GW samples will appear in 1st Quarter '07 report. - J. Kolleeny
06/22/07: Reviewed 1st & 2nd Quarter 2007 Site Status Update Report / Spill Closure Request dated 6/7/07, by Groundwater & Environmental Services, Inc. (GES). Report (in eDocs) presents groundwater data for Jan. and Apr. '07 events, as well as historical data, showing no significant residual groundwater contamination, and SVE system monitoring data (related to spill no. 0607761, reported when vault beneath floor of on-site bldg's telecom room was found and emitting petroleum odors) showing vapors from vault appear to have abated and system is no longer recovering significant hydrocarbons. Based on data, GES requests closure of spills 9908159 and 0607761. I sent letter (in eDocs) to Ms. Jessica Chiamulera of 85 Tenth Avenue Associates, LLC (new property owner, replacing Kerrie Breslin of GVA Williams), copies to Heather Cloud and Matthew Schiefferstein of GES, approving closure of spill 9908159, related to groundwater contamination, saying NFA letter will be sent separately, but asking that for spill 0607761, SVE system be pulsed by shutting down for 2 weeks and re-starting, to see if vapors are detected in telecom room while system is off and if there is a spike in vapor recovery when system is re-started. I then sent NFA letter (in eDocs) to Ms. Chiamulera, with copies to Heather Cloud and Matt Schiefferstein of GES. - J. Kolleeny "

Remarks: "SPILL IN SIDEWALK VAULT WEIGH SCALE PIT AND SIDEWALK ELEVATOR PIT. ARRANGEMENTS ARE BEING MADE FOR CLEANUP. BETWEEN 15TH AND 16TH sTREETS"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Piper - I visited the building and met with the impacted neighbor at 353 W 21st. Upon arrival I noticed an iverfill at 351. The spill entered a drain and the entrance to the basement. No one answered the door at 351. I went into inpacted house and immediately smelled cooking. I had smelled a slight odor though as I went downstairs I smelled a paint like substance. I let the homowner know that just because I don;t smell it, it doesn;t mean that you don't. I was just around #2 oil outside and could be desensitized to it. I use a pid meter and highest reading was 8.5 ppm. I left info with affected party to contact me with neighbors # t ohave them perform cleanup as htis would be the fastest way of addressing the issue. 4/25/08- csl sent to: West 21 Street Realty 351 West 21st St. NY, NY 10011 Based on spill info and age of spill, this spill is closed."
Remarks:	"in basement and no further"

Tank Info:

Tank Number:	001
Tank Id:	21535
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	B02 - Tank External Protection - Original Sacrificial Anode
	F00 - Pipe External Protection - None
	C01 - Pipe Location - Aboveground
	J02 - Dispenser - Suction Dispenser
	G99 - Tank Secondary Containment - Other
	K00 - Spill Prevention - None
	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	H00 - Tank Leak Detection - None
	E00 - Piping Secondary Containment - None
	L00 - Piping Leak Detection - None
	I05 - Overfill - Vent Whistle
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	2500
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	11/17/2005
Register:	True
Modified By:	KXTANG
Last Modified:	04/14/2017

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 6/8/07-Matthew Klaas (Albany DER) -Tried contacting Charles Rosenblum at 212-924-9086, the number is no longer in service. -There are no other contacts listed, and I was unable to locate a new number for the listed company. 6/13/07-Matthew Klaas (Albany DER) -Wrote a letter to Charles Rosenblum at 452 West 20th Street Apt. 1 New York, NY 10011-2942 requesting information regarding this spill. 4/1/09 - Austin - Transferred from Needs Reassignment to Zhune for further work to remediate and close - end 8/26/19 - Spill reassigned to Kim as per Obligado. 1/10/20 - Kim - Received an inquiry about the spill from Dan Love; he is performing a Phase 2 Environmental Assessment at nearby properties at 146-150 10th Ave, 3 buildings undergoing a gut renovation. Dan stated that they have excavated at their site to access plumbing and did not notice any petroleum odors. 2-326267: GETTY 58542, 152 10TH AVE, NY, NY 10011; Status: Unregulated/Closed This spill is associated with Spill # 9210231 at 152 10th Ave managed by Jeff Vought. 152 10th Ave underwent substantial remediation and the case was closed 3/10/04; at that time, the entire lot was excavated to property lines and to a depth of approximately 15'. This spill no longer seems to be a threat to human health or the environment. Spill closed."
Remarks:	"CONSTRUCTION GOING ON AT OLD GAS STATION SITE - NEW BUILDING BEING CONSTRUCTED. ODOR OF GASOLINE - IN STREET AND IN BASEMENT ROOMS. AT 452 W 20TH. NEIGHBORS HAVE SAME PROBLEM."

Environmental Interest/Information System:

CON EDISON SERVICE BOX: 3604 (Continued) **1016149037**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Federal Waste Generator Description: Small Quantity Generator
State District Owner: NY
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

List of NAICS Codes and Descriptions:
NAICS Codes: No NAICS Codes Found

Facility Has Received Notices of Violation:
Found Violation: Yes
Agency Which Determined Violation: EPA
Violation Short Description: Listing - General
Date Violation was Determined: 20030801
Actual Return to Compliance Date: 20031201
Return to Compliance Qualifier: Documented
Violation Responsible Agency: EPA
Scheduled Compliance Date: Not reported
Enforcement Identifier: Not reported
Date of Enforcement Action: Not reported
Enforcement Responsible Agency: Not reported
Enforcement Docket Number: Not reported
Enforcement Attorney: Not reported
Corrective Action Component: Not reported
Appeal Initiated Date: Not reported

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

NYC BOARD OF EDUCATION INTERMEDIATE SCHOOL 70 (Continued) **1001233145**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	34379
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
E00 - Piping Secondary Containment - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1966
Capacity Gallons:	10000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Waste Description:	CORROSIVE WASTE
Waste Code:	D005
Waste Description:	BARIUM
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D009
Waste Description:	MERCURY
Waste Code:	D010
Waste Description:	SELENIUM
Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D013
Waste Description:	LINDANE (1,2,3,4,5,6-HEXA-CHLOROCYCLOHEXANE, GAMMA ISOMER)
Waste Code:	D016
Waste Description:	2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)
Waste Code:	D018
Waste Description:	BENZENE
Waste Code:	D022
Waste Description:	CHLOROFORM
Waste Code:	D024
Waste Description:	M-CRESOL
Waste Code:	D026
Waste Description:	CRESOL
Waste Code:	D027
Waste Description:	1,4-DICHLOROBENZENE
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE
Waste Code:	P001
Waste Description:	2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Waste Code:	P075
Waste Description:	NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS
Waste Code:	U002
Waste Description:	2-PROPANONE (I) (OR) ACETONE (I)
Waste Code:	U035
Waste Description:	BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

RITE AID #04196 (Continued) **1014927072**

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U072
Waste Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U129
Waste Description: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U165
Waste Description: NAPHTHALENE

Waste Code: U188
Waste Description: PHENOL

Waste Code: U201
Waste Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Waste Code: U205
Waste Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Waste Code: U211
Waste Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Waste Code: U240
Waste Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Waste Code: U279
Waste Description: U279

DEC Memo:	"e2mis 152226 2/25/04 Sal Leto #42, Energy Services, reported at 10:42 hrs. that Arlin Sexton from Clean Ventures found at 09:00 hrs. approx. one pint of unknown oil on top of approx. 30 gal water in service box SB02343 located at 427 West 14 Street between 9th & 10th Avenue. The source and cause of this spill is unknown. They were working under Account #F8252. Clean Ventures did a field test of the unknown oil with results of 50 ppm but less than 500 ppm. There was no fire or smoke involved and no sewer or waterway was affected. Samples taken by Con Edison personnel. 2-26-04 cleanup has been completed as of 09:30 on 2/26/2004. No solid waster was removed.. No solid waster was removed. The Vactor truck removed all liquids in the structure. The structure was then double-washed with SLIX degreaser Environemntal tag # 35915 was removed. amd"
Remarks:	"1 pint of unknown petroleum spilled and mixed with approximately 30 gallons of water in service box 02343. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ e2mis 151252 On 11/24/03 at 09:58 B. Prescod # 53868 I&A Splicer called to report that he found a spill of unknown substance that he believes to be of an oil type. He reports that there is 15 gal. of oil & 15 gal of water. He says that it maybe a type of fuel but it does not smell like a fuel. He tried to diaper it up but was unable he says some came up but there was more there. He found this at 09:55 lacated at F/O 427 W. 14 St. He was there responding to a B ticket of a water leak. The cause and source are unknown at this time. He does not have sample jars or a chain of custody on the truck so he called his supervisor & they will be going over to the location. He was told to take 3 samples pcb.ID, & flashpoint. & mark it priority E. Than call back with the follow up information. He was also instucted to stay on location. 11/24/03 10:48 J. Cumberbatch # 10660 supervisor called to report that there was only 1 pt of oil & that it would be able to be diapered up. He will call back when it is finished. 11/24/03 11:07 J. Cumberbatch # 10660 I&A supervisor called to report that the oil was completly diapered up. The diapers will be disposed of at the W. 28 St. yard in the pcb drum. He says that the cleanup was completed at 11:05. He also states that there is no visible sign of any oil in the structure. 11/24/03 12:23 J. Cumberbatch called back with the spill tag # 18035 & a chain of custody # AA-03059. He will take 3 samples pcb,ID, & flashpoint. 11/24 @ 23:45 Lab Sequence Number: 03-09510-001 Total PCB <1.0 ppm 11/25/03 @08:59 Lab Sequence Number: 03-09510-002 Flash point > 140 deg F 11/26/03 Lab Sequence Number: 03-09511-001 Insufficient amount of sample extracted to perform oil identification. Note: Based on the above lab results of less than 1 ppm PCB and no aroclor and insufficient amount extracted to perform an oil ID, it is apparent that all the oil was cleaned up as detailed above. No source of oil was discovered."
Remarks:	"POSSIBLE 3RD PARTY SPILL/ POSSIBLE GASOLINE CLEAN UP PENDING SAMPLES "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 11/29/05 - L. Alden - Sent letter seeking information to owner: Chelsea/Village Associates, LLC., c/o Vectra Management Group, 424 W. 33rd St., Suite 540, NY, NY 10001. 12/8/05 - L. Alden - Received reply from Kinsey Corp, owner's agent. Letter included documents regarding replacement of the tank with the hole in the top, but did not indicate if soil was investigated. If there was a hole in the top of the tank, oil could have easily seeped out, contaminating soil. Kinsey info only tells of abandoning the tank and replacing it with an AST. 12/30/05 - L. Alden - Phoned John Calcaterra, of Kinsey. He had no further information. Called Eastmond. Was told I needed to speak with Rene Lewis, but he was on vacation. 4/10/06 - L. Alden - Called Rene Lewis (718-378-3000), but he is again on vacation.

351-355 W 14TH ST (Continued) **S104877200**

Suggested action: Call Lewis again for information. 11/16/06 - Austin - Reassigned to Ketani for followup/review - end 12/5/06 - Raphael Ketani. The site is 351-355 West 14 St., NY, 10011. Block and lot 00738/0008. Phone number is (212) 255-3579. According to the PBS record #2-605606, the owners are Chelsea/Village GE Associates LP c/o Kinsey Corp., 163 W. 23 St., NY, 10011. There was a 2500 gal. tank with #6 oil installed in 3/1/01, but a hole was found in it while a cleaning was being performed by A. L. Eastmond (718) 378-3000. The spill date is 11/13/2000. The tank was removed on 12/1/01 and a 1080 gal. tank was installed in its place with #2 oil. According to the NYC Property Tax database, the owners are Chelsea/Village Associates, LLC. However, Cooper Square Realty, Inc., 6 East 43 St., NY, 10017-4609 is listed as the addressee one page in from the first results web page. The phone numbers to Cooper Square are (212) 634-8900/682-7373. I tried the phone numbers for Cooper Square. I was told that Joe Simson ext. 407 was the property manager, but I could not get through. Also, there was no phone listing in the Manhattan White Pages for Chelsea/Village GE Associates or Chelsea/Village Associates, LLC. I sent out CSLs. 12/6/06 - Raphael Ketani. Mr. Simpson called me back. He said that he works for Cooper Square Realty Inc. He said he will do a records search and send DEC the information we need. 6/22/07 - Raphael Ketani. I tried to reach Mr. Simpson, but could only leave a message. I may have to make a site visit to find out what the situation is. 6/25/07 - Raphael Ketani. Mr. Simpson called to say that he will FAX over the documents DEC needs regarding the tank replacement. He said that, as far as he knew, there was no soil contamination. 10/23/07 - Raphael Ketani. I tried to reach Mr. Simpson, but was told he was no longer with the company. I was connected to Mike Basile (bay-zil) (212) 634-8900, ext. 408. I explained to him that there had been a leaking tank that was replaced and contaminated soil. I told him that DEC needed manifests for the contaminated soil that was removed, possible end point results, and a revision of the PBS database to show that the old tank was removed. He said that he will look into the matter and get back to me. 12/7/07 - Raphael Ketani. I checked the PBS record. The old 2500 gal. tank is listed as removed and the newer 1080 gal. tank is listed as installed. I tried to contact Mr. Basile, but could only leave a message that manifests and end point results were needed. 12/12/07 - Raphael Ketani. I reached Mr. Basile. He said that the property manager is David Lipsik, (212) 634-5445. He transfered me over, but I could only leave a message regarding the manifests and end point results. 12/13/07 - Raphael Ketani. I contacted Mr. Lipsik. He said he didn't have any information regarding the spill and tank removal as Cooper Square wasn't the managing company during 2000. I told him that I needed documentation regarding the soil removal, end point sample results, and an updated PBS. He directed me to Melissa Wilson in the Compliance Division of his company (212) 634-5437. I told Ms. Wilson what DEC needed and she said she will research the records for the building and get back to me. 2/25/08 - Raphael Ketani. I tried to contact Ms. Wilson, but could only leave a message. Ms. Wilson called me back. She said she had left a voice mail on 1/3/08. I told her that we have nothing in our records regarding this. She asked what documents DEC needed. I told her that DEC needed manifests for the tank and removed soil, and soil end point analytical results. She said that she will look in her records and try to find these documents. I told her to let me know one way or the other. She said she will. 2/26/08 - Raphael Ketani. Ben Hawkins

351-355 W 14TH ST (Continued) **S104877200**

of Cooper Square Realty (212) 634-8988 called to say that he is taking over the case from Ms. Wilson. He said he will look for the missing soil manifests and the end point analytical results. I told him that if these documents can't be found, then a new investigation will need to be performed. I told him an investigation plan will have to be written and submitted to DEC for approval. I asked him where the new tank is. He said it's in the same place as the old tank. I told him that the owners of the property, Cooper Square, and the cleanup company will have to work something out. With that, the conversation ended. 3/24/08 - Raphael Ketani. I tried to contact Mr. Hawkins, but could only leave a message. 3/26/08 - Raphael Ketani. I contacted Mr. Hawkins. I asked him why DEC hasn't received an investigation report. He sounded hesitant and said that he didn't know which investigation/remediation company to choose. He said that there were many listed in the phone books. I told him to pick some, tell them that the job entails 6 borings and samples and get some prices to present to the board or the owner of the building. He said he will do this. I warned him that if DEC doesn't hear back that things are moving forward, then we will send a warning letter that legal action can and may be taken. He said that he understood. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The site needs an investigation for contaminated soil and groundwater. Mr. Hawkins has not responded back to me. Therefore, a more strongly worded letter needs to go out explaining that if there is no action by a certain date, then the Department will consider the parties in violation. 3/11/09- A. L.Eastmond and Sons, INC. sent the report dated 2/17/09, The report included the soil results of two samples taken 12/2/08 under the tank from right and left side. The analytical results for the samples collected indicate non detectables levels of VOCs and SVOCs. Spill Closed. "

Remarks: "caller cleaned tank and found a hole in tank - tank is underneath the sidewalk"

Spiller Company:	999
Contact Name:	Not reported
DEC Memo:	"DPrior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Sullivan to Rommel as per Rommel. letter to be sent Previous note by JBMCCULL of C.O. Spill transferred back to R-2 3/7/08 - Austin - Assigned to Ketani for further investigation - end 7/10/08 - Raphael Ketani. There is no paper file. The spill happened on 8/10/94. They stuck a probe to 9' and found contaminated soil. The contaminant is #2 oil or diesel. They were planning to pull the tanks and remove the contaminated soil. The address is 501-513 W. 19 Street, Manhattan. I could not find a PBS case no matter which address, or which alternate address I used. I checked Property Shark for the alternate addresses. 513 W. 19 Street has an alternate address of 511 W. 19 Street, and block and lot 691/25. 501 W. 19 Street has alternate addresses of 153 10th Avenue, 501-505 W. 19 Street, and 153-159 10th Avenue. Block and lot are 691/29. In the NYC Property Tax listings, the owner of these two parcels is Tenth Avenue Realty Associates, LP, 362 Kingsland Avenue, Brklyn, 11222-1905. I sent a CSL to Tenth Avenue Realty Associates. 7/14/08 - Raphael Ketani. I received a call today from Ron Tramposch of Core Environmental (718) 762-0544. He said he represents his

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

client, 10th Avenue Realty. He said they gave him a the CSL letter. He explained that the property was bought in May 1995 from Broadway Building Materials. The site was changed from a building materials store to a truck servicing business (Mendon Trucking). During August 2006, they received an offer to sell the property. It consists of 3 lots, each of which fronts on 10th Avenue. Core did a Phase I. During September 2007, Core was asked to do a Phase II. This was when the two 550 diesel tanks were discovered. The NYC DOB records showed the 2 tanks. They were installed in 1940 and removed in 1994. The primary address is 153 10th Avenue. The soil and groundwater samples show contamination. There is also contamination from the MGP site across the street - 8200 ppb of 2-methyl naphthalene. There will be condos built on the site. There is an E-designation, but the project has not moved through the NYC DEP offices, yet. I told him that the tanks have to be registered and that the DEC needs copies of a plan showing the installation of a vapor barrier. He said both of these items will be taken care of. I told him that DEC can't close its spill case until these things are done. He said he understood. Lastly, I told him that DEC will review the Phase I and Phase II, and that we may require additional investigative work. 7/16/08 - Raphael Ketani. Yesterday, I received the Phase I and Phase II for the site. The work and reports were put together and submitted by CORE Environmental. I began my review of the reports. The Phase I stated that the proposed site remedy will be: excavation to 13' below grade for construction; installation of a containment wall; installation of vapor barrier below foundation and an active venting system; site management plan to address residual contamination; institutional controls in the form of an environmental easement. The Phase I also stated that there is an adjoining site to the north that had leaking gas tanks, an adjoining site to the southwest that had a leaking diesel tank, and a site to the southwest that was an MGP factory. There are 8 active ASTs on the site for storing various oil and waste oil products, and two 550 gal. USTs. An oil water separator is below ground. Groundwater is believed to be 7' to 9' below the surface. The Phase II had the soil and groundwater analytical results. Boring SB-10 was the only soil sample with elevated results. Ethylbenzene had 5600 ppb (limit 5500 ppb) and n-propylbenzene had 4800 ppb (limit 3700 ppb). There were 4 other VOC analytes with hits in the thousands of ppbs, but they didn't exceed TAGM. All of the other borings were completely non-detect for all of the VOCs. For the SVOCs, almost all of the analytes were non-detect in soil samples. SB-6 had 6 TAGM exceedences, but these were benzo series analytes and the hits were in the low thousands of ppbs. No hits for VOCs and SVOCs were detected in the groundwater sample from MW-3. However, MW-1 had 6 VOC hits from 53 ppb to 180 ppb, and 3 SVOC hits from 1100 ppb to 8200 ppb. MW-1 is near the fuel USTs and the fuel pump. With the exception of the 3 SVOC hits, no other SVOC analytes were detected. These SVOC analytes (2-methynaphthalene, fluorene, and phenanthrene) can all come from the MGP process. The former MGP site and its gas tanks were very near the site to the west and south. I finished my review and sent an approval letter for the Phase I and Phase II. I also stated in the letter that they should collect as much of the groundwater as possible and take another water sample to check on the level of contamination. Lastly, I told them that the two USTs and the waste oil tanks need to be registered, and that DEC needs something in writing confirming that a vapor barrier will be installed. The area the site is in was heavily industrialized. The low level VOC

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

contamination probably originated from the USTs and/or the fuel pump and associated lines. I spoke to Mr. Tramposch (718) 762-0544 and told him about the letter that will be sent to Tenth Avenue Realty Associates, regarding the Phase I and Phase II and the analytical results. I mentioned that the letter will contain a request to do groundwater collection, the taking of another groundwater sample at MW-1 to confirm the contamination levels, submission of a PBS registration form for all of the USTs and waste oil tanks, and submission of a document stating that a vapor barrier will be installed. The contact person at NYC DEP is: Angela Licita, Permitting, NYC DEP, 59-17 Junction Blvd., 10th Floor, Elmhurst, NY, 11373. 7/22/08 - Raphael Ketani. Mr. Tramposch called regarding the 7/16/08 letter I had sent. The main issue was the installation of a vapor barrier. He said that the owner of the property doesn't have a developer on board, or in mind for the property. Development of the site for a condominium building is years away. I told him that the Spills Unit deals with short term cases, and can not wait several years for the developer to produce an architectural plan showing a vapor barrier. I reminded Mr. Tramposch that the DEC is requiring groundwater extraction, water resampling one month from the extraction date, along with a plan showing the vapor barrier. I told him that DEC is concerned with the public safety and that NYC DEP will also require the vapor barrier as this will be a residential building. He said he understood. I told him that a possible solution is for DEC to issue an NFA letter when the contaminated groundwater is gone, or present at much lower levels near TAGM, and have the vapor barrier listed on the letter as a requirement of construction. Mr. Tramposch said this would be a reasonable solution. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. A report needs to be submitted containing the volume of water collected and the analytical results from a groundwater sample taken one month later. All of the tanks that were or still are present on site need to be registered. The case manager may want to request specs for the vapor barrier. 10/27/11 - Austin - Spill Transferred from Ahmed to Vought - end 11/16/2011- Intern Wade- Began file review of Spill # 9406402: Broadway Building Materials Address:501-513 W 19th St Manhattan, NY 153 10 Ave Owner: Tenth Avenue Realty Associates, L.P. 362 Kingsland Avenue, Brooklyn, New York 11215 Alternate Addresses: 501 505 WEST 19 St 153 159 Tenth AVENUE Tax lot 25, 27, & 29. Spill fact sheet- 08/10/1994 Report sent from L. Evans (ORE Group ph: 212-343-5139) to M. Tibbe-11/01/1994. (Document is Difficult to read, cannot tell what location the sample is from). GW analyticals Tw-05-Benzene [140 ug/L] , Toluene [6.5 ug/ L], Xylene [49.5 ug/L]. Tw-09-Toluene [2.5 ug/L]. Closure Letter from M. Tibbe (DEC) to Ms. L Evans (Bank Leumi Trust Company of NY)- 11/09/1994- Upon review of closure report from Advanced Cleanup Technologies investigation shows no significant contamination of soil or GW. remaining contaminations should biodegrade naturally . The spill number referenced above will be closed as of this date . PERSONAL NOTE: No information in file as to why or when this spill number remains open or was reopened. As per Spill Remarks, spill assigned to DEC Rommel prior to 9/04 and was transferred to her from DEC Sullivan on 4/12/04. Spill was then managed in DEC Central Office by DEC McCull and then transferred back to Region 2 in 3/08. Letter from Edward Jones (Erdman, Anthony and Associates, Inc ph: 716-325-1866)-01/17/1995- request for fact sheet & any test results regarding spill # 9406402. Letter from R. Ketani (DEC) to Tenth Ave Realty Associates, LP (362 Kingsland Ave Brooklyn, NY 1222-1905)-07/11/2008- DEC requires documentation (regarding the 08/10/1994 spill) verifying that the contamination was removed & the fuel sys was repaired. Required PBS registration for existing & removed tanks. Tenth Ave Realty Associates is RP. Letter from R. Tramposch (CORE)-07/14/2008- CORE is providing Environmental consultation to the property owner. Core Phase 1 showed historical records of two 550 gal underground diesel tanks. They were removed in 1994, Broadway buildings supplies. Results indicate low levels of petroleum contamination Phase 1 ESA-12/29/2006- DEC received 07/15/2008- UST s containing gasoline may be located on lot 29 near bay doors along West 19th. Oil/water separator is located on site. Site north of lot 29 was a gas station from 1950 to 2000. Spills on W 515 18th . MGP s south & West of site. 1 block south of site was the retort house, coal storage, tar separators, scrubbers, tanks, wells, & underground piping. 18th St Gas Works Site may have contaminated the subject site . (18th Gas Works Site [Consolidated Gas Company](200 ft), Danny s parking lot/ old gas station 501 19th St, 515 W. 18th St. Spill). Recommend Phase II. Current site is being used by a Mendon Truck Leasing. Building in single story, 9600 sq ft w/ a mezzanine area. Build constructed in 1945. Has 6 AST s for oils & fluids (not fuels). 507 W 19th (Lot 27) Pino Lyptol Chemical Company. Chelsea area of Manhattan 300 ft from Hudson. 12 above sea level. GW believed to be SW To NE. Current property petroleum storage tanks include: (3) 55 gallon oil & anti-freeze drums & (2) 20 gallon grease drums. (4) empty 55 gal drums. (2) empty 275 gal UST s. Historical maps indicate (2) 550 gal gasoline tanks. (6) 275 gal ASTs (oil & fluid ,not fuel). Found 3 monitoring wells on adjacent property. - Con Edison Remedial Action work plan-2006- W. 18th St MGP Voluntary Cleanup program (VCP) # V-005302. Project loc 535 W 19th ST. Proposed remedy excavation, containment wall, use restrictions. From the Phase I relatively little contamination in and immediately around the existing holder . staining found around the drums (8 drums). staining found on site was minor . Letter from R. Ketani (DEC) to Tenth Ave Realty Associates-07/17/2008- Dec reviewed the phase I ESA& Phase II ESA (produced by CORE Env) cc: Ronald Tramposch, CORE Env. Request for GW collection @ MW-1 to reduce contaminant conc. Request for PBS reg. Request: architectural/ eng. Plan for the apartment building showing position of the vapor barrier & the venting system. Email from R. Tramposch (CORE Env. ; 46-11 54th

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

Ave; Maspeth, NY 11378 Ph: 917-804-8717) to H. Amed (DEC)-07/02/2009-requesting a status update on sp# 9406402 (based on submitted Doc). Post it: Tramosch (Probably R. Tramposch) # 917-804-8710 11/17/2011-Intern Wade-continued file review Limited Phase II Env. Site investigation (ESI) (CORE)-09/24/2007- DEC rec 07/15/2008- 10 soil borings (SB). Monitoring wells (MW) installed @ 3 SB locations. 2 wells were sampled. (MW-2 did not produce enough water) CORE recommends excavation of abandoned UST s and excavation of contaminated soil, followed by end point samples. (Estimated cost $69,000) SBs done w/ Earth probe 200 (direct push). Soil cores screened w/ PID. SB 4 pushed to 20ft to investigate for potential coal tar waste, none was found. SB was advanced to silty clay area reported to be under the site. GW is 7 to 8 ft. GW is unfiltered. Highest PID reading were selected for analysis. Bedrock ~ 75 ft below Manhattan (generally). Contaminant values: SB 10- Ethyl Benzene (5500 ppb), npropylbenzene (4800 ppb). SB 6-Benzo(a)anthracene (2000 ppb), Benzo(a)pryene (1200 ppb), Benzo(b)flouranthene (1000 ppb), Benzo(k)flouranthene (1100 ppb), Chrysene (1900 ppb), Dibenzo(a,h)anthracene (310 ppb). MW1- Benzene (53 ppb), Isopropylbenzene (73 ppb), n-Butylbenzene (140 ppb), n-Propylbensene (180 ppb), sec-Butlbenzene (120 ppb), MTBE (120 ppb), 2-Methylnapthalene (8200 ppb), Fluorene (1100 ppb), Phenanthrene (1900 ppb). Barium (1820 ppb), Chromium (182 ppb), Lead (4140 ppb), Selenium (18 ppb), Mercury (2 ppb). MW-3- Selenium (27 ppb). 11/23/2011- Intern Wade-continued file review Email from Ron Tramposch to H Ahmed -07/02/2009-requesting the status of the review VCP # V-00530- 516 W 19th- no methylnapthalene of note. 524 W 19th Gasser Lot 29 was owned by MGP (1848) 11/30/11-Vought-Reviewed and approved above notes by Intern Wade. Teleconference with R. Tramposch. (Core office: 718-786-4730, Cell: 917-804-8717). The property is being proposed for sale. It will be residential w/ about 5 stories and a garage. Langan has been hired to conduct the do the environmental due diligence. Langan should be submitting a Phase II sometime in the future. Tramposch will call the owner today & email Vought detailing the most current information on the site. - The Site owner also possesses another site under Semantic Realty. Spill # 9612012. Address 511 West 18th st.Owner admits to a spill regarding a leaky tank. However, will not pay the full cost of clean-up due to Con Edison (MGP) tanks located under the site. Case was sent to Albany under the VCP- 000530, however it was referred back to Spills division. Owner owns a 3rd site called Brooklyn Operating facility ~ which is currently managed under the Petroleum & Remediation division. Dec notes on Sp# 9612012 shows owner s name to be Mendy Taffel [Ph: 718-391-5300, Fax: 561-995-7578, email: mendy@mendonleasing.com] Semantic Realty, Inc 362 Kingsland Ave Brooklyn NY 1222-1905 11/30/2011-Intern Wade-Vought received email from Tramposch. Tramposch was unable to contact the owner & will follow up 12/01/2011 to determine when he will receive the Langan report. Tramposch mentioned Spill # 9612012 & attached Core s Letter Analysis of Sub& Information was forwarded to K. Patel [DEC] for follow up. Intern Wade-Vought replied to email, indicating that he spoke w/ K. Patel regarding Sp # 9612012. He also asked to remain updated on the langan report, sales of the site, & on its development. Intern Wade-Tramposch emails Vought- Owners rep indicated that the PBS [regarding AST removal] was filed on 10/10. Intern Wade-Vought replied to email asking for a copy of the PBS submission. 12/21/2011-Intern Wade- Tramposch emailed Vought on

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

12/06/2011 w/ a PBS registration from the owner. PBS Does not look right R.T. He requests a copy of DEC s PBS facility report. Intern Wade- Vought emailed Tramposch DEC s copy of PBS for the site 12/22/2011-Intern Wade- Email from Tramposch to Vought attaching a copy of the PBS registration form including the 2-550 s. The original was placed in the mail. There are no AST s on-site. Regarding the Langan report. I am told it will be available shortly.
1/10/12-Vought-Sent email request to Tramposch for status of Langan report and Tramposch replied that he left message to owner for report. 2/9/12-Vought-Received email from Tramposch that Good morning Jeffery. Last month we discussed the Langan investigation report on this property. After discussion with the owner and purchaser, it was agreed upon that Langan would contact you directly regarding the investigation results. I am attaching the Langan contact information. I assume he will be in contact with you shortly.Sorry for this delay, but it appears that it was unavoidable because of the sale of the property. 2/10/12-Vought-Received call from and spoke to Steve Ciambruschini (Langan Ph:201-398-4549 email:sciambruschini@langan.com and Chris McMahon (cmcmahon@langan.com). They will contact Tramposch and also sumbit Langan report to Vought for review.
8/8/12-Vought-Received email from NYCOER Chawla on 8/1/12 that Randy and Jeff: 501 West 19th Street property with an old Spill #94-06402 is in the process of getting permits for redevelopment. They have E hazmat and intend to enter City BCP. Langan has proposed attached sampling locations. We briefly discussed this Spill during our last meeting. Please let me know who is DEC PM on this project so that we can coordinate and move this project along. Thanks, Shaminder . Teleconference requested by NYCOER Chawla for 1pm today. Vought sent email with spill notes, requirements as per 2/10/12 from above and a copy of summary site plans to Chawla, Langan(Ciambrushini) and Tramposch. Vought reviewed boring proposal from OER Chawla dated 8/1/12 and site plan does not include samples on proposed summary sample collection table and unclear as to whether groundwater samples will be collected downgradient of MW1. Proposal also did not include requirements above dated 2/10/12. Vought added site plans to e-docs. Note also that plan includes collection of soil, soil vapor and groundwater samples and no collection methodologies included. Vought spoke to OER Bertini and requested copy of sampling methodology and he noted that OER had requested same from Langan but did not receive it. Vought noted that DEC could not approve proposal without written sampling methodology. Vought also noted to OER Bertini that NYSDOH review of soil vapor sampling procedure once received may also be required and may also take time. 8/8/12-Vought-Teleconference with OER Chawla and OER Maurizio Bertini (Ph:212-788-3922 email:mbertini@dep.nyc.gov) and they noted that site was currently in E-designation program and that they were considering NYC LBCP Program. Chawla noted that OER had received a Phase II Report that noted LNAPL by MW1 and that future use of the site included excavation at some areas below groundwater and development with a ten-story residential structure. Vought noted that DEC would also approve immediate remedial excavation as part of development (including endpoints for investigation) to facilitate timely investigation and OER Chawla noted that OER was seeking installation of soil borings first. OER Chawla noted that they had not received any finalized development plans to date. Vought discussed outstanding DEC requirements and emails/discussions with Tramposch and Langan in 2/12. OER Chawla requested that Vought send DEC requirements to him

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

and not directly to owner so as to have a unified command with respect to further investigation/remediationn. Received and reviewed following report: Limited Phase II Environmental Investigation Report (Langan)-November 2011. Added Report to E-docs. Contact for Langan is Chris McMahon (Ph:201-794-6900). Report prepared for: HFZ Capital Group 600 Madison Avenue 17th Floor New York, NY 10022 Site E designated for hazardous materials, noise and air quality. The scope of work was not intended to meet the requirements for hazardous material investigations as defined by the E-designation program or brownfields program or to delineate sol and groundwater contamination... but was completed solely to identify all areas of contamination that may impact the proposed site redevelopment . Lot 29 is currently owned by CTR Realty Corporation. Previous commerical businesses that were identified at the site include Tuxedo Dairy, the Express Depot, meat companies, metal working facilities, trucking companies and building supply companies. Groundwater at 5-9'bg as perched water on a silt layer from 13-17'bg. Groundwater flow to the west as per Core Investigation in 2007. Phase II included six soil borings, collection of four soil samples and installation of two monitoring wells. GPR survey use was limited to due rebar in floor. Groundwater in borings at 5-10'bg. Soil sample from ELB-1 collected at highest PID reading and ELB3 sample collected from one foot interval directly above water table and the rest of the samples were collected from the base of the boring. Borings logs show strong petroleum odor at 7.5'bg(ELB1). LNAPL noted in MW1 but thickness of product not measured. Soil and groundwater analyticals show: 194ppb benzene(ELB1 9-9.5'bg). PERSONAL NOTE: Many of these groundwater samples collected within zone of tidal fluctuation and hence cannot be used for soil source characterization. Groundwater analyticals show no TOGS 1.1.1 Groundwater exceedences (however sample not collected at ELB1 due to LNAPL). Report concludes that a small area of impacted soil may be present in the area of the abandoned USTs and report recommends removal of USTs along with any impacted soils and possible removal of oil/water separator as part of development, installation of groundwater monitoring wells. 8/9/12-Vought-Sent email to OER Chawla with note that DEC cannot approve 8/1/12 proposal from Langan until a detailed sampling methodology is submitted for soil, soil vapor and groundwater and that complete proposal may also needed to be reviewed by NYSDOH. Vought also copied DEC Richard Dana as site also may be located in VCP V00530. Vought noted to OER to follow up with Vought if they need letter directly from DEC to Responsible Party. Vought attached summary site plans and copy of spill report as FYI for DEC Dana as well as DEC requirements including: 1)Submission of sampling methodology for collection of soil vapor, soil and groundwater sampling 2)possible NYSDOH review of soil vapor sampling methodology. 3)installation of soil boring on sidewalk of West 19th Street to delineate groundwater contamination to the south as well 4) Collection of groundwater sample down gradient from two 550-gallon former USTs 5) Referral of data, Methylnapthalene 8200 ppb, to V00530 under DEC PM Richard Dana pending new GW analyticals 6) Future and current use of site including possible installation of vapor barrier/SSDS and review of these plans by NYSDOH as site will be developed residential 10-story building with garage 7)Submittal of PBS registration based on two 275 Waste Oil tanks & also based on the total tank capacity of the site exceeding 1,100 gals. 8)Placement of proposed sample summary table locations (MW1 thru MW3) on Proposed Site plan. 9)Collection of

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

deepest dry soil sample AND highest PID sample at all boring locations and TWO deepest dry samples if no elevated PID readings due to likely water table fluctuation in tidal zone. 10)cc to Langan, OER Chawla and Bertini and DEC Dana. 9/21/12-Vought-Received call from and email inquiry from OER Chawla on status of Review of Phase II. To date file review by Vought: Email from Maurizio Bertini(NYCDEP) to Vought-8/30/12. Bertini noted that he received Work Plan for project and asked if Vought received a copy as well. Email from DEC Dana to Vought-8/30/12. DEC Dana also requested review of Work Plan by Langan. Email from Langan McMahon to Vought-9/5/12. McMahon posted copy of Work Plan on access site and notified Vought. Email from OER Chawla to Vought-9/20/12. Note that he will contact Vought at 11am to discuss Work Plan with attached copy of Phase II Subsurface Investigation Work Plan by Langan dated 8/28/12. Vought added Work Plan to e-docs. 9/21/12-Vought-Forwarded copy of Phase II Work Plan dated 8/28/12 to DEC Dana via email for his review as per his request. 9/24/12-Vought-Called and spoke to OER Chawla who noted that he had sent Phase II WOrk Plan to NYCDOH Chris D'Andrea for review and approval. OER Chawla later sent email to Vought from himself to Maureen Little with cc to NYCDOH D'Andrea that Langan Engineer has submitted the attached Phase II Work Plan to further investigate the environmental conditions at the 501-513 West 19th Street (block: 691, lots: 25, 27, 29) in Manhattan. The lots have been designated with Hazardous Materials, Air Quality and Noise E-designation. The site will be redeveloped with two residential building with sub-grade level, except for the section under the HighLine; a tunnel will connect the two subgrade levels. In addition to the HazMat E-designation, there is an open spill at the site. Previous investigations have identified levels of VOCs and SVOCs in both soil and groundwater due to abandoned USTs and fill material. The attached Work Plan proposes additional testing of soil and groundwater and investigation of soil vapor conditions. OER has reviewed the plan and asked for two additional soil borings to be installed in the lot East of the HighLine. The boring will be located one on the NE corner (10th Avenue side) and NW corner (Highline side) of the site. The former will be converted into a temporary groundwater monitoring well and the latter into an soil vapor sampling location. DEC (spill # 9406402) is also involved in review of this work plan. Your prompt review of soil gas investigation is greatly appreciated. Reviewed Phase II Work Plan dated 8/28/12. Site currently used as a building supply warehouse with associated offices and the remaining two lots are used for the storage of building supplies. Historically the site was operated as a dairy, a manufacturing flat, an Express Depot, a parking facility, a truck rental and repair facility, a labor staging area and commercial and residential units . Development to include construction of a residential building with basement that covers entie footprint. Copies of building plans included in Appendix. Formal plans have not been developed to date. Proposed scope of work includes collection of on sub-slab and two soil vapor samples, installation of eight soil borings with collection of two soil samples per boring, installation of five permanent monitoring wells, completion of a Phase II Subsurface Investigation Report and Remedial Action Work Plan. Plan includes soil vapor sampling procedures in accordance with NYSDOH 2006 Guidance. Soil borings will be performed to depth of 20'bg (below expected depth of future foundation with collection of continous samples and analysis of deepest dry or highest PID and second sample will be from the base of the boring to

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

correspond with proposed foundation elements. Plan includes details for the collection of soil, groundwater and soil vapor samples. Field activities to begin within two weeks of approval of Work Plan. Vought spoke with NYSDOH Mike Hughes who noted that as NYCDOH D'Andrea was reviewing Work Plan, that NYSDOH review was not needed. Vought sent email to OER Chawla with cc to DEC Dana and NYCDOH D'Andrea that REGIONAL approval of work plan was provided however Vought must receive comments from DEC Dana and NYCDOH D'Andrea on Work Plan before DEC can finalize approval. Vought also sent note that PBS registration still outstanding. 9/27/12-Vought-Received email from NYCDOH Andrea that Maureen received the Phase II workplan from Shaminder. She reviewed the workplan and had the following thoughts: The number of SV samples seems adequate for characterization, based on the information provided. Is there a reason no samples were collected in the back part of the lot bordering 10th Avenue? I am not sure how they are distinguishing between soil gas and soil vapor . Is the soil gas sample the one that is being taken sub-slab? It did not seem as though the sampling otherwise differed. This is the only information that we have reviewed regarding this project. If the project comes though the Brownfield program we will review all analytical results as well as other project related information. Chris. 3/6/13-Vought-Received call from and spoke to Langan (McMahon) and he will submit will have development plans, Phase I, OER RIR and OER RAP. Vought received plans via two CDs. 3/7/13-Vought-Received call from and spoke to Langan (McMahon) who noted that he needs Notice to Proceed from NYCOER who are witholding due to outstaning DEC requirements and open spill and he does not received Notice then there will be high expense with contractors lined to begin foundation emplacement. McMahon noted that proposed development includes excavation of entire site below the water table with dewatering and installation of a moisture/vapor barrier and no SSDS possible as foundation will be below water table. Site visit scheduled by Vought to inspect site. Received email from DEP Maurizio Bertini with cc to OER Cole that am the PM for the above site, which has an E-designation. It was once a VCP with OER, but the developer has chosen to remain in the E. We discussed the work plan sometime ago, either during the summer or fall. I believe Chris from Langan contacted you about the spill on this site and he should have sent you all documents, including the most recent RIR and RAP. The remedial actions described in the RAP focus on the development and as a consequence on the spill. I would like to discuss this project soon so we can sign off. I think we should segregate any DEC requirements in a combined RAP if that works for you. 3/12/13-Vought-Received additional call from McMahon regarding file review and site visit by Vought. 3/19/13-Vought-File review by Vought including review of recently received RIR and RAP from Langan. Vought called and spoke to OER Chawla who noted that site was not in LBCP and was in OER E-designation unit. Remedial Investigation Report (Langan- Chris McMahon)-2/6/13. Report prepared for: HFZ Capital Group 600 Madison Avenue 17th Floor New York, NY 10022 Onsite building built in 1945 and two asphalt lots also included in site. Building most recently used as building supply warehouse and two lots used for storage of building supplies. Future use of site will consist of mixed use condominium building that will completely occupy all three lots with a single subgrade level basement and two 10-story towers on either side of the highline with residential apartments. Onsite building will be demolished and new building basement will be occupied by

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

mechanical rooms, shared tenant amenities and storage. Building will have rear yard constructed above cellar level of building and as such there will be on potential contact with onsite at grade soils . New basement will be built to 10-12'bg and occupy entire site footpring with exception of areas that support foundation for highline with an estimated removal of 14,435 tons of soil and it is anticipated that dewatering will be required for installation of new foundation. Phase I site was formerly used as a dairy in 1904, manufacturing in 1924, parking lot in 1950. HFZ Highline LLC puchased site in March 2012. AOCs include abandoned gasoline/diesel USTs, oil water separator, on-site historic fill, surrounding sites, and additional industrial/commerical usage. Report includes results of installation of nine soil borings, collection of 23 soil samples and installation of six groundwater monitoring wells and four soil vapor probes. Groundwater flow is inferred to be from east to west beneath the site . ...petroleum impacted soils exist in the vicinity of the former USTs... . As per report upgradient wells show low level VOCs attributed with possible gas station that was formerly upgradient from site. Soil vapor analyticals for PCE show mitigation is required for SV3 and ...the source of chlorinated VOCs in soil vapor is attributable to an undocumented off-site release . ...waterproofing to be installed below and along foundation walls as part of proposed building redevelopment will adequately address the potential for soil vapor intrusion into the building. A remote fill port was observed on sidewalk along southern side of building . Petroleum odors noted in ELB11(6.5-10'bg), ELB12(6.5-9.5'bg), ELB13(7-15'bg), ELB14(7.5-10'bg). Three soil samples collected from each soil boring consisting of: directly beneath building slab (or highest PID), deepest dry and proposed final depth of excavation. Six groundwater samples collected as well for this investigation. Approximately .3 feet of yellowish brown free product in MW1.Site will be excavated to a depth of approximately 14'bg. Soil analyticals show: 8500ppb n-propylbenzene (ELB11 7.5-9.5'bg), 13,000ppb ethylbenzene(ELB12 7.5-9.5'bg), 17,000ppb xylene(ELB12 7.5-9.5'bg), 2000ppb ethylbenzene(ELB13 12-14'bg), 1100ppb xylene(ELB13 12-14'bg), 20,000ppb napthalene(ELB13 12-14'bg), 19,000ppb n-propylbenzene(ELB14 8-10'bg), 30,000ppb napthalene (ELB14 8-10'bg). Groundwater analyticals show: 9ppb benzene(ELB14), 15ppb napthalene(ELB14), 330ppb benzene(ELB13), 41ppb ethylbenzene(ELB13), 26ppb xylene(ELB13), 130ppb napthalene(ELB 13), 44ppb benzene(ELB12), 160ppb ethylbenzene(ELB12), 400ppb xylene(ELB12), 23ppb napthalene(ELB12). Soil vapor analyticals show: 2400ug/m3 PCE(SV3) and 13ug/m3 PCE(SV4). Remedial Action Plan (Langan)-2/26/13. ...a waterproofing/vapor barrier system will be installed below the proposed building... . Proposed collection of seven endpoint soil samples and sidewall samples will not be collected since the excavated areas will extend to property limites and sampling will be conducted within setback areas via the collection of five endpoint samples. It is anticipated that the support of the excavation for the proposed development will be isntalled three feet beyond the property line into the sidewalk and as such it is likely that all impacted materials that are located off-site may not be completely removed . Proposal for 20-mil vapor barrier also included beneath the building and on the outside of the foundation walls. Site also includes CAMP as well for VOCs, dust and odors as well as submission of a Closure Report upon completion of work. Vought called and spoke to Langan (McMahon) and noted that vapor issues may arise from pedestrian

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

traffic on the Highline above the site during excavation activities. McMahon noted that if issues arose that he would place a monitor above the site on the Highline in addition to a the proposed downwind location. 3/21/13-Vought-Called NYSDOH Hughes to discuss possible necessity of DOH review due to off-site PCE soil vapor plume and installation of proposed 20mil vapor moisture barrier along foundation walls. Vought sent the following email to NYSDOH Hughes and NYCDOH Andrea with cc to Dana, RHWRE, DEC Cozzy, OER Chawla and Bertini and Langan (McMahon) that have recently reviewed a Remedial Action Plan (RAP) and Remedial Investigation Report (RIR) for the above site that includes excavation of the entire site to below groundwater (5-8'bg) with dewatering as part of the development. The contractor is set to begin work by April 1 and as such is looking for an expedited review and approval of the RAP. The site may also be part of a VCP as well (V00530) being managed by Richard Dana in DEC Albany and is also under the E-designation Program in NYCOER. The RIR noted a concentration of 2400ug/m3 PCE in a soil vapor that was attributed to an off-site source and that location is almost center to the remedial excavation. I have attached one of my summary site plans for your review below. Soil and groundwater analyticals across the site were non-detect for PCE and MDLs were appropriate for SCOs'. Prior uses of the site include: storage and shipment of building supplies and automobile storage. No former uses were directly related to the presence of PCE on-site. Proposed development includes installation of a 20-mil vapor/moisture barrier underneath slab and along foundation walls. Question: Does NYCDOH or NYSDOH need to review vapor barrier or moisture barrier specifications in the RAP? Please note that I have also copied Jane O'Connell and Bob Cozzy as I will be discussing the PCE hit in soil vapor and if they feel the need for a P-Site Plume trackdown. I have also copied the environmental consultant (Langan) above as well so that they may remain informed. Thanks gentlemen and to everyone copied above as well for their assistance as always, 3/21/13-Vought-Called McMahon and informed him of draft DEC review letter of RIR and RAP that includes requirements for regular intermittent sampling of dewatering fluids and installation of monitoring well if excavation does removal all contaminated soil under 19th Street sidewalk. Vought also noted that via email sent by Vought above that NYSDOH or NYCDOH may have requirements with respect to vapor barrier which if the case, the review letter will need to be rewritten by Vought. If DOH has no further requirements by DOH then letter will be sent to owner as drafted by Patel. 3/27/13-Vought-Correspondence review to date: Email from Langan (McMahon) to All Parties-3/25/13. All I just spoke with Mike Hughes of the NYSDOH regarding the email that Jeff Vought sent, and he will verify with his engineering department but he strongly believes that the remedial action that is taking place including the removal of soils to a depth below the groundwater table in the area of the PCE hit and the installation of the waterproofing barrier should be sufficient to address any soil vapor issues and that the NYSDOH or NYCDOH will not need to review any of the information formally. He will respond formally either tomorrow or Wednesday. Email from McMahon to All Parties-3/26/13. All please find the attached letter from Grace, stating that the waterproofing membrane that will be used for this project will not be adversely affected by the contaminants at the site. Vought added letter to e-docs and as per letter dated 3/25/13 I have reviewed the following documents for the above referenced project:? Tables 1-6 prepared by Langan

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

Engineering and Environmental Services dated 12-2012 ? Figures 1-7 prepared by Langan Engineering and Environmental Services dated 1-31-2013 Based on the identified contaminants at the levels reported, the waterproofing or vapor barrier properties of Preprufe 300R/160R or Bituthene 3000/4000 systems and all system accessories will not be adversely affected, provided standard design and application procedures are followed. Email from McMahon to All Parties-3/27/13. Email that Mike we discussed this project on Monday and you had indicated that you would follow-up with an email stating that based on the results of the investigation and the proposed redevelopment activities which will excavate into the groundwater table on 2/3rds of the property and the use of a Grace waterproofing system beneath the entire redevelopment would be sufficient and not require NYSDOH or NYCDOH review. It is my understanding (Jeffrey please correct me if I m wrong) that this email would be sufficient to satisfy Jeffrey s question and would close out this issue with the NYSDEC.Please also find the attached letter from Grace which states that the contamination at the site in soil, soil vapor and groundwater should not have a negative effect on the performance of their waterproofing system. Regards . Email from NYSDOH Hughes to All Parties-3/27/13. Email that In general, the DOH does not have a formal policy to review the specifications of moisture/gas barriers. Our only stipulation is that the barrier is a true impermeable vapor barrier and not just a moisture barrier. If the proposed barrier for this site meets that requirement then DOH has no further comments and concurs with the proposed course of action. 3/27/13-Vought-Finalized RAP review letter and sent to all parties including requirements of regular sampling of dewatering discharge and reinstallation of well MW6 if all contaminated soil under the sidewalk cannot be removed (also in consideration of groundwater contamination levels in this well). 3/28/13-Vought-Received email from DEC Cozzy that since no PCE in GW, no need for plume trackdown. 10/24/13-Vought-Received phone message from McMahon that they located and removed the USTs and noted some impact and plan is to dig close to water to dewater and collect endpoint samples. Vought left message to return call to Vought to confirm below requirements. Vought received call from McMahon and tanks were not adjacent to sidewalk but more into building. The second excavation was performed to just above water table to install cassions, install dewatering system and then continue excavation. One hole noted in one UST but they were encased in concrete and some PID hits underconcrete. He will verify extent of proposed soil excavation to remote fill areas. He noted that no piping was attached to tanks as it may have been removed. 4/1/16-Vought-Received message from McMahon (Ph:973-560-4861)that he want to submit closure report to DEC for review so that NYOER can grant Certificate of Occupancy. Vought returned call to McMahon and left message. 4/5/16-Vought-Received email from Langan (McMahon) that Good Evening Jeff got your voicemail, thanks for getting back to me. The link below is the draft of the Remedial Closure Report that we sent over to the OER about a year ago. I m not sure that Maurizio fully reviewed it but his one comment was that he wanted me to get it over to you, so here you go. The answer is yes. We did find the tanks, removed them accordingly, dug below the groundwater table, collected all kinds of post-ex samples and three groundwater samples during dewatering. Actually, two during dewatering then when we went to take the third the dewatering system had broken the day before and they decided to not turn it back on, so the third sample was from a piezometer outside of

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

the excavation area that was used primarily for the monitoring of drawdown outside of the SOE sheeting. This we can and likely should discuss more. If you could, please confirm receipt and let me know when a good time is for you to discuss. Regards. Vought added DRAFT RCR dated May 2015 to D2 and reviewed: Draft Hazardous Materials Remedial Closure Report (Langan)-May 2015. Site part of E-designation and CEQR review. Prior to site development the site was occupied by a building supply company. Site also was occupied by Tuxedo Dairy, the Express Depot, commercial meat companies, metal working facilities, and trucking companies. The new development consists of a mixed use residential condominium building that completely occupies (full build-out) the site. The new building has a common ground floor and single subgrade level basement and two 10-story towers on either side of the highline that will contain 35 residential condominiums. Based on the location of the rear yard which is located above a below grade structure, there is no potential contact with impacted soils that were left on-site as part of the site redevelopment. The proposed building has one basement level extending approximately 16-feet below sidewalk grade and occupying the entire Site footprint, with exception of a portion of the site that is below the Highline (approximately 2,550 square feet) which remains unexcavated due to the existing structural and foundation elements that support the Highline. Approximately 21,829 tons of soil was removed as part of the foundation installation. Groundwater was encountered between depths of approximately 5- to 10-feet below existing site grade. Four dewatering wells installed and NYCDEP discharge permit obtained. Report noted Installed a Vapor Barrier System that consisted of a certified Grace Preprufe/300R waterproofing/vapor barrier with a minimum thickness of 46-mil beneath the entire building foundation and certified Grace Bituthene3000 with a minimum thickness of 62-mil along all foundation sidewalls. new buildings have a below grade cellar that is occupied by mechanical rooms (approximately 10,400 SF), shared tenant amenities (approximately 2,000 SF), and storage (Residential is approximately 2,000 SF and Commercial will be approximately 3,000 SF). Three underground storage tanks and an oil-water separator were removed during the Remedial Action. Two USTs were identified in the vicinity of the area where the tanks were suspected to be were encountered during site re-development activities. It is assumed that these were the USTs that were reported to the NYSDEC due to tank tightness failure that resulted in NYSDEC Spill No. 9406402 being assigned to the site. On 10 October 2013 the two 1,100-gallon USTs were cleaned and removed from the eastern side of the site. The previously abandoned in place USTs and associated piping were removed from the ground and the contents, consisting of a concrete slurry, were removed. 80-gallon UST associated with the oil water separator was also removed as well as surrounding contaminated soil. Six endpoint samples collected from development excavation for NYCOER and five additional endpoints collected around USTs for consideration of spill closure as per Report. The fill port was removed from the sidewalk on the north side of West 19th Street, south of former Lot 29. The excavation measured approximately 11-feet long by 8-feet wide x 9.5-feet deep and abutted the support of excavation wall to the north and extended south until the excavation boundary reached the NYCDOT right of way at West 19th Street. Staining and/or elevated PID readings were observed along the entire depth of the excavation on the eastern, southern, and western sidewalls. Five fill port area samples and one duplicate sample were

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

collected on 13 May 2014 at a depth of 9.5-feet bgs. GW-1 and GW-2 were collected from the dewatering system s effluent stream prior to reaching the settling tank or carbon units. GW-3 and its duplicate were collected from the dewatering system piezometer located outside the subject site due to a malfunction in the dewatering system on the date of sampling and the subsequent shut-down of the system following the malfunction. No exceedances of the NYSDEC GQS for VOCs were detected in any of the samples. with respect to dewatering samples. Dewatering samples were collected in June 2014, two years after last groundwater samples were collected during an subsurface investigation. As there is no exposure pathways to future site occupants and groundwater is not approved for potable use on site; the groundwater impacts that were identified do not pose a threat to public health. An approximately 12- to 14-inch thick concrete building slab was installed in areas of the site surrounding support columns for the High Line open space, the remainder of the site was finished with a 36-inch thick steel-reinforced pressure slab. Report also contained air monitoring data collected during the site development. Laboratory analyses and disposal manifests included in report. 4/5/16-Vought-After file review spill closed by Vought due to excavation of entire site to below the groundwater table and development of the foundation also below the water table and as such no remaining soil contamination or potential for soil vapor intrusion, installation of Grace petroleum compatible moisture and vapor barrier, documented historical groundwater petroleum VOC concentrations within attenuation parameters as per guidance from DEC BTS Central Office, three dewatering samples collected after soil source removal that were non-detect for VOCs and review of development plans by NYSDOH. Vought called and spoke to NYCOER Chawla who had no objections to Spill Closure. Spill closure letter sent to: HFZ Capital Group 600 Madison Avenue, 17th Floor New York, NY 1002 with cc to OER Chawla and Langan (McMahon). Spill closure letter also added to D2 and email sent to Langan (McMahon) that Chris, There is no need to discuss the spill as Closure is warranted after I reviewed the DRAFT Hazardous Waste Remedial Closure Report dated May 2015, prepared by Langan, and submitted to NYCOER. I have copied NYCDOH and NYSDOH above as they were also consulted on the spill. As we have not worked on this spill for some time here are relevant entries of my DEC Remarks sent as a refresher for DEC Central Office and NYSDOH copied above: 8/9/12-Vought-Sent email to OER Chawla with note that DEC cannot approve 8/1/12 proposal from Langan until a detailed sampling methodology is submitted for soil, soil vapor and groundwater and that complete proposal may also needed to be reviewed by NYSDOH. Vought also copied DEC Richard Dana as site also may be located in VCP V00530. Email from McMahon to NYSDOH Hughes and All Parties-3/27/13. Email that Mike we discussed this project on Monday and you had indicated that you would follow-up with an email stating that based on the results of the investigation and the proposed redevelopment activities which will excavate into the groundwater table on 2/3rds of the property and the use of a Grace waterproofing system beneath the entire redevelopment would be sufficient and not require NYSDOH or NYCDOH review. It is my understanding (Jeffrey please correct me if I m wrong) that this email would be sufficient to satisfy Jeffrey s question and would close out this issue with the NYSDEC. Please also find the attached letter from Grace which states that the contamination at the site in soil, soil vapor and groundwater should not have a negative effect on the performance of

FORMER BUILDING SUPPLY/FUTURE RESIDENTIAL (Continued) **S101340991**

their waterproofing system. Regards . Email from NYSDOH Hughes to All Parties-3/27/13. Email that In general, the DOH does not have a formal policy to review the specifications of moisture/gas barriers. Our only stipulation is that the barrier is a true impermeable vapor barrier and not just a moisture barrier. If the proposed barrier for this site meets that requirement then DOH has no further comments and concurs with the proposed course of action. A copy of the Department s closure letter is attached above and an original is in the US Mail to HFZ Capital Group. Thanks to you and all those copied above for their help. "

Remarks: "STUCK PROBE IN GROUND FOUND CONTAMINATED SOIL AT 9 FEET. WILL PULL TANKS OUT -ONCE THEY CAN SEE ALL CONTAMINATED SOIL THEY CAN REMOVE IT STUCK PILE."

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D008
Waste Description:	LEAD

EMPIRE CITY SUBWAY CO LTD (Continued) **1000912482**

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"02/03/06 Feroze talked with Mr. Minick (owner) 212-604-9898. He informed that there was a leak in the tank, they have closed the leak and pumped the oil out. It is above ground tank, floor is made of concrete. An environmental company is working for them. TTF is sent to : Mr. Minick 440 west 22nd Street New york, NY 10011. 02/10/06 Mr. Minick called and told me that they will close the tank by PTC. He will submit DEC the documents soon. 03/02/06 Feroze,: Mr.Minick told me that PTC has taken soil sample. He will submit soil analysis result and tank closer report to DEC soon.It was 275 gallon tank. 03/10/06 Feroze received a certificate and soil analysis result. The result shows that VOC and SVOC are within accepatble limit. They also submited a manifest for removal of contaminated soil. The spill is closed."
Remarks:	"ruptured tank in basement:"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Update By: DJEATON
Site Description: "Location: The 515 West 18th Street site is approximately 1 acre in size located in an urban area in the West Chelsea section of the Borough of Manhattan. The site is bounded by West 19th Street on the

515 WEST 18TH STREET (Continued) **S117851117**

north, West 18th Street to the south, and 10th Avenue to the east. Site Features: The site consists of two adjacent lots, designated as Lots 20 and 29. Lot 20 is currently improved with two 2-story buildings, with slab on grade foundations. The first building has the first floor utilized as a parking garage and the second floor as an art gallery. The other building is a residential space. Lot 29 is a paved parking lot. The High Line Park, an elevated and open recreational walkway, runs north to south over the western portion of Lot 29. Current Zoning/Use: The site is zoned C6-4 for mixed commercial and residential use and is currently vacant. Past Uses of the Site: Both lots were historically used to support the nearby Manufactured Gas Plant (MGP) operations of the West 18th Street Gas Works. In approximately 1848, two gas holders were constructed on Lot 29 and used for storage of manufactured gas until the early 1900s. Lot 20 was used as a storage yard by the MGP from about 1870 until the early 1900s. The gas works produced gas using the coal carbonization process throughout its entire history. After the site was sold in 1919, a large garage was constructed on the 18th Street side of Lot 20 that included buried gasoline tanks. In 1947, a private garage was built on the 19th Street side of Lot 20 as well. On Lot 29, the gas holders were razed in 1914. After being sold in 1917, Lot 29 was used as a wagon yard, automobile parking lot, and commercial truck parking lot with several small structures and underground petroleum storage tanks. These properties were originally part of a Voluntary Cleanup Program project, subject to a legal agreement between Con Edison and the Department, for the Con Edison West 18th Street Gas Works site, site #V00530. Site Geology and Hydrogeology: The site is underlain by a thick deposit of urban fill materials which was placed along the Hudson River shoreline to create additional land for development. The fill, 7 to 30 feet deep, consists of a variety of man-made materials such as bricks and ash, mixed with soil. The fill is underlain by sands, silts and glacial till, which extend to bedrock, found between 40 and 60 feet below the surface. Groundwater occurs between 8 and 9 feet below grade. Regional groundwater flow is westerly towards the Hudson River; local groundwater flow is generally the same. "

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were naphthalene, lead, and xylene in soil, and naphthalene and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN 9514181 TANK TEST FAILURE. ORIGINALLY ASSIGNED TO MARTINKAT - FILE TRANSFERRED TO MULQUEEN 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 03/18/09-Hiralkumar Patel. received call from Suzanne Maxx from World Team. she mentioned that

515 W 18 ST (Continued) **S104502660**

her organization is planning to buy this property and she inquired about work required to close the spill. mentioned to her that two spill cases reported (including this) at the site: Spill #: 9514181 - tank test failure reported on 02/07/1996 for two 1,500 gal tanks. spill #: 9612012 - contaminated soil found, on 01/06/1997, during replacement of two 1,500 gal tanks with one 4,000 gal tank based on information reported in spill reports, mentioned to Ms. Maxx that the department requires soil and groundwater investigation at the location of two 1500 gal tanks and one 4,000 gal tanks unless both locations are the same. mentioned to her that the department may require additional investigation and remediation, if contamination found on the site. sent email to Ms. Maxx with copy of spill reports and PBS record. Suzanne Maxx World Team **potential buyer** Ph. (310) 917-9106 email: suzanne@worldteamnow.org alternate addresses: 508-510 W 19 St, 511-525 W 18 St no other spill found. spill case 9514181 closed and consolidated with this case. case transferred from DEC Tang to DEC Patel. according to building permit record dated 06/25/1996: removed two 1,500 gal diesel USTs and one dispenser with associated piping and installed one 4,000 gal diesel UST and dispenser with associated piping <---------- PBS #: 2-032212. according to PBS record, site had following tanks: - three 550 gal gasoline USTs, closed-removed in Jan. 1999 - two 1,500 gal diesel USTs, closed-in place in Jan. 1997 - one 4,000 gal diesel UST, closed-in place in Nov. 2004 Semantic Realty, Inc. **property owner** 362 Kingsland Ave Brooklyn NY 11222-1905 Attn.: Mendy Taffel Ph. (718) 391-5300 Fax (561) 995-7578 email: mendy@mendonleasing.com spoke with Aida Diaz, book keeper for the property. she will ask property owner to call back. received call from Mendy Taffel, property owner. he asked for copy of spill reports. faxed copy of spill reports to Mr. Taffel. Mr. Taffel is in Florida and will be in NY after 10 days and at that time he will call with company's name who really owns the property. 04/23/09-Hiralkumar Patel. left message for Mr. Taffel. 04/24/09-Hiralkumar Patel. received message from Mr. Taffel. 04/28/09-Hiralkumar Patel. received call from Mr. Taffel. he will ask his consultant to submit documents. received letter from Ron from Core environmental. abstract: - subject property is located at block # 690/ lot # 20 - lot is entirely covered by two-story brick building - first floor is utilized as parking lot and the second floor is currently vacant - two 1,500 gal tanks failed tightness test in 1996; both tanks removed in 1997 and were replaced by one 4,000 gal tank which was closed in place in 2004 - tanks were located below the first floor slab - property is part of the West 18th Street Gas Works (MGP site) - previous investigatory work performed by ConEd along the western property line of this lot and the parking lot to the east has confirmed MGP related contaminants in the soil and groundwater Ronald Tramposch Core Environmental, Inc. Ph. (718) 762-0544 (O) (718) 786-4730 (917) 804-8717 (C) Fax (718) 762-0545 email: rpt@coreenv.com 05/04/09-Hiralkumar Patel. found documents on e-docs. CSL was sent out to property owner/manager on 01/07/97. spoke with DEC Jane. she asked to contact William Ottaway in Central office as he is handling MGP case. sent email to Mr. Ottaway, with copy of spill report, to know whether this case be part of MGP case or will it be separate. received email from Mr. Ottaway. he mentioned that the site is within the boundary of the ConEdison W18th Street MGP site (V00530). he has not seen any significant MGP contamination there, but believes there are some residual MGP related contamination at depth. he will receive the site-wide RI for this site this summer,

515 W 18 ST (Continued) **S104502660**

and will make determinations at that time regarding the extent of contamination and whether any active remediation is needed at this property. Mr. Ottaway does not anticipate any active remediation at this time. he expects this property to be covered by the site management plan (SMP) for the MGP site, but would not assume that the petroleum contamination would necessarily be addressed by an MGP remedy. It might be appropriate for the SMP to reference this spill so future development will understand the need to address this issue appropriately. he will discuss that with the ConEd project manager. Mr. Ottaway thinks that this spill needs to be addressed separately from the MGP site. William S. Ottaway Remedial Bureau C, MGP Section Division of Environmental Remediation NYS DEC PH. (518) 402-9686 Fax (518) 402-9022 email: wsottawa@gw.dec.state.ny.us 05/26/09-Hiralkumar Patel. spoke with Ms. Maxx regarding status of property purchase. she mentioned that they haven't purchased yet. during conversation, Ms. Maxx mentioned that there are phase I and Phase II investigation performed on the site by property owner. she mentioned that reports were made in 1996 and in 2004/2005. spoke with Mr. Taffel about previous investigation reports. he asked to contact Ron at Core environmental. left message for Ron at Core environmental. 05/27/09-Hiralkumar Patel. 11:45 AM:- received call from Ron. he spoke with property owner and owner's doesn't have any reports and doesn't remember any investigation work done on his property. 11:48 AM:- spoke with Ms. Maxx regarding previous reports. she refused to provide copy of reports for review. 08/06/09-Hiralkumar Patel. 10:31 AM:- spoke with Mr. Ottaway. he hasn't got investigation report yet. 11:05 AM:- sent letter to Mr. Taffel requiring soil/GW investigation around 4000 gal tank system (including piping, remote fill port and disepenser islands) and site map with location of current/former tanks. letter faxed to Mr. Taffel and emailed to Mr. Ottaway and Ron. 12:13 PM:- recevied message from Mr. Taffel. 12:53 PM:- spoke with Mr. Taffel. he asked for meeting to discuss this matter. he will ask Ron to call to discuss technical matter. 1:00 PM:- received call from Ron. explained him that the Department requires soil/gw investigation based on earlier tank test failure and soil contamination complaints. also explained that if MGP contamination found on property, then this case may be transferred to project manager in Albany for cleanup under MGP case. Ron will talk to Mr. Taffel. 09/09/09-Hiralkumar Patel. 3:52 PM:- received email from Ron stating that ConEd has done some investigation on the site and are waiting for documents from ConEd. 3:57 PM:- sent email to Ron and asked him to submit required investigation report (according to letter dated 08/06/09) by the end of 09/18/09 or else case may be referred to legal division. 5:00 PM:- received email from Ron. he mentioned that: letter of August 6th did give a 30 day requirement for conducting an investigation. At that time, my client was reluctant and still is reluctant to conduct an investigation at a site that poses very little threat to the environmental from the diesel tank and there is an overwhelming concern regarding the contamination from the 2 very large MGP gas holders adjacent to this former tank. Ron requested deadline extension as waiting for ConEd documents. 09/14/09-Hiralkumar Patel. 11:16 AM:- spoke with Ron. he found two access agreement between owner and ConEd and after further investigation, he found that ConEd did some soil investigation on site. and he is waiting for investigation report. based on this information, approved his request to extend deadline. asked Ron to submit report or soil sample data (with site map including sampling locaitons) by the end of 09/28/09

515 W 18 ST (Continued) **S104502660**

or else case will be referred to legal. 09/16/09-Hiralkumar Patel. 1:17 PM:- received email from Ron with site map and sample analyticals that he received from ConEd. Ron mentioned that according to Con Edison, they have prepared a site wide Remedial Action Plan to address the contamination on this property and all other properties related to the MGP plant. according to submitted site map: - 12 borings were advanced on site (MW-12A, MW-12B, SB-14, SB-14A, SB-208, SB-209, MW/SB-213, SB-214, SB-221, SB-222, SB-254 and SB-MTP-3) and two borings were advanced near property line (MW/SB-219 and SB-220) - boring MW-12A, MW-12B, MW/SB-213 and MW/SB-219 were converted into wells - strong petroleum odors noticed in soil from 5-10 ft bg in SB-214 (PID: 15 to 594 ppm), from 5-10 ft in SB-221 (PID: 11 to 222 ppm), from 5-10 ft in SB-220 (PID: 232 to 1583 ppm) and 7-19 ft in SB-14A (PID: 0-135 ppm) - high PID (217 to 514 ppm) found from 0-5 ft in SB-222 - solvent like odors noticed from 1-6 ft in SB-14A (PID: 96 to 244 ppm) - found 1,400 ppb benzene in groundwater sample from MW-12 <--------- - found soil contamination in some samples - samples were collected between 2004 and 2007 soil analtyicals:
----------SB-208------SB-209-----SB-221-----SB-222-----SB-222---
---SB-MTP-3 19-20 ft 19-20 ft 24-25 ft 1-3 ft 19-20 ft 24-25 ft
Benzene----------860-------2,100--------710--------390------4,
400---------6,700
Ethylbenzne----------2,400----------17,000------1,500
Xylene----------2,000----------160,000------1,300
Naphthalene----------42,000 after reviewing submitted sample analtyicals and previously submitted site map with approx. location of previous tanks at the site, it is found that strong petroleum odors noticed between 5 to 10 ft depth in area of previous diesel tanks and gasoline odors noticed in off-site boring SB-272 (between 6-7 ft). also heavy VOC contamination found in soil sample from 1-3 ft depth from boring SB-222 which is in area of previous diesel tanks. soil contamination found in deeper soil in other areas of site. 4:32 PM:- received email from Mr. Ottaway. he mentioned that ..I have taken a quick look at the submitted data. On the Roxy property, about half the boring logs were clean and the other half (SB-14A, SB-214, SB-221, SB-220) noted petroleum odors in the logs. None noted MGP contamination. The analytical results on this parcel showed relatively low levels of organic contamination, so I'm not sure how much of a problem this property represents. 09/17/09-Hiralkumar Patel. 2:34 PM:- spoke with Mr. Ottaway. he will review data again and will discuss with his supervisor regarding responsibility of remediation. discussed with DEC Austin. he mentioned that cleaning at MGP site requires extra precaution due to hazardous substances in ground. as per him, MGP issue is bigger than tank test failure/petroleum contamination from tank and as no immediate threat to occupants, he asked to wait for reply from Mr. Ottaway. he mentioned that no investigation/remediation required for leaking tank issue at this time. 09/22/09-Hiralkumar Patel. 4:13 PM:- received email from Mr. Ottaway. ...I reviewed the specific tests that you referenced SB-208 (18-20'), SB-209 (19-20'), SB-MPT-3 (24-25') and SB-222 (1-3'). The PAH results for the deeper tests were all quite low. PAHs are the most family of chemicals in highest concentration in MGP tar, so these results clearly show that there is not MGP tar in the immediate vicinity of these borings. In addition, the VOC analyses were predominantly benzene, with relatively little of the other VOCs typical of MGP tar. In short, I am skeptical that the benzene contamination in these 3 samples is attributable to MGP

515 W 18 ST (Continued) **S104502660**

related contamination. Looking at both SVOC and VOC results, the shallow contamination at SB-222 appears to be fairly typical of diesel or fuel oil contamination. The contamination on Lot 29 does not appear to have significantly impacted Lot 20, and I do not believe that this contamination should represent a significant complication in the remediation of the relatively small area of contamination in the vicinity of SB-222. 09/23/09-Hiralkumar Patel. spoke with DEC Austin about response from Mr. Ottaway. he wants to review file again next week and then will discuss with Mr. Ottaway and Mr. Cross. 05/17/10-Hiralkumar Patel. after revewing available information, DEC Austin required for soil/groundwater investigation by property owner and mentioned that the case will not be transferred to MGP case manager in Albany. 4:29 PM:- left message for Mr. Taffel. 09/13/10-Hiralkumar Patel. 12:51 PM:- left message for Mr. Taffel. 12:53 PM:- left message for Ron. 10/20/10-Hiralkumar Patel. 10:13 AM:- received email from Ron including review of analysis of soil/groundwater samples collected by ConEd's consultant. Ron claimed that contamination found under the site is mixed from former diesel tanks and previous MGP use of the site, based on following: - soil under the site is sand and black, organic, clayey silt - groundwater found at average 9 ft depth - fomer diesel oil tanks were six ft in diameter and tanks were two ft below grade, so tank bottom was around 8 ft bg - bottom of gas holders on adjacent lot 29 were at 18.5 ft bg (Holder #4) and at 20 ft bg (Holder #3) - high contamination found at 20 ft depth (about 12 ft below water table) reviewed previously submitted SVOC and VOC data. VOC compounds found in deeper soil but no SVOC compounds. as there were no SVOCs found in deeper soil, DEC Ottaway does not believe that contamiantion on lot 29 has impacted site on lot 20. 10/28/10-Hiralkumar Patel. 10:10 AM:- left message for DEC Ottaway. 10/29/10-Hiralkumar Patel. 3:27 PM:- spoke with DEC Ottaway. he has spoke with his supervisor and waiting for response. Ottaway will send written response about findings of soil investigation. 11/30/10-Hiralkumar Patel. 2:18 PM:- left message for (and sent email to) DEC Ottaway. 12/07/10-Hiralkumar Patel. 11:10 AM:- spoke with DEC Ottaway. he is waiting for response from his supervisor. 12/09/10-Hiralkumar Patel. 1:29 PM:- received email from DEC Ottaway. 01/05/11-Hiralkumar Patel. discussed with DEC Austin. he mentioned that the department requires complete soil delineation around the diesel tanks and remediation of contamination. 11:51 AM:- left message for Ron informing that the department requires soil/gw delineation. 01/20/11-Hiralkumar Patel. 2:17 PM:- left message for Mr. Taffel informing that the department requires soil/gw delineation as per letter dated 08/06/2009. 2:20 PM:- spoke with Ron. he mentioned that recently Verizon has signed a six year lease and just moved in. Ron doesn't know when will the property be sold. 04/19/11-Hiralkumar Patel. 11:05 AM:- left message for Ron. 11/30/11-Hiralkumar Patel. 2:52 PM:- left message for Ron. 2:54 PM:- left message for Mr. Taffel. 3:10 PM:- received message from Ron. 3:55 PM:- sent letter to Mr. Taffel requiring submission of an investigation report (for soil/gw delineation as per letter dated 08/06/09) by the end of 01/31/12. letter emailed to Mr. Taffel and Ron. 3:57 PM:- email sent to Mr. Taffel came back. 12/06/11-Hiralkumar Patel. 2:01 PM:- received call from Ron. he mentioned that Mr. Taffel is sick and may not have seen the letter. he will talk to Mr. Taffel and will submit response. 01/13/12-Hiralkumar Patel. 10:27 AM:- received email from Ron. he mentioned that Mr. Taffel has agreed to perform the site

515 W 18 ST (Continued) **S104502660**

investigation. they have reached an access agreement with the tenant (Verizon) and have scheduled the drilling of borings/monitoring wells for 01/23/12. Ron asked for time extension to submit report. he proposed to submit report by 03/15/12. 11:09 AM:- sent email to Ron. asked him to submit an investigation work plan (including map showing former tank and proposed boring/well locations), prior to any approval for time extension. 11:55 AM:- received message from Ron. 1:26 PM:- spoke with Ron. he will send work plan for review. 4:20 PM:- received work plan from Ron. abstract: - total of eight soil borings will be installed to a maximum depth of 20 ft bg - one soil sample will be collected from each boring based on visual/olfactory/PID evidence of contamination or else at soil/water interface - based on previous investigations, groundwater elevation is approx. 8-10 ft bg - previous investigation activities suggets that groundwater flow direction is likely towards the west - six soil borings will be converted to 2 inch diameter wells - will collect water samples from existing wells MW/SB-219, MW/SB-224 and MW-7, if found and accessible 01/17/12-Hiralkumar Patel. 11:26 AM:- sent work plan approval letter to Mr. Taffel and asked to submit investigation report by 03/15/12. letter emailed to Mr. Taffel, Ron, Leonard Morrow (lmpc@verizon.net - tenant) and Barry (barry@mendonleasing.com). 03/15/12-Hiralkumar Patel. Phase II report was hand-delivered. abstract: - installed eight soil borings to maximum depth fo 20 ft bg - fill material extended from approx. 5 to 20 ft bg, described as brown fine to medium sand with debris including gravel, concrete, brick, glass and wood - native soils were identified below fill material and were typically brown, fine to medium sand and varying amounts of silt - silt area was followed by gray clay which was also identified at approx. 19 to 20 ft bg - bedrock was not encountered - bedrock is reportedly located from 60-80 ft bg - six of the soil borings were converted to 2 inch monitoring wells - groundwater found between 8 and 9.5 ft bg <---------- - based on well survey, groundwater flow is toward the southwest <---------- - three existing monitoring wells (MW-7A, MW-224 and MW-219) and six newly installed monitoring wells (MW-1 through MW-6) were sampled - well MW-7A located near the corner of 10th ave and 19th St - well MW-224 located southeast of the site near the corner of 10th ave and 18th st - well MW-219 located int he sidewalk on the north side of 18th st near the subject site building - found high PID readings and petroleum odors in borings - SB-1: 0.3 to 1,185 ppm with max at 5-10 ft bg; water at 8.05-8.15 ft bg - SB-2: 8.7 to 98 ppm with max at 5-10 ft bg; water at 8.70-8.86 ft bg - SB-3: 73 to 1,485 ppm with max at 5-7 ft bg; water at 8.90-9.0 ft bg - SB-4: 3 to 217 ppm with max at 7-9 ft bg; water at 8.70-8.75 ft bg - SB-5: 8 to 1,658 ppm with max at 9-11 ft bg; water at 8.70-8.76 ft bg - SB-6: 7 to 878 ppm with max at 11-13 ft bg; water at 9.30-9.30 ft bg - SB-7: 6 to 348 ppm with max at 7-9 ft bg - SB-8: 2 to 124 ppm with max at 7-11 ft bg - found VOCs and SVOCs in soil samples - found mostly Benzene in groundwater samples, with other VOCs below 44 ppb soil analyticals: ----------SB-3----------SB-5 6-6.5 ft 9-9.5 ft Toluene----------1,200 Ethylbenzene----------7,400 Xylene----------68,000 1,2,4-Trimethylbenzene------49,000 1,3,5-Trimethylbenzene------18,000 Naphthalene----------20,000 n-Propylbenzene----------5,500----------7,100 groundwater analyticals: ----------MW-1----MW-2----MW-3----MW-4----MW-5----MW-6----MW-224---- MW-7A

Benzene-------50-----350-----120------83------30------16--------32----
---23 04/03/12-Hiralkumar Patel. discussed with DEC Austin. based on available data and based on earlier response from DEC Ottaway, Austin asked for remediation of contamination. he also asked to resampling of existing wells as found high Benzene around diesel tank area. 3:11 PM:- spoke with Ron. informed him that the department requires resampling of existing monitoring well and remediate the soil contamination. he agreed for resampling of wells, but did not agreed on remediation of soil contamination. he mentioned that diesel tanks must have leaked and caused contamination, but it is localized and there is much bigger MGP waste issue. he mentioned that cleanup of diesel contamination can be achieved together with cleanup of MGP waste. he also mentioned that the subject site is part of ConEd's MGP cleanup area and the site is referred as Area 2. he will send copy of document showing the subject site as part of ConEd's MGP investigation. during conversation, Ron mentioned that Mendy Taffel has passed away and he will send contact info of his son who is handling the site now. 3:29 PM:- spoke with Richard Dana, new project manager of MGP site in Albany. he mentioned that ConEd has recently started working in this area. he will talk to DEC Ottaway, previous project manager and review availabe document. asked him to send contact details of project manager at ConEd. Richard Dana NYS DEC Ph. (518) 402-9662 4:51 PM:- received message from DEC Dana. he could not find coned's report for 2007 data and was looking for a copy, if available. 04/05/12-Hiralkumar Patel. 6:52 AM:- received email from Ron. he requested a written requirement for groundwater re-sampling. he also sent contact info of owner-in-charge. Barry Haskell **property owner's representative** Semantic Realty LLC. 362 Kingsland Avenue Brooklyn, NY 11222 Ph. (718) 391-5300 email: barry@mendonleasing.com 5:02 PM:- received email from DEC Dana. he reviewed available data (for the subject site) and concluded that there is no overlap in depths, where petroleum contamination (shallow) and MGP contamination (deep), are identified. 04/16/12-Hiralkumar Patel. 4:39 PM:- sent email to Ron. informed him that the department requires re-sampling of existing monitoring wells. asked him to submit schedule for well sampling. also asked him to submit document confirming that the subject site is part of ConEd's MGP clenaup area. email copied to Mr. Haskell. 04/17/12-Hiralkumar Patel. received email from Ron (at 7:49 PM on 04/16/12). he asked for a letter for re-sampling of existing wells. he will send coned's report regarding the subject site. 04/23/12-Hiralkumar Patel. 1:58 PM:- sent letter to Mr. Haskell requiring analysis (via 8260) of groundwater samples from the existing monitoring wells MW1 through MW6. asked him to submit report by 05/31/12. letter emailed to Ms. Haskell and Ron. 04/24/12-Hiralkumar Patel. received email from Ron (at 9:00 PM on 04/23/12) including report summary and map prepared by TRC as part of MGP investigation for ConEd. report mentioned that the subject site is included in Area 2 of the MGP investigation. reviewed submitted map with soil sample analyticals. one boring SB-14 and two wells MW-12A and MW-12B were installed on lot 20. minor SVOC contamination detected in soil from 4-5 ft depth in boring SB-14 and only 110 ppb Benzene detected in soil sample from 25-27 ft depth in boring SB-12. Ron suggested to include off-site wells MW-7A and MW-224 also. due to access issue with on-site tenant, he requested to extend time (to 06/30/12 instead of 05/31/12) for submission of groundwater sampling report. 05/02/12-Hiralkumar Patel. 1:50 PM:- sent email to Ron.

515 W 18 ST (Continued) **S104502660**

approved his request to submit report by 06/30/12. email copied to Mr. Haskell and Amy Edwards (Amy.Edwards@hklaw.com). 08/20/12-Hiralkumar Patel. 11:38 AM:- spoke with Ron regarding groundwater sampling report. he mentioned that report was sent in first week of July 2012. he will send copy again. 08/23/12-Hiralkumar Patel. 6:09 AM:- received email from Ron including groundwater sample results. Benzene found in groundwater samples. groundwater analyticals:
----------MW-1----MW-2----MW-3----MW-4----MW-5----MW-6----MW-224
Benzene-------49-----180-----220-----180------71------14--------20
01/11/13-Hiralkumar Patel. 12:52 PM:- left message for DEC Richard. 2:12 PM:- spoke with DEC Richard. he mentioned that as part of VCP cleanup, RP is required to do soil-vapor sampling and vapor mitigation is required based on the results. after discussion with DEC Austin, DEC Vought and DEC Dana, case closed based on following: - age of spill (spill reported in Jan. 1997) - status of on-site tanks (old tanks which failed test were removed and most recent tank has been abandoned in ground) - type of subsurface soil (clayey silt, organic) - findings of only benzene in groundwater (some other compounds but at minor levels) regardless of other BTEX compounds in soil above water table and - requirement of soil-vapor sampling as part of VCP project (V00530) 2:30 PM:- sent spill closure letter to Ms. Haskell. letter emailed to Mr. Haskell and Ron."

Remarks: "THE CALLERS COMPANY WAS HIRED TO REPLACE 2 1500 GALLON TANKS WITH 1 4000 GALLON TANK AND THEY DISCOVERED CONTAMINATED SOIL AROUND THE AREA OF THE TANKS - SOIL IS BEING EXCAVATED"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"10/25/21-Hiralkumar Patel. received updated emis report from ConEd. product sample analysis indicates the presence of substance similar to a lubricating oil. EMIS 282613 2/15/22 - Kim - On 10/22/21, Con Ed was working on Feeder 13M54, and discovered 1gal of unknown oil on the floor of Con Ed manhole MH-43089 that leaked in from a duct. Con Ed Lab Oil ID and analysis results (Con Ed approval date: 10/23/21) indicated the presence of a substance similar to a lubricating oil containing 2.00ppm PCB. On 10/26/21, Con Ed vendor Clean Harbors crew cleaned up the unknown oil in manhole MH-43089. Clean Harbors double-washed and rinsed the structure with the Safe Wash Technologies Solution. Clean Harbors used a Vactor to remove all wash water and debris. The waste was transported to Clean Earth of North Jersey for disposal. Con Ed inspected the structure after and found no visible oil or leaks. See document files for further information Spill closed end"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/6/04 tipple updating// I received a call from the hotline at

APARTMENT (Continued) **S106719372**

10PM on 5/5/04. It was a referral from the EPA. I returned the call of the Notifier Noboru Kawabuchi who reported that he believed that he was smelling poisons which were making him ill. I spent about 15 minutes on the phone with this gentleman attempting to gather enough details to be able to refer him to the correct agency and assure him that this situation would not be dropped. An hour and 20 minutes later when I was asleep, my Nextel phone rang, I awoke to Mr. Noboru Kawabuchi yelling into the phone accusing me of poisoning him. This is not a spill// no further action necessary"

Remarks: "TENANT SMELLS WHAT HE BELIEVES ARE POISONS, WHICH ARE MAKING HIM ILL. THE SMELL HAS BEEN AROUND FOR ABOUT 3 MONTHS. HE HAS HAD AUTHORITIES AT SCENE, BUT NOTHING IS BEING DONE. PER NOTIFIER, HE FEELS THE COMPLAINANT IS SINCERE."

Tank Info:

Tank Number: 001
Tank Id: 3534
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
L09 - Piping Leak Detection - Exempt Suction Piping
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
J02 - Dispenser - Suction Dispenser
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 03/01/1960
Capacity Gallons: 3000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: DMPOKRZY

DEC Memo:	"Sangesland spoke to Jeff at Envirotrack. They've done investigation work on the site and think its coming from next door. They will submit an investigation report to Patel for review. If this is a long term case (groundwater impacts) or part of another case (next door?) it will be reassigned to remediation. 01/02/07-Hiralkumar Patel. received call from Ellis Koch (PH. 631-389-2000 Ext. 282, Cell: 516-983-7333, Fax: 631-752-3008) from Metron Development Services, consultant working for potential buyer. Verizon ownes this property and empire city subway is tenant. property is on sell and Mr. Koch wanted to know that what work requires to close this case. told Mr. Koch that department requires site plan with sampling location and sample analyticals for review prior to any comments on cleanup requirements. he will send site plan and sample analyticals once he has it. he believes that this spill was related to old spill across a street in 1997. 01/03/07-Hiralkumar Patel. received subsurface investigation report from Envirotrac. Envirtract is consultant for owner. abstract: - phase I conducted in 2005 indicated the potential for USTs associated with the former heating units at the site - GPR survey was performed, but did not indiate the presence of any anomalies that could be associated with suspect USTs - subsurface investigation was based on the findings and conclusions presented in Phase-I report - off-site spill incidents related to former gasoline station at 152 10th ave and 161 10th ave - currently property is occupied by Empire City, a construction firm - site has active 3000 gal Diesel UST located within the building's garage area - according to Empire city, UST is double-walled fiberglass tank and is protected by an interstitial monitoring system - no spills or tank test failure associated with this tank - seven soil and groundwater samples taken from site - groundwater was encountered at depths ranging from approx. 9 to 10 ft bg - soil sample collected from immediately above the groundwater interface each boring location - monitoring wells were installed to an approx. depth of 15 ft bg - liquid-phase hydrocarbons (LPH) was not encountered in any of monitoring wells. gauging event was conducted during high tide on Nov. 20, 2006 - LPH was detected at a thickness of 0.82 ft in MW-3 during low tide on Nov. 28, 2006 - groundwater flow direction was determined westerly during high tide and southwesterly during low tide - few SVOC compounds found over limit in soil sample B-1 and B-4 - heavy VOC and

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

SVOC contamiantion found in groundwater samples MW-3 and MW-7 alternate addresses: 169-183 10th ave, 500 W 21st Street, 501 W 20th Street no other spill record found. PBS#: 2-604451 for 3000 gal UST. UST registered at 177-83 10th Ave address. 01/05/07-Hiralkumar Patel. spoke with DEC Austin. he asked to find details on site background, UST on site and buildings and any spill in surrounding area. spoke with Mr. Koch. he doesn't have Phase-I report. he asked to contact Jeff at Envirotrac. spoke with Jeffrey Bohlen at Envirotrac. he will send copy of Phase-I report in mail and site map with spill cases in surrouding area in email. Owner: Verizon Contact: Jerome Kung 221 East 37th Street 6th floor NY, NY 10016 Ph. (212) 338-6754 email: jerome.kung@verizon.com Jeffrey Bohlen Envirotrac Ph. (631) 924-3001 Fax (631) 924-5001 email: jeffb@envirotrac.com received email from Mr. Bohlen with site plan including surrounding area with past spills. site plan has following spill #s in surrounding area: ******** 9614310: 161-165 10Th AVE DEC Mulqueen inspected site. observed contaminated soil excavated for disposal. found hardpan clay at bottom of excavation and as per Mulqueen, this clay layer is possible barrier against additional vertical migration. no details on groundwater samples or endpoint samples from excavation. case closed. ******** 9210231: 152 10th Ave (old getty station) DEC O'Dowd asked Getty to install monitoring wells based on tank test failure complaint. three monirtoring wells installed. groundwater showed contamination. 173 ppb MTBE (MW-1), 1200 ppb MTBE (MW-2) and 1890 ppb MTBE (MW-3) DEC Vought reviewed closure report. entire lot has excavated to depth of 15 ft. removed 8850 tons of soil. groundwater concentration decreased after soil removal. case closed on 03/10/2004. ******** 0030004: 152 10th Ave (old getty station) spill reported after gasoline odors at site and in neighbours. case still open. ******** 0012876: 510 West 21St Street #2 oil spill. project manager: Andre Obligado spill reported because oil observed in sump and found broken supply and return lines. DEC ECO Smith issued violation for not vaccuming sumps as directed by DEC. 10 wells installed at site. NAPL present in groundwater. as of June 2004, 4000 gallons of total fluids removed includieng 128 gallons of NAPL. groundwater impact due to #2 oil in MW0, MW5 and MW6. in Feb. 06 another well installed based on soil contamiantion and found 1 ft of product. case still open. ******** 0010394: 511 West 21St Street Gasoline spill. project manager: Andre Obligado spill reported due to leaking product line. corrosion in fill line at fill port. Fenley & Nicol did soil investigatio and found soil contaminated. high contamination at SP3 with 93000 ppb MTBE and 2242 ppb benzene. did groundwater delineation. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethlybenzene, ~23500 total xylenes, 321,467 MTBE. case still open. ******** discussed with DEC Austin. he suggested more groundwater investigation off-site which has open spills (0012876 and 0010394). spoke with DEC Andre Obligado. he mentioned that he will get latest investigation data by end of Jan. 07. he will give copy of these reports. received Phase-I report from Mr. Bohlen from Envirotrac. abstract: - Certificate of Occupancy indicates that fuel oil storage tanks were present at subject property in 1946 - groundwater is estimated to occur at depth of 10 ft bgs - Empire city subway has occupied this property since 1977. prior to 1977, the building was utilized for truck repair - 3000 gal UST was installed in 1991 - all floor drains in the building are connected to one of the oil-water

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

separator - three self contained ASTs were indentified in maintenance area less than --------- - ASTs were in good condition, with no visible rust or corrosion - seven 55-gal drums were identified in maintenanace area - concrete floor under ASTs and in vicinity of drum area was in good condition - an inspection of the southern vault indicated that it was empty. a 1000 gal fuel oil AST had been removed from the vault in 1997 and building converted to gas heat less than -------- - inspection of northern vault indicated the presence of a gas-fired boiler - from 1950 Sanborn map: existing building at the site divided into two separate halves - the southwest and southeast corners of 10th ave and w 20th st are occupied by a gasoline station - two properties to the west are utilized as auto body/collision shops - tracks for an abandoned elevated railroad line are located above the auto body shops - as per sanborn map of 1895, manufactured gas plant (MGP) was located on 11th ave between 19th and 20th streets, on 10th ave between 18th and 19th street and on 18th street, east of 10th ave less than ------ - MGP doesn't exist on 1921 sanborn map - subject site is listed on NYC DEP database for City Environmental Quality Review (little E restricted) and for Underground Gasoline Storage Tanks Testing Protocol, which indicates that prior to redevelopment the NYCDEP may require soil and/or groundwater sampling less than ------- 01/10/07-Hiralkumar Patel. received message from Jeff from Envirotrac inquiring what work required at site regarding groundwater contamination. spoke with Jeff. explained him that there are three more open cases in neighbourhood which has soil/groundwater contaminated. told Jeff that the Department is waiting for latest investigation reports from these other sites and after reviewing these reports, the Department will ask responsible parties to do more investigation along boundries to check any migration to this Verizon site. asked him to wait till then. also asked him to notify buyer about contamination and possible remediation work in future at subject site. 02/20/07-Hiralkumar Patel. spoke with DEC Andre. he got analyticals for #2 oil spill site (spill# 0012876: 510 WEST 21ST ST, Manhattan). he will send letter requiring groundwater investigation between 510 West 21st STreet and 169 10th AVe sites. Andre is waiting for analyticals for gasoline spill site (spill# 0010394: 511 WEST 21ST ST, Manhattan). 05/08/07-Hiralkumar Patel. DEC Andre still waiting for data. 06/01/07-Hiralkumar Patel. recieved call from Jeff. Jeff mentioned that property closing will be done in Nov. 2007 and buyer of property is: Scott Resnick SNR Realty LLC 1100 E 59th Street New York, NY 10022 Ph. (212) 421-1960 10/31/07-Hiralkumar Patel. spoke with Mr. Kung at Verizon. he will check who really ownes this land. explained Mr. Kung that the department requires groundwater investigation as found contaminated groundwater in two wells. asked him for site specific groundwater flow direction at site. Mr. Kung will call back. spoke with DEC Andre. he mentioned that property at 510 W 21st street, which has #2 oil spill and contaminated groundwater, installed well on eastern side and found no product. also property at 511 W 21st street, where gasoline spill reported, found groundwater flowing in west direction (away from subject site at 169 10th ave). they also did tidal survey and found no change in groundwater flow direction. summary: - no product/contamination found in groundwater from well on eastern side of property at 510 w 21st street, which is close to well # 3 on subject site where found high naphthalene - groundwater at 511 w 21st street is flowing in west direction, away from well # 7 on subject site where found high MTBE

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

11/06/07-Hiralkumar Patel. received call from Jeff from Envirotrac. as per Jeff, Verizon still ownes the site, but will be out by end of Nov. 2007. explained to Jeff that the department requires site specific groundwater flow direction and complete groundwater delineation with off-site wells to confirm any contamination coming from off-site, if any. site specific groundwater direction was determined earlier and data showing that groundwater was flowing in two different directions. asked Jeff to survey existing wells again to confirm groundwater flow or variation in flow direction. and based on confirmed groundwater flow direction, need upgradient well to see any off-site contamination. 11/27/07-Hiralkumar Patel. spoke with Jeff at Envirotrac. he mentioned that there is new manager at verizon for the site. Empire City Subway Company Ltd. (subsidiary of Verizon) 199 Fulton Avenue 4th Floor Hampstead, NY 11550 Contact: John Quatrale Ph. (516) 292-8166 (O) (917) 846-4423 (C) email: john.n.quatrale@verizon.com from Dept. of State record, owner's address: Chairman or Chief Executive officer: Empire City Subway Company Limited W. Rober Mudge One Verizon Way, 4th Floor, Room # E204 Basking Ridge, NJ 07920 Principal Executive Office Empire City Subway Company Limited 140 West Street, Room # 1900 New York, NY 10007 sent letter to Mr. Quatrale requiring complete groundwater delineation (including upgradient well around previous well locations MW-3 and MW-7) and tidal survey at site. letter emailed to Mr. Quatrale and Jeff at Envirotrac. received call from Mr. Quatrale. Verizon has sold property and will be out of site in couple of weeks. Mr. Quatrale hesitate to install any further wells based on soil data and confirmed contamination in neighbouring properties. asked Mr. Quatrale to perform required work as stated in letter before pointing any site as source. also asked Mr. Quatrale to submit site map with all exisiting wells on sidewalk near site, towards area which looks like source of existing contamination. also asked to submit new owner's information. Mr. Quatrale also asked for letter to DOT requesting permit to remove diesel tank from site. spoke with DEC Austin regarding letter to DOT. Austin mentioned that as there is no soil or groundwater contamination where diesel tank is, no letter should be issued. sent email to Mr. Quatrale with this information. 12/26/07-Hiralkumar Patel. received call from Mr. Quatrale. they sold property and are out of site. as per sale agreement, new owner is taking responsibility of further work. asked Mr. Quatrale to provide new owner's information and confirmation letter from new owner regarding responsibility of investigation. Mr. Quatrale will call back after Jan. 2, 2008. 01/11/08-Hiralkumar Patel. received tank closure report from Envirotrac. abstrac: - removed one 3000 gal diesel UST, one diesel dispenser, one remote fill and associated subsurface piping - groundwater was encountered within the excavation at an approx. depth of 8 ft bg less than ------- - no holes or cracks were observed in tank or product piping - five endpoint samples collected - no contamination found in endpoint samples sent email to Mr. Quatrale requiring submission of groundwater investigation report (as per letter dated Nov. 27, 2007) also asked for confirmation letter from new owner regarding responsiblity of further investigation and any remediation. 01/14/08-Hiralkumar Patel. received email from Mr. Quatrale. as per Mr. Quatrale, Verizon Environmental management will do additional soil/groundwater investigation and currently working with new owner to get access for such investigation. new property owner is: Scott Resnick HLC Development Holdings, LLC. 375 Park Avenue, Suite 2703 New York, NY

10152 Ph. (212) 421-1960 FAx (212) 421-3095 email: SResnick@srcapitalnyc.com left message for Mr. Resnick. 01/17/08-Hiralkumar Patel. sent copy of letter, that was sent on 11/27/07 to old owner, to new owner. 03/25/08-Hiralkumar Patel. sent email to Mr. Quatrale and Mr. Resnick to submit updates. received email from Mr. Quatrale. they finished work and will submit report in two weeks. 04/08/08-Hiralkumar Patel. received investigation report from Jeff. abstract: - during UST removal, two newly-installed apparent monitoring wells were discovered in the sidewalks to the north and south of the site along west 20th and west 21st streets - the apparent monitoring well identified in the sidewalk of west 20th street was observed to include a manhole cover that resembles a fill port for a tank (but its not a fill port, but a well) less than --------- - installed twenty additional soil borings (B-8 through B-27) - installed tweleve additiona wells (MW-8 through MW-19) - groundwater was encountered at depths ranging from approx. 9 to 10 ft bg - soil sample collected from immeidately above the groundwater interface from the soil borings less than -------- - monitoring wells were installed to an approx. depth of 15 ft bg - groundwater flow direction was calculated to be to the west - analytical results revealed that the liquid phase hydrocarbons (LPH) samples from both MW-12 and MW-17 appear to be of an extremely weathered middle distillate, either diesel fuel or fuel oil. based on analytical report, the age of the LPH collected at MW-12 is estimated to be at least 18+/-2 years and the age of the LPH from MW-17 is estimated to be at least 19+/-2 years less than ---------- - groundwater samples were not collected at wells confirmed to contain LPH - only one soil sample found contaminated; B-19 where found 13,000 ppb Naphthalene - found free product in following wells ----------MW-3-----MW-9------MW-11-----MW-12-----MW-13-----MW-17----MW-18 product thickness------0.05-----0.01------0.47------1.02------0.01------0.03-----0.15 (in ft on 02/15/08) discussed with DEC Austin. he mentioned that as upgradient and downgradient wells are clean, there could be another source on the site. asked to review well logs to make sure proper depth of screen in each well. as per Phase I, site had three ASTs. sent email to Jeff to submit scaled site map with location of all tanks (including ASTs). reviewed tank closure report again. found that groundwater was encountered in tank excavation pit at 8 ft depth. and as per tank closure report, Envirotrac took five endpoint soil samples, but no groundwater sample was taken. no sample taken along underground lines and at remote fill port and dispenser island. from latest subsurface investigation report, found that wells MW-11 and MW-12 have highest thickness of product and both are located in middle of site. and there are no wells between previous diesel tank location and locations of MW-11 and MW-12. spoke with Jeff at Envirotrac. asked him about depht of previous tank invert. Jeff mentioned that tank was installed inside concrete box and groundwater was found right under concretre box. asked Jeff to submit depth of tank invert, excavation and endpoint samples. also asked him location of lines to/from tank. Jeff believes that lines were installed in two layers of concrete, but will confirm that. left message for Mr. Resnick to find future use of property. received call from Mr. Resnick. they are planning to redevelop this entire site. there will be hotel/residential building at site with 7 story above grade and about 1 or 2 levels below grade and as part of redevelopment they will excavate entire site below water table. sent

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

letter to Mr. Resnick and Mr. Quatrale requiring implementation of interim remedial measures (to remove product from wells) and soil/groundwater delineation via installation of monitoring well at previous diesel UST location. also asked to submit RAP including CAMP, endpoint samples, sampling of dewatering discharge (if occurs) and installation of vapor barrier and possible SSDS. letter emailed to Mr. Quatrale, Mr. Resnick and Jeff. 05/07/08-Hiralkumar Patel. received letter from Mr. Quatrale. as Verizon sold the property and as per sales agreement, new owner HLC development will do required remediation. 05/08/08-Hiralkumar Patel. received call from Frank from Roux associates. Frank requested deadline extension as current property owner just got possession. Frank is currently reviewing previous reports and will submit cost estmiates for future work. Frank is planning to start work by June 25th, 2008. asked Frank to call back by end of May, 2008 with updates about further work and based on that the department may approve their request. but asked Frank to gauge and recover any free product from wells, immediately. Frank Cherena Roux Associates Ph. (631) 232-2600 email: fcherena@rouxinc.com 05/09/08-Hiralkumar Patel. received email from Frank confirming above conversation. 05/22/08-Hiralkumar Patel. received call from Frank. they will install wells next week and will start gauging and recovery of any product from these wells. 07/10/08-Hiralkumar Patel. spoke with Frank at Roux. they are currently gauging and recovering product from one inch wells. still waiting for approval to install monitoring wells. asked Frank to submit report for work done till date with proposed well location map. left message for Mr. Resnick (new owner). 07/11/08-Hiralkumar Patel. left message for Mr. Resnick to submit work plan for well installation by end of 07/18/08. received call from Frank from Roux. he will submit gauging and product recovery result by end of 07/18/08 and will submit work plan for well installation by 07/31/08. approved his request. 07/23/08-Hiralkumar Patel. received monitoring well gauging report. abstract: - four weekly monitoring and product recovery events were completed from 06/19/08 to 07/15/08 - groundwater was observed to flow towards the Hudson river in a west-northwesterly direction - separate-phase petroleum product was observed in five of the 21 wells - appor. 0.50-0.75 gal of separate-phase petroleum product was removed during monitoring period - will submit work plan for installation of wells downgradient from previous tank location well monitoring results (depth of product in ft):

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

09/18/08-Hiralkumar Patel. spoke with Matt at Tyree. he has submitted proposal but haven't heard yet. left message for Mr. Resnick. 09/19/08-Hiralkumar Patel. left message for Mr. Resnick. received message from Mr. Resnick's office. lady mentioned that Mr. Resnick doesn't own this property and asked to contact Mr. Neuringer. spoke with Mr. Neuringer. he mentioned that they are currently in planning phase and will not excavate site for at least six months. asked Mr. Neuringer to submit owner's contact info and consultant's contact info. Mr. Neuringer mentioned that they have copies of all previous reports and corrensponddence from the department and they are working on installation of additional wells. Mr. Neuringer asked to contact Tony Leichter, project manager in his office who will be point of contact. HLC Development LLC **current property owner** c/o CB Developers 565 5th Avenue New York, NY 10017 contact: Anthony Leichter **project manager and contact person** Ph. (212) 697-8601 x 225 (914) 659-1989 (C) email: wooster42@aol.com Shane Neuringer VP, Aquisitions & Development CB Developers 161 Chrystie Street, 2nd Floor New York, NY 10002 PH. (212) 505-5270 Fax (212) 260-7033 email: shane@cbdevelopers.com discussed with DEC Austin and DEC Urda. they both agreed to send STIP to all three parties: Verizon, HLC Development Holdings LLC. and HLC Development LLC. DEC Urda asked to send STIP letter to all three address of Empire city subway (verizon): Hampstead, Basking Ridge and Manhattan. 09/24/08-Hiralkumar Patel. ACRIS record shows that property was sold to HLC Development LLC only and there is no record of HLC Development Holdings LLC. spoke with Mr. Neuringer regarding property ownership. Mr. Neuringer mentioned that property transaction was between Empire city subway and HLC development LLC, but HLC Development HOlding LLC was partner in new ownership and then HLC Development Holdings sold their part to main company that is HLC Development LLC. 09/29/08-Hiralkumar Patel. from NYC DOB record found that site is little E restricted for hazmat/noise. multiple addresses: 169-175 10 Ave, 177-183 10 Ave, 500 W 21 St, 501 W 20 St sent email to Daniel Cole (Ph.: 718-595-4536, email: DanielCo@dep.nyc.gov) requesting project manager's information regarding this e site. spoke with Mr. Leichter at CB developers. he mentioned that currently site has vacant building and they are planning to build a hotel. 10/01/08-Hiralkumar Patel. spoke with Mr. Cole at DEP. he hasn't found any record yet. sent letter with STIP to Mr. Quatrale at Verizon, Mr. Resnick and Mr. Neuringer requiring further soil/groundwater delineation and submission of RAP according to previous letter dated 04/10/08. sent copy of previous letter with the STIP letter. letter emailed to Mr. Quatrale, Mr. Resnick, Mr. Neuringer and Mr. Cole. 10/06/08-Hiralkumar Patel. received call from Matt from Tyree. they have been hired by current property owner. Matt will submit site map with proposed well location and RAP based on groundwater investigation report. Matt Boeckel Tyree Ph. (508) 922-9044 (C) (631) 249-3150 Ext. 241 email: mboeckel@tyreeorg.com 10/09/08-Hiralkumar Patel. received signed STIP from HLC Development LLC. signed STIP forwarded to regional director for execution. 10/10/08-Hiralkumar Patel. received fully executed STIP from regional director. sent copy (mail and email) of final STIP to Mr. Neuringer. 10/17/08-Hiralkumar Patel. received message from Matt from Tyree. they are planning to install wells next week. 10/21/08-Hiralkumar Patel. left message for Matt to send site map with proposed well locations, before any drilling. 11/06/08-Hiralkumar Patel. received fax from Matt with proposed well locations. Matt proposed to install

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

four more wells: two wells between previous diesel tank and MW-12, one on northeast side of MW-12 and one southwest side of MW-18 along property boundry. left message for Matt. asked him to install one well at previous tank location itself. 11/14/08-Hiralkumar Patel. received message from Matt. left message for Matt. received call from Matt. he mentioned that due to presence of art gallary people inside building, they can't pump out product until first week of Dec. discussed with DEC Austin and he mentioned that the department can't wait such long as free product in well. spoke to Matt. and asked him to pump out product as per required schedule. he will send crew on monday 11/17/08. also asked to submit revised site map with proposed well locations. 11/25/08-Hiralkumar Patel. left message for Matt. left message for Mr. Neuringer. recived call from Matt. they are pumping out product from wells via small pump and will use vacuum truck next week. will send revised site map with proposed well locations and wells will be installed in second or third week of DEc. 08. receivec call from Mr. Neuringer and Mr. Leichter. they confirmed that revised map will be submitted today/tomorrow and will start well installation in next month. 11/26/08-Hiralkumar Patel. received revised site plan with proposed well locations. sent email to Matt, Mr. Neuringer and Mr. Leichter approving proposed well locations and asked Matt to notify a week before drilling. 12/05/08-Hiralkumar Patel. left message for Matt regarding well installation dates. 12/12/08-Hiralkumar Patel. left message for Matt regarding well installation dates. 01/16/09-Hiralkumar Patel. received weekly monitoring report from Tyree. increased product thickness was observed in all wells during monitoring on 11/21/08 and then product thickness reduced. no monitoring and product recovery happened from 07/15/08 to 11/21/08. found product in wells MW-09 and MW-14 where no product was found before 07/15/2008. will do weekly monitoring and product removal and will sample all wells by end of this month (quarterly sampling). Matt mentioned that they are waiting for third bid for well installation and will install well soon once contractor decided. he asked whether 2 inch wells acceptable. sent email to Matt requiring installation of 4 inch wells (as suspecting free product based on product in other wells). received email from Matt. due to space restriction in one of the proposed well location, inside office area, Matt asked if 2 inch well accpeted in one location. sent email to Matt approving installation of one 2 inch well and asked to put remaining 4 inch wells. 02/03/09-Hiralkumar Patel. received well monitoring/product removal report. product thickness increase during well gauging on 01/09/09. total of approx. 471 gal of product and contaminated water was removed in Jan. 2009. 02/04/09-Hiralkumar Patel. left message for Matt inquiring work schedule for required wells installation. spoke with Mr. Leichter regarding well installation work schedule. will call back. 02/23/08-Hiralkumar Patel. left message for Matt. spoke with Mr. Leichter regarding well installation. he will call back by tomorrow. received message from Matt. they installed wells on 02/11/09 and collected groundwater samples from all wells. will submit groundwater sampling report once data available from lab. 03/03/09-Hiralkumar Patel. received email from Matt with well monitoring/gauging report for Feb. 2009. depth to water at the site ranged from 7 to 10 ft bg. product thickness ranged from 0.01 to 1.07 ft. total of approx. 520 gal of product and contaminated water removed in Feb. 2009. 03/19/09-Hiralkumar Patel. received email from Matt. will submit report by 03/27/09. 04/02/09-Hiralkumar Patel. received monthly groundwater monitoring

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

and product recovery report for month of March. product thickness during the monitoring period ranged from 0.02 ft to 1.01 ft. total of approx. 483 gal of product and contaminated groundwater removed. 04/08/09-Hiralkumar Patel. received monitoring well installation report. abstract: - original scope of work was to install 4 monitoring wells. total of two wells (MW-20 and MW-21) were installed. total of six additional attempts were made to install two wells in the approved locations however due to refusal the wells could not be installed - two soil samples were collected (at 5-10 ft and 10-15 ft bg) from each well borings for analysis - groundwater was encountered at approx. 9 ft bg less than --------- - well screen installed from 5 ft to 12.5 ft depth - no PID readings noticed during well installation - no VOC contamination found in soil samples - high SVOC contamination found in soil samples below 5 ft depth - no groundwater samples collected at this time, samples wil be collected separately received quarterly monitoring report. abstract: - groundwater samples collected from total of 23 wells (21 installed by owner and two previously installed unknown wells) - found high naphthalene in samples from wells MW-3 (135 ppb), MW-8 (821 ppb), MW-12 (436 ppb), MW-13 (848 ppb) and MW-14 (1,180 ppb) - found MTBE in wells MW-13 (103 ppb) and MW-14 (240 ppb) - found minor contamination of other VOCs in wells - recommends to continue weekly monitoring and EFR events and samples on a quarterlly basis 04/09/09-Hiralkumar Patel. discussed with DEC Austin. he asked for tidal survey, confirmation of groundwater flow direction and off-site groundwater investigation towards west of the property. 04/10/09-Hiralkumar Patel. visited site. saw tyree crew on-site pumping product out from seven wells which had product. visited adjacent site on west side (downgradient). there is a building material supply business on adjacent property at 507-509 W 20th Street (alternate address: 506-508 W 21 St) which is downgradient from the subject spill site. met with Cesar Chavez at Kamco supply corp. at 507 W 20th street. informed him about spill next door and possible soil/groundwater investigation inside building. he agreed to allow consultant to perform required investigation work. spoke with Alan Swerdlick, business owner. he asked to contact Ray Barter in his office to get property owner’s info. left message for Mr. Barter. Kamco Supply Corp. **business at 507 W 20th street** Alan Swerdlick **business owner** 80 21st Street Brooklyn, NY 11232 contact: Ray Barter **vice president of financial matters at Kamco** Ph. (718) 768-1234 Fax (718) 788-8607 email: rbarter@kamco.com Cesar Chavez **business manager at Kamco** Ph. (212) 736-7350 Fax (212) 564-6436 email: cchavez@kamco.com spoke with Mr. Azani, property owner of 507 W 20th street and informed him about current situation and future investigation work on his property. Liron Realty Inc. **property owner of 507 W 20th street** 2025 Broadway, # 28B New York, NY 10023-5017 contact: Shalom Azani Ph. (917) 498-2773 (C) Fax (212) 496-1846 sent letter to Mr. Neuringer requiring off-site soil/gw investigation at 507 W 20th street & tidal survey of all wells. letter emailed to Mr. Neuringer, Matt, Mr. Barter and Mr. Quatrale. letter faxed to Mr. Azani. 04/10/09-Hiralkumar Patel. received message from Matt. 04/15/09-Hiralkumar Patel. left message for Matt. 04/16/09-Hiralkumar Patel. received call from Matt. he will contact owner/tenant at 507 W 20th street and will visit the site. he also mentioned about tidal survey. he believes that tidal survey will not help in this case and he suggest not to do so. asked him to visit neighbour’s site and to submit proposed well location map and

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

explanation for not doing tidal survey. 04/24/09-Hiralkumar Patel. received email from Matt requesting to extend deadline for report submissiong. 04/29/09-Hiralkumar Patel. spoke with Matt. he is going to site tomorrow morning and then will submit work plan with proposed well location on adjacent property. he is expecting to submit report by end of May 2009. approved his request to extend deadline. 05/05/09-Hiralkumar Patel. received monthly report from Matt. product thickness during monitoring period ranged from 0.02 ft to 1.10 ft. 05/12/09-Hiralkumar Patel. received email from Matt. he asked for approval to install 2-inch diameter wells for off-site investigation. 05/14/09-Hiralkumar Patel. sent email to Matt requiring to install 4-inch diameter wells (not 2-inch) which can be used in future. 06/04/09-Hiralkumar Patel. 11:30 AM:- received email from Matt with monthly status report for May 2009. product thickness ranged from 0.01 ft to 0.92 ft. total of approx. 500 gal of product and contaminated groundwater was removed in May 2009. about 0.5 ft of product re-appeared in well MW-11. no product was measured in well MW-11 since 02/26/09. 06/25/09-Hiralkumar Patel. 3:12 PM:- received quarterly monitoring report. abstract: - groundwater samples collected from total of 23 wells (21 installed by owner and two previously installed unknown wells) - found minor contamination in wells - recommends to continue weekly monitoring and EFR events and samples on a quarterlly basis 07/06/09-Hiralkumar Patel. 11:13 AM:- received call from Mr. Neuringer. he got proposals for off-site well installation and will start soon. he will ask Matt to call back with work schedule. 07/06/09-Hiralkumar Patel. 3:19 PM:-received email from Matt with monthly status report for June 2009. product thickness ranged from 0.02 ft to 1.17 ft. total of approx. 428 gal of product and contaminated groundwater was removed in June 2009. four wells are proposed to be installed along the adjacent down-gradient property in July 2009. 07/15/09-Hiralkumar Patel. 4:46 PM:- received email from Matt. offsite wells will be installed on 07/30/09-07/31/09. 08/06/09-Hiralkumar Patel. 4:19 PM:- received monthly monitoring report from Matt. product thickness ranged from 0.00 ft to 1.24 ft. total of approx. 362 gal of product and contaminated groundwater was removed in July 2009. 09/02/09-Hiralkumar Patel. 4:31 PM:- received off-site monitoring well installation report. abstract: - three monitoring wells (MW-22, MW-23 and MW-24) were installed - wells were set at 13 ft bg - soil samples were collected in continour 5 ft intervals starting at ground surface to a depth of 10 ft bg - soil samples collected at 5 to 10 ft bg from each well location were submitted for analysis - groundwater was found at about 8 ft bg - no contamination found in soil samples - will submit groundwater sampling report separately 09/03/09-Hiralkumar Patel. 12:10 PM:- received monthly status report for Aug. 2009. product thickness ranged from 0.00 ft to 1.19 ft. total of approx. 493 gal of product and contaminated groundwater was removed in Aug. 2009. 09/16/09-Hiralkumar Patel. 12:20 PM:- received quarterly groundwater sampling report. found free product in wells MW-3, MW-9, MW-11, MW-12, MW-13, MW-14 and MW-18. product thickness ranged from non-detectable to 1.19 ft. total of 26 wells sampled (including 3 recently installed wells on adjacent downgradient property). next quarterly well sampling will happen in Nov. 2009. very minor dissolved contamination found in few wells. 09/23/09-Hiralkumar Patel. 2:28 PM:- spoke with Matt regarding any product found in off-site wells as no data in recently submitted quarterly sampling report. Matt mentioned that no product was found earlier, but product

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

found in off-site wells in month of September 2009. will submit monthly report in Oct. 2009. 10/01/09-Hiralkumar Patel. 10:36 AM:- received monthly status report for Sept. 2009. product thickness ranged from 0.00 ft to 0.75 ft. total of approx. 546 gal of product and contaminated groundwater was removed in Sept. 2009. product re-appeared in well MW-9 (last seen on 05/29/09). found 0.48 to 0.66 ft product in off-site well MW-24. 10/06/09-Hiralkumar Patel. discussed with DEC Austin and DEC Vadim. based on available information, case transferred to DEC Vadim. 11:19 AM:- sent email to Matt and informed about case transfer. summary: - one 3000 gal diesel tank was located in garage area, no contamination found in endpoint soil samples after removal of the tank - no spills or tank test failure associated with diesel tank - groundwater at 8-9 ft bg - according to subsurface investigation, conducted in Dec. 2006, gw flow direction was determined westerly during high tide and southwesterly during low tide - according to phase I, three self contained ASTs were identified in maintenance area, a 1000 gal fuel oil AST had been removed from the southern vault in 1997 - auto body shops located on west side of property (downgradient from the site) - elevated abandoned railroad is located adjacent to western property boundary, above auto body shops - as per sanborn map of 1895, manufactured gas plant (MGP) was located on 11th ave between 19th and 20th streets, on 10th ave between 18th and 19th street and on 18th street, east of 10th ave less than ------ - according to Additonal subsurface investigation report, from March 2008: analytical results for product samples from MW-12 and MW-17 shows that product appears to be of an extremely weathered middle distillate, eigher diesel fue or fuel oil. based on analyticals result, age of the LPH at MW-12 is estimated to be at least 18+/-2 years and age of LPH from MW-17 is estimated to be at least 19+/-2 years less than --------- (this could be from previous heating oil tanks on property) - fill material and medium to fine grained sand found in all borings/wells to depth of 15 ft - owner is planning to develope this site as hotel/residential complex - found free product in off-site well, downgradient from the site - e-designated site less than -------- 11/03/2009: This spill case was transferred to A. Doronova. - AD 01/11/2010: Received a Quarterly Monitoring report for the period of September - November 2009. Will review. AD 02/02/2010: Reviewed the report. It states that there 26 GW monitoring wells. During the monitoing period free product was detected in 10 wells: MW-3, MW-7, MW-9, MW-11, MW-12, MW-13, MW-14, MW-18, MW-23 and MW-24. The product thickness ranged from non-detectable to 1.19 ft. The free product is removed on a weekly basis using VEFR. Since November 2008 a total of 5,939 gallons of free product/GW mixture have been removed from the site. Total of 26 wells sampled. Total VOCs ranged from ND to 571ppb (MW-13) and total SVOCs ranged from ND to 2,298ppb (MW-13). Product absorbent socks will be placed into wells containing free product. Weekly EFR events and quarterly GW monitoring will continue at the site. GW contour map is abcent. To request wells survey. AD 02/04/2010: Received a Summary Monitoring report for January 2010. Will review. AD 03/08/2010: Reviewed the summary report. It states that there 26 GW monitoring wells. The work completed included monitoring of the wells for depth to water and product (if present). Recovery of a free product was performed using VEFR. During the monitoing period free product was detected in 7 wells: MW-3 (0.03'), MW-7 (0.01'), MW-9, MW-12(0.37'), MW-13 (0.04'), MW-14(0.21'), MW-18(0.43'), and MW-24(0.12'). The product thickness ranged from non-detectable to

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

0.43 ft. The free product is removed on a weekly basis using VEFR. Since November 2008 a total of 6,381 gallons of free product/GW mixture have been removed from the site. Product absorbent socks have been placed into wells containing free product. Weekly EFR events and quarterly GW monitoring will continue at the site. AD 03/10/2010: Received a Quarterly Monitoring report for the period of December 2009 through February 2010. Will review. AD 03/30/2010: Reviewed the quarterly monitoring report prepared by Tyree. It states that during the monitoring period 9 wells out of 26 contained free product: MW-3, MW-7, MW-9, MW-11, MW-12, MW-13, MW-14, MW-18 and MW-24. The product thickness ranged from ND to 1.19 ft. The work completed included monitoring of the wells for depth to water and product (if present) and sampling of the wells. Recovery of a free product was performed using weekly VEFR. Since November 2008 a total of 6,791 gallons of free product/GW mixture have been removed from the site. 24 GW wells were sampled for VOCs and SVOCs. Total VOCs ranged from ND to 832ppb (MW-12); and SVOCs ranged from ND to 1,312ppb (MW-13). Weekly EFR events and quarterly GW monitoring will continue at the site. AD 04/01/2010: Received a Summary Monitoring report for March 2010. Will review. AD 04/21/2010: Reviewed the summary report. It states that work completed included monitoring of the wells for depth to water and product (if present). Recovery of a free product was performed using VEFR. During the monitoing period in the beginning of March, free product was detected in 5 wells: MW-3 (0.03'), MW-12(0.82'), MW-13 (0.29'), MW-14(1.59') and MW-18(0.21'). The product thickness ranged from 0.01' to 1.59 ft. In the end of March - free product was detected in three wells: MW-11 (0.49'), MW-12 (0.32') and MW-18 (0.50'). The free product is removed on a weekly basis using VEFR. A total of 586 gallons of free product/GW mixture have been removed from the site during March 2010. Product absorbent socks have been placed into wells MW-23 and MW-24. Weekly EFR events and quarterly GW monitoring will continue at the site. AD 05/06/2010: Received a Summary Monitoring report for April 2010. Will review. AD 05/12/2010: Reviewed the summary report. It states that there are 26 GW monitoring wells at the site. The work completed included monitoring of the wells for depth to water and product (if present). Recovery of a free product was performed using VEFR. During the monitoing period in the beginning of April, free product was detected in 3 wells: MW-11(0.63'), MW-12 (0.92') and MW-18(0.68'). In the end of April - free product was detected in 2 wells: MW-11 (0.70'), and MW-18(0.86'). Well MW-12 was not sampled in the end of April. The free product is removed on a weekly basis using VEFR. A total of 548 gallons of free product/GW mixture have been removed from the site during April 2010. Product absorbent socks have been placed into wells MW-23 and MW-24. Weekly EFR events and quarterly GW monitoring will continue at the site. AD Received a phone call from Mr. Eric Telemaque of Etex Corp. (212)631-9000. His company is a new consultant for the site. He asked for latest reports from Tyree. Told him to submit FOIL request to DEC. AD 06/01/2010: Received a Summary Monitoring report for May 2010. Will review. AD 09/2010: Reviewed the summary report. The work completed included monitoring of the wells for depth to water and product (if present). Recovery of a free product was performed using VEFR. During the monitoring period on May 14, 2010, free product was detected in 2 wells: MW-11(0.38') and MW-18(0.50'). A total of 97 gallons of free product/GW mixture have been removed from the site during May 2010. Product absorbent socks have been placed into wells MW-23 and MW-24. Weekly EFR events and

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

quarterly GW monitoring will continue at the site. AD 09/14/2011: Called and left a message to Mr. Boeckel of Tyree. AD 09/15/2011: Called and left a message to Mr. Eric Telemaque of EMTEQUE Corp. (212)631-9000. AD 09/16/2011: Called and left a message to Mr. Resnick of HLC Development LLC (site owner). AD 09/20/2011: Received a message from Mr. Resnick of HLC Developments LLC. This site is no longer owned by HLC DEvelopment. The new owner of the site is: Sherwood Equities, contact phone number - 212-980-8000. Called to Sherwood Equities and spoke with Paul Callan (212-515-1414). He said that remediation continue at the site and that Mr. Mitch Soloman (vice-president of construction of Sherwood Equities) will get back to me with info on consulting company performing the remediation. Later received a call from Mr. Soloman. He said that Sherwood Equities plan to do some re-development project at the site and will excavate contaminated soils during this re-development. Asked him about approximate start date of the construction. He told me that it will probably beging in a year. Explained to Mr. Soloman that the site should be monitored during this waiting period, because it has history of a free product and already has not been not monitored for a year. Mr. Soloman said that thay have consultant company which oversees demolition and asbestos cleanup at their properties (EMTEQUE Corp. - Mr. Eric Telemaque). Mr. Telemaque will contact DEC. AD 09/23/2011: Received a phone call from Mr. Telemaque. Discussed with him the next course of actions for the site. He proposed monthly EFR events untill disappearance of the free product, after that start groundwater sampling. Requested him to submit this proposal for review and approval. AD 11/01/2011: Did not received the proposal. Called and spoke with Mr. Telemaque of EMTEQUE. He told me that he sent an e-mail to me on September 27, 2011. Informed him that e-mail was not received. It was clarified that Mr. Telemaque used wrong e-address. He re-sent that e-mail to the correct address and it says: From: Eric Telemaque [mailto:eric@emteque.com] Sent: Tuesday, September 27, 2011 8:35 AM To: 'axdoronova@gw.dec.state.ny.us' Subject: 169 10th Avenue - Spill 06-09814 Ainura, As discussed, we have been retained by the owner to advise them on the open spill for this site. They are in the process of meeting with architects and engineers for the design of the development of a new facility at this location at which time, they will undertake an aggressive program through excavation for foundation to address the spill at the site. As an interim measure, we are proposing the evacuation of free product along with some dissolved components from the existing wells on site. This work will be performed once a month and will include gauging of the wells as well. On a quarterly basis, this information shall be summarized in a report issued to NYSDEC. As long as free product continues to exist in the wells, sampling for VOCs and SVOCs will not be performed. Once free product is absent, we would develop and propose a sampling program to NYSDEC. If this meets with the NYSDEC s approval and we commence the well evacuation immediately. Please advise. Eric M. Telemaque President EMTEQUE Corporation 505 Eighth Avenue, Suite 900 New York, NY 10018-4546 212.631.9000 Office 646.529.6526 Cellular 212.631.8066 Fax eric@emteque.com www.emteque.com Will review. AD 11/02/2011: Reviewed the previous reports. Last GW sampling was performed in March of 2009. Discussed the monthly EFR proposal with J. Kolleeny of DEC. Baseline GW sampling is needed. Called and spoke with Mr. Telemaque. Requested baseline GW sampling of site perimeter wells and few site wells. He will discuss this request with the site owner. AD 12/08/2011:

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

Received a phone call from Mr. Telemaque. He informed me that they performed a GW sampling at the site, and asked for firther actions. required to prepare a summary report with recommendations for DEC review. He will submit the report shortly. AD 12/14/2011: Received an e-mail from Mr. Telemaque saying: Ainura, Please review and call to discuss at your convenience. Report is being forwarded as a draft, once final hard copy of results are received from the lab, we will resubmit. Regards, Eric M. Telemaque President Emteque LLC 505 Eighth Avenue, Suite 900 New York, NY 10018-4546 212.631.9000 Office 646.529.6526 Cellular 212.631.8066 Fax AD 02/09/2012; Reviewed the report. It states that Emteque visited the site on November 19, 2011, to gauge and sample the wells. Free product was detected in wells Mw-11 (0.66'), MW-12 (0.72') and MW-18 (0.81'). SVOCs were detected in wells: MW-11 (3,713ppb), MW-12 (4,364ppb), MW-17 (5,950ppb) and MW-18 (6,650ppb). Low levels of TVOCs were detected in wells: MW-11 (14ppb), MW-12 (111.8ppb), MW-17 (6.5ppb) and MW-18 (59.4ppb). Based on the data the consultant states that groundwater contamination has decreased in the wells in comparison with 2010 GW sampling, but that free products is still present in three wells. Emteque recommends to perform monthly product recovery and quarterly GW sampling at the site. Once free product is abcent, a more agressive approach to remediate the site will be proposed. AD Talked with Mr. Telemaque regarding site monitoring and free product recovery proposal. Approved Emteque's recommendations. Next report is due. AD 07/02/2012: Received May 2012 groundwater monitoring report from Emteque. No pdf copy was submitted to request e-copy of the report. Sent an e-mail to Mr. Telmaque of Emteque with a request to submit CD with pdf copy of the report. Later in the day received an e-mail with attached pdf copy of the report. DL the report to eDocs. Will review. AD 08/07/2012: Reviewed the report. It states that that Emteque visited the site on May 24, 2012, to gauge and sample the wells. There are a total of 26 monitoring wells at the site. Emteque gauges and samples ten selected wells. Those wells are: MW-5, MW-6, MW-11, MW-12, MW-16, MW-17, MW-18, MW-23, MW-24 and MW-Unknown North. Free product was detected in 5 wells MW-11 (1.39'), MW-12 (2.19'), MW-17 (0.68') MW-18 (1.45') and MW-24 (0.22'). Approximately 150 gallons of free product/GW mixture was recovered from the wells. After free product was removed from the wells, GW samples were collected for lab analysis. SVOCs were detected in wells: MW-11 (275ppb), MW-12 (712ppb), MW-17 (1070ppb) and MW-18 (1372ppb). Low levels of TVOCs were detected in MW-11 (11ppb), MW-12 (63ppb), MW-17 (20ppb) and MW-18 (38ppb). Emteque will continue performing monthly product recovery and quarterly GW sampling at the site. Once free product is abcent, a more agressive approach to remediate the site will be proposed. AD 10/22/2012: Sent an e-mail to Mr. Telemaque of Emteque with a requiremnt to submit a next report by November 2, 2012. later in the day received an e-mail from Mr. Telemaque saying that the report is ready and will be submitted by e-mail shortly. Around 11:00 AM I received the report via e-mail. DL it to eDocs. Took a quick look at the submitted report. Summary tables with analytical data, site plan and GW contour map are missing. Called and spoke with Jim Blaney of Emteque (cell: 609-613-2004). Requested to submit all missing data. Also mentioned that all site-related well should be sampled on next quarterly round. AD 11/14/2012: Received an e-mail from Chawla, Shaminder of OER which states that developer for this site wants to enter City Voluntary Cleanup Program. Developer has proposed remedial investigation work involving eight soil borings, 6

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

soil vapor points and monitoring 4 existing groundwater wells for full analysis. OER woud like to discuss this investigation proposal and proposed remediation through 17 feet of excavation with DEC. Sent available dates for a meeting to Paul John of DEC. AD 11/21/2012: Reviewed the report. It states that Emteque visited the site on May 24, 2012, to gauge and sample the wells. There are a total of 26 monitoring wells at the site. Emteque gauges and samples ten selected wells on August 22, 2012. Those wells are: MW-5, MW-6, MW-11, MW-12, MW-16, MW-17, MW-18, MW-23, MW-24 and MW-Unknown North. On September 28, 2018 gauging event free product was detected in 5 wells MW-12 (0.24'), MW-17 (0.96') MW-18 (0.02'), MW-23 (0.04) and MW-24 (0.21'). Approximately 420 gallons of free product/GW mixture was recovered from the wells. After free product was removed from the wells, GW samples were collected for lab analysis. SVOCs were detected in wells: MW-11 (633ppb), MW-12 (358ppb), MW-17 (27ppb) and MW-18 (104ppb). Low levels of TVOCs were detected in MW-11 (6ppb), MW-12 (26ppb), MW-23 (26ppb), MW-24 (122ppb) and MW-18 (13ppb). In general terms, both VOC and SVOC groundwater impacts appear to be attenuating over time when compared to the May 2012 data. Emteque will continue performing monthly product recovery and quarterly GW sampling at the site. Emteque s next well monitoring is scheduled for October, 2012. AD 11/26/2012: Received the following e-mail from Impact Environmental: Ms. Doronova, Attached please find a Notification of New Environmental Consultant for; NYSDEC Spill No. 06?09814 169 10th Avenue, New York NY Best Regards, Ben Hernandez Salazar Environmental Engineer IMPACT ENVIRONMENTAL welcome to solid ground& www.impactenvironmental.com There is a letter attachment, which states that Impact Env. will peform IRM and GW monitoring at the site. AD 11/30/2012: Received a phone call from Kevin Kleaka of Impact Environmental. Discussed the site conditions and further required actions for the site. Later received the following e-mail from Mr. Kleaka: Ainuna, As per our discussion today, this email shall memorialize the existing groundwater wells required for sampling by the NYSDEC for the above referenced site with respect to the 4th quarter 2012. The existing groundwater wells to be sampled and testing requirements shall be as follows: Twelve (12) existing monitoring wells: MW-5, MW-13, MW-14, MW-15, MW-16, MW-22, MW-23, MW-24, MW-19, Unknown Well-South, Unknown Well-North and Unknown Well (10th Ave). The wells will be sampled for dissolved phase contamination if they do not indicate the presence of LNAPL or free phase product. If free phase product is present, it s thickness will be reported and the groundwater will not analyzed for dissolved concentrations. The analysis of the groundwater sampled from the wells will be performed to include VOCs and SVOCs for the gasoline and fuel oil contamination compound list (Table 3 list from CP-51). In addition, monthly well gauging and product recovery will continue as previously performed. A groundwater survey will be performed to measure water table elevations and determine flow direction. Thank you, please contact me with any comments or misunderstandings. Kevin Kleaka Vice President IMPACT ENVIRONMENTAL www.impactenvironmental.com Corporate Headquarters 170 Keyland Court - Bohemia - NY - 11716 T - 631.269.8800 C - 516.805.8892 F - 631-269-1599 AD 12/20/2012: Had a conference call meeting with OER and Impact Environment regarding handling of the project by all involved parties. Scheduled tentative scope meeting on January 10, 2012. 01/10/2013: I and J. Kolleeny attended a meeting with Breanna Gribble of OER; Kevin Kleaka, Ben Hernandez, Joel Rogers of Impact

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

Environmental and Jason Roth of Sherwood Equities. DEC met with the RP s consultant and NYCOER staff to discuss the proposed remedial actions and end-point sampling requirements. On the meeting RAP preparation, reporting and other remediation related issues were discussed. It was agreed that one RAWP addressing both DEC s and OER s concerns will be prepared, rather than two separate RAWPs, and that post-remediation groundwater monitoring will be included in the RAWP. The final RAWP will be submitted to DEC soon. 01/30/2013: Received a RAP. The first page of the RAP addressed only to OER. Sent an e-mail to Ben Hernandez of Impact Env. with a request to include DEC. AD 02/07/2013: Received the revised RAP. Reviewed the RAP. The consultant proposed excavation of contaminated soil during site redevelopment. The entire site will be excavated down to 14-17 feet below grade, with dewatering. End-point soil samples will be collected and a waterproof membrane will be installed beneath the planned on-site building to prevent intrusion of any residual petroleum vapors. Remediation is scheduled to begin in March of 2013. End-point soil sampless are planned to be collected every 30 linear feet. Site plan with the proposed end-point soil sampling locations is missing. DEC is not included in the new spill, citizen complains or RAP modifications reporting. The RAP needs to be revised. AD 02/11/2013: Spoke with Ben. Required to revise the RAP to incude DEC in notifications and reporting process. Also requested to add a site map with a end-point soil sampling locations. AD 02/12/2013: Received revised work plan. The required changes were made in the RAP. Have concerns regarding depth of the bottom soil samples collected by Impact Env. in-situ. Discussed the RAP with J. Kolleeny of DEC. Will request to add three more end-point soil samples from the bottom of the excavation. AD 02/15/2013: Called and spoke with Mr. Salazar of Impact Env regarding additional soil samples. Sent the following e-mail to B. Salazar: Ben, I have reviewed the revised RAP submitted to DEC on February 11, 2013 and discussed it with my supervisor - Jonathan Kolleeny. The revisions to the RAP are accepted by DEC. We have one more requirement for the work plan. Since all soil samples from soil borings SB-1 through SB-8 were collected by Impact Env. from the 18-20' bgs interval, we would like you to collect three additional end-point soil samples from the center part of the property. If you are planning to collect them in the same manner as SB-1 and others using soil borings before start of the excavation, then soil samples from 14-17' bgs interval should be collected for analysis. Please submit site map with additional soil sampling locations for review and approval, and verify method of their collection, before submitting final RAP to the Department. Sincerely, Ainura Doronova AD 02/19/2013: Received the revised site plan with additional end-point soil sampling locations and revised RAP with addition to the text regarding collection of the soil samples from the bottom of excavation. Will review. AD 02/21/2013: Received the following e-mail from Ben: Hi Ainura, I have been going over the RAP with my supervisor and we would like to discuss the sidewall end point samples with you. Could you please give me a call at your earliest convenience to discuss? My number is 631-334-2354. Thanks, Ben Hernandez Salazar Called and spoke with Mr. Hernandez of Impact. He informed me that they would like to change the number of sidewall end-point samples from previously proposed 18 samples down to 10, arguing this decision by technical difficulties to obtain these samples due to sheet-piling installation. Requested to submit a site map with new end-point soil sampling locations along with detailed

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

explanation for such changes. AD 02/28/2013: Received the following correspondence from Mr. Hermandez of Impact Environmental: Ainura, Based on discussions with the Construction Manager on the 500 E. 21st Street project, there are a number of logistical and cost prohibitive issues with collection of soil sidewall endpoint samples via test pits. Each alternative is presented below. " Excavation of test pits outside of the sheetpiles this approach would require an excavator of sufficient size to dig test pits to 6-8 below existing grade (BEG), which is not expected to be on-site for the early pavement demolition activities. Since the test pits would be within the existing sidewalk area, backfilling the test pits would require compaction of the backfill material in lifts (to avoid future sidewalk settlement); this would require installation of shoring at each test pit. In addition, due to the prevalence of underground utilities in the surrounding sidewalk areas, excavating the large test pits would not be a viable alternative, as it could result in undo risk of damage to utilities and safety issues. " Excavation of test pits inside the sheetpiles - this would result in sampling of materials that will be removed during the construction activities, and would therefore not be representative. " Test pits installed prior to sheeting installation this approach would potentially destabilize ground for the sheetpile contractor, unless backfilled in compacted lifts as described above, and may not result in a representative sample. " Cutting holes in the sheet pile walls this approach presents potential sheetpile strength and stability issues. " In-situ Soil boreholes in the sidewalk this is the least obtrusive method, but carries significant costs. Due to these considerations, the most viable method is to collect in-situ sidewall samples by drilling boreholes. Based on the limited options for sidewall sample collection, we are proposing collection of a total of 10 samples, with 3 collected from each long side of the excavation (running north-south) and 2 collected from each short side of the excavation (running east-west). In addition, 3 bottom samples will be collected following excavation. Below is a Dropbox link of the Final RAP/RAWP reflecting the in-situ borehole sidewall samples for your review and approval. A hardcopy along with digital files on CD will be mailed to your office.
https://www.dropbox.com/s/6zoahbhmzywpjwe/2013-2-26_%2006-098141_13EH-N124M_500%20West%20212%20Street_Final%20RAP.pdf
Please contact me with any questions or comments. Thank You, Ben Hernandez Salazar Discussed the changes to the number of end-point soil samples with J. Kolleeny of DEC. The proposed number of end-point samples is not acceptable. Since the western part of the property is more contaminated esp. along the property line, few more end-point soil samples should be collected from western sidewall. Called and spoke with B. Salazar of Impact. Later sent him the following e-mail: Ben, I have reviewed the changes to the proposed number of the end-point soil samples and discussed them with my supervisor - Jonathan Kolleeny. Please add two more soil samples along the western property line to the proposed number of samples. The total number of the end-point soil samples for the site should be 15, including bottom samples. Thank you, Ainura Doronova AD 03/05/2013: received a phone call from K. Kleaka of Impact. He asked for what compounds they should analyze the end-point samples. Informed him that soil should be analyzed for Fuel Oil Contaminated Soil compounds from Table 3 of CP-51. Also I mentioned how many soil samples per boring should be collected. Later in the day received the

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

final RAP in dporbox. Reviewed the RAP. The changed the total number of the proposed end-point soil samples from 13 to 15. Two more soil samples were added along the western property line. Again, only one soul samples per boring was proposed in the RAP instead of the required two samples. Will discuss this with J. Kolleeny. AD 03/06/2013: Discussed the proposed soil sampling interval with J. Kolleeny of DEC. Issued a RAP approval letter with the following comment: Two soil samples should be collected for analysis per each in-situ sidewall soil boring location: one sample from directly above the water table and a second from the sampling interval with the highest PID reading. In the absence of any field indications of contamination, a single soil sample should be collected from just above the water table. Sent the approval letter to Mr. Roth of Sherwood 21 Associates LLC. DL pdf copy of the letter and copy of the final RAP to eDocs. AD 07/30/2013: During the month of July, 2013, I was continuously receiving Daily Reports for remedial activities from Impact Env. I had combined 15 July daily reports into one monthly report and DL the report to eDocs. Will review. AD 09/04/2013: Reviewed the July Daily Reports. According to them, during the month of July, Ryder Construction performed demolition and removal of existing concrete foundation slab and footings and was disposing loads of concrete debris off-site. Empty 30 gallon flammable liquid storage tank was discovered in Zone 6. Ryder Construction did removal of oil impacted soil from oil-water separator release in Zone 6. During all site construction activities, Impact Env. performed air monitoring for particulates and VOC levels which were within acceptable range. AD 09/05/2013: During the month of August, 2013, I was continuously receiving Daily Status Reports for remedial activities from Impact Env. I had combined 24 August daily reports into one monthly report and DL the report into eDocs. Will review. AD 09/26/2013: Reviewed the August Daily Reports. According to them, during the month of August, Ryder Construction performed installation of walls sheet piles. Impact Env. colected 3 compound samples and 1 VOC sample for waste characterization of oil impacted soils (from OWS release). On August 20, 2013, unknown buried used oil tank was discovered during excavation in Zone 5. Tank was damaged during excavation causing residual oil release onto surrounding soils. Impacted soils were excavated and placed on plastic sheeting for sampling and off-site disposal. On August 21, 2013 Impact Env. collected waste characterization sample from used oil impacted soil stockpile (from used oil tank release on 8.20.13). On August 23, 2013 unknown UST was discovered between Zones 4 and 5 (approx. 550 gal). UST was placed in secure location and covered for proper abatement and disposal. On August 28, 2013 another unknown UST (approximately 550 gallon) was discovered in Zone 5 possibly containing used oil residuals. Tank was placed in secure location and covered for proper abatement and disposal. The site was excavated down to 6 feet below existing grade. During the month of August, Ryder Construction was continuously excavating and removing soils and concrete debries from site originating from different Zones of excavation. Soil being loaded for off-site disposal to Former NJ Zinc Facility, Pennsylvania (3420 c.y -total) and to Pure Soil Technologies Jackson, NJ (740 c.y.-total). Air monitoring (particulate and VOC) levels were within acceptable range. Dewatering system installation planned for Tuesday 9/3. AD 09/30/2013: During the month of September, 2013, I was continuously receiving Daily Status Reports for remedial activities performed at the site in September 2013 from Impact Env. I had

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

combined 15 September daily reports into one monthly report and DL the report into eDocs. Will review. AD 10/23/2013: Reviewed the September 2013 daily reports. According to reports, during the month of September 2013, Ryder Construction performed installation of a suction wells for a site dewatering system. Ryder Construction also performed pumping of a surface water using pump trucks. Approximately 9,000 gallons of water was removed off-site. Carbon tanks for the dewatering system were set up on September 18, 2013. Air monitoring was done continuously and (particulate and VOC) levels were within acceptable range. On September 24, 2013 Ryder Construction did pre-stress test on tiebacks and set up suction well pumps to the dewatering system. They plan to start the dewatering system in October 2013. AD 10/24/2013: Received the following e-mail from B. Salazar saying: Shana / Ainura, Attached please find copies of the Daily Reports for work performed at the 500 West 21st Street site from October 3rd to October 18th . Currently, foundation piles are being installed and most of the site has been excavated to sub grade except for the soil entrance ramp. Please let me know if you have any questions or comments. Thank you, Ben Hernandez Salazar IMPACT ENVIRONMENTAL I combined 12 October 2013 daily reports into one monthly report and DL the report into eDocs. Will review. AD 11/14/2013: Reviewed the October 2013 daily reports. According to reports, during the month of October 2013, Ryder Construction performed off-site disposal of excavated contaminated soil to Palmerton, PA; performed pre-stress test on tiebacks and set up suction well pumps to the dewatering system. On October 8, 2013 Impact Env. installed well points along eastern side of the site. On October 18, 2013 piles were installed along 10th Avenue. Air monitoring (particulate and VOC) levels during the reported period were within acceptable range. No soil samples were collected during the reported period. AD 11/25/2013: Received the following e-mail from B. Hernandez Salazar: Good Evening Ainura, Attached please find the 500 West 21st Street, Manhattan (NYSDEC Spill #06-09814) Quarterly Monitoring Reports for the Fourth Quarter 2012 and First Quarter 2013 for your review. Please let me know if you will require hard copies. Thank you, Ben Hernandez Salazar IMPACT ENVIRONMENTAL DL the reports to eDocs. Will review. AD 12/11/2013: Reviewed the 4th GW QMR for 2012. The report summarizes the activities of the groundwater well gauging and quarterly sampling for the months of November and December 2012. The Quarterly Monitoring Program consists of the gauging of 27 groundwater monitoring wells, identified as MW-1 through MW-24, Unknown Well-South, Unknown Well-North, and Unknown Well-10th Avenue and the sampling of 12 groundwater monitoring wells, identified as MW-5, MW-13, MW-14, MW-15, MW-16, MW-19, MW-22, MW-23, MW-24, Unknown Well-South, Unknown Well-North, and Unknown Well-10th Avenue. The groundwater flow direction at the Site is to the east. November 2012 Monitoring: On November 30, 2012, Impact Environmental gauged 25 wells with an oil-water interface meter. Measurable free phase product was observed in 8 monitoring wells: MW-3, MW-7, MW-11, MW-12, MW-17, MW-18, MW-23 and MW-24 with a thickness of 0.12 feet, 0.02 feet, 0.14 feet, 0.01 feet, 0.01 feet, 0.01 feet, 0.02 feet and 0.01 feet, respectively. Monitoring wells MW-13 and MW-14 were unable to be located during this monitoring event. Groundwater was not detected in monitoring well Unknown Well-South which appeared to have an obstruction at the 8 foot depth. December 2012 Monitoring and Sampling: On December 11 and 12, 2012, Impact Environmental gauged 27 wells with an oilwater interface meter and sampled 8 wells (MW-5,

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

MW-15, MW-16, MW-19, MW-22, MW-24, Unknown Well-North and Unknown Well-10th Avenue). Measurable free phase product was observed in 8 wells: MW-3, MW-7, MW-11, MW-12, MW-13, MW-14, MW-17 and MW-23 with a thickness of 0.02 feet, 0.01 feet, 0.10 feet, 0.01 feet, 0.36 feet, 0.02 feet, 0.01 feet and 0.02 feet, respectively. Groundwater was not detected in well Unknown Well-South which appeared to have an obstruction at the 8 foot depth. Monitoring wells that contained free product were not sampled. Product Recovery: Measurable free phase product has been observed in 10 wells: MW-3, MW-7, MW-11, MW-12, MW-13, MW-14, MW-17, MW-18, MW-23 and MW-24 since November 2012. Monitoring of LNAPL will continue to be conducted on a monthly basis. The LNAPL has been removed through the use of a peristaltic pump. Impact Environmental has removed approximately 88.5 gallons of LNAPL and contaminated groundwater during product recovery efforts since November 30, 2012 contributing to a total of approximately 8,495 gallons since the commencement of product recovery in December 2008. The laboratory analysis performed on the groundwater samples MW-5, MW-15, MW-16, MW-19, MW- 22, MW-24, Unknown Well-North and Unknown Well-10th Avenue detected target concentrations of four VOCs above the NYSDEC ambient water quality standards in wells MW-24 and Unknown Well-North. Concentrations of MTBE ranged from ND in MW-5, MW-16 and MW-22 to 31.0 ug/L in MW-24. Concentrations of BTEX were not detected in any of the groundwater samples. Concentrations of Total VOCs ranged from 0.07 ug/L in MW-22 to 60.40 ug/L in MW-24. The laboratory analysis also detected target concentrations of two SVOCs above the NYSDEC ambient water quality standards in monitoring well MW-24. Concentrations of PAHs were not detected in any of the groundwater samples. Concentrations of Total SVOCs ranged from 0.78 ug/L in MW-22 to 175.40 ug/L in MW-24. Quarterly sampling planned to be performed in the first quarter of 2013 prior to the start of construction. AD 12/18/2013: Reviewed the 1st quarter of 2013 GW monitoring report. This Quarterly Monitoring Report summarizes the groundwater monitoring activities performed at the site from January through April 2013. The groundwater flow direction at the Site is to the east. January 2013 GW Monitoring: On January 17, 2013, Impact Environmental gauged 26 wells with an oil-water interface meter. Measurable free phase product was observed in 8 wells: MW-3, MW-7, MW-11, MW-12, MW-13, MW-17, MW-18 and MW-23 with a thickness of 0.05 feet, 1.20 feet, 0.50 feet, 0.10 feet, 0.15 feet, 0.05 feet, 0.05 feet and 0.09 feet, respectively. Groundwater was not detected in monitoring well Unknown Well-South which appeared to have an obstruction at the 8 foot depth. February 2013 GW Monitoring: On January 17, 2013, Impact Environmental gauged 26 wells with an oil-water interface meter. Measurable free phase product was observed in 8 wells: MW-7, MW-11, MW-12, MW-13, MW-17, MW-18, MW-23 and MW-24 with a thickness of 0.05 feet, 0.50 feet, 0.01 feet, 0.07 feet, 0.02 feet, 0.85 feet, 0.01 feet and 0.01 feet, respectively. Groundwater was not detected in monitoring well Unknown Well-South which appeared to have an obstruction at the 8 foot depth. March 2013 GW Monitoring and Sampling: On March 8, 2013, Impact Environmental gauged 26 wells with an oil-water interface meter and sampled 10 wells (MW-5, MW-14, MW-15, MW-16, MW-19, MW-22, MW-23, MW-24, Unknown Well-North and Unknown Well-10th Avenue). Measurable free phase product was observed in 6 wells: MW-7, MW-11, MW-12, MW-13, MW-17 and MW-18 with a thickness of 1.41 feet, 0.27 feet, 0.02 feet, 0.05 feet, 0.02 feet, and 0.03 feet, respectively. Groundwater was not detected in well Unknown Well-South which appeared to have an obstruction at the 8

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

foot depth. Monitoring wells that contained free product were not sampled. April 2013 GW Monitoring: On April 9, 2013, Impact Environmental gauged 26 wells with an oil-water interface meter. Measurable free phase product was observed in 5 wells MW-6, MW-7, MW-11, MW-12, and MW-13 with a thickness of 0.60 feet, 1.45 feet, 0.60 feet, 0.20 feet, and 0.10 feet, respectively. Groundwater was not detected in well Unknown Well-South which appeared to have an obstruction at the 8 foot depth. Impact Environmental has removed approximately 245-gallons of LNAPL and contaminated groundwater during product recovery efforts since November 30, 2012 contributing to a total of approximately 8,652-gallon since the commencement of product recovery in December 2008. GW data: The laboratory analysis performed on the groundwater samples detected elevated levels of MTBE in monitoring wells: MW-14, MW-15, MW-19, MW-23, MW-24, Unknown Well-10th Avenue and Unknown Well-North, ranging from 13ppb to 117ppb. The laboratory analysis detected trace concentrations of SVOCs below the NYSDEC ambient water quality standards in all monitoring wells, except Unknown Well-10th Avenue. In accordance with the approved Remedial Action Plan, groundwater monitoring and analysis will be performed on the nine remaining site perimeter wells (MW-16, MW-17, MW-19, MW-23, MW-24, Unknown Well-North, Unknown Well-South, and Unknown Well-10th Avenue) after excavation and foundation construction at the site is completed. AD 01/27/2014: During the month of January, 2014, I was continuously receiving from Impact Env. Daily Status Reports for remedial activities performed at the site in January 2014. I had combined 6 January daily reports into one monthly report and DL the report into eDocs. Will review. AD 02/20/2014: Reviewed the report. It states that the following activities were performed at the site since last reporting: - Continued Site dewatering. - Installation of compacted RCA sub base and of concrete mud slab. - Installation of PrePrufe 300R Waterproofing/Vapor Barrier over mud slab on northern portion of site. - Site grading/excavation to final sub grade level in Zones 1, 2, and 4. - Offsite soil disposal. - Installation of foundation wall formwork and rebar. - Concrete pour in section of foundation wall. - Excavated elevator pit, and installed elevator pit concrete formwork and rebar. No samples were collected. Air monitoring (particulate and VOC) levels within acceptable range. AD 01/14/2015: Called and left a message to Mr. Hernandez of Impact Environmental. AD 01/21/2014: Spoke with B. Hernandez. He said that there are construction activities going at the site. They are planing to install some wells for post-remediation GW monitoring. WP for wells installation will be submitted shortly. AD 01/22/2015: Received the following e-mail from Mr. Hernandez: Hi Ainura, Attached for your review and approval, please find the Replacement Well Installation Work Plan for the site located at 500 West 21st Street (169 10th Avenue) in Manhattan. This work plan addresses the installation of new monitoring wells to replace the existing perimeter sidewalk wells destroyed during redevelopment construction activities and required for post-remediation monitoring as stipulated in the March 2013 Remedial Action Work Plan. Due to the contractor s new sidewalk installation schedule, the wells will be required to be installed no later than early next week. Please let me know if you have any questions or require additional information. Thank you, Ben Hernandez Salazar Reviewed the work plan submitted by Impact Environmental Closures, Inc. (Impact Env.) on behalf of Sherwood 21 Associates LLC. The work plan proposes replacement of the off-site perimeter wells destroyed

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

during site redevelopment activities. A total of six monitoring wells are proposed to be installed on the sidewalks adjacent to the site for the required post-remediation groundwater monitoring. The locations for the proposed wells are adequate. Will issue an approval letter. Off-site wells on the ajacent property should be monitored on a continuous basis. DL the work plan to DDocs. AD 01/23/2015: Spoke with Ben Hermandez and Jason Roth regarding the work plan. Requested to check the exsisting off-site wells for the free product. Issued and sent the approval letter. DL copy of the letter to DDocs. AD 03/16/2015: Received the following e-mail from Shana Holberton: Hi Ainura, I am the NYCOER project manager for the 500 West 21st Street site and recently received the Remedial Closure Report for 500 West 21st Street for review I understand it was submitted to you for review as well. Would you be available tomorrow to discuss the open spill at the site (Spill No. 06-09814) and outstanding DEC requirements? Best, Shana Holberton Project Manager NYC Mayor s Office of Environmental Remediation 100 Gold Street, 2nd Floor, New York, NY 10038 Direct: (212)788-3220 Mobile: (917)974-4604 sholberton@dep.nyc.gov Sent her an e-mail stating that DEC did not receive the report yet. AD 03/17/2015: Received the following e-mail from B. Hernandez: Good Afternoon Ainura, Attached for your review please find the Drop Box link to the Remedial Closure Report for the site located at 500 West 21st Street (previously known as 169 10th Avenue), Spill No. 0609814. Remedial Closure Report https://www.dropbox.com/s/49kc98jgpga2lbw/2015-2-26.13EHN124M.RAR.DRAFT.BH.pdf?dl=0 Appendices https://www.dropbox.com/s/whkssjtjmq5ck02/2015-3-2.13EHN124M.RAR%20APPENDICES.BH.pdf?dl=0 Please let me know if you have any questions or comments. Thank you, Ben Hernandez Salazar IMPACT ENVIRONMENTAL Will review. AD 03/18/2015: Received the following e-mail from S. Holberton: Hi Ainura, After you have had an opportunity to look over the closure report would you please notify me if you have any objections to OER issuing a notice to DOB which would allow for residential occupation of the building? Thanks in advance, Shana Holberton Project Manager NYC Mayor s Office of Environmental Remediation Sent her e-mail that her office will be notified after DEC will review the report. AD 03/20/2015: Reviewed the submitted report. It states that Impact Environmental peformed at the site the following actions: - Mitigated and removed to the extent feasible LNAPL observed in the on-site monitoring wells; - Collected and analyzed in-situ sidewall soil samples and in-situ and post excavation bottom soil samples. Soil sample results were compared to NYSDEC Unrestricted Use (Track 1) and Restricted Residential Use (Track 2) Soil Cleanup Objectives (SCOs) as presented in NYSDEC Part 375-6 and CP51. Laboratory analysis did not detect pesticides or PCBs in any of the three samples. Trace levels of VOCs, SVOCs and metals were detected well below Track 1 Unrestricted Use SCOs. - Removed two 1080-gallon and one 550 gallon USTs found during excavation at the site. - Constructed an engineered composite cover consisting of a 24-inch thick concrete foundation floor slab, 18-inch thick concrete basement walls, and a permanent abandoned SOE system consisting of a grout secant pile wall and interlocking steel sheet piles, to prevent human exposure to residual soil/fill remaining under the Site. The concrete foundation structure covered the full extents of the site, to all property lines. - Installed a certified waterproofing/vapor barrier system beneath the building slab and upwards along all foundation sidewalls to grade. - Imported materials used for backfill

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

in compliance the RAP and in accordance with applicable laws and regulations. - Historic fill, construction and demolition debris and native soil were excavated and removed from the entire Site footprint to 18-19 feet below sidewalk grade to allow for the installation of the building s foundation structure. Transported and disposed off-Site soil/fill material at permitted facilities in accordance with the RAP and applicable laws and regulations for handling, transport, and disposal. A total of 24,098.49 tons of material were excavated from the Site. Sampled and analyzed excavated media as required by disposal facilities. Appropriately segregated excavated media onsite. - Screened excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a photoionization detector (PID). - Mobilized site security, equipment, utility mark outs and marking & staking of excavation areas. - Implemented storm-water pollution prevention measures in compliance with applicable laws and regulations. - Performed all activities required for the remedial action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations. AD 03/26/2015: Called and left a message to S. Holberton. AD 03/27/2015: Called and spoke with Ms. Holberton of OER. Informed her that based on the performed activities and soil analytical results,DEC does not have any objections to OER issuing a notice to DOB which would allow for residential occupation of the building. Spill case will remain open pending submission of the groundwater sampling results. Later received an e-mail from Ms. Holberton saying: Hello Ainura, Thanks again for reviewing the remedial closure report that was submitted by Impact Environmental to OER and DEC. Per our conversation, OER and DEC are in agreement that the remedial action as outlined in the Remedial Action Plan has been performed and the owner may seek a Temporary Certificate of Occupancy for the residential units within the building. The spill at the site will remain open and will be addressed under DEC s oversight. Best, Shana Holberton Project Manager NYC Mayor s Office of Environmental Remediation AD 05/20/2016: Received the following e-mail from Impact Environmental: Good Evening Ainura, We have completed post-remediation groundwater monitoring events for the 2015 Year and First Quarter 2016 for the site located at 169 10th Avenue / 500 West 21st Street, New York NY (Spill No. 06-09814). We had previously sent the 2015 Annual Report hard copy. For convenience, below please find links to both electronic copies of the reports: 2015 Annual Post-Remediation Groundwater Monitoring Report https://impactenvironmental.filecamp.com/public/file/2n8d-h7m5sqer First Quarter 2016 Post-Remediation Quarterly Monitoring Report https://impactenvironmental.filecamp.com/public/file/2n8e-5gatolh0 Please contact me with any questions or comments. Thank You, Ben Hernandez Salazar Senior Project Engineer O: 631-269-8800 Ext. 142 C: 631-334-2354 Uploaded reports. Will review. AD 06/02/2016: Reviewed the Annual Monitoring Report-2015. The report states that the site was remediated in conjunction with site redevelopment and in accordance with the scope of work presented in the NYSDEC and NYC OER-approved Remedial Action Plan (RAP) dated March 5, 2013. Redevelopment of the site commenced in April 2013 with the demolition of the former one-story masonry building. Remedial activities began shortly after building demolition in July 2013. Redevelopment of the Site consisted of the demolition of the one story structure and the construction of an eight-story, 116,000 gross square foot, 103-foot high mixed-use residential / commercial retail building. The building

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

includes one basement level, which is approximately 18-19 feet below the 10th Avenue sidewalk grade. Soil excavation: The entire site was excavated to a depth of 20 feet below grade and a total of 24,098.49 tons of soil/fill material was excavated from the site between August 19, 2013 and February 5, 2014. All excavated soil/fill material was exported for off-site disposal at properly licensed/regulated facilities. No onsite material was reused as backfill. Groundwater: Construction dewatering was performed during excavation to allow for the construction of the new foundation structure. A total of 7,092,000 gallons of groundwater was pumped from the Site, pretreated onsite via settling tank; oil/water separator; bag filters; and granular activated carbon vessels, and discharged to a NYCDEP combined sewer in accordance with NYCDEP Discharge Permit (#C-5275). Underground Storage Tanks: During excavation activities, two (2) 1,080 gallon and one (1) 550 gallon fuel oil underground storage tanks (USTs) were encountered. No evidence of leaks was observed and the tanks were properly cleaned and disposed off-site. End-point soil sampling: Collected and analyzed 18 sidewall and 3 bottom documentation soil samples to determine the performance of the remedy with respect to attainment of Site-Specific SCOs. A waterproofing/vapor barrier system consisting of Grace Preprufe 300R membrane consisting of a 46-mil, high-density polyethylene (HDPE) sheet with a synthetic adhesive and weather resistant protective coating was installed beneath the entire concrete foundation slab and pile caps. GW sampling: In accordance with the approved RAP, groundwater monitoring was performed on eight of the nine remaining and reinstalled perimeter wells in April 2015 (MW-UW10-A, MW-16-A, MW-17A, MW-22, MW-23, MW-24, MW-25 and MW-UWN-A), and seven of the nine remaining and reinstalled perimeter wells in June 2015 (MW-UW10-A, MW-16-A, MW-22, MW-23, MW-24, MW-25 and MW-UWN-A), after remedial excavation and foundation construction. No measurable free phase product was observed in any the sampled wells on either the April or June 2015 sampling events. A general trend of decreasing concentrations of target VOCs and SVOCs in comparison to pre-remediation findings was observed during this post-remediation monitoring period. The most contaminated well MW-17A in April 2015 had 35ppb TVOCs. The most contaminated well in June 2015 sampling was MW-24 with 86ppb of total VOCs. Impact Environmental will continue to perform the groundwater sampling. Frequency of post-excavation groundwater monitoring and analysis will be based on the results of the initial post-excavation groundwater monitoring and analysis event. Closure of NYSDEC Spill #06-09814 will be attempted based on the results of the post-remediation groundwater sampling. AD 06/03/2016: Reviewed the Post-Remediation Groundwater Quality Report. It states that Impact Environmental has continued the post-remediation groundwater monitoring program and conducted the 1st Quarter event on January 20, 2016. Measurable free phase product was not observed in any of the nine (9) wells during the quarterly monitoring event. Groundwater samples were collected from each well MW-UW10-A, MW-16-A, MW-17-A, MW-22, MW-23, MW-24, MW-25, MW-UWN-A, and MW-19A. All purged groundwater was pumped out of the well and transferred to a 55-gallon drum. The depth to water, depth to product and product thickness were recorded. The monitoring wells were sampled as part of this investigation. One groundwater sample was secured from each of these monitoring wells for laboratory analysis. The groundwater samples secured from monitoring wells on the Site were labeled for identification purposes as MW-UW10-A, MW-16-A,

EMPIRE CITY SUBWAY GARAGE (Continued) **S108296336**

MW-17-A, MW-22, MW-23, MW-24, MW-25, MW-UWN-A, and MW-19A. Based on the GW survey results, the groundwater flow direction at the Site is to the west and northwest. No measurable free phase product was observed in any the sampled wells during this monitoring event. A general trend of decreasing concentrations of target VOCs and SVOCs in comparison to pre-remediation findings was observed in the site wells. Total VOCs decreased from 0.77 ug/L to non-detect in MW-16; 1.51 ug/ L to non-detect in MW-22; 55.4 ug/ L to 14.9 ug/ L in MW-23; 117.2 ug/L to 16.13 ug/L in MW-24; 23.01 ug/ L to 3.4 ug/ L in Unknown Well North; 21 ug/l to non-detect in Unknown Well 10th Ave. Total SVOC concentrations decreased from 1.27 ug/L to non-detect in MW-16; 0.78 ug/ L to non-detect in MW-22; 24.38 ug/ L to 11.1 ug/ L in MW-23; 175.4 ug/L to 13.36 ug/L in MW-24; 4.57 ug/ L to non-detect in Unknown Well North; 2.54 ug/l to 0.06 ug/L in Unknown Well 10th Ave. The most contaminated levels of TVOCs of 42.4ppb at well MW-17A. According to the consultant, the sustained absence of free phase product and decrease in VOC and SVOC concentrations in the remaining site perimeter wells during the post-remediation monitoring events of 2015 and First Quarter 2016 is attributable to the remedial actions conducted at the site, including the excavation to 20 feet below grade and offsite disposal of 24,098.49 tons of soil/fill and the pumping and permitted discharge of 7,092,000 gallons of groundwater during construction dewatering. In addition, the Engineering Controls implemented during Site remediation and redevelopment, are protective of public health and the environment and address any potential future offsite contamination sources at the Site. Based on the findings of the post-remediation groundwater monitoring and the remedial actions performed on the Site, Impact requests the NYSDEC to close Spill #06-09814. AD 06/07/2016: Discussed the spill closure request with J. Kolleeny of DEC. Based on the remediation work performed at the site such as: - removal of USTs; - excavation of the site to 20 feet below grade and offsite disposal of 24,098.49 tons of soil/fill; - pumping and permitted discharge of 7,092,000 gallons of groundwater during construction dewatering; - applied Engineering Controls during Site remediation and redevelopment, that are protective of public health and the environment; - post-remediation groundwater monitoring, which confirms the effectiveness of the performed remediation, The Department approves the spill closure request. Will issue a closure letter. AD 06/08/2016: Issued and sent the closure letter to Mr. Roth of Sherwood 21 Associates LLC. Case closed. AD "

Remarks: "material could be gasoline or fuel oil or even a mixture; INSTALLED SEVERAL WELLS AND CONTAIMINATION SEEMS TO BE COMING FROM OFF SIGHT; NOT YET CLEAN;"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"02/12/10-Hiralkumar Patel. alternate addresses: 444-460 W 15th St, 447-469 W 14th St, 58-76 10th Ave PBS #: 2-604379. as per PBS record, site has following tanks, in-service: - five 6,000 gal gasoline USTs - one 6,000 gal diesel UST - one 2,000 gal waste oil AST in contact with soil - two 2,000 gal lube oil ASTs in contact with soil - two 1,000 gal lube oil ASTs in contact with soil - three 500 gal lube oil ASTs in contact with soil Other spills on property: 0102822, 0103052, 0412142, 0412147, 0909956, 0909957 spill # 0102822 reported on 06/13/2001 by FDNY about spill in gas station. spill closed on 03/28/2005 and referred to spill # 0103052. documents found on e-docs. as per document, line failed a test on super un-leaded on 06/23/2001. spill # 0103052 reported on 06/19/2001 by Fenley & Nicol due to equipment failure. no info about any actual leak. spill closed on 07/12/2006 assuming work completed. nothing in e-docs. spill # 0412142 reported on 02/14/2005 as 500 gal gasoline spilled during delivery. According to caller's remarks, 200 gal was recovered and ~300 gal went into ground. Fenley & Nicol was hired to do subsurface investigation. case closed on 05/17/2006 and referred to old case 0103052. documents found on e-docs. spill # 0412147 reported on 02/14/2005, duplicate spill number for 500 gal gasoline spill. spill # 0909556 reported on 12/08/2009 due to foul smell of unknown material. DEC Ketani inspected site and based on inspection, he close the case on 12/08/2009. few pics on e-docs. spill # 0909957 reported on 12/08/2009 due to foul smell. duplicate spill. spill closed and referred to spill # 0909956. reviewed old files. 1) 06/09/2001: letter from Chelsea Car Wash: - FDNY responded to site on 06/13/2001 due to gasoline odors in basement - FDNY issued violation (violation # A03676) - Fenley & Nicol was hired to do tank and line test - all tanks passed test. lines for regular product tank passed test - testing of super line revealed a problem with line that feeds super and special to dispensers on 10th ave side of station - no problem with line that feeds super and special to dispensers (# 2, 3 and 5) along 14th street side of station - according to document from F&N, leak was found in super line going from dispenser #7 to #6 2) 04/13/2005: Limited Subsurface Investigation Report from Fenley & Nicol: - advanced 1 soil boring (SB-1) to depth of 10-14 ft bg in vicinity of spill area (# 0412142) - collected soil and groundwater sample from this one boring - depth to groundwater in the vicinity of the site is approx. 14 ft bg - regional groundwater flow in the

GAS STATION/CAR WASH (Continued) **S110140247**

vicinity of the site appears to be toward the west - found 556 ppb MTBE in soil sample from 10-14 ft depth less than ---------- - found 8,207 ppb MTBE in groundwater sample less than --------- 3) 09/09/2005: Limited Subsurface Investigation Report from Fenley & Nicol: - three borings (SB-1 to SB-3) were advanced to a depth of 14 ft bg (to groundwater interface) and five soil samples were collected - one boring (SB-1) was advanced in area of the spill # 0412142; south of the car wash exit - two other borings were advanced on the northwest corner (SB-2) and southwest edge (SB-3) of the property where a previous spill (0103052) occured - soil samples generally consisted of medium to coarse-grained brown sand less than --------- - soil samples SB-2 at 14 ft depth and SB-3 at 14 ft depth indicated olfactory evidence of impact and detected 2,878 ppm (at 14 ft in SB-2) and 2,598 ppm (at 14 ft depth in SB-3) on PID - found heavy soil contamination in SB-2 and SB-3 at 14 ft depth - no contamination found in shallow soil samples from SB-2 and SB-3 at 8 ft depth - no groundwater samples collected soil analyticals:
----------SB-2----------SB-3 14 ft 14 ft
Benzene----------500*----------500*
Toluene----------39,698----------58,397
Ethylbenzene----------24,720
Xylene----------209,336----------205,834
1,2,4-Trimethylbenzene----113,000----------86,052
1,3,5-Trimethylbenzene-----23,939----------30,175
Naphthalene----------12,431
MTBE----------500*----------1,000* * - MDL for Benzene was 500 ppb (above limit) in both samples and MDL for MTBE was 500 ppb for sample SB-2 and was 1,000 ppb for sample SB-3 11:50 AM:- received call from Oliver from Envt'l Maintenance contractor. Oliver is preparing rpt. asked Oliver to submit lab data and site plan for review and rpt once its ready. Richard Stumbo Environmental Maintenance Contractors, Inc. Ph. (914) 232-7355; email: rstumbo@enviromain.com Francis Oliver Ciriaco Environmental Maintenance Contractors, Inc. PH. (914) 232-7355; Fax (914) 232-7357; email: fciriaco@enviromain.com 02/16/10-Hiralkumar Patel. received email from Allan Ciriaco (at 3:16 PM on 02/15/10) from EMC. Allan forgot to attach Phase II report. Sent email to Allan asking to send report. 02/17/10-Hiralkumar Patel. 10:36 AM:- spoke with Mr. Stumbo about Phase II rpt, he will send copy of rpt. Mr. Stumbo mentioned that currently site has Mobil gas station and car wash center. current owner is planning to demolish existing structures and build multi-story commercial. owner is planning to dig to 18 ft depth. asked Mr. Stumbo to send property owner's contact info also. 10:45 AM:- spoke with Mr. Munoz, general manager of 10th ave car wash llc. Mr. Munoz mentioned that they owned gas station and car wash business. 10th ave car wash llc. owns all gas tank systems and operate/maintain it. Mr. Munoz is on-site for 10 years (and was there during spill in 2005). Mobil is providing gas only. 10th Avenue Car Wash LLC. **business and tanks owner** 70 10th Avenue New York, NY 10011 Attn.: Quiolvio Munoz, General Manager Ph. (646) 486-4541; Fax (646) 486-4538 email: chelcarwas@aol.com reviewed old reports and found confusing data about dispenser locations along 10th ave. as per site map from 2001, site had three dispensers # 6, 7 & 8 in row. as per site map from Apr 2005, site had three pump islands (dispensers 1/2, 3/4 and 5/6) in row close to 10th ave and two pump island (dispensers 7 and 8) in row next to on-site building. this map doesn't show dispenser #6 in row of dispenser #7. and as per site map

GAS STATION/CAR WASH (Continued) **S110140247**

from Nov. 2005 only two dispenser islands are in row in each group (instead of three as per Apr 2005 map). 02/18/10-Hiralkumar Patel. 11:17 AM:- spoke with Mr. Stumbo and informed that Phase II hasn't received yet. Mr. Stumbo will email report by noon. 11:50 AM:- received email from Allan Ciriaco (aciriaco@enviromain.com) from EMC with their client's contact info. Brandon Miller **potential buyer** Real Estate Equities Corporation 18 East 48th Street, Penthouse New York, NY 10017 Ph. (212) 682-2121 (O);(917) 750-1138 (C); Fax (212) 682-3920 email: brandon@reec-ny.com 1:33 PM:- left message for Mr. Miller. 1:36 PM:- spoke with Mr. Brill at Real Estate Equities. Mr. Brill mentioned that they are in process of buying this property and will redevelop this property into retail stores. site will have basement and ground floor structure. no planning for residential complex. Jordan Brill email: jordan@reec-ny.com owner of 450 W 15th Street, adjacent property which was part of subject site in past, is: RP Stellar Milk Owner, LLC. c/o Stellar Management 156 William Street New York, NY 10038 Attn.: Richard Randberg Ph. (212) 840-7625; email: rrandberg@stellarmanagement.com 1:48 PM:- received Phase II report from Allan. - limited Phase II was dated 08/22/08 and was performed by Property Solutions - Phase I was performed by Property Solutions dated 06/24/08 - property is utilized as gasoline service station, oil change garage, carwash and convenience store - total of 8 dispenser islands are located on property: 5 in southern portion of site parallel to W. 14th st. and 3 in northern portion of site parallel to 10th ave. - six 6,000 gal USTs and ten ASTs of various volumes on-site less than ---------- - subject property is covered by a portion of the highline elevated railway - historically, subject property consisted of several stores, dwellings, offices, wagon yard, lumber yards and scrap iron & metal yard - property was utilized as a parking lot from at least 1979 until 1996 - subject building was constructed after 1997 and prior to 2000 - from 07/29/08 through 08/01/08, Property Solutions advanced total of ten soil borings (SB-01 through SB-10) to a depth of 20 ft bg - boring SB-01 was advanced to the northwest of the gasoline USTs - borings SB-02 to SB-05 were advanced on northern portion of site in vicinity of former fuel supply line leak - borings SB-06 to SB-10 were advanced on southern portion of site in area of gasoline USTs - groundwater was encountered in all ten borings at 12 ft bg less than ---------- - two soil samples collected from each borings except SB-09 where three soil samples were collected for analysis - on 08/04/08 to 08/06/08, Property Solutions installed total of six monitoring wells (MW-01 through MW-06) to a depth of 20 ft bg, with 10 ft of screen - well MW-01 was installed in former location of SB-06 located to west of gasoline USTs - wells MW-02 and MW-03 in the northern portion of the site to the west of fuel dispenser islands (at former boring locations SB-02 and SB-3, respectively) - well MW-04 was installed in location of former boring SB-04 located to north of gsoline USTs - well MW-05 was installed in location of former boring SB-09 located to east of gasoline USTs - well MW-06 was installed approx. two ft from SB-01 located to the west of the subject building along 10th ave - soil encountered at the site generally consisted of red to brown coarse to fine sand with some gravel to a depth of approx. 14 ft bg - from 14 ft bg to 20 ft bg the soils encountered consisted of red to brown coarse to fine sand with some areas of sand and gravel - several areas of silt were also encountered at approx. 17 to 20 ft bg - found high PID readings in few borings - found petroleum odors around 16 ft bg in borings SB-03, SB-04, SB-05 - found petroleum

GAS STATION/CAR WASH (Continued) **S110140247**

odors around 19 ft bg in boring SB-06, but no PID readings - found some VOC contamination in few samples and in groundwater samples soil analyticals:

SB-05/18.0----------111
SB-05/18.5----------28 report missing boring logs for borings SB-07 to SB-10. 2:54 PM:- spoke with Allan and asked him to submit copy of Phase I report and boring logs for SB-07 to SB-10 and scaled site map including locations of all existing tanks, dispenser islands, borings and wells and site specific groundwater flow direction. Allan mentioned that Phase II work was done by Property Solutions Inc. in 2008 and EMC was reported spill based on results of Phase II in 2008. EMC hasn't done any soil/groundwater investigation themselves. 4:37 PM:- left message for Mr. Randberg at Stellar managment. 02/22/10-Hiralkumar Patel. 10:09 AM:- received message from Mr. Randberg. 10:42 AM:- received email from Francis Oliver from EMC with boring logs for borings B-7 to B-10. no high PID noted in these borings. 10:48 AM:- spoke with Mr. Randberg. Mr. Randberg mentioned that his company owns office building at 450 W 15th Street and doesn't own gas station/car wash. Mr. Randberg mentioned that gas station, car wash and office building were owned by single company back in days, but was separated and someone else owns property of gas station/car wash. Mr. Randberg baught 450 W 15th street in late 2006. 1:30 PM:- left message for Mr. Munoz. 1:52 PM:- spoke with Mr. Miller who gave property owner's contact info. Mulnick LLC. **owner of car wash/gas station property** c/o Milk Studios 450 W 15th Street, 8th Floor New York, NY 10011 Attn.: Erez Shternlicht PH. (212) 645-2797 email: erez@milkstudios.com 2:02 PM:- left message for Ketty at Mr. Shternlicht's office. 2:12 PM:- received message from Ketty

GAS STATION/CAR WASH (Continued) **S110140247**

(917-515-2055). 2:35 PM:- spoke with Mr. Shternlicht. he confirmed that he owned both properties in 2005 and then sold office building in 2006. informed him about unresolved spill issue from 2005. 02/23/10-Hiralkumar Patel. 8:08 AM:- sent email to Mr. Munoz with copy of PBS form to correct site address (as tanks are located at 70 10th ave and not at 450 W 15th street). 9:08 AM:- sent letter to Mr. Munoz and Mr. Shternlicht requiring Phase I, scaled site plan including former tank systems and boring/wells and work plan for complete delineation of soil and groundwater contamination. Phase I and work plan are due on 03/23/10. letter emailed to Mr. Munoz, Mr. Shternlicht, Mr. Miller, Mr. Stumbo and Mr. Randberg. 02/25/10-Hiralkumar Patel. 10:50 AM:- received email from EMC with letter from Mulnick Realty, LLC. authorizing 459 W 14th Realty Associates, LLC. to conduct remediation at the site. 03/02/10-Hiralkumar Patel. 2:35 PM:- received work plan including two scaled site maps. first map, dated 03/13/1998, is plan with proposed tanks and pump islands locations (that could be before tank system installed). and this map doesn't show location of other tanks on property. second map, dated 02/15/2009, shows recent boring/well locations and proposed well locations on map. proposed work plan is not acceptable as proposing to install three wells more than 90 ft apart from each other. requires monitoring wells within 25 ft distance from each other. 2:41 PM:- received Phase I report from Allan from EMC. as per Sanborn maps review, site was wagon yard and iron and metal yard from 1895 to 1921, vacant lot from 1950 to 2000 and then convereted to gas station/car wash/lube change facility. 03/11/10-Hiralkumar Patel. 3:26 PM:- spoke with (and sent email to) Francis at EMC. informed him that proposed wells are more than 90 ft away from each other and any underground utility/structure can affect GW flow direction. asked Francis to submit revised work plan including wells within 25 ft from each other in each affected area. also asked for scaled site map showing all existing tank systems (including remote fill ports, dispenser islands/boiler, piping etc. and not proposed plan as submitted earlier), all former/current borings/wells, and location of proposed wells. 03/17/10-Hiralkumar Patel. 1:27 PM:- received investigation work plan from Allan Ciriaco from EMC. proposed to install total of 13 monitoring wells. proposed work plan is not acceptable as doesn't include any investigation downgradient from the site (along 10th ave). 03/23/10-Hiralkumar Patel. 11:03 AM:- left message for Mr. Stumbo at EMC. 3:54 PM:- received message from Mr. Stumbo. 03/24/10-Hiralkumar Patel. 8:20 AM:- sent email to Mr. Stumbo informing that the proposed work plan is not acceptable as doesn't include any downgradient investigation. asked to submit revised work plan. email copied to Fancis (EMC), Mr. Munoz, Mr. Miller and Mr. Shternlicht. 9:55 AM:- received revised work plan. 11:25 AM:- sent work plan approval letter to Mr. Munoz and Mr. Shternlicht. letter emailed to Mr. Munoz, Mr. Shternlicht, Mr. Miller and Mr. Stumbo. 05/04/10-Hiralkumar Patel. 11:27 AM:- received email from Allan from EMC with investigation report. abstract: - installed total of 13 soil borings to a depth of 20 ft bg - collected soil sample at highest PID reading - installed monitoring wells at each boring location to depth of 20 ft bg with 10 ft of screen - found groundwater at 13 ft bg - soil encountered at site generally consisted of brown coarse to fine sand with some gravel soil analyticals:

----------800----------290-------730-------700-----620 05/05/10-Hiralkumar Patel. 2:19 PM:- sent email to Allan requiring him to submit revised report as following missing: - boring logs doesn't include PID radings and any petroluem odors at different depths - sample recovery info missing in boring logs MW-7 and MW-8 - boring log for MW-2 is missing - well size - no info about soil sampling depths - submitted site map is not clear and un-scaled - site-specific groundwater flow direction asked Allan to submit scaled site map showing following: - existing tanks, dispenser island and remote fill ports - all current/previous boring/wells - site specific groundwater flow direction also asked Allan about deepest dry soil sample, as report only indicates about soil sample at highest PID readings. email copied to Mr. Stumbo, Mr. Munoz, Mr. Shternlicht and Mr. Miller. 3:45 PM:- received call from Allan requesting extension for submitting required scaled site map. approved request and asked to submit revised rpt with missing info by end of 05/14/10. 05/06/10-Hiralkumar Patel. 2:24 PM:- received email from Allan with revised report. revised report is not acceptable as doesn't include site-specific groundwater flow direction and scaled site map. also report has added appendix with PID readings during boring, but requires to have detailed boring logs with soil description, observations and PID readings on one page. as per report, wells installed on-site are 2 inch in diameter. 05/07/10-Hiralkumar Patel. 11:30 AM:- spoke with Allan. informed him that the submitted revised report is not acceptable. asked him to submire re-revised report with: - detailed boring log with soil type, observation and PID readings (instead of separate appendix for PID readings) - site-specific groundwater flow direction (instead of assumptions based on nearby river) - scaled site map including only property line, building outline, underground gasoline tanks, remote fill ports, dispenser islands, current/former boring/well locations and site-specific groundwater flow direction - sample depth info in

GAS STATION/CAR WASH (Continued) **S110140247**

summary table of soil analyticals 12:45 PM:- left message for Mr. Shternlicht. 12:47 PM:- left message for Mr. Miller. 1:51 PM:- sent email to Allan requiring to submit re-revised report. email copied to Mr. Miller, Mr. Munoz and Mr. Shternlicht. checked PBS record. site address in PBS record hasn't changed yet. 2:01 PM:- sent email to Mr. Munoz with PBS correction form and asked him to submit form by end of 05/21/10 to avoid legal referral. email copied to Mr. Miller and Mr. Shternlicht. 05/11/10-Hiralkumar Patel. 4:51 PM:- received email from Allan with work plan for addt'l soil/groundwater investigation. 05/12/10-Hiralkumar Patel. 2:00 PM:- received call from Allan inquiring about approval status on submitted work plan. informed Allan that the department is still waiting for re-revised investigation report. so, once report is received and reviewed, the department will send STIP to property owner and submitted work plan will be reviewed only after STIP signed. 2:15 PM:- received re-revised report from Allan which is still missing site-specific groundwater flow direction. 3:25 pm:- spoke with Rich at EMC about site-specific groundwater flow direction. Rich mentioned that they can't triangulate existing wells as GW in all wells found at same depth during soil borings. no well survey done yet. asked Rich to survey existing wells to confirm groundwater depth and determine site-specific groundwater flow direction and then submit revised report including site-specific groundwater flow direction and groundwater contour map. 05/17/10-Hiralkumar Patel. 11:15 AM:- spoke with Allan. asked him to find out source and discharge of water used in car wash operation. 12:35 PM:- received call from Allan. he stated that water for car wash comes from city supply system and used water goes into city sewer system. 05/18/10-Hiralkumar Patel. 9:10 AM:- received email from Allan with GW contour map. after discussing with DEC Austin, case transferred to DEC Vadim Brevdo. summary: - line was found leaking suppling super gas to dispenser #6 (leak was found in portion between dispenser #7 to #6) - found high MTBE (no other components) in soil and groundwater sample from boring installed in area betweeen dispenser #7 and #6 along 10th ave - found high VOC contamination (BTEX and MTBE) in soil samples at groundwater interface along 10th Avenue which is western (and downgradient) side of the property - according to Phase II done in Aug. 2008, groundwater was found at 12 ft bg - according to Phase II done in Aug. 2008, site has total of eight dispenser islands: five are located in the southern portion of the site parallel to West 14th street and three are located in the northern portion of the site parallel to 10th ave DEC requires: 1) scaled site plan including all current/former tank systems, 2) complete soil and GW investigation, 3) site specific GW flow direction, 4) correction of PBS record (PBS record shows site address as 450 W 15th street, but tanks are located at 70 10th Ave) **refer to spill #: 0412142 also.** 05/28/10: This spill case transferred from K. Patel to J. Kolleeny. - JK 06/10/10: Reviewed Supplemental Investigation Work Plan rpt by Envt'l Maintenance Contractors (consultant), dated 6/9/10 (in eDocs). Work plan proposes drilling 13 soil borings adjacent to existing monitoring wells to delineate contamination vertically (below water table) as requested by Kumar Patel of DEC, and 4 borings off-site, to be converted into monitoring wells. Based on field observations, addt'l off-site borings/wells may be drilled. I sent approval letter (in eDocs) to Mr. Brandon Miller (RP), cc's to Rich Stumbo & Allan Ciriaco of EMC, asking for 1 more off-site boring/well across 10th Ave. from MW-9 (currently worst well), asked for highest PID interval

GAS STATION/CAR WASH (Continued) **S110140247**

in on-site borings to be sampled for lab analysis, asked for all wells to be sampled, and asked that summary rpt include conceptual remedial strategy proposal. Set deadline of 8/20/10 for submission of summary rpt. - J. Kolleeny 06/15/10: On 6/11/10, received email from Allan Ciriaco of EMC, with attached revised site plan, modified to include addt'l off-site boring/well (in eDocs). - J. Kolleeny 06/22/10: On 6/18/10, received email from Rich Stumbo of EMC: Please find attached copy of revised drawing [in eDocs] indicating locations of proposed boring & mon well locations for site. Based on site reconnaissance, DIG SAFE search and ground penetrating survey (GPS), we discovered there is no access across street from property on 15th St (north side of property) because there are markings on sidewalk that state no drilling and DIG SAFE & GPS indicate that there are utility lines under areas of sidewalk on that side of street, therefore we will not perform any borings on that side of property; there are also no drilling markings in areas across street from property on 10th Ave, however we did find location SW of property across 10th Ave as indicated on attached drawing. Please note that for supplemental investig work being performed we will only be drilling an addt'l two boring and mon well locations across streets from property, one being S across street on 14th and other SW across street on 10th Ave. We plan to start drilling activities on 6/18/10. Please review & approve or comment upon receipt. I sent reply: That's unfortunate; water table map sent earlier by Allan seemed to indicate more westerly GW flow direction, rather than southwesterly, and since most contaminated on-site wells were MW-8, MW-9 and MW-10, I felt that most likely area for off-site impacts would be directly across 10th Ave. I noticed that no drilling area along west side of 10th Ave seems to end at point where Avenue begins to curve to southwest to merge with West 14th Street - would it be possible to put well there? Also, I don't see indication that western edge of triangular median is off limits to drilling - could well be put there? If you can think of any other possible ways to safely investigate these areas for off-site impacts, please let me know. In any case, you should proceed with supplemental invest using revised site plan showing most recent proposed drilling locations, based on site recon, DIG SAFE search and GPR survey. If you can also put well or wells at locations I suggested above, please let me know. Rich wrote back: Unfortunately we will be unable to drill along West Side of B'way marking no drilling extends around that corner also I did not notice that we didn't mark that on drawing submitted a revised drawing will be submitted with this correction. Also western edge of triangular median has utilities and municipal pipe markings within as per DIG SAFE. We have permits available to drill in these areas, however it does not look like we will be able to safely access subsurface soils in these areas to further assess. We plan to be on site to begin with off-site borings that we can safely access. I will update you on any new info that becomes available as project moves along. - J. Kolleeny 08/19/10: On 8/18/10, received email from Allan Ciriaco of EMC with pdf file of supplemental investig rpt; after quick prelim review, called Allan and pointed out that fig in rpt only has estimated GW flow direction, not calculated water table contour map. I asked that gauging data for wells be used to generate map each time GW is sampled. He said he would prepare map, and asked if I had any other comments on rpt; I told him I would let him know. On 8/19/10, sent email to Allan, cc to Richard Stumbo of EMC, saying I had no other suggested revisions to rpt and requesting that he forward hard copy

GAS STATION/CAR WASH (Continued) **S110140247**

of rpt with GW gauging data table and water table contour map, and either a pdf of entire revised rpt or pdf of addt'l materials, upon receipt of which I will complete rpt review and respond to recommendations. - J. Kolleeny 08/23/10: Received email from Allan Ciriaco of EMC with attached pdf of water table contour map I requested (in eDocs). Awaiting hard copy of rpt. Sent email reply to Allan: Thanks for water table contour map. In future rpts, please include not only up-to-date water table map but also table with well gauging data. Do you have any idea why map you sent shows all well locations either as cones of depression in water table or mounding locations? - J. Kolleeny 08/26/10: Received email from Allan Ciriaco of EMC responding to my 8/23/10 question: 10th Avenue houses a large number of municipal utilities including water, electric, sewer, gas, etc. In addition, a number of large buildings could cause these anomalies in form of cones of depression at sampling/measuring locations. Also, please note that there are three (3) large buildings located in close proximity locations with subject site as detailed in contour map which could also cause these anomalies. (???) - J. Kolleeny 08/31/10: Received hard copy of 8/13/10 Supplemental Subsurface Investigation Rpt by EMC on 8/26/10 (in eDocs). Results of on-site soil borings for addt'l vertical delineation of soil contam and two off-site borings/wells, and GW sampling from all on- and off-site wells showed high levels of petroleum contam on-site, but lab analyses did not show significant contam in off-site samples (although there were elevated PID readings, signs of staining and odors). Rpt recommends preparation of remedial action plan for DEC approval prior to starting any construction work at site, and abatement of contaminated subsurf materials at site in accordance with DEC-approved RAP during proposed construction activities. On 8/31/10, I sent letter (in eDocs) approving recommendations to Brandon Miller, cc's to Allan Ciriaco and Richard Stumbo of EMC. Set due date of 11/05/10 for submission of RAP. - J. Kolleeny 09/09/10: Received email from Allan Ciriaco of EMC with attached pdf files of RAP and HASP on 9/2/10. Reviewed and on 9/9/10 sent email to Allan, cc's to Richard Stumbo of EMC and Brandon Miller: I've looked over RAP & HASP. While I agree with general approach of soil excavation to remove contaminated material that may be acting as on-going source of GW contamination and soil vapors, there are a number of things that should be added to or revised in rpts. 1. RAP should include data tables summarizing all available soil & GW sample results, and a site plan diagram (not aerial photo) showing all sampling locations, plus other site features (USTs, dispensers, etc.). Site plan should also show outline of area to be excavated. 2. RAP mentions collection of soil samples after removal of USTs plus associated piping and dispensers, but does not discuss collection of end-point soil samples following excavation of entire site to target depth of 24 feet. End-point samples should be collected from multiple locations at bottom of excavation (even though it will be below water table) and from excavation sidewalls (this may be difficult due to presence of sheeting, but must be done) to characterize any residual contamination left behind by remedial action. RAP should include an end-point sampling plan and discussion. 3. I strongly suggest that some sort of oxygen-enhancing compound or chemical oxidant be applied to open excavation bottom, regardless of whether or not residual contamination is present, to expedite cleanup of GW contamination, which RAP does not currently address. 4. RAP should mention that weekly updates will be provided to DEC during remediation, as we

GAS STATION/CAR WASH (Continued) **S110140247**

discussed, and that DEC case manager will be consulted (and if possible will visit site) before proceeding with backfilling of excavation and construction of planned on-site building. 5. RAP mentions that planned on-site building will include vapor barrier. Unless building will have basement that will extend into, or nearly to, water table, construction plans should also include install'n of sub-slab depressurization system to prevent potential vapor intrusion from any residual soil and/or GW contamination. This should be discussed in RAP. 6. RAP must include plans for follow-up GW monitoring, with replacement of wells destroyed during construction and/or install'n of new wells, to evaluate effectiveness of remedial actions. 7. Discussion in HASP of air monitoring during excavation is not adequate (Section 8.2 Air Emission Control). I have attached generic Community Air Monitoring Plan. This plan should be modified to be site-specific and either incorporated into HASP or submitted as a separate document (CAMP). Please make necessary changes and additions to these documents and re-submit them to my attention. Feel free to contact me if you have any questions. P.S.: Before removing UST system, Petroleum Bulk Storage application form must be submitted to our PBS unit notifying them of tank removal, within 30 days prior to removal. - J. Kolleeny 11/04/10: On 11/2/10, received email from Richard Stumbo of EMC with attached letter (in eDocs) requesting extension of Nov. 5th deadline for submission of RAP until Dec. 1, 2010. Letter states that addt'l time is needed for all parties involved to become familiar with requirements of RAP and associated HASP, and to review and make changes to those documents to finalize them. On Nov. 4th, I sent letter (in eDocs) to Brandon Miller, cc's to Rich Stumbo and Allan Ciriaco of EMC, approving deadline extension to Dec. 1st. - J. Kolleeny 12/14/10: On 12/7/10, received revised RAP and HASP from EMC. After review, contacted Rich Stumbo of EMC on 12/14/10 and listed following problems with RAP: needs more specific info on collection of end-point soil samples; needs more specific info on type and quantity of chem ox and/or oxygen-enhancing product(s) to be applied to subsurface; and needs to have post-remediation/construction replacement monitoring wells installed at locations of current wells MW-9 and MW-10. Rich said they will revise RAP and re-send. - J. Kolleeny 12/20/10: Spoke with Rich Stumbo of EMC, he said project engineer Langan wants to again reduce depth of excavation, this time from proposed 16 ft bgs to 13 ft bgs, due to concerns about quantity of dewatering required and possible adverse impacts on nearby structures. I expressed concern that remedial plan keeps being reduced in scope, and that I don't want construction to proceed at site without spill being adequately addressed. I pointed out that worst soil and GW contam are localized in NW area of site, and asked if deeper excavation could be done in that area. Rich stated he will consult with developer and engineers and get back to me, including with another revised RAP. I also noted that GW samples haven't been collected since April 2010, and would be beneficial to have up-to-date data. He agreed. I sent email to Brandon Miller (RP rep), cc to Rich Stumbo & Allan Ciriaco of EMC: Dear Mr. Miller: I have been reviewing draft Remedial Action Plan for this spill site, and also discussing project with Richard Stumbo of Envt'l Maintenance Contractors. I believe it would be useful and appropriate to collect addt'l GW data, since monitoring wells at site were last sampled in April 2010, more than 7 months ago. I'd like to request that round of GW samples be collected from all existing on- and off-site wells and submitted for lab analysis of gasoline-related

GAS STATION/CAR WASH (Continued) **S110140247**

compounds, and results forwarded to DEC to assist in our review of RAP. Prior to sampling, wells should be gauged for depth to GW and for presence of free product. Depth to water measurements should be used to construct up-to-date water table contour map showing GW flow direction. Any measurable free product should be recovered by appropriate methods. Feel free to contact me if you have any questions. - J. Kolleeny 01/10/11: On 1/7/11, received email from Allan Ciriaco of EMC: Per your request please find attached groundwater sample results for 70 10th Avenue Project. Should you have any questions or require addt'l information please don't hesitate to give us a call. Attached was lab data for 12/23/10 GW sampling event performed at my request (in eDocs). I sent email reply: These data should be tabulated, listing only results for gasoline-related compounds, and presented in revised RAP for this site. Spoke with Richard Stumbo of EMC on 1/10/11, he said these results would be incorporated into revised RAP currently in preparation. He also said that since they now plan to excavate soil only to about 10 ft bgs, they are considering injecting RegenOx into monitoring wells, rather than applying to open excavation, which will likely not extend into water table. I suggested injecting by GeoProbe rather than using existing wells, which could be compromised by injections. He agreed to explore this option. - J. Kolleeny 02/03/11: On 2/1/11, received email from Rich Stumbo of EMC: Please find attached drawing [in eDocs] detailing locations of injection points (noted in color red including SB-7A, SB-8A, SB-9A and SB-10A) for bio-remedial product injection via GeoProbe for this project. Please note that injection points will be same locations as borings advanced during supplt'l investigative site work (SISW). Current monitoring wells MW-05, -06, -07, -08, -09, and -10 noted in green color will be sampled approx 2 months after injections & prior to construction activities that will destroy these wells. These are wells that when GW samples were collected & analyzed indicated elevated concentrations of VOCs and/or SVOCs. If time permits before excavation activities, a second round of injections will occur and same wells if still available will be re-sampled to determine effectiveness of bioremediation. In addition please find attached post-construction monitoring well locations for monitoring GW after completion of construction. For further reference we have included Project Architect Site Plan [in eDocs] showing proposed cellar/subgrade construction. This site plan indicates locations of post-construction injection wells in cellar that we would install in order to continue injecting bioremedial product into GW after building has been completed. We would like to schedule bio-remedial product injections as soon as possible and wanted to see if you had any issues with locations of injection points and wells that would be sampled. We look forward to hearing back from you as soon as you get chance. On 2/3/11, I spoke with Aaron of EMC, suggested they also inject at boring locations SB-3A and SB-4A; then I sent email to Rich Stumbo: I spoke with Aaron at your office today, and I suggested also injecting at former boring locations SB-3A and SB-4A, in addition to locations you have proposed. Please include this in revised RAP and send it to me as soon as possible, as I would like to formally approve RAP prior to you beginning to implement work. Also, please always remember to reference project's DEC Spill Number (0911962) in any emails regarding this project, and in all other project-related correspondence. - J. Kolleeny 02/08/11: Reviewed final revised RAP by EMC, dated 1/25/11, received 2/7/11 (in eDocs). RAP proposes removal

GAS STATION/CAR WASH (Continued) **S110140247**

of all ASTs/USTs at site, injections of RegenOx in most impacted area, excavation of soil in most impacted area, down to 12 ft bg, application of RegenOx to bottom of pit, collection of end-pt samples, install'n of vapor barrier, install'n of three post-construction mon wells for follow-up monitoring, and if monitoring continues to show impacts, install'n of four post-construction injection wells in bldg cellar for addt'l RegenOx injections. I sent approval letter (in eDocs) to Brandon Miller, cc to Rich Stumbo of EMC, stating that in addition to 3 post-construction wells, any on- and/or off-site mon wells remaining after site development should be included in follow-up GW monitoring, and that if monitoring shows contamination remains elevated, addt'l remedial actions may be required. - JK 09/26/11: Received email from Allan Ciriaco of EMC with attached pdf file of GW Sample Analysis Rpt. After prelim review, sent email reply: Mr. Ciriaco, Can you please revise GW data comparison table to include line for Total VOCs and for Total SVOCs? I find that is more convenient way to evaluate changes in GW quality than looking at increases and decreases in concentrations of individual compounds. Please also include site plan diagram showing monitoring well locations and injection locations, and site location figure with USGS Topo Quadrangle as base map, or Hagstrom Map, Google Earth Map, or equivalent as base map. - JK 09/27/11: Received email from Allan Ciriaco of EMC with GW Sample Analysis Rpt dated 9/23/11, with data table revised as I requested to include lines for total VOCs/SVOCs (rpt in eDocs). Table gives GW results for Dec. 2010, prior to injections, for April 2011 after 1st round of injections, and for July 2011 after 2nd round of injections. Data show total VOCs increased significantly for most wells after injections (esp after 2nd round). For example, MW-5 had 285 ug/L tVOCs in Dec. 2010, 877 ug/L tVOCs in April 2011, and 1,125 ug/L in July 2011; MW-6 had 172 ug/L tVOCs in Dec. 2010, 97 ug/L in April 2011, and 17,452 ug/L in July 2011; MW-7 had 1,830 ug/L tVOCs in Dec. 2010, 1,198 ug/L in April 2011, and 4,214 ug/L in July 2011; MW-8 had 1,138 ug/L tVOCs in Dec. 2010, 2,110 ug/L in April 2011, and 4,075 ug/L in July 2011; MW-9 had 9,607 ug/L tVOCs in Dec. 2010, 29,718 ug/L in April 2011, and 27,310 ug/L in July 2011. Of seriously contaminated wells, only MW-10 showed decreases from initial contam levels: 17,109 ug/L tVOCs in Dec. 2010, 13,374 ug/L in April 2011, and 9,810 ug/L in July 2011. Rpt states that a 3rd round of RegenOx injections was performed on Sept. 21-22, 2011, and that GW will be sampled again on Nov. 17, 2011. - J. Kolleeny 09/28/11: Sent email to Allan Ciriaco of EMC: Allan, I looked over rpt and notice that on 1st page, it says that another round of injections is recommended, but then on next page it says that injections were performed on Sept. 21st & 22nd. So am I correct in assuming that this rpt does not require DEC response/approval? Also, I noticed that levels of total VOCs in many wells increased after first two rounds of injections and are pretty high in several wells. If high levels of total VOCs persist after 3rd round of injections, you might consider doing vacuum-enhanced fluid recovery with vac truck on worst wells to try to bring dissolved-phase contam levels down and pull water through soil to strip soluble contaminants off soil. This would also bring air into subsurface to promote biodegradation. Later, sent another email: Allan, I have another question: besides RegenOx injections, are other elements of approved RAP, such as UST removal, contaminated soil removal, application of RegenOx to excavation pit, etc., yet to be performed? - J. Kolleeny 09/30/11: On 9/29/11, received email from

GAS STATION/CAR WASH (Continued) **S110140247**

Richard Stumbo of EMC, responding to my question: Jonathan, There are other elements of RAP that have not been done. Ownership is still waiting on closing of property to occur. We anticipate that this may happen within next month, at which time existing USTs will be decommissioned and removed and area of contamination will be excavated as per RAP. - J. Kolleeny 12/20/11: Reviewed GW Sample Analysis Comparison Rpt dated 12/14/11 by EMC, received on CD by mail on 12/19/11 (in eDocs). Rpt states that 3rd round of RegenOx injections was performed Sept. 21-22, 2011; EMC returned to site on Nov. 28, 2011 to properly develop monitoring wells, and sampled wells on Nov. 29th. Results show well MW-4 had 447 ug/L total VOCs (down from 825 ug/L in July 2011 after 2nd round of injections; had 886 ug/L tVOCs prior to any injections); well MW-5 had 2,976 ug/L tVOCs (up from 1,125 ug/L in July 2011; had 285 ug/L prior to injections); well MW-6 had 25 ug/L tVOCs (down from 17,452 ug/L in July 2011; had 172 ug/L prior to injections); well MW-7 had 845 ug/L tVOCs (down from 4,214 ug/L in July 2011; had 1,830 ug/L prior to injections); well MW-8 had 1,133 ug/L tVOCs (down from 4,075 ug/L in July 2011; had 1,138 ug/L prior to injections); well MW-9 had 16,890 ug/L tVOCs (down from 27,310 ug/L in July 2011; had 9,607 ug/L prior to injections); and well MW-10 had 7,804 ug/L tVOCs (down from 9,810 ug/L in July 2011; had 17,109 ug/L prior to injections). Overall, results are mixed; most wells showed decreases from higher levels of contam detected after 1st and/or 2nd round of injections, but not necessarily decreases from pre-injection contam levels. Rpt states that new property ownership will proceed with excavation of contam soil, as per approved RAP, in March 2012, and that USTs will be slated for removal. - J. Kolleeny 06/01/12: DEC was notified that during UST removal activities at this site, a flash/explosion occurred when a worker was sawing a metal conduit. Jeffrey Vought of DEC spill response responded to site. Two workers were taken to a hospital, treated for minor injuries and released. Residents of two nearby buildings were evacuated; residents of one bldg were allowed to return but other bldg was kept evacuated for engineering evaluation of structural integrity. I contacted Richard Stumbo of Envt'l Maintenance Contractors (consultant) and requested summary of incident, sending follow-up email: Rich, As we discussed today, please provide DEC with a written summary of flash/explosion incident which occurred today during UST removal activities at your earliest convenience. In particular, summary should address whether or not proper procedures were followed to render USTs free of explosive vapors prior to any cutting or piercing of tanks or of piping leading into/out of tanks. Vadim Brevdo (my supervisor) sent follow-up email: Dear Mr. Stumbo, I am Vadim Brevdo, Chief of Petroleum Remediation Section in DEC in which this project is being managed by Jon Kolleeny as project manager. I am requesting that in addition to written summary of flash/explosion incident which Jon requested, you also provide summary of actions that will be undertaken on this project to address this accident and prevent similar accidents in future. This should include but not be limited to following: what steps/measures will be taken to prevent similar accidents in future, what is being undertaken to address situation, what is being done to return residents of one of buildings evacuated, and what measures you intend to undertake to ensure safe operations on site in future. Please note that this is time-sensitive and I want to have your summary no later than noon, Monday, June 4. Please keep Jon Kolleeny promptly informed on all further developments associated with this accident. Send all

GAS STATION/CAR WASH (Continued) **S110140247**

information to Jon Kolleeny and cc me on your e-mails. - J. Kolleeny 6/4/12-Vought-See also closed spill #1202128 for info regarding explosion on 6/1/12 during UST removal at this same site. 06/6/12: On 6/5/12, received email from Allan Ciriaco of Envt'l Maintenance Contractors with attached summary of 6/1/12 flash/explosion incident (in eDocs as brief). Summary states that USTs were properly cleaned and purged of vapors, and speculates that a spark generated by cutting conduit with saw ignited pocket of vapor in tank area or in pea gravel surrounding tank. Tank removal contractor, Justin Group, Inc., will implement a procedure to include addt'l tool box meetings during this type of work and perform screening for combustible gases before any activities that produce a flammable environment are performed. I sent email to Allan and to Richard Stumbo: Allan and Richard, Thanks for summary. I'm a little unclear about metal conduit that was being cut. Was that a part of UST system, e.g, a line into or out of tank for electronics, or maybe for cathodic protection? If possible, please provide a little more detail about metal conduit that was being cut at time of flash. Received email response from Rich Stumbo on 6/6/12: Jonathan I don t know if anyone is positive at this time as to what conduit was part of. My understanding is that there were no wires in conduit may have been pulled?? but once contractor is back on site they will try to determine what conduit serviced. - J. Kolleeny 10/19/12: On 10/9/12, received Final Rpt for UST Removal Project dated 10/2/12, by Envt'l Maintenance Contractors, Inc. On 10/8/12, received email from Rich Stumbo of EMC: Jonathan, Per our correspondance last week we submitted a hard copy of UST closeout rpt. Please let me know if there are any questions or if addt'l information is required. Clean soils surrounding remedial area have been excavated to allow for required shoring for access to contaminated materials. Upon completion of install of shoring required, excavation activities will commence and contaminated soils will be enountered. All work is to be performed in accordance with RAP. We are tentatively scheduled to remove contaminated materials on Wednesday or Thursday of this week. We will contact you when we are confirmed with a start date. On 10/18/12, received email from Rich Stumbo: Jonathan just wanted to follow up on status of rpt submitted. Have you had chance to review and comment on. If all is acceptable please let us know as ownership is anxious to close out that part of project. Currently we do not have a schedule as to when we will be digging out contaminated soils as part of RAP, however we will contact you as soon as we have been informed by ownership. I sent reply: Richard, I did receive rpt, but haven't yet had a chance to look at it. I'm not sure what you mean when you say owner is anxious to close out this part of project ; I'm assuming tank excavation has already been backfilled, you're not waiting on my review of rpt to do that, are you? Does rpt specifically request a DEC response, to confirm something along lines of no further action with respect to UST closure is required ? We don't usually issue statements like that until a site is ready for spill closure. Anyway, I'm out of office tomorrow but I will try to look at rpt early next week and I'll get back to you with any questions and/or comments. On 10/19/12, Rich sent reply: Jonathan, I guess ownership just wants to make sure that you have everything that you need as it relates to removal of USTs. If there is something else that you would need please let me know after your revew. Remaining remedial work will possibly be starting up this morning but will let you know as we find out info needed. - J. Kolleeny 10/23/12: After reviewing UST removal rpt, I spoke with

GAS STATION/CAR WASH (Continued) **S110140247**

Rich Stumbo of EMC, requested revised site plan diagram showing end-point soil sample locations, modified to show other pertinent site features such as existing wells, dispensers, etc. Rich agreed to provide this. - JK 11/19/12: Sent email to Rich Stumbo of EMC: Richard, I was wondering if there's been any progress on revising site plan diagram in UST closure rpt for this site? I'd like to upload rpt into our database, but I want to wait for a pdf file of rpt with a site plan diagram revised as we recently discussed, to show pertinent site features with labels, and with monitoring wells and injections wells more clearly labeled. Please let me know. Rich sent reply: Jonathan, I apologize we have been so busy that I have not had chance to pull that info and revise, but will take care of it this week. Please note that contractor will be excavating tomorrow and we should be collecting end-point samples either this Wed or next Monday depending on how quickly they can complete work. - J. Kolleeny 12/10/12: Received email from Allan Ciriaco of EMC: Mr. Kolleeny, sorry for delay, please find attached revised drawing as per your request. Should you have any question or addt'l required information please don't hesitate to give us a call. I inserted revised site plan into pdf file of 10/2/12 UST Removal Rpt, uploaded rpt into eDocs. Rpt summarizes removal of six 6,000-gal USTs, collection of 7 end-pt soil samples. Only one end-pt sample (#3, from near SW corner of tank pit, had several SVOCs above cleanup guidelines. Rpt states that this area will be addressed through DEC-approved RAP. - J. Kolleeny 12/11/12: Received email from Allan Ciriaco of EMC: Mr. Kolleeny, please find attached rpt for endpoint samples collected from pit at 461 West 14th Street, New York City, NY. Should you have any question or addt'l required information please don't hesitate to give us a call. Letter rpt dated 12/10/12 (in eDocs) says excavation was completed on 11/25/12, twenty end-pt samples were collected on 11/26/12. Results show no VOC or SVOC exceedances of cleanup guidelines (in fact, no VOCs detected, some minor SVOCs detected in a couple of samples). Allan sent follow-up email: Mr. Kolleeny, can you confirm if you received revised drawing and endpoint sample rpt that we sent. I sent email reply: Mr. Ciriaco, Yes, I received revised drawing of UST excavation with end-point sample locations yesterday, and today I received letter with end-point results from remedial excavation and diagram showing those end-point sample locations, thanks. I have several questions. Was RegenOx applied to excavation prior to backfilling, as per approved RAP? Also, will soil excavation and end-point sample data, and all other remedial actions, be summarized in a Final Rpt, to be submitted after completion of first round of post-remedial GW sampling, as per approved RAP? And will 3 post-construction replacement monitoring wells be installed as per approved RAP? When do you plan to conduct first post-remedial GW sampling event? Please let me know. - J. Kolleeny 12/18/12: Spoke with Richard Stumbo of EMC on 12/17/12, he noted that end-pt soil samples showed very little remaining soil contam in excavation pit, and suggested that instead of applying chem ox to pit as proposed in approved RAP, they backfill and install injection wells in basement of new bldg and inject chem ox into GW. I asked that he prepare an amendment to RAP for my review/approval. He sent such Amendment (in eDocs); after prelim review, I sent email: Richard, I have a question. Amendment to RAP states that vapor barrier will be installed prior to backfilling excavation, and that three injection wells will be installed within excavated area. Doesn't this mean that you will be drilling through vapor barrier to install injection

GAS STATION/CAR WASH (Continued) **S110140247**

wells? Won't that compromise vapor barrier? Please let me know. Then sent another email: Richard, I have another question. Approved RAP for this project included statement that if follow-up GW monitoring continues to show elevated contaminant levels, 4 post-construction injection wells will be installed in completed building's cellar for addt'l bio-remedial injections (this statement is in section, Follow Up GW Testing, on pages 14-15). Would those 4 addt'l injection wells be in addition to 3 injection wells proposed in Amendment to RAP, or would 3 injection wells proposed in Amendment to RAP supercede statement in original RAP about installing 4 addt'l injection wells? (Are 3 injection wells proposed in Amendment to RAP all located within anticipated basement?) Please let me know, and please clarify this issue when you revise Amendment to RAP. - J. Kolleeny 01/02/13: Received email from Richard Stumbo of EMC: Jonathan, Happy new year. We will have a drawing and narrative sent to you by end of this week detailing answers to your questions. We are just trying to see what we can fit into basement of building at this time because of bathroom and mechanicals that are being installed in basement. - J. Kolleeny 01/07/13: Randy Austin (R2 Spill Engineer) was copied on letter from NYCDEP Bureau of Envt'l Planning & Analysis to CEQR examiner at NYC Board of Standards & Appeals, with comments on site assessment rpts by Langan Engrng for this property and an adjacent property, which are planned for one development. Randy forwarded letter (in eDocs) to me. - J. Kolleeny 01/11/13: On 1/8/13, received email from Allan Ciriaco of EMC with attached revised Amendment to RAP. I contacted Richard Stumbo of EMC and noted that new proposal for post-construction monitoring wells no longer includes proposed well at location of former well MW-9, which was most impacted well at site. Rich agreed to add back in that well and re-submit. On 1/10/13, received email from Allan Ciriaco with Amendment to RAP revised as of 1/10/13 (in eDocs). RAP Amendment notes that end-point soil samples from remedial excavation showed little to no residual soil contamination. Therefore, EMS recommends injection of bio-remedial product into subsurface to treat contaminated GW, rather than application of bio-remedial product to excavation pit as originally proposed in approved RAP. To accomplish this, three 4-inch injection wells will be installed within excavation area and incorporated into planned building s basement during construction. A vapor barrier will be installed after backfilling excavation and placing six inches of gravel on top; barrier will be flashed up basement walls and up well casings. Amendment also shows proposed locations for 4 post-construction monitoring wells for follow-up GW monitoring, with one well in excavation/basement area (4-inch) and 3 wells in sidewalk along 10th Ave (2-inch), including well at former location of MW-9. EMC proposes to collect GW samples from two of three injection wells and monitoring well in basement area to determine type of bio-remedial product to inject and necessary quantities. After construction, 4 post-construction monitoring wells will be sampled, and final rpt will be prepared documenting all remedial activities and post-construction GW sample results, with recommendations for further action as appropriate. I sent approval letter (in eDocs) to RP Brandon Miller, cc's to Richard Stumbo & Allan Ciriaco of EMC. - JK 05/02/13: On 4/30/13, received email from Richard Stumbo of Envt'l Maintenance Contractors, with attached info on vapor barrier and tape they intend to install beneath planned building at site (info in eDocs as brief). Email stated: Jonathan please find attached a copy of specs for vapor barrier that ownership would like to apply in pit.

GAS STATION/CAR WASH (Continued) **S110140247**

Vapor barrier that ownership would like to apply is EnviroLiner 6030 (30 mil) and based on our review we believed that vapor barrier complies with ASTM standards and with NYSDOH guidance on soil vapor intrusion. Let us know if it meets with satisfaction of your office. I sent email reply: Yes, proposed vapor barrier complies with ASTM standards and with NYSDOH guidance on soil vapor intrusion. As such, it should provide adequate protection from potential intrusion of any petroleum vapors emitted by residual soil and/or GW contamination at site. Care should be taken during install'n of vapor barrier to insure it is properly sealed at critical points, such as where utilities or GW monitoring/injection wells enter building. Thanks for providing this documentation. - J. Kolleeny 03/11/14: On 3/6/14, received an email from Allan Ciriaco of Envt'l Maintenance Contractors, Inc. with attached pdf file of GW Sample Analysis Rpt dated 3/5/14. I sent email reply noting that rpt does not include a site plan showing GW sample location and other pertinent site features. I requested that he send a site plan showing current site conditions, including on-site structure(s), locations of existing injection and monitoring wells, and three proposed monitoring well locations for inclusion in rpt. On 3/10/14, received two site plans (one of which appears to be an as-built architectural drawing of new on-site bldg); I inserted diagrams into 3/5/14 rpt and uploaded to eDocs. Rpt presents results of one GW sample collected from monitoring well RMW1 (located within cellar of bldg), showing no detections of any petroleum-related VOCs or SVOCs. Rpt recommends that three monitoring wells be installed in sidewalk along 10th Ave (to west of site) and sampled to determine current GW conditions in those areas, as per amended RAP dated 1/10/13. I sent email to Mr. Ciriaco stating: Mr. Ciriaco, Thank you for site plan diagrams; I have added them into GW Sample Analysis Rpt you submitted in your earlier email. Rpt includes a recommendation to install and sample three post-construction monitoring wells in sidewalk along 10th Avenue. Since these actions were already proposed as part of January 2013 amended Remedial Action Plan which I approved, I do not intend to issue a formal response approving current recommendation in this rpt. If there is any problem with this, please let me know. - J. Kolleeny 05/28/14: Received phone call from Allan Ciriaco of EMC, who said they have successfully installed two of three proposed post-construction monitoring wells in sidewalk along 10th Ave. (wells RMW-2 and RMW-4), but were not able to install 3rd well RMW-3 due to repeated refusals (see well locations in DecDocs as drawing dated 2/5/13). He asked if it would be okay to not install that 3rd well due to difficult drilling conditions, and to go ahead with sampling of 2 new wells. I asked what kind of drill rig they were using and he replied it was a GeoProbe rig but with hollow-stem auger drilling capability. I said I needed to review available historical GW data and well locations, but would get back to him later in day. After reviewing past GW data and well locations, I sent email to Allan, cc to Richard Stumbo of EMC: Allan, I took a closer look at past GW data, and I'm okay with holding off on installing proposed well RMW-3 for now. However, when you go to site to sample wells RMW-2 and RMW-4, please re-sample well RMW-1 as well. If results for well RMW-1 and/or RMW-2 show significant levels of GW contamination, then I'll again ask that another effort be made to re-install a well at approx proposed location of RMW-3, perhaps using a more heavy-duty drill rig. Please let me know when you have GW sample results, and also please forward details about GeoProbe rig with hollow-stem auger that

GAS STATION/CAR WASH (Continued) **S110140247**

we discussed earlier today. - J. Kolleeny 05/29/14: Received email from Allan Ciriaco of EMC with attached info on GeoProbe drill rig used to install post-construction monitoring wells (in DecDocs). I sent email reply, with cc to Richard Stumbo of EMC: Mr. Ciriaco, Thanks for this info. I believe a heavier-duty drill rig should be used for hollow-stem auger drilling in this setting, where rocks and other subsurface obstructions are likely to be encountered. Was soil sampling performed during install'n of two successful wells? Received email reply from Rich Stumbo: Jonathan, We did not collect any samples, however we did screen soils as they were coming up with a PID. Screening indicated very low concentrations of volatiles. Technicians on site did not observe or smell any contamination within soils encountered during borings. We will forward your recommendation to boring company that we used for future reference. We will be collecting water samples during next week and will forward you a copy of rpt by some time around June 16, if not sooner. Appreciate your time with this. - J. Kolleeny 07/09/14: On 7/7/14, received Post-Construction Mon Well Install'n and Sampling Rpt by EMC, sent by email from Allan Ciriaco of EMC. Rpt summarizes install'n of 3 post-construction mon wells in sidewalk along 10th Ave., and sampling of those wells plus mon well installed in new bldg's basement. Results show significant dissolved impacts in 2 of sidewalk wells, moderate impacts in basement well. Based on data, EMC recommends an addt'l bio-remedial application. I sent email to Ciriaco requesting that rpt be revised to include lines for total VOCs/SVOCs in GW data tables, and to provide details re bio-remedial application. On 7/8/14, received revised rpt (in DecDocs) by email from Ciriaco. Data table shows sidewalk replacement well RMW-2 had 3,969 ug/L total VOCs (near former well MW-9 which had 16,890 ug/L tVOCs when last sampled in Nov. 2011), sidewalk replacement well RMW-3 had 1,000 ug/L tVOCs (near former well MW-10 which had 7,804 ug/L when last sampled in Nov. 2011), and basement well RMW-1 had 336 ug/L tVOCs (was ND when sampled in Feb. 2014). Based on data, EMC recommends bio-remedial application involving injections of RegenOx into 3 injection wells in bldg basement, then deployment of ORC Advanced socks into injection wells for continuous slow release, with follow-up GW sampling of 4 post-construction wells (1 in basement, 3 in sidewalk). I sent letter (in DecDocs) approving addt'l bioremedial applicatn to Brandon Miller (RP), cc's to Allan Ciriaco & Richard Stumbo of EMC, noting that if injections do not bring contam down to levels suitable for spill closure, addt'l GW mon and/or remedial actions may be necessary. Then sent email to Ciriaco & Stumbo noting that follow-up GW samples need only be analyzed for VOCs (not SVOCs), that when requesting spill closure, rpt should include spill history and risk assmt, and that address on site's PBS reg should be corrected. - J. Kolleeny 12/30/14: Reviewed rpt by Envt'l Maintenance Contractors, Inc. dated 12/4/14 (in DecDocs), which summarizes application of bioremedial product (RegenOx & ORC Advanced) at site in August 2014, and presents results of follow-up GW sampling on 11/19/14. GW samples from four post-construction mon wells show well RMW1 (in cellar of new bldg) had 36.7 ug/L total VOCs (down from 335.9 ug/L in June 2014, prior to bioremedial application), well RMW2 had 1,232.1 ug/L tVOCs (down from 3,969.2 ug/L in June 2014), well RMW3 had 651.1 ug/L tVOCs (down from 1,000.3 ug/L in June 2014), and well RMW4 was ND (had 6 ug/L tVOCs with no exceedances in June 2014). Based on improvement in GW quality, EMC requests spill closure. I sent letter (in DecDocs) to RP Brandon Miller, cc's to Rich Stumbo and Allan Ciriaco of EMC,

GAS STATION/CAR WASH (Continued) **S110140247**

requesting another round of GW sampling from 4 wells to confirm improvement in GW quality and show that contam levels are continuing to decrease. Mr. Miller sent email to Rich Stumbo of EMC, cc'ing me: Rich- How many more times do you think we need to do this? I need a conservative estimate of cost associated with it. I sent email to Mr. Miller, cc's to Stumbo and Ciriaco, stating that well RMW4 can be omitted from next sampling round to save a little on cost. - JK 04/10/15: Reviewed gw sampling rpt by Envt'l Maintenance Contractors, Inc., dated 3/12/15 (in DecDocs). Rpt presents results of GW sampling on 2/24/15 showing well RMW1 had 0 ug/L total VOCs (had 36.7 ug/L tVOCs in Nov. 2014 and 335.9 ug/L tVOCs in June 2014); well RMW2 had 201.3 ug/L tVOCs (had 1,232.1 ug/L tVOCs in Nov. 2014 and 3,969.2 ug/L tVOCs in June 2014); and well RMW3 had 292.5 ug/L tVOCs (had 651.1 ug/L tVOCs in Nov. 2014 and 1,000.3 ug/L tVOCs in June 2014). Rpt notes that data show VOC levels significantly lower than previous sampling events, indicating continued improvement in GW quality. Based on data, rpt recommends spill closure. In light of significant remedial actions performed at site (removal of USTs, soil excavation, ISCO injections) continued downward trend in residual dissolved-phase GW impacts, and engineering control (vapor barrier) implemented to prevent any petroleum vapor intrusion into new site building related to any residual petroleum impacts at site, I concur that spill closure is appropriate. I closed spill, sent closure letter (in DecDocs) to Brandon Miller (RP), cc's to Richard Stumbo and Allan Ciriaco of EMC. - J. Kolleeny 06/10/15: Received Well Decommissioning Rpt by Envt'l Maintenance Contractors, dated 5/17/15, via email from Allan Ciriaco of EMC (in DecDocs). Rpt presents photo documentation of proper abandonment of monitoring wells and ISCO injection wells at site. - J. Kolleeny"

DEC Memo:	"06/01/12-Hiralkumar Patel. DEC received notification from NYC OEM about explosion at former gas station during removal of the gasoline tanks. 11:15 AM:- visited site. met with NYC OEM. contractor, Justin Group, was hired to remove six 6,000 gal gasoline USTs. tank content was removed by Fenley & Nicol. contractor has removed four of the tank. while cutting pipes on the fifth tank, explosion occurred around 10:45 AM due to vapors in the tank. as per the contractor, tanks were gas free and that work was done by the same company, Justin Group. two people were injured: one person who was doing LEL and PID monitoring and other person who was doing the work. FDNY checked nearby buildings and overhead park (Highline park). no LEL or odors detected on- or off-site. two buildings (449 W. 14th St. and 450 W. 15th St) were evacuated by FDNY and NYC DOB. the residents of the 15th St. location have returned to their building, but the 14th St. building is still vacated, subject to a structural integrity inspection, since it adjoins the explosion location. a Stop Work order was issued by NYC DOB, and the Highline Park (adjoining structure) is being inspected for damage, as well. no petroleum vapors currently are present either in the exploded tank or in the area. 6/4/12-Vought-Spill transferred from DEC Patel to DEC Vought as Vought responded to site on 6/1/12 with Patel as Patel had committment elsewhere. See also open spill #0911962 at this same site managed by DEC Kolleeny. Vought received paperwork from DEC Patel that included the following contact information: Russell Agruja *Tank Removal Company* Justin Group Ph:(718)449-9500 Kenneth Fisher *Owner* Cozen O'Conner Ph:(917)806-9563 Nate Stone *Construction Manager* Ph:(732)904-4277 As per DEC Patel, contractor was onsite in process of full gas station decomissioning and was removing six(6,000-gallon) gasoline USTs and during removal of fifth UST, explosion occurred due

EXPLOSION AT FORMER GAS STATION (Continued) **S112146593**

to ignition of vapors inside UST. Liquid was removed from UST prior to decomissioning by Fenley & Nicol approximately two weeks ago. No product or liquid observed in tank as well as time of DEC site visit however 4'x4' burnt hole was observable in side of UST in excvation at approximately 8'below grade. DEC Patel noted that site represenatives noted that they were performing LEL monitoring via a CAMP when explosion occurred and two workers were in area(one performing air monitoring via PID and one doing tank cutting work). One worker was treated on-scene and released and the second worker was taken to local hospital and examined for internal injuries and was then released. No signs of soil contamination adjacent to UST however soils may have been backilled when USTs originally installed. Excavation immediately adjacent to pile support for Highline as well as adjacent to 449 West 14th Street and 450 West 15th Street. Both buildings were initially evacuated and then checked for explosive vapors by FDNY and levels were determined to be safe and both buildings were reoccupied. FDNY however did issue Stop Work Order for tank work onsite. Onsite agencies included: NYCOEM (Robert Treiland Ph:718-422-4868) FDNY Bureau of Fire Investigation (Randall Wilson Ph:718-921-9705) FDNY Bureau of Fire Investigation Fire Marshall (Joseph Pruden Ph:718-492-1880) FDNY Bureau of Fire Prevention (Prosalov) Friends of the Highline (Ronnit Bendavid-val Ph:212-229-4890) OSHA (Chung Huang Ph:212-620-3200) NYCDEP Hazmat (Harry Mayer) NYPD NYCDOB At time of site visit, NYCDOB inspected both the structural support for the Highline and well as the adjacent building at 449 West 14th Street and determined both were structurally sound and as such both were reoccupied and reopened. Vought returned to office and updated RSE and also spoke with DEC Kolleeny who will follow up with Richared Stumbo with respect to open spill #0911962. Vought spoke with DEC Kolleeny and Petroleum Remediation Unit will request summary of incident and preventive measures. Vought spoke with RSE on 6/1/12 who noted that as no release of product to soil or groundwater, that spill could be closed. RSE also noted via email that DEC had the hard copy paperwork for the tank closure filing for this site, under PBS #2-604379 and recently received this tank closure notification, and it hadn't been entered yet into the UIS Database but will be done so. Vought also received call from ECO Dainack and sent him copy of report as he responded to site after DEC left on 6/1/12. Spill closed by Vought."

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D005
Waste Description: BARIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: D024
Waste Description: M-CRESOL

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P075

MOUNT SINAI - BETH ISRAEL COMPREHENSIVE CANCER CENTER (Continued) 1001229432

Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: P188
Waste Description: BENZOIC ACID, 2-HYDROXY-, COMPD. WITH (3AS-CIS)-1,2,3,3A,8,8A-HEXAHYDRO-1,3A,8-TRIMETHYLPYRROLO[2,3-B]INDOL-5-YL METHYLCARBAMATE ESTER (1:1) (OR) PHYSOSTIGMINE SALICYLATE

Waste Code: U010
Waste Description: AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR) MITOMYCIN C

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U059
Waste Description: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code: U129
Waste Description: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

Waste Code: U132
Waste Description: HEXACHLOROPHENE (OR) PHENOL, 2,2'-METHYLENEBIS[3,4,6-TRICHLORO-

Waste Code: U150
Waste Description: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

Waste Code: U200
Waste Description: RESERPINE (OR) YOHIMBAN-16-CARBOXYLIC ACID, 11,17-DIMETHOXY-18-[(3,4,5-TRIMETHOXYBENZOYL)OXY]-, METHYL ESTER, (3BETA, 16BETA, 17ALPHA, 18BETA, 20ALPHA)-

Waste Code: U205
Waste Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Region:	2
DER Facility ID:	202743
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 11/18/94: REASSIGNED FROM SIGONA TO ZHITOMIRSKY ON 11/18/94. transfered from Hale to Tibbe. see also 94-05274 & 98-05205. Piping repaired, spill investigation, investigation/remediation ongoing. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 5/19/2011 The spill was reassigned from Joe O'Connell to Linda Ross 3/2/12 - Raphael Ketani. During February 2012, the spill case was reassigned to me. I reviewed the Work Plan for Monitored Natural Attenuation Program. The USTs in question failed their tightness tests during 1993. Subsequent to this, 430 gal. of diesel were collected from the water table. The subsurface is tidally influenced with a smear zone from 4 feet to 15 feet below grade. During 2002, bioremediation was conducted. The soil results from 3/18/03 showed very high concentrations for specific VOC analytes in the tens of thousands of parts per billions for the samples from SB-01 from 9 to 11 feet bgs, and from SB-02 from 5 to 9 feet bgs. The groundwater results were from non-detect to just slightly above standards. TCLP results were from non-detect to very low hits. No product has been seen on the water table since 2004. Groundwater sampling had been taking place quarterly at W-5, W-20, W-21, W-23 and W-24. From the review of the data, it appears that a new round of soil sampling should take place in order to confirm subsurface conditions. Later, John Lysiak of URS (the consultant for the MTA bus depot program) sent me tables of soil and groundwater analytical data from samples that were taken after 2003. I reviewed the data. The first sets of tables listed the total VOCs in parts per billion for each interval sampled for each boring (i.e. SSP-6: 5'-7'; 9,565 ppb total VOCs; 7'-9'; 35,318 ppb total VOCs; etc.) and then the total SVOCs (see the e-doc title DEC Hand Tabulation of Totals). These tables were followed by others listing the individual VOC analytes and the individual SVOC analytes for each interval sampled for each boring. I looked at only the latest sets of data for each boring. These were usually sets of data for samples collected during 2010 or 2011. While there sometimes were exceedences of particular VOC analytes that were double the standard or more, there were usually only one or two exceedences per sample. Sometimes the exceedence(s) was accompanied by analyte hits that were well

NYCT HUDSON DEPOT (Continued) **S100177042**

below standards. So, even though the VOC totals looked very high, the total value was mostly one analyte (i.e. 61,000 ppb of n-propylbenzene with a total of 61,636 ppb). Also, the exceeding analyte(s) was usually a degradation product of benzene. In short, the VOC contamination was low. However, the 10' to 11' sample from SSP-2 taken on 7/17/08 had 12,000 ppb of n-propylbenzene. The 5' to 7' sample from SSP-4 taken on 1/12/09 had 61,000 ppb of p-isopropyltoluene. The 9' to 11' sample from SSP-5 taken on 8/26/09 had 48,000 ppb of p-isopropyltoluene. The 7' to 9' sample taken from SSP-6 on 6/2/10 had 10,000 ppb of n-propylbenzene. The 11' to 13' sample from SSP-7 taken on 11/13/09 had 12,000 ppb of n-propylbenzene. The individual SVOC exceedences were almost exclusively those of the benzo series and the associated combustion products (chrysene, dibenzo(a)anthracene, indeno(1,2,3-cd)pyrene). While the exceedences may have been ten times the standard or more, they were not above several thousand parts per billion. Anthracene, acenaphthene, acenaphthalene, naphthalene, phenanthrene and pyrene were typically low throughout all of the soil samples. In total, the analytical results were very similar to those of historical fill, and not an oil spill. Recent groundwater samples were also taken from 2009 to 2011. The results were almost entirely non-detect for all of the samples. In some samples there were estimated values, but these were typically only slightly above the standards or below the standards. The groundwater didn't seem to be affected by the spill. This was probably due to the years of tidal flushing. I was informed that letters to the NYCT should go to: GREGORY MATHELIER CONSTRUCTION ADMINISTRATOR UST & ENVIRONMENTAL REMEDIATION PROGRAM ON-CALL PROJECTS/ CAPITAL PROGRAM MANAGEMENT MTA NEW YORK CITY TRANSIT 2 BROADWAY, D2.91, NY 10004 PHONE: 646-252-3470 FAX: 646-252-3140 E-MAIL: GREGORY.MATHELIER@NYCT.COM 3/12/12 - Raphael Ketani. A search of the PBS database did not reveal a registration for the two side by side tanks, nor the other two tanks to the north. I sent an e-mail to Toni Watts of the Safety Division of the NYCT (646) 252-5939/Toni.Watts@NYCT.com requesting that the tanks be investigated and that a PBS registration be established. I added that the lack of a registration was a violation of 6NYCRR Part 612. Ms. Watts found the PBS registration. It is #2-190284. However, it lists 6 above ground tanks. Not the two USTs that were of concern. The document doesn't list what type of fuels were in the tanks. 3/13/12 - Raphael Ketani. Gregory Mathelier of NYCT (646) 252-3470 called. He said that he is the point of contact for all correspondences regarding NYCT sites which are under the Consent Order. We discussed the tank registration for the site. I commented that there used to be a 550 gal. UST north of the twin large tanks and also a 5,000 gal. heating oil UST. These tanks were removed some time ago. I also stated that the twin 7,100 gal. tanks are not indicated as being either USTs or ASTs. Mr. Mathelier said that the 7,100 gal. tanks are USTs. I responded by saying that all four tanks had to be added to the PBS registration for the site as they were not on there. I added that this was a violation and that the spill would not be closed without a proper PBS registration. Mr. Mathelier said that he will take care of this. Later, Mr. Mathelier sent me an e-mail containing a map showing the 4 USTs in question and a PBS registration form indicating that the twin 7,100 gal. USTs are registered. As Mr. Mathelier explained and as the map shows, the 550 gal. UST and the 5,000 gal. UST are on NYC DOS property, not the NYCT property. 3/15/12 - Raphael Ketani. A case review meeting took place today. In

NYCT HUDSON DEPOT (Continued) **S100177042**

attendance were Hassan Hussein, EE 3 and head of the Hazardous Materials Unit, myself and the other members of the unit. The soil and groundwater analytical data were presented. Staff at the meeting stated that more information was needed in order to understand the case. Kevin Connare of URS (716) 856-5636 (the NYCT consultant) was contacted by phone and a teleconference ensued. Mr. Connare explained that the tanks were closed by cleaning them and then pumping in concrete slurry. The oil was first addressed by pumping and treating. About 430 gallons of product were collected from 1994 to 1997. A sheen hasn't been seen since at least a year ago. During April 4 to 7, 2002, RegenOx was pumped into 5 existing wells. Each well received 100 gal. of a mixture. There were 7 injection events. This work was done by Fenley & Nicol. RegenOx was pumped quarterly into the wells during 2007. Monitored natural attenuation was allowed to reduce the soil analyte concentrations since 2007. This involved taking confirmatory samples quarterly since 2007 and up until last fall. Since 1999, groundwater samples have been taken bi-annually. I asked Mr. Connare about the boring locations that were marked on one of the site maps which extend well north of the site. He stated that these were done in 1994 and 1995 by ADT and he knew nothing about them. 3/29/12 - Raphael Ketani. A case review meeting took place today. In attendance were Hassan Hussein, EE 3 and head of the Hazardous Materials Unit, myself and the other members of the unit. The soil and groundwater analytical data were presented. Kevin Connare of URS (716) 856-5636 lead the meeting. Mr. Connare stated that a comprehensive report will be submitted to the DEC regarding the site in the near future. 4/26/12 - Raphael Ketani. During this monthly meeting, the consultant, URS, stated that there was no remediation or monitoring activity at the site. Previous soil sampling via monitored natural attenuation was being allowed to reduce the analyte concentrations. Staff at the Department expressed concerns that no soil samples had been taken on the east side of the twin tanks and that the last set of soil results showed up to 60,000 ppb and 70,000 ppb of particular analytes in the soil on the west sides of the tanks. Staff from the NYCT stated that a petition for closure will be submitted. 1/31/2013 - Raphael Ketani. I received the URS Petition for Spill Closure Report dated January 2013 and began my review. 2/5/13 - Raphael Ketani. I finished my review of the Petition for Spill Closure Report. In summation from the report: Groundwater is present below the site from 4 to 8 feet below grade with a 4 foot tidal fluctuation. The ground below the site contains a thick layer of artificial/anthropogenic fill - from the soil analytical chemistry and the boring logs, the fill appears to be ash and cinder with wood, concrete, brick and other manmade materail. The twin 7100 gal. UST systems were integrity tested during September and October 1991 and each system failed its respective test. According to the closure report, the failed portion of the systems was the piping. A subsurface investigation took place during 1993 and 1994 and a plume of oil was discovered on the water table. Wells W-1 to W-3 were installed during July and August 1993 and up to 4.26 feet of oil was found on the water table. The plume turned out to be diesel fuel from the twin 7100 gal. UST systems and fuel oil from a UST under the adjacent NYC DOT site to the north. An estimated 550 to 1100 gals. of product was lost from the NYCT UST systems. From April to June 1994, wells W-5 to W-7 were installed. A sheen was present in W-5. In 1994, wells W-8, W-11, W-13 to W-17 were installed. A product recovery system was installed and operated from June 1994 to December 1997

NYCT HUDSON DEPOT (Continued) **S100177042**

when recoverable product was no longer present. About 430 gals. of product was recovered. During December 1998, the USTs were cleaned out and abandoned in place with sand. During January 1999, borings GP-1 to GP-4: GP-1 to GP-3 were installed around the tanks and GP-4 was installed in the vicinity of the pump house. All of the borings had odors and product. During February 2000, wells W-19 to W-23 were installed west, north and south fo the USTs. No wells were installed east of the USTs due to the bike path. During September 2000, borings GP-5 to GP-10 were installed to the south, north, east and west of the USTs. During 2002, the bioremediation program was started. Monitored natural atttenuation was started during May 2007. From May 2007 to June 2011, quarterly soil and groundwater sampling took place. Residual VOCs and SVOCs were found in the soil and the absence or minor presence of VOCs in the groundwater. Wells W-25 and W-26 were installed northeast and southeast of the USTs during July 2007 and had a few soil VOCs above CP-51 standards, but few SVOCs. Confirmatory soil borings SSP-1 to SSP-3 were installed on the west side of the USTs in order to minimize disruptions to the bike path. Soil borings up to SSP-10 were sampled from 5 to 15 feet below grade between June 2007 and July 2011 at consecutive 2 foot intervals. On June 2, 2010, the NYCT did in-situ chemical oxidation by injecting RegenOx into some wells. No product has been seen on the groundwater since 2010. The last soil sampling event took place during June 2011 and showed VOCs in only one of the three borings and SVOCs in two of the three borings. Only one groundwater sample had VOCs above standards. Quarterly sampling stopped as agreed upon by the NYCT, DEC and URS as it was agreed that the site was a candidate for closure. As part of the decommissioning of the wells, ORC solution will be mixed into the backfill for the wells before plugging and abandoning them. However, historical soil hot spots had been identified at locations SB-01 and SB-02, GP-06 and GP-07, SSP-01, SSP-02, SSP-04 to SSP-07 and SSP-09. Many of these moderate to very high VOC exceedences were from soil samples taken during 2009 to 2011. So, it is not clear whether the analytes would have been reduced by natural weathering during the past several years to the present. Confirmatory soil sampling needs to be performed. Though, no product has been seen during 2012 and the groundwater results do not show more than low exceedences of the TOGS 1.1.1 standards. Additionally, no borings or wells were ever installed on the east side of the east UST. Despite the bike path, there is a need to find out what is below the surface under this area. The soil results for GP-06 and GP-07 suggest that elevated concentrations of the analytes may be present. Because of the VOC exceedences in the soil samples from the recent past and the lack of information regarding subsurface conditions east of the twin USTs I could not close the spill case. I drafted a letter to the NYCT requesting a work plan for conducting confirmatory soil borings to the west of the USTs and new soil borings and new wells east of the USTs. The letter was submitted to Hassan Hussein, supervisor of Unit C Region 2 DER, for his approval. Mr. Hussein approved the letter and it was sent out with a due date of March 22, 2013 for submission of the work plan for doing the requested borings and wells. 3/22/13 - Raphael Ketani. Mr. Mathelier sent me a request by e-mail asking that the DEC obtain permission from the Hudson River Park Trust for the NYCT so that they may install more borings next to the two USTs. The area above the USTs is presently crossed by bike paths and walkways. The draft letter was forwarded to Hassan Hussein for his approval. 3/29/13 - Raphael Ketani. Mr. Hussein approved the letter to Ms.

NYCT HUDSON DEPOT (Continued) **S100177042**

Silberfeld, General Counsel of the Hudson River Park Trust, in which her cooperation was requested for the soil investigation at the USTs. The letter was sent out. 5/31/13 - Raphael Ketani. I reviewed the May 2013 Site Specific Investigation Work Plan. Historical hot spots were identified as SB-01, 2, 6 and 7, SSP-01, 2, 4 to 7 and 9. The soil MNA and groundwater sampling program had continued until June 2011. Product had not been seen in the wells until 8/20/10 when 0.01' of product appeared in W-21. Five borings will be installed. These will be HDSB-1 to 3, HDMW-01 and HDMW-02. Two of the borings will be converted into wells. The wells will be installed to 15 feet below grade with 12 feet of screen. The borings will be installed east of the east tank, west of the west tank, north of both tanks and in the vicinities of the historical hot spots. I looked at Figure 3-1 which showed the proposed boring locations and determined that there were not enough borings or wells to delineate the extent of any undiscovered contamination. I revised the figure to show where the DEC wanted more borings and wells. I indicated that borings should be installed midway on the east side of the east tank, between SSP-01 and SSP-07, between SB-01 and SSP-09, between SSP-02 and SSP-06, and between SSP-05 and SSP-04. Wells should be installed at the southern and northern ends of each tank and closer to GP-06 and GP-07. In total, I asked for 2 additional borings and 4 additional wells. An e-mail was sent with the revised Figure 3-1. A deadline was set for June 28 for submission of the revised SSIWP. 6/26/13 - Raphael Ketani. I reviewed the Hudson Depot Site Specific Investigation Work Plan dated May 2013 and revised June 2013. The work plan contained a revised Figure 3-1 with the boring and well locations as requested by the DEC in its 5/31/13 e-mail. I approved the revised work plan. I sent Mr. Hussein a draft letter approving the revised SSIWP. 6/27/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 8/1/13 - Raphael Ketani. I reviewed a set of task orders that Ms. Cadecia Josephs had sent to Ms. Silberfeld of the Hudson River Park Trust. These task order were: CPM-23 dated 5/23/13 and regarding the writing and submission of the SSIWP (which was previously approved in its revised version); CPM-24 dated 7/17/13 and regarding the addition of 2 soil borings and 4 wells to the SSIWP (the document as approved); and CPM-25 dated 7/31/13 and regarding the abandonment of well W-05. 4/3/14 - Raphael Ketani. I sent an e-mail to Noreen Doyle, General Counsel, Hudson River Park Trust (212) 627-2020/ndoyle@hrpt.ny.gov. In the e-mail, I requested her help in getting the NYCT's plan approved for doing the site investigation. I added that this step was necessary before the NYCT could apply for a permit to the NYC DOT for doing the work. 12/31/15 - Raphael Ketani. I reviewed the NYCT December 2015 Soil and Groundwater Investigation/Petition for Spill Closure Report. A historical review of the site was contained in the beginning of the report. The consultants estimated from the product thicknesses in the wells that 550 to 1100 gallons of product was released. A recovery pump was installed and operated from June 1994 to December 1997. The pump was shut down after this as no product was seen. Two 7100 gallon USTs were located below grade and had been closed in place during December 1998. Several investigations took place and some remedial actions from 1999 to 2011. Bioremediation of the soil took place during 2002. The sheens and product thicknesses were reduced after this action. The DEC allowed monitored natural attenuation (MNA) to drive the remediation. The first soil and groundwater sampling took place during 2007. Chemical oxidation took place during 2010 to enhance the

NYCT HUDSON DEPOT (Continued) **S100177042**

MNA. Groundwater monitoring has continued to the present time. The soil and groundwater investigation work east of the USTs was completed from December 4 to 30, 2014. Sixteen (16) borings and 6 wells were installed. The borings were HDSB-1 to HDSB-10. The wells were HDMW-01 to HDMW-06. Groundwater was found to be at from 4' to 9' bgs and tidally influenced. Thirty (30) soil samples and 6 groundwater samples were collected. The soil results were compared to the CP-51 standards and the groundwater results were compared to the TOGS 1.1.1 standards. The soil samples were taken on 12/5, 8, 11, 12/2014. The upper portion of each boring had brown to dark brown fine to medium sub-angular sand with varying amounts of gravel and silt and fill. The PID readings varied. Oil stains and odors were present in several borings and generally only within the 5' to 15' interval. The most significant stains, PID readings (to 175 ppm) and odors were at borings to the northwest of the USTs (HDSB-01 and HDSB-04). Sheen and oil blebs appeared in some borings west of the USTs at 6' to 12' bgs. SB-1 (7'-9') was taken on 12/5/14 and had 4 analytes from 14,800 ppb to 36,400 ppb (benzene species analytes), but no benzene. The rest of the results were non-detect. The results for SB-1 (16'-18'), SB-2 to 7 and SB-10 were either all non-detect or mostly non-detect with 1 high exceedence. SB-6 (10'-12') was taken on 12/8/14 and had 6 exceedences from 180 ppb to 1400 ppb. The soil sample results for HDMW-01 (15'-16'), HDMW-03 (10'-11'), HDMW-04 (17'-19'), HDMW-05 (16'-18') and HDMW-06 (15'-16') were all non-detect or had 3 to 4 low hits with the rest non-detect. HDMW-01 (10'-12'), HDMW-02 (5.5'-7.5'), HDMW-04 (5'-7'), HDMW-05 (10'-12') and HDMW-06 (10'-12') each had 2 to 4 high hits and/or exceedences from 1500 ppb to 12,300 ppb with the rest of the results non-detect. Groundwater samples were taken from HDMW-01 to HDMW-06 on 12/30/14. The samples had from 4 to 11 very low to moderate (highest 21.5 ppb) hits and exceedences. The rest of the results were non-detect. The consultants recommended closure based upon the fact that the VOC results for the soil were either mostly non-detect or below standards. They also stated that the groundwater VOCs were either non-detect or mostly below standards with no free phase product. The NYCT believes that monitoring should be discontinued based upon the results. Also, the area is a paved bike path, which is part of the Hudson River Linear Park. So contact with any residual contamination is not possible. I approved the report and agreed with the recommendations of NYCT and their consultants that the spill case should be closed. This was also based upon the generally very low soil analytical results and the very low groundwater results. It was also based upon the fact that the USTs had been closed in place, bioremediation had been attempted and chemical oxidation had also been attempted in order to remediate the contamination. As the site could not be dug up due to the disruption this would cause to activities in the area, there was not anything else that could be done to reduce the contaminant concentrations. Also, the subsurface is subject to tidal action twice a day and so the soil and materials below grade will continue to be washed - thereby removing more contamination or oxidizing it. However, as the tidal waters can enter below grade, so can spills that originate on the river from boat and shipping activity. So, the subsurface will never be pristine and will maintain itself in equilibrium with the Hudson River water chemistry. 1/4/2016 - Raphael Ketani. I closed the spill case effective today and issued a Spill Closure Letter to NYCT for the site. 4/7/16 - Raphael Ketani. A progress update meeting took place on 3/31/16 for

NYCT HUDSON DEPOT (Continued) **S100177042**

all of the NYCT depot sites. During the meeting, Mr. Mathelier asked that I contact the administrative staff at the Hudson River Linear Park in order to find out what construction activities are taking place so that the NYCT can plan for closing the wells. I contacted Ms. Doyle by email (General Counsel, Hudson River Park Trust (212) 627-2020/ndoyle@hrpt.ny.gov) and asked her for a construction update and whether well abandonment can proceed. Ms. Doyle sent the following response email: The short answer is that no Trust-sponsored construction has occurred on the site as of yet. However, our Board of Directors approved a lease last week that will allow construction at and in the vicinity of Pier 57. I was just speaking with Rachel Seebacher of DEC this morning about this. She was going to contact the DEC staff involved with the NYCT spill to get a better understanding of the status of this spill and clean-up and any continuing obligations that may exist. I think it makes sense for that conversation to occur. I ve looped her in above. She will be back in touch with HRPT after getting an update so that we can figure out next steps. Later, I sent Ms. Doyle an air photo of the site, along with maps and a pdf of the extracted pages concerning the site from the December 2015 Monthly Progress Report. 4/26/16 - Raphael Ketani. Mr. Mathelier (Gregory.Mathelier@nyct.com) copied me in an email to David Boyle regarding future development of the site. Mr. Mathelier stated that the NYCT CPM would provide some assistance to RXR (the developer) concerning the removal of oil contaminated soil, should this be encountered. The possibility of encountering contaminated soil would arise from the installation of new utilities which are associated with the reconstruction of the Pier 57 facility. 6/22/16 - Raphael Ketani. Late today, I received an email from Yasin Rahman, Assistant Environmental Engineer in the NYCT CPM/UST and Environmental Remediation Program (718) 613-0294/yasin.rahman@nyct.com. The email was addressed to representatives of the owner of Pier 57, RXR Realty, and HRCG and EIC Associates. Excavation drawings dated and revised on 10/19/15 were attached to the email. The email stated that NYCT would assist RXR is the hauling and disposal of the contaminated soil. The excavating would be for the installation of various utilities and would extend down to as much as 13 feet below grade. About 94.8 cu. yds. of soil and fill are expected to be removed. I archived the documentation and had no comments. The contact information for RXR Realty is 1330 Avenue of the Americas, Ste. 500, NY, NY, 10019, (212) 797-1330. Another address for RXR Realty is: 230 Park Avenue, Ste. 1500, NY, NY, 10169, (516) 874-2966, Attn: Michael Rem, PE, Senior Project Manager, Development. 7/27/16 - Raphael Ketani. Mr. Rem copied me in an email that was sent to Mr. Yasin. The first paragraph of the email stated that the wells had been decommissioned and removed. Shortly after this email, Mr. Yasin sent an email to Mr. Rem regarding the contaminated soil excavation plan. 3/29/18 - Raphael Ketani. Yesterday, I received the Dvirka & Bartilucci Monitoring Well Decommissioning/Abandonment Report dated 3/28/18. The work was performed in accordance with CP-43 Groundwater Monitoring Well Decommissioning Policy. The work was performed on 6/6/16, 6/7/16 and 12/19/16. For each well, the concrete well head box was broken up and the casing with its screen was pulled out. Then the wells were filled with grout and an asphalt patch placed on top of the depression where the well used to be. Boring locations were also covered with an asphalt patch. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name:	PAUL TYREE
DEC Memo:	"11/13/2020 - Feng - Desk Duty in office. Spoke to Paul Tyree and James Ross. It is a 5,000-gallon UST in the school's basement. It failed the tank test today. The tank tester is still at the site. There is still 3,500 gallons of #2 oil still inside the tank. They are planning to pump out the tank and to investigate whether there is a leak. They are looking for subcontractor to do the pump out. They are setting up temporary tank in the basement to hold the pumped oil. And they are setting a temporary heat system for the school. So far no determination of any loss. No signs of spills. There is potential

GUARDIAN ANGEL SCHOOL (Continued) **S102672077**

smell in the basement and not sure about the building. Briefed to Veronica Zhune and assign her the spill for further follow up. She might inspect the site tomorrow to make sure the tank is pumped out. PBS 2-608435 Paul Tyree Metro Environmental office: 631-393-6655 Cell: 516-426-5224 ptyree@mesllc.org Property Manager: Andi Metaliaj 917-513-1023 11/14/20-Zhune responded to this spill. the tank is a 5000 -gallon tank UST and failed the test . About 3500 gallons of oil #2 were pumped out by Metro Environmental. There is staining in the boiler room. Waited for Custodian to walk me 5 floors of the school to check for odors in the school. Found room #1 (first grade) second floor with slightly oil odors. Did air monitoring in the 5 floors with the PID meter. The meter indicated 1PPM in some areas of the school. Installed scrubbers in the 5 floors. 11/16/20-Zhune spoke to Ms. Perez the principal of the school. She said everything is fine. No odors complaint in the school. 11/23/20-Paul Tyree email- I hope all is well. I just wanted to give you a quick update on the work that was completed at Guardian Angel today. . Took soil borings, groundwater and soil samples in the court yard and boiler room . Screen soils . Air monitoring continues . Ventilation system is up and operating in the school we expected to have the analytical results in hand within 10 days business days. We will send you the report with the data and our recommended next steps no later than 48 hours after. We should have it to you by 12/3/20. 12/12/20 - Obligado - I reviewed an email provided by Paul Tyree which included a request to abandon the leaking tank in place. The email included soil sampling results, ground water sampling, and indoor air sampling results. The tank is present below a concrete covered courtyard. The tank is located adjacent to the area where oil staining was observed on the basement wall. Soil borings were advanced to a depth of 2 feet on all sites of the tank. No exceedences of CP51 soil clean up objectives were detected in any of the soil samples. One Gw sample was collected which also did not have any exceedences of GW standards. Indoor air samples were also cRollected from the basement, 1st floor, and 2nd floor. I sent the indoor air sampling results to NYSDOH to review. According to Nathan Walz there are some minor hits above background in the science and classroom that I expect will continue to decrease with time, since this is a school I would recommend that another round of samples be collected to confirm a downward trend. I forwarded the request for confirmatory indoor air sampling to Paul Tyree. 12/16/20 - Obligado - I inspected the site with Paul Tyree. No significant odors were observed in the cellar. No oil seepage into the boiler room was observed. The courtyard is completely surrounded by Church and School buildings. Removal of the UST not feasible or practical. I told Paul Tyree that they could proceed with the tank abandonment. 1/26/21-Paul Tyre from Metro Environmental Services LLC emailed the closure report dated 1/20/21. The report stated that MES properly close in place 1 x 5000 gallon UST. Soil samples were taken and analyzed for VOCs and SVOCs at an accredited laboratory. All results were below NYSDEC clean up criteria. A groundwater was obtained and submitted for analyzes. Groundwater sampling results were below NYDSDEC standards. Qualitative and Quantitative air sampling was conduct6ed and the last qualitative air sampling was below NYSDOH standards. Based on the information of the re[port this spill is closed. Spill closed."

Remarks: "ust in vault, unknown amount"

Property Description:	The High Line is an elevated 1.5-mile long freight rail line on the West side of Manhattan that has not been used since 1980. It was constructed between 1929 and 1934 as part of the West Side Improvement Project. During the period from 1934 to 1982, the High Line was an

HIGH LINE (Continued) **1012098490**

active railroad servicing the warehouses and terminals adjacent to the active waterfront industries in this section of Manhattan. Since 1980, when the last train utilized the structure, it has been unused. In June 2005, the Federal Surface Transportation Board granted a Certificate of Interim Trail Use (CITU) to allow the High Line to be used as public open space in the Rails-to-Trails Program. The City of New York took title to the High Line from CSX Transportation, Inc. in November 2005.

Highlights:	Former Use: The High Line is an elevated 1.5-mile long freight rail line on the West side of Manhattan that has not been used since 1980. It was constructed between 1929 and 1934 as part of the West Side Improvement Project. During the period from 1934 to 1982, the High Line was an active railroad servicing the warehouses and terminals adjacent to the active waterfront industries in this section of Manhattan. Since 1980, when the last train utilized the structure, it has been unused. In June 2005, the Federal Surface Transportation Board granted a Certificate of Interim Trail Use (CITU) to allow the High Line to be used as public open space in the Rails-to-Trails Program. The City of New York took title to the High Line from CSX Transportation, Inc. in November 2005.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

PBS #: 2-610670. a PBS application was submitted in Oct. 2007, but it was returned on 10/10/2007 due to missing Section B of the application and incorrect information. PBS registration was never completed. other spills #: 9510451, 9612959, 9613049 spill # 9510451

310 WEST 18TH STREET OWNERS CORP. (Continued) **S110772153**

was reported on 11/20/1995 as odor complaint due to vent pipe close to caller's apartment window. case closed. spill # 9612959 was reported on 02/01/1997 by NYC DEP due to #2 fuel oil spill as a result of overfill. case closed without remarks. spill # 9613049 was reported on 02/04/1997 as #2 fuel oil spilled during delivery. case closed without remarks. based on google pic, site has five story building with a basement, next to a playground. 3:13 PM:- left message for Mr. Cohen. 310 West 18th Street Owners Corp. **property owner** c/o A. Michael Tyler Realty Corp. 122 East 42nd Street, Suite 1700 New York, NY 10168 Attn.: Irwin Cohen PH. (877) 641-5900 email: irwinc@amtrealtyny.com 01/20/16-Hiralkumar Patel. 3:10 PM:- visited site. noted fill port close to street curb, in front of building entrance. noted vent pipe on building's foundation wall in northwest corner of the building. no access to the building for an inspection. 3:14 PM:- left message for Mr. Cohen. 01/21/16-Hiralkumar Patel. 2:47 PM:- spoke with Mr. Cohen, property manager. informed him about open spill case and incomplete PBS registration for the tank system at the site. Mr. Cohen mentioned that spill occurred from vent pipe due to overfill and material spilled onto concrete surface outside the building. he stated that there was no impact inside the building and the spill was immediately cleaned up by Aggressive Energy. Mr. Cohen mentioned that East Coast Petroleum delivers oil to the building now. 3:17 PM:- spoke with Anthony Milanese at East Coast Petroleum. he stated that the site has 550 gal tank. case closed based on available information."

Remarks: "while filling company overflows into in basement, loss occurred on floor, not cleaned up properly"

Tank Info:

Tank Number:	001
Tank Id:	11124
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
H00 - Tank Leak Detection - None
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
G03 - Tank Secondary Containment - Vault (w/o access)
C00 - Pipe Location - No Piping

29-35 NINTH AVE (AT 13TH ST) (Continued) **U004045351**

	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	F01 - Pipe External Protection - Painted/Asphalt Coating
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DER Facility ID:	114912
DEC Memo:	"Spill originally assigned to Sullivan and closed on 11/14/1991. Re-opened due to spill 0012509 (Merritt Engineering working for potential buyer, found contamiantion) and 9504874 (Con Ed excavation on south side of street, soils saturated with diesel). Site investigation and remediation to be tracked by this spill number 9011674. Rommel. 12/6/04 Spill address originally 528 W19th Street, changed to 542 (both of which are actually listed by City as 80-94 11th Street or just 80 11th Street. 542 W19th Street is address on PBS 2-032239. Stip mailed to Barry Haskell 362 Kingsland Avenue

MENDON (Continued) **S104275639**

Brooklyn NY 11222 Deadline for return of signed stip 1/24/05. Rommel 12/23/04 Received call from Mark at Sive, Paget and Riesel, PC 212-421-2150 who represent the developer (Georgetown). MGP site is being handled by Joe Moloughney under BCP program.The remediation will remove all soil between 18th and 19th Streets to 15 feet. The four tanks were already pulled during remediation and ten others were found and also pulled. The developer has been informed that they must complete the tank registration and closure process for all the tanks on-site and they have assured me they will do so. Spill closed. Rommel "

Remarks: "(4) 550 GAL TANKS WERE DISCOVERED DURING A ROUTINE CON ED STREET PATROL,NYCDEP WAS TOLD THAT TANKS FAILED 10 YEAR PBS TEST IN 1990, TANKS WERE NOT IN USE BUT NOT CLOSED PROPERLY."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

SUNOCO S/S-501 W 14TH ST (Continued) **1000556261**

corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"A consultant (no name) called on 6/24/2003 to say the station had been condemned and removed as part of the west side highway improvements. This specific site is now a part of developed city park (Part of Hudson River Park). 4/12/04-Vought-Spill transferred from Sullivan to Sun as per Rommel. 6/29/04 PBS shows tanks removed in 1993. David Oil was owner. Transferred from Sun to Foley. (KMF) 5/3/05 501 W 14th St is also known as 65-79 11th Ave. Property is vacant land between 14th and 15th Streets and 10th and 11th Avenues. Block 686, Lot 29. Requested Hank Alpert submit tank closure report for tanks removed in 1993. 5/3/05 Email from Hank Alpert, owner of David Oil. In December of 1996, the NYS Department of Transporation, Real Estate Division acquired the property under a condemnation involving the restructuring of the Westside Highway. As a result of the condemnation, NYS now owns the property. As part of the settlement, the State purchased all underground storage tanks and presumably removed them."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Date Rec Updated: 12/06/2019
Updated By: LSZINOMA
Site Description: "Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."
Env Problem: "Nature and Extent of Contamination: Remediation, which is complete,

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

	was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "
Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."

Env Problem: "Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

	Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "
Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

Site Description:	"Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the

Site Code: 58929
Site Description: "Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

building dewatering systems."

Env Problem: "Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

Site Code: 58929
Site Description: "Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."

Env Problem: "Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

BROWNFIELDS:

Name:	17TH STREET DEVELOPMENT PROJECT
Address:	76 11TH AVENUE
City,State,Zip:	NEW YORK, NY 10011
Program:	BCP
Site Code:	58929
Acres:	1.750
HW Code:	C231036
SWIS:	3101
Town:	New York City
Record Added Date:	07/01/2004
Record Updated Date:	06/09/2021
Update By:	DJEATON
Site Description:	"Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."

Env Problem:

"Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Address:	80 11TH AVENUE
City,State,Zip:	NEW YORK, NY 10011
Site Code:	57373
HW Code:	C231017
Control Code:	13
Control Type:	ENG
Date Record Added:	12/28/2009
Date Rec Updated:	06/02/2021
Updated By:	SXDEYETT
Site Description:	"Location: The 19th Street Development site is located along 11th Avenue, between 18th and 19th Streets. Site Features: The site is primarily comprised of a large multi-story office building with underground parking. Current Zoning/Use(s): The site is zoned commercial, industrial and is used as office space. Surrounding parcels are a combination of commercial and residential uses. The nearest residential area is within 500 feet to the east. Past Use of the Site: The site is one parcel of numerous parcels that comprise the former West 18th Street Gas Works site. Prior to remediation and redevelopment, the Site contained a two-story brick structure that served as a mid- to long-term truck parking garage and small fenced vacant lot in the SW corner. Geology and Hydrogeology: The site consists of urban fill material, silty sands with some gravel, and a clayey silt layer with varying amounts of organic material. The clayey silt layer varies in depth from approximately 11 feet below ground surface (bgs) to 28 feet bgs and is approximately 30 feet thick. Groundwater is encountered at depths between 6 and 8 feet bgs, and generally flows to the west. "
Env Problem:	"Prior to Remediation: Based upon investigations completed at the site, the primary contaminants of concern at the site include Benzene, Toluene, Ethylbenzene and Xylene (BTEX), as well as Polycyclic Aromatic Hydrocarbons (PAHs). The impacted soils mainly were found above 15 feet bgs, with the higher concentrations of BTEX and PAHs where Non-Aqueous Phase Liquid (NAPL) was seen. Groundwater was also impacted with BTEX, PAHs and/or phenolic constituents concentrations exceeding ambient water quality criteria. Post-remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, toluene, ethylbenzene, and xylene (BTEX), and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a site management plan."

19TH STREET DEVELOPMENT SITE (Continued) **S105857225**

Health Problem:	"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on-site building has a sub-grade parking garage that is partially below the natural groundwater level and incorporated a vapor barrier into its construction. A ventilation system installed in the garage inhibits the accumulation of soil gases within the building. "

19TH STREET DEVELOPMENT SITE (Continued) **S105857225**

Updated By: THKNIZEK

INST CONTROL:
Name: 19TH STREET DEVELOPMENT SITE
Address: 80 11TH AVENUE
City,State,Zip: NEW YORK, NY 10011
Site Code: 57373
Control Name: Landuse Restriction
HW Code: C231017
Control Code: 25
Control Type: INST
Dt record added: 12/28/2009
Dt rec updated: 06/02/2021
Updated By: SXDEYETT
Site Code: 57373
Site Description: "Location: The 19th Street Development site is located along 11th Avenue, between 18th and 19th Streets. Site Features: The site is primarily comprised of a large multi-story office building with underground parking. Current Zoning/Use(s): The site is zoned commercial, industrial and is used as office space. Surrounding parcels are a combination of commercial and residential uses. The nearest residential area is within 500 feet to the east. Past Use of the Site: The site is one parcel of numerous parcels that comprise the former West 18th Street Gas Works site. Prior to remediation and redevelopment, the Site contained a two-story brick structure that served as a mid- to long-term truck parking garage and small fenced vacant lot in the SW corner. Geology and Hydrogeology: The site consists of urban fill material, silty sands with some gravel, and a clayey silt layer with varying amounts of organic material. The clayey silt layer varies in depth from approximately 11 feet below ground surface (bgs) to 28 feet bgs and is approximately 30 feet thick. Groundwater is encountered at depths between 6 and 8 feet bgs, and generally flows to the west. "
Env Problem: "Prior to Remediation: Based upon investigations completed at the site, the primary contaminants of concern at the site include Benzene, Toluene, Ethylbenzene and Xylene (BTEX), as well as Polycyclic Aromatic Hydrocarbons (PAHs). The impacted soils mainly were found above 15 feet bgs, with the higher concentrations of BTEX and PAHs where Non-Aqueous Phase Liquid (NAPL) was seen. Groundwater was also impacted with BTEX, PAHs and/or phenolic constituents concentrations exceeding ambient water quality criteria.
Post-remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, toluene, ethylbenzene, and xylene (BTEX), and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a site management plan."
Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil

19TH STREET DEVELOPMENT SITE (Continued) **S105857225**

vapor intrusion. The on-site building has a sub-grade parking garage that is partially below the natural groundwater level and incorporated a vapor barrier into its construction. A ventilation system installed in the garage inhibits the accumulation of soil gases within the building. "

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Last Modified:	05/25/2017
Material Name:	#2 fuel oil (on-site consumption)
Tank Number:	002
Tank Id:	19285
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
H00 - Tank Leak Detection - None
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	05/01/1973
Capacity Gallons:	3000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	11/01/1995

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Need to trace owner of site and then send Contaminated Soil Letter. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/21/06 - Raphael Ketani. I reached Nathan Epler of Roux Associates (631) 232-2600. He said that he had sent in all of the paperwork some time ago. I told him that DEC had nothing for the

535 WEST 19TH STREET RE-DEVELOPMENT SITE (Continued) **S107488445**

case. He said he will get back to me. The 3 550 gal. tanks mentioned in the spill report are not on any PBS record. Mr. Epler and an associate called me back. They said that the tanks had already been removed, along with the liquids they contained and the soil that was found to be contaminated. I asked them for the manifests, pictures, a site plan, clean end point sample results, and a PBS registration form. They said they had all of that and that they will send it to me by the beginning of next week. 7/5/06 - Raphael Ketani. Chris Batista of Roux called to say that he has the manifests, soil analytical results, and soon the signed PBS registration form. He said he will send them very soon. 7/17/06 - Raphael Ketani. I received the closure report today. 7/18/06 - Raphael Ketani. I reviewed the closure report and found it to be acceptable. Based upon the analytical results, pictures, manifests, and narrative in the 7/13/06 closure report from Roux Associates, I am closing the spill case. 8/17/06 - Raphael Ketani. I received a cover letter from ROUX Associates date 7/14/06. The letter was given to me by Nick Lombardo of the PBS Unit. He said that PBS application was alright and that he received a check with the application. I will have the document E-DOCed."

Remarks: "DURING A PHASE TWO INVESTIGATION FOUND CONTAMINATED AND FOUND THREE 550 GALLON TANKS: DID NOT REMOVE AS OF YET:"

ENG CONTROLS:
Name: 511 WEST 21ST STREET
Address: 511 WEST 21ST STREET
City,State,Zip: NEWYORK, NY 10011
Site Code: 475372
HW Code: C231080
Control Code: 15
Control Type: ENG
Date Record Added: 10/03/2016
Date Rec Updated: 09/08/2021
Updated By: JXPEREZM
Site Description: "Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for

TIME WARNER CABLE (Continued) **U003074535**

	manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site."

Site Code: 475372
Site Description: "Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station.

TIME WARNER CABLE (Continued) **U003074535**

Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site."

Site Code: 475372
Site Description: "Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at

TIME WARNER CABLE (Continued) **U003074535**

	the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site."

Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST, two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon other ASTs. Time Warner Facility Manager Phone # (212) 598-7357 11/30/05 - Obligado - call Time Warner at number listed above. No answer. 12/15/05 - Obligado - called again, no answer. Called Dave Greffinius (consultant for neighboring property) to see if he was able to get any facility information for Time Warner building. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number. 12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday. 1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested. 1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contanct info with instructions to send/fax any files he had regarding this spill number. 1/19/05 - Obigado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week. 3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06. Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 adn 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertanent information. 5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring investigation and collection of gw sample from below line where leak occured. 5/16/06 - Obligado - Delivery confirmation on 5/13/06 6/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greates contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Enviornmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw samplng points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field

TIME WARNER CABLE (Continued) **U003074535**

(TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethlybenzene, ~23500 total xylenes, 321,467 MTBE. 8/21/06 - Obligado - Phone conversation with Kristin Dilner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dilner and Abbas Family. 90 days for ISR and 60 days for RAP. 8/31/06 - Obligado - Received delivery confirmaiton of Stip Agreeement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and and emailed it as a final version back to Abbas requesting signature by 12/2/06. 11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks infront of 521 and 510 w. 21st street to do ground water sampling and guaging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinius from Delta stating they would grant access but asked to be copied on analytical results. 4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additioanlly, Jessica said I should expect a report by May 31 and UST excavation in June. 5/9/07 - Obligado - Recevied a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations. 5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map. 5/18/07 - Obligado - Received a progress reprot letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street faciliity by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the

TIME WARNER CABLE (Continued) **U003074535**

report sooner than that. He will talk to Time Warner to expedite the report. 7/19/07 - Obligado - Reviewed documents entitled Investigation Summary Report , dated February 27, 2007, Update on CAP s Milestone and Monitoring Well Survey Report , dated June 11, 2007, and Monitoring Well Survey and Tidal Study , dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007. 1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan. 7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner attorney), Tradewinds Contractors, and Abass Family. During removal of USTs Brian Falvey visited the site for a PBS Inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewall. Bottom was a concrete slab, but I couldn't see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back

TIME WARNER CABLE (Continued) **U003074535**

of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any USt. From the 550 USt they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday. 1/28/08 - Obligado - Email update from Woodel - LBG has supervised the excavation of the 2 test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent source zone above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday. 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasline UST excavation had MTBE above TAGM. The waste oil UST excavation idicated residual SVOCs adn chromium typical of urban fill thorughout the city. Test pits TP1 adn TP2 were excavated adn 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited free-phase product appears to have accumulated around the buried concrete and structural components of th ebuildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4 diameter slotted screen set 3 ft into water. 1120

TIME WARNER CABLE (Continued) **U003074535**

lbs of RegenOx adn 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of smapling will be completed March 10, 2008. Review 1Q08 MOnitoring Report - 5 wells were guaged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summerof 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of REgenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide and meaningfull data. SEnt letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with 980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG and requested a BTEX plume map on future reports. 10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using REgenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010. 11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (time Warner attorney), and repsensentatives of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer LEvin (attorney). We discussed the pending injections and the planned purchase and redevlopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The

TIME WARNER CABLE (Continued) **U003074535**

injections are scheduled to begin tomorrow (11/10/11). 11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December. 1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additionl remedial actions if not effective. 1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediatley down gradient of footers in TP2 to monitor effects of residaul source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches. 1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2)evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals. 3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Growzkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks. 7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with chemox or try alternate methods. 7/17/12 - Obligado - recieved an email from LBG Sean Groqzkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deffering requirement for new plan until review of the 3rd quarter data. 12/17/12 - Obligado - received and and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. 04/29/2013 - Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. 11/15/2013 - Remedial Investigation Work Plan have been approved. Remedial investigation ongoing under the BCP program(511 West 21st Street Site, Site ID C231080). (Perez) 03/31/2015 - BCP Site (511 West 21st Street Site, Site ID C231080) Remedial Action Work Plan (RAWP) have been approved. 04/03/2016 - Field work in connection the approved RAWP ongoing. (Perez) 03/30/2017 - Construction of the on-site BCP remedy completed on October 2016 and CoC issued on December 2016. Post-remedy groundwater sampling event scheduled for the first quarter of 2017.

TIME WARNER CABLE (Continued) **U003074535**

(Perez) 10/02/2018 - The vast majority of the source of groundwater contamination (soil with contamination levels above protection groundwater soil cleanup objectives) has been removed. On- and off-site groundwater will be monitor under the Brownfield Cleanup Program project 511 West 21th Street (C231080). There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. NFA letter sent to RP. "

Remarks: "UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR."

Contact Name: Serena M. Parker
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 12/9/03 TJD Reassigned Demeo greater than greater than greater than Rommel. 11/23/05- Obligado - Spill transferred from Tang to Obligado 11/29/05 - Obligado - From Caller Remarks: UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR . No files were found to document repairs or tests. Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST, two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon other ASTs. Time Warner Facility Manager Phone # (212) 598-7357 11/30/05 - Obligado - call Time Warner at number listed above. No answer. 12/15/05 - Obligado - called again, no answer. Called Dave Greffinius (consultant for neighboring property) to see if he was able to get any facility information for Time Warner building. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number. 12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday. 1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested. 1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contanct info with instructions to send/fax any files he had regarding this spill number. 1/19/05 - Obigado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week. 3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06. Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 adn 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertanent information. 5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring investigation and collection of gw sample from below line where leak occured. 5/16/06 - Obligado - Delivery confirmation on 5/13/06 6/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greates contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado

TIME WARNER CABLE (Continued) **U003074535**

- Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Enviornmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw samplng points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethlybenzene, ~23500 total xylenes, 321,467 MTBE. 8/21/06 - Obligado - Phone conversation with Kristin Dilner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dilner and Abbas Family. 90 days for ISR and 60 days for RAP. 8/31/06 - Obligado - Received delivery confirmaiton of Stip Agreeement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and and emailed it as a final version back to Abbas requesting signature by 12/2/06. 11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks infront of 521 and 510 w. 21st street to do ground water sampling and guaging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinius from Delta stating they would grant access but asked to be copied on analytical results. 4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additioanlly, Jessica said I should expect a report by May 31 and UST excavation in June. 5/9/07 - Obligado - Recevied a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations. 5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map. 5/18/07 - Obligado - Received a progress

TIME WARNER CABLE (Continued) **U003074535**

reprot letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street faciliity by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the report sooner than that. He will talk to Time Warner to expedite the report. 7/19/07 - Obligado - Reviewed documents entitled Investigation Summary Report , dated February 27, 2007, Update on CAP s Milestone and Monitoring Well Survey Report , dated June 11, 2007, and Monitoring Well Survey and Tidal Study , dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007. 1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan. 7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner attorney), Tradewinds Contractors, and Abass Family. During removal of USTs Brian Falvey visited the site for a PBS Inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewall. Bottom was a concrete slab, but I couldn’t see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the

TIME WARNER CABLE (Continued) **U003074535**

bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any USt. From the 550 USt they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday. 1/28/08 - Obligado - Email update from Woodel - LBG has supervised the excavation of the 2 test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent source zone above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday. 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasline UST excavation had MTBE above TAGM. The waste oil UST excavation idicated residual SVOCs adn chromium typical of urban fill thorughout the city. Test pits TP1 adn TP2 were excavated adn 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited

TIME WARNER CABLE (Continued) **U003074535**

free-phase product appears to have accumulated around the buried concrete and structural components of th ebuildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4 diameter slotted screen set 3 ft into water. 1120 lbs of RegenOx adn 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of smapling will be completed March 10, 2008. Review 1Q08 MOnitoring Report - 5 wells were guaged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summerof 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of REgenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide and meaningfull data. SEnt letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with 980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG and requested a BTEX plume map on future reports. 10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using REgenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010. 11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (time Warner attorney), and repsensentatives of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer LEvin (attorney). We discussed the pending injections and the planned purchase and redevlopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the

TIME WARNER CABLE (Continued) **U003074535**

existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The injections are scheduled to begin tomorrow (11/10/11). 11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December. 1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additionl remedial actions if not effective. 1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediatley down gradient of footers in TP2 to monitor effects of residaul source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches. 1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2)evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals. 3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Growzkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks. 7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with chemox or try alternate methods. 7/17/12 - Obligado - recieved an email from LBG Sean Groqzkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deffering requirement for new plan until review of the 3rd quarter data. 12/17/12 - Obligado - received and and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. 04/29/2013 - Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. 11/15/2013 - Remedial Investigation Work Plan have been approved. Remedial investigation ongoing under the BCP program(511 West 21st Street Site, Site ID C231080). (Perez) 03/31/2015 - BCP Site (511 West 21st Street Site,

TIME WARNER CABLE (Continued) **U003074535**

Site ID C231080) Remedial Action Work Plan (RAWP) have been approved. 04/03/2016 - Field work in connection the approved RAWP ongoing. (Perez) 03/30/2017 - Construction of the on-site BCP remedy completed on October 2016 and CoC issued on December 2016. Post-remedy groundwater sampling event scheduled for the first quarter of 2017. (Perez) 10/02/2018 - The vast majority of the source of groundwater contamination (soil with contamination levels above protection groundwater soil cleanup objectives) has been removed. On- and off-site groundwater will be monitor under the Brownfield Cleanup Program project 511 West 21th Street (C231080). There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. NFA letter sent to RP. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Material Name:	#2 fuel oil (on-site consumption)

Tank Number:	007
Tank Id:	56993
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

G01 - Tank Secondary Containment - Diking (Aboveground)
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I02 - Overfill - High Level Alarm
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	05/01/1997

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	CA5721-88P
Tank Id:	247437
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

J04 - Dispenser - On Site Heating System (Suction)
L00 - Piping Leak Detection - None
C03 - Pipe Location - Aboveground/Underground Combination
G00 - Tank Secondary Containment - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
F00 - Pipe External Protection - None
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1984
Capacity Gallons:	3000
Tightness Test Method:	NN

Tank Info:

Tank Number:	001
Tank Id:	65011
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
F00 - Pipe External Protection - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
L00 - Piping Leak Detection - None
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser
E00 - Piping Secondary Containment - None

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/01/1998
Capacity Gallons:	5000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
