DEC Memo:	01/29/18 - Lakhani During Approved Oil's delivery, it was realized that there was a hole in the fill line. Approved Oil Eric Sutphen claims that the oil is contained to the sub-basement where a majority of the oil was absorbed by garbage and debris that is piled on the sub-basement floor. Approved Oil called Easco Neil Tomasetti (347-682-0730, ntomasetti@easco.com) to assist with the cleanup. 5000 gallon 32 fuel oil AST on the property. PBS #2-315397 Site Owner: Bleecker Tower Tenants Corp 644 Broadway New York, NY 10003 Assigned to DEC Zhune as daytime runner. 1/29/18- Veronica visited the site. The site is a residential building with 8 floors and 13 apartments located at 644 Broadway in Manhattan. The tank is a 5000-gallons AST # 2 fuel oil. As per the super Mr. Brewster they had a delivery of 3000 gallons of fuel oil # 2 today at 4 am. A tenant who resides in the 5 th floor complained oil odors in the main hallway at 12:00 am. The super called Approved oil. They came and discovered a big hole in the fill line and approximately 100 gallons of oil spilled on the floor of the basement. Easco is cleaning the spill in the basement. They installed 2 scrubbers in the main hallway. They will install a ventilation system in the basement tomorrow morning. I checked the hallways of all floors and noticed no oil odors in any of the hallways. There is oil odor in the main hallway 1/30/18-Lin-Recieved call from Dave Wilder

COMMERCIAL (Continued) **S121464200**

(Resident of impacted building. APT #5C). Phone number 917-364-1487. According to Mr. Wilder, he
still smell odor in his apartment. There are currently 2 senior citizen who resides in his
apartment. He mentioned that odor travels into his apartment when he have the windows open. He
request immediate clean up of the spill. Relayed message to case manager. 1/31/18-Zhune visited the
apartment of Mr. Wilder and noticed slight oil odors at the entrance of his apartment. The PID
reading was 2.4 PPM at the entrance. I inspected the rest of the apartment and found no odors. I
inspected the hallways of the building and the maximum PID reading was 4.6 ppm at 8th floor, 3.3
ppm at 7th floor, 3.3 ppm at 6th floor, 3.4 ppm at 5th floor, 4.0 ppm at 4th floor, 3.0 ppm at 3rd
floor, 2.9 ppm at second floor and 1.4 ppm at the first floor. There was no odors at the entrance
of the building. Calvin Brewster Building manager 914-671-8437
2/1/18-Neil email-As of yesterday we
removed 11.5 tons of debris. As we get to the bottom of the coal and dirt, some oil liquid comes
out which we control using an absorbent. Today we bagged another truck load of contaminated debris
for which I will be sending the dump truck to remove tomorrow. If you can, I need the correct spill
number. The one I have isn t correct 2/7/18-Neil email-Good Morning Veronica Attached are some
pictures that were taken 2/6/18 about 1pm. Picture 1755 shows debris piled on the left of the
walkway to the left of the oil tank room. The dirt under the lumber is clean and does not have to
be removed. Picture 1754 show a puddle of oil that is in the middle of the walkway that is to the
left of the oil tank room. The area is lower than the oil tank floor. Ahead of this puddle is a
very large mound of coal (picture 1753- under blue tarp). I estimate approximately 25 t0 30 ton.
The oil leak from the pipe was above this and the oil soaked through the coal to the coal dust
below. As we are removing the coal, the oil is released and it run down into the walkway creating a
puddle of oil in the same place it is now. We clean the puddle and then as we remove the coal, the
oil runs downhill and settles in the walkway in the same place because it’s a low spot. The
clean-up is going to be active for at least another two weeks because of the amount of debris and
also because its in a sub- basement. To date we have removed 33.5 tons of contaminated debris. We
bag materials for two days and the third day we load a dump truck for removal. We then return to
out warehouse and transfer the debris into a trailer used for shipping to a disposal site (Cycle
Chem, Elizabeth NJ) Please note that this is only a surface clean-up and we have not investigated
the sub-surface as of 2/28/18-Neil email-To date we have remove 50 ton

of contaminated coal and
dirt. This contaminated material came from the oil tank room and the rear room that is beneath the
area where to fill and vent run from the tank room to the outside. The oil when spilled leaked on
to the coal and drained to the bottom. It is my understanding through conversations with the
environment firm, PVE Engineering rep. Eric Traiger (646 602 4999) and that they are going to do
the sub surface investigation. 4/17/18- Erik Draijer from PVE-As discussed on the phone, we are
commencing with the field work for this subsurface investigation. We are completing the GPR survey
and utility clearance this Thursday the 19th of April. We will be completing up to ten borings next
Monday and Tuesday, the 23rd and 24th. We will be drilling around the tank and impacted area and
sampling from each boring. We will attempt to install up to three wells to sample groundwater
and/or identify free product. All of this work will be completed in the sub-basement. 6/5/18 -
Obligado - I reviewed the Subsurface Investigation Report prepared by PVE. The report summarizes
the prior clean up activities by EASCO. 2421 bags of contaminated material (equivalent to 120.65
barrels) was removed from the Site onto 5 dump trucks for disposal. 6 soil borings were advanced.
No VOCs or SVOCs were detected in soil samples above CP51. Purge water from MW1 had a sheen with
black staining indicative of traces of free product . Groundwater samples from MW1, MW2, MW3, and
MW5 were below TOGS groundwater standards. Groundwater results from MW4 had several compounds above
TOGS GW standards including xylenes 12 ug/L, napthtalene 30 ug/L, 28 ug/L 1,2,4 trimethylbenzene,
and 19 ug/L 1,3,5 trimethylbenzene. PVE recommends spill closure. Based on the report low levels of
VOCs were detected in only one well MW4 with a maximum concentration of 30ug/l of Naphthalene. 2421
bags of contaminated material (equivalent to 120.65 barrels) was removed from the Site onto 5 dump
trucks for disposal. This spill does not appear to be a threat to human health and the Environment.
This spill was remediated to the extent feasible. The report includes the waste manifest. Spill
closed.

DEC Memo:	6/9/11-Vought-Primary off-hours spill responder. Spill assigned to DEC Feroze as part of minor Con Ed spill portfolio review and possible closure. Initial EMIS #226103 entered into Cross Reference Field, downloaded into E-docs and deleted from proxy. As per EMIS While removing an abandon gas main at the N/S Cooper SQ. 100' S/O E6 ST ConEd equipment leaked one ounce of liquid on dirt containing PCB and benzene according to past lab results. Spill was immediately cleaned and placed in a soil container. Contractor (Clean Ventures) will dispose of content of cleanup. 8/9/11 - Austin - 1 oz. gas main condensate spilled while abandoned line was being removed - Con Ed contained and cleaned up the spill - See eDocs for additional information - Spill closed - end
Remarks:	PCB spilled from transformer onto soil. Cleanup is complete.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	05/28/08 Contaminated soil was discovered around underground return line. Return line will be replaced, as per Celeste Rufer.Ms. Rufer also indicated that tightness testing will be performed after the line replacement.CSL was sent to(via mail& facsimile@(212)995-4932) New York University 285 Mercer Street New York, NY 10003 Attn: Celeste Rufer (sr) 11/05/08-Vought-Received copy of submission of PBS registration to DEC Lombardo. 8/21/09- Complete file review by Intern EM Ibeh and DEC Vought File being reviewed is SP#0809019, spill date- 11/08, at NYU 251 Mercer Street, NY 10003 {see SP# 0802239}. 6/30/08- TRC Solutions Report to DEC Vought stating that on 5/20/08, the diesel fuel pump associated with the southernmost 30,000gal. UST lost suction pressure indicating a clog or obstruction in the fuel oil supply line and the tank system was immediately taken out of service and in order to determine the cause of obstruction, hand excavation was performed to expose the fuel line. On 5/28/08, the fuel oil lines were exposed and petroleum impacted soil was observed adjacent to an elbow on the fuel oil line. The elbow on the fuel oil line was replaced by NYU plumbing staff afterwards, hand excavation was performed to remove the petroleum impacted soil. The sidewalls and bottom of the excavation were screened with a PID and based on observations, petroleum contamination in soil was confined horizontally to the immediate area of the former leaking fuel oil line and extended vertically downward. 3 post-excavation end-point samples were collected- 1 sample from the bottom of the excavation and 2 samples from the bottom of the northern and southern sidewalls. Due to presence of USTs, it was not practical to collect samples from the eastern and western sidewalls. Groundwater was not encountered in the excavation. Samples were analyzed for STARS Memo #1 VOCs and SVOCs. VOCs for the 3 samples were non-detect while SVOCs for south SW- Benzo(a)pyrene 0.18ppm and Benzo(b)fluoroanthene 0.25ppm; north SW- Benzo(a)pyrene 0.16ppm; BE- Benzo(a)pyrene 0.12ppm. A CD of the Spill Closure Letter Report was enclosed with the correspondence. 9/10/08- TRCSolutions Report same as above. 5/18/09- TRCSolutions Report to DEC Vought stating that the Tisch Building at the above-named address utilizes #2 fuel oil generators for the facility s cogeneration plant and that NYU maintains (3) 30,000gal. fuel oil (2 #2 and 1 #6 fuel oil) USTs (PBS #2-043982) to store fuel for the generators. That on 11/08, construction

NEW YORK UNIVERSITY - CO GEN (Continued) **1007112448**

activities were initiated to re-line the northernmost 30,000gal. UST (tank #3) and on this day, during soil excavations to expose the surface of this UST, a historic out-of-service 4 diameter fuel oil line was identified. The line was oriented north-south, ~6 bgs and a hole ~a quarter inch in diameter was observed in the part of the line above the top of the UST and petroleum impacted soil was observed adjacent to the damaged historic fuel oil line thus a spill was reported to the DEC and a SP# was assigned. The line was removed 11/12/08 and after it was done, hand excavation was performed to remove the petroleum impacted soil. The sidewalls and bottom of the excavation were screened with a PID for evidence of petroleum contamination along with inspection for staining and odors. Based on observations, petroleum contamination in soil was confined horizontally to ~3ftx2ft area in the immediate vicinity of the former leaking fuel oil line and extended vertically downward. On 3/27/09, the excavation was inspected and soil in the northern and southern sidewall exhibited no visual or olfactory evidence of contamination. PID readings for soil samples collected from the sidewalls of the excavation were not above background and soil from the bottom of the excavation exhibited no visual evidence of contamination; however, it exhibited a slight fuel oil odor and PID readings ranged from 50-100ppm. 3 post-excavation end-point samples were collected- 1 sample from the bottom of the excavation and 2 samples from the bottom of the northern and southern sidewalls. Due to presence of USTs, it was not practical to collect samples from the eastern and western sidewalls. Groundwater was not encountered in the excavation. VOCs for the 2 sidewall (SW) samples were below the RSCO for fuel oil contaminated soil but 1,2,4-Trimethylbenzene 26ppm, 1,3,5-Trimethylbenzene 13.ppm, m+p Xylenes 11.0ppm, Naphthalene 15.0ppm and o Xylene 9.7ppm were above RSCO for the sample from the bottom of the excavation (BE). SVOC samples from both SWs had Benzo(a)pyrene at 0.081ppm and 0.071ppm respectively while the BE concentrations were below RSCO. Report concluded that the SVOC concentration detected from the samples from the sidewalls were characteristic of the soil found at the site and not as a result of the spill. VOC exceedence was as a result of the residual fuel oil contamination at the bottom of the excavation. TRC requested spill closure as the historic fuel oil line has been removed and groundwater not being encountered in the excavation (borings installed for an adjacent project revealed that it is present at ~38ftbgs and is not potable). 08/26/09-Vought-Reviewed above notes and file with DEC Ibeh and message was left with TRC Guder (212-221-7822) that either groundwater

endpoint sample location with site plan OR sensitive receptor survey with site plan is required.
Letter to be issued upon callback from Guder. See also spill #0809019 at same site.
09/15/09-Vought-Received email from Guder that I did receive your message from a few weeks back and
I presented the options (groundwater or sensitive receptor survey) to NYU. I haven't received a
firm commitment on which way they are leaning but I am following up with them. As soon as I hear
from them I will send you aquick note with the information.
10/04/09-Vought-Received email from TRC
Richard Wetherbee that You are correct in that both releases are associated with the same tank
system; however, there were two separate small releases from different sets of piping associated
with the USTs. The spills were discovered at different times (hence the separate spill cases) and
each was remediated separately. At completion, one of the remedial excavations was entirely clean
(Spill No. 0802239): no evidence of residual petroleum contamination; no detectable VOCs; and minor
exceedances of TAGM RSCOs for benzo(a)pyrene and beno(b)fluoranthene (max concentration 0.25
mg/kg), which are attributed to the fill characteristics. The second remedial excavation (Spill No.
0809019) removed all petroleum impacted soil to a depth of approximately 20 feet below grade;
however, field observations and lab results indicated the presence of residual fuel oil
contamination at the base of the excavation. Going forward, we are managing the closure of the
spill cases as one project - we are currently preparing a sensitive receptor survey report which
will address both spill cases and support our petition for no further action.
11/30/09-Vought-Received copy of report dated 11/30/09 from TRC Lindemuth entitled Sensitive
Receptor Survey. Tisch Building located 251 Mercer uses #2 fuel oil generators for facilities
cogeneration plant. In conjunction with the contstruction of a cogeneration facility, the No. 2
fuel oil USTs were re-fitted and relined. During this work, petroleum impacted soil was observed in
the vicinity of former fuel oil supply lines and spills were reported to the NYSDEC (Spill Case
numbers 0809019 and 0802239). Hand excavation of soils occurred at both spill locations. Additional
excavation could not be performed at both locations due to a retaining wall. Tank area is located
in a pedestrian plaza between two buildings. Groundwater at estimated depth of 38'bg. FOR SPILL
NUMBER 0802239: Broken fill pipe at 7'bg and soil excavation performed to depth of 15'bg. 27 drums
of contaminated soil removed. Field observations indicated that the petroleum impacted soil was

NEW YORK UNIVERSITY - CO GEN (Continued) **1007112448**

limited in extent and that no petroleum contaminated soil remained at the completion of the
excavation . Soil analyticals for this spill number are below TAGM 4046 Requirements except for
minor PAH's attibutable to fill material. FOR SPILL NUMBER 0809019: This spill found during
relining of northern most UST. During excavation activities to top of UST, a out of service 4
diameter fuel oil fill line was identified. A hole approximately one quarter inch in diameter was
observed in the part of the fuel line above the top of the UST and petroleum impacted soil was
observed. Soil was hand excavated to a depth of 20'bg and 26 drums of contaminated soil removed.
Contaminated soil remained at base of excavation. Soil analyticals showed: 26000ppb
1,2,4-trimethylbenzene, 15,000ppb napthalene and 11000ppb xylene. Sensitive receptor includes
evaluation of exposure pathways, use of surrounding buildings. The results of the site
reconnaissance indicated that the area in the vicinity of the release is paved with impermeable
materials (e.g. concrete and asphalt) and that there are no sensitive receptors located on adjacent
properties. Request spill closure. 1/19/10-Vought-This spill closed by Vought and above information
forwarded to DEC Piper for possible spill closure of Spill #0809019. SCL sent to: New York
University 285 Mercer Street New York, NY 10003 Attn: Celeste Rufer with cc to TRC Lindemuth.

Remarks: PBS No: 2-043982 hole in fuel return line and repairing will be started, has been shut down:

DEC Memo: 12/21/09-Spoke to Celeste of NYU. Some oil is seeping through a foundation wall in the central heating system room. They are guessing the oil is coming from old abandoned pipes. They will meet with the consultant tomorrow to discuss this seepage. Need follow-up. DEC Piper performed site visit, met with Mike Burke and Celeste. SSI recommended as oil seeps were obseved at a number of locations where utilities enter basement. 5/23/2011- from SSIR The objective ofthe investigation was to (1) evaluate the source of petroleum weeps in the basement and (2)determine whether the observed release has impacted groundwater. Due to restrictive field conditions, the proposed scope of services was not completed and the objectives were not met. There are two active 28,0005gallon No. 2 fuel oil underground storage tanks (USTs) and one active 30,0005gallon No. 6 fuel oil UST located at the Site. The USTs containing No. 2 fuel oil formerly contained No. 6 fuel oil, but were converted in 1985. In addition, one 30,0005gallon No. 6 fuel oil and one 5,0005gallon lube oil USTs were closed in place with foam and concrete slurry, respectively, in close proximity to the active USTs. According to NYU Cogeneration Plant personnel who are knowledgeable about the Site history, aboveground piping associated with the lube oil UST was removed in 1985 and underground piping associated with the out5of5 service No. 6 fuel oil tanks were cleaned and decommissioned in place in 1985 in conjunction with the UST upgrades; however, there are no available records that document how they were cleaned or closed. Oil weeps and petroleum5related staining are evident on the southern basement wall adjacent to the fuel oil piping room at the fuel oil supply and return line penetrations. The active and out of service USTs are located on the opposite side of the walls where weeps were identified however, oil weeps are only evident at the piping penetrations. The extent, magnitude and source of the petroleum release is not known. 5/17/2011- Due to refusal, sir was inconclusive. Further investigation warranted. Report in edocs. Langan proposes: Inspect all USTs associated piping that was closed5in5place in 1985 to verify that they were properly cleaned and closed5in5place; Steam clean all accessible piping associated with the out5of5service USTs and recover all residual liquid; After piping has been steam cleaned, pressure grout the remnant underground piping associated with the out5of5service USTs; and Decommission existing underground piping associated with the active No. 2 fuel oil USTs. Residual fuel

NYU CENTRAL PLANT (Continued) **1001493678**

oil should be collected, then
piping should be steam cleaned and pressure grouted. Underground
piping should be replaced with
aboveground piping. Upon completion of this task, NYSDEC PBS
registration should be updated to
reflect the changes. 9/2/2011- Left message for Mike Burke.

Remarks: FUEL OIL SEEPING IN FROM ANNULAR SPACE AROUND ABONDONED PIPES, CLEANUP UNDERWAY, ABSORBENT PADS BEING USED AT THIS TIME.

DEC Memo:	Contaminated soil (#2 oil) found under sidewalk between curb fill and basement wall due to leaking remote fill line. NYU Contact Person: Martin Kushner 212-998-1405 PTC will NOT be doing any more work on this project. NYU is planning a major excavation job on this building and will be digging out the sidewalk and underpinning the building foundation wall as part of a large renovation of the building. They do not think it's necessary to dig out the contamination now and refill, if they will be digging the entire area out in the near future. DEC should confirm NYU's work schedule and get followup when the excavation is actually done. **** Also, need to ask NYU about status of new fill line?*** 11/27/07 - Raphael Ketani. I contacted Martin Kushner of NYU. He said that the site is a co-generation plant. NYU is planning to expand the plant. Deeper

NYU CENTRAL PLANT (Continued) **1001493678**

digging is necessary to
expand the plant. He said that the company that will do the expansion construction will do the deep
digging with shoring and underpinning. I asked him about the fill line replacement. He said that
they have a temporary right now and will put in a new permanent one when the construction is done
on that side of the plant. He said he expected the work to start next week. He put me in conference
with Celeste Rufer (roo-fer) (212) 998-1086, Environmental Health & Safety (environmental
specialist). I spoke to Ms. Rufer and told her that DEC needed a report at the end of the project
with manifests for the soil removed, pictures, plans, end point sample results, and a cover letter
explaining what took place. I also asked her to keep me updated as to the progress of the project.
She said she would send e-mails and voice mails. She asked that I contact her, rather than Mr.
Kushner, as she is the project manager. 12/10/07 - Raphael Ketani. Ms. Rufer called to say that
they have resumed digging at the site. They plan to go down 15' for the installation of a Con Ed
vault. However, upon the continuation of the digging, they hit an unknown tank. They will inspect
the tank, clean it out, remove it, and register it. 12/11/07 - Raphael Ketani. Ms. Rufer called to
say that the object was not a tank, but a pipe. It has been completely uncovered and will be
removed soon. The soil around the pipe will be checked for contamination and end point samples will
be taken if contamination is detected. 12/19/07 - Raphael Ketani. Ms. Rufer (212) 998-1086 called
me. She said that they were starting the soil excavation in the area of the future Con Ed vault.
She added that all of the contaminated soil will be removed. 1/4/08 - Raphael Ketani. I tried to
contact Ms. Rufer, but could only leave a message. 1/7/08 - Raphael Ketani. I spoke to Ms. Rufer.
She said that everything was dug out on 12/21/07 and end points were taken. She said that she had
told the company doing the digging to keep removing soil until everything is clean. She added that
Con Ed has already installed their vault. I told her that DEC needed the manifests and the end
point results. She said that DEC will get everything in a report when it is ready. 2/7/08 - Raphael
Ketani. I spoke to Ms. Rufer. She said she is about to review the completed report regarding the
excavation, sampling and remediation work. She said she hopes to get it to me sometime during the
next two weeks. I told her that would be fine. 2/28/08 - Raphael Ketani. Today I received the
Environmental Soil Excavation and End Point Sampling Findings Report dated 2/12/08 (revised
2/22/08) from Ms. Rufer. I am reviewing the report. 3/3/08 - Raphael Ketani. I finished my review

	of the ESE and EPSFR. There were virtually no VOC analyte hits for the end point samples. Sample EP-1 was the only one with SVOC hits. Only those hits belonging to the benzo series exceeded the TAGM standards. Manifests for the removed soil and pictures of the excavation work were also included. Based upon my review of the soil analyticals in the ESE and EPSFR, and the manifests and the photos, I am closing the spill case.

DEC Memo: Contaminated soil found under/around 3000 gal tank. Soil being removed, end point samples will be taken. Report will be forwarded to DEC Piper. 8/21/09- Complete file review by Intern EM Ibeh and DEC Vought File being reviewed is SP#0809019, spill date- 11/08, at NYU 251 Mercer Street, NY 10003. {See SP# 0802239} 6/30/08- TRCSolutions Report to DEC Vought stating that on 5/20/08, the diesel fuel pump associated with the southernmost 30,000gal. UST lost suction pressure indicating a clog or obstruction in the fuel oil supply line and the tank system was immediately taken out of service and in order to determine the cause of obstruction, hand excavation was performed to expose the fuel line. On 5/28/08, the fuel oil lines were exposed and petroleum impacted soil was observed adjacent to an elbow on the fuel oil line. The elbow on the fuel oil line was replaced by NYU plumbing staff afterwards, hand excavation was performed to remove the petroleum impacted soil. The sidewalls and bottom of the excavation were screened with a PID and based on observations, petroleum contamination in soil was confined horizontally to the immediate area of the former leaking fuel oil line and extended vertically downward. 3 post-excavation end-point samples were collected- 1 sample from the bottom of the excavation and 2 samples from the bottom of the northern and southern sidewalls. Due to presence of USTs, it was not practical to collect samples from the eastern and western sidewalls. Groundwater was not encountered in the excavation. Samples were analyzed for STARS Memo #1 VOCs and SVOCs. VOCs for the 3 samples were non-detect while SVOCs for south SW- Benzo(a)pyrene 0.18ppm and Benzo(b)fluoroanthene 0.25ppm; north SW- Benzo(a)pyrene 0.16ppm; BE- Benzo(a)pyrene 0.12ppm. A CD of the Spill Closure Letter Report was enclosed with the correspondence. 9/10/08- TRCSolutions Report same as above. 5/18/09- TRCSolutions Report to DEC Vought stating that the Tisch Building at the above-named address utilizes #2 fuel oil generators for the facility s cogeneration plant and that NYU maintains (3) 30,000gal. fuel oil (2 #2 and 1 #6 fuel oil) USTs (PBS #2-043982) to store fuel for the generators. That on 11/08, construction activities were initiated to re-line the northernmost 30,000gal. UST (tank #3) and on this day, during soil excavations to expose the surface of this UST, a historic out-of-service 4 diameter fuel oil line was identified. The line was oriented north-south, ~6 bgs and a hole ~a quarter inch in diameter was observed in the part of the line above the top of the

NYU CENTRAL PLANT (Continued) **1001493678**

UST and petroleum impacted
soil was observed adjacent to the damaged historic fuel oil line thus
a spill was reported to the
DEC and a SP# was assigned. The line was removed 11/12/08 and after it
was done, hand excavation
was performed to remove the petroleum impacted soil. The sidewalls and
bottom of the excavation
were screened with a PID for evidence of petroleum contamination along
with inspection for staining
and odors. Based on observations, petroleum contamination in soil was
confined horizontally to
~3ftx2ft area in the immediate vicinity of the former leaking fuel oil
line and extended vertically
downward. On 3/27/09, the excavation was inspected and soil in the
northern and southern sidewall
exhibited no visual or olfactory evidence of contamination. PID
readings for soil samples collected
from the sidewalls of the excavation were not above background and
soil from the bottom of the
excavation exhibited no visual evidence of contamination; however, it
exhibited a slight fuel oil
odor and PID readings ranged from 50-100ppm. 3 post-excavation
end-point samples were collected- 1
sample from the bottom of the excavation and 2 samples from the bottom
of the northern and southern
sidewalls. Due to presence of USTs, it was not practical to collect
samples from the eastern and
western sidewalls. Groundwater was not encountered in the excavation.
VOCs for the 2 sidewall (SW)
samples were below the RSCO for fuel oil contaminated soil but
1,2,4-Trimethylbenzene 26ppm, 1,3,5-
Trimethylbenzene 13.ppm, m+p Xylenes 11.0ppm, Naphthalene 15.0ppm and
o Xylene 9.7ppm were above
RSCO for the sample from the bottom of the excavation (BE). SVOC
samples from both SWs had
Benzo(a)pyrene at 0.081ppm and 0.071ppm respectively while the BE
concentrations were below RSCO.
Report concluded that the SVOC concentration detected from the samples
from the sidewalls were
characteristic of the soil found at the site and not as a result of
the spill. VOC exceedence was
as a result of the residual fuel oil contamination at the bottom of
the excavation. TRC requested
spill closure as the historic fuel oil line has been removed and
groundwater not being encountered
in the excavation (borings installed for an adjacent project revealed
that it is present at
~38ftbgs and is not potable). 09/01/09-Vought-After review with DEC
Ibeh, Due to bottom endpoint
TAGM 4046 RSCO exceedence and multiple tank systems on site DEC may
possibly require: 1)collection
of a groundwater sample at tank location with submission of scaled
site plan OR 1)submission of a
sensitive receptor survey with a scaled site plan. Vought left message
with TRC Guder to return
call to discuss. Vought transferred file to DEC Piper for further
action as he is project manager

NYU CENTRAL PLANT (Continued) **1001493678**

on record. You are correct in that both releases are associated with the same tank system; however, there were two separate small releases from different sets of piping associated with the USTs. The spills were discovered at different times (hence the separate spill cases) and each was remediated separately. At completion, one of the remedial excavations was entirely clean (Spill No. 0802239): no evidence of residual petroleum contamination; no detectable VOCs; and minor exceedances of TAGM RSCOs for benzo(a)pyrene and beno(b)fluoranthene (max concentration 0.25 mg/kg), which are attributed to the fill characteristics. The second remedial excavation (Spill No. 0809019) removed all petroleum impacted soil to a depth of approximately 20 feet below grade; however, field observations and lab results indicated the presence of residual fuel oil contamination at the base of the excavation. Going forward, we are managing the closure of the spill cases as one project - we are currently preparing a sensitive receptor survey report which will address both spill cases and support our petition for no further action.
11/30/09-Vought-Received copy of report dated 11/30/09 from TRC Lindemuth entitled Sensitive Receptor Survey. Tisch Building located 251 Mercer uses #2 fuel oil generators for facilities cogeneration plant. In conjunction with the contstruction of a cogeneration facility, the No. 2 fuel oil USTs were re-fitted and relined.
During this work, petroleum impacted soil was observed in the vicinity of former fuel oil supply lines and spills were reported to the NYSDEC (Spill Case numbers 0809019 and 0802239). Hand excavation of soils occurred at both spill locations. Additional excavation could not be performed at both locations due to a retaining wall. Tank area is located in a pedestrian plaza between two buildings. Groundwater at estimated depth of 38'bg. FOR SPILL NUMBER 0802239: Broken fill pipe at 7'bg and soil excavation performed to depth of 15'bg. 27 drums of contaminated soil removed. Field observations indicated that the petroleum impacted soil was limited in extent and that no petroleum contaminated soil remained at the completion of the excavation . Soil analyticals for this spill number are below TAGM 4046 Requirements except for minor PAH's attibutable to fill material. FOR SPILL NUMBER 0809019: This spill found during relining of northern most UST. During excavation activities to top of UST, a out of service 4 diameter fuel oil fill line was identified. A hole approximately one quarter inch in diameter was observed in the part of the fuel line above the top of the UST and petroleum impacted soil was observed. Soil was hand excavated to a depth of 20'bg and 26 drums of contaminated soil removed. Contaminated soil remained

NYU CENTRAL PLANT (Continued) **1001493678**

at base of excavation. Soil
analyticals showed: 26000ppb 1,2,4-trimethylbenzene, 15,000ppb napthalene and 11000ppb xylene.
Sensitive receptor includes evaluation of exposure pathways, use of surrounding buildings. The
results of the site reconnaissance indicated that the area in the vicinity of the release is paved
with impermeable materials (e.g. concrete and asphalt) and that there are no sensitive receptors
located on adjacent properties. Request spill closure.
1/19/10-Vought-This spill 0802239 closed by
Vought and above information forwarded to DEC Piper for possible spill closure of Spill #0809019.
DECPiper reviewed report. Based on work to date, this spill is closed .see e-docs if warranted.

Remarks: Caller states contaminated soils were found around above tank. Soil will be removed and further testing done.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	11/24/2004 Anthony from PTC said there was a leak in the fill line at this address. The fill pipe ran in an old coal chute from the curb into the basement. The leaking line dripped down this chute and into a sidewalk vault. PTC cleaned the vault and replaced the fill line. No soil was impacted, all spilling was confined to the chute and the vault. PTC will send in a package to confirm what was said. 12/24/2005 - PTC submitted a letter & waste manifest outlining the remediation and line repair work done to close out the spill. 03/17/05 - Sawyer - No further action is necessary for this spill. Closed.
Remarks:	Clean up in progress.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	An environmental contractor noted that approxomately 100 gallons of heating fuel oil spilled in the basement of this private residence. the oil was removed. Cracks were observed in the concrete floor. Seventeen cubic yards of oil contaminated concrete and debris were removed from the site. Twenety-two cubic yards of contaminated soil were excavated and removed from the site. The excavation was backfilled, a vapor barrier was placed over the soil, a new concrete floor was constructed, and the floor was sealed. Later soil borings found low-level PAH contamination below or just above the recommended soil cleanup objectives in one location. The spill was closed on August 4, 2005.
Remarks:	September 14, 2001 the resident smelled oil. Service man found AST leaking.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	4/11/08 bf: Called Ken Bonal (212)431-5751 of Newmark & Company. He no longer works there according to receptionist. She instructed me to call Anderson Santos, Superintendent of the building cell:(917)288-6195 office: (212)505-0756. Left message on machine for him to call me. Sent ttf letter to: Anderson Santos, Superintendent 436 Lafayette Street New York, NY 10003 5/12/08 On 5/8/08, received message from Mike Tartanella, consultant (914)740-1963. Called him back today. Tank is AST in a vault and all piping is exposed. No visible leak was found. Could not determine cause of failure yet. Wanted to know iof second tightness test is required. I told him yes and tank will be retested. He has to inform client of this. Letter on the way to me explaining failure. Received letter from Michael Tatanella of IVI Due Diligence Services, Inc. bf 9/30/08 Received fax from Ray Lara of PTC. Fax was of sampling results. bf 10/1/08 Called Ray Lara. PTC did tank cleaning and had sampling done around tank. Tank was removed. I requested that he send a site plan of sampling.

COMMERCIAL BUILDING (Continued) **S109064210**

He will send site plan. Called Joe Bortolussi of Newmark Knight Frank (212)431-5751. Told him he needs to send closure application. He told me new tank was installed. I told him he needs to update registration to reflect new changes. He will have contractor (Ace Atlas) contact me regaring this. bf 10/6/08 Received fax from Ray Lara. Letter from John of Ace-Atlas. Tank failed with dry leak. Two dead lines connected to the tank. Tank failed again. Concrete wrapping is removed No oil found on tank in enclosure material or on floor. NFA. bf

left message for Paul. 10/15/14-Hiralkumar Patel. 10:52 AM:- left message for Mr. Destrada. 11:25 AM:- sent TTF letter to Mr. Destrada, requiring report submission by the end of 11/28/14. letter emailed to Mr. Destrada and James Coffey (jcoffey@ngkf.com). 12/18/14-Hiralkumar Patel. 2:45 PM:- spoke with Mr. Destrada. he mentioned that the leaking tank system is empty since it failed the test. the tank is located in room under the sidewalk. all the piping run aboveground, including fill line which crosses the sidewalk concrete. they have hired Ace Atlas to conduct soil investigation along the tank's bottom as the tank is sitting on surface. he will talk to the contractor and submit work schedule. 3:09 PM:- received call from Rob from Riteway, subcontractor working for Ace Atlas. they tried to drill four holes through tank's bottom, but got to soil underneath the floor in only one hole. there is 5 inches of concrete floor underneath the tank and no oil stains observed on concrete or soil from the holes. as no petroleum staining noted in concrete underneath the tank (which was holding #6 oil), informed Rob that no further investigation is needed. asked him to send email including site observations. 12/23/14-Hiralkumar Patel. received email from Rob including site summary. based on available information, case closed.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
