EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) for the property at 375 Lafayette Street in New York, New York (the "subject property") under the written authorization of Edward J. Minskoff Equities, Inc. (the "Client" and the "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with a potential transaction involving the subject property.

Subject Property Layout

The about 19,775-square foot (about 0.45-acre) subject property is located at 375 Lafayette Street in New York, New York and is identified on the Manhattan Borough Tax Map as Block 531, Lots 17, 52, and 56. The subject property is occupied by an outdoor asphalt- and concrete-paved parking lot operated by Edison ParkFast. A parking attendant booth is located in the south-central part of the subject property on Lot 17 and a storage shed is located in the northeastern corner of the subject property on Lot 52. The north-central and eastern parts of the subject property (Lot 17 and 52) also contain 37 four-level hydraulic vehicle stacker lifts.

Subject Property Current Use

The subject property is an outdoor parking lot operated by Edison ParkFast.

Subject Property History

The subject property was developed by 1895 with a church on the western half at 28 Great Jones Street and five, 4-story row buildings on the eastern half from 30 to 34 Great Jones Street. By 1921, a printing facility was added in the eastern part of the subject property at 34 Great Jones Street. The church was demolished by the 1940s and replaced by a filling station and an L-shaped service building. Between 1950 and 1969, the eastern row buildings were demolished and replaced with an open-air parking lot. From the 1920s to 1970s, the property hosted various businesses, including hat manufacturing, clothing manufacturing, sheet metal works, metal polishing, printing, and electroplating. By 1975, the filling station and service building were replaced by an open-air parking lot. The remaining row building at 30 Great Jones Street housed Concord Electronics Corp, which operated from at least 1980 until 2006. The building was demolished between 2006 and 2008, and a parking lot was established by 2010, with no significant changes since.

Adjoining Properties and Surrounding Area

The adjoining properties and surrounding area were developed with mostly residential homes by 1895. Between the early 1900s and 1950s, the area to the north was redeveloped with large mixed-use industrial, commercial, and residential buildings. Historical operations on adjoining and surrounding properties included auto repair, filling stations, and parking and garages.

Conclusions

Langan completed a Phase I ESA of the subject property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

Table ES-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Current & Historical Use of the Subject Property: Historical and current uses of the subject property include a filling station (1940s-1975), hat manufacturing (1920-1963), clothing manufacturing (1934), sheet metal works (1934-1958), bottle capping machine works (1934-1956), metal polishing (1938-1958), printing (1942-1947), plating (1947), parking (1975 to present day), and electroplating (1980-2006). Several of these historical uses are also associated with regulatory database listings for petroleum bulk storage and hazardous waste generation. A Phase II Environmental Site Investigtion (ESI) was completed at the subject property by Langan in October 2018 to investigate potential impacts from current and historical on- and off-site uses. Documentated contamination included semivolatile organic compounds (SVOCs) in soil above the restricted use restricted-residential (RURR) and/or industrial use (IU) soil cleanup objectives (SCOs), metals above unrestricted use (UU) and/or residential use (RU) SCOs, and chloroform in groundwater above the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA water (collectively the NYSDEC SGVs). Some areas of the subject property could not be investigated due to the presence of vehicle stacker lifts. Additionally, potential impacts to subject property soil vapor or from per- and polyfluoroalkyl substances (PFAS) (historically used in electroplating) were not previously investigated. These remaining potential impacts to the subject property from historical on-site uses, and the documented contamination at the subject property are a REC.
Historical Uses of Adjoining Properties: Historical uses of the south-adjoining properties include automotive repair and service, and a filling station between the 1940s and 1996. Documented contamination and/or inadvertent releases of petroleum products and/or hazardous substances at these adjoining properties likely impacted soil vapor at the subject property and are a REC.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Closed Spill No. 0209425: NYSDEC Spill No. 0209425 was reported for the subject property (30 Great Jones Street) due to a release of 10 gallons of No. 2 fuel oil on 13 December 2002. The spill was caused by a delivery truck and resulted in soil in a basement vent shaft being impacted. The spill was closed on 13 January 2004 following cleanup and an NYSDEC inspection. Based on the documented cleanup and regulatory status, closed Spill No. 0209425 is an HREC.
De Minimis Conditions
Oily Staining: During the site reconnaissance, surficial oily staining typical of parking lots was observed on the concrete and asphalt paving throughout the subject property and in the vicinity of hydraulic equipment. The asphalt and concrete in the areas of staining were observed to be intact. The surface staining is a de minimis condition.
Business Environmental Risks (BERs)
Non-Native Fill: During a previous investigation at the subject property, non-native fill consisting of sand containing varying amounts of gravel, brick and concrete was identified from immediately beneath the surface cover to depths ranging from about 10 to 15 feet below ground surface (bgs). SVOCs and metals were detected in soil samples collected from the non-native fill layer above the applicable SCOs for the planned use of the subject property. Non-native fill containing elevated concentrations of these constituents are typically found in fill materials in NYC and may not trigger a regulatory reporting

ASTM E1527-21 Scope Items
requirement, but will require implementation of special soil handling, management, and off-site disposal procedures at a cost premium during future redevelopment of the subject property. Therefore, the presence of non-native fill at the subject property is considered a BER.
E-Designation at the Subject Property: An E-designation (E-619) for Hazardous Materials and Noise was assigned to the three subject property tax lots by the New York City (NYC) Department of City Planning (DCP) as part of the SoHo/NoHo Neighborhood Plan (City Environmental Quality Review [CEQR] No. 21DCP059M). E-Designation E-619 established a notice of environmental requirements pertaining to hazardous materials and noise that must be addressed to the satisfaction of the NYC Office of Environmental Remediation (OER) prior to obtaining building permits for future alteration/redevelopment. Additional costs associated with satisfying the E-Designations during future redevelopment of the subject property are considered a BER.

1. INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) for the property located at 375 Lafayette Street in New York, New York (the "subject property") under the written authorization of Edward J. Minskoff Equities, Inc. (the "Client" and the "user"). A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with a potential transaction involving the subject property.

1.1 Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (REC) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

1.2 Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

On 8 July 2024, the US EPA final rule designating two per- and polyfluoroalkyl substances (PFAS) – perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) including their salts and structural isomers – as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) became effective. Because of the complex and varied historical use of PFAS in various industries; limited prior disclosures of PFAS content on product specification sheets, Material Safety Data Sheets (MSDS), and Safety Data Sheets (SDS); the complex chemistry and chemical transformations associated with some PFAS; and the ever-growing and varied list of state regulations, it is not feasible to evaluate PFOA and PFOS without also considering other PFAS. As such, absent analytical data, Langan incorporated a review of PFAS as a general class into this Phase I ESA.

PFAS and other CERCLA hazardous substances and petroleum products have been detected in background environmental samples across the globe, including in areas removed from specific recognized sources. This Phase I ESA was not intended to evaluate background concentrations of CERCLA hazardous substances or petroleum products, regardless of whether the source is naturally occurring or anthropogenic. The objective of Langan's scope of services was to identify the presence, likely presence, and/or material threat of a release of CERCLA hazardous

substances and petroleum products related to specific property uses that are generally recognized as known or potential sources of such substances and products.

1.2.1 Records Review and Local Government Interviews

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to the New York City Department of Health (NYCDOH), the New York State Department of Health (NYSDOH), the New York State Department of Environmental Conservation (NYSDEC), the NYSDEC DECinfo Locator database, the New York City Department of Environmental Protection (NYCDEP), and the New York City Fire Department (FDNY). Langan also reviewed online records including the New York City Department of Buildings (NYCDOB), United States Geological Survey (USGS) mapping, and US EPA databases. Agency FOIA-requested information, where received, is discussed in relevant sections of this report and referenced in Section 7. Pertinent documents are provided in Appendix B.

Langan supplemented the third-party-provided historical records with review of online historical record sources including Google Earth Pro.

1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews

Langan completed the site reconnaissance on 6 May 2025. Eric Allen (the "key site manager") accompanied Olivia Miller of Langan during the site reconnaissance. Mr. Allen is a manager for Edison ParkFast and has been associated with the subject property for about 3 years. Mr. Allen was also interviewed during the site reconnaissance.

Langan walked the periphery of the subject property, observed the subject property from adjoining public thoroughfares, and observed the accessible interiors of structures at the subject property. Langan observed the adjoining properties and the surrounding area from the periphery of the subject property and from public thoroughfares adjoining to or traveled on to access the subject property. The weather at the time of the site reconnaissance was approximately 61°F and rainy. Photographs from the site reconnaissance are provided in Appendix C.

1.2.3 Evaluation, Report and Parts Used in Concert

Langan evaluated the information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 1.4.

1.2.4 Non-ASTM Scope Services

The scope of services for the Phase I ESA did not include non-scope ASTM considerations.

1.3 User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AULs) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the user regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the user state the reason the Phase I ESA was requested. Relevant information provided by the user is discussed in applicable sections of this report.

Unless specifically included in the scope of services, Langan did not complete a title search or a search for environmental liens or AULs, as that is the responsibility of the user. If the user requested that Langan complete such searches on the user's behalf, the information was supplied to Langan by a vendor, and to the vendor by government sources; therefore, neither Langan nor the vendor can verify the completeness or accuracy of the title search, or AUL searches.

1.4 Limiting Conditions/Deviations

Langan was unable to thoroughly inspect all ground surfaces of the subject property due to the presence of hydraulic vehicle stacker lifts and parked cars. Langan considers this condition a data gap; however, Langan does not consider this to materially affect the findings of this Phase I ESA.

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

1.5 Data Gaps

Data gaps, if encountered, are discussed throughout the report. Significant data gaps, if any, are summarized in Section 5.0.

2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

The following sections describe the subject property location, ownership, physical setting, and current layout and operations.

2.1 Location, Legal Description, and Ownership

The about 19,775-square foot (about 0.45-acre) subject property is located at 375 Lafayette Street in New York, New York and is identified on the Manhattan Borough Tax Map as Block 531, Lots 17, 52, and 56. Additional street addresses associated with the subject property include 375-379 Lafayette Street, and 12-28, 30, 32, and 34 Great Jones Street.

According to online Automated City Register Information System (ACRIS) information, the subject property is owned by 375 Lafayette Street Properties, LLC (Lot 17 and Lot 52) and SP Great Jones, LLC (Lot 56).

2.2 Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area is discussed below.

2.2.1 Topography

The 2019 USGS 7.5-minute quadrangle topographic map for Brooklyn, New York depicts the subject property at an elevation of about 42 feet above mean sea level (amsl), which represents a local plateau. The regional topography slopes downward toward the north and the East River (approximately 1.1 mile east of the subject property) and to the west toward the Hudson River (approximately 1 mile west of the subject property).

2.2.2 Geology

A previous environmental investigation at the subject property (see Section 3.3) documented non-native fill (sand containing varying amounts of gravel, brick and concrete) from below the surface cover to about 10 to 15 feet below grade surface (bgs) across most of the subject property; non-native fill was not identified in the northwestern corner of the property. Native soil beneath the fill layer is generally comprised of brown, medium- to coarse-grained sand and was observed to the maximum investigation depth of 47 feet bgs. A previous geotechnical investigation at the subject property documented competent gray mica schist rock at depths from 63 to 72 feet bgs.

Based on a review of the "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey" by Charles A. Baskerville, et al., the bedrock underlying the subject property is likely the Manhattan Schist formation, which consists of interbedded mica schist, gneiss, quartz, and amphibolite. Geological surface features (e.g., rock outcroppings) were not observed at the subject property.

Non-native fill material at the site, which is known to contain constituents above applicable state and/or federal standards, may not trigger a regulatory reporting requirement, but will require

implementation of special soil handling, management, and off-site disposal procedures at a cost premium during future redevelopment of the subject property. Therefore, the presence of non-native fill at the subject property is a Business Environmental Risk (BER).

2.2.3 Hydrogeology

Based on a previous environmental report for the subject property (see Section 3.3), depth to groundwater at the subject property is about 43 feet bgs. A groundwater monitoring well was observed in the north-central part of the subject property (Lot 56) during the site reconnaissance. Based on the local topography and proximity to nearby surface water features, the inferred groundwater flow direction in the vicinity of the subject property is to the east or southeast toward the East River.

2.3 Subject Property Description

The subject property is occupied by an outdoor asphalt- and concrete-paved parking lot operated by Edison ParkFast. A parking attendant booth is located in the south-central part of the subject property on Lot 17 and a storage shed is located in the northeastern corner of the subject property on Lot 52. The north-central and eastern parts of the subject property (Lot 17 and 52) also contain 37 four-level hydraulic vehicle stacker lifts.

A Subject Property Layout Map is provided as Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix C.

2.4 Current Subject Property Use

The subject property is an outdoor parking lot operated by Edison ParkFast. The following table summarizes subject property utility providers.

Table 2-1 Utility Providers

Utility	Providers
Electricity (used for cooling)	Con Edison
Natural gas (used for heating)	None
Water	New York City Municipal
Sewer	New York City Municipal

2.5 Hazardous Substances and Petroleum Products

Hazardous substance and petroleum product use at the subject property is related to hydraulic equipment maintenance for the on-site parking lot. Langan did not observe evidence of leaks, spills, pools of liquid or releases such as staining, or sheens, other than as described below.

2.5.1 Underground Storage Tanks (USTs)

No evidence of existing USTs was observed at the subject property. A geophysical survey of accessible areas of the subject property in 2018 did not detect anomalies suspected to be

associated with USTs; however, three areas of the property containing vehicle stacker lifts could not be scanned (see Section 3.3).

2.5.2 Aboveground Storage Tanks (ASTs)

No ASTs were observed at the subject property.

2.5.3 Drums, Totes, and Intermediate Bulk Containers

Langan observed the following containers on the subject property:

- One 55-gallon steel drum
- Two 55-gallon plastic drums
- Eight 5-gallon plastic buckets

According to the key site manager, these containers were empty and will be used for holding hydraulic oil when the stacker equipment needs to be drained for maintenance. Langan observed the containers to be intact without obvious indications of a release or material threat of a future release with the exception of two of the 5-gallon containers. These containers were stained along their tops and sides. Langan did not observe cracks or pathways through the surface cover (asphalt or concrete) in the area of the stained containers. Loose rock salt was also observed in the area of the containers.

2.5.4 Other Chemical Storage, Containers, or Equipment

The parking lot contains 37 four-level hydraulic vehicle stacker lifts. The hydraulic oil compressor is located on a concrete pad in the northwestern part of the subject property and the associated oil lines run along the northern and eastern property boundaries. Localized surficial staining from parked vehicles and from the hydraulic lift system was observed throughout the subject property. Langan did not observe actively leaking equipment, and no cracks or pathways through the surface cover (asphalt or concrete) were observed in the vicinity of the staining.

Langan observed several retail-size containers of maintenance-related products and janitorial products in the parking attendant booth and similar products were reportedly located in the storage shed. The shed was inaccessible due to parked cars. No staining was observed in the vicinity of the observed products.

A concrete-lined pit was observed in the southeastern corner of the subject property. No staining was observed on or near the pit; however, the pit was covered by a metal plate and could not be inspected. During a previous subsurface investigation at the subject property, a soil boring was advanced near the pit and completed as a temporary groundwater monitoring well. No visual, olfactory, or photoionization evidence of impacts was observed in soil or groundwater near the pit, and the analytical results did not indicate that a release from the pit had occurred.

2.6 Air Emissions

Langan did not observe air emissions sources at the subject property.

2.7 Waste Management

The following sections describe current hazardous and non-hazardous waste streams, and observations of fill areas or other solid waste throughout the subject property.

2.7.1 Hazardous Waste

Langan did not observe hazardous waste at the subject property.

2.7.2 Non-Hazardous Waste

Langan did not observe non-hazardous waste at the subject property.

2.7.3 Fill Areas or Solid Waste

Langan did not observe areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) that suggest the presence of garbage, construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting solid waste disposal.

A previous investigation at the subject property (see Section 3.3) documented non-native fill (sand containing varying amounts of gravel, brick and concrete) from below the surface cover to about 10 to 15 feet bgs across most of the subject property; non-native fill was not identified in the northwestern corner of the subject property. Non-native fill, which is documented to contain constituents above applicable state and/or federal standards, may not trigger a regulatory reporting requirement, but will require implementation of special soil handling, management, and off-site disposal procedures at a cost premium during future redevelopment of the subject property. Therefore, the presence of non-native fill at the subject property is a BER.

2.8 Wastewater

Sanitary wastewater from the parking attendant booth at the southern part of the subject property is discharged to the New York City municipal sewer system. Langan did not observe or identify evidence of septic systems or cesspools at the subject property.

2.9 Stormwater

Stormwater at the subject property percolates through pervious areas or sheet flows to the adjoining roadways into the municipal storm sewer system. Langan did not observe evidence of impact (e.g., sheens, staining) to stormwater pathways.

2.10 Wells

A groundwater observation well that was installed during Langan's 2018 geotechnical subsurface investigation was observed at the north-central part of the subject property (Lot 56) during the site reconnaissance. No staining was observed in the vicinity of the well.

3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

The following sections provide summaries of the historical uses of the subject property, and available information regarding documented environmental conditions associated with the historical uses.

3.1 Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix D.

Table 3-1 Subject Property History

Time Period	Historical Discussion
1895 – 1920s	The subject property was developed by 1895 with a church on the western half at 28 Great Jones Street and five, 4-story mixed-use commercial and residential row buildings on the eastern part of the subject property at 38 Great Jones Street. By 1921, the church was shown on the Sanborn Map to be vacant and one of the row buildings at the southeastern part of the site contained a printing facility.
1920s – 1960s	By the 1940s, the former church was demolished, and the western half of the subject property had been redeveloped with a filling station and L-shaped service building. The former printing operation was no longer noted in the row building in the southeastern part of the subject property. By 1969, the easternmost four row buildings (32 to 38 Great Jones Street) were demolished and redeveloped with an open-air parking lot. Between the 1920s and 1960s, relevant subject property building occupants and uses included hat manufacturing (1920-1963), clothing manufacturing (1934), sheet metal works (1934-1958), bottle capping machine works (1934-1956), metal polishing (1938-1958), printing (1942-1947), and plating (1947).
1970s – Present	By 1975, the filling station and service building were demolished and redeveloped with a parking lot. The remaining row building at the central part of the subject property (30 Great Jones Street) reportedly contained the "Concord Electronics Corp" facility (see Section 3.2), which performed electroplating and electronics manufacturing from at least 1980 until 2006. The building at 30 Great Jones Street remained until it was demolished between 2006 and 2008. The area was redeveloped with a parking lot by 2010. Subject property parking lot operations and configuration have remained generally unchanged since 2010.

A previous environmental investigation was completed at the subject property by Langan in 2018 (see Section 3.3) to investigate potential impacts from historical on- and off-site uses. Semivolatile organic compounds (SVOCs) were detected in soil above restricted use restricted-residential (RURR) and/or industial use (IU) soil cleanup objectives (SCOs), and chloroform was detected in groundwater above the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA water (collectively, the NYSDEC SGVs). Analytical results are discussed further in Section 3.3. Some areas of the subject property could not be fully investigated due to the presence of vehicle stacker lifts. Additionally, potential impacts to subject property soil vapor or from PFAS (historically used in electroplating)

were not previously investigated. These remaining potential impacts to the subject property from historical on-site uses are a REC.

3.2 Regulatory Database Review

The subject property is identified on the following databases: EDR Historical Auto Stations (EDR Hist Auto); ASTs (NY AST); NY Spills; E-Designation; US EPA Enforcement and Compliance History Online (ECHO); PFAS ECHO; US EPA Facility Index System (FINDS); US EPA Integrated Compliance Information System (ICIS); Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG); NY Manifest; PA Manifest; and RI Manifest. The environmental database report is attached as Appendix E.

The subject property (375-379 Lafayette Street) was identified under the name "H B Service Center" in the EDR Hist Auto database as a gasoline service station between 1969 and 1972. Historical Sanborn Maps (see Section 3.1) and historical photographs also indicate that a filling station and automotive repair business was located on the western side of the subject property from at least the 1940s to 1969.

The subject property (30 Great Jones Street) is identified in the NY AST database as an unregulated/closed facility (Petroleum Bulk Storage [PBS] ID No. 2-207543) for a 1,500-gallon No. 2 fuel oil AST. The AST was reportedly installed in November 1976 and removed in May 2008. This address is also identified as the location of NYSDEC Spill No. 0209425, which was reported due to a release of 10 gallons of No. 2 fuel oil on 13 December 2002. The spill was caused by a delivery truck and resulted in soil in a basement vent shaft being impacted. The spill was closed on 13 January 2004 after cleanup and an NYSDEC inspection. Based on the documented cleanup and regulatory status, closed Spill No. 0209425 is an HREC.

The subject property (30 Great Jones Street) is listed in the RCRA SQG, NY Manifest, RI Manifest, ICIS, FINDS, and ECHO databases under the name "Concord Electronics Corp." The facility is listed as a RCRA SQG since 1 January 2007 for the generation of corrosive waste (D002), reactive waste (D003), arsenic (D004), cadmium (D006), chromium (D007), lead (D008), silver (D011), wastewater treatment sludges from electroplating operations (F006), copper cyanide (P029), potassium cyanide (P098), silver cyanide (P104), and sodium cyanide (P106). The facility was also historically classified as a SQG in 2006, and as a Large Quantity Generator (LQG) in 1980, 1992, 1994, 1996, 1998, 2001, 2002, 2004, and 2006. Written informal violations were issued in 1984, 1995, and 2005; the violations either note that the facility achieved compliance or that a return to compliance was unverifiable. Information provided in the RI, NY, and PA Manifest databases also indicates that hazardous sludges and wastes associated with electroplating operations were removed from the facility between 1990 and 2007. The FINDS, ICIS, and ECHO database listings for the facility are associated with historical hazardous waste generation activities. The facility is also listed on the PFAS ECHO database, which was developed by the US EPA for sites in industry sectors with processes that may involve handling and/or releases of PFAS.

The three subject property tax lots are listed with E-designations (E-619) for Hazardous Materials and Noise by the NYC DCP as part of the SoHo/NoHo Neighborhood Plan (City Environmental

Quality Review (CEQR) No. 21DCP059M). Additional costs associated with satisfying the E-Designations during future redevelopment of the subject property are a BER.

A previous environmental investigation was completed at the subject property by Langan in 2018 (see Section 3.3) to investigate potential impacts from historical on- and off-site uses. Documentated contamination included SVOCs in soil above restricted use RURR and/or IU SCOs, metals above unrestricted use (UU) and/or residential use (RU) SCOs, and chloroform in groundwater above the NYSDEC SGVs. Some areas of the subject property could not be fully investigated due to the presence of vehicle stacker lifts. Additionally, potential impacts to subject property soil vapor or from PFAS (historically used in electroplating) were not previously investigated. These remaining potential impacts to the subject property from historical on-site uses are a REC.

3.3 Prior Report Review

In October 2018, Langan completed a Phase II Environmental Investigation (EI) at the subject property for due diligence purposes and to investigate the REC and BERs identified in a 2018 Phase I ESA. The Phase II report is included in Appendix B and referenced in Section 7. The following RECs and BERs were investigated as part of the Phase II EI:

- REC – Potential impacts from current and historical on-site uses, including a filling station (1950-1972), electronics manufacturing with electroplating (1960-2007), paper manufacturing (1938-1973), printing (1927), and hat manufacturing (1927-1963)
- BER – Potential impacts from current and historical off-site uses, including six filling stations and/or automotive repair facilities between 1921 and 2005
- BER – Potential presence of non-native fill at the subject property
- BER – Potential presence of undocumented USTs at the subject property

The Phase II EI included a geophysical survey of all accessible areas, advancement of ten soil borings to a maximum depth of 45 feet bgs, installation of three temporary groundwater monitoring wells, and the collection and laboratory analysis of soil and groundwater samples.

Soil analytical results were compared to the NYSDEC Title 6 of the New York Codes, Rules, and Regulations (NYCRR) Part 375 SCOs and the NYSDEC Commissioner's Policy CP-51 Soil Cleanup Guidance. Groundwater analytical results were compared to the NYSDEC Title 6 NYCRR Part 703.5 and the NYSDEC SGVs.

Field observations and laboratory analytical results from the EI were as follows:

- Several areas of the subject property where vehicle stacker lifts were present could not be surveyed by geophysical equipment or investigated via soil boring during the EI.
- Non-native fill consisting of variable color, fine- to coarse-grained sand with varying amounts of gravel, brick and concrete was identified from immediately below the surface cover to about 10 to 15 feet bgs across most of the subject property; non-native fill was not identified in one boring in the northwestern corner. Native soil beneath the fill layer consisted of brown, medium- to coarse-grained sand. Photoionization detector (PID) readings above background up to 3.8 parts per million (ppm) were recorded from three

boring locations from within the fill layer and were attributed to non-native fill. Odors and staining were not observed in the soil borings.

- Groundwater was encountered at about 43 feet bgs. Odors, sheen, and evidence of free product were not observed during purging or groundwater sampling activities.
- Soil Analytical Results - volatile organic compounds (VOC) were not detected above the UU SCOs. Eight SVOCs were detected in soil at seven borings above the SCOs, including benzo(a)pyrene and dibenzo(a,h)anthracene, which were detected above the IU SCO. Metals were detected in soil at all boring locations above the SCOs, including copper, barium, and mercury above the CU SCOs.
- Groundwater Analytical Results - Chloroform was detected above the SGVs in two groundwater samples. Metals including iron, manganese, sodium, and selenium were detected above the SGVs; however, these metals are representative of regional groundwater conditions.

4. ADJOINING PROPERTIES AND SURROUNDING AREA

The following sections describe current and historical uses of and database listings for adjoining properties and the surrounding area.

4.1 Current Use of Adjoining Properties and Surrounding Area

The current use of adjoining and surrounding properties is summarized in Table 4-1.

Table 4-1 Current Use of Adjoining Properties and Surrounding Area

Direction	Adjoining Properties	Surrounding Area
North	Commercial, office, and multi-family residential buildings (381 and 383 Lafayette Street, 28 West 4th Street)	Commercial, office, and multi-family residential buildings
East	Multi-family mixed-use residential and commercial buildings (40 Great Jones Street and 32 East 4th Street)	Commercial, office, institutional (fire department), and multi-family residential buildings
South	Great Jones Street followed by mixed-use residential and commercial buildings and offices (363 Lafayette Street and 25 through 39 Great Jones Street)	Commercial, office, and multi-family residential buildings
West	Lafayette Street followed by an office building (380 Lafayette Street)	Commercial, office, and multi-family residential buildings

Langan did not observe obvious conditions likely to represent environmental concerns for the subject property from current uses of adjoining or surrounding properties.

4.2 Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix D.

Table 4-2 Historical Use of Adjoining Properties

Direction	Adjoining Properties
North	The north-adjoining properties were developed with a church and several residential row buildings as early as 1895. By 1904, two row buildings to the northeast were demolished and replaced by an 8-story commercial and residential building. By 1921, five row buildings to the northwest were demolished and replaced with a 4-story commercial building labeled "Stock of Paper and Twines" and "Lithographer". Beginning in 1969, the 8-story building to the northwest is labeled as mixed-use residential and commercial use. Beginning in 1975, the 4-story building to the northeast is noted to be used for manufacturing. Adjoining properties to the north were relatively unchanged from 1975 through 2005.
East	The east-adjoining properties were developed with a 7-story building and a 4-story building as early as 1895. By 1904, the buildings were noted to contain commercial and residential uses. Between 1975 and 1994, the first floor of the 4-story building is noted to be used for manufacturing. Adjoining properties to the east were relatively unchanged from 1994 through 2005.

Direction	Adjoining Properties
South	The south-adjoining properties across Great Jones Street were developed with multiple mixed-use commercial and residential buildings and a "fire patrol" facility as early as 1895. Commercial uses between 1904 and 1921 include box packing, a casket company, an automotive warehouse, and a stable. Between 1950 and 2001, southwestern adjoining properties contained part of a filling station with automotive repair facility (363 Lafayette Street) and an automotive repair facility (25 Great Jones Street). Additional uses included a motor freight facility to the southeast in 1950 (37 Great Jones Street) and automotive garages between 1950 and 2005 (31 and 33 Great Jones Street). The remaining adjoining properties to the south remained relatively unchanged from 1950 to 2005.
West	The west-adjoining property across Lafayette Street was developed with a 6-story commercial and residential building as early as 1895. The adjoining property to the west was relatively unchanged from 1994 through 2005.

Historical manufacturing and automotive servicing uses at south-adjoining properties are considered an environmental concern for the subject property; no other uses of environmental concern at adjoining properties were identified in the historical records review. The historical uses of the south-adjoining properties are a REC.

The surrounding area was well developed with residential and commercial/industrial uses as early as 1895. Between the early 1900s and 1950s, the area to the north was redeveloped with large mixed-use commercial and residential buildings. Notable historical industrial uses in the surrounding area are as follows:

- 393-399 Lafayette Street (about 160 feet north – inferred cross-gradient) – printing (1895-2005), dyeing (1934-1938)
- 388 Lafayette Street (about 110 feet northwest – inferred up-gradient) – silversmith/manufacturing (1904)
- 366-372 Lafayette Street (about 175 feet southwest – inferred cross-gradient) – filling station (1921-1950), auto laundry (1969-1988), automotive repair (1991-2005)
- 358 Lafayette Street/10 Bond Street (about 200 feet southwest – inferred cross-gradient) – filling station (1950-2005), automotive repair (1969-1988, 1998)

4.3 Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property (see Section 8.2). Langan did not consider request and review of the associated regulatory agency files necessary to evaluate potential RECs for the subject property unless discussed in Section 4.3.1 or 4.3.2 below.

4.3.1 Adjoining Properties

Database listings for adjoining properties are summarized as follows.

231 Center Street Associates / Post Brothers Service Station – 363-371 Lafayette Street (southwest-adjoining, inferred cross-gradient)

This facility is identified in the EDR Hist Auto database as a gasoline service station between 1969 and 1994. The site is listed in the NY UST database as an unregulated/closed facility (PBS ID No. 2-349836) for six 550-gallon gasoline USTs that were installed in August 1962 and closed and removed in September 2000. A tank test failure was reported to NYSDEC on 19 April 1994, which resulted in Spill No. 9400935 being assigned to the site. According to database records, a subsurface investigation was conducted in May 2002 to evaluate potential subsurface impacts associated with the tank failure. No visual or olfactory indications of petroleum contamination were reportedly observed in two soil borings at the site. Soil sample analytical results were not provided in the database file. Spill No. 9400935 was closed on 17 May 2002.

A previous environmental investigation was completed at the subject property by Langan in 2018 (see Section 3.3) to investigate potential impacts from historical on- and off-site uses. Though evidence of contamination associated with historical uses was not observed in subject property soil and groundwater, potential impacts to soil vapor were not investigated. Remaining potential impacts to the subject property from historical off-site uses are a REC.

Harwood Property – 25 Great Jones Street (south-adjoining, inferred cross-gradient)

Spill No. 9604778 was reported for this site on 24 May 1996 due to intentional dumping of an unknown quantity of photograph developing chemicals. According to the database file, the spill affected soil, was planned for cleanup, and NYCDEP was notified. The spill was closed on 12 July 1996. Based on the material spilled, regulatory status and inferred cross-gradient location in relation to the subject property, this site is not a REC.

28-30 East 4th Street (northeast-adjoining, inferred cross-gradient)

This facility was identified in the NY AST database (PBS ID No. 2-189200) as an active facility containing a 1,500-gallon No. 2 fuel oil AST. Spill Nos. 9502124 and 9911688 were also reported for this site. Spill No. 9502124 was reported on 19 May 1995 due to a tank overfill that impacted a sidewalk. The spill was closed the same day it was reported. Spill No. 9911688 was reported on 7 January 2000 due to a defective fuel gauge that resulted in a release of 5 gallons of No. 4 fuel oil to a floor drain. The spill was reportedly cleaned up and the spill was closed on 26 February 2003. Based on regulatory status and inferred cross-gradient location in relation to the subject property, this site is not a REC.

New York University/NYU – 383-389 Lafayette Street (north-adjoining, inferred cross-gradient)

This facility is listed as a RCRA Very Small Quantity Generator (VSQG) of hazardous waste since 2015 for the generation of lead (D008) wastes. The site was historically listed as a VSQG in 2023, as a LQG in 2014 and 2016, and as a NonGen in 2016. No violations associated with hazardous waste generation are reported for the site.

The facility was also identified in the NY AST database (PBS ID No. 2-607297) as an unregulated/closed facility that formerly contained a 1,500-gallon No. 2 fuel oil AST. Based on regulatory status and inferred cross-gradient location in relation to the subject property, this site is not considered a REC.

S.E.G. 380 Holdings LLC/Petersburg Press Inc/ 380 Lafayette Street (west-adjoining, inferred up-gradient)

This facility is listed as a RCRA NonGen of hazardous waste since 2015 for the historical generation of ignitable waste (D001). The site was historically listed as VSQG (formerly Conditionally Exempt Small Quantity Generator [CESQG]) in 1996 and as a NonGen in 2006 and 2007. No violations associated with hazardous waste generation are reported for the site.

The facility was also identified in the NY AST database (PBS ID No. 2-607417) as an active facility containing a 5,000-gallon No. 2 fuel oil AST. Based on regulatory status and lack of reported releases and violations, this site is not considered a REC.

4.3.2 Surrounding Area

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). Those warranting further discussion in the context of potential to represent an environmental concern for the subject property are discussed below.

Smooth Tooth Enterprises Inc – 41 Great Jones Street (approximately 75 feet southeast, inferred down-gradient)

This facility is listed as EDR Historical Cleaner for dry cleaning operations in 1969 and 1970. Based on the presumed down-gradient location, and lack of reported releases and violations, this facility is not a REC.

372 Lafayette Street/Waste Oil Spill at Great Jones (approximately 110 feet southwest, inferred up-gradient

The facility is listed in the NY Spills database, New York City Mayor's Office of Environmental Remediation (NYC OER), Voluntary Cleanup Program (VCP), UST, and UST finder databases. The facility is listed in the NYC OER and VCP databases under OER project numbers 12TMP0309M, 12RHAZ309M, 13CVCP073M, DOB Job No. NB-120933302 and the phase is listed as "completed". The facility is listed in the UST and UST finder databases under PBS ID 2-612028 for the closure and removal of eleven 550-gallon USTs in 2013. The facility is listed in the NY Spills database (Spill No. 1304085) because five tanks were discovered during redevelopment of the site. According to the database listing, the facility used to be a gasoline station. During construction, six 550-gallon gasoline USTs were removed in March 2013, five 550-gallon gasoline USTs were removed in July 2013, and a total of 527.87 tons of impacted soil were excavated and disposed of off-site. Additional soil was excavated for site redevelopment under a NYC OER-approved Remedial Action Work Plan. Endpoint soil samples collected at the base of excavation were non-detect for VOCs and SVOCs. As such, the spill was closed on 22 May 2015. Based on the regulatory status of the facility, this facility is not a REC.

5. CONCLUSIONS, FINDINGS AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the subject property located at 375 Lafayette Street in New York, New York. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report.

This assessment has revealed the following RECs, HREC, BERs, and de minimis conditions in connection with the subject property as presented in Table 5-1.

Table 5-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions
Current & Historical Use of the Subject Property: Historical and current uses of the subject property include a filling station (1940s-1975), hat manufacturing (1920-1963), clothing manufacturing (1934), sheet metal works (1934-1958), bottle capping machine works (1934-1956), metal polishing (1938-1958), printing (1942-1947), plating (1947), parking (1975 to present day), and electroplating (1980-2006). Several of these historical uses are also associated with regulatory database listings for petroleum bulk storage and hazardous waste generation. A Phase II ESI was completed at the subject property by Langan in October 2018 to investigate potential impacts from current and historical on- and off-site uses. Documentated contamination included SVOCs in soil above the RURR and/or IU SCOs, metals above UU and/or RU SCOs, and chloroform in groundwater above the NYSDEC SGVs. Some areas of the subject property could not be investigated due to the presence of vehicle stacker lifts. Additionally, potential impacts to subject property soil vapor or from PFAS (historically used in electroplating) were not previously investigated. These remaining potential impacts to the subject property from historical on-site uses, and the documented contamination at the subject property are a REC.
Historical Uses of Adjoining Properties: Historical uses of the south-adjoining properties include automotive repair and service, and a filling station between the 1940s and 1996. Documented contamination and/or inadvertent releases of petroleum products and/or hazardous substances at these adjoining properties likely impacted soil vapor at the subject property and are a REC.
Controlled Recognized Environmental Conditions
Langan did not identify CRECs.
Historical Recognized Environmental Conditions
Closed Spill No. 0209425: NYSDEC Spill No. 0209425 was reported for the subject property (30 Great Jones Street) due to a release of 10 gallons of No. 2 fuel oil on 13 December 2002. The spill was caused by a delivery truck and resulted in soil in a basement vent shaft being impacted. The spill was closed on 13 January 2004 following cleanup and an NYSDEC inspection. Based on the documented cleanup and regulatory status, closed Spill No. 0209425 is an HREC.
De Minimis Conditions
Oily Staining: During the site reconnaissance, surficial oily staining typical of parking lots was observed on the concrete and asphalt paving throughout the subject property and in the vicinity of hydraulic equipment. The asphalt and concrete in the areas of staining were observed to be intact. The surface staining is a de minimis condition.
Business Environmental Risks
Non-Native Fill: During a previous investigation at the subject property, non-native fill consisting of sand containing varying amounts of gravel, brick and concrete was identified from immediately beneath the

ASTM E1527-21 Scope Items
surface cover to depths ranging from about 10 to 15 feet below ground surface (bgs). SVOCs and metals were detected in soil samples collected from the non-native fill layer above the applicable SCOs for the planned use of the subject property. Non-native fill containing elevated concentrations of these constituents are typically found in fill materials in NYC and may not trigger a regulatory reporting requirement, but will require implementation of special soil handling, management, and off-site disposal procedures at a cost premium during future redevelopment of the subject property. Therefore, the presence of non-native fill at the subject property is considered a BER.
E-Designation at the Subject Property: An E-designation (E-619) for Hazardous Materials and Noise was assigned to the three subject property tax lots by the NYC DCP as part of the SoHo/NoHo Neighborhood Plan (CEQR No. 21DCP059M). E-Designation E-619 established a notice of environmental requirements pertaining to hazardous materials and noise that must be addressed to the satisfaction of the NYC OER prior to obtaining building permits for future alteration/redevelopment. Additional costs associated with satisfying the E-Designations during future redevelopment of the subject property are considered a BER.

6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Brian Gochenaur, QEP
Associate Principal (Environmental Professional)

Résumés outlining the qualifications of the project team and the Environmental Professional are included in Appendix F.

8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

8.1 ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

8.2 Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix E contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

Table 10-1
Assessment of Projected and Potential Development Sites

Site ID	Borough	Block	Lot	BBL	Address	Group	Existing Zoning	Proposed Zoning	Sanborns or City Directories	On-site Database listings	Concerns within 400-foot Radius	On-Site Concerns	Site Visit Findings	E-Designation	Rationale
1	MN	531	41	1005310041	352 BOWERY	Projected	M1-5B	M1-5/R10A		No	Filling station to the north, other automotive and industrial uses	Minimal		Yes	Off-site Concerns
1	MN	531	42	1005310042	350 BOWERY	Projected	M1-5B	M1-5/R10A	X	No	Filling station south-adjacent, other automotive and industrial uses	Historic manufacturing		Yes	On-site concerns
1	MN	531	43	1005310043	348 BOWERY	Projected	M1-5B	M1-5/R10A	X	Yes, Spills	Automotive and industrial uses	Former filling station		Yes	On-site concerns
1	MN	531	44	1005310044	54 GREAT JONES STREET	Projected	M1-5B	M1-5/R10A	X	No	Filling station east-adjacent, other automotive and industrial uses	Minimal		Yes	Off-site concerns
2	MN	531	17	1005310017	317 LAFAYETTE/GREAT JONES STREET	Projected	M1-5B	M1-5/R9X	X	Yes, PBS, Spills	Minimal	Historic filling station/automotive		Yes	On-site concerns
2	MN	531	52	1005310052	GREAT JONES STREET	Projected	M1-5B	M1-5/R9X		No	Filling station, Fire Department station	Limited printing		Yes	On- and Off-site concerns
2	MN	531	56	1005310056	30 GREAT JONES STREET	Projected	M1-5B	M1-5/R9X		Yes, PBS, Spills	Filling station west-adjacent, Fire Department station	AST and Spill		Yes	On- and Off-site concerns
3	MN	522	41	1005220041	301 MULBERRY STREET	Projected	M1-5B	M1-5/R9X	X	Yes, RCRA, ECHO, FINDS	Filling station/NY SPILL west-adjacent, automotive, historic cleaner	Historic Automotive		Yes	On- and Off-site concerns
3	MN	522	43	1005220043	315 LAFAYETTE STREET	Projected	M1-5B	M1-5/R9X		No	Filling station/NY SPILL west-adjacent, automotive, historic cleaner	Minimal		Yes	Off-site concerns
4	MN	234	9	1002340009	155 GRAND STREET	Projected	M1-5B	M1-5/R10		No	Gasoline station south-adjacent	Minimal		Yes	Off-site concerns
4	MN	234	11	1002340011	159 GRAND STREET	Projected	M1-5B	M1-5/R10	X	No	Minimal	Gasoline station		Yes	On-site concerns
5	MN	227	20	1002270020	43 GRAND STREET	Projected	M1-5A	M1-5/R10	X	No	Industrial/ manufacturing	Historic motor repair/ manufacturing		Yes	On-site concerns
5	MN	227	22	1002270022	47 GRAND STREET	Projected	M1-5A	M1-5/R10	X	No	Electric Motor Repair/Unspecified Manufacturing west-adjacent, industrial/ manufacturing	Historic manufacturing		Yes	On-site and off-site concerns
6	MN	227	6	1002270006	391 CANAL STREET	Projected	M1-5B	M1-5/R10		No	Unspecified manufacturing west-adjacent, Industrial/ manufacturing	Minimal		Yes	Off-site concerns
6	MN	227	7	1002270007	393 CANAL STREET	Projected	M1-5B	M1-5/R10	X	No	Industrial/ manufacturing	Historic manufacturing		Yes	On-site and off-site concerns
7	MN	227	1	1002270001	381 CANAL STREET	Projected	M1-5A	M1-5/R10	X	No	Historic cleaner east-adjacent, industrial/ manufacturing	Historic manufacturing		Yes	On-site and off-site concerns
7	MN	227	2	1002270002	383 CANAL STREET	Projected	M1-5A	M1-5/R10		No	Candy factory west-adjacent, industrial/ manufacturing	Minimal		Yes	Off-site concerns

Table 10-1 (cont'd)
Assessment of Projected and Potential Development Sites

Site ID	Borough	Block	Lot	BBL	Address	Group	Existing Zoning	Proposed Zoning	Sanborns or City Directories	On-site Database listings	Concerns within 400-foot Radius	On-Site Concerns	Site Visit Findings	E-Designation	Rationale
8	MN	209	21	1002090021	126 LAFAYETTE STREET	Projected	M1-5B	M1-5/R10	X	No	Historic cleaner, packing box factory, brass and copper factory and hotel north-adjacent. Industrial/ manufacturing	Distillery		Yes	On-site and off-site concerns
8	MN	209	26	1002090026	257 CANAL STREET	Projected	M1-5B	M1-5/R10	X	No	Distillery north-adjacent, industrial/ manufacturing	Automobile		Yes	On-site and off-site concerns
9	MN	208	13	1002080013	3 HOWARD STREET	Projected	M1-5B	M1-5/R10	X	Yes, Spills	Storage of 2nd Hand Boilers and Radiators east and south adjacent, industrial/ manufacturing	Automobile		Yes	On-site and off-site concerns
9	MN	208	19	1002080019	239 CANAL STREET	Projected	M1-5B	M1-5/R10	X	No	industrial/ manufacturing	Historic boiler and radiator storage		Yes	On-site and off-site concerns
9	MN	208	20	1002080020	243 CANAL STREET	Projected	M1-5B	M1-5/R10	X	Yes, PBS, EDR MGP (no actual former MGP use)	Storage of 2nd Hand Boilers and Radiators northeast adjacent; industrial/ manufacturing	Minimal		Yes	Off-site concerns
10	MN	207	5	1002070005	204 CENTRE STREET	Projected	M1-5B	M1-5/R10	X		Industrial/ manufacturing	Minimal		Yes	On-site and off-site concerns
10	MN	207	6	1002070006	204 CENTRE STREET	Projected	M1-5B	M1-5/R10	X	Yes, BCP, former MGP	Industrial/ manufacturing	Minimal		Yes	On-site and off-site concerns
10	MN	207	7	1002070007	204 CENTRE STREET	Projected	M1-5B	M1-5/R10	X	Yes, BCP, former MGP	Industrial/ manufacturing	Minimal		Yes	On-site and off-site concerns
10	MN	207	8	1002070008	208 HESTER STREET	Projected	M1-5B	M1-5/R10	X	Yes, BCP, former MGP	Industrial/ manufacturing	Minimal		Yes	On-site and off-site concerns
10	MN	207	10	1002070010	204 HESTER STREET	Projected	M1-5B	M1-5/R10	X	BCP	Industrial/ manufacturing	BCP		Yes	On-site and off-site concerns
12	MN	545	48	1005450048	410 LAFAYETTE STREET	Projected	M1-5B	M1-5/R9X	X	No	Minimal, general commercial or industrial	Minimal/previous site structures		Yes	Possible on- and off-site concerns
13	MN	531	37	1005310037	358 BOWERY	Projected	M1-5B	M1-5/R10A	X	No	Filling station, Fire Department station	Historic filling station/automotive		Yes	On-site concerns
14	MN	529	35	1005290035	53 BOND STREET	Projected	M1-5B	M1-5/R7X	X	No	Filling station, industrial/manufacturing	Historic automotive		Yes	On-site and off-site concerns
15	MN	510	33	1005100033	281 LAFAYETTE STREET	Projected	M1-5B	M1-5/R7X	X	No	Silverware manufacturing south-adjacent, industrial/ manufacturing, automotive	Historic manufacturing		Yes	On-site and off-site concerns
16	MN	485	28	1004850028	81 MERCER STREET	Projected	M1-5A	M1-5/R7X		No	Industrial/ manufacturing	Minimal		Yes	Off-site concerns
20	MN	476	73	1004760073	356 WEST BROADWAY	Projected	M1-5B M1-5A	M1-5/R10	X	Yes, Spill, PBS, LTANK	Automotive, industrial/ manufacturing	Spill, current and historic automotive		Yes	On-site and off-site concerns
21 (now p/o 20)	MN	476	56	1004760056	30 THOMPSON STREET	Projected	M1-5B M1-5A	M1-5/R10	X	Yes, Spill	Automotive, industrial/ manufacturing	Spill, noted gasoline tank		Yes	On-site and off-site concerns

Table 10-1 (cont'd)
Assessment of Projected and Potential Development Sites

Site ID	Borough	Block	Lot	BBL	Address	Group	Existing Zoning	Proposed Zoning	Sanborns or City Directories	On-site Database listings	Concerns within 400-foot Radius	On-Site Concerns	Site Visit Findings	E-Designation	Rationale
22	MN	476	1	1004760001	92 AVENUE OF THE AMER	Projected	M1-5B	M1-5/R10	X	Yes, Spill, BCP, EDR Historic Auto	Automotive, industrial/ manufacturing	Spill, BCP, noted GTs, EDR Historic Auto		Yes	On-site concerns
23	MN	475	61	1004750061	72 GRAND STREET	Projected	M1-5B	M1-5/R7X	X	No	Minimal, general commercial or industrial	Minimal		Yes	Possible on- and off-site concerns
24	MN	235	29	1002350029	217 HESTER STREET	Projected	M1-5B	M1-5/R10		No	Industrial/ manufacturing	Minimal		Yes	Off-site concerns
25	MN	208	4	1002080004	123 LAFAYETTE STREET	Projected	M1-5B	M1-5/R10	X	No	Brass and Copper Factory west-adjacent, Storage of 2nd Hand Boilers and Radiators east-adjacent, industrial/ manufacturing	Historic industrial		Yes	On-site and off-site concerns
26	MN	208	1	1002080001	247 CANAL STREET	Projected	M1-5B	M1-5/R10	X	Yes, EDR MGP (not actual MGP site)	Distillery northwest-adjacent, industrial/ manufacturing	Historic industrial		Yes	On- and Off-site concerns
27	MN	207	20	1002070020	114 BAXTER STREET	Projected	M1-5B	M1-5/R10	X	No	Mattress factory north-adjacent,	Minimal		Yes	On- and Off-site concerns
28	MN	482	27	1004820027	218 LAFAYETTE STREET	Projected	M1-5B	M1-5/R7X		No	Paper box factory northwest-adjacent, machine repair shop south adjacent, NY Edison Co. Rotary Station, iron works, and paper box factory south Property block, industrial/ manufacturing	Minimal		Yes	Off-site concerns
28	MN	482	28	1004820028	216 LAFAYETTE STREET	Projected	M1-5B	M1-5/R7X	X	No	NY Edison Co. Rotary Station south-adjacent, paper box factory northwest and southwest Property block, iron works south Property block, industrial/ manufacturing	Historic industrial		Yes	On-site and off-site concerns
30	MN	522	28	1005220028	324 LAFAYETTE STREET	Projected	M1-5B	M1-5/R9X		No	Cigar factory and envelope manufacturing south-adjacent, industrial/ manufacturing, automotive	Minimal		Yes	Off-site concerns
31	MN	496	40	1004960040	75 SPRING STREET	Projected	M1-5B	M1-5/R9X		Yes, AST	Fire Dept, industrial/ manufacturing	Minimal		Yes	On-and off site concerns
32	MN	472	28	1004720028	154 GRAND STREET	Projected	M1-5B	M1-5/R9X		Yes, AST, FINDS, ECHO	Filling station and school west-adjacent, police headquarters east-adjacent block, industrial/ manufacturing	Minimal (possible historic manufacturing - see link)		Yes	On-site and off-site concerns

Table 10-1 (cont'd)
Assessment of Projected and Potential Development Sites

Site ID	Borough	Block	Lot	BBL	Address	Group	Existing Zoning	Proposed Zoning	Sanborns or City Directories	On-site Database listings	Concerns within 400-foot Radius	On-Site Concerns	Site Visit Findings	E-Designation	Rationale
A	MN	482	9	1004820009	57 CROSBY STREET	Potential	M1-5B	M1-5/R7X	X	No	NY Edison Co. Rotary Station south-adjacent, machine repair east-adjacent, iron works, and paper box factory south Property block, industrial/ manufacturing.	Historic transfer yard for Con Edison		Yes	On-site and off-site concerns
AA	MN	488	30	1004880030	382 WEST BROADWAY	Potential	M1-5A	M1-5/R7X		No	Paper factory north, paint and dye warehouse and filling station south Property block, metal works east adjacent Property block, automotive/ manufacturing	Minimal		Yes	Off-site concerns
AAA	MN	230	7	1002300007	325 CANAL STREET	Potential	M1-5B	M1-5/R9X		No	Manufacturing northwest adjacent, minimal automotive/ manufacturing	Minimal		Yes	Off-site concerns
AAA	MN	230	8	1002300008	327 CANAL STREET	Potential	M1-5B	M1-5/R9X		No	Manufacturing northwest adjacent, minimal automotive/ manufacturing	Minimal		Yes	Off-site concerns
B	MN	515	7	1005150007	463 WEST BROADWAY	Potential	M1-5A	M1-5/R7X	X	No	Manufacturing north-adjacent, AST south-adjacent, manufacturing/ automotive	Historic automotive		Yes	On-site and off-site concerns
BB	MN	531	3	1005310003	686 BROADWAY	Potential	M1-5B	M1-5/R9X		No	AST south adjacent, silversmith manufacturing northeast Property block, printers north, filling station southeast, manufacturing/ automotive.	Minimal		Yes	Off-site concerns
BBB	MN	487	28	1004870028	146 SPRING STREET	Potential	M1-5A	M1-5/R7X	X	No	Metal works adjacent-southwest, Fire Dept, industrial/ manufacturing/ automotive	Minimal		Yes	On-site and off-site concerns
BBB	MN	487	29	1004870029	144 SPRING STREET	Potential	M1-5A	M1-5/R7X	X	No	Metal works adjacent-southwest, Fire Dept, industrial/ manufacturing/ automotive	Minimal		Yes	On-site and off-site concerns
C	MN	487	18	1004870018	395 WEST BROADWAY	Potential	M1-5A	M1-5/R7X	X	No	Fire Dept, industrial/ manufacturing/ automotive	Historic metal works		Yes	On-site and off-site concerns

Table 10-1 (cont'd)
Assessment of Projected and Potential Development Sites

D. THE FUTURE WITHOUT THE PROPOSED ACTIONS

In the Future without the Proposed Actions (No Action condition), the sites are assumed to either remain generally unchanged from existing conditions or become occupied by uses that are as-of-right under existing zoning (see Chapter 1, "Project Description"). Although the sites do not currently present a hazard to people or the environment, any construction involving soil disturbance could potentially increase pathways for human exposure to any subsurface hazardous materials present. As such, soil disturbance would likely not be conducted in accordance with all of the procedures (e.g., for conducting testing before commencing excavation and implementation of health and safety plans during construction) described in the following section. However, should petroleum tanks and/or petroleum spills be identified (e.g., during excavation for new foundations), legal requirements (including those of DEC) would need to be followed, as would applicable regulatory requirements prior to demolition relating to ACMs and relating to disturbance and handling of suspect LBP. Off-site disposal of excess soil/fill would also need to be conducted in accordance with federal and state requirements. Overall, in the No Action condition, the amount of soil disturbance would likely be less than in the Future with the Proposed Actions, but the controls on its performance would not be as stringent as under the Proposed Actions, as described below.

E. THE FUTURE WITH THE PROPOSED ACTIONS

In the future with the Proposed Actions (With Action condition), activities associated with the development on the projected or potential development sites could result in demolition and construction activities that could increase pathways for human exposure. **Table 10-1** summarizes the findings of the hazardous materials evaluation for each of the sites. The final column includes the recommendation concerning the placement of a hazardous materials (E) Designation (E-619) for all potential and projected development sites that could have been adversely affected by current or historical uses at, adjacent to, or within 400 feet of the development site. In evaluating whether the placement of an (E) Designation for hazardous materials is necessary, current site conditions and previous on-site uses were prioritized, followed by the adjacent site use or history, and finally the conditions within a 400-foot radius.

As noted above, construction-related activities anticipated for the With Action condition could increase pathways for exposure to hazardous materials. However, the possibility of impacts to the health and safety of workers, the community, and future occupants would be reduced by performing demolition and construction in accordance with the measures identified below:

- Prior to construction, further investigation would be performed on each site. This would start with preparation of a Phase I ESA in accordance with American Society of Testing Materials (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. The findings would be used to prepare a subsurface investigation protocol for agency review. Upon approval of the protocol, the investigation (typically including laboratory analysis of soil, groundwater, and soil vapor samples from the site) would be implemented and a report of the findings submitted to the agency along with the proposed remediation plan (i.e., measures to be implemented prior to or as part of construction to avoid impacts to the health and safety of workers, the community, and future occupants), which would include a construction health and safety plan to protect workers and the surrounding community during development activities.

- Any renovation or demolition activities with the potential to disturb LBP would be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*).
- Prior to any renovation or demolition activities with the potential to disturb suspect ACMs, an asbestos survey would be conducted to determine whether these materials are ACMs. If these materials prove to contain asbestos, they would be properly removed and disposed of in accordance with all state and federal regulations.
- Unless there is labeling or test data that indicates that florescent lights, other electrical equipment, and hydraulic fluid are not mercury- and/or PCB-containing, if disposal is required, it would be performed in accordance with applicable federal, state, and local regulations and guidelines.
- All excavated soil requiring off-site disposal would be managed in accordance with applicable regulatory requirements. All soil and any other materials intended for off-site disposal would be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal would be in accordance with federal, state, and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc. All on-site petroleum storage tanks (and any unforeseen tanks encountered during redevelopment) would be properly closed and removed in accordance with applicable requirements.
- If dewatering is required for construction, testing would be performed to ensure compliance with New York City Department of Environmental Protection (DEP) sewer discharge permit/approval requirements and, if necessary, pre-treatment world be conducted prior to discharge to the sewer.

To ensure the measures above are implemented, as warranted, an (E) Designation (**E-619**) for hazardous materials would be placed on all 84projected and potential development sites identified in Table 10-1 as part of the Proposed Actions. Recommendations for (E) Designations are based on whether the sites may have been adversely affected by current or historical uses at, adjacent to, or within 400 feet. In determining whether a site is recommended for an (E) Designation, current site conditions were given priority, followed by the adjacent site use or history, and finally the conditions within a 400-foot radius.

The (E) Designation would require that, prior to redevelopment, the property owner conduct: a Phase I ESA in accordance with the ASTM E1527-13; and implement a soil, soil vapor, and groundwater testing protocol, and remediation where appropriate, to the satisfaction of OER before issuance of construction-related DOB permits (pursuant to Section 11-15 of the *Zoning Resolution*—Environmental Requirements). The (E) Designation also mandates construction-related health and safety plans, which must be approved by OER.

The text of the (E) Designation (E-619) would be the following:

> ***Task 1****—The applicant submits to OER, for review and approval, a Phase I ESA of the site along with a soil and groundwater testing protocol, including a description of methods and a site map with all sampling locations clearly and precisely represented.*
>
> *If site sampling is necessary, no sampling should begin until written approval of a protocol is received from OER. The number and location of sample sites should be selected to adequately characterize the site, the specific source of suspected contamination (i.e., petroleum based contamination and non-petroleum based contamination), and the remainder of the site's*

condition. The characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of sampling data. Guidelines and criteria for selecting sampling locations and collecting samples are provided by OER upon request.

***Task 2**—A written report with findings and a summary of the data must be submitted to OER after completion of the testing phase and laboratory analysis for review and approval. After receiving such results, a determination is made by OER if the results indicate that remediation is necessary.*

If OER determines that no remediation is necessary, written notice shall be given by OER.

If remediation is indicated from the test results, a proposed remediation plan must be submitted to OER for review and approval. The applicant must complete such remediation as determined necessary by OER. The applicant should then provide proper documentation that the work has been satisfactorily completed.

F. CONCLUSION

As shown in **Table 10-1**, the Proposed Actions would include the placement of hazardous materials E-Designations (E-619) for all projected and potential development sites. The implementation of these measures would preclude the potential for significant adverse impacts associated with the Proposed Actions. ✷

Appendix F: Proposed Air Quality (E) Designations

Appendix F: Proposed Air Quality (E) Designations

A. INTRODUCTION

Under the proposed zoning, (E) Designations are proposed to avoid impacts on privately owned parcels on projected or potential development sites with respect to air quality (heating and hot water systems and potential industrial uses). A description of the requirements of those (E) Designations follows. A list of the sites, blocks, and lots affected by the (E) Designations is presented in **Tables F-1** through **F-2**.

B. PROPOSED (E) DESIGNATIONS

HEATING AND HOT WATER SYSTEM (E) DESIGNATIONS

Under the Proposed Actions, for each of the 84 projected and potential development sites (26 projected and 58 potential development sites) development sites that failed the heating and hot water system screening analysis, a refined analysis was performed utilizing the AERMOD dispersion model (see Chapter 15," Air Quality"). The results indicated that all but two of the 31 sites that failed the screening analysis for No. 2 oil also failed the refined analysis, and eight of 38 sites that failed the screening analysis for natural gas also failed the refined analysis.[1]

To preclude the potential for significant adverse air quality impacts on other projected and potential developments from the heating and hot water system emissions, an (E) Designation would be incorporated into the proposed rezoning for each of the affected sites. The descriptions and requirements of the proposed (E) Designations for these sites with respect to heating and hot water systems are presented in **Tables F-1 and F-2**.

Table F-1
(E) Designations for Projected Development Sites
(Heating and Hot Water System Restrictions)

Development Site	Block	Lots	Proposed (E) Designation
1	531	41, 42, 43, 44	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, to avoid any potential significant air quality impacts.
3	522	41, 43	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, to avoid any potential significant air quality impacts.

[1] For the initial natural gas AERMOD runs some refinements were made for either stack locations or stack heights based upon the location and/or height of the receptor building.

Table F-1 (cont'd)
(E) Designations for Projected Development Sites
(Heating and Hot Water System Restrictions)

Development Site	Block	Lots	Proposed (E) Designation
6	227	6, 7	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, and ensure that the heating and hot water systems stack(s) is located at least 10 feet away from the lot line facing Grand Street, to avoid any potential significant air quality impacts.
7	227	1, 2	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, to avoid any potential significant air quality impacts.
9	208	13, 19, 20	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, ensure that the heating and hot water system stack(s) is located no greater than 47 feet away from the lot line facing Canal Street and at least 65 feet away from the lot line facing Centre Street, to avoid any potential significant air quality impacts.
15	510	33	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 30 feet away from the lot line facing Jersey Street, to avoid any potential significant air quality impacts.
22	476	1	Any new commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 223 feet above grade, and that heating and hot water system stack(s) is located at least 30 feet away from the lot line facing Watts Street, to avoid any potential significant air quality impacts.
23	475	61	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 98 feet above grade, to avoid any potential significant air quality impacts.
24	235	29	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, to avoid any potential significant air quality impacts.
25	208	4	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, ensure that the heating and hot water systems stack(s) is located at least 28 feet away from the lot line facing Centre Street, and ensure that heating and hot water system stack(s) is located at least 173 feet above grade, to avoid any potential significant air quality impacts.

Table F-1 (cont'd)

Development Site	Block	Lots	Proposed (E) Designation
K	514	4	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Prince Street, to avoid any potential significant air quality impacts.
MM	474	14	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Grand Street, and ensure that heating and hot water stack(s) is located at least 105 feet above grade, to avoid any potential significant air quality impacts.
N	530	31	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Bowery, to avoid any potential significant air quality impacts.
NN	514	24	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing West Houston Street, to avoid any potential significant air quality impacts.
O	474	7501	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Broome Street, and ensure that the heating and hot water system stack(s) is located at least 102 feet above grade, to avoid any potential significant air quality impacts.
OO	513	39	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 45 feet away from the lot line facing Mercer Street, and ensure that the heating and hot water system stack(s) is located at least 112 feet above grade, to avoid any potential significant air quality impacts.

Table F-2 (cont'd)
(E) Designations for Potential Development Sites
(Heating and Hot Water System Restrictions)

Development Site	Block	Lots	Proposed (E) Designation
P	514	1	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Prince Street, and ensure that the heating and hot water system stack(s) is located at least 100 feet above grade, to avoid any potential significant air quality impacts.
Q	516	36, 37	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing West Houston Street, and ensure that heating and hot water stack(s) is located at least 103 feet above grade, to avoid any potential significant air quality impacts.
QQ	474	19	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Broome Street to avoid any potential significant air quality impacts.
RR	501	32	Any new residential and/or commercial development must be fitted with low NOx (20 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 15 feet away from the lot line facing Prince Street and no more than 13 feet away from the lot line facing Wooster Street, to avoid any potential significant air quality impacts.
SS	475	22	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, to avoid any potential significant air quality impacts.
U	473	5	Any new residential and/or commercial development must **EITHER** exclusively use natural gas as the type of fuel for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Broome Street, and ensure that heating and hot water stack(s) is located at least 169 feet above grade **OR** must be fitted with low NO_x (30 ppm) burners firing natural gas for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 166 feet above grade, and that heating and hot water system stack(s) is located at least 20 feet away from the lot line facing Broome Street, to avoid any potential significant air quality impacts.

Table F-2 (cont'd)
(E) Designations for Potential Development Sites
(Heating and Hot Water System Restrictions)

Development Site	Block	Lots	Proposed (E) Designation
UU	473	7	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Grand Street, and ensure that heating and hot water stack(s) is located at least 167 feet above grade, to avoid any potential significant air quality impacts.
V	228	111	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, and ensure that heating and hot water stack(s) is located at least 133 feet above grade, to avoid any potential significant air quality impacts.
W	498	1	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 17 feet away from the lot line facing Broadway and at least 55 feet away from the lot line facing Spring Street, to avoid any potential significant air quality impacts.
WW	483	14	Any new residential and/or commercial development must exclusively use natural gas as the type of fuel for heating and hot water systems, ensure that heating and hot water system stack(s) is located at least 40 feet away from the lot line facing Crosby Street, and ensure that heating and hot water stack(s) is located at least 173 feet above grade, to avoid any potential significant air quality impacts.
ZZ	230	3,4	Any new residential and/or commercial development must be fitted with low NOx (30 ppm) burners firing only natural gas for heating and hot water systems, and ensure that heating and hot water system stack(s) is located at least 10 feet away from the lot line facing Greene Street to avoid any potential significant air quality impacts.

✷

$L_{10(1)}$ noise levels in **Table 17-7** were determined by adjusting the existing noise measurements to account for background traffic growth between the Existing Condition and With Action condition according to the Noise PCE screening analysis results. The projected future $L_{10(1)}$ noise levels include the noise contribution from vehicular traffic on adjacent roadways.

Table 17-7
Required Attenuation at Noise Measurement Locations (in dBA)

Receptor	Location	Highest With Action $L_{10(1)}$ Value[1]	Minimum Required Attenuation[2]
1	Broadway between West 3rd Street and West 4th Street	74.7	31
2	Great Jones Street and Lafayette Street Intersection	70.4	28
3	Bowery between West 3rd Street and West 4th Street	73.4	31
4	East Houston Street and Lafayette Street Intersection	74.6	31
5	Lafayette Street between East Houston Street and Prince Street	70.5	28
6	Prince Street and Mercer Street Intersection	68.1	N/A
7	Spring Street and Crosby Street Intersection	69.1	N/A
8	Lafayette Street between Spring Street and Broome Street	68.9	N/A
9	Thompson Street between Watts Street and Grand Street	74.3	31
10	Grand Street and 6th Avenue Intersection	74.9	31
11	Grand Street and West Broadway Intersection	70.5	28
12	Canal Street and West Broadway Intersection	79.0	35
13	Broadway between Broome Street and Grand Street	74.8	31
14	Grand Street and Lafayette Street Intersection	71.2	28
15	Hester Street and Centre Street Intersection	72.8	28
16	Canal Street and Centre Street Intersection	79.5	35

Notes:
1 Future noise levels adjusted for expected increases in background traffic in the With-Action condition.
2 Attenuation values are shown for residential or community facility uses; commercial office uses would require 5 dBA less attenuation.
3 "N/A" indicates that the highest calculated L_{10} is below 70 dBA. The *CEQR Technical Manual* does not specify minimum attenuation guidance for exterior L_{10} values below this level.

Based on the values shown in **Table 17-7**, required attenuation levels were determined for all development sites. These values are shown in **Table 17-8**.

Table 17-8
Required Attenuation at Development Sites (in dBA)

Development Site	Block(s)	Lot(s)	Façade(s)	Representative Receptor	Required Attenuation[1]
Projected Development Sites

HHH	529	69	All	2	28

Notes:
1 Attenuation values are shown for residential or community facility uses; commercial office uses would require 5 dBA less attenuation.
2 "N/A" indicates that the highest calculated L_{10} is below 70 dBA. The *CEQR Technical Manual* does not specify minimum attenuation guidance for exterior L_{10} values below this level.
3 Attenuation requirement based on cumulative noise level prediction including contribution from traffic on adjacent roadways and projected playground noise.

To implement the attenuation requirements at Projected and Potential Development Sites **(Table 17-8)**, an (E) Designation for noise (E-619) would be applied specifying the appropriate amount of window/wall attenuation. The text of the (E) Designation would be as follows:

> **To ensure an acceptable interior noise environment, the building façade(s) of future development on the Blocks and Lots shown in Table 17-8 must provide minimum composite building façade attenuation as shown in Table 17-8, in order to maintain an interior L_{10} noise level not greater than 45 dBA for residential and community facility uses or not greater than 50 dBA for commercial office uses. To maintain a closed-window condition in these areas, an alternate means of ventilation that brings outside air into the building without degrading the acoustical performance of the building façade(s) must also be provided.**

The attenuation of a composite structure is a function of the attenuation provided by each of its component parts and how much of the area is made up of each part. Normally, a building façade is composed of the wall, glazing, and any vents or louvers for heating, ventilation, and air conditioning (HVAC) systems in various ratios of area. Buildings proposed to be located on the (E) designated sites would be designed to provide composite window/wall attenuation greater than or equal to the attenuation requirements listed in **Table 17-8**.

By adhering to the design guidelines specified in the Noise (E) Designations described above, buildings to be developed as a result of the Proposed Actions would provide sufficient attenuation to achieve the *CEQR Technical Manual* interior noise level guidelines of 45 dBA L_{10} for residential or community facility uses and 50 dBA L_{10} for commercial office uses.

G. MECHANICAL EQUIPMENT

It is assumed that the building mechanical systems (i.e., HVAC systems) would be designed to meet all applicable noise regulations (i.e., Subchapter 5, §24-227 of the New York City Noise Control Code, the New York City Department of Buildings Code) and to avoid producing levels that would result in any significant increase in ambient noise levels. Therefore, the Proposed Actions would not result in any significant adverse noise impacts related to building mechanical equipment. ✷

Re: Freedom of Information Request
375 Lafayette Street
Block 531 Lots 17, 52 and 56
New York, New York
Langan Project No. 170930301

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.

The property is located at **375 Lafayette Street, in New York, New York**. The subject property is identified as **Block 531, Lots 17, 52 and 56.** The 19,775-square foot subject property is located at the northeastern corner of Lafayette Street and Great Jones Street. The subject property is adjoined to the north and east by offices and multi-family residential buildings.

Please contact me at 845-978-3734 with any questions or send your response to my attention at omiller@langan.com or at the below address:

Langan Engineering and Environmental Services, P.C.
368 Ninth Avenue, 8th Floor

Record Close

Date Spill Closed: 01/13/2004

"Date Spill Closed" means the date the spill case was closed by the case manager in the Department of Environmental Conservation (the Department). The spill case was closed because either; a) the records and data submitted indicate that the necessary cleanup and removal actions have been completed and no further remedial activities are necessary, or b) the case was closed for administrative reasons (e.g., multiple reports of a single spill consolidated into a single spill number). The Department however reserves the right to require additional remedial work in relation to the spill, if in the future it determines that further action is necessary.

If you have questions about this reported incident, please contact the Regional Office where the incident occurred.

Re: Phase II Environmental Investigation Report
375 Lafayette Street ("the Project")
New York, New York
Langan Project No. 100742901

Dear Mr. Freeman:

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology D.P.C. (Langan) has prepared this letter report to document the results of a Limited Phase II Environmental Investigation (Phase II EI) completed at the above referenced property for the purposes of due diligence A site location map is provided as Figure 1. The following is a summary of the findings of this investigation.

Site Description

The approximate 19,775 ft^2 site is located at 375 Lafayette Street (Block 531, Lots 17, 56, and 52) in Manhattan, New York. The Site is currently occupied by an Edison Park Fast car parking lot that consists of an asphalt paved lot at street level, a one-story parking attendants' building along Great Jones Street, a hydraulic oil generator with internal reservoir, above-grade hydraulic oil distribution piping, and above-grade four-level car racks that each contain a hydraulic piston built into the frame of each parking bay.

The Site is bound to the north by a five-story mixed-use commercial and office building, a four-story mixed-use commercial and office building affiliated with New York University, and an eight-story residential apartment building followed by East 4th Street. The Site is bound to the east by a seven-story residential building, to the south by Great Jones Street followed by seven lots containing a 13-story mixed-use commercial and office building, two six-story and one three-story mixed-use commercial and residential buildings, one seven-story residential building, two seven-story industrial/manufacturing buildings, and an active construction site. The Site is bordered to the west by Lafayette Street underlain by the New York City Transit Authority (NYCTA) 4, 5, 6-Subway tunnel, followed by a six-story mixed-use commercial and office building.

Site History

Based on historical records reviewed as part of Langan's 20 June 2018 Phase I Environmental Site Assessment (ESA), the western portion of the Site was historically occupied by a gasoline filling station with two one-story service garages between at least 1950 and 1972. Underground storage tanks (USTs) were not identified on historical Sanborn Maps or registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database associated with current or historical site use. Other historical site operations with potential to cause adverse environmental impacts, as identified in the Phase I ESA, included a printing company on the eastern portion of the Site at 36 Great Jones Street in 1921 and an electronics company identified at 30 Great Jones Street between 1984 and 2007. According to historical Sanborn Maps, the Site has been used for car parking since 1975. Isolated areas of stained asphalt, likely associated with current site use as a car parking facility with above-grade hydraulic parking lifts, were observed during site reconnaissance completed as part of the Phase I ESA.

Historical operations of concern identified in the Phase I ESA for the area surrounding the Site included a gasoline filling station containing two 550-gallon USTs to the southwest of the intersection of Lafayette Street and Great Jones Street, a gasoline filling station and automobile service station with three 275-gallon gasoline USTs northeast of the intersection of Lafayette Street and Bond Street, and a motor freight station and two automobile repair facilities adjacent to the south across Great Jones Street. Although not adjacent to the subject property, a metal manufacturing company was identified to the west, across Lafayette Street.

Based on the potential for adverse impacts to the subsurface at the Site, historical site and current site was identified as a Recognized Environmental Condition (REC) in the Phase I ESA. Langan also identified the potential for subsurface impacts from surrounding sites, the potential presence of historic urban fill, and the potential presence of undocumented USTs as Business Environmental Risks (BERs).

This Phase II Environmental Investigation (EI) was completed for the purposes of due diligence to investigate potential subsurface impacts associated with current and historical use of the subject property, which was identified as a REC in the 2018 Phase I ESA.

Geological and Hydrogeological Conditions

Based on observations made during this Phase II EI, site stratigraphy generally consists of an approximately 10- to 15-foot thick layer of historic fill underlain by medium to coarse sand, which was encountered at depths of up to 47-feet below ground surface (bgs) at the three soil boring locations completed as temporary groundwater monitoring wells. Varying amounts of concrete and brick were observed within the historic fill layer. Native material was encountered directly below the asphalt surface cover in soil boring LSB-2 on the northwest portion of the site. Bedrock was not encountered in any of the soil borings installed as part of this Phase II EI.

Groundwater levels measured in temporary monitoring wells installed in soil borings LSB-5, LSB-9, and LSB-10 were measured at approximately 43.1 and 43.5-feet bgs. Based on local topography, groundwater within the overburden is anticipated to flow towards the east toward the East River.

PHASE II ENVIRONMENTAL INVESTIGATION

The Phase II investigation included a geophysical survey in all accessible areas of the subject property, the installation of ten soil borings, three temporary groundwater monitoring wells, and the collection of soil and groundwater samples for laboratory analysis. Soil borings and temporary groundwater monitoring wells were installed by Enviroprobe Service Inc. (Enviroprobe) of Mount Laurel, New Jersey on 22 August and 23 August 2018.

Geophysical Survey

The geophysical survey was completed on 17 August 2018 by Hager-Richter Geoscience Inc. of Fords, New Jersey using electromagnetic surveying equipment and ground penetrating radar (GPR). The purpose of the geophysical survey was investigate all portions of the subject property which were not occupied by above-grade car racks to scan for potential USTs and/or associated piping, and to clear proposed environmental and geotechnical drilling locations of subsurface utilities. Buried structures indicative of potential USTs were not identified on accessible areas of the Site. The geophysical survey identified areas of reinforced concrete in the eastern, central, and southwestern portions of the site. Geophysical utility clearance was completed in an approximate 10-foot radius around each proposed soil boring location. Active electrical utilities were identified along the southern property boundary and former electrical utilities that were observed to be cut at surface grade were located in the western portion of the site historically occupied by the gasoline filling station. The Geophysical Survey Report is provided as Attachment A.

Soil Investigation Procedures and Field Observations

On 22 August and 23 August 2018, ten soil borings (LSB-1 through LSB-10) were completed to investigate soil conditions and assess the potential presence of impacts associated with current and historical site use, historic urban fill, and potential impacts from historical use of surrounding sites. The borings were completed by Enviroprobe.

Eight of the soil borings (LSB-2 through LSB-4 and LSB-6 through LSB-10) were completed to 15-feet bgs, one soil boring (LSB-1) was completed to 20-feet bgs, and one of the soil borings (LSB-5) was completed to 50-feet bgs using a using a track-mounted Geoprobe® 7822DT direct-push drilling rig. Soil borings LSB-1 through LSB-7 were installed to evaluate potential subsurface impacts associated with historic site use as a gasoline filing station and automobile service garages. Soil borings LSB-8 and LSB-9 were installed to evaluate potential subsurface impacts associated with historic site use as an electronics manufacturer and printing company.

LSB-10 was installed to assess potential subsurface impacts associated with buried hydraulic oil lines and surficial staining associated with the current site use. Soil borings LSB-5, LSB-9, and LSB-10 were completed with 2-inch diameter temporary groundwater monitoring wells to a depth of approximately 50-feet bgs, corresponding to approximately 7-feet into the observed groundwater table. The temporary monitoring wells were installed in the southern portion of the site due constraints associated with the current site operations as an active parking facility.

All soil boring locations are shown on Figure 2, and a summary of soil sample analytical results is provided in Table 1. Soil boring logs and temporary monitoring well construction logs are provided in Attachment B, groundwater sampling sheets are provided in Attachment C, and a complete laboratory data package is provided in Attachment D.

Continuous macrocore samples were collected to the bottom of each boring, with the exception of LSB-9 and LSB-10, which were advanced using a combination of direct-push and solid-stem auger drilling methods (where subsurface obstructions were encountered). Continuous macrocore samples were collected to 15-feet bgs at these locations to evaluate potential subsurface impacts within the historic fill layer and the borings were then advanced to 50-feet bgs via a combination of direct-push and solid-stem auger drilling methods for temporary well installation. Field screening of soil during sample collection for volatile organic compounds (VOCs) using a photo-ionization detector (PID) was completed during the installation of all ten test borings and all soil samples were screened for visual or olfactory evidence of impacts. Slightly elevated PID readings of up to 3.8 parts-per-million (ppm) above background were detected in LSB-1 between 6- and 10--feet bgs, up to 1.7 ppm above background in LSB-3 between 1- and 3-feet bgs, up to 2.5 ppm above background in LSB-8 between 10- and 15-feet bgs, and up to 2.7 ppm above background in LBS-9 between 5- and 10-feet bgs. Elevated PID readings and/or odor and staining were not observed in any other soil borings.

Ten soil samples were collected for chemical analysis during this Phase II EI. Samples for laboratory analysis were collected from a two-foot depth interval within the observed historic fill layer, and were biased towards the depth intervals exhibiting slightly elevated PID readings identified above. The soil sample collected from soil boring LSB-2 was collected from native material, as no historic fill was identified at this location.

Soil samples were submitted to York Analytical Laboratories, Inc. (York) of Stratford, Connecticut for volatile organic compound (VOC), semi-volatile organic compound (SVOC), Target Analyte List (TAL) metals, and hexavalent chromium analysis.

<u>Soil Sampling Quality Assurance/Quality Control</u>

Each macrocore was lined with a dedicated acetate liner prior to the collection of each 5-foot long soil sample collected in the use of the Geoprobe® 7822DT. Soil samples were then placed in glass jars supplied by the laboratory. Soil samples collected for VOCs were obtained via a

plunger calibrated to collect approximately 5 grams of soil and then placed in a vial that was preserved with methanol or distilled water.

Each soil sample was recorded in a field log book. Samples were transferred to the laboratory after field sampling was completed, and were stored at a maximum of 4° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

Quality assurance (trip blanks) and quality control samples (field blank and duplicate samples) were incorporated into the sampling event and consisted of one field blank, one duplicate sample, and two trip blanks. The soil duplicate sample and field blank sample were analyzed for VOCs, SVOCs, TAL metals, and hexavalent chromium. The trip blanks were analyzed for VOCs only.

Ground Water Investigation and Field Observations

On 22 August and 23 August 2018, three temporary groundwater monitoring wells (LTW-1 through LTW-3) were installed by a licensed well driller from Enviroprobe. Monitoring wells were completed to approximately 50-feet bgs, corresponding to approximately 7-feet below the observed groundwater table. All temporary groundwater monitoring wells were constructed with 10-feet of 2-inch diameter Schedule 40 polyvinyl chloride (PVC) 0.010-inch slot size well screen and 40-feet of 2-inch diameter PVC riser. Monitoring well locations were measured in the field from the nearest property boundary and are shown on Figure 2. Groundwater levels were measured prior to sampling with an oil/water interface probe. Light non-aqueous phase liquid (LNAPL) was not detected in any of the temporary groundwater monitoring wells. Static groundwater levels in the three groundwater monitoring wells were measured to be between 43.1- and 43.5-feet bgs. Based on local topography, groundwater within the overburden is anticipated to flow towards the east toward the East River.

On 23 August 2018, three groundwater samples (LTW-1 through LTW-3) were collected for chemical analysis via United States Environmental Protection Agency (USEPA) low-flow purging and sampling methods using dedicated polyethylene tubing and a 1.75-inch diameter submersible bladder pump with a dedicated polyethylene bladder at each location. Groundwater field parameters, including pH, specific conductivity, dissolved oxygen, oxidation-reduction potential, temperature, and turbidity were measured during low-flow purging activities. Groundwater Field Sampling Logs are provided in Attachment C. No odors, evidence of sheen, or free product were observed during purging or sampling activities in any of the wells. A summary of groundwater analytical results is provided in Table 2 and shown on Figure 4. A complete laboratory data package is provided in Attachment D.

Groundwater samples were submitted to York Analytical Laboratories, Inc. (York) of Stratford, CT for VOC, SVOC, TAL metals, and hexavalent chromium analysis.

Groundwater Sampling Quality Assurance/Quality Control

Collected groundwater samples were placed in containers supplied by the laboratory with the appropriate preservatives. Each groundwater sample was recorded in a field log book. Samples were transferred to the laboratory after field sampling was completed, and were stored prior to submission to the laboratory at a maximum of 4° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

Quality assurance (trip blanks) and quality control samples (field blank and duplicate samples) were incorporated into the sampling event and consisted of one field blank, one trip blank, and one duplicate sample for groundwater samples. The groundwater field blank and duplicate samples were analyzed for VOCs, SVOCs, total TAL metals, and hexavalent chromium. The trip blank was analyzed for VOCs only.

Laboratory Analytical Results

Soil

All soil analytical results were compared to the NYSDEC 6 NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives (SCOs) and the NYSDEC Commissioner's Policy CP-51 Soil Cleanup Guidance dated 21 October 2010 and are discussed below. Duplicate soil samples results are not included in the discussion as these samples are collected for quality assurance/quality control verification of the laboratory results only.

Analytical results revealed no exceedances of the NYSDEC Unrestricted Use SCOs for VOCs in any of the soil samples collected with the exception of acetone, a common laboratory artifact, in LSB-9.

SVOCs exceeding the NYSDEC SCOs were detected in LSB-1 and LSB-5 through LSB-10. 2-Methylnaphthalene was detected in soil sample LSB-10 (1.61 mg/kg) at a concentration exceeding the NYSDEC Restricted Use SCO (RUSCO) for Residential Use. Benzo(k)fluoranthene (1.63 mg/kg – 5.42 mg/kg) was detected in soil samples LSB-1, LSB-5 and LSB-7 through LSB-10 at concentrations exceeding the NYSDEC RUSCO for Residential Use and in LSB-6 at concentrations exceeding the NYSDEC RUSCO for Restricted Residential Use. Chrysene (1.91 mg/kg – 5.87 mg/kg) was detected in soil samples LSB-1, LSB-5, LSB-9, and LSB-10 at concentrations exceeding the NYSDEC RUSCOs for Residential Use and in LSB-6 through LSB-8 at concentrations exceeding the NYSDEC RUSCO for Restricted Residential Use. Indeno(1,2,3-cd)pyrene (1.21 mg/kg – 4.65 mg/kg) was detected in soil samples LSB-1 and LSB-5 through LSB-10 at concentrations exceeding the NYSDEC RUSCO for Restricted Residential Use. Benzo(a)anthracene (2.16 mg/kg – 6.76 mg/kg) and benzo(b)fluoranthene (1.88 mg/kg – 6.79 mg/kg) were detected in soil samples LSB-1, LSB-5, and LSB-7 through LSB-10 at concentrations exceeding the NYSDEC RUSCOs for Restricted Residential Use and in soil sample LSB-6 at concentrations exceeding the NYSDEC RUSCOs

for Commercial Use. Dibenzo(a,h)anthracene (0.389 mg/kg – 1.84 mg/kg) was detected in soil samples LSB-5 and LSB-9 at concentrations exceeding the NYSDEC RUSCO for Restricted Residential Use, in samples LSB-1, LSB-7, LSB-8, and LSB-10 at concentrations exceeding the NYSDEC RUSCO for Commercial Use, and in LSB-6 at concentrations exceeding the NYSDEC RUSCO for Industrial Use. Benzo(a)pyrene (2.18 mg/kg – 7.85 mg/kg) was detected in soil samples LSB-1 and LSB-5 through LSB-10 at concentrations exceeding the NYSDEC RUSCO for Industrial Use.

Metals were detected at concentrations exceeding the NYSDEC Unrestricted Use SCOs in all soil samples collected. Hexavalent chromium (1.85 mg/kg) was detected in sample LSB-2; copper (53.6 mg/kg – 58.4 mg/kg) was detected in samples LSB-6 and LSB-10; and, zinc (120 mg/kg – 275 mg/kg) was detected in samples LSB-1, LSB-5 and LSB-8 through LSB-10 at concentrations exceeding the NYSDEC Unrestricted Use SCOs. Nickel (41 mg/kg – 172 mg/kg) was detected in samples LSB-1, LSB-3, and LSB-4 at concentrations exceeding the NYSDEC Unrestricted Use SCO and in LSB-2 at a concentration exceeding the NYSDEC RUSCO for Residential Use. Iron (8,360 mg/kg – 19,600 mg/kg) was detected in all soil samples at concentrations exceeding the NYSDEC RUSCO for Residential Use. Lead (79.1 mg/kg – 603 mg/kg) was detected in samples LSB-2, LSB-3, LSB-6, LSB-8, and LSB-9 at concentrations exceeding the NYSDEC Unrestricted Use SCO and in samples LSB-1, LSB-5, and LSB-10 at concentrations exceeding the NYSDEC RUSCO for Restricted Residential Use. Mercury (0.204 mg/kg – 2.8 mg/kg) was detected in samples LSB-2, LSB-3, LSB-6, LSB-8, and LSB-10 at concentrations exceeding the NYSDEC Unrestricted Use SCO and in sample LSB-1 at a concentration exceeding the NYSDEC RUSCO for Commercial Use. Barium (429 mg/kg – 532 mg/kg) was detected in LSB-1 and LSB-10 at concentrations exceeding the NYSDEC RUSCO for Commercial Use.

Groundwater

All groundwater analytical results were compared to the NYSDEC Part 703 Groundwater Quality Standards and the NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (collectively referred to as GWQS) and are discussed below. Duplicate groundwater samples results are not included in the discussion as these samples are collected for quality assurance/quality control verification of the laboratory results only.

Analytical results revealed no VOCs were detected in exceedance of the NYSDEC GWQS with the exception of chloroform in samples LTW-2 and LTW-3 at concentrations of 7.93 µg/l and 9.78 µg/l, respectfully. SVOCs were not detected in any of the groundwater samples collected at concentrations exceeding the GWQS.

Total metals were detected in all groundwater samples at concentrations exceeding the GWQS including iron (363 µg/l – 827 µg/l), iron and manganese combined (577 µg/l – 2,057 µg/l), and sodium (160,000 µg/l – 370,000 µg/l). Additionally, the metal manganese (396 µg/l – 1,230 µg/l) was detected in groundwater samples LTW-2 and LTW-3 and the metal selenium (10.4 µg/l) was detected in groundwater sample LTW-2 at concentrations exceeding the GWQS.

Conclusions and Recommendations

Field observations documented during this Limited Phase II EI revealed that historic fill is present at the subject property. Slightly elevated PID readings up to 3.8 ppm were observed in soil borings LSB-1, LSB-3, LSB-8, and LSB-9; however, as no visual or olfactory evidence of impacts were observed at these locations, the elevated PID readings are attributed to the presence of historic fill. Odor or staining was not observed in any of the soil borings advanced at the site.

Laboratory analytical results did not identify VOCs in soil at concentrations above the NYSDEC SCOs in any of the samples collected with the exception of acetone, a common laboratory artifact, in soil boring LSB-9. The VOC chloroform was detected in all three groundwater samples and at concentrations exceeding the GWQS in two of the three groundwater samples as discussed above. Chloroform was not detected in any of the ten soil samples collected at concentrations above laboratory reporting limits; therefore, chloroform in groundwater may be the result of an offsite source and not related to historical site use.

Polycyclic aromatic hydrocarbons (PAHs) including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding the NYSDEC SCOs in all soil samples, with the exception of LSB-2 through LSB-4 on the southwestern portion of the site. Additionally, the PAH 2-methylnaphthalene was detected in LSB-10 on the southeast portion of the site at a concentration exceeding the RUSCO for Residential Use. These samples were collected from within the historic fill layer and the elevated concentrations of PAHs are typical of historic urban fill. These compounds were not detected in any of the groundwater samples collected at concentrations above laboratory reporting limits.

The metal iron was detected in all soil samples collected at concentrations exceeding the NYSDEC SCOs in addition to barium, hexavalent chromium, copper, lead, mercury, nickel, and zinc at various locations at the site. These samples were collected from within the historic fill layer and the elevated concentrations of metals are typical of historic urban fill. The presence of iron, manganese, sodium, and selenium at concentrations exceeding the GWQS in groundwater at the site is attributable to background conditions of groundwater in native soil.

Based on the soil and groundwater analytical results, subsurface impacts are consistent with the presence of historic fill, which will require special handling and disposal requirements during disturbance of this material during future site work. The detection of chloroform in

groundwater may be attributable with off-site impacts from the historic use of adjacent and surrounding sites, as VOCs were not detected in any of the soil samples collected. As no subsurface anomalies indicative of potential USTs were identified in the geophysical investigation and petroleum-related VOCs were not detected in soil above NYSDEC Unrestricted Use SCOs or in groundwater above NYSDEC GWQS, evidence of impacts to the subsurface as the result of historical site use as a gasoline filling station and automotive service was not identified.

The results of this investigation are not to be construed as indicative of the overall site conditions. Additional areas of impacts may exist at the site and may be encountered as part of any redevelopment/renovation activities. If encountered, additional areas of impacts would require additional investigation to determine the nature and extent of these impacts and may also trigger the need for regulatory reporting.

Sincerely,
Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

Notes:
Soil Cleanup Objectives are taken from the NYSDEC Subpart 375-6 Remedial Program SCOs (Revised Brownfields) criteria are from the NYSDEC Soil Cleanup Objective Tables 375-6.8(a) and 375-6.8(b), last revised 14 December 2006 and the NYSDEC CP-51 Soil Cleanup Guidance dated 21 October 2010.
ft bgs - feet below ground surface
NA: Not analyzed
U: The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.
J: The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
D: Compound analyzed at a secondary dilution factor.
B: analyte found in the analysis batch blank
Italicized results indicate Reporting Limits (RL) greater than or equal to the most stringent criteria.

RE: Geophysical Survey
375 Lafayette Avenue
Manhattan, New York

Dear Mr. Oleske:

In this report, we summarize the results of a geophysical survey conducted in August, 2018 by Hager-Richter Geoscience, Inc. (H-R), dba HR Geological Services in NY, at the above referenced site for Langan Engineering & Environmental Services (Langan). The scope of the project and area of interest were specified by Langan.

INTRODUCTION

The site is an active asphalt-paved parking facility located at 375 Lafayette Avenue, in Manhattan, New York. The site is L-shaped and measures approximately 230 feet by 100 feet. Reportedly, the southwest portion of the site was occupied by a former gas station. Figure 1 shows the general location of the Site. Langan requested a geophysical survey to detect subsurface obstructions such as underground storage tanks (USTs) and subsurface utilities in the accessible portions of the area of interest (AOI). Langan was also interested in clearing the locations of several proposed borings within the AOI of obstructions. Figure 2 shows the approximate limits of the geophysical survey.

OBJECTIVE

The objective of the geophysical survey was to detect subsurface objects such as USTs, utilities, etc., and if detected, to locate them in the accessible portions of the proposed area of interest.

THE SURVEY

José Carlos Cambero Calzada, P.G., Alexis Martinez, and Mark Jones of Hager-Richter conducted the field operations on August 17, 2018. The project was coordinated with Amanda

Forsburg and Matthew Oleske of Langan. Mr. Oleske specified the AOI and was present on site during the survey. The presence of vehicle stackers prevented access for the geophysical instrumentation in large portions of the site. The geophysical survey was conducted in sections previously cleared of vehicles by the parking operators.

The geophysical survey was conducted using three complementary geophysical methods: magnetics (Mag), ground penetrating radar (GPR), and precision utility location (PUL). Magnetic data were acquired along traverses spaced no more than 5 feet apart along the travel lanes with data stations spaced at approximately 3-4-inch intervals across the accessible portions of the area of interest. The mag survey detects and outlines areas containing buried metal. However, the mag method cannot provide information on the type of objects causing magnetic anomalies. In order to aid in the identification of the objects, GPR data were acquired in two mutually perpendicular directions and spaced no more than 5 feet apart across the accessible portions of the AOI. The GPR method is useful for detecting both metallic and non-metallic subsurface objects.

The PUL system was used for tracking utilities in the AOI by connecting the transmitter to surface features such as valves and hydrants and by scanning the AOI for the presence of live electric lines.

EQUIPMENT

Mag. The magnetic survey was conducted using a Geometrics Model G858-G Cesium Vapor Magnetometer. The G-858-G uses two sensors with a vertical separation of 3.0 feet. The total magnetic field is measured at both sensors and the vertical magnetic gradient is calculated from those measurements. The G858-G can record data at 0.2 second cycle rates with a 0.05 gamma sensitivity. Magnetic data are most commonly presented as contour maps.

GPR. The GPR survey was conducted using a Geophysical Survey Systems, Inc. UtilityScan HS system using a Hyper Stacking antenna with central frequency of 350 MHz and a 100 ns[1] time window. The system includes a survey wheel that triggers the recording of the data at fixed intervals, thereby increasing the accuracy of the locations of features detected along the survey lines.

GPR uses a high-frequency electromagnetic pulse (referred to herein as “radar signal”) transmitted from a radar antenna to probe the subsurface. The transmitted radar signals are reflected from subsurface interfaces of materials with contrasting electrical properties. The travel times of the radar signal can be converted to *approximate* depth below the surface by correlation

[1] ns, abbreviation for nanosecond, 1/1,000,000,000 second. Light and the GPR signal require about 1 ns to travel 1 ft in air. The GPR signal requires about 3.5 ns to travel 1 ft in unsaturated sandy soil.

with targets of known depths, including stratigraphic horizons, pipes, cables, and other utilities, or by using handbook values of velocities for the materials in the subsurface. The acquisition of GPR data was monitored in the field on a graphic recorder and the real time images were immediately available for field use. The GPR data were also recorded digitally for subsequent processing. Interpretation of the records is based on the nature and intensity of the reflected signals and on the resulting patterns.

PUL. The PUL survey was conducted using a precision electromagnetic pipe and cable locator, Radiodetection RD7000 series. The RD7000 series consists of separate transmitter and receiver. The system can be used in "passive" and "active" modes to locate buried pipes by detecting electromagnetic signals carried by the pipes. In the "passive" mode, only the receiver unit is used to detect signals carried by the pipe from nearby power lines, live signals transmitted along underground power cables, or very low frequency radio signals resulting from long wave radio transmissions that flow along buried conductors. In the "active" mode of operation, the transmitter is used to induce a signal on a target pipe, and the receiver is used to trace the signal along the length of the pipe. Our system uses a 10W transmitter.

LIMITATIONS OF THE METHODS

HAGER-RICHTER GEOSCIENCE, INC. MAKES NO GUARANTEE THAT ALL SUBSURFACE TARGETS OF INTEREST WERE DETECTED IN THIS SURVEY. HAGER-RICHTER GEOSCIENCE, INC. IS NOT RESPONSIBLE FOR DETECTING SUBSURFACE TARGETS THAT NORMALLY CANNOT BE DETECTED BY THE METHODS EMPLOYED OR THAT CANNOT BE DETECTED BECAUSE OF SITE CONDITIONS. GPR SIGNAL PENETRATION MAY NOT BE DEEP ENOUGH TO DETECT SOME TARGETS. HAGER-RICHTER GEOSCIENCE, INC. IS NOT RESPONSIBLE FOR MAINTAINING FIELD MARKOUTS AFTER LEAVING THE WORK AREA. THE CLIENT UNDERSTANDS THAT MARK-OUTS MADE DURING INCLEMENT WEATHER OR IN AREAS OF HIGH PEDESTRIAN OR VEHICULAR TRAFFIC MAY NOT LAST.

Field mark-outs. Utilities detected by the geophysical methods at the time of the survey are marked in the field, and the operator makes every attempt, field conditions permitting, to detect and mark as many utilities as possible at the time of survey. Adverse weather and site conditions (rain, snow, snow and soil piles, uneven surfaces, high traffic, etc.) can hamper in-field interpretation. Utility mark-outs made on wet pavement, snow, snow piles, gravel surfaces, or in active construction zones may not last. H-R is not responsible for maintaining utility mark-outs after leaving the work area.

Magnetic. The data recorded in magnetic surveys are affected by *all* ferrous metal objects. In particular, steel objects above ground, such as trailers, fences, and buildings, can so influence the magnetic field that the effects of buried metal objects, if any, at the same location are "masked." Thus, where magnetic anomalies can be attributed to surface objects, the presence or absence of buried metal objects cannot be determined from the magnetic data alone.

Detection and identification should be clearly differentiated. Detection is the recognition of the presence of a magnetic object, and the magnetic method is excellent for such purposes. Identification, on the other hand, is determination of the nature of the causative body (i.e., what is the body -- a cache of drums, UST, automobile, white goods, etc.?), and the magnetic method cannot identify the buried metal object.

GPR. There are limitations of the GPR technique as used to detect and/or locate targets such as those of the objectives of this survey: (1) surface conditions, (2) electrical conductivity of the ground, (3) contrast of the electrical properties of the target and the surrounding soil, and (4) spacing of the traverses. Of these restrictions, only the last is controllable by us.

The condition of the ground surface can affect the quality of the GPR data and the depth of penetration of the GPR signal. Sites covered with snow piles, high grass, bushes, landscape structures, debris, obstacles, soil mounds, etc. limit the survey access and the coupling of the GPR antenna with the ground. In many cases, the GPR signal will not penetrate below concrete pavement, especially inside buildings, and a target may not be detectable. The GPR method also commonly does not provide useful data under canopies found at some facilities. GPR surveys inside buildings may be severely constrained by space limitations and interference from above-grade structures.

The electrical conductivity of the ground determines the attenuation of the GPR signals, and thereby limits the maximum depth of exploration. For example, the GPR signal does not penetrate clay-rich soils, and targets buried in clay might not be detected.

A definite contrast in the electrical conductivities of the surrounding ground and the target material is required to obtain a reflection of the GPR signal. If the contrast is too small, possibly due to construction details or deeply corroded metal in the target, then the reflection may be too weak to recognize and the target can be missed. In many cases, plastic, clay, asbestos concrete (transite), brick-lined, stone-lined, and other non-metallic utilities cannot be detected.

Spacing of the traverses is limited by access at many sites, but where flexibility of traverse spacing is possible, the spacing is adjusted to the size of the target. The GPR operator controls the spacing between lines, and the design of the survey is based on the dimensions of the smallest feature of interest. Targets with dimensions smaller than the spacing between GPR survey lines can be missed.

PUL. The PUL equipment cannot detect non-metallic utilities, such as pipes constructed of vitrified clay, transite, plastic, PVC, fiberglass, and unreinforced concrete, when used in passive mode alone. Such pipes can be detected if a wire tracer is installed with access to such tracer for transmission of a signal or where access (such as floor drains and clean-outs) permits insertion of a device on which a signal can be transmitted.

In some, but not all, cases, the subsurface utility designation equipment cannot detect metal utilities reliably under reinforced concrete because the signal couples onto the metal reinforcing in the concrete. Similarly, the method commonly cannot be used adjacent to grounded metal structures such as chain link fences and metal guardrails.

In congested areas, where several utilities are bundled or located within a short distance, the signal transmitted on one utility can couple onto adjacent utilities, and the accuracy of the location indicated by the instrument decreases.

RESULTS

The geophysical survey was conducted using Mag, GPR and PUL methods across the accessible portions of the specified AOI. Figure 2 is a color contour plot of the Mag survey results, and Figure 3 shows the locations of the GPR traverses and an integrated interpretation of the geophysical data.

Mag. A magnetic survey measures lateral variations in the earth's magnetic field which can be caused by the presence of ferrous metal objects, geological changes, and man-made magnetic fields. Figure 2 is a color contour plot of the vertical magnetic gradient, after filtering spikes produced by the presence of surface metallic objects described above. In addition, and as it will be described in the GPR section, numerous areas with subsurface reinforced concrete were detected and adversely affected the magnetic data. For these reasons, the magnetic survey was not successful in detecting possible USTs, utilities, or other subsurface metallic objects.

GPR. The locations of the GPR traverses and the integrated interpretation of the geophysical data are shown in Figure 3. Apparent GPR signal penetration was fair, with reflections received for about 20-30 nanoseconds. Based on velocity matching calibrations made for the area of interest, the GPR signal penetration is estimated to have been about 3 to 4 feet.

GPR reflections typical for UST were not observed in the GPR records for the Site. Several flat topped structures, approximately 2 feet by 2 feet in size, were detected in the west portion of the site and may correspond to buried former pile caps. Their locations were marked in the field and are shown in Figure 3 with black boxes.

The GPR records indicate the presence of buried reinforced concrete in numerous areas of the site. The areas of buried reinforced concrete are shown in Figure 3 with a hatched pattern. Whether buried structures such as USTs, utilities, foundations, etc. occur at a depth greater than the effective depth of investigation of the GPR (about 3 - 4 feet) or in areas inaccessible to the geophysical survey cannot be determined from the geophysical data.

The GPR records exhibit linear reflections typical of possible utilities or segments of utilities. Some of the utilities were also detected by the PUL method, and their locations are shown in Figure 3.

PUL. The PUL transmitter was attached to conduits located in and on the perimeter of the AOI such as light poles, gas valves, fire hydrants, telecommunication conduits, etc. We also conducted a PUL survey in "passive" mode to detect signals carried by utilities from nearby power lines. The locations of utilities detected were marked in the field at the time of the survey and are shown in Figure 3.

The proposed locations of several boreholes to be installed by Langan were marked in the field, in areas where conflicts with utilities were not detected with PUL. Additional GPR records were acquired in the vicinity of the proposed boring locations to ensure that obstructions were not present. We note that a possible utility segment oriented SW-NE was detected with GPR after data processing in the office, and its location conflicts with proposed borings along the central east portion of the site. The approximate locations of the proposed borings are shown in the figures for reference.

CONCLUSIONS

Based on the geophysical survey performed by Hager-Richter Geoscience, Inc. at 375 Lafayette Avenue, in Manhattan, New York, we conclude that:

- No UST was detected within the investigated areas of interest. *Whether buried structures such as USTs, utilities, foundations, etc. occur at a depth greater than the effective depth of investigation of the GPR (about 3 - 4 feet) or in areas inaccessible to the geophysical survey cannot be determined from the geophysical data.*

- Several, unidentified buried structures, approximately 2 feet by 2 feet in size, were detected.

- Possible utilities were detected and located in the area of interest.

- Possible areas of buried reinforced concrete were detected.

LIMITATIONS ON USE OF REPORT

This letter report was prepared for the exclusive use of Langan Engineering & Environmental Services and its client (collectively, Client). No other party shall be entitled to rely on this Report or any information, documents, records, data, interpretations, advice or opinions given to the Client by Hager-Richter Geoscience, Inc. (H-R) in the performance of its work. The Report relates solely to the specific project for which H-R has been retained and shall not be used or relied upon by the Client or any third party for any variation or extension of this project, any other project or any other purpose without the express written permission of H-R. Any unpermitted use by the Client or any third party shall be at the Client's or such third party's own risk and without any liability to H-R.

H-R has used reasonable care, skill, competence and judgment in the performance of its services for this project consistent with professional standards for those providing similar services at the same time, in the same locale, and under like circumstances. Unless otherwise stated, the work performed by H-R should be understood to be exploratory and interpretational in character and any results, findings or recommendations contained in this Report or resulting from the work proposed may include decisions which are judgmental in nature and not necessarily based solely on pure science or engineering. It should be noted that our conclusions might be modified if subsurface conditions were better delineated with additional subsurface exploration including, but not limited to, test pits, soil borings with collection of soil and water samples, and laboratory testing.

Except as expressly provided in this limitations section, H-R makes no other representation or warranty of any kind whatsoever, oral or written, expressed or implied; and all implied warranties of merchantability and fitness for a particular purpose, are hereby disclaimed.

If you have any questions or comments on this letter report, please contact us at your convenience. It has been a pleasure to work with Langan on this project. We look forward to working with you again in the future.

Sincerely yours,
HAGER-RICHTER GEOSCIENCE, INC.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 22, 2018 and listed below. The project was identified as your project: **100732401**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 18H1037

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:

Date: 08/29/2018

Benjamin Gulizia
Laboratory Director

Sample and Data Qualifiers Relating to This Work Order

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-CRL	The RL check for this element recovered outside of control limits.
M-MBLk	Analyte was detected in the batch method blank above the Reporting Limit.
A-01	Surrogate recovery confirmed by duplicate analysis
QM-02	The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte inherent in the sample.
SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
QR-04	The RPD exceeded control limits for the LCS/LCSD QC.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-08	The recovery of this surrogate was outside of QC limits.
S-09	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect confirmed by re-extraction and re-analysis of the sample.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported

RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

York Project (SDG) No.: 18H1109

Langan Engineering & Environmental Services (NJ)
300 Kimball Drive
Parsipanny NJ, 07054
Attention: Amanda Forsburg

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 23, 2018 and listed below. The project was identified as your project: **100732401**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 18H1109

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:

Sample and Data Qualifiers Relating to This Work Order

SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
S-08	The recovery of this surrogate was outside of QC limits.
QR-04	The RPD exceeded control limits for the LCS/LCSD QC.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-SRD1	The serial dilution for this element was outside control limits.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-MBLk	Analyte was detected in the batch method blank above the Reporting Limit.
M-CRL	The RL check for this element recovered outside of control limits.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-01	This result was reported from an analysis conducted outside of the EPA recommended holding time.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Historical Topo Map Report

04/29/25

Site Name:	Client Name:
375 Lafayette Street	Langan
375 Lafayette Street	368 Ninth Avenue, 8th Floor
New York, NY 10003	New York, NY 10001-2727
EDR Inquiry # 7972161.4	Contact: Kaitlyn Gioia

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 170928901

Project: 375 Lafayette Street

Coordinates:

Latitude:	40.727213 40° 43' 38" North
Longitude:	-73.992964 -73° 59' 35" West
UTM Zone:	Zone 18 North
UTM X Meters:	585042.14
UTM Y Meters:	4508963.48
Elevation:	42.00' above sea level

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 422 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.
