EBI Project # 1118003581

To Whom It May Concern:

Attached please find *EBI's Phase I Environmental Site Assessment*, (the *Report*) for the above-mentioned asset (the Subject Property). During the property survey and research, *EBI's* property surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the property and its history. The *Report* was completed according to the terms and conditions authorized by you, the Client. This *Report* has been completed in conformance with ASTM E 1527–13 and *JP Morgan Chase Bank NA's* Scope of Work.

In connection with a proposed extension of credit represented by, or investment in, a proposed loan, debt issuance, or other financing to be secured, in whole or in part, directly or indirectly by the property or by pledges of direct or indirect ownership interests, or representing preferred equity ownership interests, in the property owner (in any such case, the "Financing") or the proposed issuance of any securities secured or otherwise backed, in whole or in part, directly or indirectly by the properties or the Financing (the "Securities"), this report by EBI Consulting (the "Preparer"), and any update thereof and the information therein, may be used and relied upon by the addressee(s) of this report, their affiliates, successors and assigns and (a) any actual or prospective purchaser of, or investor in, the Financing (or any portion thereof or interest therein by way of participation, syndication or otherwise), (b) any actual or prospective financing source for any such purchaser or investor, (c) any servicer for the Financing or the Securities, (d) any trustee for the Financing or the Securities, (e) any rating agency actually or prospectively rating the Financing or the Securities, (f) any underwriter or placement agent for the Financing or the Securities, (g) any institutional provider of any liquidity facility or credit support for the Financing or the Securities, and (h) the respective affiliates of each person or entity referenced in clauses (a)-(g) above, and (i) the respective officers, directors, employees, agents, advisors, counsel, successors and assignees of each person or entity referenced in clauses (a)-(h) above. In addition, this report or a reference to this report and its preparer may be referred to and included in whole or in part, summarized or quoted (provided any such partial inclusion, summary, or quote is not misleading) in any term sheet, offering circular, private placement memorandum, registration statement, prospectus or prospectus supplement relating to the Financing or the Securities (or any portion thereof) and the Preparer agrees to cooperate reasonably in answering questions by any of the persons or entities referenced in clauses (a)-(i) above. The report speaks only as of its date in the absence of a specific written update of the report signed and delivered by the Preparer. This report has no other purpose and should not be relied upon by any other person or entity.

There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

EBI Consulting is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the Report or on the closing of any business transaction.

EBI Consulting declares that, to the best of our professional knowledge and belief, EBI meets the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and EBI has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. EBI Consulting has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

At the request of JP Morgan Chase Bank NA, EBI has performed a Phase I Environmental Site Assessment (ESA) of the property located at 167 East 124th Street & 160 East 125th Street in New York, New York, 10035, herein referred to as the Subject Property. The main objective of this ESA was to identify recognized environmental conditions in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment, or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13.

The Subject Property includes two contiguous rectangular parcels, cumulatively totaling approximately 1.80 acres. The Subject Property is currently improved with a single-story grocery store and associated parking garage as well as a three-story United States Post Office building. Both structures are located on top of a slab and are not improved with a basement. The grocery store was reportedly constructed in 1999 and the Post office was reportedly constructed in 1957. industrial or manufacturing activities were observed at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. EBI's Findings and Opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

ASSESSMENT SUMMARY TABLE										
	167 East 124th Street & 160 East 125th Street 167 East 124th Street & 160 East 125th Street, New York, New York, 10035									
Assessment Component	SECTION	NO FURTHER ACTION	REC	HREC	CREC	OTHER	RECOMMENDED ACTION	ESTIMATED COST		
Current Occupants/ Operations	2.3, 5.0						EBI recommends that reports confirming the purpose of the three groundwater monitoring wells at the Subject Property and the results of any sampling be provided for review. EBI notes that if the monitoring wells are no longer used, their proper abandonment is required	Action Item		
Historical Review	4.3						No Further Action			
Regulatory Review	4.1						No Further Action			
Potential Off-site Sources	2.5, 4.1	\boxtimes					No Further Action			
Hazardous Substances / Petroleum Products	5.2	\boxtimes					No Further Action			

Other Suspect Containers	5.2	\boxtimes			No Further Action	
Waste Generation	5.3	\boxtimes			No Further Action	
USTs	5.4				EBI recommends that a Soil Management Plan be developed to provide guidance in the event that the former abandoned UST and/or petroleum impacted soils are encountered during the demolition or redevelopment of Subject Property improvements	\$1,500
ASTs	5.4	\boxtimes			No Further Action	
PCBs	5.5	\boxtimes			No Further Action	
Additional Site Conditions	5.6	\boxtimes			No Further Action	
Asbestos Containing Materials	7.1				EBI recommends that all suspect asbestos-containing materials (ACM) identified be bulk sampled by a licensed asbestos inspector prior to any renovation or demolition activities. Any materials that are determined to be asbestos-containing through bulk sampling should be removed by a licensed abatement contractor prior to renovation or demolition activities that would disturb these materials.	Action Item
Radon	7.2	\boxtimes			No Further Action	
Lead-based Paint	7.3	\boxtimes			No Further Action	
Lead in Drinking Water	7.4	\boxtimes			No Further Action	
Vapor Migration	4.1.4	\boxtimes			No Further Action	

1.0 Introduction

This report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 167 East 124th Street & 160 East 125th Street in New York, New York, 10035.

I.I PURPOSE

The purpose of this ESA was to identify recognized environmental conditions and certain environmental conditions outside the scope of ASTM Practice E 1527-13 in connection with the property at the time of the property reconnaissance.

1.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following:
 the presence or absence of hazardous substances or petroleum products; generation, treatment,
 storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which
 potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, and radon.

1.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This Phase I Environmental Site Assessment (the report) has been prepared for the use of JP Morgan Chase Bank NA, in accordance with our Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services approved and signed by JP Morgan Chase Bank NA (the Agreement), and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Conditions For Engagement and Authorization Letter and Agreement for Environmental Services is maintained at the EBI Consulting office in Burlington, Massachusetts. To the extent any provisions of this report conflict with the terms of the Agreement, the Agreement will control.

EBI has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. This report was prepared with no exceptions or deletions from ASTM Standard E 1527-13.

This Phase I Environmental Site Assessment has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit *JP Morgan Chase Bank NA* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify recognized environmental conditions. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property (1) due to a release to the environment, (2) under conditions that indicate an existing release or a past release, or (3) under conditions that pose a material threat of a future release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term does not include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the standard environmental record sources and municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. EBI relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct unless the information is known to be inaccurate or if it is obvious, based on other information obtained as part of the assessment, that the

information is not accurate. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to verify independently the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The information reported, as well as EBI's findings, conclusions, and recommendations are based upon sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with authorities having jurisdiction over the Subject Property. *JP Morgan Chase Bank NA* agrees that EBI has no obligation to independently verify the accuracy or completeness of the information reviewed or received during the course of these environmental services.

EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under un-surveyed and/or inaccessible portions of the Subject Property. Unsurveyed and inaccessible portions of the Subject Property are described below. In addition, EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under the Subject Property where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

EBI services and opinions are based on the scientific or technical tests or procedures specifically set forth in the scope of the Services described in this report. The ASTM Standard E 1527-13 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI used that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality at the same time and under similar circumstances. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by EBI. Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified if necessary, at additional cost.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions.

1.4 SPECIAL TERMS AND CONDITIONS

This Phase I Environmental Site Assessment (the report) has been prepared to assist JP Morgan Chase Bank NA in its underwriting of a proposed mortgage loan on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. Amendments to EBI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and EBI's contract and report extends to JP Morgan Chase Bank NA only, in accordance with our Standard Conditions For Engagement and, Authorization Letter and Agreement for Environmental Services.

The purpose of this Report is to assist JP Morgan Chase Bank NA, in determining whether to acquire the Property, foreclose on the Property or in the underwriting of a mortgage loan on the Subject Property described herein, to observe the general physical condition and maintenance status of the property, and to suggest repair or maintenance items considered customary for the property to continue in its current operation, compared to properties of similar age and condition.

This Report was performed utilizing methods and procedures consistent with established commercial practices and in conformance with industry standards. The suggestions represent EBI Consulting's opinion based on written, graphic or verbal information, the property condition and data available to us at the time of the survey. Factual information regarding operations, conditions or data provided by the Client, occupants, owner or their representative has been assumed to be correct and complete.

This Report may be relied upon by JP Morgan Chase Bank NA or their assignee. In addition, the Report may be relied upon by any rating agency involved in rating securities secured by, or representing an interest in, the Property Note. This Report may be used in connection with materials offering for sale the Property Note, or an interest in the Property Note, and in presentations to any rating agency. With respect to the foregoing, the Report speaks only as of the origination date of the Report unless specifically updated through a supplemental Report.

1.5 DATA GAPS

Any data gaps identified herein, as defined by ASTM Practice E1527-13 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

2.0 SUBJECT PROPERTY DESCRIPTION

2. I OWNERSHIP AND LOCATION

According to the City of New York Assessor's Office, the Subject Property is currently owned by 160 East 125th Owner LLC.

The Subject Property is located at 167 East 124th Street & 160 East 125th Street in New York, Manhattan, New York. The Subject Property includes two contiguous rectangular parcels, identified by the New York Assessor's Office as Block 1773, Lot 27 and Block 1773, Lot 0, cumulatively totaling approximately 1.80 acres. The Subject Property is located in the southeast quadrant of the intersection of Dr. Martin Luther King Boulevard and Lexington Avenue. Figure 1 - Location Map depicts the location of the Subject Property on a street map of New York. Figure 2 - Locus Map depicts the location of the Subject Property on the Brooklyn, New York United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle. Figure 3 - Site Plan depicts the configuration of the Subject Property and adjoining properties.

2.2 **SUBJECT PROPERTY IMPROVEMENTS**

The Subject Property is currently improved with a single-story grocery store and associated parking garage as well as a three-story United States Post Office building. Both structures are located on top of a slab and are not improved with a basement. The grocery store was reportedly constructed in 1999 and the Post Office was reportedly constructed in 1957. The building structures encompass the entire Subject Property area and are surrounded by concrete sidewalks.

2.3 CURRENT USE OF THE SUBJECT PROPERTY

At the time of the assessment, the Subject Property was observed as vacant. No industrial or manufacturing activities were observed at the Subject Property.

2.4 MUNICIPAL SERVICES & UTILITIES

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES				
Utility	Provider/Source			
Potable Water Supply	City of New York			
Sewage Disposal System	City of New York			
Electrical Service	Consolidated Edison			
Natural Gas Service	Consolidated Edison			
Oil Service	Not provided			
Heating/Cooling Systems	Natural gas / Electric split system HVAC units			
	Rooftop chiller located on parking garage roof (offline)			
Emergency Power	One natural gas fired emergency generator			

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Subject Property is primarily characterized by residential and retail/commercial development.

	ADJOINING PROPERTIES
North	The Subject Property is bound to the north by East 125 th Street, beyond which are located three mixed use commercial/residential buildings with street level retail storefronts (2306 3 rd Avenue, 163 East 125 th Street, and 145 East 125 th Street). The Subject Property is also bound to the north by the intersection of Lexington Avenue and East 125 th Street, beyond which is located a commercial retail building (127 East 125 th Street).
South	The Subject Property is bound to the south by the New York Fire Department 12 th Battalion and East 124 th Street, beyond which are located a mixture of commercial buildings and residential dwellings along East 124 th Street (150 East 124 th Street through 182 East 124 th street and 2276 3 rd Avenue).
East	The Subject Property is bound to the east by the New York Fire Department 12 th Battalion and 3rd Ave, beyond which is located the Internal Revenue Service (2283 3 rd Ave) and commercial buildings along 3 rd Ave (2289-2291 3 rd Ave).
West	The Subject Property is bound to the west by the intersection of Lexington avenue and East 124 th Street as well as Lexington Avenue, beyond which are located are located commercial retail storefronts along Lexington Avenue (132 East 125 th Street, 2050 Lexington Ave, and 136 East 124 th Street).

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties. Please refer to section 4.0 for a discussion of environmental conditions identified for surrounding properties during the database review.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by JP Morgan Chase Bank NA with regard to this Phase I Environmental Site Assessment. Additionally, a User Questionnaire was forwarded to the designated Client contact. The User Questionnaire has not been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. Relevant documentation referenced below is presented in Appendix C.

3.1 TITLE RECORDS

Title record information associated with the Subject Property has not been provided to EBI by JP Morgan Chase Bank NA. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.3.5 of this report.

3.2 ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS

JP Morgan Chase Bank NA has provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A discussion regarding environmental liens is presented in Section 4.3.7 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 SPECIALIZED KNOWLEDGE

JP Morgan Chase Bank NA provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. EBI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.3.8 of this report.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

JP Morgan Chase Bank NA has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

JP Morgan Chase Bank NA has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

JP Morgan Chase Bank NA provided contact information for the Subject Property owner, manager and/or occupants.

3.7 REASON FOR PERFORMING PHASE I ESA

JP Morgan Chase Bank NA retained EBI to complete this Phase I Environmental Site Assessment in connection with a real estate transaction.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-13, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix E.

The database report identified 10 "orphan sites". Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. EBI attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, EBI did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, EBI uses the best available data when evaluating the location of listed sites discussed below.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS						
Regulatory Database	Approximate Minimum Search Distance	Subject Property Listed	Off-site Listings Within Search Distance			
Federal NPL Sites	1.0 mile	No	0			
Federal Delisted NPL Sites	0.5 mile	No	0			
Federal SEMS Sites	0.5 mile	No	0			
Federal SEMS-ARCHIVE Sites	0.5 mile	No	0			
Federal RCRA CORRACTS Sites	1.0 mile	No	0			
Federal RCRA non-CORRACTS TSD Sites	0.5 mile	No	0			
Federal RCRA Generators Sites	Property & Adjoining	Yes	4

NJ/NY Manifest	Property	Yes	NA			

4.1.1 Federal Agency Database Records

National Priority List (NPL)

The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the NPL.

Delisted National Priority List (NPL)

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the Delisted NPL database.

Superfund Enterprise Management System (SEMS)

SEMS tracks federal hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of the USEPA's Superfund Program. The list was formerly known as CERCLIS and was renamed at the end of 2015. The list contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). SEMS also contains sites that are either proposed to or on the National Priority List (NPL), as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the SEMS database.

SEMS – ARCHIVE

SEMS-ARCHIVE tracks sites that have been removed from the SEMS list. This list was formerly known as the CERCLIS- NFRAP list and was renamed SEMS-Archive at the end of 2015. SEMS-ARCHIVE sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the SEMS-ARCHIVE database.

Resource Conservation and Recovery Act (RCRA) – Corrective Action Tracking System (CORRACTS) RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the RCRA CORRACTS database.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the RCRA non-CORRACTS TSD database.

RCRA Hazardous Waste Generators

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than I Kg of acutely hazardous waste per month. The Subject Property and four adjoining properties were identified on the RCRA Generator database. The two Subject Property and two adjoining RCRA listings are associated with Consolidated Edison transformer manhole vaults. Consolidated Edison manages, maintains, and assumes all responsibility for releases within their transformer vaults. Note that EBI was unable to gain access to the transformer vaults addressed at the Subject Property. Based on the assumption of responsibility by Consolidated Edison, it is considered unlikely that the two Subject Property and adjoining property RCRA listings associate with Consolidated Edison transformer vaults represent a significant environmental concern to the Subject Property. Information regarding the remaining Subject Property and adjoining listings is presented in the following table:

	RCRA GENERATORS							
S ite	Distance / Direction / Gradient*	EPA ID No.	Regulatory Status					
Pathmark	Subject Property	NYR000223164	RCRA NonGen					
160 East 125th Street	\		No Violations Found					
New York, NY								
USPS Triborough	Subject Property	NY0180010035	RCRA NonGen					
167 East 124th Street			No Violations Found					
New York, NY								
William Somerville	Adjoining /	NYR000108316	No Violations Found					
166 E 124th Street	South /							
New York, NY	Crossgradient							
MTA NYCT 125 th	Adjoining /	NYR000099861	No Violations Found					
125 th Street & Lexington	North /							
New York, NY	Crossgradient							

^{*} Presumed hydrogeologic gradient based upon regional topography

One former occupant of the Subject Property, Pathmark, was listed RCRA-NonGenerator of hazardous waste. Pathmark formerly occupied 160 East 125th Street from 1999 until approximately 2017 when the property was reportedly vacated. According to the database, Pathmark formerly generated pharmaceutical wastes including salts. No reported violations were reported for Pathmark. Based upon the absence of reported violations associated with this listing, the vacation of this facility in 2017, and the site conditions observed at the time of EBI's reconnaissance, the former RCRA-NonGen database listing for Pathmark is not considered to represent an existing release, past release, or material threat of release of hazardous substances or petroleum products on the Subject Property.

One former occupant of the Subject Property, USPS Triborough Station, was listed RCRA-NonGenerator of hazardous waste. USPS Triborough Station formerly occupied 167 East 124th Street from 1998 until approximately 2015 when the property was reportedly vacated. According to the database, the USPS formerly handled ignitable waste, corrosive waste, and trichloroethylene. No reported violations were reported for the USPS Triborough station. Based upon the absence of reported violations associated with this listing, the former use of the property (Post Office), the vacation of this facility in 2015, and the site conditions observed at the time of EBI's reconnaissance, the former RCRA-NonGen database listing for the USPS Triborough station is not considered to represent an

existing release, past release, or material threat of release of hazardous substances or petroleum products on the Subject Property.

Based upon the absence of reported violations and/or presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the remaining RCRA Generator facilities represent an environmental concern to the Subject Property.

Federal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on Federal Engineering Control or Institutional Control Registries.

Emergency Response Notification System (ERNS)

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the ERNS database.

Facility Index System/Facility Registry System (FINDS/ECHO)

FINDS is a national database, overseen by the EPA to identify sites or facilities subject to environmental regulations. The database is an inventory of facilities that provides information regarding facility operations that may affect air, water, and land in the United States. The system maintains pointers to Program Office databases that contain more detail on a designated facility. The Subject Property was identified on the FINDS database. Information regarding the Subject Property listings is presented in the following table:

FINDS/ECHO SITES							
Site	Distance / Direction / Gradient*	ID No.	Regulatory Status				
Pathmark 160 East 125 th Street New York, NY	Subject Property	110066948174	RCRA Listing				
USPS Triborough 167 East 124 th Street New York, NY	Subject Property	110004325114	RCRA Listing				

The Subject Property was identified on the FINDS database in connection with the RCRA Generator database. Please refer to section 4.1.1 RCRA Hazardous Waste Generators for a discussion of the former on-site RCRA generators.

4.1.2 State and Tribal Agency Database Records

State and Tribal equivalent NPL Sites and CERCLIS Sites

State and tribal equivalent NPL and CERCLIS databases were searched for sites located within 1.0 mile and 0.5 mile of the Subject Property, respectively. The Subject Property was not identified on state and/or tribal databases. However, four sites located within the specified minimum search distances were identified on state and/or tribal databases. Information regarding the listed sites is presented in the following table:

STATE AND TRIBAL EQUIVALENT NPL SITES AND CERCLIS SITES						
Site	Distance / Direction / Gradient*	ID No.	Regulatory Status			
Vista I	2,800 Feet /	437428	Notification Date: 07/14/2010			
2401 Third Ave Bronx, NY	North / Crossgradient		Contaminants: Not Reported Media Impacted: Not Reported Status: SHWS Date of Closure: NA			
Rider Avenue Gas Station 250 East 138 th Street Bronx, NY	4,000 Feet / Northeast / Crossgradient	437424	Notification Date: 07/14/2010 Contaminants: Not Reported Media Impacted: Not Reported Status: SHWS Date of Closure: NA			
2568 Park	4,800 Feet /	437190	Notification Date: 07/08/2010			
2568 Park Avenue Bronx, NY	Northeast / Crossgradient		Contaminants: Not Reported Media Impacted: Not Reported Status: SHWS Date of Closure: NA			
2350 Fifth Avenue corp. 2350 Fifth Avenue New York, NY	5,000 Feet / North / Crossgradient	57691	Notification Date: 11/18/1999 Contaminants: CVOCs Media Impacted: Soil & GW Status: SHWS Date of Closure: NA			

^{*} Presumed hydrogeologic gradient based upon regional topography

Based upon the separating distance and presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

State and Tribal Spills Sites (Spills)

A review of available Spills databases was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property and I I adjoining cases were identified on the Spills database. According to the spills database, all of the identified Spill cases have been granted a Closed Status with the New York Department of Environmental Conservation (NYSDEC). Four of the adjoining spills are associated with Consolidated Edison transformer vaults. Based on the responsible party (ConEd) and regulatory status (closed), it is unlikely that these four spills represent an environmental concern to the Subject Property. Three adjoining spills were reported for minor vehicle accidents on adjacent roadways and based on their status (closed) and extent of contaminates released (less than 5-gallons), it is unlikely that these three sites represent a significant concern to the Subject Property. Information regarding the Subject Property and four remaining adjoining Spill cases can be found in the table below.

STATE AND SPILLS SITES

Site	Distance / Direction / Gradient*	ID No.	Regulatory Status
US Post Office 167 East 124 th Street New York, NY	Subject Property	0005315	Notification Date: 05/10/2000 Contaminants: Petroleum Media Impacted: Soil Status: Closed
2 nd Avenue Subway Lexington and 125 th Street New York, NY	Adjacent / North / Crossgradient	0300354	Date of Closure: 05/28/2009 Notification Date: 04/10/2003 Contaminants: Petroleum Media Impacted: Soil (minor) Status: Closed Date of Closure: 08/26/2005
Between 3 rd and Lexington Ave in front of Firehouse New York, NY	Adjacent / Northeast / Crossgradient	0609087	Notification Date: 08/11/2006 Contaminants: Drum on sidewalk Media Impacted: None Status: Closed Date of Closure: 12/01/2006
		0330038	Notification Date: 09/09/2003 Contaminants: Drum on sidewalk Media Impacted: None Status: Closed Date of Closure: 10/03/2003
2032 Lexington Ave New York, NY	Adjacent / West / Upgradient	1711643	Notification Date: 03/22/2018 Contaminants: Cooking Oil Media Impacted: Subway Status: Closed Date of Closure: 03/26/2018
Capital Care Electrical 2289 3 rd Ave New York, NY	Adjacent / East / Downgradient	0913500	Notification Date: 03/22/2010 Contaminants: Petroleum (I-gallon) Media Impacted: Concrete Status: Closed Date of Closure: 05/07/2010

^{*} Presumed hydrogeologic gradient based upon regional topography

In May of 2000, a 2,000-gallon fuel oil UST was closed in place at the United States Post Office (USPO) building. Information on the Spills listing indicates that the tank was abandoned in place due to structural concerns. Impacted soils were reportedly identified at the time of the tank abandonment. Soil samples collected from the tank excavation were analyzed and the database indicates that "when compared to TAGM 4046 RSCO limits, only several of the benzo series analytes in samples...had exceedences and these were low exceedences". The exact location of the UST could not be identified by EBI during site reconnaissance. The spill was granted a Closed status by the NYSDEC on May 10, 2000 due to the absence of sensitive receptors and the nature/extent of the impacted soils identified. Based on the documented closure of the UST, the results of the post-excavation soil samples exhibiting "low" concentrations and the regulatory closure of the case, the former UST and Spills case represent a historical recognized environmental condition (HREC) in connection with the Subject Property. However, EBI notes that the former UST and impacted soils may be encountered during the demolition of the Subject Property and construction of any new improvements at the Subject Property. This represents a de minimis condition in connection with the Subject Property.

Based on the regulatory status, presumed hydrogeologic gradient relative to the Subject Property and the reported nature and/or extent of contamination, it is considered unlikely that conditions associated with the remaining adjoining spill cases represent an environmental concern to the Subject Property.

State and Tribal Landfill Sites and Solid Waste Disposal Sites

The state and tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property was not identified on state or tribal landfill and solid waste disposal site databases. However, two sites located within 0.5 mile of the Subject Property were identified on state or tribal landfill and solid waste disposal site databases. Information regarding the listed sites is presented in the following table:

STATE AND TRIBAL LANDFILL SITES AND SOLID WASTE DISPOSAL SITES						
S ite	Distance / Direction / Gradient	ID No.	Facility Status			
Petro Recycling LLC	2,200 Feet /	03W81	Facility Type: C&D Processing			
290 East 132 Street	Northeast /		Facility Status: Active			
Bronx, NY	Downgradient		No Reported Violations			
WMNY LLC	2,400 Feet /	03T79	Facility Type: Transfer Station			
98 Lincoln Ave	Northeast /		Facility Status: Active			
Bronx, NY	Downgradient		Spills Reported			

^{*} Presumed hydrogeologic gradient based upon regional topography

Based upon the separating distance and presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

State and Tribal Leaking Storage Tank Sites

Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property was not identified on state or tribal Leaking Storage Tank databases. According to the Leaking Storage Tank (LTANK) database, 57 LTANK sites are located within 0.5 mile of the Subject Property. Of the listed sites, 39 sites are located greater than 0.25 miles from the Subject Property and/or across the Harlem River. Based upon the distance and/or hydrogeologic separation from the Subject Property, these 39 sites are considered unlikely to represent an existing release, past release, or material threat of release of hazardous substances or petroleum products on the Subject Property. All 18 of the LTANK sites located within 0.25 mile of the Subject Property have been granted a Closed status by the New York Department of Environmental Conservation (NYSDEC), and based upon the current regulatory status are considered unlikely to represents an environmental concern to the Subject Property.

State and Tribal Registered Storage Tanks

The Subject Property and four adjoining properties were identified on state or tribal Registered Storage Tank databases. Information regarding the listed sites is presented in the following table:

9	STATE AND TRIBAL REGISTERED STORAGE TANKS			
Location	Distance / Direction / Gradient	Capacity / Contents	Year Installed	Status
Triborough Station 167 East 124 th Street New York, NY	Subject Property	(I) 2,000-gallon UST / Fuel Oil	NA	Closed In Place
Manhattan Citadel Co. 2306 Third Ave New York, NY	Adjacent / North / Downgradient	(I) 5,000- gallon UST / Oil	1986	Removed 2017

STATE AND TRIBAL REGISTERED STORAGE TANKS				
Location	Distance / Direction / Gradient	Capacity / Contents	Year Installed	Status
Block 1774 Lot 27 157 East 125 th Street New York, NY	Adjacent / North / Downgradient	(I) 1,500- gallon AST / No. 2 Fuel Oil	NA	Removed 2000
Block 1774 Lot 47 157 East 125 th Street New York, NY	Adjacent / North / Downgradient	(I) 1,500- gallon AST / No. 2 Fuel Oil	NA	Removed 2000
Con Edison 145 East 125 th Street New York, NY	Adjacent / North / Downgradient	(1) 3,000- gallon AST / No. 6 Fuel Oil	NA	Closed In-Place 2007

^{*} Presumed hydrogeologic gradient based upon regional topography

Please refer to section 4.1.2 State Spills sites for a discussion of environmental concerns identified at the Subject Property in connection with the closed-in-place fuel oil tank.

Based on the lack of reported releases and presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified state or tribal Registered Storage Tank sites represent an environmental concern to the Subject Property.

State and Tribal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property was not identified on state or tribal Engineering Control or Institutional Control Registries. However, one site located within 0.5 mile of the Subject Property was identified on state or tribal Engineering Control or Institutional Control Registries. Information regarding the listed site is presented in the following table:

STATE AND TRIBAL ENGINEERING CONTROL / INSTITUTIONAL CONTROL REGISTRIES			
Site	Distance / Direction / Gradient*	ID No.	Regulatory Status
Harlem Park Acquisitions	750 Feet /	59177	Notification Date: 04/20/2016
1800 Park Ave	West /		Contaminants: Fuel Oil
New York, NY	Upgradient		Media Impacted: Soil & GW
			Status: ENG Control
			Date of Closure: NA

^{*} Presumed hydrogeologic gradient based upon regional topography

Based upon the distance from the Subject Property and reported nature of contamination, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

State and Tribal Voluntary Cleanup Sites

The Subject Property was not identified on state or tribal Voluntary Cleanup Site (VCP) databases. According to the VCP database, 10 VCP sites were identified within 0.5 miles of the Subject Property. Four of the 10 sites are located at a distance greater than 0.25 miles from the Subject Property and based on their distance are not considered likely to represent an environmental concern. Information regarding the six remaining sites is presented in the following table:

S	STATE AND TRIBAL VOLUNTARY CLEANUP SITES			
Site	Distance / Direction / Gradient	ID No.	Regulatory Status	
146 East 126 th Street New York, NY	200 Feet / North / Crossgradient	I5CVCPI49M	Responsible Party: Rigano, LLC Notification Date: November 2015 Contaminants: Petroleum Media Impacted: Soil Status: VCP Agreement Date of Closure: NA	
220-231 East 125 th Street New York, NY	200 Feet / Southeast / Downgradient	IICBCP004M IICBCP005M	Responsible Party: Church of Scientology Notification Date: NA Contaminants: Petroleum Media Impacted: Soil Status: NA Date of Closure: NA	
81 East 125 th Street New York, NY	600 Feet / West / Upgradient	13CVCP120M	Responsible Party: 125th Street Equities, LLC Notification Date: 08/06/2013 Contaminants: NA Media Impacted: Soil Status: Complete Date of Closure: May, 2015	
69 east 125 th Street New York, NY	900 Feet / Northwest / Crossgradient	I5CVCPI22M	Responsible Party: 69 East 125 Street Owner, LLC Notification Date: May 17, 2015. Contaminants: Metals, Petroleum, CVOCs Media Impacted: Soil & GW Status: VCP Date of Closure: NA	
2211 Third Ave New York, NY	I,000 Feet / South / Crossgradient	12CBCP037M	Responsible Party: NA Notification Date: NA Contaminants: Petroleum Media Impacted: Soil Status: Complete Date of Closure: July 2-16	
1901 Madison Ave New York, NY	I,400 Feet / Northwest / Crossgradient	14CVCP160M	Responsible Party: NA Notification Date: 2013 Contaminants: Petroleum/VOCs Media Impacted: Soil & GW Status: RAWP Date of Closure: NA	

^{*} Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, separating distance, presumed hydrogeologic gradient relative to the Subject Property and/or reported nature/extent of contamination, it is considered unlikely that

conditions associated with the identified Voluntary Cleanup Sites represent an environmental concern to the Subject Property.

State and Tribal Brownfield Sites

The Subject Property was not identified on state or tribal Brownfield Sites databases. According to the Brownfield database, seven sites are located within 0.5 miles of the Subject Property. Five of the seven sites are located at a distance greater than 0.25 miles from the Subject Property and based on their distance are not considered a significant environmental concern. Information regarding the remaining two sites located within 0.25 mile of the Subject Property is presented in the following table:

	STATE AND TRIBAL BROWNFIELD SITES			
Site	Distance / Direction / Gradient	ID No.	Regulatory Status	
Parcel B West	Adjoining /	564509	Notification Date: 2017	
2305-2315 3 rd Ave	East /		Contaminants: None reported (Phase II	
New York, NY	Downgradient		pending review)	
			Media Impacted: NA	
			Status: Brownfield	
			Date of Closure: NA	
Harlem Part Acquisitions	700 Feet /	1000851452	Notification Date: 04/20/2016	
LLC	West /		Contaminants: Petroleum	
1800 Park Ave	Upgradient		Media Impacted: Soil	
New York, NY	\		Status: Brownfield	
			Date of Closure: NA	

^{*} Presumed hydrogeologic gradient based upon regional topography

Based upon the separating distance, presumed hydrogeologic gradient relative to the Subject Property and/or reported nature/extent of the release, it is considered unlikely that conditions associated with the identified Brownfield Sites represent an environmental concern to the Subject Property.

NY/NI Manifest

The New York Manifest is a document that tracks hazardous waste from the generator through transporters to a TSD facility. The Subject Property was listed on the New York/NJ Manifest database associated with the USPS Triborough station.

NY/NJ Manifest			
Site	Distance / Direction / Gradient*	EPA ID No.	Regulatory Status
USPS Triborough Station 167 East 124th Street	Subject Property	NY0180010035	Material ID: Ignitable/Corrosive Waste Quantity: 5-Gallons
New York, NY		NY0180010035	Not Reported. Same ID as NJ Manifest

^{*} Presumed hydrogeologic gradient based upon regional topography

Based on the lack of reported releases and current site conditions, it is unlikely that conditions associated with the USPS Triborough Station listing do not represent a material threat to the Subject Property.

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the following:

City of New York Building Department

EBI reviewed available files regarding the Subject Property at the City of New York Building Department for information regarding past uses of the Subject Property. The original building permits and certificates of occupancy for the existing buildings indicate that the buildings were constructed in 1957 (USPS building) and 1999 (grocery store). EBI additionally identified certificates of occupancy, dated prior to the development of the existing structures. The COOs indicate that the Subject Property was occupied by a parking lot, several retail storefronts, and several residential multifamily buildings. The exact nature of the prior tenants was not provided by the COO documents. The review of Building Department records did not identify past uses of the Subject Property that would constitute a recognized environmental condition.

City of New York Board of Health

EBI has submitted a written request to the New York Board of Health for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). As of the date of this report, EBI has not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this report, EBI will forward this information as an addendum to this report. If no response is received, or no material information is identified, our report will not be modified.

City of New York Fire Department

EBI has submitted a written request to the New York Fire Department for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). As of the date of this report, EBI has not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this report, EBI will forward this information as an addendum to this report. If no response is received, or no material information is identified, our report will not be modified.

4.1.4 Vapor Migration

EBI conducted a vapor migration screening survey of the Subject Property. This vapor migration screening was conducted in accordance with ASTM E1527-13 and is not intended to satisfy the requirements of ASTM E2600-15. The scope of this screening was limited to visual observations and review of the environmental database report and did not include the collection and laboratory analysis of air samples to confirm or refute the presence of airborne contaminants by vapor intrusion.

EBI's site observations and review of the environmental database report (cited in Section 4.1) did not identify any conditions on the Subject Property or on adjoining properties that would indicate a REC relative to vapor migration at the Subject Property.

4.2 PHYSICAL SETTING

4.2.1 Topography

The Subject Property is located at an elevation of approximately 20 feet above mean sea level (msl). The topography of the Subject Property is relatively flat and slopes gently to the east. The Subject Property is located in a relatively flat area, and the general slope of the surrounding region is to the east (see Figure 2 - Locus Map, which depicts the location of the Subject Property on the Brooklyn, New York USGS 7.5 Minute Topographic Quadrangle).

4.2.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Near-surface geology in heavily developed areas such as the Subject Property and vicinity is considered "urban land" and is characterized by a non-homogeneous distribution of soil and fill types. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

4.2.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest downgradient surface water body is the Harlem River, located approximately 1,700 feet east of the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the east. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. EBI observed three groundwater monitoring wells around the boundaries of the Subject Property. EBI requested additional information regarding the purpose of these wells and the results of sampling conducted from these wells, however, EBI has not been provided with additional information or reports regarding the on-site monitoring wells as of the date of this report. These monitoring wells represent a de minimis condition in connection with the Subject Property.

4.3 HISTORICAL USE OF THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

EBI attempted to determine the history of the Subject Property dating back to 1940 or first developed use. The following table summarizes the historical use of the Subject Property and surrounding area.

HISTORICAL USE SUMMARY			
Period	Historia	cal Uses	Source(s)
renou	Subject Property	Surrounding Area	Source(s)
At least 1896-	The Subject Property is	Residential multifamily and	Aerial Photographs
1957	improved with several small	commercial retail development	Fire Insurance Maps

HISTORICAL USE SUMMARY			
Historical Uses		Sauras (a)	
Period	Subject Property	Surrounding Area	Source(s)
2017 to	Existing vacant property	Residential multifamily and	Personal Interviews
Present		commercial retail development	

No environmentally significant conditions were identified on the Subject Property or surrounding properties during the historical review.

4.3.1 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). It should be noted that the scale of the available aerial photographs precludes the distinct identification of structures and/or land uses on or in the vicinity of the Subject Property. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table. Copies of the aerial photographs are presented in Appendix F.

	AERIAL PHOTOGRAPH SUMMARY				
Year	Issues Noted	Observations			
1924 1941 1944 1954	No	Subject Property: The Subject Property appears to be developed with several small to mid-sized commercial and residential buildings throughout the existing property. The Subject Property appears to be developed in a manner consistent with urban New York City.			
1961 1966		Surrounding Area: Surrounding properties in all directions are improved with small to mid-sized commercial buildings depicted in a manner consistent with urban New York City.			
1975	No	Subject Property: Several commercial buildings and residential dwellings at the Subject Property have been demolished and are depicted as vacant dirt lots. The existing Post Office building is depicted on the Subject Property, along with three commercial/residential structures. In addition, a parking lot is depicted on the northwest corner of the property. Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1966 photograph.			
1991	No	Subject Property: The Subject Property is depicted as it exists in present day. The Subject Property is depicted with the existing US Post Office building and commercial retail building. Surrounding Area: Two large commercial and/or industrial buildings and paved parking areas are identified to the north. Cleared, undeveloped land appears to occupy surrounding area to the east, followed by well-developed commercial/industrial parcels			
		located beyond Middlesex Turnpike. The surrounding area to the south and west appears as developed with several commercial and/or industrial buildings.			
2008 2012	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1995 photograph. Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1995 photograph, with the exception of the development of the north adjoining property into the existing commercial building.			

4.3.2 Fire Insurance Maps

A search for historical fire insurance maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical fire insurance maps depicting the Subject

Property were reviewed and are summarized in the following table. Copies of the fire insurance maps are presented in Appendix F.

	FIRE INSURANCE MAP SUMMARY					
Year	Issues Noted	Observations				
1896	No	Subject Property: The Subject Property is improved with approximately 30 small mixed use commercial retail and residential buildings. The Subject Property also consists of a vacant lot and a small school. Surrounding Properties: Surrounding properties in all directions appear to be improved with several small commercial retail and residential buildings consistent with urban New				
1911 1939	No	York City. Subject Property: Conditions on the Subject Property are similar to those as depicted on the 1906 map, with the addition of two medium-sized warehouse buildings in place of the former vacant lots and the school building being depicted as lodging. Surrounding Properties: Conditions on the surrounding properties are similar to those				
1951	No	as depicted on the 1896 map. Subject Property: Conditions on the Subject Property are similar to those as depicted on the 1939 map, with the exception of the demolition of a former commercial retail building. The area surrounding the former structure is depicted as a vacant lot. Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1939 map.				
1968	No	Subject Property: Conditions on the Subject Property are similar to those as depicted on the 1951 map, with the exception of the demolition of the row houses located on the northern portion of the property as well as the development of the present-day US Post Office building, located in place of the former vacant lot. Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1951 map. A small manufacturer of window frames and a printing				
1979	No	operation are depicted on the south adjacent property. Subject Property: The Subject Property primarily consists of a vacant lot, with the exception of the presence of the existing Post Office building along with three small commercial buildings on the eastern portion of the property. Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1968 map, with the exception of the redevelopment of the south adjoining property into the existing fire station.				
1980 1986 1991 1995	No	Subject Property: The Subject Property primarily consists of a vacant lot, with the exception of the presence of the existing Post Office building. Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1979 map.				
2001 2005	No	Subject Property: The Subject Property is depicted as it exists in present day. The Subject Property is improved with the existing commercial building and Post Office building. The structures encompass the entire Subject Property. Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1995 map, with the exception of the redevelopment of north adjacent buildings into the existing commercial building.				

4.3.3 Topographic Maps

Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical topographic maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the topographic maps are presented in Appendix F.

	TOPOGRAPHIC MAP SUMMARY		
Year	Issues Noted	Observations	
1897 1947		Subject Property: The Subject Property is shaded to represent urban development; no distinct structures or other notable features are depicted.	
1966 1997 2013	No	Surrounding Properties: The surrounding properties are shaded to represent urban development; no distinct structures or other notable features are depicted.	

4.3.4 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix F.

	STREET DIRECTORY SUMMARY (2051-2061 LEXINGTON AVE)				
Year	Issues Noted	Occupants			
NA	NA	Subject Property is not listed in research source.			
		STREET DIRECTORY SUMMARY (2288-2298 THIRD AVE)			
Year	Issues Noted	Occupants			
1920	No	Lucas Bros Department Store, Lafayette Fashion Shop.			
1923	No	Eagle Clothes Inc., Paul Xanthos, Paramount Shirt Shops.			
1927	No	Roxy Clothing Shops, Kaufman Hats, Paramount Shirt Shops, United Cigars.			
1934	No	Jacob Gumbel Treas Clothing.			
1938	No	Brooks Furniture Exchange, Triborough Liquor Store, Paramount Shirt Shops, United Cigars, Samuel Wolf Barber.			
1942	No	WM Cohen Liquors, Triborough Liquor Store, residential, Albert Peppis Liquors, United Cigar Stores.			
1947	No	Fashion Furniture Co, Rosenbaum Cigars, Jack Kramer WM Cohen Liquors, Triborough Liquor Store.			
1950 1956	No	Fashion Furniture Co, Rosenbaum Cigars, Jack Kramer WM Cohen Liquors, Triborough Liquor Store.			
1958	No	Fashion Furniture Co, Rosenbaum Cigars, Jack Kramer WM Cohen Liquors.			
1963	No	Monterey Furniture Corp, Fashion Furniture Co, Jack Kramer.			
1968	No	WM Cohen Liquors, Triborough Liquor Store, Floral Discotech.			
1973	No	WM Cohen Liquors, Triborough Liquor Store, Harlem Screening Center, Floral Discotech.			
1973	No	Mario Crisafulli.			
2006	No	James Melhan Construction.			
		STREET DIRECTORY SUMMARY (149-181 EAST 124TH STREET)			
Year	Issues Noted	Occupants			
1920	No	Offices, Inter Asiatic Trading Co, Grob I & Co Israel & Jacob M Bakers.

4.3.5 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3.6 Property Tax Records

The property cards for the Subject Property was obtained at the City of New York Assessor's Office. The property card identifies the current owner as 160 East Street Owner LLC. A listing of the former Subject Property owners was not available for review.

4.3.7 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.3.8 Previous Environmental Reports

EBI was not provided with or made aware of previous environmental assessments or other documentation regarding environmental investigations performed for the Subject Property. EBI did not identify previous environmental reports for the Subject Property at local agencies or other sources contacted during this assessment.

4.3.9 Other Historical Records and Interviews

Mr. Steven Howley, Property Manager, was interviewed to obtain information regarding the history of the Subject Property. According to Mr. Howley, he has been familiar with the Subject Property for approximately three years and that the existing building was vacated in 2017. Mr. Howley stated that he was unaware of the use or occupants of the Subject Property prior to 2017.

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Scott Barta, EBI Field Assessor, on June 19, 2018. Mr. Barta was accompanied by and interviewed Mr. Steven Howley, the Subject Property Facility Manager.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was sunny and approximately 85° Fahrenheit. During the survey, representative tenant spaces, mechanical spaces, and/or equipment components were observed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Notable hazardous substances or petroleum products in connection with identified uses observed at the Subject Property are described below.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS			
General Type of Approximate Quantity / Material Container / Material		Location	Storage Condition
Hydraulic fluid	One five-gallon pail	Elevator Machine Room	Good: No leaks or spills

EBI did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

EBI did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

5.2.3 Unidentified Substances Containers

EBI did not observe evidence of unidentified substances containers at the Subject Property.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

EBI identified the following waste streams generated at the Subject Property:

Waste Generation, Storage, and Disposal				
Classification Type of Waste / Type of Storage / Disposal Method / Contractor				
Non-regulated Solid Waste	None identified	NA	NA	

Waste Generation, Storage, and Disposal				
Classification	Type of Waste / Generation Process	Type of Storage / Location	Disposal Method / Contractor	
Non-regulated Liquid	Sanitary Sewage / Routine	NA (Municipal Sanitary	City of New York	
Waste	Site Operations	Sewer)		
Regulated Solid or	None identified	NA	NA	
Liquid Waste				
Biomedical Waste	None identified	NA	NA	

EBI did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.4 UNDERGROUND STORAGE TANKS (USTs) & ABOVEGROUND STORAGE TANKS (ASTs)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of existing USTs or ASTs located at the Subject Property.

5.4.2 Former Storage Tanks

In May of 2000, a 2,000-gallon fuel oil UST was closed in place at the United States Post Office (USPO) building. Information on the Spills listing indicates that the tank was abandoned in place due to structural concerns. Impacted soils were reportedly identified at the time of the tank abandonment. Soil samples collected from the tank excavation were analyzed and the database indicates that "when compared to TAGM 4046 RSCO limits, only several of the benzo series analytes in samples...had exceedences and these were low exceedences". The exact location of the UST could not be identified by EBI during site reconnaissance. The spill was granted a Closed status by the NYSDEC on May 10, 2000 due to the absence of sensitive receptors and the nature/extent of the impacted soils identified. Based on the documented closure of the UST, the results of the post-excavation soil samples exhibiting "low" concentrations and the regulatory closure of the case, the former UST and Spills case represent a historical recognized environmental condition (HREC) in connection with the Subject Property. However, EBI notes that the former UST and impacted soils may be encountered during the demolition of the Subject Property and construction of any new improvements at the Subject Property. This represents a de minimis condition in connection with the Subject Property.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBs)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with **US Code of Federal Regulations** Title 40 - Protection of Environment, Chapter 1 - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

The following oil-containing equipment was identified at the Subject Property:

OIL-CONTAINING EQUIPMENT				
Classification	Type of Equipment	Year Installed / Location	Staining / Releases Identified	
Transformers and Fluid-Containing Electrical Equipment	None identified	NA	NA	
Hydraulic Equipment	(2) passenger elevators	1999 / Main Lobby Grocery Store	No	
Other Oil-containing Equipment	None identified	NA	NA	

Two hydraulic elevators service the grocery store at the Subject Property. The elevators were installed at the time of construction (1999) and based on their date of installation, are not considered to be PCB-containing. Assessment of the elevator mechanical rooms did not reveal staining or other evidence of a release of hydraulic fluid. The elevators were out of service at the time of this assessment.

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Subject Property on the day of the site visit. Photographs of pertinent Subject Property features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS			
Condition	Identified		
Interior Drains, Trenches, or Sumps	Yes		
Interior Stains or Corrosion	No		
Unusual Odors	No		
Interior Pools of Liquid	No		
Stained Soil or Pavement	No		
Stressed Vegetation	No		
Indications of Solid Waste Disposal	No		
Exterior Pits, Ponds, or Lagoons	No		
Wastewater or Stormwater Discharge/Disposal	No		
Oil-Water Separators or Clarifiers	No		
Septic Systems or Cesspools	No		
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	Yes		
Petroleum or Natural Gas Pipelines/Easements	No		

During site reconnaissance, EBI observed the presence of floor drains at the property. The floor drains reportedly discharge to municipal sewer. No visual evidence of staining or a release was observed in the vicinity of the floor drains.

EBI observed three groundwater monitoring wells around the boundaries of the Subject Property. EBI requested additional information regarding the purpose of these wells and the results of sampling conducted from these wells, however, EBI has not been provided with additional information or reports regarding the on-site monitoring wells as of the date of this report. These monitoring wells represent a de minimis condition in connection with the Subject Property.

6.0 INTERVIEWS

The site contact or Key Site Manager was contacted to be interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The Pre-Survey Questionnaire and any accompanying documentation is presented in Appendix C.

KEY SITE MANAGER INTERVIEW			
Contact / Affiliation	Date of Communication	Years Associated with Subject Property	Telephone No.
Mr. Steven Howley	06/19/2018	3	(212) 712-0634
Property Manger			
Excell			

The following additional persons were interviewed to obtain information regarding recognized environmental conditions in connection with the property.

ADDITIONAL INTERVIEWS			
Contact / Affiliation	Date of Communication	Years Associated with Subject Property	Telephone No.
Marc Kwestel Executive Vice President Excell Development	06/14/2018	2	(212) 712-0634
City of New York Building Department On-line	06/21/2018	NA	http://www1.nyc.gov /site/buildings/index. page

Pertinent information from the interviews is presented in applicable sections of this report.

7.0 CONSIDERATIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

The following sections address environmental issues or considerations at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-13 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those that can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

Based upon the date of construction (1999) and in accordance with the scope of work for this assessment, EBI did not conduct a survey for the presence of ACM in the grocery store structure.

EBI conducted a limited visual screening survey for the presence of ACM at the United States Post Office Building (167 East 124th Street). EBI identified friable suspect ACM in the form of textured ceiling and wall surfacing materials, sheetrock/joint compound composite material, 2'x4' white perforated acoustical ceiling tile, thermal pipe insulation, and non-friable suspect ACM in the form of vinyl floor tile and associated mastic, cementitious insulating material on HVAC ductwork, various construction mastics and caulking, and roofing materials. These materials were observed to be undamaged and in poor to good condition at the time of assessment. Please note that due to the prospective demolition of the building, this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the buildings would have been thoroughly surveyed and sampled. The possibility exists for ACM to be present in areas of the buildings not accessed or sampled by EBI personnel. Based on the limited scope of this assessment, additional suspect ACM may also present in areas of the buildings that were accessed as part of this assessment.

Due to the continued distribution of a wide variety of asbestos-containing building materials, asbestos may be present in some of the roofing, flooring, wall and ceiling materials, caulking/putties, adhesives, spackling compounds, and insulation materials, as well as other building materials that may be used at the Subject Property. Sampling many of these materials requires techniques that may be destructive to subject facilities, and in the case of roofing material, may void warranties. It is recommended that an asbestos inspection be performed in accordance with all applicable federal, state, and local regulatory requirements prior to renovation, demolition, or other activities that could cause a material disturbance. Any removal or disturbance of ACM or suspect ACM should be performed by properly trained personnel and in compliance with federal, state, and local regulations.

7.2 RADON

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building through openings in the foundation, and therefore is a potential health concern to residents of the lowest level of a building with inadequate ventilation.

The EPA Map of Radon Zones indicates that Manhattan is located within a Zone 3 radon area. Zone 3 is defined as an area that has a low potential for radon gas, with a predicted average indoor radon screening level less than 2.0 picoCuries per liter (pCi/L). The EPA recommended Action Level for radon is 4.0 pCi/L.

Based upon the non-residential nature of the Subject Property and in accordance with the scope of work for this assessment, EBI did not conduct a limited short-term radon screening at the Subject Property.

7.3 LEAD-BASED PAINT (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the non-residential use of the existing buildings and in accordance with the scope of work of this assessment, a lead-based paint (LBP) survey was not conducted at the Subject Property.

7.4 LEAD IN DRINKING WATER

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg /L).

Municipal water service is provided to the Subject Property by the NYCDEP. Potable water is reportedly obtained from surface water supplied from a network of 19 reservoirs and three controlled lakes in a nearly 2,000 square-mile watershed, and a groundwater supply system in southeastern Queens. Based upon review of the New York City 2016 Drinking Water Supply and Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.

8.0 FINDINGS AND OPINIONS

EBI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report.

This assessment has identified no evidence of recognized environmental conditions (RECs) in connection with the Subject Property.

However, the following de minimis conditions were identified:

- In May of 2000, a 2,000-gallon fuel oil UST was closed in place at the United States Post Office (USPO) building. Information on the Spills listing indicates that the tank was abandoned in place due to structural concerns. Impacted soils were reportedly identified at the time of the tank abandonment. Soil samples collected from the tank excavation were analyzed and the database indicates that "when compared to TAGM 4046 RSCO limits, only several of the benzo series analytes in samples...had exceedences and these were low exceedences". The exact location of the UST could not be identified by EBI during site reconnaissance. The spill was granted a Closed status by the NYSDEC on May 10, 2000 due to the absence of sensitive receptors and the nature/extent of the impacted soils identified. Based on the documented closure of the UST, the results of the post-excavation soil samples exhibiting "low" concentrations and the regulatory closure of the case, the former UST and Spills case represent a historical recognized environmental condition (HREC) in connection with the Subject Property. However, EBI notes that the former UST and impacted soils may be encountered during the demolition of the Subject Property and construction of any new improvements at the Subject Property. This represents a de minimis condition in connection with the Subject Property.
- EBI observed three groundwater monitoring wells around the boundaries of the Subject Property. EBI requested additional information regarding the purpose of these wells and the results of sampling conducted from these wells, however, EBI has not been provided with additional information or reports regarding the on-site monitoring wells as of the date of this report. These monitoring wells represent a de minimis condition in connection with the Subject Property.

In addition, the following consideration outside the scope of ASTM Practice E 1527-13 was identified in connection with the Subject Property:

■ EBI conducted a limited visual screening survey for the presence of ACM at the United States Post Office Building (167 East 124th Street). EBI identified friable suspect ACM in the form of textured ceiling and wall surfacing materials, sheetrock/joint compound composite material, 2'x4' white perforated acoustical ceiling tile, thermal pipe insulation, and non-friable suspect ACM in the form of vinyl floor tile and associated mastic, cementitious insulating material on HVAC ductwork, various construction mastics and caulking, and roofing materials. These materials were observed to be undamaged and in poor to good condition at the time of assessment. Please note that due to the prospective demolition of the building, this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems. Based on the condition of suspect ACM, these materials do not currently pose a significant environmental threat to the occupants of the Subject Property. Suspect ACM do not present a problem when maintained

in good condition. However, additional sampling, removal, and disposal arrangements may be necessary should building construction or renovation activities be conducted. Asbestos is a condition outside the scope of ASTM E 1527-13 and is not considered a recognized environmental condition (REC).

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, EBI offers the following recommendations:

- EBI recommends that a Soil Management Plan be developed to provide guidance in the event that the former abandoned UST and/or petroleum impacted soils are encountered during the demolition or redevelopment of Subject Property improvements. Estimated cost: \$1,500.
- EBI recommends that reports confirming the purpose of the three groundwater monitoring wells at the Subject Property and the results of any sampling be provided for review. EBI notes that if the monitoring wells are no longer used, their proper abandonment is required. Estimated cost: Action Item
- EBI recommends that all suspect asbestos-containing materials (ACM) identified be bulk sampled by a licensed asbestos inspector prior to any renovation or demolition activities. Any materials that are determined to be asbestos-containing through bulk sampling should be removed by a licensed abatement contractor prior to renovation or demolition activities that would disturb these materials. Estimated Cost: Action Item.

This certificate is issued to

Louis Allen Abramson, Architect 46 West 46th Street, City.

, for the owner or owners.

The superimposed, uniformly distributed loads, or their equivalent concentrated loads in any story shall not exceed the live loads specified above; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically

BORGUGH OF MANHATTAN, CITY OF NEW YORK

Left the send of the send

Unless specifically stated above, the building or any part thereof; if certified as a public building, shall not be used as a building in which persons are harbored to receive medical charitable or other learning by treatment, such as a hospital, asylum, etc., or in which persons are held or detained under legal restraint, such as a police station, jail, etc.; nor shall it be used as a motion picture theatre as defined in section 30, chapter 3, Code of Ordinances; nor as a theatre or opera house or other building intended to be used for theatrical or operatic purposes or for public entertainment of any kind, for the accommodation of more than 300 persons, provided to

Unless specifically stated above, the building or any part thereof, if certified as a residence building, shall not be used as a tenement house as defined in the tenement house law, nor shall it be used as any form of residence building having more than 15 sleeping rooms; nor shall it be used as a lodging house within the meaning of Sec. 1305 of the Greater New York Charter.

bus Unless specifically stated above, the building or any part thereof, if certified as a business building, shall not be used as a garage, inition vehicle repair shop or oil selling station as defined in section 1, chapter 10, Code of Ordinances; nor shall it be used for the generation or compression of acetylene; nor as a factory building as defined in the labor law, nor as a grain elevator; nor as a coal pocket.

burt Except as otherwise noted above, the building, or any part thereof, if located elsewhere than in an unrestricted district, shall not be used for any of the purposes enumerated in paragraph (a) of section 4 of the building zone resolution; nor for any trade, industry or use that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise; nor for any kind of manufacturing not already prohibited, except that, if located in a business district, rot more than twenty-five per cent. of the total floor space may be so used, or space equal to the area of the lot in any case.

Except as otherwise floted above, the building, if certified as a garage, may not be used for more than five cars on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance-to-a-public-school, or-in-which-portion-there-exists any-hospital-maintained as a charitable institution; and in no case within a distance of 200 feet from the nearest exit from or entrance to a public school; nor within two hundred feet of any hospital maintained as a charitable institution.

If the building has, at any time previous to the issuance of this certificate, been the subject of an appeal to the board of appeals or of a petition to the board of standards and appeals resulting in modification or variation of law or any lawful requirement, the construction and arrangement of the building as specified in the resolution granting such modification or variation, must be maintained, and all conditions imposed by either board must be observed.

No change or re-arrangement in the structural parts of the building, or affecting the lighting or ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located, i until an approval of the same has been obtained from the superintendent of buildings.

This certificate supersedes each and every previously issued certificate of occupancy for this building or any part thereof, and each and every such previously issued certificate shall be null and void; and this certificate in turn becomes null and void upon the issuance of any new lawful certificate.

This certificate does not in any way relieve the owner or owners, or any other person or persons in possession or control of the building, or any part thereof, from obtaining such other permits or licenses as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

This certificate does not authorize the use or operation of any elevator in the building without the special certificate required by section 563 of the building code.

If the building is or is required to be equipped with standpipes or other fire extinguishing or gas shut off appliances, this certificate is not complete until such standpipes or other appliances have been inspected by the fire department (or by the Tenement House Department, in the case of a gas shut off in a tenement house) and approved in writing, either in a separate certificate or by endorsement upon this certificate. (Space for such endorsement is provided on page 4 of this certificate.)

If this certificate is marked "Temporary," it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to a tenement house unless also approved by the tenement house commissioner; and it must be replaced by a full certificate as soon as the entire building is completed according to law and ready for occupancy.

The word "class" as used in this certificate refers to the classification of buildings in the building code

This certificate is issued in accordance with the provisions of section 411-a of the Greater New York Charter and of section 5 of chapter 5 (Building Code) of the Code of Ordinances of the City of New York.

BUREAU OF BUILDINGS BOROUGH OF MANHATTAN, CITY OF NEW YORK

CERTIFICATE OF OCCUPANCY No. 14448

192

Supersedes Certificate of Occupancy No. 13411

To the owner or owners of the building:

New York Oct . 3 1928

THIS CERTIFIES that the building located on Block 1773 , Lot 37

under a permit, Application No. 52 H.B. of 19 27 conforms to the approved plans and specifications accompanying said permit and any approved amendments thereto, and to the requirements of the building code and all other laws and ordinances and to the rules and regulations of the hoard of standards and appeals, applicable to a building of its class and kind, except that in the case of a building heretofore existing and for which no previous certificate of occupancy has been issued and which has not been altered or converted since March 14, 1916, to a use that changed its classification as defined in the building code, this certificate confirms and continues the existing uses to which the building has been put; and

CERTIFIES FURTHER that the building is of nonfixed roof construction within the meaning of the building code and may be used and occupied as a business building as hereinafter qualified, in a business district under the building zone resolution, subject to all the privileges, requirements, limitations, and conditions prescribed by law or as hereinafter specified.

, for the owner or owners.

not exceed the live loads specified above; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the appreciate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

NATIANIATION YORK

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

Unless specifically stated above, the building or any part thereof, if certified as a public building, shall not be used as a building in which persons are harboard to receive inedical, charitable or other care or treatment, such as a hospital, asylum, etc., or in which persons are held or detained under legal restraint, such as a police station, jail, etc.; nor shall it be used as a motion picture theatre as defined in section 30, chapter 3, Code of Ordinances; nor as a theatre or opera house or other building intended to be used for theatrical or operatic purposes, or for public entertainment of any kind, for the accommodation of more than 300 persons.

Unless specifically stated above, the building or any part thereof, if certified as a residence building, shall not be used as a tenement house as defined in the tenement house law; nor shall it be used as any form of residence building having more than 15 sleeping rooms; nor shall it be used as a lodging house within the meaning of Sec. 1305 of the Greater New York Charter.

Unless specifically stated above, the building or any part thereof, if certified as a business building, shall not be used as a garage, motor vehicle repair shop or oil selling station as defined in section 1, chapter 10, Code of Ordinances; nor shall it be used for the generation or compression of acetylene; nor as a factory building as defined in the labor law, nor as a grain elevator; nor as a coal pocket.

Except as otherwise noted above, the building, or any part thereof, if located elsewhere than in an unrestricted district, shall not be used for any of the purposes enumerated in paragraph (a) of section 4 of the building zone resolution; nor for any trade, industry or use that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise; nor for any kind of manufacturing not already prohibited, except that, if located in a business district, not more than twenty-five per cent. of the total floor space may be so used, or space equal to the area of the lot in any case.

Except as otherwise noted above, the building, if certified as a garage, may not be used for more than five cars on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance to a public school, or in which portion there exists any hospital maintained as a charitable institution; and in no case within a distance of 200 feet from the nearest exit from or entrance to a public school; nor within two hundred feet of any hospital maintained as a charitable institution.

If the building has, at any time previous to the issuance of this certificate, been the subject of an appeal to the board of appeals or of a petition to the board of standards and appeals resulting in modification or variation of law or any lawful requirement, the construction and arrangement of the building as specified in the resolution granting such modification or variation, must be maintained, and all conditions imposed by either board must be observed.

No change or re-arrangement in the structural parts of the building, or affecting the lighting or ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located, until an approval of the same has been obtained from the superintendent of buildings.

This certificate supersedes each and every previously issued certificate of occupancy for this building or any part thereof, and each and every such previously issued certificate shall be null and void; and this certificate in turn becomes null and void upon the issuance of any new lawful certificate.

This certificate does not in any way relieve the owner or owners, or any other person or persons in possession or control of the building, or any part thereof, from obtaining such other permits or licenses as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

This certificate does not authorize the use or operation of any elevator in the building without the special certificate required by section 563 of the building code.

If the building is or is required to be equipped with standpipes or other fire extinguishing or gas shut off appliances, this certificate is not complete until such standpipes or other appliances have been inspected by the fire department (or by the Tenement House Department, in the case of a gas shut off in a tenement house) and approved in writing, either in a separate certificate or by endorsement upon this certificate. (Space for such endorsement is provided on page 4 of this certificate.)

If this certificate is marked "Temporary," it is applicable only to those parts of the building indicated on its face, and certifics to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to a tenement house unless also approved by the tenement house commissioner; and it must be replaced by a full certificate as soon as the entire building is completed according to law and ready for occupancy.

The word "class" as used in this certificate refers to the classification of buildings in the building code (section 70).

This certificate is issued in accordance with the provisions of section 411-a of the Greater New York Charter and of section 5 of chapter 5 (Building Code) of the Code of Ordinances of the City of New York.

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced to a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with a some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL
BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended not from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarmi systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the huilding indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration,

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

APPENDIX D PROFESSIONAL QUALIFICATIONS

Scott Barta

Staff Scientist 21 B Street Burlington, MA 01803

Office: 781.425.5126 Mobile: 978.857.0167

SUMMARY OF EXPERIENCE

Mr. Barta is a staff scientist specializing in Phase I Environmental Site Assessments (ESAs) within the commercial real estate industry. Since November 2014, Mr. Barta has completed over 100 Phase I Environmental Site Assessments, which have been used to evaluate current and historic environmental conditions for real estate transactions. Mr. Barta has developed a detailed understanding of environmental issues for commercial and residential properties. Additionally, Mr. Barta has participated in the oversight of remedial activities, primarily dust monitoring and soil removal for Massachusetts Hazardous Waste Sites.

RELEVANT PROJECT EXPERIENCE

<u>Phase I Environmental Site Assessments</u>: Mr. Barta has conducted ASTM Phase I Environmental Site Assessments for several commercial and residential properties in the northeast United States. Assessments have adhered to the ASTM E 1527-13 standard. Additional services provided, as conditions outside of the ASTM standard, have included asbestos inspections, lead paint sampling, and radon sampling.

<u>Remediation</u>: Mr. Barta has conducted dust monitoring and soil removal oversight activities to maintain a safe work zone and ensure proper disposal of contaminated soils. Projects include the 26 Howley Street bridge construction project, the Mishawum Road Dave and Busters construction, and the Jet Aviation parking lot construction.

<u>Subsurface Investigations</u>: Mr. Barta has conducted groundwater gauging and sampling activities in support of due diligence Phase 2 subsurface investigations. Sites include Hanscom Air force Base and Beacon Street in Somerville Massachusetts.

EDUCATION

B.S. Environmental Science and Policy, Plymouth State University, Plymouth, NH, 2012

PROFESSIONAL REGISTRATIONS

Asbestos Inspector Accreditation, 2015

ASTM E 1527 Phase I Environmental Site Assessment Training, 2014

U.S. Department of Housing and Urban Development (HUD) Lead Based Paint Visual Assessment Training Course, 2014

Hallie A. Vitolo

Program Director 8119 Waterview Boulevard Lakewood Ranch, FL 34202 Office/Mobile: 603.818.2750

SUMMARY OF EXPERIENCE

Ms. VITOLO has over 25 years of experience in the environmental consulting industry. She has conducted numerous site assessments, extensive subsurface investigations and remedial design and installation work on both oil and chemical waste sites. Her work with state regulatory agencies to negotiate reasonable cleanup solutions and experience with alternative environmental insurance coverage has enabled Ms. Vitolo to assist large portfolio clients to find ways to better assess and minimize long-term liability. She has proven knowledge of realistic remediation costs and performance based on many years work as an environmental construction project manager.

Ms. Vitolo has worked in the due diligence industry for over 10 years and has conducted technical review of thousands of Phase I Environmental Site Assessments throughout the united states. She has worked with numerous Wall Street lending institutions, legal counsel and government agencies to develop strategies for managing environmental liability in the real estate industry.

RELEVANT PROJECT EXPERIENCE

Environmental Site Assessments: Ms. Vitolo has conducted technical review of thousands of ASTM Phase I Environmental Site Assessments for industrial, commercial, retail, healthcare, raw land, multi-family residential properties and telecommunication sites. She is familiar with Fannie Mae, Freddie Mac, SBA, FDIC and numerous lender-specific requirements.

Subsurface Investigations: Ms. Vitolo has completed subsurface investigations at commercial properties across the united states. She has overseen drilling activities, boring installation, soil and groundwater sampling, remedial pilot studies, tank removals, contaminated soil removal projects and remedial system installations. She has worked with regulatory agencies to evaluate remedial strategies and risk and has successfully closed numerous sites.

EDUCATION

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are

23 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 15 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 03/19/2018 has revealed that there is 1 ERNS site within approximately 0.125 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/14/2018 has revealed that there are 4

NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/08/2017 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/14/2018 has revealed that there are 57 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are

2 NY CBS AST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there is 1 NY RES DECL site within approximately 0.18 miles of the target property.

Other Ascertainable Records

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 03/07/2018 has revealed that there are 3 NY DRYCLEANERS sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
DAVAL CLEANERS Facility Id: 2-6203-00048	2083 LEXINGTON AVE.	N 0 - 1/8 (0.056 mi.)	C103	172

FANCY EASTSIDE CLEAN Facility Id: 2-6203-00172	2315 THIRD AVENUE	ENE 0 - 1/8 (0.054 mi.)	D100	169

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites

on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 04/30/2018 has revealed that there are 298 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 9 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA HWS: The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA HWS list, as provided by EDR, has revealed that there are 3 NY RGA HWS sites within approximately 1 mile of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

7/27/05 - Transferred for closure review to M Johnson. 10/27/05 - Transferred to K. Hale for closure review. 6/15/06 Transferred for closure review to T Knizek. 8/18/08 Spill transferred from T Knizek to Sheilla Paige. (SRP) 4/23/09 - Austin - transferred this spill from Page (in Central Office) to Ketani - end 5/12/09 - Raphael Ketani. I copied the notes from the outside database and put them in the UIS database: United States Postal Service - Howard Huie (212) 330-3752, 421 8th Avenue, NY Status= Awaiting Response; may require

RP to do additional work Howard Huie's email address:

howard.huie@usps.gov - UST Closure Report states the 2000 gallon heating oil tank was closed in place. ATC (consultant) recommended,

additional investigation to delineate the extent of any soil

contamination. Asked Mr. Huie if recommendations were carried out. Have not heard back from him. This spill site may require additional work. Synopsis= PBS (2-365351) Facility Report shows that tank was closed/removed in May 1, 2000. Spill Report states that tank was abandoned in place and soil samples taken showed contamination. UST

Closure Report (on file) states the 2,000 gallon heating oil

underground storage tank was closed in place at the USPS Triborough Station located at 167 East 124th Street, New York, NY 10035. The

S104787955

tank was constructed of single walled steel and was not in service at the time of closure. Structural and space constraints prevented the UST from being entirely removed from the site. Spill File Review 8/3/2000Spill called in. Caller stated that the tank was abandoned in place. Soil samples showed contamination. 8/2000ATC Associates Inc. submitted to USPS an UST Closure Report. ATC recommended additional investigation to delineate the extent of any soil contamination with the installation of soil borings in accessible areas around the tank to verify the extent of any soil contamination resulting from the operation of the tank. Information Gathering 8/19/2008Jennifer Taylor and Vincent Ricevuto (individuals who prepared the UST Closure Report) no longer work at ATC. Left message with a gentleman named Chris. 9/23/2008Called (212) 330-3900 (number on PBS Facility Information Report) and was directed to Howard Huie manager of USPS building maintenance. His number is (212) 330-3752. Left message and will call him again tomorrow if I don t hear back. Howard Huie called back and asked that I send him our requests via email (howard.huie@usps.gov). Just sent him an email requesting any information he has available on the status of the spill. 12/8/2008Have not heard back from Howard Huie. I sent him a follow up email. Howard Huie replied. He said that he had documentation on file. I asked him if he could send me a copy via mail or fax (specifically of a site assessment report with analytical data). 12/9/2008Mailed letter requesting information. 12/10/2008Received fax of report I already had on file. Emailed Howard Huie telling him to ignore the letter I sent yesterday and asked him if the recommendations from the UST Closure Report were actually carried out. 1/2/2009Have not heard back from Howard Huie. Spill may require additional work. 5/28/09 - Raphael Ketani. I reactivated the spill case. It concerns a 2,000 gal. UST that had contained #2 fuel oil (PBS #2-365351). The tank had leaked and had caused soil contamination. I reviewed the August 2000 UST Closure Report that was submitted by ATC. ATC listed the five soil sample analytical results in Table 1. One sample each was taken from the sides and ends of the tank. One sample was taken from below the tank. All of the analytical results were compared to TCLP Alternative Guidance Values, and Human Health Guidance Values. Why is unclear. When compared to TAGM 4046 RSCO limits, only several of the benzo series analytes in samples TRI-X4, and TRI-X5 had exceedences, and these were low exceedences. I tried to contact Mr. Huie of the USPS (212) 330-3752 regarding the investigative work, but could only leave a message. I contacted ATC Associates, Inc. (610) 313-3100 and spoke to the secretary. She said that the project manager and the program director listed on the cover letter to the closure report no longer worked for ATC. She added that the division they were in has been completely eliminated from the company. As the soil contamination is essentially all below TAGM standards, and as the site is 2,000 feet inland (to the west) of the Harlem River with little chance of the contamination escaping to the river, and as no one is reachable in order to gain additional information regarding the investigation, and as the spill took place 7 years ago and the oil is probably devolatized. I am closing the spill case. 11/26/12 - Raphael Ketani. Carrie Nelson of ADR Environmental, 225 30th Street, Ste 202, Sacramento, CA, 95816 [(856) 313-8721/nelson.carrie@verizon.net] called. She requested a closure letter for the case and a copy of the investigation report. I sent her the letter and the report. I also sent the closure letter to Tony Rubio, U.S. Post Office, 167 E. 124th Street, NY, 10035-9998.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

DEC Memo: "04/08/10- Zhune spoke to Paul from Milro 516-379-1500. He said Petro

called Milro to request installation of temporary tank. Petro informed Milro that there was a leaking tank at this site in the basement. Milro pumped out 275 gallons of oil # 2 from leaking tank into a 275 gallons temporay tank. Paul also said the owner did not want Milro to do the cleanup becouse she think spill is Petro responsability. Zhune spoke to Ira Pressir owner of Capital Captre Electrical 212-534-3546. He said after fill up we noticed kind of leak. Petro said it was in the bottom of the tank, they put patch on it. Approximately 1 galon of oil went underneath the tank. As per Ira floor underneath the tank is solid concrete. Petro cleaned the spill. Miro will come back next week to removed the old tank and install a new one. 04/20/10- Zhune inspected the site. Petro did not remove speedy-dry with contamination arround and under the tank also there is a big oil stain under the tank. Ira is going to call Petro to come back and clean the area arround and under the tank. 04/21/10- Ira called to say the Petro came back to the site to remove the speedy-dry with contamination and power wash the area affected. As

per Ira the area arround and under the tank is completly cleaned. 05/07/10- Zhune called Ira. He said Milro replaced the tank and the pipes yesterday 05/06/10 Every thing is good now. Spill Closed. "

Remarks: "TANK LEAKING, APPROX 1 GALLONS SPILLED TO CONCRETE FLOOR, CLEANUP IN

PROGRESS."

Town: New York City Record Added Date: 11/27/2017 Record Updated Date: 02/07/2018 Update By: **JHOCONNE**

Site Description: Location: The site is located in an urban area and denoted on the Manhattan Borough Tax Maps as Block 1790, Lots 1, 3, 5, 6, 41, 44,

> ultimately be merged into a single tax lot upon closing (slated for June 2018). The site is located on the western part of the city block bordered by East 126th Street to the north, Second Avenue to the east, East 125th Street to the south, and Third Avenue to the west. Site Features: The site encompasses an area of about 45,600 square feet (1.04 acres). The current use of each lot is described below: Lot 1: vacant one-story commercial building with one cellar level (most recently occupied by a variety store) Lot 3 (formerly Lots 3 and 49): vacant lot Lot 5: vacant three-story, mixed-use commercial/residential building with a partial cellar level Lots 6, 41, 44, and 45: vacant lot Lot 101: vacant four-story, mixed-use commercial/residential building with one cellar level Lot 8: two-story auto repair shop with a partial cellar level with three 275-gallon aboveground storage tanks (ASTs) Lot 40: vacant lot Lot 46: two-story dry cleaner with a partial cellar level Current Zoning and Land Use: The entire site is located in the C6-3 mixed commercial and residential district, which is consistent with the current land use. The proposed development will be as-of-right. The surrounding area includes commercial, industrial, residential, institutional, and

45, 46, and 101 and portions of Lots 8 and 40, all of which will

transportation/utility buildings, as well as vacant lots, construction sites, and open space. Past Use of the Site: The site has been occupied by residential, commercial, and industrial facilities since the late 1800s. Historical site uses include a

transmission and muffler shop, a metal supply shop, an auto repair

shop (also a current use), parking, a tire repair shop, a used car dealership, and dry cleaner (also a current use). Based on the November 2006 Phase I Environmental Site Assessment, gasoline tanks are historically associated with the former used car dealership (Lot 46). Site Geology and Hydrogeology: The USGS Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey indicate that the bedrock underlying the site consists of white calcite-dolomite marble (Inwood Marble). During subsurface investigations, historic fill was identified at the surface of the site, predominately consisting of brown, fine- to coarse-grained sand with varying amounts of gravel, silt, brick, debris, ash, coal, and organic material. The surficial historic fill layer extends to about 8 to 20 feet below grade surface (bgs) across the site footprint. Glacial till, generally consisting of brown and grey, fine- to coarse grained sand with varying amounts of silt, clay, and gravel, was observed beneath the historic fill layer. The inferred regional groundwater flow direction for the area surrounding the site is to the east towards the Harlem River. Groundwater underlying the site was observed at depths ranging from 18 to 20 feet bgs across the site footprint during the 2017 subsurface investigation.

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available. Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised

as additional information becomes available.

subterranean tank. Riteway tank on the way to do the cleanup (Anthony is the supervisor). According to Jose, a bank employee, odor was first noticed when he came in at 8 am when the bank first opened. Odor is a lot better now that the door is opened and that there is better air circulation. It looks like it came out of the manhole and impact to drains. There is access to the tank room. According Mel Gonzalez from Petro Kings (delivery company. Phone# 9145764040), 1142

Gallons was delivered. 1/8/18-Zhune and Lin visited the site. Met Anthony Lara from Riteway and Jose Graulan 212-360-7532. (Assistant treasure). As per Jose the oil company deliveried oil yesterday and overfilled the tank. they noticed oil odor when they came to he bank at 8am. Apple Bank headquarter called Riteway to do the cleanup. The tank is a 2500 gallons tank and is located in the basement of the bank. Approximately 3 gallons of #2 fuel oil came by the vent pipe and 350 gallons spilled inside the tank room. There are oil outside the tank room. There are petroleum odors in the bank and in the basement. RiteWay is Cleaning the spill. They installed ventilation system in the bank. 1/8/18-Zhune spoke to Anthony. Anthony said that they finished the cleanup. 1/8/18- Zhune spoke to Jose. Jose said that after the cleanup the odors has improved. they are better than

> today morning. He asked me to call Neil to find out the company that is coming tomorrow morning to evaluate the air quality at the bank. I spoke to Neil and he said that ACE Environmental Consulting will be at the bank at 7:30 am to evaluate the air quality. 1/9/18-Zhune visited the site. Jose and I inspected the basement and the spill was cleaned. There was no petroleum odors in he basement and in the bank. As per Jose early in the morning ACE Environmental consulting performed an indoor air survey and it was determined that the results were low in concentrations. They open the bank to the public. There was oil outside by the vent pipe on the sidewalk. I spoke to Anthony Lara about the oil on the sidewalk. Anthony said that they will clean the oil outside by the vent pipe on the sidewalk. 1/25/18- Neil email-ACE conducted VOC sampling on Monday 1/22/18. VOC concentrations have lowered from an average of 1.0 ppm-1.2 ppm before establishing activated carbon filtration; to 0.1 ppm-0.3 ppm during filtration which is substantially lower and deemed acceptable for occupancy. I recommend maintaining filtration for one additional week until next Monday 1/29. I will instruct PAL to return one more time this week to change filters. Date/time to be confirmed "

DEC Memo: "need to send ttf letter to Property Manager: Mr. Joe Berko (212-687-0777) Berko & Associates 501 Fifth Ave - Suite 1408 New

York, NY 10017 Nov. 7, 2005 A Tank Test Failure Letter was sent to: Joe Berko Berko & Assoc. 501 Fifth Ave- Suite 1408 New York, NY 10017 11/16/05-Vought-Spoke with Maya Betesh (212-687-0777) and she will be faxing in repair invoices. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/14/06 - Raphael Ketani. I called up Berko & Associates and asked to speak to the case manager for the property. I spoke to Joseph Berko. He said that all of the documentation showing that the tank was abandoned in place and that everything was taken care of was sent some time ago. I told him I don't have anything to look at. He said he will send it again. 6/15/06 - Raphael Ketani. Mr. Berko called me back. He stated that the tank was abandoned in place. I looked up the PBS case #2-610163

the tank was abandoned in place. I looked up the PBS case #2-610163 and it showed the tank abandoned in place. I told Mr. Berko that I needed the failed tank test results, why the tank failed, and a letter report from Brookside Environmental, the company that abandoned the tank, stating that there were no impacts to drains or the environment. He said he would get these documents for me. 7/20/06

- Raphael Ketani. I left a message for Mr. Berko asking what was

presently taking place at the site. 8/2/06 - Raphael Ketani. I spoke to Mr. Berko. He said he was just the mortgage broker at the time. He said that he has the information and will get me the documentation that I need. 8/4/06 - Raphael Ketani. I received the dry fail tank and system test results and the cover letter from Eastside Floors stating there was no environmental impact or impact to the sewer system or drainage system. Also the cover letter stated that no oil was spilled as it was a dry leak, that the tank was abandoned in place, and that they have converted to electric heat. Based upon the

above listed documentation, I am closing the spill case."

Remarks: "Systems test failure. No product released."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

FINDS:

Registry ID: 110012171292

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Registry ID: 110019636508

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "1/9/98 Faulty equipment on silver unleaded submersible system.

Equipment has been repaired. Amoco to make arrangements for cleanup.

1/14/98 Spoke to Jerry, Crompco. The gauge on the silver U/L submersible pump was visibly leaking. Amoco Env. aware of problem. Will need subsurface investigation. 1/14/98 Left message for Rae Adams, Amoco (973-331-7012). Rommel spoke to Eric Lismanis, Baltec (914-273-2626)- was aware of spill. He said that they had vacced out between 30-50gal gasoline and water from tank sump. They were planning to perform a Geoprobe investigation. Rommel requested Baltec send a brief investigation plan. He will inform the project manager to address it to K. O'Dowd's attention. 2/9/98 Received letter from Baltec, Jeffrey Anderson, summarizing investigation plan. 10/22/98 Received Baltec Investigation Report(8/25/98). 4 soil borings by Geoprobe installed 2/9/98. Samples collected just above groundwater interface at depths from 7 to 13' bgs. Highest PID reading was 665ppm from 12'bgs in B-3. On 3/8/98, Baltex collected 8 groundwater samples

from existing monitoring wells, MW-A, MW-C, MW-D, MW-E, MW-F, MW-G, MW-H, and MW-I. Samples were analyzed by EPA Method 8020 for BTEX/MTBE. DTW approx 11-14'bgs. Total BTEX ranged from ND (MW-A,

MW-C, MW-D, MW-E, MW-G) to 600ppb(MW-H). MTBE ranged from ND(MW-G) to 90,800ppb(MW-H). Downgradient well, MW-D, displayed ND total BTEX and

BP AMOCO STATION #13401 (Continued)

S102962041

13100ppb MTBE. MW-H, adjacent to the tank vault, showed concentrations of BTEX to be 600ppb and MTBE at 90,800ppb. 03/17/03 REASSIGNED FROM ROMMEL TO VOUGHT. 11/28/03 Reassigned from Vought to Foley. File review: Pre-2000 data taken from First and Third Quarter 2000 report. Highest MTBE readings 3/18/98 91000ppb MW-H (source area) 9/2/98 27000ppb MW-H 12/23/98 51000ppb MW-F (downgradient of source) 3/12/99 7950ppb MW-F 6/23/99 13400ppb MW-E (downgradient of source) 9/1/99 19200ppb/19100ppb MW-H/MW-F (source and downgradient) 1/13/00 4450ppb MW-H 7/31/00 2380ppb MW-C (most downgradient) 12/5/00 6240ppb MW-D (most downgradient) 2/27/01 7940ppb MW-D 6/11/01 3520ppb MW-C 9/28/01 11000ppb MW-J (source area) 12/12/01 3370ppb MW-C 3/15/02 2830ppb MW-C 6/20/02 1050ppb MW-D 8/26/02 1450ppb MW-D 12/12/02 449ppb MW-I (source area) 3/24/03 529ppb MW-I 6/10/03 284ppb MW-F Highest BTEX readings have generally remained in the source area within MW-H and MW-I. Highest reading was actually from MW-J (since destroyed) with 2790ppb total BTEX on 12/12/01. 6/10/03 BTEX highest at MW-I at 256ppb. 2/5/04 Received SHAR Addendum report. Four soil borings were installed on 10/3/03 by Geoprobe to confirm that no source of contamination exists in soil, as indicated by groudwater concentration trends. Groundwater detected at 10-14'bgs. Borings were completed to 16'bgs. Samples were collected from the soil exhibiting highest PID reading or at soil water interface. Results indicated that five VOCs were detected at concentrations above soil cleanup objectives in one of four samples collected [SB-N(11-12')]. Total BTEX ranged from ND(SB-K, SB-L, SB-M) to 103998ppb(SB-N). MTBE ranged from ND(SB-K) to 7ppb (SB-M). Total VOCs ranged from ND (SB-k) to 279568ppb(SB-N). Petroleum stains were noted in all borings at approx 15'bgs. 3/16/04 3Q and 4Q 2003 reports received. No LNAPL. Max total BTEX 184ppm(MW-1) and max MTBE 636ppm(MW-1) from 11/20/03. On 1/25/05, Spill #0411494 was reported for gasoline contamination detected on adjacent property(empty lot) at 249 E 125th St. Consultant discovered while drilling two Geoprobes for a potential buyer. Notified B. Fisher of adjacent property issue. However, results did not indicate contamination and spill #0411494 was closed. 3/15/05 Received Line Closure and Dispenser Upgrade Report. As part of spill prevention initiative, they excavated 150' of single-walled steel piping and replaced it with flexible double-walled Geoflex piping; excavated 80' of abandoned single-walled steel piping; installed sumps around the submerged pumps of the UST system; removed existing shallow spill containment boxes beneath each dispenser and replaced with deep Environ spill boxes; and installed electronic leak detection at each product line which were tied to Veeder Root. Lab analysis of post-ex soil samples collected from beneath the product dispensers, from beneath the former and abandoned product piping, and from around the top-of-tank excavation and tank vent lines identified concentrations of VOCs in excess of soil cleanup objectives (4 of 22 samples, D-1(4.4'), PR-2(4'), PR-3(3.5'), SS-2(2.3')). 4/26/05 3Q04sampled MW-I in 9/04. Total BTEX at 455ppb and MTBE at 12ppb. 4Q04-Sampled MW-I, MW-O, MW-P in 12/04. BTEX ranged from 2766ppb(MW-P) to 6180ppb(MW-O). MTBE from 119ppb(MW-I) to 268ppb(MW-P). 9/19/05 1Q05-DTW 10.9-12'bgs. No LNAPL. BTEX from 2086ppb(MW-O) to 5172ppb(MW-P). MTBE from 29ppb(MW-I) to 493ppb(MW-P). 2Q05- DTW 11.2-12.2'bgs. No LNAPL. BTEX from 1172ppb(MW-O) to 2957ppb(MW-P). MTBE from 52ppb(MW-I) to 231ppb(MW-O). 9/28/05 Subsurface Assessment Report received for activities completed between 11/7/04 and 12/7/04. One 2 diameter MW-O and one 4 diameter MW-P were installed to 18'bgs. GW was encountered at 12-13'bgs during installation. A soil sample was

BP AMOCO STATION #13401 (Continued)

S102962041

collected from MW-O at 10.5-12.5'bgs and from MW-P at 11-13'bgs, and analyzed by 8260. Soil contamination noted in MW-P at total VOC concentration of 224,640ppb. Three groundwater samples were collected from MW-I, MW-O, MW-P on 12/23/04 and analyzed by 8260. Total BTEX ranged from 2766ppb(MW-P) to 6180ppb(MW-O). MTBE ranged from 119ppb(MW-I) to 268ppb(MW-P). 11/8/05: Reviewed the guarterly monitoring report dated 11/1/05. Three monitoring wells were sampled on 9/19/05. Many others wells with no contamination are no longer being sampled. Based on the varying lithology that comprises the screened intervals of the on site monitoring wells...the measured ground water elevations may not reflect the regional ground water flow...(to the) northeast towards the Harlem River. Total BTEX in all three wells is approximately 1000ppb and MTBE is 25-290 ppb. Contamination appears to be attenuating on its own. Delta is evaluating possible Fenton's injections in 3Q06. 3/15/06 Reassigned from Foley to Tang. (KMF) 3/20/2008 - Feng - eDoc Quarterly Monitoring Report 3Q2007. (RJF) 10/29/2008 - 2Q2008, 10/23/2008, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled 8/13/2008. 3 wells were gauged. NO LNAPL. DTW 11.14' to 12.28' bg. Flows to northeast. 3 wells were sampled. Max benzene 7.6 ug/L (MW-I). Max BTEX 4,213 ug/L (MW-I). Max MTBE 320 ug/L (MW-O). (RJF) 8/13/2009 - Reviewed the Site History Letter, dated June 30, 2009, by Delta, pdf copy. On 1/9/1998, there was a gasoline inventory loss at the Amoco service station. During the same day, a leaking valve a the pump island was discovered during the tank testing. On 1/14/1998, appro 200 gallons of gasoline/water mix was removed from the pump sumps via a vacuum truck. During the November-December 2004 lines closure and dispensers upgrade, soil endpoint samples show elevated VOCs. PR-2 hit over a million ug/kg total VOCs at 4 feet. The letter also state that the five 4,000-gallon USTs were removed in November 2008. Checked PBS record, no record shows the removal. Drilling Work Plan, dated June 30, 2009, by Delta, pdf copy. Delta propsed to install 2 wells MW-Q and MW-R at both site of the tanks area. Email comments to Delta on the History letter and the DWP. Asked Delta to check whether there was tank closure and dispenser closure, and tank closure report if there is any. DEC required 2 more wells at the former elevated lines closure dispensers upgrade endpoint samples, D-1, PR-2 and PR-3 area. attached site plan. Work plan revision within 30 days, 9/2009. (RJF) email from Igor Goldstein (Delta). No tanks were removed in November 2008 and will get back to me on the two additional wells. 11/5/2009 -3Q4Q2009, 10/30/2009, pdf, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled on August 31, 2009. 3 wells were gauged. NO LNAPL. DTW 10.93' to 12' bg. Flows to north. 3 wells were sampled. Max benzene 46 ug/L (MW-I). Max BTEX 1,412 ug/L (MW-I). Max MTBE 390 ug/L (MW-O). (RJF) 12/15/2009 -Reviewed Drilling Work Plan revision, dated 9/9/2009, by Delta. Delta has added 2 more wells, MW-S on the west sidewalk of 2nd Ave and MW-T on the north sidewalk of East 125th Street. Work plan is approved. SHARA due 3/2010. (RJF) 4/12/2010 - email from Delta As you are aware, Delta Consultants (Delta) arranged for the installation and sampling of additional ground water monitoring wells at the subject site. However, drilling activities took longer then expected due to the presence of underground utilities and numerous refusals which, in turn, lead to additional private mark-outs conducted at the drilling locations and several mobilization events. As such, Delta will not have all well installation and sampling data in order to complete

Subsurface Hydrocarbon Assessment Report Addendum (SHARA) for the subject site by April 30, 2010. Delta is hereby requesting an extension for the submittal of SHARA report for the subject site until May 31, 2010. Please indicate your office comments to this request in your reply. 6/10/2010 - 1H2010, 4/21/2010, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled on 2/18/2010. 3 wells were gauged. NO LNAPL. DTW 10.99 12.06' bg. Flows to north. 3 wells were sampled. Max benzene 4.1J ug/L (MW-I). Max BTEX 2,257 ug/L (MW-I). Max MTBE 67 ug/L (MW-O). 7/20/2010 - Informed by Hasan Ahmed from spill about the new spill 10-04193 occured on July 4th, 2010. A customer hit the dispenser 3/4 and leaked. The containment box underneath the dispenser has collected a portion of the gasoline and some staining was visible on the pavement going to a small 18 X18 drain grate near the corner of the canopy with PID 51.9 to 436 ppm. Tyree was onsite on July 4 and pumped out 30 gallons of gasoline from the dispenser containment and from the nearby 18 X18 drain. Alvin Petroleum was onsite July 7 and repaired the dispenser, clean out the dispenser 3/4 containment box and replace the gravel that sits on the bottom of the containment box. The station operator reviewed the inventory records which show approx. 40 gallons of premium and 34 gallons of regular are unaccounted for on July 4, but with % variance in the system this may only amount to 15 gallons of premium and 10 gallons regular (or roughly 30 gallons total). The spill 10-04193 was closed and consolidated under spill 97-11337. email David Greffenius with questions. 1) is the containment box under that leaked dispenser tight or seal well? and its size? 2) is the 18 x18 drain a dry well or connected to the sewer? If it is a dry well, then the sediment shall be removed and confirm with some soil samples. 3) please send me a map indicating which one is dispenser 3/4 that was being hit and leaked. 7/30/2010 - Subsurface Hydrocarbon Assessment Report Addendum, dated 5/28/2010, by Delta. MW-S could not be installed due to the presence of underground utilities and NO DRILL marks sprayed on the sidewalk by the NYCT. On 2/4/2010, EnviroTrac hand cleared 2 soil boring locations to 6.5 feet, but could not establish the desired depth using the onsite equipment. On 3/1-2/2010, EnviroTrac completed the hand clearing and advanced MW-Q, MW-R and MW-T using Geoprobe unit equipped with hollow stem auger and macro sampler. All 3 soil borings were drilled to 17.5 feet where refusal, most likely due to the presence of bedrock, was encountered. 5 soil samples were taken. MW-Q (9.5-10'), VOCs ND, 800 benzo(a)anthracene, 820 benzo(a)pyrene, 1,200 benzo(b)fluoranthene, 440 benzo(k)fluoranthene, 730 chrysene, 210 dibenz(a,h)anthrancene. MW-Q (14.5-15'), 6,000 n-propylbenzene, 12,630 total VOCs, 500 benzo(a)anthrancene, 500 benzo(a)pyrene, 680 benzo(b)fluoranthene, 230 benzo(k)fluoranthene, 570 chrysene. MW-R, (12-12.5'), 360 total VOCs, 4,500 benzo(a)anthracene, 3,000 benzo(a)pyrene, 3,500 benzo(b)fluoranthene, 1,800 benzo(k)fluoranthene, 3,300 chrysene, 460 dibenz(a,h)anthracene. MW-T (12.5-13'), total VOCs ND, no exceedances SVOCS. Groundwater was collected on 4/13/2010. MW-Q, 13 benzene, 8.1 toluene, 19 ethylbenzene, 6.1J xylenes, 46 BTEX, 220 isopropylbenzene, 1,300 n-propylbenzene, 13 n-isopropylbenzene, 6.8 1,2,4-trimethylbenzene, 99 n-butylbenzene, 75 sec-buylbenzene, 78 naphthalene, 1,845.4 total VOCs, 20 benzo(a)anthracene, 15 benzo(a)pyrene, 17 benzo(b)fluoranthene, 8.5 benzo(g,h,i)perlene, 7.9 benzo(k)fluoranthene, 20 chrysene, 69 fluoranthene, 7.3 indeno(1,2,3-cd)pyrene, 240 naphthalene, 55 pyrene, 581 total SVOCs.

S102962041

MW-R, VOCs ND, 0.043J benzo(a)anthracene, 0.049 benzo(a)pyrene, 0.072 benzo(b)fluoranthene, 0.024J benzo(k)fluoranthene, 0.047J chrysene, 0.035J indeno(1,2,3-cd)pyrene, 0.565 total SVOCS. MW-T, 14.6 total VOCs, 0.16 benzo(a)anthracene, 0.11 benzo(a)pyrene, 0.17 benzo(b)fluoranthene, 0.066 benzo(k)fluoranthene, 0.19 chrysene, 0.029J indeno(1,2,3-cd)pyrene, 3.481 total SVOCs. Based on the low concentration of detected compounds (total BTEX 46 ug/L), and since soil impacts appear to be limitted, Delta does not recommend any additional investigation and/or remediation activities with respect to the site at this time. Groundwater will be continued to be monitored on a biannually schedule. As agreed during the meeting on 6/23/2010, keep monitoring at this time and see how the monitoring data look like before more investigation/RAP. 11-30-2010 This spill is reassigned to Alex Z. as per Vadim Brevdo and Mark Tibbe instructions. AZ 4/11/2011 - Spill transferred back to JFeng. 7/21/2011 - 1H2011, 5/23/2011, by Anteagroup. The wells were sampled on 2/14/2011. 5 wells were sampled. Flows to east. NO LNAPL. Low BTEX and MTBE. Max BTEX 265 ug/L (MW-I). JF 5/31/12 - Raphael Ketani. Today I received the Antea Group Remedial Action Completion Report dated 5/24/12. I reviewed the report. The spill was initially called in on 1/9/98 due to a leaking dispenser valve. Two hundred gallons of a gasoline and water mix were recovered from a sump. An initial investigation found high soil and groundwater contamination. During October 1998 the consultant began EFRing wells I and H. By September 2000 a total of 8200 gals. of contaminated water, 559 gals. of petroleum hydrocarbons and 0.67 lbs. of LNAPL were recovered. During October 2003 an additional investigation was conducted. Soil analytical results were below the SCOs for borings K, L and M. Boring N results had 6 analyte exceedences. During November and December 2004 the station was upgraded and 250 tons of contaminated soil were removed. During November 2004, 22 soil samples were taken down to 4.5 feet under the former locations of the dispensers, the product lines, tank vent pipes, and tops of the sidewalls of the UST field. Only 4 samples exceeded the SCOs. During December 2004 two wells were installed. Well P had soil exceedences. The December 23, 2004 groundwater results for wells I, O and P indicated that BTEX and MTBE were over the limits. During March 1 and 2 of 2010, three wells were installed - Q, R and T. Q had soil BTEX exceedences and groundwater exceedences. T had SVOC exceedences. The groundwater monitoring shows impacts to the north and the east of the USTs. Wells I, O, P, Q, R and T were sampled on 2/20/12. I had 470 ppb of ethylbenzene and 110 ppb of total xylenes. O had very low VOC hits with 74 ppb MTBE. P had low double digit VOC hits. Q had very low VOC hits and 45 ppb benzene. R and T were non-detect. Groundwater is generally at 85 feet elevation and 11.30 feet below grade. Flow is to the east. A risk and exposure assessment and modeling were performed. This was done in part because there is a Dunkin Donuts restaurant on site. The Historical Soil Analytical Results Map dated 4/6/12 shows that there were very high endpoint results for total VOCs. PR-2 from November 2004 at 4 feet down had 1,269,260 ppb of total VOCs. Shallow borings B-1, B-2A, B-3 and B-4 from February 1998 had up to 647,000 ppb of total VOCs. SB-N of October 2003 at 11'-12' down had 279,568 ppb total VOCs. D-1, SS-2, D-5 and PR-3 from November 2004 and at shallow depth had up to 123,773 ppb total VOCs. MW-P from December 2004 at 11'-13' down had 288,572 ppb total VOCs. MW-Q and MW-R from March 2010 at 12' to 15' down had up to 12.630 ppb total VOCs and up to 62,070 ppb total SVOCs. Despite the excavation that took place, there

BP AMOCO STATION #13401 (Continued)

S102962041

is still very high contamination in the soil. However, B-1, B-2A, PR-2, PR-3, D-1 and D-5 were at locations that would presently be under the existing canopy. The extent of the remediation was found to be inadequate for the following reasons: 1) very high soil contamination was found to still exist at 13 locations depicted on the 4/6/12 Historical Soil Analytical Results Map 2) not enough borings and wells were performed in the northern half of the site and next to the tire shop and along the east side of the Dunkin Donuts in order to fully delineate the soil contamination 3) a well was not installed downgradient of MW-I in order to see what the analyte concentrations are in the groundwater that is about to leave the site 4) no end point samples were taken in the bottom of the tank graves and not enough end point samples along the sides of the tank field or within the footprint of the canopy area 5) utility locations are not indicated on the maps 6/1/12 - Raphael Ketani. I drafted a letter to Mr. Onufrak for the review of Hassan Hussein, EE III and head of the Hazardous Materials Unit. In the letter, I included the 5 points listed above and set a date of July 27, 2012 for the submission of a work plan for conducting further soil and groundwater contamination delineation. The letter was approved by Mr. Hussein and was sent out today. 6/27/12 - Raphael Ketani. Tim Fisher, Chris Meyer and Dr. Gordon Hinshalwood of Antea Group called me in a conference call. We discussed the DEC 6/1/12 review letter for the Antea Group 5/24/12 Remedial Action Completion Report. We went over each of the five above listed items. For item #1, Mr. Fisher explained that they had wanted to show what the concentrations used to be. He added that, by this time, the concentrations should be very low. For item #2, I explained the DEC's rationale for requesting further investigation of the northern part of the site. This was that there is very little information for this part of the site. We can't really understand what the subsurface conditions are or what effect the groundwater flow is having. Mr. Meyer stated there was no reason to do more work in this area as the spill was associated with the tank field and the dispensers. I insisted that they more fully investigate this area as there could be old tank fields, dry wells and other things below the site. I added that I was suspicious that the area had been left so clear when the site was redeveloped. I told them that I suspected there was a building in the northern part of the site at one time. At the end of this part of the discussion, Antea Group had not stated that they would do more work in the northern part of the site. For item #3, Mr. Fisher said that they didn't see the need to install a well further downgradient of well MW-I. He said that the analytical results from the groundwater sample from well MW-I were low, except for 470 pp of ethylbenzene and 110 ppb of total xylenes. I responded that this is why the DEC wants to see another well further downgradient. We want to be sure that elevated groundwater contaminants are not leaving the site as a plume. Again, Antea Group had not agreed to put another well further downgradient. For item #4, Mr. Fisher stated that they could not take more endpoint samples in the tank graves or along the sides as there are too many active fuel lines. Mr. Hinshalwood said that it is Antea's health and safety policy not to drill under canopies. I told Mr. Fisher to drill borings out from under the canopy and away from the fuel lines, but to get as close as he can to the former tank graves. For item #5, Mr. Fisher stated that they will submit a map showing all of the utilities in the next work plan. Mr. Fisher asked for an extension of the work plan submission deadline to September 28. I granted the

EDR ID Number

extension. 8/8/2012 - 1H2012, 4/27/2012, by Antea Group. Groundwater was sampled on 2/20/2012. The next sampling will be in 8/2012. MW-I, 591 BTEX, 18 MTBE. MW-O, 12.8 BTEX, 74 MTBE. MW-P, 85.4 BTEX, 13 MTBE, MW-Q, 64.1 BTEX, 26 MTBE. 11/20/2012 - Reviewed Soil Groundwater Investigation Work Plan, dated 8/30/2012, by Antea Group. Antea proposed to do 6 soil borings and 1 monitoring well installation. The work plan is intended to address the comments that NYSDEC had on the spill closure request. BP/Antea is not seeking NYSDEC's approval on the work plan since these installations are within the property line. No comments. Antea did the utility mark-out on October 18, 2012 and found 3 out of the 7 proposed boring locations are on an offsite property where an access agreement is needed. The offsite propoerty appears to be part of the BP station parking lot and access agreement may not needed. They reached out to the owner of the offsite propoerty on October 19th. Will proceed the onsite work once the effects of Hurricane Sandy have subsided and will continue for access to the offsite property. 12/7/2012 - 2H2012, 10/31/2012, by Antea Group. The groundwater was sampled August 10. 2012. The next sampling will be in February 2013. MW-I, 350 BTEX, 12 MTBE. MW-O, 29.3 BTEX, 310 MTBE. MW-P, 60.1 BTEX, 0.58J MTBE. MW-Q, 37.5 BTEX, 24 MTBE. 3/26/2014 - Discussed with J. Vought and the case is forwarded to Central Office K. Hale for review. 4/11/2014 -Discussed with J. Vought and advised by K. Hale. Spill is closed based on: 1) The residual soil contamination has been remained under the tanks, dispensers and piping. It reaches the extent of feasible for soil remediation due to the reasons of PBS system integrity and safety. 2) BTEX/MTBE concentration in groundwater has been low for years. This suggest that the residual soil contamination has discontinued contributing to groundwater contamination. 3) The soil sampling from soil borings SB-X, SB-M, SB-N2, MW-O, MW-U, MW-Y and MW-Z which located in the close proximity to the historical impact locations show minimum or low soil contamination level. 4) During the PBS system upgrade in 2004, a total of 250.3 tons of soil has been removed. 5) EFR events on MW-I and MW-H and removed 8,200 gallons of petroleum impacted groundwater, 559.36 lbs of petroleum hydrocarbon and 0.67 lbs of LNAPL. 6) Inclusion of remaining soil contamination language in the spill closure letter in case site is redeveloped. 7) NYSDEC is not aware of any change of use of the site. Spill is closed. Spill closure letter to BP/Antea."

DEC Region: 2
DER Facility ID: 209163
DEC Memo: "03/08/0

"03/08/06 Feroze, PBS case of this spill is # 2-240680. TTF is sent to: Robert Algarin 2253 Third Ave New york, NY 10035 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/21/06-Hiralkumar Patel. Spoke with John Laddy at Protest. this site has three 20,000 gal USTs on location and they were transferring oil from one tank to another. during this transfer, tank overfilled and spill happened on concrete side walk and asphalt street (possible from vent pipe). Protest has cleaned the site. John doesn't know about concrete condition but nothing went down to sewer/drain. DEP has visited site already. 03/23/06-Hiralkumar Patel. Spoke with John at Protest. John will go on site to replace faulty valve on tank. he will call me with updates. 03/24/06-Hiralkumar Patel. called for Manny Dias (212-369-3755 Ext 11), but he will be in office on Monday Mar 27 2006. 03/28/06-Hiralkumar Patel. Spoke with Mr. Dias. as per him, oil came out from vent pipe and spilled on concrete side walk and then ran on asphlt street. there are no cracks in concrete on sidewalk. no soil/sewer/drain affected. the tank had faulty pressure gauge on it. tank is currently empty and out of service, they are working on replacing this faulty gauge. all cleaned up. no complaints. Spoke

with Mr. Melnick at Protest and asked him to send me copy of invoice once he done changing faulty gauge. He told me that they are going to replace it soon once they find out problem with gauge. 04/21/06-Hiralkumar Patel. Spoke with Mr. Melnick. they got permission to do repair work, but they haven't got chance to do it. they will probably go in next week. he will call once he done with repair work. 05/05/06-Hiralkumar Patel. Spoke to Mr. Melnick at Protest. they will start work probably on May 15. 06/22/06-Hiralkumar Patel. visited site on 06/20/2006. spoke to William, super of building & to Maria Cruz, executive director. tank was still empty on time of visit. no work done yet. spoke with Mr. Dias and asked to call back with updates. Maria Cruz Executive Director ARCO 2253 3rd Ave, 5th Floor New York, NY 10035 PH. (212) 369-3755 Fax (212) 369-6215 Email: taino@acromgt.com mcruz@arcomgt.com spoke with John at Protest. he explained that oil spill happened due to overfill of tank. they have tested all three tanks and tank system passed test. asked John to fax me test results. John suggest Mr. Dias to repair/replace valve to prevent further spill. spoke with Mr. Dias. he explained that due to air pressure inside syphon, oil in one tank reached to top and overfilled. and piece of syphon was leaking and that why it created air pressure. Mr. Dias was planning to change that defected piece of pipe in September as winter season starts. asked him to submit work invoice once he done with such repair work. spoke with John at protest again. he explained that this site doesn't have syphon. instead these tanks are connected through valves in supply/return lines. so if they need, they can open/close valve to transfer oil from one tank to another, when John did test, he did test by isolating each tank system from another two. 06/26/06-Hiralkumar Patel. Left message for Mr. Dias. 06/29/06-Hiralkumar Patel. Spoke to John and asked to send tank test results for all three tanks. 07/05/06-Hiralkumar Patel. Spoke to John at Protest. he has misplaced tank test results, once he gets it, he will forward it to the Department. Left message for Mr. Dias. 07/10/06-Hiralkumar Patel. spoke with Mr. Dias and asked him to send tank test results for all tanks. 11/14/06-Hiralkumar Patel. left message for Mr. Dias. 12/01/06-Hiralkumar Patel. left message for Mr. Dias. 12/19/06-Hiralkumar Patel. spoke with Bob at Protest. he will check for tank test result and will fax if he finds it. spoke with Mr. Dias. they have repaired leaking valve. received tank test result from Bob from Protest. all three tanks were passed test. spoke with DEC Jacob about PBS registration. PBS registration expired on 10/23/1997. i gave tank test results to DEC Brian to update PBS record. sent email to Jacob with site address, manager's name and address. based on available tank test result and other informations, case closed. 12/22/06-Hiralkumar Patel. received work invoice copy, about repair of leaking valve, from Mr. Dias."

anlaysis - elevation of property ranges from 14 to 31 ft - depth to groundwater at 12 ft - groundwater flows to the east - bedrock was not encountered during geotechnical (to 100 ft bg) or soil boring investigations - found SVOC contamination in some samples which could be presence of historic fill - found gasoline-associated VOCs and chlorinated solvents in sub-slab vapor samples <============ - no levels of any gasoline compounds were detected in soil or groundwater beneath the site - no chlorinated solvents were detected in the soil - levels of TCE and PCE in the groundwater were detected at concentrations less than the standard and not in the area of the former printing operations - greatest level of TCE (349 ug/m3) was detected in the sample adjacent to the sidewalk, which could be attributing to a pooling effect 1:50 PM:- spoke with Rachel. asked her to hold on to any soil excavation activities on the site until the department reviews the previous reports. 1:57 PM:- left message for Shminder Chawla at NYC OER. 2:17 PM:- received email from Rachel. she mentioned that Michael Mandac is the project manager at NYC OER. 2:19 PM:- spoke with Michael Mandac at NYC OER. he mentioned that this project is one of the initial projects that may have been reviewed by DEC Albany office. asked him to provide document confirming approval from NYS DEC to avoid review again. he will talk to Shaminder. Michael Mandac NYC OER PH. (212) 676-0754 06/19/12-Hiralkumar Patel. 1:36 PM:- received call from Rachel. she mentioned that they are planning to start excavating soil from the lot 36. informed her that due to presence of PCE/TCE/BTEX in soil-vapor samples, the department does not approve any excavation until report review is completed, she mentioned about approval from NYC OER. informed her about the discussion with Mike at OER and asked her to provide confirmation about review and approval of the available reports by DEC. she will talk to Mike at OER. 06/20/12-Hiralkumar Patel. 1:05 PM:- received email from Mr. Chawla from NYC OER. he mentioned that remedial investigation results were discussed with Bob Cozzy, Kevin Hale, Dennis Ferrar and Sally Dews of DER in Albany, as well as with Amar Nagi and Jane in region 2 office. DEC Albany approved to handle this project in city's brownsfiled program under MOA executed between city OER and DEC. Mr. Chawla mentioned that proposed remedial action includes installation of 32-mil HDPE Grace Preprufe 160R vapor barrier and an active SSDS, institutional controls involving a deed restriction notice and implementation of a site management plan including periodic inspection and certification of engineering controls. 1:33 PM:- email from Mr. Chawla was forwarded to DEC Cozzy. 2:56 PM:- received call from Rachel. she inquired about approval for planned excavation on lot 36. informed her that based on email from Mr. Chawla, the department approves planned excavation, but requires air/dust monitoring as proposed in the work plan (previously submitted to NYC OER). asked her not to perform any work in the area where tank was found, until the department reviews sample results. 3:03 PM:received email from Rachel. she mentioned that soil excavation will be performed in western portion of the site and an environmental technician will be on-site to monitor the excavation activities and perform air monitoring. 06/25/12-Hiralkumar Patel. received email from Shana Cross (at 3:06 PM on 06/21/12) including site map and results of soil samples collected from tank location. total of five soil samples collected for anlaysis. no contamination found in soil samples, 11:45 AM:- received call from Rachel, she mentioned that they will start soil excavation in the tank area today and will

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: JAMES MORRIS

"12/26/08-Hiralkumar Patel. visited site. met Mr. Diaz, property manager. found oil and water on boiler room floor. site occupies entire block between 2nd and 3rd ave and between 122nd and 123rd street. site has four boilers for entire block. boiler room is located in basement at 230 E 123rd Street. part of one of the boiler blew up and broke supply line that was ruuning adjacent to the boiler, oil started leaking from supply line, odors inside boiler room. FDNY received odor complaint from tenant. they checked each floor and confirmed no more odors. super openened some doors on floors and ventilation on roof. all boilers are turned off. as per Mr. Diaz, building has heat backup for six hours. could not inspect boiler room floor as entire room is filled with oil and water. building super mentioned that alongwith oil supply line, natural gas line also broke in this incident, but due to automatic shut off valve, no leak inside basement. asked Mr. Diaz to pump out oil and water from boiler room and to consult with boiler company and ConEd before turning remaining three boilers on, spoke with Eric Gruber, insurance broker. he hired Branch Services to pump out oil/water. site also has Harlem Day Charter School on street level, close to boiler room. school was closed and will be closed for next week. site has three 20,000 gal USTs enclosed in concrete box under a street sidewalk along E 123rd street, observed three monitoring wells at the edge of tank vault, along E 123rd st. alternate addresses: 200-218 E 123rd St, 220-222 E 123rd St, 224-244 E 123rd St 2383-2389 2nd Ave, 2391-2395 2nd Ave 219-223 E 122nd St, 201-217 E 122nd St, 231-265 E 122nd St 2243-2261 3rd Ave Tiano Towers **property owner** Acro Management **management company** 2253 3rd Avenue, 5th Floor New York, NY 10035 Attn.: Manny Diaz **property manager** PH. (212) 369-3755 (O) (917) 681-3213 (C) Fax (212) 369-6215 email: mdiaz@multifamilymgt.com Miguel Soto **building super** Ph. (917) 682-6838 Eric Gruber Ben Gruber, Inc. Public Adjuster Ph. (845) 621-4600 (O) (917) 295-1406 (C) Fax (845) 621-4613 Branch Services **cleanup company** Ms. Malony Ph. (631) 767-4428 PBS #: 2-240680. found PBS expired in 10/1997, tanks are due for tightness test, spoke with Mr. Diaz (at 10:45 AM) regarding PBS renewal and tank test. asked him to test all three tank systems by end of next week (01/02/09). they are still waiting for vacuum truck and as per Mr. Diaz, truck will be on-site in next half hour. found another open spill case. Spill #: 0000963. spoke with Mr. Diaz regarding open tank test failure reported in April 2000. Mr. Diaz mentioned that during that time, they re-lined all three tanks and during that work, small amount of contamination found on top of one tank. Mr. Diaz mentioned that tanks are in concrete box, covered with sand, under sidewalk. asked Mr. Diaz to submit paper work for such work done in 2000. mentioned to him, that if no documents available for such work, then based on tank test failure complaint, the department may require soil

delineation around tank system. also asked Mr. Diaz to renew PBS registration and submit tank system test result for all three tanks, by end of 01/02/09. told him that if tank test results will not be submitted by end of 01/02/09, then the department will issue notice of violation (as management was informed about expired PBS in 2006 while working on spill #: 0514031). sent email to Mr. Diaz with above requirements alongwith PBS renewal form. 12/29/08-Hiralkumar Patel. received message from Scott Hamarich from Eastern environmental. spoke with Scott at eastern, he responded for cleanup and removed about 10,000 to 11,000 gal of oil/water mix from basement on 12/26/08. they returned to site on 12/27 and 12/28/08 for powerwashing the floor. still doing that today. Scott mentioned that these all caused by a natural gas blast in one of the boiler, which was shifted about 3 ft away from its position and damaged all lines. there is no heat or hot water in entire building since 12/26/08 Scott Hamarich Eastern Environmental Ph. (631) 774-9821 (C) (631) 727-2700 (O) email: scotthamarich@easternenviro.com discussed case with DEC Susan, regional direction and DEC Vought. DEC Susan asked for PID survey inside a school building and proper ventilation. visited site. met Mr. Diaz and Mr. Gruber. inspected boiler room floor. minor cracks found in floor. found multiple floor drains inside boiler room and all connects to sump in corner. sump was disconnected. Eastern was removing water from sump using vacuum truck. spoke with Scott at eastern environmental. asked him to inspect each corner of boiler room for any cracks in floor and if finds major cracks, then required soil samples. also asked him for PID survey inside entire school and submission of report for such survey, asked Scott to do PID survey in school building twice; one on tomorrow (12/30/08) and second on saturday (01/03/09). Scott has scheduled tank test on wednesday (12/31/08). spoke with Jerry Baquero (646-884-3300, building incharge) and Anne Burns (646-510-1613, head of the school) and informed them regarding current condition. informed them that contractor will do PID survey in school building. 12/31/08-Hiralkumar Patel. spoke with Scott. they have finished cleanup inside boiler room. did PID survey in school building and found nothing. will do tank test today. 01/06/09-Hiralkumar Patel. spoke with Scott. they did another PID survey in school on 01/02/09 and found nothing, all tanks passed test, will submit report by end of 01/16/09. 01/22/09-Hiralkumar Patel. spoke with Mr. Diaz. asked him to submit cleanup report for recent spill, report for work done in 2000 to correct tank system leak and PBS renewal copy by the end of 01/30/09, told him that if the department doesn't receive these documents by 01/30/09 then may issue notice of violation. 02/03/09-Hiralkumar Patel. received tank test result for all three tank. tanks passed the test. spoke with Manny and Scott. asked Manny to submit cleanup report for recent spill by end of 02/06/09 and copy of tank repair work done in 2000 by end of 02/13/09. Scott mentioned that PBS application is ready and will send to Albany. will send copy of PBS renewal application. 02/06/09-Hiralkumar Patel. received email from Scott with tank test results. all three tanks passed the test. tank testing result forwarded to DEC Jacob for review and PBS record. 02/20/09-Hiralkumar Patel. spoke with Manny. remind him to submit report. PBS registration hasn't renewed yet. issued notice of violation for following reasons: - failure to renew registration (registration expired on 10/23/1997) - failure to color code fill ports - failure to test tank/piping (no tank test record available from 11/01/1997 to 03/15/2006) - failure to monitor unmetered tank

DEC Memo: "1/26/05 Adjacent to Amoco at 255 E 125th St (Spill #9711337). Mike

Bullock, Warren & Panzer(212-922-0077), will be sending in analyticals for two Geoprobes completed for potential buyer. He indicated there was no reason to think the gasoline was from any other sources other than the Amoco. No PBS #. Block 1790/ Lot 20 Notified Amoco's Consultant, B. Fisher of Delta Environmental. 5/4/05 Received analytical results for SB-1, GW-1 and SB-2 on 1/26/05. After

review of the results, it was not clear why this spill had been

reported. No exceedances were detected in soil or groundwater. Called Mike Bullock of Warren and Panzer on several occasions to try to obtain more information regarding the report. He has not returned my

calls. Based upon the results submitted, no further action is

warranted."

Remarks: "Lot is adjacent to an Amaco gas station. Warren and Pazner were

drilling in the lot and found evidence of a spill. Lab confirmer fresh gasoline in the soil and groundater. Unsure when or who will be

doing the clean up."

645 Fifth Ave - 8th FIr New York, NY 10022 Site is now a vacant lot which is being developed into the the Harlem Marriot Hotel to be built on Park Ave between 124th St & 125th St. Contamination showed up in several monitoring wells. Developer plans on extensive excavation to install foundations and sub basements. During excavation soil will be sorted for disposal. Once the excavation is complete, a determination will be made concerning which direction the contamination is coming from. 06/22/06: This spill is transferred from Mr.koon Tang to Q.Abidi. Called to Mr. Michael Caridi (212)848-0253 and left message to call me back regarding information of spill. -QA 07/19/06: Called Mr. Arnold Fleming at (212)675-3225 and left message to call me back. -QA 11/14/06: Called Mr. Michael Caridi and left message to call me back. Called Mr. Arnold fleming (Flemming -Lee Shue) he said that he will talk to client (Hospital) and he will fax me the information regarding spill. -QA 02/15/07: Called Fleming Lee Shue Company at (212)675-3225 and talk to Ms. Marry Nanso, Project Director of the Company. She said that her Company is going to do the Remediation at the site. They have not started yet the remediation work. She said Mr. Shawn Bollers (DEC) (718)482-4608, Project Manager, Brownfield Programme, DEC will take care of this spill. -QA 06/26/2008: This spill case was transferred to A. Doronova - AD 11/04/2008: Called and left a message to M. Manto of FLS and to M. Caridi (phone: 212-935-3550) of Park Avenue LLC, AD 05/07/2009: This case was transferred to S. Bollers - SB BCP Project Manager. "

Remarks: "looks like historical ground water contamination. they think it is

coming from off site '

Location: The Site is located in an urban area of New York County (Manhattan) on the west side of Park Avenue bounded by 124th and 125th Streets. The address of the site is 1800 Park Avenue. Site features: Post remediation: Following excavation to development depth of 13 feet below ground surface, the site was covered with a two foot layer of recycled concrete aggregate. There are no on-site buildings; no redevelopment has taken place. Current zoning/uses: Surrounding uses include residential buildings with first floor retail, and commercial buildings with office space to the north across 125th Street; the Metro-North Railroad tracks to the east along Park Avenue, residential buildings across Park Avenue; an asphalt-payed

commercial buildings with office space to the north across 125th Street; the Metro-North Railroad tracks to the east along Park Avenue, residential buildings across Park Avenue; an asphalt-paved parking lot to the south across 124th Street; and a residential building with first floor retail and the New York College of Podiatric Medicine to the west. The Site is zoned C4-4 for commercial

use. Historic use: The site was residential and had been the location of the former Harlem Central Hotel (later the Hotel Naomi) through the 1970s. It was a parking lot since approximately 1980 until remedial action started. These uses contributed to the contamination identified on-site. Site geology and hydrogeology: The site is underlain by man-made fill to a depth of approximately 10 feet below grade, following site-wide excavation to development depth, glacial lake deposits and till, and bedrock. Published geologic data indicate that the bedrock consists of Ordovician/Cambrian age metamorphic rock. In the vicinity of the Site, bedrock consists of Manhattan Formation (schist) surrounded by a larger area underlain by the Inwood Formation (marble). The groundwater table is found at approximately 14 to 16 feet below grade and the gradient is toward

the southwest.

Env Problem:

Nature and extent of contamination: Prior to remediation: The RI and subsequent supplemental investigations at the site included the collection of soil and groundwater samples the analyses of which identified the contamination of environmental media as follows. Soil - Historic fill was present on the site to a depth of approximately 20 feet below grade. A layer of petroleum contamination was identified at the water table across much of the site, varying in thickness up to approximately three feet. Fingerprint analysis of the petroleum layer identified it as #6 fuel oil. In addition to soil grossly contaminated by the petroleum layer, several hot spots were identified that exhibited exceedances of both Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Use (RRUSCOs) as well as the Site Specific SCOs (SSSCOs). These included exceedances for lead including hazardous levels; 1,050 parts per million (ppm) compared to the UUSCO of 63 ppm and RRUSCO of 400 ppm; and SVOCs namely carcinogenic Polycyclic Aromatic Hydrocarbons (cPAHs) including; benzo(a)pyrene at 3.2 ppm, benzo(a)anthracene at 3.7 ppm and benzo(b)fluoranthene at 3.6 ppm compared to the UUSCO and RRUSCO of 1 ppm. Groundwater - No exceedance of groundwater standards by volatile organic compounds was noted. Filtered groundwater samples showed exceedances of groundwater standards for aluminum, iron and

Direction Distance Elevation

HARLEM PARK AQUISITIONS LLC - SITE C231041 (Continued)

1016974985

EDR ID Number

manganese. In May 2011, a trace of free-phase petroleum was identified in one well and was not sampled at that time. The well was subsequently monitored in October 2011, and no trace of petroleum was identified at that time. The analytical results of the groundwater samples indicated no VOCs or SVOCs were detected above Class GA standards, and no dissolved lead was detected in the groundwater. Dissolved manganese was detected in five wells exceeding the Class GA standard of 300 parts per billion (300 ppb), but in only one area with a corresponding soil sample exceeding the Protection of Groundwater SCO. These results indicate a regional groundwater issue that is not site related. Significant threat: NYSDEC, in consultation with NYSDOH, has determined that the site conditions do not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were lead and SVOCs in soil. Remedial action, through excavation and removal of 3,000 tons of contaminated soil including hot spots as defined in the RAWP, has successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem:

Remedial actions are complete and measures are in place to control

the potential for coming in contact with residual contamination that

remains on-site.

Nature and extent of contamination: Prior to remediation: The RI and subsequent supplemental investigations at the site included the collection of soil and groundwater samples the analyses of which identified the contamination of environmental media as follows. Soil - Historic fill was present on the site to a depth of approximately 20 feet below grade. A layer of petroleum contamination was identified at the water table across much of the site, varying in thickness up to approximately three feet. Fingerprint analysis of the petroleum layer identified it as #6 fuel oil. In addition to soil grossly contaminated by the petroleum layer, several hot spots were identified that exhibited exceedances of both Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Use (RRUSCOs) as well as the Site Specific SCOs (SSSCOs). These included exceedances for lead including hazardous levels; 1,050 parts per million (ppm) compared to the UUSCO of 63 ppm and RRUSCO of 400 ppm; and SVOCs namely carcinogenic Polycyclic Aromatic Hydrocarbons (cPAHs) including; benzo(a)pyrene at 3.2 ppm, benzo(a)anthracene at 3.7 ppm and benzo(b)fluoranthene at 3.6 ppm compared to the UUSCO and RRUSCO of 1 ppm. Groundwater - No exceedance of groundwater standards by volatile organic compounds was noted. Filtered groundwater samples showed exceedances of groundwater standards for aluminum, iron and manganese. In May 2011, a trace of free-phase petroleum was identified in one well and was not sampled at that time. The well was subsequently monitored in October 2011, and no trace of petroleum was identified at that time. The analytical results of the groundwater samples indicated no VOCs or SVOCs were detected above Class GA standards, and no dissolved lead was detected in the groundwater. Dissolved manganese was detected in five wells exceeding the Class GA standard of 300 parts per billion (300 ppb), but in only one area with a corresponding soil sample exceeding the Protection of Groundwater SCO. These results indicate a regional groundwater issue that is not site related. Significant threat: NYSDEC, in consultation with NYSDOH, has determined that the site conditions do not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were lead and SVOCs in soil. Remedial action, through excavation and removal of 3,000 tons of contaminated soil including hot spots as defined in the RAWP, has successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem:

Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that

remains on-site.

HARLEM PARK AQUISITIONS LLC - SITE C231041 (Continued)

1016974985

Updated By: snboller Site Code: 59177

Site Description: Location: The Site is located in an urban area of New York County

(Manhattan) on the west side of Park Avenue bounded by 124th and 125th Streets. The address of the site is 1800 Park Avenue. Site features: Post remediation: Following excavation to development depth of 13 feet below ground surface, the site was covered with a two foot layer of recycled concrete aggregate. There are no on-site buildings; no redevelopment has taken place. Current zoning/uses: Surrounding uses include residential buildings with first floor retail, and commercial buildings with office space to the north across 125th Street; the Metro-North Railroad tracks to the east along Park Avenue, residential buildings across Park Avenue; an asphalt-paved parking lot to the south across 124th Street; and a residential building with first floor retail and the New York College of Podiatric Medicine to the west. The Site is zoned C4-4 for commercial use. Historic use: The site was residential and had been the location of the former Harlem Central Hotel (later the Hotel Naomi) through the 1970s. It was a parking lot since approximately 1980 until remedial action started. These uses contributed to the contamination identified on-site. Site geology and hydrogeology: The site is underlain by man-made fill to a depth of approximately 10 feet below grade, following site-wide excavation to development depth, glacial lake deposits and till, and bedrock. Published geologic data indicate that the bedrock consists of Ordovician/Cambrian age metamorphic rock. In the vicinity of the Site, bedrock consists of Manhattan Formation (schist) surrounded by a larger area underlain by the Inwood Formation (marble). The groundwater table is found at approximately 14 to 16 feet below grade and the gradient is toward the southwest.

Env Problem:

The well was subsequently monitored in October 2011, and no trace of petroleum was identified at that time. The analytical results of the groundwater samples indicated no VOCs or SVOCs were detected above Class GA standards, and no dissolved lead was detected in the groundwater. Dissolved manganese was detected in five wells exceeding the Class GA standard of 300 parts per billion (300 ppb), but in only one area with a corresponding soil sample exceeding the Protection of Groundwater SCO. These results indicate a regional groundwater issue that is not site related. Significant threat: NYSDEC, in consultation with NYSDOH, has determined that the site conditions do not pose a significant threat to human health or the environment. Post

EDR ID Number

Remediation: Remediation at the site is complete. Prior to

remediation, the primary contaminants of concern were lead and SVOCs in soil. Remedial action, through excavation and removal of 3,000 tons of contaminated soil including hot spots as defined in the RAWP, has successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, and groundwater

is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control

the potential for coming in contact with residual contamination that

remains on-site.

Site Code: 59177

Site Description: Location: The Site is located in an urban area of New York County

(Manhattan) on the west side of Park Avenue bounded by 124th and 125th Streets. The address of the site is 1800 Park Avenue. Site features: Post remediation: Following excavation to development depth of 13 feet below ground surface, the site was covered with a two foot layer of recycled concrete aggregate. There are no on-site buildings; no redevelopment has taken place. Current zoning/uses: Surrounding uses include residential buildings with first floor retail, and commercial buildings with office space to the north across 125th Street; the Metro-North Railroad tracks to the east along Park Avenue, residential buildings across Park Avenue; an asphalt-paved parking lot to the south across 124th Street; and a residential building with first floor retail and the New York College of Podiatric Medicine to the west. The Site is zoned C4-4 for commercial use. Historic use: The site was residential and had been the location of the former Harlem Central Hotel (later the Hotel Naomi) through the 1970s. It was a parking lot since approximately 1980 until remedial action started. These uses contributed to the contamination identified on-site. Site geology and hydrogeology: The site is underlain by man-made fill to a depth of approximately 10 feet below grade, following site-wide excavation to development depth, glacial lake deposits and till, and bedrock. Published geologic data indicate that the bedrock consists of Ordovician/Cambrian age metamorphic rock. In the vicinity of the Site, bedrock consists of Manhattan Formation (schist) surrounded by a larger area underlain by the Inwood Formation (marble). The groundwater table is found at approximately 14 to 16 feet below grade and the gradient is toward the southwest.

Env Problem:

Nature and extent of contamination: Prior to remediation: The RI and subsequent supplemental investigations at the site included the collection of soil and groundwater samples the analyses of which identified the contamination of environmental media as follows. Soil - Historic fill was present on the site to a depth of approximately 20 feet below grade. A layer of petroleum contamination was identified at the water table across much of the site, varying in thickness up to approximately three feet. Fingerprint analysis of the petroleum layer identified it as #6 fuel oil. In addition to soil

grossly contaminated by the petroleum layer, several hot spots were identified that exhibited exceedances of both Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Use (RRUSCOs) as well as the Site Specific SCOs (SSSCOs). These included exceedances for lead including hazardous levels; 1,050 parts per million (ppm) compared to the UUSCO of 63 ppm and RRUSCO of 400 ppm; and SVOCs namely carcinogenic Polycyclic Aromatic Hydrocarbons (cPAHs) including; benzo(a)pyrene at 3.2 ppm, benzo(a)anthracene at 3.7 ppm and benzo(b)fluoranthene at 3.6 ppm compared to the UUSCO and RRUSCO of 1 ppm. Groundwater - No exceedance of groundwater standards by volatile organic compounds was noted. Filtered groundwater samples showed exceedances of groundwater standards for aluminum, iron and manganese. In May 2011, a trace of free-phase petroleum was identified in one well and was not sampled at that time. The well was subsequently monitored in October 2011, and no trace of petroleum was identified at that time. The analytical results of the groundwater samples indicated no VOCs or SVOCs were detected above Class GA standards, and no dissolved lead was detected in the groundwater. Dissolved manganese was detected in five wells exceeding the Class GA standard of 300 parts per billion (300 ppb), but in only one area with a corresponding soil sample exceeding the Protection of Groundwater SCO. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Consultants, an Oranjewoud N.V. Company Direct +1 914 495 9929 -Mobile +1 914 522 6344 - USA Toll Free 800 477 7411 dgreffenius@deltaenv.com - www.deltaenv.com I visited this site on July 5th to gather information and to collect photoionization detector (PID) readings at the site. My understanding is a customer hit one of the fuel dispensers at its base, which damaged the regular & premium shear valves inside the dispenser. Dispenser # 3/4 was dented near the bottom but not extensively (see first photo). The station operator, Alam, said fuel was coming from the bottom of this dispenser until the shut-off system was actuated. Some staining was visible on the pavement going to a small 18 X 18 drain grate near the corner of the canopy, about 30 feet from the dispenser (see third photo). The drain grate had PID readings of 51.9 to 436 ppm. The two storm drains in the street at the corner of East 125th Street and 2nd Avenue weren t affected and had PID readings of 0 ppm. Dispenser # 3/4 is fitted with a large containment box that collected a portion of the gasoline. I spoke with Alvin Petroleum who said they went to the site on July 4 and made the site safe, and then returned on July 7 to make repairs to the dispenser, clean out the Dispenser # 3/4 containment box, and replace the gravel that sits on the bottom of the containment box. I spoke with Tyree who said they also went to the site on July 4 and pumped approx. 30 gallons of gasoline from the dispenser containment and from the nearby 18 X 18 drain, Finally, I spoke to the station operator, Alam, who said he reviewed his electronic inventory records which show that approx. 40 gallons of premium and 34 gallons of regular are unaccounted for on July 4, but he said with % variance in the system this may only amount to 15 gallons premium and 10 gallons regular (or roughly 30 gallons total). A Spill Number was called in for this incident on July 14th (Spill No. 10-04193). I asked the spills dispatcher to enter a note requesting that the new Spill No. be consolidated with the existing Spill No. 97-11337, which is currently managed by Delta Consultants on behalf of Atlantic Richfield Company, a BP affiliated company. Some pictures were uploaded in UIS. A cross reference was made with the old spill#9711337. This spill is closed. "

Remarks:

"Caller reporting a spill of approx 30 gallons of gasoline to concrete. Clean up complete. Request consolidation with exsisting spill number 97-11337"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

O'CONNELL E2MIS 122182 12/30/98 22:30 T.BROWN(14933) RW REPORTS HE FOUND SPILL OF 1 GALLON OF UNKNOWN OIL IN SB45748 F/O 2238 3 AVE. SPILL IS CONTAINED, THERE WAS NO ENTRY TO ANY SEWERS OR WATERWAYS. THERE WERE NO VISIBLE CRACKS IN THE STRUCTURE AND THERE WAS NO SEWER CONNECTION. A SAMPLE WAS TAKEN AND SPILL TAG #21880 WAS INSTALLED. THERE WERE NO AGENCIES ON LOCATION. THE REASON FOR ENTERING THE STRUCTURE WAS DUE TO A MANHOLE FIRE AND THERE IS NOT ANY OIL CONTAINING EQUIPMENT IN THE HOLE. SPILL WAS FOUND AT 22:00 HRS ON 12/30/98 AND REPORTED TO D.ROMANO IN THE CONTROL CENTER AT 22:30 ON 12/30/98. If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is

place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis. If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead. 12/31/98 23:10 ROMANO NOTIFIED S.ROMERO(CIG) OF THE SPILL...... *** THIS JOB WAS ENTERED

ON 12/31/98 AT 09:07 BECAUSE E2MIS WAS DOWN ALL NIGHT. 12/31/98 09:30 P.MCHUGH NOTIFIED F.MASSERIA(CIG) OF THE INCIDENT NUMBER. 1-12-99 09:55 Job delayed until 1-8-99 because of incorrect address on original oil sample results. Cleanup completed on 1-8-99 at 1100 hours, supervised by R.Valasquez 27881. No oil found in SB, mud and water only, SB flushed. Tag 21880 removed. Crew: J.Burgos 07271 and

J.Pelzer 06470. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<u>Click this hyperlink</u> while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead DEC Field was

> KOLLEENY ALTHOUGH SPILL REPORT SAYS CAUSE OF SPILL WAS TANK OVERFILL, AND THAT CONTAM. SOIL WAS FOUND DURING TANK REMOVAL, IN TRUTH, CONTAM. SOIL WAS FOUND DURING DRILLING OF BORING (AT DISPENSER) AS PART OF TANK CLOSURE-IN-PLACE INVESTIGATION. TANKS WERE NOT REMOVED; CAUSE OF SPILL WAS NOT OVERFILL. CHESNER ENGINEERING AND THEN URS CORP. PERFORMED SITE INVESTIGATIONS, FOUND SOME SOIL CONTAMINATION AND MINOR GROUNDWATER CONTAMINATION. URS INSTALLED A BIOVENTING

SYSTEM TO ADDRESS SOIL AND PERFORMED GROUNDWATER MONITORING, STARTED

SYSTEM IN MARCH 2003. BY OCTOBER 2003, GROUNDWATER MET STATE

STANDARDS IN ALL MONITORING WELLS. DEC APPROVED NO FURTHER ACTION FOR GROUNDWATER, AND MONITORING WAS DISCONTINUED. URS PLANS TO ADVANCE

SOIL BORINGS TO EVALUATE PROGRESS OF SOIL CLEANUP. Reviewed System

Performance Monitoring Reports for June-Aug. '04 and Sept.-Nov. '04 on March 14, 2005; system appears to be operating adequately. Soil confirmation sampling has been performed but awaiting report with results. - J. Kolleeny 3/14/05 Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK 5-15-2005 Reviewed Perfomance Monitoring

Report received on 4/1/2005 and Results of Confirmation Soil

Sampling/Request for NFA received on 4/27/2005. No VOCs were detected in any of the confirmation soil samples. Minor SVOC exceedances were collected from soil borings SB-09 and SB-10. For the approximately six SVOCs that exceeded TAGM #4046 cleanup concentrations there is no apparent exposure pathway according to URS report. NFA letter was

issued. AZ'

Remarks: "during tank removal caller found contaminated soil and today got

test results back "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110004565738

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

() email: wiwong@dep.nyc.gov case #: 12CVCP037M & 12EHAZ218M Darek sent email to OER Wong stating that during excavation activities today, visually stained soil was encountered in Grid 5 at a depth of approx. 12 ft bg. the location of the visually stained soil lines up closely with the former location of the UST in Grid 5. there were no signs of a release initially during removal of the UST and the endpoint samples collected at 10 ft did not indicate a release. downloaded RIR and RAWP from NYC OER's database. abstract of RIR: - report dated Dec. 2011 - site includes three lots on block #: 1785: 43, 46 and 146 proposed future use of the site will consist of a new 12 story residential building which will include affordable residential units and first floor retail space or community center space - building will also include a basement, which will require excavation to approx. 10 ft bg - each of the three lots comprising the site was developed prior to 1896 with four-story row houses. lot 46 was redeveloped prior to 1911 with a large four story building with basement which was utilized as a department store, furniture store and several other commercial uses until it was demolished in 2008. the four-story row houses on lots 146 and 43 remained in place until the late 1970's/early 1980's. the upper floors were likely utilized as residential apartments, and the first floor of both buildings as small stores - Phase I conducted in Oct. 2011 - Phase I concluded that additional work was necessary to properly close out a 3,000 gal #2 fuel oil UST which may be located beneath the sidewalk of E 121st St - a geophysical survey was performed and no UST-like anomalies were found - elevation of the property is approx. 16 ft above mean sea level - installed nine soil borings (B1 through B7, T1 and T2), to a depth of 15 ft bg and collected total of 12 soil samples stratigraphy of the site, from the surface down, consists of urban fill, which was primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. the layer of urban fill extended to a depth ranging from of approx. 7 to 15 ft bg - no PID readings above background concentrations were obtained from any of the soil borings - installed five (5) 1-inch temporary monitoring wells to a depth of 19 ft bg; with 10 ft of screen - monitoring wells were installed in borings B1, B4, B5, B6 and B7 and collected 5 groundwater samples - depth to groundwater ranges from 12 to 15 ft bg - groundwater flow is generally from west to east - installed four (4) soil-vapor probes to a depth of 8 ft bg - no contamination noted in soil and groundwater samples - minor petroleum VOCs and CVOCs were detected in soil-vapor samples 10/13/15-Hiarlkumar Patel. 8:54 AM:received message from Derek. 1:04 PM:- left message for Derek. 2:02 PM:- received call from Derek. they are removing the contaminated materials and will collect endpoint samples. 10/20/15-Hiralkumar Patel. received email from Derek (at 10:15 AM on 10/16/15). they received acceptance documentation from the disposal facility. contractor plans to remove material next week, will collect endpoint samples, once all visually stained soil is removed. Derek also

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

 Tank Number:
 1

 Tank Id:
 54434

 Material Code:
 0001

Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating

D01 - Pipe Type - Steel/Carbon Steel/Iron

F01 - Pipe External Protection - Painted/Asphalt Coating A03 - Tank Internal Protection - Fiberglass Liner (FRP)

C01 - Pipe Location - Aboveground

105 - Overfill - Vent Whistle

G04 - Tank Secondary Containment - Double-Walled (Underground) H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

Tank Location: 1

Tank Type: Steel/Carbon Steel/Iron

Tank Status: In Service
Pipe Model: Not reported
Install Date: 03/22/1949
Capacity Gallons: 2000
Tightness Test Method: -

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110056328683

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<u>Click this hyperlink</u> while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

<u>Click this hyperlink</u> while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<u>Click this hyperlink</u> while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

EPA ID Number

gallons of fuel oil were recovered during immediate cleanup, 68 gallons were recovered from the facility s oil/water separator system, and at least 109 gallons and as much as 275 gallons of the remaining fuel oil spilled into the UST via the open fill pipe. Based on these volumes, between 19 and 185 gallons of fuel oil could have spilled into the pea gravel surrounding the USTs. The residual contamination will be addressed during the full site remediation. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 5/19/2011 The spill was reassigned from Joe O'Connell to Linda Ross 2/27/12 -Raphael Ketani. Spill reassigned to me during February 2012. The spill was called in due to the failure of the diesel USTs. Two thirds of the southern and eastern parts of the site were affected. An associated spill numbered 9007322 was called in, referred to spill #8808896 and closed. This later spill was the result of tank test failures for the diesel USTs. Monthly progress update meetings are taking place. 4/26/12 - Raphael Ketani. Monthly groundwater monitoring is being performed by URS. 12/18/12 - Raphael Ketani. There have been monthly to bimonthly (once every two months) update meetings with the NYCT regarding this and 17 other sites. The information for the sites is in the UIS under e-docs, multiple sites, DER, Region 2, Petroleum Spills, NYCT. 4/28/14 - Raphael Ketani. As of about this date, documents are no longer archivable via the e-docs system in the UIS. The succeeding archive system is DecDocs. 6/9/14 -Raphael Ketani. Gregory Mathelier (CONSTRUCTION ADMINISTRATOR, UST & ENVIRONMENTAL REMEDIATION PROGRAM, ON-CALL PROJECTS/ CAPITAL PROGRAM MANAGEMENT, MTA NEW YORK CITY TRANSIT, 300 CADMAN PLAZA, 6TH FL., 6376, BUS: 718-613-0029/ CELL: 646-879-1970, E-MAIL: GREGORY.MATHELIER@NYCT.CO) called me today to say that the Mother Clara Hale Depot at 146th Street will be rebuilt on top of the present site. Once it is rebuilt and ready for operation during January 2015, the buses from the 126th Street Depot will be transferred to there and the 126th Street Depot will be left empty. Once empty, the 126th Street Depot will be returned to the City. Mr. Mathelier said that he was surprised by this news and never knew that the 126th Street Depot was NOT owned by the NYCT. However, that is the plan he heard from administrative staff at the NYCT. I asked Mr. Mathelier what the future use of the site will be. He said that he didn't know. With that, the conversation ended. In a later e-mail, Mr. Mathelier also informed me that he found out from his superiors that the site was sitting on top of an old slave burial ground. So excavating what little contamination is still present was out of the question. Mr. Mathelier sent me the Petition for Spill Closure Report, June 2014 and dated 6/6/14. It was written that the amount of the release was unknown. The south and east parts of the site were affected. Depth to groundwater varies from 3.5 feet to 11 feet below grade. A pump and treat system was installed. During 1993, 27,400 gals. of product was recovered. The system was permanently shut down during February 2001 due to the loss of efficiency of this collection method. This was followed by bioremediation with bacteria and nutrients during the rest of 2001. Three rounds of surfactant injections took place with BioSolve from January to March of 2004. Groundwater monitoring is continuing. The report also described the 4 spill cases that were closed by the former DEC NYCT spill case manager, Mark Tibbe. These cases were: 9007322; 0502231; 0509617; and 0513919. Spill 9007322 concerned the diesel USTs at the southeast corner of the site. There were tank test failures. So the spill was called in. The amount of the release is unknown. It was not certain

EPA ID Number

from the case record whether this spill is a duplicate of 8808896. There were no case notes. Spill 0502231 was opened up due to a #4 heating oil spill. A delivery took place to an out of service 8,000 gal. UST (tank #1), instead of the neighboring in service 8,000 gal. UST (tank #2) during May 2005. This was the result of tank #2 being tagged and locked out and not tank #1. Product came out of the piping sump to tank #1. The spill was contained to the concrete vault and an non-functioning zipper drain. About 801 gals. of oil spilled. The spill took place in the southwest part of the depot. Of the total spilled, 439 gals. was recovered during the initial clean up. Another 68 gals. was recovered by the oil water separator. It was estimated that 19 to 185 gallons of product was unaccounted for. The site investigation was completed during April 2008. Borings SB-7 to SB-10 were performed 15 feet bgs. The soils encountered were sand. No product was seen in soil samples from the 4 borings. Soil analytical results revealed minor VOC exceedences of TAGM standards. Benzo series SVOC exceedences were noted (case manager's note: the results looked like historical fill). There were no groundwater VOC exceedences and only 1 sample with 2 SVOC exceedences. Spill 0509617 involved the failure of the piston at hydraulic lift #3. About 270 gals. of hydraulic fluid were released during November 2005. The lift is in the southwest part of the site. During March 2006, soil excavating took place. A trench 5 feet deep, 12 feet wide and 14 feet long was cut. However, in the process of excavating the soil, the fill line to the #2 oil USTs was cut. Number 2 oil was released and spill number 0513919 was opened. Six soil samples were taken at the ground surface in the hydraulic fluid spill area on 3/10/06 and 3/13/06. The results were almost entirely non-detect. Groundwater was not affected. Spill 0513919 was estimated as 240 gals. of product. About 180 gals. was recovered from the piston sump. Sixty gallons was unaccounted for. A trench 10 feet long, 2 feet wide and 2 feet deep was dug. On 3/21/06, five PLine soil samples were collected at the very top of the ground for the #2 oil spill. The results had very high exceedences for VOCs. The investigation for the #2 oil spill was conducted during November 2006. Borings MW-10 to MW-12 were conducted. At each boring, the soil samples had elevated PID readings and strong odors with many VOC exceedences. However, only the soil sample from MW-11 had many high VOC and naphthalene exceedences. The sample from MW-12 had 3 VOC exceedences. During January 2007, a thin layer of product was seen in each well. MW-11 had 0.02 feet of product. The rest of the wells had just sheens. During March 2007, MW-13 and MW-14 were installed. Again, there were elevated PID readings and strong oil odors. The NYCT believes that the 60 gals. of product is adsorbed to the soil. During a September 29, 2011 meeting between staff from the NYCT and DEC, it was agreed that no further action may be warranted and that the site is a candidate for spill closure. This agreement was based upon the lack of substantial impacts or the absence of substantial measureable product. Groundwater monitoring is taking place monthly. MW-04 has from 0.01 to 0.13 feet of product on 11/18/13. MW-01 had 0.01 to 0.03 feet of product on 1/14/14 and 2/14/14. RW-01 had 0.01 feet of product on 4/13/14 and 5/13/14. 6/26/14 - Raphael Ketani. A case review took place today regarding the site. After consideration of the information contained in the file, it was determined that the case could be closed. This was based upon the presence of very little product in only 3 wells, the lack of collectible product since January 2011, the inability to dig up the remaining contamination due

Site

EDR ID Number

EPA ID Number

to the slave burial ground and the successful remediation of the 4 previous spills. It was determined that the residual contamination was not a threat to the public or the environment. Therefore, the spill case was closed today. 1/8/15 - Raphael Ketani. Today I reviewed the Dvirka & Bartilucci October 10, 2014 Monitoring Well Decommissioning/Abandonment Summary Letter Report. The work was performed from August 20 to 22 and from August 25 to 26, 2014. Decommissioning/abandonment was not performed for wells MW-A2 and MW-09 as they had previously been paved over and destroyed. The wells which were abandoned were: MW-1 to 14, A1, A3, A4 and RW-1 and 2. A jackhammer and concrete saw were used to remove each well manhole and the surrounding concrete. A hollow stem auger rig was used to overdrill each well to 5 feet below grade, thereby exposing 5 feet of riser. This was not done for RW-2 as the riser was made of steel. This well was simply just grouted. Each well was grouted from the bottom up using a tremmie and the upper 5 feet of the riser was cut off. Any soil with petroleum odors was drummed. A 1 foot conrete patch was installed at each former well location. The wells in the sidewalks had their entire flags replaced. A total of one quarter cubic yard of petroleum contaminated soil was shipped out via AARCO for disposal at Clean Earth in Carteret, New Jersey. All USTs will be cleaned out and closed in place as per DEC regulations. 1/15/15 -Raphael Ketani, Today I received the COMPLETE October 10, 2014 Monitoring Well Decommissioning/Abandonment Summary Letter Report. I reviewed all of the attachments that had been missing. I accepted the report without comment. 7/27/15 - Raphael Ketani. I received a call today from Tracey Bell, Assistant Vice President of the NYC Economic Development Corporation [(212) 312-3752/(347) 672-6297/TBell@nycedc.com]. She wanted to know who had responsibility for the USTs as the EDC was considering having the site developed. I told her that it was whichever entity presently owns them. She asked whether the spill case would have to be reopened if they took out the USTs and found contamination or if they dug somewhere else and found contamination. I told her that the spill would have to be called in and the case would have to be reopened. However, I added, if circumstances prevented excavation (i.e. close to utilities, would endanger a road, etc.), then the contamination could be left in place. Ms. Bell stated that since the spill would be reopened, then the site might not be developed. 2/23/16 - Raphael Ketani. Today I received an email from Cadecia Josephs (718) 613-0296, Associate Project Manager I with NYCT and assistant to Mr. Mathelier. A letter work plan was attached which described the proposed investigation of the UST tank field at the former depot. Ms. Josephs described the plan in the text of her email. She wrote the following: In preparation for the closure in place of the UST tank farm located at the former 126th street Bus Depot (former Spill No. 8808896, closed on June 26, 2014), a soil and groundwater sampling program is being proposed to investigate any potential subsurface contamination. The attached letter details the work to be performed by a subcontractor to our Consultant (Dvirka and Bartilucci Consulting Engineers). The tank farm consists of eight 4,000 gallon USTs encased in a concrete vault which extends to 20 ft below grade, this vault is backfilled with approximately eleven feet of pea gravel. A total of 12 soil borings and 4 groundwater probes are proposed to be completed in the vicinity of the USTs and associated fuel lines. Each tank vault exterior soil borings (TCSB-01 through TCSB-04) will be advanced using a direct push drill rig to approximately 22 feet below grade

Site

S106702967

and 5 to 7 feet in the vicinity of the below grade fuel lines (TCSB-05 through TCSB-12). One soil boring will be advanced inside the tank vault (TCPB-01) using a guzzler to a depth of approximately 13 feet below grade surface. A total of 4 groundwater probes (TCGP-01 through TCGP-04) are proposed to be installed in the vicinity outside the tank vault and the below grade lines to a depth of 2 feet below grade. One (1) groundwater probe will be installed inside the vault (TCGP-01) to where liquid is encountered within the tank vault. All samples will be analyzed for STARS VOCs and SVOCs via USEPA Methods 8260 and 8270, respectively. Groundwater samples will be compared to the Class GA Groundwater Standards and Guidance Values and soil samples will be compared to the Soil Cleanup Objectives provided on Table 3 of NYSDEC s CP-51 Soil Cleanup Guidance document. All field activities will be performed in accordance with the Consent Order negotiated between NYCT and the NYSDEC. Upon completion of the soil and groundwater investigation and the receipt of analytical results, a Soil and Groundwater Investigation Report will be submitted to the NYSDEC for its review. If the proposed investigation plan meets the NYSDEC s approval your written confirmation would be greatly appreciated. Feel free to contact Mr. Gregory Mathelier at (718) 613-0029 with any questions you may have regarding this matter. 2/25/16 - Raphael Ketani. I reviewed the Dvirka & Bartilucci 1/29/16 Technical Scope of Work and Estimated Cost Proposal letter. The subject eight 4,000 gallon USTs and associated piping were evacuated, cleaned out and filled with concrete on December 21, 2015. In the letter plan, Dvirka & Bartilucci (D&B) proposes to conduct a soil and groundwater investigation (as described above) of the vault area and the associated piping. The pea gravel inside the vault will be screened at one location within the vault by conducting a soil boring (TCPB-01) and an assessment will be made of any petroleum contamination that is found inside. If liquid is discovered in the vault, then groundwater probe TCGP-01 will be constructed. Twelve soil borings and four groundwater probes will be completed in the vicinity of the vault and next to the piping. The vault floor slab is 7 feet thick. So no borings will be conducted through the floor. Four borings will be drilled in the vicinity of the vault to a total depth of 22 feet, 2 feet below the vault floor. Soil borings adjacent to the piping will be drilled to 5 to 7 feet below grade (8 borings). Groundwater probes TCGP-01 to TCGP-04 will be installed at selected locations (see Figure 1 in the letter). Each boring location will be hand cleared to 6 feet below the depot floor. A geophysical survey will be completed in order to locate utilities in the area. One Call utility mark outs will also be conducted. Groundwater is expected to be found at 3 to 8 feet below grade in the vicinity of the vault. Each probe will be advanced to 2 feet below the water table. A burial ground exists under the southwest part of the site. Access to drill will be coordinated with the proper authorities. If archaeological materials are encountered while drilling, then work will stop and NYCT will be notified. On pages 7 and 8 of the letter plan, D&B describes a list of tasks and assumptions regarding the proposed work which form most of the basis for estimating the cost of the investigation. These tasks comprise Task 1 - the investigation. Task 2 will be to write the tank field investigation report, have it reviewed by D&B staff and submit it to the DEC. The total cost of the project is estimated to be \$96,276. I found the letter plan to be acceptable and sent a written letter to Mr. Mathelier approving the Technical Scope of Work and Estimated Cost Proposal letter. In the

Direction Distance Elevation

vation Site Database(s) EPA ID Number

S106702967

EDR ID Number

DEC approval letter, I indicated that a groundwater flow map must also be included in the investigation report. Also, I stated that a schedule for the various tasks must be submitted to the Department once the start date for the investigation is confirmed. 4/18/16 - Raphael Ketani. A PBS Request for Waiver letter dated 4/18/16 was submitted by NYCT to Leszek Zielinski, EE II and head of the PBS Unit. In the letter, the NYCT requested that they be allowed to forego the soil investigation around the USTs, which is required by 6NYCRR 613-2.6(c) when tank systems are being abandoned. The reason for this request is that the NYCT doesn't want to potentially risk disturbing the human remains that may be adjacent to the UST pad. "

DEC Memo: "11/22/05: This spill transferred from J.Kolleeny to S.Kraszewski.

01/03/06: One 20K tank replaced with one 10K tank. Maximum mechanical

stated they would perform 4 borings, one for each side of the 20K tank as part of the site assessment. No record of a site assessment recieved by DEC. No mention of boring made near the fill port. Fascimile from Maxiumu Mechanical states that the soil around the fill port is to be drummed, but no mention of samples taken from this area. Letter from Maximum Mechanical states contaminated soil to be stockpiled on sheeting. No record of the amount of soil removed, tare weights or destination of the material. No mention of end-point sample taken from the excavation. Need the site assessment report mentioned in the correspondence and info about the excavation. - SK 09/01/06: DEC Lead for this spill changed from unassigned to S. Kraszewski. - J. Kolleeny 02/08/07: DEC lead changed from S. Kraszewski to J. Kann. J.Kann 12/30/09: J.Kann - spill consolidated

with 9910794"

DEC Memo: "12/16/05: This spill transferred from J.Kolleeny to S.Kraszewski.

03/23/06: This spill transferred to K.Tang - SK 3/10/11: J.Kann - Investigative work plan submitted on 3/3/11. 5/29/12: J.kann - priority P0 assigned to the site 2/11/15: J.Kann - reviewed file.

Appears that seapage into basement occured around 1995. Wells were installed at that time. No product noted from 1997 gauging logs. Approved plan provided that is existing wells are not found, up to 3 new wells will need to be installed. SIR is due August 12, 2015 10/29/15: J.Kann - received a call from Drew Pardus regarding the site. He indicated that it will be very difficult to advance the borings around the tank where it is in the rear of the building (no easy access). He proposed using a jack hammer to get through the concrete and attempt to collect samples that way. He said he did not observe any wells in the basement. I looked through the files and found photos showing when the wells were installed. May need to make a site visit. 11/16/15: J.Kann - visited the site today. The boiler room was redone since the 1997 photos, and the wells are no longer present. Climbed up to see the location of the tank. It is impossible to bring a geoprobe to the tank area. The adjoining property has a narrow walkway to the back. but there is a height elevation change between the tank and the adjacent property. Need to consider options for the site. NYCHA will look through their files and determine if they have any additional information about the site. I do have some

well data indicating that no product was present. After any new information is located, it will be submitted to the DEC. A discussion with Pardus will be made to determine what action is necessary. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado."

Update By: Site Description: C231090 3101 New York City

04/28/2014 08/08/2014 JEBROWN

Location This is a vacant property located at 1900 Park Avenue in the East Harlem neighborhood of Manhattan, New York City. It is on the southeastern corner of the city block bordered by 130th Street to the north, Park Avenue to the east, 129th Street to the south, and Madison Avenue to the west, and is comprised of New York City Tax Block 1754, Lot 33. The site is rectangular and encompasses an approximate area of 9,000 square feet. Site Features The site is bound by East 129th Street, a retail gasoline station and multiple-story residential buildings to the south. To the east is Park Avenue, the overhead Metro-North railroad tracks and a Consolidated Edison facility. There is an automobile repair facility to the north and multiple-story residential buildings to the west. Currently, the property is an abandoned construction site excavated to approximately 13 feet below sidewalk grade (el.17 feet) and improved with a partially completed foundation and cellar level (el. 4 feet). The majority of the site (~90%), except for the northwestern corner, was excavated into bedrock in 2006. The partially-completed foundation includes twenty columns, a partial floor slab, an elevator pit, and a foundation wall spanning the perimeter of the site except for the southeast corner. As part of the proposed site remediation, the columns, footings, and slabs will be demolished and removed, and new foundation elements will be installed to accommodate the new building design. Current Zoning The site is located in a C8-3 commercial district; however, the area is currently undergoing rezoning. The proposed use is consistent with local and area plans per the January 2013 East Harlem Land-Use and Rezoning Initiative -Draft Zoning Recommendations. No easements or rights-of-way are in effect within the site boundary. A railroad easement exists to the east of the site boundary for elevated tracks maintained by the MTA (Metro-North Railroad). The site meets En-zone eligibility requirement Part A: having a poverty rate greater than 20% in the 2000 Census. Land Use The current owner, 1900 Park LLC, has owned the since January 2014. The previous owner was Six Columns Realty Corporation (August 1987 to January 2014). The proposed 60,000 to 70,000 square foot project will include: A multi-story (9 to12-story) mixed-use building with one floor of commercial space (4,000 sq. ft.), two to three floors of community space (25,000 sq. ft.), and five to eight floors of residential space. Past Use of the Site was historically a gasoline filling station/service station from 1935 to approximately 2001. This abandoned construction site has been dormant since 2006. Site Geology and Hydrogeology The Harlem River is located approximately 1,000 feet east of the site. The depth to groundwater is approximately 13-19 feet deep (bottom of test pit excavation). Although the groundwater flow direction is undefined, an assumed flow direction is to the east towards the Harlem River. The majority of the site has been excavated to bedrock which dips toward the northwest corner of the property and is encountered at depths ranging from about 13 feet to 25 feet below grade. Typically very hard, the bedrock is generally mica schist comprised of guartz, garnet, and feldspar. The only remaining overburden soil is in the northwestern corner of the site. This native material consists of black to gray,

Env Problem:

Health Problem:

medium to fine grained sand with varying amounts of gravel, silt, cobbles, and boulders to a depth of approximately 25.5 feet below street level. The site is approximately 500 feet west of a Zone X Flood Area, which is an area that is subject to 0.2% annual flood

chance.

Nature and Extent of Contamination In 2006, all contaminated media from grade to a depth of 13 feet was removed from the entire BCP site. The majority (possibly 90%) of the site has been excavated to bedrock. In April 2014, a limited site geotechnical and environmental evaluation was conducted in the northwest corner of the property where overburden soil still remains. This limited site evaluation consisted of 5 soil borings (LB-1 thru LB-5), one test pit (TP-3) and one groundwater sample from a temporary observation well, LB-2(OW). There is no report of this limited site evaluation but the BCP Application indicated Areas showing evidence of petroleum-impacted soil were observed during the 2014 geotechnical investigation . The five boring logs have no records of PID readings, odors or visually impacted soils. Contaminants of Concern: Based on the April 2014 soil and groundwater sample results, the primary contaminants of concern are: Toluene (groundwater) Chloroform (groundwater) Copper (soil and groundwater) Sodium (groundwater) Chlorinated solvents, SVOCs, PCBs and pesticides do not appear to be contaminants of concern. Residual toluene may be associated with operating a gasoline filling station/service station for over 60 years, but is consistent with or below typical background concentrations in NYC. The other compounds are not site-related. Soil: A total of seven soil samples were collected from TP-3, LB-2 and LB-5. The BCP Application indicates organic vapor concentrations were said to be up to 59.7 parts per million but there are no recorded PID values. Sample depths were approximately 15 feet below the street level (0-2 feet below the basement elevation). Soil sample results were below detection limits or below Unrestricted Use SCOs except for one sample for Copper at 73.2 mg/kg (Unrestricted Use, 50 mg/kg), which is not site-related. Groundwater: One groundwater sample was collected from a temporary observation well LB-2(OW) in the northwest corner of the site. The temporary ten-foot well screen was terminated about 25 feet below street level. The groundwater sample results were non-detect or below Ambient Water Quality Standards (AWQS) except for Chloroform at 19 ug/l (AWQS, 7 ug/l), Toluene at 17 ug/l (AWQS, 5 ug/l) and Sodium at 26,600 ug/l (AWQS, 20,000 ug/l). Soil Vapor: No soil vapor or sub-slab soil samples were collected.

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

KOLLEENY TRANSFERRED FROM Y.KRIMGOLD TO KOLLEENY TO I.ISLAM 5/3/05-

The site's soil & GW are currently under remediation by LiRo Engineers by injecting bio-nutrient(through 24 wells) and Iso-Gen Oxygen (through 8 wells). Reviewed the quarterly site monitoring report (Nov./04-Jan./05). Initially, vacuum track was also used to remove Free Product from wells which was followed by bio-nutrient

injection. Relative to baseline sampling data, significant

improvement in GW quality has been achieved so far in almost all site wells. Installation of ORC socks has been recommended via email for the wells showing persistently high level of Total VOC concentration. Soil investigation is done annually and groundwater quarterly. All wells are found free from Free Product.Installed the quarterly report in the eDoc Folder. - II 7/29/05- Reviewed the Feb.- May/05 monitoring report. Overall GW contamination improved compared to the baseling compliant conducted in 2003. Peccent data exhibit low.

monitoring report. Overall GW contamination improved compared to the baseline sampling conducted in 2003. Recent data exhibit low hetero-trophic bacteria count in some of the wells even though DO and other biotreatment parameters are reasonable. The next soil sampling is planned for October 2005. Oxygen delivery system running and site monitoring will continue. Installed the report in the eDoc folder.-II 11/29/05- Reviewed the Jun-Aug/05 site monitoring report dt. Sept. 30/05. The final injection of bio-nutrient occurred in April 21/04. In addition, oxygen supplement through delivery wells started with eight delivery wells have now been reduced to four wells down the road due to failure of the Iso-Gen well controllers. ORC socks were also installed in wells LW-9 and LW-19 in Jan/05 and wells LW-5 and LW-15 in May/05. No free product has been observed recently. August/05 GW sampling results exhibit mixed results as TVOCs concentrations increased at some wells(particularly at LW-10) while decreased at others. But overall significant improvement is observed compared to the baseline samplings conducted in 2003. The consultant LiRo is supposed to resample well LW-10 to evaluate the sudden discrepancy. The proposed upcoming soil sampling plan by LiRo is hereby approved with two additional borings to be advanced adjacent to LW-14 and LW-19. Filed the report in the EDoc folder.- II 03/08/06: this spill transferred from I. Islam to Q. Abidi. 4/19/06: Reviewed Quarterly Monitoring report Sept. 2005 - Dec. 2005. Six groundwater samples were taken on December 28, 2005 during monitoring. Analytical data show four groundwater samples are still contaminated. Free product was not observed during monitoring. Soil samples were taken on December 20, 2005. Two new soil borings were made, LW-9 and LW-11 data shows TVOCs are very high. Only two of five planned soil borings were completed.. LiRo recommends postponing completion of the other soil borings for about six months. They also recommend continuing oxygen delivery system and monitoring at the site. Sent an e-mail to DDC and consultants on 4/19/06 approving these recommendations, and suggesting that the new CM (URS) review all data and evaluate the site to recommend a future course of action. - QA 08/18/06: Transferred to S.Kraszewski. URS Bi-monthly update report on june 9, 2006 URS collected GW samples. VOC analysis revealed no VOCs above GW quality criteria except in LW-09. - SK 10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM 12/8/06 Reviewed the Revised Remedial Strategy Report submitted by URS dated November 17, 2006. Site Summary: On Jan. 27, 2003 the DEC approved a remedial strategy by Liro to inject a bio-nutrient slurry and to install the Iso-Gen Oxygen Delivery Sytem (uses a low capacity pump and electrolytic cell to dissociate water into hydrogen and oxygen) on eight wells. In Jan 2005 the number of oxygen delivery wells was reduced to four due to failure of the well controllers. Consequently, Liro installed ORC socs in the other four wells between Jan and May 2005. The bio-nutrient slurry was injected into twenty-four injection wells between Nov 2003 and Apr 2004. URS was retained as the site manager in Mar 2006 and provided this revised remedial strategy because the manufacturer of the Iso-Gen Oxygen Delivery System had gone out of business and continued operation and maintenance of the system requires monthly replacement of the electrolytic cells. URS proposes implementing chemical oxidation followed by enhanced bioremediation if warranted in lieu of the currently approved remedial strategy. RegenOx will be injected in 10 wells at a rate of 200lbs per injection well with injections occurring once a month for 4 months. Additionaly, URS proposes advancing 4 soil borings near the previously detected vadose zone soil contamination at monitoring well LW-06 to determine if remedial measures are required. Report uploaded to eDocs. -JAM 1/10/07 Meeting with DDC and URS. Verbally approved Revised Remedial Strategy. - JAM 1/19/07 Reviewed UST Closure Report submitted by James McCullah Co., Inc. dated Nov. 2006. DDC contracted to remove two 2,000-gallon diesel oil tanks and one 1,000-gallon Gasoling tank. The tanks were removed on July 11, 2006. All three tanks were steel, five-foot diameter, double-walled tanks buried approx. four feet below grade. Tanks were found to be in good condition. All piping was also removed. Five end-point soil samples were collected from between 7'-12' below grade and analyzed for VOCs and SVOCs. Groundwater was not encountered before reaching bedrock at 11 feet below grade. No signs of contamination were observed, through olfactory and PID screening. Some VOCs were detected however, no detections were above TAGM. SVOCs in sample 1 were the only detections above TAGM. Report uploaded to eDocs. - JAM 8/17/07 Reviewed Soil Sampling Results Report dated July 31, 2007 submitted by URS. On June 12, 2007, URS advanced four soil borings near monitoring well LW-06. Two soil samples were collected from each and the analytical results showed no VOCs detected above TAGM. On May 1, and 2, 2007, URS collected groundwater samples from 16 monitoring wells. Five wells were inaccessible or dry and could not be sampled. VOCs were non-detectible in eight wells. VOC exceedences were detected in wells with concentrations ranging from 16ppb in well LW-06 to 2,018ppb in well LW-10. Elevated concentrations persist in wells LW-10 and LW-20. Conclusions: Soil analytical show that no VOCs exceed TAGM. However, elevated PID readings were detected during the screening of soil samples, which contradict sample results. URS attributes this to the hot humid weather, which may have affected the PID readings. Petroleum odors were not observed from the soil. Minor SVOCs exceeded TAGM, attributed to urban fill. URS proposes chemical oxidation to address dissolved phase contamination observed. URS will prepare a bid package and perform this work. I expect a remedial summary report when work is completed. Report uploaded to eDocs. -

S104510350

JAM 11/18/08 Reviewed System Performance Report for Monitoring Period July through September 2008 submitted by URS dated October 24, 2008. Franklin was contracted by URS to install the injections wells and on August 1, August 29 and October 10, 2008 completed three rounds of RegenOx injections. Thirty-three injection wells were installed and in each of the three injection rounds, 140lbs of RegenOx and 100 gallons of water was applied in each well. URS collected groundwater samples monthly between July and September, 2008. URS states that groundwater samples show improvement after the RegenOx injection and recommends continuing groundwater monitoring monthly while the injections are still occurring. URS anticipates Franklin will perform the next injections in December 2008. The report is uploaded to eDocs. - JAM 10/19/09 Reviewed the System Performance Report for Monitoring Period October through December 2008 submitted by URS dated February 18, 2009. On December 18, 2008, URS collected groundwater samples from eight wells in the monitoring program. Analytical results showed total VOC concentrations ranging from 43ppb in LW-19 to 4,502ppb in LW-14. Compared with results from the previous sampling event in September 2008, three wells showed decreased total VOCs and four wells showed increased total VOCs. URS states, After three rounds of RegenOx injections, the groundwater analytical data show fluctuating contaminant concentrations... Franklin is expected to perform a fourth round of injections in March 2009. URS will continue to monitor groudnwater quality. This report is uploaded to eDocs. - JAM 11/18/09 Reviewed System Performance Report through 3rd Quarter 2009 submitted by URS dated October 6, 2009. The report summarizes four rounds of RegenOx injections and 2 rounds of groundwater sampling, which occurred after the injections. The four rounds of injections occurred on August 1, August 28, October 14 of 2008 and February 27, 2009. On June 10, and September 17, 2009, URS collected groundwater samples from 12 of the 13 monitoring wells. Well LW-12 was inadvertently missed in June and well LW-20 was dry in September. NO VOCs were detected above GWQS in wells LW-02, LW-04, LW-07, LW-12, and MW-01. The remaining wells had total VOC concentrations ranging from 166ppb in LW-19 to 7,291ppb in LW-14. URS states that the rebound effect is attributed to the desorption of contaminants from soils in the northeast portion of the site. This corresponds to the conclusion presented in the ISRP by LiRO submitted in 2002, which noted contamination in the northeast portion of the site that could be attributed to the heating oil system or an unknown source. URS will perform soil sampling in the northeast portion of the site in November of 2009. No RegenOx injections are scheduled. URS is also considering using a stronger oxidant like sodium persulfate. The report is uploaded to eDocs. -JAM 6/9/10 Reviewed the System Performance Report through 4th Quarter 2009 submitted by URS dated February 5, 2010. URS conducted groundwater sampling on December 16 and 17, 2009 and results showed VOC concentrations ranging from 100 ppb in LW-10 to 2,938 ppb in LW-14. URS has performed 4 rounds of ChemOx injections and the results of groundwater monitoring after injections initially showed improvement. According to URS, it appears rebound is occuring in the northeast portion and the source may be from contamintion adsorbed on the soil in the smear-zone dissolving into the groundwater. In November 2009, URS performed a limited soil investigation in the northeast portion of the site and found contamination in 5 soil samples collected just above and below the water table in that area (groundwater is at 10ft below grade). URS proposes additional RegenOx

S104510350

injections into existing injection wells to target two areas; the area near wells LW-3 and LW-6, and the other area near borings SB-08, SB-09, SB-10, and SB-11. They also propose installing ORC socks in wells BN-03 and BN-08, located along the sidewalk along 131st Street. Report uploaded to eDocs. I called and left a message with Kevin Shanahan today to discuss the status of the out of service fuel oil tank in the northeast portion of the site. - JAM 6/10/10 Spoke to Kevin Shanahan at URS. I searched the PBS Registration (PBS # 2-455849) and found that a 5,000-gallon #2 Fuel Oil UST is listed as In Service. I asked Kevin to have the tank inspected and if it is in fact out of service, then the tank should be closed and the PBS registration updated. Perhaps the tank should be removed as it may be a source for contamination found in soil and groundwater. If so then contaminated soil should be excavated and the source removed prior to implementing another round of ChemOx injections. He agreed and will get back to me after URS inspects the tank. The latest groundwater sampling report will be issued and when Kevin gets back to me after the tank inspection, I will write a response with DEC's requirements to DDC. - JAM 10/25/10 In the quarterly status update meeting with the DDC and URS on 10/19/10, URS said that the results from the site reconnaissance was submitted in the report dated September 30th. URS will propose additional ChemOx injections to treat residual dissolved phase contamination under a separate letter. - JAM 11/05/2010: This spill case was transferred to A. Doronova. - AD 02/17/2011: Had a quarterly meeting with DDC and URS. Discussed the proposed 5th round of RegenOx injections. Since the previous rounds did not indicate significant improvements in GW quality, asked URS to do USTs inventarization and find out if it is feasible to remove closed-in-place USTs which are acting as a continuous sources of contamination according to a GW contamination plume map. Put RegenOx injection proposal on hold, till the requested info will be submitted to DEC. AD 02/18/2011: Received a Remediation Performance Report, submitted by URS Corporation (URS) and dated February 15, 2011. The report presents groundwater sampling results and states that some of the site s monitoring wells showed elevated levels of VOCs and that one well (LW-20) exhibited free product during the last monitoring round. Based on the data, URS recommends an additional round of RegenOx injections in two areas of the site. Will wait for USTs info before making decision. AD 03/07/2011: Received a call from K. Shanahan of URS regarding feasibility of removal of USTs in question from the site. He said that there are some issues with their removal. Told him that then these areas should be investigated further and long-term remediation will be required. Also he insisted on implementation of RegenOx injections since it was already approved by DDC and they have contractor ready to perform it. Told him that previous rounds of injection did not show significant improvement, and that they should consider different compound for injections. I said that they can submit their proposal for RegenOx application for my review. Later received an e-mail from K. Shanahan saying: Ainura, Thank you for taking some time this morning to discuss the latest developments for this site. Here is a basic summary of our discussions: 1. URS informed DEC that removal of the closed-in-place 4,000-gallon heating oil UST is not considered feasible due to structural concerns of the adjacent elevator. DEC indicated that if this tank cannot be removed, it may result in a long-term remediation project since any source areas associated with this tank would remain. 2. URS informed DEC that removal of the six closed-in-place

MAP FINDINGS

Site Dat

MANHATTAN EAST 10 DOS -DDC (Continued)

S104510350

550-gallon USTs is complicated by the presence of the new diesel and gasoline supply piping and electrical conduit running directly over the closed tanks. DEC requested that URS consider protecting the lines and removing the tanks. If the lines are damaged during construction, they could be repaired. URS preliminarily agreed and will arrange for the UST removal in this area. 3. URS requested that DEC approve the limited Regenox Injection Plan URS prepared in December 2010 (see attached). The design is complete and the contractor has been procured for this work. DEC reiterated that they did not feel the four Regenox applications have resulted in significant VOC reductions but they would consider the request to complete this addition work. DEC also suggested that URS look at alternative bioremediation technologies for this site. In summary, URS will have the six closed-in-place 550-gallon USTs removed and DEC will review the attached plan for limited Regenox Injections. If possible DEC will provide URS an approval to move forward. Thanks, Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203 716-923-1215 Reviewed the attached scope of work where URS proposes implement additional round of RegenOx injections in two areas of the site, using ten existing injection wells. Free product will be removed from the affected well (LW-20) before beginning the injections. A summary report with conclusions and recommendations will be provided to DEC. AD 03/10/2011: Discussed this proposal with J. Kolleeny of DEC. AD 03/11/2011: Issued and sent an approval letter with the following comment: " If the RegenOx application is not effective in reducing VOC levels, an alternative remediation approach should be proposed for the site. DL the letter to eDocs. AD 07/31/2011: Received a 1st guarter monitoring report for 2011. DI to eDocs. Will review. AD 08/25/2011: received an e-mail from Kevin saying: Ainura, Closed in-place USTs are being removed today, tomorrow and possibly on Monday depending upon utility complications. Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203 716-923-1215 AD 08/19/2011: Reviewed the report. It states that the most recent remedial action conducted at the Manhattan East 10 facility involved using RegenOxTM injections to treat dissolved phase groundwater contamination. Four rounds of injections were completed between August 1, 2008 and February 27, 2009. After the four rounds of RegenOxTM injections, the groundwater analytical data continue to show fluctuating contaminant concentrations. The groundwater sampling for the first quarter of 2011 was completed on March 7 and 8, 2011. The samples were analyzed for petroleum related volatile organic compounds (VOCs) using USEPA Method SW 8260. Samples were collected from wells LW-02, LW-03, LW-04, LW-06, LW-07, LW-09 (IW-22), LW-10 (IW-21), LW-12, LW-14, LW-15, LW-19 and MW-01. LW-20 was not sampled because product was detected in the well. The measured quantity of product in the well was 0.03 feet. The analytical results showed no VOCs exceeded the NYSDEC GQS in wells LW-02, LW-04, LW-06, LW-07, LW-12, and MW-01. The remaining six wells exhibited several VOCs above the NYSDEC Groundwater Quality Criteria, with total VOC concentrations ranging from 96 ppb in LW-09 to 3,510 ppb in LW-14. The most recent groundwater results support URS recommendations for additional RegenOxTM injections and the installation of ORC socks as outlined in previous quarterly monitoring reports. URS anticipates that removal of the six USTs will be completed in September 2011. Upon approval from NYSDEC to inject additional RegenOx"! in accordance with the December 2010 submittal, URS will proceed with additional RegenOxTM

MAP FINDINGS

MANHATTAN EAST 10 DOS -DDC (Continued)

S104510350

injections to address residual groundwater contamination in accordance with the Scope of Work already provided to NYSDEC. URS will continue groundwater monitoring on a quarterly basis. Since product has been detected in LW-20 for three consecutive quarters, a petroleum absorbent sock will be installed in this well during the next sampling event. - URS recommendations for additional RegenOxTM injections and the installation of ORC socks were approved by DEC back in March of 2011. AD 12/01/2011: Received 2nd guarter 2011 monitoring report. DL to eDocs. Will review. AD 01/17/2012: Reviewed the report. It states that on August 26, 2011, Franklin removed the five 550-gallon USTs, along with the tank encasement and fill material. Since the removal of the 350-gallon UST may have posed a threat to the structural integrity of the building above it, it was not removed. No environmental impacts were noted during the UST removal work. Analytical results for soil samples collected following removal of these tanks will be submitted in the next quarterly report. Following the removal of the five USTs, URS is making plans to implement the next round of RegenOxTM injections. The injection work plan proposes that 60 pounds of oxidant (Part A), 30 pounds of activator (Part B), and 120 gallons of water will be injected into wells IW-02, IW-03, IW-04, IW-07, and IW-10, all located in the area where the tanks were removed. In the more contaminated northeast area of the site, the work plan proposes injecting 120 pounds of oxidant. 60 pounds of activator, and 240 gallons of water into injection wells IW-06, IW-29, IW-30, IW-31, IW-32, and IW-33. The groundwater sampling for the second quarter of 2011 was completed on June 13 and 14, 2011. All wells were sampled except for LW-20 since product was found in this well at a thickness of 0.01 feet. The depth to groundwater at the site ranges from approximately 7 to 11' bgs. The predominant flow direction is to the east and northeast. The analytical results showed no VOCs exceeded the NYSDEC Standards in wells LW-02, LW-04, LW-06, LW-12, and MW-01. In well LW-07, MTBE was the only VOC detected, at 17 ppb. The remaining six wells exhibited several VOCs above the NYSDEC Groundwater Quality Criteria, with TVOCs ranging from 31 ppb in LW-09 to 3,884 ppb in LW-14. After four rounds of RegenOxTM injections, the groundwater analytical data showed fluctuating contaminant concentrations. URS concludes that future RegenOxTM treatments would address the higher level contamination that remains in the downgradient area, especially given the fact that the 4,000-gallon closed in-place heating oil tank and any associated contaminated soil cannot be removed via excavation. URS will continue to perform groundwater monitoring on a guarterly basis. The most recent groundwater results support URS recommendations for additional RegenOxTM injections and the installation of ORC socks as outlined in previous quarterly monitoring reports. URS is preparing to conduct the next round of injections in accordance with the December 2010 scope of work. No DEC response or approval is needed. AD 02/08/2012: Received a third quarter 2011 monitoring report. DL to eDocs. Will review. AD 03/13/2012: Reviewed the report. It states that groundwater sampling for the third quarter of 2011 was completed on September 7 and 8. 2011. All wells were sampled except for LW-03 because of an obstruction in the well, and LW-20 since product was found in this well at a thickness of 0.01 feet. The obstruction in well LW-03 has since been removed. The depth to groundwater at the site ranges from approximately 7 to 11' bas. The predominant flow direction is to the east and northeast. The depth to bedrock at this site ranges from 9

Elevation

EPA ID Number

feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. Minor quantities of product have been detected in monitoring well LW-20 for the past several groundwater sampling events. During the June 2011 event, a petroleum absorbent sock was installed in this well to collect product. During the September 2011 site visit, the sock was replaced. URS will continue to monitor product and replace the absorbent sock in this well as necessary. The analytical result from this sampling event showed no exceedance of any NYSDEC Standards for VOCs in wells LW-02, LW-04, LW-07, LW-12, and MW-01. There were no VOCs detected in samples collected from wells LW-02, LW-07, and MW-01; in LW-04 and LW-12 only MTBE was detected. In well LW-06, n-propyl benzene was the only VOC that exceeded the standards at 6 ppb as compared to a criterion of 5 ppb. The remaining five wells exhibited two or more VOCs above the standards, with TVOCs ranging from 14 ppb in LW-09 to 2,332 ppb in LW-14. URS concludes that VOC-impacted groundwater and saturated soils remain in the eastern half of the site. URS recommends installation of five additional groundwater monitoring wells and analysis of soil and groundwater samples in this area to better delineate the extent of soil, groundwater and free product impacts. Based on the groundwater data obtained over the past few years, URS sure that the remediation by chemical oxidation has had a positive effect. Therefore, URS intends to implement additional RegenOx injections once the new wells have been installed and the extent of the VOC impacts has been refined. Summary: The report presents groundwater sampling results and states that significant groundwater impacts remain in the eastern part of the site. Based on the data, URS recommends further delineation of the groundwater contaminant plume via installation of five monitoring wells, with collection of soil and groundwater samples, followed by an additional application of chemical oxidant in this area of the site. A summary report with conclusions and recommendations will be provided to DEC. To issue an approval letter. AD 03/14/2012: Issued and sent the approval letter to A. Samani of DDC with the following comment: " If the additional RegenOx application is not effective in reducing VOC levels, an alternative remedial approach should be proposed for the site. DL pdf copy of the letter to eDocs. AD 06/13/2012: Received 4th Quarter 2011 and 1st Quarter 2012 Monitoring Reports. DL pdf copy to eDocs. Will review. AD 07/26/2012: Reviewed the report. It states that the 13 wells are currently included in the quarterly groundwater monitoring program: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09 (IW-22), LW-10 (IW-21), LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01. Groundwater sampling for the fourth quarter of 2011 was completed on December 12, 2011. The groundwater sampling for the first quarter of 2012 was completed on March 5 and 6, 2012. During both sampling events, all wells were sampled except for LW-20, which currently contains a petroleum-absorbent sock and typically contains free product. For the first quarter 2012, the analytical results showed that no VOCs exceeded the Standards in 5 wells: LW-02, LW-04, LW-07, LW-12 and MW-01. In well LW-06, only n-propylbenzene was detected above criteria at 8ppb as compared to a criterion of 5 ppb. The remaining 6 wells: (LW-03, LW-09, LW-10, LW-14, LW-15 and LW-19) exhibited several VOCs above the NYSDEC Groundwater Quality Criteria; the most contaminated well was LW-14, with TVOCs of 3,299 ppb. The remaining wells exhibited TVOCs ranging from 17 ppb in LW-09 to 776 ppb in LW-15. URS states that analysis of recent groundwater sampling data indicates that moderate VOC concentrations persist in the

Elevation

Site

S104510350

northeastern part of the site. According to URS, the existing monitoring well network is not sufficient to delineate this plume. Therefore, URS has elected to install four additional monitoring wells in this area to be included in the quarterly monitoring program. URS has scheduled the new well installation for June 2012. The work plan for wells installation was approved by DEC in March 1012. URS also intends to implement additional RegenOx injections once the new wells have been installed and the extent of the VOC impacts has been refined. In an email dated March 14, 2012, the NYSDEC approved this recommendation. The NYSDEC also suggested that other remedial alternatives be considered for the site if the additional RegenOx application is unsuccessful. URS will continue to monitor groundwater on a quarterly basis, and will implement the delineation and remediation strategies identified above. AD 12/05/2012: Received 2nd and 3rd Quarter of 2012 Monitoring Reports. DL pdf copy to eDocs. Will review. AD 01/28/2013: Reviewed the report. It states that Associated Environmental Service (Associated) installed monitoring wells MW-02 through MW-05 from June 18 through 22, and October 1 and 2, 2012 under URS supervision. A total of four soil samples were collected during installation of the monitoring wells (MW-02 through MW-05). VOCs were detected above NYSDEC Soil Cleanup criteria in the shallower sample depth at MW-2(9-10'-37.580ppb) and MW-03(7.5-8.5'-104.100ppb) locations. Recent analytical data indicates that both of these samples were collected close to depth of the groundwater table at the site. Groundwater Sampling data: The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The GW samples are analyzed for petroleum related VOCs using United States Environmental Protection Agency (USEPA) Method SW 8260. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. The groundwater sampling for the second quarter of 2012 was completed on June 4 and 5, 2012 except for newly-installed monitoring well MW-03 which was developed and sampled on July 23, 2012. The third quarter sampling event was conducted on August 28, 2012. During both the second and third quarter sampling events, monitoring well LW-20 was not sampled because it contains a petroleum absorbent sock and typically contains free product. Wells MW-02 and MW-04 also were not sampled during the either quarter because installation of these two wells was completed after the sampling events. Well MW-05 was not sampled in the second quarter event because it was found to be dry; this well was sampled in the third quarter. For the third quarter sampling event on August 28, 2012, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 9 monitoring wells: LW-02, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, MW-01, and MW-05. The five monitoring wells with exceedances of the criteria exhibited total VOCs ranging from 65 ppb in LW-19 to 2,161 ppb in LW-14. Results from this most recent sampling event generally were in the same range as the results from the previous event in June. Based on recent trends in groundwater sampling data and soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011, URS states that it appears that the groundwater impacts historically detected in the western half of the site have been successfully

Site

Elevation

MANHATTAN EAST 10 DOS -DDC (Continued)

S104510350

remediated by chemical oxidation. In the western half of the site, only well LW-03 continues to exhibit minor VOC contamination. The last quarterly report of 2009 presented the results of a soil sampling program that showed significant soil contamination in the saturated zone in the northeast corner of the site and recommended additional injection of RegenOx for treatment. In an email dated March 14, 2012, the NYSDEC approved this recommendation. Based on those soil sampling results, as well as data collected during the recent installation of four additional GW monitoring wells in this area, URS prepared a work plan for the injections to be implemented in fourth guarter 2012. URS will continue guarterly GW monitoring at the site. AD 04/09/2013: Received an e-mail from K. Schanahan of URS with attached GW monitoring Report and a Scope of Work for Additional Round of RegenOx Injection saying the following: Ainura, During the last project status meeting we discussed the Manhattan East 10 site operated by the New York City Sanitation Department. Based on our discussions it was decided that URS would send you the Work Order for the next Regenox Injection event for your review and approval. Specifically, I believe you wanted to look at the proposed injection locations and quantities. The Work Order is attached. Please let us know if this is acceptable as soon as possible since our contractor is ready to initiate construction. We have also attached the latest monitoring report which was posted to the website today for reference. Please note the favorable groundwater concentrations for the recent sampling event. Kevin J. Shanahan Senior Project Manager URS Corporation Received a phone call from Kevin Schanahan of URS. He asked to expedite the approval of the work plan. Reviewed the work plan. It states that RegenOx injections were succesful in reducing VOCs levels in site monitoring wells, but says that some of the site s monitoring wells still indicated elevated levels of VOCs and that one well (LW-20) exhibited free product sheen during the last monitoring round. Based on the data, URS recommends performing an additional round of RegenOx injections targeting the northeast area of the site, via thirty injection points. Free product will be removed from the affected well before beginning the injections. A summary report with conclusions and recommendations will be provided to DEC. 04/10/2013: Issued and sent an approval letter to A. Samani. DL pdf copy of the letter to eDocs. AD 04/12/2013: Received hard copy of the Groundwater Monitoring and Remediation Report for 4th Quarter 2012 and 1st Quarter 2013. DL to eDocs. Will review. AD 05/28/2013: Reviewed the report. It states that in September 2012, URS issued a Work Order to conduct RegenOx injections via direct-push injection borings at 14 locations in the northeast corner of the site. Figure 4 shows the actual injected locations both inside the building and in the sidewalk. The injections were conducted from the bottom of the boring progressing upward; the injection interval for each boring extended from bedrock or refusal up to 8 feet below ground surface (bgs) or until the reagents begin to daylight from the boring. The goal was to inject 30 pounds of Part A RegenOx, 30 pounds of Part B RegenOx and 100 gallons of water into each vertical foot of the injected interval. The first three injection borings were conducted on October 22, 2012 as a preliminary event to determine how easily the borings could be installed, how much material was likely to be injected at each location, and how much daylighting or other issues could be expected. The remainder of the injections were completed in the period from January 15 through 21, 2013. The table below summarizes the actual injection intervals and quantities for each of

Site

Elevation

MAP FINDINGS

Database(s)

EDR ID Number EPA ID Number

MANHATTAN EAST 10 DOS -DDC (Continued)

S104510350

the 13 borings that were completed. Overall, the actual quantity of 1,410 pounds of Part A RegenOx injected during this event was within the target range of 1,260 and 2,100 pounds determined during the design. Based on the apparent improvement in groundwater quality as a result of the recent RegenOx event URS intends to implement additional injection events in the second guarter of 2013. Grooundwater sampling: The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2012 was completed on November 26 and 27, 2012; the first quarter 2013 sampling event was completed on February 13 and 14, 2013. Monitoring well LW-20 was not sampled during either event because it contained a heavy sheen of free product. Monitoring well LW-15 was not sampled during the first quarter 2013 because it was blocked by a car. For the most recent sampling event on February 13 and 14, 2013, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-06, LW-07, LW-12, LW-14, MW-01, MW-04 and MW-05. In addition, monitoring wells LW-03, LW-09, and LW-19 each only exceeded the criterion for one or two compounds and had low total VOC concentrations of 33 ppb, 8 ppb, and 24 ppb, respectively. The highest total VOC concentration was in well MW-02 with 739 ppb total VOCs. After the RegenOx injections completed in 2008-2009, the groundwater analytical data showed favorable results in the western half of the site and uncertain results in the eastern half of the site which is located further downgradient, wells in the western area of the site such as LW-03 and LW-06 initially showed an increase in concentration following the first RegenOx injections in 2008 and 2009, but are now consistently low. Based on these results, it appears that the contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW-10 where the total VOC concentrations prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb and now are consistently below 100 ppb. Conclusions: URS states that based on recent trends in groundwater sampling data. it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only well LW-03 continues to exhibit minor VOC contamination. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011, also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations have been relatively consistent for the past several years. However, following a round of chemical oxidation injections completed in October 2012 and January 2013, the most recent monitoring results indicate significant reductions in total VOC concentrations in several of the most contaminated wells. Future monitoring events will indicate whether the reductions observed are sustained and how many additional injection events may be required to achieve remediation goals. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data, URS recommends the following: - Continue to conduct additional RegenOx injections events in the northeast area of the site, as warranted. As requested by the NYSDEC at the last quarterly meeting. URS will submit the proposed scope of work for the next RegenOx injection to the NYSDEC for

EPA ID Number

review. - Continue the quarterly groundwater monitoring and sampling. AD 11/14/2013: Received hard copy of the Groundwater Monitoring and Remediation Report for 2nd and 3rd Quarters of 2013. DL to eDocs. Will review. AD 12/05/2013: Reviewed the report. It states that in April 2013, URS issued Work Order R-84-02 for one round of RegenOx injections to be conducted at the site. The work order proposed injection borings at a total of 30 locations following the same methodology and target injection quantities as the prior scope of work (30 pounds Part A and B RegenOx and 100 pounds of water per foot). The injections were completed between April 30 and June 4, 2013. Injections were successfully completed at 16 of the proposed locations; injection could not be completed at several locations due to overhead obstructions that limited access with the equipment; the remainder of the proposed injections could not be completed due to refusal encountered during installation. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the second quarter of 2013 was completed on May 6 and 7, 2013; the third guarter 2013 sampling event was completed on July 29 and 30, 2013. All of the wells currently in the groundwater monitoring program were sampled during both events. For the most recent sampling event on July 29 and 30, 2013, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 10 monitoring wells: LW-02, LW-04, LW-06, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04 and MW-05. The highest total VOCs were in wells LW-14 with 8,671 ppb and LW-20 with 3,092 ppb. In the remaining wells, the total VOC concentrations ranged from 33 ppb to 873 ppb. Minor quantities of product have been detected in monitoring well LW-20 over the past year. A petroleum absorbent sock was installed in the well in June 2011 and replaced approximately every six months as it became saturated. In an effort to flush the product from the well, URS redeveloped the well in May 2013 by pumping 100 gallons of water from the well. The sock and development water were disposed of off-site. During the two subsequent sampling events, product has not been detected in this well, or any other monitoring wells. The report states that over 25,000 pounds of RegenOx has been injected into the saturated zone over the past five years to oxidize petroleum-related VOCs in groundwater. Based on recent trends in groundwater sampling data, URS concludes that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only wells LW-03 and LW-10 continue to exhibit minor VOC contamination. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, several locations with elevated VOC concentrations that warrant additional remedial actions. Based on the

Site

Elevation

current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: " No additional investigations at this time. " Conduct at least one additional RegenOx injection event in the northeast area of the site. " Continue the quarterly groundwater monitoring and sampling. There are no proposals requiring DEC approval at this time. AD 05/20/2014: Received hard copy of the Groundwater Monitoring and Remediation Report for 4th Quarter of 2013 and 1st quarter of 2014. Will review. AD 06/19/2013: Reviewed the report. It states that the groundwater sampling for the fourth quarter of 2013 was completed on October 21-23, 2013. The first guarter 2014 sampling event was completed on January 20 and 21, 2014. Samples were collected from all of the wells currently in the groundwater monitoring program during the fourth quarter 2013 event. During the first quarter 2014, a sample could not be collected from well LW-06 because it was covered by a steel plate. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. GW data: For the most recent sampling event in January 2014, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-07, LW-09, LW-10, LW-12, MW-01, MW-02, MW-04, and MW-05. The highest total VOC concentrations were in wells LW-14 with 4.846 ppb, LW-20 with 1,157 ppb, and LW-15 with 771 ppb. In the remaining wells, the total VOC concentrations ranged from 17 ppb to 225 ppb. The analytical results from the previous sampling event in October 2013 were similar to the January 2014 results. Conclusions: According to URS, over 25,000 pounds of RegenOx has been injected into the saturated zone over the past five years to oxidize petroleum?related VOCs in groundwater. They state that based on recent trends in groundwater sampling data it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only a few wells continue to exhibit minor VOC contamination. The soil sampling completed during removal of five 550?gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, several locations with elevated VOC concentrations that warrant additional remedial actions. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: - No additional investigations at this time. - Conduct at least one additional RegenOx injection event in the northeast area of the site. - Continue the quarterly groundwater monitoring and sampling. There are no proposals requiring DEC approval at this time. AD 09/11/2014: Received hard copy of the Groundwater Monitoring and Remediation Report for 2nd and 3rd quarters of 2014. Will review. AD 10/28/2014: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the second and third quarter of 2014 (through July). The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the westcentral and

Elevation

Site

S104510350

northern portions of the site. The groundwater sampling for the second quarter of 2013 was completed on April 16 and 17, 2014; the third quarter 2014 sampling event was completed on July 15?17, 2014. During both the second and third quarter, samples were collected from all of the wells in the groundwater monitoring program except well LW?06 because it was covered by a steel plate. For the most recent sampling event in July 2014, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04, and MW-05. The highest total VOC concentrations were in wells LW-20 with 1,257 ppb and LW-14 with 1,221 ppb. In the remaining five wells, the total VOC concentrations ranged from 12 ppb to 95 ppb. The analytical results from the previous sampling event in April 2014 were similar to the July 2014 results. Actions: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Actions: - No additional investigations at this time. - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from continued monitoring of the site. There is no proposal which requires DEC approval at this time. AD 03/30/2015: Received a hard copy of the Groundwater Monitoring and Remediation Report for 4th quarters of 2014 and 1st quarter of 2015. Will review. AD 04/06/2015: Reviewed the report. It states that URS performs quarterly groundwater monitoring at this site. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the westcentral and northern portions of the site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2014 was completed on October 21, 2014; samples were collected from all wells in the program except for LW-06 because it was covered by a steel plate and LW-09 because it was blocked by a car. The first quarter 2015 sampling event was completed on January 19 and 20, 2015; samples were collected from all wells in the program except for LW-06 because it was covered by a steel plate. The samples are analyzed for petroleum related VOCs and naphthalene using USEPA Method SW 8260. GW data: For the most recent sampling event in January 2015, the analytical results showed that no VOCs exceeded the NYSDEC GW Quality Standards in monitoring wells LW-02, LW-04, LW-07, LW-09, LW-10, LW-12, LW-19, MW-04, and MW-05. The highest tVOCs were in wells LW-20 with 1,728 ppb, LW-14 with 1,639 ppb, and MW-01 with 686 ppb. In the remaining four wells, the tVOCs ranged from 38 ppb to 202 ppb. The analytical results from the previous sampling event in October 2014 were generally the same as the most recent results with wells LW-14 and LW-20 showing the highest total VOCs. URS states in the report that the result of 686 ppb total VOCs at well MW-01 during this quarter was unexpected since the highest previous result from this well since it was installed in 2004 was only 3 ppb. Future monitoring events will indicate whether the total VOCs remain elevated at this location, Conclusions: A total of 19,000 pounds of RegenOx oxidizer and 19,000 pounds of activator has been injected into the saturated

Site

S104510350

zone since 2008 to oxidize petroleum-related VOCs in groundwater. According to URS, based on recent trends in groundwater sampling dats, it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of 5 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOCs in many of the wells show significant improvement following the recent RegenOx injections. There are however, a few wells with elevated VOCs (LW-14 and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Actions: - No additional investigations at this time. - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program. There are no proposals which require DEC's approval at this time. AD 09/17/2015: Received the following e-mail from URS: Document report.sp9810588.20150917.bronx_west2.2ndq2015_monitoring_rpt.pdf has been uploaded. This document is described as: Groundwater Monitoring and Remediation Summary Report for the Second Quarter 2015 for the Bronx West 2 Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 10/19/2015: Reviewed the report. It states that in June 2015, URS issued Work Order R-96-01 for one round of RegenOx injections to be conducted at the site. The work order proposed injection borings at a total of 40 locations following the same methodology and target injection quantities as the prior scope of work (30 pounds each of RegenOx oxidant and activator and 100 pounds of water per foot). Injection locations that could not be injected in 2013 or 2014 were attempted again during the 2015 round of injections if access was possible. Seven new injection locations (IB-44 through IB-50) were also added to the scope of work for this event in order to address remaining areas of higher contamination. The injections were completed between June 11 and July 2, 2014. GW sampling: URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. Monitoring well locations are shown on Figure 3. The wells currently included in the guarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the second guarter of 2015 was completed on April 14 and 15, 2015; the groundwater sampling for the third quarter of 2015 was completed on July 13 and 14, 2015; samples were collected from all wells in the program during both events. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. GW analytical data; For the most recent sampling event in July 2015, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-06, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04,

Site

S104510350

and MW-05. The highest total VOC concentrations were in wells LW-14 with 6,092 ppb and LW-15 with 1,175 ppb. In the remaining five wells, the total VOC concentrations ranged from 11 ppb to 322 ppb. The analytical results from the previous sampling event in April 2015 were generally the same as the most recent results, with wells LW-14, LW-15, and LW-20 showing the highest total VOC concentrations. Conclusions: A total of 23,215 pounds of RegenOx oxidizer and 23,215 pounds of activator has been injected into the saturated zone since 2008 to oxidize petroleum-related VOCs in groundwater. Based on recent trends in groundwater sampling data (see Figure 5), it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Future actions for the site are outlined below. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above. URS recommends the following: Actions: "No additional investigations at this time. " Continue the quarterly groundwater monitoring and sampling. " Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program. Proposals/Approvals Required: " None. AD 02/05/2016: Received the following e-mail: Document report.sp9709777.20160205.manhattan_east_10.4th_q2015. monitoring_and_remediation_report.pdf has been uploaded. This document is described as: Groundwater Monitoring and Remediation Report for the Fourth Quarter 2015 for the Manhattan East 10 site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 03/18/2016: Reviewed the report. It contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the fourth quarter of 2015. GW sampling: URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. Monitoring well locations are shown on Figure 3. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2015 was completed on October 21 and 22, 2015; samples were collected from all wells in the program during this event. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. GW data: For the most recent sampling event in October 2015, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04. LW-06. LW-07. LW-09. LW-10. LW-12. LW-19. MW-01. MW-04. and MW-05. The highest total VOC concentrations were in wells LW-14 with

Site

EPA ID Number

2,772 ppb, LW-20 with 952 ppb, and LW-15 with 724 ppb. In the remaining three wells, the total VOC concentrations ranged from 23 ppb to 213 ppb. As shown above, wells in the western area of the site such as LW-03 and LW-06 initially showed an increase in concentration following the first RegenOx injections in 2008 and 2009, but have remained consistently low since then. These wells are outside the area where the 2012-2015 RegenOx injections have been conducted. Based on these results, it appears that the overall contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW-10 where the total VOC concentrations prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb. The October 2015 results from this well showed no detected VOCs. Most wells in the northeast area of the site showed an increase in VOC concentrations following the 2008 and 2009 RegenOx injections. Total VOC concentrations at these wells generally remained consistent through 2012 with the exception of well LW-19, where concentrations had reduced to trace concentrations in 2011. As shown on the chart above, the 2012-2015 RegenOx injections appear to have had a positive effect on groundwater quality in the vicinity of wells MW-02 and MW-03, while total VOC concentrations in wells LW-14, LW-15, and LW-20 have been more variable. The fluctuation in contaminant concentration in these wells may be due to the fact that the saturated soil is more contaminated in this area, and that the RegenOx has created some rebound of VOC levels after injection of the oxidant. The rebound phenomenon occurs when an oxidant oxidizes all the contamination in the dissolved phase and then begins to dissolve contamination adsorbed on soil or present as non-aqueous phase liquid (NAPL). The last several quarters show that the elevated concentrations are now decreasing at most wells with the exception of LW-14 which showed a significant increase in the first three quarters of 2015. The total VOC concentration in LW-14 in October 2015 was significantly lower. Additional sampling events will be required to determine the long-term effectiveness of the most recent injections, and whether additional remedial actions are required. Conclusions: A total of 23,215 pounds of RegenOx oxidizer and 23,215 pounds of activator has been injected into the saturated zone since 2008 to oxidize petroleum-related VOCs in groundwater. Based on recent trends in groundwater sampling data, it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Future actions for the site are outlined below. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Actions: " No additional investigations at this time. " Continue the quarterly groundwater monitoring and sampling. " Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the

Site

results from the ongoing groundwater monitoring program. There are no proposals requiring DEC approval. AD 04/28/2016: Received the following e-mail from URS: Document report.sp9709777.20160428.manhattan east 10.1st q2016. monitoring_and_remediation_report.pdf has been uploaded. This document is described as: Groundwater Monitoring and Remediation Report for the First Quarter 2016 for the Manhattan East 10 Sanitation Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 05/12/2016: Reviewed the report. It contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the first quarter of 2016 (through January). URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The samples are analyzed for petroleum related VOCs and naphthalene using USEPA Method SW 8260. The groundwater sampling for the first quarter of 2016 was completed on January 13 and 14, 2016; samples were collected from all wells in the program except well MW-02 which was blocked by a vehicle. The depth to groundwater at the site ranges from approximately 8 to 11 feet bas. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west?central and northern portions of the site. GW data: For the most recent sampling event in January 2016, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04, and MW-05. The highest total VOCs was in well LW-14 with 2.804 ppb. The total VOCs in the remaining wells were 1,036 ppb in LW-15, 669 ppb in LW-20, 192 ppb in MW-03, and 38 ppb in LW-10. Conclusions: A total of 23,215 pounds of RegenOx oxidizer and 23,215 pounds of activator has been injected into the saturated zone since 2008 to oxidize petroleum-related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOCs in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOCs (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: - No additional investigations at this time. - Continue the quarterly groundwater monitoring and sampling. -Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report. Proposals/Approvals Required: - None. AD 05/19/2016: Discussed this site on a quarterly meeting with DDC and URS. Additional in-situ chemical injections will be proposed. AD 05/27/2016: Received the

following e-mail from Kevin Shanahan of URS: Hi Ainura, The last chemical oxidation injection event at the Manhattan East 10 sanitation garage was completed in June 2015. We would like to complete another chemical oxidation injection event next month. Attached is the proposed injection plan for your reference. The only changes from the previous injection plan were: 1.Deleting locations where overhead obstructions prohibited the contractor from performing the injections 2.Deleting some locations close to the heating oil UST 3. Adding two locations adjacent to well LR-15 This technology has already been approved but we wanted to make sure you were OK with one additional injection event. Please let us know when you can. Thanks, Kevin J. Shanahan Project Manager, Environmental Business Unit, Metro New York D +1-716-923-1215 M +1-716-480-7352 kevin.shanahan@aecom.com Reviewed the work plan. Will send an approval letter. AD 05/31/2016: Issued and sent an approval letter to J. Aliberti. AD 07/13/2016: Received the following e-mail from K. Shanahan: Hello, We are in the process of creating a new web-site for storage of reports issued to NYSDEC. The old web-site is no longer functional. The new site should be up and running within the next month. In the interim, we intend to issue reports by e-mail so we do not have any delays. Attached please find the report for the Manhattan East 10 site for the second quarter of 2016. Thanks, Kevin J. Shanahan Project Manager, Environmental Business Unit. Metro New York D +1-716-923-1215 M +1-716-480-7352 kevin.shanahan@aecom.com AECOM 257 W. Genesee Street Suite 400 Buffalo, New York 14202-2657, USA T +1-716-856-5636 aecom.com Will review. AD 08/15/2016: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the second quarter of 2016 (through April). URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the second quarter of 2016 was completed on April 11 and 12, 2016; samples were collected from all wells in the program. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. For the most recent sampling event in April 2016, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 13 of the 17 monitoring wells that were sampled. The highest total VOC concentration was in well LW-15 with 1,253 ppb. The total VOC concentrations in the remaining wells were 153 ppb in LW-14, 17 ppb in LW-20, and 113 ppb in MW-03. Based on these results, it appears that the overall contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW-10 where the total VOCs prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb. The April 2016 results showed that no VOCs were detected in this well. The total VOCs at wells LW-14 and LW-20 have dropped significantly over the last several quarters. However, the total VOCs in LW-15 has been increasing slightly over the last several quarters. Additional sampling events will be required to determine whether the recent reductions will be sustained and whether additional remedial actions are required. Conclusions: A total of 23,215 pounds of RegenOx oxidizer and 23,215 pounds of activator have been injected

into the saturated zone since 2008 to oxidize petroleum-related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. According to URS, in the eastern half of the site, total VOCs in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOCs (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Future actions for the site are outlined below. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Continue the quarterly groundwater monitoring and sampling. Conduct one additional RegenOx injection event in the northeast area of the site as approved by NYSDEC in a letter dated May 31, 2016. Proposals/Approvals Required: None. AD 11/11/2016: Received the following e-mail from URS: The document Manhattan East 10 - 3Q 2016 Report has been posted to the NYCDDC SharePoint site. Please click here to access the site.

https://nycddc.aecomonline.net/SitePages/Home.aspx Please click here to open the file.

https://nycddc.aecomonline.net/All_Reports/Manhattan%20East%2010/ report.sp9709777.2016-11-11.Manhattan_East_10.3rd_Q2016. Monitoring_and_Remediation_Report.pdf Will review. AD 12/15/2016: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the third quarter of 2016 (through July). On May 31, 2016, NYSDEC issued a letter approving of the additional RegenOx injection event. CGE completed the injection work between June 20 and July 8, 2016. RegenOx was successfully injected at 23 locations including three injection locations (IB?33B, IB?33C, and IB?40) that were added during this injection event. Eleven of the originally proposed locations could not be injected due to refusal, limited access, or utility interference. GW sampling: URS performs quarterly groundwater sampling to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW?02, LW?03, LW?04, LW?06, LW?07, LW?09, LW?10, LW?12, LW?14, LW?15, LW?19, LW?20, and MW?01 through MW?05. The groundwater sampling for the third quarter of 2016 was completed on July 11 and 12, 2016; samples were collected from all wells in the program except well LW?15 which was blocked by a vehicle. This well was sampled separately on August 24, 2016. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. For the most recent sampling event in July 2016, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 10 of the 17 monitoring wells that were sampled. The highest total VOCs were in wells LW-14 with 895 ppb and LW-20 with 469 ppb. The total VOCs in the remaining wells ranged from 25 ppb to 101 ppb. Conclusions: In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx

injections. There are however, a few wells with elevated VOC concentrations (LW?14, LW?15, and LW?20) that may warrant additional remedial actions pending the results of future monitoring. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available. Proposals/Approvals Required: - None. AD 01/26/2017: Received the following e-mail: The document Manhattan East 10 - 4Q 2016 Report has been posted to the NYCDDC SharePoint site. Please click here to access the site.

https://nycddc.aecomonline.net/SitePages/Home.aspx Please click here to open the file.

https://nycddc.aecomonline.net/All_Reports/Manhattan%20East%2010/ report.sp9709777.2017-01-26.Manhattan East 10.4th Q2016. Monitoring_and_Remediation_Report.pdf Will review. AD 03/03/2017: Reviewed the 4th QMR for 2016. It states that URS performs quarterly groundwater sampling to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater program are: LW-02, LW-03, LW-04, LW-06, LW-07. LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2016 was completed on October 10 and 11, 2016; samples were collected from all wells in the program. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. The highest total VOC concentrations were in wells LW-14 with 5,974 ppb and LW-20 with 607 ppb. The total VOC concentrations in the remaining wells with exceedances ranged from 18 ppb to 234 ppb. The consultant states that the total VOC concentration at well LW-20 has dropped consistently for the last three years. The total VOCs in LW-15 was also lower in the two most recent samples. Total VOC concentrations at well LW-14 remain highly variable. The fluctuation in contaminant concentration at this well may be due to the fact that the saturated soil is more contaminated in this area, and that the RegenOx has created some rebound of VOC levels after injection of the oxidant. Conclusions A total of 27,795 pounds of RegenOx oxidizer and 27,795 pounds of activator have been injected into the saturated zone since 2008 to oxidize petroleum?related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following several years of RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following:

Site

Elevation

MANHATTAN EAST 10 DOS -DDC (Continued)

S104510350

Actions: - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available. Proposals/Approvals Required: - URS recommends dropping wells MW-01, MW-04, and LN-06 from the groundwater sampling program. These wells are upgradient of the tank systems and samples collected from these wells have not shown petroleum impacts. The modified well network will be sufficient to monitor dissolved phase impacts to groundwater at the site. AD 03/28/2017: Received an e-mail with a link to 1st QMR 2017. Will upload and review. AD 05/03/2017: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the first quarter of 2017 (through January). URS performs quarterly groundwater sampling to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the first quarter of 2017 was completed on January 11 and 12, 2017; samples were collected from all wells in the program except well MW-01 which was blocked by a vehicle. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. GW data: For the most recent sampling event in January 2017, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 10 of the 16 monitoring wells that were sampled. The highest total VOC concentrations were in wells LW-14 with 6,288 ppb and LW-15 with 1,267 ppb. The total VOC concentrations in the remaining wells with exceedances ranged from 15 ppb to 709 ppb. Conclusions: A total of 27,795 pounds of RegenOx oxidizer and 27,795 pounds of activator have been injected into the saturated zone since 2008 to oxidize petroleum-related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550?gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that warrant additional remedial action. Recommendations for the site are outlined below. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Actions: - Continue the quarterly groundwater monitoring and sampling. - URS intends to conduct two additional RegenOx injection events in the northeast area of the site in 2017. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available, URS recommends dropping wells MW-01, MW-04, and LW-06 from the groundwater sampling program. These wells are upgradient of

S104510350

the tank systems and samples collected from these wells have not shown petroleum impacts. The modified well network should be sufficient to monitor dissolved phase impacts to groundwater at the site. AD 05/19/2017: Sent an e-mail to Mr. Shanahan of URS approving their recommendation regarding three wells. AD 06/21/2017: Received an e-mail with a link to 2nd QMR 2017. Will upload and review. AD 07/26/2017: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the second guarter of 2017 (through April). The groundwater sampling for the second quarter of 2017 was completed on April 10 and 11, 2017; samples were collected from all wells in the program, including the three wells recently removed from the program. For the sampling event in April 2017, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 12 of the 17 wells that were sampled. The highest total VOCs was in well LW-14 with 3,792 ppb. The total VOCs in the remaining wells with exceedances ranged from 25 ppb to 579 ppb. Conclusions: A total of 32,795 pounds of RegenOx oxidizer and 32,795 pounds of activator have been injected into the saturated zone since 2008 to oxidize petroleum?related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550?gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following RegenOx injections. There are however, a few wells with elevated VOCs (LW-14, LW-15, and LW-20) that warrant additional remedial action. Additional RegenOx injections were conducted in April/May 2017 and a second round of injections will be conducted in June 2017. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Actions: - Continue the quarterly groundwater monitoring and sampling. - URS intends to conduct an additional RegenOx injection event in the northeast area of the site in June 2017. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available. Proposals/Approvals Required: - None. AD 09/20/2017: Received the following e-mail from URS: The document Manhattan East 10 - 3Q 2017 Report has been posted to the NYCDDC SharePoint site and copied to the public file store. Please click here to open the file on the public server. report.sp9709777.2017-09-20.Manhattan_East_10.3rd_Q2017. Monitoring_and_Remediation_Report.pdf Please click here to access the SharePoint site. https://nycddc.aecomonline.net/ Will review. AD 10/30/2017: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10

facility for the third quarter of 2017 (through July). URS performs quarterly groundwater sampling to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW?02, LW?03, LW?04,

Site

MAP FINDINGS

Database(s)

LW?07, LW?09, LW?10, LW?12, LW?14, LW?15, LW?19, LW?20, MW?02, MW?03, and MW?05. For the most recent sampling event in July 2017, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in seven of the 14 monitoring wells that were sampled. The highest total VOCs was in well LW?14 with 5,831 ppb. The total VOCs in the remaining wells with exceedances were much lower and ranged from 9 ppb to 155 ppb. Wells in the western area of the site such as LW?03 and LW?06 initially showed an increase in concentration following the first RegenOx injections in 2008 and 2009, but have remained consistently low since then. These wells are outside the area where the 2012?2017 RegenOx injections have been conducted. Based on these results, it appears that the overall contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW?10 where the total VOC concentrations prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb. The July 2017 results showed only 9 ppb TVOCs in this well. Conclusions: In the eastern half of the site, total VOCs in many of the wells show significant improvement following RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW?14, LW?15, and LW?20) that warrant additional remedial action. Additional RegenOx injections were conducted in April/May 2017 and a second round of injections was conducted in July 2017. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Actions: - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available. Proposals/Approvals Required: - None. AD 01/22/2018: Received the following e-mail from URS: The document Manhattan East 10 - 4Q 2017 Report has been posted to the NYCDDC SharePoint site and copied to the public file store. Please click here to open the file on the public server. report.sp9709777.2018-01-22.Manhattan East 10.4th Q2017. Monitoring_and_Remediation_Report.pdf Please click here to open the file on the SharePoint site (requires log in). https://nycddc.aecomonline.net/All_Reports/Manhattan%20East%2010/ report.sp9709777.2018-01-22.Manhattan_East_10.4th_Q2017. Monitoring and Remediation Report.pdf Will review. AD 02/14/2018: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the fourth quarter of 2017 (through October). It states that the groundwater sampling for the fourth quarter of 2017 was completed on October 16 and 17, 2017; samples were collected from all monitoring wells in the program. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs and has been relatively consistent over the last year. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. GW data: For the most recent sampling event in October 2017, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 8

of the 14 wells that were sampled. The highest total VOC

EDR ID Number

concentration was in well LW-14 with 3,799 ppb. The total VOCs in the remaining wells with exceedances, were lower and ranged from 9 ppb to 451 ppb. Conclusions: A total of 37,955 pounds of RegenOx oxidizer and 37,955 pounds of activator have been injected into the saturated zone since 2008 to oxidize petroleum-related VOCs in groundwater. The groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that warrant additional remedial action. Additional RegenOx injections were conducted in April/May 2017 and a second round of injections was conducted in July 2017. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summarized above, URS recommends the following: Actions: Continue the quarterly groundwater monitoring and sampling. Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available.

with DSNY facilities. Tim DeMeo has referred me to you in hopes that you can assist me. The three locations are as follows: Pier 36 South Street, Sanitation Dept Bldg #M3 5/25/2012 Spill#1201854. 2501 Knapp Street, Brooklyn NY 2/16/2012 Spill#1113075, this address is an empty lot on google maps, however 2509 Knapp Street is a DSNY facility with active tanks. 110 East 138th Street 2/2/2012 Spill#1112646, this address is listed on my report as in Manhattan however it is actually in the Bronx and is privately owned. There is however a DSNY facility on 110 East 131st street in Manhattan. I understand it may be difficult to find information on these sites since they are old and have possibly incorrect addresses. I would greatly appreciate any information and or possible reports you may have on these sites. 1/17/2017 Austin This spill report is being transferred from Rashad Omar to Kumar Patel end. 04/26/18-Hiralkumar Patel. searched for site 110 E 138th St in Manhattan, but this address exists in Bronx but not in Manhattan. searched for NYC Sanitation facility in upper Manhattan and found sanitation garage at 110 E 131st Street, based on available information, changed site address from 110 East 138th St to 110 East 131st Street . 12:00 PM:- visited site and met Jeff Cabralies, General Superintendent. he mentioned that site has gasoline, diesel, hydraulic oil, motor oil and #2 fuel oil tanks. fill ports for all tank systems are along Park Ave except for #2 fuel tank which is along 131st St. all tanks are underground, found at least three monitoring well covers on Park Ave sidewalk. Jeff was not aware of any ongoing remediation at the site. Jeff Cabralies NYC Sanitation PH. (212) 862-7427 05/01/18-Hiralkumar Patel. alternate address: 110-124 E 131st St, 1921-1937 Park Ave, 101-105 E 130th St PBS #: 2-455849, as per PBS record, the site has/had following tanks: - one (1) 285 gal waste oil AST, closed-in-place in Sept. 2009 - one (1) 550 gal other product UST, closed-in-place in Dec. 1983 - one (1) 550 gal lube oil UST, closed-in-place in Nov. 1999 - one (1) 5,000 gal #2 oil UST, closed-in-place in Apr. 2003 - one (1) 1,080 gal gasoline UST, removed in Jul. 2006 - two (2) 2,000 gal diesel USTs, removed in Jul. 2006 - one (1) 550 gal kerosene UST, removed in Aug. 2000 - one (1) 550 gal other product UST, removed in Aug. 2000 - one (1) 275 gal waste oil AST, removed in Jun. 2010 - one (1) 550 gal lube oil UST, removed in Aug. 2000 - one (1) 1,000 gal motor oil UST, in-service, installed in Sept. 2001 - one (1) 1,000 gal hydraulic oil UST, in-service, installed in Sept. 2001 - one (1) 550 gal waste oil UST, in-service, installed in May 2003 - one (1) 5,000 gal #2 oil UST, in-service, installed in Jun. 2003 - one (1) 2,500 gal gasoline/ethanol UST, in-service, installed in Nov. 2006 - two (2) 2,500 gal biodiesel USTs, in-service, installed in Nov. 2006 other spills #: 9308006, 9513866, 9709777, 9913531, 0006315, 0106036 spill # 9308006 was reported on 10/01/1993 as 1 gal diesel spilled on concrete due to gauge malfunction. case closed. spill # 9513866 was reported on 01/31/1996 due to findings of soil contamination. case closed and merged with spill # 9913531. spill # 9709777 was reported on 11/19/1997 due to tank test failure. site is under remediation and case is being managed by DEC Doronova. spill # 9913531 was reported on 02/29/2000 due to findings of soil contamination, case closed and merged with spill # 9709777. spill # 0006315 was reported on 08/28/2000 due to findings of soil contamination. case closed and merged with spill # 9709777. spill # 0106036 was reported on 09/06/2001 due to tank test failure. case closed and merged with spill # 9913531, the subject spill case was reported on 02/02/2012 due to tightness test failure of a #2 fuel oil tank system. as per

Map ID MAP FINDINGS

Direction Distance Elevation

stance EDR ID Number evation Site Database(s) EPA ID Number

NYC DEPT OF SANITATION - TTF (Continued)

S111458652

PBS record, the site has two #2 fuel oil tank systems: 1) a 5,000 gal UST (tank # 004) which was closed in-place in Apr. 2003, and 2) a 5,000 gal UST (tank # 014), currently in-service, installed in June 2003. based on available information, the tank # 014 must have tested in 2012. as per PBS record, the tank # 014 is double-walled tank/piping with leak detection system. there were no issues found with tank # 014 during a PBS inspection on 10/23/2012. reviewed 2017 3rd Quarter report (dated 09/20/2017) for remediation project # 9709777, as per the site map, the tank # 014 is located in middle of property, along northern portion of the site. site map also shows presence of multiple monitoring wells around the tank system as part of ongoing remediation at the site. groundwater around the tank # 014 was found between 9 and 10 ft bg. after reviewing all available information, the subject spill case is closed due to no indication of a current release, no information indicating that there may have been a historical release, and any historical release due to this test failure in past will be managed by an active remediation (spill #: 9709777) at the site."

Remarks: "repair/retest pending"

DEC Memo: "04/03/06-Hiralkumar Patel. TTF letter sent out to Mr. Ramos.

09/02/09-Hiralkumar Patel. 1:18 PM:- received email from Mr. Ramos. NYC DDC removed and replaced tank in March 2009. Gabe Ramos Dep. Chief of Citywide Operations City of New York, Parks & Recreation 5-Boro Operations Randalls Island, NY 10035 Ph. (212) 410-8916 email: Gabriel.Ramos@parks.nyc.gov 05/24/12-Hiralkumar Patel. 2:02 PM:- sent email to Mr. Ramos inquiring updates, 10/06/14-Hiralkumar Patel, as per DEC Austin, case assigned to DEC Vadim. DEC requries: 1) tank closure report (any contamination along any lines or under tank, which part failed) 07/29/2015 Reviewed a Request for Closure dated April 8, 2015. Discussed the site with K. Shanahan (URS). The report proposed the closure based on the results of the closure report dated April 2009. However, the post excavation samples were all taken along the centerline of the excavation. No samples were taken at the sides of the excavation. Also, no samples were taken at the fill port location and supply/return lines. It should be noted that this tank system failed two tightness tests. I contacted K. Shanahan and discussed this site. It was decided that URS will take additional soil samples at the sides of the excavation, return and fill lines, and the fill port. URS will submit a brief work plan for the site. AZ 7-30-2015 The following e-mail was sent to K. Shanahan and V. Brevdo: Dear Kevin, I have reviewed a report for the above site dated April 8, 2015. As we have discussed over the phone, all post excavation soil samples were taken only along the centerline of the excavation. No side samples were taken. Also, no samples were taken at associated piping and former fill port locations. As we have agreed, Aecom will submit a work plan to sample the above mentioned locations. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 1-22-2016 Reviewed a Work Plan dated November 4, 2015. The Work Plan proposed installation of three groundwater monitoring wells and advancement of three soil borings in the former 5,000-gallon heating UST. The following email was sent to K. Shanahan and V. Brevdo: Dear Kevin, I have reviewed a Work Plan for this site. In order to examine the potential environmental impacts from the former 5,000-gallon UST, URS proposed to advance six soil borings. Three of them will be converted to wells. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for

Map ID MAP FINDINGS

identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky -Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 -Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 2-29-2016 The following email was received from K. Shanahan: Alex, Last week we met with the New York City Department of Parks and Recreation at the above referenced site in an effort to obtain construction and forestry permits. During the meeting, Parks staff requested that we eliminate one proposed boring and one proposed well since they were located within the tree s drip line. The attached figure shows three proposed monitoring wells and two borings based on the meeting. We need your approval of this revised plan. Could you call me when you have a chance to discuss? Thanks, Kevin J. Shanahan I called K. Shanahan and approved the wells and borings locations. I stated that if borings encounter contaminated soil they should be finished as wells. AZ 10-19-2016 Reviewed an Investigation Summary and Remedial Plan for this site dated August 29, 2016. According to the report, this spill was assigned after the 5,000 gallon No.2 fuel oil UST failed two tightness tests. The 5,000 gallon tank was removed and replaced with a new tank in 2009. Several contaminants were detected in soil. A total of approximately 137 tons of soil were removed from the site. URS conducted an investigation in May and June 2016. Three monitoring wells and two soil borings were installed. Field screening results indicated no apparent impacts to soils or groundwater. Laboratory analyses of soil and groundwater samples revealed no exceedances of soil and groundwater criteria. Based on this information this spill is closed. AZ"

cleanup activities. David reported that an oil company overfilled the tank and approximately 50 gallons of fuel oil was spilled in the basement. Petroleum Tank Cleaners was hired and the fuel oil spill was cleaned up on December 6, 2002. The cleanup involved the use of a sorbent material to contain the fuel oil. Two drums of the sorbent material and one drum of petroleum contaminated soil was subsequently removed from the basement by Petroleum Tank Cleaners. David indicated that the basement tank is an above ground storage tank and not an underground storage tank. David also indicated that the tank did not fail, but the spill resulted from an overfill. 9/20/2005 - Jason Pelton contacted Petroleum Tank Cleaners and spoke with Helen Parker about spill cleanup documentation. Helen reviewed the project files and faxed Jason a Non-Hazardous Waste Manifest documenting the removal and disposal of 2 drums of Oil Soaked Debris and 1 drum of Petroleum Contaminated Soil. The waste was transported to General Environmental Management in Cleveland, Ohio for disposal. The disposal date on the manifest is: 1/3/03. 9/22/05 - Based on communication with M&T Mortgage and the remediation contractor and documentation that the fuel oil spill was cleaned up, Spill Number 0209020 was Closed on September 22, 2005 by Jason Pelton. Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 12/02/2002 Rommel - Duty officer See also spill # 0209046 reported by 1st floor tenant. Overfill into basement, Unclear who ordered oil or what oil company made the delivery. Vought spoke to Mulqueen (FDNY) who responded to the scene. FDNY collected speedy dry and oil into 55 gallon drums which were left on site outside. Spoke to Tommie Collins and Tina Spenson - tenants in building. They indicated that there has not been heat for three weeks. They provided Spoke to Hector at J&N Managing Company 212-721-0424 21 West 86th Street, NY, NY 10024 He provided Mark Landis' phone number 212-724-8300 and cell 917-334-9321. Mr. Landis is the court appointed receiver for this property during the pendency of foreclosure. He is responsible for any necessary cleanup. Mark indicated that he will have to obtain funds from M&T Bank - who foreclosed on building, who will then have to go through HUD - who insured the mortgage. HUD Contact - Cardell Johnson - Housing Specialist - 8004408647 ext. 3467. Spill responder Vought on site 3:00pm. 12/3/2002-Vought-Site visit by vought. According to resident delivery made on 12/2/2002 at approximately 8pm by a green and whtie truck (previous trucks were green and red). No delivery receipt was left and driver who caused spill put down speedy dry at vent and fill. This was first delivery of oil season. Site inspection revealled FDNY 55 gallon drum, a boiler room covered with impacted adsorbent and impacts to an adjacent kitchen. J&M Realty (Victor Berrios and Mark Landis 212-721-0424) agreed to hire contractor and fix heat (heat had not worked all season). 12/4/2002-Spoke with Isaac Mungra (PTC 718-624-4842) who called in spill #0209093 at same location (spill closed by Vought). PTC arrived on-ste and cleaned speedy dry. Cracked concrete by vent needs to be excavated and removed. Tank needs to be tightness test and vault inspected. Boiler room concrete is intact according to PTC. 12/11/2002-Vought-Spoke with Isaac. Speedy dry has been swept and disposed of. Three drums were also removed and impacted concrete and soil by vent has been excavated and sampled. Lab analysis not received yet. Tank still needs tightness testing and/or vault inspected. Called David Legamari (M&T Mortgage Co. 716-848-3772) for vault inspection/tightness testing and left message to call NYSDEC. 1/7/04-Vought-Spill transferred from Vought to Austin. 01/27/04 -

DEC Memo: "6/13/06 - Raphael Ketani. I talked to Thomas Leddy of Protest (631)

321-4670. He said that they did a normal plug off test. He said it is a UST for heating oil for their buildings in the park. The contact person is: Wellington Green or Gabe Ramos (boss) NYC Parks Department Randalls Island, NY, 10035 (212) 410-8969 06/19/06-Hiralkumar Patel. Spoke to Tom. he is not sure but that was dry leak probably. haven't heard from parks department yet. PBS #: 2-604978 TTF sent out to Gabe Ramos at: Gabe Ramos City of NY Parks & Recreation 5 Boro Operations Randalls Island, NY 10035 Ph. (212) 410-8916 FAX (212) 410-8319 letter faxed to Mr. Ramos. 05/24/12-Hiralkumar Patel. 2:02 PM:- sent email to Mr. Ramos inquiring updates. 10/06/14-Hiralkumar Patel. as per DEC Austin, case assigned to DEC Vadim. 02/25/2015 - V. Brevdo e-mail from Aecom (Former URS): Hello Vadim, I have been meeting with

representatives of the New York City Department of Parks and Recreation to determine the status of the seven spills assigned to URS on November 3rd (see attached pdf file). According to Mr. Gabe Ramos of the Parks Department, it appears that the following spills were assigned as a result of failed tank tightness testing at the Pelham Fritz Recreation Building located in Marcus Garvey Park: Spill No. 0515023 Currently assigned to Mr. Alex Zhitomirsky Spill No. 0602813 Currently assigned to Mr. Vadim Brevdo There was a 5,000-gallon heating oil tank at the site that was replaced by LiRo in 2009. URS believes that both of these older spills should be closed based on data collected during the tank replacement project as documented in LiRo s closure report. Our case for spill closure is contained in a report we are ready to send to the NYSDEC. However, we would like direction from you regarding who to send the report to. It may make sense to have one NYSDEC PM managing both of these spill numbers since it appears they are related to the same UST that was replaced in 2009. Once we have direction from you, we will issue the report for your review. Thanks, Kevin J. Shanahan Project Manager Direct: 716-923-1215 Cell: 716-480-7352 Note New Email: kevin.shanahan@aecom.com VB 02/25/2015 - V. Brevdo Three spill numbers 0515023, 0602813, and 0813485 (closed) are related to the same tank that was replaced in 2009. Based on the e-mail explanations

from Aecom (Former URS) and the review of the closed spill case 0813485, this spill case (0602813) is closed via administrative

DEC Memo: "x236 need CSL to be sent LiRo documented the removal of one

5,000-gallon heating oil (#2 diesel) underground storage tank (UST) at the Pelham Fritz Recreation Center. The removal was conducted by Gemstar Construction Corp. of Staten Island, NY. The Pelham Fritz Recreation Center is located within the western portion of the Marcus Garvey Park at 18 Mount Morris Park West in Manhattan, New York. The

tank was being replaced as part of an ongoing New York City Department of Design and Construction UST management and upgrade program. No problems had been previously reported for the heating oil tank. A 5,000-gallon heating oil single-wall steel UST and associated piping were removed from the site. During the excavation of the tank, the top of the tank was encountered at approximately 3.5 feet below ground surface and a concrete bottom slab was encountered at approximately 10.5 feet below ground surface. Upon inspection, the exterior of the tank had surficial rust. However, the interior and exterior of the UST were free of any visual damage such as holes. pitting or degradation. No staining or discoloration was noted within the excavation. The bottom slab was removed and six excavation bottom samples were collected at a depth of 12 feet bgs along the centerline of the excavation (see attached figure). The laboratory results (also attached) showed relatively low VOC concentrations. SVOC concentration for several PAHs exceeded TAGM 4046 criteria and therefore I called in a spill report. No water was observed in the excavation. Based on surrounding locale (there are bedrock outcrops

in the Park) we expect that the depth to rock and groundwater is 25 feet or less. LiRo is preparing a UST Closure report that will be submitted to NYSDEC. "

"Caller states they found trace lelments of petroleum compounds in

> followup. 03-18-2015 - V. Brevdo This TTF Spill Case is re-assigned to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Ms. Ainura Doronova as Project Manager. - VB 03/18/2015: This spill case was transferred to A. Doronova. - AD 04/21/2015: Looked for the owner's info in the PBS database. There are three different search results for the same address with three different PBS IDs. Will look in Acris. AD 04/24/2015: Looked in Acris. The property block is 01723, lot is 0023. AD 04/29/2015: Asked advise from PBS-unit regarding the issue with three different search results for the same address with three different PBS IDs. They will look into it. AD 05/01/2015:

Received the following response from PBS-unit: There are three PBS numbers for the same tank at subject address, but only 2-612163 is active. Both 2-340464 and 2-605389 are inactive because we discovered

back in January that they were duplicates (triplicates?) of 2-612163. We used to call this situation Administratively Closed but now it s just Inactive . According to PBS database, the contact person for this site is - Peter Garsia, phone number: (646)335-0730. Address: 17 West 125 Holdings, LLC 200 West 106th Street New York, NY 10025 Issued and sent a certified TTF Letter (# 7010 0290 0000 9758 3458) to Mr. Peter Garcia of 17 West 125 Holdings, LLC. Response is due June 1, 2015. AD 06/2015: Did not receive any response. AD 09/2015: Called and left a message. AD 07/2016: Searched for the info in PBS database. According to it, the owner of the site is: Thor 17 W 125th Street LLC 25 West 39th Street New York, NY 10018 (212)460-5829 Emergency contact: Tony Toral (646)937-2594. AD 02/08/2017: Called and spoke with T. Toral. He asked to send him a NYSDEC Spill Report on his e-mail, so he can address the issue. E-mail: ttoral@thorequities.com Issued and sent the e-mail with the requirement to submit all info by March 8, 2017. AD 03/06/2017: Received a call from Antony Spadavecchia. He informed me that they performed the tank tightness test today and it was passed, the report will be submitted shortly. AD 03/08/2017: Received the following e-mail from Mr. Spadavecchia: Good morning Ainura, Please see attached the summary of the Tank System Tightness Testing located at 17 W 125th Street, New York, New York in regards to NYSDEC Spill No. 1307857. Please let me know if you have any other questions. Thank you, Anthony J. Spadavecchia Will review. AD 04/12/2017: Reviewed the report. It states that the subject property located at 17 W 125th Street has an open spill case for a tank tightness test failure, for the 5,000 gallon #2 fuel oil AST located in the building s basement. The AST is completely encased in concrete with weep holes at the base of the encasement. The leak is listed as Dry leak re-test pending. The former superintendent of the property has indicated this incident consisted of a dry leak due to a faulty man way gasket and piping above the tank. No significant petroleum stains were observed at the base of the AST encasement. PVE retained G.C. Environmental, Inc. (GCE) of Bay Shore, New York to conduct the tank tightness test on March 6, 2017. PVE personnel were on site on to observe and document field conditions. An initial evaluation of the tank was performed and the fill pipe was located immediately east of the entrance of the one of the commercial properties affiliated with the building. Measurements were noted and recorded. During the initial testing, the systems test failed the dry ullage section of the test due to air intrusion. GCE located the leak on the vent pipe and restored the failed section on the vent pipe. GCE then conducted a secondary tank tightness test using the Horner EZY3 Locator Plus non-volumetric tank test. The EZY3 Locator Plus did not detect air intrusion in the tank system, the ullage portion of the tank, nor below the product level. Conclusions: The AST on site was evaluated and passed the tank tightness test performed by certified personnel in accordance with all EPA protocols for Tank Testing equipment (results of the tank tightness test attached). Based on the conclusions outlined above, the consultant recommends that the NYSDEC spill case for the referenced property be closed. AD"

Features: Currently, the Site is used as a school, offices, and multi-uses and contains an approximately 4,480-square foot, one 1-story building. The remainder of the Site consists of an asphalt-paved parking lot. Current Zoning and Land Use: The current zoning designation is R7-2 residential use. The surrounding parcels are currently used as residential, retail, office, and institutional buildings. Past Use of the Site: Prior to 1940, the Site has been utilized for residential, commercial, stone yard (1896), lumber yard (1911), coal yard (1911), school (1923) and gasoline station (1938). From 1941 to 1980, the Site has been utilized for residential, commercial, school, and gasoline station. From 1981 to present, the Site has been utilized for institutional and commercial uses. Site Geology and Hydrogeology: Elevation of the property ranges from 8 to 10 feet and depth to groundwater ranges from 6 to 8 feet. Groundwater flow is generally from West to East. Depth to bedrock is unknown but greater than 15 feet. The stratigraphy of the Site, from the surface down, consists of 2-5 feet of urban fill material underlain by at least 10 feet of well drained, medium to fine brown sand with some

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

TIPPLE 7/21/03 tipple sent request for documentation 11/28/05 - L. Alden - Sent latest owner letter requesting information. Dr. Georgina Falu, 333 E. 118th St., NY, NY 10035. 1/05/06 - L. Alden - Dr. Falu called, and reported that the spill had been cleaned up before she bought the building and that she has had no problems. I asked if she could get anything documenting the cleanup from the former owner. She will see what she can find and get back to me. In the absence of any documentation, this spill can still probably be closed. 4/10/06 - L.

Alden - Close spill."

Remarks: "CALLER STATES SOMEONE FROM BLDG WAS TO BE WATCHING FROM BASEMENT

DURING DELIVERY TO LET DRIVER KNOW WHEN TO STOP FUELING - SUBJECT APPARENTLY LEFT BASEMENT AREA LEADING TO TANK OVERFILL - SPILL

CLEANED UP"

Site Description:

New York City Town: Record Added Date: 05/15/2015 Record Updated Date: 12/29/2017 Update By: **JHOCONNE**

> Location: The Site is located in an urban area in the South Bronx and is bordered to the northeast by Bruckner Boulevard, to the southeast by Lincoln Avenue, to the southwest by Block 2316, Lot 35, which is part of the pier head and bulk head, followed by the Harlem River, and to the northwest by the Third Avenue bridge. Site Features: The property is currently developed with a one-story 19,450 sf commercial building constructed in 1931. The entire site is paved. Current Zoning/Use: The site is zoned M1-3/R8 residential/commercial, a Special Mixed Use District, and is currently occupied by a moving company and a bus company as a maintenance garage and yard. Historical Use: The subject property was historically used for coal storage (1891 - 1908), the New Jersey Central Rail Bronx Freight Terminal (1908 - 1950s), and crane repair, a paint shop, blacksmith shop, bus depot and vehicle repair shop (1968 - present). Site

> > Geology and Hydrogeology: Subsurface soils at the Site consist of historic fill materials to a depth ranging from 5 to 7 feet below the surface followed by native silty-sand and peat layers. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 5 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the west. Groundwater occurs beneath the Site at a depth of approximately 7 feet below grade under water table conditions. Based

on regional flow maps and the proximity to surface water, groundwater flow is expected to be to the southwest toward the Harlem River but is likely influenced by tidal fluctuations.

Nature and Extent of Contamination: Soil - SVOCs (typically PAHs), pesticides (4,4' DDD, 4,4' DDE, 4,4' DDT) and metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, nickel and zinc) above Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Use Soil Cleanup Objectives (RRSCOs) in shallow soils. Results were typical of fill material found in the area. One petroleum related VOC was noted in deeper soil at boring 15B6 on the northwest side of the Site that exceed its UUSCO. Specifically, ethylbenzene at 31 parts per million, or ppm (USCOs of 1 ppm). Several SVOCs, including benz(a)anthracene at a maximum of 9.6 ppm (UUSCO of 1 ppm), benzo(a)pyrene at a maximum of 9 ppm (UUSCO of 1 ppm), benzo(b)fluoranthene at a maximum of 7 ppm (UUSCO of 1 ppm), benzo(k)fluoranthene at a maximum of 6.5 ppm (UUSCO of 0.8 ppm), chrysene at a maximum of 10 ppm (UUSCO of 1 ppm), Dibenz(a,h)anthracene at a maximum of 0.91ppm (UUSCO of 0.33 ppm) and indeno(1,2,3-cd)pyrene at a maximum of 4.6 ppm (UUSCO of 0.5 ppm) were noted in deeper soil samples. Groundwater -The following petroleum-related VOCs exceeded groundwater standards: benzene at 9.2

Env Problem:

EDR ID Number

parts per billion (ppb), ethylbenzene at 280 ppb, isopropylbenzene at 95 ppb, naphthalene at 1,300 ppb, n-Propylbenzene at 20 ppb and toluene at 12 ppb at MW-6 on the northwest side of the Site in the vicinity of the petroleum contaminated soil. Soil Vapor -

Tetrachloroethene (PCE) was detected at an elevated concentration of 161 micrograms per cubic meter (ug/m3) at SV-1 on the north side of

the Site.

Health Problem: Contaminated groundwater at the site is not used for drinking or other

purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. People may come into contact with contaminants in soils if they contact surface soils or dig below the surface. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion.

Because the site is vacant, the inhalation of site-related

contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the event that on-site buildings are re-occupied and in any future buildings developed on the site. Environmental sampling indicates that soil vapor intrusion is not a

concern for off-site buildings.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

TIPPLE 12/12/2003 Management company telephone 917-709-4887 Sangesland spoke with Vega in apt B. He said he came to visit his grandmother and the apartment building was filled with a heavy oil smell. Vega called NYFD. Mike Mulqueen was at the site(Sangesland did NOT speak with Mike) Mulgueen reported the spill and estimated 30 gallons. According to Vega, NYFD and City DEP were both on site and gave the management company several written orders to clean & repair the spill. Sangesland called the management company and left a message. No response yet. Unknown who is doing the cleanup. No contact made yet with either owner or management company. 12/15/03 Tipple responded to the scene, rang all bells and was buzzed in, located boiler and tank area, found the spill, no one was to be found. It was not apparent if the spill was caused by a slow drip or asingle event. Tipple then Called Management company, Owner as per PBS registration and Tenant in apt.B, got no response. Spoke with Mulqueen, FDNY had put speedy dry and biosolve to absorb the oil and reduce the vapors. FDNY stated that a cleanup company should be in route Tipple sent letter to repair/ test/tank and clean spill.

12/15/03 Ray from Petroleum Tank Cleaners will PROBABLY do the cleanup. He will look at the site and get a signed contract. 3/5/2004 Sangesland spoke to Ray at PTC. PTC records show 4 drums & a van for

4 hours. Spill Complete Closed"

Remarks: "caller states that the tank looks like it is leaknig. it is an above

ground 1000 gallon tank in the basement that has been leaking for

about a week."

BROWNFIELDS: Relative:

Lower Program: **BCP** Site Code: 507623 Actual: Acres: 1.4 2 ft. HW Code: C203052 SWIS: 301 Town: New York City

Record Added Date: 05/08/2015 Record Updated Date: 01/16/2018 Update By: **JXGRECO** Site Description:

Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The main site feature includes a vacant 19.450 square foot one-story commercial building (no basement) constructed in 1931; asphalt, concrete and cobblestone-paved exterior driving/storage areas; an approximate 10,500 square foot private parking lot and sparsely-vegetated areas. However, during January 2017 the one-story building was demolished and the slab remains in place. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District) and is currently inactive. The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The subject property was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. A Phase II Environmental Assessment Investigation was performed in 2014 which indicated the presence of petroleum related contamination in soil and groundwater. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum related VOCs, SVOCs and metals. Soil: A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted

residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater: A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened: Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River.

The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil.

Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion.

The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment.

Environmental sampling indicates that site-related contamination does not pose a soil vapor concern for off-site buildings.

DEC Memo: "2/10/05 MT// Leak above product line, owner instructed not to refill

tank,but he can use all of the oil currently in the tank. Owner's office 718-454-8555 contact Joe Cohen for the next 3 weeks, Yoshi is the lead person is going on vacation next week for 3 weeks. Owners plan to convert to gas, empty and remove the oil tank and conduct whatever cleanup that is needed.///TTF letter sent 07/18/2005: Called owner of the property at 4 East 132nd Street (Mr. Yoshi of 4 East 132nd Realty LLC) to determine status of cleanup. Yoshi faxed documentation of tank removal that occurred in March 2005. Contents of tank were removed, tank cleaned and purged, fill and vent lines cut, oil lines disconnected and removed, and the tank was cut up and removed. Tank closure was reviewed by a licensed NYC Fire Department

Underground Tank Installer and a Certificate of Affidavit was submitted to the NYC Fire Department Bureau of Fire Prevention on April 21, 2005. There was no release of product from tank into the environment. Documentation was determined to be adequate to close spill. No Further Action letter sent to owner. M. Brand DER NYSDEC

Albany."

DEC Region: DER Facility ID: 268974 DEC Memo: "4/20/2005 Spill case transferred from DeMeo to Rahman: Sangesland

spoke to project manager working for building owner. He said the problem tank was cleaned, cut up and removed from the vault. Vault was located under the sidewalk in front of the building. Vault was cleaned and there were no cracks in the floor, therefore no oil leaked out of the vault area. Sangesland asked the project manager to

> send into the DEC: 1) Letter stating that the tank was removed 2) Statement that the vault area was totally cleaned and no cracks found. 3) Detailed photos of the vault floor showing it is clean and has no cracks. 4) Request closure of open spill number. 06/14/05-SR// Received photographs, invoice and left a message for them. 10.21.05 Sharif- Reviewed the waste disposal manifest and photographs after the tank has been removed. Aparently, there is no cracks or leak on the floor. But the tank room wall looks wet with black stain at different places. Spoke with Phil Rutherford, 212-685-9680 who said they took pictures after it was power washed again since my last conversation with him. He would send me the all new photographs and

check with the company whether they filed any deregistration application with DEC. 11.18.05 Sharif// Recev'd new photograph that

looks pretty much clean. NFA required."

New York City Town: Record Added Date: 05/15/2015 Record Updated Date: 08/14/2015 Update By: **BXANDERS** Site Description:

BCP

Location: The Site is located in an urban area in the Mott Haven section of the Bronx and is comprised of approximately 47.411 square foot (sf) irregularly (rectanuglar?) shaped lot. The site includes all of Block 2309 Lot 12 and a portion of Lot 1 and has 75 feet of frontage along Bruckner Boulevard and approximately 300 (360?) feet of frontage along E. 134th Street. Site Features: The site is currently vacant. Current Zoning/Use: The site is zoned M1-2/R6A residential/commercial and is currently vacant, though part is used as a parking lot by the adjacnet building. Historical Use: The subject property was historically used as a piano factory,

woodworking factory and marble factory (1890s through 1920s), and a revolving door factory and window and door factory (1940s through 2007). Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 5 to 10 feet below grade. Silty sand is present immediately below this layer to a depth of 15 feet. The depth to bedrock is anticipated at

Direction Distance

Elevation Site Database(s) EPA ID Number

FORMER MANUFACTURING PLANT (Continued)

EDR ID Number

approximately 20 to 30 feet below land surface. Groundwater at the

Site is present under water table conditions at a depth of

approximately 10 feet below grade. Based on regional water table elevation maps, groundwater flow is expected to be southwest toward

the Harlem River.

Env Problem: Information submitted with the BCP application regarding the

environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the

conditions at the site are currently under review and will be revised

as additional information becomes available.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

SANGESLAND Sangesland spoke to Nick Pascel of Hess. He said it was a tank overfill and 20 gal of heated #6 came out of the vent line. On to soil. Eastmond has been mobilized to clean up. - Confirm cleanup directly with Eastmond 7/28/2004 - Sangesland spoke to Rene at Eastmond. He said they pulled out 75 bags of contaminated soil. They will take endpoint samples and will take pictures. When all are done, report will be sent in for closure. 9/16/2004 Sangesland spoke to Issac at Eastmond. A second major spill happened at this site (in the hole that was dug to clean out the last spill). Apparently there are 2 tanks at the site and the building switched the tank numbers. When Hess delivers to tank 1 they are filling tank 2. Eastmond suggests installing an overfill alarm. Issac says that they already cleaned up

case out. The new spill number for today's spill (0406637) has been closed out and referenced back to this spill number. 9/28/2004 Sangesland spoke to DeMeo about the spill site. Photo of the site showed most of the latest spill went out into a parking lot area. there was a 2' x 10' area of garden and a small bush, right up next to the building under the vent lines that was saturated in oil. This area needs to be dug out, clean endpoints and the area should be cemented over because if it's location under the vent lines.

the hole and will now take endpoint samples and photos to close this

11/26/2004 Sangesland spoke to rep from Hess to request building's management company #. Need to confirm with property manager that

remediation/cement work was completed."

DER Facility ID: 272424

DEC Memo: "03/23/05 transferred from T. DeMeo to J. Krimgold who was daytime

duty officer when inquiring phone call came in. CS. 03/31/05.

J.Krimgold spoke to Carol Payne (Pine Funeral Home) @ 212-662-4840

located 273 Lenox Ave.- affected party. She stated that about

December 2004 a strong oil odor was observed in the basement. Also, oil seepage was observed coming from a wall adjacent to 275 Lenox Ave. Oil odor substantially diminished over last few months, but the oil seepage (stain) is still there. J.Krimgold called South Carolina Heating (SCH) and spoke with Natasha Danzler @ 212-234-5900. She informed that they have been called by Funeral Home and informed about incident in about 2 weeks after it happened. No notification was made to the Department at that time. They sent a crew to check out and found that one of two 257 Gal #2 oil tanks was tipped on the side and released an unknown amount of oil to the basement's concrete floor and on the wall of the adjacent (273 Lenox Ave.) building. No paddles of oil were observed at that time. SCH was in contact with Funeral Home's insurance, but as of today they have not come to the agreement. J.Krimgold called RP, Mr. Walter Edwards (landlord? of 275 Lenox Ave) and left a message with his assistant Ms. Santa M Johns (212-864-7410x208). 3/31/05. CSL has been sent to: Mr. W. Edwards

Walter J Edwards Enterprises Inc 275 Lenox Avenue New York, NY 10027-5541 YK. 5/2/05. Talked to Mr. Edwards. He claimed that his office lost CSL letter and his consultant Ethan Elton, Inc. also lost a fax copy of this letter. Nothing has been done since. Mr. Edwards was out from country and just came back. He will come and pick up a copy of CSL tomorrow. YK. 5/2/05. Mr. Poul Franky called and asked for a copy of CSL. He is with ICS Claims, an adjuster for West Port Insurance (claim # 185540 filed by Pine Funeral Home). They can cover a part of the cleanup expenses. His phone # 914-907-5788, fax 845-778-0658. YK. 5/27/05. Aimee Petkus from Ethan C. Eldon Associates, Inc. called to discuss her letter to the Department dated May 25, 2005. Generally, the letter states that 40 gal of #2 oil was spilled and 40 gal was recovered. It is unclear then how adjacent property got oil in their basement if all oil was removed. Phone conversation revealed that the consultant was not aware about oil spillage at adjacent (273 Lenox Ave) property. Agreed that they will take soil samples from under tanks in the tank room and from the basement at 273 Lenox. If results warrant a soil excavation will be performed at both sites. YK. 6/1/05. J.Krimgold reviewed a work plan submitted by the Ethan C. Eldon Associates, Inc. dated May 27, 2005. At least 4 soil borings to be advanced in the tank room and at 273 Lenox. The work should begin on June 8, 2005. 9/8/05. J.Krimgold reviewed the Phase II Environmental investigation report prepared by Ethan C. Eldon Assoc, Inc. and submitted on June 22, 2005. Afer initial cleanup four soil borings were advanced in the spill area. The lab results show no contaminants level above TAGM in all borings. NFA letter. "

SHWS:

HW Program: Site Code: 57691 Classification: 4 Region: 2 Acres: 1.543 HW Code: 231004 Record Add: 11/18/1999 Record Upd: 05/09/2017 Updated By: **JHOCONNE**

Site Description: Location: The site is located on the west side of Fifth Avenue

between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing

Map ID Direction Distance Elevation

Site

EDR ID Number

EPA ID Number

building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aguifer above the clay and deeper aguifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion.

Env Problem:

Direction Distance

EDR ID Number Elevation Site Database(s) **EPA ID Number**

2350 FIFTH AVENUE CORP (Continued)

1000108749

Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of

site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil

vapor intrusion is not a concern for off-site buildings.

Site Description:

Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later

1000108749

machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aguifer above the clay and deeper aguifer below the clay. The groundwater surface in the shallow aguifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem:

Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion.

Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location: The site is located on the west side of Fifth Avenue

between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of

EPA ID Number

the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aguifer above the clay and deeper aguifer below the clay. The groundwater surface in the shallow aguifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem:

Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion.

Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location: The site is located on the west side of Fifth Avenue

between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the

Map ID Direction Distance Elevation

Site

process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aguifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aguifer above the clay and deeper aguifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem:

Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is

similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location: The site is located on the west side of Fifth Avenue

between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential

buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aguifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aguifer above the clay and deeper aguifer below the clay. The groundwater surface in the shallow aguifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem:

Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil

Direction Distance Elevation

vation Site Database(s) EPA ID Number

2350 FIFTH AVENUE CORP (Continued)

EDR ID Number

vapor and sub-slab insulation material is being managed under the

Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area

is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air quidelines. To minimize the potential for the inhalation of

site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil

vapor intrusion is not a concern for off-site buildings.

FINDS:

Registry ID: 110000808074

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

USGS TOPOGRAPHIC MAP

Target Property Map: 5940599 CENTRAL PARK, NY

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

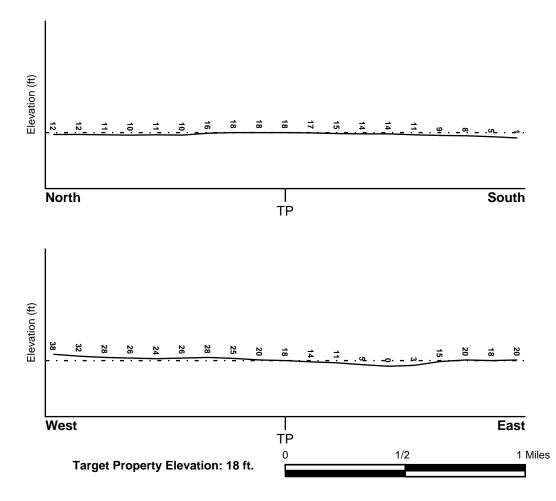

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

CENTRAL PARK YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Paleozoic Category: Stratified Sequence

System: Ordovician

Series: Middle Ordovician (Mohawkian)

Code: O2 (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
	Bou	ndary		Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam

loamy sand sandy loam fine sandy loam

Surficial Soil Types: silt loam

loamy sand sandy loam fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock

very gravelly - loamy sand

stratified sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The use of this material is subject to the terms of a license agreement. You will be held liable for any unauthorized copying or disclosure of this material.

This Report contains certain products owned by or licensed by Tele Atlas North America, Inc. ("TANA") and licensed to EDR pursuant to an agreement between EDR and TANA (the "TANA Agreement"). Such products include the Dynamap®/2000 (commencing with the most current version, nationwide coverage, ArcInfo™format, tiled by county, with semi–annual Updates) and are referred to in this Report as the "Licensed Products".

The use of the Licensed Products with a non-TANA map may result in increased variance between the location displayed on the map and ground truth location.

The recipient of the Report (hereinafter referred to as an "End User") shall use such Report solely for its internal purposes and not for resale.

U.S. GOVERNMENT RIGHTS. If End User is an agency, department, or other entity of the United States Government, or funded in whole or in part by the United States Government, then use, duplication, reproduction, release, modification, disclosure or transfer of this commercial product and accompanying documentation, is restricted in accordance with the LIMITED or RESTRICTED rights as described in DFARS 252.227−7014(a)(1) (JUN 1995) (DOD commercial computer software definition), DFARS 227.7202−1 (DOD policy on commercial computer software), FAR 52.227−19 (JUN 1987) (commercial computer software clause for civilian agencies), DFARS 252.227−7015 (NOV 1995) (DOD technical data − commercial items clause); FAR 52.227−14 Alternates I, II, and III (JUN 1987) (civilian agency technical data and noncommercial computer software clause); and/or FAR 12.211 and FAR 12.212 (commercial item acquisitions), as applicable. In case of conflict between any of the FAR and DFARS provisions listed herein, the construction that provides greater limitations on the Government's rights shall control. Contractor/manufacturer is Tele Atlas North America, Inc., 11 Lafayette Street, Lebanon, NH 03766−1445. Phone: 603.643. 0330. The Licensed Products are ⊚ 1984−2008 by Tele Atlas North America, Inc. ALL RIGHTS RESERVED. For purpose of any public disclosure provision under any federal, state or local law, it is agreed that the Licensed Products are a trade secret and a proprietary commercial product and not subject to disclosure.

If End User is an agency, department, or other entity of any State government, the United States Government or any other public entity or funded in whole or in part by the United States Government, such End User agrees to protect the Licensed Products from public disclosure and to consider the Licensed Products exempt from any statute, law, regulation, or code, including any Sunshine Act, Public Records Act, Freedom of Information Act, or equivalent, which permits public access and/or reproduction or use of the Licensed Products. In the event that such exemption is challenged under any such laws, any and all right to retain any copies or to use of the Licensed Products shall be terminated and considered immediately null and void. Any copies of the Licensed Products held by End User shall immediately be destroyed. If any court of competent jurisdiction considers this clause void and unenforceable, in whole or in part, for any reason, then all Licensed Products previously delivered to End User will be destroyed.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING. WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

APPENDIX G TERMINOLOGY

TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-13. The Standard Practice should be referenced for further detail related definitions or additional explanation regarding the meaning of terms.

Recognized environmental condition (REC): The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: I) due to any release to the environment, 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

De minimis conditions: Conditions that generally do not present threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions or controlled recognized conditions.

Historical recognized environmental condition(s) (HREC): A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time of the Phase I ESA, the condition shall be included in the conclusions section of the report as a recognized environmental condition,

Controlled recognized environmental condition(s) (CREC): A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report. NOTE: A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

Material threat: A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Material impact to public health or environment: A substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. An example might include a release of a hazardous substance in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or

substantial damage to natural resources. The risk of that exposure or damage would represent a material impact to public health or environment.

General risk of enforcement action: The likelihood that an environmental condition would be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be more likely than not, then the condition is considered a general risk of enforcement action.

Data failure: A failure to achieve the historical research objectives, even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

Data gap: A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).
