EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. on behalf of Kaufman New Ventures (Kaufman) to identify current or potential environmental concerns and Recognized Environmental Conditions (RECs) at the ±19,775 square foot site consisting of the property at 375 Lafayette Street (Block 531, Lots 17, 52, and 56) located in New York, New York. The ESA included a site inspection, review of historical information, completion of a federal/state/local environmental database search, and interviews with local and state agencies to assess current and past site conditions.

The subject property is currently developed with an asphalt-paved parking lot at street level and contains a one-story attendant's building and above-grade lifts for parking. The car parking lifts contain above-grade hydraulic pistons connected to a hydraulic oil compressor with built-in reservoir tank on top of a concrete pad in the northwest portion of the site.

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, the following recognized environmental conditions (RECs), de minimis conditions, and business environmental risks that may impact proposed redevelopment of the site were identified:

Recognized Environmental Conditions

A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. It is the opinion of the environmental professional that the following represent RECs:

Potential Impacts From Current and Historical Site Use

Based on observations made during the site inspection, the potential exists for the current use of above-grade hydraulic lifts and potential former use of subgrade hydraulic oil distribution piping associated with the above-grade hydraulic pistons to have an adverse impact to soil and groundwater conditions at the site. Some localized staining was observed on the lifts in the vicinity of the hydraulic pistons which are connected to a hydraulic compressor through a network of above grade metal hydraulic lines. One metal grate was observed in the southeast corner of the parking lot that contained two capped

metal hydraulic lines that entered a piping conduit approximately 2-feet below street level. Remnant hydraulic lines may potentially be present beneath the site.

Based on the review of historical Sanborn Fire Insurance Maps and radius report records between at least 1950 and 1972, the western portion of the subject property was formerly occupied by a gasoline filling station with two one-story service garages. No underground storage tanks were identified on the Sanborn Maps and no registered tanks were identified in the radius report. Due to the historical site use as a gasoline filling station, the potential exists for gasoline underground storage tanks (USTs) or associated impacted soil and groundwater to remain in the subsurface of the subject property which may not have been properly closed or removed in accordance with New York State Department of Environmental Conservation (NYSDEC) regulations.

Other historical subject property operations with potential to cause adverse impacts include a printing company on the eastern portion of the subject property at 36 Great Jones Street in 1921 (as identified on the Sanborn Maps) and an electronics company identified at 30 Great Jones Street in the radius report. Records associated with the electronics company included generation and disposal of hazardous waste used in electroplating operations between 1984 and 2007. A formal enforcement action filed against the Concord Electronics Corporation in 1985. Although all formal enforcement actions and written informal violations issued to the Concord Electronics Corporation reportedly achieved compliance, no documentation was provided regarding the nature of the violations issued, corrective measures taken, or potential impacts to subsurface conditions as a result of former electronics manufacture at this site.

Due to the potential use of chemicals associated with historical and current operations and the duration of these activities and the potential for gasoline USTs to be present in the subsurface, it is the opinion of the environmental professional that the historical and current site use has the potential to impact subsurface conditions at the site. As such, the historical and current use of the subject property is considered a REC.

Business Environmental Risks

A BER is defined as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations. It is the opinion of the environmental professional that the following represent business environmental risks:

Surrounding Sites

Based on the review of historical Sanborn Maps and the radius report, at least six gasoline filling stations and automotive repair facilities were located adjacent to or in the close vicinity of the subject property between 1921 and 2005. The radius report documented the tank removal and remediation of some of these sites; however, there is potential for off-site impacts associated with these sites to adversely impact the subject property. Subsurface impacts were identified at three former gasoline filling stations to the south and west of the subject property based on NYSDEC Spill case narratives provided in the radius report. Furthermore, the number of properties involving the use of aboveground storage tanks (ASTs), USTs, spills, and the generation and disposal of hazardous waste on adjacent properties and the surrounding area represent a business environmental risk due to the potential for offsite migration of contaminants to impact sub-slab soil, soil vapor, and/or groundwater below the subject property, and may impact future site redevelopment activities.

Historic Urban Fill

Based on the urban density of the area, it is likely that the subject site area contains historic urban fill which is typically characterized by elevated concentrations of poly-aromatic hydrocarbons (PAHs) and metals. The presence of fill will require implementation of soil handling and management procedures to address excavation, reuse, handling, and possible offsite disposal of this material if the site were to be redeveloped.

Potential Presence of Undocumented Underground Storage Tanks

While no evidence of USTs was observed during the site inspection, the building at the site has historically been operated for commercial, light manufacturing, and residential uses and as a gasoline filling station. Due to this historical use of the site and the previous development prior to the current parking facility, it is the opinion of the environmental professional that the potential presence of heating oil USTs beneath the lots or adjacent sidewalks represents a business environmental risk. During any proposed site redevelopment a contingency plan to properly remove and dispose of any USTs that may be encountered in accordance with state and local regulations should be employed.

De Minimis Conditions

A de minimis condition is defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. It is the opinion of the environmental professional that the following represent de minimis conditions:

Hydraulic Oil Release

Evidence of a minor release of hydraulic oil limited to small isolated areas in the vicinity of above-grade hydraulic pistons connected to car parking lifts was observed during site reconnaissance. Staining was observed on the asphalt pavement, and on the metal structure of the lifts throughout the property. Sheen was observed on pooled rainwater in isolated areas near the hydraulic lifts. The parking lot is paved with asphalt and no cracking or penetrations in the vicinity of the lifts were observed. There was no evidence of a substantial release that would impact the subsurface of the subject property and require a regulatory response related to the use of the current hydraulic lift system.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) has completed a Phase I Environmental Site Assessment (ESA) of a ±19,775 square foot site located at 375 Lafayette Street, New York, New York (Figure 1).

This ESA was conducted to identify current or potential environmental concerns and/or Recognized Environmental Conditions (RECs) resulting from past or current activities on the subject property, as well as to evaluate immediately surrounding environs with the potential to impact upon the property. The assessment consisted of a site reconnaissance of all accessible property areas, a review of State and Federal environmental databases as they concern the subject property and surrounding areas, contact with Federal, State and local agencies, a review of Sanborn Fire Insurance Maps of the subject property and surrounding areas, and a review of local/county records.

The ESA was conducted in a manner consistent with industry standard and practice and in accordance with the Standards of the American Society for Testing and Materials (ASTM) E1527-13 Standard Practice for Environmental Site Assessments. Any deviations from this practice are provided in Section 11.0 of this report.

2.0 RELIANCE/LIMITATIONS

This ESA report was prepared for Kaufman New Ventures (Kaufman), for the Proposed 375 Lafayette Street Development and for the objectives of due diligence. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the subject property addressed herein, or by any third party without a written authorization from Langan.

Langan's scope of services, as described in the proposal dated 24 May 2018, was limited to that agreed to with Kaufman and no other services beyond those explicitly stated are implied. No exploratory borings, sampling of soil, soil vapor, or groundwater, or laboratory analysis were performed by Langan as part of the scope of services.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the subject property. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of Recognized Environmental Conditions (RECs) at the subject property. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular site. Therefore, Langan cannot "insure" or "certify" that the subject property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary thoroughness and competence of our profession. The user is cautioned that federal, state, and local laws may impose environmental obligations that are beyond the scope of ASTM Practice E 1527-13.

The conclusions, opinions and recommendations provided in this report are based solely on the following activities:

- Visual observations of the subject property and the immediate vicinity at the time of Langan's site visit;
- Review of relevant available historical information; and,
- Correspondence and/or discussion with personnel knowledgeable about the site.

The conclusions, opinions and recommendations are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the time of our site visit.

The User is responsible for the review and identification of environmental liens, activity, and use limitations, and for ascertaining reasons for significantly lower purchase property price in accordance with Section 6 of ASTM E 1527-13. A questionnaire covering these above-concerns was provided to Kaufman and completed by the general counsel for Edison Properties, LLC and is included as Appendix A. In addition, a similar questionnaire was provided to Mr. Naveen Liyanaarachchi, the assistant site manager for the subject property, and is included as Appendix B. If any of these above-concerns were uncovered during the course of the Phase I ESA, they are addressed in this report.

The report findings are based in part on information provided by local, county and state officials and environmental databases from Federal and State sources. Langan assumes no responsibility for the accuracy and completeness of this information. Visual observations discussed in this report represent conditions at the time of the site inspection and may not be representative of the past or future site conditions.

As per ASTM E1527-13, Phase I ESA Report deviations, as well as professional opinions regarding these deviations, are listed in Section 11.0.

This ESA has been prepared for the sole use of Kaufman. This ESA should not be relied upon by other parties without the express consent of Langan and Kaufman. In accordance with Section 4.6 of ASTM E 1527-13 and 40 CFR §312.20, a Phase I ESA may be considered valid for one year starting from the commencement date of the assessment listed on the front cover of this report. The formal property acquisition/real estate transaction must take place during this period. However, the following components must be conducted or updated within 180 days (six months) prior to the date of the property acquisition/real estate transaction:

- Interviews with past and present owners, operators and occupants;
- Searches for recorded environmental cleanup liens;
- Review of governmental records;
- Site Reconnaissance of the property and adjoining properties; and,
- The declaration by the Environmental Professional.

3.0 SITE DESCRIPTION

The subject property is designated as Block 531, Lots 17, 52, and 56 by the New York City Department of Finance (Figure 2). The site is currently occupied by an Edison Park Fast car parking lot that consists of an asphalt paved lot at street level, a one-story parking attendants' building along Great Jones Street, a hydraulic oil generator with internal reservoir, above-grade hydraulic oil distribution piping, and above-grade four-level car racks that each contain a hydraulic piston built into the frame of each parking bay. Localized minor staining was observed on the parking racks in the vicinity of the hydraulic pistons, and on the asphalt pavement below. The western portion of subject property was historically occupied by a gasoline filling station between 1950 and 1969 according to historical resources reviewed as part of this Phase I ESA.

The subject property is bound to north by a five-story mixed-use commercial and office building, a four-story mixed-use commercial and office building affiliated with New York University, and an eight-story residential apartment building. The subject property is bound to the east by a seven-story residential building, to the south by Great Jones Street followed by seven lots containing a 13-story mixed-use commercial and office building, two six-story and one three-story mixed-use commercial and residential buildings, one seven-story residential building, two seven-story industrial/manufacturing buildings, and an active construction site. The subject property is bordered to the west by Lafayette Street underlain by the NYCTA 4, 5, 6-Subway tunnel, followed by a six-story mixed-use commercial and office building.

The property is currently zoned as a manufacturing district (M1-5B) according the New York City Department of City Planning zoning map dated 11 October 2012.

4.0 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

For the purpose of report completeness and to better understand the subsurface conditions, the geologic conditions in the general area of the subject property are discussed in this section.

The "Surficial Geologic Map of New York" by the New York State Museum State Geological Survey indicates that the surficial geology at the site consists of till which is generally an impermeable layer comprised of poorly sorted and variably sized clasts. The subject property is located within an area where bedrock may be present within 1- to 3-meters of surface grade and may sporadically outcrop from the surface. According to the "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey" by Charles A. Baskerville the site is underlain by the Hartland Formation which consists of interbedded units of feldspar, schist, and amphibolite.

Test borings were completed in the vicinity of the subject property during a geotechnical investigation conducted by Langan in 2004 at a site located approximately 250-feet to the south of the subject property on Bond Street. The site subsurface conditions documented during this geotechnical investigation consisted of a 15- to 17-foot thick layer of miscellaneous fill underlain by successive layers of sand, fine sand, and mica schist bedrock. Rock was typically encountered at depths that ranged from 68- to 74-feet below grade. Groundwater was measured in observations wells installed as part of the geotechnical investigation at approximately 43-feet below grade.

The subject property is topographically at a higher elevation than much of the surrounding area. Based on site/area topography in the vicinity of the subject property and the surrounding area observed during the site inspection, groundwater flow within the overburden material is generally anticipated to be to the east, towards the East River.

5.0 USER PROVIDED INFORMATION

A questionnaire was completed by the general counsel for Edison Properties, LLC and is included in Appendix A. Information obtained from this questionnaire is discussed in the sections below. Documents provided by the User are discussed in this section.

5.1 Title Records

A Title Search was not provided by the User for this ESA. Langan completed a limited review of available online records maintained by the New York City Department of Finance to determine current and former site ownership. These records are discussed in Section 8.0.

5.2 Environmental Liens or Activity and Use Limitations

Reasonably ascertainable recorded land title records and lien records that are filed under federal, tribal, state, or local law should be reviewed to identify environmental liens or activity and use limitations, if any, that are currently recorded against the property. Any environmental liens or activity and use limitations are required to be reported to the Environmental Professional conducting the ESA per ASTM E1527-13.

No environmental liens or use limitations (engineering or institutional controls) were identified for the subject property in the EDR report or by the User. Information regarding the 'E'-designation status of the property can be found in Section 8 of this report.

5.3 Specialized Knowledge

Specialized knowledge is defined by ASTM E 1527-13 as *"any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property*". For example, a User is involved in the same line of business as current or former occupants of the property or adjoining

property and has specialized knowledge of the chemicals and processes used in this line of business.

The User did not provide specialized knowledge material related to recognized environmental conditions in connection with the property as part of this ESA.

5.4 Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the User shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User should try to identify an explanation for a lower price which does not reasonably reflect fair market value if the property were not contaminated.

The User indicated that no valuation reduction for environmental issues occurred for the ground lease of the subject property.

5.5 Commonly Known Information

If the user is aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate such information. This information may include past uses of the property, specific chemicals that were used on site, spills or releases or environmental cleanups that have taken place.

No additional information regarding the environmental condition of the subject site was provided to Langan.

5.6 Documentation Provided by the User

No additional information regarding the environmental condition of the subject site was provided to Langan.

6.0 REVIEW OF PREVIOUS LAND USE

Historic Sanborn Fire Insurance Maps and City Directory Information were requested from Environmental Data Resources (EDR) of Shelton, Connecticut. Provided are descriptions of the materials provided by these resources.

6.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps of the subject property and surrounding area dated 1895, 1904, 1921, 1950, 1969, 1975, 1979, 1980, 1983, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, and 2005 were obtained from Environmental Data Resources and reviewed as part of this ESA. Copies of Sanborn Maps are provided in Appendix C.

Subject Property

In 1895 the subject property is developed with five four-story buildings of unspecified use in the eastern portion of the site, and the Mission of the Immaculate Virgin church building on the western portion of the site. Three horizontal boilers are shown in the Lafayette Place roadway to the west of the church building. The number of stories is not labeled for the church building, which contains one elevator. In 1904, the church building is labeled as a three- to eight-story building with two basement levels; two horizontal boilers are shown in the Lafayette Place roadway to the west of the church building. An eight-story commercial building with one basement level, an elevator, and loading flats is shown in the center of the subject property, and one horizontal boiler is shown in the Great Jones Street roadway south of the commercial building. The remaining four-story buildings are now shown with basement levels. Three are labeled for commercial use with loading flats and one is labeled for mixed commercial and residential use. In 1921, the church building is labeled as vacant and the four-story commercial building at 36 Great Jones Street is labeled as a printer; the former mixed-use building is now labeled for commercial use with loading flats.

In 1950, the church building on the western portion of the subject property is no longer shown, and has been replaced by a filling station with two one-story service garages on the northern and eastern portions of the lot and a one-story commercial building connecting the two. Conditions on the eastern portion of the subject property are similar to those shown on the 1921 Sanborn Map, with the exception that the printer is no longer labeled. The horizontal boilers formerly

located in the Great Jones Street and Lafayette Street (formerly Lafayette Place) roadways are no longer shown on the 1950 Sanborn Map. In 1969, the four-story buildings with basements have been demolished and are replaced with a parking lot; conditions on the remainder of the subject property are consistent with those shown on the 1950 Sanborn Map. In 1975, the gasoline filling station, one-story service garages, and one-story commercial building have been removed and replaced with a parking lot; a small one-story structure, most likely an attendants' booth, is shown on the northwest corner of the parking lot. Conditions shown on the remainder of the subject property are consistent with those shown on the 1969 Sanborn Map. Conditions shown on the 1979 through 2005 Sanborn Maps are consistent with those shown on the 1969 Sanborn Map with the exception that the one-story building formerly on the western portion of the site is not shown on the 1992 through 1995 Sanborn Maps, and is shown in the southwest corner of the parking lot on the 1996 through 2005 Sanborn Maps.

Adjacent North

Properties adjacent to the north of the subject property on the 1895 Sanborn Map include a five-story convent and two-story chapel connected to the Mission of the Immaculate Virgin church, and four four-story buildings of unspecified use. In 1904, the convent is shown with two basement levels, and the chapel with one basement level. Two of the four-story buildings are shown with basements levels and are labeled for mixed commercial and residential use and commercial use, both with loading flats. The remaining two former four-story buildings have been replaced with one eight-story commercial building with loading flats containing two elevators and one basement level.

Conditions shown on the 1921 and 1950 Sanborn Maps are similar to those shown on the 1904 Sanborn Map, with the exception that one of the four-story buildings is shown as a vacant lot in 1950 and one of the four-story buildings is now labeled as a five-story building with a basement. On the 1969 Sanborn Map, the convent and chapel buildings are now labeled as unspecified flats and the five-story building has been removed and the parcel is identified a parking lot. The former convent is labeled as a warehouse and residential building on the 1975 Sanborn Map; no other changes are shown. In 1979, the eight-story commercial building is now labeled for as mixed-use commercial, residential, and unspecified manufacturing. Conditions shown on the 1980 through 2005 Sanborn Maps are consistent with those shown on the 1979 Sanborn Map with

the exception that the five-story former convent building is now labeled as mixed-use commercial and lofts from 1992 to 2005.

Adjacent East

Properties adjacent to the east of the subject property on the 1895 Sanborn Map include a seven-story building of unspecified use with one elevator and the rear yard of a four-story building of unspecified use. On the 1904 Sanborn Maps, the seven-story building is labeled for commercial use with loading flats and one basement level and the rear yard has been developed with a building addition. Conditions on the 1921 through 2005 Sanborn Maps are similar to those shown on the 1904 Sanborn Map.

Adjacent South

Properties adjacent to the south of the subject property shown on the 1895 Sanborn Map include two seven-story buildings, one six-story building, two three-story buildings, and three five-story buildings of unspecified use. A three-story building labeled as Fire Patrol is also shown. Four of the buildings contain elevators. On the 1904 Sanborn Map, the Lafayette Place roadway has been extended to the south past Great Jones Street. Adjacent properties to the south include nine three- to seven-story commercial buildings with one or two basement levels; mixed use commercial/residential us is labeled for two buildings, commercial use is labeled at one of the buildings, commercial use with loading flats is labeled at five of the buildings, and commercial use with manufacturing flats is labeled at two of the buildings. One of the buildings is identified as a stable and the fire patrol building remains labeled. The westernmost property is mostly vacant and labeled as packing boxes with a small one-story commercial building.

Conditions shown for adjacent properties on the 1921 Sanborn Map are generally consistent with those shown on the 1904 Sanborn Map with the exception that a mixed-use commercial and residential property is labeled as a warehouse with auto storage. A gasoline station containing two 550-gallon gasoline tanks is labeled southwest of the intersection of Lafayette Street and Great Jones Street (366 Lafayette Street) and a gasoline station and automobile service shop with three 275-gallon buried gasoline tanks is shown northeast of the intersection of Bond Street and Lafayette Street (357-371 Lafayette Street). On the 1950 Sanborn Map, the gasoline filling station shown on the 1921 Sanborn Map is expanded to include the majority of the eastern side of the

Lafayette Street frontage between Bond Street and Great Jones Street and the gasoline filling station shown at 366 Lafayette Street is expanded to occupy the entire western Lafayette Street frontage between Bond Street and Great Jones Street. Adjacent properties to the south now include automobile service and automobile repair facilities (21 and 25 Great Jones Street), a motor freight station, and an unspecified flat with a garage on the first floor. In 1969, the automobile repair facility to the south is no longer shown and a second garage is labeled. The northern portion of the gasoline filling station at 366-372 Lafayette Street is labeled as an automobile laundry until 1991 when it is shown as automobile repair. Conditions shown on the 1975 through 1996 Sanborn Maps are generally consistent with the 1969 Sanborn Map. The gasoline filling station and one-story automobile service building along Lafayette Street is shown as a vacant lot on the 2001 Sanborn Map; no other notable chances are shown through 2005.

Adjacent West

On the 1895 Sanborn Map, adjacent properties to the west across Lafayette Place include one five-story building of unspecified use containing two elevators. In 1904, the building is labeled as a six-story commercial building with loading flats and a basement. Although not adjacent to the subject property, a four-story building with two basement levels labeled as "Whiting Manufacturing Co. – Silversmiths" is shown northwest of the subject property at 9-13 Lafayette Place. Conditions shown on the 1921 Sanborn Map are consistent with those shown on the 1904 Sanborn Map; the Whiting Manufacturing Co. building is now labeled for unspecified commercial use with loading flats. Conditions shown through the 2005 Sanborn Map are generally consistent with those shown on the 1921 Sanborn Map.

Sanborn Map Review Conclusions

Based on the identification of a gasoline filling station on the western portion of the subject property between 1950 and 1969, it is in the opinion of the environmental professional that the historical site operations may have adversely impacted subsurface conditions at the subject property and, therefore represents a REC. Additionally, based on the identification of gasoline filling stations, automobile repair garages, and auto washes to the south and southwest of the subject property, it is in the opinion of the environmental professional that the potential for off-site migration of contaminants to impact

sub-slab soil, soil vapor, and/or groundwater below the subject property represents a BER.

6.2 City Directory Search

City directory information was obtained from EDR in an attempt to identify past uses of the subject property and establishments in the surrounding area. As provided in the City Directory Abstract (Appendix D), business directories including city, cross-reference and telephone directories were reviewed. City directories include the site address for the years 1920 through 2014 including 1920, 1923, 1927, 1934, 1938, 1942, 1947, 1950, 1956, 1958, 1963, 1968, 1973, 1978, 1983, 1998, 2000, 2006, 2010, and 2014.

The City Directory Report for the subject property listings consists primarily of commercial and light manufacturing listings including clothing manufacturers, hat manufacturers, electronics manufacturers, and paper companies. The following historic listings refer to businesses of potential concern that were formerly located on the subject property:

Address	Business Name	Listing Date
30 Great Jones Street	Concord Electronics Corp.	2000-2006
	Bernhardt Zine Paper Co. Inc.	1938-1973
	Ainsley Hat Co. Inc.	1938-1963
	Art Corrugated Co.	1938-1968
	Miller Hat Co. Inc.	1947-1958
	Empire Raincoat Co.	1947
	Bay MFG Co.	1942
	Pennant Hat Co.	1938
	Crown Hat Frame Co.	1927
	Elgin Hat Frame Co. Inc.	1927
	Lucie Gustav Paper	1927
	Solash Barnet Caps	1927
	Success Hat Co	1927
32 Great Jones Street	A & M Metal Polishing	1956-1958
36 Great Jones Street	Gelman MFG Co.	1947-1950
	Mandel & Levine Printers	1927
38 Great Jones Street	Bond Service & Repair Corp.	1938-1956

Historical site operations including paper and textile manufacturing, electronics manufacture, and hat making may potentially involve the storage, generation, and disposal of hazardous materials. The Concord Electronics Co. was identified in the radius report as a hazardous waste generator between 1980 and 2007 for the generation and disposal of electroplating solutions, and received a formal enforcement action in 1985. No records were identified for the paper and textile manufacturing companies, or the hat making companies in the radius report.

Listings over the years for surrounding properties identified businesses of potential concern including: auto repair and service (1938-1942, 1998-2000), gasoline filling stations (1938-1947), trucking companies (1938-1998), publishing and printing companies (1927-1988), silversmiths and metal stamping (1938-1958), clothing dyers (1938), textile manufacturing (1968), and plastic manufacturing (1947-1968).

The trucking company, located at 37 Great Jones Street, is shown as a motor freight station on the 1950 Sanborn Map, but is not associated with records of petroleum storage, release, or the generation and disposal of hazardous waste. The auto repair facilities, 25 Great Jones Street, 33 Great Jones Street, and 35 Great Jones Street were confirmed on historic Sanborn Maps as auto repair facilities or garages between 1921 and 1950. Additionally, the address 371 Lafayette Street, listed in the City Directory Abstract as "Car Land" in 1998 and 2000, is shown on the 1996 Sanborn Map as an unspecified commercial building attached to an auto repair facility and a gasoline filling station. Potential subsurface impacts associated with the gasoline filling station and auto repair facilities at 363-371 Lexington Avenue, adjacent to the south of the subject property, are discussed in detail below.

City Directory Review Conclusions

It is the opinion of the environmental professional that potential for adverse impacts to the subsurface of the subject property associated with the former gasoline filling stations and auto repair facilities located adjacent to the subject property and in the surrounding area are moderate and could potentially affect subsurface conditions on the subject property. As such, potential impacts from surrounding sites represents a business environmental risk.

7.0 REGULATORY DATABASE SEARCH

A database search report that identifies sites listed on state and federal databases within the ASTM-required radii was obtained for the property from Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. A copy of EDR's complete report is provided as Appendix E.

The report included the following databases specified by the ASTM Phase I protocol as well as non-ASTM databases (not listed):

RECOMMENDED/**REQUIRED** SEARCH DISTANCES
1.0-mile
Federal National Priority List (NPL)
Federal RCRA CORRACTS Facilities List
State- and Tribal-Equivalent NPL
0.5-mile
Federal Delisted NPL
Federal CERCLIS/SEMS**
Federal CERCLIS NFRAP List/SEMS-Archive**
Federal RCRA non-CORRACTS TSD Facilities List
State- and Tribal-Equivalent CERCLIS
State and Tribal Landfill and/or Solid Waste Disposal Site Lists
State and Tribal Leaking Underground Storage Tanks (LUSTs)
State and Tribal Voluntary Cleanup Sites
State and Tribal Brownfields Sites
Subject Property and Adjacent Properties Only
Federal RCRA Generators List
State and Tribal Registered Storage Tanks
Subject Property Only
Federal ERNS List
Federal Institutional Controls/Engineering Controls Registries
State and Tribal Institutional Controls/Engineering Controls Registries

* A description of these databases and a complete listing of sites identified on the above-referenced databases is provided in the EDR Report.

** As of March 2016, SEMS replaced the CERCLIS database and SEMS-Archive replaced the CERCLIS NFRAP database.

Subject Property

Addresses associated with the subject property including 375-379 Lafayette Street, 30 Great Jones Street, and 379 Lafayette Street are identified in the following databases in the radius report:

- EDR Historical Auto Stations (EDR Hist Auto);
- NY Aboveground Storage Tanks (NY AST);
- NY Spills Database (NY Spills);
- Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG);
- United States Environmental Protection Agency (USEPA) Enforcement and Compliance History Online (ECHO);
- USEPA Facility Index System (FINDS);
- USEPA Integrated Compliance Information System (ICIS); and,
- NY Manifest, PA Manifest, RI Manifest, and NJ Manifest Databases.

The subject property was identified in the EDR Hist Auto database as the H B Service Center gasoline service station that operated at 375-379 Lafayette Street between 1969 and 1972. According to a review of historical Sanborn Maps, a gasoline station was shown on the subject property at 375-379 Lafayette Street on the 1950 and 1969 Sanborn Maps.

The subject property is identified in the NY AST database as an unregulated/closed site registered in the NYSDEC Petroleum Bulk Storage (PBS) Program as Facility No. 2-207543 for one 1,500-gallon No. 2 fuel oil AST in the former apartment/office building located at 30 Great Jones Street. According to the radius report, the AST was installed in November 1976 and removed in May 2008. This address is also identified in the NY Spills database for the release of 10-gallons of No. 2 fuel oil that occurred on 13 December 2002 as the result of human error and assigned Spill No. 0209425 by NYSDEC. Based on the NYSDEC case narrative provided in the radius report, No. 2 fuel oil was spilled into a basement vent. Following a cleanup and on-site inspection by NSYDEC, Spill No. 0209425 was administratively closed on 13 January 2004.

Concord Electronics Corp., located at 30 Great Jones Street, is listed in the RCRA SQG, NY Manifest, RI Manifest, ICIS, FINDS, and ECHO databases for forms received by the USEPA on 1 January 2007 classifying the site as a SQG of waste impacted with hazardous concentrations of an unspecified type of waste. Historical

generator information classified the site as a Large Quantity Generator (LQG) in 2006 for the generation of waste impacted with hazardous concentrations of arsenic, cadmium, chromium, lead, silver, wastewater treatment sludges from electroplating operations, corrosive waste, and reactive waste. This site is also identified as a SQG in 2006 and as an LQG of the hazardous waste types listed above from 1992 to 2004. Historical generator information also classified the site as a LQG of waste impacted with hazardous concentrations of copper cyanide, potassium cyanide, silver cyanide, and sodium cyanide in 1980. Written informal violations were issued to the site in 1984, 1995, and 2005, all of which achieved compliance. This facility is listed in the RI Manifest database for the disposal of hazardous sludges used in electroplating operations between 1990 and 1998, and in the NY Manifest database for the disposal of hazardous sludges used in electroplating operations between 2004 and 2007

The Concord Electronics Corp. is listed in the FINDS database for being tracked through the USEPA Toxics Release Inventory System and through the RCRA Program as a biennial reporter. According to the radius report, a formal enforcement action was filed in December 1985 and the site ceased reporting as a hazardous waste biennial reporter in January 2006. North American Industry Classification System (NAICS) codes provided in the radius report identify the site as machine shops (332710) and electroplating, plating, polishing, anodizing, and coloring (332813). No additional information was provided in the radius report, or in records maintained online by USEPA regarding the outcome of the formal enforcement action filed against the Concord Electronics Corporation in 1985.

The subject property address 379 Lafayette Street is also identified in the RCRA Non-Generators/No Longer Reporting (NonGen/NLR), FINDS, ECHO, and Manifest databases associated with Con Edison Manhole: 59368. As the Con Edison manhole is likely beneath the street or sidewalk adjacent to the subject property, it is discussed in the surrounding properties section below.

Based on the historical use of the subject property as the H B Service Center gasoline service station between 1969 and 1971, and use of the subject property for the manufacture of electrical components including on-site electroplating operations between 1984 and 2007, it is in the opinion of the environmental professional that historic site use has the potential for adverse effects to the soil, groundwater, and/or soil vapor quality at the site; therefore, historical use of the subject property is identified as a REC.

Surrounding Properties

Based on the large number of database records identified within one mile of the subject property (1,146), Langan limited the review of surrounding properties to adjacent sites and sites within 1/8-mile from the subject property. It is the environmental professional's opinion that based on the dense development of the site area, and former, current and proposed use of the site that the review of the database pertaining to this more limited area is appropriate.

Langan evaluated the following to determine whether additional environmental records with respect to these facilities, including the orphan sites, should be reviewed:

- Case status (i.e., whether a No Further Action letter has been issued or a case has been closed);
- Type of database and whether the presence of soil or ground water contamination is known;
- Distance of the site from the subject property; and,
- Whether the site is upgradient or downgradient of the subject property based on local topography and the anticipated eastern groundwater flow direction.

Langan reviewed the information provided using the above criteria and the findings for adjacent and notable records are discussed below.

Hudson River PCB Contamination

The Hudson River PCB Site is identified as a 200-miles stretch of the river that is impacted by 1.1 million pounds of PCBs discharged by General Electric Co. over thirty years. PCBs adhered to sediments and accumulated downstream of the discharge. The removal of Fort Edward Dam in 1973 resulted in the remobilization and downstream distribution of sediments that had accumulated upstream of the dam. River scouring and erosion have also contributed to redistribution. Non-aqueous phase PCB-bearing oils leaking into the river serve as a continuing source of contamination. Forty hot spots have been identified as sediments containing greater than 50 parts per million PCBs. The Hudson River PCB Site is found in the following databases: National Priorities List, Comprehensive Environmental Response, Compensation, and Liability Information System, RCRA Large-Quantity Generators, US Engineering Controls, US Institutional Controls, NY Historic Leaking Tanks, CONSENT, Record of Decision, and NY Manifest.

It is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from these listings is low.

Center Street Associates / Post Brothers Service Station – 363-371 Lafayette Street

The Center Street Associates / Post Brothers Service Station site, located adjacent to the south and hydraulically cross-gradient from the subject property at 363-371 Lafayette Street is identified in the NY UST, NY LTANKS, and EDR Hist Auto databases according to the radius report. This site is identified in the EDR Hist Auto database as 371 Lafayette, a gasoline service station that operated between 1987 and 1994, and as Post Bros. Service Station Inc., a gasoline service station that operated from 1969 to 1976 and 1980 to 1986. The site is listed in the NY UST database as an unregulated/closed site registered in the NYSDEC PBS Program as Facility No. 2-349836 for six 550-gallon gasoline USTs installed in August 1962 and removed in September 2000. A tank test failure was reported to NYSDEC on 19 April 1994 and assigned Spill No. 9400935 as identified in the NY LTANKS database. A subsurface investigation was completed in May 2002 and included installation of two soil borings to evaluate potential subsurface gasoline impacts associated with the failed UST. According to the NYSDEC case narrative provided in the radius report, no visual or olfactory indications of petroleum contamination were observed in either of the soil borings completed; one of the soil borings encountered a sand layer between 22- and 28-feet below street level that was determined to be clean sand backfill associated with construction of the NYCTA Subway Line below Lafayette Street. Sample analytical results were not provided in the radius report, and NYSDEC administratively closed the LTANKS Spill case on 17 May 2002. Although not associated with the address range of the Center Street Associates/Post Brothers Service Station site, two complaints were reported to NYSDEC at the intersection of Lafayette Street and Bond Street related to gasoline odors infiltrating into building basements. Spill No. 9306682 was assigned by NYSDEC on 31 August 1993 and Spill No. 9400898 was assigned by NYSDEC on 19 April 1994 both related to intrusion of gasoline fumes into the basement of 20 Bond Street, located approximately 224-feet southwest and hydraulically upgradient from the subject property. No further information was provided in the radius report; NYSDEC administratively closed Spill No. 9306682 on 3 September 1993 and administratively closed Spill No. 9400898 on 19 June 1994.

Although soil impacts were not identified during a limited subsurface investigation at this former gasoline filling station, soil boring locations were not provided for review and groundwater samples were not collected. Based on the potential for this site to impact regional groundwater quality, it is in the opinion of the environmental

professional that the potential for adverse impacts to the subject property from this site is moderate.

Former Gasoline and Automotive Repair Facilities

The sites discussed below were identified on the Sanborn Fire Insurance Maps as filling stations or automotive repair facilities and are associated with regulatory records as identified in the radius report.

Former Penske – 40 Bond Street

The former Penske trucking site, located approximately 242-feet south and hydraulically cross-gradient from the subject property at 40 Bond Street is shown as a parking lot with one-story building of unspecified use on historical Sanborn Maps between 1921 and 2004. This site is identified in the NY Spills database for identification of gasoline and diesel impacts in soil and groundwater associated with seven 550-gallon USTs removed from the site in 1994; NYSDEC assigned Spill No. 0330066 on 11 February 2004 referencing a release date of 28 June 1994. According to the NYSDEC case narrative provided in the radius report, a UST closure report was never submitted documenting the removal of the seven 550-gallon USTs, prompting additional investigation and reporting during redevelopment of the site with a residential building circa 2004. A Phase II subsurface investigation was completed that included delineation of soil impacts to the extent possible; however, no additional information was provided related to the extent or limitations of the delineation completed. Excavation was completed for site redevelopment and 16 post-excavation soil end-point samples were collected in June 2006. A waterproofing/vapor barrier system and active sub-slab depressurization system were incorporated into site development and NYSDEC administratively closed Spill No. 0330066 on 18 September 2008.

Harry's Automotive Repair / Panoramic Auto Service Inc. – 10-12 Bond Street

The Harry Automotive Repair / Panoramic Auto Service Inc. site, located approximately 240-feet west-southwest and hydraulically cross-gradient of the subject property at 10-12 Bond Street is identified in the EDR Hist Auto database as Harry's Service Station Inc., Harry's Automotive Repair Corp., Amsterdam Mercantile Operating Corp., S&P Automotive, S&P Automotive Enterprises, Amsterdam Merc Operating, Panoramic Auto Service Station, and Apollo Towing Inc. listed as gasoline service stations and/or general automotive repair shops that operated between 1971 and 2003. This location is also shown as a filling station on historic Sanborn Maps between 1950 and 2005.

This site is identified in the NY UST database as 10-12 Bond Street Partners, LLC for three 2,000-gallon USTs of unknown content installed in January 1991 and closed-in-place in October 2006. The former gasoline station is listed in the NYSDEC Spills database as "Con Edison" but is related to the former gasoline station based on the information provided. According to the radius report, a caller advised that there was an ongoing problem at the gasoline service station at 10 Bond Street and NYSDEC assigned Spill No. 9710410 on 10 December 1997. No further information was provided and NYSDEC administratively closed the spill on 10 December 1997. Subsequently, Spill No. 0608806 was assigned by NYSDEC on 31 October 2006 based on soil analytical results collected from the vicinity of three USTs reportedly closed in October 2006. According to the NYSDEC case narrative for Spill No. 9710410, three USTs and connective piping passed a tightness test and were filled with concrete slurry. Soil borings completed around the USTs and dispenser islands did not identify exceedances of NYSDEC Technical and Administrative Guidance Memorandum (TAGM 4046) cleanup criteria. NYSDEC administratively closed Spill No. 0608806 on 15 April 2008 following receipt of a UST closure report and soil sample analytical results.

A&P Service Station – 8 Bond Street

The A&P Service Station, located approximately 349-feet south-southwest and hydraulically downgradient of the subject property is identified in the NY UST database for four 550-gallon gasoline USTs and one 550-gallon UST of unknown contents installed in 1961 and converted to non-regulated use in October 1993. This site is identified in the NY Spills database for two reports of gasoline fumes in the basement of the 8 Bond Street building reported to NYSDEC and assigned Spill Nos. 9707585 and 9707584 on 26 September 1997. According to the NYSDEC case narrative for Spill No. 9707585 provided in the radius report, gasoline vapors were reportedly intruding into the basement of 8 Bond Street from the gasoline station at the adjacent 10-12 Bond Street site discussed above. The potential vapor intrusion pathway was identified to be a leaking sewer main servicing both buildings; vapors subsided following actions to seal the leaking sewer main and NYSDEC administratively closed Spill No. 9707585 on 25 February 1998. As Spill No. 9707584 was a duplicate report of Spill No. 9707585, it was administratively closed by NYSDEC on 26 September 1997 referencing Spill No. 9707585.

Former Gasoline Station - 372 Lafayette Street

The 372 Lafayette Street site, located approximately 86-feet west-northwest and hydraulically cross-gradient from the subject property is listed in the NY UST, NY Spills, and NY VCP databases. According to the NYSDEC Spills case narrative

provided in the radius report, the former gasoline station site was being redeveloped in 2013 and a total of five 5,000-gallon USTs of unknown contents, five USTs of unknown contents and capacity, and eleven 550-gallon USTs presumed to have been filled with gasoline. Excavation for site development was performed under oversight of the New York City Office of Environmental Remediation (NYCOER) via the E-Designation and NY Voluntary Cleanup Program (VCP).

NYSDEC was notified when two 550-gallon USTs removed from the excavation were observed to have holes in the bottoms with underlying soil impacts; as such, Spill No. 1304085 was assigned on 16 July 2013. A total of approximately 530-tons of petroleum impacted soil were removed from the removal excavation of the 11 550-gallon USTs, which are registered in the NYSDEC PBS database as closed-removed in March 2013 and July 2013. Excavation for removal of the USTs was completed to approximately 8-feet below sidewalk grade, and additional excavation for site redevelopment under an NYCOER-approved Remedial Action Work Plan (RAWP) was completed to a depth of approximately 13-feet below sidewalk grade. Endpoint samples collected from the bottom of the development excavation did not detect exceedances for VOCs and SVOCs. Minor petroleum impacts including ethylbenzene, and xylenes were detected in groundwater at the site, but were not required to be investigated or remediated by NYSDEC. Several low-level VOCs (unspecified) were also detected in soil vapor; as such, the proposed building included incorporation of a waterproofing/vapor barrier system and a passive sub-slab depressurization system (SSDS) below the building foundation. As excavation for site redevelopment achieved removal of the contamination source, and future building occupants are protected from residual impacts in groundwater and soil vapor by the vapor barrier system and passive SSDS, NYSDEC administratively closed Spill No. 1304085 on 22 May 2015.

RCRA Non-Generators/No Longer Reporting (NonGen/NLR)

The RCRA NonGen database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). RCRA Non-Generators do not currently generate hazardous waste.

According to EDR, there are 231 RCRA NonGen/NLR sites reported within 1/4-mile of the subject property with 69 RCRA NonGen/NLR sites within 1/8-mile of the subject property. The following RCRA NonGen/NLR sites are located adjacent to the subject property:

- Petersburg Press Inc. – 380 Lafayette Street
- NYU – 383 Lafayette Street
- Con Edison Manhole: 59368 – 379 Lafayette Street
- Con Edison Manhole: 35859 – Northeast Corner of Lafayette Street and Great Jones Street
- Con Edison – 30-32 East 4th Street
- Con Edison Service Box: 35864 – 33 Great Jones Street

Petersburg Press Inc., located adjacent to the west and hydraulically cross-gradient from the subject property at 380 Lafayette Street is identified in the RCRA NonGen/NLR database for forms received by the USEPA on 1 January 2007 classifying the site as a non-generator of hazardous waste. Historical generator information classified the site as a verified non-generator in 2006 and as a conditionally exempt small quantity generator (CESQG) on 29 July 1996. This site is also identified in the NY Manifest database for the disposal of ignitable waste in 1996. No violations were reported for this facility. This address is also listed in the NY AST database as discussed below.

The New York University site, located adjacent to the north and hydraulically cross-gradient from the subject property at 383 Lafayette Street is listed in the RCRA NonGen/NLR database for forms received by the USEPA on 20 June 2016 classifying the site as a non-generator of hazardous waste. Historical generator information classified the site as a large quantity generator (LQG) of soils, solids, sludges, clothing, rags, and dredge material impacted with polychlorinated biphenyls (PCBs) in 2016, and of waste impacted with hazardous concentrations of lead in 2016 and 2014. According to the 2017 hazardous waste biennial reporting year, this site generated 97,645 pounds of waste impacted with lead. No violations were reported for this facility. The NYU site is listed in the NY Manifest and NJ Manifest databases for disposal of an unreported type of hazardous waste in 2015. This site is also identified in the NY AST database as discussed below.

Con Edison Manhole: 59368, located adjacent to the northwest of the subject property and Con Edison Manhole: 35859, located adjacent to the west of the subject property, are both hydraulically cross-gradient from the subject property and identified in the RCRA NonGen/NLR database for forms received by the USEPA on 6 March 2012 and 23 June 2011, respectively, classifying these sites as non-generators of hazardous waste. Historical generator information classified Con Edison Manhole: 59368 as a non-generator in June 2011 and as a CESQG of an unspecified type of hazardous

waste in May 2011. Historical generator information classified Con Edison Manhole: 35859 as a CESQG of an unreported type of hazardous waste in May 2011. Both of these Con Edison Manhole sites were listed in the NY Manifest and NJ Manifest databases for disposal of waste impacted with hazardous concentrations of lead in 2011. No violations were reported for either facility.

The Con Edison Site at 30-32 East 4th Street, located adjacent to the north and hydraulically cross-gradient from the subject property is listed in the RCRA NonGen/NLR database for forms received by the USEPA on 6 October 2015 classifying the site as a non-generator of hazardous waste. Historical generator information classified the site as a SQG of an unreported type of hazardous waste in October 2015. This site is listed in the NY Manifest and NJ Manifest databases for the disposal of waste impacted with hazardous concentrations of lead in 2015, and in the FINDS and ECHO databases for being active in the RCRA Program. No violations were reported for this facility.

The Con Edison Service Box: 35864, located adjacent to the south and hydraulically cross-gradient from the subject property is identified in the RCRA NonGen/NLR database for forms received by the USEPA in 2012, classifying the site as a non-generator of hazardous waste. Historical generator information classified the site as a CESQG of an unreported type of hazardous waste in 2012. This facility is listed in the NY Manifest and NJ Manifest databases for the disposal of waste impacted with hazardous concentrations of lead in 2012. No violations were reported for this facility.

Due to the lack of violations for these facilities and isolated hazardous waste generation and disposal associated with Con Edison sites, it is in the opinion of the environmental professional that the potential for adverse impacts to the subject property from these sites is low.

NY UST

The UST database contains USTs registered with the NYSDEC under the PBS division. These USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the NYSDEC PBS Database.

According to the Radius Report provided by EDR, there are 34 NY UST sites within 1/4-mile of the subject property. The only site located adjacent to the subject property is the 231 Centre Street Associates site, located at 371 Lafayette Street which is discussed in detail above. Additionally, former gasoline stations and/or

automotive repair sites at 8 Bond Street, 10-12 Bond Street, and 372 Lafayette Street, although not adjacent to the subject property, are discussed in detail above.

The following NY UST sites located within 1/8-mile of the subject property are associated with NY Spills or LTANKS cases:

- Lafayette Women's Shelter – 350 Lafayette Street
- Kalodop Park Corp. – 403 Lafayette Street
- Former Cooper Hotel – 2 Cooper Square
- National Audubon Society – 700 Broadway
- Downtown Automotive Inc. – 326 Bowery Street
- 30 Cooper Square

Each of these sites are located over 250-feet from the subject property and are associated with closed or inactive USTs, with the exception of the Lafayette Women's Shelter locate approximately 272-feet west-southwest and hydraulically downgradient from the subject property at 350 Lafayette Street. The Lafayette Women's Shelter is listed in the NY UST database for one 2,500-gallon No. 2 fuel oil UST installed in January 1970. This site is identified in the NY LTANKS database due to a tank overfill that was reported to NYSDEC on 21 January 1992 and assigned Spill No. 9110940. All of the NY Spills and/or NY LTANKS cases associated with the above-listed sites were administratively closed by NYSDEC between 1992 and 2017.

Based on the historical gasoline filling stations and/or automotive repair facilities identified in the NY UST database that are discussed in detail above, it is in the opinion of the environmental professional that the potential for subsurface impacts to the subject property from these adjacent and/or notable sites is moderate.

NY AST

The Aboveground Storage Tank (AST) database contains NYSDEC registered ASTs. ASTs are regulated under Subtitle I of RCRA. The information for this database comes from the NYSDEC PBS Database.

According to the Radius Report provided by EDR, there are 171 NY AST sites located within 1/4-mile of the subject property. The following NY AST sites are located adjacent to the subject property:

- S.E.G. Holdings LLC – 380 Lafayette Street
- New York University – 383 Lafayette Street
- 28-30 E. 4th Street Housing Corp. – 28-30 East 4th Street

S.E.G. Holdings LLC, located adjacent to the north-northwest and hydraulically upgradient from the subject property at 380 Lafayette Street is identified in the NY AST database for one 5,000-gallon No. 2 fuel oil AST installed in January 1970.

The New York University site, located adjacent to the north and hydraulically upgradient from the subject property at 383 Lafayette Street is identified in the NY AST database for one 1,500-gallon AST containing No. 2 fuel oil installed in February 1956 and closed-removed in September 2014.

The 28-30 E. 4th Street Housing Corp. site, located adjacent to the northeast and hydraulically upgradient from the subject property is identified in the NY AST database for one 1,500-gallon No. 2 fuel oil AST installed in August 2005. This site is also identified in the NY Spills database for the release of approximately 4-gallons of No. 4 fuel oil as the result of a tank overfill due to a defective level gauge. The release was reported to NYSDEC and assigned Spill No. 9911688 on 26 February 2003. According to the NYSDEC case narrative provided in the radius report, an unspecified amount of petroleum reached a floor drain; however, following a reported cleanup NYSDEC administratively closed Spill No. 9911688 on 26 February 2003.

It is in the opinion of the environmental professional that the potential for adverse impacts from these sites is low.

MANIFEST

The NY Manifest, NJ Manifest, RI Manifest, and PA Manifest databases list and track hazardous waste from the generator through transporters to a TSD facility.

According to the radius report, there are 331 NY Manifest, 9 PA Manifest, 2 RI Manifest, and 96 NJ Manifest sites within 1/4-mile of the subject property. The following Manifest sites are located adjacent to the subject property:

- Con Edison Manhole:59368 – 379 Lafayette Street
- Con Edison Manhole: 35859 – Northeast Intersection of Lafayette Street and Great Jones Road
- Petersburg Press Inc. – 380 Lafayette Street

- Con Edison – 30-32 East 4th Street
- Con Edison – 22 East 4th Street
- NYU – 383 Lafayette Street
- Con Edison Service Box: 35864 – 33 Great Jones Street

The Con Edison Manhole: 59368 site, located adjacent to the west of the subject property, and the Con Edison Manhole: 35859 site, located adjacent to the southwest of the subject property, are identified in the NY Manifest and NJ Manifest databases for the disposal of waste impacted with hazardous concentrations of lead in 2011.

The Petersburg Press Inc. site, located adjacent to the west of the subject property is identified in the NY Manifest database for the disposal of non-listed ignitable waste in 1996.

The Con Edison site, located adjacent to the north of the subject property at 30-32 East 4th Street is identified in the NY Manifest and NJ Manifest databases for the disposal of waste impacted with hazardous concentrations of lead and an unreported type of hazardous waste in 2015.

The Con Edison site located adjacent to the north of the subject property at 22 East 4th Street is identified in the NY Manifest and NJ Manifest databases for the disposal of waste impacted with hazardous concentrations of lead in 2014.

The NYU site, located adjacent to the north of the subject property at 383 Lafayette Street is identified in the NY Manifest and NJ Manifest databases for the disposal of waste impacted with hazardous concentrations of lead in 2015, and for disposal of an unreported type of hazardous waste in 2014.

Con Edison Service Box: 35864, located adjacent to the south of the subject property at 33 Great Jones Street, is identified in the NY Manifest and NJ Manifest databases for the disposal of waste impacted with hazardous concentrations of lead in 2012.

No violations were reported for these facilities.

Due to the lack of violations for these facilities, it is in the opinion of the environmental professional that the potential for adverse impacts to the subject property from these sites is low.

EDR Hist Auto

EDR searched selected national collections of business directories and collected listings of potential gas station/filling station/service station sites. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

According to the Radius Report provided by EDR, there are 11 EDR Hist Auto sites located within 1/8-mile of the subject property. The following EDR Hist Auto sites are located adjacent to the subject property and are discussed in detail at the beginning of this section:

- 371 Lafayette Street
- Post Bros. Service Station Inc. – 363-371 Lafayette Street
- Post Bros. Service Station – 361 Lafayette Street

These sites are discussed in detail in detail at the beginning of this section.

NY LTANKS

The NY LTANKS database contains an inventory of reported leaking storage tank incidents from April 1986 to the present. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents identified within this database are either tank test failures, tank failures or tank overfills.

According to the Radius Report provided by EDR, there are 7 NY LTANKS sites located within 1/8-mile of the subject property; each of the spill cases associated with these sites was administratively closed between 1992 and 2013. The following NY LTANKS sites are located adjacent to the subject property:

- 371 Lafayette Street
- 30 East 4th Street

The 371 Lafayette Street site is associated with the former Center Street Associates / Post Brothers Service Station site located adjacent to the south of the subject property and is discussed in detail at the beginning of this section.

The 30 East 4th Street site is identified in the NY LTANKS database for the release of an unspecified amount of No. 4 fuel oil that occurred during a tank overfill on 19 May 1999 and was assigned Spill No. 9502124 by NYSDEC. According to the NYSDEC case narrative provided by EDR, Spill No. 9502124 was administratively closed by NYSDEC on 19 May 1995 following a reported cleanup. No additional information was provided.

It is in the opinion of the environmental professional that the potential for subsurface impacts to the subject property from the 371 Lafayette Street site is moderate, as discussed in detail at the beginning of this section.

NY Spills

The NY Spills database includes data collected on spills reported to NYSDEC. It includes spills active as of April 1, 1986, as well as spills occurring since this date.

According to the radius report provided by EDR, there are 50 NY Spills sites located within 1/8-mile of the subject property; each of the NY Spills cases were administratively closed between 1992 and 2017, with the exception of the Commercial building at 644 Broadway. This site is listed in the NY Spills database for the release of approximately 100-gallons of No. 2 fuel oil onto the concrete basement floor of a commercial building during a fuel delivery that occurred on 29 January 2018 and was assigned Spill No. 1709872 by NYSDEC. According to the NYSDEC case narrative provided in the radius report, the release was attributed to a ruptured fill line that spilled the fuel oil onto the concrete basement floor and caused odors to permeate the building. A site inspection including screening within the occupied spaces of the building using a photoionization detector (PID) was completed; however, no additional information was provided regarding cleanup activities completed associated with the release.

The following NY Spills sites are located adjacent to the subject property:

- Harwood Property – 25 Great Jones Street
- Spill Number 9911688 – 38-30 East 4th Street

The Harwood Property, located adjacent to the south of the subject property is listed in the NY Spills database for the deliberate release of an unspecified quantity of chemical agents used in photographic development reported to NYSDEC on 24 May 1996 and assigned Spill No. 9604778. According to the NYSDEC case narrative provided in the radius report, the tenant deliberately spilled the unspecified amount of photography development chemicals during an eviction from the property. A cleanup was reportedly completed and NYSDEC administratively closed Spill No. 9604778 on 12 July 1996. No further information was provided.

Spill Number 9911688, located adjacent to the north of the subject property is listed in the NY Spills database for the release of approximately 5-gallons of No. 4 fuel oil that occurred during a tank overfill on 7 January 2000 and was assigned Spill No. 9911688 by NYSDEC. The overfill was reportedly attributed to a faulty gauge and an unspecified amount of petroleum affected a floor drain. No additional information was provided and NYSDEC administratively closed Spill No. 9911688 on 26 February 2003.

Government Databases Review Conclusions

The following adjacent sites (described in detail above) could potentially impact subsurface conditions at the subject property, groundwater in particular, and may pose a moderate risk to the subject property and future redevelopment activities:

- Center Street Associates / Post Brothers Service Station – 363-371 Lafayette Street
- Former Penske – 40 Bond Street
- Harry's Automotive Repair / Panoramic Auto Service Inc. – 10-12 Bond Street
- A&P Service Station – 8 Bond Street
- Former Gasoline Station – 372 Lafayette Street

Based on Langan's review of the sites identified above, environmental impacts to the subject property from the remainder of these sites are not anticipated. However, it should be noted that 1,146 sites were identified in the radius report and the potential exists that these urban sites may have a cumulative impact on regional groundwater quality. It is the opinion of the environmental profession that this represents a business environmental risk.

Additionally, the potential for vapor intrusion impacts to the subject property from onsite or nearby sources was evaluated. No specific potential vapor intrusion concerns (pVICs) were identified as part of this Phase I ESA; however, it should be noted that due to the

number of spill sites identified in the area of the subject property and the associated potential for groundwater impacts in the site area, vapor intrusion issues at the site may exist.

8.0 GOVERNMENT AGENCY RECORDS REVIEW

Federal, state and local agencies were contacted via written correspondence, telephone interviews and/or personnel interviews regarding records of environmental concerns, violations, and/or permits, or any other potentially environmentally-relevant records on the subject property. In additional, government information that was readily available online on government websites was also reviewed. A listing of agencies/individuals contacted by Langan as part of this ESA is provided in Table 1. Copies of government correspondence are provided in Appendix F.

US Environmental Protection Agency (USEPA)

The USEPA online FOIL request form was submitted for the subject property. In a letter dated 12 June 2018, Langan received a response from the USEPA indicating that all records are publically available on the online database (https://www.epa.gov/enviro/frs-query-page). According to the USEPA database, no records are available for the subject property. If any additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum.

Langan also reviewed the RCRAInfo Search, Enforcement and Compliance History Online, and the Superfund Enterprise Management System (SEMS) databases maintained online by USEPA. The subject property was identified on the USEPA ECHO database confirmed the records identified in the radius report.

US Fish and Wildlife Service (US FWS)

Information regarding critical habitats or endangered species with the vicinity of the subject property was obtained from the US FWS Information Service Information for Planning and Conservation online database (https://ecos.fws.gov/ipac/). No Federally-listed or proposed endangered or threatened species were known to exist at the subject property.

New York State Department of Environmental Conservation Region 2

Fawzy Abdelsadek, the Regional Enforcement Coordinator, was contacted by Langan and written file review requests were submitted for the subject property. In an email

dated 4 June 2018 Langan received a response acknowledging receipt of the request. If any additional pertinent information is provided subsequent to issuance of this report, it will be provided as an addendum. Langan also reviewed the Environmental Site Database records maintained online by the NYSDEC which confirmed the records identified in the radius report.

NYSDEC Division of Fish, Wildlife, & Marine Resources

Langan reviewed records maintained online on the NYSDEC Environmental Resource Mapper (http://www.dec.ny.gov/gis/erm/) which revealed that no state-designated significant natural communities and rare plants and animals are found in the vicinity of the subject property. Based on these results, a written records request was not submitted.

New York State Department of Health (NYSDOH)

The NYSDOH Records Access Officer was contacted by Langan and a written file review request was submitted for the subject property. To date, no response has been received by Langan regarding this request. If any additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum

New York City Department of Environmental Protection (NYCDEP)

The NYCDEP online FOIL request form was submitted for the subject property. In a letter dated 1 February 2013, Langan received acknowledgement from the NYCDEP of the records request. In a letter dated 7 February 2013 Langan received a response from the NYCDEP Division of Pollution Control and Monitoring indicating that no records are available for the subject property. If any additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum.

According to records maintained online by the NYCDEP Clean Air Tracking System (CATS), two cancelled applications for a boiler fired by No. 2 fuel oil dated December 1998 and September 1983 are documented for the subject property at 30 Great Jones Street.

New York City Department of Health & Mental Hygiene (NYC DOHMH)

Ms. Rene Bryant, the NYC DOHMH Records Access Officer, was contacted by Langan and a written file review request was submitted for the subject property. To date, no response has been received by Langan regarding this request. If any additional pertinent

information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum.

New York City Department of City Planning (NYC DCP)

An electronic version (effective zoning date 11 October 2012) of the NYC Zoning Map for the subject property was downloaded from the NYC DCP website (http://www.nyc.gov/html/dcp/html/zone/zh_zmaptable.shtml).

New York City Mayor's Office of Environmental Coordination (NYC MOEC)

Records maintained online by NYC MOEC through the CEQR Access Portal (https://a002-ceqraccess.nyc.gov/ceqr/) were reviewed on 11 June 2018. The subject property was not identified as being a part of the CEQR program.

'E'-Designation Status

The New York City Department of City Planning coordinated a program identifying properties for special environmental concerns based on documented historical use, neighborhood noise concerns, and neighborhood air quality issues. These properties are identified on 'E'-designated sites on zoning maps and in the NYC Department of Buildings (NYCDOB) Building Information System (BIS) database. The NYCDOB is restricted from issuing building permits for the property until the NYC Mayor's Office of Environmental Remediation (NYC OER) has reviewed information prepared by an environmental professional and made a determination to issue of "Notice-of-No-Objection" or a "Notice-to-Proceed" to the NYCDOB. Prior to the NYCOER's creation in 2008, the NYC Department of Environmental Protection (NYCDEP) conducted these reviews.

Langan reviewed the following information sources to determine if the subject property is listed as an 'E'-designated property: CEQR Environmental Designations List dated 6 June 2018 (http://www1.nyc.gov/assets/planning/download/pdf/zoning/zoning-text/appendixc_tab1.pdf?r=031416), CEQR Restrictive Declaration List dated 15 May 2018 (http://www1.nyc.gov/assets/planning/download/pdf/zoning/zoning-text/appendixc_tab2.pdf?v=020416), and NYCDOB BIS on 8 June 2018 (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp). The subject property was not listed as an E'-designated site based on these resources.

Fire Department of New York City (FDNY)

Information regarding the presence of petroleum or chemical storage tanks was requested from the FDNY. To date, no response has been received to our written

request to the New York City Fire Department. If any additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum.

New York City Department of Buildings (NYC DOB)

Langan completed a limited review of available records maintained online by the NYC DOB. Certificates of Occupancy for Lot 17 (375-379 Lafayette Street) identified the site at a gasoline service station in 1931 and 1938. Subsequent Certificates of Occupancy classified the site as a parking lot with one-story temporary shelter for attendants between 1972 and 2010.

New York City Department of Finance (NYC DOF)

Langan completed a limited review of available records maintained online by the NYC DOF to determine current and former site ownership (http://www.nyc.gov/html/dof/html/home/home.shtml). According to the DOF, Lots 17 and 52 of the subject property are currently owned by 375 Lafayette Street Properties, LLC, and Lot 56 is currently owned by SP Great Jones, LLC. Former ownership history obtained from is summarized in the following table:

Address	Owner's Name	Date of Ownership
375 Lafayette Street (Lot 17)	Mobil Oil Corporation	Prior to 6/30/1971
	Edison Jones Corp.	6/30/1971
	Edison Washington Corp.	12/29/1971
	Abbie G. Goteman Trust	2/7/1974
	375 Lafayette Street Properties, LLC	10/1/1998
30 Great Jones Street (Lot 56)	30 Great Jones St. Corp.	Prior to 11/8/1976
	Harcy Realty Corp.	11/8/1976
	SP Great Jones, LLC	9/19/2007
32 Great Jones Street (Lot 52)	Millou Realty Corp.	Prior to 4/26/1971
	Edison Jones Corp.	4/26/1971
	Abbie G. Gottesman Trust	2/7/1974
	375 Lafayette Street Properties, LLC	10/1/1998

The ownership information listed above provides no additional information regarding environmental conditions related to past usage different than represented by review of other historical information sources.

9.0 SITE RECONNAISSANCE

Langan conducted an inspection of the site on 4 June 2018. The inspection included a walk-through inspection of the entire site for the purposes of identifying Recognized Environmental Conditions (RECs). Typical RECs may include:

Drum storage	Dumpsters	Aboveground storage tanks	Stained areas
Drains and Sumps	Wells	Underground storage tanks	Pump stations
Waste piles	Landfills	Loading and transfer areas	Boiler rooms
Pits, Ponds, Lagoons	Swales	Process air vents	Process sinks
Storm sewers	Trenches	Detention ponds	PCBs
Impoundments	Lagoons	Floor drains and piping	Transformers
Septic systems	Dry wells	Waste treatment areas	Capacitors
Rail spurs	Incinerators	Compressor discharges	Odors
Pools of liquid	Wastewater	Stressed vegetation	Surface waters

Limiting conditions encountered during the inspection of the site included the following:

- An on-site hydraulic oil compressor connected to the above-grade car parking racks was in operation and could not be inspected for internal leaks; and,
- Accumulated debris in the bottom of a concrete lined pit in the southeast corner of the subject property prevented inspection of the integrity of the bottom of the pit.

Photographs of the subject property taken during the site inspection are provided in Appendix G. Langan was accompanied by Naveen Liyanaarachchi, assistant manager of the parking facility, who provided access to onsite buildings and answered questions during the site inspection. A questionnaire was completed by the site manager and is included as Appendix B. The inspection included a walk-through inspection of the entire site for the purposes of identifying Recognized Environmental Conditions (RECs) as detailed below.

The subject property is currently an asphalt-paved parking lot at street level that contains a one-story parking attendant's office on the southern portion of the property. Incoming electric and water service connections feeding the on-site building were observed on the southern and western faces of the one-story building. Four-level metal car parking racks were observed throughout the subject property, with each parking bay containing one to two hydraulic pistons mounted within the metal rack support structure. Localized staining indicative of minor hydraulic oil leaks were observed

throughout the property; however, stained areas were observed on top of asphalt pavement which is in good condition with minimal cracking observed. Hydraulic oil is supplied to the above-grade lifts from a hydraulic oil compressor with internal hydraulic oil reservoir located on the northwest portion of the subject property. The hydraulic oil compressor could not be opened for inspection; however, it was located on a concrete pad with minimal staining observed in the vicinity of the compressor. Metal distribution piping connects the above-grade hydraulic oil compressor with the hydraulic pistons at each lift bay and traverses the property along the northern boundary. No staining was observed at connection points in the above-grade hydraulic lines.

One small metal grate with localized staining was observed in the southeast corner of the subject property, covering an approximately 6-cubic foot concrete lined pit. Two hydraulic connections not in use were observed at pavement level, continued below grade within the concrete lined pit, and entered an approximately 4-inch piping conduit in the western sidewall of the pit. A termination point of the piping conduit and hydraulic lines was not observed during the site inspection, and may be buried below the parking lot.

The integrity of the bottom of the concrete lined pit could not be determined due to an accumulation of sediment and debris within the pit. According to on-site personnel, the former use of the pit and lines was unknown. Sheen was observed on accumulated water in the vicinity of the pit and hydraulic pistons connected to the car parking racks.

Adjacent Properties

A visual inspection of adjoining properties from the subject property line, public rights-of-way or other vantage point (e.g. aerial photography) including a visual inspection where hazardous substances may be or may have been stored, treated, handled or disposed was also conducted.

Limiting conditions encountered during the inspection of adjoining properties were encountered due to the dense urban nature of the surrounding areas which only allowed for limited line of sight that did not extend to areas where hazardous materials or substances might be stored.

Properties located adjacent to the subject property consist of commercial and residential buildings. Fill ports and vent pipes were identified in the sidewalk in front of the adjacent properties to the north at 381 Lafayette Street and 28-30 East 4th Street, to the east of the subject property at 42 Great Jones Road and 48 Great Jones Road, and

south of the subject property across Great Jones Road at 35, 43, and 47 Great Jones Road. Additionally a vent pipe was observed in the sidewalk in front of 47 Great Jones Road, but no fill port was observed in the adjacent sidewalk.

10.0 ADDITIONAL ISSUES

The following items fall outside the scope of ASTM 1527-13, however Langan can and often does provide these services to its clients if specifically requested and included in the proposed scope of work or are issues that may impact current or proposed site use.

10.1 Wetlands/Floodplain Designation

Langan reviewed United States Fish and Wildlife National Wetland Inventory (NWI) and New York State Freshwater Wetlands maps. Based on these documents no mapped wetlands are listed on the subject property. No evidence of the presence of existing onsite wetlands was identified during Langan's site inspection.

10.2 Protected Endangered Species / Critical Habitats

A determination regarding the potential presence of protected or endangered species and critical habitats on or near the subject property was not conducted as part of this ESA. This determination is often required in order to receive state or federal grants, loans, and/or permits.

Based on historic use of the subject property and the current condition and urban setting of the site, the potential presence of threatened or endangered (T&E) species on the site is low. A request for information regarding T&E species on the site was provided to the United States Fish and Wildlife Service (USFWS). This correspondence is discussed in detail in Section 8.0.

10.3 Asbestos

In 1973, use of sprayed on fireproofing on structural building components was prohibited by the EPA. On July 12, 1989, EPA issued a final rule banning most friable asbestos-containing products. The following specific asbestos-containing products remain banned: flooring felt, roll board, and corrugated, commercial, or specialty paper. In addition, the regulation continues to ban the use of asbestos in products that have not historically contained asbestos, otherwise referred to as "new uses" of asbestos. Use of asbestos

in textured paint and in patching compounds used on wall and ceiling joints was banned in 1977.

The subject property is currently developed with an asphalt-paved parking lot and contains a one-story parking attendant's booth and metal car parking racks; as such, the potential for potential asbestos containing materials to exist at the subject property is low.

10.4 Lead-based Paint

In 1977, the Consumer Product Safety Commission (CPSC) banned the use of lead based paint (LBP) in housing and restricted maximum levels in lead in new residential paint to less than 0.05% by weight. A lead-based paint inspection was not conducted as part of this ESA. Based on the current use of the subject property as an asphalt-paved parking lot at street level with the only site building being a one-story parking attendant's booth, the potential for the presence of LBP in the one-story building is low. However, the metal car parking lifts were observed to be painted and are typically disassembled and reused between parking facilities. As such, the potential exists for LBP to be present on the above-grade parking structures. Painted surfaces on the above-grade car parking structures generally appeared to be in good condition, with little paint peeling and cracking.

10.5 Lead in Drinking Water

A lead in drinking water survey of the existing building was not conducted as part of this ESA.

10.6 Indoor Air / Microbial Assessment (Mold)

A mold survey of the existing building was not conducted as part of this ESA.

10.7 Radon

The subject property is located in a Tier 3 Zone as identified by USEPA based on sampling conducted of buildings within the site area. The Tier 3 Zone is considered an area of low radon gas intrusion potential with typically concentrations less than 2 pCi/liter. A radon survey of the existing building was not conducted as part of this ESA. Radon test results from adjacent or surrounding properties are not necessarily indicative of radon conditions on the

subject property. As no building specific radon survey documentation was provided to Langan, no opinion regarding potential risks associated with radon gas exposure can be made.

As per USEPA guidelines, the only way to assess potential radon gas exposure risks is to conduct a radon assessment. In addition, the US EPA recommends that follow-up tests on large buildings should be conducted when major modifications are made either to the building structure or HVAC system or the HVAC system's operation settings.

10.8 Historical and Archaeological Review

Langan reviewed the NYCityMap (http://maps.nyc.gov/doitt/nycitymap/) to review the potential presence of historical landmark buildings or historic districts near the subject property. The 376-380 Lafayette Street building, located adjacent to the west of the subject property across Lafayette Street, is a city landmark designated on 17 May 1966 by the New York City Landmarks Preservation Commission (NYCLPC). The Firehouse Engine Co. Thirty-Three building, located to the west of the subject property on Block 531 at 42 Great Jones Street is a city landmark designated on 12 November 1968. The subject property is located within the NoHo Historic District Extension (LP-02287), which was designed as a historic district by the NYCLPC on 13 May 2008.

In addition, Langan reviewed the NYCLPC online historic maps (https://nyclpc.maps.arcgis.com/apps/webappviewer/index.html?id=93a88691cace4067828b1eede432022b) which confirmed the location of the subject property within the NoHO Historic District Extension.

Langan also reviewed the NYSHPO online database (http://nysparks.com/shpo/online-tools/). As of 13 June 2018, the adjacent property to the west of the subject property across Lafayette Street at 376-380 Lafayette Street is identified in the NYSHPO database as a National Register Listed site as of 28 December 1979, and as a State Register Listed site as of 23 June 1980. The Firehouse: Engine Co. 33 building, to the west of the subject property at 44 Great Jones Street is identified in the NYSHPO database as a National Register Listed site as of 16 March 1972 and as a State Register Listed site as of 23 June 1980.

Additionally, the adjacent property to the north of the subject property at 381 Lafayette Street is identified in the NYSHPO database as "undetermined," meaning that the NYSHPO is aware of the historic status of the buildings but does not have enough information to make a determination about a landmark status.

11.0 DEVIATIONS

This Phase I ESA conforms with ASTM with the following deviations noted:

- Property use was only determined back to 1895, not to first development, as historical property records were not reasonably available;
- Data gaps in excess of 5 years were encountered during the review of historic resources where property usage was apparently inconsistent between 1921 and 1950;
- Government agencies that have not responded to record review inquiries are listed above - additional pertinent information provided to Langan subsequent to the issuance of this report will be provided in an addendum;
- Limited access was provided to the existing buildings as part of this ESA access as identified in Section 9.0;
- Based on the large number of database records identified within one mile of the subject property (1,146), Langan limited the review of surrounding properties to adjacent sites and sites within 1/8-mile from the subject property.
- An assessment of the current property value versus the proposed sale price of the property was not completed as this information was not provided by the User;
- Interviews of former business operators were not conducted; and,
- Interviews of property owners were not conducted;

It is the opinion of the reviewing Environmental Professional that the above-deficiencies will not detrimentally affect the identification of potential recognized environmental conditions. This opinion is based on the following factors:

- The site was historically occupied by a gasoline filling station and auto repair facilities from at least 1950 to 1972 following the data gap between 1921 and 1950. Although the presence of the on-site gasoline filling station was not

identified on historic Sanborn Maps prior to 1950, it is in the opinion of the environmental professional that this will not detrimentally affect the identification of potential recognized environmental conditions.

- Langan limited the database review to adjacent sites and sites within 1/8-mile from the subject property. It is the environmental professional's opinion that based on the dense development of the site area, and former, current and proposed use of the site that the review of the database pertaining to this more limited area is appropriate and will not detrimentally affect the identification of potential recognized environmental conditions.

12.0 FINDINGS/OPINIONS

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, the following recognized environmental conditions (RECs), de minimis conditions, and business environmental risks that may impact proposed redevelopment of the site were identified:

1. Potential impacts from current and historical site use;
2. Potential impacts from current and historical operations conducted at adjacent and nearby properties;
3. Potential presence of historic fill material;
4. Potential presence of undocumented underground storage tanks; and,
5. Minor hydraulic oil release and staining.

It is the opinion of the environmental professional that historical site operations as a gasoline filling station (1950-1972) an electronics manufacturer including electroplating operations (1960-2007), paper manufacturing (1938-1973), a printing company (1927), and hat making (1927-1963) involving the storage, generation, and release of hazardous wastes and current site operations as a parking lot including the use and storage of hydraulic oil have the potential to have adversely impacted the subsurface; therefore, Finding 1 represents a REC. It is in the opinion of the environmental professional that historic site operations conducted at adjacent and nearby properties including six gasoline filling stations and/or auto repair facilities between 1921 and 2005, have the potential to have impacted regional groundwater conditions; however, as these impacts are common to densely developed urban areas and may only affect site redevelopment

activities, Finding 2 is identified as a business environmental risk (BER). It is the opinion of the environmental professional that historic fill may be present in the subsurface at the site which would impact any future site redevelopment considerations. As this condition is consistent in the urban setting that the subject property is located in, Finding 3 represents a BER. It is the opinion of the environmental professional that undocumented heating oil USTs may be present at the subject property associated with former residential, commercial, and light manufacturing buildings. Therefore, Finding 4 represents a business environmental risk. Localized staining on top of asphalt and/or concrete surfaces were observed during the site inspection associated with abovegrade hydraulic pistons and distribution lines; therefore, Finding 5 represents a De Minimis condition.

13.0 CONCLUSIONS

Langan has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of a ±19,741-square foot site located at 375 Lafayette Street, New York, New York, the subject property. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, this assessment has revealed the following recognized environmental conditions (RECs) in connection with the property:

Recognized Environmental Conditions

It is the opinion of the environmental professional that the following represent RECs:

Potential Impacts from Current and Historical Site Use

Based on the review of historic Sanborn Maps and the radius report, the western portion of the subject property was occupied by a gasoline filling station with two one-story auto service buildings between at least 1950 and 1972. No UST registration documents were identified for the subject property in the radius report, or in the NYSDEC PBS on-line database including any documentation of closure or removal of USTs associated with the former gasoline filling station. Due to the historical site use as a gasoline filling station and current site use as a parking lot at street level with no basement level, the potential exists for gasoline USTs to remain in the subsurface of the subject property which may not have been properly closed or removed in accordance with NYSDEC regulations.

Other historical subject property operations with potential to cause adverse impacts to the subsurface include a printing company on the eastern portion of the subject property at 36 Great Jones Street in 1921 as identified on the Sanborn Maps and an electronics company identified at 30 Great Jones Street in the radius report. Records associated with the electronics company included generation and disposal of hazardous waste used in electroplating operations between 1984 and 2007 and a formal enforcement action filed against the Concord Electronics Corporation in 1985. Although all formal enforcement actions and written informal violations issued to the Concord Electronics Corporation achieved compliance, no documentation was provided regarding the nature of the violations issued, corrective measures taken, or potential impacts to subsurface conditions as a result of former electronics manufacture at this site.

Due to the potential use of chemicals associated with historical and current operations and the duration of these activities and the potential for gasoline USTs to be present in the subsurface, it is the opinion of the environmental professional that the historical and current site use has the potential to impact subsurface conditions at the site. As such, the historical and current use of the subject property is considered a REC.

14.0 QUALIFICATIONS / CERTIFICATION

The following professionals assisted in the completion of this report.

We, the undersigned, declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property as documented in Appendix H. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

USER QUESTIONNAIRE

LANGAN

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the *Landowner Liability Protections* offered under CERCLA. Missing or incomplete information could result in a determination that "all appropriate inquiry" is not complete.

General Information

User/Client Name (s): Edison 44 Party, LLC

Property Name:

Address: 325 Lafayette Street, NY, NY

Property Type: Party Hall

Type of Property Transaction:

Purchase of property	☐
Financing of property	☐
Sale of property	☐
Ground Lease	☒
Build to Suit Lease	☐
Other_____	

Reason Why Phase I ESA is required: Ground Lease

Site Contact (s): Separately provided

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

	Yes	No
(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	☐	☒

No search has been done by User

	Yes	No
(2.) Activity and Land Use (AUL) limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	☐	☒

No search has been done by User

LANGAN

	Yes	No
(3.) Specialized knowledge or experience of the person seeking to qualify for LLP (40 CFR 312.28).		
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☒	☐
(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).	**Yes**	**No**
(a.) Does the ~~purchase~~ price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Parts 4a and 4b.]	☒	☐
(b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	☐	☐
(c.) Identify an explanation for the lower price and provide a written record of such explanation as an attachment.		
(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).	**Yes**	**No**
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,	☐	☒
(a.) Do you know the past uses of the property?	☒	☐
(b.) Do you know of specific chemicals that are present or once were present at the property?	☐	☒
(c.) Do you know of spills or other chemical releases that have taken place at the property?	☐	☒
(d.) Do you know of any environmental cleanups that have taken place at the property?	☐	☒
(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate Investigation (40 CFR 312.31).	**Yes**	**No**
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	☐	☒

SIGNATURE:

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

APPENDIX B

PROPERTY OWNER / OPERATOR / KEY SITE MANAGER QUESTIONNAIRE

LANGAN

ASTM PRACTICE E 1527-13:
OWNER/OPERATOR/SITE-MANAGER QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

Project Location/Address: 325 Lafayette St.
Edison Park East.
NY NY.

ASTM E-1527-13, Section 9.4

Are you aware of any of the following located on the subject property:

Pits, Ponds, or Lagoons?	Yes ☐	No ☑
Stained Soil or Pavement? minor- hydraulic piston/sheen on asphalt	Yes ☑	No ☐
Stressed Vegetation?	Yes ☐	No ☑
Solid Waste (including trash, construction debris, or demolition debris)?	Yes ☐	No ☑
Wastewater or Discharges into Drains, Ditches, Underground Injection System, or Stream?	Yes ☐	No ☑
Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)?	Yes ☐	No ☑
Septic Systems or Cesspools?	Yes ☐	No ☑

ASTM E-1527-13, Section 10.9

Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	Yes ☐	No ☑
Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	Yes ☐	No ☑
Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	Yes ☐	No ☑

ASTM E-1527-13, Section 10.8

Are you aware if any of the documents listed below exists and if so, whether copies can and will be provided to the Consultant performing the ESA?

	Unaware	Document Exists	Copy will be provided
Environmental site assessment reports	☑	☐	☐
Environmental compliance audit reports	☑	☐	☐
Environmental permits (such as solid waste disposal permits, hazardous waste disposal permits, NPDES permits, wastewater permits, underground injection permits)	☑	☐	☐
Registrations for underground and aboveground storage tanks	☑	☐	☐
Material safety data sheets	☑	☐	☐
Community-right-to-know plan	☑	☐	☐
Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control plans, facility response plan, etc.	☑	☐	☐

Contact: Amanda Forsburg

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

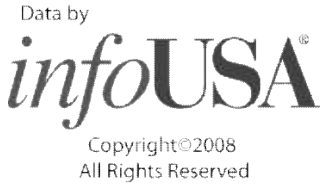
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 9 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 11 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/12/2018 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/12/2018 has revealed that there are 130 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 34 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF AST site within approximately 0.5 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there is 1 NY RES DECL site within approximately 0.125 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 17 NY VCP sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 231 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/21/2018 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 10 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Pathway: SURFACE WATER PATHWAY
Scoring: 4

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

FINDS:

Registry ID: 110004342177

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

CONCORD ELECTRONICS CORP (Continued) **1016199001**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/10/95: This is additional information about material spilled from the translation of the old spill file: TTF. 4/11/02 TRANSFERRED FROM O DOWD TO TIPPLE 5/1/02 SHAINDEL ENVIRONMENTAL KEN FRIEDMAN BEGINS DRILLING TO DO SITE ASSESSMENT, TIPLE WITNESSED FIRST BORING INSTALLATION. THERE WAS NO VISUAL OR OLFACTORY INDICATION OF PETROLEUM CONTAMINATION IN THE CONTINUOUSLY SAMPLED BORING. 5/2/02 KEN FRIEDMAN CALLED AT 7:45 AM TO INFORM ME THAT IN THE SECOND BORING A CLEAN SAND FILL(SIMILAR TO THAT USED AS BACKFILL MATERIAL IN SUBWAY CONSTRUCTION) WAS ENCOUNTERED AT 22 FOOT AND CONTINUED THROUGH TO 28 FOOT. WHEN THE DRILLERS PULLED THE SPOON FROM THE HOLE AT 28 FOOT THERE WAS AIR ESCAPING FROM THE BORING HOLE AS THE SUBWAY TRAIN APPROACHED THE SITE, AND THERE WAS A PROMINANT VIBRATION ON THE STEEL AS THE TRAINS PASSED. THE SITE IS ADJACENT TO THE SUBWAY, BOTH MR. FRIEDMAN AND I BELIEVE THAT THIS HOLE IS COMPLETED AND HE WILL ATTEMPT TO ATTAIN A GROUNDWATER SAMPLE FROM THE NEXT BORING. THE SITE IS NARROW AND AND THE SUBWAY IS PARTIALLY UNDER PART OF THE SITE. IF A WATER SAMPLE IS ATTAINABLE WITHOUT COMPRIMISING THE SUBWAY STRUCTUER IT WILL BE. MR.FRIEDMAN IS RESEARCHING THE POSSIBILITY OF A DEWATERING SUMP IN THE SUBWAY ALONG THE SITE TO POSSIBLY FIND ANOTHER WAY TO ATTAIN A GROUNDWATER SAMPLE REPRESENTATIVE OF THE SITE. 5/3/02 no sump associated with subway, apparently there is no dewatering necessary at this site. 5/16/02 left message for Kevin Hale to take a look at the report sent to him...concurs with no further action on this site "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110055456956

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WASTE OIL SPILL AT GREAT JONES LAFEYETTE LLC (Continued) **S113819127**

Contact Name: RENE KAHN
DEC Memo: "7/16/2013 - Feng - DEC J. Vought and J. Feng spoke to Ray Kahn of ESPL Environmental Services (212-330-7501, rkahn@espl.com). The site is under construction activities. They knew there were tanks. They found (5) 5,000-gallon tanks previously. They did more work and found (5) more tanks. These tanks are believed were used for gasoline. Gasoline related VOCs were detected in soil. No spill has been called in for the discovery of these tnaks. The site was formerly a gasoline station. This site is an E-Designated site with NYC environmental program and also a BCP project with NYCOER. The site is developed into commercial and residential use. Vapor barrier and passive SSDS to be installed underneath the building. The NYCOER approved RAWP which calls for excavation. The waste oil tank was found during the excavation and spill was called in. The excavation is 20-30 feet and endpoint will be taken. Contac information: Noam Shemel Great Jones Lafeyette LLC 225 West 35th Street New York, NY 10001 (212) 631-0203 Called NYSOER Shaminder Chawla and Hena. According to them, the entire site will be excavated to 15 feet. They have discussed this site with Bob Cozzy and Jane O'Connell before they found those tanks. Hena will send us the approve RAWP to see if DEC has any concern and need something more. NYSDEC may need to deal with the offsite issue. 7/29/2013 - conference call with Ray Kahn of ESPL, Hannah Moore and Shaminder Chawla of NYCOER. The 11 tanks were removed and the excavation was extended down to 8 feet. No endpoint samples have been collected due to the anticipated excavation for site development. The site is now 3 feet below street level. The piling is started but not completed yet. No vapor complaint have been awared of so far. DEC required further investigation, i.e. borings and endpoint samples. 7/31/2013 - conference call with Hannah Moore and Shaminder Chawla. DEC requires at least 2 soil borings in the former tank field area, register the tanks and will conduct site visit upon the reach of expected excavation depth. 8/1/2013 - sent letter requiring site investigation to Great Jones Lafayette LLC (the developer) and cc ESPL and OER. DEC requires soil boring in the west side of southern tank group and at former soil vapor SV-2 location, soil and groundwater samples to be taken. DEC also require the rest of the tanks to be registered and notification when reach the limit of the excavation. Work plan by the end of 8/2013. 10/2/2013 - reviewed Tank Closure Report, dated September 2013, by ESPL. On 7/12/2013, 5 tanks Tank 007-011, 550-gallon, were removed from the southwest portion of the site. Tank 010 and 011 were observed to have holes on bottom of the tanks. The excavation was 30x30 and 8 feet deep. On 7/17/2013, a total of 527.87 tons (manifests dated 7/17/2013 and 7/22/2013)of impacted soil was removed from the site for disposal at Clean Earth of Carteret. email Ray Kahn of ESPL 1) Section 6, the excavated area for each tank group (southwest and middle of the site) was approximately 30x30 feet and approx. 8 feet deep. Any excavation in the middle of the site? 2) How many tons of soil have been removed? 527.87 or 492 tons? While most of the soil were transported on 7/17/2013 as the manifests indicated, why there is one truck load on 7/22/2013? Is it from the same excavation? 3) When the previous found (6) 550-gallons USTs were removed other than the reported (5) 550-gallons USTs? Why not included these 6 tanks removal into this report? also required update for the required investigation work plan. 5/22/2015 - Reviewed spill history and discussed with J. Vought. Spill is closed based on: 1) All sources have been removed. (6) 550-gallon gasoline USTs were removed in March 2013. (5)

WASTE OIL SPILL AT GREAT JONES LAFEYETTE LLC (Continued) **S113819127**

550-gallon gasoline USTs were removed in July 2013, and a total of 527.87 tons of impacted soil was excavated and disposed offsite. 2) Additional soil was excavated for site development under the NYCOER approved RAWP. The excavation depth was 13 feet for foundation and a cellar. Endpoint samples were collected at the terminus of the developmental excavation. No VOCs or SVOCs excceedances. 3) Soil sampling results indicated some SVOCs compounds and metals exceedances in the soil samples collected from the top 2 feet which will be excavated and removed as developmental excavation will be advanced to 13 feet. And the soil samples collected from depth of 34-38 feet show all non-detected of VOCs and SVOCs. 4) Groundwater sampling indicated there are still minor petroleum impacts. BTEX concentration, i.e. 16 ug/L ethylbenzene and 75 ug/L xylenes were detected which do not warranted further investigation and remediation. 5) Metal compounds in soil at 13 feet, i.e. 163 mg/kg lead and 1.03 mg/kg mercury. And metal dissolved in groundwater were detected, i.e. 0.043 mg/L lead. These levels of metals in soil and groundwater are not in a level that concerns shall be raised thus no further action is required. 6) Soil vapor samples were collected also. Low level of several VOCs were detected. The new building will require the removal of the USTs and excavation of 13 feet which will remove the source of the soil vapor contamination. 7) Vapor barrier and passive SSDS were installed for the new building that would protect occupants from exposure to the residual contaminants. 8) Inclusion of remaining contamination language in the spill closure letter in case site is redeveloped. Spill Closure letter to Great Jones Lafayette LLC and ESPL. Spill is closed. "

Remarks: "during excavation a tank was found, unk amt"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company:	001
Contact Name:	RICHARD SAUT
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per ROmmel. 10/14/04 Reassigned from Rommel to Sun. 10/22/04 Joe Sun called Penske's Environmental Engineer (Richard Saut) today and asked if they have ever submitted the Tank Closure Assessment Report for the seven (7)550-gallon underground storage tanks removed in 1994. He will check their record and get back to me next Monday. 10/28/04 Sun sent a letter to Richard Saut of Penske (previous owner) and two current owners, Michael Bogin of 23 BOnd Strret, and Ira Drukier of 40 Bond Strret, requiring them to submit the following documents by December 19, 2004: 1)Complete delineation of soil and groundwater contamination, 2) Investigation summary report, including a detailed description of a vapor mitigation efforts used in the construction of the residence including the installation of vapor barriers and/or sub-foundation venting systems, 3)Remedial action plan and Operation and Monitoring Plan (OMMP) and Surrounding property sketch. 11/12/04 Sun sent a letter to both Richard Saut of Penske and Michael bogin of current owner's Attorney and informed them that the Department approved that groundwater samples are not required for the property located at 23 Bond Street, Manhattan, NY based on the following subsurface investigations: 1)Tank Excavation Assessment by Handex,

FORMER PENSKE (Continued) **S106382647**

dated 11/18/03, and 3)Environmental Review by Environmental Compliance Inc., dated 12/24/03. 1/4/05 File Update by Sun: Since the concentrations of BTEX and Base Neutrals of soil samples taken from 23 Bond Street are all below NYS Recommended Soil Cleanup Objectives for Gasoline Contaminated Soils (TAGM 4046), the spill is now only applied to 40 Bond Strret. 10/05/05-File Update by Sun: On 10/05/05, Sun sent a letter to Joel Landes of Langan, the consultant for the property owner informing him that the New York State Department of Environmental Conservation (the Department) has received the Revised Phase II Site Investigation Report dated September 2, 2005 for this site. The Department has reviewed the report and contamination has been delineated to the extent possible. The Department requested that a Remedial Action Plan be submitted by October 31 2005 for review and approval. (Sun) 10/18/2005: Project reassigned from Sun to Andersen. 10/09/2005: RAP reviewed and approved. Recommended additions included 1) DER-10 method of soil sampling 2) 3 months of indoor air sampling after construction of the building. (S.Andersen) 1/27/06: Received a phone message from Joel Landes on Langan stating that excavation and implementation of the RAP has begun. The Project Manager of the project is John Gavras, phone: 212-479-5406. 2/27/06: Received a phone call from John Gavres. Will send excavation report and electronic copy of RAP. His contact info is as follows: John M. Gavras, PG, CPG PROJECT MANAGER Direct: 212.479.5406 Cell: 917.968.6779 LANGAN ENGINEERING & ENVIRONMENTAL SERVICES Tel: 212.479.5400 Fax: 212.479.5444 21 Penn Plaza 360 West 31st Street, 8th Floor New York, NY 10001-27278 www.langan.com 6/1/06: Left a voice message for John Gavres to followup on status of excavation. 6/2/06: Received voice message from Jamie Barr (212-479-5449). Excavation is nearly completed. 16 endpoint samples were taken and a report is in preparation. The vapor barrier was installed. 8/9/06: Left a message with Jamie Barr to followup on status of remediation report. 8/10/06: Received phone call from Jamie Barr. Report is in preparation and will be submitted in one months time. 9/19/06: Left voice message with Jamie Barr to followup on status of excavation report. 9/21/06: Spoke to Jamie Barr. They are waiting for sources of clean topsoil. Report will be finalized with topsoil manifests when filling with topsoil is completed. 10/30/06: Left voice message with Jamie Barr to followup on the status of the remediation report. 11/13/06: Left voice message with Jamie Barr to followup on the status of the remediation report. 11/27/06: Spoke to Jamie Barr. They are still waiting for clean fill at the site. Report cannot be completed until fill is received. Construction delays are delaying project completion. They hope to have the project completed by the end of the year. 1/22/07: Spoke to Jamie Barr. Report preparation delayed waiting for certain aspects of construction to be completed. 3/1/07: Left message for Jamie Barr to followup on report preparation. 3/27/07: Left voice message for Jamie Barr to followup on report preparation. 4/5/07: Left voice message for Jamie Barr to followup on overdue remedial action report. 4/5/07: Spoke to Jamie Barr. Report expected in two weeks. 5/10/07: left message for jamie barr to followup on RAR 5/21/07: spoke to jamie barr - report will be submitted next week, lead exceedance? 6/12/07: Emailed Jamie Barr to followup on RAR. (jbarr@langan.com) Received email from Jamie Barr, report will be submitted in 1.5 weeks. 7/30/07: Emailed Jamie Barr to followup on RAR submission. 8/7/07: Received email from Jamie Barr, RAR is in preparation. 9/12/07: Emailed Jamie Barr to followup on RAR submittal. 9/14/07: Received email from Jamie Barr. Report will be

FORMER PENSKE (Continued) **S106382647**

submitted next week. 9/24/07: Received FER. 10/9/07: Mercury and sVOC remained after excavation and redevelopment. An active SSDS was installed. Sent letter indicating a Site Management Plan is required. Letter sent via email and hard copy. 10/10/07: Spoke to Jamie Barr. A site management plan will be submitted. 4/9/08 - Carlson: Left voice message for Jamie Barr. The SMP is overdue. 4/24/08 - Carlson: Received phone message from Jamie Barr. 4/28/08 - Carlson: Left voice message for jamie Barr. Need to schedule a phone conversation to discuss SMP. Spoke to Jamie Barr. An SMP will be submitted. 7/23/08 - Carlson: Sent letter to Jamie Barr requiring submittal of SMP by 8/6/08. 7/28/08 - Carlson: Received phone message from John Gavras. He will be handling SMP. 7/29/08 - Carlson: Spoke to John Gavras. SMP submittal date extended to 8/13/08. 9/18/08 - Carlson: Reviewed SMP. Annual reports will not be required for this site. NFA required. Issued letter approving SMP and indicating NFA is required. A proposal must be submitted to the Department to shutdown the SSDS at the site."

FINDS:

Registry ID: 110004481917

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110067708314

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/27/02 SPOKE WITH ROMEO SANTOS, THE PHASE 2 WITH A PROPOSED REMEDIAL ACTION PLAN WILL BE SENT TO THIS OFFICE WITHIN THE NEXT FEW WEEKS. DURING THE PHONE CONVERSATION WITH MR. SANTOS, I STATED THAT GROUNDWATER SAMPLES WILL BE REQUIRED IN ADDITION TO THE STANDARD CLEAN SOIL REQUIREMENTS. SEE PBS # 2-350575 1/23/2003 reviewed phase 2 , there was no remedial action plan, scaled site plan and lab results dated one day after report date original data not supplied, only transcribrd version. 6/18/03 TIPPLE'S RESPONSE TO SUBMITTAL1. Scaled Site Map -The Site Map must be a scaled plan indicating the location of all tanks and appurtenances. The tank locations, both horizontally and vertically (depth) are required. 2. Tank Registration- The Tanks must be Properly registered as per 6 NYCRR Registration of Petroleum Storage Facilities. Section1.5 of the June 13 submittal refers to the Extraction, transportation and disposal of tanks and related piping if tanks were removed please have this properly reflected on the PBS registration. The site plan indicates that there are 12 tanks total, one 4000gal.tank, and eleven 550gal. tanks, and one hydraulic lift located on this property, the registration indicates that there are 10 closed in place tanks, one 4000gal. gasoline, one 4000gal. diesel, eight 550 gal. gasoline tanks on this property. Please make sure all PBS records are updated and accurate for this facility. 3. Soil Samples -All samples will be analyzed for both VOC's and SVOC's due to the confusion concerning the product formerly contained in the tanks. The Department requires the analytical soil sample results from this tank excavation, the site plan/report must clearly identify the location of these endpoint results both horizontally and vertically, compare the excavation dimensions with the sample locations. Compare these levels to the NYSDEC Recommended Soil Cleanup Objective - TAGM Levels. 4. Groundwater Samples - As per our December 27, 2002 phone discussion, a minimum of one groundwater sample must be analyzed at this former refueling facility 12/03/03 DC env. Danny called//report arrived/no groundwater sample taken and elevated SVOC's in three seperate tank cluster locations. Awaiting recommendations for continued remedial strategies. 2/12/04 TRANSFERRED FROM TIPPLE TO ROMMEL. 03/15/04 Reassigned from Rommel to Sun. 05/04/04 Sun sent a Stipulation Agreement to Fred Spindler of ParK-It Management requiring complete delineation of the contamination, submittal of an Investigation Summary report followed by a submittal of a Remedial Action Plan. The Department also requires a PBS registration to be submitted

PARKING GARAGE (Continued) **S106010294**

immediately reflecting the former tanks and their subsequent decommissioning. The Department set a deadline of May 26, 2004 for signing of the Stipulation Agreement by the Respondent. 10/12/04 Sun sent a letter to Fred Spindler of Part-It Management requiring by 11/19/04 to submit the following: 1) collect one groundwater sample from each of four former tank fields, and groundwater flow direction must be established. All groundwater samples shall be analyzed via EPA 8260/8270. 2)one soil sample shall be taken for each remote fill location. The Department will evaluate the submitted information and determine if additional investigation is warranted. 1/11/06: Case reassigned to Andersen. Called consultant to ask if the excavation was completed on all sides of the tank, and to confirm that groundwater was not encountered during the excavation. He said he would review the file and call me back. 1/18/06: Called Romeo Santos (Consultant), spoke to secretary and she said he will call me back. 1/31/06: NFA issued."

Remarks: "test results from a investigation - there is a old abandoned tank in the ground"

Environmental Interest/Information System

CON EDISON (Continued) **1018280546**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"PBS 2-601677 expired. spoke with FF Hurigan. FD recovered oil into two drums and left the drums at the scene.Spill was from the vent on sidewalk. No spill in the building.No soil was impacted.Spill occurred while transferring oil from one tank to other.No delivery was made. 05/26/10 Spoke with Stan, (718)688-8638. Dept of Homeless Services retained a contractor to remove the drums with oil.Mr. Stan confirmed me that there is no soil impact at the site,no odor in the building.Tank tightness testing was done recently.Disposal manifest will be sent to DEC. Case closed as there is no contamination left at the site.(sr)"
Remarks:	"Caller reporting a spill of 75 gallons of #2 fuel oil to street. Clean up in progress."

DEC Memo:	"5/22/08 - Raphael Ketani. I spoke to Pete Lakotos of Terms Environmental (908) 464-0028. He said that the construction crew was digging and just uncovered the 1000 gal. tank. It used to contain heating oil. They did a tank test and it failed. The contaminated soil will be put on a plastic tarp and cover with plastic. A soil sample has been sent off for soil characterization. Once the analyticals come back, they will know where to send the soil and the soil will be removed from the site. They also found 3 more tanks. These tanks are encased in and filled with concrete. They will be pulled out and put on the side of the property for disposal. As far as he knows, they didn't leak. He will submit a PBS registration form to Albany DER. The site is owned by To Better Days, LLC, 155 Avenue of the Americas, NY, 10013. 5/27/08 - Raphael Ketani. I sent a CSL to the owners. 5/30/08 - Raphael Ketani. The CSL came back marked Insufficient Address. I called up Mr. Lakotos and asked him what the full address is. He stated that the owners were on the third floor. I changed the date, added 3rd Floor to the address, and resent the letter. 8/19/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The case manager needs to make followup calls to see what progress has been made in the investigation. The owner owes DEC an investigation report, and a new PBS registration. 12/04/08-Zhune spoke to Pete from Term Environmental Service He said tanks were pull out contaminated soil was removed, samples were taken everything is done. The report will be send within two days. 12/04/08-Zhune spoke to Jeff Silverman he said a 15 story rental building will be build in these site. 04/16/09- Terms Environmental Service Inc. sent the July 19,2008 UST Closure and Remedial Action Report. From May 20, to June 4, 2008, respresentatives from Term were present at the subject site to everdee the (4) UST removals. The three (3) abandoned 500 gallon gasoline UST's were observed to have no holes and no evidence of discharge were noted. Four soil samples were collected (S1,S2,S3 and S4) from sidewalls of the pad at depths 13 to 13.5 fbg. Three base samples (S5,S6,S7) were collected at a depth of 13.5 to 14 fbg. The results of these samples revealed that VOC's are well below the RSCO's. Although levels of SVOc's were detected slightly exceeding the RSCO's standard in samples S1, S2, S4, S5(Benzo(a)antracene, Chrysene, Benzo(a)pyrene, Dibenzo(a,h) anthracene), samples

FORMER HOTEL (Continued) **S109063115**

S3-S6(Benzo(a)pyrene) and sample S7(Benzo(a)pyrene, Chrysene). The one (1) 1000 galoon #2 heating oil UST was observed to have holes in the sidewalls and the soil were noted to be stained and odiferous. Six post excavation samples were collected in total. S1,S2,S3,S4 were collected from the sidewalls of the excavation at a depth of 14.5-15 fbg. S5 and S6 were collected at the base of the excavation beneath the invert former UST at depths 15- 15.5 fbg. The analytical test results revealed that all post excavation soil samples were below the RSCO's Standard for VOC's and SVOC's. Water was no ecountered during remedial activities to a depth of 25 ftbg. Engineering core samples collected at the site reported groundwater to be at approximately 33 fbg. Spill Closed. 12/08/11-Vought-Received call from Daniel Gabay (PH: 917-403-4554) representing Atlantic Development Group) developer and he is requesting a formal closure letter as soon as possible. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Name:	CELESTE RUFER
Spiller Company:	NY UNIV
Spiller Address:	20 COOPER SQ
Spiller Company:	999
Contact Name:	CELESTE RUFER
DEC Memo:	"Contact: CELESTE RUFER Safety Mgr @ NYU-212-998-1086 celeste.rufer@nyu.edu Hess is the delivery company. Under sidewalk fill line running into the sidewall of the basement. Break in the fill line spilling oil down the basement wall. Ms Rufer had the fill line cemented closed. Triumverite Environmental (Dan Ambrico 516-315-3877) is doing the quick cleanup . She will install a new fill line right away, and then put up for bid a sidewalk dig out of the old fill line to find out how much contamination there is in the soil under the sidewalk. 9/14/12 TJD CSL - line failure letter mailed and emailed to: New York University 740 Broadway 6th Floor New York, NY 10003 Attention: Celeste Rufer celeste.rufer@nyu.edu 7/2/13 TJD File review. Spill was due to a failed fill pipe associated with 8K AST which recently underwent a conversion from #6 to #2 FO. Spill discharge was following initial fill following cleaning of tank - estimated 50 gallons of fuel was reported discharged onto concrete basement floor. Closure report indicates that following cleaning of tank in preperation for coversion the curb fill pipe was tested and passed - leak was from area of fill pipe which penetrated building foundation - no information rearding the tester was provided. Triumvirate Environmental was retained for cleanup - granular absorbents were utilized for cleanup of conrete basement floor - a total of 5,700 lbs of contaminated absorbents & oil soaked debris were recovered, transported and properly disposed of during the remedial process. NYU consultant Langan Engineering retained the services of Nova Environmental Services to perform a GPR survey prior to a geoprobe investigation by Aquifer Drilling and Testing of soils beneath the sidewalk in vicinity of reported failure of underground single wall fill pipe - a total of (4) soil samples were collected for laboratory analysis. All target analytes are within acceptable concentrations. East Coast Mechanical Corp. was then retained to replace the failed fill pipe with new piping in secondary containment - followed by a reported passing test of new piping. A reference to this work is contained on an invoice but no tightness test report was provided. Ilkay Cam-Spanos of Langan Engineering was contacted via telephone today and was directed to provide copies of tightness test reports for (2) testing events which were referenced in Langan closure report. Awaiting requested documentation. 7/3/13 TJD Langan Engineering has provided requested documentation. No further action is required."
Remarks:	"lost from fill port during fill, unk cause or amount greater than five gallons"

Contact Name:	SERGIO
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND/SACCACIO 9/5/2002 Transfer spill to Sangesland Sangesland spoke with Jeffery Doss of CEI (Certified Environment) at 212-717-7042. He asked what it would take to close this spill out. There was also some question on the address. Mr. Doss stated that one building is 16-20 Cooper Sq and the next building is 30 Cooper Sq. There does not appear to be a building listed as 20-30 Cooper Sq. Mr.

SPILL NUMBER 0004644 (Continued) **S104787360**

Doss will look into the spill and address questions and will try to close out the case. 10/1/2002 Sangesland spoke with Michael Orlofsky (attorney for property manager). Mr. Orlofsky confirmed that the address of his client's building is 16-20 Cooper Sq and that it was this building which had the spill incident. Sangesland requested Mr. Orlofsky to have either Castle Oil or the building's oil service company to prepare a letter which states the following: 1) Yes there was a spill at the site and it was traced back to a problem with XXXXXXXX line/pipe or valve. The problem was repaired and no longer leaks. All of the lines (street to tank and tank to boiler) were inspected and determined to be in good working condition. 2) This letter (with any back up info) should be forwarded to the DEC along with a request to close out the spill number. If such a letter comes to the DEC, the DEC will close out the spill and forward a copy of the closed spill report to the building owner or manager. 11/27/2002 - Sangesland received a letter from Michael Orlofsky requesting closure on the spill. Attached to this letter was a statement from Jim Carey of Castle Oil (718-579-3400) that: 1) All of the oil lines associated with the tank, boiler (i.e. fill line, vent line, suction and return lines) are all in good working order. 2)The lines running from the fill port to the tank and from the tank to the burner are all visible. 3) There are no visible signs of contamination. Based on this letter from Castle, the spill has been closed out. "

Remarks: "OIL LINE FAILURE CAUSED SPILL ONTO FLOORING. CLEANED UP BY SUPER OF BUILDING."

FINDS:

Registry ID: 110004372884

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019803257

Environmental Interest/Information System
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 11/26/97 mmm:GOT CALL FROM STEVE, WHO'S FATHER WAS THE OWNER OF THE PROPERTY 12 YEARS AGO, AND WANTED TO KNOW IF DEC GOT ANY KIND

DOWNTOWN AUTOMOTIVE, INC. (Continued) **U001840828**

OF SITE ASSESSMENT REPORT. CALLED YELLOWSTONE AND LEFT MESSAGE. 4/12/04-Vought-Spill transferred from Mulqueen to Rommel as per Rommel. 1/18/2006 - Haggerty - Unable to reach Todd McIndoo from Yellowstone Industries. I believe his contact # (516-485-0000) is outdated. I also emailed him with no response Todd McIndoo . Keep open-site visit. 7/1/2008 Sangesland spoke to an attorney who represents one of the new owners in the new building that was built at the site. She will investigate what permitting was done with the city to build the building. The site was a gas station, now it is a 6 floor building with commercial condo units on the ground floor and condo apartment units above it. 7-30-2008- DECPiper Spoke to Don Middleton, consultant for bank. 631-321-4300. I Let him know we have no info on spill. He will look into it and report back. 9/22/2008 Sangesland spoke to Marie Precko(?) who is working for the owner trying to close out all open issues on the new building. Since it was once a gas station and the initial comments said there was soil/groundwater contamination, Sangesland said she would probably need: 1- Drawings/photos which show the area was dug out down to bedrock for construction. 2- Since the building is a corner unit (Bond St & Bowery) Sangesland suggested that soil borings (geoprobe) be taken on the sidewalk of each side of the building. 2/22/2010 - Sangesland spoke to Andy Robinson works for William Vitacco Assoc building expiditer for the building. Trying to clean up open violation. 212-791-4578 ext 206 8/16/11 - Austin - Received call from Allen Green (646-599-5869), an expeditor who wanted to know how to get this spill report closed. I explained the basic preliminary findings of the spill report, and the subsequent history showing many inquiries about how to close this spill, with no submissions or additional info provided to the DEC on what has actually been done since 1997. I referred Mr. Green to the current DEC project manager for this spill (Ryan Piper) for more details on how to proceed. - end 1/18/17- DEC Piper received and reviewed Subsurface investigation report. Based on results of soil, groundwater and soil vapor/ indoor air sampling, no further action is warranted. This spill is closed. Report in DEC Docs."

Remarks: "TANK REMOVAL REVEALED CONTAMINATED SOIL AND POSSIBLE GROUNDWATER CONTAMINATION AT AN AUTOMOTIVE STATION-ABOUT 250 YARDS OF SOIL AT THE COMPLETON"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #138160: 7/11/01 19:30 hrs. Sean Henihan #16850, Splicer Underground North, reported at 18:46 hrs. that he found at 18:40 hrs. approx. 15 gallons of green fluid and approx. 15 gallons of water in service box SB37911 located at the north west corner of Bleeker Street & Lafayette Street. The green fluid is possibly anti-freeze or the green dye that the water dept. uses to test for leaks in their pipes. Considering the amount of green fluid found (15 gallons) it is possibly the green dye used by the NY City Water Dept. He was at this location at the request of the Manhattan Environmental Desk and the ERT, Sean Mahoney. Stanley Baldwin of the DEP was at this location earlier in the day and reported to the ERT that a green substance was coming from a Con Edison structure. ERT, Sean Mahoney called the Manh. Environ. Desk at 14:45 hrs. and reported that Mr. Baldwin of the DEP is claiming that the green substance or fluid is coming from a Con Edison manhole. The ERT and Mr. Baldwin agreed that the fluid was either anti-freeze or the green dye used by the Water

SERVICE BOX 37911 (Continued) **S105058851**

Dept. and was non-hazardous. The Environ. Desk called Mike Donahue & Dennis Romano of the Underground South to veify if there were any crews working in this area. They both stated that there were no crews working or assigned to this location. Sean Henihan reported that there was a trench approx. 2 feet north of this service biox which had a pipe running through it. The trench is approx. 12 inches deep x 4 feet long x 2 feet wide. The trench contained approx. 7 gallons mixture of the green fluid and water. It appears that the green fluid from the trench migrated into our service box. UPDATE 7/12/2001 @ 01:50 HRS Lab results for Lab Sequence 01-07266-001 Aroclor 1242 < 1.0 ppm 1.0 Aroclor 1254 < 1.0 ppm 1.0 Aroclor 1248 < 1.0 ppm 1.0 Aroclor 1260 < 1.0 ppm 1.0 UPDATE: 8/09/01 Jimmy Rodriguez, Underground South Supervisor, reported at 11:13 hrs. on 7/13/01 that the cleanup of this manhole has been completed. He reported that 20 gallons of fluid was removed on 7/12/01 and 10 gallons of fluid was removed on 7/13/01 for a total of 30 gallons. One drum of PPE (solid waste) was generated. The crew pumped the structure, washed it with one gallon of citrus cleaner and flushed the service box with the Vactor truck. The cleanup was completed at 11:00 hrs. 8/9/01 14:12 Received lab results lab sequence # 01-07267-001 Insufficient amount of sample extracted to perform oil identification. Ethylene Glycol < 10.2 ppm PROPYLENE GLYCOL 6.60 PPM"

Remarks: "15 gallons of a grn material & 5 gallons of water - they tested material & they will clean up late tonight or tomorrow - ref #138160"

VB 11/29/2013 - V. Brevdo No information, data, documents which would confirm tank test failure are available to the Department. No tank test results report from the alleged failed test are available. This is unconfirmed TTF spill case. Furthermore, PBS file 2-256277 for this address does not contain any documents which would confirm tank test failure in 1999, 2000, 2001 or 2002. To that effect, no any documents are in PBS file which would indicate any TTF at any time. The Department determined that there are no sufficient grounds / cause to pursue / enforce this unconfirmed case against site owner. PBS file shows valid PBS certificate dated 01/29/2013 expiring on 09/19/2017. Spill Case is closed effective 11/29/2013. VB"

FINDS:

Registry ID: 110055458115

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company:	COOPERS SQUARE HOTEL GROU
Spiller Address:	27 COOPERS SQUARE
Spiller Company:	001
Contact Name:	MATTHEW MOSS
DEC Memo:	"need to send CSL. 08/3/06-Zhune sent CSL to the owner Matthew Moss at: Peck Moss Hotel Group 250 Lafayette Street, Suite 38 New York, NY 10012 11/20/06-Vought-Review of Environmental Investigation and Remediation at 27 Cooper Square (Environmental Building Solutions, LLC. Mike Borello 646-290-5925). The site currently consists of a four (4) residential building surrounded on the north, south and east sides by an open excavation that is associated with the construction of future Cooper Square Hotel. Site formerly occupied by metal works, auto parts store, canal street towing and tire store. Previous soil investigation by Eldon Environmental Management Corporation, dated January 1990, for the propety located at 25 Cooper Square, a former gasoline service station . As per investigation there were six (550-gallon) gasoline USTs and one 275-gallon waste oil tank. Site investigation performed in July 2006 including the collection of two soil samples at depths of 3' and 6' below the basement floor joists. No groundwater was encountered during investigation. Soil analyticals show 1200ppb benzo(a)anthracene, 8200ppb benzo(a)pyrene, 11000ppb benzo(b)fluoranthene and 3900ppb benzo(k)fluoranthene, 12000ppb chrysene all from below floor center sample. no upgradient samples were collected for comparison purposed as the area surrounding the contamination has been excavated approximately 30 feet below ground

COOPERS SQUARE HOTEL GROU (Continued) **S108129276**

surface for the Cooper Square Hotel foundation. All contaminated soil that exceeds TAGM 4046 will be excavated and disposed of... . If excavation reaches the water table before soil contamination guidance values are met, a groundwater investigation will be conducted . Excavation of site performed from 8/06-10/06. ...approximately 250 cubics yards of contaminated soil and construction debris was removed from the basement of the subject property . Four endpoint sidewall samples were collected for analysis. Soil analyticals show relatively low concentrations of PAHs compared to above soil investigation (highest concentration is 2950 benzo(a)anthracene, no VOCs. No additional soil was removed due to construction constraints. ... a finished four inch concrete slab is to be poured to further finish the basement . Report recommends no further action. DEC requires: 1)PBS registration 2)installation of vapor barrier due to SVOC exceedences under 27 Cooper Square. 11/20/06-Vought-Called Borello for above requirements and material was excavated from under existing foundation of 27 Cooper Square. Gasoline tanks were formerly located in outdoor garden portion on site plan. 27 Cooper had former auto repair operations on ground floor and residential above. Outdoor garden is planned not to be excavated. No signs of pipes or dispenser island (are covered by dirt). Samples collected were actually bottom as sidewalls of were composed of brick and final excavation depth of hotel is 25-30' below grade. Hotel will not be located on top of former gasoline UST location or contamination documented to be under 27 Cooper Square(which is to remain in place). NYCDOB surveying 27 Cooper on a daily basis. Vought to send letter with above requirements to: Peck Moss Hotel Group 250 Lafayette Street, Suite 38 New York, NY 10012 Attm: Mathew Moss Vought received copy of Environmental Investigation Report dated January 1990 prepared by Eldon Environmental Management. A total of six (550-gallon) gasoline USTs and one 275-gallon waste oil UST which are located 6 to 8 feet below the surface . Work included installation of five soil borings. The location of the borings was determined by the general vicinity of the six known 550 gallon gasoline tanks and the 250 gallon waste oil tank . PID survey showed no positive readings. Borings ranged in depth from approximately 17 to 27 feet, where groundwater had not yet been encountered . Site underlain by fill material which includes asphalt, ash, pebbles, concrete, slag and wood . Soil analyticals showed no TAGM 4046 Required Soil Cleanup Objective exceedences. Report concludes that it appears that there are no significant environmental concerns present at the subject site . 12/12/06-Vought-Received fax from Environmental Building Solutions (Borello)dated 12/6/06. Additionally the PBS Application was submitted to Nick Lombardo earlier this week . Attached is letter from Sciame Construction Company (Michael Gordon 212-232-2200) that soil bariier will be installed as per DEC and DOH requirements. Spill closed by Vought. Sent NFA as per letter request. "

Remarks: "HEAVY METALS AND SEMI VOLITALS. THIS WAS HISTORIC MATERIAL IN THE BASEMENT. CLEAN UP IS IN PROCESS."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 2/25/2003-Vought-Spoke with Fred Caputo (Bayside Fuel 718-333-8880) and fill goes under sidewalk and into building. Spill caused by leaking fill line. Line was replaced and sidewalk was backfilled. Last delivery made on 2/3/2003. 4/11/2003-Vought-Received message from Tony (212-226-6500) that Miller performed work. Vought called Tony and Miller removed approximnately 10 cubic yards of soil were removed and fill line broke releasing fuel into vault. NYSDEC requires Site Plan, photos, disposal manifest, work invoice. Vought will notify Tony if endpoint samples are necessary once report with above requirements is received. 5/21/2003-Vought-Recieved the following from Tony Poulter: authorization for contractor (miller Environmental) to proceed, Miller invoice (for disposal of ten yards of soil), daily job report and disposal manifest. Vought called Tony

SPILL NUMBER 0211638 (Continued) **S106124860**

and told him that NYSDEC requires endpoint sampling from below depth of excavation and analyticals. 11/13/2003-Vought-Two soil cores performed by Miller on 5/29/03 from under former tank location. Soil analyzed for 8021/8270 analyses and show no TAGM 4046 Soil Cleanup Objectives exceedances. Spill closed by Vought."

Remarks: "CALLER LIVES IN APT HOUSE. SPILL NOT COMPLETELY CLEANED UP."

FINDS:

Registry ID: 110004331081

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004472810

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"01/29/18 - Lakhani During Approved Oil's delivery, it was realized that there was a hole in the fill line. Approved Oil Eric Sutphen claims that the oil is contained to the sub-basement where a majority of the oil was absorbed by garbage and debris that is piled on the sub-basement floor. Approved Oil called Easco Neil Tomasetti (347-682-0730, ntomasetti@easco.com) to assist with the cleanup. 5000 gallon 32 fuel oil AST on the property. PBS #2-315397 Site Owner: Bleecker Tower Tenants Corp 644 Broadway New York, NY 10003 Assigned to DEC Zhune as daytime runner. 1/29/18- Veronica visited the site. The site is a residential building with 8 floors and 13 apartments located at 644 Broadway in Manhattan. The tank is a 5000-gallons AST # 2 fuel oil. As per the super Mr. Brewster they had a delivery of 3000 gallons of fuel oil # 2 today at 4 am. A tenant who resides in the 5 th floor complained oil odors in the main hallway at 12:00 am. The super called Approved oil. They came and discovered a big hole in the fill line and approximately 100 gallons of oil spilled on the floor of the basement. Esco is cleaning the spill in the basement. They installed 2 scrubbers in the main hallway. They will install a ventilation system in the basement tomorrow morning. I checked the hallways of all floors and noticed no oil odors in any of the hallways. There is oil odor in the main hallway 1/30/18-Lin-Recieved call from Dave Wilder (Resident of impacted building. APT #5C). Phone number 917-364-1487. According to Mr. Wilder, he still smell odor in his apartment. There are currently 2 senior citizen who resides in his apartment. He mentioned that odor travels into his apartment when he have the windows open. He request immediate clean up of the spill. Relayed message to case manager. 1/31/18-Zhune visited the apartment of Mr. Wilder and noticed slight oil odors at the entrance of the apartment. The PID reading was 2.4 PPM at the entrance. I inspected the rest of the apartment and found no odors. I inspected the hallways of the building and the maximum PID reading was 4.6 ppm at 8th floor, 3.3 ppm at 7th floor, 3.3 ppm at 6th floor, 3.4 ppm at 5th

COMMERCIAL (Continued) **S121464200**

floor, 4.0 ppm at 4th floor, 3.0 ppm at 3rd floor, 2.9 ppm at second floor and 1.4 ppm at the first floor. There was no odors at the entrance of the building. "

Remarks: "spill to inside concrete floor/clean up crew en route"

Cleanup Meets Std:	False
Last Inspection:	Not reported
Recommended Penalty:	False
UST Trust:	False
Remediation Phase:	0
Date Entered In Computer:	2011-06-08
Spill Record Last Update:	2011-08-09
Spiller Name:	ERT
Spiller Company:	CON EDISON
Spiller Address:	COOPER SQ & EAST 6TH ST
Spiller Company:	999
Contact Name:	ERT
DEC Memo:	"6/9/11-Vought-Primary off-hours spill responder. Spill assigned to DEC Feroze as part of minor Con Ed spill portfolio review and possible closure. Initial EMIS #226103 entered into Cross Reference Field, downloaded into E-docs and deleted from proxy. As per EMIS While removing an abandon gas main at the N/S Cooper SQ. 100' S/O E6 ST ConEd equipment leaked one ounce of liquid on dirt containing PCB and benzene according to past lab results. Spill was immediately cleaned and placed in a soil container. Contractor (Clean Ventures) will dispose of content of cleanup. 8/9/11 - Austin - 1 oz. gas main condensate spilled while abandoned line was being removed - Con Ed contained and cleaned up the spill - See eDocs for additional information - Spill closed - end"
Remarks:	"PCB spilled from transformer onto soil. Cleanup is complete."

FINDS:

Registry ID: 110063779647

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	32043
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

F06 - Pipe External Protection - Wrapped
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None

THE NOHO STAR BUILDING (Continued) **U004048503**

H00 - Tank Leak Detection - None
F02 - Pipe External Protection - Original Sacrificial Anode
G01 - Tank Secondary Containment - Diking (Aboveground)

Tank Location:	2
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	07/16/2004
Register:	True

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110055459169

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "05/28/08 Contaminated soil was discovered around underground return line. Return line will be replaced, as per Celeste Rufer.Ms. Rufer also indicated that tightness testing will be performed after the line replacement.CSL was sent to(via mail& facsimile@(212)995-4932) New York University 285 Mercer Street New York, NY 10003 Attn: Celeste Rufer (sr) 11/05/08-Vought-Received copy of submission of PBS registration to DEC Lombardo. 8/21/09- Complete file review by Intern EM Ibeh and DEC Vought File being reviewed is SP#0809019, spill date-11/08, at NYU 251 Mercer Street, NY 10003 {see SP# 0802239}. 6/30/08-TRC Solutions Report to DEC Vought stating that on 5/20/08, the diesel fuel pump associated with the southernmost 30,000gal. UST lost suction pressure indicating a clog or obstruction in the fuel oil supply line and the tank system was immediately taken out of service and in order to determine the cause of obstruction, hand excavation was performed to expose the fuel line. On 5/28/08, the fuel oil lines were exposed and petroleum impacted soil was observed adjacent to an elbow on the fuel oil line. The elbow on the fuel oil line was replaced by NYU plumbing staff afterwards, hand excavation was performed to remove the petroleum impacted soil. The sidewalls and bottom of the excavation were screened with a PID and based on observations, petroleum contamination in soil was confined horizontally to the immediate area of the former leaking fuel oil line and extended vertically downward. 3 post-excavation end-point samples were collected- 1 sample from the bottom of the excavation and 2 samples from the bottom of the northern and southern sidewalls. Due to presence of USTs, it was not practical to collect samples from the eastern and western sidewalls. Groundwater was not encountered in the excavation. Samples were analyzed for STARS Memo #1 VOCs and SVOCs. VOCs for the 3 samples were non-detect while SVOCs for south SW- Benzo(a)pyrene 0.18ppm and Benzo(b)fluoroanthene 0.25ppm; north SW- Benzo(a)pyrene 0.16ppm; BE- Benzo(a)pyrene 0.12ppm. A CD of the Spill Closure Letter Report was enclosed with the correspondence. 9/10/08- TRCSolutions Report same as above. 5/18/09- TRCSolutions Report to DEC Vought stating that the Tisch Building at the above-named address utilizes #2 fuel oil generators for the facility s cogeneration plant and that NYU maintains (3) 30,000gal. fuel oil (2 #2 and 1 #6 fuel oil) USTs (PBS #2-043982) to store fuel for the generators. That on 11/08, construction activities were initiated to re-line the northernmost 30,000gal. UST (tank #3) and on this day, during soil excavations to expose the surface of this UST, a historic out-of-service 4 diameter fuel oil line was identified. The line was oriented north-south, ~6 bgs and a hole ~a quarter inch in diameter was observed in the part of the line above the top of the UST and petroleum impacted soil was observed adjacent to the damaged historic fuel oil line thus a spill was reported to the DEC and a SP# was assigned. The line was removed 11/12/08 and after it was done, hand excavation was performed to remove the petroleum impacted soil. The sidewalls and bottom of the excavation were screened with a PID for evidence of petroleum contamination along with inspection for staining and odors. Based on observations, petroleum contamination in soil was confined horizontally to ~3ftx2ft area in the immediate vicinity of the former leaking fuel oil line and extended vertically downward. On 3/27/09, the excavation was inspected and soil in the northern and southern sidewall exhibited no visual or olfactory evidence of contamination. PID readings for soil samples collected

NEW YORK UNIVERSITY (Continued) **1007112448**

from the sidewalls of the excavation were not above background and soil from the bottom of the excavation exhibited no visual evidence of contamination; however, it exhibited a slight fuel oil odor and PID readings ranged from 50-100ppm. 3 post-excavation end-point samples were collected- 1 sample from the bottom of the excavation and 2 samples from the bottom of the northern and southern sidewalls. Due to presence of USTs, it was not practical to collect samples from the eastern and western sidewalls. Groundwater was not encountered in the excavation. VOCs for the 2 sidewall (SW) samples were below the RSCO for fuel oil contaminated soil but 1,2,4-Trimethylbenzene 26ppm, 1,3,5- Trimethylbenzene 13.ppm, m+p Xylenes 11.0ppm, Naphthalene 15.0ppm and o Xylene 9.7ppm were above RSCO for the sample from the bottom of the excavation (BE). SVOC samples from both SWs had Benzo(a)pyrene at 0.081ppm and 0.071ppm respectively while the BE concentrations were below RSCO. Report concluded that the SVOC concentration detected from the samples from the sidewalls were characteristic of the soil found at the site and not as a result of the spill. VOC exceedence was as a result of the residual fuel oil contamination at the bottom of the excavation. TRC requested spill closure as the historic fuel oil line has been removed and groundwater not being encountered in the excavation (borings installed for an adjacent project revealed that it is present at ~38ftbgs and is not potable). 08/26/09-Vought-Reviewed above notes and file with DEC Ibeh and message was left with TRC Guder (212-221-7822) that either groundwater sample at previous bottom endpoint sample location with site plan OR sensitive receptor survey with site plan is required. Letter to be issued upon callback from Guder. See also spill #0809019 at same site. 09/15/09-Vought-Received email from Guder that I did receive your message from a few weeks back and I presented the options (groundwater or sensitive receptor survey) to NYU. I haven't received a firm commitment on which way they are leaning but I am following up with them. As soon as I hear from them I will send you aquick note with the information. 10/04/09-Vought-Received email from TRC Richard Wetherbee that You are correct in that both releases are associated with the same tank system; however, there were two separate small releases from different sets of piping associated with the USTs. The spills were discovered at different times (hence the separate spill cases) and each was remediated separately. At completion, one of the remedial excavations was entirely clean (Spill No. 0802239): no evidence of residual petroleum contamination; no detectable VOCs; and minor exceedances of TAGM RSCOs for benzo(a)pyrene and beno(b)fluoranthene (max concentration 0.25 mg/kg), which are attributed to the fill characteristics. The second remedial excavation (Spill No. 0809019) removed all petroleum impacted soil to a depth of approximately 20 feet below grade; however, field observations and lab results indicated the presence of residual fuel oil contamination at the base of the excavation. Going forward, we are managing the closure of the spill cases as one project - we are currently preparing a sensitive receptor survey report which will address both spill cases and support our petition for no further action. 11/30/09-Vought-Received copy of report dated 11/30/09 from TRC Lindemuth entitled Sensitive Receptor Survey. Tisch Building located 251 Mercer uses #2 fuel oil generators for facilities cogeneration plant. In conjunction with the contstruction of a cogeneration facility, the No. 2 fuel oil USTs were re-fitted and relined. During this work, petroleum impacted soil was observed in the vicinity of former fuel oil supply lines and

NEW YORK UNIVERSITY (Continued) **1007112448**

spills were reported to the NYSDEC (Spill Case numbers 0809019 and 0802239). Hand excavation of soils occurred at both spill locations. Additional excavation could not be performed at both locations due to a retaining wall. Tank area is located in a pedestrian plaza between two buildings. Groundwater at estimated depth of 38'bg. FOR SPILL NUMBER 0802239: Broken fill pipe at 7'bg and soil excavation performed to depth of 15'bg. 27 drums of contaminated soil removed. Field observations indicated that the petroleum impacted soil was limited in extent and that no petroleum contaminated soil remained at the completion of the excavation . Soil analyticals for this spill number are below TAGM 4046 Requirements except for minor PAH's attibutable to fill material. FOR SPILL NUMBER 0809019: This spill found during relining of northern most UST. During excavation activities to top of UST, a out of service 4 diameter fuel oil fill line was identified. A hole approximately one quarter inch in diameter was observed in the part of the fuel line above the top of the UST and petroleum impacted soil was observed. Soil was hand excavated to a depth of 20'bg and 26 drums of contaminated soil removed. Contaminated soil remained at base of excavation. Soil analyticals showed: 26000ppb 1,2,4-trimethylbenzene, 15,000ppb napthalene and 11000ppb xylene. Sensitive receptor includes evaluation of exposure pathways, use of surrounding buildings. The results of the site reconnaissance indicated that the area in the vicinity of the release is paved with impermeable materials (e.g. concrete and asphalt) and that there are no sensitive receptors located on adjacent properties. Request spill closure.
1/19/10-Vought-This spill closed by Vought and above information forwarded to DEC Piper for possible spill closure of Spill #0809019.
SCL sent to: New York University 285 Mercer Street New York, NY 10003 Attn: Celeste Rufer with cc to TRC Lindemuth. "

Remarks: "PBS No: 2-043982 hole in fuel return line and repairing will be started, has been shut down:"

Contact Name: ANTHONY LARA
DEC Memo: "Contaminated soil (#2 oil) found under sidewalk between curb fill and basement wall due to leaking remote fill line. NYU Contact Person: Martin Kushner 212-998-1405 PTC will NOT be doing any more work on this project. NYU is planning a major excavation job on this building and will be digging out the sidewalk and underpinning the building foundation wall as part of a large renovation of the building. They do not think it's necessary to dig out the contamination now and refill, if they will be digging the entire area out in the near future. DEC should confirm NYU's work schedule and get followup when the excavation is actually done. **** Also, need to ask NYU about status of new fill line?*** 11/27/07 - Raphael Ketani. I contacted Martin Kushner of NYU. He said that the site is a co-generation plant. NYU is planning to expand the plant. Deeper digging is necessary to expand the plant. He said that the company that will do the expansion construction will do the deep digging with shoring and underpinning. I asked him about the fill line replacement. He said that they have a temporary right now and will put in a new permanent one when the construction is done on that side of the plant. He said he expected the work to start next week. He put me in conference with Celeste Rufer (roo-fer) (212) 998-1086, Environmental Health & Safety (environmental specialist). I spoke to Ms. Rufer and told her that DEC needed a report at the end of the project with manifests for the soil removed, pictures, plans, end point sample results, and a cover letter explaining what took place. I also asked her to keep me updated as to the progress of the project. She said she would send e-mails and voice mails. She asked that I contact her, rather than Mr. Kushner, as she is the project manager. 12/10/07 - Raphael Ketani. Ms. Rufer called to say that they have resumed digging at the site. They plan to go down 15' for the installation of a Con Ed vault. However, upon the continuation of the digging, they hit an unknown tank. They will inspect the tank, clean it out, remove it, and register it. 12/11/07 - Raphael Ketani. Ms. Rufer called to say that the object was not a tank, but a pipe. It has been completely uncovered and will be removed soon. The soil around the pipe will be checked for contamination and end point samples will be taken if contamination is detected. 12/19/07 - Raphael Ketani. Ms. Rufer (212) 998-1086 called me. She said that they were starting the soil excavation in the area of the future Con Ed vault. She added that all of the contaminated soil will be removed. 1/4/08 - Raphael Ketani. I tried to contact Ms. Rufer, but could only leave a message. 1/7/08 - Raphael Ketani. I spoke to Ms. Rufer. She said that everything was dug out on 12/21/07 and end points were taken. She said that she had told the company doing the digging to keep removing soil until everything is clean. She added that Con Ed has already installed their vault. I told her that DEC needed the manifests and the end point results. She said that DEC will get everything in a report when it is ready. 2/7/08 - Raphael Ketani. I spoke to Ms. Rufer. She said she is about to review the completed report regarding the excavation, sampling and remediation work. She said she hopes to get it to me sometime during the next two weeks. I told her that would be fine. 2/28/08 - Raphael Ketani. Today I received the Environmental Soil Excavation and End Point Sampling

NYU CENTRAL PLANT (Continued) **1001493678**

Findings Report dated 2/12/08 (revised 2/22/08) from Ms. Rufer. I am reviewing the report. 3/3/08 - Raphael Ketani. I finished my review of the ESE and EPSFR. There were virtually no VOC analyte hits for the end point samples. Sample EP-1 was the only one with SVOC hits. Only those hits belonging to the benzo series exceeded the TAGM standards. Manifests for the removed soil and pictures of the excavation work were also included. Based upon my review of the soil analyticals in the ESE and EPSFR, and the manifests and the photos, I am closing the spill case. "

removed, end point samples will be taken. Report will be forwarded to DEC Piper. 8/21/09- Complete file review by Intern EM Ibeh and DEC Vought File being reviewed is SP#0809019, spill date- 11/08, at NYU 251 Mercer Street, NY 10003. {See SP# 0802239} 6/30/08- TRCSolutions Report to DEC Vought stating that on 5/20/08, the diesel fuel pump associated with the southernmost 30,000gal. UST lost suction pressure indicating a clog or obstruction in the fuel oil supply line and the tank system was immediately taken out of service and in order to determine the cause of obstruction, hand excavation was performed to expose the fuel line. On 5/28/08, the fuel oil lines were exposed and petroleum impacted soil was observed adjacent to an elbow on the fuel oil line. The elbow on the fuel oil line was replaced by NYU plumbing staff afterwards, hand excavation was performed to remove the petroleum impacted soil. The sidewalls and bottom of the excavation were screened with a PID and based on observations, petroleum contamination in soil was confined horizontally to the immediate area of the former leaking fuel oil line and extended vertically downward. 3 post-excavation end-point samples were collected- 1 sample from the bottom of the excavation and 2 samples from the bottom of the northern and southern sidewalls. Due to presence of USTs, it was not practical to collect samples from the eastern and western sidewalls. Groundwater was not encountered in the excavation. Samples were analyzed for STARS Memo #1 VOCs and SVOCs. VOCs for the 3 samples were non-detect while SVOCs for south SW- Benzo(a)pyrene 0.18ppm and Benzo(b)fluoroanthene 0.25ppm; north SW- Benzo(a)pyrene 0.16ppm; BE- Benzo(a)pyrene 0.12ppm. A CD of the Spill Closure Letter Report was enclosed with the correspondence. 9/10/08- TRCSolutions Report same as above. 5/18/09- TRCSolutions Report to DEC Vought stating that the Tisch Building at the above-named address utilizes #2 fuel oil generators for the facility s cogeneration plant and that NYU maintains (3) 30,000gal. fuel oil (2 #2 and 1 #6 fuel oil) USTs (PBS #2-043982) to store fuel for the generators. That on 11/08, construction activities were initiated to re-line the northernmost 30,000gal. UST (tank #3) and on this day, during soil excavations to expose the surface of this UST, a historic out-of-service 4 diameter fuel oil line was identified. The line was oriented north-south, ~6 bgs and a hole ~a quarter inch in diameter was observed in the part of the line above the top of the UST and petroleum impacted soil was observed adjacent to the damaged historic fuel oil line thus a spill was reported to the DEC and a SP# was assigned. The line was removed 11/12/08 and after it was done, hand excavation was performed to remove the petroleum impacted soil. The sidewalls and bottom of the excavation were screened with a PID for evidence of petroleum contamination along with inspection for staining and odors. Based on observations, petroleum contamination in soil was confined horizontally to ~3ftx2ft area in the immediate vicinity of the former leaking fuel oil line and extended vertically downward. On 3/27/09, the excavation was inspected and soil in the northern and southern sidewall exhibited no visual or olfactory evidence of contamination. PID readings for soil samples collected from the sidewalls of the excavation were not above background and soil from the bottom of the excavation exhibited no visual evidence of contamination; however, it exhibited a slight fuel oil odor and PID readings ranged from 50-100ppm. 3 post-excavation end-point samples were collected- 1 sample from the bottom of the excavation and 2 samples from the bottom of the northern and southern sidewalls. Due to presence of USTs, it was not practical to collect samples from the eastern and

NYU CENTRAL PLANT (Continued) **1001493678**

western sidewalls. Groundwater was not encountered in the excavation. VOCs for the 2 sidewall (SW) samples were below the RSCO for fuel oil contaminated soil but 1,2,4-Trimethylbenzene 26ppm, 1,3,5-Trimethylbenzene 13.ppm, m+p Xylenes 11.0ppm, Naphthalene 15.0ppm and o Xylene 9.7ppm were above RSCO for the sample from the bottom of the excavation (BE). SVOC samples from both SWs had Benzo(a)pyrene at 0.081ppm and 0.071ppm respectively while the BE concentrations were below RSCO. Report concluded that the SVOC concentration detected from the samples from the sidewalls were characteristic of the soil found at the site and not as a result of the spill. VOC exceedence was as a result of the residual fuel oil contamination at the bottom of the excavation. TRC requested spill closure as the historic fuel oil line has been removed and groundwater not being encountered in the excavation (borings installed for an adjacent project revealed that it is present at ~38ftbgs and is not potable).
09/01/09-Vought-After review with DEC Ibeh, Due to bottom endpoint TAGM 4046 RSCO exceedence and multiple tank systems on site DEC may possibly require: 1)collection of a groundwater sample at tank location with submission of scaled site plan OR 1)submission of a sensitive receptor survey with a scaled site plan. Vought left message with TRC Guder to return call to discuss. Vought transferred file to DEC Piper for further action as he is project manager on record. You are correct in that both releases are associated with the same tank system; however, there were two separate small releases from different sets of piping associated with the USTs. The spills were discovered at different times (hence the separate spill cases) and each was remediated separately. At completion, one of the remedial excavations was entirely clean (Spill No. 0802239): no evidence of residual petroleum contamination; no detectable VOCs; and minor exceedances of TAGM RSCOs for benzo(a)pyrene and beno(b)fluoranthene (max concentration 0.25 mg/kg), which are attributed to the fill characteristics. The second remedial excavation (Spill No. 0809019) removed all petroleum impacted soil to a depth of approximately 20 feet below grade; however, field observations and lab results indicated the presence of residual fuel oil contamination at the base of the excavation. Going forward, we are managing the closure of the spill cases as one project - we are currently preparing a sensitive receptor survey report which will address both spill cases and support our petition for no further action. 11/30/09-Vought-Received copy of report dated 11/30/09 from TRC Lindemuth entitled Sensitive Receptor Survey. Tisch Building located 251 Mercer uses #2 fuel oil generators for facilities cogeneration plant. In conjunction with the contstruction of a cogeneration facility, the No. 2 fuel oil USTs were re-fitted and relined. During this work, petroleum impacted soil was observed in the vicinity of former fuel oil supply lines and spills were reported to the NYSDEC (Spill Case numbers 0809019 and 0802239). Hand excavation of soils occurred at both spill locations. Additional excavation could not be performed at both locations due to a retaining wall. Tank area is located in a pedestrian plaza between two buildings. Groundwater at estimated depth of 38’bg. FOR SPILL NUMBER 0802239: Broken fill pipe at 7’bg and soil excavation performed to depth of 15’bg. 27 drums of contaminated soil removed. Field observations indicated that the petroleum impacted soil was limited in extent and that no petroleum contaminated soil remained at the completion of the excavation . Soil analyticals for this spill number are below TAGM 4046 Requirements except for minor PAH’s

NYU CENTRAL PLANT (Continued) **1001493678**

attibutable to fill material. FOR SPILL NUMBER 0809019: This spill found during relining of northern most UST. During excavation activities to top of UST, a out of service 4 diameter fuel oil fill line was identified. A hole approximately one quarter inch in diameter was observed in the part of the fuel line above the top of the UST and petroleum impacted soil was observed. Soil was hand excavated to a depth of 20'bg and 26 drums of contaminated soil removed. Contaminated soil remained at base of excavation. Soil analyticals showed: 26000ppb 1,2,4-trimethylbenzene, 15,000ppb napthalene and 11000ppb xylene. Sensitive receptor includes evaluation of exposure pathways, use of surrounding buildings. The results of the site reconnaissance indicated that the area in the vicinity of the release is paved with impermeable materials (e.g. concrete and asphalt) and that there are no sensitive receptors located on adjacent properties. Request spill closure.
1/19/10-Vought-This spill 0802239 closed by Vought and above information forwarded to DEC Piper for possible spill closure of Spill #0809019. DECPiper reviewed report. Based on work to date, this spill is closed .see e-docs if warranted. "

Remarks: "Caller states contaminated soils were found around above tank. Soil will be removed and further testing done."

DEC Memo:	"12/21/09-Spoke to Celeste of NYU. Some oil is seeping through a foundation wall in the central heating system room. They are guessing the oil is coming from old abandoned pipes. They will meet with the consultant tomorrow to discuss this seepage. Need follow-up. DEC Piper performed site visit, met with Mike Burke and Celeste. SSI recommended as oil seeps were obseved at a number of locations where utilities enter basement. 5/23/2011- from SSIR The objective ofthe investigation was to (1) evaluate the source of petroleum weeps in the basement and (2)determine whether the observed release has impacted groundwater. Due to restrictive field conditions, the proposed scope of services was not completed and the objectives were not met. There are two active 28,0005gallon No. 2 fuel oil underground storage tanks (USTs) and one active 30,0005gallon No. 6 fuel oil UST located at the Site. The USTs containing No. 2 fuel oil formerly contained No. 6 fuel oil, but were converted in 1985. In addition, one 30,0005gallon No. 6 fuel oil and one 5,0005gallon lube oil USTs were closed in place with foam and concrete slurry, respectively, in close proximity to the active USTs. According to NYU Cogeneration Plant personnel who are knowledgeable about the Site history, aboveground piping associated with the lube oil UST was removed in 1985 and underground piping associated with the out5of5 service No. 6 fuel oil tanks were cleaned and decommissioned in place in 1985 in conjunction with the UST upgrades; however, there are no available records that document how they were cleaned or closed. Oil weeps and petroleum5related staining are evident on the southern basement wall adjacent to the fuel oil piping room at the fuel oil supply and return line penetrations. The active and out of service USTs are located on the opposite side of the walls where weeps were identified however, oil weeps are only evident at the piping penetrations. The extent, magnitude and source of the petroleum release is not known. 5/17/2011- Due to refusal, sir was inconclusive. Further investigation warranted. Report in edocs. Langan proposes: " Inspect all USTs associated piping that was closed5in5place in 1985 to verify that they were properly cleaned and closed5in5place; " Steam clean all accessible piping associated with the out5of5service USTs and recover all residual liquid; " After piping has been steam cleaned, pressure grout the remnant underground piping associated with the out5of5service USTs; and " Decommission existing underground piping associated with the active No. 2 fuel oil USTs. Residual fuel oil should be collected, then piping should be steam cleaned and pressure grouted. Underground piping should be replaced with aboveground piping. Upon completion of this task, NYSDEC PBS registration should be updated to reflect the changes. 9/2/2011- Left message for Mike Burke."
Remarks:	"FUEL OIL SEEPING IN FROM ANNULAR SPACE AROUND ABONDONED PIPES, CLEANUP UNDERWAY, ABSORBENT PADS BEING USED AT THIS TIME."

Tank Info:

Tank Number:	001
Tank ID:	1198
Tank Status:	Closed - In Place
Material Name:	Closed - In Place
Capacity Gallons:	30000
Install Date:	06/01/1964
Date Tank Closed:	12/12/2007
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Pipe Model:	Not reported
Modified By:	NRLOMBAR
Last Modified:	04/14/2017

Equipment Records:

G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
K01 - Spill Prevention - Catch Basin
B00 - Tank External Protection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
C03 - Pipe Location - Aboveground/Underground Combination
F06 - Pipe External Protection - Wrapped

CENTRAL HEATING PLANT (Continued) **U000393713**
