VOC	volatile organic compound

1.0 INTRODUCTION

On behalf of S & F 126 ST. LLC (the Applicant), Tenen Environmental, LLC (Tenen) has prepared this Remedial Investigation Work Plan (RIWP) for the property located at 260 West 126th Street, New York, New York (the Site). This RIWP was submitted concurrently with a New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Application. The Site location and layout are shown on Figures 1 and 2, respectively. This RIWP has been designed to meet the requirements of the BCP. The scope of work includes the collection of subsurface soil to assess conditions at in the historic fill layer, in native soil directly below the historic fill layer, and at the groundwater interface; installation and sampling of six on-site groundwater monitoring wells to establish on-site groundwater conditions and groundwater flow direction; and installation and collection of seven on-site soil vapor samples to assess vadose conditions at the groundwater interface. The results of this RI will be used to prepare a Remedial Investigation Report (RIR) and qualitative human health exposure assessment (QHHEA) and to support the development of a Remedial Action Work Plan (RAWP). This RIWP has been prepared in accordance with the NYSDEC Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10, May 3, 2010).

1.1 Work Plan Organization

This RIWP includes an introduction (Section 1), background information (Section 2), scope of work (Section 3), and proposed project schedule (Section 4). Quality assurance/quality control, health and safety (including community air monitoring), and project team information are addressed in separate appendices. Supporting tables and figures referenced throughout are included at the end and as attachments to this RIWP.

1.2 Summary of Previous Investigations

A Remedial Investigation was completed by Environmental Business Consultants (EBC) on behalf of Velocity Framers in November 2016 (Remedial Investigation Report dated December 2016) in accordance with the requirements of the New York City Mayor's Office of Environmental Remediation (NYC OER) E-Designation program and consisted of the installation of eight soil borings, the collection of 17 soil samples (including quality assurance/quality control [QA/QC] samples), the installation of four groundwater monitoring wells, the collection of four groundwater samples (including QA/QC samples), the installation of five soil vapor points, and the collection of five soil vapor samples. A summary of the previous RI findings is presented below. A detailed discussion of previous sampling events is included in Section 2.5 of this RIWP. Previous sample locations and sample results are depicted on Figures 3-6.

1.2.1 Soil

Soil results were compared to NYSDEC Unrestricted Use (UU) and Restricted-Residential Use (RR) Soil Cleanup Objectives (SCOs) as listed in 6 NYCRR Part 375-6.8(a) and (b). UUSCOs are the most stringent cleanup standards and are used as comparison for site-specific proposed cleanup standards. The RRSCOs are consistent with the anticipated future use of the Site.

Soil sampling indicated the following:

- Several semivolatile organic compounds (SVOCs), most notably polycyclic aromatic hydrocarbons (PAHs), were detected in one shallow (0-2 feet below grade [ft-bg]) soil sample collected from the parking lot at concentrations exceeding the UUSCOs and RRSCOs.
- A variety of metals, including arsenic, barium, copper, chromium, lead, mercury, nickel, and zinc, were detected in shallow (0-2 ft-bg) and deep (10-12 ft-bg) soil samples across the Site in exceedance of UUSCOs. Of these, barium and lead were each detected in four shallow (0-2 ft-bg) and one deep (10-12 ft-bg) soil samples at concentrations exceeding their respective RRSCOs.

- Two pesticides, 4,4'-DDE and 4,4'-DDT, were detected in exceedance of their respective UUSCOs in three shallow (0-2 ft-bg) and one intermediate (2-4 ft-bg) soil samples, with the highest concentrations occurring in the sample collected from the northeastern corner of the Site. Pesticides were not detected in exceedance of RRSCOs in any soil samples.
- Volatile organic compounds (VOCs) and polychlorinated biphenyls were not detected in exceedance of UUSCOs or RRSCOs in any soil samples.

1.2.2 Groundwater

Groundwater results were compared to NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance Values (Class GA Standards).

Groundwater sampling indicated the following:

- A variety of SVOCs, specifically PAHs, were detected slightly in exceedance of Class GA Standards in groundwater samples collected from the southern portion of the Site.
- A variety of metals, including arsenic, barium, beryllium, cadmium, chromium, copper, iron, lead, magnesium, manganese, nickel, sodium, and thallium were detected in exceedance of Class GA Standards in unfiltered groundwater samples collected across the Site. Filtered groundwater samples were not analyzed as part of the 2016 RI.
- VOCs, pesticides, and PCBs were not detected in exceedance of Class GA Standards in any groundwater samples.

1.2.3 Soil Vapor

Soil vapor results were compared to the New York State Department of Health (NYSDOH) Soil Vapor Decision Matrices (Decision Matrices) as outlined in the October 2006 Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (Soil Vapor Guidance) with May 2017 and February 2024 updates.

Soil vapor sampling indicated the following:

- Chlorinated VOCs (cVOCs) were detected in soil vapor across the Site, specifically tetrachloroethene (PCE), trichloroethene (TCE), carbon tetrachloride, and chloroform. In general, the highest concentrations of cVOCs were detected in the soil vapor sample collected from the southern portion of the parking lot, along the southern perimeter of the Site.
- A variety of petroleum-related VOCs were detected in soil vapor across the Site, including benzene, toluene, ethylbenzene, p/m-xylene, o-xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-methyl-2-pentanone, 4-ethyltoluene, heptane, styrene, cyclohexane, and propylene. In general, the highest concentrations of petroleum-related VOCs were detected in the southern portions of the onsite building and parking lot.

1.3 Regulatory Interaction

One subsurface investigation has been completed to date to identify if impacts existed on-site due to historic site operations.

A Phase II Work Plan was prepared on behalf of Velocity Framers and submitted to NYC OER for the Site. A Remedial Investigation was subsequently conducted by EBC in November 2016 (Remedial Investigation Report dated December 2016) on behalf of Velocity Framers in accordance with NYC OER E-designation requirements.

Several years later, S & F 126 ST. LLC enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to remediate a portion of Lot 56 on May 15, 2022 (NYC VCP #22CVCP053M). A hazardous materials (hazmat) Remedial Action Plan (RAP) was prepared by Tenen on behalf of Key Developers Inc. in March 2022 and approved by NYC OER. However, the proposed remediation of a portion of the Site under the VCP did not occur. The existing church building was excluded from the NYC VCP agreement, as the church building remained under the exclusive possession and control of the fee owner of the Site, Thomas Memorial Wesleyan Methodist Church, at that time. Additionally, only the eastern portion of the Site outside of the church building was contemplated for redevelopment at the time.

Following a change in conceptual redevelopment plans for the Site, a BCP Application was submitted for the entire Site (inclusive of the church building) to NYSDEC DER in conjunction with this RIWP. The work to be performed under this RIWP, as well as all future remedial work, will be performed in accordance with the requirements set forth in the Brownfield Cleanup Agreement (BCA) (BCA Index No. C231164-10-2025).

1.4 Work Plan Objectives

This RIWP has been developed to achieve the following BCP objectives:

- To fully characterize onsite subsurface soils, groundwater and soil vapor;
- To collect data sufficient to perform an onsite and offsite Qualitative Human Health Exposure Assessment; and,
- To produce data of sufficient quantity and quality to prepare a Remedial Action Work Plan (including alternatives analysis) to support the remediation of the Site.

2.0 BACKGROUND

This section includes a description of the Site and surrounding uses, a summary of the proposed Site development, Site characteristics, and information regarding historical operations and regulatory interactions. Summaries of previous Site investigations are also provided.

2.1 Site Description and Surrounding Uses

The Site, located at 260 West 126th Street, New York, New York (Borough of Manhattan, Tax Block 1931, Lot 56), is a rectangular-shaped parcel located on the southern side of West 126th Street, between Frederick Douglass Boulevard (formerly Eighth Avenue) and Adam C. Powell Boulevard, in the Harlem section of Manhattan. The Site is approximately 12,490 square feet (SF) and has approximately 125 feet of frontage along West 126th Street and is approximately 100 feet deep.

The Site is developed with a two-story church building with a full cellar level covering approximately 2,725 SF of the western portion of the property. The remainder of the property is a paved, vacant parking lot. The church building is currently vacant and recently experienced a fire, rendering it unsafe to occupy. Due to this hazard, demolition of the church building will be required to facilitate implementation of the Site-wide Remedial Investigation.

The Site lot is zoned C4-4D, denoting a commercial contextual district that has bulk and density regulations and also allows for some residential uses. Site location, layout and usage are depicted on Figure 1.

2.2 Proposed Development

The Site will be redeveloped with a new 14-story mixed-use residential and community facility building with a full cellar that will encompass the entirety of the Site. Based on present design and plans, the redevelopment will include approximately 20-25 affordable residential units (approximately 30%) at 80% area median income (AMI) utilizing the Voluntary Inclusionary Housing (VIH) and 421-a programs. Demolition of the existing Site structure (two-story building with a full cellar) will be completed to facilitate site remediation as part of the redevelopment. The building design and plans are still being developed for the project; however, it is anticipated that excavation for development will extend approximately 30 feet below grade (ft-bg) across the Site. The water table was encountered at approximately 23 to 25 ft-bg and is expected to be encountered during excavation. The proposed development is consistent with the existing zoning and the recent development in this area of Manhattan.

2.3 Site Characteristics

2.3.1 Site Topography

Based on the U.S. Geological Survey (USGS 7.5 Minute Topographic Quadrangles: Central Park, NY) topographic map, the Site is located at an elevation of approximately 32 feet above mean sea level (msl) and is relatively flat.

2.3.2 Site Geology and Hydrogeology

The Site is underlain by a historic fill layer (sand, silt, ash, gravel, rock, and brick fragments) extending to at least 12 ft-bg. Soil below 12 ft-bg was not investigated as part of EBC's November 2016 RI and therefore the soil type at these depths is unknown.

Depth to groundwater at the Site was measured at depths ranging from 22.90 to 24.67 feet below grade. Groundwater flow is generally towards the south, likely due to the presence of sub-grade structures because the general groundwater flow direction would be expected to move in an easterly direction. The nearest

subway line is located two blocks to the east of the Site along Malcom X Boulevard, and due to distance is not likely to impact groundwater flow direction.

2.4 Historical Operations

The Site lot has been developed since at least 1902. In 1902, the Site lot was divided into six separate tax parcels with six tightly grouped four-story residential buildings present on the north side of the Site, along West 126th Street. By 1951, the residential buildings had been demolished and the Site was mostly undeveloped except for the western portion of the Site, where a four-story storefront building with lumber storage remained. By 1962, the existing two-story church building with a full cellar level was present on the western portion of the Site. The Site has generally remained unchanged through current day with a two-story building on the western portion of the Site and licensed parking on the eastern portion of the Site.

2.5 Previous Investigations

Previous assessments and investigations include an October 2016 Phase I Environmental Site Assessment (ESA) Report and a November 2016 Remedial Investigation, both conducted by EBC on behalf of Velocity Framers. A Remedial Investigation was completed by EBC in November 2016 in compliance with NYC OER E-designation requirements (Remedial Investigation Report dated December 2016). The Remedial Investigation Report, inclusive of analytical laboratory reports in their entirety, is included as Appendix A. The results of historical sampling are summarized on Figures 4-6, and a map depicting all previous sampling locations is included as Figure 3. A summary of previous analytical results are included as Tables 2 through 4. A detailed description of all previous assessments and investigations is included in the sections below. Based on the previous investigation conducted at the Site, the primary contaminants of concern for the Site are cVOCs, petroleum-related VOCs, PAHs, and metals (barium and lead).

2.5.1 *Phase I Environmental Site Assessment Report, 260 West 126th Street, New York, NY, Environmental Business Consultants, October 2016.*

A Phase I ESA was completed for the Site by EBC in October 2016 on behalf of Velocity Framers of Brooklyn, New York. The Phase I ESA did not identify any Recognized Environmental Conditions (RECs) in connection with the Site. However, EBC did identify three other environmental concerns (non-RECs), which are summarized as follows:

- The Site has an E-Designation (E-201) for Hazardous Materials, Noise, and Air as a result of the 125th Street Corridor Rezoning and Related Actions. The HazMat E-Designation required a Phase I and Phase II Testing Protocol. The Air E-Designation requires that any new residential and/or commercial development must endure that the heating, ventilation and air conditioning (HVAC) stacks are located at least 79 and 63 feet for No. 4 fuel oil and No. 2 fuel oil from the lot lines, respectively, or use natural gas as the type of fuel for space heating and hot water systems to avoid any potential significant adverse air quality impacts. The Noise E-Designation required a 40 dBA attenuation level for indoor spaces.
- Due to the age of the onsite building, the potential for the presence of asbestos-containing materials (ACMs) is considered likely. Specifically, asphaltic roofing materials, adhesives, plasters, and exterior use caulks commonly contain asbestos in older and newer buildings alike. EBC recommended conducting an ACM survey to identify building materials and components with asbestos content prior to demolition or disturbance.
- Due to the age of the onsite building, the potential for the presence of lead-based paint (LBP) is also considered likely. No significant damaged or peeling paints were identified; however, LBP may be present in hidden or inaccessible portions of the Site. Additionally, no children currently

reside at the Site, which greatly reduces the risks associated with the potential presence of LBP. EBC recommended conducting a lead survey to evaluate the presence of LBP at the Site prior to demolition or disturbance.

2.5.2 *Remedial Investigation Report, 260 West 126th Street, New York, NY, Environmental Business Consultants, December 2016.*

The November 2016 RI was conducted by EBC on behalf of Velocity Framers in accordance with the requirements of the NYC OER E-Designation program and consisted of the installation of eight soil borings, the collection of 17 soil samples (including QA/QC samples), the installation of four groundwater monitoring wells, the collection of four groundwater samples (including QA/QC samples), the installation of five soil vapor points, and the collection of five soil vapor samples (one sub-slab soil vapor sample and four exterior soil vapor samples). All soil and groundwater samples collected during the November 2016 RI were analyzed for VOCs, SVOCs, target analyte list (TAL) metals (total metals only for groundwater), pesticides, and PCBs and all soil vapor samples collected during the RI were analyzed for TO-15 VOCs. The results of the November 2016 RI are detailed below:

Soil

Soil results were compared to NYSDEC UUSCOs and RRSCOs as listed in 6 NYCRR Part 375-6.8(a) and (b). UUSCOs are the most stringent cleanup standards and are used as comparison for site-specific proposed cleanup standards. The RRSCOs are consistent with the assumed future use of the Site.

Soil sampling indicated the following:

- Several SVOCs, most notably PAHs, were detected in one shallow (0-2 feet below grade [ft-bg]) soil sample collected from the parking lot at concentrations exceeding the UUSCOs and RRSCOs. Total SVOCs were detected at a max. concentration of 13.07 parts-per-million (ppm).
- A variety of metals, including arsenic, barium, copper, chromium, lead, mercury, nickel, and zinc, were detected in shallow (0-2 ft-bg) and deep (10-12 ft-bg) soil samples across the Site in exceedance of UUSCOs. Of these, barium (max. 2,760 ppm) and lead (max. 2,040 ppm) were each detected in four shallow (0-2 ft-bg) and one deep (10-12 ft-bg) soil samples at concentrations exceeding their respective RRSCOs.
- Two pesticides, 4,4'-DDE and 4,4'-DDT, were detected in exceedance of their respective UUSCOs in were detected in exceedance of their respective UUSCOs in three shallow (0-2 ft-bg) and one intermediate (2-4 ft-bg) soil samples, with the highest concentrations occurring in the shallow sample collected from the northeastern corner of the Site. 4,4'-DDE was detected at a max. concentration of 0.022 ppm and 4,4'-DDT was detected at a concentration of 0.025 ppm. Pesticides were not detected in exceedance of RRSCOs in any soil samples.
- Volatile organic compounds (VOCs) and polychlorinated biphenyls were not detected in exceedance of UUSCOs or RRSCOs in any soil samples.

Groundwater

Groundwater results were compared to NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance Values (Class GA Standards).

Groundwater sampling indicated the following:

- A variety of SVOCs, specifically PAHs, were detected slightly in exceedance of Class GA Standards in groundwater samples collected from the southern portion of the Site.
- A variety of metals, including arsenic, barium, beryllium, cadmium, chromium, copper, iron, lead, magnesium, manganese, nickel, sodium, and thallium were detected in exceedance of Class GA Standards in unfiltered groundwater samples collected across the Site. Filtered groundwater samples were not analyzed as part of the 2016 RI.
- VOCs, pesticides, and PCBs were not detected in exceedance of Class GA Standards in any groundwater samples.

Soil Vapor

One sub-slab soil vapor sample was collected at six inches below grade (in-bg) within the onsite building and four exterior soil vapor samples were collected at 12 ft-bg across the Site. The results of the soil vapor sampling indicated the following:

- Chlorinated VOCs (cVOCs) were detected in soil vapor across the Site, specifically tetrachloroethene (PCE), trichloroethene (TCE), carbon tetrachloride, and chloroform. PCE was detected at a concentration of 11.3 micrograms per cubic meter (ug/m3) in the sub-slab soil vapor sample and at a max. concentration of 16.5 ug/m3 in exterior soil vapor; TCE was detected at a concentration of 0.38 ug/m3 in the sub-slab soil vapor sample and at a max. concentration of 0.62 ug/m3 in exterior soil vapor; carbon tetrachloride was detected at a concentration of 0.52 ug/m3 in the sub-slab soil vapor sample and at a max. concentration of 0.35 ug/m3 in exterior soil vapor; and, chloroform was detected at a concentration of 2.24 ug/m3 in the sub-slab soil vapor sample and at a max. concentration of 7.76 ug/m3 in exterior soil vapor. In general, the highest concentrations of cVOCs were detected in the exterior soil vapor sample collected from the southern portion of the parking lot, along the southern perimeter of the Site.
- A variety of petroleum-related VOCs were detected in sub-slab soil vapor and exterior soil vapor across the Site, including benzene, toluene, ethylbenzene, p/m-xylene, o-xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-methyl-2-pentanone, 4-ethyltoluene, heptane, styrene, cyclohexane, and propylene. Total BTEX concentrations ranged from 20.58 ug/m3 to 41.44 ug/m3. Of the BTEX compounds, the highest concentration was detected for toluene at 16.5 ug/m3. In general, the highest concentrations of petroleum-related VOCs were detected in the southern portions of the onsite building and parking lot.

3.0 REMEDIAL INVESTIGATION

The Remedial Investigation (RI) proposed for the Site includes sampling of soil, soil vapor, ambient air and groundwater. A geophysical survey prior to installation of soil borings, monitoring wells, and soil vapor points is not proposed. Proposed sample locations will be hand cleared to approximately five ft-bg prior to drilling. The objectives of this RI are to fully characterize the soil, groundwater and soil vapor onsite and to provide data of sufficient quantity and quality to support development of a Remedial Investigation Report (RIR), Qualitative Human Health Exposure Assessment (QHHEA) and Remedial Action Alternatives Analysis.

This RIWP was developed to meet the following Site-specific objectives:

- Fully characterize onsite subsurface soil and groundwater, consistent with DER-10;
- Evaluate potential sources of contamination, the migration pathways, and actual or potential receptors of contaminants on or through soil, groundwater and soil vapor;
- Assess soil vapor conditions across the Site;
- Assess potential impacts to human health as a result of the release of contaminants at the Site.

3.1 Scope of Remedial Investigation

The scoping process, for the purpose of identifying and defining the RI tasks described below, included the following:

- Review of current and historical Site reports and data;
- Review of results from previous environmental assessments, work plans and reports; and
- Evaluation of DER-10 requirements and relevant State and Federal guidance documents.

The RI will begin following NYSDEC approval of this RIWP. The RI will include the collection of 27 soil samples from nine soil borings, installation of six on-site groundwater monitoring wells, collection of six groundwater samples, installation of seven temporary soil vapor points, collection of seven soil vapor samples and collection of one outdoor ambient air sample. The type, location, and rationale for each exploration are detailed in the sections below and in summary table included in Section 3.7. Demolition of the existing church building in the western portion of the Site will be completed prior to implementation of the RI, due to safety concerns regarding the structural integrity of the building following a recent fire and to gain safe access to RI sampling locations in the western portion of the Site.

Demolition of the onsite building and installation of soil borings, groundwater monitoring wells, and soil vapor monitoring points will be completed in accordance with the sections below and the standard procedures included in the Quality Assurance Project Plan (QAPP) and Health and Safety Plan (HASP), included as Appendix B and C, respectively. Following the collection of this data, review and evaluation will be performed in order to determine if additional investigation is needed.

Proposed RI sample locations are shown on Figure 7. A summary table of proposed samples and sampling rationale is included in Section 3.7 of this Work Plan.

3.2 Demolition of Existing Church Building

Demolition of the existing church building in the western portion of the Site will be required to implement the RI in accordance with this RIWP. As noted in the 2016 Phase I ESA, it is likely the onsite building contains ACM due to the age of the building. An asbestos survey will be conducted prior to demolition and

asbestos abatement completed as necessary based upon the results of the survey. NYSDEC does not review ACM abatement plans or demolition plans for compliance with applicable local, state or federal requirements. These remedial measures will be submitted to, and/or performed in accordance with, the requirements of other agencies including: the New York City Department of Environmental Protection, the New York City Department of Buildings and the New York State Department of Labor, as may be applicable.

Any ACM encountered will be removed and disposed of by a New York State Department of Labor (NYSDOL) licensed asbestos handling contractor in accordance with federal, state, and city regulations. Construction and demolition debris will be disposed of in accordance with federal, state and city regulations, including 6NYCRR Part 360. All transport of materials will be performed by licensed haulers in accordance with appropriate local, state, and federal regulations, including 6NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded.

All trucks loaded with Site materials will exit the vicinity of the Site using only the most current New York City Department of Transportation (NYCDOT)-approved truck routes (currently the 2022 New York City Truck Route Map).

3.3 Soil Sampling

A subsurface investigation will be performed to further characterize soil conditions onsite.

The following scope of work will be implemented:

- Advance nine soil borings (SB-1 through SB-9) across the Site to the proposed development depth (30 feet below sidewalk grade [ft-bsg]);
- Collect a minimum of 27 soil samples, or three from each soil boring. Soil samples will be collected from the grade to two ft-bg interval, from the two-foot interval of native soil directly below the historic fill layer, and from the two-foot interval directly above the groundwater interface. If visual, olfactory, or PID evidence of contamination is noted in a boring, samples will also be collected from the two-foot interval of highest suspected contamination and the next apparent non-impacted interval; and,
- Analyze all soil samples for VOCs, SVOCs, pesticides, herbicides, PCBs, TAL metals (including total cyanide, tri- and hexavalent chromium), per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane.

3.3.1 Soil Sampling Methodology

A total of nine soil borings will be advanced across the Site as part of this RI; proposed soil sample locations are shown on Figure 7. Based on field measurements and observations, boring locations may be moved or added. Coordination with NYSDEC will take place prior to modifications being made with regard to the above-described placement of proposed sampling locations.

The soil borings will be installed using a direct-push, track-mounted Geoprobe® unit. All soil borings will be advanced to the proposed development depth (approximately 30 ft-bsg). Soil samples will be collected from five-foot macrocores fitted with dedicated acetate liners. At each location, the liners for each interval will be opened and the soil screened for VOCs using a 10.6 electron-volt (EV) PID. The soil retrieved from each sampler will be described by Tenen field staff on boring logs using the Unified Soil Classification System. All observations regarding potential contamination such as odors, staining, etc. will be documented. Soil will be screened from grade to the terminal depth of each boring. All descriptions and observations will be documented in a field logbook.

A minimum of three soil samples will be collected from each soil boring. Soil samples will be collected from the grade to two ft-bg interval, from the two-foot interval of native soil directly below the historic fill layer, and from the two-foot interval directly above the groundwater interface. Additional soil samples will be collected if PID, visual, or olfactory evidence of contamination is noted in the soil column. Samples will be collected from the two foot interval of highest suspected contamination and from the next apparent non-impacted two foot interval.

Soil samples selected for laboratory analysis will be collected directly from the acetate liner, placed in pre-cleaned, pre-preserved laboratory-provided sample bottles or En Core samplers (En Novative Technologies), sealed and labeled, and placed in a cooler and chilled to 4ºC for transport under chain-of custody procedures. Soil samples will be submitted to a NYSDOH ELAP-certified laboratory via courier service and analyzed for the respective analyte lists included in 6 NYCRR Part 375 SCOs. Laboratory analytical parameters and methods are outlined below. QA/QC procedures to be followed are described in the QAPP included as Appendix B.

A minimum of three soil samples collected from each soil boring will be analyzed for the following analytes on the Part 375 list with a Category B deliverable package:

- Target Compound List (TCL) VOCs by EPA Method 8260;
- SVOCs by EPA Method 8270;
- Pesticides by EPA Method 8081B;
- Herbicides by EPA Method 8151A;
- PCBs by EPA Method 8082A;
- Target Analyte List (TAL) Metals by EPA 6010C/7471B;
- Total Cyanide by EPA Method 9010C;
- Trivalent and Hexavalent Chromium by EPA Method 3060A;
- PFAS by USEPA Method 1633A; and
- 1,4-Dioxane by USEPA Method 8270.

Emerging contaminants (e.g., PFAS and 1,4-Dioxane) will be sampled in accordance with the current NYSDEC guidance, *Guidelines for Sampling and Analysis of PFAS Under NYSDEC's Part 375 Remedial Programs* (April 2023).

3.4 Groundwater Sampling

The following scope of work is proposed to further characterize groundwater onsite:

- Six permanent monitoring wells will be installed to further assess and characterize groundwater conditions on-site. All wells will be advanced five feet into the groundwater table;
- Gauge and collect groundwater samples from six newly installed wells;
- Groundwater samples will be analyzed for VOCs, SVOCs, pesticides, herbicides, PCBs, total and dissolved TAL metals (including total cyanide, tri- and hexavalent chromium), PFAS and 1,4-dioxane.
- Survey newly installed monitoring wells, collect one round of depth-to-groundwater measurements from all wells, evaluate groundwater elevations, and present updated groundwater contours.

3.4.1 Groundwater Well Sampling

Six newly installed permanent monitoring wells will be sampled; proposed monitoring well locations are depicted on Figure 7. All sampling equipment will be decontaminated prior to use. Prior to sampling, water levels will be measured using an electronic product-water level indicator. Sample collection will be accomplished by using low-flow procedures. Samples will not be collected until pH, temperature, and conductivity measurements stabilize and the turbidity reading is 50 Nephelometric Turbidity Units (NTU)

or less, or stabilizes above 50 NTU.

Newly installed monitoring wells will be installed using a Geoprobe® direct-push rig. At each location, soil will be screened for VOCs using a PID. Newly installed monitoring wells will be constructed of two-inch inner diameter (ID) PVC casing and riser with a ten-foot PVC screen (0.020-inch slot). The ten-foot screen will straddle the groundwater interface (five feet above and five feet below). A filter pack of sand will be placed in the annular space around the screen of the monitoring wells (minimum 2-inches around the circumference of the screen) and will extend two feet above the screen. The annular area around the well casing above the sand pack will be sealed with hydrated bentonite pellets for an interval of two feet. The annular space above the bentonite pellets to one ft-bg will be backfilled with unimpacted drill cuttings or clean sand. Upon completion of the well, a locking well cap will be installed atop the PVC riser and a steel flush-mount roadbox and concrete apron will be installed at grade.

Groundwater well construction logs will be completed for all of the newly constructed wells, including description of the lithology, top of casing, and screening interval. Boring and well construction logs will be included in the RIR.

Newly installed wells will be developed on the day of installation by pumping, using a peristaltic pump and dedicated high-density polyethylene (HDPE) tubing. The wells will be developed until at least three well volumes have been evacuated, turbidity reaches 50 NTU or less or stabilizes above 50 NTU, and pH, temperature, and conductivity measurements stabilize. Stability is defined as variation between field measurements of 10 percent or less and no overall upward or downward trend in measurements.

All newly installed wells will be surveyed to a common datum (likely North American Vertical Datum of 1988 [NAVD 88]).

Groundwater samples will be collected using low-flow techniques in accordance with EPA Region 1 Low-Stress (Low-Flow) Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells. (EQASOP-GW 001 Revision 3, dated July 30, 1996 with January 19, 2010 revision). All groundwater samples will be collected directly from dedicated tubing and placed in pre-cleaned, pre-preserved laboratory provided sample bottles, cooled to 4℃ in the field, and transported under chain-of-custody command to the designated laboratory for analysis. Groundwater samples from newly installed wells will be collected at least one week after installation and analyzed for the following analytes on the Part 375 list and emerging contaminants with a Category B deliverable package:

- Target Compound List (TCL) VOCs by EPA Method 8260;
- SVOCs by EPA Method 8270;
- Pesticides by EPA Method 8081B;
- Herbicides by EPA Method 8151A;
- PCBs by EPA Method 8082A;
- Total and Dissolved TAL Metals by EPA 6010C/7471B;
- Total Cyanide by EPA Method 9010C;
- Trivalent and Hexavalent Chromium by EPA Method 3060A;
- PFAS by USEPA Method 1633A; and
- 1,4-Dioxane by USEPA Method 8270.

Emerging contaminants (e.g., PFAS and 1,4-Dioxane) will be sampled in accordance with the current NYSDEC guidance, *Guidelines for Sampling and Analysis of PFAS Under NYSDEC's Part 375 Remedial Programs* (April 2023).

3.5 Soil Vapor and Ambient Air Sampling

The following scope of work is proposed to be implemented to determine soil vapor conditions at the site:

- Install seven soil vapor points across the the Site. One soil vapor sample (SV-1) will be installed in the center of the Site to a depth of approximately three feet above the groundwater interface (approximately 23 to 25 ft-bsg) to assess soil vapor conditions at the Site. Two soil vapor samples (SV-2 and SV-3) will be installed along the northern perimeter of the Site to a depth of approximately 6-8 ft-bg and four soil vapor samples (SV-4 through SV-7) will be installed along the southern, eastern, and western perimeters of the Site to the anticipated depth of the nearest building foundation to assess potential soil vapor migration offsite;
- One outdoor ambient air sample will be collected for each soil vapor sampling event; and,
- Analyze soil vapor and ambient air samples for EPA Method TO-15 VOCs.

3.5.1 Soil Vapor Sampling Methodology

A total of seven soil vapor samples and one outdoor ambient air sample will be collected as part of this RI. Samples will be collected in accordance with the NYSDOH Soil Vapor Guidance.

A Geoprobe® direct push machine will be used to install the soil vapor sampling probes. At each soil vapor sampling location, access to the subsurface soil will be gained by drilling through the top surface material (concrete) using a drill bit. Upon penetration through the surface material, a disposable sampling probe consisting of a 1.5-inch long hardened point and a 6-inch long perforated vapor intake will be installed to a depth of approximately three feet above the groundwater interface (approximately 23 to 25 ft-bsg) for SV-1, to a depth of approximately 6-8 ft-bg for SV-2 and SV-3, and to the anticipated depth of the nearest building foundation for SV-4 through SV-7.

At the terminal depth of soil vapor locations, the sample probe will be attached to ¼-inch diameter Teflon® tubing and extended to the surface. The borehole above the sampling probe to grade will be sealed using an inert sealant to prevent ambient air mixing with the soil vapor. Ambient air will be purged from the boring hole by attaching the surface end of the ¼-inch diameter Teflon® tube to an air valve and then to a vacuum pump. The vacuum pump will remove no more than one to three volumes of air (volume of the sample probe and tube) prior to sample collection. The flow rate for both purging and sample collection will not exceed 0.2 liters per minute.

The soil vapor samples will be first screened for VOCs using a PID. A tracer gas (helium) will be used in accordance with the NYSDOH protocols to verify the integrity of the soil vapor probe seal. Helium will be used as the tracer gas and a bucket will serve to keep it in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer prior to sampling. Although there is an allowable amount of tracer gas that can be detected as per the NYSDOH Soil Vapor Guidance, if the tracer sample results show any presence of the tracer gas, the probe seals will be adjusted to prevent infiltration which would result in the generation of inaccurate (likely biased low) results.

A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone and chain of custody.

Soil vapor samples will be collected in laboratory-supplied and batch-certified-clean 6-liter Summa canisters using two-hour regulators. All samples will be sealed, labeled, and placed in a secure container for delivery to a NYSDOH ELAP-certified analytical laboratory. All soil vapor samples will be analyzed for EPA Method TO-15 VOCs.

3.5.2 Ambient Air Sampling Methodology

All samples will be collected in accordance with the NYSDOH Soil Vapor Guidance. Sample locations may be adjusted based on field observations or conditions.

One outdoor ambient air sample will be collected as part of this RI. The outdoor ambient air sample will be collected from breathing height (three to five feet above the ground surface) from an upgradient sampling location. The sampling flow rate will not exceed 0.2 liters per minute (L/min). Sampling will occur for a duration of two hours. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols.

The ambient air sample will be collected in a laboratory-supplied and batch-certified-clean 6-liter Summa canister using a two-hour regulator and will be sealed, labeled, and placed in a secure container for delivery to a NYSDOH ELAP-certified analytical laboratory. The sample will be analyzed for EPA Method TO-15 VOCs.

3.6 Quality Assurance / Quality Control (QA/QC)

Samples will be collected in accordance with the Quality Assurance Project Plan (QAPP) included as Appendix B.

Sample analysis will be performed by a NYSDOH ELAP-certified laboratory. The laboratory will report sample results on a 10-day turnaround time. An independent sub-consultant will validate sample results and prepare a Data Usability Summary Report (DUSR).

3.7 Summary Table of Proposed Sampling Locations

As required by Section 3.3(b)(3) of DER-10, a table describing all proposed sampling locations and QA/QC samples is presented below.

Table 1. Proposed Sampling Locations and Analysis

Soil

Sample Location	Media	Sampling Intervals	Analytical Parameters	Sampling Method / Minimum Reporting Levels	Rationale	QA/QC Samples
SB-1	Soil	From grade to two ft-bg, from the two-foot interval of native soil directly below the historic fill layer, and from the two-foot interval above the groundwater interface. Additional samples will be collected from the two-foot interval of highest suspected contamination and the next apparent non-impacted two-foot interval if PID, visual, or olfactory evidence of contamination is encountered in the soil column	Part 375 Analytes, PFAS, and 1,4-Dioxane	EPA 1633A / MDL less than 1 ug/kg for PFAS; EPA 8270 / MDL less than 0.1 mg/kg for 1,4-Dioxane; EPA 8260C, 8270D, 8081B, 8082A, 8151A, 7196A, 3050B, 7471B, 9010C/9012B/9014 and 3060A/7196 / MDL less than Unrestricted Use SCOs	Evaluate/fully characterize soil conditions across the Site.	1 duplicate, 1 field blank, and 1 MS/MSD per 20 samples; 1 trip blank per sample delivery group
SB-2						
SB-3						
SB-4						
SB-5						
SB-6						
SB-7						
SB-8						
SB-9						

Groundwater

Sample Location	Media	Sampling Intervals	Analytical Parameters	Sampling Method / Minimum Reporting Levels	Rationale	QA/QC Samples
MW-1	Groundwater	10-ft screen across groundwater interface (5 ft above and 5 ft below)	Part 375 analytes including total and dissolved metals; 1,4-dioxane; PFAS	EPA 8260C, 8270D, 8270D-SIM Modified, 8081B, 8151A, 7196A, 3050B, 7471B, 9010C/9012B/9014, 3060A/7196 and 1633A / MDL less than Class GA Standards for Part 375 analytes; MDL less than 0.28 ug/L for 1,4-dioxane; MDL less than 2 nanograms per liter (ng/L) for PFAS	Fully characterize onsite groundwater	1 duplicate, 1 field blank, and 1 MS/MSD per 20 samples; 1 trip blank per sample delivery group
MW-2						
MW-3						
MW-4						
MW-5						
MW-6						

Soil Vapor and Outdoor Air

Sample Location	Media	Sampling Intervals	Analytical Parameters	Sampling Method / Minimum Reporting Levels	Rationale	QA/QC Samples
SV-1	Soil Vapor	3 ft above the groundwater interface (approximately 23 to 25 ft-bsg)	TO-15 VOCs	EPA TO-15 / MDL less than 1.00 ug/m3	Assess soil vapor conditions on-site at the groundwater interface	None
SV-2		6-8 ft-bg			Assess soil vapor conditions at the Site perimeters and the potential for soil vapor to migrate offsite	
SV-3						
SV-4		Anticipated depth of the nearest neighboring building's foundation				
SV-5						
SV-6						
SV-7						
AA-1	Ambient Air	Breathing height (3-5 feet above the ground)			Assess ambient air conditions onsite	

Quality Assurance / Quality Control

Sample Location	Media	Sampling Intervals	Analytical Parameters	Rationale
Trip Blanks	QA / QC	--	Part 375 analytes and/or 1,4-dioxane and PFAS, as necessary	Quality assurance and quality control
Soil Duplicate				
Soil Blank				
Soil MS/MSD				
Groundwater Duplicate				
Groundwater Blank				
Groundwater MS/MSD				

MDL – Method Detection Limit
Reporting limits are laboratory- and sampling event-specific. The overall objective is to ensure that the minimum reporting levels are such that they can be used to evaluate potential sources, assess risk from detected compounds, and compare detected concentrations against applicable regulatory levels.

3.8 Qualitative Exposure Assessment

Following receipt of the laboratory analytical results, a QHHEA will be completed in accordance with Section 3.3(c)4 and Appendix B (NYSDOH guidance for preparing a qualitative human health exposure assessment) of DER-10. The QHHEA will utilize the results of the RI to evaluate and document potential exposure routes and identify and characterize potential current and future receptors. The results of the RI will be used to identify potential human exposure scenarios associated with contaminants in soil vapor, soil, and groundwater. The results of the QHHEA will be included in the RIR.

3.9 Health and Safety Plan (HASP)

All work at the Site will be completed in accordance with the Health and Safety Plan (HASP) included in Appendix C.

3.10 Air Monitoring

The NYSDOH Generic Community Air Monitoring Plan (CAMP), included as Appendix 1A of DER-10, will be implemented during all ground-intrusive sampling activities. Special requirements will be implemented during any ground-intrusive work occurring within twenty feet of potentially exposed individuals or building openings (windows, vents, doors, etc.). Also, special requirements will be implemented during all work completed inside an occupied building. Details of the CAMP are included in Appendix D.

3.11 Investigation-Derived Waste (IDW)

Following the completion of sampling, boreholes will be backfilled with clean cuttings or sand. If grossly contaminated soil cuttings are encountered or if excess soil cuttings are generated, they will be placed in 55-gallon drums. Purge water and other investigation-derived waste (IDW) will be containerized in 55-gallon drums. After the investigation is complete, the drum contents will be characterized for offsite disposal. Drums containing IDW will be staged onsite to await offsite disposal and will be clearly labeled as “hazardous waste – pending analysis” until waste characterization results indicate otherwise. Drums staged onsite will be protected from the elements by covering with a tarp or plastic sheeting at the end of each work day.

3.12 Reporting

During implementation of the RI, daily reports will be sent to the NYSDOH and NYSDEC Project Managers via email by the end of each day following the reporting period and will include:

- The NYSDEC assigned project number;
- An update of progress made during each day;
- Locations of work and soil borings, monitoring wells, or soil vapor points installed that day;
- A summary of all soil, groundwater, soil vapor, or ambient air samples collected that day;
- A summary of any and all complaints with relevant details (names, phone numbers);
- A summary of CAMP findings, including excursions;
- Wind direction, CAMP monitoring locations, and CAMP readings;
- An explanation of notable Site conditions;
- Personnel onsite;
- Delays/problems encountered; and,

- Anticipated work activities for the next day/week.

Daily reporting will be conducted during each day of RI implementation, including soil boring installation and soil sampling, groundwater monitoring well installation and groundwater sampling, and soil vapor point installation and soil vapor/ambient air sampling. Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill, etc.), requests for changes to the RIWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the RIWP will be addressed directly to the NYSDEC Project Manager via personal communication.

Daily reports will include a Site figure depicting Work Zones and representative photographs of work conducted that day. Any exceedances of CAMP readings, corrective actions taken, and indication of whether the corrective actions reduced readings to below action levels will be communicated to the NYSDEC and the NYSDOH Project Managers as soon as practicable on the day of occurrence as well as included in the daily report for that day. All complaints received will be immediately reported to NYSDEC.

A RIR will be prepared in accordance with the requirements of DER-10. The report will include details of the sampling, tabulated sample results and an assessment of the data and conclusions. If warranted, recommendations for additional actions will be included.

Soil sample results will be compared to the Unrestricted Use and Restricted-Residential Use SCOs as included in Part 375-6.8. Groundwater sample results will be compared to the Class GA Standards, including February 2024 updates. Soil vapor sample results will be compared to the ambient air sample results. The results of all media will be evaluated comprehensively to determine the need for additional investigation and/or remediation.

The Remedial Investigation Report will also include the qualitative human health exposure assessment, CAMP results, laboratory data packages, DUSR, geologic logs, well construction diagrams, and well purging/sampling logs. All data will also be submitted electronically to NYSDEC via the Environmental Information Management System (EIMS) in EQuIS format.

3.13 Green and Sustainable Remediation (GSR) Practices

In accordance with NYSDEC's DER-31 Green Remediation guidance document, green remediation concepts and techniques should be considered during all stages of the remedial program, including site investigation, with the goal of improving the sustainability of the cleanup and summarizing the net environmental benefit of any implemented green technology. Tenen and its subcontractors will incorporate green remediation principles and techniques to the extent feasible to reduce the environmental footprint of the investigation and cleanup. The major green remediation components for site investigation are as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gases and other emissions;
- Increasing energy efficiency and minimizing use of non-renewable energy;
- Conserving and efficiently managing resources and materials; and,
- Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste.

Tenen and its subcontractors will incorporate best management practices (BMPs) at all stages of the site investigation to lower the environmental footprint attributable to implementation of the work scope. The following BMPs will be incorporated during the planned RI scope of work:

- Utilize machinery and equipment that is suitably sized for the Site and is capable of performing multiple tasks whenever possible to avoid field deployment of multiple machines;
- Shut down of machinery and equipment during extended periods of downtime instead of idling the engines to avoid fuel consumption when the machinery is not actively engaged;
- Perform routine, on-time maintenance to all machinery and equipment to ensure fuel efficiency;
- Utilize direct-push technology (DPT) instead of rotary drilling rigs for the installation of soil borings, monitoring wells, and soil vapor points during the RI. DPT can reduce drilling duration by as much as 50-60% while eliminating generation of drill cuttings and the need to dispose of drilling fluids;
- All IDW generated for disposal will be contained in 55-gallon drums onsite to await offsite disposal. Drums will be closed at the end of each work day and covered with a tarp or plastic sheeting to promote dust suppression and protection from the elements;
- Soil borings and co-located monitoring wells will be installed within the same borehole whenever possible to minimize the time it takes to construct new wells;
- Minimize truck travel for disposal of IDW generated during the RI by selecting local disposal facilities;
- Minimize waste disposal by reusing soil/fill that does not exhibit visual, olfactory, or PID evidence of contamination to backfill boreholes;
- Use local subcontractors during RI implementation to minimize vehicle emissions during commute; and,
- Request project staff and subcontractors use public transportation to reach the Site during RI implementation to the extent practicable.

4.0 SCHEDULE

The following project schedule has been developed for the work plan implementation.

Work Plan Implementation Schedule

Task Number	Task	Estimated Task Duration (calendar days)	Total Duration (calendar days)	Estimated Date of Completion
0	Work Plan Approval	0	0	Early December 2025
1	Mobilization	1	1	Mid-December 2025
2	Soil Boring, Monitoring Well and Exterior Soil Vapor Point Installation / Soil Sampling	5	8	Mid-December 2025
3	Groundwater and Soil Vapor Sampling and Well Survey	2	15	Late December 2025
4	Laboratory Analysis	10	25	Mid-January 2026
5	Draft Report and Data Validation	30	55	January 2026
6	Submittal of RI Report	1	56	February 2026
7	RIR Approval	45	101	April 2026
8	RAWP Submittal	30	131	May 2026
9	NYSDEC Review and 45-Day RAWP Public Comment Period	75	206	July 2026
10	RAWP Approval	15	221	August 2026
11	Mobilization/RA Implementation	180	401	February 2027
12	SMP and FER Submittal	60	461	April 2027
13	COC Receipt	30	491	May 2027

EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of Velocity Framers: 260 West 126th Street, New York, NY 10027. The purpose of the Phase I ESA is to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions (RECs) are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

The Site consists of a single tax lot on the south side of West 126th Street, approximately 120 feet to the east side of Frederick Douglass Boulevard (formerly Eighth Avenue) and approximately 570 feet to the west of Adam C Powell Boulevard in the Harlem neighborhood of the Borough of Manhattan, City of New York. The street address associated with the Site is 260 West 126th Street, Manhattan, NY 10027 and is identified as Block 1931 and Lot 56 on the New York City (NYC) Tax Map. The lot is rectangle-shaped, has 125 feet of street frontage along West 126th Street and extends approximately 100 feet back away from the street covering a12,490 s.f. area. The Site is currently developed with a two-story church building with a 2,725 sf footprint on the west side of the Site and the remainder of the Site is paved and used as a parking lot. According to New York City Department of Planning records, the Site is designated a public facility or institution use which reflects the most recent operations at the Site. The onsite building is currently by Thomas Memorial Wesleyan Methodist Church.

Site history was based on the review of Sanborn® fire insurance maps, aerial photos, city directory listings, historic topographic maps and available online records. According to the review these historic documents, it is known that the Site has been developed since at least 1902. In 1902, the Site was divided into six separate tax parcels with six tightly grouped 4-story residential buildings present on the north side of the Site along W. 126th Street. The western and southern adjacent buildings were

occupied by a hotel complex (Hotel Minot) and the eastern adjacent property was undeveloped in 1902. The surrounding vicinity was primarily developed with tightly grouped residences and apartment buildings with storefronts present along on the ground floor along a grid of city streets. Commercial and community structures included music hall, opera house, performing arts center, two hotels, cafes, wagon repair shops and a couple storage warehouses in 1902. The Site, adjacent and surrounding vicinity remained generally unchanged through 1912 however, the property on the west side of the Site was now used to store lumber, the western adjacent properties included Hotel Braddock, a paint shop and offices and the southern adjacent properties were occupied by offices of Bishop Building and the eastern adjacent property remained undeveloped. By 1951 the Site was mostly undeveloped except for the western portion of the Site where a 4-story storefront building with lumber storage remained. The western and southern adjacent properties remained unchanged and the eastern adjacent property was now occupied by the Apollo Theatre. Several other theatres and performing arts facilities were present to the east-southeast of the Site at this time. By 1976 a church was present on the west side of the Site and the remainder of the Site was undeveloped. This is consistent with the current layout of the Site; however, the Site remained divided into six separate lots. A 1962 Certificate of Occupancy indicates the presence of the current two-story church building. This is the oldest record indicating the age of the onsite building that was encountered while preparing this Phase I ESA. The Apollo Theatre remained adjacent to the east, Hotel Braddock remained adjacent to the west and the Bishop Building and associated offices remained adjacent to the south. The surrounding vicinity had changed significantly at this time and was now occupied by several large structures including churches, large apartment complex buildings, department stores and schools amongst several tightly grouped mixed-use buildings with storefronts on the ground floor and residential apartments above. The Site has remained generally unchanged through the current day with a two-story church building on the west side and licensed parking on the east side of the Site. The adjacent properties are primarily commercial at this time and include a discount household electric components store, H&R Block and Amsterdam News to the west, Duane Reade to the southwest, Red Lobster to the south and Apollo Theatre to the east and southeast.

RECOGNIZED ENVIROMENTAL CONDITIONS

Based upon reconnaissance of the subject site and surrounding properties, and review of historical records and regulatory agency databases, no Recognized Environmental Conditions (RECs) were identified for the Site. However, three (3) other environmental concerns (non-RECs) were identified and are summarizes as follows:

Additional Environmental Concerns (non-RECs)

- The Site has an E-Designation (E-201) for Hazardous Materials, Noise and Air on April 30, 2008 as a result of the 125th Street Corridor Rezoning and Related Actions. The HazMat E-Designation requires a Phase I and Phase II Testing Protocol. The Air E-Designation requires that any new residential and/or commercial development must endure that the heating, ventilation and air conditioning (HVAC) stacks are located at least 79 and 63 feet for No. 4 fuel oil and No. 2 fuel oil from the lot lines or use natural gas as the type of fuel for space heating and hot water systems to avoid any potential significant adverse air quality impacts. The Noise E-Designation requires a 40dBA attenuation level for indoor spaces.
- Due to the age of the onsite building, the potential for the presence of asbestos-containing materials (ACMs) is considered likely. Specifically, asphaltic roofing materials, adhesives, plasters and exterior use caulks commonly contain asbestos in older and newer buildings alike. EBC recommends conducting an ACM survey to identify building materials and components with asbestos content prior to demolition or disturbance.
- Due to the age of the onsite buildings, the potential for the presence of lead-based paint (LBP) is also considered likely. No significantly damaged or peeling paints were identified; however, LBP may be present in hidden or inaccessible portions of the Site. Additionally, no children currently reside at the Site which greatly reduces the risks associated with the potential presence of LBP. EBC recommends conducting a lead survey to evaluate the presence of LBP at the Site prior to demolition or disturbance.

1.0 INTRODUCTION

1.1 Purpose

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of Velocity Framers: 260 West 126th Street, New York, NY 10027. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

1.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and maps, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut, provided the following information: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, and a historical telephone directory search.

EBC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the Site or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). EBC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

1.3 Significant Assumptions

EBC has made the following assumptions in the preparation of this report:

1. Groundwater – Based upon an average surface elevation of 29 feet above mean sea level (amsl), the depth to groundwater at the Site is approximately 20-25 feet below grade surface (bgs). The surface topography of the Site gently slopes to the east towards the Harlem River (0.82mi E) and northwest towards the Hudson River (0.85mi NW). Groundwater is expected to flow in a general easterly direction, consistent with the regional trend. However, there may be some fluctuations.
2. Regulatory Records Information – EBC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - EBC assumes that all information provided through interviews is complete and unbiased.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by EBC.
4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or

regulations, or policies of federal, state, or local government agencies. EBC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others.

1.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between Velocity Framers and EBC.

1.6 User Reliance

This report was prepared for the exclusive use of Velocity Framers. No other party may use the report without the written authority of Velocity Framers and EBC.

2.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

2.1 Location and Legal Description

The Site consists of a single tax lot on the south side of West 126th Street, approximately 120 feet to the east side of Frederick Douglass Boulevard (formerly Eighth Avenue) and approximately 570 feet to the west of Adam C Powell Boulevard in the Harlem neighborhood of the Borough of Manhattan, City of New York. The street address associated with the Site is 260 West 126th Street, Manhattan, NY 10027 and is identified as Block 1931 and Lot 56 on the New York City (NYC) Tax Map. The lot is rectangle-shaped, has 125 feet of street frontage along West 126th Street and extends approximately 100 feet back away from the street covering a 12,490 s.f. area.

Records were obtained from the New York City Registrar on October 17, 2016, including copies of property transaction records for the Site dating back to 1973. A copy of all of the information obtained is attached in **Appendix B**.

The property transaction information for the Site is listed below:

- September 25, 1973 – Contract of sale between Ms. Beatrice Berle and Freedom National Bank;
- March 17, 2004 – Judgment between Thomas Memorial Wesleyan Methodist Church and Harlem Commonwealth Council, Inc;

2.2 Site Characteristics

The Site is currently developed with a two-story church building with a 2,725 sf footprint on the west side of the Site and the remainder of the Site is paved and used as a parking lot. According to New York City Department of Planning records, the Site is designated a public facility or institution use which reflects the most recent operations at the Site. The onsite building is currently occupied by Thomas Memorial Wesleyan Methodist Church. The two-story building is painted tan, has block/brick and mortar exterior walls, a stucco-finished facade and a flat asphaltic rooftop. A chainlink security fence is present along 126th Street, containing the paved parking area on the east side of the property.

Photographs taken during of the Site during the site inspection are attached in **Appendix A**.

2.2.1 Utilities

The Site is equipped with electric service provided by Con Edison of New York, natural gas provided by National Grid, telephone, cable and internet service. Additionally, the Site is connected to the NYC municipal sewer system.

2.3 Physical Setting

The topography of the Site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Manhattan, New York (NY) Quadrangle (**Figure 3**), which indicates that the Site has a topographic elevation of approximately 29 feet above mean sea level (amsl). The Site is relatively flat with the general topographic gradient sloping to the east towards the Harlem River and northwest towards the Hudson River.

2.3.1 Surface Water

The nearest surface water bodies include the Harlem River, present 0.82 miles to the east and the Hudson River, present approximately1 mile to the west of the Site.

2.3.2 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the Site is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinant soil types may be present in the general vicinity of the Site. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (**Appendix E**).

2.3.3 Groundwater

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2006, the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 29 feet, the depth to groundwater in the vicinity of the Site is approximately 20-25 feet below grade surface (bgs). Groundwater is expected to flow to the east and/or northwest consistent with the regional topography and proximity to nearby surface water bodies.

2.3.4 Radon Risk

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The radon levels for September 2014 obtained from the website of New York State Department of Health indicates that the Kings County area is not a radon risk area. Test results from the New York State Department of Health (NYSDOH) radon survey indicate average radon concentrations of 2.44 pCi/L for nearly 400 homes screened. Out of the 400 homes screened, 392 homes had radon concentrations of less than 4 pCi/L. Based on this data, radon does not likely represent an environmental concern.

3.0 PROPERTY USAGE

3.1 Current Property Usage

The Site consists of a single tax lot on the south side of West 126th Street, approximately 120 feet to the east side of Frederick Douglass Boulevard (formerly Eighth Avenue) and approximately 570 feet to the west of Adam C Powell Boulevard in the Harlem neighborhood of the Borough of Manhattan, City of New York. The street address associated with the Site is 260 West 126th Street, Manhattan, NY 10027 and is identified as Block 1931 and Lot 56 on the New York City (NYC) Tax Map. The lot is rectangle-shaped, has 125 feet of street frontage along West 126th Street and extends approximately 100 feet back away from the street covering a12,490 square foot sf area.

The Site is currently developed with a two-story church building with a 2,725 sf footprint on the west side of the Site and the remainder of the Site is paved and used as a parking lot. According to New York City Department of Planning records, the Site is designated a public facility or institution use which reflects the most recent operations at the Site. The onsite building is currently occupied by Thomas Memorial Wesleyan Methodist Church. The two-story building is painted tan, has block/brick and mortar exterior walls, a stucco-finished facade and a flat asphaltic rooftop. A chain-link security fence is present along 126th Street, containing the paved parking area on the east side of the property.

A review of New York City Department of Buildings (NYCDOB) records and the NYC Department of City Planning Zoning map indicates that the Site is zoned commercial C4-4D, is occupied by an institutional use facility and has a M1-Church/Synagogue (**Figure 5A**).

3.2 Current Usage of Adjoining/Surrounding Properties

A summary of the uses of the surrounding/adjacent properties is described below. Photos of the exterior of adjacent properties are attached in **Appendix A**.

Surrounding Property Usage

Direction	Property Description
North	West 126th Street followed by an undeveloped/vacant property (Lots 5, 6 &7) with a two-story 2-3 story plumber/contractors building and a 2-story church (259-261 W. 126th Street) to the northeast and a 5-story residential building to the northwest (271 W. 126th Street).
South	A 2-story commercial building currently occupied by a Red Lobster and a Banana Republic (261 W. 125th Street).
East	A 5-story residential building (260 W. 126th Street).

West	A 1-story commercial building occupied by True Discount LLC. and H&R Block (2342 Frederick Douglas Boulevard)and a 4-story mixed use building with offices on the first two floors and residential apartments above (2338 Frederick Boulevard).

3.3 Historical Usage of Site and Surrounding Properties

Historical sources researched to determine past usage of the Site and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Sanborn fire insurance maps for the Site and surrounding area were reviewed for the years 1902, 1912, 1951, 1976, 1978, 1980, 1985, 1986, 1988, 1989, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004 and 2005. The review is summarized in Section 3.3.1. Copies of Sanborn maps are included as **Appendix C**.

City Directory Abstract - A directory of historical telephone listings at the Site and surrounding properties were reviewed from approximately five year intervals for the years through 2013. The review is summarized in Sections 3.3.2 below. A copy of the City Directory is included in **Appendix D**.

Aerial Photographs - Historic aerial photographs of the Site and surrounding properties were reviewed from approximately five year intervals for the years 1924 through 2011. The review is summarized in Sections 3.3.3 below. A copy of the Aerial Photos is included in **Appendix E**.

3.3.1 Sanborn Fire Insurance Maps - Site and Adjacent Properties

The historical usage of the Site and adjacent properties, identified through Sanborn map review, is summarized below:

1902

Subject Site: In 1902, the Site was divided into six separate tax parcels with six tightly grouped 4-story residential buildings present on the north side of the Site along W. 126th Street.

Adjacent Properties: The western and southern adjacent buildings were occupied by a hotel complex (Hotel Minot) and the eastern adjacent property was undeveloped in 1902. The surrounding vicinity was primarily developed with tightly grouped residences and apartment buildings with storefronts present along on the ground floor along a grid of city streets. Commercial and community structures included music hall, opera house, performing arts center, two hotels, cafes, wagon repair shops and a couple storage warehouses in 1902.

1912

Subject Site: The Site remained generally unchanged.

Adjacent Properties: Adjacent properties and surrounding vicinity remained generally unchanged through 1912 however, the property on the west side of the Site was now used to store lumber, the western adjacent properties included Hotel Braddock, a paint shop and offices and the southern adjacent properties were occupied by offices of Bishop Building and the eastern adjacent property remained undeveloped.

1951

Subject Site: By 1951 the Site was mostly undeveloped except for the western portion of the Site where a 4-story storefront building with lumber storage remained.

Adjacent Properties: The western and southern adjacent properties remained unchanged in comparison to 1912 and the eastern adjacent property was now occupied by the Apollo Theatre. Several other theatres and performing arts facilities were present to the east-southeast of the Site at this time.

1976

Subject Site: By 1976 a church was present on the west side of the Site and the remainder of the Site was undeveloped. This is consistent with the current layout of the Site; however, the Site remained divided into six separate lots.

Adjacent Properties: The Apollo Theatre remained adjacent to the east, Hotel Braddock remained adjacent to the west and the Bishop Building and associated offices remained adjacent to the south. The surrounding vicinity had changed significantly at this time and was now occupied by several large structures including churches, large apartment complex buildings, department stores and schools amongst several tightly grouped mixed-use buildings with storefronts on the ground floor and residential apartments above.

1978-2007

Subject Site: The Site has remained generally unchanged from 1976 through the current day with a two-story church building on the west side and licensed parking on the east side of the Site.

Adjacent Properties: The adjacent properties and surrounding vicinity remained generally unchanged from 1976 through the current day. The adjacent properties are primarily commercial at this time and include a discount household electric components store, H&R Block and Amsterdam News to the west, Duane Reade to the southwest, Red Lobster to the south and Apollo Theatre to the east and southeast.

3.3.2 City Directory Listings

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (**Appendix D**) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

Historical city directory information is summarized as follows:

Date	Property Information
1920	**Subject Property:** Residential Listings **Adjacent Properties:** Residential & Commercial Listings
1923	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1927	**Subject Property:** Residential Listings **Adjacent Properties:** Residential & Commercial Listings
1931	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1934	**Subject Property:** Not Listed **Adjacent Properties:** Residential& Commercial Listings
1938	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1942	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1947	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1950	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1956	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1958	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1963	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1968	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1973	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings

1978	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1983	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1988	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1993	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1996	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
1998	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2000	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2006	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2008	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings
2013	**Subject Property:** Not Listed **Adjacent Properties:** Residential & Commercial Listings

Information regarding additional surrounding properties identified on the City Directory search is included with the search in **Appendix D**. The review of City Directory listings indicates the Site was occupied by private individuals for residential purposes in 1920 and 1927. No other information regarding the Site can be determined .

3.3.3 Aerial Photographs

EBC reviewed aerial photographs for the following years; 1924, 1945, 1951, 1954, 1961, 1966, 1974, 1984, 1991, 1995, 2006, 2008, 2009 and 2011 from EDR. In 1924, the Site appears to be developed with structure(s) present along W. 126th Street. This is consistent with Sanborn Insurance Map data from the same era. A 1945 aerial appears to show the Site developed in the same configuration; however, due to the quality, detailed information cannot be determined. By 1951, there is only one structure present on the west side of the Site and the eastern portion is undeveloped. Several vehicles can be seen parked on the undeveloped parking area on the west side of the Site in the 1954 aerial. The Site remained generally unchanged with a building present on the west side of the lot and the majority of the Site to the east being used as a paved parking lot through 2011. A copy of the aerial photograph images is provided in **Appendix E**.

3.3.4 Historical Topographic Maps

1897 - 1947 (15-Minute)

Subject Site:

Due to the scale of these maps, detailed information regarding the Site cannot be determined. However, the Site appears to be developed.

Adjacent properties:

The surrounding vicinity appears developed with several structures along a grid of city streets.

1956 - 1997 (7.5-Minute)

Subject Site:

The Site is incorporated into an area which is shaded pink indicating an area of increased urban development. No detailed information regarding the Site can be determined.

Adjacent properties:

The surrounding vicinity is also shaded pink indicating an area of increased urban development. Additionally, several large roadways and large, institutional facilities, parks and large apartment complexes are present at this time.

2013 & 2014 (7.5-Minute)

Subject Site:

No detailed information, not even structures or shading at the Site is shown.

Adjacent properties:

A grid of city streets are shown in the surrounding vicinity with a localized strip of large roadways (main urban arteries) present to the east of the Site along the Bronx/Harlem border. Several schools, hospitals/clinics and parks are shown in the surrounding vicinity.

The review of historic topographic maps did not indicate the presence of any onsite RECs, nor any adjacent properties of particular concern. A copy of topographic maps is provided in **Appendix F**.

3.4 Site History Summary

Site history was based on the review of Sanborn® fire insurance maps, aerial photos, city directory listings, historic topographic maps and available online records. According to the review these historic documents, it is known that the Site has been developed since at least 1902. In 1902, the Site was

divided into six separate tax parcels with six tightly grouped 4-story residential buildings present on the north side of the Site along W. 126th Street. The western and southern adjacent buildings were occupied by a hotel complex (Hotel Minot) and the eastern adjacent property was undeveloped in 1902. The surrounding vicinity was primarily developed with tightly grouped residences and apartment buildings with storefronts present along on the ground floor along a grid of city streets. Commercial and community structures included music hall, opera house, performing arts center, two hotels, cafes, wagon repair shops and a couple storage warehouses in 1902. The Site, adjacent and surrounding vicinity remained generally unchanged through 1912 however, the property on the west side of the Site was now used to store lumber, the western adjacent properties included Hotel Braddock, a paint shop and offices and the southern adjacent properties were occupied by offices of Bishop Building and the eastern adjacent property remained undeveloped. By 1951 the Site was mostly undeveloped except for the western portion of the Site where a 4-story storefront building with lumber storage remained. The western and southern adjacent properties remained unchanged and the eastern adjacent property was now occupied by the Apollo Theatre. Several other theatres and performing arts facilities were present to the east-southeast of the Site at this time. By 1976 a church was present on the west side of the Site and the remainder of the Site was undeveloped. This is consistent with the current layout of the Site; however, the Site remained divided into six separate lots. A 1962 Certificate of Occupancy indicates the presence of the current two-story church building. This is the oldest record indicating the age of the onsite building that was encountered while preparing this Phase I ESA. The Apollo Theatre remained adjacent to the east, Hotel Braddock remained adjacent to the west and the Bishop Building and associated offices remained adjacent to the south. The surrounding vicinity had changed significantly at this time and was now occupied by several large structures including churches, large apartment complex buildings, department stores and schools amongst several tightly grouped mixed-use buildings with storefronts on the ground floor and residential apartments above. The Site has remained generally unchanged through the current day with a two-story church building on the west side and licensed parking on the east side of the Site. The adjacent properties are primarily commercial at this time and include a discount household electric components store, H&R Block and Amsterdam News to the west, Duane Reade to the southwest, Red Lobster to the south and Apollo Theatre to the east and southeast.

4.0 USER PROVIDED INFORMATION

4.1 Title Records

A record of the deeds for the Site is discussed in Section 2.1.

4.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

No environmental liens were noted.

4.3 Specialized Knowledge

The user did not provide EBC with any specialized knowledge regarding the Site.

4.4 Commonly Known or Reasonably Ascertainable Information

EBC was not provided with any commonly known or reasonably ascertainable information.

4.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

4.6 Owner, Property Manager and Occupant Information

According to New York City Department of Finance records, the current owner of the Site is identified as The Thomas Memorial Wesleyan Church.

4.7 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the Site as part of the due diligence to support the acquisition of the property involving Velocity Framers.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the Site. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix E**). A summary of standard environmental record sources researched is as follows:

5.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Federal Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	1.0 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Site and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Site
USEPA	Emergency Response Notification System	ERNS	Site
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

Federal NPL List - The National Priority List (NPL) is the United States Environmental Protection Agency (USEPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

Findings: The Site is not listed as an NPL facility. One (1) NPL site was identified within $^{1}/_{2}$ to 1-mile radius of the Site. However, due to the distance from the Site is not considered a REC.

Federal Delisted NPL List – NPL Delisted Sites are former NPL sites that have been remediated and removed from the USEPA's priority list. Sites are deleted where the USEPA has determined that no further response is appropriate.

Findings: The Site is not identified as a Delisted NPL facility. There were no Delisted NPL sites identified within a one-mile radius of the Site.

Federal CERCLIS List - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Findings: The Site is not listed as a CERCLIS facility. No CERCLIS sites were listed within a half-mile radius of the Site.

Federal CERCLIS-NFRAP List – No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of USEPA's knowledge, assessment at a site has been completed and that USEPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

Findings: The Site is not listed as a CERCLIS-NFRAP facility. No CERCLIS-NFRAP sites were identified within a half mile radius of the Site.

Federal RCRA CORRACTS List - The RCRA Corrective Actions (CORRACTS) database is the USEPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

Findings: The Site is not listed as a RCRA CORRACTS facility. One (1) RCRA CORRACTS site was identified within a 1/2 to 1 mile radius of the Site. However, due to the location and distance from the Site is not considered a concern with respect to the Site.

Federal RCRA Treatment, Storage and Disposal Facilities - The USEPA Resource Conservation and Recovery Act (RCRA) program identifies reporting facilities that treat, store or dispose of hazardous waste.

Findings: The Site is not listed as a RCRA TSDF and no TSDFs were identified within a ½ mile radius of the Site.

Federal RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A LQG is a site which generates more than 1,000 kilograms (kg) of hazardous waste during any one calendar month and can store waste on-site for up to 90 days. A SQG is a site which generates more than 100 and less than 1,000 kg of hazardous waste during any one calendar month and accumulates less than 6,000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1,000 kg of hazardous waste at any time. A CESQG is a site which generates less than 100 kg of hazardous waste or less than one kg of acutely hazardous waste during any one calendar month. A NonGen site is a former registered/regulated generator which does not presently generate hazardous waste.

Findings: The Site is not listed as and quantity of generator. However, ten (10) RCRA-LQGs, two (2) RCRA-SQGs and thirty-six (36) RCRA-CESQG facilities were identified within a 1/4 mile radius of the Site. No adjacent sites were identified. According to the EDR database, no violations are listed or corrective action has been taken for all these sites. Based on this information, these sites are not expected to represent a significant environmental concern.

Federal Institutional/Engineering Controls – Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Findings: No Federal Institutional/Engineering Controls were listed for the Site and no sites were identified within a ½ mile radius of the Site.

Federal Emergency Response Notification System - The Emergency Response Notification System (ERNS) is national database used collect information on reported releases of oil or hazardous substances.

Findings: Neither Site nor the adjacent properties were identified in the ERNS databases.

Federal Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Findings: The Site was not identified in the CONSENT database. No sites within a one mile of the Site were identified in the CONSENT database.

Federal Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.

Findings: The Site was not identified as a ROD site. The closest ROD site is present 1/2 to 1 mile away from the Site. Due to the distance from the Site, this offsite property is not considered a concern.

Federal Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Findings: Neither the Site nor any property within ¼ mile of the Site is listed in the MINES database.

5.1.2 New York State Databases

The table below summarizes the State databases that were searched.

New York State Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Site and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Site and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Site
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

NYS Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance/waste sites.

Findings: The Site is not listed as a SHWS facility. No SHWS facilities were identified within a one mile radius of the Site.

NY Vapor Reopened – This is a database listing of previously dismissed/closed sites that are being re-evaluated with current knowledge of the potential for soil vapor intrusion.

Findings: The Site is not listed as a NY VAPOR REOPENED site. One (1) NY VAPOR REOPENED facility was identified within a 1/2 to one mile radius of the Site. However, due to the distance from the Site is not considered a concern.

Hazardous Substance Waste Disposal Sites - The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-

Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

Findings: Neither the Site nor vicinity were listed in the HSWDS database.

ICIS – Integrated Compliance Information System. ICIS supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System

Findings: The Site is not listed as an ICIS site. No ICIS sites were identified in the surrounding vicinity.

NYS Landfill - The NYSDEC Solid Waste Facility Register records contain an inventory of solid waste disposal facilities or landfills in New York State.

Findings: The Site is not listed as a landfill. No NYS Landfill sites were identified within a half mile radius of the Site.

NYS Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

Findings: The Site was not listed as a SWRCY site. No SWRCY sites were identified within a $^{1}/_{2}$ mile radius of the Site.

NYS Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Findings: The Site is not listed as a SWTIRE site. There were no SWTIRE sites identified within a ½ mile radius of the Site.

NYS Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Findings: The Site was not identified as a LTANKS site. Seventy-two (72) LTANK sites were identified within a ½ mile of the Site. No adjacent sites with open spill cases were identified. Most of the LTANK sites in the surrounding vicinity have received closure from the NYSDEC. Based on this information, these LTANK sites are not expected to present a significant environmental concern to the Site.

NYS Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

Findings: The Site is not listed as an PBS site. Ten (10) UST sites and seventy (70) AST sites are registered within a ¼ mile radius of the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

Findings: The Site is not identified as a CBS facility. Additionally, no CBS facilities were identified in the surrounding vicinity.

NYS Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Findings: Neither the Site nor surrounding vicinity were identified in the NYSDEC Institutional/Engineering Controls databases.

NYS Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies hazardous waste sites undergoing private sector cleanup as part of redevelopment.

Findings: The Site was not identified as a VCP site. No VCP sites were identified within a $^{1}/_{2}$ mile radius of the Site.

NYS Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Findings: The Site is not listed in the NY Brownfields database. One (1) other Brownfield site is located within 1/4 mile radius of the Site. This site is located in a hydrologically cross-gradient location. Based on either distance and/or the assumed direction of groundwater flow, this property is not expected to represent a significant environmental concern with respect to the Site.

NYS Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

Findings: Neither the Site nor surrounding vicinity were not identified as MOSF sites.

NYS Spills - The New York State Spills Information Database (NY SPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

Findings: The Site is not listed as a NY SPILLS site. Fifteen (15) spill sites were identified within $^{1}/_{8}$ mile of the Site. Adjacent sites were not identified. Most of the spill listings located closest to the Site have received closure from the NYSDEC and do not represent RECs in connection with the Site. The closes Spill site is 98 feet to the southwest of the Site at 271 W. 125th Street. This spill case (0212531) resulted from tank overfill on March 19, 2003. This tank was later removed, no indication of contamination was observed and the spill case was closed in 2006. Additionally, this spill site as well as the other closest ones are located at either lower elevations or hydrologically cross or downgradient.

FUDS: The listing includes locations of formerly used defense sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Findings: The Site is not listed as a FUDS site. No FUDS sites were identified within a 1/2 to 1 mile radius of the Site.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSDF.

Findings: The Site is not listed as a NY Manifest or NJ Manifest site. Two hundred thirty-eight (238) NY MANIFEST and fifty-six (56) NJ MANIFEST sites were identified within a ¼ mile radius of the Site. No adjacent sites with violations, open spills or particular concerns were identified. Information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for the remaining sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

Drycleaner Sites - The NYSDEC maintains a listing of all registered drycleaners. Drycleaner sites do not necessarily pose a hazard unless a spill occurs. Sites at which spills have been identified are addressed in the appropriate section.

Findings: The Site is not identified as a drycleaner. Three (3) Drycleaner sites were identified within ¼ mile of the site. These sites are not located adjacent and are located either hydrologically cross or downgradient of the Site. Based on the assumed direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

NYS Manufactured Gas Plants - Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Findings: The Site is not listed as a MGP site. Two (2) MGP sites were identified within a one-mile radius of the Site. These sites are located approximately 1/2 mile from the Site. Due to the distance from the Site these are not considered RECs.

E Designation - The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Findings: The Site has an E-Designation (E-201) for Hazardous Materials, Noise and Air on April 30, 2008 as a result of the 125th Street Corridor Rezoning and Related Actions. The HazMat E-Designation requires a Phase I and Phase II Testing Protocol. The Air E-Designation requires that any new residential and/or commercial development must endure that the heating, ventilation and air conditioning (HVAC) stacks are located at least 79 and 63 feet for No. 4 fuel oil and No. 2 fuel oil from the lot lines or use natural gas as the type of fuel for space heating and hot water systems to avoid any potential significant adverse air quality impacts. The Noise E-Designation requires a 40dBA attenuation level for indoor spaces.

The Site was not identified as an E Designation site. Nine (9) E-Designation sites are present in the surrounding vicinity. However, these sites are under the jurisdiction of the NYCDEP's Office of Environmental Remediation and will be properly handled during redevelopment activities to reduce exposures to environmental hazards.

EDR Historical Auto Stations - EDR has searched selected national collections of business directories and has collected listings of potential gas station/ filling station/ service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station etc.

Findings: The Site is not listed as a Historical Auto Station. Two (2) Historical Auto Station sites were identified within a 1/2 - 1 mile radius of the Site. These sites are not located adjacent

to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for this site. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and are not considered a REC.

EDR Historical Cleaners - EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc.

Findings: The Site was not identified as an EDR Historical Cleaners site. Three (3) cleaners sites in the surrounding vicinity were identified. However, none of these sites are adjacent and no violations or open spills are associated. As such, these sites are not considered RECs.

5.1.3 EDR Vapor Encroachment Screen

A Vapor Encroachment Screen was conducted using the EDR VEC App™. A copy of the EDR Vapor Encroachment Screen report is included in **Appendix G**. Some small waste oil, fuel oil, and transfer oil spills were reported within the surrounding vicinity, but no significant spills of chlorinated volatile organic compounds were reported within a radius of 1/3 mile. No significant spills of fuel oil or gasoline with an active status were reported within a radius of 1/3 mile. In summary, no significant vapor intrusion sources exist in the immediate vicinity of the Site that supersede the degree of contamination that exists at the Site as it is a former MGP with known coal tar and MGP-impacts. Due to the known contamination at the Site, there is a potential for vapor encroachment at the Site; however, such sources of contamination will be greatly reduced during remedial actions prior to future redevelopment.

5.2 Additional Environmental Record Sources

5.2.1 Local Agency Review

Freedom of Information Act (FOIA) requests were sent to the New York City Department of Environmental Protection (NYCDEP), New York City Fire Department, New York City Department of Health (NYCDOH) and the New York City Fire Department (FDNY) for information regarding

hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

5.2.2 New York City Department of Finance

The following is a summary of pertinent information obtained from the New York City Department of Finance website:

Tax Lot:	Block 1931 – Lot No. 56
Address:	260 W. 126th Street
Owner:	Thomas Memorial Wesleyan Methodist Church
Lot Size:	12,490 s.f. - rectangle-shaped
Building Class:	M1 - Church/Synagogue
Zoning:	Commercial (C4-4D)

5.2.3 New York City Department of Buildings

The Department of Buildings (DOB) computerized Property Profile Overviews (PPOs) were reviewed. Several Certificates of Occupancy (COO) forms for the Site were available that provided historical information. A 1954 COO indicates that the Site was used as a paved parking lot with a small single-story temporary frame shelter for an attendant. Two separate 1962 COOs indicate the presence of a two-story church building with full cellar. This is the oldest record indicating the age of the current existing building that was encountered in preparing this Phase I ESA report. The 1962 COOs indicate that the cellar was used as a social hall, with a boiler room, kitchen, bathroom, coat room and storage room, the first floor was used a church hall with an office and the second floor was used as a chapel, classrooms, choir practice room and restrooms. There are twenty-five (25 DOB-violations, one (1) ARA/LAA Jobs and one hundred-eleven actions for the Site. Several of these DOB-violations are still active. All but one of these violations are in regard to the boilers and one is in regard to public assembly. There are several older violations listed prior to 1987 that have been closed. The one ARA/LAA job is in regard to replacing and registering a gas boiler in 2010. The 111 actions include several building alterations from 1922 through 1989, several building notices from 1952 through 1960, demolition permits from 1939 and 1940, an elevator report from 1924, an electric sign application

from 1922, several oil burner applications from 1961, new building actions from 1969 through 1989, plumbing jobs from 1915 through 1930, public assembly actions from 1962, several permits from 1930, plumbing repair slips from 1948 and 1982, several special reports from 1907 through 1955 and unsafe building actions from 1927 through 1940.

5.2.4 Previous Environmental Reports

No previous Environmental Reports were provided in preparation of this ESA Report.

5.2.5 Historic Zoning Map

Historic zoning maps were not made available through the official website of the City of New York. However, the most recent zoning map from 2016 indicates that the property is zoned commercial (C4-4D). This appears to be consistent with the historic use of the site, adjacent properties and nearby vicinity. The 2016 zoning map is provided in the attached **Figure 5A**.

5.2.6 Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject properties, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issue identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an "E" designation, as well as maintained within Chain of Title Records. For a site to be designated with an "E" restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a "Potential" or "Projected" re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an "E" designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the Site. No change of use or development requiring a building permit will be issued for an "E" designated site without approval from the NYCOER.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New

York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites. The Site is located within an industrial business zone (IBZ); however, it does not currently have an E-Designation or any known environmental restrictions as the result of rezoning.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Ms. Eleni Kavvadias of EBC performed the site inspection on Friday, October 28, 2016; beginning at approximately 10:30am.

Photographs taken during the inspection are attached (**Appendix A)**.

6.2 Observations

Ms. Kavvadias documented the presence of a two-story church building with a full cellar on the east side of the Site and a paved parking lot on the remaining western portion of the Site. She confirmed that the onsite building is currently occupied by Thomas Memorial Wesleyan Methodist Church. The basement is currently improved with a kitchen and dining room, the first floor was improved with a sanctuary and the second level is occupied by offices. The two-story building is painted tan, has block/brick and mortar exterior walls, a stucco-finished facade and a flat asphaltic rooftop. A chainlink security fence is present along 126th Street, containing the paved parking area on the east side of the property.

6.3 Aboveground and Underground Storage Tanks (ASTs/USTs)

No indications of USTs or ASTs were observed at the Site. Additionally, no records indicating the potential for the presence of tanks was observed. Information may be available in files maintained by the FDNY; however, no responses to EBC's FOIL requests have been received to date. Copies of tank records are provided in **Appendix B**.

6.4 Hazardous and Non-Hazardous Chemical Storage and Disposal

Numerous small quantity containers of surface cleaners, soaps and other common materials were present throughout the onsite building. Storage and housekeeping of these materials was noted as good with no signs of spillage. In addition there were no indications of improperly stored chemicals or spillage noted around the exterior of the buildings or grounds.

6.5 Underground Injection Control (UIC) Structures

Underground injection wells are regulated by the Underground Injection Control (UIC) Program under the authority of Part C of the Safe Drinking Water Act (SDWA) (42 U.S.C. 300h et seq.). The SDWA

is designed to protect the quality of drinking water in the United States, and Part C specifically mandates the regulation of underground injection fluids through wells. The USEPA has promulgated a series of UIC regulations under this authority. Recent applicable revisions to UIC regulations were published in the State Implementation Guide - Revisions to the Underground Injection Control Regulations for Class V Injection Wells, September 2000. This document specifically addresses Class V injection wells, which include on-site wastewater disposal features such as drywells, cesspools and in-situ drains. The USEPA issued a Notice of Final Determination for Class V wells; Final Rule on June 7, 2002. With the exception of motor vehicle waste disposal wells and large-capacity cesspools, Class V wells are "authorized by rule" (40 CFR 144.24) and may inject non-hazardous waste as long as the following criteria are met:

- The injection does not endanger underground sources of drinking water (40 CFR 144.12); and
- The well owners or operators submit basic inventory information (40 CFR 144.26).

The USEPA may, at its discretion, require the owner or operator of any well authorized by rule to submit information for review to determine if a well may be endangering an underground source of drinking water. In regard to motor vehicle waste disposal wells and large capacity cesspools (those that serve more than 20 persons per day), owners and/or operators of such wells in regulated areas must close the wells or obtain a permit. These requirements are being phased-in through 2008. Owners and operators of large-capacity cesspools must close the structures by April 5, 2005.

There are no drywell/stormwater structures present at the Site. Additionally, the Site is attached to the municipal NYC sewer system. Therefore, any discharges to a drain at the Site would be mobilized away from the Site with the sewer system.

6.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment

containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

Because of the age of the onsite building (before 1962), the potential for the presence of PCB-containing materials is considered likely to some degree. EBC recommends that any electric transformers and light ballasts be properly decommissioned (if present) prior to demolition or disturbance.

6.7 Asbestos

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

Due to the age of the onsite building (before 1962), the potential for the presence of asbestos-containing materials (ACMs) is considered likely. EBC recommends conducting an ACM survey to identify building materials and components with asbestos content prior to demolition or disturbance.

6.8 Lead-Based Paint (LBP)

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. Due to the age of the onsite building (before 1962), the potential for lead-based paint (LBP) is considered likely.

6.9 Mold

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and a food source is present. Molds can grow on wood, paper, carpet, foods, sheetrock, plaster and

insulation and use bio aerosols as a food source. As such, water is the key limiting agent in preventing mold growth. Without water, mold growth cannot occur. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

No visible signs of mold or water damage were observed at the Site; however, there is a potential for the presence of mold within hidden or inaccessible portions of the onsite buildings.

6.10 Wetlands

A review of the NYSDEC Freshwater Wetland Map, New York Quadrangle, indicates that the nearest nationally and state-designated wetlands are located approximately 0.8 miles to the northwest along the Hudson River and approximately 0.8 miles to the northeast along the Harlem River. ECB also reviewed NYSDEC Tidal Wetlands Maps available online at http://twi.ligis.org. Those maps indicate that the nearest 100 and 500-year flood zones are located approximately 0.75 miles to the northwest and northeast.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were also reviewed to confirm that the Site is not located within a flood zone. The FIRM showing the property (No. 3604970087G) indicates that the entire property is located at least 0.8 miles from the Site. This indicates that there is a very low risk of flooding at the Site. A copy of the FEMA FIRM is included in **Appendix B**.

7.0 INTERVIEWS

7.1 Site Owner

EBC did not interview the owner regarding the environmental condition or historical usage of the Site.

7.2 Occupants

No occupants were interviewed as part of EBC's site inspection.

7.3 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the NYCDEP, NYSDEC and FDNY for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

8.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the Site and surrounding properties, interviews and review of historical records and regulatory agency databases, *this assessment has not revealed evidence of any recognized environmental condition in connection with the Site.*

1808 MIDDLE COUNTRY ROAD
RIDGE, NY 11961
PH: 631.504.6000
FAX: 631.928.2780

9.0 CONCLUSIONS AND RECOMMENDATIONS

EBC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations as described under ASTM Practice E1527-13 for the commercial property identified by the street addresses of 260 W. 126th Street, New York, New York 10027. The Site is identified as Block 1931 Lot No. 56 in New York City property records. Any exceptions to, or deletions from, this practice are described in **Section 1.4** of this report. Based upon reconnaissance of the subject site and surrounding properties, and review of historical records and regulatory agency databases, no Recognized Environmental Conditions (RECs) were identified for the Site. However, the following environmental concerns should be noted:

Additional Environmental Concerns (non-RECs)

- The Site has an E-Designation (E-201) for Hazardous Materials, Noise and Air on April 30, 2008 as a result of the 125th Street Corridor Rezoning and Related Actions. The HazMat E-Designation requires a Phase I and Phase II Testing Protocol. The Air E-Designation requires that any new residential and/or commercial development must endure that the heating, ventilation and air conditioning (HVAC) stacks are located at least 79 and 63 feet for No. 4 fuel oil and No. 2 fuel oil from the lot lines or use natural gas as the type of fuel for space heating and hot water systems to avoid any potential significant adverse air quality impacts. The Noise E-Designation requires a 40dBA attenuation level for indoor spaces.
- Due to the age of the onsite building, the potential for the presence of asbestos-containing materials (ACMs) is considered likely. Specifically, asphaltic roofing materials, adhesives, plasters and exterior use caulks commonly contain asbestos in older and newer buildings alike. EBC recommends conducting an ACM survey to identify building materials and components with asbestos content prior to demolition or disturbance.
- Due to the age of the onsite buildings, the potential for the presence of lead-based paint (LBP) is also considered likely. No significantly damaged or peeling paints were identified; however, LBP may be present in hidden or inaccessible portions of the Site. Additionally, no children currently reside at the Site which greatly reduces the risks associated with the potential presence of LBP. EBC recommends conducting a lead survey to evaluate the presence of LBP at the Site prior to demolition or disturbance.

10.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) an 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

11.0 ADDITIONAL SERVICES

EBC has included, in addition to those items outlined by ASTM E 1527-13, a general evaluation of the following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-based Paint;
- Asbestos-containing Materials; and,
- Wetlands.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Robert Bennett
Project Manager

QUALIFICATIONS OF
ENVIRONMENTAL PROFESSIONAL

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Professional Experience

EBC: February 2015 - Present
Prior: 7 years

Education

Bachelor of Science, Environmental Science, State University of New York College at Oneonta, Oneonta, NY

Associates in Applied Sciences, Field Biology, State University of New York College at Delhi, Delhi, NY

Areas of Expertise

- Phase I / Phase II Property Assessments
- Waste Characterization / Soil Management
- Brownfield Closure and Planning Board
- Remedial Investigations
- Groundwater, Soil and Soil Vapor Remediation
- Indoor Air Quality (IAQ) Investigations
- Lead-Based Pain Risk Assessor
- Asbestos-Containing Materials Investigator/Inspector
- Landfill Closure and Monitoring
- Dredging Monitoring and Management
- Hazardous Materials Assessments
- Title V & NY Air Permitting and Registrations
- NYS / Nassau & Suffolk County Sanitary Code Compliance

Professional Certification

- OSHA 40-hr HAZWOPER
- OSHA 10-hr Construction Safety
- NYSDOH Asbestos Inspector
- NYCDEP Asbestos Investigator
- EPA Lead-Based Paint Inspector & Risk Assessor

PROFILE

Mr. Bennett has 8 years experience as an environmental consultant and is responsible for assessment and investigative services for a wide variety of projects, including industrial and commercial properties, mass transit facilities, parking structures, and sanitary and wastewater treatment facilities. Mr. Bennett has conducted Phase I, II and III Environmental Site Assessments for commercial, industrial, and residential properties in New York, New Jersey, and Massachusetts.

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Mr. Bennett conducts research and provides support for various projects on a daily basis and coordinates with clients, regulatory agencies, attorneys and sub-contractors to provide cost-effective business solutions for a plethora of environmental concerns. Mr. Bennett's field experience includes tank removal and installations, dredging oversight and monitoring, asbestos and lead inspections, compliance audits, spill management and closure, soil and groundwater sampling, and both the oversight and operation of soil boring and well installation equipment. In addition, Mr. Bennett has performed project research, data reduction and evaluation, and has prepared reports for both regulatory and client use.

Robert Bennett, Project Manager

Description:	NYC E-Designation. Historic Fill Material requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client:	Waterfront Property Management, LLC.
Authority:	NYCOER
Role:	Mr. Bennett serves as the Project Manager for the project.

Project:	Governor's Office of Storm Recovery (GOSR) New York Rising Buyout and Acquisition Program / Superstorm Sandy Relief Program
Location:	Long Island and New York City
Type:	Phase I Environmental Site Assessments (ESAs) and Property Evaluation
Contamination:	Asbestos, Lead, Mold and PCBs
Role:	Environmental Scientist II responsible for the creation and review of a high volume of Phase I ESAs

Project:	WMATA Metrorail System Assessment Program
Location:	Washington D.C. Area
Type:	Hazardous materials inspection and evaluation for planning and engineering design purposes.
Contamination:	Asbestos, Lead and PCBs
Role:	Environmental Scientist and Inspection Team Leader

Project:	Armonk Square Redevelopment Plan
Location:	Armonk Square, Armonk, NY
Type:	Monitoring well and recovery well installation. Sub-slab depressurization system (SSDS) installation and operational modifications.
Contamination:	Chlorinated Solvents
Role:	Environmental Scientist responsible for the planning and oversight of monitoring well and recovery well installation. Planning, oversight, and modifications to SSDS.

Project:	Newtown Creek Dredging Project for NYCDEP
Location:	NYCDEP Newtown Creek Wastewater Treatment Facility, Brooklyn, NY
Type:	Navigational waterway dredging
Contamination:	Hazardous and biological pollutants in bottom sediment.
Role:	Environmental Scientist responsible for the implementation and operation of engineering controls and turbidity monitoring.

Project:	Boring / Coring Program, Northeast U.S. Region
Location:	New Bedford Harbor, New Bedford, MA. Long Island and Massachusetts.

EBC

ENVIRONMENTAL BUSINESS CONSULTANTS

Robert Bennett, Project Manager

Type:	Bathymetric surveys. Borings and Corings advanced through deep sediment and bedrock to determine the proper allocation dredge areas and confined aquatic disposal zones. Additionally, Vibracore drilling was conducted in shallow and easily accessible areas.
Contamination:	PCBs
Role:	Environmental Scientist / Project Manager serving as an on-site geologist to interpret and record geological investigations.
Project:	New York State Air Permit Facilities
Location:	Westchester, Orange and Rockland County, NY
Type:	Title V Air Permits, state registration and permitting for multiple industrial laundering facilities.
Contamination:	Hazardous Air Pollutants
Role:	Environmental Scientist / Project Manager responsible for all air permitting work for a NY-branch office.
Project:	Dredging Oversight and Water Quality Monitoring
Location:	New Bedford Harbor, New Bedford, MA
Type:	Bathymetric surveys. Supervised maintenance dredging and confined aquatic disposal zone excavation operations. Turbidity and sediment flocculation monitoring.
Contamination:	PCBs
Role:	Environmental Scientist providing project oversight, coordinating daily with Mass DEP and sub-contractors. Documenting geological data.
Project:	Stormwater Abatement System Inspections, Repairs and Reporting
Location:	Multiple retailer locations throughout New York State
Type:	Stormwater drainage system and stormwater control structure inspections and repairs
Contamination:	PCBs
Role:	Environmental Scientist / Project Manager assigned to coordinate and perform routine inspections of drainage systems and stormwater control structures. Made repairs to stormwater appurtenances where neccesary.
Project:	ConEdison Truck-flush facility, effluent discharge monitoring.
Location:	Multiple ConEdison truck-flush facilities located throughout New York City, NY.
Type:	Compliance sampling and evaluation with regard to New York City Sewer Effluent Limitations.
Contamination:	Oil & Grease, Metals, Pesticides/PCBs , VOCs, SVOCs
Role:	Effluent sampling. Coordinating with client and laboratory to conduct quarterly sampling events.
Project:	RCRA Closure Support

EBC

LOCAL AGENCY INFORMATION

New York State Department of Environmental Conservation
APPLICATION FOR ACCESS TO RECORDS
Pursuant to New York State Freedom of Information Law (FOIL)

Please complete all applicable fields

Records Requested

Whenever possible, please provide specific facility name(s), owner(s), address(es), permit/spill/PBS/incident number(s).

All available documents related to the environmental condition and historic land use of the subject property located at 260 W. 126th Street, New York, NY 10027. Such documents may be related to spills, releases, violations, historic occupants and land usage, prior environmental investigations, remedial measures, state environmental database listings and the known handling, storage and transport of potentially hazardous, hazardous or non-hazardous materials associated with the subject property. The subject property is identified as Borough: Manhattan, Block: 1931, Lot 56.

The subject property has an E-Designation (E-201) for HazMat, Air & Noise as the result of the 125th Street Corridor Rezoning (CEQR #07DCP030M); however, there is no known NYSDEC involvement. The subject property appears to be solely under the authority and governance of the Mayors Office of Environmental Remediation (MOER). NYSDEC may become involved in the future depending on the findings of the remedial investigation. MOER will notify NYSDEC on these findings and potentially consult your department if warranted.

Ridge, NY 11961
Contact: Rob Bennett

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Env. Business Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # BBB7-4829-828D

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 300 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Env. Business Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/27/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 36 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/17/2016 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

Site Code: 57691
Class Code: Site is properly closed - requires continued management.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 08/01/2015 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/16/2016 has revealed that there are 72 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 10 NY UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there is 1 NY RES DECL site within approximately 0.125 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 8 NY HIST UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/16/2016 has revealed that there are

EXECUTIVE SUMMARY

15 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/21/2016 has revealed that there are 148 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site

HUDSON RIVER PCBS (Continued) **1000384273**

has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA’s analysis assumes a significantly reduced PCB loading to the river from these sources once the State’s plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non- cancer adverse health effects based on observations in animals and emerging evidence in

HUDSON RIVER PCBS (Continued) **1000384273**

humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the

HUDSON RIVER PCBS (Continued) **1000384273**

history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

CERCLIS Assessment History:

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 10/12/2005: Talked to Mr Frank Monteano (212 483 8890). He informed that there was a environmental clean up after that spill. His assistant will be back on next Monday and requested to call back than. (Sadique) 10/21/2005: Called that no. and left message to call me back. (Sadique) 11/07/2005: Tried to contact with the Hillman Environmental (718 726 3336), the no. was not in service. Searched property shark for owner and sent a certified mail to the owner. (Sadique) 12/05/2005: Letter returned on 11/25/2005 due to wrong zip code. Checked the address and send another today.(Sadique) 12/15/2005: Second letter returned on 12/15/2005. (Sadique) 12/22/2005: Site visit may help to close the spill. (Sadique) 01/20/2006: John Grathwol and I visited the spill location on 01/18/2006 at 1:25pm. Met with building superintendent Mr. Francis Rivera. They changed to gas heating last summer. The old tank removed from the building. No spill visible. Nothing on the floor. Moldy smell but no petroleum smell noticed. Inspected out side, fill pipe removed. No sign of oil spill found. Took photos of inside and out side locations. Spill can be closed. (Sadique) 01/20/2006: Spill closed. (Sadique)"
Remarks:	"OIL TANK IN OFFICE BUILDING APPEARS TO HAVE BEEN OVERFILLED. SIGNS OF OIL IN VAULT WHERE FILL PIPE IS LOCATED. CALLER STATES IT IS A SMALL AMOUNT. HE DOES NOT KNOW NAME OF OIL COMPANY THAT FILLS TANK. CALLER WILL ADDRESS PROBLEM TOMORROW WITH HILLMAN ENVIRONMENTAL."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. WAS CHANGED FROM O'DOWD TO TOMASELLO 4-15-98. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 10/24/06 - Haggerty - This site was previously mis-designated as an Exxon-Mobil site. This property was formerly a Harlem USA gas station. The property is now a multi-level retail center encompassing nearly the entire city block. Before construction was to begin in 1997, soil samples were taken in the southern most corner of the block where the gas station was located. Spill #9710405 was generated when soil sample contained gasoline compounds. Through the course of excavation and remediation, Chris Tomasello, former R2 employee closed out the 9710405 spill on 5/15/98. Unfortunetely, Spill #9800505 was called in on 4/13/98 for the same property a month before the original spill was closed out. There was only 1 composite endpoint sample taken with no description of which soil locations made up the composite sample. After exhausting every lead to find someone who knew why this additional spill was called in, I proposed the following to Jim Tuman of Grid Properties, property manager (212-678-4400 ext110): 2 samples either groundwater or soil gas on either side of the corner where the gas station stood. Spill to remain open until the samples are taken. All documents in Edocs 5/15/08 - Haggerty: received call from Mohammed Ahmed from Fleming Lee Shue. Apparently, Mr. Tuman, Property Manager, now wants to get this spill closed. PM informed him to prepare a brief work plan 6/16/08 - Haggerty: Approved work plan to install 2 grab GW samples using a GeoProbe on either side of the former gas station. 8/14/08 - Haggerty: reviewed SIR. Both grab groundwater samples clean. Spill Closed "
Remarks:	"CALLER'S COMPANY HAD OLD UNDERGROUND GASOLINE TANKS REMOVED. THEY HAD BEEN ENCASED IN CONCRETE. THE CRUSHED CONCRETE WAS TESTED BY AN OUTSIDE LAB LISTED ABOVE AND THE MATERIAL TESTED POSITIVE FOR GASOLINE."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Classification:	Conditionally Exempt Small Quantity Generator
Description:	Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/29/99 Bob Abramo (718-624-7490)- Abra Consulting -called - He has just been hired by the owner to close out this spill. He has a copy of soil boring work & test results for borings done around the abandoned 3,000 gal fuel oil storage tank buried in rear of shoe store. Sangesland asked Mr. Obrano to send a copy of these test results along with a 1-2 page description of Proposed Plan Of Action for work to be done to clean up the site. Some sort of Bio may be called for since the tank can not be moved. 8/26/99 - Sangesland read the report forwarded by Mr. Abramo and agreed with Mr. Abramo's plan to install 1 or 2 wells in the area around the abandoned tank in the sidewalk. Sangesland said if the depth to ground water was too much (50+ ft) then it would not be representitive of the tank (problems could be from further away)..... Problem still remains what to do about the confirmed contamination. 2/11/2000 - Mr. Abramo called to say one well was installed to 27' Sample tested to 8021 and 8270 All results were below limits except (enbyutel benzene 52 ppm). There still is contamination of soil between tank and building. Sangesland asked Mr. Abramo to propose some type of remediation (Bio?) on the trapped soil contamination. Mr. Abramo proposed ORC. Sangesland said

UPTOWN REALITY (Continued) **S103479726**

no. DEC requires some type of biological bugs which will be injected into the soil to work on the problem above the groundwater line. 5/2/2000 - Mr. Abramo said Bio Rem Rep suggests 4 geoprobe type injection wells around the tank along with 1,000 gal of Biorem. Sangesland said to go ahead, leave the site until Sept 1st and then retest the monitoring well. Hopefully it will be clean and can be closed out. 9/25/2000 - Mr. Ed Correll (Soil Mechanics 516-221-7500) was hired by the owner do what it takes to close out the case. Mr. Correll was told of the DEC history on the site. Sangesland asked Mr. Correll to do the following: 1) Get specific details on what type of Bio work was done in July 2000 (DEC has no records). 2) After a couple of months, retest the existing well and conduct another geoprobe between the tank and the building to check the condition. 3) Prepare a report that either shows the site is clean or Justifies why the existing contamination is not a problem Contamination is contained, encapsulated and would undermine the building if it were removed. If a report is submitted, DEC will review it and determine if additional work is needed. 12/13/2000 - Thomas McCurdy of The Breakthrough Group (856-810-3402) submitted a closure request letter. It states that at some point (approx 8/2000) an application of Bio-Rem was made at two points between the tank and the building. On 10/24/2000 MW-1 was sampled and found non-detect for all contaminants within 8270 & 8021. MTBE = 1 ppb 1/2/2001 - Spill has been closed"

Remarks: "CALLER WAS EMPLOYED TO DO SOIL SAMPLES AND TEST FROM AN ABANDONED TANK USING METHOD 82-70 -- CANTAMINATED SOIL FOUND -- MIKE MULQUENE HAS ALREADY TALKED TO CALLER ABOUT THIS CONDITION "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 10/12/2001 - Sangesland spoke with Fred Caputo of Bayside Fuel. He said it was a minor spill from an overfill out the vent line. Sangesland then called the building super Samba (cell# 914-760-9832). Super says the oil company did a good job cleaning up and there was no longer a problem. Super says the spill was only outside on the sidewalk and no problems in the basement. Spill Closed This building has a history of bad spill in the basement. Cross ref spill #9805070 Harlem USA Project . When excavation was done to build the Harlem USA Project an endless flow of oil poured out from under this building - see photos in file The developers at Harlem USA solved the problem by building a watertight wall around the base of

SPILL NUMBER 0107208 (Continued) **S105234743**

#288 St.Nicholas Ave In 1999 a new tank was installed in the basement of this building and a 5'x 5' x 5' hole dug in the boiler room did not show any contamination. It is unknown what was the source of the oil under this building."

Remarks: "DUE TO A BAD VENT PIPE - ALL HAS BEEN CLEANED UP - BLEW THE LINE WHICH CAUSED OIL TO SPILL OUT"

DEC Memo:	"10/03/08 Sangesland spoke to Bill Schlageter. He said the contractors are moving quickly on this site. They discovered some contaminated soil during excavation. They staged the contaminated soil on plastic and will have it properly removed with manifests. They already took end point samples from the open excavation and will forward a report to DEC with end point test results. 10/03/08-HRAHMED-Bill Schlageter of Preferred Environmental called. As per him they excavated 20'X25' and 12' deep. At 12' they found shin on groundwater. 10/22/09-HRAHMED-Received email from Bill Schlageter on 10/03/08 outlining the remedial action plan: The subject property is currently undergoing an entire redevelopment of the property which includes the excavation of soils to 18 feet below grade surface (bgs) and dewatering of the water table an estimated (three to four feet). An existing dewatering system is operating at the property which includes an oil/water separator, etc and discharges to the municipal sewer system. The site is listed as an E -designated parcel by the New York City Department of Planning and a Remedial Action Plan was prepared by Impact Environmental, submitted to and approved by the New York City Department of Environmental

CONSTRUCTION SITE (Continued) **S109372113**

Protection for the removal of historical fill from the property and dewatering of groundwater. As part of the process of preparing a RAP to the NYCDEP, Impact collected and analyzed groundwater samples from the property. No petroleum-impacts were identified in the groundwater samples indicative of a petroleum-release at the property. Minor impairments were detected but were contributed by Impact to an upgradient off-site source. An excavator was utilized to delineate the on-site soil impacts. Impacts were observed to extend to a depth of 12 to 14 feet below grade surface, at which point groundwater was encountered. What appeared to be a slight sheen was observed atop of the groundwater. As part of the overall site re-development, the area of petroleum-impacted soils will to be excavated. Based upon observations, made by Preferred, the following Remedial Activities will be conducted: 1. Petroleum-impacted soils will be excavated, temporarily stockpiled on-site and eventually transported off-site to a licensed/permitted facility; 2. Preferred will collect a series of endpoint soil samples from sidewalls of the excavation. No bottom endpoint sample will be collected as the bottom of the excavation will be in groundwater; 3. As the site is going to be de-watered by three to four feet, and prior groundwater data did not reveal the present of significant petroleum-related groundwater impacts, Preferred does not propose to collected groundwater quality samples; and 4. The results of the endpoint samples will be included in a spill closure report submitted to the NYSDEC for review. 10/25/10-HRAHMED-Received closure report from Bill of preffered Env. As per the report, the whole site was excavated upto 18 ft below grade. Groundwater level at this was 12 ft. A dewatering system was set up to draw down the water table and allow for deeper excavation. As part of the dewatering system, the groundwater is pumped into a frac tank and through an activated carbon filtration unit before final discharge into the municipal sewer system. Water sample results from effluent and influent was below TAGM limit or not detected. Since the entire site a excavated upto 18 ft no end point soil samples were collected. Based on the report, the spill case is closed. A SCL was sent to: 124 Owners Longview LLC c/o RCG Longview Seven Penn Plaza New York, NY 10001 Att: Richard Gorsky "

Remarks: "Contractor discovered impacted soils, soil will be excavated and placed on plastic for disposal."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MANHOLE 44877 (Continued) **S107657053**

Coleman 14241 Cable Dept reported that Eric Weinstein 12230 Cable dept had found at 03:35 a spill of 16 oz cable oil leaked from a gash on a primary feeder cable in M44877. The oil is spilled on the arc proofing and dirt on the concrete floor of the manhole. The condition has been reported to Emerg Dept as a D-Fault, the feeder has not been identified & no D-Fault tag has been placed at this time. No environmental tag has been placed at this time, supervisor notified to bring a tag to the location. No fire or smoke, no sewers or waterways affected. No injuries, weather did not contribute to the spill hazard. Acct #14872 No private property affected. No oil filled equipment. No water, no sewer connection Concrete sump , no sump pump. No substantial cracks. Samples pending safe access. No cleanup actions taken. Parking: Access Anytime. Logged by D. Gaynair 20079 Update: 2/22/06 04:54. D-Fault Tag # 01246 Hung. Environmental tag #18710 Hung. "

Remarks: "16 ounces dielecric fluid. no to 5 question. clean-up pending de-energization of feeder. con ed ref 163038"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 12/11/03 TJD Transfer pump left running causing overfill of daytank located on roof of building. FDNY responded along with DEP. Roof drain allowed most of product to be discharged directly to NYC sewer. Remainder of impacts to roof cleaned using absorbents. Spill closed."
Remarks:	"FIRE DEPT ON SCENE OF SPILL ON THE ROOF OF A BUILDING - POSSIBLE

SPILL NUMBER 0009511 (Continued) **S104879609**

HEATER MALFUNCTION - THERE IS A DRAIN ON THE ROOF SO A NEARBY SEWER IS EFFECTED AT THIS TIME"

DEC Memo:	"8/5/13 TJD TTF letter prepared for project manager's signature (Piper). PBS #2-259837. Letter addressed to: Maloof & Ellis Management 2460 Lemoine Avenue 3rd Floor Fort Lee, NJ 07024 Attention: Greg Maloof (201)363-1482 unsigned letter uploaded to EDOCS 03-18-2015 - V. Brevdo This TTF Spill Case is transfered to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Ms. Ainura Doronova as Project Manager. - VB 03/18/2015: This spill case was transferred to A. Doronova. - AD 04/29/2015: Looked for the info in PBS database. PBS #2-259837. According to the file, the contact person is - Ezra Bennet of 281 St. Nicholas Partner LLC. AD 05/01/2015: Issued and sent a certified TTF letter to Ezra Bennet of 281 St. Nicholas Partner LLC. Response is due June 1, 2015. AD 05/18/2015: Received a response from E. Bennet. Will review. AD 06/26/2015: Reviewed the submitted documents. The cover letter from Monarch Realty Holdings LLC, says that they are not aware of a failed tank integrity test. They were informed by their boiler company that the building's tank would not withstand a pressure test and hired Alliance Mechanical to abandon the tank in place. There are affidavit from the contractor, a job invoice and copy of the check attached to the cover letter. The affidavit states that the aboveground 5,000-gallon #6 fuel oil tank was cleaned and filled with cement slurry according to the rules. AD 07/15/2015: Looked into database for the details. The spill was opened on August 2, 2013 when a 5,000-gallon #6 oil tank failed the tightness test. It was reported by Rightway Tank company. According to PBS database the tank in question is an aboveground tank in contact with soil. It was closed-in-place on April 22, 2014. Tried to contact Rightway Tank with no success. AD 08/20/2015:called and spoke with Rob Hill of Rightway Tank. He confirmed that his company performed the tank tightness test on this property on August 2, 2013. Requested to send me a copy of a tightness test report, since it was missing in our database. AD 10/2015: Called and left a message to Mr. Hill. AD"
Remarks:	"Failed test. Isolation test being scheduled."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region:	2
DER Facility ID:	294184
DEC Memo:	"Limited site investigation performed by Promatec/TRC, found very minor impact to soil, but not all locations were sampled, and wells installed appear not to have been downgradient from the tank. However, after meeting at site with consultants, it became apparent that additional investigation would be impossible due to space constraints and the nearby presence of subsurface utilities and a subway line. In light of this and minor nature of contamination identified, DEC agreed to No Further Action status for site in letter issued 9/5/97. - J. Kolleeny"
Remarks:	"2,500-gal gasoline tank removed in mid-1990s, dispenser suspected to have leaked. Spill was not reported at the time."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE/DO 1/17/03 TJD Demeo contact Bernie at NYC Tank Testing for additional information regarding tank size and building contact information. Location is unregistered with PBS. NYC Tank Testing was retained for test by Alba Combustion (718 931 1700). Tank is reportably a concrete wrapped 1,080 gallon. According to NYC Tank Testing a cut manway on top of tank is likely cause of tank test failure. No reported petroleum release at location. At time of test failure 39 inches of product remain in tank. Product has not been removed. NYC Tank Testing has not been authorized to do any additional work. Rose Marie from Alba Combustion was contacted to obtain owner information and confirm tank size. Information not available at time of inquiry. Alba will call DEC with requested information ASAP. Alba Combustion called back with contact as follows: Juan Ortiz - Building Super (917)412-5688 Mercedes Gonzalez - President of Tenants Association(212)662-3373 Juan contacted and stated tank has been leaking for several months. He cleans up the oil leaking from tank enclosure on a daily basis. No plan in place to empty or repair tank. Mercedes contacted who confirmed situation is an ongoing problem. Location is a HPD building. Mercedes provided following contact for HPD: Ms. Sumada Mena (212) 863-7313 Ms. Mena contacted, she was aware of situatiuon at building and confirmed HPD retained NYC Tank Testing to test tank. Demeo directed Ms. Mena to empty tank as leak has existed for months and has not been repaired. Ms. Mena stated she was building coordinator and not the appropriate contact. Demeo was provided contact information for Willie Kesknen from Technical Services Group (212)863-7307. Demeo left message for Willie Keskinen. Mr. Keskinen Director of TIL/Tech Group from HPD has stated a contractor will be at building today to empty tank and install temporary tank. Address for HPD is 100 Gold Street, NY NY 10038. Tank Test letter not sent as tank is to be taken out of service for repairs and/or replacement. Tipple to perform site visit and assess situation. 1/17/2003 TIPPLE VISITED SITE, Spoke with the building super Jaun Ortiz the oil had been cleaned daily since the leak began months ago. The stain on the floor indicates that the oil had never gotten close to the sump area and the floor surrounding the vaulted area is sound. There is a staining on the wall adjacent to the vault indicating the high probability of a leaking fill/vent line in addition to a tank problem. Building super will call and leave message once the tank is emptied and a temporary tank installed. 05/18/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Talked to Ms. Mena on phone (212)863-7313 she said, They have changed the tank three years ago. New york city owned this building. -QA Address: HPD/TIL 100 Gold Street Room 7 T - 1 NY NY 10038 06/21/06: Called to Willy Keskinen, Deputy Director, HPD. Talked to Ms. Shirley (secretary) regarding information of spill. She said she will convey to Mr. Willy and he will call me back at the ealiest. -QA 07/19/06: Called Ms. Sumada Mena and left message to call me back. -QA 07/20/06: Ms. Losario Vera (212)863-5199 called me and said she is trying to get the information regarding spill as soon as she will get she will send it to me. -QA 09/11/06: Called Mr.Willy Keskinen He was not available. Left message at (212)863-7307 Extn. 8893 to call me back regarding spill. -QA 10/12/06: Mr. Berney (718)731-7011 called me and he said he will do more researches and then he will call me back. -QA 10/18/06: Mr. Willie Keskinen, Deputy Director, TIL/Tech (Department of Housing Preservation and Development) sent me a

APARTMENT BUILDING (Continued) **S105997932**

closing confirmation letter to close the spill. According to his letter they hired S.J. Fuel company for clean up work. The purpose of installing a new oil tank was that the existing tank had a minor leak on the tank itself. No oil was spilled on the floor. The existing oil tank was old and replaced with a new tank. Also the basement has a new cement floor in and around the new tank, and shows no sign of oilk spillage. Based on these information DEC staff closed the spill. -QA "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification:	Conditionally Exempt Small Quantity Generator
Description:	Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

CON EDISON SERVICE BOX: 21125 (Continued) **1016148776**

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110055435373

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator
Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No

CON EDISON SERVICE BOX: 21114 (Continued) **1016148772**

Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

Registry ID: 110055455886

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TERRACE APARTMENTS, INC. (Continued) **U003396939**

Tank Info:

Tank Number:	001
Tank Id:	52368
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I05 - Overfill - Vent Whistle
F00 - Pipe External Protection - None
G00 - Tank Secondary Containment - None
L00 - Piping Leak Detection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
J03 - Dispenser - Gravity
K00 - Spill Prevention - None
D00 - Pipe Type - No Piping
E00 - Piping Secondary Containment - None
C00 - Pipe Location - No Piping

Tank Location:	3
Tank Type:	Stainless Steel Alloy
Tank Status:	In Service

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	42213
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None
B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
I04 - Overfill - Product Level Gauge (A/G)
L09 - Piping Leak Detection - Exempt Suction Piping
C02 - Pipe Location - Underground/On-ground
A00 - Tank Internal Protection - None

Tank Location:	6
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service

DEC Memo:	"Sangesland called Petro requesting further details - Rep will call back This spill needs follow-up 10.28.05 Sharif- I called James Young who was not available at that time.Left messege for him to call back about the clean up of the spill. 03/01/06 Sharif Rahman- I spoke with Madeline Reese,(212)828-8573 and she would relay the department's concern to James Young. 03/27/06 Sharif Rahman- Clean up letter went to James Young 355 W 123rd Street, Apt#1A New York, NY 10027 05/11/06 Sharif Rahman- I called Petro ,516-686-2030 and spoke with Keanny @ ext.3324. He informed me the customer's account is not active now and the customer did not respond to fix the tank problem. So, they suspended the delivery due to unsafe condition of the tank. 08/07/06 Rahman- Tried to inspect the baement tank room, but could not get access as no body was found in the house. It looked like the house is

YOUNG RESIDENCE (Continued) **S107416936**

now abandoned and no body lives there.Certified mail letter dated May 11' 06 returned undelivered."

Remarks: "Tank was leaking releasing 5 gal of material onto the dirt floor. Petro will be stopping the leak. Unknown who is doing the clean up."

DEC Memo: "Sangesland spoke to Pete Chen of city DEP. He said they were called to the site by complaints of petroleum odor. Area was fenced off, but there was a large puddle of oil in the center of the lot. Property owner is MOTIVA ENTERPRISES LLC Motiva Environmental manager: John Sexton 713-241-1507 Cross Ref PBS#2-190810 6/3/2010 Sangesland heard back from John Sexton at Motiva(Shell). He said they pulled tanks from the site within the last year and had an argument with the property owner. They believe someone opened the gates and dumped petroleum on the surface to create a new problem at the site. Motiva has hired a company to come in and dig out the contaminated soil. New end point samples were taken and a complete new closure report will be submitted when the results come back. Site contact for Motiva is: Robe Rule 540-943-8468 07/02/10-Hiralkumar Patel. found case assigned to me. letter has not been sent out yet. 07/06/10-Hiralkumar Patel. 2:03 PM:- spoke with Mr. Rule. he mentioned that report was submitted to DEC Piper under spill #: 0702470. received report from DEC Piper. surface spill was found in May. site developer hired contractor to remove soil. excavated 8 ft by 8 ft area to 3 ft depth. collected two endpoint samples. no contamination in endpoint samples. based on submitted report, case closed. **refer to spill #: 0702470.** Based on the information provided by the consultant Charles Sosik (Environmental Business Consultants) this spill was reopened."

Remarks: "contaminated soil found at old gas station"
