QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

MANUAL INTEGRATION REPORT

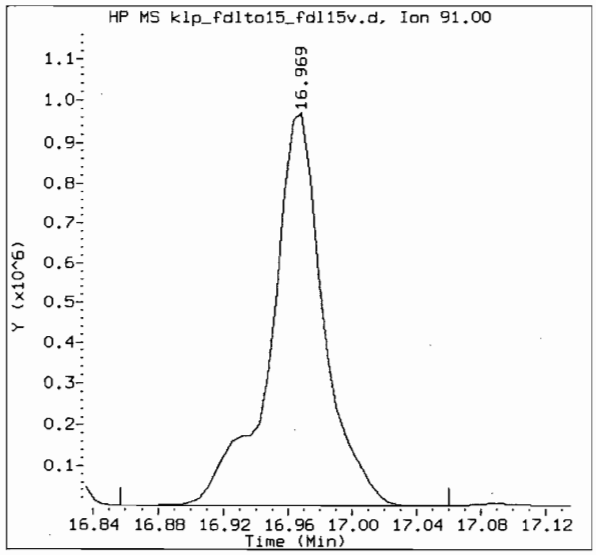
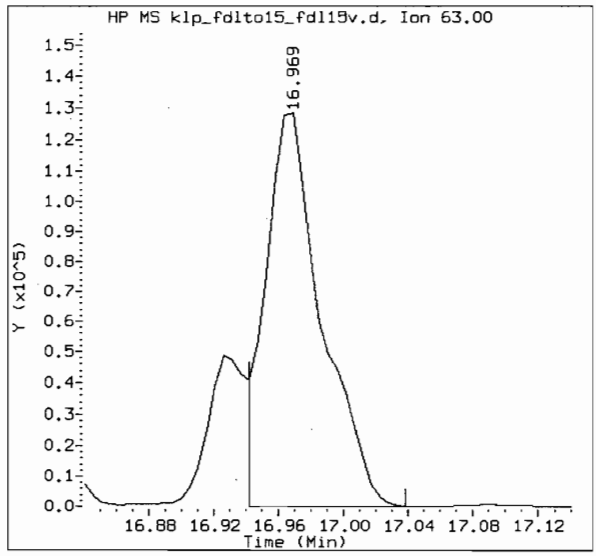
Data File Name: fdl15v.d
Client Sample ID: ASTD015
Compound Name: 2-Chlorotoluene

Inj. Date and Time: 04-FEB-2010 00:29
Instrument ID: F.i
CAS #: 95-49-8

Target Version: Target 3.50
Report Version: 1.1
Report Date: 02/09/2010 10:41

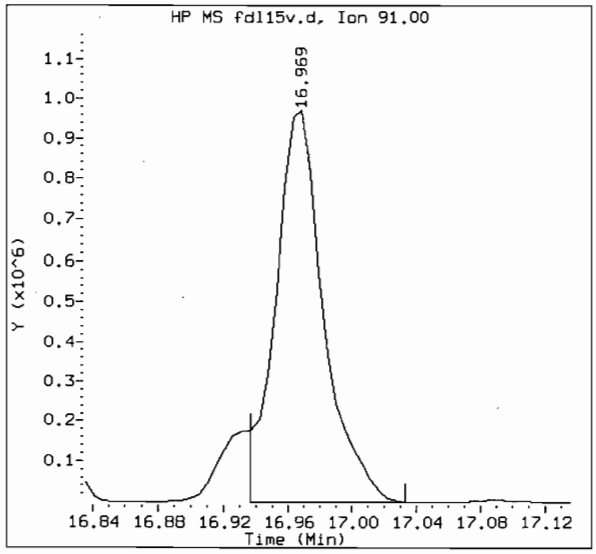


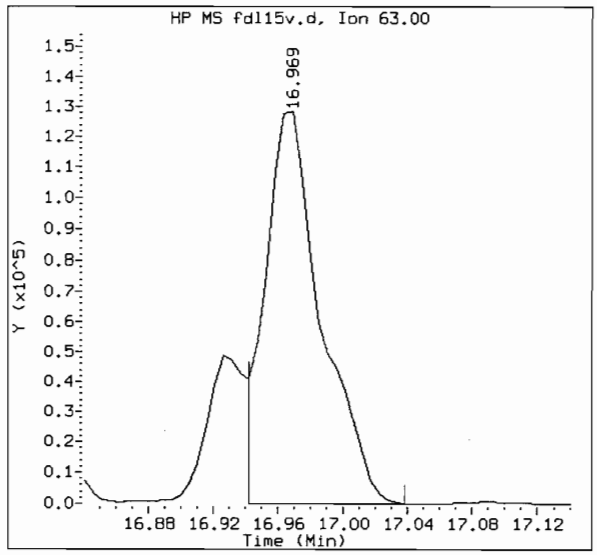


Original Integrations:

Area = 2264902

Area = 311524





Final Integrations:

Area = 2060126

Area = 311524

Manual Integration Reason: MI1 - Poor automated baseline

QC Flag Legend

Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

MANUAL INTEGRATION REPORT

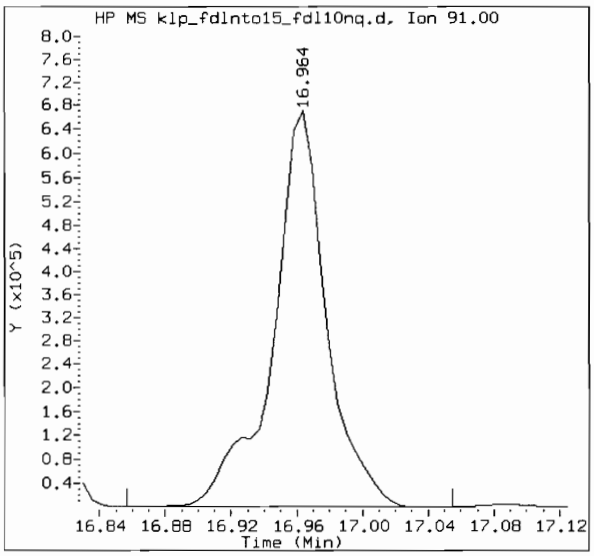
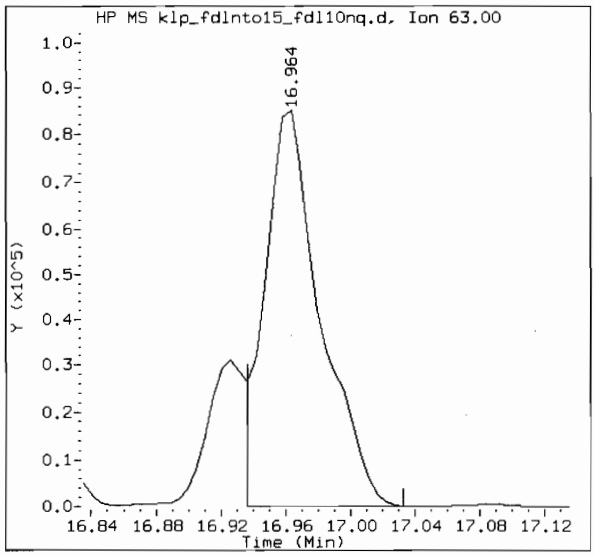
Data File Name: fdl10nq.d
Client Sample ID: FA021610LCS
Compound Name: 2-Chlorotoluene

Inj. Date and Time: 16-FEB-2010 14:59
Instrument ID: F.i
CAS #: 95-49-8

Target Version: Target 3.50
Report Version: 1.1
Report Date: 02/25/2010 08:50

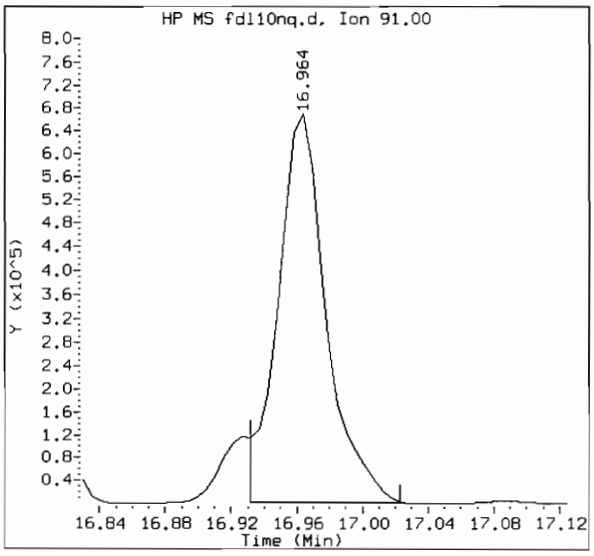


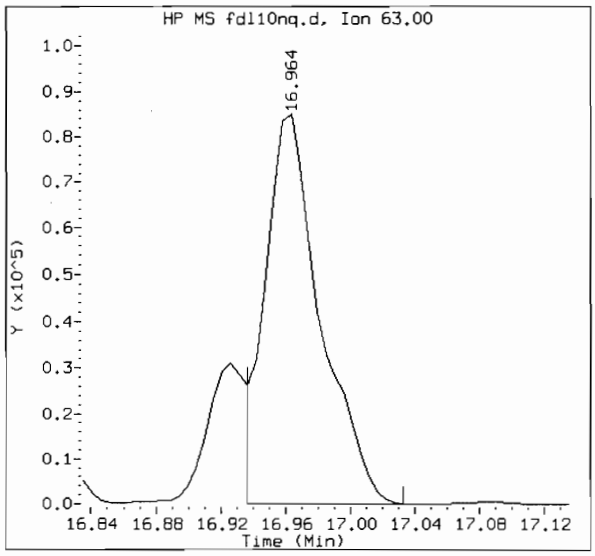


Original Integrations:

Area = 1529476

Area = 205306





Final Integrations:

Area = 1389696

Area = 205306

Manual Integration Reason: MI1 - Poor automated baseline

Sample Preparation – TO-15 Volatile

Post-Sampling Air Canister Pressure Check Record

Client ID	SDG	ETR	Date	Time (Military)	Lab BP ("Hg)	Lab Temp (°C)	Pressure Gague ID	Analyst
AKRF1	135909	135909	2-12-10	0918	29.5	22	G5	J.J.

Sampling Information and Return Equipment Check	Yes	No	Comments
(1) Is a Field Test Data Sheet (FTDS) or similar sampling documentation present?	✓		
(2) Is the flow controller ID used for each canister recorded?	✓		
(3) Is visible sign of damage to canister and/or flow controller (FC) present?		✓	

If damage observed, list equipment IDs and describe condition:

Post-Sampling Return Pressure Check

		=	1.00	6.00		=	1.00	6.00	1.00
		=	1.00	6.00		=	1.00	6.00	1.00

CALCULATION:

$$\frac{\text{Preadjusted Pressure("Hg)} + 29.92\text{" Hg}}{29.92\text{" Hg}} \times 6\text{L} = \text{Preadjusted Volume (L)}$$

$$\frac{\text{Preadjusted Pressure(psig)} + 14.7\text{psig}}{14.7\text{psig}} \times 6\text{L} = \text{Preadjusted Volume (L)}$$

$$\frac{\text{Adjusted Volume (L)}}{\text{Preadjusted Volume (L)}} = \text{Dilution Factor}$$

Where:
29.92 "Hg = Standard atmospheric pressure in inches of Mercury ("Hg).
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig).
6 L = Volume of SUMMA canister at atmospheric pressure.

CASE NARRATIVE

Client: AKRF Inc

Project: CE Flushing College Point

Report Number: 200-1086-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 08/12/2010; the samples arrived in good condition.

Volatile Organics
The analyses for several of the samples in this delivery group were accomplished at dilution based on screen analyses that showed the presence of non-target analytes at concentrations sufficient to interfere with instrument operation in full strength analyses.

AIR TOXICS QUANTITATION REPORT

Lab Sample Id: 200-1086-1
Client Smp ID: CE-AA
Inj Date : 25-AUG-2010 08:54
Operator : wrd Inst ID: F.i
Smp Info : 200-1086-A-1
Misc Info : 200,1,to15all
Comment :
Method : /chem/F.i/Fsvr.p/fdtjto15.b/to15v5.m
Meth Date : 26-Aug-2010 10:21 wrd Quant Type: ISTD
Cal Date : 12-AUG-2010 20:19 Cal File: fdt004.d
Als bottle: 4
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: TO15all.sub
Target Version: 3.50
Processing Host: chemsvr6

Concentration Formula: Amt * DF * Uf*(Vo/Vo)*(Vf/Vf) * CpndVariable

Name	Value	Description
DF	1.00000	Dilution Factor
Uf	1.00000	ng unit correction factor
Vo	200.00000	Sample Volume purged (mL)
Vf	200.00000	Final Volume (mL)

Cpnd Variable Local Compound Variable

Compounds	QUANT SIG MASS	RT	EXP RT	REL RT	RESPONSE	CONCENTRATIONS ON-COLUMN (ppb v/v)	FINAL (ppb v/v)

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

Post-Sampling Air Canister Pressure Check Record

Client ID	Job	Date	Time (Military)	Lab BP ("Hg)	Lab Temp (°C)	Pressure Gague ID	Analyst
AKRF	1086	8-13-10	1202	29.8	22	G5	J.J.

Sampling Information and Return Equipment Check	Yes	No	Comments
(1) Is a Field Test Data Sheet (FTDS) or similar sampling documentation present?		✓	
(2) Is the flow controller ID used for each canister recorded?		✓	
(3) Is visible sign of damage to canister and/or flow controller (FC) present?		✓	
If damage observed, list equipment IDs and describe condition:			

Post-Sampling Return Pressure Check

Lab ID	Canister ID	Pressure[1] ("Hg)	Anomaly[2] (Y/N)	FC ID[3]	FC Return (Y/N)	Can Cert Batch ID	Comments
1	5058	-4.6	N	4684	Y	2614 GIESE	
2	4304	-3.5		4686			
3	5057	-3.7		4582

8	4322	-3.9		4597			
9	3655	-3.8		4603			

J.J. 8-13-2010

[1] Criteria: Return Pressure should be between -1 and -10 ("Hg)

[2] If return pressure is not within criteria, initiate anomaly report.

[3] Record the ID of the FC used for sampling if information is provided, otherwise leave blank.

Internal Use Only: Flow Controller Date and Page # _____

Summa Canister Dilution Worksheet

Client: AKRF Inc

TestAmerica Job ID: 200-1086-1

Lab Sample ID	Canister Volume (L)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Dilution Factor	Final Dilution Factor	Date	Analyst
200-1086-7	6	-5.2	0.83	4.96	39.2	3.67	22.00	4.44	4.44	08/25/10 16:12	Desjardins, William R
200-1086-8	6	-5.0	0.83	5.00	39.5	3.69	22.12	4.43	4.43	08/25/10 16:09	Desjardins, William R
200-1086-9	6	-4.7	0.84	5.06	40	3.72	22.33	4.41	4.41	08/25/10 16:16	Desjardins, William R

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg

Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig

Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)

14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

Vol = Volume of SUMMA canister at atmospheric pressure

Pre-Shipment Clean Canister Certification Report

Certification Type: ☑ Batch ☐ Individual

Canister Cleaning & Pre-Shipment Leak Test								
System ID		# Cycles	Cleaning Date	Technician	Canister Size		
OVEN		5	7/14/10	RWV	(6L)	1L	3L

Port	Can ID	Leak Test: Initial[1] ("Hg)	Final ("Hg)	Adjusted Initial[2] ("Hg)	Difference[3]	Initial Reading	Final Reading
1	3655	-29.5	-29.6	-29.6	0.0	Gauge ID: G4	Gauge ID: G4
2	2614					Date: 7/14/10	Date: 7/27/10
3	4304					Time: 1820	Time: 1040
4	5057					Tech: SML	Tech: S—
5	3733					BP: 29.7 ("Hg)	BP: 29.8 ("Hg)
6	3405					Temp 22 (°C)	Temp: 22 (°C)
7	4349					[3]Acceptance Criteria:	
8	5058					(1) The difference must be less than or equal to + 0.5	
9	4322					(2) Pressure readings must be at least 24 hours apart.	
10	~~2842~~					If time frame was not met, the PM must authorize shipment of canister:	
11	4548					*PM Authorization:*	
12	2953					Signature	Date

Lot 7/14/10

[1] Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.

[2] To calculate Adjusted Initial Pressure, subtract Final BP from Initial BP and add the result (positive or negative) to the initial pressure reading.

[3] To calculate Difference, subtract the Adjusted Initial Pressure from the Final Pressure (See Acceptance Criteria)

Clean Canister Certification Analysis & Authorization of Release to Inventory										
Test Method: ☐TO15 Routine ☐ TO15 LL ☐ NJDEP-LL TO15				Inventory Level					Secondary Review	
Can ID	Date	Sequence	Analyst	1	2	3	4	Limited	Review Date	Reviewer
2614	7/15/10	GESE	WND		✓				07/25/10	KLP

Inventory Level 1: Individual Canister Certification Only. Certified clean to RLs listed in laboratory SOP for LLTO15.

Inventory Level 2: Individual or Batch Certification. Certified clean to 0.04 ppbv.

Inventory Level 3: Individual or Batch Certification. Certified clean to 0.20 ppbv.

Inventory Level 4: Individual or Batch Certification. Certified clean following procedures and RLs listed in laboratory SOP NJDEP-LLTO15.

Inventory Level Limited Use: Canisters may only be used for certain projects.

Samples do not require splitting or compositing.	True	

APPENDIX E

SOLID WASTE DISPOSAL DOCUMENTATION

DISPOSAL FACILITY APPROVAL LETTERS, FACILITY PERMITS, WASTE MANIFESTS (CD)

BUREAU OF WASTE MANAGEMENT

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expired April 24, 2010

Under the provisions of the Pennsylvania Solid Waste Management Act of July 7, 1980, Act 97, a permit for a solid waste disposal and/or processing facility at (municipality) City of Philadelphia in the County of Philadelphia is granted to (applicant) Soil Remediation of Philadelphia, Inc. (address) 3201 South 61st Street, Philadelphia, PA 19153-3592.

This permit is applicable to the facility named as Soil Remediation of Philadelphia, Inc. and described as:

Latitude - 39°, 55', 16"

Longitude - 75°, 12', 52"

This permit is subject to modification, amendment and supplement by the Department of Environmental Protection and is further subject to revocation or suspension by the Department of Environmental Protection for any violation of the applicable laws or the rules and regulations adopted thereunder, for failure to comply in whole or in part with the conditions of this permit and the provisions set forth in the application No. 301220 which is made a part hereof, or for causing any condition inimical to the public health, safety or welfare.

See Attachment for waste limitations and/or special conditions

FOR THE DEPARTMENT OF ENVIRONMENTAL PROTECTION

THIS PERMIT IS NON - TRANSFERABLE

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

1. This waste management permit is issued based upon application No. 301220, which was received in the Southeast Regional Office of the Department of Environmental Protection on November 17, 1996. This permit is for renewal and modification of the residual waste processing facility known as Soil Remediation of Philadelphia, Inc., located in the City of Philadelphia. Modifications include an expanded list of both waste to be processed and waste contaminants amenable to thermal remediation, the addition of an oily wastewater treatment process, increased processed and unprocessed waste storage piles, solid and liquid drum storage and processing areas, transfer operations for certain contaminated wastes, and provisions for the addition of various wastes and sludges to thermally remediated soil (pending separate general permit approval). This approved application consists of the following documents:

Form A received on November 7, 1996, resubmitted on January 11, 1999
Form B received on November 7, 1996, resubmitted on January 11, 1999
Form B1 received on November 7, 1996
Form HWC received on November 7, 1996, revised February 5, 1998, May 28, 1998, and May 19, 1999
Form D received on November 7, 1996, resubmitted on January 11, 1999
Form E received on November 7, 1996, resubmitted on January 11, 1999
Form G(A) received on November 7, 1996, resubmitted on January 11, 1999
Form I received on November 7, 1996, resubmitted on January 11, 1999
Form L and the PPC Plan received on November 7, 1996, revised February 5, 1998, January 11, 1999, and November 22, 1999
Form P received on November 7, 1996, revised April 17, 1998, February 5, 1998, May 28, 1998, January 11, 1999, December 6, 1999, and January 20, 2000
Form R received on November 7, 1996, revised April 17, 1998, February 5, 1998, May 28, 1998, January 11, 1999, December 6, 1999, and January 20, 2000
Form 5R received on November 7, 1996, resubmitted on January 11, 1999
Form 18R received on November 7, 1996
Form 23R received on November 7, 1996, resubmitted on January 11, 1999
Process Equipment Specifications received on November 7, 1996, resubmitted on January 11, 1999
Insurance Documentation received on June 22, 1998
Bonding Documentation received on November 7, 1996, revised April 17, 1998, February 5, 1998, and June 3, 1998

29390-D-012	November 7, 1996	January 22, 1999
29390-D-013	November 7, 1996	January 22, 1999
29390-D-014	November 7, 1996	April 29, 1998
29390-D-015	November 7, 1996	June 22, 1998
29390-012-D	November 7, 1996	January 16, 1998

This approved application includes responses to the Department's review letters dated January 16, 1997, August 15, 1997, and November 9, 1998, received on April 17, 1997, February 5, 1998, and January 11, 1999, respectively, with additional information submitted on May 28, 1998, June 3, 1998, June 22, 1998, May 19, 1999, November 22, 1999, December 6, 1999, and January 20, 2000.

The contents of all the above listed documents are, hereby, incorporated in the permit as conditions with which the permittee must comply, except as they may be modified by the conditions of this permit.

2. Nothing in this permit shall be construed to supersede, amend, or authorize violation of, the provisions of any valid and applicable local law, ordinance, or regulation, provided that said local law, ordinance, or regulation is not pre-empted by the Pennsylvania Solid Waste Management Act, the Act of July 7, 1980, Act 97, 35 P.S. 6018.101, et seq.

3. As a condition of this permit, and of the permittee's authority to conduct the activities authorized by this permit, the permittee, hereby, authorizes and consents to allow authorized employees or agents of the Department, without advanced notice or a search warrant, upon presentation of appropriate credentials, and without delay, to have access to and to inspect all areas on which solid waste management activities are being or will be conducted. The authorization and consent shall include consent to collect samples of waste, water or gases, to take photographs, to perform measurements, surveys and other tests, to inspect any monitoring equipment, to inspect the methods of operation, and to inspect and/or copy documents, books or papers required by the Department to be maintained. This permit condition is referenced in accordance with Sections 608 and 610(7) of the Solid Waste Management Act, 35 P.S. Sections 6018.608 and 6018.610(7). This condition in no way limits any other powers granted under the Solid Waste Management Act.

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

4. This facility may not accept infectious waste, municipal sewage sludges, municipal waste incinerator ash, or categories of residual waste not approved in the permit application, unless the permit amendment application has been submitted and approved by the Department. This facility may not accept hazardous waste or municipal waste, except for those certain special handling wastes categories of municipal waste approved pursuant to this condition.

5. The permitted days and hours for acceptance of waste are to be Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday 7:00 a.m. to 12:00 Noon. The facility's permitted days and hours of on-site operations are 24 hours per day, seven days per week, except as may be otherwise limited by Air Plan Approvals or permits issued by the City of Philadelphia's Air Management Services. Waste acceptance and/or operations may be extended due to extreme weather conditions in accordance with the following procedure. Prior to extending operations, justification for such an extension must be mailed or faxed to the Waste Management Program Manager or his designee. Written concurrence that the extension is justifiable needs to be received by the permittee from the manager, or his designee, before extended operations may be implemented. All other requests to extend operating hours must be requested in advance of need and be approved, in writing, in advance by the Department.

6. Upon written Department approval of the Phase I construction certification required pursuant to Condition 22, the facility may accept, for transfer operations and thermal processing, soils and other non-combustible solid materials that are contaminated with petroleum products (virgin and used) and non-petroleum hydrocarbons. For the purposes of this permit, materials are defined as the waste in which the contamination is present. The material itself may be a waste on its own, as a result of its subsequent contamination, or both. References to contaminated or processed material shall include both soil and other non-combustible solid material defined as follows, unless otherwise differentiated. Soil shall be limited to naturally occurring mineral grain and humus material directly removed from the earth's surface. Other non-combustible solid material shall be limited to sorbent media, filtration media, and casting sands, as described in Section 9.2 of Form P and Appendix A, Section A-3.2, of Form R. These other non-combustible solid materials, as defined above, are wastes and shall not be considered as, or characterized as, soil regardless of whether they contain soil or soil-like components.

   Petroleum and non-petroleum contaminants (e.g., petroleum fuels; mineral oils; natural and synthetic waxes; oils, fats and fat products; petroleum-based solvents; coal and coal products) shall be limited to those described in Table 1 (wastes for treatment) and Sections 9.3 through 9.3.6 of Form P and Appendix A, Section A-3.3 through A-3.3.6 of Form R.

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

Transfer operations, limited to soil and non-soil contaminated material as defined above, shall not commence until the Department has approved the Phase I construction certification discussed above. No other wastes, including soil amendments, wastes for beneficial use, or oil/water wastes, may be accepted for transfer operations. Direct shipments of waste from the site of origin to another permitted facility are subject to regulation under 25 Pa. Code Chapter 299, and are in no way authorized under this permit.

Contaminated soil, as described above, may be used as fill after thermal processing, provided the processed soil complies with Condition 20. Contaminated material other than soil, as described above, shall be segregated, at all times, from contaminated or processed soil and shall only be blended with soil for processing in accordance with approved blending procedures. Processed contaminated material other than soil, whether segregated from or blended with soil, shall not be used as fill unless such use is otherwise approved as a beneficial use by a general permit.

7. Incoming petroleum and non-petroleum hydrocarbon contaminated materials are to be segregated and stored (testing and pre-processing storage) in an area totaling 10,156 cubic yards, as indicated on Drawing Nos. 29390 012-D and 29390-D-012. Storage areas shall be marked or delineated to allow for visual identification of their permitted boundaries (length, width and height).

8. Soil amendment/sludge waste materials for use in the soil reuse program shall be segregated and stored inside the building in an area totaling 1,666 cubic yards, as indicated on Drawing Nos. 29390-012-D and 29390-D-012. Allowable wastes and processing are described in the Treated Soil Reuse Program and in Forms P and R, except that said wastes shall only be mixed, blended or otherwise added to processed soil (post thermal treatment) and shall not be mixed, blended or otherwise added to soil prior to thermal processing. No storage or processing of these wastes may occur unless: (1) storage and processing is also conducted pursuant to, and consistent with, a general permit for beneficial use/processing issued by the Department; and (2) the Phase I and II construction certification required pursuant to Condition 22 has been approved in writing by the Department. Upon receipt of a general permit, the permittee shall file a report with the Southeast Regional Office notifying the Department of its intentions regarding implementation of the general permit and comparing operations authorized by the general permit against those authorized by this permit. If the Department determines that an amendment to this or any other permit is required to implement the terms and conditions of the general permit, the permittee shall file the necessary application(s) and obtain the necessary amendment(s) prior to implementing, at this facility, the activities authorized by the general permit. Storage areas shall be marked or delineated to allow for visual identification of their permitted boundaries (length, width and height). Until used for storage of soil amendment/sludge wastes pursuant to a general permit, this area may be used to store hydrocarbon contaminated media approved under Condition 6.

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

9. Processed materials are to be segregated and stored in an area totaling 10,000 cubic yards, as indicated on Drawing No. 293490-006. Adjacent to this area, reformulated top soils are to be stored in an area totaling 2,301 cubic yards; however, no storage of reformulated top soils may occur unless their processing and storage is also conducted pursuant to, and consistent with, a general permit for beneficial use/processing issued by the Department. Storage areas shall be marked or delineated to allow for visual identification of their permitted boundaries (length, width and height). Until used for storage of reformulated top soils pursuant to a general permit, this reformulated top soil storage area may be used to store processed media.

   Until Phase I construction certification required pursuant to Condition 22 has been submitted to, and approved by, the Department, the permittee shall confine processed material storage to the area indicated on Drawing No. 29390-D-007 (Existing Facility Layout) and shall be further limited to a storage capacity of no more than 4,725 cubic yards of processed soil in this area (Condition 10 of permit issued on July 2, 1992).

10. The operator shall inspect each load in accordance with its approved plan under Section 287.134 of the Residual Waste Regulations, to ensure compliance with that Section and Sections 293.201 and 297.201.

11. The operator shall maintain all analyses (pre-approval, pre-acceptance, post-treatment) of residual waste that is accepted under Section 287.134 of the Residual Waste Regulations on-site for a minimum of five years after the analyses are performed. These records must be made available to representatives of the Department upon request.

12. Daily operational records must be kept in a format outlined in Sections 293.251 and 297.261 of the Residual Waste Rules and Regulations. This must include the amount of contaminated material accepted for processing and transfer each day, processed each day, and added to the processed material storage pile each day; the amount of processed material transported off site each day; the type and amount of waste transferred each day; satisfactory written and analytical documentation demonstrating compliance with the post-process treatment requirements in Condition 20; and the number of waste transport vehicles entering and exiting the facility each day.

13. An annual operations report is to be submitted on or before June 30th of each year to the Department's Southeast Regional Office in accordance with the format outlined in Sections 293.252 and 297.262 of the Residual Waste Rules and Regulations. This must be accompanied by the annual permit administration fee.

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

14. The maximum allowable concentration of hydrocarbons for incoming contaminated material may not exceed 30,000 mg/kg for volatile contaminants, and 400,000 mg/kg for semi-volatile contaminants. The API GC-FID Method for diesel range organics, expanded to C-44 must be utilized for total petroleum hydrocarbon testing (generator analysis). If the generator cannot obtain test results using the expanded method, the EPA 418.8 Method or the API-GC-FID Method for Diesel Range Organics must be utilized. For concentrations greater than 10,000 mg/kg, a Form U document must be submitted and be approved by the Department, in writing, prior to the acceptance of contaminated material having these concentrations from individual generators.

15. Acceptance limits for TOX concentrations for incoming contaminated material are to be 1,000 mg/kg. EPA Test Method No. 3540A/9020, within EPA Document No. SW-846, or an alternate method approved by the Department in writing, is to be utilized for testing incoming contaminated material for TOX concentrations.

16. EPA Test Method 3050/6010 or 7000, within EPA Document No. SW-846, or an alternate method approved by the Department in writing, is to be utilized to test incoming material for total metals concentrations.

17. EPA Method No. 5030A/8081, within an EPA Document No. SW-846, or an alternate method approved by the Department in writing, is to be utilized for testing incoming contaminated material for PCB concentrations.

18. No more than 122 waste hauling vehicles (processed and unprocessed, liquid and solid waste for processing or transfer operations) may enter and exit the facility each day. All waste hauling vehicles coming to this facility are to approach the facility from Passyunk Avenue going north on 61st Street. All waste hauling vehicles leaving the facility are to proceed south on 61st Street to Passyunk Avenue. A record of the number of waste hauling vehicles, including the type and estimated amount of waste being hauled, shall be kept as part of the daily operational record. Waste hauling vehicles entering the permitted area, whether for processing or transfer operations, shall be deemed to be received by the permittee for purposes of compliance with this permit. Any use of the terms "receipt," or receive or received in Forms P and R is limited to determining proper waste acceptance and management procedures and shall not be construed to limit the permittee's liability or responsibility regarding acceptance of waste at this facility.

19. Wastes and contaminated material, received at the facility, shall be analyzed for acceptance pursuant to the Waste Analysis Plan detailed in Form R, with the following additions:

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

a. Each separate wastestream, as identified by a unique generator and/or residual waste code identification, prior to acceptance at the facility, shall have a representative sample analyzed for total metals, TCLP metals, TPH, TOX, PCBs, ignitability, corrosivity, radioactivity and reactivity. These analytical results are to be submitted to the Department on a quarterly basis. Re-occurring wastestreams shall be analyzed at a frequency of at least annually as described above, or shall be accompanied by a generator's certification attesting to the validity of the original analysis and stating that no change to the composition of the wastestream has occurred since the original analysis. Contaminated material from remediation of residential properties, Section 1.3.1.6 of Form R (virgin petroleum contaminated soils from residential properties, not to exceed 100 tons of contaminated soil per site), are excluded from this subcondition.

b. At a minimum frequency of once per month, the permittee shall subject a randomly selected wastestream to a complete analytical scan for total metals, TCLP (organics and inorganics), TPH, TOX, PCBs, ignitability, corrosivity, radioactivity and reactivity for purposes of quality control and verification of pre-approval testing and pre-acceptance screening procedures. The Department may, at its discretion, require that these analyses be conducted by a certified laboratory. These analytical results are to be submitted to the Department on a monthly basis for the first six months. Permittee may, upon completion of the first six months of testing, petition the Department to conduct the quality control and verification testing at a lesser frequency, subject to approved by the Department in writing.

20. Post-process testing shall be conducted on each production run as described in Section 1.5 of Form R. For the purposes of this permit, a production run is defined as the processing of a stable mix of waste under a fixed set of operating conditions. Post-process samples shall be collected after rehydration. Generator analysis may not be used to document total metal levels in the processed material for each production run. A minimum of one sample per hour, for each production run, shall be collected and the samples shall be analyzed in accordance with Section 1.5 of Form R. Hourly samples shall be composited and analyzed for each production run, if the run is less than one operating day (24-hour calendar day), or at the end of each operating day should the production run extend beyond a single operating day, whichever period is shorter. RCRA Metals in Table 9, Form R, shall equate to Post Process Total Metals in Table ATT2-1, Form R. Soil, non-combustible solid materials (materials), and soil/material blends shall be treated to levels necessary to allow these processed wastes to be used lawfully and consistent with applicable standards for the intended uses. The permittee shall, as part of its daily operational records, maintain adequate documentation to demonstrate compliance with this treatment requirement.

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

21. A maximum of 250 drums of contaminated material (as defined in Condition 6) and a maximum of 250 drums of waste oil/water mixtures (Appendix A, Section A-3.3 of Form R) may be stored inside the storage building, as indicated on Drawing No. 29390-D-012.

22. Form 19R, Certification of Facility Construction Activity, must be submitted to the Solid Waste Manager in the Southeast Regional Office after this facility has been modified according to the approved plans. Said certification may be submitted in phases to cover phased construction of the proposed modifications as described in Attachment 1 of this permit. Operations related to facility modifications approved in this permit shall not be authorized until the required construction certification(s) for that phase has been submitted to, and approved by, the Department. Any modifications to the fire protection system required by the City Fire Marshall, shall be noted on the Phase I certification submission and shown on the as-built drawings submitted as part of the certification submission.

23. All references to steam cleaning operations have been withdrawn from the permit application.

24. The side streams of waste (plastic, wood demolition debris and stumps, metal demolition debris, large aggregates, and drums) unsuitable for thermal processing, after separation from the incoming contaminated media, shall be stored, either segregated or commingled, in the pre-processing storage area or in roll-offs, located as indicated on Drawing No. 29390-D-012, and disposed off site in a permitted landfill, or otherwise properly managed under the Solid Waste Management Act. Drums shall be managed in the drum storage/processing area inside the main building. All side stream wastes, other than drums, are to be incidental (less than 2 percent by volume per delivered load) to the waste streams received under the residual waste operations approved as part of this permit. The facility is not approved for receipt and processing of separate loads of construction/demolition waste (municipal waste).

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

25. The facility is permitted to treat up to a maximum of 100 gallons per minute of waste oil/water mixtures (Appendix A, Section A-3.3 of Form R) under a separate oil/water treatment process. These mixtures shall consist of non-hazardous waste oils that are phase separated or emulsified in water. Oil/water separation technology shall be used to recover the waste oil for use as "on-specification waste oil fuel" (25 Pa. Code Section 266a.40(e)) in operating the thermal treatment unit, wastewater for rehydrating the soil to the desired moisture content, and separator waste solids amenable to treatment in the thermal unit. Waste acceptance testing shall be conducted on the oil fraction of the oil/water waste. Post-processing testing shall be conducted on each batch treatment storage tank (processed oil and processed wastewater) prior to use. Processed oil shall be tested for parameters in Table 7, Form R. Processed wastewater shall be tested for TPH, at a minimum. Permittee shall maintain adequate records to document the use of on-specification waste oil at this facility. PCB's levels in waste oils used as fuel for the thermal unit must be less than 2 ppm unless the permittee demonstrates compliance with the standards for burning used oil containing PCBs imposed by 40 C.F.R. 761.20(e) (relating to prohibitions for PCBs).

26. The oil/water separation process shall be located in the main building with storage tanks located in a separate containment area outside the main building. The storage tanks shall consist of a 30,000-gallon waste oil/water mixture storage tank, two 10,000-gallon processed waste oil storage tanks and two 8,000 gallon processed water storage tanks. This operation is depicted on Drawing No. 29390-D-012. Stormwater collected in the storage tank containment system shall be pumped to the oil/water separation process prior to discharge or reuse. Stormwater volumes shall be properly managed such that adequate secondary containment volume is maintained at all times in the tank containment system.

27. Processed material shall be rehydrated at all times. Under normal operating conditions, the processed wastewater from the oil/water separation process may be used to rehydrate the processed material to a desired moisture content. However, in the event excess processed water is generated and needs to be discharged to the sanitary sewer, it shall be discharged to the sanitary sewer, pursuant to approval obtained from the Philadelphia Water Department. Sampling performed to demonstrate compliance with Condition 20 shall be conducted after the rehydration of the processed material with the processed wastewater. Public water shall be utilized to rehydrate processed material in the event that processed wastewater is inadequate, unsuitable, or otherwise unavailable for purposes of rehydration.

28. Until the Phase III construction certification has been submitted to, and approved by, the Department, the permittee may not accept, store, or process waste oil/water mixtures pursuant to Condition 21, 25, and 26.

Permit
For
Solid Waste Disposal and/or Processing Facility
FORM NO. 8

Permit No. 301220
Date Issued April 24, 2000
Date Expires April 24, 2010

29. A mechanized street sweeper shall be utilized to clean the internal roadways, to minimize fugitive dust from vehicular traffic, at a minimum of twice per operating day.

30. Both processed and unprocessed waste shall be delivered, or removed, from the facility in enclosed or tarped vehicles to minimize particulate and VOC emissions, during transport to or from the facility.

31. Until the Phase I construction certification has been submitted to, and approved in writing by, the Department, the facility shall:

    a. operate in accordance with the existing facility layout as shown on Drawing No. 29390-D-007;

    b. be limited to acceptance, for thermal processing, of virgin fuel contaminated soils.

    While operating under the limitations of this condition, or as otherwise limited by other conditions contained in this permit, the facility shall comply with all other terms and conditions of this permit.

32. The collateral bond, dated June 2, 1998, between Soil Remediation of Philadelphia, Inc. and the Department in the amount of $596,337.90 is, hereby, approved as part of this permit. Prior to the completion of the Phase I improvements approved as part of this permit, permittee shall have in place an additional bond in the amount of $274,858.00, bringing the total bond amount to $871,195.90. Upon receipt of written notice from the Department, this bond will have to be updated within 90 days in accordance with Chapter 287 of the Residual Waste Regulations.

Re: Renewal of a Class B Recycling Center General Approval
Clean Earth of Carteret, Inc.
Block 1, Lot 302
Borough of Carteret, Middlesex County
Facility ID No: 132310
Permit No.: CBG060003

Dear Mr. Kushnir:

Please be advised that the New Jersey Department of Environmental Protection, Solid and Hazardous Waste Program has reached a final determination to issue the Renewal of a Class B Recycling Center General Approval for the above referenced facility. Enclosed is a copy of the final document.

Should you wish to contest any of the conditions of the enclosed limited approval, you must file a request for an adjudicatory hearing within twenty (20) days of the date you receive this decision notice in accordance with the procedures found in N.J.A.C. 7:26A-3.14. A copy of the request should also be mailed to this office.

If you have any questions concerning this matter, please contact Frank Piliere of my staff at (609) 984-6985 or by email at frank.piliere@dep.state.nj.us.

Very truly yours,

Robert M. Confer

RECYCLING CENTER GENERAL APPROVAL FOR CLASS B RECYCLABLE MATERIALS FOR PETROLEUM CONTAMINATED SOIL

Under the provisions of N.J.S.A. 13:1E-1 *et seq.* and N.J.S.A. 13:1E-99.11 *et seq.*, known as the Solid Waste Management Act and New Jersey Statewide Mandatory Source Separation and Recycling Act, respectively, and pursuant to N.J.A.C. 7:26A-1 *et seq.*, known as the Recycling Regulations, this approval is hereby issued to:

Clean Earth of Carteret, Inc.

Facility Type:	Recycling Center for Class B Materials
Lot No.:	3.02
Block No.:	1
Municipality:	Borough of Carteret
County:	Middlesex
Facility Registration No.:	132310

This General Approval is subject to compliance with all conditions specified herein and all regulations promulgated by the Department of Environmental Protection (Department).

This General Approval shall not prejudice any claim the State may have to riparian land nor does it allow the registrant to fill or alter, or allow to be filled or altered, in any way, lands that are deemed to be riparian, wetlands, stream encroachment or flood plains, or within the Coastal Area Facility Review Act (CAFRA) zone or are subject to the Pinelands Protection Act of 1979, nor shall it allow the discharge of pollutants to waters of this State without prior acquisition of the necessary grants, permits, or approvals from the Department of Environmental Protection.

March 7, 2007
Issuance Date

Robert M. Confer, Chief
Bureau of Solid & Hazardous Waste Permitting
Solid and Hazardous Waste Program

March 7, 2012
Expiration Date

Scope of Approval

This General Approval (approval), along with the referenced application documents herein specified, shall constitute the sole approval of Recycling Center operations for Class B Recyclable Material (petroleum contaminated soil and street sweepings) storage and process center by **Clean Earth of Carteret, Inc.** located in the Borough of Carteret, Middlesex County, New Jersey. Any registration, approval or permit previously issued by the Division of Solid and Hazardous Waste, or its predecessor agencies, for the specific activities as described below and as conditioned herein, is hereby superseded.

Items 1 through 39 of this approval contain the general conditions applicable to all recycling centers. Items 40 through 89 of this approval contain the general operating requirements for all recycling centers that receive, store, process, or transfer Class B recyclable materials.

Facility Description

The recycling center is a Class B facility owned and operated by Clean Earth of Carteret, Inc. The recycling center is located at 24 Middlesex Avenue on Block 1, Lot 3.02, in Borough of Carteret, Middlesex County. This regional recycling center receives petroleum-contaminated soil from soil remediation contractors and street sweepings from municipalities. The recycling center is authorized to accept petroleum-contaminated soil and street sweepings Monday through Friday and to process petroleum contaminated soil Monday through Saturday. The recycling center is authorized to receive, process and transfer brick, block, stone, rock, and asphalt Monday through Saturday.

The recycling center is also utilized for finished product storage and equipment storage as shown on the site plan. The recycling center markets clean soil from the site.

March 2, 2007 - As part of the Renewal, this approval was modified to include a revised floor plan for the soil processing building and the use of cement kiln dust or lime as a drying agent for the treated soil.

September 16, 2003- This approval was modified to correct errors in Conditions 49, 73, 77, 78, and 82.

November 20, 2002 - This approval is being issued to transfer ownership of the former S.D.&G. Aggregates, Inc. approval to Clean Earth of Carteret.

'Approved General Approval Application and Associated Documents

The registrant shall construct and operate the facility in accordance with N.J.A.C. 7:26A-1 *et seq*., the conditions of this Approval, and the following documents:

a) Site plan: Sheets SP1 and A1, prepared by Leonard Busch Associates, signed and sealed by Leonard Busch, P.E., NJ License No. 9531, dated October 13, 2000.

b) S.D.&G. Aggregates, Inc., Application for Recycling Center General Approval, prepared by AJV Engineering, signed by Angelo J. Valetutto, P.E., dated March 1, 1996.

c) S.D.&G. Aggregates, Inc., Addendum to the March 1, 1996 recycling center application, prepared by AJV Engineering, signed by Angelo J. Valetutto, P.E., dated April 17, 1996.

d) S.D.&G. Aggregates, Inc., Submission of Middlesex County Board of Chosen Freeholders Solid Waste Plan Amendment Resolution, prepared by AJV Engineering, signed by Angelo J. Valetutto, P.E., dated August 16, 1996.

e) S.D.&G. Aggregates, Inc., Submission of Waterfront Development Permit, prepared by AJV Engineering, signed by Angelo J. Valetutto, P.E., dated September 3, 1996.

f) S.D.&G. Aggregates, Inc., Submittal of revised site plan and calculations, prepared by AJV Engineering, signed by Angelo J. Valetutto, P.E., dated November 14, 1996.

g) S.D.&G. Aggregates, Inc., Modification request, prepared by AJV Engineering, signed by Angelo J. Valetutto, P.E., dated February 12, 1997.

h) S.D.&G. Aggregates, Inc., Response to technical requirements for contaminated soils, prepared by S.D.&G. Aggregates, Inc., signed by Michael Goebner, President, Carteret Biocycle Corporation, dated October 23, 1997.

i) S.D.&G. Aggregates, Inc., Modification request, prepared by S.D.&G. Aggregates, Inc., signed by Michael Goebner, President, Carteret Biocycle Corporation, dated October 29, 1997.

j) S.D.&G. Aggregates, Inc., Submittal of new site plan, prepared by S.D.&G. Aggregates, Inc., signed by Michael Goebner, President, Carteret Biocycle Corporation, dated October 29, 1997.

In case of conflict, the provisions of N.J.A.C. 7:26A-1 *et seq.* shall have precedence over the conditions of this Approval, and the conditions of this Approval shall have precedence over plans and specifications listed above.

CLEAN EARTH/CARTERET

132310 CBG060003 Class B Recycling Ctr General Apprv -Renewal
Requirements Report

Subject Item: PI 132310 -

1. All persons issued a general approval to operate a recycling center for Class B, Class C and/or Class D recyclable material pursuant to N.J.A.C. 7:26A-1 et seq. shall comply with all conditions of the approval. [N.J.A.C. 7:26A-3.1(a)]

2. The holder of this general approval shall prominently post and maintain a legible sign, at or near the entrance to the recycling center, indicating that the recycling center is an approved New Jersey Department of Environmental Protection recycling center. The sign shall also indicate the following: Hours of operation of the recycling center; Listing of the source separated materials to be received; The size, weight, or other restrictions regarding materials to be received; The maximum amount of contaminants allowed in each load; Warning that loads will be inspected and will be barred from offloading if the contaminant level is exceeded; and Notice that the person offloading shall certify the amount of material per load, municipality of origin of the material and any other information contained on the Recyclable Material Receipt Form. [N.J.A.C. 7:26A-3.5(f)]

3. Application for renewal of this general approval shall be submitted at least three months prior to expiration of the current approval and shall comply with all requirements for renewal set forth in N.J.A.C. 7:26A-3.6 et seq. One copy of the application for renewal of the general approval shall be submitted by the applicant to the municipal clerk of the municipality in which the recycling center is located, and to the solid waste or recycling coordinator of the county in which the recycling center is located. [N.J.A.C. 7:26A-3.6(a)]

4. The applicant for renewal of this general approval shall certify in writing to the Department that there have been no changes in the operations of the recycling center since the issuance of the general approval in order to renew the approval in its existing form. In the event that there have been changes in the operations of the recycling center or where changes are planned, the application for renewal of a general approval shall be accompanied by a written request to modify the general approval in accordance with N.J.A.C. 7:26A-3.10. [N.J.A.C. 7:26A-3.6(b)]

5. In a case where the holder of this general approval does not comply with N.J.A.C. 7:26A-3.6(a) and (b) and continues to operate without renewal of the general approval, the Department may take enforcement action including the assessment of penalties under N.J.S.A. 13:1E-9; require the holder of this general approval to file an application as a new applicant for a general approval in accordance with N.J.A.C. 7:26A-3.2 and pay the application fee as per N.J.A.C. 7:26A-2; and/or take any other appropriate actions. [N.J.A.C. 7:26A-3.6(c)]

6. All persons granted a renewal pursuant to N.J.A.C. 7:26A-3.6(d) shall continue to pay the annual fee as specified in N.J.A.C. 7:26A-2. [N.J.A.C. 7:26A-3.6(h)]

7. The holder of this general approval shall obtain prior approval from the Department for any modification of the general approval. [N.J.A.C. 7:26A-3.10(a)]

8. Any change affecting the conditions of this general approval requires the prior approval of the Department. [N.J.A.C. 7:26A-3.10(b)1]

9. Any change to the information submitted pursuant to N.J.A.C. 7:26A-3.2(a), 3.4, 3.8, 3.18 or 3.19 requires the prior approval of the Department, except that changes in end-market information submitted pursuant to N.J.A.C. 7:26A-3.2(a) 7 shall not require the prior approval of the Department but shall be handled in accordance with N.J.A.C. 7:26A-3.10(f). [N.J.A.C. 7:26A-3.10(b)2]

Subject Item: PI 132310 -

10. The holder of this general approval shall notify the Department in writing of the intended modification and shall update the information submitted pursuant to N.J.A.C. 7:26A-3.2(a), 3.4, 3.8, 3.18 or 3.19. The holder of this general approval shall also provide written notice to the solid waste or recycling coordinator of the applicable county of any request to modify a general approval. [N.J.A.C. 7:26A-3.10(c)]

11. The holder of this general approval shall not institute the modification until it receives written approval from the Department. [N.J.A.C. 7:26A-3.10(e)]

12. Within one week of any change to the end-market information submitted to the Department pursuant to N.J.A.C. 7:26A-3.2(a)7, the holder of this general approval shall submit to the Department a written notification which details any change in the use of the recyclable material transferred from the recycling center to an end-market or in the end-market location to which the recyclable material is transferred. The written notification shall be sent to: New Jersey Department of Environmental Protection, Division of Solid and Hazardous Waste, Permitting and Technical Programs, P.O. Box 414, Trenton, New Jersey 08625-0414 [N.J.A.C. 7:26A-3.10(f)]

13. The Department may revoke this general approval upon a determination that the holder of the general approval has violated any provision of N.J.S.A. 13:1E-1 et seq., the New Jersey Statewide Mandatory Source Separation and Recycling Act, or any rule, regulation or administrative order promulgated pursuant to N.J.S.A. 13:1E-1 et seq. and the New Jersey Statewide Mandatory Source Separation and Recycling Act. [N.J.A.C. 7:26A-3.13(a)1]

14. The Department may revoke this general approval upon a determination that the holder of the general approval has violated any solid waste utility law at N.J.S.A. 48:2-1 et seq. or 48:13A-1 et seq., or any rule, regulation or administrative order promulgated pursuant to N.J.S.A. 48:2-1 et seq. or 48:13A-1 et seq. [N.J.A.C. 7:26A-3.13(a)2]

15. The Department may revoke this general approval upon a determination that the holder of the general approval has violated any provision of any laws related to pollution of the waters, air or land surfaces of the State or of any other State or Federal environmental laws including criminal laws related to environmental protection. [N.J.A.C. 7:26A-3.13(a)3]

16. The Department may revoke this general approval upon a determination that the holder of the general approval has refused or failed to comply with any lawful order of the Department. [N.J.A.C. 7:26A-3.13(a)4]

17. The Department may revoke this general approval upon a determination that the holder of the general approval has failed to comply with any of the conditions of this general approval issued by the Department. [N.J.A.C. 7:26A-3.13(a)5]

18. The Department may revoke this general approval upon a determination that the holder of the general approval has transferred a general approval to a new owner or operator pursuant to N.J.A.C. 7:26A-3.15 without the prior approval of the Department. [N.J.A.C. 7:26A-3.13(a)6]

19. The Department may revoke this general approval upon a determination that the holder of the general approval has failed to obtain any required permit or approval from the Department or other State or Federal agency. [N.J.A.C. 7:26A-3.13(a)7]

20. The Department may revoke this general approval upon a determination that the holder of the general approval has committed any of the acts which are criteria for denial of a general approval set forth in N.J.A.C. 7:26A-3.11. [N.J.A.C. 7:26A-3.13(a)8]

Subject Item: PI 132310 -

21. This general approval shall not be transferred to a new owner or operator without the Department's prior approval. [N.J.A.C. 7:26A-3.15(a)]

22. A written request for permission to allow a transfer of this general approval must be received by the Department at least 60 days in advance of the proposed transfer of ownership or operational control of the recycling center. The request for approval shall include the following: the name, address and social security number of all prospective new owners or operators; a written certification by the proposed transferee that the terms and conditions contained in the general approval will be met by the proposed transferee; and a written agreement between the current owner or operator of the recycling center and the proposed new owner or operator containing a specific future date for transfer of ownership or operational control. [N.J.A.C. 7:26A-3.15(a)1]

23. A new owner or operator may commence operations at the recycling center only after the existing approval has been revoked and a new approval is issued to the new owner or operator pursuant to N.J.A.C. 7:26A-3.5. [N.J.A.C. 7:26A-3.15(a)2]

24. The holder of this general approval remains liable for ensuring compliance with all conditions of the approval unless and until the existing approval is revoked and a new approval is issued to the new owner or operator pursuant to N.J.A.C. 7:26A-3.5. [N.J.A.C. 7:26A-3.15(a)3]

25. Compliance with the transfer requirements set forth at N.J.A.C. 7:26A-3.15 shall not relieve the holder of this general approval from the separate responsibility of providing notice of such transfer pursuant to the requirements of any other statutory or regulatory provision. [N.J.A.C. 7:26A-3.15(a)4]

26. The transfer of a controlling interest in the stock or assets of the recycling center that is the subject of this general approval shall constitute a transfer of this general approval. [N.J.A.C. 7:26A-3.15(b)]

27. The holder of this general approval shall maintain a daily record of the amounts of each recyclable material by type and municipality of origin which are received, stored, processed or transferred each day, expressed in tons, cubic yards, cubic feet or gallons. Those operators specifying this information in cubic yards shall also indicate the conversion ratio of the materials from cubic yards to tons. [N.J.A.C. 7:26A-3.17(a)1]

28. The holder of this general approval shall maintain a daily record of the name, address and telephone number of the end-markets for all recyclable materials transported from the recycling center, including the amounts, in tons, cubic yards, cubic feet or gallons, transported to each end-market. Those persons specifying this information in cubic yards shall also indicate the conversion ratio of the materials from cubic yards to tons. [N.J.A.C. 7:26A-3.17(a)2]

29. The holder of this general approval shall maintain a daily record of the amount of residue disposed of, expressed in tons, cubic yards, cubic feet or gallons, including the name and New Jersey Department of Environmental Protection solid waste registration number of the solid waste collector/hauler contracted to provide the haulage/disposal service. Those persons specifying the amount of residue in cubic yards shall also indicate the conversion ratio of the residue from cubic yards to tons. [N.J.A.C. 7:26A-3.17(a)3]

30. The holder of this general approval shall retain all Recyclable Material Receipt Forms required pursuant to N.J.A.C. 7:26A-3.2(a)16iii for three calendar years following the calendar year for which an annual report is required pursuant to N.J.A.C. 7:26A-3.17(c). [N.J.A.C. 7:26A-3.17(b)]

Subject Item: PI 132310 -

31. The holder of this general approval shall submit an annual report containing monthly summary statements of the information required pursuant to N.J.A.C. 7:26A-3.17(a) to the New Jersey Department of Environmental Protection, Division of Solid and Hazardous Waste, on or before March 1 of each year, for the previous calendar year. The summaries shall include the following: monthly totals of the amount of recyclable material received from each customer by municipality of origin; monthly totals of the amount of recyclable product transferred to each end-market; and the amount of residue disposed of during each month. [N.J.A.C. 7:26A-3.17(c)]

32. The holder of this general approval shall certify in writing to the Department that all residue generated at the recycling center has been disposed of in accordance with the solid waste management rules at N.J.A.C. 7:26. The certification shall be submitted annually as part of the annual report. [N.J.A.C. 7:26A-3.17(e)]

33. All information submitted to the Department pursuant N.J.A.C. 7:26A shall be handled in accordance with the requirements of the Public Records law, N.J.S.A. 47:1-1 et seq. The Department will hold confidential all end-market information, as well as information pertaining to the municipality of origin of recyclable material, submitted pursuant to N.J.A.C 7:26A-3.2, 3.7, and 3.17 through 3.20 for a period of two years from the date on which the information is submitted to the Department, where specified as confidential by the applicant and where there are no health, safety or environmental concerns which require the release of the information, as determined by the Department. [N.J.A.C. 7:26A-3.17(f)]

34. The holder of this general approval shall provide a recycling tonnage report by February 1 of each year to all municipalities from which recyclable material is received in the previous calendar year. The report shall detail the amount of each source separated recyclable material, expressed in tons or cubic yards, brought to the recycling center, as well as the date on which the recyclable materials were delivered to the recycling center. Those persons specifying this information in cubic yards shall also indicate the conversion ratio of the materials from cubic yards to tons. [N.J.A.C. 7:26A-4.4(a)]

35. The recycling center shall not commence operations unless and until it is included in the applicable district solid waste management plan. [N.J.A.C. 7:26A-4.2]

36. The construction of the recycling center that is the subject of this general approval shall be in conformance with the New Jersey Uniform Construction Code, N.J.S.A. 52:27D-119 et seq., and the rules promulgated pursuant thereto. [N.J.A.C. 7:26A-4.1(b)]

37. The New Jersey Department of Environmental Protection or an authorized representative acting pursuant to the County Environmental Health Act, N.J.S.A. 26:3A2-1 et seq. shall have the right to enter and inspect any building or other portion of the recycling center at any time in order to determine compliance with the provisions of all applicable laws or rules and regulations adopted pursuant thereto. This right to inspect includes, but is not limited to: sampling any materials on site; photographing any portion of the recycling center; investigating an actual or suspected source of pollution of the environment; and, ascertaining compliance or non-compliance with the statutes, rules or regulations of the Department, including conditions of the recycling center approval issued by the Department. [N.J.A.C. 7:26A-4.3(a)]

8. The right of entry specified at N.J.A.C. 7:26A-4.3(a) shall be limited to normal operating hours for the purpose of reviewing and copying all applicable records, which shall be made available to the Department during an inspection and submitted to the Department upon request. [N.J.A.C. 7:26A-4.3(b)]

Subject Item: PI 132310 -

39. The facility shall comply with the general operating requirements for all Recycling Centers as provided at N.J.A.C. 7:26A-4.1 [N.J.A.C. 7:26A-4]

Subject Item: RCBG139162 - Class B Material

40. The preparedness and prevention plan and the contingency plan contained in the approved documents must be maintained on-site and updated as necessary. [N.J.A.C. 7:26A-3.5(e)]

41. Upon detection of a release of contaminants to the environment, the facility shall perform the following cleanup steps: stop the release, contain the released contaminants, clean up and manage properly the released contaminants and other materials and if necessary, repair or replace any leaking soil containment systems prior to returning them to service. [N.J.A.C. 7:26A-3.5(e)]

42. Upon closure of the facility the owner or operator shall remove or decontaminate petroleum contaminated soils, containment system components, and structures and equipment and manage them as hazardous waste, unless the materials are not hazardous waste under NJAC 7:26G-5. [N.J.A.C. 7:26A-3.5(e)]

43. All equipment and portions of the facility designated for the storage or processing of petroleum contaminated soils shall be visually inspected each operating day for integrity and leaks. [N.J.A.C. 7:26A-3.5(e)]

44. Records shall be maintained for all visual inspections. These records shall document that inspections were performed, any problems found, and the subsequent correction of such problems. All records shall be kept for a minimum of three years. [N.J.A.C. 7:26A-3.5(e)]

45. The facility shall keep a record of each shipment of petroleum contaminated soil accepted for processing. These records may take the form of a log, invoice, manifest, bill of lading or other shipping documents. All tracking records must be kept for a minimum of three years. Records for each shipment shall include the following information: the name and address of the transporter who delivered the soil to the facility, the name and address of the generator from whom the soil was sent, the NJDEP registration number of the transporter, EPA ID number (if applicable) of the generator, the quantity of soil accepted and the date of acceptance. [N.J.A.C. 7:26A-3.5(e)]

46. The facility shall maintain on-site a written operating record showing analysis records, tracking records, and summary reports of incidents requiring implementation of the contingency plan. This information shall be made available to Department personnel upon request and shall be kept for a minimum of three years. [N.J.A.C. 7:26A-3.5(e)]

47. The following source separated Class B recyclable materials, which have been separated at the point of generation from other waste materials or separated at a permitted solid waste facility authorized to separate recyclable materials, may be received, stored, processed or transferred at this recycling center: NJDOT street sweepings (that meet NJ Non-Residential Direct Contact Soil Cleanup Criteria) and non-hazardous petroleum contaminated soils which otherwise would be ID 27 if not recycled. Only soil contaminated with the following compounds shall be accepted and processed at this facility: gasoline, kerosene, jet fuel, Numbers 1 through 6 fuel oil, and used oil. Used oil shall be defined as any oil that has been refined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities. No soils may be accepted that have been contaminated with materials that are other waste materials, or waste by-products, such as sludges. No soils with free petroleum product or other liquids, as determined by USEPA SW-846, Method 9095, Chapter 6.0, shall be accepted at the facility. No hazardous waste, as defined by N.J.A.C. 7:26G-5, shall be accepted by the facility. [N.J.A.C. 7:26A-3.5(e)]

Subject Item: RCBG139162 - Class B Material

48. At no time shall the receipt, storage, processing, or transferring of non-source separated construction and demolition material be allowed at this recycling center. The prohibition of this material shall be strictly enforced and any incident shall be considered a serious violation to the conditions of this Approval. [N.J.A.C. 7:26A-3.5(e)]

49. The recycling center may not receive, store, process, or transfer source separated petroleum contaminated soils (ID 27) and NJDOT street sweepings with any other Class B recyclable materials. The commingling of petroleum contaminated soil and NJDOT street sweepings shall only be allowed after the testing requirements in Conditions 71-76 and 86-89 have been met. [N.J.A.C. 7:26A-3.5(e)]

50. The maximum amount of contaminants, as defined in N.J.A.C. 7:26A-1.3, allowed in each incoming load of Class B recyclable material shall be limited to 1% by volume. Incidental by-product materials shall not be considered to be contaminants. [N.J.A.C. 7:26A-3.5(e)]

51. Incidental amounts of rebar, metal, soil, and other by-products which adhere to the Class B recyclable materials, as specified in this Approval, and which are returned to the economic mainstream as raw material or products, may be received, stored, processed, or transferred at this recycling center. The receipt of such incidental amounts of these materials need not be separately accounted for, but the storage and end-markets for these materials shall be subject to specific conditions of this Approval. [N.J.A.C. 7:26A-3.5(e)]

52. The holder of this general approval shall operate the recycling center and construct or install associated appurtenances thereto, in accordance with the provisions of N.J.A.C. 7:26A-1 et seq., the conditions of this general approval, and the general approval application documents which are incorporated herein. [N.J.A.C. 7:26A-3.5(e)]

53. In case of conflict, the conditions of this approval shall have precedence over the general approval application documents listed above and the most recent revisions and supplemental information approved by the Department shall prevail over prior submittals and designs. [N.J.A.C. 7:26A-3.5(e)]

54. One complete set of the general approval application documents, this general approval, and all records, reports and plans as may be required pursuant to this approval shall be kept on file at the recycling center and shall be available for inspection by authorized representatives of the Department or delegated agents upon presentation of credentials. [N.J.A.C. 7:26A-3.5(e)]

55. Hours of operation for receiving the source separated recyclable material shall be limited to: 7:00 a.m. to 5:00 p.m., Monday through Friday and the hours of operation for storing, processing, and transferring the source separated recyclable material shall be limited to 7:00 a.m. to 1:00 a.m., Monday through Friday and 7:00 a.m. to 5:00 p.m. on Saturday. [N.J.A.C. 7:26A-3.5(e)]

56. Material deliveries to the recycling center shall be scheduled in such a manner as to minimize truck queuing on the recycling center property. Under no circumstances shall delivery trucks be allowed to back-up or queue onto public roads. [N.J.A.C. 7:26A-3.5(e)]

57. The recycling center may receive no more than 2,700 tons per day of the recyclable materials and may receive no more than 10,000 tons per week of the recyclable materials. This condition is contingent upon the traffic on the public roads adjacent to the faclity not being adversely affected. Should the traffic be impacted by the facility, the Department reserves the right to reduce the capacity of the facility. [N.J.A.C. 7:26A-3.5(e)]

Subject Item: RCBG139162 - Class B Material

58. The total amount of unprocessed/processed Class B recyclable material stored in the "soil storage warehouse" shall not exceed 18,287 cubic yards. Materials stored in the "soil storage warehouse" shall be stored only in those areas designated for that purpose as indicated on the approved site plan drawing. "Area D" on the approved site plan may be used to store either unprocessed or processed soils. However, unprocessed and processed soils shall not be stored in "Area D" at the same time. "Area E" on the approved site plan may be used for soil mixing prior to introducing the unprocessed soil to the processing equipment. "Area E" shall not be used for the storage of material. [N.J.A.C. 7:26A-3.5(e)]

59. If at any time, the amount of material stored inside the building exceeds 18,287 cubic yards, the recycling center shall immediately cease receiving any unprocessed material until the amount of material stored inside on-site falls below 18,287 cubic yards. [N.J.A.C. 7:26A-3.5(e)]

60. Unprocessed recyclable material shall not remain on-site, in its unprocessed form, for more than one (1) year. [N.J.A.C. 7:26A-3.5(e)]

61. The total amount of processed Class B recyclable materials stored outside shall not exceed 31,674 cubic yards. Processed material shall be stored only in those areas designated for that purpose as indicated on the approved site plan drawings. If at any time, the amount of processed material stored outside exceeds 31,674 cubic yards, the recycling center shall immediately cease processing activities until the amount of processed material falls below 31,674 cubic yards. [N.J.A.C. 7:26A-3.5(e)]

62. All processed material shall be stored separately from residues. [N.J.A.C. 7:26A-3.5(e)]

63. By-products shall be stored in the container(s) or area(s) as depicted on the approved site plan and shall be removed off-site to the end markets as referenced in the approved documents. [N.J.A.C. 7:26A-3.5(e)]

64. Horizontal and vertical control points for the unprocessed and processed materials stockpile areas shall be set and maintained on-site. Horizontal limitation markers shall be set at the corners of the stockpile areas as depicted on the approved site plan. Vertical limitation markers shall be set at locations in close proximity of the stockpile areas and shall clearly establish elevation height of 18 feet above the existing grade for the stockpile areas located inside the building and 25 feet above the existing grade for the processed stockpile areas located outside. [N.J.A.C. 7:26A-3.5(e)]

65. Metal pipe or metal rods or the equivalent as approved by the Department shall be used to establish these control points. [N.J.A.C. 7:26A-3.5(e)]

66. Ingress and egress of the facility shall be restricted to Middlesex Avenue only. [N.J.A.C. 7:26A-3.5(e)]

67. Methods of effectively controlling dust shall be implemented at the facility in order to prevent offsite migration. [N.J.A.C. 7:26A-3.5(e)]

68. Fire fighting and emergency procedures shall be posted, and shall include the telephone numbers of local fire, police, ambulance, and hospital facilities. If a fire occurs on-site, the facility shall immediately notify the local fire official and within twenty-four (24) hours report the incident to the N.J.D.E.P. Environmental Action Hotline at 1-877-927-6337. [N.J.A.C. 7:26A-3.5(e)]

Subject Item: RCBG139162 - Class B Material

69. Any suspected or prohibited hazardous waste, as defined at N.J.A.C. 7:26G-5, found in a load accepted at the recycling center shall not be returned to the generator. Such materials shall be segregated and stored in a secure manner and shall be immediately reported to the N.J.D.E.P. Environmental Action Hotline at 1-877-927-6337. The owner/operator of the recycling center shall secure the name of the collector/hauler suspected of delivering such waste to the facility and related information surrounding the incident, if available, and shall make this information known to the Department's enforcement personnel. [N.J.A.C. 7:26A-3.5(e)]

70. Pursuant to N.J.A.C. 7:26A-3.11(a), the holder of this general approval shall obtain prior approval from the Department for any increase in the design capacity of the facility. The facility shall submit a request to the Department, in writing, for the proposed increase and shall submit updated information pursuant to the requirements of N.J.A.C. 7:26A-3.2(a), 3.4, or 3.8, as applicable. The facility shall also provide written notice of the request to the solid waste or recycling coordinator of the applicable district. [N.J.A.C. 7:26A-3.5(e)]

71. The sampling plan, collection, preservation, and handling for the sampling and analysis of unprocessed contaminated soil as required in this Approval must be performed in accordance with the New Jersey Technical Requirements for Site Remediation at N.J.A.C. 7:26E and the latest edition of the New Jersey Department of Environmental Protection, Hazardous Waste Programs, Field Sampling Procedures Manual. The Technical Regulations may be purchased from West Publishing at (800) 808-WEST. The sampling manual may be purchased from: NJDEP Maps and Publications, P.O. Box 402, Trenton, N.J. 08625. All analysis must be performed by a New Jersey certified laboratory. [N.J.A.C. 7:26A-3.5(e)]

72. All soils must be tested using the most current approved test methodology in accordance with USEPA SW-846. [N.J.A.C. 7:26A-3.5(e)]

73. Petroleum contaminated soils shall be sampled either at the point of generation or at the recycling center. Soils from different generation sites shall be segregated at the facility until the sampling results are received. The sampling and analysis shall be implemented as follows: [N.J.A.C. 7:26A-3.5(e)]

74. Every 100 cubic yards of contaminated soil from each site shall be sampled and analyzed for TPH in the following manner a representative sample from every 20 cubic yards of contaminated soil shall be taken and these five samples shall be composited into one sample and analyzed. When the volume of soil is less than 100 cubic yards, a representative sample of every 20 cubic yards, or a fraction thereof, shall be taken and these samples shall be composited into one sample and analyzed. [N.J.A.C. 7:26A-3.5(e)]

75. Every 800 cubic yards of contaminated soil shall be sampled and analyzed for total volatile organic compounds (VOC), in the following manner a representative sample from every 100 cubic yards of contaminated soil shall be taken and these samples shall be composited into one sample and analyzed. When the volume of soil is less than 800 cubic yards, a representative sample of every 100 cubic yards, or fraction thereof, shall be taken and these samples shall be composited into one sample and analyzed. [N.J.A.C. 7:26A-3.5(e)]

76. The sampling results shall be used to determine the maximum contaminant feed rate or maximum contaminant concentration for the processing equipment in accordance with the Air Quality Permit and shall also demonstrate that the material is non-hazardous for the above contaminants in accordance with N.J.A.C. 7:26G-8.5. [N.J.A.C. 7:26A-3.5(e)]

Subject Item: RCBG139162 - Class B Material

77. Processed material end products, for uses other than as landfill cover material or Department approved Brownfields projects, shall be sampled and analyzed for total petroleum hydrocarbons (TPH), total volatile organic compounds (VOC), and all contaminants listed in the New Jersey Soil Cleanup Criteria (SCC). The sampling procedure shall be implemented as follows: Every 100 cubic yards of processed soil shall be sampled and analyzed for the above contaminants in the following manner: a representative sample from every 20 cubic yards of processed soil shall be taken and these five samples shall be composited into one sample and analyzed. [N.J.A.C. 7:26A-3.5(e)]

78. Processed material end products to be used in road construction projects shall be sampled every 1,000 cubic yards for TPH and VOC in the following manner: a representative sample from every 100 cubic yards of processed soil shall be taken and the samples shall be composited into one sample and analyzed. [N.J.A.C. 7:26A-3.5(e)]

79. Other levels of testing may be allowed on a case-by-case basis as determined by use criteria in accordance with Department guidance and regulations. Applications for case-specific testing requirements must be made to the Bureau of Landfill & Recycling Management. [N.J.A.C. 7:26A-3.5(e)]

80. Only approved criteria shall be used to determine the allowable end use of the processed material and the maximum allowable contamination levels for use. [N.J.A.C. 7:26A-3.5(e)]

81. The maximum allowable contamination levels for unrestricted general use are 200 ppm TPH and all individual organic contaminants less than or equal to 50% and inorganic contaminants less than or equal to 75% of the most stringent direct contact soil cleanup criteria (SCC). [N.J.A.C. 7:26A-3.5(e)]

82. For soils being used as landfill cover material: the analytical requirements of the individual landfills shall be complied with. For soils being used as fill material in Brownfields projects, the requirements (including sampling frequency and analytical parameters) shall be approved by the individual Site Remediation Program case manager on a case-by-case basis. [N.J.A.C. 7:26A-3.5(e)]

83. Other levels of contamination may be allowed on a case-by-case basis as determined by use criteria and levels of contamination in accordance with Department guidance and regulations. Applications for case-specific Certificates of Authority to operate beneficial use projects pursuant to N.J.A.C. 7:26-1.7(g) must be made to the Bureau of Resource Recovery and Technical Programs before any use of the processed material end products. [N.J.A.C. 7:26A-3.5(e)]

84. Any processed material end products that do not meet the above criteria must be reintroduced to the treatment process for further treatment. After treatment, the processed material end products must be reanalyzed in accordance with the above criteria. [N.J.A.C. 7:26A-3.5(e)]

85. All analysis records must be kept for a minimum of three years and made available for inspection by state and local officials upon request. [N.J.A.C. 7:26A-3.5(e)]

Subject Item: RCBG139339 - Class B Material

86. All sampling results shall be used to determine the maximum contaminant feed rate or maximum contaminant concentration for the processing equipment in accordance with the Air Quality Permit and shall also demonstrate that the material is non-hazardous for the above contaminants in accordance with N.J.A.C. 7:26G-5. [N.J.A.C. 7:26A-3]

Subject Item: RCBG139339 - Class B Material

87. Every 100 cubic yards of street sweepings from each site shall be sampled and analyzed for TPH in the following manner: a representative sample from every 20 cubic yards shall be taken and these five samples shall be composited into one sample and analyzed. When the volume is less than 100 cubic yards, a representative sample of every 20 cubic yards, or a fraction thereof, shall be taken and these samples shall be composited into one sample and analyzed. [N.J.A.C. 7:26A-3]

88. Unprocessed street sweepings shall be sampled either at the point of generation or at the recycling center. Street sweepings from different generation sites shall be segregated at the facility until the sampling results are received. The sampling and analysis shall be implemented as follows: [N.J.A.C. 7:26A-3]

89. Every 800 cubic yards of street sweepings shall be sampled and analyzed for total volatile organic compounds (VOC), in the following manner: a representative sample from every 100 cubic yards shall be taken and these samples shall be composited into one sample and analyzed. When the volume is less than 800 cubic yards, a representative sample of every 100 cubic yards, or fraction thereof, shall be taken and these samples shall be composited into one sample and analyzed. [N.J.A.C. 7:26A-3]

Stockpiles 46, 47A, 47B, 47C

Dear Mr. Dyroff,

In regards to the above referenced historic fill, contaminated soil, 1800 tons of the material has been approved for acceptance in to Clean Earth of Philadelphia.

Processing of the soil for ultimate reuse will be performed under PADEP solid waste permit number 301220, issued to Clean Earth of Philadelphia.

Sincerely,

Dane M. Tanner

RE: **Soil Vapor Mitigation System**
Annual Status Memorandum for 2010
Sky View Parc – 131-07 40th Road
Flushing, Queens, New York
Langan Project No. 001838804

Since the re-activation of the sub-slab soil vapor collection (SVC) systems in January 2010, as documented in our Soil Vapor Mitigation System Activation Status Memorandum dated 22 January 2009, Langan has been performing routine periodic system inspections. This memorandum documents the current status and operation of the SVC system. A revised Engineering Controls (EC) Completion Report with as-built drawings documenting these modifications is still pending the completion of building construction activities.

System Periodic Testing

The system has been running continuously since 19 January 2010 when Muss Development personnel turned on the SVC systems inline fans. As per the NYSDEC-approved Site Management Plan (SMP) submitted by AKRF, weekly system inspections were completed for the first month of operation, followed by two monthly inspections, then quarterly inspections thereafter. The weekly inspections were completed on February 3, 11, 17 and 24 2010, and the monthly inspections were completed on: 24 March and 30 April 2010. The quarterly inspections were then completed on: 6 August 2010 and 5 November 2010. The next quarterly inspection will be conducted in February 2011.

Periodic system monitoring consisted of measuring the vacuum at the 16 fan locations and 11 permanent monitoring/sampling ports using a digital micro-manometer and magnahelic differential pressure gauges. Copies of the system inspection logs are attached. In addition, the in-lines fans were periodically inspected (at least on a monthly basis) by site personnel to ensure continuous operation. Only one fan failure was noted during the first year of operation: Fan 3B. The fan is scheduled to be replaced during the next quarterly inspection. The failure of this fan is not an immediate concern given the redundancies built into the system.

At the fans, vacuum measurements varying within acceptable performance ranges were observed. Based on our calculations and the inline fan manufacturer's specifications, these vacuums correspond to average flow rates between 50 to 150 cubic feet per minute (cfm) of soil vapor per fan or a total system flow rate of 400 to 800 cfm. Measurable vacuums were observed at the endpoint cleanout sampling ports in six of the eight pipe runs also within acceptable performance ranges. Measurements could not be obtained from the two remaining cleanouts, as these were lost during construction of the building's loading docks. Measurable vacuums were also observed in the five permanent perimeter sampling ports. These monitoring ports represent the farthest points from the perforated SVC system pipe runs. The vacuum measurements demonstrated that the SVCS system is properly operating and that negative pressures are being maintained in the gravel layer beneath the vapor barrier. Variations in system performance were noted and may be attributed to fluctuations in daily weather conditions.

Langan also conducted screening of volatile organic vapors and methane gas using a PID (ppb mini-RAE) and a landfill gas meter (Landtech GEM 200). Volatile organic vapors were measured varying in concentration in the SVCS piping. At the beginning of system operations, spikes in volatile concentrations were observed in the SVC system piping which could primarily be attributed to the use of cleaning solvents and adhesives to connect the piping during system construction. Over the course of the year as the system operated, the contributions of these sources to the volatile organic fraction of the system exhaust declined precipitously as expected. Methane concentrations above background readings were not detected at any of the sampling or exhaust points.

Permitting

System emissions were tested by AKRF during the pilot phase. The analytical data were compared to the emissions standards in the NYSDEC publication "Air Guide 1" to assess the need for treatment units as part of the vapor mitigation system. AKRF has confirmed that substantive requirements of air permitting have been met; therefore, Langan understands that air permit requirements have been waived under the NYSDEC Brownfield Cleanup Program.

Conclusions

Based on Langan site inspections and testing completed to date, the SVC system is operating and effectively moving air throughout the subslab of the building. All sixteen inline venting fans have been installed and activated and temporary repairs have been completed to the unfinished system components. Based on data gathered during Langan's system inspections, the SVC system (in this temporary modified configuration) is meeting performance expectations.

As previously stated in the EC Completion Report, the SVCS should not be turned off without written approval by NYSDEC and NYSDOH and even temporary suspensions require approval from NYSDEC and NYSDOH after building occupancy. In order to determine whether the system can be converted to passive venting (i.e., without operating the in-line fans) during building occupancy, a separate sampling protocol will be established by Langan for approval by NYSDEC and NYSDOH. During building occupancy, systems should remain in place and operational until permission to discontinue use is provided in writing by NYSDEC and NYSDOH.

As identified previously, Langan will issue a revised EC Completion Report and formally certify as-built plans for the system upon completion of building construction and installation of remaining SVC system components in their final configuration, including several sampling ports and vacuum line clean-out terminations.

Please call with any questions.

RE: **Soil Vapor Mitigation System Activation Status Memorandum**
Sky View Parc – 131-07 20th Road
Flushing, Queens, New York
Langan Project No. 001838804

Langan completed the preliminary phase of the pilot test of the sub-slab soil vapor collection (SVC) system following its re-activation this past week. This system had been taken offline during building construction activities at the site in accordance with Langan's Engineering Controls (EC) Completion Report dated 28 November 2007. The system has been re-activated in anticipation of the occupancy of the first floor of the building (opening of a BJ's Wholesale Club).

The system has been modified significantly since submittal of the EC Completion Report and certification. Modifications include:

- The extension of the exhaust stacks to 6-stories above ground level;
- The addition of a second inline fan to each stack near the top of each stack;
- The reinstallation of the polyethylene vapor barrier in the northern half of the building footprint;
- The installation of a waterproofing course (secondary vapor barrier) to the underside of the building slab; and
- Modifications to the number and location of clean-outs and sampling ports (SP).

Langan has prepared this memorandum to document the current status and operation of the SVC system. A revised EC Completion Report documenting these modifications will be submitted subsequent to completion of building construction activities.

System Pilot Testing

Muss Development personnel turned on the SVC systems inline fans on 19 January 2010. Langan conducted confirmation (pilot) testing of the SVC system while in active mode on 20 January 2010. Confirmation testing consisted of measuring the vacuum at the 16 fan locations and 11 permanent monitoring/sampling ports using a digital micro-manometer and magnahelic differential pressure gauges. A copy of the system inspection log is attached.

At the fans, vacuum measurements varying from -1.40 inches water column (wc) at Fan-4B (Line 4) to -5.60 inches wc at Fan-7A (Line 7) were observed. Based on our calculations and the inline fan manufacturer's specifications, these vacuums correspond to average flow rates between 60 to 150 cubic feet per minute (cfm) of soil vapor per fan or a total system flow rate of 480 to 800 cfm. Measurable vacuums were observed at the endpoint cleanout sampling ports in six of the eight pipe runs, varying between -0.042 (Line 7) to -0.091 (Line 4) inches wc. Measurements could not be obtained from the two remaining cleanouts, as these were lost during construction of the building's loading docks. Measurable vacuums were also observed in the five permanent perimeter sampling ports. These monitoring ports represent the farthest points from the perforated SVC system pipe runs. The vacuum measurements demonstrated that the SVCS system is properly operating and that negative pressures are being maintained in the gravel layer beneath the vapor barrier.

It should be noted that system performance may be affected by daily weather conditions. The vacuum measurements discussed above were collected during cold weather conditions on a clear day with falling barometric pressures.

Langan also conducted screening of volatile organic vapors and methane gas using a PID (ppb mini-RAE) and a landfill gas meter (Landtech GEM 200). Volatile organic vapors were measured varying in concentration from 64 to 4,320 ppb in the SVCS piping, with the highest readings found in SP-11. At this time the spikes in concentration observed in the SVC system piping can be primarily attributed to use of cleaning solvents and adhesives to connect the piping during system construction. Over time as the system operates, the contributions of these sources to the volatile organic fraction of the system exhaust are expected to diminish. . Methane was not detected at any of the sampling or exhaust points during the pilot test.

Permitting

System emissions are to be tested by AKRF during this pilot phase. The analytical data should be compared to the emissions standards in the NYSDEC publication "Air Guide 1" to assess the need for treatment units as part of the vapor mitigation system. Under the NYSDEC

Brownfield Cleanup Program, air permit requirements are waived provided that substantive requirements are met. AKRF will collect air samples from the sampling ports and fan exhaust as outlined in their SMP to confirm substantive requirements of air permitting are met.

Conclusions

Based on Langan site inspections and testing completed to date, the SVC system is operating and effectively moving air throughout the subslab of the building. All sixteen inline venting fans have been installed and activated and temporary repairs have been completed to the unfinished system components. Based on data gathered during Langan's system inspection on 20 January 2010, the SVC system (in this temporary modified configuration) is meeting performance expectations. As per the NYSDEC-approved Site Management Plan (SMP) submitted by AKRF, weekly system inspections should be completed for the first month of operation, followed by two monthly inspections, then quarterly inspections thereafter. Langan may recommend continuing weekly system inspections after the first month to confirm the effectiveness of the temporary system repairs until such time as the permanent system repairs are completed. This recommendation will depend on system performance and site management practices as they relate to protection of SVC system components and temporary repairs.

As previously stated in the EC Completion Report, the SVCS should not be turned off without written approval by NYSDEC and NYSDOH and even temporary suspensions require approval from NYSDEC and NYSDOH after building occupancy. In order to determine whether the system can be converted to passive venting (i.e., without operating the in-line fans) during building occupancy, a separate sampling protocol will be established by Langan for approval by NYSDEC and NYSDOH. During building occupancy, systems should remain in place and operational until permission to discontinue use is provided in writing by NYSDEC and NYSDOH.

As identified previously, Langan will issue a revised EC Completion Report and formally certify as-built plans for the system upon completion of building construction and installation of remaining SVC system components in their final configuration, including several sampling ports and vacuum line clean-out terminations.

Please call with any questions.

1.0 INTRODUCTION

This Quarterly Vapor Monitoring Report has been prepared by AKRF, Inc. (AKRF) to summarize the sub-slab depressurization system (SSDS) vapor discharge monitoring performed at the Flushing Industrial Park (Western), Parcel 2 (BCP Site No. C241078) during the first quarter of 2010. This Parcel, in combination with Flushing Industrial Park (Eastern), Parcel 1 (BCP Site No. C241051), Flushing Industrial Park (Western Waterfront), Parcel 3 (BCP Site No. C241079), and Flushing Industrial Park (Flushing River), Parcel 4 (former BCP Site No. C241080), comprise approximately 13.6 acres located on the northwestern corner of College Point Boulevard and 40th Road, in Flushing, Queens, New York (collectively, the Property). The Property location is shown on Figure 1.

In 2001, C.E. Flushing, LLC (the initial Volunteer) entered into a Voluntary Cleanup Agreement with the New York State Department of Environmental Conservation (NYSDEC) with regard to the Property. By letter dated April 2, 2004, the Volunteer requested transition from the Voluntary Cleanup Program to the Brownfield Cleanup Program (BCP) for completion of the remedial program for the Property. In December 2004, the Volunteer entered into separate Brownfield Cleanup Agreements (BCAs) with NYSDEC for each of four Parcels – each one generally matching the former operable unit (OU). Amended BCAs to revise the Volunteers were executed in June 2005, December 2006, April 2007 and November 2007. In December 2007, Final Engineering Reports and Site Management Plans (SMPs) were submitted and NYSDEC granted Certificates of Completion for Parcels 1, 2 and 3. Under the SMPs, post-remediation vapor monitoring is to be performed on a quarterly basis after the start up of the SSDS.

2.0 VAPOR MITIGATION SYSTEM OPERATION & MAINTENANCE

Site remediation of Parcel 2 included the installation of a vapor mitigation system, comprised of an SSDS and a vapor barrier, under the western retail building of the property development. The vapor mitigation system design and installation oversight were conducted by Langan Engineering and Environmental Services, Inc. (Langan) of Elmwood Park, New Jersey. The SSDS construction was completed between October 30 and November 21, 2007, as documented in Langan's Engineering Controls (EC) Completion Report, dated November 28, 2007 provided in Appendix A. The SSDS consists of eight parallel runs of six-inch diameter solid and perforated Schedule 80 PVC pipe installed within a continuous gravel layer beneath the vapor barrier and site cover. The piping connects together at two manifold locations to the north and south of the Parcel 2 western retail building footprint. The two manifolds each consist of four pipe risers (exhaust stacks) with independent inline vacuum fans and sixteen (16) sampling ports, designated SP-1 through SP-16. The system consists of eight (8) exhaust stacks with sixteen (16) in-line fans (2 fans per exhaust stack, though initially only one per stack was installed).

The vapor barrier is comprised of 60-millimeter thick linear low-density polyethylene geomembrane. The vapor barrier seams and perforations were sealed with double sided tape per manufacture specifications.

During the construction phase of the western retail building on Parcel 2, the active operation of the SSDS was temporarily suspended. Langan conducted confirmation (pilot) testing of the SSDS while in active operation on January 20, 2010 and concluded that the SSDS was operating effectively. As outlined in Langan's Soil Vapor Mitigation System Activation Status Memorandum dated January 22, 2010 (Appendix B), the SSDS has been modified since the submittal of the EC Completion Report and certification. These modifications included:

- The extension of the exhaust stacks to 6-stories above ground level;

- The addition of the second in-line fan to each stack on the 4th floor near the top of each stack;
- The reinstallation of the vapor barrier in the northern half of the western retail building footprint;
- The installation of a waterproofing course (secondary vapor barrier) to the underside of the western retail building slab; and
- Modifications to the number and locations of clean-outs and sampling ports (SP).

3.0 VAPOR MONITORING ACTIVITIES

3.1 SSDS Inspection

The SSDS has been inspected regularly since the system was restarted on January 20, 2010. Inspections were conducted on a weekly basis during the first month and as part of the quarterly vapor discharge sampling. These inspections consisted of measuring flow rates and vacuum readings to confirm that all of the fans are operational. The inspection performed on February 3, 2010, prior to the quarterly sampling event, indicated that all fans were operational and vacuum measurements at all the vapor sampling locations (CE-VAPOR-1 to CE-VAPOR-8) were within acceptable range.

During the inspections, several of the cleanout pipes (SP-2, 3, 4, 7, 13, 14, and 15) were buried or otherwise obstructed; therefore, vapors within these SPs could not be field screened and vacuum readings could be not collected. Vacuum pressures and field-screened vapor concentrations at the accessible cleanout pipes (SP-1, 5, 6, 8, 9, 10, 11, 12, and 16) were within normal range. Inspection logs are provided in Appendix C.

3.2 Vapor Sampling Methodology

Vapor samples were collected below each of the upper fans on February 8, 2010 to confirm that emissions meet the standards in the NYSDEC Division of Air Resources (DAR) publication "*Air Guide-1: Annual Guideline Concentrations (AGC)/Short-term Guideline Concentrations (SGC) Tables*", dated September 10, 2007. The vapor samples were collected directly from the sampling ports below the 4th floor SSDS fans. During sampling, the 1st floor fans were running and the 4th floor fans were turned off so there was no vacuum on the sampling port. Eight samples (CE-VAPOR-1 to CE-VAPOR-8) were collected with 6-liter Summa canisters equipped with flow regulators and vacuum gauges to allow sample collection over a 15-minute period. Vapors were field screened by collecting samples in Tedlar bags and using a photo-ionization detector (PID) to detect volatile organic compounds (VOCs) and a landfill gas meter to detect methane. One ambient air sample (CE-AA) was collected on the northeastern portion of the roof to determine background levels in the vicinity of the effluent. All sampling was conducted in accordance with the SMP protocol. Vapor sampling logs are presented in Appendix C. Vapor sampling activities were recorded on the Periodic Inspection Logs presented in Appendix C. All other observations (e.g., field screening results, sampling personnel, and sample port integrity) were also noted on the sampling log.

Summa canisters were placed in a secure shipping container for pickup by the laboratory. Vapor samples were analyzed for VOCs using EPA Method TO-15 at TestAmerica, Inc. of South Burlington, Vermont, a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Procedure (ELAP) certified laboratory.

4.0 FINDINGS AND CONCLUSIONS

4.1 Vapor Analytical Results

The analytical results are summarized in Table 1, and the laboratory analytical reports are provided in Appendix D. The laboratory analytical reports include the chain of custody documentation, laboratory certification and laboratory quality assurance data. Vapor analytical results were compared to the corresponding NYSDEC Air Guide-1 SGCs. Analytical results for the eight soil vapor samples and the ambient air sample indicated the detection of 26 compounds; however, none exceeded the SGCs and most were found at levels of only at most tens of micrograms per cubic meter. Detected compounds included trimethylbenzene, dichlorobenzene, trimethylpentane, acetone (potentially a lab artifact), isopropanol (also potentially a lab artifact), toluene and xylene. These compounds include several that are potentially related to gasoline. None of the common chlorinated solvents (tetrachloroethene or its breakdown products) were detected.

The analytical results indicated that effluent treatment units are not warranted as part of the vapor mitigation system. Analytical data will continue to be examined for SSDS emissions while in operation.

4.2 Continuation of Vapor Monitoring

Vapor monitoring activities will continue on a quarterly basis (unless permission to discontinue is granted in writing by NYSDEC and NYSDOH) to determine whether emissions continue to meet the SGCs.

Notes

GENERAL

NS : No soil cleanup objective listed.

U : The analyte was not detected at the indicated concentration.

Exceedences are highlighted in bold font.

AIR

DAR-1 SGC : To satisfy the requirements described in 6 NYCRR Part 212.9(a) Table 1, the NYSDEC established a listing of non-criteria air contaminants with acceptable ambient air concentrations to help the user of DAR-1 make an appropriate Environmental Rating determination. The acceptable air concentrations, in micrograms per cubic meter, are listed for annual emission rates called Annual Guideline Concentrations (AGC) and for hourly emission rates called Short-Term Guideline Concentrations (SGC). A listing of AGC/SGCs were incorporated into the 1991 Draft version of Air Guide-1 (DAR-1) under Appendix C and revised in 1995, 2000, 2003 and 2007

µg/m^3 : micrograms per cubic meter of air

Re: Engineering Controls (EC) Completion Report
Soil Vapor Collection System
Former Flushing Industrial Park (Parcel 2)
40th Road and College Point Boulevard
Flushing, Queens County, New York
Langan Project No. 1838804

Dear Ms. Muteanu-Ramnic:

This letter provides an engineering controls (EC) completion report for the soil vapor collection system (SVCS) installed at the former Flushing Industrial Park site (Parcel 2) in Flushing, Queens, New York. The active SVCS system was installed as a contingency to protect the planned building from methane and any residual volatile organic compound (VOC) contamination associated with past industrial uses of the property. Installation was conducted in accordance with the construction drawings provided to NYSDEC, NYSDOH, and NYCDEP on 19 October 2007 with the minor modifications as detailed below. In addition, this document outlines the system engineer's operation, maintenance, and monitoring inspection requirements to ensure long-term system performance.

Conceptual Remedial Approach

The SVCS was designed to collect soil vapor and methane gas generated from contaminants and degrading organic matter located in the site subsurface. By applying a negative pressure within a virtually air tight envelope, the system is engineered to prevent the build up of gases into potentially hazardous concentrations and control the number and location of gas exhaust points in order to limit if not prevent direct human exposure to these gases.

System Design & Installation

The SVCS construction was completed between 30 October 2007 and 21 November 2007. Langan personnel conducted near continuous oversight inspections of the SVCS installation. The SVCS consists of eight parallel runs of six-inch diameter solid and perforated Schedule 80 PVC pipe installed within a continuous gravel layer beneath the vapor barrier and asphalt site cover. The vapor barrier consists of 60-mil thick linear low-density polyethylene (LLDPE) geomembrane. The vapor barrier seams and perforations were sealed with double sided tape per manufacturer specifications.

Given the large number and varying shapes and sizes of building foundation elements including piles, pile caps, and saddle beams, several modifications were made to the vapor barrier termination design during the installation process in order to create acceptable adaptations as shown in the attached as-built drawing details. Modifications included the use of physical supports on pile cap penetrations to maintain pressure and seal the double-sided tape. This was a concern given the cold and damp weather conditions during installation. Electric heat guns and towels were used to dry and clean tape application surfaces and warm mastic tape to promoted adhesion. Polystyrene foam panels (Owens Corning extruded polystyrene insulation Foamular 250) were used along with neoprene foam gaskets and metal tension bands for the physical support to ensure the proper setting of the double-sided mastic tape and reduce physical stress due to the weight of the vapor barrier.

Changes in the pile cap designs and wet site conditions also necessitated the thickening of the gravel layer along two rows of perforated piping, Lines 3 and 8. Because pile caps have not been completed on the northern half of the building footprint, all installed piles were cut to grade and covered with a continuous uninterrupted gravel layer with overlying vapor barrier and asphalt cover. Because several piles could not be cut down to grade in Column lines W-R and W-S, the vapor barrier was trimmed to surround each pile cluster and encased within a concrete working slab.

During the installation process the gravel layer was exposed during the occurrence of several rain events and resulted in the flooding of Line 1 and 2 on the southern end of the building. After the vapor barrier and asphalt cover were placed, a fiber optic camera was used to determine the areas of localized flooding within each line. A vacuum truck with a 2-inch diameter corrugated hose was then used to evacuate the water from the SVCS lines and the surrounding gravel layer over a period of three days, until no additional water seepage was observed within each pipe.

The SVCS piping connects together at two manifold locations to the north and south of the building footprint. Each piping run has its own independent inline vacuum fan (Fantech 160R) capable of moving 89 to 260 cubic feet per minute (cfm) of soil vapor at 0.2 to 1.5-inches of water column (wc) vacuum each or a total flow rate of 712 to 2,080 cfm. Specifications for the inline vacuum fans are provided in Attachment A. If NYSDEC/NYSDOH were to allow the inline vacuum fans to be turned off and removed in the future, the system is designed to also operate as a SVCS. Because actual system performance cannot be assured in passive mode given this site's unique characteristics, the system would need to be closely monitored to determine if seasonal fluctuations in actual soil vapor production rates would mandate the year-round activation of the SVCS.

Vacuum monitoring/sampling ports are present at the western end of each pipe run. These ports also function as cleanout access to the system when in active mode and could be used as secondary vapor exhaust points if the system is operated in passive mode during the construction phase. An additional eight vacuum monitoring/sampling ports are located around the perimeter of the system; these ports terminate within the gravel layer in order to monitor vacuum pressures at a distance away from the piping run. An as-built plan of the SVCS piping layout, monitoring port locations, and details are provided as Drawing C-901A and C-901B.

Any future modifications to the certified system should be done in accordance with original design installation requirements. Depending on the final building slab design and the choice of fill to reach slab grade on the site, it may be determined in the system engineer's judgment that system augmentation or modification may be necessary in order to maintain SVCS functionality.

System Pilot Testing

Langan personnel turned on the fans on 18 November 2007. Langan conducted confirmation (pilot) testing of the SVCS system while in active mode on 20 and 21 November 2007. Confirmation testing consisted of measuring the vacuum at the fan manifolds, sixteen permanent monitoring/sampling ports, and 17 temporary interior vacuum monitoring points using a digital micro-manometer and magnahelic differential pressure gauges.

At the fan manifolds at the SVCS exhaust points, vacuum measurements varying from -0.388 (Line 8) to -0.602 (Lines 4 & 5) inches wc were observed. According to the inline fan manufacturer's specifications, these vacuums correspond to average flow rates between 206 to 260 cfm of soil vapor each or a total system flow rate of 1,648 to 2,080 cfm. Measurable vacuums were observed at the endpoint cleanout sampling ports in all eight pipe runs, varying between -0.010 (Line 3) to -0.178 (Line 1) inches wc. Measurable vacuums were also observed in the eight permanent perimeter sampling ports. These monitoring ports represent the farthest points from the perforated SVCS pipe runs. Additional vacuum measurements were

taken from the interior of the system at points located between piles and pile caps that represented the farthest points from the perforated SVCS pipe runs. The vacuum measurements demonstrated that the SVCS system is properly operating and that negative pressures are being maintained in the gravel layer beneath the vapor barrier.

It should be noted that system performance will be affected by daily weather conditions. The vacuum measurements discussed above were collected during poor weather conditions that included rain, wind, and falling barometric pressures. These weather conditions were among the more difficult atmospheric conditions under which the system operates, yet a vacuum was still maintained throughout the system. During better weather conditions, particularly those accompanied with rising barometric pressures, system vacuum pressures are expected to increase.

Langan also conducted screening of volatile organic vapors and methane gas using a PID (ppb mini-RAE) and a landfill gas meter (Landtech). Volatile organic vapors were measured varying in concentration from 5 to 242 ppb below the vapor barrier and up to 1,304 ppb in the SVCS piping, with the highest readings found in the exhaust from Line 3. The spikes in concentration observed in the SVCS piping are primarily attributed to use of cleaning solvents and adhesives to connect the piping during system construction. Over time as the system operates the contributions of these sources to the volatile organic fraction of the system exhaust will likely diminish. Methane was not detected at any of the sampling points during the pilot test.

Site Management Plan & Trouble Shooting Guide

A Site Management Plan (SMP) has been prepared by AKRF to cover the former Flushing Industrial Park site (Parcel 2) with this SVCS constituting a portion of that parcel. This SVCS completion report has been provided as an attachment in part to document the system engineer's operation, maintenance, and monitoring inspection requirements. The maintenance and monitoring schedule is detailed in Section 4.2.2 of AKRF's November 2007 SMP.

Routine activities conducted during regular inspections should include:

- Visual inspection of the complete SVCS system;
- Inspect piping and fittings for air leaks or evidence of vandalism or tampering;
- Measure organic vapor readings of exhaust and at sampling ports using an organic vapor monitor (photo-ionization detector PID or equivalent);
- Measure methane vapor readings of exhaust and at sampling ports using a methane monitor;
- Determine if system dewatering is necessary; and,
- Measure vacuum readings at the sixteen permanent monitoring/sampling ports.

Non-routine maintenance activities include assessment of electrical problems and system flooding after high-water storm events because the site is located within the flood plain. Electrical problems including tripped circuit breakers and loose or damaged wiring are common causes of inline fan operational issues. A qualified electrician should be called to inspect the system electrical panel, wiring, and fan motor and diagnose the exact nature of the failure. To assist in the completion of this task, a periodic inspection log form has been developed and is included as an attachment to this report.

If the fans are running but significant vacuum losses are observed that are outside normal SVCS operating parameters, the SVCS pipes within the area of the identified failure should be video-scoped to identify the portions of the pipe runs that are flooded or otherwise damaged. The SVCS can then be dewatered using a vacuum truck or other acceptable pumping method until video-scoping shows less than 1-inch of water within each impacted piping run. If a piping run is damaged, consultation with the design engineer would be required in order to determine a remedy.

Notification Plan

Visual alarms have been installed to notify non-technical personnel such as the site superintendent/manager or designee of a loss of a system power. A regular system inspection schedule has been outlined in AKRF's SMP. In the event that the system has shut down, the manager will contact Langan, who will respond as necessary.

Air Permitting

Under the NYSDEC Brownfield Cleanup Program, air permit requirements are waived provided that substantive requirements are met. AKRF will collect air samples from the sampling ports and fan exhaust as outlined in their SMP to confirm substantive requirements of air permitting are met.

Termination of System Operation

During the construction phase, the active operation of the system may be temporarily suspended and converted to passive operation without specific approval from NYSDEC and NYSDOH.

However, prior to initial building occupation, the SVCS must be operated in active mode (with fans running) under this SMP. The SVCS should not be turned off without written approval by NYSDEC and NYSDOH; even temporary suspensions will require approval from NYSDEC and NYSDOH after building occupancy. In order to determine whether the system can be converted to passive venting (i.e., without operating the in-line fans) during building occupancy, a separate sampling protocol will be established by Langan and AKRF for approval by NYSDEC

and NYSDOH. During building occupancy, systems should remain in place and operational until permission to discontinue use is granted in writing by NYSDEC and NYSDOH.

If you have any questions or concerns in connection with this change order request, please contact us at 201-794-6900.

Sincerely,

Langan Engineering and Environmental Services, Inc.

Installation Instructions for MODEL FR

IMPORTANT: Read These Instructions Completely Before Installing Fan And Save These Instructions For Future Reference.

Items Included: One FR fan, one mounting bracket, mounting hardware

Regular Kits Also Include: Grill with mounting collar/backdraft damper combination, duct mounting clamps

Deluxe Kits Also Include: 2 Grills with mounting collar/backdraft damper combination, "Y" transition, duct mounting clamps, balancing damper

Additional Items Needed: Duct work, duct tape or mounting clamps, duct termination device (roof cap, louvered shutter, etc.)

Tools Required: Electric drill, drill bits, regular screwdriver, phillips screwdriver, razor knife, keyhole saw (optional)

Instructions pour l'installation du MODÈLE FR

IMPORTANT: Lisez ces instructions complètement avant d'installer le ventilateur et sauvegardez ces instructions pour de future référence.

Articles inclus : Un ventilateur FR, un support, matériel de support.

Les Kits Réguliers incluent en outre : Grille avec les fixations pour le collier/décharge du régulateur, les pinces de fixation du tuyau.

Les kits de luxe inclus également : 2 Grilles avec les fixations pour le collier/décharge du régulateur, raccordement en "Y", les pinces de fixation du tuyau, du régulateur d'équilibrage.

Les articles supplémentaires nécessaires : Le tuyau, le ruban adhésif ou les pinces de fixation, le dispositif de connexion du tuyau (couvercle du toit, porte-volets, etc.).

Les outils nécessaires : une perceuse électrique, outils de forage, un tournevis normal, un tournevis pour vis de crosse, un couteau rasoir, une scie passe partout (optionnel).

Instrucciones de instalacion del MODELO FR

IMPORTANTE: Lea a Fondo Estas Instrucciones Antes de Instalar el Ventilador, y Consérvelas para Referencia Futura.

Renglones Incluidos: Un ventilador FR, un soporte de montaje y tornillería

Los Juegos Regulares También Incluyen: Rejilla con conjunto do collarín de montaje y mariposa de contratiro, y abrazaderas de montaje del conducto

Los Juegos de Lujo También Incluyen: 2 Rejillas con conjunto de collarín de montaje y mariposa de contratiro; adaptador en "Y", abrazaderas de montaje del conducto y mariposa compensadora

Renglones Adicionales Requeridos: Conductos, cinta para conductos o abrazaderas de montaje, dispositivo de terminal del conducto (capucha de terminación en el techo, juego de persianas, etc.)

Herramientas Necesarias: Taladro eléctrico, barrenas, destornillador recto, destornillador Phillips, navaja, sierra caladora (opcional)

Installing Mounting Bracket & Fan

1. When selecting fan mounting location, the following criteria should be considered: *a) mounting to minimize noise generated by fan operation; b) service accessibility*
   a) Mounting the fan as far as possible from the intake point will minimize fan operating noise from being transmitted back through the duct work. If the fan is to be used as a booster for moving the air between two rooms, a central point along the duct may be optimal. Insulated flexible type duct work (recommended for all bathroom exhaust applications) will result in much quieter operation. Fantech recommends minimum 8' of insulated flexible duct between any exhaust grill and fan for low noise level.
   b) Fan location should allow sufficient access for service.

Mount Bracket (NB).

Mount Fan.

2. Using the wood screws provided, attach the mounting bracket (NB or MB) to a support beam at the selected location. Fan mounting can be at any point along the duct and in any angle, however, vertical mounting is recommended to reduce condensation buildup in the fan. If a horizontal installation is necessary and condensation buildup may pose a problem, either wrap insulation around the fan or drill a ¼" hole in the bottom of the housing (along with an NPT insert [by others] and drain tubing) allowing condensation to drain.
3. Attach fan to the mounting bracket with the sheet metal screws provided. Wiring box should be positioned for easy access. Bracket is provided with rubber vibration isolation grommets to prevent the transmission of sound through the structure. Be careful not to overtighten. Also, care should be taken not to strip the plastic housing. Screws are self tapping and do not require pilot holes. However, pilot holes (no larger than 9/32") are recommended.
4. Connect duct work to inlet and outlet of fan using CB clamps or duct tape. When using insulated duct, it is recommended that the inner vinyl core be clamped or taped to the inlet and outlet and that the vapor barrier surrounding the insulation be duct taped to the fan housing.

Mount Bracket (MB).

Mount Fan.

NOTE: Steps 2 & 3 may be reversed.

Installing DG Supply/Exhaust Grill

If a Vent/Light combination kit is purchased, the VLC vent/lights are supplied with a separate installation instruction replacing steps 1 through 4.

1. Select the grill mounting point within the area to be ventilated. To ease installation, locations of framing beams within the walls or joists supporting the ceiling should be considered. Collar/damper is provided with a perforated hanging strap for attachment directly to a beam or joist. Allow sufficient space between the collar/damper and the beam to attach the duct work. If the location of the grill does not allow direct attachment, a cross-member mounted to the framing should be used.

Mount Collar

2. Place the mounting collar/damper in the selected location and trace a circle onto the surface. From the interior side of the room, cut through the surface. Please note: In order to assure a smoother finish when mounting through a sheetrock or tile type ceiling, it is recommended that a razor knife be used to make the cut.
3. From within the attic or crawl space, place the mounting collar into the hole until the edge of the collar is flush with the interior wall or ceiling surface. Attach collar to the support beam with the 2" wood screws provided. Attach duct work. Secure using CB or FC clamps and/or duct tape. When installing the damper into rigid type ducting, FC clamps or duct tape should be used.

Side view grill and collar.

***PLEASE NOTE:** When attaching flex duct to the collar/damper combination and an immediate elbow is necessary, be certain that the elbow is installed with a "soft" bend to allow damper blades to operate properly.*

4. Snap the grill into the mounting collar/damper. Grill should be pushed tightly into place for an airtight fit. If there is a gap between the collar and the ceiling it should be caulked to avoid air leakage. For subsequent cleaning the grill can be pulled out and cleaned.

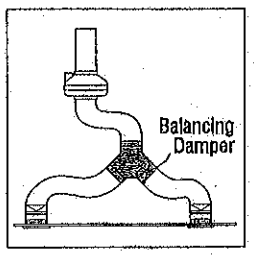
Installing DG Supply/Exhaust Grill

When installing a **DLX kit**, a balancing damper has been included to allow for adjustment of the system. The damper may be used where the grills will be connected using branches of unequal length or where the flow will need to be balanced for any reason.

"Y" with balancing damper.

To Install The Damper:

1. The Damper must be installed on the branch with the least restriction.
   This is generally the duct that is shortest or has the fewest bends.
2. Drill a 9/16" hole approximately 1½" from the edge on the flat side of the "Y".
3. Place the washer over the threaded shaft on the damper.
4. Insert the damper, shaft first, into the hole just drilled.
5. Attach the handle using the wing nut.
6. Adjust the damper to balance airflow and tighten the wing nut to secure.



FR Series Fan and balancing damper.

Flexible Duct Installation Hints

Flexible insulated duct is strongly recommended where allowed by local code for bathroom exhaust applications, where ducting passes through unconditioned space or where noise is a factor. Failure to use insulation could result in excessive condensation buildup within the duct, and undesirable sound levels within the room. For the quietest possible installations, Fantech recommends a minimum of 8' of insulated flexduct between any exhaust grill and fan. When using flexible type duct work, duct should be stretched as tight and straight as possible. Failure to do so could result in dramatic loss of system performance. Flexible duct should be connected to the fan with CB type clamps or duct tape. All connections should be as airtight as possible to maximize system performance.

Warnings

DO NOT CONNECT POWER SUPPLY until fan is completely installed. Make sure electrical service to the fan is locked in "OFF" position

1. All units are suitable for use with solid-state speed control.
2. This unit has rotating parts and safety precautions should be exercised during installation, operation and maintenance.
3. **CAUTION:** "For General Ventilation Use Only. Do Not Use To Exhaust Hazardous Or Explosive Materials And Vapors."
4. **WARNING: To reduce the risk of fire, electrical shock, or injury to persons-observe the following:**
   a. Use this unit only in the manner intended by the manufacturer. If you have questions, contact the factory.
   b. Before servicing or cleaning, switch power off at service panel and lock service panel to prevent fan from being switched on accidentally.
   c. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
   d. The combustion airflow needed for safe operation of fuel burning equipment may be affected by this unit's operation. Follow the heating equipment manufacturer's guidelines and safety standards such as those published by the National Fire Protection Association (NFPA), the American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE) and the local code authorities.
   e. When cutting or drilling into wall or ceiling, do not damage electrical wires or other hidden utilities.
   f. Exhaust fans must always be vented to the outdoors.
   g. Acceptable for use over a bathtub or shower.
   h. NEVER place a switch where it can be reached from a tub or shower.
5. **WARNING!** Check voltage at the fan to see if it corresponds to the motor nameplate.

GUARDS MUST BE INSTALLED WHEN FAN IS WITHIN REACH OF PERSONNEL OR WITHIN SEVEN (7) FEET OF WORKING LEVEL OR WHEN DEEMED ADVISABLE FOR SAFETY.

Electrical Connection

1. Remove the screws securing the terminal box cover plate located on the side of the fan. All fan motor connections are pre-wired to an electrical terminal strip. A ⅜" romex type cable restraint connector will be needed to secure the wiring through the knockout provided on the side of the terminal box.
2. Bring incoming electrical service through the romex connector and the fan knockout. Be sure to place the connector nut over the wiring coming into the terminal box. There are two open ports on the terminal strip. Using a small regular screwdriver, tighten the neutral (white) wire of the incoming supply under the open terminal strip port labeled "N". Tighten the line (black) wire of the incoming supply under the open terminal strip port labeled "L". Since the fan motor is isolated within a plastic housing, grounding is not necessary.
3. Secure the romex connector. Secure the incoming supply with the romex connector. Replace the fan terminal box cover. All fan motor and capacitor connections have been pre-wired from the factory. No additional fan wiring is necessary.

Liquid tight wiring – Top View (For outside applications).

Romex wiring – Top View

Troubleshooting

If fan fails to operate, please check the following:

1. Consult wiring diagrams (see below) to insure proper connection.
2. Check motor lead wiring, capacitor leads and incoming supply leads to insure definite contact.
3. If possible, use a meter to test for continuity across the fan motor leads. In order to do this, the capacitor must be disconnected (do not test the capacitor - it will not meter continuity). If motor leads show continuity, consult factory for a replacement capacitor.

Maintenance Instructions

Since fan bearings are sealed and provided with an internal lubricating material, no additional lubrication is necessary.

Five (5) Year Warranty

DURING ENTIRE WARRANTY PERIOD:
FANTECH will repair or replace any part which has a factory defect in workmanship or material. Product may need to be returned to the Fantech factory, together with a copy of the bill of sale and identified with RMA number.

OR FACTORY RETURN YOU MUST:
- Have a Return Materials Authorization (RMA) number. This may be obtained by calling FANTECH either in the USA at 1.800.747.1762 or in CANADA at 1.800.565.3548. Please have bill of sale available.
- The RMA number must be clearly written on the outside of the carton, or the carton will be refused.
- All parts and/or product will be repaired/replaced and shipped back to buyer; no credit will be issued.

OR
The Distributor may place an order for the warranty part and/or product and is invoiced. The Distributor will receive a credit equal to the invoice only after product is returned prepaid and verified to be defective.

FANTECH WARRANTY TERMS DO NOT PROVIDE FOR REPLACEMENT WITHOUT CHARGE PRIOR TO INSPECTION FOR A DEFECT.
REPLACEMENTS ISSUED IN ADVANCE OF DEFECT INSPECTION ARE INVOICED, AND CREDIT IS PENDING INSPECTION OF RETURNED
MATERIAL. DEFECTIVE MATERIAL RETURNED BY END USERS SHOULD NOT BE REPLACED BY THE DISTRIBUTOR WITHOUT CHARGE TO THE END USER, AS CREDIT TO DISTRIBUTOR'S ACCOUNT WILL BE PENDING INSPECTION AND VERIFICATION OF ACTUAL DEFECT BY FANTECH.

THE FOLLOWING WARRANTIES DO NOT APPLY:
- Damages from shipping, either concealed or visible. Claim must be filed with freight company.
- Damages resulting from improper wiring or installation.
- Damages or failure caused by acts of God, or resulting from improper consumer procedures, such as:
  1. Improper maintenance
  2. Misuse, abuse, abnormal use, or accident, and
  3. Incorrect electrical voltage or current.
- Removal or any alteration made on the FANTECH label control number or date of manufacture.
- Any other warranty, expressed, implied or written, and to any consequential or incidental damages, loss or property, revenues, or profit, or costs of removal, installation or reinstallation, for any breach of warranty.

WARRANTY VALIDATION
- The user must keep a copy of the bill of sale to verify purchase date.
- These warranties give you specific legal rights, and are subject to an applicable consumer protection legislation. You may have additional rights which vary from state to state.

Garantie de 5 ans

La présente garantie remplace toutes les garanties antérieures.

DURANT TOUTE LA PÉRIODE DE GARANTIE:
FANTECH, INC. s'engage à réparer ou à remplacer toute pièce présentant un défaut d'usine en matière de qualité d'exécution ou de matériau. Il sera peut être nécessaire de retourner le produit à l'usine FANTECH, accompagné d'une copie du contrat de vente et du numéro d'autorisation de retour.
POUR RETOURNER UN PRODUIT À L'USINE, VOUS DEVEZ:
- Obtenir un numéro d'autorisation de retour; pour ce faire, communiquer avec FANTECH, INC. aux États-Unis au numéro 1 800 747-1762, ou au Canada, au numéro 1 800 565-3548. Veuillez avoir votre contrat de vente à portée de la main.
- S'assurer que le numéro d'autorisation de retour est lisible sur l'extérieur de la boîte, sinon la boîte sera refusée.
- Toutes les pièces et/ou le produit seront réparés ou remplacés puis retournés à l'acheteur. Aucun crédit ne sera accordé.

OU
Le Distributeur peut commander une pièce ou un produit couvert par la garantie; la facture lui sera envoyée. Le distributeur ne sera crédité du montant de sa facture qu'après que le produit a été retourné port payé et qu'il a été trouvé défectueux.
LES TERMES DE LA GARANTIE DE FANTECH NE PRÉVOIENT PAS DE REMPLACEMENT SANS FRAIS AVANT QUE LA PIÈCE OU LE PRODUIT DÉFECTUEUX AIT ÉTÉ INSPECTÉ. LES PRODUITS OU PIÈCES REMPLACÉS AVANT L'INSPECTION DE LA DÉFECTUOSITÉ SERONT FACTURÉS ET LE MONTANT DU CRÉDIT EST FONCTION DE L'INSPECTION DE LA PIÈCE OU DU PRODUIT RETOURNÉ. LE DISTRIBUTEUR NE DOIT PAS REMPLACER SANS FRAIS POUR L'UTILISATEUR FINAL L'ÉQUIPEMENT DÉFECTUEUX RETOURNÉ PAR L'UTILISATEUR FINAL, CAR LE COMPTE DU DISTRIBUTEUR NE SERA CRÉDITÉ QU'APRÈS L'INSPECTION ET LA VÉRIFICATION PAR FANTECH DE LA DÉFECTUOSITÉ.
LES GARANTIES NE S'APPLIQUENT PAS DANS LES CAS SUIVANTS:
- Dommages dus au transport (dissimulés ou visibles). Les réclamations doivent être faites à la compagnie de fret.
- Dommages dus au mauvais câblage ou à l'installation inappropriée.
- Dommages ou défectuosité causés par une calamité naturelle ou résultant d'une procédure irrégulière de l'acheteur, notamment :
  1. Entretien irrégulier
  2. Mauvais usage, usage abusif, usage anormal ou accident
  3. Tension ou courant électrique incorrect
- Enlèvement ou toute modification du numéro de contrôle ou de la date de fabrication de l'étiquette FANTECH
- Toute autre garantie expresse, écrite ou implicite, pour les dommages accidentels ou indirects, perte de biens, de recettes, manque à gagner ou coûts relatifs à la dépose, à l'installation ou à la réinstallation, en cas de violation de garantie.

CERTIFICATION DE LA GARANTIE:
- L'utilisateur doit conserver une copie du contrat de vente pour confirmer la date d'achat.
- Les présentes garanties vous donnent des droits spécifiques reconnus par la loi et sont régies par les lois sur la protection du consommateur appropriées. Il est possible que différents états offrent d'autres droits.

Garantia por cinco (5) años

Esta garantía reemplaza toda otra garantía anterior.

DURANTE EL PERÍODO INTEGRO DE LA GARANTÍA:
FANTECH reparará o reemplazará toda parte que presente un defecto en el material o en la mano de obra. Es posible que el producto deba ser devuelto a la fabrica FANTECH, juntamente con una copia de la constancia de compraventa e identificado con el número de RMA.
PARA DEVOLUCIÓN A FÁBRICA USTED DEBE:
- Tener un número de Autorización de Devolución de Material (RMA). Esto se puede obtener llamando a FANTECH ya sea en los Estados Unidos al 1.800.747.1762
- en Canadá al 1.800.565.3548. Tenga a mano la constancia de compraventa.
- El número de RMA deberá estar claramente escrito en la parte exterior de la caja, de lo contrario la caja será rechazada.
- Todas las partes y/o el producto serán reparados/reemplazados y devueltos al comprador; no se otorgará crédito.

O BIEN
El Distribuidor puede colocar una orden por la parte y/o producto en garantía y facturarla/o. El Distribuidor recibirá un crédito igual a la factura sólo después de que se haya devuelto el producto con pago previo y con verificación de defecto.
LAS CONDICIONES DE LA GARANTÍA DE FANTECH NO CONTEMPLAN EL REEMPLAZO SIN CARGO ANTES DE REALIZAR LA INSPECCIÓN PARA DETECTAR DEFECTOS. LOS REEMPLAZOS EMITIDOS ANTES DE INSPECCIONAR POR DEFECTOS SON FACTURADOS, Y EL CRÉDITO ESTÁ A LA ESPERA DE INSPECCIÓN DEL MATERIAL DEVUELTO. EL MATERIAL DEFECTUOSO DEVUELTO POR LOS USUARIOS FINALES NO DEBERÁ SER REEMPLAZADO POR EL DISTRIBUIDOR SIN CARGO PARA EL USUARIO FINAL, YA QUE EL CRÉDITO DE LA CUENTA DEL DISTRIBUIDOR ESTARÁ A LA ESPERA DE INSPECCIÓN Y VERIFICACIÓN DEL DEFECTO REAL POR FANTECH.
LAS SIGUIENTES GARANTÍAS NO SE APLICAN:
- Daños durante el envío, ya sean encubiertos o visibles. Se deberá presentar el reclamo a la compañía transportadora.
- Daños ocasionados por cableado o instalación indebidos.
- Daños o fallas causados por hechos fortuitos, u ocasionados por procedimientos impropios por parte del usuario, tales como:
  1. Mantenimiento indebido
  2. Uso indebido, abuso, uso anormal o accidente y
  3. Tensión o corriente eléctrica incorrecta.
- Remoción o modificación realizada al número de control del rótulo de FANTECH o de la fecha de fabricación.
- Toda otra garantía, expresa, implícita o escrita, daños y perjuicios, pérdida de propiedad, de ingresos, o de beneficios, o costo de remoción, instalación o reinstalación por incumplimiento de la garantía.

VALIDACIÓN DE LA GARANTÍA
- El usuario debe conservar una copia de la constancia de compraventa para verificar la fecha de compra.
- Estas garantías le otorgan derechos legales específicos, y están sujetas a una legislación aplicable para protección del consumidor. Usted puede tener derechos adicionales que varían de estado en estado.

Fantech

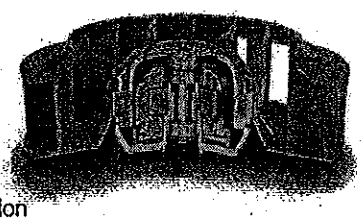
Trust the Industry Standard!

Improved UV resistance!

HP Series Fans
for Radon Applications

Why put your reputation at stake by installing a fan you know won't perform like a Fantech? For nearly twenty years, Fantech has manufactured quality ventilation equipment for Radon applications. Fantech is the fan Radon contractors have turned to in over 1,000,000 successful Radon installations worldwide.

Fantech HP Series Fans Provide the Solutions to meet the challenges of Radon applications:



HOUSING
- UV resistant, UL listed durable plastic
- UL Listed for use in commercial applications
- Factory sealed to prevent leakage
- Watertight electrical terminal box
- Approved for mounting in wet locations - i.e. Outdoors

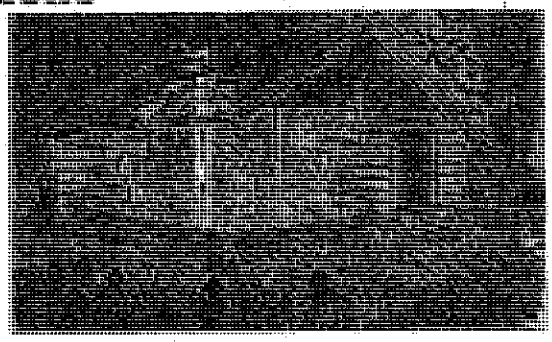
MOTOR
- Totally enclosed for protection
- High efficiency EBM motorized impeller
- Automatic reset thermal overload protection
- Average life expectancy of 7-10 years under continuous load conditions

RELIABILITY
- Five Year Full Factory Warranty
- Over 1,000,000 successful radon installations worldwide

HP Series Fans are specially designed with higher pressure capabilities for Radon Mitigation applications

Fantech

Fantech has developed the HP Series fans specifically to suit the higher pressure capability requirements needed in Radon Mitigation applications. Most Radon Mitigators who previously used the Fantech FR Series fans have switched to the new HP Series.



Performance Data

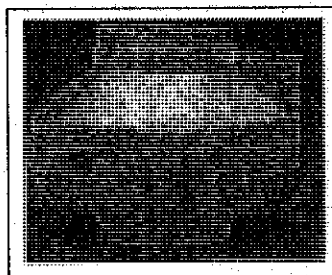
HVI MEMBER™

Performance Curves

Fantech provides you with independently tested performance specifications.

The performance curves shown in this brochure are representative of the actual test results recorded at Texas Engineering Experiment Station/Energy Systems Lab, a recognized testing authority for HVI. Testing was done in accordance with AMCA Standard 210-85 and HVI 915 Test Procedures. Performance graphs show air flow vs. static pressure.

Use of HP Series fans in low resistance applications such as bathroom venting will result in elevated sound levels. We suggest FR Series or other Fantech fans for such applications.

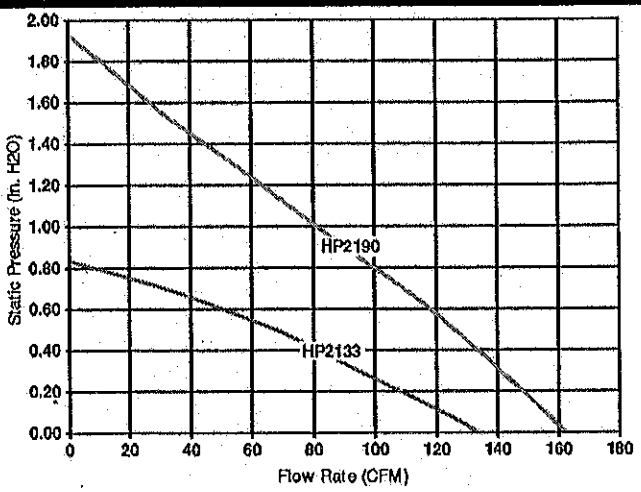


HP FEATURES INCLUDE

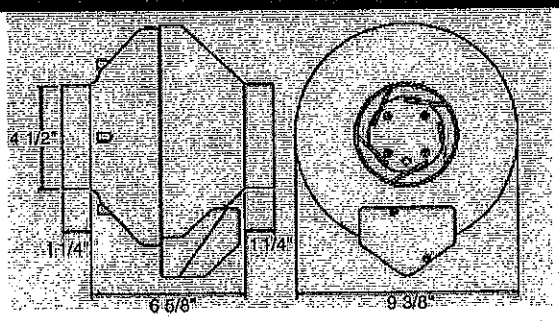
- Improved UV resistant housings approved for commercial applications.
- UL Approved for Wet Locations (Outdoors)
- Sealed housings and wiring boxes to prevent Radon leakage or water penetration
- Energy efficient permanent split capacitor motors
- External wiring box
- Full Three Year Factory Warranty

c UL us

HP2133 and 2190 Radon Mitigation Fans



Tested with 4" ID duct and standard couplings.

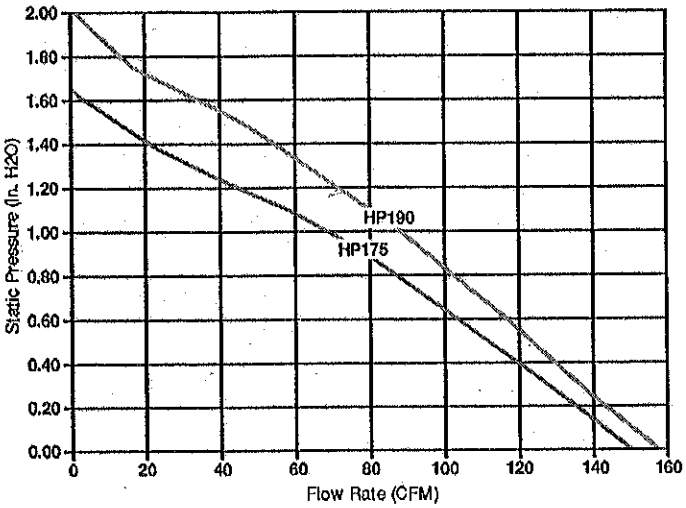


HP2133 – For applications where lower pressure and flow are needed. Record low power consumption of 14-20 watts! Often used where there is good sub slab communication and lower Radon levels.

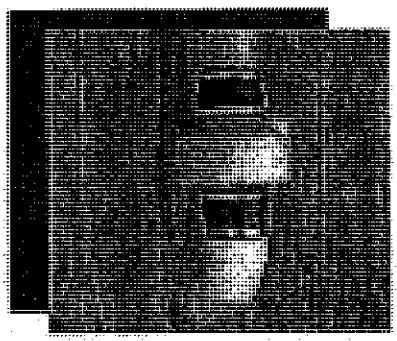
HP2190 – Performance like the HP190 but in a smaller housing. Performance suitable for the majority of installations.

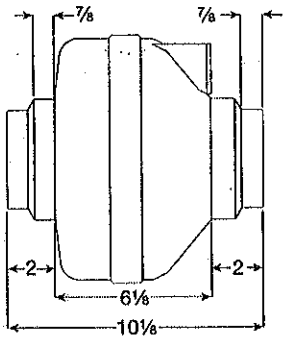
Fans are attached to PVC pipe using flexible couplings.
For 4" PVC pipe use Indiana Seals #156-44, Pipeconx PCX 56-44 or equivalent.
For 3" PVC pipe use Indiana Seals #156-43, Pipeconx PCX 56-43 or equivalent.

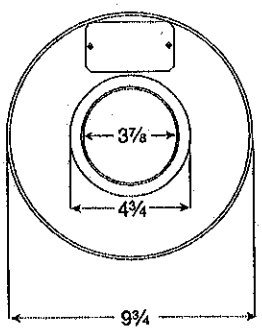
HP175 and HP190 Radon Mitigation Fans



Tested with 4" ID duct and standard couplings.







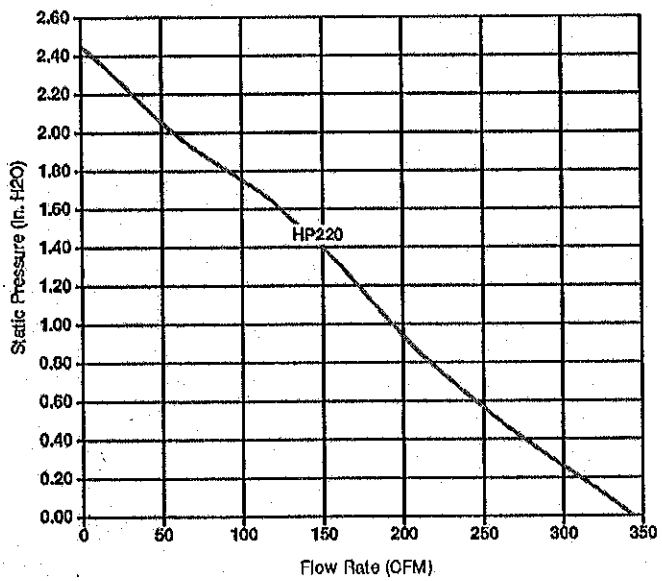
HP175 – The economical choice where slightly less air flow is needed. Often used where there is good sub slab communication and lower Radon levels.

HP190 – The standard for Radon Mitigation. Ideally tailored performance curve for a vast majority of your mitigations.

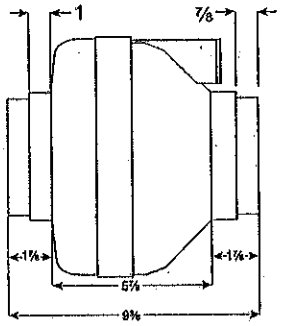
Fans are attached to PVC pipe using flexible couplings.
For 4" PVC pipe use Indiana Seals #151-44, Pipeconx PCX 51-44 or equivalent.

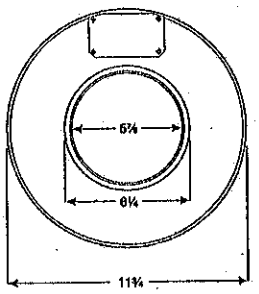
For 3" PVC pipe use Indiana Seals #156-43, Pipeconx PCX 56-43 or equivalent.

HP220 Radon Mitigation Fan



Tested with 6" ID duct and standard couplings.





HP 220 – Excellent choice for systems with elevated radon levels, poor communication, multiple suction points and large subslab footprint. Replaces FR 175.

Fans are attached to PVC pipe using flexible couplings.
For 4" PVC pipe use Indiana Seals #156-64, Pipeconx PCX 56-64 or equivalent.

For 3" PVC pipe use Indiana Seals #156-63, Pipeconx PCX 56-63 or equivalent.

FR Series performance is shown with ducted outlet. Per HVI's Certified Ratings Program, charted air flow performance has been derated by a factor based on actual test results and the certified rate at .2 inches WG.
* Also available with 8" duct connection. Model FR 250-8. Special Order.

Five (5) Year Warranty

This warranty supersedes all prior warranties

DURING ENTIRE WARRANTY PERIOD:

FANTECH will replace any fan which has a factory defect in workmanship or material. Product may need to be returned to the Fantech factory, together with a copy of the bill of sale and identified with RMA number.

FOR FACTORY RETURN YOU MUST:

- Have a Return Materials Authorization (RMA) number. This may be obtained by calling FANTECH either in the USA at 1.800.747.1762 or in CANADA at 1.800.565.3548. Please have bill of sale available.
- The RMA number must be clearly written on the outside of the carton, or the carton will be refused.
- All parts and/or product will be repaired/replaced and shipped back to buyer; no credit will be issued.

OR

The Distributor may place an order for the warranty fan and is invoiced. The Distributor will receive a credit equal to the invoice only after product is returned prepaid and verified to be defective.

FANTECH WARRANTY TERMS DO NOT PROVIDE FOR REPLACEMENT WITHOUT CHARGE PRIOR TO INSPECTION FOR A DEFECT. REPLACEMENTS ISSUED IN ADVANCE OF DEFECT INSPECTION ARE INVOICED, AND CREDIT IS PENDING INSPECTION OF RETURNED MATERIAL. DEFECTIVE MATERIAL RETURNED BY END USERS SHOULD NOT BE REPLACED BY THE DISTRIBUTOR WITHOUT CHARGE TO THE END USER, AS CREDIT TO DISTRIBUTOR'S ACCOUNT WILL BE PENDING INSPECTION AND VERIFICATION OF ACTUAL DEFECT BY FANTECH.

THE FOLLOWING WARRANTIES DO NOT APPLY:

- Damages from shipping, either concealed or visible. Claim must be filed with freight company.
- Damages resulting from improper wiring or installation.
- Damages or failure caused by acts of God, or resulting from improper consumer procedures, such as:

1. Improper maintenance
2. Misuse, abuse, abnormal use, or accident, and
3. Incorrect electrical voltage or current.

- Removal or any alteration made on the FANTECH label control number or date of manufacture.
- Any other warranty, expressed, implied or written, and to any consequential or incidental damages, loss or property, revenues, or profit, or costs of removal, installation or reinstallation, for any breach of warranty.

WARRANTY VALIDATION

- The user must keep a copy of the bill of sale to verify purchase date.
- These warranties give you specific legal rights, and are subject to an applicable consumer protection legislation. You may have additional rights which vary from state to state.

Product Data Sheet

GSE UltraFlex Textured

GSE UltraFlex Textured is the coextruded textured version of GSE UltraFlex. It is a high quality, linear low density polyethylene (LLDPE) geomembrane with one or two coextruded, textured surfaces, and consisting of approximately 97.5% polyethylene, 2.5% carbon black and trace amounts of antioxidants and heat stabilizers; no other additives, fillers or extenders are used. The resin used is a specially formulated, proprietary virgin polyethylene and is designed specifically for flexible geomembrane applications. GSE UltraFlex Textured has excellent resistance to UV radiation and is suitable for exposed conditions. This product allows projects with greater slopes to be designed since frictional characteristics are enhanced. *These product specifications meet or exceed GRI GM17.*

Oxidative Induction Time, min	ASTM D 3895, 200° C; O_2, 1 atm	200,000 lb	>100
Roll Length[2] (approximate), ft (m)			830 (252)
Roll Width[2], ft (m)			22.5 (6.9)
Roll Area, ft² (m²)			18,675 (1,734)

NOTES:

- +Note 1: Disperson only applies to near spherical agglomerates. 9 of 10 views shall be Category 1 or 2. No more than 1 view from Category 3.
- +Note 2: 10 mil average. 8 of 10 readings ≥7 mils. Lowest individual ≥ 5 mils.
- GSE UltraFlex Textured is available in rolls weighing about 3,000 lb (1,360 kg).
- [1]The combination of stress concentrations due to coextrusion texture geometry and the small specimen size results in large variation of test results. Therefore, these tensile properties are average roll values.
- All GSE geomembranes have dimensional stability of ±2% when tested with ASTM D 1204 and LTB of <-77° C when tested with ASTM D 746.
- [2]Roll lengths and widths have a tolerance of ± 1%.

RE: SOIL VAPOR COLLECTION SYSTEM (SVCS) CERTIFICATION
Former Flushing Industrial Park (Parcel 2)
40th Road and College Point Boulevard
Flushing, Queens County, New York
Langan Project No.: 1838804

I, Gerard Coscia, am currently a registered professional engineer licensed by the State of New York. I had primary direct responsibility for design and implementation of the Soil Vapor Collection System for Flushing Industrial Park, Parcel 2 (NYSDEC BCA Index No. W2-1027-04-10 Site No. C241078).

I certify that the implementation of the As-Built Soil Vapor Collection System dated 28 November 2007, signed and stamped by Gerard Coscia, a NYS licensed Professional Engineer with Langan Engineering & Environmental Services, P.C., was observed by qualified professionals under my supervision and that the requirements set forth in the design have been achieved. Copies of the As-Built Soil Vapor Collection System drawings are included as an attachment to the Engineering Controls (EC) Completion Report included in Appendix G of the November 2007 Final Engineering Report submitted by AKRF, Inc, of New York, New York.

I certify that all applicable Engineering Controls and all operation and maintenance requirements applicable to the vapor mitigation system are contained in the attached Engineering Controls (EC) Completion Report dated 28 November 2007. A Site Management Plan has been submitted by the Applicant for the continual and proper operation, maintenance, and monitoring of the vapor mitigation system.

I certify that all information and statements in this certification are true. I understand that a false statement made herein is punishable as Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law.

Gerard Coscia, P.E.
NYS Professional Engineer #059086-1

RE: **Soil Vapor Mitigation System Activation Status Memorandum**
Sky View Parc – 131-07 20th Road
Flushing, Queens, New York
Langan Project No. 001838804

Langan completed the preliminary phase of the pilot test of the sub-slab soil vapor collection (SVC) system following its re-activation this past week. This system had been taken offline during building construction activities at the site in accordance with Langan's Engineering Controls (EC) Completion Report dated 28 November 2007. The system has been re-activated in anticipation of the occupancy of the first floor of the building (opening of a BJ's Wholesale Club).

The system has been modified significantly since submittal of the EC Completion Report and certification. Modifications include:

- The extension of the exhaust stacks to 6-stories above ground level;
- The addition of a second inline fan to each stack near the top of each stack;
- The reinstallation of the polyethylene vapor barrier in the northern half of the building footprint;
- The installation of a waterproofing course (secondary vapor barrier) to the underside of the building slab; and
- Modifications to the number and location of clean-outs and sampling ports (SP).

Langan has prepared this memorandum to document the current status and operation of the SVC system. A revised EC Completion Report documenting these modifications will be submitted subsequent to completion of building construction activities.

System Pilot Testing

Muss Development personnel turned on the SVC systems inline fans on 19 January 2010. Langan conducted confirmation (pilot) testing of the SVC system while in active mode on 20 January 2010. Confirmation testing consisted of measuring the vacuum at the 16 fan locations and 11 permanent monitoring/sampling ports using a digital micro-manometer and magnahelic differential pressure gauges. A copy of the system inspection log is attached.

At the fans, vacuum measurements varying from -1.40 inches water column (wc) at Fan-4B (Line 4) to -5.60 inches wc at Fan-7A (Line 7) were observed. Based on our calculations and the inline fan manufacturer's specifications, these vacuums correspond to average flow rates between 60 to 150 cubic feet per minute (cfm) of soil vapor per fan or a total system flow rate of 480 to 800 cfm. Measurable vacuums were observed at the endpoint cleanout sampling ports in six of the eight pipe runs, varying between -0.042 (Line 7) to -0.091 (Line 4) inches wc. Measurements could not be obtained from the two remaining cleanouts, as these were lost during construction of the building's loading docks. Measurable vacuums were also observed in the five permanent perimeter sampling ports. These monitoring ports represent the farthest points from the perforated SVC system pipe runs. The vacuum measurements demonstrated that the SVCS system is properly operating and that negative pressures are being maintained in the gravel layer beneath the vapor barrier.

It should be noted that system performance may be affected by daily weather conditions. The vacuum measurements discussed above were collected during cold weather conditions on a clear day with falling barometric pressures.

Langan also conducted screening of volatile organic vapors and methane gas using a PID (ppb mini-RAE) and a landfill gas meter (Landtech GEM 200). Volatile organic vapors were measured varying in concentration from 64 to 4,320 ppb in the SVCS piping, with the highest readings found in SP-11. At this time the spikes in concentration observed in the SVC system piping can be primarily attributed to use of cleaning solvents and adhesives to connect the piping during system construction. Over time as the system operates, the contributions of these sources to the volatile organic fraction of the system exhaust are expected to diminish. . Methane was not detected at any of the sampling or exhaust points during the pilot test.

Permitting

System emissions are to be tested by AKRF during this pilot phase. The analytical data should be compared to the emissions standards in the NYSDEC publication "Air Guide 1" to assess the need for treatment units as part of the vapor mitigation system. Under the NYSDEC

Brownfield Cleanup Program, air permit requirements are waived provided that substantive requirements are met. AKRF will collect air samples from the sampling ports and fan exhaust as outlined in their SMP to confirm substantive requirements of air permitting are met.

Conclusions

Based on Langan site inspections and testing completed to date, the SVC system is operating and effectively moving air throughout the subslab of the building. All sixteen inline venting fans have been installed and activated and temporary repairs have been completed to the unfinished system components. Based on data gathered during Langan's system inspection on 20 January 2010, the SVC system (in this temporary modified configuration) is meeting performance expectations. As per the NYSDEC-approved Site Management Plan (SMP) submitted by AKRF, weekly system inspections should be completed for the first month of operation, followed by two monthly inspections, then quarterly inspections thereafter. Langan may recommend continuing weekly system inspections after the first month to confirm the effectiveness of the temporary system repairs until such time as the permanent system repairs are completed. This recommendation will depend on system performance and site management practices as they relate to protection of SVC system components and temporary repairs.

As previously stated in the EC Completion Report, the SVCS should not be turned off without written approval by NYSDEC and NYSDOH and even temporary suspensions require approval from NYSDEC and NYSDOH after building occupancy. In order to determine whether the system can be converted to passive venting (i.e., without operating the in-line fans) during building occupancy, a separate sampling protocol will be established by Langan for approval by NYSDEC and NYSDOH. During building occupancy, systems should remain in place and operational until permission to discontinue use is provided in writing by NYSDEC and NYSDOH.

As identified previously, Langan will issue a revised EC Completion Report and formally certify as-built plans for the system upon completion of building construction and installation of remaining SVC system components in their final configuration, including several sampling ports and vacuum line clean-out terminations.

Please call with any questions.

Attachment: System Inspection Log

PERIODIC INSPECTION LOG
SOIL VAPOR COLLECTION SYSTEM (SVCS)
FLUSHING INDUSTRIAL PARK, 40TH ROAD AND COLLEGE POINT BOULEVARD, FLUSHING, NEW YORK

Inspector Name: Marshall King	Date: 1/20/2010
Time IN: 13:30	Time OUT: 20:30

GENERAL

Weather: Mostly Sunny Temp: 42°F (max) Barometric Pressure: 29.83 in Hg and rising

When was the last rain event? Trace precip on 1/19/2010; Last measurable 1/17/2010.

Is this a daily/(weekly)/monthly system check? (circle one)

Are all system fans operating? (Yes) No If no, please list:

Any evidence of system tampering or vandalism? NO

Were all cleanout and sampling port caps securely attached prior to system testing? YES

Please list caps that were not secure in place: N/A

Re: Laboratory Project No. 29000
Case: 29000; SDG: NY135909

Dear Ms. Brunner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on February 10th, 2010. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 02/10/10 ETR No: 135909		
820120	CE-VAPOR-1	02/08/10	AIR
820121	CE-VAPOR-2	02/08/10	AIR
820122	CE-VAPOR-3	02/08/10	AIR
820123	CE-VAPOR-4	02/08/10	AIR
820124	CE-AA	02/08/10	AIR
820125	CE-VAPOR-5	02/08/10	AIR
820126	CE-VAPOR-6	02/08/10	AIR
820127	CE-VAPOR-7	02/08/10	AIR
820128	CE-VAPOR-8	02/08/10	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The volatile organics analyses for several of the samples referenced above were accomplished at dilution based on screen analyses due to the presence of target or non-target analytes at high concentrations.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

MANUAL INTEGRATION REPORT

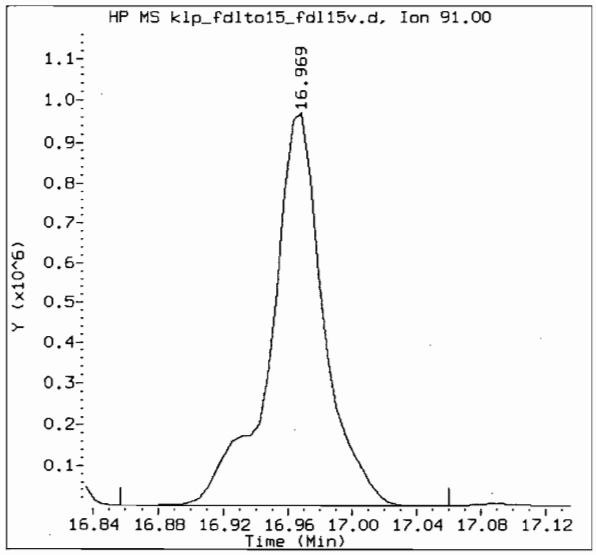
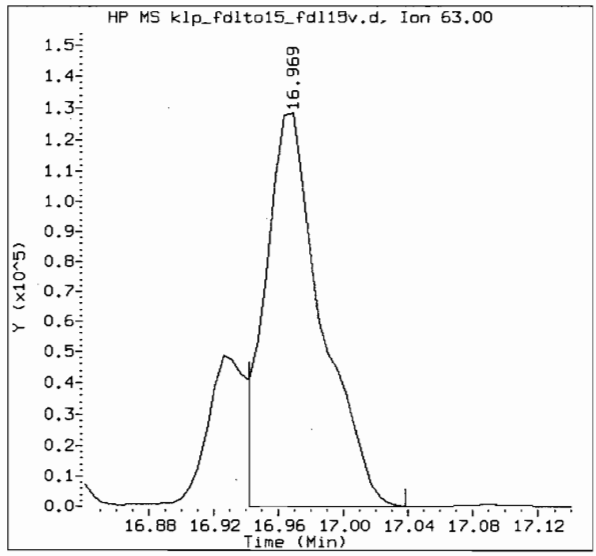
Data File Name: fdl15v.d
Client Sample ID: ASTD015
Compound Name: 2-Chlorotoluene

Inj. Date and Time: 04-FEB-2010 00:29
Instrument ID: F.i
CAS #: 95-49-8

Target Version: Target 3.50
Report Version: 1.1
Report Date: 02/09/2010 10:41

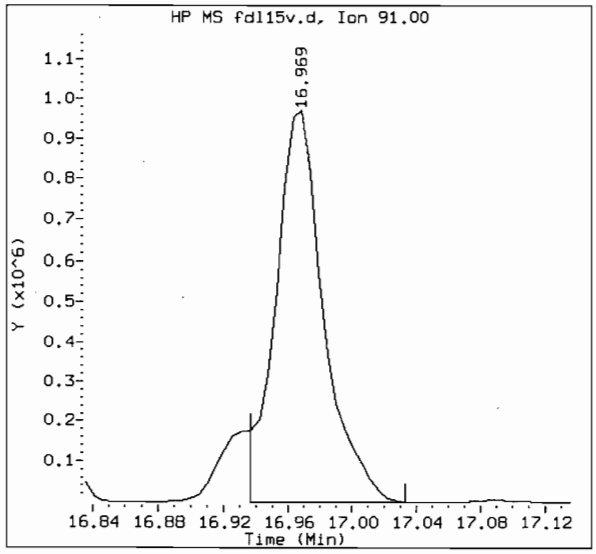


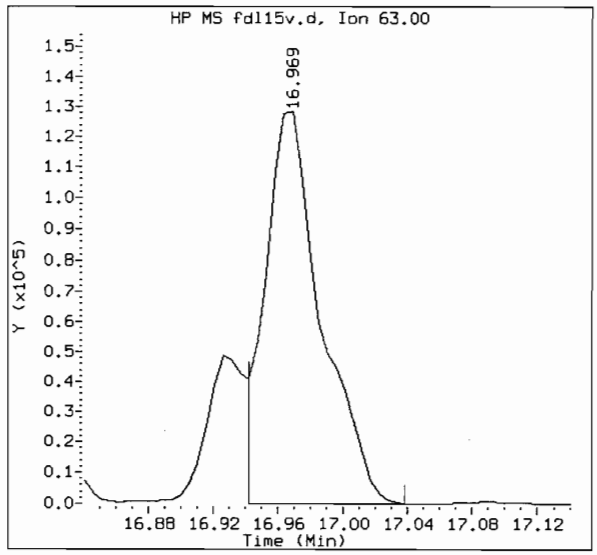


Original Integrations:

Area = 2264902

Area = 311524





Final Integrations:

Area = 2060126

Area = 311524

Manual Integration Reason: MI1 - Poor automated baseline

QC Flag Legend

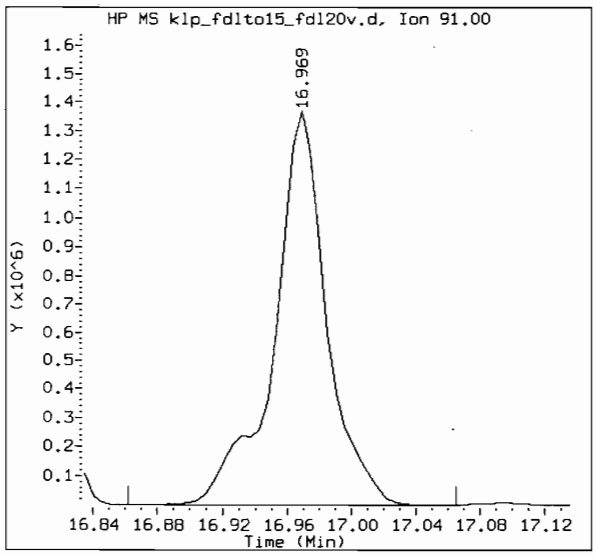
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

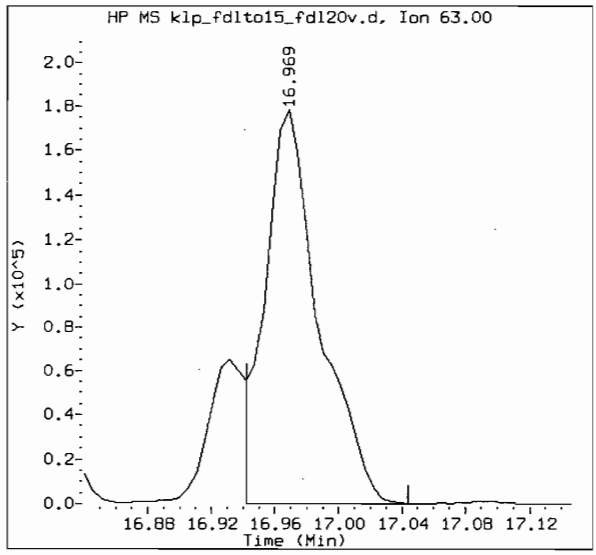
MANUAL INTEGRATION REPORT

Data File Name: fdl20v.d
Client Sample ID: ASTD020
Compound Name: 2-Chlorotoluene

Inj. Date and Time: 04-FEB-2010 01:19
Instrument ID: F.i
CAS #: 95-49-8

Target Version: Target 3.50
Report Version: 1.1
Report Date: 02/09/2010 10:41

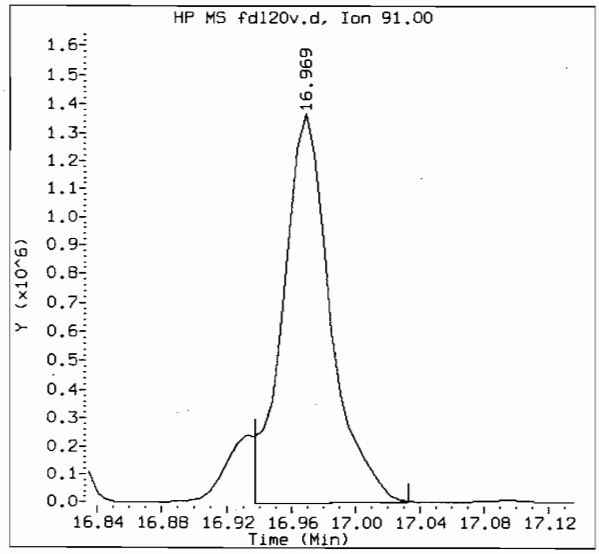


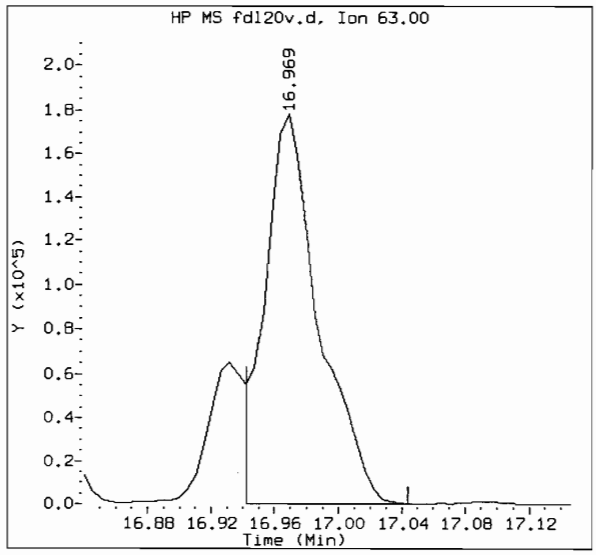


Original Integrations:

Area = 3119407

Area = 426357





Final Integrations:

Area = 2883426

Area = 426357

Manual Integration Reason: MI1 - Poor automated baseline

QC Flag Legend

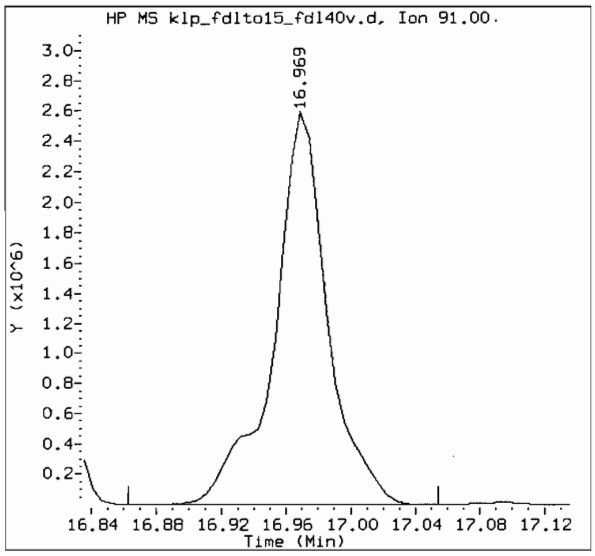
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

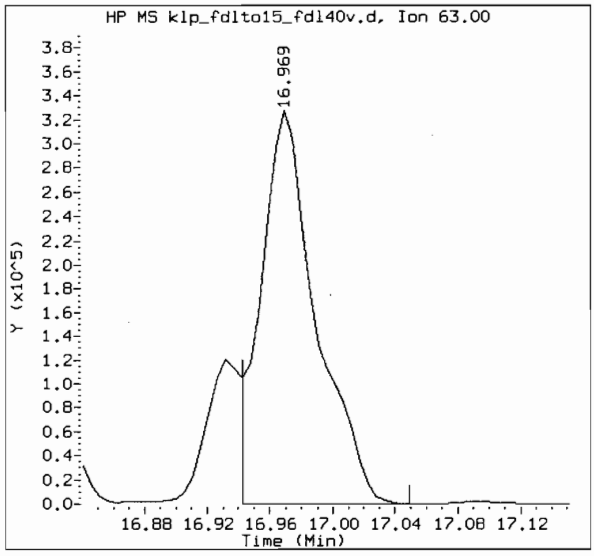
MANUAL INTEGRATION REPORT

Data File Name: fdl40v.d
Client Sample ID: ASTD040
Compound Name: 2-Chlorotoluene

Inj. Date and Time: 04-FEB-2010 02:09
Instrument ID: F.i
CAS #: 95-49-8

Target Version: Target 3.50
Report Version: 1.1
Report Date: 02/09/2010 10:41

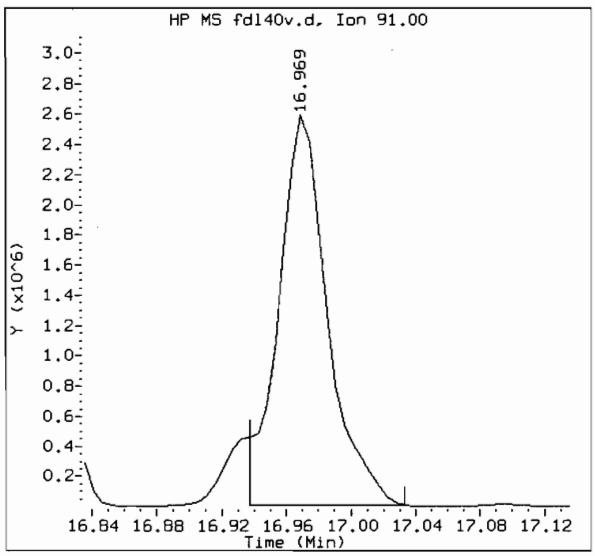


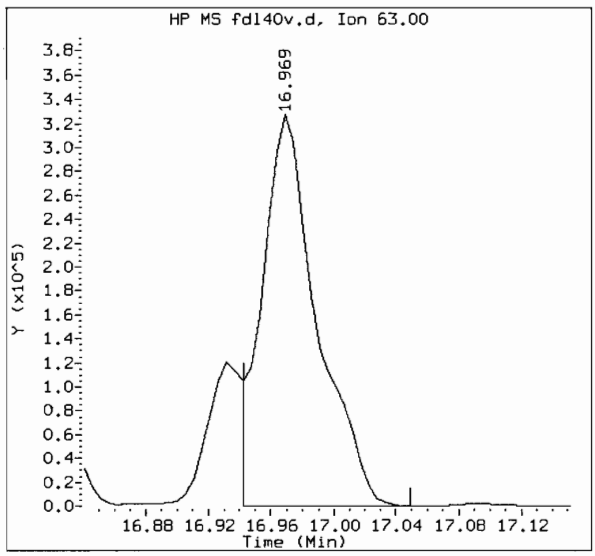


Original Integrations:

Area = 6049804

Area = 803359





Final Integrations:

Area = 5572127

Area = 803359

Manual Integration Reason: MI1 - Poor automated baseline

		=	1.00	6.00		=	1.00	6.00	1.00
		=	1.00	6.00		=	1.00	6.00	1.00
		=	1.00	6.00		=	1.00	6.00	1.00

CALCULATION:

$$\frac{\text{Preadjusted Pressure("Hg)} + 29.92\text{" Hg}}{29.92\text{" Hg}} \times 6\text{L} = \text{Preadjusted Volume (L)}$$

$$\frac{\text{Preadjusted Pressure(psig)} + 14.7\text{psig}}{14.7\text{psig}} \times 6\text{L} = \text{Preadjusted Volume (L)}$$

$$\frac{\text{Adjusted Volume (L)}}{\text{Preadjusted Volume (L)}} = \text{Dilution Factor}$$

Where:
29.92 "Hg = Standard atmospheric pressure in inches of Mercury ("Hg).
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig).
6 L = Volume of SUMMA canister at atmospheric pressure.

1.0 INTRODUCTION

This Quarterly Vapor Monitoring Report has been prepared by AKRF, Inc. (AKRF) to summarize the sub-slab depressurization system (SSDS) vapor discharge monitoring performed at the Flushing Industrial Park (Western), Parcel 2 (BCP Site No. C241078) during the second quarter of 2010. This Parcel, in combination with Flushing Industrial Park (Eastern), Parcel 1 (BCP Site No. C241051), Flushing Industrial Park (Western Waterfront), Parcel 3 (BCP Site No. C241079), and Flushing Industrial Park (Flushing River), Parcel 4 (former BCP Site No. C241080), comprise approximately 13.6 acres located on the northwestern corner of College Point Boulevard and 40th Road, in Flushing, Queens, New York (collectively, the Property). The Property location is shown on Figure 1.

In 2001, C.E. Flushing, LLC (the initial Volunteer) entered into a Voluntary Cleanup Agreement with the New York State Department of Environmental Conservation (NYSDEC) with regard to the Property. By letter dated April 2, 2004, the Volunteer requested transition from the Voluntary Cleanup Program to the Brownfield Cleanup Program (BCP) for completion of the remedial program for the Property. In December 2004, the Volunteer entered into separate Brownfield Cleanup Agreements (BCAs) with NYSDEC for each of four Parcels – each one generally matching the former operable unit (OU). Amended BCAs to revise the Volunteers were executed in June 2005, December 2006, April 2007 and November 2007. In December 2007, Final Engineering Reports and Site Management Plans (SMPs) were submitted and NYSDEC granted Certificates of Completion for Parcels 1, 2 and 3. Under the SMPs, post-remediation vapor monitoring is to be performed on a quarterly basis after the start up of the SSDS.

2.0 VAPOR MITIGATION SYSTEM OPERATION & MAINTENANCE

Site remediation of Parcel 2 included the installation of a vapor mitigation system, comprised of an SSDS and a vapor barrier, under the western retail building of the property development. The vapor mitigation system design and installation oversight were conducted by Langan Engineering and Environmental Services, Inc. (Langan) of Elmwood Park, New Jersey. The SSDS construction was completed between October 30 and November 21, 2007, as documented in Langan's Engineering Controls (EC) Completion Report, dated November 28, 2007. The SSDS consists of eight parallel runs of six-inch diameter solid and perforated Schedule 80 PVC pipe installed within a continuous gravel layer beneath the vapor barrier and site cover. The piping connects together at two manifold locations to the north and south of the Parcel 2 western retail building footprint. The two manifolds each consist of four pipe risers (exhaust stacks) with independent inline vacuum fans and sixteen (16) pipe cleanouts, designated SP-1 through SP-16 at the perimeter of the building. The system consists of eight (8) exhaust stacks with sixteen (16) in-line fans (2 fans per exhaust stack, though initially only one per stack was installed), with sampling ports in the riser pipes beneath in each respective fan. See Figure 2 for the piping layout and the vapor sampling locations in the pipe risers (designated CE-VAPOR-1 to CE-VAPOR-8).

The vapor barrier is comprised of 60-millimeter thick linear low-density polyethylene geomembrane. The vapor barrier seams and perforations were sealed with double sided tape per manufacture specifications.

During the construction phase of the western retail building on Parcel 2, the active operation of the SSDS was temporarily suspended. Langan conducted confirmation (pilot) testing of the SSDS while in active operation on January 20, 2010 and concluded that the SSDS was operating effectively. As outlined in Langan's Soil Vapor Mitigation System Activation Status Memorandum dated January 22, 2010, which was submitted to NYSDEC as an attachment to the May 2010 *Quarterly Vapor Monitoring Report*, the

vapor mitigation measures have been modified since the submittal of the EC Completion Report and certification. These modifications included:

- The extension of the exhaust stacks to 6-stories above ground level;
- The addition of the second in-line fan to each stack on the 4th floor near the top of each stack;
- The reinstallation of the vapor barrier in the northern half of the western retail building footprint;
- The installation of a waterproofing course of Liquid Boot (a secondary vapor barrier) to the underside of the western retail building slab; and
- Modifications to the number and locations of clean-outs and sampling ports (SP).

To our knowledge, no additional modifications have been made to the SSDS since the January 20, 2010 activation.

3.0 VAPOR MONITORING ACTIVITIES

3.1 SSDS Inspection

The SSDS has been inspected regularly since the system was restarted on January 20, 2010. Inspections were conducted on a weekly basis during the first month and quarterly thereafter (as part of the quarterly vapor discharge sampling). These inspections consisted of measuring flow rates and vacuum readings to confirm that all of the fans are operational. The inspection performed on May 24 and June 1, 2010 prior to the quarterly sampling event, indicated that all fans were operational and vacuum measurements at all the vapor sampling locations (CE-VAPOR-1 to CE-VAPOR-8) were within acceptable range.

During the inspection, several of the cleanout pipes (SP-2, 3, 4, 7, 13, and 16) were not present, apparently buried beneath pavement; therefore, vapors within these SPs could not be field screened and vacuum readings could be not collected. Vacuum pressures and field-screened vapor concentrations at the accessible cleanout ports (SP-1, 5, 6, 8, 9, 10, 11, 12, 14, and 15) were within normal range. The vacuum at these cleanouts are considered ancillary to those in the risers and these measurements are not necessary to evaluate system performance. The field screening readings would not be representative of sub-slab conditions as the pipes are under vacuum during system operation. As such, future inspection events will only confirm the port and cap integrity at accessible cleanout locations. The inspection log is provided in Appendix A.

3.2 Vapor Sampling Methodology

Vapor samples were collected below each of the upper (4th floor) fans on May 24 and June 1, 2010 to confirm that emissions met the thresholds in the NYSDEC Division of Air Resources (DAR) publication "*Air Guide-1: Annual Guideline Concentrations (AGC)/Short-term Guideline Concentrations (SGC) Tables*", dated September 10, 2007. The vapor samples were collected directly from the sampling ports below the 4th floor SSDS fans. During sampling, the 1st floor fans were running but the 4th floor fans were turned off so there was no vacuum on the sampling port. Eight samples (designated CE-VAPOR-1 to CE-VAPOR-8) were collected with 6-liter Summa canisters equipped with flow regulators and vacuum gauges to allow sample collection over a 30-minute period. Vapors were also field screened by collecting samples in Tedlar® bags and using a photo-ionization detector (PID) to detect volatile organic compounds (VOCs) and a landfill gas meter to detect methane.

One ambient air sample (CE-AA) was collected on the central portion of the roof to determine background levels. All sampling was conducted in accordance with the SMP protocol. Vapor sampling activities were recorded on the Periodic Inspection Logs presented in Appendix A. All other observations (e.g., field screening results, sampling personnel, and sample port integrity) were also noted on the inspection log.

Summa canisters were placed in a secure shipping container for pickup by the laboratory. Vapor samples were analyzed for VOCs using EPA Method TO-15 at TestAmerica, Inc. of South Burlington, Vermont, a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Procedure (ELAP) certified laboratory.

4.0 FINDINGS AND CONCLUSIONS

4.1 Vapor Analytical Results

Field screening results at sampling ports at both the 1st floor and 4th floor locations indicated that vacuum pressures and field-screened vapor concentrations were within acceptable ranges. Low methane concentrations—a maximum of 0.2% methane, which is 4% of the lower explosive limit (LEL)—were detected in three of the lines in the 4th floor sampling ports. No elevated PID readings were noted in the sampling ports in either the 1st floor or 4th floor ports. The analytical results are summarized in Table 1, and the laboratory analytical reports are provided in Appendix B. The laboratory analytical reports include the chain of custody documentation, laboratory certification and laboratory quality assurance data. Vapor analytical results were compared to the corresponding NYSDEC DAR-1 SGCs. Analytical results for the eight soil vapor samples and the ambient air sample indicated the detection of eleven compounds; however, none exceeded the SGCs and most were found at levels of only tens of micrograms per cubic meter at most. Detected compounds were methyl ethyl ketone, toluene, styrene, tetrahydrofuran, dichloroethane, xylenes, n-heptane, trimethylbenzene, trimethylpentane, and ethylbenzene. Several of these compounds are potentially related to gasoline. None of the compounds detected were the target compounds for determining the recommended response actions identified in the NYSDOH October 2006 *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*.

The analytical results indicated that effluent treatment is not warranted as part of the vapor mitigation system. The potential for vapor intrusion from the low level concentrations of methane and VOCs in the sub-slab vapors is also mitigated by presence of two vapor barrier layers beneath the building.

4.2 Continuation of Vapor Monitoring

Vapor monitoring activities will continue on a quarterly basis (unless permission to discontinue is granted in writing by NYSDEC and NYSDOH) to determine whether emissions continue to meet the SGCs, and to evaluate system performance with the fans operating. In order to determine whether the system can be converted to passive venting (i.e., without operating the in-line fans), a separate sampling protocol will be established for approval by NYSDEC and NYSDOH.

Soil Vapor Analytical Results
Notes

GENERAL

NS : No soil cleanup objective listed.

U : The analyte was not detected at the indicated concentration.

Exceedences are highlighted in bold font.

AIR

DAR-1 SGC : To satisfy the requirements described in 6 NYCRR Part 212.9(a) Table 1, the NYSDEC established a listing of non-criteria air contaminants with acceptable ambient air concentrations to help the user of DAR-1 make an appropriate Environmental Rating determination. The acceptable air concentrations, in micrograms per cubic meter, are listed for annual emission rates called Annual Guideline Concentrations (AGC) and for hourly emission rates called Short-Term Guideline Concentrations (SGC). A listing of AGC/SGCs were incorporated into the 1991 Draft version of Air Guide-1 (DAR-1) under Appendix C and revised in 1995, 2000, 2003 and 2007

µg/m^3 : micrograms per cubic meter of air

APPENDIX A

PERIODIC INSPECTION LOG

PERIODIC INSPECTION LOG
VAPOR MITIGATION SYSTEM
Flushing Industrial Park Parcel 2 (Skyview Parc), 40th Road and College Point Boulevard, Flushing, New York

Inspector Name: M. Oleske and E. Baird	**Date:** **5/24/10 & 6/1/10**
Time IN: 7:00	**Time OUT:** 15:00

GENERAL

Weather: 5/24: partly cloudy; 6/1: mostly cloudy | Temperature: 5/24: ~ 70 F; 6/1: ~ 80 F | Barometric Pressure: 5/24: 30.26'; 6/1: 29.81"

When was the last rain event? For the 5/24 sampling event: 5/11 (0.02"); For the 6/1 sampling event: 5/27 (0.02").

Are all system fans operating? Yes

If no, please list:

Any evidence of system tampering, vandalism or damage? No

Were all cleanout and sampling port caps securely attached prior to system testing? All sampling ports (cleanouts) were capped.

If no, please list location and corrective action: NA.

LABORATORY ANALYTICAL RESULTS (CD)

TestAmerica
South Burlington, VT

Extended Data Package

NY137497

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

TestAmerica Laboratories, Inc.

June 11, 2010

Ms. Kate Brenner
AKRF Inc.
440 Park Ave, South
New York, NY 10016

Re: Laboratory Project No. 29000
Case: 29000; SDG: NY137497

Dear Ms. Brenner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on May 27th, 2010. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 05/27/10 ETR No: 137497		
831356	CE-VAPOR-5	05/24/10	AIR
831357	CE-VAPOR-6	05/24/10	AIR
831358	CE-VAPOR-7	05/24/10	AIR
831359	CE-VAPOR-8	05/24/10	AIR
831360	CE-AA	05/24/10	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The volatile organics analyses for the vapor samples referenced above were accomplished at dilution based on screen analyses that showed concentrations of non-target analytes at concentrations sufficient to interfere with instrument operation if analyzed at full strength.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

*: Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

Method Codes:

P	ICP-AES
MS	ICP-MS
CV	Cold Vapor AA
AS	Semi-Automated Spectrophotometric
