Tank Info:

Tank Number:	001
Tank Id:	17644
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	G00 - Tank Secondary Containment - None
	J02 - Dispenser - Suction Dispenser
	H00 - Tank Leak Detection - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	I04 - Overfill - Product Level Gauge (A/G)
	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	F00 - Pipe External Protection - None
Tank Location:	Aboveground in subterranean vault with access for inspections.....
	Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Tank Converted to Non-Regulated Use
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	2000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	CGFREEDM

ENG CONTROLS:

Name:	511 WEST 21ST STREET
Address:	511 WEST 21ST STREET
City,State,Zip:	NEWYORK, NY 10011
Site Code:	475372
HW Code:	C231080
Control Code:	15
Control Type:	ENG
Date Record Added:	10/03/2016
Date Rec Updated:	09/08/2021
Updated By:	JXPEREZM
Site Description:	"Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site."

Site Description:	"Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site."

TIME WARNER CABLE (Continued) **U003074535**

Site Code:	475372
Site Description:	"Location: The site is located at 511 West 21st Street in Manhattan, NY. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, is currently an active construction site and there are no site occupants. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use, and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 12/9/03 TJD Reassigned Demeo greater than greater than greater than Rommel. 11/23/05- Obligado - Spill transferred from Tang to Obligado 11/29/05 - Obligado - From Caller Remarks: UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR . No files were found to document repairs or tests. Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST, two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon other ASTs. Time Warner Facility Manager Phone # (212) 598-7357 11/30/05 - Obligado - call Time Warner at number listed above. No answer. 12/15/05 - Obligado - called again, no answer. Called Dave Greffinius (consultant for neighboring property) to see if he was able to get any facility information for Time Warner building. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number. 12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday. 1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested. 1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contanct info with instructions to send/fax any files he had regarding this spill number. 1/19/05 - Obigado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week. 3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06. Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 adn 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertanent

TIME WARNER CABLE (Continued) **U003074535**

information. 5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring investigation and collection of gw sample from below line where leak occured. 5/16/06 - Obligado - Delivery confirmation on 5/13/06 6/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greates contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Enviornmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw samplng points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethlybenzene, ~23500 total xylenes, 321,467 MTBE. 8/21/06 - Obligado - Phone conversation with Kristin Dilner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dilner and Abbas Family. 90 days for ISR and 60 days for RAP. 8/31/06 - Obligado - Received delivery confirmaiton of Stip Agreeement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and and emailed it as a final version back to Abbas requesting signature by 12/2/06. 11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks infront of 521 and 510 w. 21st street to do ground water sampling and guaging. Since this would help to allow

TIME WARNER CABLE (Continued) **U003074535**

a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinius from Delta stating they would grant access but asked to be copied on analytical results. 4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additioanlly, Jessica said I should expect a report by May 31 and UST excavation in June. 5/9/07 - Obligado - Recevied a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations. 5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map. 5/18/07 - Obligado - Received a progress reprot letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street faciliity by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the report sooner than that. He will talk to Time Warner to expedite the report. 7/19/07 - Obligado - Reviewed documents entitled Investigation Summary Report , dated February 27, 2007, Update on CAP s Milestone and Monitoring Well Survey Report , dated June 11, 2007, and Monitoring Well Survey and Tidal Study , dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007. 1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan. 7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He

TIME WARNER CABLE (Continued) **U003074535**

asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner attorney), Tradewinds Contractors, and Abass Family. During removal of USTs Brian Falvey visited the site for a PBS Inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewall. Bottom was a concrete slab, but I couldn't see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any USt. From the 550 USt they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday. 1/28/08 - Obligado - Email update from Woodel - LBG has supervised the excavation of the 2

TIME WARNER CABLE (Continued) **U003074535**

test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent source zone above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday. 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasline UST excavation had MTBE above TAGM. The waste oil UST excavation idicated residual SVOCs adn chromium typical of urban fill thorughout the city. Test pits TP1 adn TP2 were excavated adn 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited free-phase product appears to have accumulated around the buried concrete and structural components of th ebuildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4 diameter slotted screen set 3 ft into water. 1120 lbs of RegenOx adn 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of smapling will be completed March 10, 2008. Review 1Q08 MOnitoring Report - 5 wells were guaged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summerof 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of REgenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide and meaningfull data. SEnt letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with

TIME WARNER CABLE (Continued) **U003074535**

980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG and requested a BTEX plume map on future reports. 10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using REgenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010. 11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (time Warner attorney), and repsensentatives of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer LEvin (attorney). We discussed the pending injections and the planned purchase and redevlopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The injections are scheduled to begin tomorrow (11/10/11). 11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December. 1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additionl remedial actions if not effective. 1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediatley down gradient of footers in TP2 to monitor effects of residaul source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches. 1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2)evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals. 3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Growzkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks. 7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with

TIME WARNER CABLE (Continued) **U003074535**

chemox or try alternate methods. 7/17/12 - Obligado - recieved an email from LBG Sean Groqzkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deffering requirement for new plan until review of the 3rd quarter data. 12/17/12 - Obligado - received and and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. 04/29/2013 - Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. 11/15/2013 - Remedial Investigation Work Plan have been approved. Remedial investigation ongoing under the BCP program(511 West 21st Street Site, Site ID C231080). (Perez) 03/31/2015 - BCP Site (511 West 21st Street Site, Site ID C231080) Remedial Action Work Plan (RAWP) have been approved. 04/03/2016 - Field work in connection the approved RAWP ongoing. (Perez) 03/30/2017 - Construction of the on-site BCP remedy completed on October 2016 and CoC issued on December 2016. Post-remedy groundwater sampling event scheduled for the first quarter of 2017. (Perez) 10/02/2018 - The vast majority of the source of groundwater contamination (soil with contamination levels above protection groundwater soil cleanup objectives) has been removed. On- and off-site groundwater will be monitor under the Brownfield Cleanup Program project 511 West 21th Street (C231080). There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. NFA letter sent to RP. "

Remarks: "UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 12/9/03 TJD Reassigned Demeo greater than greater than greater than Rommel. 11/23/05- Obligado - Spill transferred from Tang to Obligado 11/29/05 - Obligado - From Caller Remarks: UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR . No files were found to document repairs or tests. Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST, two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon other ASTs. Time Warner Facility Manager Phone # (212) 598-7357 11/30/05 - Obligado - call Time Warner at number listed above. No answer. 12/15/05 - Obligado - called again, no answer. Called Dave Greffinius (consultant for neighboring property) to see if he was able to get any facility information for Time Warner building. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number. 12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday. 1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested. 1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contanct info with instructions to send/fax any files he had regarding this spill number. 1/19/05 - Obigado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week. 3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06.

TIME WARNER CABLE (Continued) **U003074535**

Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 adn 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertanent information. 5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring investigation and collection of gw sample from below line where leak occured. 5/16/06 - Obligado - Delivery confirmation on 5/13/06 6/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greates contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Enviornmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw samplng points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethlybenzene, ~23500 total xylenes, 321,467 MTBE. 8/21/06 - Obligado - Phone conversation with Kristin Dilner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dilner and Abbas Family. 90 days for ISR and 60 days for RAP. 8/31/06 - Obligado - Received delivery confirmaiton of Stip Agreeement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and and emailed it as a final version back to Abbas requesting signature by 12/2/06. 11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front

TIME WARNER CABLE (Continued) **U003074535**

of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks infront of 521 and 510 w. 21st street to do ground water sampling and guaging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinius from Delta stating they would grant access but asked to be copied on analytical results. 4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additioanlly, Jessica said I should expect a report by May 31 and UST excavation in June. 5/9/07 - Obligado - Recevied a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations. 5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map. 5/18/07 - Obligado - Received a progress reprot letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street faciliity by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the report sooner than that. He will talk to Time Warner to expedite the report. 7/19/07 - Obligado - Reviewed documents entitled Investigation Summary Report , dated February 27, 2007, Update on CAP s Milestone and Monitoring Well Survey Report , dated June 11, 2007, and Monitoring Well Survey and Tidal Study , dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007. 1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also

TIME WARNER CABLE (Continued) **U003074535**

include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan. 7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner attorney), Tradewinds Contractors, and Abass Family. During removal of USTs Brian Falvey visited the site for a PBS Inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewall. Bottom was a concrete slab, but I couldn't see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any USt. From the 550 USt they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST

TIME WARNER CABLE (Continued) **U003074535**

excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday. 1/28/08 - Obligado - Email update from Woodel - LBG has supervised the excavation of the 2 test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent source zone above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday. 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasline UST excavation had MTBE above TAGM. The waste oil UST excavation idicated residual SVOCs adn chromium typical of urban fill thorughout the city. Test pits TP1 adn TP2 were excavated adn 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited free-phase product appears to have accumulated around the buried concrete and structural components of th ebuildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4 diameter slotted screen set 3 ft into water. 1120 lbs of RegenOx adn 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of smapling will be completed March 10, 2008. Review 1Q08 MOnitoring Report - 5 wells were guaged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summerof 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of REgenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide and meaningfull data. SEnt letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of

TIME WARNER CABLE (Continued) **U003074535**

the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with 980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG and requested a BTEX plume map on future reports. 10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using REgenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010. 11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (time Warner attorney), and repsensentatives of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer LEvin (attorney). We discussed the pending injections and the planned purchase and redevlopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The injections are scheduled to begin tomorrow (11/10/11). 11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December. 1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additionl remedial actions if not effective. 1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediatley down gradient of footers in TP2 to monitor effects of residaul source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches. 1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2)evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals. 3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Growzkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks. 7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed

TIME WARNER CABLE (Continued) **U003074535**

downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with chemox or try alternate methods. 7/17/12 - Obligado - recieved an email from LBG Sean Groqzkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deffering requirement for new plan until review of the 3rd quarter data. 12/17/12 - Obligado - received and and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. 04/29/2013 - Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. 11/15/2013 - Remedial Investigation Work Plan have been approved. Remedial investigation ongoing under the BCP program(511 West 21st Street Site, Site ID C231080). (Perez) 03/31/2015 - BCP Site (511 West 21st Street Site, Site ID C231080) Remedial Action Work Plan (RAWP) have been approved. 04/03/2016 - Field work in connection the approved RAWP ongoing. (Perez) 03/30/2017 - Construction of the on-site BCP remedy completed on October 2016 and CoC issued on December 2016. Post-remedy groundwater sampling event scheduled for the first quarter of 2017. (Perez) 10/02/2018 - The vast majority of the source of groundwater contamination (soil with contamination levels above protection groundwater soil cleanup objectives) has been removed. On- and off-site groundwater will be monitor under the Brownfield Cleanup Program project 511 West 21th Street (C231080). There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. NFA letter sent to RP. "

Remarks: "UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR."

Tank Info:

Tank Number:	001
Tank Id:	165081
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
E00 - Piping Secondary Containment - None
F00 - Pipe External Protection - None
J05 - Dispenser - On Site Heating System (Supply/Return)
K00 - Spill Prevention - None
L99 - Piping Leak Detection - Other
D01 - Pipe Type - Steel/Carbon Steel/Iron
G10 - Tank Secondary Containment - Impervious Underlayment
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Name:	555 WEST 22ND STREET
Address:	555 WEST 22ND STREET
City,State,Zip:	NEW YORK, NY 10011
Program:	BCP
Site Code:	525716
Acres:	0.778
HW Code:	C231101
SWIS:	3101
Town:	New York City
Record Added Date:	04/13/2016
Record Updated Date:	03/16/2021
Update By:	HMDUDEK
Site Description:	"Location: The site is located in a mixed-use area of the West Chelsea section of the Borough of Manhattan. The site is comprised of five tax lots (approx. 33,671 SF) identified on New York City tax maps as Block 694, Lots 2, 5, 60, 61 and 65. The site is bounded to the north by West 23rd Street, to the east by 10th Avenue, to the south by West 22nd Street, and to the west by 11th Avenue. Lots 5, 60, 61, and 65 were accepted into the Brownfield Cleanup Program on August 4, 2016 (BCA #C231101). The BCA was amended on October 27, 2017 to also include Lot 2. Site Features: Currently a multi-tenant high-rise residential apartment building with ground floor commercial space is under construction. Current Zoning and Land Use: The site is currently zoned C6-3A, C6-3 and M (Commercial, Mixed Buildings and Manufacturing), which allows for residential use. Lots 5, 60, 61, and 65 are currently operating as an active U-Haul facility. Lot 2 is currently vacant. Adjacent properties include mixed use commercial/residential to the north, industrial/manufacturing and commercial/residential to the east, office space and commercial/residential to the south and the West Side Highway to the west. Past Use of the Site: Historic site uses included: lumber yard, iron works, garage, automotive repair services, and storage and dispensing of petroleum products. It is unknown whether U-Haul continued to dispense gasoline after taking title to the property in the late 1970s/early 1980s. Currently, no vehicle repair or fueling takes place onsite. Prior use of the site for petroleum storage and fueling appear to have historically impacted both soil and groundwater. Three historic spills where noted to be associated with the site, all historic spills have been closed out. A recent spill was reported adjacent to the site, (northeast) in a sidewalk area, this spill is currently open. Site Geology and Hydrogeology: The site incorporates approximately 0.77 acres of fairly level land situated in the City of New York, New York County, New York. The site is mapped on the Jersey City, NY-NJ Quadrant 7.5 Minute Topographic Map, published by the United States Geological Survey (USGS). Review of the topographic map indicates that the site is located approximately 7 feet above sea level (NAVD 88). The site subsurface consists of an approximate 8-9 foot thick layer of historic fill material, followed by sand and gravel deposits. Depth to water is approximately 8-9 feet below ground (ftbg). Based on the proximity to the Hudson River, groundwater is expected to flow to the west. The site is located in FEMA flood zone AE, also known as the 100-year floodplain. "

555 WEST 22ND STREET (Continued) **S118950495**

Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

	H99 - Tank Leak Detection - Other
	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	G03 - Tank Secondary Containment - Vault (w/o access)
	L09 - Piping Leak Detection - Exempt Suction Piping
	I04 - Overfill - Product Level Gauge (A/G)
	E07 - Piping Secondary Containment - Trench Liner
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/01/1965
Capacity Gallons:	1500
Tightness Test Method:	NN

DEC Memo:	"2/10/2004: This spill case was reassigned from Sigona to Rommel for management. (Sigona) 10/7/2004: Project management transferred to D. Harrington in Central Office. (Rommel) 10/7/2004: Sent letter to Exxon Mobil approving the site characterization work plan. (Harrington) 6/6/2005: Sent Exxon Mobil a letter approving the SI report and the supplemental SI work plan. Additional monitoring wells

MOBIL OIL-#17-510 ALBRO OPERA (Continued) **1000553497**

will be installed along West 30th Street. Quarterly sampling will be conducted for 1 year, then a remedial plan will be developed if necessary. (Harrington) 9/8/2005: Spill no. 05-06979 was assigned due free product being observed in MW-1. Nature of the product was unknown at the time spill was called in. (Harrington) 10/4/2005: Sent e-mail to Exxon Mobil approving the revised supplemental SI work plan, which changed the location of the proposed monitoring wells along the south side of West 30th Street due to utility clearance issues. (Harrington) 2/1/2006: Approved the supplemental SI report. Station is currently scheduled for divestment in the first half of 2006. Exxon Mobil to submit documentation regarding decommissioning activities when they occur. RAP will be developed after receipt and review of decomission report and the analytical results of 4 additional rounds of quarterly groundwater sampling. (Harrington) 3/8/07 - DEC lead changed from Dave Harrington to Mike Haggerty 7/3/07 - Haggerty - approved Groundwater Characterization Work Plan dated 6/28/07. MW-1 along West 30th Street has had intermittent product over the past year. Kleinfelder didn t believe product to be petroleum based. Running parallel to the sidewalk are Oil-o-Static Electric lines. These underground lines are insulated by a di-electric. Kleinfelder believed PCB s could be the unknown product in the well. I was on-site July 26, 2007 when they sampled to see for myself. No free product. Analyticals proved no PCB s are present, only petroleum compounds detected. 7/26/07 - I was on-site while they sampled to see for myself. No free product. Analyticals eventually proved no PCB s are present, only petroleum compounds detected. 1/3/08 - Haggerty - spoke with Shan Zuidema from Kleinfelder concerning future remediation plans. EFR events were conducted monthly starting in September. Effectiveness will be determined after the January EFR event. Additional remedial strategies will be proposed. Also, groundwater isn't fully delineated. The placement of additional downgradient MWs is difficult due to the presence of underground utilities in the adjacent sidewalks. 6/2/08 - Haggerty - approved Remedial Investigation Work Plan dated May 20, 2008. Additional wells will be installed in the northern portion of the site to track down free product and get a sample for analysis. Kleinfelder proposed eliminating EFR events. Approved discontinuation of EFR events because BTEX dissolved concentrations low. EFRs originally intended to collect LPH but had limited success. Instead, LPH absorbent socks will be installed. 10/1/08 - Haggerty: Ethanol detected at 717ppb on groundwater. spill 08-07364 called in 11/20/08 - Haggerty: spill 08-07364 closed. Ethanol ND in groundwater. Not a new release. Due to the presence of sensitive utilities in the sidewalk of West 30th Street and the transit yard/depot across West 30th Street, the Department will not require further delineation at this time. The Department reserves the right to require further delineation on West 30th Street. 12/9/08 - Haggerty: Product found in 1 of the newly installed wells. PM re-initiated quarterly EFR events 4/1/09 - Haggerty: PM reduced reporting schedule to Bi-annual, still sampling quarterly 9/09 - Haggerty: 4 additional wells installed. 0.4ft of product encountered in 1 of the newly installed wells. PM re-instated quarterly EFR events. April '10 Absorbent LPH Socks will be installed in MW-1 and MW-5. PM approved RegenOx injection pilot test in April May '10 Installation of injection points scheduled for the 2nd week of June June 2010 - Pilot test completed 6/6 and 6/10. Results will be reported in subsequent QMR's November 2010 - EM has handed the project over to Liberty Petroleum Realty LLC. See 11/18/10

MOBIL OIL-#17-510 ALBRO OPERA (Continued) **1000553497**

letter from Liberty. February 2011 - Feasibility Report under reivew March 2011 - Waiting for new data to determine effectiveness of ChemOx injection April 2011: reviewed Quarterly Report. Gw conditions have returned to pre-injection conditions. RegenOx appears to have had little to no effect after 3 rounds of quarterly sampling. Spoke with Jerome Oertling from Arcadis (new consultant), they are developing a new remedial plan, possibly a stronger oxidant or excavation or both. I sent email requiring a RAP/CAP be submitted July July 2011: RAP/CAP submitted August 2011: Revised RAP/CAP under review per my comments on the original RAP/CAP Sept 2011 - approved Revised RAP/CAP November 2011 - Bolla has yet to sign the CO January 2012 - RAP/ CAP approved. Need CO to implement February 2012 - CO executed, injections can now proceed May 2012 - waiting on preliminary results August 2012 - Additional VTE events have been conducted to remove the product in MW-8 December 2012 - Arcadis still removing residual product using dual-phase extraction events. Injections will begin after the product has been removed May 2013 - 0.5ft of product in MW-8 remains after multiple attempts/ technologies to remove it, but heard the property is to be sold to someone purchasing much of the block. We have a Consent Order will the current owner, Liberty Petroleum (owned by Capital Petroleum) so OGC will need to be contacted if the property is sold. December 2013 - Arcadis overdrilled MW-8 hoping that larger diameter well will increase the product recovery November 26, 2014 - Spill closed does not meet standards based on the remedial action implemented to date and the fact that further remediation is not feasible. Contamination is limited to groundwater in one area (MW-8R) and does not appear to be migrating off-site. All reasonable remedial technologies have been attempted but due the geology, the only viable technology remaining is excavation. While excavation at MW-8R would remove the residual LPH in the pore space impacting groundwater, excavation is not feasible; depth is approximately 15fbg and is 10ft or less from (Con Edison and NYC sewer) utilities. Review the following Historical Remedial Activities: " Between January 16, 2006 and March 2010, twelve enhanced fluid recovery (EFR) events were conducted on monitoring wells MW-1, MW-5, MW-7 and MW-8, recovering approximately 2,442 gallons of groundwater/LPH mixture. " Between June 7, and June 10, 2010, a total of approximately 780 pounds of RegenOx was injected into wells IP-1 through IP-3 during a Feasibility Study completed by Kleinfelder. " On September 26, 2011, ARCADIS completed a vacuum enhanced recovery (VER) pilot test on MW-8. During the test, approximately 28 gallons of impacted groundwater were recovered and disposed of via vacuum truck. Additionally, 0.46 pounds (lbs) of vapor-phase volatile organic compounds (VOCs) were removed under vacuum and destroyed via an internal combustion engine (ICE) unit. " An EFR event was conducted on April 9, 2012. This event was in response to the LPH detection in wells MW-5 and MW-8 on April 4, 2012. Approximately 80 gallons of liquid was removed over 7.3 hours of operation. " LPH gauging and recovery events were conducted on April 4, April 12, May 8, June 20, July 16, and August 6, 2012. MW-5 and MW-8 were gauged with an interface probe for depth to LPH and depth to water. LPH was recovered with a polyethylene bailer and stored on site in a labeled Department of Transportation (DOT) 55-gallon drum for later disposal. " On August 6, 2012, MW-8 was redeveloped in an attempt to increase the yield from the formation. " On August 29, 2012, a High Vacuum Dual-Phase Extraction (HVDPE) event took place on monitoring well MW-8 to remove LPH and vapor-phase

MOBIL OIL-#17-510 ALBRO OPERA (Continued) **1000553497**

hydrocarbons from the well. Two 55-gallon granular activated carbon (GAC) drums were used to treat effluent vapor before exhausting to the atmosphere. Approximately 95 gallons of liquid was removed during this event. " On October 3, 2012, a High Vacuum Dual-Phase Extraction (HVDPE) event took place on monitoring well MW-8 to remove LPH and vapor-phase hydrocarbons from the well. Two 55-gallon granular activated carbon (GAC) drums were used to treat effluent vapor before exhausting to the atmosphere. Approximately 100 gallons of liquid was removed during this event. " On March 19, 2013, A Data Acquisition and Processing Laboratory (DAPL) unit was used for liquid removal and soil vapor extraction (SVE) at MW-8. The object of this event was essentially a push/pull event to address impacts observed in vadose and smear zone soils. Air was introduced into IP-2 to aid in circulation through both the vadose and saturated zones. A total of 1.235 lbs of VOCs were removed via the vapor stream at MW-8. Approximately 100 gallons of liquid was recovered from MW-8. " MW-8R was installed on December 18, 2013. The original MW-8 was over drilled via hollow stem auger drilling. All original well material, well screen sand, and grout were removed and drummed for proper disposal. This well replacement was an attempt to remove LPH impacted soil and gravel pack from around the well screen as well as to create increased yield from the well. MW-8R was developed on December 26, 2013. A total of 15 gallons of liquid was removed during development. " LNAPL gauging and recovery events, including product absorbing sock change outs, occurred monthly in 2014 from February through August. The highest recorded product thickness was 0.23 ft in February and decreased to non-detect in both June and July and only 0.07 ft in August. "

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Update By:	JCGRATHW
Site Description:	"Location: The site is located in an urban area at 601 West 29th Street, which includes the addresses 601-609 West 29th Street, 613-617 West 29th Street, 615-635 West 29th Street, and 309 11th Avenue, in the Chelsea section of Manhattan. The site is bound to the north by an auto repair shop, a New York City Department of Sanitation (DSNY) garage, a private parking facility, and West 30th Street, followed by a construction site part of the Hudson Yards redevelopment district; to the east by 11th Avenue, followed by residential and commercial uses; to the south by West 29th Street, followed by a Con Edison parking and office facility; and to the west by a private parking facility followed by 12th Avenue and the Hudson River Park. Site Features: The site consists of part of one lot (lot 12); which resulted from a three-lot merger of the former lots 12, 29 and 36, comprising approximately 61,719-SF (1.13 acres). The site is now vacant. The former Lot 12 consisted of an asphalt-paved parking lot for the Port Authority of New York and New Jersey, a one-story office and locker room structure for the DSNY, a one-story and a four-story brick building occupied by artist studios and gallery space; former Lot 29 consisted of a one-story brick and concrete building occupied by an artist studio; and former Lot 36 consisted of a demolished gasoline station with an auto repair garage. The responsible party remediated a petroleum spill at this former station (Spill project #9305598). Current Zoning and Land Use: The current zoning designation of the site is M2-3 (manufacturing district). The surrounding area is largely developed with industrial and commercial uses with residential and commercial uses located to the east. Past Use of the Site: The site was developed with a lumber yard and an auto house as early as 1890. Between approximately 1911 and 1930, former Lot 12 was additionally developed with a smelting and refining works. An asbestos distribution warehouse, freight/transportation businesses, and several gasoline tanks were on-site until the late 1970s. The current DSNY structure was constructed by 1994. Former Lot 29 was developed with an iron works between 1890 and 1899, and later replaced by a woodworking and scenery manufacturer in 1911. By 1950, the lot was occupied by Express Depot and contained gasoline tanks. Former Lot 29 remained relatively unchanged through the late 1980s when it included commercial uses; an art gallery was identified as early as 2002. Former Lot 36 was historically occupied by a lumber

DD WEST 29TH LLC - C231107 (Continued) **1007880989**

	yard and wagon yard until approximately 1927, when a gasoline station was located on the lot. The addition of an auto repair shop was noted in the 1950s. Former Lot 36 remained relatively unchanged through the present-day. Site Geology and Hydrology: The site lies at an elevation of approximately 10 to 15 feet above the National Geodetic Vertical Datum of 1988 and slopes slightly down toward the southwest. Groundwater is 10 to 17 feet below ground surface and is expected to flow in a westerly to northwesterly direction toward the Hudson River, located approximately 520 feet west of the Site. Historic fill material (comprised of sand and silt, with varying amounts of brick, plastic, wood, concrete, gravel, and asphalt) was observed in the soil borings between just below surface grade down to approximately 10 to 15 feet below grade. The fill material was underlain by sand and silt down to approximately 20 feet below grade."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were detected in on-site soils including the SVOCs including Benzo(a)anthracene , benzo(a)pyrene, benzo(b)fluoranthene, and dibenzo(a,h)anthracene and metals including lead. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use in the western portion of the site, and track 4, restricted residential use in the eastern portion of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	1
Tank Id:	17199
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

H05 - Tank Leak Detection - In-Tank System (ATG)
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
I04 - Overfill - Product Level Gauge (A/G)
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
F00 - Pipe External Protection - None
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
G01 - Tank Secondary Containment - Diking (Aboveground)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	08/01/1957

308 W 30 ST (Continued) **A100318896**

Capacity Gallons:	4000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	DMPOKRZY
Last Modified:	10/02/2017
Material Name:	#4 fuel oil (on-site consumption)

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 20192
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 4000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 08/28/1997

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Tank Info:

Tank Number:	007
Tank Id:	230087
Material Code:	0015
Common Name of Substance:	Motor Oil

Equipment Records:

F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None

DSNY M DISTRICT 6 GARAGE (Continued) **A100343919**

H00 - Tank Leak Detection - None
G01 - Tank Secondary Containment - Diking (Aboveground)
L00 - Piping Leak Detection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 10/01/1994
Capacity Gallons: 275
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 06/04/2014

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL JOE LOCKWOOD AT SITE WANTS CALL BACK TO DISCUSS NEXT MOVE. HE

MANHATTAN VEHICLE MAINTENANCE FACILITY (Continued) **S104506869**

WANTS TO CONTINUE WORKING. PLEASE CALL HIM AT SITE 212 330-4909. The contamination was reportedly discovered while excavating the piping for upgrading of PBS piping. DEC (sigona) spoke with Joe Lockwood several times regarding the cleanup. Requested that Apex collect soil samples every 25-50 feet along the piping system, and if possible install groundwater monitoring wells to determine the actual extent of contamination at the site. DEC (Sigona) called Joe Lockwood for an update on 5/7/99, left message. DEC (Sigona) inspected May 20th, 1999 at 2:30 P.M. met on-site w/Richard Papesca, USPS & John Hornak, Allstate Power Vac Replacing all 4K UST 10 years old w/new double wall FRP, with leak detection & new pipes. Cleaned all vaults pea gravel was removed and disposed. They will install new pump run outside concrete vault. Installing 3-4 MW's along pipe run outside vault. Installing new concrete pad. Area above tanks, piping and island under large canpy - roof. Originally, plan was to upgrade piping. Found the tanks were 10 years old, but did not meet all of the standards, decided to replace tanks. DEC Sigona spoke to Nick DeCarlo (212)330-3107 USPS Environmental Compliance, 421 8th Avenue, NY,NY 10199 Rm 5013 on August 28, 2001, indicated that MWs were installed in June 2001, and results of groundwater testing would be submitted to DEC with recomendations for closure of spill. On Sept 20, 2001, DEC Sigona received report from Apex Environmental, dated Sept 17, 2001. 4/12/04-Vought-Spill transferred from Sigona to Rommel as per Rommel. 9/16/2005 - Jacob- Base on report from Apex environmental, the depth to groundwater was measured using an electronic water level indicator. Depth for groundwater was 7.23'for MW-1, 8.72'for MW-2, and 8.56'for MW-3.Result for water analysis are on file."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
B00 - Tank External Protection - None
L00 - Piping Leak Detection - None
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
E01 - Piping Secondary Containment - Diking (AG only)
K01 - Spill Prevention - Catch Basin
H00 - Tank Leak Detection - None

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	06/01/2000
Capacity Gallons:	280
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported

DEC Memo:	"TTF was sent out to BROADWAY REAL ESTATE SERVICES 450-460 WEST 33RD STREET NEW YORK, NY 10043 ATTN: JAVIER CORRIPIO ** PBS 2-456721 ** 2/26/13 TJD File review. Tank failed tightness test on 9/8/12 - intially reported as a wet leak. Tank was uncovered and corrosion was identified at tank top fittings and associated piping. Repairs were performed and a tank only (isolation test) was performed on 10/2/12 which passed. A complete system tightness test was then permformed on 10/11/12, also with passing results. Contractor has provided the following statement in their closure report, Throughout excavation operations, close inspections indicated neither visual nor olfactory evidence of petroleum contamination, confirming that there was no loss of product into the subsurface. all required closure documentation has been submitted and uploaded to EDOCS. No further action is required at this time."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

	C01 - Pipe Location - Aboveground
	G00 - Tank Secondary Containment - None
	L00 - Piping Leak Detection - None
	J01 - Dispenser - Pressurized Dispenser
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	F01 - Pipe External Protection - Painted/Asphalt Coating
	H00 - Tank Leak Detection - None
	I00 - Overfill - None
	K01 - Spill Prevention - Catch Basin
	A01 - Tank Internal Protection - Epoxy Liner
	E00 - Piping Secondary Containment - None
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/05/2009
Capacity Gallons:	275
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	NRLOMBAR
Last Modified:	04/14/2017
Material Name:	waste oil/used oil

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 05/18/2001 Reassigned from Tomasello to Demeo 3/25/2004

601 WEST 26TH STREET (Continued) **S104275653**

Reassigned from Demeo to Sangesland 2/28/2005 Sangesland received a note from John Raguso stating that Emteque was going to begin it's remediation process at the site. The contractor will mobilize and then clean and close the remaining tanks onsite. Once the permits have been finalized, the contractor will then begin the major construction phase of the project to break ground, put in the required shoring and conduct the required remediation/soil removal activities. Contact: John Raguso 631-271-6622 7/7/05 Excavation has begun on the western tank field. When all soil is removed down to the water table (10-13 ft) the pit will be kept open and a vac truck will be on site for several days to vac out any petroleum floating on the water table. The site has several structural issues with surrounding buildings and a Security wall Several end points will be taken, but we already know that this whole area was coal ash fill from the late 1800's. We will expect to see SVOC's, but we do NOT want to see any VOC's. They will dig down to the water table, so that is as much soil removal as can be done. This work (on western tank field) should be finished by 7/15/05. Then similar work will be done on the eastern tank field John Raguso cell #646-529-6531 3/13/2006 Sangesland completed the review of a Spill Closure Petition Report prepared by Emteque Corp. (John Raguso - 631-774-9519) The report provides a history of the site including details of the 6 USTs on site. 3 were closed out several years ago and the other 3 were closed out in 2005 during this closure process. In additon, large soil excavations were made in the areas around these 6 tanks (3 eastern tanks & 3 western tanks) Due to structural issues, all of the contaminated soil could not be removed, but an overwhelming majority (over 95% according to Emteque) of the contaminated soil was removed. The end point sampling conducted in Oct 2005, show VOC and SVOC below TAGM and the GW samples were very good, with only some minor hits . The one item of some concern was Benzene. All 5 GW samples taken were above TAGM for benzene. The TAGM GW limit is 0.7ppb and the levels in all 5 GW samples ranged from 8.2ppb up to 43ppb. 3/30/2006 Sangesland confirmed with John Raguso at Emteque that another round of GW samples will be taken in April '06. If these numbers show a decline, the case may be closed due to natural attenuation. 5/22/2006 Sangesland reviewed a submittal from John Raguso of Emteque. As requested by the DEC, another round of groundwater samples were taken at the site. These samples showed the expected drop in contamination levels. While there are still some slight exceedences of the GW standards, the NYSDEC believes these levels will attenuate naturally over time. Based on the high commercial usage level of the area and the history of train yards, gas stations and historical fill the site is OK to close out as is with no further action Closure letter was sent to 601 West Associates c/o John Raguso with specific requirement to properly close out all monitoring wells on the site."

Remarks: "GAGE LINE BROKE ? CONTAINED IN BOILER RM. AND TANK ROOM - PETROL TANK CLEANER IS SUCKING UP OIL NOW. SENT TO DEP."

Contact Name:	TODD HASSOLD
DEC Memo:	"08/28/11-Hiralkumar Patel. 9:45 PM:- visited site. met Todd from Recovery. inspected boiler room. found water and oil in boiler room. Todd mentioned that they could not inspect the entire boiler room as water in rear of the boiler room is deeper and water level was rising. spoke with Mario, building super. he mentioned that there are no drains in the boiler room floor and only one sump pit in entire boiler room. sump pit has four pumps inside it. they had 3,000 gal vacuum truck which can not hold all the water/oil in the boiler room. also, they were not sure about condition in rear of the boiler room. absorbent pads were on water. as water level was rising, Todd was worried about impact to electric panels which is about 10 higher than water level in boiler room. Todd requested to turn on sump pumps to throw water only from bottom into city sewer system. he mentioned that by lowering water level, oil may impact the wall and other structure, but that can be cleaned easily with power wash at later time. but he was worried about impacting electric panels and other part of basement as water level was rising. after discussing with DEC Austin, approved Todd's request to turn on sump pumps so they can lower the water level in boiler room. after they remove most of the water (only), they will remove remaining water/oil into vacuum truck. asked Todd to secure sump area with absorbent pads and booms to prevent any oil get into city sewer system. also asked him to turn off pumps frequently to check boiler room for any unusual thing. asked Todd to call with update. Mario mentioned that the entire tank system is turned off. Mario Onichimiuk **building super** Ph. (917) 817-1927 Todd Hassold Recovery Environmental Services, Inc. PH. (973) 940-3144 (O) (973) 896-6185 (C) Fax (973) 940-3146 email: thassold@recoverysrvs.com 08/29/11-Hiralkumar Patel. 9:45 AM:- visited site. cleanup crew was still on-site removing oil. two sump pumps were still working. currently, contractor is skimming off oil from top of water. after water level dropped, super inspected the rear end of the boiler room and found two buckets were knocked down during flooding and caused spill. inspected tank room which is in garage area. site has two 20,000 gal #6 oil ASTs. no spill inside the tank room. boiler room is right underneath the tank room location. as per super, no leak noticed from any fuel piping. asked Mario to call back for re-inspection, once basement is dry. 5:09 PM:- received call from Tom from Recovery. he mentioned that during cleanup, they found oil/water separator in back of the boiler room. he requested a site inspection. 08/30/11-Hiralkumar Patel. 11:00 AM:- visited site. met

601 WEST 26TH STREET (Continued) **S104275653**

Tom from Recovery. inspected boiler room. Tom mentioned that sump pumps were turned off yesterday night and when they left, area around sump was clean. but they found more oil this morning. during cleanup last night, they found oil/water separator in boiler room. inspected oil/water separator. found oil on top of oil/water separator, but no indication of any oil overflowed the separator. two pipes enters into oil/water separator. one pipe goes to a loading dock above the boiler room (contractor will find out where this pipe comes from) and second pipe goes into a tunnel located at the west end of the boiler room. there is an hatch boiler room ceiling in area where the oil/water separator inlet pipe crosses to loading dock. tunnel is located along the boiler room ceiling in west end of the boiler room. this tunnel runs east-west and then north-south. this tunnel structure is completely within building footprint and underneath the loading dock area. found oil leak from the northern most end of the tunnel. currently active tanks are located right above the northern end of the tunnel and currently active supply/return lines running aboveground in tunnel. no sign of leak found from currently active lines. found two sumps in the tunnel: first along the western wall of the north-south portion of the tunnel and another along the southern wall of the east-west portion of the tunnel. found a pipe coming out of the western wall of the tunnel in the area south of sump in north-south section. Tom closed the valve on this pipe and water flow into the separator was dropped. as purpose of this inlet pipe was unknown, asked Tom to leave valve open. Mario mentioned that there were three 20,000 gal #6 oil USTs abandoned-in-place behind the western wall of the tunnel (north-south section). found oil seepage from the northern wall of the ease-west section of the tunnel. as sump pumps in tunnel are connected to the oil/water separator, it looks like whatever oil seeped into the tunnel was thrown into oil/water separator. as there was no oil recovery from the separator, oil followed the water discharge pipe into the main sump. informed Mario that main sump pumps must not be used until the cleanup is completed as water coming into sump may be contaminated (dissolved phase). all water from basement must be disposed off as contaminated material. as per Mario, the former 20,000 gal tanks were under the loading dock platform. Mario gave copy of tank abandonment documents. as per the documents: - Don Carlo Environmental abandoned three (3) 20,000 gal USTs on 07/10/2001. tanks were abandoned using foam and lines were discontinued and closed - Malbro Inc. abandoned three (3) 20,000 gal USTs in Aug. and Sep. of 2005. tanks and all associated piping were filled with lightweight cellular concrete slurry mixture during inspection, found a 3,000 gal diesel AST for emergency generator. Mario mentioned that emergency generator is located on first floor. during inspection, found a coned vault in boiler room containing high voltage lines. this coned vault is located on other side of boiler room, opposite of the main sump in the boiler room. met with Sandy Hahn, property manager. informed her that leak in the boiler room, could be left over spilled material inside the concrete vault (if any) around the former 20,000 gal USTs. due to heavy rain over the weekend (harricane Irene), water may have entered around the abandoned tanks and pushed oil into the tunnel which end up into main sump via oil/water separator. asked her to submit a scaled site map with old/current tanks, piping, tunnel, sumps (in passage as well as boiler room) and oil/water separator. asked her to find out purpose of the pipe that comes out from the old UST area. also asked her to investigate in the old tank area. RXR SL Owner LLC. **property

--*-

601 WEST 26TH STREET (Continued) **S104275653**

at the southwest corner of the building and possible a third large tank in the Williams Communications unit (area north of west side tanks) - no fuel oil appeared to be leaching from any of the three masonary walls surrounding the eastern tank field 2) 06/11/2002: Phase II Petroleum Contaminant Investigation: - advanced total of thirteen (13) soil borings - found refusal in eight (8) of the borings which were abandoned - the remaining five (5) borings (MW-1 through MW-5) were installed to 7 ft bg and converted to 2 inch monitoring wells - soil sample was collected at 6 ft bg from boring MW-1 due to the presence of mild, but noticeable, noxious odor - minor VOC contamination found in soil sample from MW-1 which was installed in southwest corner of the building - found sheen in wells MW-1 and MW-2 and 0.25 inch product in well MW-3 - no product or sheen observed in wells MW-4 and MW-5 - monitoring wells were sampled in two events: first event was conducted within one week of development and second event was conducted approx. two weeks after development - water samples from first round were analyzed for VOCs and SVOCs via 8260 and 8270, respectively - water sample from second round were analyzed for TPH via 8015B - minor VOC contamination found in groundwater sample from MW-1, MW-2 and MW-3 (maximum 86 ppb of Benzene in MW-2) - product sample collected from MW-3 for fingerprint and was identified as hydraulic oil <----- - based upon field observations and analyticals results, two somewhat commingled contaminant plumes are present: free phase product on water which appear to be mixture of weathered #4 and #6 oil and a dissolved plume of a lighter hydrocarbon, which appears to be gasoline or a weathered kerosene 3) 04/23/2003: Final Phase II Environmental Site Assessment: - during inspection by NYSDEC project manager in Dec. 2002, found oil seepage through the tunnel wall adjacent to the eastern tank field - in Dec. 2002, Emteque was informed that the building's boiler was being inundated with oil/water coming from the house tank (tank # 6), which is located in the eastern tank field - Don Carlo Environmental performed a tightness test on the tank and tank found leaking - this investigation was performed to delineation contamination around eastern tank field and to complete delineation of contamination (by installing more monitoring wells) found around the western tank field - Emteque installed three (3) 4-inch monitoring well through the sidewalk equally spaced around the northeast corner of the intersection of 12th Ave and 26th street - three wells (MW-6, MW-7 and MW-8) were installed to a depth of 14 ft bg with 10 ft of screen - wells were set aprpox. 7 ft into the water table - no evidence of fuel oil contamination was identified in wells - soil samples collected at the water table during the well installation - no contamination found in soil samples collected during well installation - advanced five (5) soil borings (ETFSB-1 through ETFSB-5), to a depth of 12-16 ft bg, through the basement floor over the eastern tank field, collecting soil samples to a depth of approx. 4 ft below the groundwater table - soil samples collected at the water table during soil boring installation - no contmaination found in soil samples collected from soil boring in eastern tank field - 1 inch piezometers installed in three borings (ETFSB-1, ETFSB-2 and ETFSB-3) surrounding the tank field to the south and east - tunnel's wall contains groundwater on west side of eastern tank field - access was not provided to the north side of the eastern tank field - free phase product found on water in eastern tank field area - investigation revealed that contamination associated with leak from the house tank appears to be contained within the vicinity of the

601 WEST 26TH STREET (Continued) **S104275653**

house tank between the south wall, the north adjacent tank, the western tank tunnel and has not migrated more than 10 ft east of the tank 4) 06/16/2003: Revised Proposed Petroleum Contamination Corrective Action Plan: - groundwater local to the western tank field is approx. 10 ft below the first floor slab, approx. 6 ft below surrounding grade and flowing predominantly westerly - groundwater lcoal to the eastern tank field is approx. 10 ft below the parking garage of the FBI unit and apparently not flowing, since the groundwater flow is restricted on its western margin by the tank tunnel and to the south and east by basement boiler room walls - a small local easterlly gradient in the vicinity of the plume around western tank field and also in eastern tank field is being induced by dewatering to prevent flooding of the building basement 5) Spill Closure Petition Report: <--------- missing 6) 05/12/2006: Spill Closure Petition Report - Update #1: - collected groundwater samples from well MW-1 and recovery wells RW-1, RW-2, RW-3 and RW-4 - found minor VOC contamination during second round (maximum 46 ppb Benzene in RW-1) - removed almost 53,000 gal of contaminated groundwater and 1,637 tons of soil from the site

601 WEST 26TH STREET (Continued) **S104275653**

house pipes from these tanks 08/31/11-Hiralkumar Patel. 9:00 AM:- visited site. inspected boiler room and tunnel. found oil/water inside the boiler room. spoke with Tom. he mentioned that they pumped out oil/water from entire room before leaving site yesterday night, but more came back this morning. he mentioned that last night they closed the valve on pipe (recovery pipes installed next to western tank field) which discharges into oil/water separator so less water accumulated in boiler room. inspected tunnel again, specifically to see any seepage from tanks on eastern side of the tunnel. found oil seepage from eastern side tanks also. found multiple wells on and around property: one well in loading dock on west of western tank field, one well in loading dock ramp, one well on northern sidewalk of W 26th street, one well at the intersection of W 26th street and 12th ave, one well on eastern sidewalk of 12th ave, two wells on southern sidewalk of the W 27th street met with Todd and Michael Borello (from EBS). based on observations during site visits, asked Mr. Borello for following: - general scaled site map of entire property including all closed/in-service oil tanks (must include tanks owned/operated by tenants) - scaled site map (including old/current oil tanks, pipings, sumps, oil/water separator, seepage points, previous monitoring wells etc.) of area of concern - power wash of impacted areas in entire boiler room (pipes, walls, columns, floor etc.) - detailed cleaning of oil/water separator - turn on the oil/water separator system with proper DEP discharge permit - pump out of all water/oil from boiler room for off-site disposal until oil/water separator system turned on - collection of water sample (either from oil/water separator or from its discharge pipe) for 8260/8270 analyses - correction of PBS record (registration of existing in-service tanks, 3,000 gal diesel AST in loading dock ramp area and any other unregistered tank) Mr. Borello mentioned that they are planning to open small access in both east and west wall of the tunnel for preliminary inspection. they will consult with structural engieer and if safe, they will open larger access to both tank fields to clean any leftover contamination. Michael Borello Environmental Building Solutions, LLC. Ph. (646) 290-5925 Ext. 225 (917) 217-7334 (C) Fax (212) 867-9715 email: mborello@ebsllcnyc.com based on given information, a FBI rents building space on north side of eastern tank vault. 10:03 AM:- left message at FBI (212-384-5000). 09/01/11-Hiralkumar Patel. 8:00 AM:- received message from Mr. Borello. 12:25 PM:- spoke with Mr. Borello. he mentioned that based on available information, the new tanks are located right above the old western tank vault. they have collected water sample yesterday. he will submit scaled site map and water sample result by 09/08/11. 12:58 PM:- spoke with Eric at Emteque regarding missing initial spill closure report. Eric will check file and submit report, if available. Eric mentioned that they did Phase I report for Chase bank (lender) in 2010. Eric Telemaque Emteque PH. (212) 631-9000 email: eric@emteque.com 9/2/11-Vought-Received call from and spoke to Todd Hassold (Recovery Environmental Ph:973-896-6185) who noted that he had urgent issue on hand in that he was recovering approximately 25,000-gallons of oil/water mixture a day from the oil/water separator (source of water was seepage from adjacent Hudson River) and source of oil still undetermined. Hassold noted the liquid is mostly water with minor petroleum sheen. Hassold noted also that he was in the process of submitting a NYCDEP Discharge Permit Application to dispose of the water from the oil/water separator. Hassold noted that Clean Harbors was closed (disposal facility) and

601 WEST 26TH STREET (Continued) **S104275653**

that he did not have the storage capacity for the 25,000-gallons per day over the weekend and such was requesting an emergency permit to discharge to the sewer. Vought spoke to DEC Elburn who noted that due to Hurricane (causing of flooding) that DEC had an emergency permit reqiuirement exemption and as such no permit was needed for DEC. DEC Elburn noted however that NYCDEP also needed to be contacted (NYCDEP Leslie Lipton Ph:718-595-4730). Hassold called Lipton and as per Hassold, Lipton did not respond but Hassold was told by another DEP employee to call 311. Vought suggested that Hassold send an email with a description of the issue to DEC Vought as soon as possible so that he may forward email to DEC Patel, Elburn and DEP Lipton. Vought received email from Thomas Domke (VP Operations Recovery Environmental) confirming phone conversation but not including any details of issue. Vought sent reply email with cc to DEC Patel, Elburn and DEC Lipton that a full description is needed and that Vought on vacation for next two weeks and as such all parties should be copied on full description. Vought and all parties received full description and Vought reviewed description with DEC Water Unit Elburn and sent reply email that DEC had no objections to discharge to sewers as long as NYCDEP requirements were met also. 09/07/11-Hiralkumar Patel. 10:41 AM:- received call from Todd. he mentioned that NYC DEP approved water discharge to city sewer. now the entire boiler room is dry. 10:50 AM:- received call from Mr. Borello. he mentioned that no dissolved contamination found in water sample collected from boiler room last week. asked him to submit result for review. he also mentioned that they are waiting for result of water sample that was collected to get DEP permit to discharge water from oil/water separator into city sewer system. currently, they are planning to drill some holes in tunnel walls for further investigation. Mr. Borello will submit scaled site map today. 12:21 PM:- received message from Eric. he did not found spill closure report prepared probably in Oct. 2005. 09/08/11-Hiralkumar Patel. 10:22 AM:- received email from Mr. Borello including site map (including oil tanks on property), desgin of oil/water separator system and groundwater sample result. no dissolved contmaination found in water sample. as per the submitted site map, the entire site has total of fifteen (15) tanks: - one 5,000 gal tank at the end of garage ramp (from W 27th street), owned by property owner - two 20,000 gal tanks (currently in-service #6 oil tanks) in loading dock area, owned by property owner - one 10,000 gal tank in loading dock area, owned by Broadview - one 3,000 gal tank (diesel tank) in loading dock ramp, owned by Level III - four 275 gal tanks on 3rd floor, owned by property owner - four 275 gal tanks on 4th floor, owned by Broadview - two 250 gal tanks on 6th floor, owned by Level III reviewed PBS record again. PBS #: 2-600389 - three 20,000 gal in-service #6 oil ASTs in vault with access and three 20,000 gal closed-in-place #6 oil ASTs in vault with access. this PBS registration has expired in July 2006. as per PBS record, tanks owned by previous property owner. as per available information, the remaining three tanks were also closed-in-place in 2005. this PBS registration needs to be renewed/updated/closed with correct information (tanks closed/new property owner). PBS #: 2-604877 - one 10,000 gal diesel AST on legs/saddles. as per PBS record, tank owned by Wiltel Communications Group, Inc. this registration has expired in Dec. 2010. this registration needs to be renewed. PBS #: 2-607987 - one 275 gal waste oil AST on legs/saddles. as per PBS record, tank owned by Verizon. registration currently active. PBS #: 2-611131 -

601 WEST 26TH STREET (Continued) **S104275653**

one 10,000 gal diesel AST in contact with imprevious barrier. tank was installed in Jan. 2000. as per PBS record, tank owned by Level III Communications LLC. registration currently active. this registration may need to be updated because as per Mr. Borello, Level III owns a 3,000 gal diesel AST (which is located in loading dock ramp). 2:27 PM:- spoke with Timothy Kimball at Level III Communications. he confirmed that Level III owns 10,000 gal diesel tank which is located in loading dock area and a generator is located next to the tank. he mentioned that they don't own 3,000 gal diesel tank. he also confirmed that they don't have any day tanks on 6th floor. during conversation, he mentioned that Level 3 Communication acquired Wiltel Communications Group in 2007-2008. informed him that the tank registration under Wiltel Communication (for 10,000 gal diesel tank) has not been closed out properly. asked him to close the PBS registration that is under Wiltel Communications's name. Timothy Kimball Level 3 Communications LLC. (also owns Wiltel Communications Group) Ph. (720) 888-4744 email: timothy.kimball@level3.com 2:51 PM:- left message Gregory Myka (315-432-8486) at Verizon to confirm that Verizon only owns one 275 gal waste oil tank at the site. 3:05 PM:- left message for Mr. Borello and informed him that tanks' information provided on map is not accurate. 4:36 PM:- received message from Mr. Myka from Verizon. he confirmed that they have only one 275 gal waste oil tank at the site. they don't have any other tanks. 4:42 PM:- received message from Mr. Borello. he mentioned that he got tank's information from chief engineer. but they will do site survey and talk to each tenant to find out exact number of tanks and its owners. 09/09/11-Hiralkumar Patel. 9:18 AM:- visited site. inspected boiler room. no oil or sheen found on water in entire boiler room. boiler room walls/floor and other oil impacted structures were cleaned. found clean water going into main sump from oil/water separator. frac tank was on W 27th street, but wasn't connected to main sump. 9:27 AM:- spoke with Mr. Borello. informed him that there are multiple PBS records for the subject site. he requested copy of PBS records. 3:49 PM:- sent email to Mr. Borello including PBS records. asked him to submit all on-site tank's information (location, size, owner etc.) by the end of 09/16/11. informed him that PBS registrations must be updated/renewed immediately. email copied to Ms. Hahn. 09/14/11-Hiralkumar Patel. 10:43 AM:- spoke with Todd. he mentioned that insurance company requested an estimate for investigation. Todd is preparing the estimate and will submit to insurance company. 09/19/11-Hiralkumar Patel. received PBS application package in FedEx. as per submitted application, site has following tanks: - two 20,000 gal #6 oil ASTs in loading dock area; tank owned by property owner - one 5,000 gal #2 oil AST in basement (at end of garage ramp from W 27th street); tank owned by property owner - one 250 gal #2 oil AST in generator room on 3rd floor; tank being used to start up the generator; tank owned by property owner - one 250 gal #2 oil AST on 3rd floor along 12th Ave side by Verizon; tank being used to start up the generator; tank owed by property owner - two 250 gal ASTs on 3rd floor along 11th ave side; both tanks are closed-in-place; tanks owned by property owner - one 10,000 gal diesel tank in loading dock; tank owned by Broad View Network - one 250 gal #2 oil tank under the generator in central office on 4th floor; tank owned by Broad View Network - one 250 gal #2 oil tank closed-in-place in central office on 4th floor; tank owned by Broad View Network - one 250 gal #2 oil tank under the generator in data center on 4th floor; tank owned by Broad View Network - one 250 gal #2 oil tank closed-in-place in data

601 WEST 26TH STREET (Continued) **S104275653**

center on 4th floor; tank owned by Broad View Network - one 10,000 gal diesel tank in loading dock (PBS #: 2-611131); tank owned by Level 3 Communication - one 247 gal waste oil tank in basement (PBS #: 2-607987); tank owned by Verizon - one 1,000 gal waste oil tank in basement; tank owned by FBI - one 500 gal oil tank on 2nd floor; tank owned by FBI there is no information about 3,000 gal AST observed in loading dock area. 09/20/11-Hiralkumar Patel. 12:18 PM:- received message from Mr. Borello. 4:29 PM:- spoke with Mr. Borello. he mentioned that they drilled some holes in both side tank vaults and found oil pouring out from holes. as such they will break larger access to these vaults for further inspection/cleanup. he will send pics that he collected today. he will also schedule a site inspection, once larger holes made in wall. 4:31 PM:- receive email from Mr. Borello including a pic and a video showing oil pouring out of vault. 09/23/11-Hiralkumar Patel. 1:18 PM:- received call from Todd. he mentioned that they drilled small holes in both vaults and found product coming out from eastern vault only. only water came out through holes in western vault. based on that observations, they made 18 inches by 24 inches hole in western wall of the eastern vault (vault towards the boiler room). found free product in the vault. Todd mentioned that the hole is about 2 ft above the product level in vault, so they are not concerned about overflow through this hole. as there is heavy rain for today and tomorrow, asked Todd to secure the hole to prevent any spill in boiler room, if water level rise in vault. scheduled a site inspection at 3:30 PM on 09/26/11. 1:55 PM:- spoke with Mr. Borello. informed him about possibilty of oil overflow from hole in eastern vault due to heavy rain. Mr. Borello has already spoken with building management/super and they will inspect area frequently. if any spill noticed, they will call contractor for cleanup. also informed Mr. Borello about no information on PBS application about 3,000 gal tank observed in loading dock area. Mr. Borello will confirm that and will submit revised PBS application. 09/26/11-Hiralkumar Patel. 3:30 PM:- visited site. inspected hole made in eastern tank vault area. found free product and water in hole. the area behind the wall was filled with construction debris and filled with large concrete/stone pieces. met Ms. Hahn, Todd, Tom and Mike. informed them that the department requires delineation of soil/groundwater contamination on north and east side of eastern tank vault. no investigation needed on west and south of the eastern tank vault (as it is in tunnel area). Tom mentioned that they only found some water from holes mades in western tank vault area. asked Mike to prepare a scaled site map for area around tank vaults. asked Ms. Hahn to submit an investigation work plan for delineation. during meeting, Mike confirmed that the 3,000 gal diesel AST observed in loading dock area is owned by Broad View Network and there is no 10,000 gal tank owned by Broad View Network. Mike will submit revised PBS application to DEC Nick. forwarded previously received (incorrect) PBS application (which includes a check) to DEC Nick. asked him not to process application as a new updated PBS application will be submitted. 10/12/11-Hiralkumar Patel. received email from Ms. Hahn (at 11:39 AM on 09/30/11) including copy of revised PBS application and letter describing tank owners. PBS application was sent to PBS unit. as per revised tank owner letter, Broad View Network owns 3,000 gal diesel tank in loading dock and not the 10,000 gal diesel tank as mentioned in earlier PBS application submitted on 09/19/11. all other tank info is the same. 10/26/11-Hiralkumar Patel. 4:18 PM:- received email from Joe Horowitz (Horow137@aol.com) including copy of letter

601 WEST 26TH STREET (Continued) **S104275653**

from DEP with conditional authorization for water discharge. 11/02/11-Hiralkumar Patel. 3:21 PM:- received email from Mike including a draft work plan for review. he proposed to install nine soil borings which will be converted to monitoring wells. these borings/wells are proposed around two sets of abandoned USTs. draft work plan doesn't include a work schedule. also need a site map with structures in basement (tunnel, sumps in tunnel, main sump in boiler room, oil/water separator and boring/well locations). 11/14/11-Hiralkumar Patel. 9:45 AM:- spoke with Mike. informed him that the draft work plan looks fine except it is missing two things: work schedule and a site map with structures in cellar (tunnel, sumps in tunnel etc.). he will submit final work plan. 02/03/12-Hiralkumar Patel. 4:31 PM:- left message for Mike. 4:32 PM:- sent email to Mike, Ms. Hahn and Todd inquiring update. 5:08 PM:- received email from Mike. they are in process of obtaining bids from drilling companies and will start work once contractor is selected. he mentioned that oil/water separator is working fine and no additional oil observed in basement. 02/07/12-Hiralkumar Patel. 2:13 PM:- sent email to Mike and asked him about schedule for contractor selection. also asked him about the amount of oil recovered since the oil/water separator turned on. email copied to Ms. Hahn. 02/21/12-Hiralkumar Patel. 11:15 AM:- received email from Mike. they are in final stage of hiring drilling contractor and will schedule work shortly. till now, they recovered less than 55 gal of oil. 07/24/12-Hiralkumar Patel. 2:27 PM:- received email from Mike. they have installed numerous borings and wells at the site. they are having some logistical problems in few areas and requested a site visit. 07/26/12-Hiralkumar Patel. 3:42 PM:- left message for Mike. asked him to submit status report for work done till now, prior to any site visit. 3:47 PM:- sent email to Mike and asked to submit status report for work done till now. informed him that site visit can be done only after completing review of the additional information. email copied to Ms. Hahn. 07/27/12-Hiralkumar Patel. 9:51 AM:- received email from Mike including site map and field notes. as per field notes, four wells installed at the site: two wells (Point A and Point B) on the west side and two wells (Point G and Point H) on the east side of the former tank field. fuel oil smell noted during installation of wells Point A and Point B. Mike mentioned that a third well could not be installed on east side (in the FBI space) due to refusal. he also mentioned that driller is hesitant to drill in the boiler room due to possible flooding. 11:28 AM:- spoke with Mike. he mentioned that installation of four wells was completed on 07/23/12. dark soil and petroleum odors were noted during installation of wells Point A and Point B on the west side of the tank field. no sign of contamination observed in wells on east side (Point G and Point H) in FBI parking space. he does not know about any product on water as wells are not developed yet. asked him to develope the four wells, define site-specific groundwater flow direction and collect groundwater samples for VOC/SVOC analysis. informed him that wells should not be installed in basement boiler room due to possible flooding issues. asked him to submit detailed boring/well logs for review. 11:47 AM:- sent email to Mike and asked to submit boring/well logs, results of groundwater samples and site-specific groundwater flow direction by the end of 08/20/12. email copied to Ms. Hahn. 09/07/12-Hiralkumar Patel. 11:53 AM:- received email from Mike including soil boring logs and soil/gw data. received boring logs for borings Point A, Point B, Point G and Point H. Point A and Point B were installed in RXR

601 WEST 26TH STREET (Continued) **S104275653**

Parking Garage and fuel oil smell noted in both borings at 10 ft depth. wells were installed to 25-30 ft depth in Point A and Point B. borings Point G and Point H were installed in FBI parking space. in Point G, bedrock encountered at 16 ft depth. found PID readings in Point A and Point B, but PID unit is not included in logs. as per lab report, four soil samples collected. one soil sample from 10 ft depth from each of four borings. no VOC contamination found in soil samples, but some SVOC compounds were detected (below cleanup standard) in soil samples. as per lab report, four groundwater samples collected from borings. no contamination found in groundwater samples. the site map does not show location of Point H. needs revised boring logs (with PID unit) and site map (with boring locations). 10/03/12-Hiralkumar Patel. 2:28 PM:- sent email to Mike. asked him to submit revised boring logs and site map. also asked him about amount of product removed till date using on-site recovery system. email copied to Ms. Hahn. 11/26/12-Hiralkumar Patel. went to site for inspection to see impact after hurricane Sandy. met with Mario. he mentioned that the entire basement was full of water, but no more oil observed on water. the oil/water separator, as part of the on-going cleanup, was emptied out right before storm. as boilers were damaged during storm, they have temporary boilers on street. they are also in process of converting to #2 oil. 01/15/13-Hiralkumar Patel. received message from Mike (at 1:11 PM on 01/14/13). he mentioned that he is waiting for response for data he submitted on 09/07/12. 11:33 AM:- sent email to Mike and informed him that the department responded on 10/03/12 and asked for revised boring logs and product recovery data, which has not received yet. 11:37 AM:- received email from Mike including copy of email that he sent on 10/09/12. email included revised boring logs and site map. 12:14 PM:- received email from Mike. they recovered less than 55 gal oil since oil/water separator installed. reviewed available boring logs, site map and sample results. borings A, B, G and H were installed to a depth of 25-30 ft bg (except boring G which was installed at 16 ft bg). maximum PID reading of 2 ppm was recorded at 10 ft in boring B which is located southwest of the former tank rooms. soil and groundwater samples were collected from these four borings. no contamination found in soil or groundwater samples. 12:23 PM:- spoke with Mike. asked him to submit depth of borings/wells and former tank room reference to single point. 3:14 PM:- received email from Mike. he mentioned that points G and H inside the FBI space were to a depth of 15 ft and would be below the 6 USTs that were closed in place. he also mentioned that points A and B were advanced to a depth of 20 ft but from street grade and are not below the USTs. 01/30/13-Hiralkumar Patel. discussed with DEC Austin. based on site history, available sampling data and observations during site visit after hurricane Sandy, Austin asked to close the case. 1:59 PM:- sent email to Mike. asked him to submit spill closure report. email copied to Ms. Hahn. 02/28/13-Hiralkumar Patel. 2:43 PM:- sent email to Mike inquiring about closure report. email copied to Ms. Hahn. 03/22/13-Hiralkumar Patel. 4:50 PM:- received email from Sharon Dyal (sdyal@ebsllcnyc.com) from Environmental Building Solutions, including spill closure report. 03/26/13-Hiralkumar Patel. based on available information, case closed. 2:45 PM:- sent spill closure letter to Ms. Hahn. letter emailed to Ms. Hahn and Mike."

Remarks: "weather related - cleanup starting"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Cross ref #9304676 1/21/2004 Sangesland contacted several parties associated with the spill in this building. Apparently on 1/20/2004 a leak was discovered in an elbow of the fill line in the basement Tunnel Room of this address. Building Manager: Harold Brody - Responsible Party According to Paul at New York Combustion (718-763-6100), Mr. Brody called NY Comb. to ask them to come and fix the leaking pipe. Paul informed Mr. Brody that a spill would need to be reported. Neither Mr. Brody or Paul reported the spill. Romeo Santos at Don Carlo Environmental (718-857-2100) was hired either evening of 1/20 or morning of 1/21 to do the actual clean up of the oil. Mr. Santos says that he called in the Anonymous spill report #0311818 earlier this morning and then he sub contracted the cleanup

601 WEST 26TH STREET (Continued) **S104275653**

work to Petroleum Tank Cleaners. All clean up work is complete. Paul from New York Combustion finished the pipe repair work. 1/23/2004 PTC called to say that they in fact DID NOT complete the clean up at the site. PTC was hired only to vac out the liquid portion of the spill. PTC was told by Don Carlo Enviornmental that they will be responsible for the final cleanup. Don Carlo says the clean up was done by PTC and DC will not be doing any further work. In frustration, Sangesland sent DEC Enironmental Control Officer Paul Blanton to visit the site. He asked why the owner or consultants failed to call in the spill within the 2 hours required by law. There was considerable finger pointing and no one took responsibility for the error. There was some discussion of how the oil went into a second unused tank. No ticket was issued. 3/31/2004 As of this date, the case is still open. No follow up documentation has been submitted to the DEC to close out this case. 10-06-05: NYCT performing borings for #7 line extension. Two boring performedin the area of this facility noted strong contamination (04-06966 & 04-07003). Boring logs and notes in eDocs. MCT 3/30/2006 Sangesland closed this case and referenced this to spill #9304676. All tanks on site were removed. Impacted Soil was excavated. Still some impacted GW as of 10/05 Consultant will take another round of GW samples in 4/06. This spill is closed "

Remarks: "718-857-1800- DC Envirormental phone, this is the only info I could get out of caller. Might be a leak in the fill line."

Tank Info:

Tank Number:	001
Tank Id:	266103

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K00 - Spill Prevention - None
G12 - Tank Secondary Containment - Double-Walled (AG only)
J02 - Dispenser - Suction Dispenser
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
E00 - Piping Secondary Containment - None
B00 - Tank External Protection - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	04/01/2011
Capacity Gallons:	3000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported

H01 - Tank Leak Detection - Interstitial - Electronic Monitoring

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	05/01/2016
Capacity Gallons:	75
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	JSMACRI

Tank Id:	58046
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	03/01/2000
Capacity Gallons:	7500
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Tank Info:

Tank Number:	001
Tank Id:	3356
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
L09 - Piping Leak Detection - Exempt Suction Piping
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
H99 - Tank Leak Detection - Other

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	06/20/2000
Capacity Gallons:	1500
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"2-4-15 - Obligado (Desk Duty) - I called AARco and left message to call back DEc. 2-5-15 - Obligado - I called Aarco again, left another message for John Bananno 08-03-2018 As per Remediation Section B Chief Vadim Brevdo, this spill case is reassigned from Vadim Brevdo to MD. S. Hoque as project manager effective August 3, 2018. -MDH 10/23/2018-M.Hoque: Spoke to AARCO(Kathrine and Mike)and discussed the latest status of the spill case. AARCO sent the tank test report. The report stated that a dry portion of the tank was leaked. Tank test was conducted on 2/4/2015 and was failed. Mike told that the tank was emptied. NYC Sanitation did not contact with AARCO for further investigation. (MDH) 4/2/2021-M.Hoque: An email sent to Carlos R. Maldonado-Roubert, Project Director, Public Buildings, Transportation Program Unit Tanks & Remediation requested to submit a site update report. (MDH) 4/8/2021-M.Hoque: The email below received from DDC: From: Aliberti, Jerry (DDC) Thu 4/8/2021 11:55 AM To: Hoque, MD S (DEC) Cc: Roberts, Harvey ; Heede, Connor ; Roger Stevens (PMS Construction Management) ; Tom Larison ; Wesolowski, Martin (Wesolowskim@liro.com); Samani, Afsar (DDC) ; Maldonado-Rouber,

NYC SANITATION (Continued) **S117535323**

Carlos (DDC) ; Fullwood, Harvey (DDC) ; Walton, Ricardo (DDC) ; Brevdo, Vadim (DEC) Good morning MD S Hoque, Thanks for bringing this open spill to our attention. Through our Consent Order with NY State, DDC routinely addresses these spills with monitoring from DEC s Vadim Brevdo and his staff. This spill was generated by a DSNY contractor quite some time ago, but was never disclosed to DDC. However unfortunate that this spill has gone unnoticed by DDC, I m glad to inform you that funding is currently being procured to replace all 7 petroleum storage tanks at this site. Our design consultant, LiRo, and construction manager, PMS, are ready and able to commence this work as soon as the funds are allocated hopefully within 2 to 3 months. Feel free to contact me if you have any questions or concerns. Best regards, Jerry Aliberti, CCM - Deputy Program Director - Public Buildings Division Transportation Program Unit New York City Department of Design + Construction - 30-30 Thomson Avenue - Long Island City, NY 11101 T: 718-391-1073 - M: 917-731-6613 - aliberti@ddc.nyc.gov At 1:56 pm, another email received from Mr. Harvey Roberts of AECOM. Contract PW348-63 will add the Manhattan Repair Shop to its Site List. From: Roberts, Harvey To: Aliberti, Jerry (DDC) ; Brevdo, Vadim (DEC) ; Hoque, MD S (DEC) Jerry, Harvey Roberts Project Manager 605 Third Avenue, 2nd Floor New York, NY 10158 Direct: (212)896-0371 4/9/2021-M.Hoque: At 2:40 pm, Carlos Rouber(347-598-3941) of NYC DDC called me to discuss how to go forward to complete the site remediation. He said that AECOM will work for DDC and it will take 2 to 3 months to start the remediation. Hw will keep the Department updated on this matter. (MDH) 9/9/2021-M. Hoque: Sent an email to Harvey Roberts and others/DDC/AECOM regarding status of the site remediation. (MDH) 9/13/2021-M. Hoque: On September 13, 2021, below email received from the Consultant Attention MD Hoque: DDC has assigned The Manhattan Boro Repair Shop to Contract PW348-71, being performed by the firm, PMS. The PMS scope of work is to remove and replace seven USTs, including piping and related equipment. PMS is currently performing the site inspections needed to prepare its Pre-Design report. Harvey Roberts Project Manager 605 Third Avenue, 2nd Floor New York, NY 10158 3/10/2022-M. Hoque: The email below received for AECOM: From: Roberts, Harvey Sent: Thursday, March 10, 2022 12:06 PM To: Hoque, MD S (DEC) ; Aliberti, Jerry (DDC) Cc: Heede, Connor ; Roger Stevens (PMS Construction Management) ; Tom Larison ; Wesolowski, Martin (Wesolowskim@liro.com) ; Samani, Afsar (DDC) ; Maldonado-Rouber, Carlos (DDC) ; Fullwood, Harvey (DDC) ; Walton, Ricardo (DDC) ; Heede, Connor Subject: RE: NYSDEC Spill case # 1410686, 640 W 26th Street, Manhattan, NY (DSNY Manhattan Boro Repair Shop) Mr. Hoque, NYCDDC transferred the remedial responsibility for Spill Case #1410686, DSNY Manhattan Borough Repair Shop, located at 640 West 26th Street, to another contractor. It is my understanding that NYCDDC the new contractor will replace the tank systems at the facility. Harvey Roberts Project Manager 605 Third Avenue, 2nd Floor New York, NY 10158 Direct: (212)896-0371"

Remarks: "caller reporting a failed tank test on a 1,000 gallon tank. tan will removed and replaced."

Tank Info:

Tank Number:	001
Tank ID:	60392
Tank Status:	In Service
Material Name:	In Service
Capacity Gallons:	1000
Install Date:	08/01/1994
Date Tank Closed:	Not reported
Registered:	True
Tank Location:	Underground
Tank Type:	Equivalent technology
Material Code:	0015
Common Name of Substance:	Motor Oil
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Pipe Model:	Not reported
Modified By:	JSMACRI
Last Modified:	04/14/2021

Equipment Records:

F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G04 - Tank Secondary Containment - Double-Walled (Underground)
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
E02 - Piping Secondary Containment - Vault (with Access)
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
G03 - Tank Secondary Containment - Vault (w/o access)
I02 - Overfill - High Level Alarm
B04 - Tank External Protection - Fiberglass

Tank Number:	002
Tank ID:	60393

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN Notes:by Rorriguez called ray lara of petroleum tank cleaners. he stated that there was a overfill of 30 gallons of oil to the address. The tank gauge was not working. Cleaning the spill right now. Ray Zolker from Hess. 800-437-7265. left a message for him to call. 12/05/2002 Tipple at od desk was called by Hess to request spill numbers 0209070 and 0209079 (since both numbers were issued for the same incident) be referenced to as one number. Tipple closed out # 0209079 and referenced the spill to 0209070. GAUGE ON TANK NOT WORKING 800-437-7265. 212-964-7712. RAY ZOICKER (HESS). 12/20/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. -QA

APT BLDG (Continued) **S105997474**

12/21/06: Called Mr. Rubin (Super of Co op building) at (212)242-7191 he said this spill is cleaned up long time ago. He said to call property Manager regarding documents of the spill. Called Ms. Yvonne (Property Manager) at (212)319-5000 and talked about the information of the spill. She said this spill is cleaned since long time ago. She will send me closing confirmation letter to close the spill. -QA 01/03/06: Called Ms.Yvonne and said to take end point soil sample to find out the contamination in soil of spill area. -QA 02/05/07: Called Ms. Yvonne at (212)319-5000 and reminded her to take soil samples for closing this spill. -QA 06/11/07: Mr. Issac Mungra (Eastmond Company) sent me a report of one soil sample on dated May 30, 2007, which he took 2 ft. under the pipe line in the garden. He also sent a diagram in which he has shown the location of the sample. Soil sample is clean. -QA 06/21/07: I visited Spill site, checked fill port, vent line in the garden area and inside the basement. I didn't see any odor or any stain in the area. I have not found any sign of contamination in this area. This spill is clean (see photos in e-doc). After discussion with Mr. Jon Kolleeny (supervisor), I closed this spill. -QA "

DEC Region: 2
DER Facility ID: 120725
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 3/9/04-Vought-File review by Vought: Letter from DEC(O'Dowd) to Getty(Ochoterena)-12/10/97. Letter sent requiring installation of three monitoring wells in response to tank test failure on 12/3/92. Report due to DEC by close of business 1/30/98. Site notes by DEC O'Dowd-meeting held on 11/12/97. Site planned for construction of new residential building. Tank Closure Report (Tyree Organization William Conroy)-April 1998. Reason for tank closure is property divestment. One pump island located adjacent to 10th Avenue. Removal of twelve (550-gallon) gasoline USTs and one (550-gallon) waste oil from 3/23-3/25/98. Multistory commercial and apartment buildings located across 10th Avenue to the west, church with a school and playground lcoated across West 20th Street to the north of the subject property . Six endpoint samples were collected including five from the gasoline excavation and one composite sample from the waste oil excavation. Soil analytials show 9990ppb toluene(south wall), 10600ppb napthalene(south wall), 10000ppb toulene(west wall), 15900ppb napthalene(west wall), 156ppb MTBE (Bottom). Waste oil soil endpoint shows 427ppb benzo(a)anthracene and 411ppb benzo(b)fluoranthene. Addendum to the Tank Closure Report (Tyree Org)-5/25/98. The additional work consisted of further excavation of th west wall and the south wall of the gasoline tankfield excavation. The additional excavation resulted in clean(STARS Memo) endpoint soil samples from the two walls. Excavation indicated the presence of a former basement filled with demolition debris. Depth to groundwater estimated at 9 below grade. Two additional soil endpoints were collected for analysis. Soil endpoint analyticals show not TAGM 4046 Soil Cleanup Objective exceedances after second excavation event. Project Summary Report (Tyree Org)-5/25/98. One groundwater sampling event prior to the destruction of the wells during removal of underground storage tanks. Groundwater analyticals show 173ppb MTBE(W-1), 1200ppb MTBE(W-2) and 1890ppb MTBE(W-3). Groundwater flow direction not determined. Closure Request (Tyree Org)-7/8/99. The property was sold by Tyree's client to the 20th Street Association, LLC. The owner has excavated the property for construction purposes . These three wells were destroyed in March 1998 when the gasoline tanks were removed . A total of 305.11 tons of soil were removed from teh tankfield excavation. The entire lot (approximately 114' x 100') has been excavated to the property lines and to a depth of approximately 15'. Tyree requests closure based on 1)only ethylbenzene in one well at 6.1ppb 2)the levels of MTBE were probably significantly reduced by removal of approximately 9 feet of unsaturated and 6' of saturated soil 3)approximately 8550 tons of soil were removed. Tyree requests no further action. Vought reviewed site with DEC Rommel which resulted in spill closure."
Remarks: "ORIGINAL SPILL ASSIGNED TO O'DOWD."

Updated By: DJEATON
Site Description: "This site is a portion of site 231005 and previously referred to as V00530. Location: The 0.4 acre site is the northwestern part of a larger, historic manufactured gas plant (MGP) operation which once encompassed portions of five city blocks along the western side of Manhattan, New York City. Remediation has already been accomplished at several other portions of the larger site. The descriptions of the other sections can be found under the listings for the sites noted above. This site is bounded by the West Side Highway (NY Route 9A) on the west, and West 18th and 19th Streets to the south and north, respectively. To the east, the rest of the block is made up mixed use commercial properties. Site Features: The site is almost flat, with a slight slope to the west, toward the Hudson River. Most recently, the site housed the Bayview Prison facility for women, which was closed following major flood damage from Tropical Storm Sandy in 2013. The entire site is covered with buildings or pavement. Current Zoning and Land Use: The former prison building and a building annex remain vacant on the site. Current site zoning is C6-3, for commercial purposes. The site is included in the Special West Chelsea District, a 14-square block area established in 2005 to allow mixed commercial and residential development, and to promote development around the adjacent High Line city park. Adjacent properties to the east are being redeveloped for residential and commercial uses. Past Use of the Site: The West 18th Street Gas Works began operations in 1834 and continued to expand through most of the 1800s, but was closed in the early 1900s. Manufactured gas was produced by heating coal in a closed vessel, collecting the gas and purifying it, and then delivering it through underground networks of pipes into the surrounding area. The gas was used in homes and businesses for heating, lighting, and cooking in much the same way that natural gas is used today. Operable Unit 5 contained two gas holders during the period when the MGP was active. The gas manufacturing process

BAYVIEW CORRECTIONAL FACILITY (Continued) **1007112519**

produced a byproduct consisting of a black, oily liquid waste known as coal tar. This tar escaped from underground storage tanks and pipes into surrounding subsurface soils. The tar is resistant to decay and is commonly found in soils at former MGP sites decades after operations ceased. Most of the tar contamination found at the West 18th Street MGP was found on neighboring properties, which have already been remediated or are in the process of being remediated. Relatively minor impacts have been detected on Operable Unit 5. Following closure of the MGP, the gas manufacturing facility was torn down and the site was subdivided and sold to a number of different owners. Subsurface structures such as building foundations and subsurface piping, however, were often not removed and remain in place today. A variety of commercial and industrial operations developed throughout the former MGP site in the middle and late 1900s. Based on investigation work conducted to date, it appears that gas holder foundations still exist beneath the site. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie Cambrian Hartland Formation bedrock. The unconsolidated units are divided in to three distinct stratigraphic units. From the surface down, the units consist of a fill unit (highly heterogeneous, generally highly permeable) a silty-clay unit (a low-permeability aquitard consisting of tidal marsh deposits), and a sand unit (highly permeable stratified alluvial sands). "

Env Problem: "Nature and Extent of Contamination: Sampling at the site was limited due to the presence of buildings that did not permit extensive sampling. Based on the limited sampling to date, which included analysis for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals, no significant contamination has been detected on this operable unit. There is a possibility that some source material may be present within the holder structure under the former prison building, however, there is no evidence that source material is migrating from the operable unit. The soil samples collected on this site contained SVOCs and metal contamination; the highest concentration of total SVOCs is 610 parts per million (ppm). Concentrations of mercury exceed the restricted residential SCOs, with a maximum concentration of 1.9 ppm. Groundwater collected north of this operable unit met ambient water quality standards, and the groundwater south of the adjacent operable unit (south of the site) contained minor contamination of SVOCs, with only naphthalene exceeding its groundwater standards at a concentration of 11 parts per billion. Soil vapor and indoor air sampling have not indicated the potential for soil vapor exposure. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

241 WEST 28TH STREET (Continued) **S125465251**

Record Updated Date:	12/28/2021
Update By:	MDMACCAB
Site Description:	"Location The 29,315 square foot (0.67 acre) site is within the Chelsea neighborhood of Manhattan, bearing the addresses 241 251 West 28th Street and 240 250 West 29th Street. The site is bound by West 29th Street to the north, a 13 story commercial office building and a 12 story commercial office building to the east, West 28th Street to the south, and a five story industrial manufacturing building and a seven story public institutional building to the west. Current Zoning and Land Use The current zoning designation is M1 6D, which permits residential, commercial, and industrial uses. The current surrounding parcel uses are a combination of residential, commercial, industrial, and institutional. The site is presently (December 2021) undergoing construction of two residential towers.. Past Use of the Site The site had been occupied by commercial and industrial facilities as early as 1890. Past site uses included a lumber yard (circa 1890), a fur processing and cleaning company (1927 1934), an auto repair facility (circa 1934), garages with petroleum bulk storage (1930 to 2011) and parking facilities with hydraulic lifts and suspected hydraulic USTs (1920 2014). During its operation as a parking lot and garage, the site was assigned a NYC restrictive E zoning designation in April 2011 for hazardous materials (E 137), air quality, and noise (E 276). Site Geology and Hydrogeology Subsurface stratigraphy at the site consists of historic fill underlain by native soil consisting of silt, sand, gravel, and boulders overlying bedrock. The fill extends to varying depths ranging from about 3 to 20 feet below grade and generally consists of loose, black to gray to brown, fine to coarse sand, with varying amounts of gravel, silt, rock fragments, brick, tile, concrete and ash. Mica schist bedrock was encountered at depths ranging from about 21 feet below grade in the southern portion of the site to 63 feet below grade near the northeast corner. Groundwater depth ranges from about 15.8 to 17.4 feet below grade. Regional groundwater is inferred to flow 0.75 miles west toward the Hudson River, following the influence of local topography."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil were primarily associated with historic fill present across the site that included metals and semi volatile organic compound (SVOCs). Ten underground storage tanks (USTs) were located and properly exhumed and properly disposed of off-site. Contaminants associated with historic fill were present across the site. Volatile organic compounds (VOCs) were present in groundwater above water quality standards. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are nearly complete at the site and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

DEC Memo:	"DEC Piper spoke w/ Charles Rose. Assistant to the principal. As per conversation, they were getting ready for winter and noticed a leak. When the janitor inspected found approx 200 gal in vaulted area. Spill is contained and in vault. PTC to respond today and pump out remaining oil and oil on floor. No drains, sewers effected. PTC to contact DEC upon completion of emergency cleanup. School is not in session and no children are present. Odors present in basement only and not in school. 9/11/06- DEC Piper spoke w/ Sister Katheleen, PTC had cleaned up emergency spill. Piper spoke w/ PTC, tank was above ground on concrete. Concrete was in good shape. School is going to replace tank. 6 drums of oil soaked speedy dry removed. CLosed."
Remarks:	"TANK IS LEAKING IN THE TANK ROOM OF SCHOOL: CREW ENROUTE TO PUMP OUT TANK AND CLEAN UP SPILL: NO DRAINS EFFECTED:"

DER Facility ID:	416281
DEC Memo:	"Case started as a TTF on March 13, 2012 On May 30, 2012 Sangesland spoke to property manager (Pedro Martin 212-868-3888). He said there is a 5,000 gal #6 tank that has some contamination issues (he didn't know details). Owner hired Riteway Tank to deal with the problems. Sangesland sent an e-mail to both David at Riteway and Veronica Zhune to ask them to work together on this site. Unknown if tank is being repaired or closed/removed? 5/29/2012 Sangesland got an e-mail from David Chan at Riteway. He said they just got a signed proposal back from the owner. They will move forward with additional sampling and work in the next few weeks. 7/6/2012 Sangesland received an e-mail from Riteway: Sampling was performed this past Monday we core drilled through the bottom of the tank to retrieve samples. The samples returned dirty (verified onsite via PID). Ground water is at the tank, as soon as we core drilled through the bottom, water rushed in. We are currently writing an action plan for Veronica. We propose to IMMEDIATELY cut/install perforations on the interior of the tank of various sizes and at various heights to minimize the spreading of the contamination and to aid in the migration of loose product back into

APARTNMENT BUILDING TTF (Continued) **S111738872**

the tank. We are working on a delineation proposal for the client. Due to the location of the tank (buried in the basement), To perform an accurate delineation may be extremely difficult, if not near impossible. Access to the area is limited, especially when trying to get geo probe equipment onsite. 7/27/2012 - Sangesland sent this message to Riteway today after a site visit: Earlier today I inspected the basement of 245 West 29th St and discussed the project with Joe Ostrowski. Based on the inspection and discussion, the NYSDEC is requiring two tasks to be completed before the tank can be closed in place. 1) The NYSDEC requests that several additional holes be drilled in the sidewall of the buried tank to allow groundwater (and petroleum) to freely flow back into the tank. This liquid should be pumped out weekly for a period of 4-6 weeks. An inspection should be made of this liquid to determine what percentage is petroleum. 2) Two additional soil borings need to be drilled through the basement floor at a location approx 8 feet North of the buried tank and another 8 feet South of the buried tank down below the Groundwater level in the area. A soil sample should be taken at the Groundwater interface level and tested for VOC's and SVOC's per Methods 8260 & 8270. Based on the results of these two tasks, the NYSDEC may require additional work, or may close the case out and allow the existing tank to be closed in place. Please provide a short writeup of the results of this investigation. Thanks, SS
****
********* 10/26/2012 Sangesland spoke to David Chan at Riteway. He tried to take soil borings around the tank as requested. He hit refusal at about 6ft. He got minor hits on some VOCs. Slots were cut in the buried tank and they have pumped out several hundred gallons of water from the tank about 6 times over the last 1-2 months. Visual inspection of this water shows no oil. Riteway will return one more time to take a water sample and do a sniff test. If the sample smells at all, a sample will be sent to the lab.
****
11/27/2012 Sangesland spoke to David Chan at Riteway. He said they put slots in the existing buried tank and have pumped out groundwater from the tank several times over the last month. The water appears clean and there is no oil mixed in. Based on this information, DEC has approved closing the spill case and allowing the property owners to go ahead with closing this tank and constructing a new tank. "

Remarks: "test failure, no loss of product, tank has been pumped"

DEC Memo:	"Need to trace owner of site and then send Contaminated Soil Letter. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/21/06 - Raphael Ketani. I reached Nathan Epler of Roux Associates (631) 232-2600. He said that he had sent in all of the paperwork some time ago. I told him that DEC had nothing for the

535 WEST 19TH STREET RE-DEVELOPMENT SITE (Continued) **S107488445**

case. He said he will get back to me. The 3 550 gal. tanks mentioned in the spill report are not on any PBS record. Mr. Epler and an associate called me back. They said that the tanks had already been removed, along with the liquids they contained and the soil that was found to be contaminated. I asked them for the manifests, pictures, a site plan, clean end point sample results, and a PBS registration form. They said they had all of that and that they will send it to me by the beginning of next week. 7/5/06 - Raphael Ketani. Chris Batista of Roux called to say that he has the manifests, soil analytical results, and soon the signed PBS registration form. He said he will send them very soon. 7/17/06 - Raphael Ketani. I received the closure report today. 7/18/06 - Raphael Ketani. I reviewed the closure report and found it to be acceptable. Based upon the analytical results, pictures, manifests, and narrative in the 7/13/06 closure report from Roux Associates, I am closing the spill case. 8/17/06 - Raphael Ketani. I received a cover letter from ROUX Associates date 7/14/06. The letter was given to me by Nick Lombardo of the PBS Unit. He said that PBS application was alright and that he received a check with the application. I will have the document E-DOCed."

Date Record Updated: 07/03/2018
Updated By: GWCROSS
Site Description: "Location: The site is the northwestern part of a larger, historic gas manufacturing site which once encompassed portions of five city blocks along the western side of Manhattan, New York City. Remediation has already been accomplished at several other portions of the larger site, as detailed below. The portion of the site covered by this document (Operable Unit 5, as described below) is bounded by the West Side Highway (NY Route 9A) on the west, and West 18th and 19th Streets to the south and north, respectively. To the east, the rest of the block is made up mixed use commercial properties. Site Features: The site is almost flat, with a slight slope to the west, toward the Hudson River. Most recently, the site housed the Bayview Prison facility for women, which was closed following major flood damage from Tropical Storm Sandy in 2013. The entire site is covered with buildings or pavement. Current Zoning and Land Use: The former prison building and a building annex remain vacant on the site. Current site zoning is C6-3, for commercial purposes. The site is included in the Special West Chelsea District, a 14-square block area established in 2005 to allow mixed commercial and residential development, and to promote development around the adjacent High Line city park. Adjacent properties to the east are being redeveloped for residential and commercial uses. Past Use of the Site: The West 18th Street Gas Works began operations in 1834 and continued to expand through most of the 1800s, but was closed in the early 1900s. Manufactured gas was produced by heating coal in a closed vessel, collecting and purifying it, and then delivering it through underground networks of pipes into the surrounding area. The gas was used in homes and businesses for heating, lighting, and cooking in much the same way that natural gas is used today. Operable Unit 5 contained two gas holders during the period when the MGP was active. The gas manufacturing process produced a black, oily liquid waste known as coal tar. This tar escaped from underground storage tanks and pipes into surrounding subsurface soils. The tar is resistant to decay and is commonly found in soils at former MGP sites decades after operations ceased. Most of the tar contamination found at the West 18th Street MGP was found on neighboring properties, which have already been remediated or are in the process of being remediated. Relatively minor impacts have been detected on Operable Unit 5. Following closure of the MGP, the gas manufacturing facility was torn down and the site was subdivided and sold to a number of different owners. Subsurface structures such as building foundations and subsurface piping, however, were often not removed and remain in place today. A variety of commercial and industrial operations developed throughout the former MGP site in the middle and late 1900s. Based on investigation work conducted to date, it appears that gas holder foundations still exist beneath Operable Unit 5. Operable Units: An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Although the entire West 18th Street MGP site is included in a Voluntary Cleanup Agreement with Consolidated Edison, the former MGP site is now split between several different current owners and operable units, which has enabled a piece-by-piece approach to site cleanup. Some of this cleanup work has been accomplished under the original Voluntary Cleanup Agreement, and some

CE - W. 18TH ST. GAS WORKS (Continued) **S105684667**

has been accomplished by third party developers under the New York State Brownfield Cleanup program. The following is a summary of the operable units comprising the site. Operable Unit 1 (OU 01) is the entire historical footprint of the MGP site. Operable Unit 2 (OU 02), the West Chelsea Development property (535 West 19th Street), was designated as OU-2 to facilitate redevelopment. Remedial Action took place from September 2006-February 2008, for which a release letter, closing out remediation of this property, was issued in November 2009. Operable Unit 3 (OU 03), 524 West 19th Street, also known as the Gasser Property, was remediated from September 2007 - September 2008. A final engineering report was approved in August, 2009, and a deed restriction was filed in October 2009. Operable Unit 4 (OU 04) is the portion of the site that sits between West 16th and West 17th Street and 10th and 11th Avenue. Another part of the original MGP site, the 19th Street Development site, located at 80 11th Avenue, was remediated under the Brownfield Cleanup Program as site number C231017, and received a Certificate of Completion in September 2006. No formal Operable Unit designation was made for this property. The block bounded by West 17th and 18th Streets, and by 10th and 11th Avenues, entered into the BCP as two different projects. The western portion (known as the 17th Street Development Site, C231036) completed remedial action in December 2014, and is currently being redeveloped. The eastern portion, surrounding the High Line Park, is known as the 515 West 18th Street Site (C231093) has been thoroughly investigated and is currently awaiting remedial action. No formal Operable Unit designation was made for this property. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie Cambrian Hartland Formation bedrock. The unconsolidated units are divided in to three distinct stratigraphic units. From the surface down, the units consist of a fill unit (highly heterogeneous, generally highly permeable) a silty-clay unit (a low-permeability aquitard consisting of tidal marsh deposits), and a sand unit (highly permeable stratified alluvial sands). Operable Unit 5 (OU 05) is the subject of this document, and represents one of the last two portions of the West 18th Street MGP Site which have not been remediated or have a remedy selected. A remedy for the other remaining portion at the northeastern corner of the site, and the city streets which traverse the site, will be determined in the future. "

Env Problem: "Nature and Extent of Contamination: Groundwater and subsurface soil are contaminated with BTEX and PAH. A significant amount of coal tar contamination is associated with the former MGP structures on this property. Significant contamination on many parcels extends to the bottom of the fill unit at depths approaching 50 feet below ground surface. Soils saturated with coal tar are found at depths between 1.5 feet and 35 feet below ground surface. Wells spontaneously accumulate up to 8 feet of mobile tar. Special Resources Impacted/Threatened: The heaviest concentration of coal tar is found along the western, downgradient edge of the site. MGP contamination appears to have migrated from this property primarily to the north and west, but has not yet been observed in the Hudson River 160 feet to the west of the site. Tar accumulates spontaneously (without pumping) in monitoring wells at the western property line, so off-site migration can occur readily. Significant Threat: This site presents a significant environmental threat due to the presence of tar moving off-site in the direction of the Hudson River 160 feet away. OU5: Nature and Extent of Contamination: Sampling at the site was limited due to the presence of buildings that did not permit

CE - W. 18TH ST. GAS WORKS (Continued) **S105684667**

	extensive sampling. Based on the limited sampling to date, which included analysis for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals, no significant contamination has been detected on this operable unit. There is a possibility that some source material may be present within the holder structure under the former prison building, however, there is no evidence that source material is migrating from the operable unit. The soil samples collected on Operable Unit 5 contained SVOCs and metal contamination; the highest concentration of total SVOCs is 610 parts per million (ppm). Concentrations of mercury exceed the restricted residential SCOs, with a maximum concentration of 1.9 ppm. Groundwater collected north of this operable unit met ambient water quality standards, and the groundwater south of the adjacent operable unit (south of the site) contained minor contamination of SVOCs, with only naphthalene exceeding its groundwater standards at a concentration of 11 parts per billion. Soil vapor and indoor air sampling have not indicated the potential for soil vapor exposure. "
Health Problem:	"Public water is provided to the area, thereby preventing exposures to groundwater. The area is covered with buildings or pavement, thereby preventing direct contact with contamination. The investigation of the whole site is on-going and data will be evaluated as they become available."

DEC Memo:	"01/19/06: This spill transferred from J.Kolleeny to S.Kraszewski. 5K tank installed in 1974, two known TTFs. Has passed all subsquent tank tests since this one. Needs a site investigation to determine the impact to soil and GW. - SK 09/01/06: DEC Lead for this spill changed from unassigned to S. Kraszewski. - J. Kolleeny 02/09/07 - J.Kann - Spill reassigned from S.Kraszewski to J.Kann. 07/16/07 - J.Kann - recvd a call from Tara Kam (609-548-1318) requesting information on the spill - specifically if it was still open. I told her it was still open and that it was related to a tank test failure and that I have very little information in my file. She was doing a site assessment for an adjacent property. 07/17/2008- J.Kann - Based on information provided by NYCHA, after manway nuts and bolts were replaced, the tank passed subsequent tightness testing. The latest test was performed on 4/28/08. Based on this information, soil impacts should not have occurred and the spill was closed. NFA."

Update By:	DJEATON
Site Description:	"Location: The 515 West 18th Street site is approximately 1 acre in size located in an urban area in the West Chelsea section of the Borough of Manhattan. The site is bounded by West 19th Street on the north, West 18th Street to the south, and 10th Avenue to the east. Site Features: The site consists of two adjacent lots, designated as Lots 20 and 29. Lot 20 is currently improved with two 2-story buildings, with slab on grade foundations. The first building has the first floor utilized as a parking garage and the second floor as an art gallery. The other building is a residential space. Lot 29 is a paved parking lot. The High Line Park, an elevated and open recreational walkway, runs north to south over the western portion of Lot 29. Current Zoning/Use: The site is zoned C6-4 for mixed commercial and residential use and is currently vacant. Past Uses of the Site: Both lots were historically used to support the nearby Manufactured Gas Plant (MGP) operations of the West 18th Street Gas Works. In approximately 1848, two gas holders were constructed on Lot 29 and used for storage of manufactured gas until the early 1900s. Lot 20 was used as a storage yard by the MGP from about 1870 until the early 1900s. The gas works produced gas using the coal carbonization process throughout its entire history. After the site was sold in 1919, a large garage was constructed on the 18th Street side of Lot 20 that included buried gasoline tanks. In 1947, a private garage was built on the 19th Street side of Lot 20 as well.

515 WEST 18TH STREET (Continued) **S117851117**

On Lot 29, the gas holders were razed in 1914. After being sold in 1917, Lot 29 was used as a wagon yard, automobile parking lot, and commercial truck parking lot with several small structures and underground petroleum storage tanks. These properties were originally part of a Voluntary Cleanup Program project, subject to a legal agreement between Con Edison and the Department, for the Con Edison West 18th Street Gas Works site, site #V00530. Site Geology and Hydrogeology: The site is underlain by a thick deposit of urban fill materials which was placed along the Hudson River shoreline to create additional land for development. The fill, 7 to 30 feet deep, consists of a variety of man-made materials such as bricks and ash, mixed with soil. The fill is underlain by sands, silts and glacial till, which extend to bedrock, found between 40 and 60 feet below the surface. Groundwater occurs between 8 and 9 feet below grade. Regional groundwater flow is westerly towards the Hudson River; local groundwater flow is generally the same. "

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were naphthalene, lead, and xylene in soil, and naphthalene and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site. "

BASEMENT (Continued) **S117364525**

2:26 PM:- spoke with Rob. he mentioned that as part of heating system conversion from #6 to #2 oil/natural gas, the 7,500 gal tank was pumped out and cleaned. after cleaning, the tank system was tested and it failed. based on tank's condition, Riteway will send proposal to replace the tank system. currently, the building is using natural gas. Rob mentioned that all piping run aboveground, except part of fill line that runs under the sidewalk. 3:01 PM:- sent TTF letter to Mr. Faraci requiring report submission by the end of 11/21/14. letter emailed to Mr. Faraci and Rob. 12/04/14-Hiralkumar Patel. 11:09 AM:- spoke with Rob. they did an isolation test on 10/07/14 and tank only failed the test. Rob confirmed that all the piping passed the isolation test. they sent proposal for tank replacement on 10/09/14, but haven't heard back. 11:18 AM:- called Mr. Faraci's office and lady asked to call Mel Farrel, property manager. 11:20 AM: left message for Mr. Farrel. Mel Farrel **property manager** Ph. (917) 498-4793 12/05/1-Hiralkumar Patel. received message from Mr. Farrel (at 5:59 PM on 12/04/14). he mentioned that the leaking tank is being removed. 12/18/14-Hiralkumar Patel. 2:40 PM:- left message for Mr. Farrel. 12/30/14-Hiralkumar Patel. 11:37 AM:- spoke with Mr. Farrel. he mentioned that ABC Tank repaired the tank by rewelding the tank's bottom. he will have someone from ABC Tank call back with more details. 2:24 PM:- received message from Donna from ABC Tank. 01/06/15-Hiralkumar Patel. 2:55 PM:- spoke with Donna. she mentioned that the leak was found on top of the tank, but no petroleum release was observed from the tank. to prevent any leak from tank's bottom in future, owner decided to reweld the bottom plate. they found problem with section of fill line and will do line work soon. Donna will call back with update. 03/16/15-Hiralkumar Patel. 3:26 PM:- received email from Donna including closure report. during isolation test, leak was found in fill line, but no soil contamination was observed. after reinforcing the tank's bottom and replacing the leaking fill line, ABC tank conducted system test which passed. case closed based on available information. 3:36 PM:- sent spill closure letter to Mr. Faraci. letter emailed to Mr. Faraci and Donna."

Remarks: "6500 gallon tank."

Hamptons phone # 212 714 2902 Donald Lee is contact owner is not aware that there was a spill on the property. spill was reported before they bought the building. spill report faxed to them on 10/19/05 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 10/10/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: 224-232 West 30th Street no other

M B HAMPTONS LLC. - TTF (Continued) **S103478240**

spills found. PBS #: 2-251666. as per PBS record, the site has/had following tanks: - one (1) 5,000 gal #6 oil UST, closed-in-place in Oct. 1998 - one (1) 5,000 gal #2 oil AST on saddles, in-service, installed in Oct. 1998 MB Hamptons, LLC. **property owner** 11/28/14 TJD File review. Based upon a review of available documentation the 5K UST associated with reported tank test failure was closed in place in October 1998 - a new 5K Ast was installed at the same time. New owners took possession of the property after reported tank replacement. Business records are required to be maintained for only 7 years - no subsequent spill reports were received at this address. Previous attempts by Department staff to obtain historical information associated with reported tank test failure have been unsuccessful. Spill report is more than 15 years old. Spill is administratively closed."

Updated By:	SXDEYETT
Site Description:	"Location: The 19th Street Development site is located along 11th Avenue, between 18th and 19th Streets. Site Features: The site is primarily comprised of a large multi-story office building with underground parking. Current Zoning/Use(s): The site is zoned commercial, industrial and is used as office space. Surrounding parcels are a combination of commercial and residential uses. The nearest residential area is within 500 feet to the east. Past Use of the Site: The site is one parcel of numerous parcels that comprise the former West 18th Street Gas Works site. Prior to remediation and redevelopment, the Site contained a two-story brick structure that served as a mid- to long-term truck parking garage and small fenced vacant lot in the SW corner. Geology and Hydrogeology: The site consists of urban fill material, silty sands with some gravel, and a clayey silt layer with varying amounts of organic material. The clayey silt layer varies in depth from approximately 11 feet below ground surface (bgs) to 28 feet bgs and is approximately 30 feet thick. Groundwater is encountered at depths between 6 and 8 feet bgs, and generally flows to the west. "
Env Problem:	"Prior to Remediation: Based upon investigations completed at the site, the primary contaminants of concern at the site include Benzene, Toluene, Ethylbenzene and Xylene (BTEX), as well as Polycyclic Aromatic Hydrocarbons (PAHs). The impacted soils mainly were found above 15 feet bgs, with the higher concentrations of BTEX and PAHs where Non-Aqueous Phase Liquid (NAPL) was seen. Groundwater was also impacted with BTEX, PAHs and/or phenolic constituents concentrations exceeding ambient water quality criteria. Post-remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, toluene, ethylbenzene, and xylene (BTEX), and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a site management plan."
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil

19TH STREET DEVELOPMENT SITE (Continued) **S105857225**

vapor intrusion. The on-site building has a sub-grade parking garage that is partially below the natural groundwater level and incorporated a vapor barrier into its construction. A ventilation system installed in the garage inhibits the accumulation of soil gases within the building. "

City,State,Zip: NEW YORK, NY 10011
Site Code: 57373
Control Name: Site Management Plan
HW Code: C231017
Control Code: 32
Control Type: INST
Dt record added: 12/28/2009
Dt rec updated: 06/02/2021
Updated By: SXDEYETT
Site Code: 57373
Site Description: "Location: The 19th Street Development site is located along 11th Avenue, between 18th and 19th Streets. Site Features: The site is primarily comprised of a large multi-story office building with underground parking. Current Zoning/Use(s): The site is zoned commercial, industrial and is used as office space. Surrounding parcels are a combination of commercial and residential uses. The nearest residential area is within 500 feet to the east. Past Use of the Site: The site is one parcel of numerous parcels that comprise the former West 18th Street Gas Works site. Prior to remediation and redevelopment, the Site contained a two-story brick structure that served as a mid- to long-term truck parking garage and small fenced vacant lot in the SW corner. Geology and Hydrogeology: The site consists of urban fill material, silty sands with some gravel, and a clayey silt layer with varying amounts of organic material. The clayey silt layer varies in depth from approximately 11 feet below ground surface (bgs) to 28 feet bgs and is approximately 30 feet thick. Groundwater is encountered at depths between 6 and 8 feet bgs, and generally flows to the west. "
Env Problem: "Prior to Remediation: Based upon investigations completed at the site, the primary contaminants of concern at the site include Benzene, Toluene, Ethylbenzene and Xylene (BTEX), as well as Polycyclic Aromatic Hydrocarbons (PAHs). The impacted soils mainly were found above 15 feet bgs, with the higher concentrations of BTEX and PAHs where Non-Aqueous Phase Liquid (NAPL) was seen. Groundwater was also impacted with BTEX, PAHs and/or phenolic constituents concentrations exceeding ambient water quality criteria. Post-remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene,

19TH STREET DEVELOPMENT SITE (Continued) **S105857225**

toluene, ethylbenzene, and xylene (BTEX), and PAHs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a site management plan."

Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on-site building has a sub-grade parking garage that is partially below the natural groundwater level and incorporated a vapor barrier into its construction. A ventilation system installed in the garage inhibits the accumulation of soil gases within the building. "

Site Description:	"Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."

Env Problem: "Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

Site Description: "Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."

Env Problem: "Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

Site Code: 58929
Site Description: "Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."

Env Problem: "Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

Site Code: 58929
Site Description: "Location: The 17th Street Development Project site encompasses the entire block between 17th and 18th Streets, and between 10th and 11th Avenues in the lower west side of Manhattan. Site Features: The site contains two residential towers with commercial space on the first floor and subsurface parking. The main distinguishing feature is a former elevated rail line that cuts across the eastern edge of the site, which was recently converted to use as a city park, High Line Park. Current Zoning/Use(s): This 1.75 acre site is currently zoned for commercial/residential. Surrounding Uses: The surrounding land use is historically commercial, but new residential development has been proceeding rapidly in recent years. Past Use of the Site: This site is one parcel in the larger Consolidated Edison W 18th Street Former Manufactured Gas Plant (MGP) site, ID No. V00530. Most of the gas making and purification facilities of the MGP were located on this parcel. Prior to its use as an Manufactured Gas Plant, the property experienced very little development, consisting of the construction of five houses which were torn down after about 20 years to make room for expansion of the MGP operations. The plant began distribution of coal gas in November 1834 and operated continuously until it shut down in 1901 or 1902. In 1932, the railroad acquired the property. Some of the buildings were razed and a rail yard was built. The remaining buildings were used for other uses. Later, the tracks were removed, the remaining buildings razed and the site used

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

as a parking lot. In the 1950s an automobile fueling and service station was built on the west end of the site. In the 1980s the service station was demolished and since then the site has been used exclusively as a parking lot. 17th Street Development Corporation is the BCP Volunteer for this block/site only. The remainder of the former MGP site remains under the Con Edison Voluntary Cleanup Agreement. Site Geology and Hydrogeology: Between 50 and 80 feet of unconsolidated materials overlie schist bedrock at the site. The fill deepens significantly from east to west. Overburden consists of three distinct stratigraphic units. The top unit is fill, generally highly permeable, ranging from 13 to 45 feet thick. The upper 5 to 10 feet of fill contains significant man-made materials and the remnants of former structures and debris. Below that fill is mostly fine to medium or fine to coarse sand with trace brick, ash wood fibers and concrete. Buried in the fill along the western border of the site is timber cribbing that formed the shoreline and bulkhead at one time. Below the fill is a Silty-Clay Unit which forms a low permeability aquitard. Water and other liquids such as coal tar do not readily pass through this layer. It varies in thickness from 40 feet to as little as 2 feet. Below the Silty-Clay Unit is the Sand Unit, a moderately permeable aquifer ranging from 20 to 40 feet thick. Permeability is far greater in a horizontal direction than vertical. The water table is located approximately 9 feet bgs and is nearly flat. Flow is generally toward the Hudson River to the west. In some areas, groundwater flow is influenced by man-made factors such as the Hudson River bulkhead, sheet pile walls, utilities, and by various man-made flows such as leaking water lines, drains, sewers, and building dewatering systems."

Env Problem: "Nature and Extent of Contamination: Remediation, which is complete, was a combination of shallow excavation and removal between 3 and 7 feet over the entire site, in-situ solidification of the middle third of the site, and containment with the installation of a sealed sheet pile wall keyed into a confining clay-silt layer in the western third of the site. Remaining behind are: 1) very minor contamination under the High Line (eastern part of the site), inaccessible due to extensive High Line foundations and 2) significant mobile tar contained by the sheet pile wall and the underlying confining clay-silt layer. In this western third of the site, coal tar continues to slowly accumulate and is collected from 4 collection wells and removed from the site. Special Resources Impacted/Threatened: Before the remediation, which cut off any offsite migration of contaminants via groundwater, manufactured gas plant (MGP) contamination appears to have migrated from this property primarily to the north and west, but has not been observed in the Hudson River 160 feet to the west of the site. Off-site groundwater and/or soil gas contamination will be addressed as part of the overall remedy for the larger West 18th Street MGP site. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying or nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although no buildings currently occupy the site, future site

17TH STREET DEVELOPMENT PROJECT (Continued) **S110748434**

development is likely to include at least one structure and the potential for soil vapor intrusion will be evaluated. Any concerns related to soil vapor intrusion in nearby buildings will be addressed under the voluntary agreement for the West 18th Street MGP Site."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 11/17/99 Call from Mark Turoff - Environmental consultant hired to work this job. pager 917-525-3087 cell 917-750-1843 Mr. Turoff requested an extension in time until late December. Sangesland asked several specific questions about what was being done on the site now (new tenent moving in?) Are there any other tanks on the site? will the tank be removed or abandoned in place? Mr. Turoff knew nothing. Sangesland asked him to answer these questions and plan what needed to be done. Submit that in writing and then PERHAPS the actual work could be postponed until late Dec. '99 11/26/99 - Mr. Turoff sent a letter dated 11/22/99 requesting an extension of deadline date. NONE of the information requested in 11/17/99 telephone conversation was submitted in this letter. Mr. Turoff requested a written extension of the deadline, but since he did not submit what was requested, no such letter will be sent out. 12/6/99 - Call from owner saying Trinity Consulting was on site chopping open the floor .... (no notification was made to DEC about this work).... Sampling will be done 12/7/99 early AM 12/7/99 - Six GeoProbe borings were pushed down to 10' - 12' to bedrock. Sangesland was on site for the first 4 borings - all appeared clean. Borings will be sent in for testing. If the results come back clean, the site will be closed out. 12/29/99 - Trinity sent in data from several soil borings. After Sangesland left the site on 11/7/99 another tank was found in the garage. This new tank was a clean motor oil storage tank used to put into cars during service. Borings were done around this one also. All borings were tested to EPA 8270. All results were below detection limits except for 1 taken near the fill line of the used motor oil tank. The one high sample had the following values: (Eco Test Lab) all below 300 ug/kg except: Fluoranthese = 420 Pyrene = 380

AUTO CARE WEST (Continued) **S106719717**

Benzo(a)anthracene = 440 Chrysene = 440 Benzo(b)fluoranthene = 500 Benzo(k)fluoranthene = 500 DEC status on this site is NOT closed, but it will be listed as inactive with no further action required. Since the source is gone and the contamination was just around the fill line and not wide spread, DEC direction is to have the tanks filled and taken out of service. Over time natural attenuation should remediate the site. In it's expected use as an art gallery with a concrete floor, this should have no impact on either health or environment. In the future if the use of the property changes, this issue may need to be addressed again. 1/11/2000 - Vinnie Lovari from Island Tank (718-967-9424) was given permission to open up the tanks, recheck size and then closed them out in place. PBS Registration paperwork will be sent after the work is done. 1/26/2000 - Spill event is closed out."

Remarks: "TANK IN GROUND FOUND TO BE LEAKING-NO FURTHER INFO AT THIS TIME. "

DEC Memo:	"09/19/11-Hiralkumar Patel. 2:49 PM:- left message for Greg at GC Environmental. 2:52 PM:- spoke with Scott at Lawrence Environmental and Greg at GC Environmental. GC environmental performed a tightness test as part of potential property sale. site has one 4,000 gal #6 oil AST which is about 10% underground. supply/return lines runs aboveground in building. fill line runs underground below the sidewalk and then runs aboveground in the building. during test, Greg observed a tell-tale line from tank, but they could not find other open end of tell-tale line. Scott Smith Lawrence Environmental Group LLC. Ph. (212) 682-2001 09/21/11-Hiralkumar Patel. 1:51 PM:- left message for Scott. 2:29 PM:- received message from Scott. 09/23/11-Hiralkumar Patel. 12:53 PM:- spoke with Scott. he mentioned that Lawrence environmental was hired by James Bush. he asked to contact James for property owner's contact information. 1:03 PM:- left message for James. James Bush Ph. (212) 977-5000 09/23/11-Hiralkumar Patel. 11:31 AM:- spoke with James. James mentioned that his company is planning to buy this property and they are dealing with broker. as part of possible property transcation, they did Phase I report and found some issues. so they hired Lawrence environmental, who did soil borings and tank test. James asked to contact Paul at Eastern Consolidated. Paul Nigido **broker** Eastern Consolidated Ph. (212) 499-7700 alternate addresses: 364-370 W 18th Street, 112-126 9th Ave PBS #: 2-256552. as per PBS record, site has one 4,000 gal #6 oil AST in contact with soil. tank was installed in Apr. 1940. other spill: 0905371. spill was reported by tenant due to petroleum odors in building. DEC Vought inspected site and found no problem. case closed. 1:07 PM:- spoke with Ben Haghani, property owner. informed him about tank test failure. he mentioned that they already corrected the problem. he doesn't know much but will send update after talking to person who is handling this issue. FRG 9th Avenue LLC. **property owner** 380 Madison Avenue, Suite 2401 New York, NY 10017 Attn.: Ben Haghani Ph. (212) 922-1220 Ext. 303 email: ben@fortunarealtygroup.com 1:47 PM:- sent TTF to Mr. Haghani. letter emailed to Mr. Haghani. case assigned to DEC Falvey. 10/13/11-Hiralkumar Patel. 3:42 PM:- received call from Mark Cherchio (212-922-1220 Ext. 303) from management. he mentioned that the tank failed the tightness test because of old tell-tale line. they have cut that line and now system is tight. asked Mark to submit letter from contractor confirming reason for tank test failure and passing test result. 10/31/11-Hiralkumar Patel. received letter report from Mr. Cherchio including tank test results. based on submitted information, case closed."

Contact Name:	RICK ELEZI
DEC Memo:	"08/10/09-Vought-Off hours responder. DEC Ahmed (primary off hours responder called caller Rick Elezi (212-260-8060) who was contact for REM Residential (management company for building) and left message to return call immediately. Due to no call back Vought responded to site and called and left second urgent message for emergency hotline at REM Residential (left message with Victoria). Onsite Vought met with

LAWRENCE ENVIRONMENTAL GROUP LLC (Continued) **S109828460**

building super Jose Lopez (ph:914-490-0806) who when informed of the odor complaint, immediately referred that the call most likely came from Apt 3K (Rick) who was repeatedly calling various city agencies with numerous complaints. Lopez also mentioned that Rick was in current litigation with landlords of building. Vought noticed no odors in lobby of building. Vought inspected basement and found minor spill (12 patch of stained concrete) by oil burners and noted speedy dry was already applied to spill. No odors in basement. Also no observable spills or odors in secondary containment room of 4000-gallon #2 fuel oil AST (registered as in contact with soil). Spill closed by Vought due to no odors, very minor spill on concrete. 11/16/09-Vought-Received call from Richard Saler(917-414-7379) who was inquiring as to status of above spill. Rick mentioned numerous toxic hazards to his building including illegal venting from new sandwich shop, mold, fire hazard from stored oil and adjacent electrical supply (note that fuel oil has very high flashpoint and presents minor explosion hazards). Rick noted that three large of drums of oil were formerly stored in a room with a half door and there was a large oil spill there and suggested that Vought missed room during last site visit. Rick also mentioned that NYCDOH was onsite but would not provide Vought contact information for NYCDOH representative despite repeated requests and said that he would only provide it to Vought if additional site visit was performed. Vought discussed that if source of initial complaint was known than Department would have responded immediately back in August to have NYCDOH site visit to ensure health and safety of residents. Rick mentioned that he was made report to NYC Department of Investigations due to his lack of satisfaction with NYCDOH. Vought informed DEC Austin of second complaint. Rick will send pictures to Vought with spill and stated that door was closed at time of DEC Site visit. Vought arranged site visit for 11/17 at 10am during which NYCDEP rep would be onsite also arranged by Rick. Rick mentioned that there were presently no odors in his apartment. Vought called Jose and informed him of DEC site visit and requested that he leave room with half door open. Jose noted that room with half door was room that Vought inspected on 8/10/09. 11/17/09-Vought-Site visit by Vought with Richard and NYCDOH Eric Joseph (212-442-3372)from unit of P. Stallbohm. Joseph indicated that this was his second time responding to site and meeting with Richard. Richard indicated that building was being impacted by food odors from Subway sandwich shop. NYCDOH Joseph inspected Subway sandwich shop and inquired as to ventilation system. No sources of petroleum in Subway Sandwich shop. Vought requested to inspect residence of Richard for vapors and Richard declined request and said that there were no petroleum odors in his apartment . Vought inquired as to pictures of spill he said yesterday he had and he stated that he could not find them . Vought noted no odors in hallway of building or in basement hallway. Vought requested that Richard show Vought specific room where spill was because he stated Vought missed room on last inspection. Vought inspected room with Richard and NYCDOH Joseph and room was same room that was subject of inspection (and 12 oil stain on poured concrete floor) as last site visit on 8/7/09. No additional signs of spillage from last site visit and no petroleum vapors. NYCDOH Joseph confirmed that during his prior visit he performed PID survey of basement and found no odors. No additional cracks or routes of entry to subsurface. Vought explained results of inspection to Richard and spill will remain closed. See edocs for photos of site visit. "

LAWRENCE ENVIRONMENTAL GROUP LLC (Continued) **S109828460**

Remarks: "caller lives at this address...claims that there are open containers of what looks like oil in the basement of building, containers have overflowed onto the basement floor...Odor of petro in apartment"

During this process, an unknown UST was discovered and reported as Spill No. 0706755. The UST was decommissioned and properly removed from the site during the soil removal activities and therefore this Spill is closed. J. durnin "

DEC Memo:	"need to contact either jeff bohlen at envirotrack (631-471-1500) or Jerome Kung at verizon (212-338-6754) to determine what work is being done on the site. No letter has been sent yet. 06/21/05-SR// Spoke with jeff Bohlen(516-807-8983). He will forward all necessary documents to DEC. 10.07.05 Sharif is currently reviewing the subsurface investigation report submitted by Envirotrac. 3/20/06- DEC Piper reviewed tank closure report. As per report and database, there are two historic spills at the property, 9007995 and 9314833. In 1994, two 4K gasoline UST's were removed, and two 3K gasolne UST were installed. Samples collected from the limits of the excavation detected petroleum impacted soils in the vicinity of these USTs. Additonally, 8- 550 gal USTs are located in the basement of the property. These tanks were allegedly closed along w/ the two 4K gal USTs. SVOC's were detected exceeding NYSDEC TCLP guidance values. Spills 9007995 and 9314833 were closed on 8/6/96 after receipt of tank closure reports for the 2 4K USTs and 8- 550 USTs. In June-August 2005, seven (7) MWs were installed on site. Lab analytical revealed VOC's , SVOC's, and metals above TAGM 4046. Note: the groundwater was determined to be slightly to moderately saline. From Jan 6- 11, 2006, Envirotrac removed the two 3K gasoline USTs that

555 WEST 34TH ST/NYTEL (Continued) **S104275609**

were installed in 1994 and constructed of double wall fiberglass. A total of six (6) endpoint samples were collected from the excavation. With the exception of the West sidewall in which 226 ppb of benzene was detected, no other VOC's were detected above TAGM 4046. Additional excavation was performed in the area of the two- 4K UST remote fills and the two- 3K UST remote fills. Analytical results suggest that VOC's were not present above TAGM 4046, however SVOC's were. In additon to the sampling performed in reference to the UST's, soil samples were collected at the base of the Truck Elevator Shaft where it was determined that VOC's and SVOC's were detected above TAGM 4046, due to a bad seal. To minimize any future impact, the seals were replaced and vegetable oil was used in place of pet. based hydraulic oil. As per the report, the property is currently in negotiations to be sold. This party reportedly plans on razing the building and excavating to bedrock. ~45 feet bgs. In the meantime Envirotrac recommends quarterly sampling of the MW network. Referred to K. Tang 3/21/06 - reviewed the tank closure report. Soil and GW contamination is minimal, max GW VOCs is ~200 ppb and only one side wall sample is slight above TAGM 4046. Spill closed. - KST"

Town:	New York City
Record Added Date:	02/01/2006
Record Updated Date:	12/20/2012
Update By:	JAQUINN
Site Description:	"Location: The Site is located at 555 West 34th Street, also known as 400 Eleventh Avenue, between 10th and 11th Avenues in Manhattan, New York City, New York County. Site Features: The property is identified

WEST 34TH STREET DEVELOPMENT PROJECT (Continued) **S104495666**

as Block 706, Lot 1 in New York City s tax records and consists of a 37,800 square-foot (1.020 acre) rectangular-shaped vacant parcel. The surrounding urban area consists primarily of retail and commercial business. The Amtrak Railroad tunnel (and easement) runs through the northwest corner of the site. Current Zoning/uses: This site was designated as C6-3 on the NYC Zoning Map 8b which is a general central commercial district. This site is also an e-designation requiring NYCDEP approval. In January 2005, this site was rezoned as part of the City-led Hudson Yards District to allow for commercial and residential uses. The NYC MTA constructed a permanent entrance in the middle of this BCP site for the 34th Street Station of the No.7 Subway Extension. Historic Use: From 1890 to 1962, the site was used for commercial, residential, and manufacturing including a wagon house, black smith shop, electrical supplies and a warehouse. In 1973, the most recent business that covered the entire site was a 2-story commercial communications facility including numerous petroleum underground storage tanks (USTs). Six petroleum spills have occurred at this site between 1990 and 2007. Site Geology and Hydrogeology: The site is approximately 25 feet above mean sea level. Groundwater is 17 feet to 32 feet below ground surface. Surface water and groundwater flow is towards the Hudson River which is approximately 1,500 feet to the west of the site. The subsurface soil profile consists of urban fill overlying sand and silt deposits. Bedrock is located between 15 and 25 feet below grade. Between 2007 and 2012, all soil above bedrock was removed and replaced with clean fill. 12/19/12-DEC signed the Certificate of Completion for this site."

Env Problem:	" Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was low level petroleum (diesel/gasoline) in soil and in shallow groundwater."
Health Problem:	"No site-related contaminants of concern were identified beyond the boundaries of the site, therefore no exposure pathways exist."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Sent TTF letter to consultant: Maria Ramirez, GZA, 65 Willowbrook Blvd, Wayne, NJ 07470 11/5/2003 Sangesland spoke with Maria Ramirez at GZA. She says the building is converting to natural gas and the 10,000 gal tank will be abandoned in place. Tank is below the basement floor under an electrical utility room. They cleaned out the tank and found holes in the top 1/3 of the tank. They will take borings through the bottom of the tank to determine if the area is contaminated. 12/4/2003 e-mail message from Maria Ramirez said the soil borings through the bottom of the tank would take place around 12/12/03. 12/11/2003 Sangesland reviewed a submittal from Maria Ramirez of GZA dated Nov 19, 2003. This outlined the the work discussed above and stated that 4 holes will be drilled through the bottom of the tank and samples will be collected for testing (if possible-it may be in cement). If the samples are clean, the tank will be abandoned in place with foam. 12/22/2003 Sangesland spoke with Fran Schultz of GZA about this site. They made 4 holes in the bottom and sides of this tank and hit cement. Water is entering the tank. To date approx 700 gal of water has entered the tank. They believe the water is from a broken water main. Sangesland asked GZA to test the water for VOC and SVOC. GZA said they would also test for Floride and Clorine to determine if this water is city tap water or groundwater. If the water samples come back clean, then GZA will prepare an arguement that the tank is in a subbasement vault. All records of the building (blueprints) are gone (they were in 7 World Trade Center). There are lots of utilities nearby. The tank is being abandoned in place. GZA will request closure of the spill number. 3/15/2004 Sangesland reviewed a report from Maria Ramirez of GZA. Based on the description of the tank location (below ConEd electrical equipment), the drilling of holes through the bottom and sides of the tank (all into cement), results of water tests on the water that came into the tank after drilling (no petroleum but did have Floride & Chlorine). Based on all of this information, the DEC will allow GZA to go ahead with abandonment of the tank. After proper abandonment is complete, GZA will submit a final report with a request for spill closure. 11/14/05 - Larry Alden - Reviewed file and concur with assessment of Sangesland (3/15/04). Reviewed PBS# 2-606121, which showed that 10,000-gallon tank was closed in-place on 7/8/04. With absence of any contamination, and tank subsequently closed, this spill can be closed."
Remarks:	"failed a tighteness test but could not isolate a specific pipe - test was performed as part of a closure."

DER Facility ID: 467379
DEC Memo: "8/20/15 TJD Teleconference with building super (Mr. Sampson 646.468.4409) - he states there is an active leak from 10K AST in sub-basement. Tank failed a tightness test earlier in the day. Tank bottom is reported to be in direct contact with soil and shallow groundwater is reported to be impacted. Product in sump. DeMeo dispatched AH Secondary (Zhune) for inspection and facilitation of an immediate pump-out of leaking tank system pending repairs and passing retest. 8/20/15-Zhune responded to this spill. Met Superintendent Mr. Sampson. As per Mr. Sampson he noticed oil spill in the tank room and adjacent rooms and he notified his supervisor. During my inspection I observed a pool of oil in the tank room,oil in the floor of the adjacent rooms (boiler room and a Jeen room) and oil in two drains. The manager of the building hired Riteway. Riteway will pump out the tank and will clean the spill. 8/21/15-Mr. Sampson emailed pictures and the following email: Rite way pump out all the Oil out of the tank and the Tank room to there are Coming back today to do A isolation test and clean up more. 9/4/15-Zhune called Mr. Sampson. Mr. Sampson said Rite Way cleaned the tank room, the oil outside the tank room and the oil in the sump. They will come back to complete the cleanup but the building need to repair a water leak. They found out the line was leaking. They are in the process to get the permit to repair the line. They found the tank in good condition. 9/9/15-David Chan sent the following email The site has been cleaned up, we remediated in total approximately 5 drums, and pumped out about 2000 gallons of oily water (there was very little oil, it was mostly water, I believe the water was a pre-existing condition there). The leak was a faulty fill (it was repaired by others). I am waiting for documentation. Once I have everything prepared I will send over. 9/17/15-David Chan sent the following email Riteway will be performing the repairs to the fill line. We are scheduled to begin the work this coming Monday on 9/21/2105. 9/28/16-Robert Hill sent the following email. Riteway Tank replaced the fill line at 305 7 Avenue, NYC. All the lines were above ground. Can I put oil back into the tank or do I need to perform a system test. Please let me know ASAP. My customer would like to fill their tank. 10/19/15-Riteway sent the spill closure report dated 10/5/15. the letter stated the tank was pumped out and the oily water in the room was vacuumed up. the two (2) drains and one (1) sump was pumped out and cleaned with bio-degradable degreaser as well. Riteway proceeded to trouble shoot the issue by isolating the tank and testing the lines. The tank only passed the test. The cause of the spill was a slow leak on a faulty fitting on the fill line. The fill line is above ground and the tank room floor is sound concrete. Riteway Tank Maintenance Corp performed the repairs to the fill line. The entire area was remediated until free from contamination. A total of 2500 gallons of liquid and 6 drums of impacted material was remediated. the site is cleaned. Spill closed."
Remarks: "Test failure. Observed wet leak. Repair being planned. Cleanup is pending."

Control Code:	15
Control Type:	ENG
Date Record Added:	10/15/2008
Date Rec Updated:	12/31/2021
Updated By:	SNBOLLER
Site Description:	"Location: The Site is located in an urban area of New York County (Manhattan) on the east side of 10th Avenue between W. 16th and W. 17th Streets (the site does not include the building on the southeast corner of 10th Ave. and W. 17th St.). Site Features: The former site features include several buildings and a paved parking lot. The site buildings were unused and were demolished. Past Uses: The most recent uses of the Site include a warehouse for electrical construction equipment; an electrical contractor area; a vehicle garage and outdoor parking area; an outdoor garden supplies store; a restaurant; auto body shop; and classroom space for a theater company. Prior uses include various freight and automobile uses, with underground fuel storage tanks, and unspecified manufacturing. Surrounding uses include multi-story residential buildings with and without lower-level commercial uses, parking, and playgrounds. The High Line , an elevated rail line which was used in the past for freight and is now unused, is to the west of and partially over the western end of the site (with aerial easement). An investigation pertaining to the removal of underground storage tanks occurred in the early 1990's. A Phase I and limited Phase II Environmental Site Assessment was performed in 2004. Operable Units: For remedial purposes, the site was divided into two Operable Units (OUs). An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is the eastern portion of the site which is fully occupied by the new residential building. Operable Unit 2 (OU2) is the High Line area that extends along 10th Avenue and the western portion of 16th Street. Site Geology and Hydrogeology: The generalized subsurface profile consists of urban fill overlying sand, with bedrock at depths between 40 and 70 feet below grade (ft-bg). The fill consisted of brown and grey, coarse to fine sand, some silt, gravel and brick fragments. Fill thickness ranged from about four to twelve feet. The thickness of the lower coarse to fine sand and gravelly sand ranges from 31 to 47 feet. The upper medium to fine sand extends typically to depths of about 20 ft-bg. Bedrock was encountered below the sand and consists of moderately fractured, medium-hard mica schist and moderately fractured, hard pegmatite. Bedrock was found at depths ranging from about 21 to 77 ft-bg. Bedrock is shallowest at the east end of the Site and slopes downward to the west toward the Hudson River. The net groundwater flow is to the west, toward the Hudson River. Depth to groundwater is 10 to 14 ft-bgs. "

WEST 17TH STREET AND 10TH AVENUE (Continued) **S109321176**

Env Problem: "Nature and Extent of Contamination Prior to Remediation: Soil - Based on the investigations conducted at the site, the primary contaminants of concern were related to the past uses of petroleum, and to historic fill which was present across the entire site. The site soils were contaminated with volatile organic compounds (VOCs) related to petroleum (benzene, toluene, ethylbenzene, xylene, naphthalene) and, to a much lesser degree with chlorinated solvents (e.g. tetrachloroethene). Contaminants also included semi-volatile organic compounds of petroleum origin. Exceedances of applicable standards, criteria and guidance for soil were identified. Groundwater - Petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) were present at elevated levels of concentration in groundwater throughout the Site. Concentrations of VOCs above Class GA Standards included chloroform, BTEX compounds and methyl-tert butyl ether (MTBE). SVOCs were prevalent at concentrations above NYSDEC regulatory levels in the groundwater in the southern and western portions of the Site and included dibenzofuran, 2-methylnaphthalene and naphthalene. The VOCs and SVOCs appear to be related to the prior use of the Site for vehicle fueling and repair. Iron, magnesium, manganese and sodium, common earth minerals, were detected in concentrations exceeding groundwater standards in all of the filtered groundwater samples. Soil Vapor - During the remedial investigation, VOCs were detected across the Site in subsurface soil gas samples, as well as in the one ambient air sample. The highest concentration of VOCs was found at soil gas sample location FLS-4, collected at soil boring FLS-4. PID readings in boring FLS-4 peaked at 1,684 parts per million (ppm) at a depth of 16 ft-bg. Post Remediation: Remediation at the Site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs in soil and groundwater. Remedial actions have successfully achieved the site specific soil cleanup objectives. Residual contamination in the soil, groundwater and sub-slab vapor are being managed under a Site Management Plan. As part of the remediation, the petroleum contaminated soil and the historic fill was excavated from OU-1 and disposed of at regulated facilities. Groundwater was treated on site, and the clean effluent was discharged to the New York City sewer under a permit. The contaminated soil and groundwater in OU-2 were remediated through injection of ORC (Oxygen Release Compound) into the underlying groundwater and subsoil. The top one foot of soil in OU-2 was removed through excavation. A Track 4 cleanup was achieved for the site. Engineering and Institutional Controls have been instituted to manage the residual contamination. These controls have been memorialized in the Environmental Easement that has been recorded in the New York County Clerk’s office. The Certificate of Completion was issued on October 6, 2008. "

Health Problem: "Public water is provided to the area, thereby preventing exposures to groundwater. The remedial action work plan for the site calls for the removal of contaminated soil from the site prior to construction of a residential building on-site. Soil gas is contaminated by chlorinated solvents that are likely due to an off-site source. The site owner will include measures in the building construction to prevent soil vapor migration into the building."

Concentrations of VOCs above Class GA Standards included chloroform, BTEX compounds and methyl-tert butyl ether (MTBE). SVOCs were prevalent at concentrations above NYSDEC regulatory levels in the groundwater in the southern and western portions of the Site and included dibenzofuran, 2-methylnaphthalene and naphthalene. The VOCs and SVOCs appear to be related to the prior use of the Site for vehicle fueling and repair. Iron, magnesium, manganese and sodium, common earth minerals, were detected in concentrations exceeding groundwater standards in all of the filtered groundwater samples.
Soil Vapor - During the remedial investigation, VOCs were detected across the Site in subsurface soil gas samples, as well as in the one ambient air sample. The highest concentration of VOCs was found at soil gas sample location FLS-4, collected at soil boring FLS-4. PID readings in boring FLS-4 peaked at 1,684 parts per million (ppm) at a depth of 16 ft-bg. Post Remediation: Remediation at the Site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs in soil and groundwater. Remedial actions have successfully achieved the site specific soil cleanup objectives. Residual contamination in the soil, groundwater and sub-slab vapor are being managed under a Site Management Plan. As part of the remediation, the petroleum contaminated soil and the historic fill was excavated from OU-1 and disposed of at regulated facilities. Groundwater was treated on site, and the clean effluent was discharged to the New York City sewer under a permit. The contaminated soil and groundwater in OU-2 were remediated through injection of ORC (Oxygen Release Compound) into the underlying groundwater and subsoil. The top one foot of soil in OU-2 was removed through excavation. A Track 4 cleanup was achieved for the site. Engineering and Institutional Controls have been instituted to manage the residual contamination. These controls have been memorialized in the Environmental Easement that has been recorded in the New York County Clerk's office. The Certificate of Completion was issued on October 6, 2008. "

Health Problem: "Public water is provided to the area, thereby preventing exposures to groundwater. The remedial action work plan for the site calls for

WEST 17TH STREET AND 10TH AVENUE (Continued) **S109321176**

the removal of contaminated soil from the site prior to construction of a residential building on-site. Soil gas is contaminated by chlorinated solvents that are likely due to an off-site source. The site owner will include measures in the building construction to prevent soil vapor migration into the building."

Site Code: 59118
Site Description: "Location: The Site is located in an urban area of New York County (Manhattan) on the east side of 10th Avenue between W. 16th and W. 17th Streets (the site does not include the building on the southeast corner of 10th Ave. and W. 17th St.). Site Features: The former site features include several buildings and a paved parking lot. The site buildings were unused and were demolished. Past Uses: The most recent uses of the Site include a warehouse for electrical construction equipment; an electrical contractor area; a vehicle garage and outdoor parking area; an outdoor garden supplies store; a restaurant; auto body shop; and classroom space for a theater company. Prior uses include various freight and automobile uses, with underground fuel storage tanks, and unspecified manufacturing. Surrounding uses include multi-story residential buildings with and without lower-level commercial uses, parking, and playgrounds. The High Line , an elevated rail line which was used in the past for freight and is now unused, is to the west of and partially over the western end of the site (with aerial easement). An investigation pertaining to the removal of underground storage tanks occurred in the early 1990's. A Phase I and limited Phase II Environmental Site Assessment was performed in 2004. Operable Units: For remedial purposes, the site was divided into two Operable Units (OUs). An operable unit

WEST 17TH STREET AND 10TH AVENUE (Continued) **S109321176**

represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is the eastern portion of the site which is fully occupied by the new residential building. Operable Unit 2 (OU2) is the High Line area that extends along 10th Avenue and the western portion of 16th Street. Site Geology and Hydrogeology: The generalized subsurface profile consists of urban fill overlying sand, with bedrock at depths between 40 and 70 feet below grade (ft-bg). The fill consisted of brown and grey, coarse to fine sand, some silt, gravel and brick fragments. Fill thickness ranged from about four to twelve feet. The thickness of the lower coarse to fine sand and gravelly sand ranges from 31 to 47 feet. The upper medium to fine sand extends typically to depths of about 20 ft-bg. Bedrock was encountered below the sand and consists of moderately fractured, medium-hard mica schist and moderately fractured, hard pegmatite. Bedrock was found at depths ranging from about 21 to 77 ft-bg. Bedrock is shallowest at the east end of the Site and slopes downward to the west toward the Hudson River. The net groundwater flow is to the west, toward the Hudson River. Depth to groundwater is 10 to 14 ft-bgs. "

Env Problem: "Nature and Extent of Contamination Prior to Remediation: Soil - Based on the investigations conducted at the site, the primary contaminants of concern were related to the past uses of petroleum, and to historic fill which was present across the entire site. The site soils were contaminated with volatile organic compounds (VOCs) related to petroleum (benzene, toluene, ethylbenzene, xylene, naphthalene) and, to a much lesser degree with chlorinated solvents (e.g. tetrachloroethene). Contaminants also included semi-volatile organic compounds of petroleum origin. Exceedances of applicable standards, criteria and guidance for soil were identified.
Groundwater - Petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) were present at elevated levels of concentration in groundwater throughout the Site. Concentrations of VOCs above Class GA Standards included chloroform, BTEX compounds and methyl-tert butyl ether (MTBE). SVOCs were prevalent at concentrations above NYSDEC regulatory levels in the groundwater in the southern and western portions of the Site and included dibenzofuran, 2-methylnaphthalene and naphthalene. The VOCs and SVOCs appear to be related to the prior use of the Site for vehicle fueling and repair. Iron, magnesium, manganese and sodium, common earth minerals, were detected in concentrations exceeding groundwater standards in all of the filtered groundwater samples.

Control Type: INST
Dt record added: 10/15/2008
Dt rec updated: 12/31/2021
Updated By: SNBOLLER
Site Code: 59118
Site Description: "Location: The Site is located in an urban area of New York County (Manhattan) on the east side of 10th Avenue between W. 16th and W. 17th Streets (the site does not include the building on the southeast corner of 10th Ave. and W. 17th St.). Site Features: The former site features include several buildings and a paved parking lot. The site buildings were unused and were demolished. Past Uses: The most recent uses of the Site include a warehouse for electrical construction equipment; an electrical contractor area; a vehicle garage and outdoor parking area; an outdoor garden supplies store; a restaurant; auto body shop; and classroom space for a theater company. Prior uses include various freight and automobile uses, with underground fuel storage tanks, and unspecified manufacturing. Surrounding uses include multi-story residential buildings with and without lower-level commercial uses, parking, and playgrounds. The High Line , an elevated rail line which was used in the past for freight and is now unused, is to the west of and partially over the western end of the site (with aerial easement). An investigation pertaining to the removal of underground storage tanks occurred in the early 1990's. A Phase I and limited Phase II Environmental Site Assessment was performed in 2004. Operable Units: For remedial purposes, the site was divided into two Operable Units (OUs). An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is the eastern portion of the site which is fully occupied by the new residential building. Operable Unit 2 (OU2) is the High Line area that extends along 10th Avenue and the western portion of 16th Street. Site Geology and Hydrogeology: The generalized subsurface profile consists of urban fill overlying sand, with bedrock at depths between 40 and 70 feet below grade (ft-bg). The fill consisted of brown and grey, coarse to fine sand, some silt, gravel and brick fragments. Fill thickness ranged from about four to twelve feet. The thickness of the lower coarse to fine sand and gravelly sand ranges from 31 to 47 feet. The upper medium to fine sand extends typically to depths of about 20 ft-bg. Bedrock was encountered below the sand and consists of moderately fractured, medium-hard mica schist and moderately fractured, hard pegmatite. Bedrock was found at depths ranging from about 21 to 77 ft-bg. Bedrock is shallowest at the east end of the Site and slopes downward to the west toward the Hudson River. The net groundwater flow is to the west, toward the Hudson River. Depth to groundwater is 10 to 14 ft-bgs. "
Env Problem: "Nature and Extent of Contamination Prior to Remediation: Soil - Based on the investigations conducted at the site, the primary contaminants of concern were related to the past uses of petroleum,

WEST 17TH STREET AND 10TH AVENUE (Continued) **S109321176**

and to historic fill which was present across the entire site. The site soils were contaminated with volatile organic compounds (VOCs) related to petroleum (benzene, toluene, ethylbenzene, xylene, naphthalene) and, to a much lesser degree with chlorinated solvents (e.g. tetrachloroethene). Contaminants also included semi-volatile organic compounds of petroleum origin. Exceedances of applicable standards, criteria and guidance for soil were identified.
Groundwater - Petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) were present at elevated levels of concentration in groundwater throughout the Site. Concentrations of VOCs above Class GA Standards included chloroform, BTEX compounds and methyl-tert butyl ether (MTBE). SVOCs were prevalent at concentrations above NYSDEC regulatory levels in the groundwater in the southern and western portions of the Site and included dibenzofuran, 2-methylnaphthalene and naphthalene. The VOCs and SVOCs appear to be related to the prior use of the Site for vehicle fueling and repair. Iron, magnesium, manganese and sodium, common earth minerals, were detected in concentrations exceeding groundwater standards in all of the filtered groundwater samples.
Soil Vapor - During the remedial investigation, VOCs were detected across the Site in subsurface soil gas samples, as well as in the one ambient air sample. The highest concentration of VOCs was found at soil gas sample location FLS-4, collected at soil boring FLS-4. PID readings in boring FLS-4 peaked at 1,684 parts per million (ppm) at a depth of 16 ft-bg. Post Remediation: Remediation at the Site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs in soil and groundwater. Remedial actions have successfully achieved the site specific soil cleanup objectives. Residual contamination in the soil, groundwater and sub-slab vapor are being managed under a Site Management Plan. As part of the remediation, the petroleum contaminated soil and the historic fill was excavated from OU-1 and disposed of at regulated facilities. Groundwater was treated on site, and the clean effluent was discharged to the New York City sewer under a permit. The contaminated soil and groundwater in OU-2 were remediated through injection of ORC (Oxygen Release Compound) into the underlying groundwater and subsoil. The top one foot of soil in OU-2 was removed through excavation. A Track 4 cleanup was achieved for the site. Engineering and Institutional Controls have been instituted to manage the residual contamination. These controls have been memorialized in the Environmental Easement that has been recorded in the New York County Clerk's office. The Certificate of Completion was issued on October 6, 2008. "

Health Problem: "Public water is provided to the area, thereby preventing exposures to groundwater. The remedial action work plan for the site calls for the removal of contaminated soil from the site prior to construction of a residential building on-site. Soil gas is contaminated by chlorinated solvents that are likely due to an off-site source. The site owner will include measures in the building construction to prevent soil vapor migration into the building."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY TYREE REMOVED A 550-GALLON STEEL SINGLE-WALLED EMERGENCY GENERATOR DIESEL TANK. SOIL HAD PETROLEUM ODOR AND SHEEN. CONTAMINATED SOIL WAS OVER-EXCAVATED AND STOCKPILED; POST-EXCAVATION SAMPLES WERE TAKEN. J. KOLLEENY OF DEC SPOKE WITH LAURIE JODICE OF TYREE ON 4/12/01; SHE WILL FORWARD COPY OF CLOSURE REPORT WHEN AVAILABLE. ACCORDING TO LJ, MOST CONTAMINATION WAS REMOVED AND THE SOIL LEFT IN THE PIT WAS RELATIVELY CLEAN. THE TANK LOCATION WAS VERY CLOSE TO WHERE O'BRIEN-KREITZBERG IS INSTALLING AN SVE SYSTEM TO REMEDIATE GASOLINE CONTAMINATION. KOLLEENY WILL FOLLOW UP TO ENSURE THAT RESIDUAL CONTAMINATION FROM THE EMERG. GEN. TANK (IF ANY) IS ADDRESSED, EITHER BY THE SVE SYSTEM OR IN SOME OTHER WAY. This spill is referred to spill # 9512583 and is closed today by II (01/10/05)."

Remarks: "WHEN TANK WAS REMOVED THERE WAS AN ODOR OF PETROLEUM. [SEE DEC NOTES.]"

Spiller Company: 001
Contact Name: BOB KREUZER
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY URS did site investigations and initially proposed installing a dual-phase extraction system to address soil and GW contamination. However, site facility had inadequate electrical service to support a high-vacuum DPE system, so in early 2000 they proposed installing an SVE system for soil and ORC injection for dissolved-phase GW contamination. DEC approved plan in May 2000; work begun on SVE system in late 2000. However, when ORC injection wells were installed in Feb. 2001, free product was found in injection wells (under building, which is on pillars). URS performed IRM on wells. SVE system started up in Oct. 2001 and operated until June 2002, when it was shut down due to break in conveyance piping. URS did addt'l investigation to delineate free product, and in April 2003 they proposed installing a GW recovery system to address free product and dissolved-phase GW contamination, and expanding SVE system. DEC approved this plan in July 2003. URS submitted a Design Analysis Rpt for remedial plan in Feb. 2004; DEC approved DAR in June 2004. 7/21/05: DEC reviewed Documentation for Letter of Agreement submitted by URS with SVE/Air Stripper Data Sheets and supporting calculations, and issued a letter on 7/21/05 authorizing discharges of treated vapors from the expanded SVE system and treated air stripper off-gas from the groundwater recovery system. - J. Kolleeny 03/14/07: Reviewed System Performance Monitoring Report for October 2006 through January 2007 by URS Corp., dated Feb. 12, 2007. Soil vapor extraction (SVE) and groundwater extraction & treatment (GWET) systems were started up on Oct. 25, 2006. SVE system consists of one horizontal extraction well and two horizontal ventilation trenches; GWET consists of 3 groundwater extraction wells. Franklin Co. is contractor operating/maintaining the systems. Performance monitoring data indicate that contaminants are being extracted from soil and groundwater and the systems should continue to operate. GW monitoring event in June 2006 showed free product in two wells (injection wells IW-6 and IW-12), and dissolved-phase contamination in two wells (IW-10, with 8,843 ppb, and IW-13, with 5,872 ppb total VOCs, resp.). In Jan. 2007 GW event, only two wells were sampled, BW-4 and MW-4, both ND; other wells were dry or inaccessible. Changed spill priority status to P2. - J. Kolleeny On 3/14/07, new gasoline spill was reported (#0613411). Delivery overfill event, 4 ft. of product found in well (extraction well GEW-01, according to Jane Staten of URS), and UST manway was full of gasoline also. Franklin Co., who reported spill, have arranged for vac truck to pump out manway and well. Any residual impacts will be addressed by remedial systems and tracked under this spill number. - J. Kolleeny 07/23/07: Reviewed System Performance Monitoring Report for Feb. thru April '07 by URS, dated 6/8/07 (in eDocs). Report summarizes performance data for on-site SVE and GW treatment systems, plus GW monitoring data. PID monitoring of SVE vapor effluent gave reading of 621 ppm on 4/18/07, corresponding to benzene concentration of 12.4 ppm - above discharge limit in Stip Agreement. System was shut down and carbon was changed out, system re-started on 5/4/07. Vapor effluent sampling of GW system air stripper was in compliance. GW was sampled on Jan. 4, 2007; only two wells in sampling program were sampled, others were either inaccessible or dry. Results showed were ND for two wells sampled, however, this was before result spill 0613411, which report states

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

was caused by a break in gasoline fill line; Franklin Co. installed a direct fill on tank, by-passing damaged fill line. Sampling of GW extractions wells in Feb. and March '07 showed big increased in recovered contaminants in March: GEW-1 went from 210 ug/L total VOCs to 30,900 ug/L; GEW-2 went from 20 ug/L to 800 ug/L, and GEW-3 went from 985 ug/L to 32,070 ug/L total VOCs, suggesting impacts from fill line break, and indicating system is recovering elevated levels of contaminants from GW. Report concludes SVE and GWE systems must continue to operate. - J. Kolleeny 08/17/07: Reviewed System Performance Monitoring Report for May-July '07 by URS, dated 8/7/07 (in eDocs). Report notes that benzene concentrations in SVE system effluent have increased, due to recent spill(s) of fresh gasoline from damaged fill line to active UST; even though benzene level has not exceeded discharge limit, as precaution Franklin Co. will change out the vapor phase carbon. Report also notes that due to presence of free product in GW recovery wells, they've had to shut down GWET system so product doesn't foul carbon. I sent email to Afsar Samani of DDC, cc's to Jerry Aliberti of DDC, Jane Staten & Harvey Roberts of URS, stating: I have reviewed System Performance Monitoring Report for May-July 2007, dated August 7, 2007. Report notes that, due to presence of large quantities of free product in on-site groundwater extraction wells (from recent spills related to damaged fill line to active gasoline UST), groundwater extraction and treatment (GWET) system has been shut down. I am concerned that without GWET system operating to exert hydraulic control over local groundwater flow, dissolved-phase groundwater contaminant plume, and perhaps free product as well, may migrate off-site, potentially impacting neighboring property. Therefore, I request that DDC and URS take whatever steps are feasible to expedite recovery of free product at site, so that GWET system can be re-activated as soon as possible. Also, discussed this in email exchange with Jane Staten, who stated: URS is scheduled to visit site with vac truck this coming Tuesday. If we feel effort is successful, we will continue with weekly visits until it is determined they are no longer necessary or effective. - J. Kolleeny 11/19/07: Reviewed URS's System Performance Monitoring Report for August-October 2007, dated 11/12/07 (in eDocs). Report states that GWET system had been shut down because free product was getting into system and causing discharge to sewer to exceed NYCDEP standards, but now they've restarted system just using GEW-2 and GEW-3, since GEW-1 seems to be well that's pulling in product. Report states that benzene vapor discharge from SVE system is in compliance, but effluent had high PID reading on 10/30/07, so they changed out carbon. GW samples were collected from several monitoring, vent & injection wells on 8/2/07, and from GWET wells on 8/31/07; results show high levels of VOCs in several wells, including extraction wells and MW-6. Well gauging consistently shows 3+ feet of product in MW-7, small amts. of product in several other wells. URS is conducting vac truck visits every 2 weeks to recover product. I called Jane Staten of URS and asked why wells MW-3 & MW-5 weren't sampled, she thinks one or both are under an emergency generator; she'll look into it and get back to me. I asked if MW-6 can be used as a GW extraction well; she said it's only a 1-inch diameter well because it was installed by Geoprobe, under elevated part of building. I asked if spill buster pump could be installed in MW-7, she said she would look into it. Also asked if URS field personnel could check sump on top of new UST to see if it's still collecting product during fuel deliveries, Jane said she'd ask them to check. - J. Kolleeny 12/26/07: On 12/19/07,

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

sent email to Jane Staten of URS asking if their field personnel had checked tank top sump for presence of product; on 12/26/07 Jane replied: Our field technician checked tank sumps at Midtown South on 11/29/07. One sump was dry and other contained a little water. There was no evidence of gasoline. Based on this, I closed spill case 0705553. - J. Kolleeny 03/20/08: Reviewed System Performance Monitoring Report for Nov. '07 through Jan. '08 by URS, dated 2/8/08 (in eDocs). Report presents O&M data for SVE & GWET systems, concluding that systems are removing elevated levels of contaminants from soil and GW, and will continue operating. Also notes that product levels from spill involving new UST's sump and/or fill port in March '07 (sp. nos. 0705553, 0702185, 0702402) are decreasing, showing effectiveness of GWET and periodic vac truck visits. However, report was submitted prior to new reported spill 0712091 (2/15/08), where large product thicknesses were suddenly and inexplicably observed in well GEW-01 and several monitoring wells, which caused temp. disruption in operation of GWET system, since product was getting into air stripper. (Tracking of that spill is ongoing.)
Report states that SVE system was shut down for 2 weeks during monitoring period to change out vapor phase carbon. GW sampling was performed on 11/5/07, but samples were only collected from BW-5, MW-3, MW-4, VW-2 and VW-4; VW-4 had total VOCs of 737 ug/L, up from 44 ug/L in Aug. '07; some wells with hi TVOCs in Aug. weren't sampled in Nov. (like (IW-13); plume fig. for Nov. '07 shows free product in GEW-01, MW-7 and MW-8, not clear why MW-6 wasn't sampled (gauging table indicates it had 0.05 ft. of product on 11/15/07, but wasn't gauged on 11/05/07. All product data is made irrelevant by spill 0712091. - J. Kolleeny 03/28/08: Received email from Jane Staten of URS on 3/27/08, with attached table showing well gauging data from 1/17/08 to 3/14/08 (in eDocs). Data show product in GEW-01 has decreased, from 3.18 ft. on 2/25/08 to 0.0 ft. on 3/3/08, to 0/15 ft. on 3/14/08; however, product in MW-6 seems not to be going away, with 3.75 ft. on 3/14/08; MW-7 went from 0.30 ft. on 2/25/08 to 0.07 ft. on 3/3/08 to 0.44 ft. on 3/14/08. Jane also reported that spill buster pump in GEW-01 is operating and URS has instructed contractor to restart GW extraction pumps. - J. Kolleeny 06/11/08: At direction of my supervisor Vadim Brevdo, closed spill 0712091 at this site (for free product [gasoline] detected in GW extraction well and monitoring wells) to consolidate with this spill (9512583), under which remediation of subsurface petroleum contamination at this site is being tracked. See Caller Remarks, DEC Remarks and documents in eDocs in spill no. 0712091 for further info about that spill and response actions. - J. Kolleeny 09/11/08: Reviewed System Performance Monitoring Reports for Feb.-April '08 and May-July '08 (both in eDocs). Both reports state that SVE and GWET systems at site are removing elevated levels of contaminants from soil and GW, and that free product thickness msmts continue to decrease, showing effectiveness of GWET system and periodic vac truck visits. Worst wells for free product have been GWE-1, MW-6 and MW-7; as of last gauging event on 7/22/08, GWET had no measurable product, MW-6 had 0.04 ft., and MW-7 had 0.18 ft. As of 7/29/08 GW sampling event, worst wells for dissolved phase contam are GEW-2 with 960 ug/L total VOCs (mostly BTEX)and VW-04 with 936 ug/L total VOCs (mostly MTBE). - J. Kolleeny 01/20/09: Reviewed System Performance Monitoring Report for Aug. - Oct. 2008, dated 12/5/08 (in eDocs). Rpt states that SVE and GWET systems at site are removing elevated levels of contaminants from soil & GW. As of Oct. '08 sampling event, worst dissolved-phase

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

well was GEW-1, which had 14,455 ug/L total VOCs (last reporting period, had free product); 2nd worst dissolved-phase in GEW-2, with 634 ug/L total VOCs. Rpt also states that product thickness msmts continue to decrease, showing effectiveness of GWET system and vac truck visits, but data do not support this. Six wells had free product in Oct. '08, with worst wells being MW-6 and MW-7; those wells started August with almost no product (0.04 ft. and 0.13 ft., resp.) but on 8/29/08 jumped up to 1.96 ft. and 1.06 ft., resp., and stayed around these thicknesses for rest of reporting period, ending with 1.96 ft. and 1.44 ft., resp., on 10/20/08. Rpt states that URS visited site 8 times during period to recover free product with peristaltic pump, recovering about 12.5 gallons of product. I sent email to Jane Staten of URS: I've been looking through Midtown South monitoring report for Aug.-Oct. '08 (dated 12/5/08), and noticed that Table 9 - GW Elevation/Product Thickness Measurements seems to show significant rebound of product thicknesses in MW-6 and MW-7 starting on 8/29/08. Do you have any thoughts or ideas about what could have caused this? Were thicknesses in these two wells steadily decreasing before this reporting period, or do these appear to be typical fluctuations for these wells? Also, have we already discussed why URS is using peristaltic pump to recover product rather than vac truck - is it primarily for cost considerations, or does it have to do with recharge rates for wells or something along those lines? - J. Kolleeny 01/22/09: Received email from Jane Staten of URS responding to my email of 1/20/09: Based on water/product levels we have recorded, product thickness appears to be affected by water levels, i.e., lower the water, greater the product thickness. We are using peristaltic pump for couple of reasons. First, there is access problem at site. Vac truck is too big to use driveway so it sits on street and hose runs up driveway. According to our field personnel, it is difficult for truck to find spot to 'sit' and when hose runs up driveway, it causes police grief because they have to drive around it. Second, wells are only 1-inch in diameter. Vac truck uses small hose which is lowered into well and well is almost immediately evacuated. Same process occurs with peristaltic pump, i.e., small tube is lowered into well and well is evacuated, so vac truck really provides no advantages. Cost was not a consideration. - JK 03/24/09: Reviewed System Perf Monitoring Rpt for Nov.'08 - Jan.'09 by URS, dated 3/4/09 (in eDocs). Rpt states that effluent of GWET system exceeded NYCDEP limits for discharge to sanitary sewer, system was shut down. Franklin Co. will install liquid-phase carbon unit to polish GW prior to discharge to sewer, sometime in 2nd Quarter '09. Rpt further states that GW and SVE systems removed elevated contam concentrations from soil and GW, and that approx. 6 gals of product was recovered from 5 on-site wells using peristaltic pump. GW samples were collected from wells VW-04, GEW-01, GEW-02 and GEW-03 on Jan. 5, '09; remaining wells were not sampled because they were dry or exhibited free product or had an obstruction. Of wells sampled, worst contam was in GEW-01 with 17,140 ug/L total VOCs (up from 14,455 ug/L in Oct.'08) and GEW-03 with 12,244 ug/L total VOCs (had free product in Oct.'08). Free product thickness continued to increase in MW-7, with 2.73 ft. on 1/5/09 and 2.64 ft. on 11609.- JK 08/11/09: Reviewed Syst Perf Mon Rpt for Feb.-April '09 by URS, dated 5/27/09 (in eDocs). Rpt states GWET system was shut down during rpt period due to effluent exceeding NYCDEP discharge stds; rpt says Franklin Co. has installed activated carbon units to polish GW prior to discharge, and GWET system will be re-started in June '09. SVE system operated

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

without interruption during rpt period, removing elevated contam concentrations from vadose zone. Approx. 7 gals of free product were recovered via peristaltic pump. GW samples were collected from 14 wells in April '09; hottest wells were GEW-1 with 24,980 ug/L total VOCs, MW-8 with 24,454 ug/L TVOCs, GEW-3 with 7,735 ug/L TVOCs, and IW-15 with 3,334 ug/L TVOCs. Free product thickness fluctuated ranging from 0 to 0.56 ft in MW-06, from 0.91 to 3.53 ft in MW-07, and from 0.01 to 0.68 ft in MW-09. Four other wells showed traces of product. - JK 12/16/09: Reviewed Syst Perf Mon Rpt for May-July '09 by URS, dated 9/9/09 (in eDocs). Rpt states GWET system was re-started on 6/3/09 and removed elevated levels of contaminants. SVE system operated without interruption during rpt period, but removed fewer contaminants from vadose zone during this rpt period. URS attributes this to construction activities related to removal/replacement of 4,000-gal gasoline UST. System's vapor discharge was in compliance. Approx. 5 gals of free product were recovered via peristaltic pump. GW sample was collected from GWET-1 on 7/9/09, result showed 151 ug/L total VOCs; other wells either had product or were obstructed by construction activities, so were not sampled. Wells MW-6 and MW-7 had most free product, averaging 0.28 ft and 0.69 ft, resp. during rpt period. - J. Kolleeny 12/17/09: Reviewed Syst Perf Mon Rpt for Aug.-Oct.'09 by URS, dated 11/24/09 (in eDocs). Rpt states SVE system operated throughout rpt period, removing more contaminants from vadose zone since construction activities associated with removal/replacement of 4k gasoline UST were completed. Vapor discharge was in compliance. GWET system removed elevated contam levels during this rpt period. Approx. 3 gals of free product were recovered via peristaltic pump from wells MW-7 and MW-9; overall product levels seem to be decreasing. GW samples were collected from 3 wells on 10/19/09; other wells either had product or were dry, so were not sampled. Well MW-6 had 38,573 ug/L total VOCs, and IW-15 had 25,628 ug/L TVOCs. - J. Kolleeny 04/13/10: Reviewed Syst Perf Mon Rpt for Nov.'09 - Jan.'10 by URS, dated 3/3/10 (in eDocs). Rpt states SVE and GWET systems operated throughout rpt period, removing contaminants from subsurface and GW. Vapor discharges were in compliance. GWET system removed elevated contam levels during this rpt period. Approx. 2.4 gals of free product were recovered by peristaltic pump from wells MW-7 and MW-9; MW-7 had 0.19 ft of product on 1/6/10 and 0.22 ft product on 1/19/10. Influent to GWET system from 3 extraction wells was sampled on Nov. 4 & Dec. 2, 2009 and on Jan. 16, 2010: GEW-01 had total VOCs of 8,946 ug/L, 5,537 ug/L and 54,490 ug/L, resp; GEW-02 had tVOCs of 130 ug/L, 122 ug/L and 1,530 ug/L, resp.; and GEW-03 had 7,263 ug/L, 5,710 ug/L and 2,729 ug/L, resp. GW sample taken from IW-15 on 1/6/10 had 12,885 ug/L tVOCs (down from 25,628 ug/L in Oct.'09) and sample from MW-6 had 29,410 ug/L tVOCs (down from 38,645 ug/L in Oct.'09). Other wells either had product or were dry, so weren't sampled. - JK 09/23/10: Reviewed Syst Perf Mon Rpt for Feb.-April 2010 by URS, dated 6/23/10 (in eDocs). Rpt states that SVE system operated thoughout rpt period; GWET system was off briefly on two occasions but restarted immediately during maintenance visits. Both systems removed elevated levels of VOCs from subsurface, and vapor discharges were in compliance. Well gauging showed only traces of product (0.01 ft) in wells GEW-01 and GEW-03; no measurable product was collected by system. GW samples collected in April 2010 showed decreases in extraction wells vs. Jan. 2010 event (tho still elevated, in 1,000-2,000 ug/L total VOC range), but 2 mon wells that haven't been

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

sampled in a while had high levels of VOCs: MW-6 had 9,051 ug/L tVOCs, MW-8 had 5,731 ug/L tVOCs. System operation and GW Mon will continue. - J. Kolleeny 01/10/11: Reviewed Syst Perf Mon Rpt for May-July 2010 by URS, dated 9/1/10 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface; treated water and vapor discharges were in compliance with stds. Well MW-07 saw rebound in free product thickness, with 0.94 ft on 6/10/10 and 0.32 ft on 7/26/10; well MW-09 had trace of product in early May 2010, no product detected in June or July. About 2 gals of free product were removed from wells MW-07 and MW-09 using a peristaltic pump. GW sampling on 8/10/10 showed worst dissolved contam in well MW-06, which had 46,126 ug/L total VOCs (up from 9,051 ug/L in April 2010, extraction well GEW-1, which had 4,168.5 ug/L tVOCs (up from 1,634 ug/L in April 2010), and extraction well GEW-3, which had 1,399 ug/L tVOCs (down from 1,533 ug/L in April 2010); well MW-08 was obstructed and was not sampled. System operation and GW monitoring will continue. - J. Kolleeny 05/30/11: Reviewed Syst Perf Mon Rpt for August-October 2010 by URS, dated 2/16/11 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface; treated water and vapor discharges were in compliance with stds. Rpt also states that URS is implementing several system modifications to improve performance, including conversion of existing horizontal ventilation well (VW-10 thru VW-13) to also function as an extraction well, and conversion of existing extraction well SVE-01A to also function as a ventilation well, to allow for increased flexibility in configuring system to extract from one or both sides of contaminated area. Well MW-07 had less free product during August & September, but rebounded to 1.63 ft on 10/21/10; well MW-09 had no measurable product during most of monitoring period but had 0.01 ft on 10/21/10. About 1.5 gals of free product were removed from wells MW-07 and MW-09 using a peristaltic pump. GW sampling on 10/21/10 showed worst contam in well MW-06 with 23,516 ug/L total VOCs (down from 46,126 ug/L in Aug. 2010) and well MW-08 with 2,677 ug/L tVOCs (was not sampled in Aug. 2010, but had 5,731 ug/L in April 2010); extraction wells GEW-1 had 870 ug/L tVOCs (down from 4,169 ug/L in Aug. 2010) and GEW-3 had 329 ug/L tVOCs (down from 1,399 ug/L in Aug. 2010). System operation and GW monitoring will continue. - J. Kolleeny 08/25/11: Reviewed Syst Perf Mon Rpt for November 2010 thru January 2011 by URS, dated 6/18/11 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface, and that URS has completed several system modifications to improve contaminant recovery and system operation. Treated GW and recovered soil vapor discharges were in compliance with stds. Only well MW-07 had measurable free product, with 1.62 ft on 1/5/11 and 0.12 ft on 1/19/11; approx 1.5 gals of product were removed by peristaltic pump. GW sampling on 1/5/11 showed worst wells were MW-06 with 23,062 ug/L total VOCs (down a little from 23,516 ug/L in Oct. 2010), MW-8 with 5,083 ug/L tVOCs (up from 2,677 ug/L in Oct. 2010) and IW-10 with 3,368 ug/L tVOCs (was not sampled in Oct. 2010). System operation and GW monitoring will continue. - J. Kolleeny 12/02/11: Reviewed Syst Perf Mon Rpt for Feb.-April 2011 by URS, dated 9/7/11 (in eDocs). Rpt states that on-site GWET & SVE systems are continuing to remove contaminants from subsurface; treated GW and recovered vapor discharges were in compliance with stds. Only well MW-07 had measurable LNAPL, with 0.60 ft on 4/4/11 and 0.21 ft on 4/27/11; approx 1.75 gals of product were removed by peristaltic pump. GW sampling on 4/4/11 showed decreases

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

in contam in worst wells: MW-06 had 9,198 ug/L total VOCs (down from 23,062 ug/L in Jan. 2011), MW-8 had 2,923 ug/L tVOCs (down from 5,083 ug/L in Jan. 2011); however, GEW-1 had 1,591 ug/L tVOCs (was not sampled in Jan. 2011 but had 870 ug/L in Oct. 2010). Rpt includes tank inventory / comparison with DEC PBS records; these show that four 550-gal gasoline USTs were removed in mid-1990s or earlier, but location of these USTs is unknown. URS will continue to evaluate UST history and how it may have impacted on-site soil & GW. System operation and GW mon will continue. - JK 03/14/12: Reviewed Syst Perf Mon Rpt for 3rd Quarter 2011 by URS, dated 12/20/11 (in eDocs). Rpt states that on-site GWET & SVE systems continue to remove contam from subsurface. Only well had measurable LNAPL, but levels increased, with 0.78 ft on 6/6/11 and 0.65 ft on 7/18/11; approx 1.5 gals of product were removed by peristaltic pump. GW sampling on 7/18/12 showed worst contam in MW-6 with 12,569 ug/L total VOCs (up from 9,198 ug/L in April 2011), and MW-8 with 3,513 ug/L tVOCs (up from 2,923 ug/L in April 2012); well GEW-1 had 107 ug/L tVOCS, down significantly from 1,591 ug/L in April 2011. Rpt includes tank inventory and states that URS will continue to evaluate UST history and how it may have impacted on-site soil & GW. System operation and GW mon will continue. - J. Kolleeny 07/06/12: Received email from Kevin Shanahan of URS Corp: Jon, Next week we will be sending you/posting a rpt for Midtown South site which contains a work plan to collect soil samples at site. Purpose of soil sampling is to determine if SVE system was successful in remediating unsaturated soil. When you review rpt you may want to look at photo DSC05412 (attached) [in eDocs image folder as UST_AreaAfterBackfilling] to better understand limitations with drilling near new tank system. We are calling for 12 boring locations beneath building and one south of tank (foreground). - J. Kolleeny 07/12/12: Reviewed Syst Perf Mon Rpt for 4th Quarter 2011 by URS, dated 3/22/12 (in eDocs). Rpt states that treated GW and recovered soil vapor discharges were in compliance with stds. Free product was detected in well MW-7 at thicknesses ranging from 0.15 ft to 0.24 ft, and on one occasion in well MW-9 at 0.01 ft; approx 1.25 gals of product were removed by peristaltic pump. GW sampling on 10/10/11 showed worst contam in MW-6 with 7,294 ug/L total VOCs (down from 12,569 ug/L in July 2011), and MW-8 with 3,822 ug/L tVOCs (up a little from 3,513 ug/L in July 2011); injection well IW-15 had 932 ug/L tVOCS (had not been sampled since Jan. 2011, when it had 156 ug/L tVOCs), and GEW-1 had 114 ug/L tVOCs (up slightly from 107 ug/L in July 2011). Rpt includes UST inventory, states that URS will continue to evaluate UST history and how it may have impacted on-site soil & GW. System operation & GW mon will continue. Rpt seems to be missing several data tables (e.g., GW data table, well gauging data table). I sent email to Kevin Shanahan of URS requesting that rpt be re-issued with missing tables. - JK 07/17/12: Received email from Leng Ung of URS with attached pdf of revised 4th Quarter 2011 system performance monitoring rpt, with all data tables included (in eDocs). - J. Kolleeny 07/17/12: Reviewed Syst Perf Mon Rpt - 1st Quarter 2012 by URS, dated 7/11/12 (in eDocs). Rpt states that vapor and water discharges from SVE and GWET systems were in compliance with discharge limits. Free product was detected in one well, MW-7, at thicknesses up to 0.36 ft; 1.25 gals of product were recovered by peristaltic pump. GW sampling on 1/9/12 showed worst dissolved contam in wells MW-6, with 7,160 ug/L total VOCs (down a little from 7,294 ug/L in Oct. 2011) and MW-8, with 2,060 ug/L tVOCs (down from 3,822 ug/L in Oct. 2011). Rpt states that

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

URS will continue to operate SVE and GWET systems, but that systems are starting to show reduced benefit, with contam concentrations in recovered media reaching asymptotic conditions. Based on low vapor recovery by SVE system, URS recommends collecting confirmation soil samples from treatment area to determine if further soil remediation is needed. Rpt includes work plan for confirmation soil borings, proposing 13 borings laid out in a grid. I contacted Kevin Shanahan of URS and asked that work plan be revised to include historical soil data and that boring locations be modified to target specific areas where soil contam was detected in past; asked that confirmation soil boring work plan be revised and re-submitted as brief, separate document (rather than revising and re-submitting as part of 1st quarter 2012 monitoring rpt). He agreed to revise and re-submit work plan as requested. - JK 08/06/12: On 8/3/12, received revised Proposed Work Plan for Confirmation Soil Sampling by URS, dated 7/31/12 (in eDocs). Plan proposes 7 soil borings in area of known vadose zone soil impacts, to evaluate remedial progress by SVE system and need for continued operation of SVE system. I sent letter (in eDocs) to Afsar Samani of DDC, cc's to Mehrzad Asbagh of DDC, Kevin Shanahan & Harvey Roberts of URS, approving plan but requesting two addt'l soil borings and drilling of one proposed boring as close as possible to former boring SB-10. - J. Kolleeny 09/10/12: Reviewed System Performance Monitoring Rpt - 2nd Quarter 2012 by URS, dated 8/30/12 (in eDocs). Rpt states that SVE and GWET systems operated continuously thru quarter, and that vapor & water discharges from SVE and GWET systems were in compliance with discharge limits. Free product was detected in well MW-7, at thicknesses up to 0.34 ft; 1.5 gals of product were recovered by peristaltic pump. GW sampling on 4/23/12 showed MW-6 had 6,835 ug/L total VOCs (down from 7,160 ug/L in Jan. 2012), MW-8 had 2,497 ug/L tVOCs (up from 2,060 ug/L in Jan. 2012), GEW-1 had 133 ug/L tVOCs (up from 60 ug/L in Jan. 2012). Rpt concludes that URS will continue to operate remedial systems; however, systems are showing indications of reduced benefit, with concentrations of recovered soil vapors and GW sampling results reaching asymptotic conditions. Rpt notes that DEC approved confirmation soil sampling plan in Aug. 2012 and that sampling is scheduled for 3rd quarter 2012. - J. Kolleeny 06/06/13: Reviewed System Performance Monitoring Rpt - 3rd & 4th Quarters 2012 by URS, dated 1/16/13 (in eDocs). Rpt states that SVE system was found off on arrival on 7/6/12 because the electrical switch had been turned off; system was restarted during same visit; and GWET system was off on arrival on 8/29/12 due to an air stripper alarm; air stripper was cleaned, alarm re-set and system re-started. Vapor discharges from both systems were in compliance with discharge limits. Free product was detected in well MW-7, from 0.05 ft to 0.42 ft; product was recovered with peristaltic pump on 12 visits, URS will continue product recovery at least monthly. GW sampling on 7/16/12 and 10/10/12 showed significant dissolved impacts persist in wells MW-6 and MW-8: MW-6 had 8,675 ug/L total VOCs in July 2012 (up from 6,835 ug/L in April 2012) and increased to 9,795 ug/L in Oct. 2012; MW-8 had 4,007 ug/L tVOCs in July 2012 (up from 2,497 ug/L in April 2012) and increased to 6,944 ug/L in Oct. 2012. Soil sampling in Oct. 2012 showed significant residual vadose zone soil contam in boring S-09 near north end of easternmost horizontal SVE well, with 151,920 ug/kg total VOCs; two other borings had significant contam in saturated zone (S-04 with 218,380 ug/kg tVOCs and S-05 with 194,330 ug/kg tVOCs). Rpt states that URS will investigate whether SVE system can

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

be modified to more effectively target remaining area of soil contam. URS will continue to operate both SVE and GWET systems, and will evaluate options to improve systems' effectiveness; twice monthly product recovery and quarterly GW sampling will continue. - J. Kolleeny 09/25/13: Reviewed System Performance Monitoring Rpt - 1st & 2nd Quarters 2013 by URS, dated 7/17/13 (in eDocs). SVE and GWET systems operated throughout rpt period, and vapor discharges were in compliance with discharge limits. Free product was detected in well MW-7 from 0.04 to 0.6 ft; product was recovered with peristaltic pump on 8 visits. GW sampling on 1/8/13 and 4/3/13 showed MW-6 had 58 ug/L total VOCs in Jan. 2013 (anomalous decrease from 9,795 ug/L in Oct. 2012) and rebounded to 7,156 ug/L in April 2013, while MW-8 had 6,656 ug/L tVOCs in Jan. 2013 (down from 6,944 ug/L in Oct. 2012), and decreased to 1,025 ug/L tVOCs in April 2013. Rpt concludes that soil & GW impacts at site are decreasing but remain high enough to warrant further remedial actions. URS will continue quarterly GW sampling, manual product recovery and operation of SVE & GWET systems, and will continue to evaluate options to improve and/or replace remedial systems to more effectively address remaining areas of contam. - J. Kolleeny 01/30/14: Reviewed System Performance Monitoring Rpt for 3rd & 4th Quarter 2013 by URS, dated 1/17/14, rcvd on 1/28/14. SVE & GWET systems operated throughout rpt period; vapor discharges were in compliance with discharge limits. Well gauging on 8 visits during rpt period showed up to 0.21 ft of LNAPL in well MW-7 and up to 0.04 ft in MW-9; ~1.75 gals of product were recovered from MW-7 and ~1.25 gals were recovered from MW-9, using a peristaltic pump. GW sampling in July 2013 showed well MW-6 had 10,623 ug/L total VOCs (up from 7,156 in April 2013) and well MW-8 had 6,044 ug/L tVOCs (up from 1,025 ug/L in April 2013). GW sampling in Oct. 2013 showed well MW-6 had 4,621 ug/L tVOCs and well MW-8 had 1,708 ug/L tVOCs. Based on persistence of product and high VOC levels at site, rpt makes proposals to better evaluate site conditions and improve effectiveness of on-site remedial systems. Specifically, URS recommends: (1) advance 3 new soil borings to evaluate current soil conditions, (2) over-drill existing monitoring wells MW-6, MW-7, MW-8 and MW-9 (1 diameter wells) and replace with 4 diameter wells for improved product recovery and to allow for future remedial actions (e.g., placement of absorbent or ORC socks, extraction by vac truck, and/or surfactant injections to desorb contaminants from soil), (3) install 5 new 4 diameter mon wells to better delineate areas of product and dissolved contam, (4) install addt'l 6 diameter GW extraction well in area of greatest contam, (5) redevelop 3 existing extraction wells to improve GW recovery, and (6) possibly inject surfactants to enhance soil remediation. Based on results of 3 new soil borings, URS may implement proposed modifications to on-site SVE system. Once product in wells MW-7 & MW-9 has been addressed, URS proposes to shut down existing GW extraction wells GEW-1, GEW-2 & GEW-3 and operate only new extraction well GEW-4 to determine its radius of influence; after review of resulting data, addt'l extraction wells will be brought on-line. After speaking with Kevin Shanahan of URS about proposals, I sent letter (in eDocs) approving proposals to Afsar Samani of DDC, cc's to Marcy Asbagh of DDC, Kevin Shanahan and Harvey Roberts of URS, noting that before doing any surfactant injections, work plan must be submitted for DEC review/approval. - J. Kolleeny 09/29/14: Reviewed System Performance Mon Rpt for 1st & 2nd Quarter 2014 by URS, dated 6/25/14 (in DecDocs). Rpt states that SVE system vapor discharge and air stripper

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

off-gas were in compliance during mon period, based on both PID screening and sample analysis by lab. GW recovery wells GEW-1, GEW-2 & GEW-3 continue to operate and recover GW. In addition, URS visited site 10 times during rpt period to gauge wells and recover LNAPL; well MW-7 had product every visit except 4/23/14, with thicknesses up to 0.21 ft, and they recovered ~2.25 gals during period. Rpt states that, as proposed by URS and approved by DEC, URS will overdrill existing one-inch wells MW-6, MW-7, MW-8 & MW-9 and replace with 4-inch wells, plus they will install five addt'l wells in this area to better delineate product plume. GW sampling was performed in January and April 2014. Jan. 2014 results showed well MW-6 had 5,142 ug/L total VOCs (up from 4,621 ug/L in Oct. 2013) and MW-8 had 5,908 ug/L tVOCs (up from 1,708 ug/L in Oct. 2014). April 2014 results showed well MW-6 declined to 4,453 ug/L tVOCs; MW-8 was not sampled due to vehicle parked over well. Operation of SVE and GWET systems, GW sampling and LNAPL recovery will continue at site. - J. Kolleeny 09/30/14: Reviewed Request for Soil Vapor Extraction System Shutdown by URS, dated 9/10/14 (in DecDocs). Rpt notes that monitoring of on-site SVE system s vapor influent indicates that system has reached limit of effectiveness and is no longer recovering measurable quantities of HC vapors. Rpt also notes that soil data indicate system has effectively treated vadose zone soil contamination and that remaining soil impacts at site are located mainly in saturated soil zone, which is not targeted by SVE system. Ergo, URS requests approval to suspend operation of SVE system and prepare system for long-term shutdown. System will remain on-site and URS will evaluate future site data to determine if resuming system operation is warranted. In meantime, other remedial activities at site operation & modification of GWET system, product recovery, GWET system performance monitoring, and quarterly GW sampling will continue. I sent letter (in DecDocs) approving system shutdown to Afsar Samani of DDC, cc's to Merhzad Asbagh of DDC, Kevin Shanahan and Harvey Roberts of URS. - J. Kolleeny 03/12/15: Reviewed System Performance Monitoring Rpt for 3rd & 4th Quarter 2014 by URS, dated 1/9/15 (in DecDocs). Rpt states that operation of on-site SVE system terminated on 10/1/14. As for GWET system, results of PID monitoring of air-stripper vapor effluent were ND during rpt period, and lab analysis of effluent air sample was ND for benzene, so system vapor discharge was in compliance. Sampling of GWET system GW influent showed system is recovering low levels of dissolved VOCs (up to 90 ug/L total VOCs). Well gauging and product recovery were performed 8 times during rpt period; product was detected in well MW-7 each time, with greatest thickness of 0.36 ft; about 2 gals total product recovered. GW sampling was performed in July and Oct. 2014; results showed well MW-6 had 3,234 ug/L tVOCs in July 2014 (down from 4,453 ug/L in April 2014) and increased to 4,406 ug/L tVOCs in Oct. 2014; well MW-8 had 4,264 ug/L tVOCs in July 2014 (not sampled in April 2014; had 5,908 ug/L tVOCs in Jan. 2014) and decreased to 1,046 ug/L tVOCs in Oct. 2014. Rpt states that URS will over-drill existing 1-inch wells MW-6, MW-7, MW-8 & MW-9 and replace with 4-inch wells, and will install 5 addt'l mon wells in this area to better delineate LNAPL plume. Also, an addt'l GW extraction well will be installed within dissolved-phase plume, existing extraction wells will be re-developed, and URS may apply surfactants to subsurface to enhance soil remediation. Qtrly GW monitoring, GWET system operation and manual product recovery efforts will continue, and URS will evaluate need for surfactant applications or other remedial actions; they will

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

prepare/submit work plan prior to doing any addt'l remedial actions. - JK 03/12/15: I emailed Kevin Shanahan of AECOM to note that 3rd & 4th quarter 2014 rpt does not include any SVE system monitoring data for 3rd quarter (system was permanently shut down on Oct. 1st, 2014). He sent table with SVE monitoring data for Aug.-Sept. 2014 (July 2014 data were included in System Shutdown Request Letter rpt). Table in DecDocs as brief. - JK 05/21/15: Reviewed System Performance Monitoring Rpt for First Quarter 2015 by URS, dated 4/10/15 (in DecDocs). Rpt states that URS is planning to add a 4th GW extraction well to GWET system, install addt'l monitoring wells, and re-install some wells with larger diameter casings to enhance remediation and monitoring at site. PID screening and lab sampling of GWET system's air stripper vapor effluent showed air discharge is in compliance. Recovery of free product from well MW-7 with peristaltic pump was performed 4 times during quarter, for total of ~1 gal removed; highest product thickness measured was 0.18 ft. During GW sampling in Jan. 2015, well MW-8 was not sampled because access to well was obstructed. Sampling results for 1/13/15 showed well MW-6 had 2,665 ug/L total VOCs (down from 4,406 ug/L in Oct. 2014), well MW-9 had 11,316 ug/L tVOCs (not sampled in April, July or Oct. 2014), and extraction well GEW-1 had 148 ug/L tVOCs (up from 47 ug/L in Oct. 2014). Sampling of influent to GW treatment system on 1/7/15 showed influent from GEW-1 had 165 ug/L tVOCs, GEW-2 had 6 ug/L tVOCs, and GEW-3 had 56 ug/L tVOCs. Rpt states that URS will continue quarterly GW monitoring/sampling, continue manual LNAPL recovery, continue operation of GWET system & proceed with enhancements to system (install'n of new extraction well and re-development of existing extraction wells), proceed with installing new mon wells and replacing several narrow-diameter wells, and continue to evaluate need for surfactant injections or other remedial actions to address residual free product and saturated soil zone contamination. - J. Kolleeny 07/23/15: Reviewed System Performance Monitoring Rpt for 2nd Quarter 2015 by URS dated 6/2/15 (in DecDocs). Rpt covers period 1/29/15 to 4/29/15 as 2nd qtr 2015. Rpt states that URS plans to add a 4th GW extraction well to GWET system, install addt'l monitoring wells, and re-install some wells with larger diameter casings to enhance remediation & monitoring at site. PID screening and lab sampling of GWET system's air stripper vapor effluent showed air discharge is in compliance. LNAPL was removed from well MW-7 3 times during quarter using a peristaltic pump; well had up to 0.32 ft of LNAPL; ~0.75 gals were recovered. GW influent samples from GWET system extraction wells show system is recovering low levels of VOCs. GW sampling in April 2015 showed well MW-6 had 3,445 ug/L total VOCs (up from 2,665 ug/L in Jan. 2015), well MW-8 had 248 ug/L tVOCs (up from 148 ug/L in Jan. 2015), well MW-9 had only 0.8 ug/L tVOCs (down from 11,316 ug/L in Jan. 2015; this well has periodically had LNAPL, most recently in March 2014). URS will continue quarterly GW monitoring & sampling, manual LNAPL recovery, and operation of GWET system (proceeding with system enhancements in 3rd quarter 2015); in addition, URS will proceed with installing new mon wells and replacing several narrow wells, and will continue to evaluate need for surfactant injections or other remedial actions to address residual free product and saturated soil zone contamination. - J. Kolleeny 10/30/15: Received email from Kevin Shanahan of URS/AECOM: Jon, Envirotrac is performing routine O&M for existing GW pump & treat system. They are also constructing system enhancements over next few months. Today we were informed that GW extraction pump in

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

GEW-02 is broken. GEW-02 is lowest producing well at site, is located outside of plume and is being replaced by new extraction well GEW-04 in November. We wanted to make you aware that GW extraction at GEW-02 in no longer happening and that new extraction well should be drilled and functional by end of year. I sent email reply: Kevin, Thanks for letting me know. I agree it doesn t make sense to try to repair or replace pump in GEW-02, considering its location outside plume and its historically low yield. Please continue to keep me posted and let me know when new extraction well GEW-04 has been installed. - J. Kolleeny 11/23/15: During quarterly DDC Consent Order Status Meeting on 11/19/15, Harvey Roberts of URS related that a local citizen had contacted NYPD and URS to complain about noise generated by on-site GW recovery system. URS had modifications made to system, resulting in decrease of ~15 decibels (a significant noise decrease); however, citizen continued to make complaints. Mr. Roberts conducted a test in which he turned off system and asked citizen if there was any difference in noise, citizen said no difference, suggesting system may not be source of noise perceived as bothersome. When Roberts pointed out that system had been off when he had asked for noise evaluation, citizen remained skeptical and continued to maintain that system is source of noise problem. At meeting, I asked if system GW influent contains significant levels of dissolved contaminants. Kevin Shannahan of URS/AECOM responded that VOC levels in system influent are very low. I suggested shutting down GWET system until new recovery well is installed in heart of plume, since system is currently recovering minimal hydrocarbons and shutting it temporarily might resolve noise complaints. URS/AECOM said they would look into shutting down system. On 11/23/15, I received email from Harvey Roberts: Jon, Per your suggestion at last week s Quarterly Status Meeting, URS has instructed Envirotrac, Midtown South Pct remediation system operator, to shut treatment system while they modify system. Envirotrac plans to shut system tomorrow during its regularly scheduled O&M visit. System operation will resume in late Jan. 2016 when modifications have been completed. I sent email reply: Harvey, Thanks for letting me know. I m assuming that latest GW data show contaminant plume confined to site. If there is a sampling event before system modifications have been completed in Jan. 2016 and GW data show that plume is migrating off site, it may be necessary to re-start system before mods are completed, to re-establish hydraulic control. - JK 12/10/15: Reviewed System Performance Monitoring Rpt for 3rd Quarter 2015 by URS, dated 9/1/15 (in DecDocs). Rpt seems to cover period from 4/29/15 thru 7/29/15 as 3rd qtr of 2015. Rpt states that URS will add a 4th GW extraction well to GWET system, install addt'l monitoring wells, reinstall several existing wells with larger diameter casings, and take steps to reduce noise emanating from system. PID screening & lab sampling of system's vapor discharge showed compliance with DEC stds. URS visited site 4 times during rpt period, detecting LNAPL in well MW-7 each time, at thicknesses up to 0.83 ft. ~1 gal of LNAPl was recovered. GW sampling on 7/20/15 showed well MW-6 had 3,178 ug/L total VOCs (down from 3,445 ug/L in April 2015), well MW-8 had 1,665 ug/L tVOCs (up from 248 ug/L in April 2015), well MW-9 had 2,398 ug/L tVOCs (up from 0.8 ug/L in April 2015). Rpt notes that well MW-9 last had LNAPL in March 2014, and that GW samples from MW-9 have shown highly fluctuating tVOCs. Rpt states that, in addition to system mods & well install'ns mentioned above, URS will continue to evaluate need for surfactant injections or other remedial actions to address saturated soil contam. URS will

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

continue quarterly GW monitoring & LNAPL recovery efforts. - JK 03/21/16: Reviewed System Performance Monitoring Rpt for 4th Quarter 2015 by URS, dated 12/2/15 (in DecDocs). Rpt covers period from 7/30/15 to 10/28/15 as 4th qtr 2015. PID screening & lab sampling of GWET system's vapor discharge showed compliance with DEC stds. URS visited site 3 times during rpt period, detecting LNAPL in well MW-7 each time, up to 0.94 ft in thickness; ~1 gal of LNAPL was recovered. GW sampling on 10/7/15 showed well MW-6 had 3,378 ug/L total VOCs (up from 3,178 ug/L in July 2015), well MW-8 had 1,222 ug/L tVOCs (down from 1,665 ug/L in July 2015), well MW-9 had 5,541 ug/L tVOCs (up from 2,398 ug/L in July 2015). Rpt states that on 10/28/15, GW pump in extraction well GEW-02 malfunctioned; URS contacted DEC and it was agreed that since well is outside main plume and has historically had low yield, it would not be worth repairing or replacing pump; system continues to operate with two recovery wells, GEW-01 and GEW-03, until new recovery well GEW-04 is installed and brought on line. URS will install 4th recovery well, install addt'l monitoring wells and replace several existing 1-inch wells with 4-inch wells (according to approved plan). They will also continue to evaluate need for surfactant injections, and will continue quarterly GW monitoring & LNAPL recovery efforts. - J. Kolleeny 05/31/16: Reviewed System Performance Monitoring Rpt for 1st Quarter 2016 by URS, dated 4/7/16 (in DecDocs). Rpt covers period from 10/29/15 to 1/18/16 as 1st qtr 2016. Based on PID screening of GWET system's vapor influent/effluent, it appears system discharge complied with DEC stds (system was shut down on 11/24/15, prior to quarterly air sampling, in prep for reinstall'n of wells and modifications to GWET system). In Nov. 2015, well MW-7 had 0.28 ft of LNAPL; during Dec. 2015 & Jan. 2016, well was not gauged as access to well was obstructed at those times. Approx 0.25 gal of LNAPl was recovered from MW-7. GW sampling was performed on 1/18/16; wells MW-6, MW-7 & MW-8 were not sampled because they were in process of being reinstalled as larger wells. Well MW-9 had 3,988 ug/L total VOCs (down from 5,541 ug/L in Oct. 2015); well GEW-1 had 53 ug/L tVOCs (up from 40 ug/L in Oct. 2015). Rpt states that subcontractor EnviroTrac is in process of implementing remedial system modifications approved by DEC, including install'n of addt'l delin wells and an addt'l GW extraction well; this work is expected to be completed in early 2016, at which point operation of GWET system will resume. URS will continue quarterly GW sampling and manual product recovery. - J. Kolleeny 09/07/16: Reviewed System Performance Monitoring Rpt for 2nd & 3rd Quarters 2016 by URS, dated 8/11/16 (in DecDocs). Rpt covers period from Jan. 19 thru July 22, 2016 as 2nd & 3rd quarters of 2016.) Rpt summarizes recent modifications at site that were proposed by URS and approved by DEC in Jan. 2014 - they over-drilled & replaced 1-inch wells MW-6, MW-7 & MW-8 with 4-inch wells (MW-9 could not be over-drilled as planned, so new well MW-15 was installed nearby), installed four new wells MW-10, MW-11, MW-13 & MW-14 (proposed well MW-12 was not installed due to subsurface obstruction, MW-13 was moved to west to compensate), installed addt'l extraction well GEW-4; in addition, they plan to redevelop extraction wells GEW-1 and GEW-3 to ensure proper functioning (GEW-2 consistently show no contam, so it won't be redeveloped.) GWET, shut down since 11/24/15, was re-started with new extraction well on 8/3/16. During rpt period, free product was detected in well MW-7/7R (0.03 ft in MW-7 in March, 0.08 ft in MW-7R in April 2016) and in well MW-15 (0.02 ft in April 2016). Absorbent socks were placed in MW-7R and MW-15 in April, and were replaced in

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

June 2016 as both socks were 100% saturated. GW sampling in April 2016 showed well MW-6R had 18,434 ug/L total VOCs, well MW-8R had 1,981 ug/L tVOCs, well MW-10 had 1,410 ug/L tVOCs, and well MW-11 had 8,359 ug/L tVOCs. GW sampling in July 2016 showed MW-6R decreased to 7,150 ug/L tVOCs, MW-8R decreased to 1,591 ug/L tVOCs, MW-10 increased to 1,959 ug/L tVOCs, and MW-11 decreased to 2,892 ug/L tVOCs. URS will continue manual product recovery, quarterly GW sampling, and operation/monitoring of GWET system; they'll also continue to evaluate need for surfactant injections or other actions to address residual LNAPL and saturated soil contam, and will submit a work plan for DEC approval before implementing any addt'l remedial actions. - JK 03/24/17: Reviewed System Performance Monitoring Rpt for 4th Quarter 2016 by URS, dated 12/22/16 (in DecDocs). Rpt discusses 2016 modifications to GW extraction & treatment system at site (mainly install'n & operation of addt'l extraction well GEW-4). URS estimates total gals of GW collected by each well during rpt period as: GEW-1 ~9,233 gals, GEW-3 182 gals, GEW-4 3,840 gals. Extraction wells GEW-1 and GEW-3 operated from 9/27 thru 10/6, and were then shut off to determine influence of GEW-4 when pumping on its own. GW samples from extraction wells taken by EnviroTrac (subcontractor) on 10/11/16 showed GEW-1 had 240 ug/L total VOCs, GEW-3 had 5,725 ug/L tVOCs, GEW-4 had 5,917 ug/L tVOCs. Samples collected by URS on 10/5/16 showed GEW-1 had 224 ug/L tVOCs, GEW-3 had 60 ug/L tVOCs, and GEW-4 had 23,293 ug/L tVOCs. Rpt states these data indicate that new well GEW-4 was installed in area with highest dissolved impacts as intended. Samples of vapor effluent from air stripper and GW discharge to NYC sewer were in compliance. No free product was detected in 3 site visits this quarter, but absorbent socks in wells MW-7R & MW-15 were replaced on each visit. GW sampling on 10/5/16 showed well MW-6R had 4,581 ug/L tVOCs (down from 7,150 ug/L in July 2016), well MW-8R had 1,201 ug/L tVOCs (down from 1,591 ug/L in July 2016), well MW-10 had 2,819 ug/L tVOCs (up from 1,959 ug/L in July 2016), well MW-11 had 348 ug/L tVOCs (down from 2,892 ug/L in July 2016). Rpt states that GW & soil contam in saturated & smear zones remain high enough to warrant continued remediation, and small amts of free product remain in a small area of site. URS concludes that data from newly installed wells have better delineated GW impacts, showing plume is limited to 40 ft by 50 ft area. URS will continue quarterly GW monitoring, continue manual product recovery, optimize GWET system ops, and continue to evaluate need for surfactant injections or other remedial action. They also propose to remove wells that are consistently dry from GW monitoring program (IW-3, IW-10, IW-13, IW-15, VW-02 & VW-04), and to decommission a number of 1-inch injection wells (IW-1 thru IW-5A, IW-11, IW-12, IW-14, IW-16 thru IW-18), which are often dry and/or are located near existing monitoring wells. I sent email (in DecDocs) to Jerry Aliberti of DDC, cc's to March Asbagh of DDC, Kevin Shanahan and Harvey Roberts of URS/AECOM, approving these recommendation. - J. Kolleeny 06/15/17: Reviewed System Performance Monitoring Rpt for First Quarter 2017 by URS, dated 3/30/17 (in DecDocs). Rpt covers period from Oct. 2016 thru Jan. 2017. During this period, extraction wells GEW-1 & GEW-3 were not operating & did not recovery any GW; GEW-4 recovered 15,320 gals (155 gpd). Sampling of influent to GWET system in Nov. & Dec. 2016 and Jan. 2017 showed total VOCs ranged from 726 ug/L to 2,3339 ug/L in GEW-1, from 1,029 ug/L to 3,285 ug/L in GEW-3, and from 1,441 ug/L to 3,282 ug/L in GEW-4. Sampling of system discharge to NYC sewer system showed effluent was in

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

compliance with NYCDEP discharge criteria. GW samples collected from extraction wells on 1/17/17 showed no VOCs in GEW-1 or GEW-2, GEW-3 had 9.5 ug/L of MTBE, and GEW-4 had 8,147 ug/L tVOCs. URS visited site 3 times during quarter to gauge wells & recover LNAPL, but no LNAPL was detected in any wells; however, absorbent socks in MW-7R & MW-15 continue to collect LNAPL. Socks were replaced in Nov. 2016. GW sampling on 1/17/17 showed well GEW-4 had 8,147 ug/L tVOCs (down from 23,293 ug/L in Oct. 2016), well MW-6R had 104 ug/L tVOCs (down from 4,581 ug/L in Oct. 2016), well MW-10 had 289 ug/L tVOCs (down from 2,819 ug/L in Oct. 2016), well MW-11 had 257 ug/L tVOCs (down from 348 ug/L in Oct. 2016); wells MW-8R & MW-15 were not sampled due to vehicles parked over wells. URS will continue quarterly GW monitoring, product recovery by absorbent socks (or other methods as appropriate), operation of GWET system, evaluation of need for surfactant injections or other remedial actions to address residual LNAPL and saturated zone soil impacts, and will decommission 11 injection wells DEC approved for removal from GW monitoring program. - JK 07/24/17: Reviewed System Performance Monitoring Rpt for Second Quarter 2017 by URS, dated 6/13/17 (in DecDocs). Rpt covers period from 1/19/17 thru 4/27/17. Rpt states that GWET system operated in compliance with benzene air emission limit, based on weekly PID screening of sir stripper influent & effluent showing no detections and on quarterly samples of vapor influent & effluent showing no VOCs detected. During this quarter, system operated using only new extraction well GEW-4, which recovered 14,130 gals of GW (143 gpd). Monthly GW samples from extraction wells showed that on Feb. 23, 2017, GEW-1 had 924 ug/L total VOCs, GEW-3 had 1,621 ug/L tVOCs, GEW-4 had 1,862 ug/L tVOCs; on March 29, 2017, GEW-1 had 852 ug/L tVOCs, GEW-3 had 1,517 ug/L tVOCs, GEW-4 had 1,906 ug/L tVOCs; on April 27, 2017, GEW-1 had 698 ug/L tVOCs, GEW-3 had 1,458 ug/L tVOCs, GEW-4 had 1,929 ug/L tVOCs. Monthly samples of effluent from GWET showed system discharge was in compliance with NYCDEP criteria. Quarterly GW sampling on 4/13/17 showed well GEW-4 had 9,799 ug/L tVOCs (up from 8,147 ug/L in Jan. 2017), well MW-6R had 130 ug/L tVOCs (up from 104 ug/L in Jan. 2017), well MW-10 had 115 ug/L tVOCs (down from 289 ug/L in Jan. 2017), well MW-11 had 509 ug/L tVOCs (up from 257 ug/L in Jan. 2017). No measurable LNAPL was reported for this quarter, but LNAPL continued to be recovered by absorbent socks installed in wells MW-7R and MW-15; socks in MW-15 were replaced each month during this quarter. URS will: continue quarterly GW monitoring, continue product recovery by absorbent socks and/or other methods as appropriate, optimize GWET system for more continuous pumping to maintain/increase GW capture zone, evaluate need for surfactant injections or other actions to address residual LNAPL & saturated zone soil impacts, decommission eleven injection wells, repair leak in carbon vessel T-501 or replace unit, heat trace & insulate exposed section of discharge pipe from GWET to DEP sewer system. - J. Kolleeny 01/08/18: Reviewed System Performance Monitoring Rpt for Third Quarter 2017 by URS, dated 9/15/17 (in DecDocs). Rpt covers period from 4/28/17 to 7/26/17. Based on PID readings and air sampling data, on-site GWET system operated in compliancde with benzene air discharge limit. During quarter, extraction well GEW-1 recovered 5 gals, GEW-3 recovered 0 gals, GEW-4 recovered 10,523 gals (117 gpd). GW influent samples from extraction wells showed that on 5/26/17, GEW-1 had 94 ug/L total VOCs, GEW-3 had 349 ug/L tVOCs, GEW-4 had 1,770 ug/L tVOCs; on 6/30/17, GEW-1 had 77 ug/L tVOCs, GEW-3 had 857 ug/L tVOCs, GEW-4 had 1,835 ug/L tVOCs; on

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

7/26/17, GEW-1 had 164 ug/L tVOCs, GEW-3 had 672 ug/L tVOCs, GEW-4 had 1,452 ug/L tVOCs. Treated GW discharge from GWET system complied with NYCDEP criteria. There were no system shutdowns this quarter. Three well gauging events showed no LNAPL detected in any wells this quarter (absorbent socks were removed from MW-7R & MW-15 on 5/24/17 to see if LNAPL would collect, but no measurable product was observed). GW sampling on 7/26/17 showed well GEW-4 had 11,327 ug/L tVOCs (up from 9,799 ug/L in April 2017), well MW-6R had 384 ug/L tVOCs (up from 131 ug/L in April 2017), well MW-7R had 16,886 ug/L tVOCs (not sampled in April 2017, Jan. 2017 or Oct. 2016 due to LNAPL in well), well MW-9 had 2,540 ug/L tVOCs (not sampled previous 3 quarters), well MW-10 had 151 ug/L tVOCs (up from 115 ug/L in April 2017), well MW-11 had 316 ug/L tVOCs (down from 509 ug/L in April 2017), well MW-15 had 65,257 ug/L tVOCs (not sampled due to LNAPL in Jan. & April 2017, or Oct. 2016), well GEW-1 had 92 ug/L tVOCs (up from 10 ug/L in April 2017). URS will continue quarterly GW monitoring, use absorbent socks for LNAPL recovery from affected wells, optimize GWET system, evaluate need for surfactant injections, turn on pump in well GEW-1, decommission 11 injection wells, replace liquid-phase carbon adsorbers, insulate exposed section of discharge pipe from GWET to DEP sewer system. - JK 04/05/18: Reviewed System Performance Monitoriong Rpt for Fourth Quarter 2017 by URS, dated 1/23/18 (in DecDocs). PID monitoring & lab sampling of GWET system air stripper's vapor influent & effluent showed no VOCs detected in either, so system's benzene discharge is in compliance. Monthly sampling of GWET system's treated water discharge showed compliance with NYCDEP discharge criteria. GWET system recovered 37,950 gals of GW during rpt period (7/26 - 10/31/17). Monthly sampling of GW influent from each extraction well (on 8/31, 9/28 & 10/31/17) showed total VOCs ranged from 13 ug/L to 607 ug/L in GEW-1, from 16 ug/L to 886 ug/L in GEW-3, and from 149 ug/L to 1,309 ug/L in GEW-4; highest VOC levels were seen in Aug. 2017, with decreases in Sept. & Oct. 2017 partly attributable to increased capture zone after bringing GEW-1 back on line. Well gauging showed no LNAPL detected in any wells this quarter. GW sampling on 10/30/17 showed well GEW-1 had 143 ug/L tVOCs (up from 92 ug/L in July 2017), well GEW-3 had 8 ug/L tVOCs (up from 6 ug/L in July 2017), well GEW-4 had 5,736 ug/L tVOCs (down from 11,327 ug/L in July 2017), well MW-6R had 191 ug/L tVOCs (down from 384 ug/L in July 2017), well MW-7R had 11,243 ug/L tVOCs (down from 16,886 ug/L in July 2017), well MW-8R had 220 ug/L tVOCs (not sampled in July 2017, had 5 ug/L tVOCs in April 2017), well MW-9 had 78 ug/L tVOCs (down from 2,540 ug/L in July 2017), well MW-10 had 1,346 ug/L tVOCs (up from 151 ug/L in July 2017), well MW-11 had 3,693 ug/L tVOCs (up from 316 ug/L in July 2017), well MW-15 had 57,704 ug/L tVOCs (down from 65,257 ug/L in July 2017). Rpt states that following DEC's 3/24/17 approval, 7 injection wells were decommissioned on 10/2/17 (4 other injection wells approved for decommissioning could not be located & are presumed paved over during past construction work). Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, continue to evaluate need for surfactant injections or other actions to address product & saturated soil contam, and will repair flow meters/totalizers for GEW-1 & GEW-4. - J. Kolleeny 06/05/18: Reviewed System Performance Monitoring Rpt for First Quarter 2018 by URS, dated 3/13/18 (in DecDocs). Rpt covers period from 11/01/17 thru 1/31/18. PID screening & lab sampling of GWET system air stripper

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

discharge showed virtually no VOCs detected in vapor stream, no benzene in effluent, so discharge was in compliance with DEC stds. Monthly sampling of GWET system's treated water discharge showed compliance with NYCDEP discharge criteria. GWET system (extraction wells GEW-1 & GEW-4) recovered total of 80,692 gals of GW during rpt period, going by summing flows from extraction wells, or going by discharge flow meter, system recovered 61,786 gals of GW; URS states that discharge flow meter is more likely accurate, and speculates that mineral deposition in piping from extraction wells or in flow meters could cause erroneous readings; contractor (EnviroTrac) is scheduled to disassemble and clean piping system in Feb. 2018. Monthly sampling of GW influent from each extraction well showed total VOCs ranged from 6 ug/L to 20 ug/L in GEW-1, from 9 ug/L to 51 ug/L in GEW-3, and from 123 ug/L to 683 ug/L in GEW-4; highest tVOCs for each extraction well were from Jan. 2018 sampling event. Gauging of wells showed a sheen in MW-7R on 1/31/18 (absorbent sock was replaced), and MW-15 had 0.03 ft of LNAPL on 12/28/17 and 0.01 ft on 1/31/18; socks were replaced both times. GW sampling on 1/31/18 & 2/1/18 showed well GEW-3 had 14 ug/L tVOCs (had 8 ug/L in Oct. 2017), well GEW-4 had 6,829 ug/L tVOCs (up from 5,736 ug/L in Oct. 2017), well MW-6R had 119 ug/L tVOCs (down from 191 ug/L in Oct. 2017), well MW-8R had 103 ug/L tVOCs (down from 220 ug/L in Oct. 2017), well MW-9 had 93 ug/L tVOCs (up from 78 ug/L in Oct. 2017), well MW-10 had 1,028 ug/L tVOCs (down from 1,346 ug/L in Oct. 2017), well MW-11 had 17,814 ug/L tVOCs (up from 3,693 ug/L in Oct. 2017). Wells MW-7R & MW-15 were not sampled due to LNAPL; well GEW-1 could not be accessed. Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, and continue to evaluate need for surfactant injections or other actions to address product & saturated soil contamination. - J. Kolleeny 10/11/18: Reviewed System Performance Monitoring Rpt for 2nd Quarter 2018 by URS dated 7/31/18 (in DecDocs). Rpt covers 2/1/18 thru 4/25/18. Rpt states that screening of air stripper vapor discharge showed no PID readings, and lab sampling of vapor influent & effluent on 4/11/18 showed no benzene (or other VOCs) detected, so GWET system was in compliance with air stds. Sampling of system's treated GW discharge showed compliance with NYCDEP criteria. Only extraction wells GEW-1 and GEW-4 operated this quarter. Monthly sampling of GW influent from each extraction well showed total VOCs ranged from 18 to 29 ug/L in GEW-1, from 29 to 147 ug/L in GEW-3, and from 30 to 2,522 ug/L in GEW-4. Well gauging on 4/6/18 showed a petroleum sheen in wells MW-7R and MW-15; both wells contain absorbent socks which are not yet fully saturated. GW sampling on 4/16 & 4/15/18 showed well GEW-1 had 452 ug/L total VOCs (not sampled in Jan. 2018 due to obstruction; had 143 ug/L tVOCs in Oct. 2017), well GEW-3 had 6 ug/L tVOCs (down from 14 ug/L in Jan. 2018), well GEW-4 had 15,533 ug/L tVOCs (up from 6,829 ug/L in Jan. 2018), well MW-6R had 3 ug/L tVOCs (down from 119 ug/L in Jan. 2018), well MW-8R was ND (had 103 ug/L tVOCs in Jan. 2018), well MW-9 had 15 ug/L tVOCs (down from 93 ug/L in Jan. 2018), well MW-10 had 3,079 ug/L tVOCs (up from 1,028 ug/L in Jan. 2018), well MW-11 had 12,695 ug/L tVOCs (down from 17,814 ug/L in Jan. 2018); wells MW-7R and MW-15 were not sampled due to presence of sheen (~0.001 ft of LNAPL). Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, and continue to evaluate need for surfactant injections or other actions to

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

address product & saturated soil contamination. - J. Kolleeny 12/20/18: Reviewed System Performance Monitoring Rpt for Third Quarter 2018 by URS dated 11/5/18 (in DecDocs). Rpt covers 4/26/18 thru 7/26/18. Rpt states that system air stripper vapor influent & effluent PID readings were all zero, except on 7/20/18 when effluent measured 0.10 ppmv; 2% estimated benzene concentration would be 0.002 ppmv, which is well below emission limit of 2.0 ppmv. Lab analysis of vapor influent/effluent collected on 8/15/18 showed no benzene or other VOCs detected, so GWET system was in compliance with air stds. Sampling of system's treated GW discharge showed compliance with NYCDEP criteria. Only extraction wells GEW-1 and GEW-4 operated this quarter; GEW-1 recovered 72,207 gals of GW, GEW-4 recovered 3,941 gals. Rpt states that no measurable LNAPL or sheen was observed in any wells this quarter; absorbent socks in wells MW-7R & MW-15 were 75% saturated and replaced on 7/30/18. GW sampling on 7/30/18 showed well GEW-1 had 230 ug/L total VOCs (down from 452 ug/L in April 2018), well GEW-3 had 16 ug/L tVOCs (up from 6 ug/L in April 2018), well GEW-4 had 20,027 ug/L tVOCs (up from 15,553 ug/L in April 2018), well MW-6R was ND (had 3 ug/L tVOCs in April 2018), well MW-8R had 59 ug/L tVOCs (was ND in April 2018), well MW-9 had 64 ug/L tVOCs (up from 15 ug/L in April 2018), well MW-10 had 3,732 ug/L tVOCs (up from 3,079 ug/L in April 2018), well MW-11 had 9,378 ug/L tVOCs (down from 12,695 ug/L in April 2018). Rpt states that wells MW-7R and MW-15 were not sampled due to product (?). Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, evaluate need for addt'l wells to south of MW-10 & MW-11 to better delineate plume, and continue to evaluate need for surfactant injections or other actions to address product & saturated soil contamination. - J. Kolleeny 03/07/19: Reviewed System Performance Monitoring Rpt for Fourth Quarter 2018 by URS dated 1/16/19 (in DecDocs). Rpt covers 7/27/18 thru 10/23/18. On-site GWET system air stripper vapor influent & effluent PID readings were all zero this quarter. Lab analysis of system vapor influent & effluent samples collected on 10/23/18 showed influent had 57 ppbv total volatiles (all MTBE), and effluent was ND; no benzene was detected, system was in compliance with DEC air stds. System's treated GW discharge was in compliance with NYCDEP criteria. Extraction wells GEW-1 and GEW-4 operated this quarter; GEW-1 collected 59,684 gals, GEW-4 collected 4,473 gals. Gauging of wells showed product sheen in well MW-15 in Oct. 2018; absorbent socks have been placed in MW-15 and MW-7R. GW sampling on 10/10/18 showed well MW-7R had 2,921 ug/L total VOCs (was not sampled for past several quarters due to LNAPL), well MW-9 had 92 ug/L tVOCs (up from 64 ug/L in July 2018), well MW-10 had 3,176 ug/L tVOCs (down from 3,732 ug/L in July 2018), well MW-11 had 2,758 ug/L tVOCs (down from 9,378 ug/L in July 2018), well GEW-1 had 160 ug/L tVOCs (down from 230 ug/L in July 2018), well GEW-4 had 19,134 ug/L tVOCs (down from 20,027 ug/L in July 2018). Rpt states that URS will continue quarterly GW monitoring, continue manual product recovery from affected wells using absorbent socks, continue to optimize GWET system, evaluate need for addt'l wells to south of MW-10 & MW-11 to better delineate plume, and continue to evaluate need for surfactant injections or other actions to address product & saturated soil contamination. Also, URS will lower pump on set-point for P-104 in extraction well GEW-4 from 12 ft to 14 ft bgs, and will monitor & record pump cycle frequencies and durations before and after adjusting set-point. - J. Kolleeny 06/17/19: Reviewed System

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

Performance Monitoring Rpt for First Quarter 2019 by URS dated 5/2/19 (in DecDocs). Rpt covers 10/24/18 thru 1/31/19. On-site GWET system air stripper vapor influent & effluent PID readings were all zero this quarter, and no VOCs were detected in lab samples of system vapor influent & effluent samples, so system vapor discharge was in compliance with DEC air standards. System's GW effluent was in compliance with NYCDEP criteria. During rpt period, GW extraction well GEW-1 recovered 48,419 gals and GEW-4 recovered 4,712 gals, which is less than previous quarter due to frequent high water alarm shutdowns. EnviroTrac cleaned air stripper influent strainer and reduced flow from EQ tank to air stripper. Problem seems to be resolved, as system operated without shutting down from 1/3/19 to 1/31/19 (end of rpt period). No measurable LNAPL was detected this quarter, but sheen was observed in MW-15 in Jan. 2019 and absorbent socks in both MW-15 and MW-7R were partly saturated with LNAPL. GW sampling on 1/14/19 showed well MW-7R had 1,168 ug/L total VOCs (down from 2,921 ug/L in Oct. 2018), well MW-10 had 1,149 ug/L tVOCs (down from 3,176 ug/L in Oct. 2018), well MW-11 had 70 ug/L tVOCs (down from 2,758 ug/L in Oct. 2018), well GEW-1 had 185 ug/L tVOCs (up from 160 ug/L in Oct. 2018), well GEW-4 had 3,242 ug/L tVOCs (down from 19,134 ug/L in Oct. 2018). Rpt notes that all wells have shown significant decrease in tVOCs over last several quarters. Based on data, URS will continue: quarterly GW monitoring, manual product recovery from affected wells using absorbent socks, optimizing GWET system, performing scheduled quarterly & semiannual system maintenance, and evaluating need for surfactant injections or other actions to address product & saturated soil contamination. - JK
08/21/19: Reviewed System Performance Monitoring Rpt for Second Quarter 2019 by URS dated 8/1/19 (in DecDocs). Rpt covers 2/1/19 thru 4/23/19. On-site GWET system air stripper vapor influent & effluent PID readings were zero this quarter except on 3/6/19, when influent was 0.1 ppmv and effluent was 0.2 ppmv. Based on PID reading and assumption that benzene is 2% of effluent, benzene was well below air discharge standard. Lab sampling of GWET air influent/effluent showed influent had 67 ppbv total volatiles, including 34 ppbv of benzene, but effluent air was ND. System's GW effluent was in compliance with NYCDEP criteria. Due to problems with flow meter on one GWE pump, gals of GW recovered/treated this period is estimated to be ~75,045 gals; NYCDEP flow meter showed 79,656 gals during rpt period. Well gauging data table indicates well MW-15 had 0.001 ft of LNAPL (trace or sheen) on 2/14/19 and on 4/17/19; absorbent sock was 75% saturated on 4/17/19 and was replaced. GW sampling on 4/16-17/19 showed well GEW-1 had 335 ug/L tVOCs (up from 185 ug/L in Jan. 2019), well GEW-4 had 3,545 ug/L tVOCs (up from 3,232 ug/L in Jan. 2019), well MW-6R had 9 ug/L tVOCs (was ND in Jan. 2019), well MW-7R had 2,315 ug/L tVOCs (up from 1,168 ug/L in Jan. 2019), well MW-9 had 123 ug/L tVOCs (up from 4 ug/L in Jan. 2019), well MW-10 had 2,340 ug/L tVOCs (up from 1,149 ug/L in Jan. 2019), well MW-11 had 3,427 ug/L tVOCs (up from 70 ug/L in Jan. 2019). Rpt notes that water table was 1 ft lower in April than in Jan. 2019, suggesting that increases in tVOCs in GW were due to release of contaminants trapped in soil pore spaces. Based on data, URS will repair & recalibrate flow meters in GWE wells or replace units, and will continue: quarterly GW monitoring, manual product recovery from affected wells using absorbent socks, optimizing GWET system, performing scheduled quarterly & semiannual system maintenance, and evaluating need for surfactant injections or other actions to address product & saturated soil contamination. - JK

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

11/12/19: Received phone call from Kevin Shanahan of URS/AECOM, who reported that subcontractor at site discovered a hole in side of vapor-phase carbon unit that treats air stripper off-gas; system has been shut down. Kevin said options are to repair unit, replace unit, or discharge directly to atmosphere without vapor treatment. I said if they choose to go with no treatment, I would need to see a proposal with supporting data showing that system's untreated vapor influent meets air discharge standards. Kevin agreed with this. - J. Kolleeny 11/13/19: Received email from Kevin Shanahan of URS/AECOM: Jonathan, As we discussed yesterday, GWET remediation system at Midtown South Police Precinct was turned off on Nov. 11, 2019 during a routine O&M inspection. Our subcontractor EnviroTrac turned system off after observing a hole in side of vapor-phase granular activated carbon (VGAC) tank and carbon discharged to floor of treatment system enclosure. Attached photo illustrates hole in VGAC tank. URS and EnviroTrac are currently evaluating actions necessary to return remediation system to operation. These actions may include repairing VGAC unit, replacing VGAC unit, or removing unit from air stripper emission flow. URS is reviewing historical system data and if it seems that best option is to eliminate VGAC unit from air stripper emission flow, we will send you a letter with that recommendation and request your approval. Please contact me if you have any comments or questions. - J. Kolleeny 11/26/19: Reviewed Request to Discontinue Air Emissions Treatment (Revised) by URS, dated 11/25/19 (in DecDocs). Rpt states that on 11/12/19 VGAC unit that treats air stripper off-gas for on-site GWET system was found to be damaged (has a hole in side, black carbon has apparently been spewed from hole). URS evaluated options: repair VGAC unit, replace unit, or discharge untreated system off-gas directly to atmosphere. URS recommends last option, proposing to connect air stripper directly to system s discharge stack and discontinue air emissions treatment. In support of this proposal, URS provided lab analytical data for system vapor samples showing both benzene and total VOC concentrations in system influent (i.e., untreated air stripper off-gas) to be below benzene discharge standard (2,000 ppbv at 200 cfm air flow) since at least 2009. URS states that when remedial system is reactivated, air emissions will be monitored weekly with a PID and sampled quarterly for lab analysis to ensure compliance with regulatory limit. I sent letter (in DecDocs) to Jerry Aliberti of DDC, cc's to Carlos Maldonado of DDC, Kevin Shanahan & Harvey Roberts of URS, approving this proposal, but requiring that after system has been reactivated and running for several hours, a vapor discharge sample should be collected for lab analysis to confirm compliance with air discharge standard, and that even if discharge meets standard, if any nuisance odors are reported, system should be shut down and refitted with air emissions treatment. - J. Kolleeny 12/10/19: Reviewed System Performance Monitoring Rpt for Third Quarter 2019 by URS, dated 11/5/19 (in DecDocs). Rpt covers period from 4/24/19 to 7/31/19. PID screening of air stripper off-gas (effluent after vapor phase carbon adsorption treatment) gave readings of 0.0 ppm; air samples collected on 7/18/19 had benzene at 40.3 ppbv in influent and 0.97 ppbv in effluent, well below benzene discharge std., so GWET is in compliance. NYCDEP discharge flow totalizer showed 98,084 gals of GW pumped during 99-day period; flow meters for individual extraction wells totaled 70,530 gals during this period. One system shutdown occurred during rpt period: system was off when EnviroTrac (O&M contractor) arrived at site on 7/18/19, apparently due to power

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

outage caused by thunderstorm on previous day. Rpt states that no measurable product or sheen was observed in wells during 3rd quarter 2019; absorbent sock in well MW-7R was last replaced in Aug. 2018, sock in well MW-15 was last replaced in April 2019. GW sampling on 7/17/19 showed well GEW-1 had 147 ug/L total VOCs (down from 335 ug/L in April 2019), well GEW-4 had 2,049 ug/L tVOCs (down from 3,545 ug/L in April 2019), well MW-6R had 37 ug/L tVOCs (up from 9 ug/L in April 2019), well MW-7R had 1,962 ug/L tVOCs (down from 2,315 ug/L plus sheen in April 2019), well MW-9 had 79 ug/L tVOCs (down from 123 ug/L in April 2019), well MW-10 had 600 ug/L tVOCs (down from 2,340 ug/L in April 2019), well MW-11 had 7,913 ug/L tVOCs (up from 3,427 ug/L in April 2019), well MW-15 had 33,749 ug/L tVOCs (had 0.001 ft of product in April 2019 so was not sampled; same in Jan. 2019 and Oct. 2018). URS will continue quarterly GW monitoring, continue product recovery using socks or other appropriate methods, optimize GWET system to maintain/increase GW capture zone, perform scheduled quarterly & semiannual maintenance tasks, and continue to evaluate need for surfactant injections or other actions to address residual product and saturated zone soil contamination. - J. Kolleeny
02/03/20: Reviewed System Performance Monitoring Rpt for Fourth Quarter 2019 by URS, dated 1/13/20 (in DecDocs). Rpt covers Aug. 1st thru Oct. 31st, 2019. Rpt states that PID screening and lab sampling of GWET system's air effluent (from air stripper) showed it was in compliance with DEC air discharge stds (PID screening was 0.0 ppm; lab analysis on 10/25/19 showed air influent was ND for all VOCs, effluent had 0.483 ppbv of benzene and 3.562 ppbv of tVOCs). NYCDEP discharge flow totalizer showed 59,388 gals of GW were pumped during 92-day period; this is lower than previous quarter, which URS attributes to issues with high-level alarms in EQ tank and air stripper sump, which shut down pumping operations. Rpt states that system was off upon arrival on O&M visits numerous times this quarter due to high-level alarms. Sampling of GWET system water effluent showed it was in compliance with NYCDEP discharge criteria. Rpt states that well gauging on 10/16/19 showed 0.18 ft of LNAPL in well GEW-1; product was sampled for fingerprint analysis, which indicated it most closely resembled motor oil. There are no motor oil tanks at site and no known releases of motor oil at site. GW sampling on 10/16 and 10/17/19 showed well GEW-4 had 4,804 ug/L total VOCs (up from 2,049 ug/L in July 2019), well MW-6R had 67 ug/L tVOCs (up from 37 ug/L in July 2019), well MW-7R had 1,214 ug/L tVOCs (down from 1,962 ug/L in July 2019), well MW-8R had 483 ug/L tVOCs (not sampled in Jan., April or July 2019), well MW-9 had 108 ug/L tVOCs (up from 79 ug/L in July 2019), well MW-10 had 759 ug/L tVOCs (up from 600 ug/L in July 2019), well MW-11 had 6,936 ug/L tVOCs (down from 7,913 ug/L in July 2019), well MW-15 had 45,067 ug/L tVOCs (up from 33,749 ug/L in July 2019). Rpt concludes that soil & GW contamination remain sufficiently high to warrant continued remediation; minor quantities of free product are still present in a limited area. Extent of dissolved plume is ~50 x 35 ft. URS will continue quarterly GW monitoring, activate spill buster in GEW-1 or install absorbent sock to address LNAPL, continue product recovery from affected wells using socks or other appropriate methods, optimize GWET system to maintain/increase GW capture zone, perform scheduled quarterly & semiannual maintenance tasks, and continue to evaluate need for surfactant injections or other actions to address residual product and saturated zone soil contamination. Rpt states that shutdown of GWET system in Nov. 2019 due to hole found in vapor-phase carbon

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

treatment unit, and DEC approval of system operation w/o vapor treatment, will be discussed in next quarterly rpt. - J. Kolleeny 04/14/20: Reviewed System Performance Monitoring Rpt for First Quarter 2020 by URS, dated 3/31/20. Rpt covers period from Nov. 2029 thru Jan. 2020. Rpt notes that in Nov. 2019, on-site system's GAC unit (treating air stripper off-gas) was found to be damaged. System was shut down, and URS proposed to modify system to discharge to atmosphere without treatment, providing supporting data showing vapor stream meets DEC standards. DEC approved this proposal in Nov. 2019. EnviroTrac completed system modifications and system was re-started on 2/25/20. Info regarding system modifications and re-start will be in next quarterly rpt. A system vapor discharge sample was collected after re-start on 2/26/20, as required by DEC, and benzene was in compliance with discharge standard. Rpt notes that no monthly GW samples were collected from GWET wells and no system water discharge sample was collected this quarter because system was shut down. Rpt states that free product was detected in well GWET-1 in Nov. 2019 (0.34 ft) and Dec. 2019 (0.12 ft); product was ID'ed as resembling motor oil; active tanks at site store gasoline & fuel oil, there are no known releases of motor oil at site. On 3/4/20, EnviroTrac initiated product recovery from GWET-1 using a Spill Buster pump. URS speculates that presence of product in GWET-1 may be related to change in water table elevations due to system shutdown (altho product was first detected in GWET-1 in Oct. 2019, prior to shutdown). GW sampling on Jan. 20 & 21, 2020 showed well MW-6R had 3 ug/L total VOCs (down from 67 ug/L in Oct. 2019), well MW-7R had 643 ug/L tVOCs (down from 1,214 ug/L in Oct. 2019), well MW-8R had 5 ug/L tVOCs (down from 483 ug/L in Oct. 2019), well MW-9 had 2 ug/L tVOCs (down from 108 ug/L in Oct. 2019), well MW-10 had 29 ug/L tVOCs (down from 759 ug/L in Oct. 2019), well MW-11 had 55 ug/L tVOCs (down from 6,936 ug/L in Oct. 2019), well MW-15 could not be sampled (blocked by vehicle), well GWET-3 had 5 ug/L tVOCs (down from 6 ug/L in Oct. 2019), well GWET-4 had 151 ug/L tVOCs (down from 4,804 ug/L in Oct. 2019). Rpt states that decreases in contam levels in 1st quarter 2020 are likely related to shutdown of GWET system (?). URS will continue quarterly GW monitoring, continue product recovery from well GWET-1 using Spill Buster (or absorbent socks, depending on thickness), and continue system O&M & optimization. - J. Kolleeny 08/05/20: Reviewed System Performance Monitoring Rpt for Second Quarter 2020 by URS dated 7/20/20. Rpt covers period from 2/1/20 thru 4/29/20. Rpt states that EnviroTrac completed modifications to GWET system to allow air stripper off-gas to bypass damaged carbon unit & discharge to atmosphere, and restarted system on 2/25/20. An air sample taken 2/26 showed benzene in system exhaust is well below discharge limit. (Sample had 21.8 ppbv benzene, 349.9 ppbv total VOCs.) A quarterly air discharge sample collected in April was not analyzed when lab determined that sample container leaked so results would be invalid. Monitoring of system air emissions will continue weekly w/PID and quarterly with sampling for lab analysis. According to NYCDEP totalizer, GWET system treated & discharged 25,726 gals of GW from 2/25/20 to 4/29/20. Free product was detected only in recovery well GWET-1 this quarter, ranging from 0.11 to 0.23 ft. URS did not perform any product recovery this quarter, but on 3/4/20 EnviroTrac recovered product using Spill Buster pump (amt unknown). Product was ID'ed in Oct. 2019 as resembling motor oil. GW sampling on 4/20-21/20 showed well MW-7R had 1,079 ug/L total VOCs (up from 643 ug/L in Jan. 2020), well MW-10 had 145 ug/L tVOCs (up from 29 ug/L in Jan. 2020),

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

well MW-11 had 39 ug/L tVOCs (down from 55 ug/L in Jan. 2020), well MW-15 had 33,469 ug/L tVOCs (not sampled in Jan. 2020 because blocked by vehicle), well GWET-4 had 2,681 ug/L tVOCs (up from 151 ug/L in Jan. 2020); well GWET-1 was not sampled due to LNAPL, well MW-9 because dry, MW-13 because blocked by equipment; other wells sampled were either ND or have very low tVOCs consistent with previous quarter. URS will continue quarterly GW monitoring, continue product recovery from GWET-1 (and any other wells with product) using Spill Buster or absorbent socks, and continue system O&M & optimization. - J. Kolleeny 12/14/20: Reviewed System Performance Monitoring Rpt for Third Quarter 2020 by URS dated 11/3/20. Rpt covers period from May thru July 2020. Off-gas from on-site remedial system's air stripper was sampled in June & July 2020 and benzene was in compliance with discharge limit (2.25 ppbv in June, ND in July). According to NYCDEP Discharge Flow Totalizer, system pumped 29,756 gals of GW during rpt period. Sampling of system GW influent showed total VOCs ranged up to 3,112 ug/L in GEW-1, up to 2,767 ug/L in GEW-3, and up to 4,136 ug/L in GEW-4. Sampling of system's water discharge showed it was in compliance with NYCDEP criteria. Semiannual redevelopment of extraction wells was performed on 6/26/20. Free product was detected in well GEW-1 this quarter (0.06 to 0.12 ft); this well has had measurable product detected every month since Oct. 2019. A Spill Buster pump was installed in this well in March 2020; during this quarter ~3 inches of product accumulated in storage drum, indicating product is being recovered by system. A product sample collected/analyzed in Oct. 2019 indicated product most closely resembled motor oil. Rpt speculates that appearance of product may be related to water level changes due to recent system shutdown. GW sampling on 7/20/20 showed well GEW-4 had 3,237 ug/L total VOCs (up from 2,681 ug/L in April 2020), well MW-7R had 3,425 ug/L tVOCs (up from 1,079 ug/L in April 2020), well MW-10 had 1,199 ug/L tVOCs (up from 145 ug/L in April 2020), well MW-11 had 152 ug/L tVOCs (up from 39 ug/L in April 2020), well MW-15 had 31,134 ug/L tVOCs (down from 33,469 ug/L in April 2020); other wells sampled were either ND or had very low tVOCs. Well MW-9 was dry and MW-13 was blocked by equipment, so those wells could not be sampled. Rpt states that URS will continue quarterly GW monitoring, collection of LNAPL from GEW-1 via Spill Buster, manual product recovery with absorbent socks or other methods as needed, system OM&M and optimization, and evaluation of need for supplemental remedial actions. - J. Kolleeny 03/16/21: Reviewed System Performance Monitoring Rpt for Fourth Quarter 2020 by URS dated 2/9/21. Rpt covers period from August thru Oct. 2020. Sampling of on-site remedial system's off-gas on 10/29/20 showed it had 0.0147 ppmv of benzene, in compliance with std of 2.0 ppmv. Extraction wells GEW-1 and GEW-4 operated during this quarter; NYCDEP Discharge Flow Totalizer indicated system pumped 18,039 gals of GW during 91-day rpt period. Monthly sampling of system GW influent showed total VOCs in GEW-1 ranged from 505 ug/L to 1,049 ug/L in GEW-1, from 748 ug/L to 800 ug/L in GEW-3, and from 1,425 ug/L to 1,654 ug/L in GEW-4. System GW effluent was in compliance with NYCDEP discharge stds. Free product was detected in GEW-1 this quarter, ranging from 0.06 to 0.12 ft. Based on measurements of product storage drum, Spill Buster recovered ~3.6 gals of product this quarter. Qtrly GW sampling showed well MW-7R had 3,352 ug/L total VOCs (down from 3,425 ug/L in July 2020), well MW-8R had 18 ug/L tVOCs (down from 37 ug/L in July 2020), well MW-10 had 96 ug/L tVOCs (down from 1,199 ug/L in July 2020), well MW-11 had 59 ug/L tVOCs

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

(down from 152 ug/L in July 2020), well MW-15 had 33,787 ug/L tVOCs (up from 31,134 ug/L in July 2020), extraction well GEW-4 had 2,005 ug/L tVOCs (down from 3,237 ug/L in July 2020); extraction well GEW-1 had 0.06 ft of LNAPL and was not sampled. Rpt concludes that GWET system continues to be effective in reducing GW contamination at site. URS will continue quarterly GW monitoring, collection of LNAPL from GEW-1 via Spill Buster, system OM&M and optimization, and evaluation of need for supplemental remedial actions possibly including surfactant injections. - J. Kolleeny 06/07/21: Reviewed System Performance Monitoring Rpt for 10/30/21 thru 1/27/21 by URS dated 5/13/21. Sampling of on-site remedial system's off-gas on 1/27/21 showed in had 0.00107 ppmv of benzene, in compliance with std of 2.0 ppmv. Extraction wells GEW-1 & GEW-4 operated during this rpt period. System's flow-thru meter, which reflects total volume of GW pumped, indicated that 10,764 gals of GW were pumped from 10/30/20 to 1/27/21 (~120 gpd or 0.08 gpm); however, rpt states that data from this meter have been questionable since April 2018. NYCDEP discharge flow totalizer recorded total of 70,811 gals of GW pumped thru 12/30/20 (62 days, ~1,142 gpd or 0.79 gpm), after which it stopped working. Influent to GWET system was sampled on 11/23/20, 12/22/20 and 1/27/21; results showed total VOCs in GEW-1 ranged from 105 to 123 ug/L, tVOCs in GEW-3 ranged from 174 ug/L to 2,206 ug/L, and tVOCs in GEW-4 ranged from 178 ug/L to 2,823 ug/L. System GW effluent was in compliance with NYCDEP discharge stds. Free product was detected in GEW-1 this rpt period, ranging from 0.09 to 0.16 ft. Based on measurements of product storage drum, Spill Buster in GEW-1 recovered only ~1.6 gals of product this period. Product has been ID'ed as resembling motor oil, but there have been no known releases of motor oil at site. GW sampling on 1/6/21 showed well MW-10 had 878 ug/L total VOCs (up from 96 ug/L in Oct. 2020), well MW-11 had 4,242 ug/L tVOCs (up from 59 ug/L in Oct. 2020), well GEW-4 had 1,665 ug/L tVOCs (down from 2,005 ug/L in Oct. 2020). Well GEW-1 was not sampled due to presence of LNAPL, wells MW-7R, MW-8R & MW-15 could not be sampled because they were blocked by vehicles, MW-9 was dry, and MW-13 was blocked by equipment. Rpt concludes that GWET system continues to be effective in reducing GW contam at site. URS will continue quarterly GW monitoring, collection of LNAPL from GEW-1 by Spill Buster, system OM&M and optimization, and evaluation of need for supplt'l remedial actions possibly including surfactant injections. - JK 08/26/21: Reviewed System Performance Monitoring Rpt for 1/28/21 through 4/29/21 by URS dated 8/5/21. PID screening of remedial system off-gas showed no detections thru rpt period; sampling of off-gas had 11.1 ppbv of benzene, well below discharge limit of 2.0 ppmv. Extraction wells GEW-1 & GEW-4 operated during this rpt period. Flow meters in GEW-1 & GEW-4 indicated that 47,362 gals of GW were recovered by system from 1/28 to 4/29/21; NYCDEP Discharge Flow Totalizer stopped working after 12/30/20, so didn't record flow during rpt period; URS replaced flow meter on 7/12/21. Influent to GWET system was sampled on 2/25, 3/25 & 4/29/21; results showed total VOCs in GEW-1 ranged from 64 tp 119 ug/L, tVOCs in GEW-3 ranged from 107 to 239 ug/L, tVOCs in GEW-4 ranged from 262 to 550 ug/L. System water effluent was in compliane with DEP discharge stds throughout rpt period. Free product was detected only in GEW-1 this period, ranging from 0.02 to 0.11 ft. Spill buster in GEW-1 did not recover any appreciable product this period; URS has instructed EnviroTrac to remove Spill Buster pump from GEW-1 to allow URS to install an absorbent sock to recover traces of product. Quarterly GW

MIDTOWN SOUTH PRECINCT NYPD -DDC (Continued) **S105054624**

sampling on 4/8/21 showed well MW-7R had 1,270 ug/L tVOCs (not sampled in Jan. 2021; had 3,352 ug/L tVOCs in Oct. 2020), well MW-10 had 1,425 ug/L tVOCs (up from 878 ug/L in Jan. 2021), well MW-11 had 610 ug/L tVOCs (down from 4,242 ug/L in Jan. 2021), well MW-15 had 12,708 ug/L tVOCs (not sampled in Jan. 2021; had 33,787 ug/L tVOCs in Oct. 2020), well GEW-4 had 8,782 ug/L tVOCs (up from 1,665 ug/L in Jan. 2021). Well MW-8R and MW-14 were blocked by vehicles and MW-9 was dry, so these wells were not sampled. Rpt concludes that GWET system continues to be effective in reducing GW contam at site. URS will continue quarterly GW monitoring, work with EnviroTrac to optimize recovery of LNAPL from GEW-1, continue system OM&M and optimization, and evaluate need for supplt'l remedial actions possibly including surfactant injections. - JK 12/20/21: Reviewed System Performance Monitoring Rpt for 4/30 thru 7/28/21 by AECOM dated 11/11/21. PID readings taken during screening of remedial system off-gas were all zero during rpt period; lab sample of off-gas taken 7/28/21 showed 0.33 ppbv of benzene, well below discharge limit of 2.7 ppmv. Extraction wells GEW-1 and GEW-4 operated during this rpt period. System flow meters did not function properly during this period, and NYCDEP discharge flow meter stopped working in Dec. 2020. DEP meter was replaced on 7/12/21; discharge measured from 7/12 to 7/28/21 was 5,650 gals of total fluids. Monthly sampling of influent from extraction wells showed influent from GEW-1 ranged from 54 to 154 ug/L total VOCs, influent from GEW-3 ranged from 65 to 315 ug/L tVOCs, influent from GEW-4 ranged from 55 to 570 ug/L tVOCs. LNAPL was measured in GEW-1 this rpt period, ranging from 0.02 to 0.07 ft; an absorbent sock was installed in GEW-1 in Oct. 2021. GW sampling on 7/8-9/21 showed well GEW-4 had 1,746 ug/L tVOCs (down from 8,782 ug/L in April 2021), well MW-6R had 52 ug/L tVOCs (up from 3 ug/L in April 2021), well MW-7R had 865 ug/L tVOCs (down from 1,270 ug/L in April 2021), well MW-10 had 1,023 ug/L tVOCs (down from 1,425 ug/L in April 2021), well MW-11 had 1,614 ug/L tVOCs (up from 610 ug/L in April 2021), well MW-15 had 24,082 ug/L tVOCs (up from 12,708 ug/L in April 2021); wells MW-13 & MW-14 were ND; MW-9 was dry. Rpt states that on-site GWET system continues to be effective in reducing GW contam at site. AECOM will continue quarterly GW monitoring, work with EnviroTrac to optimize recovery of LNAPL from GEW-1, continue system OM&M and optimization, replace faulty system flow meters tracking flow from extraction wells and flow to & from air stripper with new magnetic flow meters, and evaluate need for supplt'l remedial actions possibly including surfactant injections. - J. Kolleeny 01/20/22: Received email from Kevin Shanahan of AECOM: Jonathan, This e-mail is intended to notify you of recent developments at Midtown South Pct. 1. System Outage On Jan. 14, 2022 our remediation system O&M contractor EnviroTrac reported that thermostat on system enclosure exhaust fan malfunctioned, resulting in fan remaining on continuously. This resulted in system freezing up, a broken pipe and cracked check valve from air stripper transfer pump P-301. Thermostat was removed and will be replaced prior to warm weather when exhaust fan is required to exhaust hot air from enclosure. Broken pipe was replaced on Jan. 17, 2022 by EnviroTrac staff. Envirotrac had to order check valve & replaced it on Jan. 19, 2022. After replacing pipe & check valve, EnviroTrac restarted system. At that time, Envirotrac determined that transfer pump P-301 was also damaged from system freezing, so system remains down until pump can be ordered and replaced. 2. Change in O&M Contractors AECOM s new remediation contract with NYCDDC started in Oct. 2021. New contract required us
