P.E. CERTIFICATION

I, Michelle Lapin, am currently a registered professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the 2007 Site Management Plan protocols, and I certify that the documentation of site management activities is accurately presented in the 2010 Site Management Report for Flushing Industrial Park, Parcel 1 (BCP Site No. C241051), Parcel 2 (BCP Site No. C241078), and Parcel 3 (BCP Site No. C241079).

For each institutional or engineering control identified for the site, I certify that all of the following statements are true:

(a) the institutional control and engineering control employed at this site is unchanged from the date the control was put in place, or last approved by DER, with the exceptions cited in this Site Management Report;

(b) nothing has occurred that would impair the ability of such control to protect public health and the environment;

(c) nothing has occurred the would constitute a violation or failure to comply with any Site Management Plan for this control; and

(d) access to the site will continue to be provided to DER to evaluate the remedy, including access to evaluate the continued maintenance of this control.

EXECUTIVE SUMMARY

The Site Management Report (SMR) documents pertinent post-remediation activities at Flushing Industrial Park (Eastern), Parcel 1 (BCP Site No. C241051), Flushing Industrial Park (Western), Parcel 2 (BCP Site No. C241078), and Flushing Industrial Park (Western Waterfront), Parcel 3 (BCP Site No. C241079), during 2010. These three Parcels comprise approximately 13.3 acres located on the northwestern corner of College Point Boulevard and 40th Road, in Flushing, Queens, New York (collectively, the Property).

Historically, the Property contained several transformers, gasoline fueling facilities, an equipment repair area and a paint storage house. Consolidated Edison (the previous Property owner), historical maps and NYSDEC records indicated underground storage tanks (USTs) and aboveground storage tanks (ASTs) storing gasoline, diesel, insulating oil, kerosene, spent motor oil and heating oil. Multiple investigations were performed on the Property between 1989 and 2005 to identify and further evaluate soil and groundwater contamination. The soil and groundwater contamination appeared to be related to a combination of sources, including: spills/leaks from historical storage and repair of equipment [including numerous electrical transformers which likely contained polychlorinated biphenyls (PCBs)]; spills/leaks from ASTs, USTs and fueling operations; transport of contaminants by the tidally influenced water table; and some components in historic fill.

Remedial activities performed in 2006 and 2007 included the removal of contaminated materials and structures (including soil, light non-aqueous phase liquid (LNAPL), ASTs and USTs, drainage structures and geophysical anomalies, as needed). The remedy also included installation of a site cover (consisting of concrete, asphalt or 2 feet of clean fill) across the site and installation of a vapor mitigation system (consisting of a vapor barrier and sub-slab depressurization system) beneath the portion of the Parcel 2 structure with retail use on the ground floor. An Environmental Easement was filed to prevent future exposure to any residual contamination remaining. In December 2007, Final Engineering Reports (FERs) and Site Management Plans (SMPs) were submitted and NYSDEC granted Certificates of Completion for Parcels 1, 2 and 3. The three SMPs provide measures for long term management of residual contamination allowing for Restricted Residential use of the Property.

The remedy remains effective and protective of human health and the environment with continued implementation of the SMPs. The SMPs and all associated institutional and engineering controls were complied with in 2010 with the exception of some openings in the site cover as part of ongoing construction and the ongoing temporary cessation of groundwater monitoring. It is anticipated that the site cover will be repaired as construction is completed and the groundwater monitoring wells will be replaced after site cover completion. Implementation of the SMPs will continue, including the annual site-wide and site cover inspections and periodic review report in the form of this Site Management Report.

1.0 INTRODUCTION

This Site Management Report (SMR) was prepared to document pertinent activities performed at Flushing Industrial Park (Eastern), Parcel 1 (BCP Site No. C241051), Flushing Industrial Park (Western), Parcel 2 (BCP Site No. C241078), and Flushing Industrial Park (Western Waterfront), Parcel 3 (BCP Site No. C241079), during 2010. These three Parcels comprise approximately 13.3 acres located on the northwestern corner of College Point Boulevard and 40th Road, in Flushing, Queens, New York (collectively, the Property). The Property location is shown on Figure 1.

Remedial activities were completed on Parcels 1, 2 and 3 between February 2006 and December 2007 under the New York State Department of Environmental Conservation's (NYSDEC) Brownfield Cleanup Program (BCP). Brownfield Cleanup Agreements (BCAs) were executed in December 2004 and amended BCAs were executed in June 2005, December 2006, April 2007 and November 2007. Remedial work was performed in accordance with NYSDEC-approved work plans. The remediation was documented in three Parcel-specific Final Engineering Reports (FERs) dated December 2007, and on-going site management requirements were specified in three Site Management Plans (SMPs), submitted with the FERs. NYSDEC issued Certificates of Completion for Parcels 1, 2 and 3 in December 2007.

The purpose of this SMR is to document on-going site management activities associated with Engineering and Institutional Controls for the Property, and to certify that those controls are in accordance with the Site Management Plans (SMPs). The SMPs provide detailed descriptions of all procedures required to manage known and potential residual contamination.

2.0 BACKGROUND

2.1 SITE DESCRIPTION

The Property is bounded by Roosevelt Avenue to the north, College Point Boulevard to the east, 40th Road to the south, and the Flushing River to the west (see Figure 2). The Property is located in the County of Queens, New York and, at the time of the FER, the Property was identified as Block 5066, Lots 1, 100, 9001, 9002 and 9100. The Property is now identified as Block 5066, Lots 1001 to 1169, 1201 to 1205, 1301 to 1579, and 9100.

In 2009, Lots 1 and 100 (the ground lots) were converted to condominium Lots 1201 to 1205, the boundaries of which include discontinuous and shared areas. In addition, residential condominium Lots 1001 through 1169 (former Lot 9002—Tower 3) were created in 2009 for the residential towers located above the retail structures. In 2010, residential condominium Lots 1301 through 1579 (former Lot 9001—Towers 1 and 2) were created. Lot 9100 remains for potential future residential (Towers 4, 5 and 6). Documentation of lot and ownership changes in 2010 is provided in Appendix A.

A site plan showing general development areas is provided as Figure 2. Occupancy of portions of the retail and residential spaces began in 2010. The eastern two-thirds of the development consist of open or actively-vented garage space on the ground (lowest) level. The retail and parking structures occupy the majority of Parcels 1 and 2, with residential towers (potentially including office space and/or community facilities) above these structures, starting at the fifth floor. Additional residential towers (designated Lot 9100) may be constructed over the western retail building on Parcel 2. The development plan includes the future construction of a waterfront esplanade that will include both landscaped and paved areas with upland connections on Parcel 3.

2.2 REMEDIAL INVESTIGATION FINDINGS

2.2.1 Geology and Hydrogeology

Results from the remedial and geotechnical investigations prior to remediation and redevelopment indicated that the top 6 to 16 feet of soil generally consisted of miscellaneous fill. The fill was variable, ranging from silty clay to sand with anthropogenic materials including brick, ash and cinders. The fill was underlain at some locations by a layer of organic silt, clay and peat up to about 30 feet thick near the Flushing River, and thinning out towards the east, ending about 200 to 300 feet from College Point Boulevard. A stiff silty clay/clayey silt stratum was occasionally encountered beneath the soft clayey soils. Occasional layers of sand, gravel, cobbles and boulders were interspersed in these strata. Below the fill and organic deposits was a layer of sand 30 to 60 feet thick, consisting of fine to coarse sand with varying percentages of silt and gravel. A stiff clay or silty clay stratum was encountered beneath the sand at a depth of 35 to 70 feet below grade (elevations -30 to -60 feet Queens Borough Datum).

Groundwater studies performed at the site and in surrounding areas before remediation indicated a general groundwater flow direction towards the west and northwest which appeared to be tidally influenced. Groundwater in the southern portion of the Property was locally influenced by a New York City Department of Environmental Protection (NYCDEP) sewer pump house located in this area. As part of remediation, interlocking bulkhead sheeting was installed at the western boundary of Parcel 3 and along segments of the western and southern Property boundaries. This sheeting appears to be limiting the tidal influence on the Property, based on measurements in monitoring wells installed before and after remediation excavation. Post-remediation water levels likely continue to fluctuate, due in part to the sheeting, continued construction excavation, and the installation of site storm sewers.

2.2.2 Nature and Extent of Contamination Prior to Remediation

Historically, the Property contained several transformers, gasoline fueling facilities, an equipment repair area and a paint storage house. Consolidated Edison (the previous Property owner), historical maps and NYSDEC records indicated underground storage tanks (USTs) and aboveground storage tanks (ASTs) storing gasoline, diesel, insulating oil, kerosene, spent motor oil and heating oil. Multiple investigations were performed on the Property between 1989 and 2005 to identify and further evaluate soil and groundwater contamination.

Soil Contamination

Subsurface investigations identified the main contaminant of concern in soil to be polychlorinated biphenyls (PCBs); however, elevated levels of volatile organic compounds (VOCs) (including benzene, sec-butylbenzene, chlorobenzene, ethylbenzene, naphthalene, and xylenes); semivolatile organic compounds (SVOCs); pesticides (including delta-BHC, dieldrin, 4,4-DDD, 4,4-DDE, 4,4-DDT, endosulfan sulfate, endrin); and metals (including arsenic, cadmium, lead and mercury) were also found. The laboratory analytical data revealed that elevated PCB concentrations were generally more prevalent in Parcels 2 and 3. In general, PCB concentrations were highest at or above the water table; however, one area on the south side of Parcels 2 and 3 was identified with hazardous waste concentrations of PCBs extending below the water table.

Groundwater Contamination

PCB-containing LNAPL was identified on the water table in three site monitoring wells on Parcels 2 and 3. Elevated levels of VOCs, SVOCs, PCBs, pesticides, and metals (arsenic, barium, cadmium, iron, lead, magnesium, manganese, selenium and sodium) were found in the groundwater.

The NYSDEC Class GA Ambient Water Quality Standards were exceeded in groundwater samples for total and dissolved PCBs, pesticides (aldrin, alpha-chlordane, dieldrin, 4,4-DDD and endrin), VOCs (acetone, benzene, chlorobenzene, toluene and vinyl chloride), SVOCs (1,3-dichlorobenzene), and total and dissolved TAL metals (arsenic, barium, cadmium, iron, lead, magnesium, manganese, selenium and sodium). The elevated concentrations of PCBs, pesticides, VOCs and SVOCs were identified in isolated areas, but the Class GA standard exceedances for metals were identified across the Property.

2.3 SITE REMEDIATION

The remediation was conducted in accordance with the NYSDEC-approved Interim Remedial Measure Work Plan (IRMWP) and Remedial Action Work Plans (RAWPs), including all addenda and modifications.

2.3.1 Contaminated Materials Removal

Based on the results of initial subsurface investigations, soil Site-Specific Action Levels (SSALs) were established for the protection of human health and the environment, considering the contemplated use and anticipated institutional and engineering controls. The SSALs were as follows:

Soil Site-Specific Action Levels

Parameter	Criterion
Individual Volatile Organic Compounds (VOCs)	TAGM 4046 RSCO
Total Semivolatile Organic Compounds (SVOCs)	100 ppm
Total Polychlorinated Biphenyls (PCBs)	10 ppm
Individual Pesticides	1 ppm or TAGM 4046 RSCO, if higher
Arsenic	24 ppm
Cadmium	10 ppm
Lead	500 ppm
Mercury	4 ppm
Silver	100 ppm
Cyanide	Hazardous Waste Reactivity Criterion

Notes: TAGM 4046 RSCO – Technical and Administrative Guidance Memorandum #4046 Recommended Soil Cleanup Objectives, January 24, 1994
ppm – parts per million

Contaminated materials removal included the excavation of soil with concentrations greater than the established SSALs above (and to the extent practicable, below) the water table; removal of LNAPL to the extent practicable; removal of ASTs and USTs; investigation and removal of drainage structures; and investigation of geophysical anomalies. Excavation and off-site disposal of contaminated soil was performed from February 2006 to November 2007.

2.3.2 Engineering Controls

Engineering controls were installed at the Property as part of the remedial action to prevent exposure to residual subsurface contamination. The engineering controls, which consist of a site cover and a sub-slab vapor mitigation system, are described in more detail below.

Site Cover

Following soil removal activities, a composite cover system was installed over the Property to prevent direct exposure to underlying soil. At the time that the FERs were submitted, the site cover on Parcels 1 and 2 consisted of concrete or asphalt.

Vapor Mitigation System

No vapor barrier was required for Parcels 1 and 3. The remedial action required a vapor mitigation system only for the portion of the development with retail use on the lowest level (i.e., the western retail building located on Parcel 2). Exposure to potential residual vapors there is minimized by the sub-slab vapor mitigation system installed beneath the building. The mitigation system consists of a network of PVC sub-slab depressurization piping placed beneath a vapor barrier with in-line fans venting extracted vapors above the roof of the parking garage.

2.3.3 Institutional Controls

Institutional controls incorporated into the remedy include an environmental easement to prohibit certain on-site uses, and ensure implementation of the Parcel-specific SMPs during future site use. These institutional controls are described in more detail below.

Environmental Easement

An environmental easement has been recorded for each of the three Parcels comprising the Property. The property deed and all subsequent instruments of conveyance will contain language indicating that the Property is subject to this environmental easement. The environmental easement includes the following site use restrictions:

- Single family housing, vegetable gardens and farming are prohibited;
- A school or day care facility is prohibited;
- Use of the site groundwater is prohibited without treatment rendering it safe for its intended purpose;
- All future activities that will disturb Residual Management Zones (i.e., penetrate through the site cover into the underlying soil) are prohibited unless they are conducted in accordance with the SMPs;
- The Property may be used for Restricted Residential use, as defined in 6 NYCRR 375-1.8(g)(2)(ii), provided that the long-term Engineering and Institutional Controls included in the SMPs remain in use;
- The Property may not be used for a more restricted level of use, such as unrestricted residential use, nor may the parking areas be converted to other enclosed purposes; and
- The easement requires annual submission of a written certification that: (1) controls are unchanged from the previous certification or that any changes to the controls

were approved by the NYSDEC and NYSDOH; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMPs.

Site Management Plan

The environmental easement requires compliance with three SMPs that were prepared to describe procedures and protocols for post-remediation management of the three Parcels. The SMPs each include four plans: (1) an Engineering and Institutional Control Plan for implementation and management of EC/ICs; (2) a Monitoring Plan for implementation of Site Monitoring; (3) an Operation and Maintenance Plan for implementation of the remedial cover, sub-slab venting system (Parcel 2 only), and the groundwater monitoring system; and (4) a Site Management Reporting Plan for submittal of data, information, recommendations, and certifications to NYSDEC. The Engineering and Institutional Control Plan portion of each SMP includes detailed procedures for handling residual on-site contamination during future soil disturbance activities.

3.0 CONSTRUCTION ACTIVITIES

The SMP established the following three Residual Management Zones (RMZs):

- RMZ A refers to previously placed backfill documented to meet SSALs (see Section 2.3.1). Excavated material from this zone that did not exhibit evidence of contamination was reused on-site as subsurface fill beneath the restored cover without additional sampling.
- RMZ B is material where previous endpoint sampling indicated that the material met the SSALs. Whenever this material was excavated, additional analyses were performed to confirm that the material met SSALs prior to its reuse on-site as backfill. If the excavated material exhibited evidence of contamination (i.e., odor, staining, or elevated photoionization detector (PID) readings) or if analytical results indicated concentrations above the SSALs, then the material was disposed of off-site.
- RMZ C is the material where endpoint sampling indicated concentrations greater than the SSALs. Soil in the vicinity of this known contamination was disposed of off-site.

Construction of the new development on the Property was performed throughout 2010. A qualified environmental professional oversaw all invasive work that disturbed the RMZs. Selected photographs showing the subsurface disturbances are provided in Appendix B.

3.1 PERMITTING AND APPROVALS

As indicated on the certification forms, local building permits were issued in 2010 for continued construction. The site lots have an "E" designation for hazardous materials, which requires New York City Office of Environmental Remediation (NYCOER) approval prior to NYC Department of Buildings (NYCDOB) issuance of many types of permits. Note that prior to 2010, "E" designation issues were formerly managed through the NYC Department of Environmental Protection (NYCDEP). NYCDEP acknowledged in a letter dated August 4, 2008 that remediation and the accompanying institutional and engineering controls under the BCP adequately address the "E" designation requirements and allowed for all permits to be issued by NYCDOB up through Temporary Certificate of Occupancy for non-residential spaces. The August 4, 2008 correspondence was amended by NYCOER on January 21, 2010 with a Notice of No Objection to retail Temporary Certificates of Occupancy. NYCOER approved the issuance of

residential Certificates of Occupancy in Notices of Satisfaction dated May 27, 2010 and October 22, 2010. Copies of pertinent NYCDEP and NYCOER correspondences are provided in Appendix C.

3.2 EXCAVATION

During excavation and stockpiling, the AKRF field personnel continuously monitored the excavated material for evidence of contamination and conducted periodic screening for VOCs using a photoionization detector (PID). No buried tanks, drums or other containers were encountered during excavation. Construction activities disturbed two of the three Residual Management Zones in 2010.

- Soil in RMZ A was excavated intermittently on Parcels 1, 2 and 3 from January 2010 to September 2010.
- Soil in RMZ B was excavated on Parcels 1, 2 and 3 from January 2010 to February 2010.
- No soil was excavated into the RMZ C zone during 2010.

The locations and surveyed elevations of excavations that extended into RMZ B are shown on Figure 4.

3.3 STOCKPILING

Soil was stockpiled based on the known or anticipated type and/or level of contamination (based on previous laboratory analytical data, PID readings, odor and/or staining). Soil exhibiting obvious contamination was stockpiled separately from potentially uncontaminated excavated material. Suspect contaminated soil was placed on rugged polyethylene tarps. Stockpiles were kept covered with appropriately anchored tarps and/or polyethylene sheeting whenever excavation and/or loading operations were not occurring. Stockpiles were encircled with haybales.

Stockpiles of excavated material were inspected as needed and after rain events; tarps and haybales were replaced as needed. Results of inspections were recorded on inspection forms maintained as part of the required construction Stormwater Pollution Prevention Plan (SWPPP). A stockpile tracking log (Table 1) was maintained to track source, sampling and final disposition of stockpiled material.

At the end of 2010, three stockpiles remained within the fenced area of Parcel 3. Stockpiles 70 and 71 contained material excavated from RMZ A and from limited off-site excavations for utility connections. Stockpile 72 contained RMZ A material. The stockpiles will be sampled as needed and either placed as backfill on-site or disposed of off-site in accordance with the SMPs.

3.4 WASTE CHARACTERIZATION

Stockpiles of soil planned for off-site disposal were sampled to characterize the materials. In 2010, twenty samples were analyzed for waste characterization based on disposal facility requirements. Waste characterization analyses typically included: total petroleum hydrocarbons (TPH), diesel range organics (DRO), VOCs by EPA Method 8260; SVOCs by EPA Method 8270; total metals by EPA Method 6010; PCBs by EPA Method 8082; and leachable VOCs, SVOCs, pesticides, and metals using the toxicity characteristic leaching procedure (TCLP) by EPA Methods 1311, 8260, 8270, 8081, 8151, 6010 and 7470; ignitability by EPA Method 1030; corrosivity by EPA Methods 9040/9045; and/or reactivity by EPA Methods 9014/9034. The

waste characterization samples were analyzed by TestAmerica in Shelton, Connecticut, a NYSDOH Environmental Laboratory Accreditation Procedure (ELAP)-certified laboratory.

Summary laboratory analytical results for the waste characterization samples are provided in Table 2, and the full laboratory reports are included on the CD provided in Appendix D.

3.5 SOIL TRANSPORTATION AND DISPOSAL

All excavated material with evidence of contamination (based on prior testing, PID readings, odor and/or staining) was disposed of off-site. In addition, soil/fill material that met the SSALs, but could not be used for backfill due to its mechanical properties or composition or because it was in excess of the volume required for backfilling, was also characterized for off-site disposal. Licensed haulers were used for this material. Material disposed of off-site is summarized in the Outgoing Waste Tracking Log provided in Table 3.

Prior to off-site disposal of soil, waste characterization (and, as appropriate, investigation) data for the material was provided to the intended disposal facility. Waste characterization data is summarized in Tables 2a to 2h. All facilities used in 2010 had previously approved material for the site and furthermore provided confirmation that they reviewed the data specific to the intended material and confirmed that the material was acceptable to them under their applicable permits. The disposal facilities confirmed that the new data was consistent with the previously approved material. Acceptance letters from disposal facilities are included in Appendix E.

The Property disposed of the following wastes from excavated material in 2010:

- From January 5, 2010 to June 11, 2010, a total of 27 trucks transported 816.06 tons of non-hazardous waste for disposal at the Clean Earth landfill in Philadelphia, Pennsylvania.
- From January 7, 2010 to June 15, 2010, a total of 50 trucks transported 1,469.72 tons of non-hazardous waste for disposal at the Clean Earth treatment facility in Carteret, New Jersey.

No hazardous waste was generated at the site in 2010. The total quantities of non-hazardous wastes removed from the Property and the respective disposal locations are shown in Table 3. Copies of waste manifests and bills of lading for material disposed of off-site are included in Appendix E.

3.6 ON-SITE SOIL REUSE AS BACKFILL

The SSAL criteria listed in Section 2.3.1 have been approved by NYSDEC for on-site reuse of material. Excavated material that had chemical or petroleum odors, visual chemical or petroleum staining, or elevated PID readings above 5 ppm were not reused on-site but were characterized for off-site disposal, as discussed in Section 3.3. Material excavated from RMZ A (previously placed backfill) was previously documented to meet SSALs; therefore, it was reused on-site beneath the cover without additional sampling. No soil excavated from RMZ B was reused on-site in 2010.

3.7 BACKFILL FROM OFF-SITE SOURCES

No backfill material from off-site sources was imported to the site during 2010.

3.8 FLUIDS MANAGEMENT

Dewatering fluids discharged into the New York City sewer system were addressed through approval by NYCDEP under Case No. C-3992. Dewatering at the site for general construction stopped in early 2010 and is not expected to resume.

3.9 DEMARCATION

After the completion of soil removal from RMZ B, the base of the excavation was surveyed by Linear Contracting, a New York State licensed surveyor with base elevations documented in the field by AKRF. Excavation locations and depths are depicted on Figure 4.

3.10 HEALTH AND SAFETY MONITORING

A Health and Safety Plan (HASP) which is as part of each SMP, includes requirements for personnel training, protocols for work zone air monitoring and community air monitoring, designated personal protection equipment, and decontamination procedures. The HASP also includes a community air monitoring plan (CAMP), which establishes protocols for VOC and particulate air monitoring to be conducted at the Property perimeter if work zone perimeter concentrations approach the applicable community action levels.

The HASP was followed for invasive work performed on the Property. Initial soil disturbance of RMZ A soil was overseen by personnel under the direction of a qualified environmental professional. RMZ B soil disturbance included air monitoring for VOCs and dust in the work zone. In areas where evidence of contamination was noted, work zone requirements were upgraded to require OSHA HAZWOPER trained workers.

VOC concentrations were monitored with a Thermo 580B PID or equivalent, and respirable particulate matter was monitored using a Thermo PDR1000 or DustTrak 8520. No remediation work zone or community air monitoring exceedances occurred [above the 15-minute time-weighted average (TWA) action levels specified in the HASP] during any activities performed under the SMP. Copies of the air monitoring logs are provided in Appendix F.

3.11 SEDIMENT AND EROSION CONTROL MEASURES

As required under 6 NYCRR Parts 700-705, a SWPPP was prepared to comply with the requirements and conditions of the State Pollutant Discharge Elimination System (SPDES) General Stormwater Permit for Construction Activity (Permit No. GP-02-01). A construction-phase SWPPP, provided as an appendix to the SMPs, included erosion and sediment controls in conformance with requirements presented in the New York State Guidelines for Urban Erosion and Sediment Control. Typical measures that were implemented to limit the potential for erosion and migration of soil included the use of hay bales, sewer inlet protection, a stabilized construction entrance, and dust control measures.

4.0 SITE COVER OPERATION AND MAINTENANCE

Exposure to residual contaminated soil/fill is prevented by an engineered composite cover system. This composite cover system is composed of asphalt or concrete. In the future, the cover system may also include landscaped areas with a minimum of two (2) feet of clean fill (meeting the Part 375 SCO, calculated as the lower of the SCOs for Residential Use or Protection of Groundwater, or for which specific approval would be given by NYSDEC).

4.1 SITE COVER ALTERATIONS

The site cover in place at the time of the FER submission consisted of concrete building slabs and sidewalks and asphalt pavement. During 2010, the site cover was modified with asphalt and additional concrete was placed for building and sidewalk construction. Disturbance of the

composite cover system and underlying residual soil was performed in accordance with the SMPs, as discussed in Section 3.0.

4.2 SITE COVER INSPECTION

AKRF inspected the site cover on December 20, 2010. The inspection consisted of checking the asphalt/concrete pavement for holes, cracking and/or signs of damage. All observed pavement was found to be intact, with no signs of significant cracking or damage. In some areas, observation of the cover was obscured by soil stockpiles, equipment, and/or sediment buildup; however, based on information from the Property owner representatives and observation throughout the year, the cover was expected to be essentially intact in the areas not visible during the December inspection. Openings in the site cover during the inspection were noted as follows:

- At the time of the inspection, one shallow excavation (approximately 1 to 2 feet deep) for the installation of utilities exposed RMZ A soil. As part of ongoing construction, this excavation will be backfilled and covered with asphalt or concrete.
- A large portion of Parcel 3 consisted of exposed RMZ A soil; however, Parcel 3 is inaccessible to the general public, as it is cordoned off with a chain-link fence.
- Five discrete (approx 3-foot by 3-foot) openings in the concrete block wall were noted in the northern portion of the parking area beneath the eastern retail with exposed RMZ A soil through the wall.

4.3 RECOMMENDED CORRECTIVE ACTION

According to the Property representatives, restoration of the cover in the utility excavation area and in the parking garage is expected in 2011. The exposed portions of Parcel 3 will be repaired as part of future esplanade construction. The locations and elevations of the asphalt and concrete site covers at the end of 2010, including areas where the site cover remains open, are shown on Figure 3. Restoration activities will be documented in subsequent Site Management Reports. The site cover inspection log and photographs of the site cover taken during the inspection are provided in Appendix G.

5.0 VAPOR MITIGATION SYSTEM OPERATION AND MAINTENANCE

The vapor mitigation system design and installation oversight were conducted by Langan Engineering and Environmental Services, Inc. (Langan) of Elmwood Park, New Jersey. The sub-slab depressurization system (SSDS) construction was completed and operational in November 2007, as documented in Langan's Engineering Controls (EC) Completion Report, dated November 28, 2007, which was presented with the FER. As permitted by the SMP, prior to initial building occupancy, operation of the sub-slab depressurization system was temporarily suspended during construction. From December 2007 to January 2010, the vapor mitigation system was temporarily taken out of service while construction continued on the western retail building.

In January 2010, the sub-slab depressurization system was reactivated prior to building occupancy. Langan conducted confirmation testing of the SSDS while in active operation on January 20, 2010 and concluded that the SSDS was operating effectively. As outlined in Langan's Soil Vapor Mitigation System Activation Status Memorandum dated January 22, 2010 (provided in Appendix H), the vapor mitigation measures have been modified since the submittal of the EC Completion Report and initial certification. These modifications included:

- The extension of the exhaust stacks to six stories above ground level;
- The addition of a second in-line fan to each stack on the 4th floor near the top of each stack;
- The reinstallation of the vapor barrier in the northern half of the western retail building footprint;
- The installation of a waterproofing course of Liquid Boot (a secondary vapor barrier) to the underside of the western retail building slab; and
- Modifications to the number and locations of clean-outs and sampling ports (SP).

No additional modifications have been made to the SSDS since the January 20, 2010 activation and Langan's January 22, 2010 certification based on Langan's Annual Status Memorandum, dated January 31, 2011, which outlined the overall status of the SSDS system throughout 2010. Vacuum measurements collected below the in-line fans were all in acceptable range during Langan's routine inspections. Measurable vacuum/pressure was documented at each of the accessible endpoint cleanout points of the SSDS which indicates that the SSDS has maintained negative pressure in the gravel beneath the vapor barrier. All in-fans were operational throughout the year with the exception of Fan 3B (located on the 4th floor). Fan 3B malfunctioned in November 2010; however, Langan concluded that the impaired fan does not substantially decrease the functionality of the system due to the redundancies built into the SSDS. Langan has scheduled to repair Fan 3B during the next routine inspection in early 2011. Langan's January 31, 2011 memorandum is provided in Appendix H.

6.0 MONITORING

6.1 ENGINEERING CONTROL SYSTEM MONITORING

Engineering control system monitoring included the site cover inspection discussed in Section 4.2. Sub-slab depressurization system inspection and monitoring was performed generally on a quarterly basis in February, May/June, August, and October 2010, as discussed in Section 6.2.

6.2 VAPOR SYSTEM MONITORING

6.2.1 Vapor System Inspection

The SSDS has been inspected regularly since the system was restarted on January 20, 2010. Inspections were conducted on a weekly basis during the first month and approximately quarterly thereafter (as part of the quarterly vapor discharge sampling). These inspections consisted of measuring flow rates and vacuum readings to confirm that all of the fans are operational. Inspections performed in 2010 indicated that all fans were operational (with the exception of Fan 3B in November and December 2010 as mentioned in Section 5.0) and measureable vacuum was noted at vapor sampling ports on both the 1st floor and 4th floor. Inspection logs were presented as attachments to Langan's memorandum provided in Appendix H, and in the Quarterly Vapor Monitoring Reports provided in Appendix I.

6.2.2 Vapor System Sampling

Vapor samples were collected for laboratory analysis from the sampling ports directly below each of the eight 4th floor SSDS fans to confirm that emissions were below the thresholds in the NYSDEC Division of Air Resources (DAR) publication "*Air Guide-1: Annual Guideline Concentrations (AGC)/Short-term Guideline Concentrations (SGC) Tables*", dated October 18, 2010. Samples were collected generally on a quarterly basis

on February 8, May 24, June 1, August 10, and October 29, 2010. During sampling, the 1st floor fans were running but the 4th floor fans were turned off so there was no vacuum on the sampling port. Eight samples (designated CE-VAPOR-1 to CE-VAPOR-8) were collected in 6-liter Summa canisters equipped with flow regulators and vacuum gauges to allow sample collection over a 30-minute period. One ambient air sample (CE-AA) was collected on the central portion of the roof to determine background levels. Vapors were also field-screened by collecting samples in Tedlar® bags and using a PID to detect total VOCs and a landfill gas meter to detect methane. Vapor sampling activities and other observations (e.g., field screening results, sampling personnel, and sample port integrity) were documented on the inspection log.

Summa canisters were placed in a secure shipping container for pickup by the laboratory under chain-of-custody protocol. Vapor samples were analyzed for volatile organic compounds (VOCs) using EPA Method TO-15 at TestAmerica, Inc. of South Burlington, Vermont, a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Procedure (ELAP) certified laboratory.

6.2.3 Vapor Monitoring Results

Results of the sampling events were reported in quarterly vapor monitoring reports submitted to NYSDEC and NYSDOH and are summarized in Table 4. Copies of these quarterly reports are provided on a CD in Appendix I.

In the two of the four sampling events during 2010, low methane concentrations—a maximum of 0.2% methane, which is 4% of the lower explosive limit (LEL)—were detected in three sampling ports. Laboratory analysis found that VOC concentrations did not exceed the NYSDEC DAR-1 AGCs or SGCs. Detected compounds included 1,2,4-Trimethylbenzene, 1,2-Dichloroethane, 1,3,5-Trimethylbenzene, 1,4-Dichlorobenzene, 2-Butanone, 2-Hexanone, 2,2,4-Trimethylpentane, 4-Ethyltoluene, Acetone, Benzene, Carbon Disulfide, Chloroethane, Chloroform, Chloromethane, Cyclohexane, Dichlorodifluoromethane, Dichloroethane, Ethylbenzene, Isopropanol, Methyl ethyl ketone, Methyl isobutyl ketone, n-Heptane, n-Hexane, Styrene, Tetrachloroethene, Tetrahydrofuran, Toluene, Trichloroethene, Trichlorofluoromethane, Trimethylpentane and Xylenes. Several of these compounds are potentially related to gasoline; however, they can also be attributed to construction chemicals such as primer, paints, and glues and many were also detected in the ambient air sample. The analytical results indicated that effluent treatment is not warranted as part of the vapor mitigation system.

Vapor monitoring activities will continue on a quarterly basis (unless permission to discontinue is granted in writing by NYSDEC and NYSDOH) to determine whether emissions continue to meet the threshold AGC and SGCs, and to evaluate system performance with the fans operating. In order to determine whether the system can be converted to passive venting (i.e., without operating the in-line fans), a separate sampling protocol will be established for approval by NYSDEC and NYSDOH.

6.3 GROUNDWATER MONITORING

No groundwater monitoring was performed in 2010 due to a large number of monitoring wells damaged during construction and ongoing construction in the immediate vicinity of damaged wells. NYSDEC was notified of this modification to the SMP initially via e-mail on November 9, 2009 and again in the 2010 SMR. Damaged monitoring wells will be replaced after grading

and site cover repair are completed on Parcel 3 as part of the esplanade construction and groundwater sampling will be resumed.

6.4 SITE-WIDE INSPECTION

A site-wide inspection was conducted at the same time as the site cap inspection on December 20, 2010 to ensure that all aspects of the remedy were in-place and effective. The remedy remains effective and protective of human health and the environment with continued implementation of the SMPs. A copy of the Site-Wide Inspection Log is included in Appendix J and discussions of pertinent issues are provided in this SMR.

7.0 INSTITUTIONAL AND ENGINEERING CONTROL COMPLIANCE

The IC/EC Certification Form was completed for each of the three remediation Parcels based on results from the site monitoring and inspections described in this SMR. Copies of the forms are provided as Appendix K. Engineering and institutional controls implemented as part of the remedial action are described in Section 2.3.2 and 2.3.3, respectively. A discussion related to certification items requiring clarification is provided within this SMR; appropriate corrective measures for non-compliance of the engineering and institutional controls are described in Sections 4.3 and 6.3.

The 2010 IC/EC Certification Forms provided in Appendix K reflect the certification period of January 2010 to December 2010. As discussed with NYSDEC, the 2011 site-wide inspection will be performed in late April 2012 and the next IC/EC certifications will cover January 1, 2011 to May 1, 2012. The 2011 SMR will be submitted to NYSDEC by June 15, 2012.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the inspections and data evaluation summarized in this report, the following conclusions and recommendations were developed:

- The permanent site cover is present and in good condition throughout the majority of the Property. Openings in the site cover were present on Parcel 3 and in several discrete areas on Parcels 1 and 2 where construction activities continue. The site cover should be restored in accordance with the SMP as construction is completed.
- The sub-slab vapor mitigation system resumed operation in January 2010, prior to building occupancy. SSDS inspection and effluent sampling should continue in accordance with the SMP.
- Groundwater monitoring was not performed in 2010, as the majority of wells were damaged during construction and access for reinstallation was limited due to ongoing construction activities. It is anticipated that the damaged groundwater monitoring wells will be re-installed after grading and site cover repair is completed on Parcel 3. Groundwater monitoring for natural attenuation should resume in accordance with the SMP after the monitoring wells are replaced.

TABLES

Flushing Industrial Park, Parcels 1-3

Table 1

Stockpile Tracking Log

Stockpile ID	Stockpile Material Origin	Residual Management Zones	Evidence of Contamination	Lab Sample Date	Laboratory Sample Analyses	Lab Results	Final Stockpile Disposition
65	Utility excavations on the southwestern portion of the site and south of the parking garage; grading RMZ-A on the southwest and southern portions of the site. Sidewalk repairs on east and south perimeters.	RMZ-A	No odors, staining or PID above background	CE-Stockpile-65A and B (11/10/09), CE-Stockpile-65C (11/24/09), CE-Stockpile-65D (12/22/09), CE-Stockpile-65E (12/23/09)	11/10/09 - 2, 8-point composites for total VOCs, PAHs, total and TCLP metals, ignitability, corrosivity, reactivity, sulfur, cyanide and PCBs 12/2/09 - one grab and 1, 8-pt composite for total VOCs, PAHs, total and TCLP metals, ignitability, corrosivity, reactivity, sulfur, cyanide and PCBs. 12/22/09 and 12/23/09 2 grab and 2, 8-pt composites for total VOCs, PAHs, total and TCLP metals, ignitability, corrosivity, reactivity, sulfur, cyanide and PCBs.	Approved for disposal at Clean Earth Carteret	Stockpile 65 disposed of at Clean Earth Carteret in January and June 2010
66	Utility excavations on northwestern portion of the site (north of BJ's)	RMZ-B (bottom of 40th Rd. gate and north of western retail building)	Petroleum-like and staining; slightly elevated PID readings (5ppm)	CE-Stockpile-66 A1 and A2 (12/7/09); CE-Stockpile-66B, C and D (12/18/09)	12/7/09 - 2 grabs for TPH DRO, total SVOCs and TCLP VOCs; 1 composite for TOX, total VOCs, total and TCLP metals (+cu, ni, zn), RCRA characteristics, PCBs, total sulfur and other full TCLP (TCLP SVOCs, pesticides and herbicides) 12/18/09 - 3 grabs for TPH DRO, total SVOCs	Approved for disposal at Clean Earth Carteret	Stockpile 66 disposed of at Clean Earth Carteret in January 2010
67	Utility excavations south of parking garage	RMZ-B	No odors, staining or PID above background	NA	NA	NA	Stockpile 67 added to Stockpile 68 and subsequently disposed of at Clean Earth Philadelphia
68	Utility excavations east-adjacent to the parking garage, on the southwestern portion of the site and the northwesternmost portion of the site.	RMZ B	No odors, staining or PID above background east of the parking garage; slight petroleum-like odor (no elevated PID readings) on the southwestern portion of the site	CE-Stockpile-68A through F and CE-Stockpile-68-1 (1/11/10); CE-Stockpile-68 G and F (3/31/10); CE-Stockpile-68H through K (5/3/10)	1/11/10 - 6 grabs for TPH DRO, total SVOCs and TCLP VOCs; 1 composite for TOX, total VOCs, total and TCLP metals (+cu, ni, zn), RCRA characteristics, PCBs, total sulfur and other full TCLP (TCLP SVOCs, pesticides and herbicides); 3/31/10- 1 grab for TPH DRO and 1 composite for TOX, total VOCs, total and TCLP metals (+cu, ni, zn), RCRA characteristics, PCBs, total sulfur and other full TCLP (TCLP SVOCs, pesticides and herbicides) 5/3/10-2 composites for TCL SVOCs and TPH DRO	Approved for disposal at Clean Earth Philadelphia	Stockpile 68 disposed of at Clean Earth Philadelphia in June 2010
69	Utility excavation south adjacent to the parking garage.	RMZ B	Slight creosote-like odor, no elevated PID readings, black-stained timbers, clayey material	CE-Stockpile-69A, 69B, 69C, 69C and 691 (5/3/10)	5/3/10 - 4-composites for TPH DRO to C44 and total SVOCs (CE-Stockpile-69A additionally sampled for TCLP VOCs); 3 grabs composited for TOX, total VOCs, total and TCLP metals (+cu, ni, zn), RCRA characteristics, PCBs, total sulfur and other full TCLP (TCLP SVOCs, pesticides and herbicides);	Approved for disposal at Clean Earth Philadelphia	Stockpile 69 disposed of at Clean Earth Philadelphia in June 2010
70	Asphalt/millings	RMZ A and Off-site	NA	NA	NA	NA	As of 12/20/10, staged in fenced area on the western portion of the site (Parcel 3)
71	Off-site utility excavation at the bottom of 40th Road west (near site entrance)	Off-site	No odors, staining or PID above background	NA	NA	NA	As of 12/20/10, staged in fenced in area on the southwestern portion of the site (Parcel 3)

Notes

GENERAL

NA : Not analyzed.

U : The analyte was not detected at the indicated concentration.

J : The concentration given is an estimated value.

B : The analyte was found in the laboratory blank as well as the sample. This indicates possible laboratory contamination of the environmental sample.

p : The relative percent difference (RPD) between the primary and confirmation column/detector is >40%. The lower value has been reported.

***** Laboratory Control Standard or Laboratory Control Standard Duplicate exceeds the control limits.

TCLP : Toxicity Characteristics Leaching Procedure.

µg/kg : micrograms per kilogram = parts per billion (ppb)

mg/kg : milligrams per kilogram = parts per million (ppm)

mg/L : milligrams per Liter = parts per million (ppm)

Re: Flushing Industrial Park, Parcels 1-3
BCP Site Nos. C241051, C241078, C241079

Dear Rosalie:

We are writing to inform you of ownership changes at the above-referenced sites. At the time the Certificates of Completion ("COC") were issued, the ownership of the various lots that comprised the site was as follows:

Lot 1 – Flushing Town Center III, LP
Lot 100 – Flushing Town Center III, LP
Lot 9001 – AFC2, LLC
Lot 9002 – AFC2, LLC
Lot 9100 – AFC2, LLC

Both of those entities were signatories to the Brownfield Cleanup Agreements ("BCAs") for all 3 parcels and recipients of the COCs.

Since that time, as explained in our February 10, 2010 letter, Lots 1 and 100 were divided into Lots 1201-1205. Lots 1201, 1202, 1203 and 1205 are still owned by Flushing Town Center III, LP. In addition, Lot 1204 (the residential access unit) has been transferred to the residential homeowners association, Sky View Parc Homeowners Association, Inc. Finally, Lot 1202 will be transferred to Target Corporation in the coming weeks. Target was added to the BCA for Parcel 1 due to its status as a future owner and was a recipient of that COC.

As reported in the 2009 Site Management Report, Former Lot 9002 has been divided into Lots 1001-1169. Those lots comprise Tower 3 of the residential development and FTC Residential Company II, L.P., which was added to all 3 BCAs due to its status as a future owner

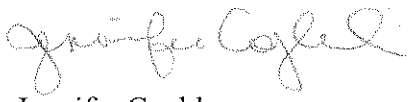
of the residential development and was a recipient of the COCs, currently owns all of the unsold units.

Former Lot 9001 has now been divided into Lots 1301-1579. Those lots comprise Towers 1 and 2 of the residential development and FTC Residential Company I, L.P., which was added to all 3 BCAs due to its status as a future owner of the residential development and was a recipient of the COCs, currently owns all of the unsold units.

Lot 9100 has not been divided and is currently owned by FTC Residential Company III, L.P., which was added to all 3 BCAs due to its status as a future owner of the residential development and was a recipient of the COCs.

We trust that this letter will serve, to the extent necessary, as the required notification under Section 27-1425 of the ECL. Please call if you have any questions or require additional information. Thank you for your assistance.

Sincerely,



Jennifer Coghlan

17TH FLOOR PLAN
PENTHOUSE 2

DIMENSION OF UNITS:

THE FLOOR AREA OF THE UNITS IS MEASURED HORIZONTALLY FROM THE OUTSIDE OF THE EXTERIOR WALLS TO THE CENTERLINE OF THE PARTITIONS SEPARATING ONE UNIT FROM ANOTHER UNIT, OR TO THE CENTERLINE OF THE WALLS OR PARTITIONS SEPARATING A UNIT FROM HALLWAYS, AND INCLUDES EQUIPMENT SPACES, CORRIDORS AND STAIRS WITHIN SUCH UNIT.

ANY COMMON ELEMENT WITHIN A UNIT SHALL NOT BE CONSIDERED AS PART OF THAT UNIT.

TAX LOT CERTIFICATION:
THE UNIT DESIGNATION AND THE TAX LOT NUMBERS SHOWN BEFORE COMFORM TO THE OFFICIAL TAX LOT NUMBERS SHOWN ON THE TAX MAPS OF THE REAL PROPERTY ASSESSMENT BUREAU OF THE CITY OF NEW YORK, BOUROUGH OF QUEENS.

CARTOGRAPHER:

DATE: 12/4/09

ARCHITECT CERTIFICATION:

STATE OF NEW YORK
COUNTY OF NEW YORK
THIS IS TO CERTIFY THAT THIS PLAN IS AN ACCURATE COPY OF A PORTION OF THE PLANS OF THE BUILDING AS FILED WITH AND APPROVED BY THE DEPARTMENT OF BUILDINGS, CITY OF NEW YORK AND FULLY AND FAIRLY DEPICTS THE LAYOUT, LOCATION, UNIT DESIGNATIONS AND APPROXIMATE DIMENSIONS OF THE UNITS AS BUILT.

SWORN TO ME BEFORE
THIS 23rd DAY OF December 2009

Skyviewparc Tower 2

DOB Job No. 402191702 - 01 - NB

October 22, 2010

Ira Gluckman, R.A.
Queens Borough Commissioner
NYC Department of Buildings
120-55 Queens Boulevard
Kew Gardens, NY 11424

Re: **40-28 College Point Boulevard - Hazardous Materials & Noise "E" Designation**
Skyviewparc Tower 2, East Building (A.K.A. Flushing Town Center)
E-74: Block 5066, Lot 9001 (Former Lot 1), Flushing, Queens, CD 7
Downtown Flushing Rezoning – CEQR # 95 DCP 052Q
OER Project # 11EH-N059Q / DEP Project # 06DEPTECH257Q

Dear Commissioner Gluckman:

The New York City Office of Environmental Remediation (OER) has reviewed the October 2010 Perkins Eastman Architects, PC Installation Report for the above referenced site. Skyviewparc (also known as Flushing Town Center) is a planned approximately 3,313,452 gross square foot mixed-use development on approximately 13.5 acres of land in Flushing (Queens), New York. Skyviewparc consists of two buildings, East and West, as well as a waterfront esplanade along the Flushing River. The East Building consists of a four-story podium (1 parking level and 3 retail levels); the top of the podium contains approximately 3 acres of rooftop amenities for the residential buildings. There are three, twelve-story residential towers and a six-story open parking structure associated with the East Building. **Skyviewparc Tower 2 is one of the three (3) residential towers associated with the East Building**. The subject property has been designated with a Hazardous Materials and Noise "E" (E-74) by the NYC Department of City Planning as part of the Downtown Flushing Rezoning action (CEQR #95 DCP 052Q).

Hazardous Material "E"

As previously stated in a DEP correspondence dated August 4, 2008 (See Attached), all Hazardous Materials "E" designation requirements have been met as a result of the issuance of a NYSDEC Brownfield Cleanup Program (BCP) "Notice of Certificate of Completion" in December 2007 as well as the recording of NYSDEC Easements that ensure long term Site Management of underlying residual impacts as well as NYSDEC implemented remedial mitigation requirements.

COPY

Noise "E"

OER has reviewed the October 2010 Installation Report prepared by Perkin Eastman Architects, PC. The Installation Report included a R.A. certified letter verifying compliance with all Noise "E" requirements as well as proofs of purchase and photographs of the windows and alternate means of ventilation installed in the residential spaces. Based upon review of the submitted documentation, OER has determined that the applicant has satisfied its commitments.

Conclusions

OER has no objection to the issuance of a Temporary Certificate of Occupancy (TCO) and/or Certificate of Occupancy (CO) by DOB as long as they relate to the residential space of Tower 2 (only). Although we have concluded that all Hazardous Materials and Noise "E" requirements have been satisfied for this project, our department recommends that the Hazardous Materials and Noise "E" designations remain on the subject site in case future excavation and/or project plans are altered requiring OER review/approval.

If you have any questions or comments, please contact me at 212.341.0964.

Sincerely,

Daniel L. Cole, P.G.

E-74: Block 5066, Lot 100, Flushing, Queens, CD 7
Downtown Flushing Rezoning – CEQR # 95 DCP 052Q
DEP Project # 06 DEPTECH 257Q

Dear Commissioner Lee:

The New York City Department of Environmental Protection, Bureau of Environmental Planning and Analysis (DEP) has reviewed the MUSS Development, LLC April 2008 Project Phasing Schedule for the above referenced site. Skyviewparc (also known as Flushing Town Center) is an approximately 3,313,452 gross square foot mixed-use development to be located on an approximately 13.5 acres of land in Flushing (Queens), New York. Skyviewparc consists of two buildings – East and West as well as a waterfront esplanade along the Flushing River. While the East Building consists of a four story podium (1 level parking and 3 levels retail), the top of the podium contains approximately 3 acres of rooftop amenities for the residential buildings, there are also three – twelve story residential towers, and a six story open parking structure, the West Building consists of a three story retail podium, and three twelve story residential towers. The phased Project is located on College Point Boulevard, between 40th Road and Roosevelt Avenue. The subject property has been designated with a Hazardous Materials and Noise "E" (E-74) by the New York City Department of City Planning as part of the Downtown Flushing Rezoning action (CEQR #95 DCP 052Q).

As a result of the subject site receiving a New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) NOTICE OF CERTIFICATE OF COMPLETION in December 2007 and the fact that NYSDEC Easements has been recorded for this site, DEP has determined that the NYSDEC BCP cleanup efforts and recorded easements supersede the Hazardous Materials "E" designation requirements for this site. The NYSDEC project/easement numbers for the site are BCP No. C241051 (Eastern Parcel 1) and Recording for Queens County as Document Number 2007000620191, dated 12-19-2007, BCP No. C241078 (Western Parcel 2) and Recording for Queens County as Document Number 2007000620190, dated 12-19-2007, and BCP No. C241079 (Western

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION
www.nyc.gov/dep
DIAL 311 Government Information and Services for NYC

Waterfront Parcel 3) and Recording for Queens County as Document Number 2007000620192, dated 12-19-2007. Upon review and approval of the Noise "E" P.E. or R.A. certified Installation Report at the completion of construction, a Final Notice of Satisfaction (FNOS) will be issued for the Hazardous Materials "E" designation since the NYSDEC BCP Certificates of Completion and Easement recordings supersede the Hazardous Materials "E" designation requirements for this site. With the exception of the pending FNOS, all Hazardous Materials "E" designation requirements for this project have been met.

As stated in DEP's previously issued August 3, 2006 Notice To Proceed, the applicant has demonstrated that window/wall attenuation of 35 dB(A) would allow the development to achieve an interior noise level of 45 dB(A). The applicant proposes to achieve the required attenuation by using windows consisting of a ¼" laminated glass inner lite, ¼" plate glass outer lite and a nominal airspace between these lites of 4.375", which would offer an OITC rating of 37. An alternate means of ventilation will be provided by roof-top mounted air conditioning units and Package Terminal Air Conditioner through wall units which will heat or cool the conditioned air from the roof top units. DEP has concluded that the applicant may proceed with construction, provided that an Installation Report, certified by a P.E. or Registered Architect is submitted by the applicant to DEP for review and approval following the completion of construction.

With the exception of DOB issuing a Certificate of Occupancy (CO) for this site at the completion of construction that would require DEP to issue a Hazardous Materials and Noise "E" Designation Notice of Satisfaction and/or Final Notice of Satisfaction, DEP has no objection to the issuance of any remaining permits (i.e., Temporary Certificate of Occupancy – TCO and Amended TCO's) by DOB that relate to this Phased development project.

Future correspondence and submittals should include the following tracking number **06DEPTECH257Q.** If you have any questions or comments, please feel free to contact Dan Cole at 718.595.4536 for Hazardous Materials or Mr. Wei Yu at 718.595.4350 for Noise "E" requirements.

Sincerely,

John Wuthenow

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

ANALYTICAL REPORT

Job Number: 220-11323-1

SDG Number: 220-11323

Job Description: CE Flushing Industrial Park

For:
AKRF Inc
440 Park Avenue South
New York, NY 10016

Attention: Kate Brunner

Approved for release.
Joan Widomski
Data Review Analyst I
2/3/2010 12:43 PM

Designee for
Erin A Arasate
Project Manager I
erin.arasate@testamericainc.com
02/03/2010

The test results in this report meet all NELAP requirements unless specified within the case narrative. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Project Manager.

Case Narrative for Job: 220-11323

Client: AKRF Inc
Date: February 3, 2010

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Lawrence Decker
Laboratory Director

February 3, 2010
Date

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
Method(s) SM 5210B: The glucose-glutamic acid standard recovered outside the recovery limits specified in the method.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.0c
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	True

Case Narrative for Job: 220-11323

Client: AKRF Inc
Date: February 3, 2010

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Lawrence Decker
Laboratory Director

February 3, 2010
Date

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
Method(s) SM 5210B: The glucose-glutamic acid standard recovered outside the recovery limits specified in the method.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

Comments
No additional comments.

Receipt
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): CE-Stockpile-69C (220-12119-3). The container label list CE-Stockpile-68C. The client was contacted and the laboratory was instructed to use the ID listed on the COC.

The following samples were recieved at the laboratory with no collection time documented on the Chain of CustodyCE-Stockpile-69-1 (220-12119-7). The sample collection time was taken form the sample bottle.

The following samples had volume split from the original container on 05/05/10 for subcontract analysis being provided by TestAmerica Edison for expanded DRO: CE-Stockpile-68H (220-12119-8), CE-Stockpile-68I (220-12119-9), CE-Stockpile-68J (220-12119-10), CE-Stockpile-69A (220-12119-1), CE-Stockpile-69B (220-12119-2), CE-Stockpile-69C (220-12119-3), CE-Stockpile-69D (220-12119-4), CE-Stockpile-69E (220-12119-5), CE-Stockpile-69F (220-12119-6). The client did not submit separate containers for these analyses.

A separate VOA container was not submitted by the client for the following TCLP VOA sample: CE-Stockpile-69A (220-12119-1). Volume for the TCLP VOA samples was split from the original container prior to laboratory usage for extraction of DRO and SVOA.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C: Internal standard (ISTD) response for the following sample was outside control limits: CE-Stockpile-68I (220-12119-9), CE-Stockpile-68J (220-12119-10), CE-Stockpile-68K (220-12119-11), CE-Stockpile-69D (220-12119-4), CE-Stockpile-69E (220-12119-5), CE-Stockpile-69F (220-12119-6). The sample was re-analyzed with concurring results. The original set of data has been reported.

No other analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: The matrix spike duplicate (MSD) recoveries for batch 36717was outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8015B: The laboratory control sample (LCS) associated with batch 36883 was outside the lower acceptance criteria. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits; therefore, the data have been reported.

Method(s) 515.1, 8151A: This method incorporates the use of second column confirmation. Corrective action for unacceptable percent recovery is not taken for surrogate or spike compounds unless the results from both columns are outside criteria. Any results which fall outside criteria are qualified and reported.

No other analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
Method(s) 9045C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following sample(s) has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: CE-Stockpile-69-1 (220-12119-7)

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: AKRF Inc Job Number: 220-12119-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	The analyte was found in an associated blank, as well as in the sample.
	J	Indicates an estimated value.
	U	Analyzed for but not detected.
GC/MS Semi VOA		
	*	Surrogate exceeds the control limit
	J	Indicates an estimated value.
	U	Analyzed for but not detected.
GC Semi VOA		
	*	LCS or LCSD exceeds the control limits
	*	Surrogate exceeds the control limit
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
	U	Analyzed for but not detected.
Metals		
	J	Sample result is greater than the MDL but below the CRDL
	U	Indicates analyzed for but not detected.
General Chemistry		
	HF	Field parameter with a holding time of 15 minutes
	J	Sample result is greater than the MDL but below the CRDL
	U	Indicates analyzed for but not detected.

Job Narrative
220-12119-1

Comments
No additional comments.

Receipt
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): CE-Stockpile-69C (220-12119-3). The container label list CE-Stockpile-68C. The client was contacted and the laboratory was instructed to use the ID listed on the COC.

The following samples were recieved at the laboratory with no collection time documented on the Chain of CustodyCE-Stockpile-69-1 (220-12119-7). The sample collection time was taken form the sample bottle.

The following samples had volume split from the original container on 05/05/10 for subcontract analysis being provided by TestAmerica Edison for expanded DRO: CE-Stockpile-68H (220-12119-8), CE-Stockpile-68I (220-12119-9), CE-Stockpile-68J (220-12119-10), CE-Stockpile-69A (220-12119-1), CE-Stockpile-69B (220-12119-2), CE-Stockpile-69C (220-12119-3), CE-Stockpile-69D (220-12119-4), CE-Stockpile-69E (220-12119-5), CE-Stockpile-69F (220-12119-6). The client did not submit separate containers for these analyses.

A separate VOA container was not submitted by the client for the following TCLP VOA sample: CE-Stockpile-69A (220-12119-1). Volume for the TCLP VOA samples was split from the original container prior to laboratory usage for extraction of DRO and SVOA.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C: Internal standard (ISTD) response for the following sample was outside control limits: CE-Stockpile-68I (220-12119-9), CE-Stockpile-68J (220-12119-10), CE-Stockpile-68K (220-12119-11), CE-Stockpile-69D (220-12119-4), CE-Stockpile-69E (220-12119-5), CE-Stockpile-69F (220-12119-6). The sample was re-analyzed with concurring results. The original set of data has been reported.

No other analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: The matrix spike duplicate (MSD) recoveries for batch 36717was outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8015B: The laboratory control sample (LCS) associated with batch 36883 was outside the lower acceptance criteria. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits; therefore, the data have been reported.

Method(s) 8082: Total PCB's=74,000ug/kg

Method(s) 515.1, 8151A: This method incorporates the use of second column confirmation. Corrective action for unacceptable percent recovery is not taken for surrogate or spike compounds unless the results from both columns are outside criteria. Any results which fall outside criteria are qualified and reported.

No other analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
Method(s) 9045C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following sample(s) has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: CE-Stockpile-69-1 (220-12119-7)

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Scott R. Hall May 17, 2010
Laboratory Director

DATA REPORTING QUALIFIERS

Client: AKRF Inc Job Number: 220-12119-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	B	The analyte was found in an associated blank, as well as in the sample.
GC/MS Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	Surrogate exceeds the control limit
GC Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	LCS or LCSD exceeds the control limits
	*	MS or MSD exceeds the control limits
	*	Surrogate exceeds the control limit
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals		
	U	Indicates analyzed for but not detected.
	J	Sample result is greater than the MDL but below the CRDL
General Chemistry		
	HF	Field parameter with a holding time of 15 minutes
	U	Indicates analyzed for but not detected.
	J	Sample result is greater than the MDL but below the CRDL

List Number: 1

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.3c
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	False	#3, label id differs from coc id.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	False	#1, no 2oz jar for TCLP Voc.
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	False	#1 has limited volume.
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	False	#1-6,8-10 splitting required for sub analysis.
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	N/A

Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	N/A	
Sample Preservation Verified	True

ANALYTICAL REPORT

Job Number: 220-11841-1

SDG Number: 220-11845

Job Description: CE Flushing Industrial Park

For:
AKRF Inc
440 Park Avenue South
New York, NY 10016

Attention: Kate Brunner

Approved for release.
Erin A Arasate
Project Manager I
4/13/2010 5:16 PM

Erin A Arasate
Project Manager I
erin.arasate@testamericainc.com
04/13/2010

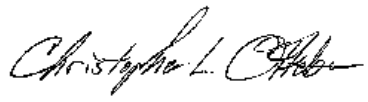
The test results in this report meet all NELAP requirements unless specified within the case narrative. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Project Manager.

TestAmerica Connecticut Certifications and Approvals: CTDOH PH-047, MADEP CT023, RIDOH A43, NYDOH 10602, NY NELAP 10602, NHDES 2528, NJDEP CT410, ME DOH CT023, UT DOH 2032614458

Case Narrative for Job: 220-11841

Client: AKRF Inc
Date: April 13, 2010

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.



Christopher L. Otterbein
Laboratory Director

April 13, 2010

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
No analytical or quality issues were noted.

GC Semi VOA
Method(s) 8081A: The continuing calibration verification (CCV) analyzed on 04/07/10 at 19:22 on RTX-CLP 2 column recovered above the upper control limit for endrin and heptachlor epoxide. The sample associated with this CCV was non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 515.1, 8151A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 680-165005 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
Method(s) 9045C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The associated sample has been qualified with the "HF" flag to indicate pH was performed in the laboratory outside the 15 minute timeframe.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: AKRF Inc

Job Number: 220-11841-1
Sdg Number: 220-11845

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	B	The analyte was found in an associated blank, as well as in the sample.
GC/MS Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
GC Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals		
	U	Indicates analyzed for but not detected.
	J	Sample result is greater than the MDL but below the CRDL
General Chemistry		
	HF	Field parameter with a holding time of 15 minutes
	U	Indicates analyzed for but not detected.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	False	#1, splitting required for sub analysis'.
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	True

Case Narrative for Job: 220-11286

Client: AKRF Inc
Date: January 21, 2010

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Lawrence Decker
Laboratory Director

January 21, 2010
Date

Job Narrative
220-11286-1

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C: Internal standard (ISTD) response for the following samples was outside control limits: CE-Stockpile 68-A (220-11286-1), CE-Stockpile 68-B (220-11286-2), CE-Stockpile 68-C (220-11286-3), CE-Stockpile 68-E (220-11286-5), CE-Stockpile 68-F (220-11286-6). The samples were re-analyzed with concurring results. The original set of data has been reported.

Method(s) 8270C: The tclp leachate blank 220-35113 for preparation batch 220-35126 contained Pentachlorophenol and 2,4,5 Trichlorophenol above the tclp reporting limit (RL). The sample associated with this leachate blank did not contain the target compounds; therefore, re-extraction was not performed.

No other analytical or quality issues were noted.

GC Semi VOA
Method(s) 8082: Total PCB's =348ug/kg

No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
Method(s) 9045C: pH analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The associated sample has been qualified with the "HF" flag to indicate pH was performed in the laboratory outside the 15 minute timeframe.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: AKRF Inc

Job Number: 220-11286-1
Sdg Number: 220-11286

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	LCS or LCSD exceeds the control limits
	B	The analyte was found in an associated blank, as well as in the sample.
GC/MS Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	Surrogate exceeds the control limit
	B	The analyte was found in an associated blank, as well as in the sample.
GC Semi VOA		
	U	Analyzed for but not detected.
	*	Duplicate RPD exceeds control limits
	J	Indicates an estimated value.
	*	MS or MSD exceeds the control limits
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals		
	U	Indicates analyzed for but not detected.
	J	Sample result is greater than the MDL but below the CRDL
General Chemistry		
	HF	Field parameter with a holding time of 15 minutes
	U	Indicates analyzed for but not detected.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.3C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	N/A

Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	N/A	
Sample Preservation Verified	True

Comments
No additional comments.

Receipt
The container label for the following sample(s) did not match the information listed on the Chain-of-Custody (COC): CE-VAPOR-1 (220-13862-2), CE-VAPOR-2 (220-13862-3), CE-VAPOR-3 (220-13862-4), CE-VAPOR-4 (220-13862-5). The container labels list sample collection times as 1421, 1422, 1422, and 1423. The COC lists sample collection times as 1451, 1452, 1452, and 1453, respectively.

All other samples were received in good condition within temperature requirements.

Air Toxics
Method(s) TO-15: The following sample(s) was diluted due to the abundance of non-target analytes: CE-VAPOR-4 (220-13862-5). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

Integrator: HP RTE Compound Sublist: all.sub
Target Version: 3.50
Processing Host: chemsvr6

Concentration Formula: Amt * DF * Uf*(Vo/Vo)*(Vf/Vf) * CpndVariable

Name	Value	Description
DF	1.00000	Dilution Factor
Uf	1.00000	ng unit correction factor
Vo	200.00000	Sample Volume purged (mL)
Vf	200.00000	Final Volume (mL)

Cpnd Variable Local Compound Variable

Login Sample Receipt Check List

Client: AKRF Inc

Job Number: 220-13862-1

Login Number: 13862
List Source: TestAmerica Connecticut
Creator: Blocker, Kristina
List Number: 1

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	N/A	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

THE LEADER IN ENVIRONMENTAL TESTING

TestAmerica Laboratories, Inc.

June 24, 2010

Ms. Kate Brenner
AKRF Inc.
440 Park Ave. South
New York, NY 10016

Re: Laboratory Project No. 29000
Case: 29000; SDG: NY137572

Dear Ms. Brenner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on June 3rd, 2010. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 06/03/10 ETR No: 137572		
831824	CE-VAPOR-1	06/01/10	AIR
831825	CE-VAPOR-2	06/01/10	AIR
831826	CE-VAPOR-3	06/01/10	AIR
831827	CE-VAPOR-4	06/01/10	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The volatile organics analyses for the vapor samples referenced above were accomplished at dilution based on screen analyses that showed concentrations of non-target analytes at concentrations sufficient to interfere with instrument operation if analyzed at full strength.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

* Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

Method Codes:

P	ICP-AES
MS	ICP-MS
CV	Cold Vapor AA
AS	Semi-Automated Spectrophotometric

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

TestAmerica Laboratories, Inc.

June 24, 2010

Ms. Kate Brenner
AKRF Inc.
440 Park Ave. South
New York, NY 10016

Re: Laboratory Project No. 29000
Case: 29000; SDG: NY137572

Dear Ms. Brenner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on June 3rd, 2010. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 06/03/10 ETR No: 137572		
831824	CE-VAPOR-1	06/01/10	AIR
831825	CE-VAPOR-2	06/01/10	AIR
831826	CE-VAPOR-3	06/01/10	AIR
831827	CE-VAPOR-4	06/01/10	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The volatile organics analyses for the vapor samples referenced above were accomplished at dilution based on screen analyses that showed concentrations of non-target analytes at concentrations sufficient to interfere with instrument operation if analyzed at full strength.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

*: Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

Method Codes:

P	ICP-AES
MS	ICP-MS
CV	Cold Vapor AA
AS	Semi-Automated Spectrophotometric

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

Concentration Formula: Amt * DF * Uf*(Vo/Vo) * CpndVariable

Name	Value	Description
DF	1.00000	Dilution Factor
Uf	1.00000	ng unit correction factor
Vo	200.00000	Sample Volume purged (mL)

Cpnd Variable Local Compound Variable

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic valueof the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $500, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

TestAmerica Laboratories, Inc.

June 11, 2010

Ms. Kate Brenner
AKRF Inc.
440 Park Ave, South
New York, NY 10016

Re: Laboratory Project No. 29000
Case: 29000; SDG: NY137497

Dear Ms. Brenner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on May 27th, 2010. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 05/27/10 ETR No: 137497		
831356	CE-VAPOR-5	05/24/10	AIR
831357	CE-VAPOR-6	05/24/10	AIR
831358	CE-VAPOR-7	05/24/10	AIR
831359	CE-VAPOR-8	05/24/10	AIR
831360	CE-AA	05/24/10	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The volatile organics analyses for the vapor samples referenced above were accomplished at dilution based on screen analyses that showed concentrations of non-target analytes at concentrations sufficient to interfere with instrument operation if analyzed at full strength.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

* Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

Method Codes:

P ICP-AES
MS ICP-MS
CV Cold Vapor AA
AS Semi-Automated Spectrophotometric

June 11, 2010

Ms. Kate Brenner
AKRF Inc.
440 Park Ave, South
New York, NY 10016

Re: Laboratory Project No. 29000
Case: 29000; SDG: NY137497

Dear Ms. Brenner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on May 27th, 2010. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 05/27/10 ETR No: 137497		
831356	CE-VAPOR-5	05/24/10	AIR
831357	CE-VAPOR-6	05/24/10	AIR
831358	CE-VAPOR-7	05/24/10	AIR
831359	CE-VAPOR-8	05/24/10	AIR
831360	CE-AA	05/24/10	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The volatile organics analyses for the vapor samples referenced above were accomplished at dilution based on screen analyses that showed concentrations of non-target analytes at concentrations sufficient to interfere with instrument operation if analyzed at full strength.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

*: Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

Method Codes:

P	ICP-AES
MS	ICP-MS
CV	Cold Vapor AA
AS	Semi-Automated Spectrophotometric

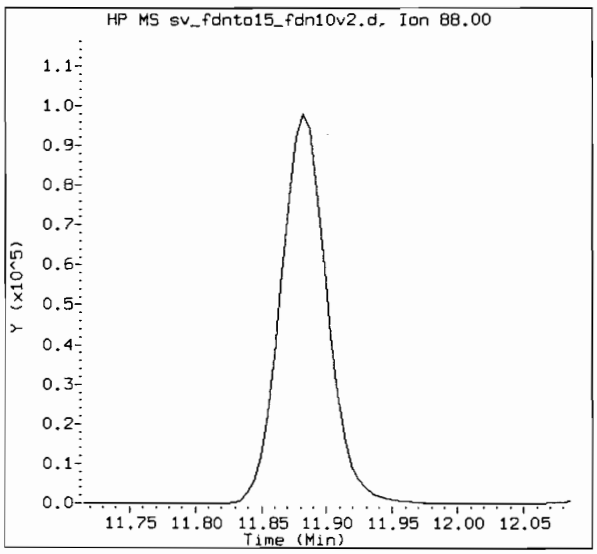
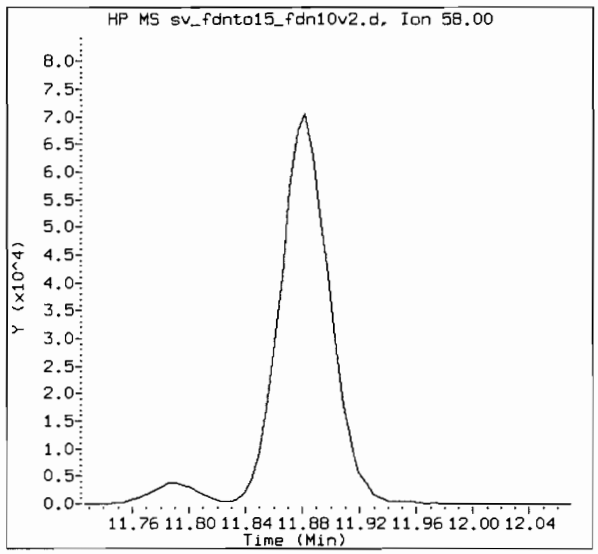
MANUAL INTEGRATION REPORT

Data File Name: fdn10v2.d
Client Sample ID: ASTD010
Compound Name: 1,4-Dioxane

Inj. Date and Time: 07-APR-2010 14:37
Instrument ID: F.i
CAS #: 123-91-1

Target Version: Target 3.50
Report Version: 1.1
Report Date: 04/12/2010 21:34

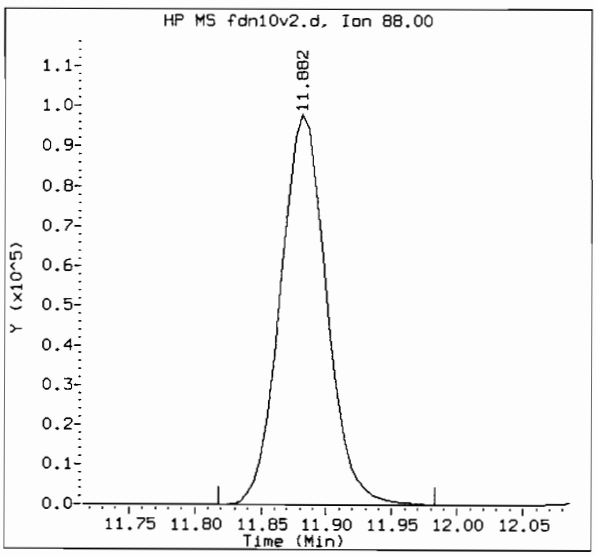


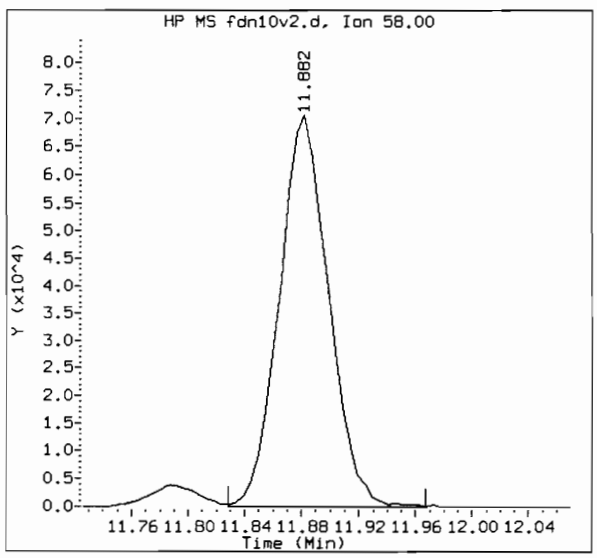


Original Integrations:

Area = 383581

Area = 5815





Final Integrations:

Area = 242636

Area = 169510

Manual Integration Reason: MI3 - Mis-identification of peak

Data File: /var/chem/F.i/Fsvr.p/fdnto15.b/fdn15v.d
Date : 07-APR-2010 15:28
Client ID: ASTD015
Sample Info: ic 021989
Purge Volume: 200.0
Column phase: RTX-624

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

Re: Laboratory Project No. 29000
Case: 29000; SDG: NY135909

Dear Ms. Brunner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on February 10th, 2010. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 02/10/10 ETR No: 135909		
820120	CE-VAPOR-1	02/08/10	AIR
820121	CE-VAPOR-2	02/08/10	AIR
820122	CE-VAPOR-3	02/08/10	AIR
820123	CE-VAPOR-4	02/08/10	AIR
820124	CE-AA	02/08/10	AIR
820125	CE-VAPOR-5	02/08/10	AIR
820126	CE-VAPOR-6	02/08/10	AIR
820127	CE-VAPOR-7	02/08/10	AIR
820128	CE-VAPOR-8	02/08/10	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The volatile organics analyses for several of the samples referenced above were accomplished at dilution based on screen analyses due to the presence of target or non-target analytes at high concentrations.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager
