EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of Velocity Framers: 260 West 126th Street, New York, NY 10027. The purpose of the Phase I ESA is to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions (RECs) are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

The Site consists of a single tax lot on the south side of West 126th Street, approximately 120 feet to the east side of Frederick Douglass Boulevard (formerly Eighth Avenue) and approximately 570 feet to the west of Adam C Powell Boulevard in the Harlem neighborhood of the Borough of Manhattan, City of New York. The street address associated with the Site is 260 West 126th Street, Manhattan, NY 10027 and is identified as Block 1931 and Lot 56 on the New York City (NYC) Tax Map. The lot is rectangle-shaped, has 125 feet of street frontage along West 126th Street and extends approximately 100 feet back away from the street covering a12,490 s.f. area. The Site is currently developed with a two-story church building with a 2,725 sf footprint on the west side of the Site and the remainder of the Site is paved and used as a parking lot. According to New York City Department of Planning records, the Site is designated a public facility or institution use which reflects the most recent operations at the Site. The onsite building is currently by Thomas Memorial Wesleyan Methodist Church.

Site history was based on the review of Sanborn® fire insurance maps, aerial photos, city directory listings, historic topographic maps and available online records. According to the review these historic documents, it is known that the Site has been developed since at least 1902. In 1902, the Site was divided into six separate tax parcels with six tightly grouped 4-story residential buildings present on the north side of the Site along W. 126th Street. The western and southern adjacent buildings were

occupied by a hotel complex (Hotel Minot) and the eastern adjacent property was undeveloped in 1902. The surrounding vicinity was primarily developed with tightly grouped residences and apartment buildings with storefronts present along on the ground floor along a grid of city streets. Commercial and community structures included music hall, opera house, performing arts center, two hotels, cafes, wagon repair shops and a couple storage warehouses in 1902. The Site, adjacent and surrounding vicinity remained generally unchanged through 1912 however, the property on the west side of the Site was now used to store lumber, the western adjacent properties included Hotel Braddock, a paint shop and offices and the southern adjacent properties were occupied by offices of Bishop Building and the eastern adjacent property remained undeveloped. By 1951 the Site was mostly undeveloped except for the western portion of the Site where a 4-story storefront building with lumber storage remained. The western and southern adjacent properties remained unchanged and the eastern adjacent property was now occupied by the Apollo Theatre. Several other theatres and performing arts facilities were present to the east-southeast of the Site at this time. By 1976 a church was present on the west side of the Site and the remainder of the Site was undeveloped. This is consistent with the current layout of the Site; however, the Site remained divided into six separate lots. A 1962 Certificate of Occupancy indicates the presence of the current two-story church building. This is the oldest record indicating the age of the onsite building that was encountered while preparing this Phase I ESA. The Apollo Theatre remained adjacent to the east, Hotel Braddock remained adjacent to the west and the Bishop Building and associated offices remained adjacent to the south. The surrounding vicinity had changed significantly at this time and was now occupied by several large structures including churches, large apartment complex buildings, department stores and schools amongst several tightly grouped mixed-use buildings with storefronts on the ground floor and residential apartments above. The Site has remained generally unchanged through the current day with a two-story church building on the west side and licensed parking on the east side of the Site. The adjacent properties are primarily commercial at this time and include a discount household electric components store, H&R Block and Amsterdam News to the west, Duane Reade to the southwest, Red Lobster to the south and Apollo Theatre to the east and southeast.

RECOGNIZED ENVIROMENTAL CONDITIONS

Based upon reconnaissance of the subject site and surrounding properties, and review of historical records and regulatory agency databases, no Recognized Environmental Conditions (RECs) were identified for the Site. However, three (3) other environmental concerns (non-RECs) were identified and are summarizes as follows:

Additional Environmental Concerns (non-RECs)

- The Site has an E-Designation (E-201) for Hazardous Materials, Noise and Air on April 30, 2008 as a result of the 125th Street Corridor Rezoning and Related Actions. The HazMat E-Designation requires a Phase I and Phase II Testing Protocol. The Air E-Designation requires that any new residential and/or commercial development must endure that the heating, ventilation and air conditioning (HVAC) stacks are located at least 79 and 63 feet for No. 4 fuel oil and No. 2 fuel oil from the lot lines or use natural gas as the type of fuel for space heating and hot water systems to avoid any potential significant adverse air quality impacts. The Noise E-Designation requires a 40dBA attenuation level for indoor spaces.
- Due to the age of the onsite building, the potential for the presence of asbestos-containing materials (ACMs) is considered likely. Specifically, asphaltic roofing materials, adhesives, plasters and exterior use caulks commonly contain asbestos in older and newer buildings alike. EBC recommends conducting an ACM survey to identify building materials and components with asbestos content prior to demolition or disturbance.
- Due to the age of the onsite buildings, the potential for the presence of lead-based paint (LBP) is also considered likely. No significantly damaged or peeling paints were identified; however, LBP may be present in hidden or inaccessible portions of the Site. Additionally, no children currently reside at the Site which greatly reduces the risks associated with the potential presence of LBP. EBC recommends conducting a lead survey to evaluate the presence of LBP at the Site prior to demolition or disturbance.

1.0 INTRODUCTION

1.1 Purpose

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of Velocity Framers: 260 West 126th Street, New York, NY 10027. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

1.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and maps, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut, provided the following information: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, and a historical telephone directory search.

EBC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the Site or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). EBC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

1.3 Significant Assumptions

EBC has made the following assumptions in the preparation of this report:

1. Groundwater – Based upon an average surface elevation of 29 feet above mean sea level (amsl), the depth to groundwater at the Site is approximately 20-25 feet below grade surface (bgs). The surface topography of the Site gently slopes to the east towards the Harlem River (0.82mi E) and northwest towards the Hudson River (0.85mi NW). Groundwater is expected to flow in a general easterly direction, consistent with the regional trend. However, there may be some fluctuations.
2. Regulatory Records Information – EBC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - EBC assumes that all information provided through interviews is complete and unbiased.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by EBC.
4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or

regulations, or policies of federal, state, or local government agencies. EBC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others.

1.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between Velocity Framers and EBC.

1.6 User Reliance

This report was prepared for the exclusive use of Velocity Framers. No other party may use the report without the written authority of Velocity Framers and EBC.

2.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

2.1 Location and Legal Description

The Site consists of a single tax lot on the south side of West 126th Street, approximately 120 feet to the east side of Frederick Douglass Boulevard (formerly Eighth Avenue) and approximately 570 feet to the west of Adam C Powell Boulevard in the Harlem neighborhood of the Borough of Manhattan, City of New York. The street address associated with the Site is 260 West 126th Street, Manhattan, NY 10027 and is identified as Block 1931 and Lot 56 on the New York City (NYC) Tax Map. The lot is rectangle-shaped, has 125 feet of street frontage along West 126th Street and extends approximately 100 feet back away from the street covering a 12,490 s.f. area.

Records were obtained from the New York City Registrar on October 17, 2016, including copies of property transaction records for the Site dating back to 1973. A copy of all of the information obtained is attached in **Appendix B**.

The property transaction information for the Site is listed below:

- September 25, 1973 – Contract of sale between Ms. Beatrice Berle and Freedom National Bank;
- March 17, 2004 – Judgment between Thomas Memorial Wesleyan Methodist Church and Harlem Commonwealth Council, Inc;

2.2 Site Characteristics

The Site is currently developed with a two-story church building with a 2,725 sf footprint on the west side of the Site and the remainder of the Site is paved and used as a parking lot. According to New York City Department of Planning records, the Site is designated a public facility or institution use which reflects the most recent operations at the Site. The onsite building is currently occupied by Thomas Memorial Wesleyan Methodist Church. The two-story building is painted tan, has block/brick and mortar exterior walls, a stucco-finished facade and a flat asphaltic rooftop. A chainlink security fence is present along 126th Street, containing the paved parking area on the east side of the property.

Photographs taken during of the Site during the site inspection are attached in **Appendix A**.

2.2.1 Utilities

The Site is equipped with electric service provided by Con Edison of New York, natural gas provided by National Grid, telephone, cable and internet service. Additionally, the Site is connected to the NYC municipal sewer system.

2.3 Physical Setting

The topography of the Site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Manhattan, New York (NY) Quadrangle (**Figure 3**), which indicates that the Site has a topographic elevation of approximately 29 feet above mean sea level (amsl). The Site is relatively flat with the general topographic gradient sloping to the east towards the Harlem River and northwest towards the Hudson River.

2.3.1 Surface Water

The nearest surface water bodies include the Harlem River, present 0.82 miles to the east and the Hudson River, present approximately1 mile to the west of the Site.

2.3.2 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the Site is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinant soil types may be present in the general vicinity of the Site. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (**Appendix E**).

2.3.3 Groundwater

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2006, the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 29 feet, the depth to groundwater in the vicinity of the Site is approximately 20-25 feet below grade surface (bgs). Groundwater is expected to flow to the east and/or northwest consistent with the regional topography and proximity to nearby surface water bodies.

2.3.4 Radon Risk

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The radon levels for September 2014 obtained from the website of New York State Department of Health indicates that the Kings County area is not a radon risk area. Test results from the New York State Department of Health (NYSDOH) radon survey indicate average radon concentrations of 2.44 pCi/L for nearly 400 homes screened. Out of the 400 homes screened, 392 homes had radon concentrations of less than 4 pCi/L. Based on this data, radon does not likely represent an environmental concern.

3.0 PROPERTY USAGE

3.1 Current Property Usage

The Site consists of a single tax lot on the south side of West 126th Street, approximately 120 feet to the east side of Frederick Douglass Boulevard (formerly Eighth Avenue) and approximately 570 feet to the west of Adam C Powell Boulevard in the Harlem neighborhood of the Borough of Manhattan, City of New York. The street address associated with the Site is 260 West 126th Street, Manhattan, NY 10027 and is identified as Block 1931 and Lot 56 on the New York City (NYC) Tax Map. The lot is rectangle-shaped, has 125 feet of street frontage along West 126th Street and extends approximately 100 feet back away from the street covering a12,490 square foot sf area.

The Site is currently developed with a two-story church building with a 2,725 sf footprint on the west side of the Site and the remainder of the Site is paved and used as a parking lot. According to New York City Department of Planning records, the Site is designated a public facility or institution use which reflects the most recent operations at the Site. The onsite building is currently occupied by Thomas Memorial Wesleyan Methodist Church. The two-story building is painted tan, has block/brick and mortar exterior walls, a stucco-finished facade and a flat asphaltic rooftop. A chain-link security fence is present along 126th Street, containing the paved parking area on the east side of the property.

A review of New York City Department of Buildings (NYCDOB) records and the NYC Department of City Planning Zoning map indicates that the Site is zoned commercial C4-4D, is occupied by an institutional use facility and has a M1-Church/Synagogue (**Figure 5A**).

3.2 Current Usage of Adjoining/Surrounding Properties

A summary of the uses of the surrounding/adjacent properties is described below. Photos of the exterior of adjacent properties are attached in **Appendix A**.

Surrounding Property Usage

Direction	Property Description
North	West 126th Street followed by an undeveloped/vacant property (Lots 5, 6 &7) with a two-story 2-3 story plumber/contractors building and a 2-story church (259-261 W. 126th Street) to the northeast and a 5-story residential building to the northwest (271 W. 126th Street).
South	A 2-story commercial building currently occupied by a Red Lobster and a Banana Republic (261 W. 125th Street).
East	A 5-story residential building (260 W. 126th Street).

West	A 1-story commercial building occupied by True Discount LLC. and H&R Block (2342 Frederick Douglas Boulevard)and a 4-story mixed use building with offices on the first two floors and residential apartments above (2338 Frederick Boulevard).

3.3 Historical Usage of Site and Surrounding Properties

Historical sources researched to determine past usage of the Site and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Sanborn fire insurance maps for the Site and surrounding area were reviewed for the years 1902, 1912, 1951, 1976, 1978, 1980, 1985, 1986, 1988, 1989, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004 and 2005. The review is summarized in Section 3.3.1. Copies of Sanborn maps are included as **Appendix C**.

City Directory Abstract - A directory of historical telephone listings at the Site and surrounding properties were reviewed from approximately five year intervals for the years through 2013. The review is summarized in Sections 3.3.2 below. A copy of the City Directory is included in **Appendix D**.

Aerial Photographs - Historic aerial photographs of the Site and surrounding properties were reviewed from approximately five year intervals for the years 1924 through 2011. The review is summarized in Sections 3.3.3 below. A copy of the Aerial Photos is included in **Appendix E**.

3.3.1 Sanborn Fire Insurance Maps - Site and Adjacent Properties

The historical usage of the Site and adjacent properties, identified through Sanborn map review, is summarized below:

1902

Subject Site: In 1902, the Site was divided into six separate tax parcels with six tightly grouped 4-story residential buildings present on the north side of the Site along W. 126th Street.

Adjacent Properties: The western and southern adjacent buildings were occupied by a hotel complex (Hotel Minot) and the eastern adjacent property was undeveloped in 1902. The surrounding vicinity was primarily developed with tightly grouped residences and apartment buildings with storefronts present along on the ground floor along a grid of city streets. Commercial and community structures included music hall, opera house, performing arts center, two hotels, cafes, wagon repair shops and a couple storage warehouses in 1902.

1912

Subject Site: The Site remained generally unchanged.

Adjacent Properties: Adjacent properties and surrounding vicinity remained generally unchanged through 1912 however, the property on the west side of the Site was now used to store lumber, the western adjacent properties included Hotel Braddock, a paint shop and offices and the southern adjacent properties were occupied by offices of Bishop Building and the eastern adjacent property remained undeveloped.

1951

Subject Site: By 1951 the Site was mostly undeveloped except for the western portion of the Site where a 4-story storefront building with lumber storage remained.

Adjacent Properties: The western and southern adjacent properties remained unchanged in comparison to 1912 and the eastern adjacent property was now occupied by the Apollo Theatre. Several other theatres and performing arts facilities were present to the east-southeast of the Site at this time.

1976

Subject Site: By 1976 a church was present on the west side of the Site and the remainder of the Site was undeveloped. This is consistent with the current layout of the Site; however, the Site remained divided into six separate lots.

Adjacent Properties: The Apollo Theatre remained adjacent to the east, Hotel Braddock remained adjacent to the west and the Bishop Building and associated offices remained adjacent to the south. The surrounding vicinity had changed significantly at this time and was now occupied by several large structures including churches, large apartment complex buildings, department stores and schools amongst several tightly grouped mixed-use buildings with storefronts on the ground floor and residential apartments above.

1978-2007

Subject Site: The Site has remained generally unchanged from 1976 through the current day with a two-story church building on the west side and licensed parking on the east side of the Site.

Adjacent Properties: The adjacent properties and surrounding vicinity remained generally unchanged from 1976 through the current day. The adjacent properties are primarily commercial at this time and include a discount household electric components store, H&R Block and Amsterdam News to the west, Duane Reade to the southwest, Red Lobster to the south and Apollo Theatre to the east and southeast.

3.3.2 City Directory Listings

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (**Appendix D**) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

Historical city directory information is summarized as follows:

Date	Property Information
1920	**Subject Property:** Residential Listings **Adjacent Properties:** Residential & Commercial Listings
1923	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1927	**Subject Property:** Residential Listings **Adjacent Properties:** Residential & Commercial Listings
1931	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1934	**Subject Property:** Not Listed **Adjacent Properties:** Residential& Commercial Listings
1938	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1942	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1947	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1950	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1956	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1958	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1963	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1968	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1973	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings

1978	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1983	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1988	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1993	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1996	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1998	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2000	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2006	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2008	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2013	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings

Information regarding additional surrounding properties identified on the City Directory search is included with the search in **Appendix D**. The review of City Directory listings indicates the Site was occupied by private individuals for residential purposes in 1920 and 1927. No other information regarding the Site can be determined .

3.3.3 Aerial Photographs

EBC reviewed aerial photographs for the following years; 1924, 1945, 1951, 1954, 1961, 1966, 1974, 1984, 1991, 1995, 2006, 2008, 2009 and 2011 from EDR. In 1924, the Site appears to be developed with structure(s) present along W. 126th Street. This is consistent with Sanborn Insurance Map data from the same era. A 1945 aerial appears to show the Site developed in the same configuration; however, due to the quality, detailed information cannot be determined. By 1951, there is only one structure present on the west side of the Site and the eastern portion is undeveloped. Several vehicles can be seen parked on the undeveloped parking area on the west side of the Site in the 1954 aerial. The Site remained generally unchanged with a building present on the west side of the lot and the majority of the Site to the east being used as a paved parking lot through 2011. A copy of the aerial photograph images is provided in **Appendix E**.

3.3.4 Historical Topographic Maps

1897 - 1947 (15-Minute)

Subject Site:

Due to the scale of these maps, detailed information regarding the Site cannot be determined. However, the Site appears to be developed.

Adjacent properties:

The surrounding vicinity appears developed with several structures along a grid of city streets.

1956 - 1997 (7.5-Minute)

Subject Site:

The Site is incorporated into an area which is shaded pink indicating an area of increased urban development. No detailed information regarding the Site can be determined.

Adjacent properties:

The surrounding vicinity is also shaded pink indicating an area of increased urban development. Additionally, several large roadways and large, institutional facilities, parks and large apartment complexes are present at this time.

2013 & 2014 (7.5-Minute)

Subject Site:

No detailed information, not even structures or shading at the Site is shown.

Adjacent properties:

A grid of city streets are shown in the surrounding vicinity with a localized strip of large roadways (main urban arteries) present to the east of the Site along the Bronx/Harlem border. Several schools, hospitals/clinics and parks are shown in the surrounding vicinity.

The review of historic topographic maps did not indicate the presence of any onsite RECs, nor any adjacent properties of particular concern. A copy of topographic maps is provided in **Appendix F**.

3.4 Site History Summary

Site history was based on the review of Sanborn® fire insurance maps, aerial photos, city directory listings, historic topographic maps and available online records. According to the review these historic documents, it is known that the Site has been developed since at least 1902. In 1902, the Site was

divided into six separate tax parcels with six tightly grouped 4-story residential buildings present on the north side of the Site along W. 126th Street. The western and southern adjacent buildings were occupied by a hotel complex (Hotel Minot) and the eastern adjacent property was undeveloped in 1902. The surrounding vicinity was primarily developed with tightly grouped residences and apartment buildings with storefronts present along on the ground floor along a grid of city streets. Commercial and community structures included music hall, opera house, performing arts center, two hotels, cafes, wagon repair shops and a couple storage warehouses in 1902. The Site, adjacent and surrounding vicinity remained generally unchanged through 1912 however, the property on the west side of the Site was now used to store lumber, the western adjacent properties included Hotel Braddock, a paint shop and offices and the southern adjacent properties were occupied by offices of Bishop Building and the eastern adjacent property remained undeveloped. By 1951 the Site was mostly undeveloped except for the western portion of the Site where a 4-story storefront building with lumber storage remained. The western and southern adjacent properties remained unchanged and the eastern adjacent property was now occupied by the Apollo Theatre. Several other theatres and performing arts facilities were present to the east-southeast of the Site at this time. By 1976 a church was present on the west side of the Site and the remainder of the Site was undeveloped. This is consistent with the current layout of the Site; however, the Site remained divided into six separate lots. A 1962 Certificate of Occupancy indicates the presence of the current two-story church building. This is the oldest record indicating the age of the onsite building that was encountered while preparing this Phase I ESA. The Apollo Theatre remained adjacent to the east, Hotel Braddock remained adjacent to the west and the Bishop Building and associated offices remained adjacent to the south. The surrounding vicinity had changed significantly at this time and was now occupied by several large structures including churches, large apartment complex buildings, department stores and schools amongst several tightly grouped mixed-use buildings with storefronts on the ground floor and residential apartments above. The Site has remained generally unchanged through the current day with a two-story church building on the west side and licensed parking on the east side of the Site. The adjacent properties are primarily commercial at this time and include a discount household electric components store, H&R Block and Amsterdam News to the west, Duane Reade to the southwest, Red Lobster to the south and Apollo Theatre to the east and southeast.

4.0 USER PROVIDED INFORMATION

4.1 Title Records

A record of the deeds for the Site is discussed in Section 2.1.

4.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

No environmental liens were noted.

4.3 Specialized Knowledge

The user did not provide EBC with any specialized knowledge regarding the Site.

4.4 Commonly Known or Reasonably Ascertainable Information

EBC was not provided with any commonly known or reasonably ascertainable information.

4.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

4.6 Owner, Property Manager and Occupant Information

According to New York City Department of Finance records, the current owner of the Site is identified as The Thomas Memorial Wesleyan Church.

4.7 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the Site as part of the due diligence to support the acquisition of the property involving Velocity Framers.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the Site. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix E**). A summary of standard environmental record sources researched is as follows:

5.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Federal Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	1.0 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Site and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Site
USEPA	Emergency Response Notification System	ERNS	Site
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

Federal NPL List - The National Priority List (NPL) is the United States Environmental Protection Agency (USEPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

Findings: The Site is not listed as an NPL facility. One (1) NPL site was identified within $^{1}/_{2}$ to 1-mile radius of the Site. However, due to the distance from the Site is not considered a REC.

Federal Delisted NPL List – NPL Delisted Sites are former NPL sites that have been remediated and removed from the USEPA's priority list. Sites are deleted where the USEPA has determined that no further response is appropriate.

Findings: The Site is not identified as a Delisted NPL facility. There were no Delisted NPL sites identified within a one-mile radius of the Site.

Federal CERCLIS List - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Findings: The Site is not listed as a CERCLIS facility. No CERCLIS sites were listed within a half-mile radius of the Site.

Federal CERCLIS-NFRAP List – No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of USEPA's knowledge, assessment at a site has been completed and that USEPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

Findings: The Site is not listed as a CERCLIS-NFRAP facility. No CERCLIS-NFRAP sites were identified within a half mile radius of the Site.

Federal RCRA CORRACTS List - The RCRA Corrective Actions (CORRACTS) database is the USEPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

Findings: The Site is not listed as a RCRA CORRACTS facility. One (1) RCRA CORRACTS site was identified within a 1/2 to 1 mile radius of the Site. However, due to the location and distance from the Site is not considered a concern with respect to the Site.

Federal RCRA Treatment, Storage and Disposal Facilities - The USEPA Resource Conservation and Recovery Act (RCRA) program identifies reporting facilities that treat, store or dispose of hazardous waste.

Findings: The Site is not listed as a RCRA TSDF and no TSDFs were identified within a ½ mile radius of the Site.

Federal RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A LQG is a site which generates more than 1,000 kilograms (kg) of hazardous waste during any one calendar month and can store waste on-site for up to 90 days. A SQG is a site which generates more than 100 and less than 1,000 kg of hazardous waste during any one calendar month and accumulates less than 6,000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1,000 kg of hazardous waste at any time. A CESQG is a site which generates less than 100 kg of hazardous waste or less than one kg of acutely hazardous waste during any one calendar month. A NonGen site is a former registered/regulated generator which does not presently generate hazardous waste.

Findings: The Site is not listed as and quantity of generator. However, ten (10) RCRA-LQGs, two (2) RCRA-SQGs and thirty-six (36) RCRA-CESQG facilities were identified within a 1/4 mile radius of the Site. No adjacent sites were identified. According to the EDR database, no violations are listed or corrective action has been taken for all these sites. Based on this information, these sites are not expected to represent a significant environmental concern.

Federal Institutional/Engineering Controls – Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Findings: No Federal Institutional/Engineering Controls were listed for the Site and no sites were identified within a ½ mile radius of the Site.

Federal Emergency Response Notification System - The Emergency Response Notification System (ERNS) is national database used collect information on reported releases of oil or hazardous substances.

Findings: Neither Site nor the adjacent properties were identified in the ERNS databases.

Federal Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Findings: The Site was not identified in the CONSENT database. No sites within a one mile of the Site were identified in the CONSENT database.

Federal Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.

Findings: The Site was not identified as a ROD site. The closest ROD site is present 1/2 to 1 mile away from the Site. Due to the distance from the Site, this offsite property is not considered a concern.

Federal Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Findings: Neither the Site nor any property within ¼ mile of the Site is listed in the MINES database.

5.1.2 New York State Databases

The table below summarizes the State databases that were searched.

New York State Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Site and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Site and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Site
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

NYS Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance/waste sites.

Findings: The Site is not listed as a SHWS facility. No SHWS facilities were identified within a one mile radius of the Site.

NY Vapor Reopened – This is a database listing of previously dismissed/closed sites that are being re-evaluated with current knowledge of the potential for soil vapor intrusion.

Findings: The Site is not listed as a NY VAPOR REOPENED site. One (1) NY VAPOR REOPENED facility was identified within a 1/2 to one mile radius of the Site. However, due to the distance from the Site is not considered a concern.

Hazardous Substance Waste Disposal Sites - The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-

Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

Findings: Neither the Site nor vicinity were listed in the HSWDS database.

ICIS – Integrated Compliance Information System. ICIS supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System

Findings: The Site is not listed as an ICIS site. No ICIS sites were identified in the surrounding vicinity.

NYS Landfill - The NYSDEC Solid Waste Facility Register records contain an inventory of solid waste disposal facilities or landfills in New York State.

Findings: The Site is not listed as a landfill. No NYS Landfill sites were identified within a half mile radius of the Site.

NYS Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

Findings: The Site was not listed as a SWRCY site. No SWRCY sites were identified within a $^{1}/_{2}$ mile radius of the Site.

NYS Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Findings: The Site is not listed as a SWTIRE site. There were no SWTIRE sites identified within a ½ mile radius of the Site.

NYS Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Findings: The Site was not identified as a LTANKS site. Seventy-two (72) LTANK sites were identified within a ½ mile of the Site. No adjacent sites with open spill cases were identified. Most of the LTANK sites in the surrounding vicinity have received closure from the NYSDEC. Based on this information, these LTANK sites are not expected to present a significant environmental concern to the Site.

NYS Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

Findings: The Site is not listed as an PBS site. Ten (10) UST sites and seventy (70) AST sites are registered within a ¼ mile radius of the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

Findings: The Site is not identified as a CBS facility. Additionally, no CBS facilities were identified in the surrounding vicinity.

NYS Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Findings: Neither the Site nor surrounding vicinity were identified in the NYSDEC Institutional/Engineering Controls databases.

NYS Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies hazardous waste sites undergoing private sector cleanup as part of redevelopment.

Findings: The Site was not identified as a VCP site. No VCP sites were identified within a $^{1}/_{2}$ mile radius of the Site.

NYS Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Findings: The Site is not listed in the NY Brownfields database. One (1) other Brownfield site is located within 1/4 mile radius of the Site. This site is located in a hydrologically cross-gradient location. Based on either distance and/or the assumed direction of groundwater flow, this property is not expected to represent a significant environmental concern with respect to the Site.

NYS Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

Findings: Neither the Site nor surrounding vicinity were not identified as MOSF sites.

NYS Spills - The New York State Spills Information Database (NY SPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

Findings: The Site is not listed as a NY SPILLS site. Fifteen (15) spill sites were identified within $^{1}/_{8}$ mile of the Site. Adjacent sites were not identified. Most of the spill listings located closest to the Site have received closure from the NYSDEC and do not represent RECs in connection with the Site. The closes Spill site is 98 feet to the southwest of the Site at 271 W. 125th Street. This spill case (0212531) resulted from tank overfill on March 19, 2003. This tank was later removed, no indication of contamination was observed and the spill case was closed in 2006. Additionally, this spill site as well as the other closest ones are located at either lower elevations or hydrologically cross or downgradient.

FUDS: The listing includes locations of formerly used defense sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Findings: The Site is not listed as a FUDS site. No FUDS sites were identified within a 1/2 to 1 mile radius of the Site.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSDF.

Findings: The Site is not listed as a NY Manifest or NJ Manifest site. Two hundred thirty-eight (238) NY MANIFEST and fifty-six (56) NJ MANIFEST sites were identified within a ¼ mile radius of the Site. No adjacent sites with violations, open spills or particular concerns were identified. Information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for the remaining sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

Drycleaner Sites - The NYSDEC maintains a listing of all registered drycleaners. Drycleaner sites do not necessarily pose a hazard unless a spill occurs. Sites at which spills have been identified are addressed in the appropriate section.

Findings: The Site is not identified as a drycleaner. Three (3) Drycleaner sites were identified within ¼ mile of the site. These sites are not located adjacent and are located either hydrologically cross or downgradient of the Site. Based on the assumed direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

NYS Manufactured Gas Plants - Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Findings: The Site is not listed as a MGP site. Two (2) MGP sites were identified within a one-mile radius of the Site. These sites are located approximately 1/2 mile from the Site. Due to the distance from the Site these are not considered RECs.

E Designation - The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Findings: The Site has an E-Designation (E-201) for Hazardous Materials, Noise and Air on April 30, 2008 as a result of the 125th Street Corridor Rezoning and Related Actions. The HazMat E-Designation requires a Phase I and Phase II Testing Protocol. The Air E-Designation requires that any new residential and/or commercial development must endure that the heating, ventilation and air conditioning (HVAC) stacks are located at least 79 and 63 feet for No. 4 fuel oil and No. 2 fuel oil from the lot lines or use natural gas as the type of fuel for space heating and hot water systems to avoid any potential significant adverse air quality impacts. The Noise E-Designation requires a 40dBA attenuation level for indoor spaces.

The Site was not identified as an E Designation site. Nine (9) E-Designation sites are present in the surrounding vicinity. However, these sites are under the jurisdiction of the NYCDEP's Office of Environmental Remediation and will be properly handled during redevelopment activities to reduce exposures to environmental hazards.

EDR Historical Auto Stations - EDR has searched selected national collections of business directories and has collected listings of potential gas station/ filling station/ service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station etc.

Findings: The Site is not listed as a Historical Auto Station. Two (2) Historical Auto Station sites were identified within a 1/2 - 1 mile radius of the Site. These sites are not located adjacent

to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for this site. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and are not considered a REC.

EDR Historical Cleaners - EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc.

Findings: The Site was not identified as an EDR Historical Cleaners site. Three (3) cleaners sites in the surrounding vicinity were identified. However, none of these sites are adjacent and no violations or open spills are associated. As such, these sites are not considered RECs.

5.1.3 EDR Vapor Encroachment Screen

A Vapor Encroachment Screen was conducted using the EDR VEC App™. A copy of the EDR Vapor Encroachment Screen report is included in **Appendix G**. Some small waste oil, fuel oil, and transfer oil spills were reported within the surrounding vicinity, but no significant spills of chlorinated volatile organic compounds were reported within a radius of 1/3 mile. No significant spills of fuel oil or gasoline with an active status were reported within a radius of 1/3 mile. In summary, no significant vapor intrusion sources exist in the immediate vicinity of the Site that supersede the degree of contamination that exists at the Site as it is a former MGP with known coal tar and MGP-impacts. Due to the known contamination at the Site, there is a potential for vapor encroachment at the Site; however, such sources of contamination will be greatly reduced during remedial actions prior to future redevelopment.

5.2 Additional Environmental Record Sources

5.2.1 Local Agency Review

Freedom of Information Act (FOIA) requests were sent to the New York City Department of Environmental Protection (NYCDEP), New York City Fire Department, New York City Department of Health (NYCDOH) and the New York City Fire Department (FDNY) for information regarding

hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

5.2.2 New York City Department of Finance

The following is a summary of pertinent information obtained from the New York City Department of Finance website:

Tax Lot:	Block 1931 – Lot No. 56
Address:	260 W. 126th Street
Owner:	Thomas Memorial Wesleyan Methodist Church
Lot Size:	12,490 s.f. - rectangle-shaped
Building Class:	M1 - Church/Synagogue
Zoning:	Commercial (C4-4D)

5.2.3 New York City Department of Buildings

The Department of Buildings (DOB) computerized Property Profile Overviews (PPOs) were reviewed. Several Certificates of Occupancy (COO) forms for the Site were available that provided historical information. A 1954 COO indicates that the Site was used as a paved parking lot with a small single-story temporary frame shelter for an attendant. Two separate 1962 COOs indicate the presence of a two-story church building with full cellar. This is the oldest record indicating the age of the current existing building that was encountered in preparing this Phase I ESA report. The 1962 COOs indicate that the cellar was used as a social hall, with a boiler room, kitchen, bathroom, coat room and storage room, the first floor was used a church hall with an office and the second floor was used as a chapel, classrooms, choir practice room and restrooms. There are twenty-five (25 DOB-violations, one (1) ARA/LAA Jobs and one hundred-eleven actions for the Site. Several of these DOB-violations are still active. All but one of these violations are in regard to the boilers and one is in regard to public assembly. There are several older violations listed prior to 1987 that have been closed. The one ARA/LAA job is in regard to replacing and registering a gas boiler in 2010. The 111 actions include several building alterations from 1922 through 1989, several building notices from 1952 through 1960, demolition permits from 1939 and 1940, an elevator report from 1924, an electric sign application

from 1922, several oil burner applications from 1961, new building actions from 1969 through 1989, plumbing jobs from 1915 through 1930, public assembly actions from 1962, several permits from 1930, plumbing repair slips from 1948 and 1982, several special reports from 1907 through 1955 and unsafe building actions from 1927 through 1940.

5.2.4 Previous Environmental Reports

No previous Environmental Reports were provided in preparation of this ESA Report.

5.2.5 Historic Zoning Map

Historic zoning maps were not made available through the official website of the City of New York. However, the most recent zoning map from 2016 indicates that the property is zoned commercial (C4-4D). This appears to be consistent with the historic use of the site, adjacent properties and nearby vicinity. The 2016 zoning map is provided in the attached **Figure 5A**.

5.2.6 Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject properties, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issue identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an "E" designation, as well as maintained within Chain of Title Records. For a site to be designated with an "E" restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a "Potential" or "Projected" re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an "E" designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the Site. No change of use or development requiring a building permit will be issued for an "E" designated site without approval from the NYCOER.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New

York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites. The Site is located within an industrial business zone (IBZ); however, it does not currently have an E-Designation or any known environmental restrictions as the result of rezoning.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Ms. Eleni Kavvadias of EBC performed the site inspection on Friday, October 28, 2016; beginning at approximately 10:30am.

Photographs taken during the inspection are attached (**Appendix A)**.

6.2 Observations

Ms. Kavvadias documented the presence of a two-story church building with a full cellar on the east side of the Site and a paved parking lot on the remaining western portion of the Site. She confirmed that the onsite building is currently occupied by Thomas Memorial Wesleyan Methodist Church. The basement is currently improved with a kitchen and dining room, the first floor was improved with a sanctuary and the second level is occupied by offices. The two-story building is painted tan, has block/brick and mortar exterior walls, a stucco-finished facade and a flat asphaltic rooftop. A chainlink security fence is present along 126th Street, containing the paved parking area on the east side of the property.

6.3 Aboveground and Underground Storage Tanks (ASTs/USTs)

No indications of USTs or ASTs were observed at the Site. Additionally, no records indicating the potential for the presence of tanks was observed. Information may be available in files maintained by the FDNY; however, no responses to EBC's FOIL requests have been received to date. Copies of tank records are provided in **Appendix B**.

6.4 Hazardous and Non-Hazardous Chemical Storage and Disposal

Numerous small quantity containers of surface cleaners, soaps and other common materials were present throughout the onsite building. Storage and housekeeping of these materials was noted as good with no signs of spillage. In addition there were no indications of improperly stored chemicals or spillage noted around the exterior of the buildings or grounds.

6.5 Underground Injection Control (UIC) Structures

Underground injection wells are regulated by the Underground Injection Control (UIC) Program under the authority of Part C of the Safe Drinking Water Act (SDWA) (42 U.S.C. 300h et seq.). The SDWA

is designed to protect the quality of drinking water in the United States, and Part C specifically mandates the regulation of underground injection fluids through wells. The USEPA has promulgated a series of UIC regulations under this authority. Recent applicable revisions to UIC regulations were published in the State Implementation Guide - Revisions to the Underground Injection Control Regulations for Class V Injection Wells, September 2000. This document specifically addresses Class V injection wells, which include on-site wastewater disposal features such as drywells, cesspools and in-situ drains. The USEPA issued a Notice of Final Determination for Class V wells; Final Rule on June 7, 2002. With the exception of motor vehicle waste disposal wells and large-capacity cesspools, Class V wells are "authorized by rule" (40 CFR 144.24) and may inject non-hazardous waste as long as the following criteria are met:

- The injection does not endanger underground sources of drinking water (40 CFR 144.12); and
- The well owners or operators submit basic inventory information (40 CFR 144.26).

The USEPA may, at its discretion, require the owner or operator of any well authorized by rule to submit information for review to determine if a well may be endangering an underground source of drinking water. In regard to motor vehicle waste disposal wells and large capacity cesspools (those that serve more than 20 persons per day), owners and/or operators of such wells in regulated areas must close the wells or obtain a permit. These requirements are being phased-in through 2008. Owners and operators of large-capacity cesspools must close the structures by April 5, 2005.

There are no drywell/stormwater structures present at the Site. Additionally, the Site is attached to the municipal NYC sewer system. Therefore, any discharges to a drain at the Site would be mobilized away from the Site with the sewer system.

6.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment

containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

Because of the age of the onsite building (before 1962), the potential for the presence of PCB-containing materials is considered likely to some degree. EBC recommends that any electric transformers and light ballasts be properly decommissioned (if present) prior to demolition or disturbance.

6.7 Asbestos

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

Due to the age of the onsite building (before 1962), the potential for the presence of asbestos-containing materials (ACMs) is considered likely. EBC recommends conducting an ACM survey to identify building materials and components with asbestos content prior to demolition or disturbance.

6.8 Lead-Based Paint (LBP)

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. Due to the age of the onsite building (before 1962), the potential for lead-based paint (LBP) is considered likely.

6.9 Mold

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and a food source is present. Molds can grow on wood, paper, carpet, foods, sheetrock, plaster and

insulation and use bio aerosols as a food source. As such, water is the key limiting agent in preventing mold growth. Without water, mold growth cannot occur. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

No visible signs of mold or water damage were observed at the Site; however, there is a potential for the presence of mold within hidden or inaccessible portions of the onsite buildings.

6.10 Wetlands

A review of the NYSDEC Freshwater Wetland Map, New York Quadrangle, indicates that the nearest nationally and state-designated wetlands are located approximately 0.8 miles to the northwest along the Hudson River and approximately 0.8 miles to the northeast along the Harlem River. ECB also reviewed NYSDEC Tidal Wetlands Maps available online at http://twi.ligis.org. Those maps indicate that the nearest 100 and 500-year flood zones are located approximately 0.75 miles to the northwest and northeast.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were also reviewed to confirm that the Site is not located within a flood zone. The FIRM showing the property (No. 3604970087G) indicates that the entire property is located at least 0.8 miles from the Site. This indicates that there is a very low risk of flooding at the Site. A copy of the FEMA FIRM is included in **Appendix B**.

7.0 INTERVIEWS

7.1 Site Owner

EBC did not interview the owner regarding the environmental condition or historical usage of the Site.

7.2 Occupants

No occupants were interviewed as part of EBC's site inspection.

7.3 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the NYCDEP, NYSDEC and FDNY for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

8.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the Site and surrounding properties, interviews and review of historical records and regulatory agency databases, *this assessment has not revealed evidence of any recognized environmental condition in connection with the Site.*

1808 MIDDLE COUNTRY ROAD
RIDGE, NY 11961
PH: 631.504.6000
FAX: 631.928.2780

9.0 CONCLUSIONS AND RECOMMENDATIONS

EBC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations as described under ASTM Practice E1527-13 for the commercial property identified by the street addresses of 260 W. 126th Street, New York, New York 10027. The Site is identified as Block 1931 Lot No. 56 in New York City property records. Any exceptions to, or deletions from, this practice are described in **Section 1.4** of this report. Based upon reconnaissance of the subject site and surrounding properties, and review of historical records and regulatory agency databases, no Recognized Environmental Conditions (RECs) were identified for the Site. However, the following environmental concerns should be noted:

Additional Environmental Concerns (non-RECs)

- The Site has an E-Designation (E-201) for Hazardous Materials, Noise and Air on April 30, 2008 as a result of the 125th Street Corridor Rezoning and Related Actions. The HazMat E-Designation requires a Phase I and Phase II Testing Protocol. The Air E-Designation requires that any new residential and/or commercial development must endure that the heating, ventilation and air conditioning (HVAC) stacks are located at least 79 and 63 feet for No. 4 fuel oil and No. 2 fuel oil from the lot lines or use natural gas as the type of fuel for space heating and hot water systems to avoid any potential significant adverse air quality impacts. The Noise E-Designation requires a 40dBA attenuation level for indoor spaces.
- Due to the age of the onsite building, the potential for the presence of asbestos-containing materials (ACMs) is considered likely. Specifically, asphaltic roofing materials, adhesives, plasters and exterior use caulks commonly contain asbestos in older and newer buildings alike. EBC recommends conducting an ACM survey to identify building materials and components with asbestos content prior to demolition or disturbance.
- Due to the age of the onsite buildings, the potential for the presence of lead-based paint (LBP) is also considered likely. No significantly damaged or peeling paints were identified; however, LBP may be present in hidden or inaccessible portions of the Site. Additionally, no children currently reside at the Site which greatly reduces the risks associated with the potential presence of LBP. EBC recommends conducting a lead survey to evaluate the presence of LBP at the Site prior to demolition or disturbance.

10.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) an 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

11.0 ADDITIONAL SERVICES

EBC has included, in addition to those items outlined by ASTM E 1527-13, a general evaluation of the following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-based Paint;
- Asbestos-containing Materials; and,
- Wetlands.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Robert Bennett
Project Manager

QUALIFICATIONS OF
ENVIRONMENTAL PROFESSIONAL

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Professional Experience

EBC: February 2015 - Present
Prior: 7 years

Education

Bachelor of Science, Environmental Science, State University of New York College at Oneonta, Oneonta, NY

Associates in Applied Sciences, Field Biology, State University of New York College at Delhi, Delhi, NY

Areas of Expertise

- Phase I / Phase II Property Assessments
- Waste Characterization / Soil Management
- Brownfield Closure and Planning Board
- Remedial Investigations
- Groundwater, Soil and Soil Vapor Remediation
- Indoor Air Quality (IAQ) Investigations
- Lead-Based Pain Risk Assessor
- Asbestos-Containing Materials Investigator/Inspector
- Landfill Closure and Monitoring
- Dredging Monitoring and Management
- Hazardous Materials Assessments
- Title V & NY Air Permitting and Registrations
- NYS / Nassau & Suffolk County Sanitary Code Compliance

Professional Certification

- OSHA 40-hr HAZWOPER
- OSHA 10-hr Construction Safety
- NYSDOH Asbestos Inspector
- NYCDEP Asbestos Investigator
- EPA Lead-Based Paint Inspector & Risk Assessor

PROFILE

Mr. Bennett has 8 years experience as an environmental consultant and is responsible for assessment and investigative services for a wide variety of projects, including industrial and commercial properties, mass transit facilities, parking structures, and sanitary and wastewater treatment facilities. Mr. Bennett has conducted Phase I, II and III Environmental Site Assessments for commercial, industrial, and residential properties in New York, New Jersey, and Massachusetts.

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Mr. Bennett conducts research and provides support for various projects on a daily basis and coordinates with clients, regulatory agencies, attorneys and sub-contractors to provide cost-effective business solutions for a plethora of environmental concerns. Mr. Bennett's field experience includes tank removal and installations, dredging oversight and monitoring, asbestos and lead inspections, compliance audits, spill management and closure, soil and groundwater sampling, and both the oversight and operation of soil boring and well installation equipment. In addition, Mr. Bennett has performed project research, data reduction and evaluation, and has prepared reports for both regulatory and client use.

SELECT PROJECT EXPERIENCE

Project:	Fulton Street Redevelopment Project - 1134 Fulton Street, Brooklyn NY
Description:	NYC E-Designation. Soil contaminated with chlorinated solvents and heavy metals requiring excavation, soil management and disposal as well as a Soil Vapor Extraction System under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client:	Porter Avenue Holdings
Authority:	NYSDEC, NYSDOH & NYCOER
Role:	Mr. Bennett served as the Project Manager for the project.
Project:	Redevelopment Project - 391 Meeker Avenue, Brooklyn NY
Description:	NYC E-Designation. Historic Fill Material requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client:	Draftex Architectural Drafting & As Built Services
Authority:	NYCOER
Role:	Mr. Bennett serves as the Project Manager for the project.
Project:	Redevelopment Project - 1555-1557 Fulton Street, Brooklyn NY

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Description:	NYC E-Designation. Historic Fill Material requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client:	Waterfront Property Management, LLC.
Authority:	NYCOER
Role:	Mr. Bennett serves as the Project Manager for the project.

Project:	Governor's Office of Storm Recovery (GOSR) New York Rising Buyout and Acquisition Program / Superstorm Sandy Relief Program
Location:	Long Island and New York City
Type:	Phase I Environmental Site Assessments (ESAs) and Property Evaluation
Contamination:	Asbestos, Lead, Mold and PCBs
Role:	Environmental Scientist II responsible for the creation and review of a high volume of Phase I ESAs

Project:	WMATA Metrorail System Assessment Program
Location:	Washington D.C. Area
Type:	Hazardous materials inspection and evaluation for planning and engineering design purposes.
Contamination:	Asbestos, Lead and PCBs
Role:	Environmental Scientist and Inspection Team Leader

Project:	Armonk Square Redevelopment Plan
Location:	Armonk Square, Armonk, NY
Type:	Monitoring well and recovery well installation. Sub-slab depressurization system (SSDS) installation and operational modifications.
Contamination:	Chlorinated Solvents
Role:	Environmental Scientist responsible for the planning and oversight of monitoring well and recovery well installation. Planning, oversight, and modifications to SSDS.

Project:	Newtown Creek Dredging Project for NYCDEP
Location:	NYCDEP Newtown Creek Wastewater Treatment Facility, Brooklyn, NY
Type:	Navigational waterway dredging
Contamination:	Hazardous and biological pollutants in bottom sediment.
Role:	Environmental Scientist responsible for the implementation and operation of engineering controls and turbidity monitoring.

Project:	Boring / Coring Program, Northeast U.S. Region
Location:	New Bedford Harbor, New Bedford, MA. Long Island and Massachusetts.

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Type:	Bathymetric surveys. Borings and Corings advanced through deep sediment and bedrock to determine the proper allocation dredge areas and confined aquatic disposal zones. Additionally, Vibracore drilling was conducted in shallow and easily accessible areas.
Contamination:	PCBs
Role:	Environmental Scientist / Project Manager serving as an on-site geologist to interpret and record geological investigations.
Project:	New York State Air Permit Facilities
Location:	Westchester, Orange and Rockland County, NY
Type:	Title V Air Permits, state registration and permitting for multiple industrial laundering facilities.
Contamination:	Hazardous Air Pollutants
Role:	Environmental Scientist / Project Manager responsible for all air permitting work for a NY-branch office.
Project:	Dredging Oversight and Water Quality Monitoring
Location:	New Bedford Harbor, New Bedford, MA
Type:	Bathymetric surveys. Supervised maintenance dredging and confined aquatic disposal zone excavation operations. Turbidity and sediment flocculation monitoring.
Contamination:	PCBs
Role:	Environmental Scientist providing project oversight, coordinating daily with Mass DEP and sub-contractors. Documenting geological data.
Project:	Stormwater Abatement System Inspections, Repairs and Reporting
Location:	Multiple retailer locations throughout New York State
Type:	Stormwater drainage system and stormwater control structure inspections and repairs
Contamination:	PCBs
Role:	Environmental Scientist / Project Manager assigned to coordinate and perform routine inspections of drainage systems and stormwater control structures. Made repairs to stormwater appurtenances where neccesary.
Project:	ConEdison Truck-flush facility, effluent discharge monitoring.
Location:	Multiple ConEdison truck-flush facilities located throughout New York City, NY.
Type:	Compliance sampling and evaluation with regard to New York City Sewer Effluent Limitations.
Contamination:	Oil & Grease, Metals, Pesticides/PCBs , VOCs, SVOCs
Role:	Effluent sampling. Coordinating with client and laboratory to conduct quarterly sampling events.
Project:	RCRA Closure Support

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Location:	Pall Corporation Former Headquarters, East Hills, NY
Type:	Environmental closure of a medical equipment manufacturing facility
Contamination:	Formic Acid, Dimethylacetamide (DMAC)
Role:	Environmental Scientist / Project Manager responsible for the supervision of the removal of all process tanks, piping and associated appurtenances. Accomplished final decommissioning activities. RCRA Closure Report.
Project:	Brownfield Closure Support
Location:	Multiple locations throughout New York City
Type:	Remedial investigations. Interim remedial measures. Soil vapor intrusion studies. RCRA Closure.
Contamination:	VOCs, SVOCs, Oil & Grease, Pesticides/PCBs , Metals
Role:	Environmental Scientist / Project Manager responsible for preparing and conducting remedial investigations, interim remedial measures, soil vapor intrusion studies and RCRA closure.
Project:	Mirant Bowline Power Plant Asbestos Survey
Location:	West Haverstraw, NY
Type:	Asbestos inspection. Personal exposure monitoring. Asbestos labeling Program. Reporting.
Contamination:	Asbestos
Role:	Environmental Scientist / Project Manager serving as a team leader to conduct large scale asbestos inspection, labeling program and reporting.
Project:	Estee Lauder SPCC Facilities
Location:	Multiple manufacturing facilities throughout Long Island
Type:	Spill Prevention Control & Countermeasures (SPCC) inspections, evaluation and reporting.
Contamination:	N/A
Role:	Environmental Scientist / Project Manager responsible for conducting inspections, facility engineering review, and reporting.
Project:	Nassau and Suffolk County Sanitary Code Facility Compliance Audits
Location:	Multiple medical equipment manufacturing facilities throughout Long Island.
Type:	Article XI and XII Sanitary Code Compliance Audits and multiple medical equipment manufacturing facilities.
Contamination:	N/A
Role:	Environmental Scientist / Project Manager responsible for conducting inspections, facility engineering review, and reporting.

LOCAL AGENCY INFORMATION

New York State Department of Environmental Conservation
APPLICATION FOR ACCESS TO RECORDS
Pursuant to New York State Freedom of Information Law (FOIL)

Please complete all applicable fields

Records Requested

Whenever possible, please provide specific facility name(s), owner(s), address(es), permit/spill/PBS/incident number(s).

All available documents related to the environmental condition and historic land use of the subject property located at 260 W. 126th Street, New York, NY 10027. Such documents may be related to spills, releases, violations, historic occupants and land usage, prior environmental investigations, remedial measures, state environmental database listings and the known handling, storage and transport of potentially hazardous, hazardous or non-hazardous materials associated with the subject property. The subject property is identified as Borough: Manhattan, Block: 1931, Lot 56.

The subject property has an E-Designation (E-201) for HazMat, Air & Noise as the result of the 125th Street Corridor Rezoning (CEQR #07DCP030M); however, there is no known NYSDEC involvement. The subject property appears to be solely under the authority and governance of the Mayors Office of Environmental Remediation (MOER). NYSDEC may become involved in the future depending on the findings of the remedial investigation. MOER will notify NYSDEC on these findings and potentially consult your department if warranted.

Certified Sanborn® Map Report

10/14/16

Site Name:

260 W. 126th Street
260 W. 126th Street
New York, NY 10027
EDR Inquiry # 4753434.3

Client Name:

Env. Business Consultants
1808 Middle Country Road
Ridge, NY 11961
Contact: Rob Bennett

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Env. Business Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # BBB7-4829-828D

PO # BGP1601

Project 260 West 126th Street

Maps Provided:

2005	1993	1978
2004	1992	1976

1996	1986	
1995	1985	
1994	1980	

Sanborn® Library search results

Certification #: BBB7-4829-828D

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Env. Business Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 300 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

260 W. 126TH STREET
NEW YORK, NY 10027

COORDINATES

Latitude (North):	40.8103680 - 40° 48' 37.32''
Longitude (West):	73.9501530 - 73° 57' 0.55''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	588549.4
UTM Y (Meters):	4518025.0
Elevation:	29 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

AERIAL PHOTOGRAPHY IN THIS REPORT

Portions of Photo from:	20150729, 20150522

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/27/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 36 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/17/2016 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

Site Code: 57691
Class Code: Site is properly closed - requires continued management.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 08/01/2015 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/16/2016 has revealed that there are 72 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 10 NY UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there is 1 NY RES DECL site within approximately 0.125 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/16/2016 has revealed that there are

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/21/2016 has revealed that there are 148 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - WEST 13	12TH AVE. BETWEEN W.	ENE 1/4 - 1/2 (0.415 mi.)	AV479	1175
CON EDISON - W 132ND	12TH AVE BETWEEN W 1	NW 1/2 - 1 (0.792 mi.)	514	1277

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site

HUDSON RIVER PCBS (Continued) **1000384273**

has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA’s analysis assumes a significantly reduced PCB loading to the river from these sources once the State’s plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non- cancer adverse health effects based on observations in animals and emerging evidence in

HUDSON RIVER PCBS (Continued) **1000384273**

humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the

HUDSON RIVER PCBS (Continued) **1000384273**

history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 10/12/2005: Talked to Mr Frank Monteano (212 483 8890). He informed that there was a environmental clean up after that spill. His assistant will be back on next Monday and requested to call back than. (Sadique) 10/21/2005: Called that no. and left message to call me back. (Sadique) 11/07/2005: Tried to contact with the Hillman Environmental (718 726 3336), the no. was not in service. Searched property shark for owner and sent a certified mail to the owner. (Sadique) 12/05/2005: Letter returned on 11/25/2005 due to wrong zip code. Checked the address and send another today.(Sadique) 12/15/2005: Second letter returned on 12/15/2005. (Sadique) 12/22/2005: Site visit may help to close the spill. (Sadique) 01/20/2006: John Grathwol and I visited the spill location on 01/18/2006 at 1:25pm. Met with building superintendent Mr. Francis Rivera. They changed to gas heating last summer. The old tank removed from the building. No spill visible. Nothing on the floor. Moldy smell but no petroleum smell noticed. Inspected out side, fill pipe removed. No sign of oil spill found. Took photos of inside and out side locations. Spill can be closed. (Sadique) 01/20/2006: Spill closed. (Sadique)"
Remarks:	"OIL TANK IN OFFICE BUILDING APPEARS TO HAVE BEEN OVERFILLED. SIGNS OF OIL IN VAULT WHERE FILL PIPE IS LOCATED. CALLER STATES IT IS A SMALL AMOUNT. HE DOES NOT KNOW NAME OF OIL COMPANY THAT FILLS TANK. CALLER WILL ADDRESS PROBLEM TOMORROW WITH HILLMAN ENVIRONMENTAL."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. WAS CHANGED FROM O'DOWD TO TOMASELLO 4-15-98. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 10/24/06 - Haggerty - This site was previously mis-designated as an Exxon-Mobil site. This property was formerly a Harlem USA gas station. The property is now a multi-level retail center encompassing nearly the entire city block. Before construction was to begin in 1997, soil samples were taken in the southern most corner of the block where the gas station was located. Spill #9710405 was generated when soil sample contained gasoline compounds. Through the course of excavation and remediation, Chris Tomasello, former R2 employee closed out the 9710405 spill on 5/15/98. Unfortunetely, Spill #9800505 was called in on 4/13/98 for the same property a month before the original spill was closed out. There was only 1 composite endpoint sample taken with no description of which soil locations made up the composite sample. After exhausting every lead to find someone who knew why this additional spill was called in, I proposed the following to Jim Tuman of Grid Properties, property manager (212-678-4400 ext110): 2 samples either groundwater or soil gas on either side of the corner where the gas station stood. Spill to remain open until the samples are taken. All documents in Edocs 5/15/08 - Haggerty: received call from Mohammed Ahmed from Fleming Lee Shue. Apparently, Mr. Tuman, Property Manager, now wants to get this spill closed. PM informed him to prepare a brief work plan 6/16/08 - Haggerty: Approved work plan to install 2 grab GW samples using a GeoProbe on either side of the former gas station. 8/14/08 - Haggerty: reviewed SIR. Both grab groundwater samples clean. Spill Closed "
Remarks:	"CALLER'S COMPANY HAD OLD UNDERGROUND GASOLINE TANKS REMOVED. THEY HAD BEEN ENCASED IN CONCRETE. THE CRUSHED CONCRETE WAS TESTED BY AN OUTSIDE LAB LISTED ABOVE AND THE MATERIAL TESTED POSITIVE FOR GASOLINE."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/29/99 Bob Abramo (718-624-7490)- Abra Consulting -called - He has just been hired by the owner to close out this spill. He has a copy of soil boring work & test results for borings done around the abandoned 3,000 gal fuel oil storage tank buried in rear of shoe store. Sangesland asked Mr. Obrano to send a copy of these test results along with a 1-2 page description of Proposed Plan Of Action for work to be done to clean up the site. Some sort of Bio may be called for since the tank can not be moved. 8/26/99 - Sangesland read the report forwarded by Mr. Abramo and agreed with Mr. Abramo's plan to install 1 or 2 wells in the area around the abandoned tank in the sidewalk. Sangesland said if the depth to ground water was too much (50+ ft) then it would not be representitive of the tank (problems could be from further away)..... Problem still remains what to do about the confirmed contamination. 2/11/2000 - Mr. Abramo called to say one well was installed to 27' Sample tested to 8021 and 8270 All results were below limits except (enbyutel benzene 52 ppm). There still is contamination of soil between tank and building. Sangesland asked Mr. Abramo to propose some type of remediation (Bio?) on the trapped soil contamination. Mr. Abramo proposed ORC. Sangesland said

UPTOWN REALITY (Continued) **S103479726**

no. DEC requires some type of biological bugs which will be injected into the soil to work on the problem above the groundwater line. 5/2/2000 - Mr. Abramo said Bio Rem Rep suggests 4 geoprobe type injection wells around the tank along with 1,000 gal of Biorem. Sangesland said to go ahead, leave the site until Sept 1st and then retest the monitoring well. Hopefully it will be clean and can be closed out. 9/25/2000 - Mr. Ed Correll (Soil Mechanics 516-221-7500) was hired by the owner do what it takes to close out the case. Mr. Correll was told of the DEC history on the site. Sangesland asked Mr. Correll to do the following: 1) Get specific details on what type of Bio work was done in July 2000 (DEC has no records). 2) After a couple of months, retest the existing well and conduct another geoprobe between the tank and the building to check the condition. 3) Prepare a report that either shows the site is clean or Justifies why the existing contamination is not a problem Contamination is contained, encapsulated and would undermine the building if it were removed. If a report is submitted, DEC will review it and determine if additional work is needed. 12/13/2000 - Thomas McCurdy of The Breakthrough Group (856-810-3402) submitted a closure request letter. It states that at some point (approx 8/2000) an application of Bio-Rem was made at two points between the tank and the building. On 10/24/2000 MW-1 was sampled and found non-detect for all contaminants within 8270 & 8021. MTBE = 1 ppb 1/2/2001 - Spill has been closed"

Remarks: "CALLER WAS EMPLOYED TO DO SOIL SAMPLES AND TEST FROM AN ABANDONED TANK USING METHOD 82-70 -- CANTAMINATED SOIL FOUND -- MIKE MULQUENE HAS ALREADY TALKED TO CALLER ABOUT THIS CONDITION "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 10/12/2001 - Sangesland spoke with Fred Caputo of Bayside Fuel. He said it was a minor spill from an overfill out the vent line. Sangesland then called the building super Samba (cell# 914-760-9832). Super says the oil company did a good job cleaning up and there was no longer a problem. Super says the spill was only outside on the sidewalk and no problems in the basement. Spill Closed This building has a history of bad spill in the basement. Cross ref spill #9805070 Harlem USA Project . When excavation was done to build the Harlem USA Project an endless flow of oil poured out from under this building - see photos in file The developers at Harlem USA solved the problem by building a watertight wall around the base of

SPILL NUMBER 0107208 (Continued) **S105234743**

#288 St.Nicholas Ave In 1999 a new tank was installed in the basement of this building and a 5'x 5' x 5' hole dug in the boiler room did not show any contamination. It is unknown what was the source of the oil under this building."

Remarks: "DUE TO A BAD VENT PIPE - ALL HAS BEEN CLEANED UP - BLEW THE LINE WHICH CAUSED OIL TO SPILL OUT"

DEC Memo:	"10/03/08 Sangesland spoke to Bill Schlageter. He said the contractors are moving quickly on this site. They discovered some contaminated soil during excavation. They staged the contaminated soil on plastic and will have it properly removed with manifests. They already took end point samples from the open excavation and will forward a report to DEC with end point test results. 10/03/08-HRAHMED-Bill Schlageter of Preferred Environmental called. As per him they excavated 20'X25' and 12' deep. At 12' they found shin on groundwater. 10/22/09-HRAHMED-Received email from Bill Schlageter on 10/03/08 outlining the remedial action plan: The subject property is currently undergoing an entire redevelopment of the property which includes the excavation of soils to 18 feet below grade surface (bgs) and dewatering of the water table an estimated (three to four feet). An existing dewatering system is operating at the property which includes an oil/water separator, etc and discharges to the municipal sewer system. The site is listed as an E -designated parcel by the New York City Department of Planning and a Remedial Action Plan was prepared by Impact Environmental, submitted to and approved by the New York City Department of Environmental

CONSTRUCTION SITE (Continued) **S109372113**

Protection for the removal of historical fill from the property and dewatering of groundwater. As part of the process of preparing a RAP to the NYCDEP, Impact collected and analyzed groundwater samples from the property. No petroleum-impacts were identified in the groundwater samples indicative of a petroleum-release at the property. Minor impairments were detected but were contributed by Impact to an upgradient off-site source. An excavator was utilized to delineate the on-site soil impacts. Impacts were observed to extend to a depth of 12 to 14 feet below grade surface, at which point groundwater was encountered. What appeared to be a slight sheen was observed atop of the groundwater. As part of the overall site re-development, the area of petroleum-impacted soils will to be excavated. Based upon observations, made by Preferred, the following Remedial Activities will be conducted: 1. Petroleum-impacted soils will be excavated, temporarily stockpiled on-site and eventually transported off-site to a licensed/permitted facility; 2. Preferred will collect a series of endpoint soil samples from sidewalls of the excavation. No bottom endpoint sample will be collected as the bottom of the excavation will be in groundwater; 3. As the site is going to be de-watered by three to four feet, and prior groundwater data did not reveal the present of significant petroleum-related groundwater impacts, Preferred does not propose to collected groundwater quality samples; and 4. The results of the endpoint samples will be included in a spill closure report submitted to the NYSDEC for review. 10/25/10-HRAHMED-Received closure report from Bill of preffered Env. As per the report, the whole site was excavated upto 18 ft below grade. Groundwater level at this was 12 ft. A dewatering system was set up to draw down the water table and allow for deeper excavation. As part of the dewatering system, the groundwater is pumped into a frac tank and through an activated carbon filtration unit before final discharge into the municipal sewer system. Water sample results from effluent and influent was below TAGM limit or not detected. Since the entire site a excavated upto 18 ft no end point soil samples were collected. Based on the report, the spill case is closed. A SCL was sent to: 124 Owners Longview LLC c/o RCG Longview Seven Penn Plaza New York, NY 10001 Att: Richard Gorsky "

Remarks: "Contractor discovered impacted soils, soil will be excavated and placed on plastic for disposal."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MANHOLE 44877 (Continued) **S107657053**

Coleman 14241 Cable Dept reported that Eric Weinstein 12230 Cable dept had found at 03:35 a spill of 16 oz cable oil leaked from a gash on a primary feeder cable in M44877. The oil is spilled on the arc proofing and dirt on the concrete floor of the manhole. The condition has been reported to Emerg Dept as a D-Fault, the feeder has not been identified & no D-Fault tag has been placed at this time. No environmental tag has been placed at this time, supervisor notified to bring a tag to the location. No fire or smoke, no sewers or waterways affected. No injuries, weather did not contribute to the spill hazard. Acct #14872 No private property affected. No oil filled equipment. No water, no sewer connection Concrete sump , no sump pump. No substantial cracks. Samples pending safe access. No cleanup actions taken. Parking: Access Anytime. Logged by D. Gaynair 20079 Update: 2/22/06 04:54. D-Fault Tag # 01246 Hung. Environmental tag #18710 Hung. "

Remarks: "16 ounces dielecric fluid. no to 5 question. clean-up pending de-energization of feeder. con ed ref 163038"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"8/5/13 TJD TTF letter prepared for project manager's signature (Piper). PBS #2-259837. Letter addressed to: Maloof & Ellis Management 2460 Lemoine Avenue 3rd Floor Fort Lee, NJ 07024 Attention: Greg Maloof (201)363-1482 unsigned letter uploaded to EDOCS 03-18-2015 - V. Brevdo This TTF Spill Case is transfered to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Ms. Ainura Doronova as Project Manager. - VB 03/18/2015: This spill case was transferred to A. Doronova. - AD 04/29/2015: Looked for the info in PBS database. PBS #2-259837. According to the file, the contact person is - Ezra Bennet of 281 St. Nicholas Partner LLC. AD 05/01/2015: Issued and sent a certified TTF letter to Ezra Bennet of 281 St. Nicholas Partner LLC. Response is due June 1, 2015. AD 05/18/2015: Received a response from E. Bennet. Will review. AD 06/26/2015: Reviewed the submitted documents. The cover letter from Monarch Realty Holdings LLC, says that they are not aware of a failed tank integrity test. They were informed by their boiler company that the building's tank would not withstand a pressure test and hired Alliance Mechanical to abandon the tank in place. There are affidavit from the contractor, a job invoice and copy of the check attached to the cover letter. The affidavit states that the aboveground 5,000-gallon #6 fuel oil tank was cleaned and filled with cement slurry according to the rules. AD 07/15/2015: Looked into database for the details. The spill was opened on August 2, 2013 when a 5,000-gallon #6 oil tank failed the tightness test. It was reported by Rightway Tank company. According to PBS database the tank in question is an aboveground tank in contact with soil. It was closed-in-place on April 22, 2014. Tried to contact Rightway Tank with no success. AD 08/20/2015:called and spoke with Rob Hill of Rightway Tank. He confirmed that his company performed the tank tightness test on this property on August 2, 2013. Requested to send me a copy of a tightness test report, since it was missing in our database. AD 10/2015: Called and left a message to Mr. Hill. AD"
Remarks:	"Failed test. Isolation test being scheduled."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Limited site investigation performed by Promatec/TRC, found very minor impact to soil, but not all locations were sampled, and wells installed appear not to have been downgradient from the tank. However, after meeting at site with consultants, it became apparent that additional investigation would be impossible due to space constraints and the nearby presence of subsurface utilities and a subway line. In light of this and minor nature of contamination identified, DEC agreed to No Further Action status for site in letter issued 9/5/97. - J. Kolleeny"
Remarks:	"2,500-gal gasoline tank removed in mid-1990s, dispenser suspected to have leaked. Spill was not reported at the time."

APARTMENT BUILDING (Continued) **S105997932**

DER Facility ID: 97747
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE/DO 1/17/03 TJD Demeo contact Bernie at NYC Tank Testing for additional information regarding tank size and building contact information. Location is unregistered with PBS. NYC Tank Testing was retained for test by Alba Combustion (718 931 1700). Tank is reportably a concrete wrapped 1,080 gallon. According to NYC Tank Testing a cut manway on top of tank is likely cause of tank test failure. No reported petroleum release at location. At time of test failure 39 inches of product remain in tank. Product has not been removed. NYC Tank Testing has not been authorized to do any additional work. Rose Marie from Alba Combustion was contacted to obtain owner information and confirm tank size. Information not available at time of inquiry. Alba will call DEC with requested information ASAP. Alba Combustion called back with contact as follows: Juan Ortiz - Building Super (917)412-5688 Mercedes Gonzalez - President of Tenants Association(212)662-3373 Juan contacted and stated tank has been leaking for several months. He cleans up the oil leaking from tank enclosure on a daily basis. No plan in place to empty or repair tank. Mercedes contacted who confirmed situation is an ongoing problem. Location is a HPD building. Mercedes provided following contact for HPD: Ms. Sumada Mena (212) 863-7313 Ms. Mena contacted, she was aware of situatiuon at building and confirmed HPD retained NYC Tank Testing to test tank. Demeo directed Ms. Mena to empty tank as leak has existed for months and has not been repaired. Ms. Mena stated she was building coordinator and not the appropriate contact. Demeo was provided contact information for Willie Kesknen from Technical Services Group (212)863-7307. Demeo left message for Willie Keskinen. Mr. Keskinen Director of TIL/Tech Group from HPD has stated a contractor will be at building today to empty tank and install temporary tank. Address for HPD is 100 Gold Street, NY NY 10038. Tank Test letter not sent as tank is to be taken out of service for repairs and/or replacement. Tipple to perform site visit and assess situation. 1/17/2003 TIPPLE VISITED SITE, Spoke with the building super Jaun Ortiz the oil had been cleaned daily since the leak began months ago. The stain on the floor indicates that the oil had never gotten close to the sump area and the floor surrounding the vaulted area is sound. There is a staining on the wall adjacent to the vault indicating the high probability of a leaking fill/vent line in addition to a tank problem. Building super will call and leave message once the tank is emptied and a temporary tank installed. 05/18/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Talked to Ms. Mena on phone (212)863-7313 she said, They have changed the tank three years ago. New york city owned this building. -QA Address: HPD/TIL 100 Gold Street Room 7 T - 1 NY NY 10038 06/21/06: Called to Willy Keskinen, Deputy Director, HPD. Talked to Ms. Shirley (secretary) regarding information of spill. She said she will convey to Mr. Willy and he will call me back at the ealiest. -QA 07/19/06: Called Ms. Sumada Mena and left message to call me back. -QA 07/20/06: Ms. Losario Vera (212)863-5199 called me and said she is trying to get the information regarding spill as soon as she will get she will send it to me. -QA 09/11/06: Called Mr.Willy Keskinen He was not available. Left message at (212)863-7307 Extn. 8893 to call me back regarding spill. -QA 10/12/06: Mr. Berney (718)731-7011 called me and he said he will do more researches and then he will call me back. -QA 10/18/06: Mr. Willie Keskinen, Deputy Director, TIL/Tech (Department of Housing Preservation and Development) sent me a

APARTMENT BUILDING (Continued) **S105997932**

closing confirmation letter to close the spill. According to his letter they hired S.J. Fuel company for clean up work. The purpose of installing a new oil tank was that the existing tank had a minor leak on the tank itself. No oil was spilled on the floor. The existing oil tank was old and replaced with a new tank. Also the basement has a new cement floor in and around the new tank, and shows no sign of oilk spillage. Based on these information DEC staff closed the spill. -QA "

Remarks: "TANK FAILED THE TEST' "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: NYS ADAM CLAYTON POWELL JR SOB
Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 09/21/1998
Site name: ADAM CLAYTON POWELL SOB
Classification: Large Quantity Generator

Date form received by agency: 10/28/1996
Site name: NYS OFFICE OF GENERAL SERVICES
Classification: Large Quantity Generator

Date form received by agency: 08/04/1995
Site name: NYS ADAM CLAYTON POWELL JR SOB
Classification: Not a generator, verified

. Waste code: D000

NYS ADAM CLAYTON POWELL JR SOB (Continued) **1000551524**

. Waste name: Not Defined

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: X003
. Waste name: OTHER STATE REGULATED WASTES [i.e., DIESEL FUEL, GASOLINE AND HOME HEATING OIL]

Date form received by agency: 12/07/1994
Site name: NYS ADAM CLAYTON POWELL JR SOB
Classification: Not a generator, verified

. Waste code: NONE

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 52366
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

D00 - Pipe Type - No Piping
E00 - Piping Secondary Containment - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
J03 - Dispenser - Gravity
B01 - Tank External Protection - Painted/Asphalt Coating
G01 - Tank Secondary Containment - Diking (Aboveground)
A00 - Tank Internal Protection - None
K99 - Spill Prevention - Other
L00 - Piping Leak Detection - None
F00 - Pipe External Protection - None
I05 - Overfill - Vent Whistle
C00 - Pipe Location - No Piping

Tank Location: 3
Tank Type: Galvanized Steel Alloy
Tank Status: In Service
Pipe Model: Not reported
Install Date: 06/01/1988
Capacity Gallons: 2000
Tightness Test Method: NN
Date Test: Not reported

DEC Memo:	"Sangesland called Petro requesting further details - Rep will call back This spill needs follow-up 10.28.05 Sharif- I called James Young who was not available at that time.Left messege for him to call back about the clean up of the spill. 03/01/06 Sharif Rahman- I spoke with Madeline Reese,(212)828-8573 and she would relay the department's concern to James Young. 03/27/06 Sharif Rahman- Clean up letter went to James Young 355 W 123rd Street, Apt#1A New York, NY 10027 05/11/06 Sharif Rahman- I called Petro ,516-686-2030 and spoke with Keanny @ ext.3324. He informed me the customer's account is not active now and the customer did not respond to fix the tank problem. So, they suspended the delivery due to unsafe condition of the tank. 08/07/06 Rahman- Tried to inspect the baement tank room, but could not get access as no body was found in the house. It looked like the house is

YOUNG RESIDENCE (Continued) **S107416936**

now abandoned and no body lives there.Certified mail letter dated May 11' 06 returned undelivered."

Remarks: "Tank was leaking releasing 5 gal of material onto the dirt floor. Petro will be stopping the leak. Unknown who is doing the clean up."

DEC Memo: "Sangesland spoke to Pete Chen of city DEP. He said they were called to the site by complaints of petroleum odor. Area was fenced off, but there was a large puddle of oil in the center of the lot. Property owner is MOTIVA ENTERPRISES LLC Motiva Environmental manager: John Sexton 713-241-1507 Cross Ref PBS#2-190810 6/3/2010 Sangesland heard back from John Sexton at Motiva(Shell). He said they pulled tanks from the site within the last year and had an argument with the property owner. They believe someone opened the gates and dumped petroleum on the surface to create a new problem at the site. Motiva has hired a company to come in and dig out the contaminated soil. New end point samples were taken and a complete new closure report will be submitted when the results come back. Site contact for Motiva is: Robe Rule 540-943-8468 07/02/10-Hiralkumar Patel. found case assigned to me. letter has not been sent out yet. 07/06/10-Hiralkumar Patel. 2:03 PM:- spoke with Mr. Rule. he mentioned that report was submitted to DEC Piper under spill #: 0702470. received report from DEC Piper. surface spill was found in May. site developer hired contractor to remove soil. excavated 8 ft by 8 ft area to 3 ft depth. collected two endpoint samples. no contamination in endpoint samples. based on submitted report, case closed. **refer to spill #: 0702470.** Based on the information provided by the consultant Charles Sosik (Environmental Business Consultants) this spill was reopened."

Remarks: "contaminated soil found at old gas station"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Update By:	JHOCONNE
Site Description:	Location:The Former Shell Service Station and Parking garage site is located in an urban area. The site is located on St. Nicholas Ave., between 121st Street (south) and 122nd Street (north) in the Borough of Manhattan.Site Features:The site currently contains an operating multi-story parking garage and a former gasoline service station with automobile repair facility. The site is comprised of two adjacent tax parcels (Lots 30 and 35) totaling approximately 0.468 acres.Current Zoning and Land Use:The site is zoned R8A/R7A (residential) with a C2-4 (commercial) overlay. Current use is commercial. Surrounding properties include a mix of multi-family residential and commercial/retail uses. The intended use is mixed-use residential and commercial with community facility space. Past Use of the site:Prior uses on Lot 30 include coal storage, a junkyard and the parking garage. On Lot 35, the former uses include a carriage factory, auto repair and the gas station.Site Geology and HydrogeologyDepth to groundwater is approximately 20 feet below ground surface. Groundwater flows to the north.
Env Problem:	Nature and Extent of Contamination:Based upon the results of several investigations, contaminants of concern include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and polychlorinated biphenyls (PCBs). The contaminants of concern do not appear to be contributing to off-site environmental impacts that require additional investigation or remedial action. Soil Volatile organic compounds (VOCs) were found at concentrations exceeding the Unrestricted Use Soil Cleanup Objectives, including acetone at 0.056 ppm and methylene chloride at a concentration of 0.22 ppm. In addition, Stoddard solvent was identified at a concentration of 671 ppm. Semi-volatile organic compounds (SVOCs) have been found including benzo(a)anthracene at 2.3 ppm, benzo(a)pyrene at 2 ppm, and benzon(k)fluoranthene at 3.6 ppm Two metals were detected at concentrations exceeding their respective UUSCOs: lead at 2980 ppm and mercury at 2.45 ppm.Groundwater - The results from groundwater samples show detections of several VOCs above groundwater standards including 1,1,2-trichloroethane (2.9 ppb), 2-isopropyltoluene (9.1 ppb), total xylenes (25 ppb), tetramethylbenzene (43 ppb), 1,2,4-trimethylbenzene (11 ppb), isopropylbenzene (19 ppb) and n-propylbenzene (30 ppb). Several SVOCs were also detected above their respective groundwater standards, including benzo(a)anthracene at 0.07 ppb, benzo(b)fluoranthene at 0.09 ppb, benzo(k)fluoranthene

FORMER SHELL SERVICE STATION AND PARKING GARAGE (Continued) **S110610533**

at 0.03 ppb, chrysene at 0.07 ppb, and ideno(1,2,3)pyrene at 0.04 ppb. PCBs were detected in groundwater above standards at 2.2 ppb. Soil Vapor Elevated concentrations of several petroleum VOCs (including 1,2,4-trimethylbenzene at 26 ug/m3 and xylenes at 100 ug/m3) and chlorinated solvents (tetrachloroethylene at 112 ug/m3 and trichloroethene at 14.9 ug/m3) were found throughout the site. The investigation indicates that the presence of PCE in soil vapor can likely be attributed to an off-site source, due to the lack of PCE in on-site soil or groundwater.Significant Threat:NYSDEC and NYSDOH have determined that this site does not pose a significant threat to human health or the environment.

Health Problem: Persons who dig below the ground surface may come into contact with contaminants in subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no occupied enclosed structures at the site, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Sampling indicates that off-site soil vapor intrusion as a result of this site is not a concern for off-site buildings.

Tank Info:

Tank Number:	1
Tank Id:	44688
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

A03 - Tank Internal Protection - Fiberglass Liner (FRP)
D01 - Pipe Type - Steel/Carbon Steel/Iron
G03 - Tank Secondary Containment - Vault (w/o access)
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
L09 - Piping Leak Detection - Exempt Suction Piping
F00 - Pipe External Protection - None
I05 - Overfill - Vent Whistle
B01 - Tank External Protection - Painted/Asphalt Coating
H00 - Tank Leak Detection - None

Tank Location:	6
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"06/08/10 - LZ Sent a TTF letter (eDocs) to 152 West 124th Street, NY, NY, attention P. Loth. Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE Jacob- Property owner is NYC H.P.D. Made five to nine calls to the NYC housing department. 4/26/06- Jacob- Sending file back to region 2 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 3/5/13 TJD T/C with Kwanza S Smith (Project/Office Manager)ddm development and services 212-410-7296 phone 212-410-2751 fax www.ddmdevelopment.com She has provided a copy of DEC record concerning this matter obtained through the FOIL process. Documentation provided is incomplete and does not contain the minimum information necessary in support of spill closure. Kwanza Smith was provided contact information for ProTest who had performed the original tank tightness test and further instructed to review available documentation to provide failing and passing tightness tests as well as a description of repairs. 11/21/13-Vought-Received call from Julisa Santana (Lemlen Wolfe Ph:718-884-4689) and they are new property managers. They removed tank and want to send affadavit of tank removal as instructed by DEC Demeo. Vought provided her email and she will email Demeo affadavit. 11/25/13 TJD T/C with Julissa Santana (Lemlen Wolfe Ph:718-884-4689) - new property manager. Ms. Santana provided affadavid of tank removal performed by All American Heating (11/13/13) - no prior notice was provided to DEC regarding scheduled work. DEC informed Ms. Santana a description of the work is required including a statement that no contamination was observed following the removal of the 2,500 gallon AST. As per discussion with Ms. Santana, the property is currently vacant and undergoing top to bottom renovations/redevelopment. There is currently no heating system or tank storage in place - as part of renovations a new gas burner will be installed. Awaiting requested correspondence. 11/25/13 TJD File review. All required closure documentation has been received - uploaded to EDOCS. No DEC inspection perfomed - closure determination based upon file review. No further action is required. Spill closed."
Remarks:	"CALLER TESTED THE TANK WHICH FAILED."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	005
Tank Id:	216539
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

C01 - Pipe Location - Aboveground
D02 - Pipe Type - Galvanized Steel
H05 - Tank Leak Detection - In-Tank System (ATG)
A00 - Tank Internal Protection - None
L00 - Piping Leak Detection - None
I04 - Overfill - Product Level Gauge (A/G)
B01 - Tank External Protection - Painted/Asphalt Coating
G01 - Tank Secondary Containment - Diking (Aboveground)
H03 - Tank Leak Detection - Vapor Well
F01 - Pipe External Protection - Painted/Asphalt Coating
J02 - Dispenser - Suction Dispenser
K00 - Spill Prevention - None

Tank Location:	3
Tank Type:	Steel/Carbon Steel/Iron

. Waste name: AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR) MITOMYCIN C

. Waste code: U031
. Waste name: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

. Waste code: U034
. Waste name: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

. Waste code: U035
. Waste name: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

. Waste code: U044
. Waste name: CHLOROFORM (OR) METHANE, TRICHLORO-

. Waste code: U058
. Waste name: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

. Waste code: U059

CVS PHARMACY #2737 (Continued) **1014958107**

. Waste name: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

. Waste code: U070
. Waste name: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

. Waste code: U072
. Waste name: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

. Waste code: U089
. Waste name: DIETHYLSTILBESTEROL (OR) PHENOL, 4,4'-(1,2-DIETHYL-1,2-ETHENEDIYL)BIS, (E)-

. Waste code: U122
. Waste name: FORMALDEHYDE

. Waste code: U129
. Waste name: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

. Waste code: U132
. Waste name: HEXACHLOROPHENE (OR) PHENOL, 2,2'-METHYLENEBIS[3,4,6-TRICHLORO-

. Waste code: U150
. Waste name: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

. Waste code: U151
. Waste name: MERCURY

. Waste code: U154
. Waste name: METHANOL (I) (OR) METHYL ALCOHOL (I)

. Waste code: U165
. Waste name: NAPHTHALENE

. Waste code: U188
. Waste name: PHENOL

. Waste code: U200
. Waste name: RESERPINE (OR) YOHIMBAN-16-CARBOXYLIC ACID, 11,17-DIMETHOXY-18-[(3,4,5-TRIMETHOXYBENZOYL)OXY]-, METHYL ESTER, (3BETA, 16BETA, 17ALPHA, 18BETA, 20ALPHA)-

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"03/23/05 transferred from T. DeMeo to J. Krimgold who was daytime duty officer when inquiring phone call came in. CS. 03/31/05.

275 LENOX AVE (Continued) **S106868649**

J.Krimgold spoke to Carol Payne (Pine Funeral Home) @ 212-662-4840 located 273 Lenox Ave.- affected party. She stated that about December 2004 a strong oil odor was observed in the basement. Also, oil seepage was observed coming from a wall adjacent to 275 Lenox Ave. Oil odor substantially diminished over last few months, but the oil seepage (stain) is still there. J.Krimgold called South Carolina Heating (SCH) and spoke with Natasha Danzler @ 212-234-5900. She informed that they have been called by Funeral Home and informed about incident in about 2 weeks after it happened. No notification was made to the Department at that time. They sent a crew to check out and found that one of two 257 Gal #2 oil tanks was tipped on the side and released an unknown amount of oil to the basement's concrete floor and on the wall of the adjacent (273 Lenox Ave.) building. No paddles of oil were observed at that time. SCH was in contact with Funeral Home's insurance, but as of today they have not come to the agreement. J.Krimgold called RP, Mr. Walter Edwards (landlord? of 275 Lenox Ave) and left a message with his assistant Ms. Santa M Johns (212-864-7410x208). 3/31/05. CSL has been sent to: Mr. W. Edwards Walter J Edwards Enterprises Inc 275 Lenox Avenue New York, NY 10027-5541 YK. 5/2/05. Talked to Mr. Edwards. He claimed that his office lost CSL letter and his consultant Ethan Elton, Inc. also lost a fax copy of this letter. Nothing has been done since. Mr. Edwards was out from country and just came back. He will come and pick up a copy of CSL tomorrow. YK. 5/2/05. Mr. Poul Franky called and asked for a copy of CSL. He is with ICS Claims, an adjuster for West Port Insurance (claim # 185540 filed by Pine Funeral Home). They can cover a part of the cleanup expenses. His phone # 914-907-5788, fax 845-778-0658. YK. 5/27/05. Aimee Petkus from Ethan C. Eldon Associates, Inc. called to discuss her letter to the Department dated May 25, 2005. Generally, the letter states that 40 gal of #2 oil was spilled and 40 gal was recovered. It is unclear then how adjacent property got oil in their basement if all oil was removed. Phone conversation revealed that the consultant was not aware about oil spillage at adjacent (273 Lenox Ave) property. Agreed that they will take soil samples from under tanks in the tank room and from the basement at 273 Lenox. If results warrant a soil excavation will be performed at both sites. YK. 6/1/05. J.Krimgold reviewed a work plan submitted by the Ethan C. Eldon Associates, Inc. dated May 27, 2005. At least 4 soil borings to be advanced in the tank room and at 273 Lenox. The work should begin on June 8, 2005. 9/8/05. J.Krimgold reviewed the Phase II Environmental investigation report prepared by Ethan C. Eldon Assoc, Inc. and submitted on June 22, 2005. Afer initial cleanup four soil borings were advanced in the spill area. The lab results show no contaminants level above TAGM in all borings. NFA letter. "

DEC Memo: "4/20/2005 Spill case transferred from DeMeo to Rahman: Sangesland spoke to project manager working for building owner. He said the problem tank was cleaned, cut up and removed from the vault. Vault was located under the sidewalk in front of the building. Vault was cleaned and there were no cracks in the floor, therefore no oil leaked out of the vault area. Sangesland asked the project manager to send into the DEC: 1) Letter stating that the tank was removed 2) Statement that the vault area was totally cleaned and no cracks found. 3) Detailed photos of the vault floor showing it is clean and

COMMERCIAL BUILDING (Continued) **S106971582**

has no cracks. 4) Request closure of open spill number. 06/14/05-SR// Received photographs, invoice and left a message for them. 10.21.05 Sharif- Reviewed the waste disposal manifest and photographs after the tank has been removed. Aparently, there is no cracks or leak on the floor. But the tank room wall looks wet with black stain at different places. Spoke with Phil Rutherford, 212-685-9680 who said they took pictures after it was power washed again since my last conversation with him. He would send me the all new photographs and check with the company whether they filed any deregistration application with DEC. 11.18.05 Sharif// Recev'd new photograph that looks pretty much clean. NFA required."

DEC Sangesland had further requirements but Hagai was not sure what needed to be done to close spill. Top cap to tank was not sealed properly and was repaired and was retested. Tank is a 5000-gallon aboveground UST and there are no spills. Tank is registered on PBS as per Hagai. Spill reassigned from Sangesland to Mahat as per Vought. PBS #2-603028 shows a 5000-gallon #2 fuel oil AST and mailing info as per PBS is: Boro Fuel Oil Co. 2 Church Avenue Brooklyn, NY 11218 Attn: Jeffrey Cohn Ph:(718)854-7500 DEC Requires: 1)copy of passing test results 2)statement of work performed. 09/27/13: Mahat Received an email (Fax) from Mr. Hagai Barlev requesting to close the spill. Seal on the top cap of the tank was leaking. The cap is seal tight now and no more leak in the TFT test. He also attached the TFT test result. The tank passed test and it is uploaded on E-docs. Case is closed as per Mahat and Vought. "

Contact Phone:	(212) 678-3011
DEC Memo:	"11/28/06 - Raphael Ketani. I made a site visit at the request of Rene Lewis, Field Supervisor, at A. L. Eastmond & Son, Inc., 1200 Oakpoint Avenue, Bronx, NY, 10474, (718) 378-3000. The building is an apartment building on the hill just to the west of Morningside Park (west 121 Street). The PBS case #2-606468 shows an in service 10,000 gal. tank with #6 oil. Vapor readings with the PID were: 65 ppb in the lobby; definite but not strong odors in the elevator; 2170 ppb at the floor of the boiler room with only slight odors; and 12.1 ppm in the tank room. The building's boiler room had a painted floor with no cracks. There was a little oil on the surface of the water in the sump, but I was told by the superintendent, Joe Gilcrest (347) 219-3705, that the sump pump had been removed years ago. The 10,000 gal. tank had held #6 oil, but Mr. Lewis told me that it was empty. He said his crew had been inside and they saw that the tank had been lined in the past. However, he said, it was now leaking again. He said that the tank will have to be replaced. I went inside the tank room and saw that oil had been pouring out of the hole in the wall through which the fill pipe passes. Some oil had been absorbed with Speedi Dri, but some had made it to the sump from under the wall separating the tank room from the boiler room. With the fiberglass insulation littering the ground, the absorbent material on the floor, and the oil covering parts of the floor, it was impossible to see whether the tank room floor had cracks. However, the tank was partially buried in the ground. I took 7 pictures inside the tank room and outside the building. I told Mr. Lewis and Mr. Gilcrest that digging will have to take place to remove all of the contaminated soil, that the soil surrounding the fill pipe will also have to be removed, and the oil in the sump will have to be collected. I told them I will send a letter to this effect to the owners of the building, John Bruff, Director of Facilities, Teachers College, 525 West 120 Street, Box 162, NY, 10027 (212) 678-3011 and to A. L. Eastmond. 11/29/06 - Raphael Ketani. I sent a CSL letter to Mr. Bruff. 1/30/07 - Raphael Ketani. I received a FAXed letter from Janice Robinson of Teachers College of Columbia University on 1/29/07 and the letter with an original signature today. The letter stated that RND Services had been hired to remove the tank, cleanup the site, and dispose of all contaminated soil and water. The letter went on to say that a report will be submitted describing the cleanup and any soil removal. Ms. Robinson's phone number is (212) 678-3732. I looked up the PBS registration #2-606468 and found that the 10,000 gal. tank was still listed as in-service. 1/31/07 - Raphael Ketani. Ms. Robinson called back to say that she had her worker send in the PBS change form today. 2/13/07 - Raphael Ketani. I spoke to Bob Hayman of RND Services (845) 348-6355. He told me that R&D will do the investigation and cleanup for the tank. I told him to also check the fill line and port as I saw staining on the wall below the pipe. He said he will do a pressure test of the pipe and port. 5/2/07 - Raphael Ketani. Today I received a progress report letter dated 4/30/07 from Robert Heyman of RND Services, Inc (845) 348-6355. Mr. Hayman also told me that they had removed the tank, cleaned up everything and removed the concrete floor. When they removed the

COLLEGE BUILDING (Continued) **S108298946**

floor, water started coming in at the rate of 2 gals./min. It turned out that the water was coming from a broken pipe on the south side of the vault and contained roof drainage water and sewer water. They removed 30,000 to 40,000 gals. of combined water with a little bit of oil. He said that the tank had been resting on bedrock and so they removed a little contaminated bedrock. They also tried to do a pressure test on the fill box and the fill pipe, but it collapsed. They will breakup the sidewalk to remove any contaminated soil and replace the pipe. Mr. Hayman said that they are putting together a report for DEC. He added that the building owners have been very cooperative and have hired their own engineer to design a new vault for the tank and the piping system. 7/23/07 - Raphael Ketani. I tried calling Rene Lewis of Eastmond, Mr. Bruff of Teachers College and Mr. Hayman of RND Services, but could only leave messages. Rene Lewis of Eastmond called to say that Teachers College paid only $10,000 of a $60,000 bill. He added that Eastmond stopped their work because of this. Mr. Lewis said that another environmental company was contracted by Teachers College to finish the job. I left another message for Mr. Hayman. 7/25/07 - Raphael Ketani. I spoke to Mr. Hayman ((845) 348-6355/cell (914) 906-0284) about the spill. He said that his company and the consulting engineer, Tom Paresi (pa-ree-see), had come up with drawings for a design that will remediate the spill. Mr. Heyman said that this design included replacing the tank, fill line and fill port, and installing an oil/water separator. He said that right now they are collecting some oil. They get called by Teachers College about once a month to go out and collect the oil. However, they haven't been called out in 2 months. Mr. Heyman said that as far as he knows, they are still under contract to Teachers College. They are are owed a lot of money for the work they've done. I tried to call Mr. Bruff, but could only leave a message. 8/1/07 - Raphael Ketani. I received the liquid collection totals from Mr. Hayman by e-mail. 10/12/07 - Raphael Ketani. I contacted Mr. Hayman. He said that he had put out his remediation for bid and he found out last teusday that he didn't get the job. He said that people have come and gone at Teachers College. He said that the new contact person is James Vespee (212) 678-3011. I tried to contact Mr. Vespee, but could only leave a message. 10/19/07 - Raphael Ketani. Christopher Diodato (212) 678-6640 of Teachers College called to let me know that they are moving forward with remediating the site. He said that Tyree Company was hired to pick up where Eastmond and R&D had left off. He said he was aware of the need to replace the tank, fill pipe and fill port. He said the entire tank vault will be replaced. I told him that if the soil around the fill pipe and port is contaminated, then this will have to be removed and soil end point samples taken. He said he will talk to Mr. Terry Koch at Tyree and tell them what DEC wants as a cleanup and as a closure report. Mr. Diodato said that the work package was put out to bid and approved. Now they are just waiting for Tyree to get one permit so that they can start the work. 11/30/07 - Raphael Ketani. I spoke to Mr. Diodato. He said that he thought Tyree still was waiting on getting one permit to do the digging and cleanup work. He said he will get back to me regarding this matter and find out when they will start their work. Mr. Diodato called back and left a message. He said that the work permit request was originally submitted on 11/7/07. However, the permit application needed a signature from an officer of Teachers College and so it had been sitting around. He said he made some calls to get the application resubmitted and hired an expeditor.

COLLEGE BUILDING (Continued) **S108298946**

So no work is taking place right now and the idea of installing a multi-thousand gallon tank on the sidewalk has been abandoned. 1/9/08 - Raphael Ketani. I tried to contact Mr. Diodato (212) 678-6640, but could only leave a voice mail. 1/10/08 - Raphael Ketani. Mr. Diodato called to say that they are in the fourth week for obtaining the necessary permits to do the digging work and breakup the concrete sidewalk. They will also do a complete vault overhaul and a tank replacement. 1/31/08 - Raphael Ketani. I tried to contact Mr. Diodato, but could only leave a message. Mr. Diodato returned my call. He said that they are still waiting to get the permits to do the work. 4/4/08 - Raphael Ketani. I tried to contact Mr. Diodato regarding the status of the work at the site, but could only leave a message. 4/16/08 - Raphael Ketani. Mr. Diodato called me today. He said that they still need two permits to do the work. One is for refurbishing the entire tank vault and another is for replacing the tank. He said the permits are registered in the BCIS and they are just waiting for word that the work is approved. 7/18/08 - Raphael Ketani. Mr. Diodato (212) 678-6640 sent me an e-mail containing the work permit. The work is supposed to start in the next 7 to 10 days and take 12 to 16 weeks. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The case manager needs to make followup calls to check on the progress of the investigation and remediation. The DEC needs to receive the investigation/remediation report and the revised PBS registration. 09/15/09- Athenica Environmental Services, Inc. sent the closure report dated september 2009 Athenica Environmental Services(Athenica) has prepared this spill closure report documenting the remediation activities taken in the former basement tank vault room of the apartment building at 106 Morningside Drive, New York. On November 27. 2006, December1 and December 4, 2006. Eastmond & Sons Boiler & Welding Service Inc. (Eastmond) decommissioned and removed the 10,000 gallon, number 6 fuel oil UST from the site. As a result of this work, Eastmond removed 78 barrels of solid waste and pumped out 400 gallons of oily water underneath the tank for off-site disposal. After cleaning of the tank interior, Eastmond cut up and removed the UST from the tank vault area. From february 19, 2007 through March 7,2007, RND Services(RND) manually excavated petroleum impacted soil within the basement tank vault area. A total of three 20-yard containers or 55.84 tond of petroleum impacted soils were removed for off-site disposal. The limits of excavation were defined by the sides of the tank and the top of bedrock. Since soils were excavated to bedrock and to the concrete walls of the vault, no post excavation soil samples could be collected for laboratory analysis Remediation performed by Eastmond RND, and Tyree Services Corporation (Tyree) has entailed the removal od petroleum impacted water from the basement tank vault area. The infiltration of water into the tank vault prompted a video inspection of undergrpound piping in the surrounding area. According to the progress reportto the NYSDEC dated April 30, 2007, the ources ofthe water infiltrating into the basement tank vault area was 80 feet of broken drainage pipimg adjacent to the tank vault. Tyree Service Corporation (Tyree) demolished the former tank vaultforthe UST, costructed a new underground tank vault and installed a new 10000-gallon aboveground storage tank ((AST)at the site. The construction of anew underground tank vault required the excavation of bedrock to lower the elevation of the floor by two to three feet. Approximately 158 tons of bedrock was excavated and disposal of off-sie as petroleum debris. After construccion of the

COLLEGE BUILDING (Continued) **S108298946**

new underground tank vault floor and walls. Tyree installed a new 10000 gallon AST. The secondary containment for the AST was the undeground tank vault since was greater than AST and has no drainage feature. Tyree removed a two inch diameter, concrete-encased, remote fill line to the former UST, which had store number six fuel oil. Tyree also installed a new remote fill line to the new AST, which the newly constructed vault and hereby avoiding any direct contact between the new fill line and any subsurface soils. The remote fill line was located in the south sidewalk of West 121st street and was approximately 16 feet in lengh. The removal of the remote fill line ocurred on December 29th and 30th 2008. During the removal, Tyree observed no evidence of petroleum odors or staining of the soils beneath the sidewalk or within the inmediate cicinity of the remote fill line. After removal of the remote fill line, Tyree install a new sidewalk. Spill Closed "

DEC Memo:	"Dry leak. repairs retest pending. Assigned to DEC Demeo for followup. 03-18-2015 - V. Brevdo This TTF Spill Case is re-assigned to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Ms. Ainura Doronova as Project Manager. - VB 03/18/2015: This spill case was transferred to A. Doronova. - AD 04/21/2015: Looked for the owner's info in the PBS database. There are three different search results for the same address with three different PBS IDs. Will look in Acris. AD 04/24/2015: Looked in Acris. The property block is 01723, lot is 0023. AD 04/29/2015: Asked advise from PBS-unit regarding the issue with three different search results for the same address with three different PBS IDs. They will look into it. AD 05/01/2015: Received the following response from PBS-unit: There are three PBS numbers for the same tank at subject address, but only 2-612163 is active. Both 2-340464 and 2-605389 are inactive because we discovered back in January that they were duplicates (triplicates?) of 2-612163. We used to call this situation Administratively Closed but now it s just Inactive . According to PBS database, the contact person for this site is - Peter Garsia, phone number: (646)335-0730. Address: 17

ABOVE GROUND TANK - TTF (Continued) **S114561808**

West 125 Holdings, LLC 200 West 106th Street New York, NY 10025
Issued and sent a certified TTF Letter (# 7010 0290 0000 9758 3458)
to Mr. Peter Garcia of 17 West 125 Holdings, LLC. Response is due
June 1, 2015. AD"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 10/10/01 SITE VISIT REVEALED THAT THE OIL HAD FILLED THE RISER AREA ABOVE THE TANKS AND SPILLED OUT ONTO THE PAVED SURFACE OF THE PARKING LOT. UPON FURTHER INSPECTION THERE WAS FRESH #2 OIL THAT HAD IMPACTED THE SUMP WITH THE OLD OIL MOP STILL ABLE TO FUNCTION.

TAFT HOUSES -NYCHA (Continued) **S100493400**

THE OLD OIL WAS DISCOLORED, THE FRESH OIL IS RED. HOUSING AUTHORITY TO REMOVE THE SATURATED SOIL FROM THE FILL AREA AND CONTINUOUSLY RUN THE OIL MOP. FIRST ESTIMATE OF 1500 GAL. SPILL MAY BE ON THE LOW SIDE. 4/30/2004 TRANSFERRED FROM TIPPLE TO KOLLEENY AS DIRECTED BY RSE BECAUSE IT IS A NYC FACILITY///// 11/04/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/27/05: No record of an oil mop system in place on Product Recovery System Report. Additional info on where #2 oil was discovered and recovery records from the oil mop. - SK 03/15/06: This spill reassigned to K.Tang. - SK 07/22/10: J.Kann - Site reassigned to J.Kann. Investigative work plan received on 7/15/10. 10/27/11: J.Kann - spill 9302271 previously closed to consolidate with this spill. SIWP was reviewed. WP did not include the installation of permanent wells for groundwater flow direction and analysis. In addition, the report did not discuss any of the information above related to the overfill - ie was any soil removed from the fill port area? did the product flow into other areas? Email sent to NYCHA (edoced). 2/8/12: J.kann - Revised figure 2 submitted today. Addendum Letter responding to comments was received on December 7, 2011. Addendum Letter, together with original Work Plan and revised Figure approved in an email today and edoced. 3/15/13: J.kann - Stip mailed to NYCHA on 3/4/13 4/8/13: J.Kann - Exension request letter received from NYCHA on April 4, 2013. NYCHA would like to submit the signed stipulation agreement by April 26. 4/16/13: J.kann - visited site on 4/16. Drilling work on-going. Boring location modifications agreed to (email attached) due to site conditions. 5/29/13: J.Kann - report received and reviewed today. All soil and gw ND for VOCs and SVOCs. No indication of petroleum staining in soil borings and no petroleum odors noted. Based on results of investigation, spill closed. "

Remarks: "overfilled during delivery - caused spill in fill box and manway - unknown if impacted soil. still under investigation."

DEC Memo:	"11/22/05: This spill transferred from J.Kolleeny to S.Kraszewski. 07/10/06: NYCHA update summary states that two 32K USTs installed in 1957 and stored #4 and #6 oil were replaced in 2000 by a single 20K UST that currently stores #2 oil. Soil contamination encountered during the tank removal, no recovery system or MWs on-site. Soil and GW conditions unknown. No site assessment available, recommends that one be performed. - SK 02/08/07 : DEC lead changed from S. Kraszewski to J. Kann. J.Kann 12/04/08: J.Kann - Met with NYCHA and their consultant (Prefferred Environmental) on October 3 to discuss requirements of the site. WP received 12/3/08. 7/20/10 J.Kann - SIR received on July 15, 2010 and edoced. 9/23/13: J.Kann - SIR reviewed. Spill closed based on teh following- -UST replaced in 2000 -714 tons of petroleum impacted soils removed in 2000 as part of tank replacement activities -6 borings advanced (12-20 feet) to shallow bedrock in 2009. -1 gw monitoring well installed in bedrock where soil boring indicated petroleum odors -No impacts to groundwater in sample collected. -Visited site on 7/31/13. Well was gauged. No product present. -NFA"

Contact Phone:	(718) 707-5718
DEC Memo:	"11/09/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/28/05: Caller remarks mentions contamination but doesn't say how it was discovered, but 2 days later the new USTs were installed at this site. It would seem that the unknown origin of the contamination was discovered during excavation. If so, spill #9004122 could be consolidated. - SK 01/26/06: Frank Inoa emailed me acknowledging that the contamination encountered was from the tank removal. - SK 9/22/06: Spill transferred from Kraszewski to Kann. 8/15/09: J.Kann - Reviewed Site Assessment report dated May 2009 and prepared by Langan. Free product remains in three wells, fingerprint inconclusive, but likely weathered No. 6 oil. System will continue to operate for a year and which time we can reevaluate. Quarterly monitoring will be performed. 9/21/10: J.Kann - Quarterly Report recieved on 9/1/10. 5/11/12: J.Kann - Quarterly Report recieved on 5/9/12. 9/6/12: J.kann - quarterly report received on 8/21/12. 1/18/13: J.Kann - 11/9/12 QR rcvd 1/16/13 5/21/14: J.Kann - sent an email to NYCHA today: The Department understands that a recovery system is operating, that monthly VEFR is being performed and that quarterly monitoring is currently being done at the following five sites: Amsterdam Houses Elliott Houses Manhattanville Houses Melrose Houses Baruch Houses Since wells at these five sites have consistently (based on quarterly reports received over the past year) had no product, a sheen or less than 0.08 inch of product in their wells, the Department would like NYCHA to temporarily cease operation of the systems and VEFR at these sites. For the next 4 months, the wells must be monitored to determine if any significant recharge of product occurs. Accurate readings of product thickness must be made, which may require using the gauging method used at South Jamaica Houses on May 19, 2014. In addition, during this 4 month time period, no absorbent socks should be placed in the wells. Data from this monitoring, along with recommendations, must be included in the 2014 3rd quarter monitoring report for these sites, which is due to the

MANHATTANVILLE HOUSES -NYCHA (Continued) **S104073522**

Department by October 1, 2014. In the event that a significant recharge is noticed in any of the wells during these 4 months, the Department must be contacted immediately (within 72 hours of gauging). 2/5/15: J.Kann - comments sent on 2014 quarterly status reports email to Yelena Tkach of NYCHA on 2/4/15. No product has been detected in on site wells for over 2 years. Comments were as follows: Based on the review of 3rd and 4th Quarter Status Reports for Manhattanville, the Department concurs that monitoring should continue through June 2015. If no measurable product is found in the wells by June 2015, the wells should be sampled and analyzed for CP-51 Fuel oil constituents which should be submitted in the 2015 2nd Quarter Status Report. "

He is truyng to get the curemt owner to replaced the tank. The tank failed the first tightness test and the second test. 02/24/13- Albert Chelladurai (property manager) called. He said the company that performed the work at this site is going to send the report. 04/08/13- Zhune received and reviewed the report, submitted by 22 Adam LLC dated 03/06/13 04/09/13-Zhune called called All Boro Tank

APT COMPLEX (Continued) **S112231217**

Testing spoke to Todd Paladino. Mr, Paladino is going to send a spill closure letter including the site plan, 06/14/13 All Boro Tank Testing ssnt the report dated June 7, 2013 The tank was cleaned, cut and removed from the location. The vent, suction and return lines were also removed and fill line cemented. They stated that no contaminationws present either while or after the removal of the tank. Two soil samples were collected from a depth of 2-feet from the tank bottom. The soil analytical results indicated not detected VOCs and SVOCs. Spill Closed. Report in edocs."

DEC Memo:	"4/24/2008 PTC started opening sidewalk thinking spill was minor. Found spill is huge and now they request permission to close up sidewalk and wait until after school is out in June for major dig out. CSL needs to be sent to: Jimmy Merlo, Fuel Division, NYC Schools, 44-36 Vernon Blvd, LIC, NY 11101 04/24/08-Vought-Called PTC Lara and fill line will be replaced tomorrow and small amount of leakage observed in the school basement (stain on wall) however stain was cleaned by PTC. DEC requires: 1)delineation of soil contamination 2)collection of endpoint samples. Vought sent CSL with four month due date and cc to PTC Lara and above requirements to: James Merlo New York City Board of Education 44-36 Vernon Blvd Long Island City, NY 11101 Ph:718-349-5738 08/1/08-Vought-Received call from and spoke to James Merlo and sidewalk will be reopened as school is over and endpoint samples should be received next month and DEC will receive report by 10/1/08. 12/03/08-Vought-Received call from and spoke to Bd. Of Ed. Raymond Correa who replaced James Merlo. Correa will send in report with above requirements to DEC. 12/04/08-Vought-Reveiwed report received from Correa on 12/5/08. Report included site plan, proceed order for Petroleum Tank Cleaners, invoices showing excavation from 4/17/08-4/25/08 and from 8/5/08-8/27/08, disposal manifests and endpoint analyticals. Four endpoint soil samples analyzed and show no TAGM 4046 Required Soil Cleanup Objective exceedences other than PAHs attributable to fill material. Vought called and spoke to PTC Salamack who confirmed that minor spill inside vault was cleaned as well. Spill closed by Vought and NFA sent to Raymond Correa at above address. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Property manager Bill Punch 917-468-1337 Tanks-a-lot was hired to do the tank repair and cleanup, Michelle Tipple responded to the site 9/8/03 Tipple updating// on 9/4/03 Bill Punch 917-468-1337 during the site visit guaranteed that Lionel Thomas would be responding on FRIDAY to empty the tank and do the initial cleanup of the free product from the floor. At 10:30 am Saturday AM I recieved a phone message from A.L. Eastman indicating that they were hired to empty the tank only. Monday 6:45am i arrived at the site and found saturated speedy dry both in and outside of the tank room. There was a garden hose on the floor, Mr. Punch swore that no one had hosed any of the oil into the sump and the sump had been unplugged since my last visit on Friday. He also indicated that money was not the issue, but he could not find a contractor to complete the cleanup over the weekend. I immediately gave him the names of eight contractors that respond 24/7. By 11;00 monday 9/8 I confirmed that tanks alot had been retained to commence with the cleanup. subsequent visit necessary. 5/9/2006 Brian Newman, Property manager 212-765-2555 x 14 - Sangesland reviewed a letter and photos showing the site is clean, tank has been repaired and the case can be closed. Spill Case has been closed out.... DEC does NOT issue No Further Action letters If additional information is required, call Steven Sangesland at DEC-Spills 718-482-6753."
Remarks:	"caller states that he is a resident in the building and the oil tank has been leaking in the basement since yesterday - caller states the fumes are overwhelming and is refusing to give any further info at this time"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 05/18/2001 Reassigned from Sullivan to Tipple 06/13/01 CALLED VELOCITY INC. LEFT MEAASGE THAT THE PROJECT HAS BEEN REASSIGNED TO TIPPLE, REQUESTED CALLBACK 8/2/01 SPOKE WITH SANTA FROM VELOCITY INC.(212)629-0690 PROPERTY TRANSACTION PENDING 12/10/03 mt///

301 WEST 116TH ST/MANHATT TTF (Continued) **S104275530**

Transferred from Tipple to Rommel 6/8/05 - Site temporarily assigned to TLGibbons in Central office, Albany 7/13/05 - Spoke with son of owner of property in Great Neck @ 516-773-3094. Gave me his fathers name (goes by either Moshe or Mike Samouha)) and cell phone (917-653-7056. Mike said he bought property 3 years ago and is currently auto parts store. He want to build on property. Says when he bought property the site was cleaned, tanks removed. He will find paperwork and send. 8/17/05 - Mr. Samouha faxed me papers, but none had to do with tanks and he has no other paperwork. The spill database shows no other spills for this address. Based on discussion with Joe Zelewski, it is recommended that this spill remain open. Recommend sending back to regional office. 8/17/05 - Mike Samouha 6/17/10 - added TTF to spill name (JOC) 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 8/24/12 TJD T/C with property owner (Mr. Samouha - 516-773-3094) regarding open spill file. Owner states site has been redeveloped - building footprint has been expanded and is now a diner. Owner states he has performed borings on the property and no contamination has been found. DEC requested copy of the investigation report be mailed to Regional Office for review. Owner states he will copy the report and put it in the mail early next week. DEC requested a current mailing address and was provided the following: 135-36 82nd Avenue Kew Gardens, NY 11435 No PBS record found for this address. Awaiting requested docuemtation. (TD) 9/17/12 TJD File review. Current property owner has submitted a copy of Phase II - Subsurface Investigation Report dated 6/3/10 (on E-DOCS). A total of (5)geoprobe borings were performed on the property prior to the expansion of building footprint - borings advanced to 12-15 ft bgs. All sample results were within RSCO. Site has been redeveloped and structure expanded over former tank field. No historical correspondence in file. File administratively closed based upon documentation submitted by current owner."

New property owner is: Thayer Street Portfolio Investors, LLC

POMEROY COMPANY (Continued) **U003388900**

Remarks: at 87 Post Avenue 320 West 57th Street 07/06/10- Zhune spoke to John Leddy from Protest. He said They tested the system and failed with dry leak. Protest thought that the problem was the universl union of the remote fill line on top of the tank. They did not do any isolation test. As per John, Dermot realty Management stop bussiness with protest. 07/06/10-Zhune spoke to Rosie Aviles. She said persom in charge is John Vayner (646) 747-6104. Left a message 09/01/11- Pro Test sent the report dated March 14, 2001. The report include the passing test. On June 30, 2008 Pro test performed a tightness test on the above subject tank system and it failed with a dry leak. On march 11, 20011, Pro Test returnted to islate the tank from its associated lines. The remote fill line was isolated from the tank due to a loose connection. The manhole cover was regasketed and rebolted. The petrometer connection was tightened. The tank passed a test the remote fill. The remote fill line was reattached and its connection at the tank tightened. Upon tevconnection of all lines, the tank system passed a retest. there was no evidence of visible contamination within the tank vault. As per manager of the building the tank was tested for mortgage refinancing prupose. Spill Closed. " "PBS No: 2-283053 Dry leak. Above ground tank vaulted in room."

Owner/Op start date: 06/20/2008
Owner/Op end date: Not reported

ASHLAND INC (Continued) **1000306415**

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Site Description: Location:The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features:The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use:The site is owned by 2350 Fifth Avenue Corporation. A Charter School is planning to occupy portion of the site after Department issue Certification of completion. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Past Use of the Site:Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractors yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959.From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology:Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along

2350 FIFTH AVENUE CORP (Continued) **1000108749**

142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use:The site is owned by 2350 Fifth Avenue Corporation. A Charter School is planning to occupy portion of the site after Department issue Certification of completion. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Past Use of the Site:Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractors yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials

2350 FIFTH AVENUE CORP (Continued) **1000108749**

for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959.From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology:Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was

2350 FIFTH AVENUE CORP (Continued) **1000108749**

installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 57691
Site Description: Location:The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features:The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use:The site is owned by 2350 Fifth Avenue Corporation. A Charter School is planning to occupy portion of the site after Department issue Certification of completion. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Past Use of the Site:Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractors yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959.From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the

2350 FIFTH AVENUE CORP (Continued) **1000108749**

former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology:Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

2350 FIFTH AVENUE CORP (Continued) **1000108749**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016
Date Made Active in Reports: 04/15/2016
Number of Days to Update: 10

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016
Date Made Active in Reports: 04/15/2016

Next Scheduled EDR Contact: 01/16/2017
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health

UTM Y (Meters):	4518025.0
Elevation:	29 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

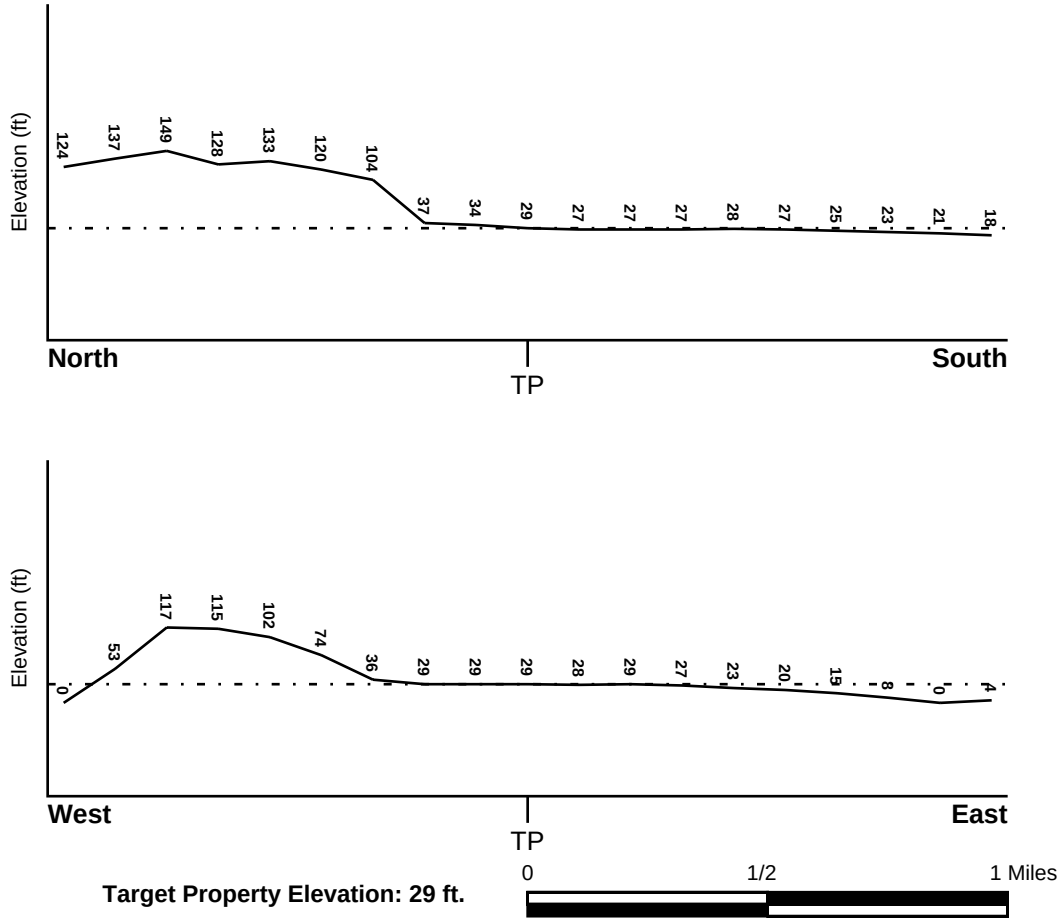
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 29 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970087F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970083F	FEMA FIRM Flood data

3604970086F	FEMA FIRM Flood data
3604970091F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
14	1/2 - 1 Mile NNW	W

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

STANDARD ENVIRONMENTAL RECORDS	Maximum Search Distance*	Summary: property	1/10	1/10 - 1/3

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	silt loam loamy sand sandy loam fine sandy loam
Surficial Soil Types:	silt loam loamy sand sandy loam fine sandy loam
Shallow Soil Types:	sandy loam
Deeper Soil Types:	unweathered bedrock very gravelly - loamy sand stratified sandy loam

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/29/99 Bob Abramo (718-624-7490)- Abra Consulting -called - He has just been hired by the owner to close out this spill. He has a copy of soil boring work & test results for borings done around the abandoned 3,000 gal fuel oil storage tank buried in rear of shoe store. Sangesland asked Mr. Obrano to send a copy of these test results along with a 1-2 page description of Proposed Plan Of Action

UPTOWN REALITY, 222-224/226-228 W.125TH, MANHATTAN, NY (Continued)

for work to be done to clean up the site. Some sort of Bio may be called for since the tank can not be moved. 8/26/99 - Sangesland read the report forwarded by Mr. Abramo and agreed with Mr. Abramo's plan to install 1 or 2 wells in the area around the abandoned tank in the sidewalk. Sangesland said if the depth to ground water was too much (50+ ft) then it would not be representitive of the tank (problems could be from further away)..... Problem still remains what to do about the confirmed contamination. 2/11/2000 - Mr. Abramo called to say one well was installed to 27' Sample tested to 8021 and 8270 All results were below limits except (enbyutel benzene 52 ppm). There still is contamination of soil between tank and building. Sangesland asked Mr. Abramo to propose some type of remediation (Bio?) on the trapped soil contamination. Mr. Abramo proposed ORC. Sangesland said no. DEC requires some type of biological bugs which will be injected into the soil to work on the problem above the groundwater line. 5/2/2000 - Mr. Abramo said Bio Rem Rep suggests 4 geoprobe type injection wells around the tank along with 1,000 gal of Biorem. Sangesland said to go ahead, leave the site until Sept 1st and then retest the monitoring well. Hopefully it will be clean and can be closed out. 9/25/2000 - Mr. Ed Correll (Soil Mechanics 516-221-7500) was hired by the owner do what it takes to close out the case. Mr. Correll was told of the DEC history on the site. Sangesland asked Mr. Correll to do the following: 1) Get specific details on what type of Bio work was done in July 2000 (DEC has no records). 2) After a couple of months, retest the existing well and conduct another geoprobe between the tank and the building to check the condition. 3) Prepare a report that either shows the site is clean or Justifies why the existing contamination is not a problem Contamination is contained, encapsulated and would undermine the building if it were removed. If a report is submitted, DEC will review it and determine if additional work is needed. 12/13/2000 - Thomas McCurdy of The Breakthrough Group (856-810-3402) submitted a closure request letter. It states that at some point (approx 8/2000) an application of Bio-Rem was made at two points between the tank and the building. On 10/24/2000 MW-1 was sampled and found non-detect for all contaminants within 8270 & 8021. MTBE = 1 ppb 1/2/2001 - Spill has been closed"

Remarks: "CALLER WAS EMPLOYED TO DO SOIL SAMPLES AND TEST FROM AN ABANDONED TANK USING METHOD 82-70 -- CANTAMINATED SOIL FOUND -- MIKE MULQUENE

DEC Memo:	"8/5/13 TJD TTF letter prepared for project manager's signature (Piper). PBS #2-259837. Letter addressed to: Maloof & Ellis Management 2460 Lemoine Avenue 3rd Floor Fort Lee, NJ 07024 Attention: Greg Maloof (201)363-1482 unsigned letter uploaded to EDOCS 03-18-2015 - V. Brevdo This TTF Spill Case is transfered to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Ms. Ainura Doronova as Project Manager. - VB 03/18/2015: This spill case was transferred to

TTF - APARTMENT BLDG, 285 ST NICHOLAS AVE, MANHATTAN, NY (Continued)

A. Doronova. - AD 04/29/2015: Looked for the info in PBS database. PBS #2-259837. According to the file, the contact person is - Ezra Bennet of 281 St. Nicholas Partner LLC. AD 05/01/2015: Issued and sent a certified TTF letter to Ezra Bennet of 281 St. Nicholas Partner LLC. Response is due June 1, 2015. AD 05/18/2015: Received a response from E. Bennet. Will review. AD 06/26/2015: Reviewed the submitted documents. The cover letter from Monarch Realty Holdings LLC, says that they are not aware of a failed tank integrity test. They were informed by their boiler company that the building's tank would not withstand a pressure test and hired Alliance Mechanical to abandon the tank in place. There are affidavit from the contractor, a job invoice and copy of the check attached to the cover letter. The affidavit states that the aboveground 5,000-gallon #6 fuel oil tank was cleaned and filled with cement slurry according to the rules. AD 07/15/2015: Looked into database for the details. The spill was opened on August 2, 2013 when a 5,000-gallon #6 oil tank failed the tightness test. It was reported by Rightway Tank company. According to PBS database the tank in question is an aboveground tank in contact with soil. It was closed-in-place on April 22, 2014. Tried to contact Rightway Tank with no success. AD 08/20/2015:called and spoke with Rob Hill of Rightway Tank. He confirmed that his company performed the tank tightness test on this property on August 2, 2013. Requested to send me a copy of a tightness test report, since it was missing in our database. AD 10/2015: Called and left a message to Mr. Hill. AD"

Remarks: "Failed test. Isolation test being scheduled."

DEC Memo:	"Limited site investigation performed by Promatec/TRC, found very minor impact to soil, but not all locations were sampled, and wells installed appear not to have been downgradient from the tank. However, after meeting at site with consultants, it became apparent that additional investigation would be impossible due to space constraints and the nearby presence of subsurface utilities and a subway line. In light of this and minor nature of contamination identified, DEC agreed to No Further Action status for site in letter

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE/DO 1/17/03 TJD Demeo contact Bernie at NYC Tank Testing for additional information regarding tank size and building contact information. Location is unregistered with PBS. NYC Tank Testing was retained for test by Alba Combustion (718 931 1700). Tank is reportably a concrete wrapped 1,080 gallon. According to NYC Tank Testing a cut manway on top of tank is likely cause of tank test

APARTMENT BUILDING, 8 ST NICHOLAS TERRACE, MANHATTAN, NY (Continued)

failure. No reported petroleum release at location. At time of test failure 39 inches of product remain in tank. Product has not been removed. NYC Tank Testing has not been authorized to do any additional work. Rose Marie from Alba Combustion was contacted to obtain owner information and confirm tank size. Information not available at time of inquiry. Alba will call DEC with requested information ASAP. Alba Combustion called back with contact as follows: Juan Ortiz - Building Super (917)412-5688 Mercedes Gonzalez - President of Tenants Association(212)662-3373 Juan contacted and stated tank has been leaking for several months. He cleans up the oil leaking from tank enclosure on a daily basis. No plan in place to empty or repair tank. Mercedes contacted who confirmed situation is an ongoing problem. Location is a HPD building. Mercedes provided following contact for HPD: Ms. Sumada Mena (212) 863-7313 Ms. Mena contacted, she was aware of situatiuon at building and confirmed HPD retained NYC Tank Testing to test tank. Demeo directed Ms. Mena to empty tank as leak has existed for months and has not been repaired. Ms. Mena stated she was building coordinator and not the appropriate contact. Demeo was provided contact information for Willie Kesknen from Technical Services Group (212)863-7307. Demeo left message for Willie Keskinen. Mr. Keskinen Director of TIL/Tech Group from HPD has stated a contractor will be at building today to empty tank and install temporary tank. Address for HPD is 100 Gold Street, NY NY 10038. Tank Test letter not sent as tank is to be taken out of service for repairs and/or replacement. Tipple to perform site visit and assess situation. 1/17/2003 TIPPLE VISITED SITE, Spoke with the building super Jaun Ortiz the oil had been cleaned daily since the leak began months ago. The stain on the floor indicates that the oil had never gotten close to the sump area and the floor surrounding the vaulted area is sound. There is a staining on the wall adjacent to the vault indicating the high probability of a leaking fill/vent line in addition to a tank problem. Building super will call and leave message once the tank is emptied and a temporary tank installed. 05/18/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Talked to Ms. Mena on phone (212)863-7313 she said, They have changed the tank three years ago. New york city owned this building. -QA Address: HPD/TIL 100 Gold Street Room 7 T - 1 NY NY 10038 06/21/06:

APARTMENT BUILDING, 8 ST NICHOLAS TERRACE, MANHATTAN, NY (Continued)

Called to Willy Keskinen, Deputy Director, HPD. Talked to Ms. Shirley (secretary) regarding information of spill. She said she will convey to Mr. Willy and he will call me back at the ealiest. -QA 07/19/06: Called Ms. Sumada Mena and left message to call me back. -QA 07/20/06: Ms. Losario Vera (212)863-5199 called me and said she is trying to get the information regarding spill as soon as she will get she will send it to me. -QA 09/11/06: Called Mr.Willy Keskinen He was not available. Left message at (212)863-7307 Extn. 8893 to call me back regarding spill. -QA 10/12/06: Mr. Berney (718)731-7011 called me and he said he will do more researches and then he will call me back. -QA 10/18/06: Mr. Willie Keskinen, Deputy Director, TIL/Tech (Department of Housing Preservation and Development) sent me a closing confirmation letter to close the spill. According to his letter they hired S.J. Fuel company for clean up work. The purpose of installing a new oil tank was that the existing tank had a minor leak on the tank itself. No oil was spilled on the floor. The existing oil tank was old and replaced with a new tank. Also the basement has a new cement floor in and around the new tank, and shows no sign of oilk spillage. Based on these information DEC staff closed the spill. -QA "

DEC Memo:	"Sangesland spoke to Pete Chen of city DEP. He said they were called to the site by complaints of petroleum odor. Area was fenced off, but there was a large puddle of oil in the center of the lot. Property owner is MOTIVA ENTERPRISES LLC Motiva Environmental manager: John Sexton 713-241-1507 Cross Ref PBS#2-190810 6/3/2010 Sangesland heard back from John Sexton at Motiva(Shell). He said they pulled tanks

235 ST NICHOLAS AVE, 235 ST NICHOLAS AVENUE, MANHATTAN, NY (Continued)

	from the site within the last year and had an argument with the property owner. They believe someone opened the gates and dumped petroleum on the surface to create a new problem at the site. Motiva has hired a company to come in and dig out the contaminated soil. New end point samples were taken and a complete new closure report will be submitted when the results come back. Site contact for Motiva is: Robe Rule 540-943-8468 07/02/10-Hiralkumar Patel. found case assigned to me. letter has not been sent out yet. 07/06/10-Hiralkumar Patel. 2:03 PM:- spoke with Mr. Rule. he mentioned that report was submitted to DEC Piper under spill #: 0702470. received report from DEC Piper. surface spill was found in May. site developer hired contractor to remove soil. excavated 8 ft by 8 ft area to 3 ft depth. collected two endpoint samples. no contamination in endpoint samples. based on submitted report, case closed. **refer to spill #: 0702470.** Based on the information provided by the consultant Charles Sosik (Environmental Business Consultants) this spill was reopened."

BROWNFIELDS: State and tribal Brownfields sites

Program:	BCP
Site Code:	420721
Acres:	0.468
HW Code:	C231067
SWIS:	3101
Town:	New York City
Record Added Date:	10/20/2009
Record Updated Date:	07/07/2015
Update By:	JHOCONNE
Site Description:	Location:The Former Shell Service Station and Parking garage site is located in an urban area. The site is located on St. Nicholas Ave., between 121st Street (south) and 122nd Street (north) in the Borough of Manhattan.Site Features:The site currently contains an operating multi-story parking garage and a former gasoline service station with automobile repair facility. The site is comprised of two adjacent tax parcels (Lots 30 and 35) totaling approximately 0.468 acres.Current Zoning and Land Use:The site is zoned R8A/R7A (residential) with a C2-4 (commercial) overlay. Current use is commercial. Surrounding properties include a mix of multi-family residential and commercial/retail uses. The intended use is mixed-use residential and commercial with community facility space. Past Use of the site:Prior uses on Lot 30 include coal storage, a junkyard and the parking garage. On Lot 35, the former uses include a carriage factory, auto repair and the gas station.Site Geology and HydrogeologyDepth to groundwater is approximately 20 feet below ground surface. Groundwater flows to the north.
Env Problem:	Nature and Extent of Contamination:Based upon the results of several investigations, contaminants of concern include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and polychlorinated biphenyls (PCBs). The contaminants of concern do not appear to be contributing to off-site environmental impacts that require additional investigation or remedial action. Soil Volatile organic compounds (VOCs) were found at concentrations exceeding the

FORMER SHELL SERVICE STATION AND PARKING GARAGE, 225-237 ST. NICHOLAS AVENUE, NEW YORK, NY 10027 (Continued)

Unrestricted Use Soil Cleanup Objectives, including acetone at 0.056 ppm and methylene chloride at a concentration of 0.22 ppm. In addition, Stoddard solvent was identified at a concentration of 671 ppm. Semi-volatile organic compounds (SVOCs) have been found including benzo(a)anthracene at 2.3 ppm, benzo(a)pyrene at 2 ppm, and benzon(k)fluoranthene at 3.6 ppm Two metals were detected at concentrations exceeding their respective UUSCOs: lead at 2980 ppm and mercury at 2.45 ppm.Groundwater - The results from groundwater samples show detections of several VOCs above groundwater standards including 1,1,2-trichloroethane (2.9 ppb), 2-isopropyltoluene (9.1 ppb), total xylenes (25 ppb), tetramethylbenzene (43 ppb), 1,2,4-trimethylbenzene (11 ppb), isopropylbenzene (19 ppb) and n-propylbenzene (30 ppb). Several SVOCs were also detected above their respective groundwater standards, including benzo(a)anthracene at 0.07 ppb, benzo(b)fluoranthene at 0.09 ppb, benzo(k)fluoranthene at 0.03 ppb, chrysene at 0.07 ppb, and ideno(1,2,3)pyrene at 0.04 ppb. PCBs were detected in groundwater above standards at 2.2 ppb. Soil Vapor Elevated concentrations of several petroleum VOCs (including 1,2,4-trimethylbenzene at 26 ug/m3 and xylenes at 100 ug/m3) and chlorinated solvents (tetrachloroethylene at 112 ug/m3 and trichloroethene at 14.9 ug/m3) were found throughout the site. The investigation indicates that the presence of PCE in soil vapor can likely be attributed to an off-site source, due to the lack of PCE in on-site soil or groundwater.Significant Threat:NYSDEC and NYSDOH have determined that this site does not pose a significant threat to human health or the environment.

Health Problem:

Persons who dig below the ground surface may come into contact with contaminants in subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no occupied enclosed structures at the site, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Sampling indicates that off-site soil

FORMER SHELL SERVICE STATION AND PARKING GARAGE, 225-237 ST. NICHOLAS AVENUE, NEW YORK, NY 10027 (Continued)

vapor intrusion as a result of this site is not a concern for off-site buildings.

DEC Memo:	"03/23/05 transferred from T. DeMeo to J. Krimgold who was daytime duty officer when inquiring phone call came in. CS. 03/31/05. J.Krimgold spoke to Carol Payne (Pine Funeral Home) @ 212-662-4840 located 273 Lenox Ave.- affected party. She stated that about December 2004 a strong oil odor was observed in the basement. Also, oil seepage was observed coming from a wall adjacent to 275 Lenox Ave. Oil odor substantially diminished over last few months, but the

275 LENOX AVE, 275 LENOX AVE, MANHATTAN, NY (Continued)

oil seepage (stain) is still there. J.Krimgold called South Carolina Heating (SCH) and spoke with Natasha Danzler @ 212-234-5900. She informed that they have been called by Funeral Home and informed about incident in about 2 weeks after it happened. No notification was made to the Department at that time. They sent a crew to check out and found that one of two 257 Gal #2 oil tanks was tipped on the side and released an unknown amount of oil to the basement's concrete floor and on the wall of the adjacent (273 Lenox Ave.) building. No paddles of oil were observed at that time. SCH was in contact with Funeral Home's insurance, but as of today they have not come to the agreement. J.Krimgold called RP, Mr. Walter Edwards (landlord? of 275 Lenox Ave) and left a message with his assistant Ms. Santa M Johns (212-864-7410x208). 3/31/05. CSL has been sent to: Mr. W. Edwards Walter J Edwards Enterprises Inc 275 Lenox Avenue New York, NY 10027-5541 YK. 5/2/05. Talked to Mr. Edwards. He claimed that his office lost CSL letter and his consultant Ethan Elton, Inc. also lost a fax copy of this letter. Nothing has been done since. Mr. Edwards was out from country and just came back. He will come and pick up a copy of CSL tomorrow. YK. 5/2/05. Mr. Poul Franky called and asked for a copy of CSL. He is with ICS Claims, an adjuster for West Port Insurance (claim # 185540 filed by Pine Funeral Home). They can cover a part of the cleanup expenses. His phone # 914-907-5788, fax 845-778-0658. YK. 5/27/05. Aimee Petkus from Ethan C. Eldon Associates, Inc. called to discuss her letter to the Department dated May 25, 2005. Generally, the letter states that 40 gal of #2 oil was spilled and 40 gal was recovered. It is unclear then how adjacent property got oil in their basement if all oil was removed. Phone conversation revealed that the consultant was not aware about oil spillage at adjacent (273 Lenox Ave) property. Agreed that they will take soil samples from under tanks in the tank room and from the basement at 273 Lenox. If results warrant a soil excavation will be performed at both sites. YK. 6/1/05. J.Krimgold reviewed a work plan submitted by the Ethan C. Eldon Associates, Inc. dated May 27, 2005. At least 4 soil borings to be advanced in the tank room and at 273 Lenox. The work should begin on June 8, 2005. 9/8/05. J.Krimgold reviewed the Phase II Environmental investigation report prepared by Ethan C. Eldon Assoc, Inc. and submitted on June 22, 2005. Afer

275 LENOX AVE, 275 LENOX AVE, MANHATTAN, NY (Continued)

	initial cleanup four soil borings were advanced in the spill area.
	The lab results show no contaminants level above TAGM in all borings.
	NFA letter. "

DEC Memo:	"4/20/2005 Spill case transferred from DeMeo to Rahman: Sangesland spoke to project manager working for building owner. He said the problem tank was cleaned, cut up and removed from the vault. Vault was located under the sidewalk in front of the building. Vault was cleaned and there were no cracks in the floor, therefore no oil leaked out of the vault area. Sangesland asked the project manager to send into the DEC: 1) Letter stating that the tank was removed 2)

COMMERCIAL BUILDING, 310 LENOX AVE, NEW YORK, NY (Continued)

Statement that the vault area was totally cleaned and no cracks found. 3) Detailed photos of the vault floor showing it is clean and has no cracks. 4) Request closure of open spill number. 06/14/05-SR// Received photographs, invoice and left a message for them. 10.21.05 Sharif- Reviewed the waste disposal manifest and photographs after the tank has been removed. Aparently, there is no cracks or leak on the floor. But the tank room wall looks wet with black stain at different places. Spoke with Phil Rutherford, 212-685-9680 who said they took pictures after it was power washed again since my last conversation with him. He would send me the all new photographs and check with the company whether they filed any deregistration application with DEC. 11.18.05 Sharif// Recev'd new photograph that looks pretty much clean. NFA required."

Remarks: "CONTAINED IN VAULT TANKS HAVE BEEN PUMPED OUT TANK SIZE ABOUT 15OO GALLONS:"

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

ENV RES DECL: Environmental Restrictive Declarations

RECORD SOURCES AND CURRENCY

Standard Environmental Record Source: State and tribal institutional control / engineering control registries

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

ERP: Environmental Restoration Program Listing

Standard Environmental Record Source: State and tribal Brownfields sites

Search Distance: 0.333 Mile

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.25 Mile

RECORD SOURCES AND CURRENCY

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

UMTRA: Uranium Mill Tailings Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US ENG CONTROLS: Engineering Controls Sites List

Standard Environmental Record Source: Federal institutional controls / engineering controls registries

Search Distance: Property

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

US INST CONTROL: Sites with Institutional Controls

Standard Environmental Record Source: Federal institutional controls / engineering controls registries

Search Distance: Property

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

HISTORICAL USE RECORDS

RGA HWS: Recovered Government Archive State Hazardous Waste Facilities List

Standard Environmental Record Source: Exclusive Recovered Govt. Archives

Search Distance: Property

The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

Date of Government Version: Not Reported
Source: Department of Environmental Conservation
Number of Days to Update: 182
Telephone: Not Reported
Last EDR Contact :06/01/2012

RGA LF: Recovered Government Archive Solid Waste Facilities List

Standard Environmental Record Source: Exclusive Recovered Govt. Archives

Search Distance: Property

The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

Date of Government Version: Not Reported

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.125 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: 02/20/2007

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
