Re. South Hadley - DSWM - Landfill
Landfill Expansion, Cell I-A2
Authorization to Operate
Transmittal No. W000081
File No. 03-275-001

Dear Mr. Ortisi:

The Massachusetts Department of Environmental Protection ("the Department") has completed its technical review of an Authorization to Operate ("ATO") permit application for the operation of Cell I-A2 of the South Hadley Sanitary Landfill ("the landfill"), located off Industrial Drive in South Hadley, Massachusetts.

Waste Systems International of South Hadley Landfill, Inc. ("WSI" or "operator") will operate the site, although the Town of South Hadley ("the Town") owns the landfill. On October 8, 2003, WSI submitted the following materials in support of the ATO application:

Authorization to Operate
BWP SW 10
South Hadley Sanitary Landfill Project
South Hadley, Massachusetts
Prepared for: Waste Systems International of South Hadley Landfill, Inc.
October 2003

Landfill Operations Plan
South Hadley Sanitary Landfill Project
South Hadley, Massachusetts
Prepared for: Waste Systems International of South Hadley Landfill, Inc.
September 2003

Cell I-A2 Certification
South Hadley Sanitary Landfill Project
South Hadley, Massachusetts
Prepared for: Waste Systems International of South Hadley Landfill, Inc.
October 2003

This information is available in alternate format. Call Aprel McCabe, ADA Coordinator at 1-617-556-1171. TDD Service - 1-800-298-2207.
DEP on the World Wide Web: http://www.mass.gov/dep
Printed on Recycled Paper

Manufacturers Certification Testing (Liner Materials)
South Hadley Sanitary Landfill Project
South Hadley, Massachusetts
Prepared for: Waste Systems International of South Hadley Landfill, Inc.
October 2003

The Department has also received supplemental information in the form of letters dated October 13, 2003; October 27, 2003; November 6, 2003; and November 7, 2003.

Tighe & Bond, Inc. of Westfield, Massachusetts prepared the application materials on behalf of Waste Systems International of South Hadley Landfill, Inc. The Cell I-A2 Certification bears the seals and signatures of Doris S. Atkinson, Massachusetts Registered Professional Civil Engineer No. 39760, and Ronald A. Michalski, Massachusetts Registered Professional Sanitary Engineer No. 28320.

On May 20, 2003, the Department issued a Final Permit that included the following elements: an Authorization to Construct ("ATC") for the proposed horizontal expansion of the landfill, known as Cell I; a Corrective Action Design ("CAD") for the final closure of a portion of the existing landfill, referred to as the "Phase II closure;" and a CAD for a full-scale pilot groundwater treatment system, designed to prevent further migration of organic contaminants from the existing landfill. The ATC was amended by a Major Modification permit issued by the Department on July 14, 2003. The Major Modification approved changes to the leachate pumping system and Phase II closure.

The ATO application reviewed herein covers the operation of Cell I-A2, the leachate collection system, leachate pumping system, and stormwater management system required for the operation of a landfill. WSI proposes to submit one or more additional ATO applications and certifications for the other three landfill cells as they are completed. This ATO also includes provisions related to the construction and operation of the groundwater treatment system. It does not include provisions related to the Phase II closure of the existing landfill.

I. SUMMARY OF REPORT/APPLICATION

Construction of Cell I began in May 2003 and continues as of the date of this Permit. Construction of Cell I-A2, the pump station, and other ancillary systems was completed in October 2003. Department personnel performed numerous inspections during construction of the landfill expansion.

The ATO application includes the following:

- A transmittal form and BWP SW 10 application form;
- Results of all quality assurance/quality control ("QA/QC") testing, which includes testing performed by the manufacturers of liner components, testing performed on-site during construction, and testing performed by third party offsite labs;
- Survey drawings depicting the final elevations of the subgrade, clay, and sand drainage layers;
- A statement, bearing the seals and signatures of Massachusetts Registered Professional Engineers Doris S. Atkinson and Ronald A. Michalski, that Cell I-A2 and the leachate collection and pumping system, and stormwater management system were constructed in accordance with the ATC and the plans, specifications, and QA/QC plan approved therein.
- Drawings depicting panel layouts for geosynthetic liner components;
- A Landfill Operations Plan, which includes information relating to operations and maintenance, lift development, waste control, leakage response, environmental monitoring, and bird control;
- An estimate of closure and post-closure costs; and

- Financial assurance information.

II. GENERAL DESCRIPTION OF PROJECT/BACKGROUND

The South Hadley Landfill is located on a 53-acre site southeast of Industrial Drive in South Hadley, Massachusetts. Disposal of municipal and industrial wastes (including liquid wastes) at the site began around 1951. The landfill operated as a burning dump until 1969, when the Town began to use sanitary landfill operating procedures. Although disposal of liquid industrial wastes at the landfill was supposed to cease in 1969, some such disposal reportedly continued until 1972. The site continued to operate as a sanitary landfill until 1996.

The horizontal expansion of the landfill, known as Cell I, encompasses 10.6 acres. Cell I will provide about 740,000 cubic yards of disposal capacity. The operational life of Cell I will be about 4.3 years at the permitted average disposal rate of 300 tons per day, 5.5 days per week. The maximum daily disposal rate will be 395 tons per day. The Landfill is permitted to accept municipal solid waste, construction and demolition waste, and other materials in accordance with General Condition 3 of the ATC. The maximum elevation of Cell I after closure will be approximately 352 feet above mean sea level.

Although the possibility of landfill mining/reclamation at this site was studied extensively during the years leading up to the ATC application and a pilot reclamation project was proposed in the Environmental Impact Report, the ATC and the ATO application contain no provisions for landfill reclamation. The Town and WSI have indicated that they may pursue this option during development of a future vertical expansion, which will be known as Cell II.

III. DESIGN OF HORIZONTAL LANDFILL EXPANSION (Cell I)

Design of Liner and Leachate Collection System

Cell I has a double composite liner with leachate detection. The liner components are presented in the table below, listed from top to bottom. Both the primary and secondary liners have redundant impermeable barrier layers to prevent the release of leachate from the landfill. The primary liner barrier layers include a textured 60-mil high density polyethylene ("HDPE") flexible membrane liner ("FML") and a geocomposite clay liner ("GCL"), and the secondary liner includes a textured 60-mil HDPE FML, a GCL, and a 12-inch layer of compacted clay.

The primary leachate collection system will consist of a tri-planar geocomposite overlain by an 18-inch sand drainage layer. Cell I has four hydraulically separate subcells known as Cell I-A1, I-A2, I-B1, and I-B2. Each subcell has a sump located approximately in the center, so the overall liner pitch runs towards the center of the subcell. The liner has a network of ridges and valleys, with ridges having at least 2% slope directing leachate flow to valleys having a minimum 1% slope. The drainage system also has a network of perforated 8" HDPE collection pipes, laid in the valleys at a minimum 1% slope.

The secondary leachate collection system is designed to collect and drain any leachate leaking through the primary liner. This layer consists of a layer of tri-planar geocomposite having the same contours as the primary liner described above.

Table: Liner components listed from top to bottom.

Liner	Component	Purpose
Primary	18" sand with hydraulic conductivity > 1.0×10^{-3} cm/sec	Leachate drainage to sumps, protection of underlying liner components
	Tri-planar geocomposite	Leachate drainage to sumps
	60-mil HDPE textured flexible membrane liner	Impermeable barrier layer
	Geocomposite clay liner	Impermeable barrier layer
Secondary	Tri-planar geocomposite	Leachate drainage to sumps, leak detection
	60-mil HDPE textured flexible membrane liner	Impermeable barrier layer
	Geocomposite clay liner	Impermeable barrier layer
	12" compacted clay with hydraulic conductivity < 1.0×10^{-7} cm/sec	Impermeable barrier layer
	Subgrade soils	Foundation for liner, protection of overlying liner components

Each subcell has one primary and one secondary sump nested together and constructed of HDPE manhole materials. Each sump is welded to the FML layer of the primary or secondary liner. Leachate will drain by gravity through double-wall HDPE piping from the primary and secondary sumps to leachate pump station No. 1 and the secondary leachate collection manhole, respectively. Leachate from the secondary leachate collection manhole will be pumped through a manhole equipped with a flow meter and discharged into pump station No. 1. The flow meter will provide a measurement of the rate of leakage through the primary liner. The combined primary and secondary leachate will be treated by the South Hadley Wastewater Treatment Facility or recirculated back to the landfill.

Each primary sump will be equipped with a pressure transducer to measure the head of leachate above the primary liner. This permit requires that the head of leachate above the transducers will be measured on a weekly basis, to determine whether the head of leachate above the liner is maintained at one foot or less as required under 310 CMR 19.110(9).

The approved plans include a leachate recirculation system designed to enhance the degradation rate of solid waste disposed of in the landfill. The recirculation system will consist of a three-tiered network of recirculation piping with a 20-foot vertical separation between each tier. Each tier will be constructed as the landfill is filled up to the designated tier elevation. The recirculation piping will consist of perforated 4-inch diameter HDPE pipe, placed in gravel-filled trenches two feet wide and at least three feet deep. All recirculation piping will be placed a minimum of 20 feet horizontally from the lateral limits of the landfill surface to prevent leachate breakouts. The same piping system will be used for active landfill gas extraction.

As described above, primary and secondary leachate will accumulate in pump station No. 1. Two centrifugal pumps in pump station No. 1, will pump the leachate to metering vault No. 1, where valves will control the quantities of flow to the sanitary sewer for disposal and/or to recirculation vault No. 1. Valves within the recirculation vault will allow the landfill operator to select the quantity of leachate to be pumped to the various recirculation grids. Valves in the recirculation vault will also control whether the grids are used for recirculation or gas extraction at any given time. It is anticipated that there will not be regular cycling between recirculation and extraction modes. Each grid will be used exclusively for leachate recirculation until the solid waste below it reaches saturation, at which time the grid will be switched to gas extraction for an extended period of time, if not permanently.

Landfill Gas Control

Bacterial decomposition of organic materials disposed on-site will generate landfill gas, generally composed of about 50% methane, 50% carbon dioxide, and trace amounts of hydrogen sulfide, carbon monoxide, and other constituents.

The approved plans include an active landfill gas extraction system to control emissions from both the existing landfill and Cell I (active gas extraction will also be required for Cell II, if it is built). Active gas extraction involves using a blower to create suction to collect gas. The leachate recirculation piping will also be used for gas extraction. In addition, the extraction system will be connected to three vertical wells that were drilled into the waste mass within the Phase II closure area of the existing landfill. There are also several vertical wells in the intermediate cover area, but it is anticipated that these wells will not be connected to the extraction system until Cell II is developed or that area receives a final cover system.

The approved plans specify the use of a candlestick flare or electric generating equipment to burn the captured landfill gas. Both of these methods generally provide a high destruction efficiency for methane and other organic compounds contained in landfill gas. WSI has selected the John Zinc Company LLC to supply a blower, flare, moisture separator, instrumentation, and controls. This system has not been installed as of the date of this permit, but it is not initially needed for the operation of Cell I because the gas extraction piping will not be built until there is about 20 feet of solid waste on the liner.

Stormwater Management

The stormwater management system was designed to handle the runoff from 2, 10, 25, and 100-year storm events. The stormwater system will include various berms, swales, and drainage pipes, ultimately discharging flow to two detention basins (including one existing basin that will be enlarged) and wetlands around the landfill. In general, stormwater runoff from the existing landfill will discharge to Detention Basin ("basin") No. 1, while runoff from cell I will discharge to basin No. 2. Although both are labeled "detention basins," the main area of each basin will be grass-lined to allow infiltration. Both will also have controlled-release structures to allow stored water to recharge adjacent wetlands.

During initial landfill operations in Cell I, WSI proposes to construct berms to separate areas that have received waste from areas that have not. Any stormwater that contacts solid waste will be handled as leachate, but clean stormwater collected from unused portions of the liner will be pumped from the liner sumps in those areas to basin No. 2.

The conceptual closure plan for Cell I calls for an encircling stone-lined swale near the top of the cell that will discharge to three stone-lined down chutes. Sheet flow from the middle and lower slopes will collect in a perimeter stone-lined swale at the toe of slope. The combined flow from the down chutes and perimeter swale will then cross under the perimeter access road via culverts to a grass-lined swale, and ultimately to basin No. 2.

Conceptual Closure of Cell I

As envisioned in the ATC submittal, the conceptual final cover system of Cell I is proposed to consist of the following, from top to bottom:

- Vegetation (hydroseeding with a mixture of seed, fertilizer, hay mulch, and bonded fiber matrix)
- 12-inch vegetative support layer (topsoil or DEP-approved alternative)
- 12-inch sand drainage layer (hydraulic conductivity > 1.0×10^{-3} cm/sec)
- 40-mil HDPE flexible membrane liner or geocomposite clay liner
- 6-inch sand gas venting layer (hydraulic conductivity > 1.0×10^{-3} cm/sec)
- 6-inch (minimum) subgrade layer

IV. GROUNDWATER TREATMENT SYSTEM

Site assessment activities have identified a groundwater plume of 1,4-dioxane migrating from the older portions of the landfill. Historically, 1,4-dioxane was used extensively as a component of chlorinated solvents to stabilize and extend the service life of those solvents. Apparently 1,4-dioxane was released into the landfill during the 1950s and 1960s when the landfill accepted liquid industrial wastes. Other volatile organic compounds ("VOCs") have been detected in groundwater from various monitoring wells, but 1,4-dioxane is the only VOC that has been consistently detected at concentrations exceeding the Massachusetts Drinking Water Standards and Drinking Water Guidelines. 1,4-dioxane is known to be toxic to humans and is considered a probable human carcinogen.

1,4-dioxane is water-soluble and has little affinity to adsorb to solids, so a plume of 1,4-dioxane can be expected to move through an aquifer at a rate equal to, or slightly less than, the velocity of groundwater flow. Most other VOCs travel at rates far below the velocity of groundwater flow.

The approved plans and specifications include a system to capture and treat contaminated groundwater that would otherwise migrate offsite. The system will consist of four six-inch diameter groundwater recovery wells, spaced at intervals of about 300 feet, and connected to an oxidation treatment unit via two-inch HDPE pipe. It is anticipated that each of the four wells will pump about 12 gallons of water per minute, and the system will capture 50 - 75% of the groundwater flow in the most contaminated part of the aquifer. The pumping rate was selected to maximize the capture of contaminated groundwater without causing water table drawdown in nearby wetlands.

Following issuance of the ATC, WSI issued a Request for Proposals for construction of a full-scale pilot groundwater treatment system. The selected vendor, Applied Process Technology, Inc ("APT"), proposes to treat the groundwater in a polyvinyl chloride ("PVC") process reactor using hydrogen peroxide and ozone. APT has designed the system to treat up to 60 gallons per minute. The system will arrive in a trailer preassembled, tested, and ready to operate. The system is designed to reduce the concentration of 1,4-dioxane to less than 50 part per billion, which corresponds to DEP's Office of Research and Standards guideline for that compound. Bench-scale testing conducted by APT suggests that the proposed system can achieve that treatment goal.

WSI proposes to conduct a 6-month pilot test to evaluate the effectiveness of the proposed treatment system. The pilot test includes the following elements:

- Each of the four groundwater extraction wells will be sampled and tested at least once for 1,4-dioxane and VOCs (EPA Method 8260) prior to startup of the treatment system.
- During the first two weeks of operations, the influent (combined flow from all four wells) and treated effluent will be sampled at least three times and tested for total suspended solids ("TSS"), total and dissolved iron, total and dissolved manganese, 1,4-dioxane, and VOCs. Following collection of a grab sample from the influent, a grab sample from the effluent will be

collected at a time lagged by the retention time of the treatment system. Concentrations of 1,4-dioxane from each extraction well will be sampled and tested at the same time.

- During the first two weeks of operations, the influent and treated effluent will be sampled for pH and temperature at least five times per week.
- Totalized flow from each recovery well will be read at least weekly during startup.
- Starting after one month of system operation, and occurring once per month thereafter, the influent and treated effluent will be sampled at least three times and tested for TSS, total and dissolved iron, total and dissolved manganese, 1,4-dioxane, VOCs, and flow rate.
- At least every other month, each extraction well will be sampled and tested for TSS, pH, total and dissolved iron, total and dissolved manganese, 1,4-dioxane, VOCs, and flow rate.
- Groundwater elevations will be measured in several specified monitoring wells on at least two separate days prior to the startup of the system. After one week of steady pumping, groundwater levels at those locations will be measured again. If groundwater drawdown in the vicinity of abutting wetlands appears to be higher than predicted based on previous groundwater pumping tests, the extraction rate in one or more extraction wells may be reduced.
- Groundwater elevations at a reduced set of locations will be measured at least once per month for the remainder of the pilot program.

The Department believes that the proposed monitoring program is adequate in concept, but that more data points are needed to fully evaluate the performance of this innovative treatment system. Consequently, this permit contains a requirement to test the influent and effluent once every two weeks, rather than once per month. In addition, this permit requires WSI to obtain written approval from the Department before reducing the groundwater extraction rate.

V. LANDFILL OPERATIONS PLAN

The Landfill Operations Plan contains a Landfill Operation and Maintenance (O&M) Plan, Lift Development Plan, Waste Control Plan, Leakage Rate Plan, Environmental Monitoring Plan, and Gull Control Plan. The O&M Plan includes a point-by-point description of each of the operating and maintenance criteria listed at 310 CMR 19.130 and the procedures by which WSI will comply with them. Some of the other elements of the Landfill Operations Plan are described below.

Waste Control Plan

This plan describes how WSI will comply with the Department's Waste Ban regulations at 310 CMR 19.017 and contains a completed Waste Ban Compliance Plan form.

Leakage Response Plan

This plan will be invoked if leakage through the primary liner exceeds the Notification Leakage Rate ("NLR") or Action Leakage Rate ("ALR"). The leakage rate will be the rate of leachate accumulating in the secondary leachate collection manhole, as measured by the flow meter between that manhole and the pump station. This permit requires WSI to read the totalized flow on a weekly basis and calculate the average daily flow. The resulting average will compared to the NLR and ALR, which are 10 gallons/acre/day and 100 gallons/acre/day, respectively.

This permit requires WSI to notify the Department and South Hadley Board of Health (BOH) in writing within three business days if the average daily flow exceeds the NLR and within one business day if

the flow exceeds the ALR. According to the Leakage Response Plan, in the event of an ALR exceedance, WSI will take the following investigatory steps:

- WSI will install blind flanges on each of the four secondary leachate pipes within the secondary leachate collection manhole, using pre-existing flanged adaptors. WSI will then open one pipe at a time to determine which subcell is leaking.
- WSI will develop, in consultation to the Department, a sampling program to characterize the quality of the leachate.
- Following the data collection steps, WSI will proceed with an evaluation of the potential environmental threats associated with the leak and an evaluation of site-specific measures available to address the potential impacts of the leak and/or eliminate the cause of the leak.

The Department believes that this plan is adequate, except that WSI should perform a limited investigation if the NLR is exceeded. The permit requires testing to identify which subcells are contributing to the leachate flow, a review of construction records, and a review of the operational history of those subcells.

Environmental Monitoring Plan

The ATO application states that environmental monitoring will be conducted in accordance with 310 CMR 19.132: *Environmental Monitoring Requirements*, which includes provisions for monitoring surface water, groundwater, leachate, and landfill gas.

WSI proposes to continue monitoring certain surface water monitoring stations and groundwater monitoring wells within the existing network of monitoring points. In addition, four shallow/intermediate depth well clusters have been installed around the perimeter of Cell I to monitor any groundwater impacts from the new cell. Existing piezometer P-3 has been abandoned because it is within the new cell area. Monitoring well MW-5 was destroyed during construction of the new cell, but a new MW-5 has been installed approximately 30 feet from its original location. WSI proposes to conduct four quarterly sampling rounds followed by semiannual sampling on an ongoing basis. WSI proposes to analyze the groundwater samples for the parameters listed at 310 CMR 19.132, plus 1,4-dioxane. In addition, within the analysis of VOCs by Method 8260, WSI proposes to identify unknown peaks having intensities greater than two times the background intensity.

WSI proposes to conduct monitoring of the quantity and quality of leachate discharge in accordance with the landfill's Industrial Wastewater Discharge Permit (Permit No. 03-6), issued by the Town of South Hadley. A copy of Permit 03-6 is provided in the ATO application. The permit requires daily monitoring of flow and pH; bimonthly monitoring for biochemical oxygen demand, chemical oxygen demand, total solids, total suspended solids, ammonia, oil and grease, cadmium lead, mercury, acetone, methyl ethyl ketone, toluene, and VOCs; and quarterly monitoring for a number of metals, heptachlor, and pesticides and PCBs. Permit 03-6 also requires quarterly reporting of monitoring data, 24-hour reporting of monitoring violations, and prompt reporting of accidental or slug discharges, upsets, or bypasses. However, regardless of the requirements of the discharge permit, WSI proposes to collect at least one composite leachate sample per semi-annual monitoring round and analyze for the same parameters as for the groundwater samples.

WSI proposes to conduct landfill gas monitoring on a quarterly basis. Monitoring stations will include venting structures for the leachate collection and/or recirculation system, passive gas vents, monitoring ports on the active gas extraction system, and perimeter soil gas monitoring points. In addition, this permit requires the installation of new gas monitoring wells around the existing landfill to

ensure complete coverage and to replace several existing points that have been destroyed over the past few years or are no longer functioning.

Gull Control Plan

This plan sets forth detailed procedures for preventing gull feeding, roosting, and loafing at the landfill. Although the plan focuses on gulls, it also applies to other bird species that may be attracted to the landfill. Elements of the plan include, but are not limited to:

- Landfill operational controls, such as minimizing the size of the working face, maintaining human presence at all times during waste placement, and placing and compacting sufficient cover materials over waste.
- Habitat controls, such as limiting surface water bodies and short grass areas.
- Harassment methods to scare gulls away, such as pyrotechnics, propane cannons, recorded distress calls, and trained dogs.
- Lethal methods, such as shooting a limited number of gulls to reinforce other control methods.

WSI has named Angelo Ortisi, the General Manager of the landfill, to be the on-site Gull Control Officer. The other landfill staff will be also be trained to implement the Gull Control Plan. WSI has hired Matt DeBettencourt of Minuteman Pest Control to review the Gull Control Plan and act as a technical consultant in implementing the plan.

The landfill is in a direct line with the flight path taken by airplanes using the secondary runway at the Westover Air Reserve Base ("Westover"). Consequently, Westover has requested that WSI coordinate with Westover's Bird Hazard Working Group ("BHWG"). The Gull Control Plan indicates that the landfill staff will attend quarterly BHWG meetings and otherwise cooperate with Westover's bird control efforts.

VI. CELL I-A2 CERTIFICATION

The Cell I-A2 Certification documents that WSI constructed Cell I-A2, the leachate collection system, leachate pumping system, and stormwater management system in substantial compliance with the plans, specifications, and QA/QC requirements approved in the ATC and Major Modification permits issued by the Department on May 20, 2003 and July 14, 2003, respectively. The certifying engineers are Doris S. Atkinson and Ronald A. Michalski of Tighe & Bond. Tighe & Bond's resident field inspector, Rob Barrett, was on-site during all phases of construction and oversaw QA/QC testing. The Certification contains the following elements (note that not all of the provided QA/QC data is discussed herein):

- A subgrade certification documents that the subgrade soils were placed to design elevations and were properly compacted according to nuclear densometer testing. An as-built plan, surveyed and certified by a professional surveyor, documents that the subgrade was constructed to design elevations.
- A clay liner certification documents that the clay liner was placed to design elevations and were properly compacted according to nuclear densometer testing. An as-built plan, surveyed and certified by a professional surveyor, documents that the clay liner was constructed to design elevations. A total of 11 Shelby tubes samples were taken for lab permeability analysis, demonstrating that the clay met the required maximum hydraulic conductivity of 1.0×10^{-7} cm/sec.

- A geocomposite clay liner (GCL) certification documents that the material was tested by an independent lab and met design specifications. Manufacturer's QA/QC testing data is provided in a separate document. GCL panel layout diagrams with tracking numbers are provided for the primary and secondary liners.
- A flexible membrane liner (FML) certification documents that the material was tested by an independent lab and met design specifications. Manufacturer's QA/QC testing data is provided in a separate document. FML panel layout diagrams with tracking numbers are provided for the primary and secondary liners. The diagrams document how seams were made (hot shoe or extrusion), where destructive seam samples were taken, and how seams were tested (vacuum box or air pressure). Independent lab testing data shows that the seams met peel and shear strength specifications.
- A drainage geocomposite certification documents that the material was tested by an independent lab and met design specifications. Manufacturer's QA/QC testing data is provided in a separate document. Drainage geocomposite panel layout diagrams with tracking numbers are provided for the primary and secondary liners.
- A sand drainage certification documents that the sand met the minimum required hydraulic conductivity of 1.0×10^{-3} cm/sec and was placed to design elevations. An as-built plan, surveyed and certified by a professional surveyor, documents that the subgrade was constructed to design elevations.
- A leachate collection system certification documents that the HDPE primary and secondary leachate sumps, dual-wall HDPE leachate containment piping, and perforated HDPE collection piping were constructed and installed in accordance with plans and specifications. Hydrostatic testing data is provided for the sumps, documenting that zero leakage was observed. The inner section of the dual-wall leachate piping was air pressure tested and the outer (containment) section was hydrostatically tested, with no leakage observed.
- A leachate pumping system certification documents that the system meets design requirements. The primary and secondary leachate manholes were hydrostatically tested with no leakage observed. The primary and secondary leachate pumps were tested and shown to conform to design pumping rates. The flow meters located in the pump station, secondary leachate metering manhole, meter vault No. 1, and meter vault No. 2 were tested and proper calibration was verified. Electrical service to the leachate pumping system has been completed and a backup generator with a propane fuel tank has been installed.
- A stormwater management certification states that the swales, stormwater basin No. 2, and basin outlet structures have been constructed to the lines and grades specified in the plans. Concrete revetment blocks have been installed, as specified, in the stormwater forebay, overflow, and at culvert locations.

VII. OTHER ITEMS OF REVIEW

Special Wastes

The ATO application states that in the future WSI will request approval to accept contaminated soil and wastewater treatment sludge at the landfill. Both of these materials are defined as Special Wastes pursuant to 310 CMR 19.061 because they need special management practices to ensure protection of public health, safety, or the environment. The Landfill Operations Plan contains procedures for management of these wastes.

For wastewater treatment sludges, there is a requirement set forth in 310 CMR 19.061(6)(d) that requires the landfill operator or sludge generator to demonstrate that it has investigated land application and composting and found that those options are not feasible. The Department has not

received such documentation to date, so WSI must submit it as part of the future Special Waste permit application. This permit does not approve the acceptance of wastewater sludges or other sludges.

Financial Assurance

The ATO application contains an estimate of costs for closure and post-closure activities for Cell I and also for the area of the existing landfill, currently under intermediate cover, that may be developed later as Cell II. For the purpose of developing this cost estimate, WSI assumed that Cell II would not be constructed. If Cell II is constructed in the future, an updated estimate of site-wide costs will be needed. However, the decision whether or not to develop Cell II will not significantly affect closure and post-closure costs attributed to Cell I.

WSI estimates that closure of Cell I and the intermediate cover area will cost $1,920,912. The cost per acre is $108,686 for Cell I (10.61 acres) and $75,059 for the intermediate cover area (9.0 acres). The per-acre costs for Cell I are greater because the intermediate cover area already has some elements of a cover system (such as landfill gas trenches, vertical gas extraction wells, and subgrade soils) and relies on infrastructure already needed for Cell I (such as a landfill gas header pipe). The total closure cost estimate also includes a 5% contingency.

The total post-closure cost estimate for Cell I and the intermediate cover area is $765,713. Post-closure costs include site maintenance, annual site inspections, leachate disposal, environmental monitoring, and a 5% contingency.

The Financial Assurance Mechanism ("FAM") funded by WSI consists of two Surety Bonds issued by the Evergreen National Indemnity Company in the amounts of $1,920,912 and $765,713, totaling $2,686,625. Both Surety Bonds are dated November 5, 2003. As the owner of the landfill, the Town expects to take over responsibility for the FAM in the future. WSI agreed to fund the FAM for an interim period (estimated to be a few months) until the Town can set up its own FAM. The Department anticipates that the Town's FAM will contain similar funding levels for closure and post-closure activities.

Recycling and Composting

The Town's existing recycling and composting activities are expected to continue. The Town will continue curbside collection of residential recyclable materials. The leaf and yard waste composting facility, previously located within the area developed as Cell I, has been moved to a new location west of detention basin No. 1.

The ATC application included a Recycling Benefits Plan ("RBP") as required under the Department's *Beyond 2000 Solid Waste Master Plan*. The purpose of a RBP is to increase the diversion of recyclable or reusable materials from the waste stream and reduce the toxicity of the waste stream by decreasing the quantity of hazardous waste disposed of as solid waste. Activities proposed under the RBP include conducting a waste composition study, maintaining compliance with Waste Ban requirements, assisting C&D waste haulers set up job site sorting systems, conducting limited sorting of C&D waste at the landfill, providing assistance to businesses and municipalities, public education, and continuing collection of hazardous wastes during annual one-day collection events and at the Town's drop off center.

DEPARTMENT DETERMINATIONS

This application complies with the application requirements at 310 CMR 19.042 (Authorization to Operate) and was reviewed in accordance with 310 CMR 19.037, *Review Procedure for Existing Facility Permits, Permit Modifications, Permit Renewals and other Approvals*. The plans and reports described above establish that the facility complies with the criteria at 310 CMR 19.042.

This document is a permit issued pursuant to Massachusetts General Laws Chapter 111, Section 150A and 310 CMR 19.000, subject to the conditions set forth below. In the event this permit and ATO conflicts with all or parts of prior plan approvals or permits issued pursuant to c. 111, s. 150A or solid waste regulations in effect prior to July 1, 1990 the terms and conditions of this permit and authorization to operate shall supersede the conflicting provisions of the prior permit approvals. This permit/ATO does not convey property rights of any sort or any exclusive privilege.

GENERAL PERMIT CONDITIONS

1. Reserve Capacity: Notwithstanding the capacity and waste-type restrictions in this permit, the facility may accept additional waste (MSW and/or Non-MSW) upon request to, and written approval by, the Department. The Department may grant such approval if it determines that a capacity shortfall may occur, and that alternate disposal facilities are not able to handle the shortfall adequately.

2. The operation, maintenance and closure of this facility shall be performed in compliance with other applicable local, state and federal laws and regulations. The operator is responsible for obtaining any other local, state, and federal permits that may be necessary.

3. This permit is issued subject to the conditions of joint liability of the permittee and owner in accordance with 310 CMR 19.043(3).

4. No transfer of this permit shall be permitted except in accordance with 310 CMR 19.044.

5. The operator shall comply with all applicable waste ban restrictions set forth at 310 CMR 19.017.

6. The operator shall operate the facility in accordance with the conditions at 310 CMR 19.007-19.011, 19.043(5) and 19.130.

7. Notwithstanding the approval of the plans and reports incorporated herein and the applicable regulations [310 CMR 19.100 et seq., Part II- Landfill Design and Operational Standards] in effect on the date this permit is issued, the Department may order the operator to take all necessary actions to comply with the provision of 310 CMR 19.000 including, without limitation, the submission of plans, reports and monitoring data; financial assurance and modifications of approved operating, maintenance and environmental monitoring procedures.

8. The operator shall comply with any applicable requirements pursuant to the Resource Conservation and Recovery Act, Subtitle D [42 USC 4004(a)(b)] and any applicable revisions thereto.

9. The operator shall conduct operations in accordance with approved plans, reports, and other submissions described above except as may be modified by the conditions set forth below. No material changes in the design or activities described in the approved documents shall be performed without prior written Department approval.

10. The Department reserves the right to require design and/or operational modifications to the approved plans, and to rescind, suspend or modify this permit by the imposition of additional conditions based upon evaluation of landfill performance, a determination of actual or the threat of adverse impacts from the construction, operation, maintenance or closure of the facility.

11. The Department and its agents and employees shall have the right to enter upon the site at all reasonable times and without notice, to inspect the landfill and any equipment, structure or land located thereon, take samples, recover materials or discharges, have access to and photocopy records, to perform tests and to otherwise monitor compliance with this Permit and all environmental laws and regulations. This right of entry and inspection shall be in addition to the Department's access authorities and rights under applicable federal and states laws and regulations, as well as any permits or other agreements between the Permittee and the Department.

SPECIFIC PERMIT CONDITIONS

1. This approval is only for the operation of Cell I-A2 of the South Hadley Sanitary Landfill.

2. Amount of Waste: The operator shall not accept more than 85,800 tons per year of solid waste for disposal in Cell I ("the facility"), including municipal solid waste ("MSW"), construction and demolition waste ("C&D"), and other wastes that may be accepted in accordance with Specific Condition 4, below. The facility shall not accept more than 395 tons of solid waste per operating day.

3. Hours of Operation – The Facility may accept solid waste for disposal only from Monday through Friday, 7:00 AM to 4:00 PM and Saturday, 8:00 AM to 2:00 PM.

4. Types of Acceptable Wastes - The facility may accept solid wastes subject to the following restrictions and conditions:

   A. Restrictions on acceptable wastes contained in the local site assignment and any MEPA restrictions;

   B. Restrictions imposed under the Department's approval of the waste ban control plan in accordance with the requirements of 310 CMR 19.017; and

   C. Restrictions imposed under the provisions of 310 CMR 19.061, regulating the handling and disposal of special wastes. Special wastes may be accepted at the facility only in strict accordance with Special Waste Determination permit approvals issued by the Department for the facility, unless otherwise approved by the Department in writing.

   D. Notwithstanding the foregoing waste restrictions, the facility may accept other wastes, such as bulky wastes or contaminated soils, so long as applicable special waste, site assignment and MEPA restrictions are met.

E. The facility shall not accept any hazardous wastes as defined and regulated pursuant to 310 CMR 30.0000, nor any liquid wastes.

5. Term - This ATO shall be valid only for the period of time for Cell I-A2 to reach its approved limits, or until five years after the date of this ATO, whichever term shall expire first, provided that the Department may amend the term of the ATO: (a) in accordance with an approved modification pursuant to either 310 CMR 19.039 or 19.040; or (b) in order to coincide with the termination or renewal date of other Department permits issued for the solid waste processing, treatment or pollution control equipment located at the facility. If the operator intends to operate Cell I-A2 after the expiration of this ATO the permittee is required to submit a request for a renewal of the ATO at least 180 days prior to the expiration of the ATO in accordance with 310 CMR 19.042(4).

6. The interim, operational final elevation grade (top of daily/intermediate cover) of Cell I shall be no higher than 349.5 feet relative to local datum and the final elevation of Cell I (top of cap) shall be no higher than 352 feet above local datum. The final elevation of the Phase II closure elevation (top of cap) shall be no higher than 335 feet relative to local datum. All final grades of the landfill shall have a minimum topslope of 5% and maximum sideslopes of 3:1 horizontal to vertical.

7. Approval to Operate Additional Subsections of Cell I - Before commencing disposal of solid waste in Cell I-A1, I-B1, or I-B2, the operator shall obtain an Authorization to Operate in accordance with 310 CMR 19.042.

8. Approval to Construct/Operate Subsequent Phases - Before commencing construction or operation in Cell II or other any other capacity expansion area, which is not approved for construction under the May 20, 2003 ATC permit and ATO granted herein, the operator shall obtain an Authorization to Construct in accordance with 310 CMR 19.041, and an Authorization to Operate in accordance with 310 CMR 19.042. Tonnage and capacity quantities granted in this permit may not extend to the subsequent Authorizations to Construct. Such permits shall be subject to additional review concerning tonnage and capacity restrictions.

9. Before accepting wastewater treatment sludges, the operator must submit an application for a Special Waste Permit. The application shall contain a demonstration that the operator or sludge generator has investigated land application and composting for disposal of the sludge and that those options are not feasible.

10. The operator shall maintain hay bales, siltation fencing, and other effective measures to protect wetlands and other offsite resources from runoff and siltation damage. Such measures shall be maintained as long as unstabilized slopes exist at the site, construction activities are occurring, or other conditions exist that could result in contaminated runoff leaving the site.

11. Effective fugitive dust controls shall be used during construction and landfill operation, including but not limited to, water spray, calcium chloride application, establishing vegetation, and street sweeping on paved access roads.

12. The usage of contaminated soils as cover material shall comply with all of the requirements of the Department's Policy #COMM-97-001, entitled "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills", revised August 15, 1997. The only alternative daily covers, not approved within the context of Policy #COMM-97-001, which may be used at the landfill shall be those specifically permitted by the Department, and their usage shall comply with the requirements of those permits. The total amount of alternative daily cover material (including

contaminated soils) used on either a yearly or monthly basis shall not exceed 25% by volume of incoming solid wastes.

13. All surface water runoff that has come in contact with potentially contaminated materials, including but not limited to refuse, contaminated soil, and beneficially reused alternate daily cover materials, intermediate cover, and grading and shaping materials, shall be contained and collected by the leachate collection system, shall not be allowed to be discharged beyond the limits of the lined landfill, and shall be treated as leachate for disposal purposes. The Department reserves the right, as part of the Environmental Monitoring Program requirements for the landfill, to require additional testing of surface water runoff entering retention basins, within retention basins, or discharging from retention basins.

14. The landfill gas collection system for Cell I and the existing landfill shall prevent nuisance odors and subsurface gas migration. The landfill gas system shall control such gas levels in the subsurface to below 25% of the Lower Explosive Limit ("LEL") at the property line and below 10% LEL in any buildings, structures, utilities, or any other confined spaces (excluding landfill gas collection systems, and leachate collection/transfer systems). If nuisance odors or exceedances of LEL restrictions occur, the Department may take appropriate enforcement action and may require the operator to make any modifications or additions to the landfill gas collection and treatment system which may be necessary.

15. The Phase II cover system shall be completed and the landfill gas collection system and flare shall be in operation by August 31, 2004.

16. Diesel trucks, dozers, compactors, and other diesel equipment used during landfill operations shall be equipped with particulate traps and oxidation catalysts for air pollution control.

17. For leachate accumulating in the secondary leachate collection system, the Action Leakage Rate (ALR) shall be 100 gallons/acre/day and the Notification Leakage Rate (NLR) shall be 10 gallons/acre/day. If the NLR or ALR values are exceeded, the following procedures shall be followed:

    A. If the NLR is exceeded, the operator shall notify the Department and the South Hadley Board of Health (BOH) within three business days and begin a limited evaluation of the leakage problem. The evaluation shall include, at a minimum, testing to identify which subcells are contributing to the leachate flow, a review of construction records, and a review of the operational history of those subcells. Within 30 days of the exceedance, the operator shall submit a written report to the Department summarizing the findings of the evaluation and recommendations for further monitoring.

    B. If the ALR is exceeded, the operator shall notify the Department and the South Hadley BOH within one business day, begin daily monitoring, commence a comprehensive engineering evaluation, submit a response action plan for Department review within seven business days, and commence response actions within fourteen days.

18. The operator shall operate the landfill leachate collection and conveyance system in a manner that ensures that the hydraulic head of leachate inside the lined area can be maintained at less than one foot in all areas. The leachate pump shall be operated such that the hydraulic head of leachate inside the lined area can be maintained at less than one foot at the expected flow except during storm events.

19. The operator shall conduct environmental monitoring for Cell I as proposed in the Landfill Operations Plan, except as modified below. The operator shall continue the environmental monitoring program for the existing landfill as required under the permit issued on May 28, 1997 and/or other applicable permits or orders, except that landfill gas monitoring shall be increased to a quarterly basis.

20. The operator shall monitor and log the pressure transducers to measure the leachate head on the liner on a weekly basis. The pressure transducers shall be maintained and calibrated in accordance with the manufacturer's recommendations.

21. By March 31, 2004, the operator shall install landfill gas monitoring wells around the perimeter of the landfill as described below:

    A. Starting at the south end of Basin No. 1 and moving counterclockwise around the perimeter of the existing landfill waste mass, and ending at the wetland area east of the existing landfill, gas monitoring wells shall be installed at intervals of one per 100 feet.

    B. Around the perimeter of Cell I, with the exception of the interface between Cell I and the existing landfill, gas monitoring wells shall be installed at intervals of one per 300 feet.

    C. The gas monitoring wells shall be installed using hollow stem auger techniques in borings advanced to the groundwater table.

22. Landfill gas monitoring locations shall include: the existing soil gas monitoring points, manholes, and catch basins currently in the monitoring program; the new landfill gas monitoring wells; venting structures for the leachate collection and/or recirculation system; and passive gas vents installed within lined landfill cells. However, once the new monitoring wells have been installed and monitored for at least one round, the operator may discontinue monitoring of all existing soil gas points (i.e., points designated with an "SG-" prefix) except SG-3, SG-4, SG-5, and SG-7D. Landfill gas monitoring shall include the following parameters: methane (%), lower explosive limit (%), oxygen (%), carbon dioxide (%), carbon monoxide (parts per million, ppm), and hydrogen sulfide (ppm).

23. The operator shall conduct the groundwater treatment pilot program as proposed in the ATO application except that the frequency of testing the treatment system influent and effluent, which was proposed to take place once per month starting one month after startup, shall take place once every two weeks.

24. A monthly operations report shall be submitted to the Department by no later than the 15th day of the following month. The operations reports shall include the following information:

    A. A summary of the quantity (in tons) of all solid waste received during the previous calendar month and the total quantity of solid waste received to date during the current calendar year. The quantities of solid waste accepted shall be itemized as MSW, non-MSW, and, if applicable, special wastes. Where applicable, each type and source of special wastes shall be identified.

    B. A summary of the quantity (in tons) of all alternative daily cover materials or contaminated soils (divided into categories of materials) received during the previous calendar month and the total quantity received to date during the current calendar year. The report shall detail the source and LSP of record for contaminated soils received and the type and source of all

alternative daily cover material received. A letter of acceptability from the LSP of record shall be included for all contaminated soils.

C. A summary of waste ban activities including all loads rejected from receipt at the landfill on the basis of non-conformance with waste bans, recycling criteria, or waste classification (i.e. special wastes or hazardous wastes). The summary shall include the date the load was rejected, a description of the type of waste rejected and the reason for rejection, as well as the name of the waste hauler, truck number and driver's identification or name.

D. Results of measurement of leachate head on the liner taken from the landfill leachate pressure transducers and a description of calibration and maintenance activities during the previous calendar month.

25. The operator shall cause bimonthly landfill inspections to be conducted by an independent third party professional experienced in and familiar with, current solid waste disposal operations and practices. A report summarizing the results of each inspection shall be submitted to the Department within 21 days following the inspection. The inspection reports shall detail compliance with each provision of 310 CMR 19.130 and with this Permit.

26. In order to prevent the occurrence of collisions between birds and airplanes, the operator shall take all necessary measures to prevent birds, especially but not limited to gulls and turkey vultures, from using the landfill site for feeding, roosting, or loafing. Such measures shall include, but not be limited to, the following:

A. The operator shall strictly adhere to the site-specific *Gull Control Program and Plan*. The effectiveness of the plan shall be periodically evaluated and the plan shall be updated as necessary. The operator shall adopt a philosophy of "continuous improvement" toward reducing the presence of problematic bird species on-site.

B. The operator shall participate in the Westover Air Reserve Base ("Westover") Bird Hazard Working Group ("BHWG") and shall comply with all reasonable requests made by Westover relating to bird control.

C. The landfill Bird Control Officer and other landfill personnel shall notify the Westover Airfield Manager (Control Tower) whenever a significant increase in bird activity is observed. Observations requiring notification shall include greater numbers than usual of birds feeding, loafing, or roosting at the landfill and/or large numbers of birds flying above the landfill.

D. The operator shall consult with Westover prior to using new pyrotechnic bird controls and comply with Westover's recommendations relating to aircraft safety.

27. The operator or Town of South Hadley ("Town") shall maintain closure and post-closure financial assurance for the landfill in the amounts and through the mechanisms as required by the Department, and as outlined in 310 CMR 19.051. The existing value of the FAM, $1,920,912 for closure and $765,713 for post-closure activities, shall not be reduced without the Department's prior written approval.

The operator or Town must submit a revised estimate of the closure and post-closure costs and financial assurance to the Department, in accordance with 19.051, every two years from the date of approval for the period during which the facility will continue to operate and does not have a certificate of closure.

The Department may, at any time, cause the Financial Assurance Mechanism (FAM) for both closure and post-closure to be amended in any manner based on changes in Department regulations or policies, future increased closure or post-closure costs, or as needed to assure adequate protection of public health, safety or the environment.

28. Within 90 days of completion of the groundwater extraction and treatment system, the operator shall submit:

    A. A construction completion report to the Department in accordance with 310 CMR 19.106, which shall contain as-built plans, signed and stamped by a Massachusetts registered professional engineer, as outlined in 310 CMR 19.042(3)(b).

    B. Quality assurance/quality control data, and written certification from the supervising engineer demonstrating that the construction was performed in accordance with Department regulations, requirements, and the approved design plan.

    C. Documentation that the operator has complied with all requirements for discharging treated groundwater to the South Hadley sanitary sewer system, including receipt of a Sewer Discharge Permit, if needed.

29. The operator shall obtain written approval from the Department before reducing the groundwater extraction rate of any well.

30. The operator shall comply with the following schedule for constructing and operating the pilot groundwater treatment system:

    A. Construction of the system shall be completed and the pilot test shall commence by February 1, 2004;

    B. The 6-month pilot test shall be completed by August 1, 2004; and

    C. A final report shall be submitted to the Department by September 15, 2004 and shall include a summary of: monitoring and testing results, preventive maintenance and repairs, capital and operating costs, overall effectiveness of system, recommendations for design modifications or alternative treatments, if any, and a schedule for implementing any recommended system modifications or further testing.

31. The operator shall continue operating the groundwater treatment system in the interim between completion of the pilot test and the issuance of a final determination by the Department.

32. Final closure of Cell I shall be completed within six months of the date on which landfilling operations in the cell cease, or as otherwise approved by the Department. Prior to the start of any final closure activities for Cell I, the Town shall submit a detailed final closure plan to the Department for review and approval. The Department reserves the right to require modifications or additional technical submittals for closure design, if necessary.

33. The operator and/or Town shall maintain and repair the final cover system during the closure period and the post-closure period. The post-closure requirements set forth at 310 CMR 19.142 (1) – (8) are hereby included by reference, subject to regulatory amendment.

RIGHT OF APPEAL

Right to Appeal- Pursuant to 310 CMR 19.037(5), except as provided for under 310 CMR 19.037 (4)(b), any person aggrieved by the issuance of this permit may file an appeal for judicial review of said decision in accordance with the provisions of M.G.L., c. 111, s. 150A and C. 30A not later than thirty [30] days following notice of this decision.

Notice of Appeal- Any aggrieved person intending to appeal the decision to the superior court shall provide notice to the Department of intention to commence such action. Said notice of intention shall include the Department File Number (03-273-001) and shall identify with particularity the issues and reason(s) why it is believed the approval decision was not proper. Such notice shall be provided to the Office of General Counsel of the Department and the Regional Director for the regional office which made the decision. The appropriate addresses to which to send such notices are:

General Counsel
Department of Environmental Protection
One Winter Street -Third floor
Boston, Massachusetts 02108

and

Michael Gorski, Regional Director
Department of Environmental Protection
Western Regional Office
436 Dwight Street
Springfield, Massachusetts 01103

No allegation shall be made in any judicial appeal of this decision unless the matter complained of was raised at the appropriate point in the administrative review procedures established in those regulations, provided that matter may be raised upon a showing that it is material and that it was not reasonably possible with due diligence to have been raised during such procedures or that matter sought to be raised is of critical importance to the public health or environmental impact of the permitted activity.

This approval pertains only to the Solid Waste Management aspects of the proposal and does not negate the responsibilities of the owners or operators to comply with any other local, state or federal laws, statutes and regulations or enforcement actions, including orders issued by another agency now or in the future. Nor does this approval limit the liability of owners or otherwise legally responsible parties from any other applicable laws, statutes or regulations now or in the future.

The Department reserves the right to require additional modifications, additions or deletions of construction design components, investigatory or remedial work, including the installation of remedial measures, if monitoring results or other information indicate such a need.

If you have any questions concerning this matter, please contact Jim Scheffler of this office at 413-755-2127.

Sincerely,

Daniel Hall
Solid Waste Chief
Bureau of Waste Prevention
Western Region

Subject: Waste Profiles for disposal of Building 8 Soil Stockpiles

Damon,

I have completed my review of the South Hadley Landfill in Massachusetts for the disposal of various stockpiled soils on Parcel B. Everything is in order from an Environmental stand point. ETI has informed me that Plaza is having the Landfill added to the insurance today and trucking will commence tomorrow. Can you please sign page 5 of 6 of the attached form - "Certification of Generator". Please send this back to me today via email or fax. Thanks.

RE: **Building 8 Stockpiled Soils**
The Shops at Atlas Park
Glendale, NY

Mr. Tomicic:

Waste characterization sampling has been completed on the soil stockpiles located at Building 8, The Shops at Atlas Park, Glendale, New York. There are currently two waste stockpiles at the aforementioned location. The attached analytical data corresponds to the following locations.

Waste Stockpile within Building 8 (150 cubic yards)

- SP-BLD8-120705(1)
- SP-BLD8-120705(2)
- SP-BLD8-120705(3)
- SP-BLD8-120705(4)
- B8-SPS-111505
- B8-SPN-111505

Waste Stockpile Outside (South Side) Building 8 (250 yards)

- SW Vault – 1B
- SW Vault – 1C
- SW Vault – 1D
- SW Vault – 1A
- SW Vault – 2B
- SW Vault – 2C
- SW Vault – 2D
- SW Vault – 2A

Should you have any other questions or require additional information, please feel free to contact me at (212) 479-5400.

Sincerely,
LANGAN ENGINEERING & ENVIRONMENTAL SERVICES

January 19, 2006

Mr. Thomas Heaton
Waste Management – Holyoke Sanitary Landfill
600 New Ludlow Road
South Hadley, MA 01075

RE: **Waste Characterization Sample - BLDG.8-STKP-011606**
Building 8 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Heaton:

On January 16th, 2006 Earth Technology Inc. collected a 6-point composite waste characterization sample from two waste soil stockpiles located at Building 8 at *The Shops At Atlas Park* in Glendale, New York. Three composite samples were collected from each waste soil stockpile, one located within the building basement and the other located on the south exterior side of the building. The 6-point composite sample was selected for the analyses of volatile organic compounds (VOCs) by EPA Method 8260B, semi-volatile organic compounds (SVOCs) by EPA Method 8270C, polychlorinated biphenyls (PCBs) by EPA Method 8082, total petroleum hydrocarbons (TPH) by EPA Method 418.1, the RCRA 8 metals by mass analysis by EPA Method 6010B, except Hg which was analyzed by EPA method 7471, and the RCRA 8 metals by TCLP analysis by EPA Method 6020A. The waste characterization analysis is supplied from a Massachusetts certified lab.

Although discrete sampling is usually the preferred method for VOC analysis, there is enough historical data available from this location to suggest that VOCs are not serious constituents of concern.

Should you have any other questions or require additional information, please fell free to contact me at (203) 230-2040.

Sincerely,
Earth Technology Inc.

Boris A. Tomicic, P.E., LEP
Senior Project Manager

RE: **Professional Engineer Opinion Letter**
Building 8 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Heaton:

On behalf of Atlas Park, LLC, Earth Technology Inc. (ETI) has prepared this letter to provide information regarding the disposal of historic urban fill. ETI estimates approximately 500 cubic yards of contaminated soil generated at The Shops At Atlas, 8000 Cooper Avenue, Glendale, New York (herein referred to as the site) will require disposal. This redevelopment project is located on a former previous light industrial site. Historic operations appear to have contaminated the site's urban fill with metals and semi-volatile organic compounds (SVOCs).

The site is located in a historically developed commercial and residential area. Although releases to the subsurface on nearby properties are documented, these releases are not anticipated to have affected the remediation area where the contaminated soil for disposal was generated.

Based on the attached analytical data (i.e. 1 waste characterization sample – BLDG.8-STKP-011606 and 14 characterization samples - SP-BLD8-120705(1), SP-BLD8-120705(2), SP-BLD8-120705(3), SP-BLD8-120705(4), B8-SPS-111505, B8-SPN-111505, SW Vault – 1B, SW Vault – 1C, SW Vault – 1D, SW Vault – 1A, SW Vault – 2B, SW Vault – 2C, SW Vault – 2D, SW Vault – 2A), it is my professional opinion that approximately 500 cubic yards of contaminated soil generated from 8000 Cooper Avenue site located in Glendale, NY should satisfy the concentration requirements for the various constituents tested. The waste characterization analysis is supplied from a Massachusetts certified lab. The concentrations of constituents analyzed and detected should meet the criteria listed in Table 1 of the Massachusetts Department of Environmental Protection policy # COMM-97-001 entitled "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection." Based on the attached analytical data, the contaminated soil is acceptable for reuse as cover material or shaping projects in the unlined cell of the Cottage Street Landfill, located in Springfield, MA. Appropriate due diligence was performed to determine that this urban fill does not contain any listed hazardous waste or is itself a characteristic hazardous waste.

A total of 1waste characterization soil sample was submitted to a fixed laboratory, collected as a 6-point composite from the two waste stockpiles. This soil sample was selected for the analyses of volatile organic compounds (VOCs) by EPA Method 8260B, SVOCs by EPA Method 8270C, polychlorinated biphenyls (PCBs) by EPA Method 8082, total petroleum hydrocarbons (TPH) by

EPA Method 418.1, the RCRA 8 metals by mass analysis by EPA Method 6010B, except Hg which was analyzed by EPA method 7471, and the RCRA 8 metals by TCLP analysis by EPA Method 6020A. Additional analyses was also conducted on 14 other characterization samples. The additional analytical data is included as an attachment to this letter for reference purposes.

The physical description of the soil, based upon a visual observation, is as follows: Brown, SAND, some (-) med. Sand and trace (+) Silt, loose. It is my professional opinion that based on the attached analytical data this soil meets the Massachusetts requirements and is suitable for daily or intermediate cover and/or shaping projects at the Waste Management Cottage Street Landfill.

Should you have any other questions or require additional information, please fell free to contact me at (203) 230-2040.

Sincerely,
Earth Technology Inc.

Material Shipping Record & Log

For the shipment of contaminated soil, urban fill, and dredge materials not subject to management under section 310 CMR 40.0035 nor manifesting under 310 CMR 30.000

Tracking Number

A. Location Information

Important: When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

1. Provide the following information on the location where the waste was generated:

Building 8 Stockpiled Soils
Release name (optional)

8000 Cooper Avenue
Street

The Shops At Atlas Park
Location aid

Glendale
City/Town

NY
State

11385
Zip code

2. Date/Period of generation: 09/01/05 From 12/31/05 To

3. U.S. EPA ID number: _____

4. 21E release: ☐ Yes ☒ No

5. List additional tracking documents associated with this document:

Discrete Bill of Ladings, as required

B. Generator Information2

Important: This form is not to be used for the shipment of remediation wastes subject to management under section 310 CMR 40.0035 of the Massachusetts Contingency Plan nor is it to be used in lieu of a hazardous waste manifest for hazardous waste or recyclable materials subject to the Massachusetts Hazardous Waste Regulations 310 CMR 30.000.

1. Provide the following generator information:

Atlas Park LLC
Name of organization

Mark Powers
Contact name

Owner's Representative
Title

70-36 83rd Street
Street address

Glendale
City/Town

NY
State

11385
Zip code

(718) 326-3560
Telephone number(including extension)

C. Owner and/or Operator Information

1. If the owner and/or operator is different from the generator as indicated in Section B, provide the following information:

Check applicable: ☒ owner ☐ operator

Name of organization

Contact name

Title

Street address

City/Town

State

Zip code

- ☒ other(describe): Historic Operations

9. Indicate which waste characterization support documentation is attached:

- ☐ site history information
- ☐ sampling and analytical methods/procedure
- ☒ laboratory data
- ☐ field screening data

If supporting documentation is not appended, provide an attachment stating the date and in connection with what document such information was previously submitted to the facility.

G. Qualified Environmental Professional Opinion

"I have personally examined and am familiar with the information contained on and submitted with this form. Based on this information, it is my opinion that the testing and assessment actions undertaken were adequate to characterize the waste, and that the facility or location can accept wastes with the characteristics described in this submittal. I am aware that significant penalties including, but not limited to, possible fines and imprisonment may result if I willfully submit information which I know to be false, inaccurate, or materially incomplete."

REV. A01

EARTH TECHNOLOGY INC.
Site & Environmental Services

March 2, 2006

Mr. Angelo Ortisi
WSI South Hadley Landfill, Inc.
12 Industrial Drive
South Hadley, MA 01075

RE: **Professional Engineer Opinion Letter**
Building 8 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Ortisi:

On behalf of Atlas Park, LLC, Earth Technology Inc. (ETI) has prepared this letter to provide information regarding the disposal of historic urban fill. ETI estimates approximately 500 cubic yards of contaminated soil generated at The Shops At Atlas, 80-00 Cooper Avenue, Glendale, New York (herein referred to as the site) will require disposal. This redevelopment project is located on a former previous light industrial site. Historic operations appear to have contaminated the site's urban fill with low-level petroleum hydrocarbons, low-level volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs).

The site is located in a historically developed commercial and residential area. Although releases to the subsurface on nearby properties are documented, these releases are not anticipated to have affected the remediation area where the contaminated soil for disposal was generated.

Based on the attached analytical data (i.e. 4 waste characterization samples – WASTESK-022406-001, SP-Parcel B-A-021506, SP-Parcel B-B-021506, and SP-Parcel B-C-021506), it is my professional opinion that approximately 500 cubic yards of contaminated soil generated from the 80-00 Cooper Avenue site located in Glendale, NY should satisfy the concentration requirements for the various constituents tested. The waste characterization analysis is supplied from Massachusetts certified labs. The concentrations of constituents analyzed and detected should meet the criteria listed in Table 1 of the Massachusetts Department of Environmental Protection policy # COMM-97-001 entitled "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection." Based on the attached analytical data, the contaminated soil is acceptable for reuse as cover material or shaping projects in the lined cell of the WSI South Hadley Landfill, located in South Hadley, MA. Appropriate due diligence was performed to determine that this urban fill does not contain any listed hazardous waste or is itself a characteristic hazardous waste.

A total of 4 composite waste characterization soil samples were submitted to a fixed laboratory, collected from the soil waste stockpile. Soil sample WASTESK-022406-001 was selected for the analyses of VOCs by EPA Method 8260B, SVOCs by EPA Method 8270C, polychlorinated biphenyls (PCBs) by EPA Method 8082, total petroleum hydrocarbons (TPH) by the CT Extractable Method, the RCRA 8 metals by mass analysis by EPA Method 6010B, except Hg

which was analyzed by EPA method 7471, and the RCRA 8 metals by the toxicity characteristic leaching procedure (TCLP) analysis by EPA Method 6020A/7471. Additional analyses on this sample included Conductivity, pH, reactivity, and flashpoint. Soil samples SP-Parcel B-A-021506, SP-Parcel B-B-021506, and SP-Parcel B-C-021506 were analyzed for VOCs (both mass and TCLP) by EPA Method 8260B, TPH by the EPA Method 8100, TCLP Pesticides by EPA Method 8081A, PCBs by EPA Method 8082, TCLP Herbicides by EPA Method 8151A, TCLP SVOCs by EPA Method 8270C, Mass Metals (As, Cd, Cr, Hg, and Pb) by EPA Method 6010B/7471A, and the RCRA 8 metals by TCLP analysis by EPA Method 6010B/7471A. Additional analyses on these three samples included ignitability, pH, reactivity, trivalent chromium, hexavalent chromium, and total organic carbon.

The physical description of the soil, based upon a visual observation, is as follows: Brown, SAND, some (-) med. Sand and trace (+) Silt, loose. It is my professional opinion that based on the attached analytical data this soil meets the Massachusetts requirements and is suitable for daily or intermediate cover and/or shaping projects at the WSI South Hadley Landfill, located in South Hadley, MA.

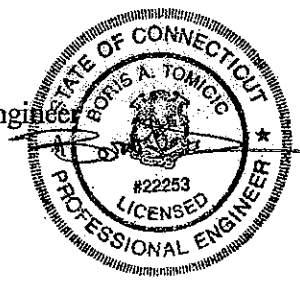

As more soil is potentially generated for disposal on this project, it will continue to be sampled at the same frequency and for similar sampling parameters, as referenced above. The volume of soil certified for disposal will be amended in subsequent opinion letters, based on the availability of additional analytical data.

Should you have any other questions or require additional information, please fell free to contact me at (203) 230-2040.

Sincerely,
Earth Technology Inc.

RE: **Professional Engineer Opinion Letter**
Building 8 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Ortisi:

On behalf of Atlas Park, LLC, Earth Technology Inc. (ETI) has prepared this letter to provide information regarding the disposal of historic urban fill. ETI estimates approximately another 500 cubic yards of contaminated soil generated at The Shops At Atlas, 80-00 Cooper Avenue, Glendale, New York (herein referred to as the site) will require disposal. As previously relayed to you, this redevelopment project is located on a former previous light industrial site. Historic operations appear to have contaminated the site's urban fill with low-level petroleum hydrocarbons, low-level volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs).

The site is located in a historically developed commercial and residential area. Although releases to the subsurface on nearby properties are documented, these releases are not anticipated to have affected the remediation area where the contaminated soil for disposal was generated.

Based on the attached analytical data (i.e. 1 waste characterization sample – WASTESK-022406-002), it is my professional opinion that approximately 500 cubic yards of contaminated soil generated from the 80-00 Cooper Avenue site located in Glendale, NY should satisfy the concentration requirements for the various constituents tested. The waste characterization analysis is supplied from a Massachusetts certified lab. The concentrations of constituents analyzed and detected should meet the criteria listed in Table 1 of the Massachusetts Department of Environmental Protection policy # COMM-97-001 entitled "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection." Based on the attached analytical data, the contaminated soil is acceptable for reuse as cover material or shaping projects in the lined cell of the WSI South Hadley Landfill, located in South Hadley, MA. Appropriate due diligence was performed to determine that this urban fill does not contain any listed hazardous waste or is itself a characteristic hazardous waste.

A total of 1 composite waste characterization soil samples was submitted to a fixed laboratory, collected from the soil waste stockpile. Soil sample WASTESK-022406-002 was selected for the analyses of VOCs by EPA Method 8260B, SVOCs by EPA Method 8270C, polychlorinated biphenyls (PCBs) by EPA Method 8082, total petroleum hydrocarbons (TPH) by the CT Extractable Method, the RCRA 8 metals by mass analysis by EPA Method 6010B, except Hg

which was analyzed by EPA method 7471, and the RCRA 8 metals by the toxicity characteristic leaching procedure (TCLP) analysis by EPA Method 6020A/7471. Additional analyses on this sample included conductivity.

The physical description of the soil, based upon a visual observation, is as follows: Brown, SAND, some (-) med. Sand and trace (+) Silt, loose. It is my professional opinion that based on the attached analytical data this soil meets the Massachusetts requirements and is suitable for daily or intermediate cover and/or shaping projects at the WSI South Hadley Landfill, located in South Hadley, MA.

As more soil is potentially generated for disposal on this project, it will continue to be sampled at the same frequency and for similar sampling parameters, as referenced above. The volume of soil certified for disposal will be amended in subsequent opinion letters, based on the availability of additional analytical data.

Should you have any other questions or require additional information, please fell free to contact me at (203) 230-2040.

Sincerely,
Earth Technology Inc.

RE: **South Hadley Landfill Acceptance Letter**
Building 8 Stockpiled Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Tomicic:

North East Waste Services, Inc. has reviewed the analytical data associated with the Building 8 soil stockpile located at The Shops At Atlas, 8000 Cooper Avenue, Glendale, New York. Based on your environmental professional certification letter and the supporting analytical data, this material is acceptable for use as daily cover at the South Hadley Landfill. We understand that this soil was generated on a former previous light industrial site and is considered an urban type fill. The following soil samples were reviewed for acceptance purposes:

- WASTESK-022406-001
- WASTESK-022406-002
- SP-Parcel B-A-021506
- SP-Parcel B-B-021506
- SP-Parcel B-C-021506

North East Waste Services, Inc. will accept the soil represented by the aforementioned analysis for use as daily cover material at the South Hadley Landfill located in South Hadley, Massachusetts.

Sincerely,
North East Waste Services, Inc.

Angelo Ortisi

Material Shipping Record & Log

For the shipment of contaminated soil, urban fill, and dredge materials not subject to management under section 310 CMR 40.0035 nor manifesting under 310 CMR 30.000

Tracking Number

A. Location Information

Important: When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

1. Provide the following information on the location where the waste was generated:

Building 8 Stockpiled Soils
Release name (optional)

8000 Cooper Avenue
Street

The Shops At Atlas Park
Location aid

Glendale
City/Town

NY
State

11385
Zip code

2. Date/Period of generation: 01/01/06 From 04/31/06 To

3. U.S. EPA ID number: _____

4. 21E release: ☐ Yes ☒ No

5. List additional tracking documents associated with this document:

Discrete Bill of Ladings and/or Non-Hazardous Waste Manifests, as required.

B. Generator Information2

Important: This form is not to be used for the shipment of remediation wastes subject to management under section 310 CMR 40.0035 of the Massachusetts Contingency Plan nor is it to be used in lieu of a hazardous waste manifest for hazardous waste or recyclable materials subject to the Massachusetts Hazardous Waste Regulations 310 CMR 30.000.

1. Provide the following generator information:

REV. 4/02

South Hadley Landfill, LLC

(a North East Waste Services company)

March 16, 2006

Mr. Boris A. Tomicic
Earth Technology Inc.
250 Sackett Point Road
North Haven, CT 06473

RE: **South Hadley Landfill Acceptance Letter**
Building 3 Stockpiled Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Tomicic:

North East Waste Services, Inc. has reviewed the analytical data associated with the Building 3 soil stockpile located at The Shops At Atlas, 8000 Cooper Avenue, Glendale, New York. Based on your environmental professional certification letter and the supporting analytical data, this material is acceptable for use as daily cover at the South Hadley Landfill. We understand that this soil was generated on a former previous light industrial site and is considered an urban type fill. The following soil samples were reviewed for acceptance purposes:

- B3SP-031006
- AOC 1&2-B3-030806

North East Waste Services, Inc. will accept the soil represented by the aforementioned analysis for use as daily cover material at the South Hadley Landfill located in South Hadley, Massachusetts.

Sincerely,
North East Waste Services, Inc.

Angelo Ortisi
General Manager

RE: **Professional Engineer Opinion Letter**
Building 3 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Ortisi:

On behalf of Atlas Park, LLC, Earth Technology Inc. (ETI) has prepared this letter to provide information regarding the disposal of historic urban fill. ETI estimates approximately 500 cubic yards of contaminated soil generated at The Shops At Atlas, 80-00 Cooper Avenue, Glendale, New York (herein referred to as the site) will require disposal. This redevelopment project is located on a former previous light industrial site. Historic operations appear to have contaminated the site's urban fill with low-level petroleum hydrocarbons, low-level volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs).

The site is located in a historically developed commercial and residential area. Although releases to the subsurface on nearby properties are documented, these releases are not anticipated to have affected the remediation area where the contaminated soil for disposal was generated.

Based on the attached analytical data (i.e. 2 soil samples – B3SP-031006 and AOC 1&2-B3-030806), it is my professional opinion that approximately 500 cubic yards of contaminated soil generated from the 80-00 Cooper Avenue site located in Glendale, NY should satisfy the concentration requirements for the various constituents tested. The waste characterization analysis is supplied from Massachusetts certified labs. The concentrations of constituents analyzed and detected should meet the criteria listed in Table 1 of the Massachusetts Department of Environmental Protection policy # COMM-97-001 entitled "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection." Based on the attached analytical data, the contaminated soil is acceptable for reuse as cover material or shaping projects in the lined cell of the WSI South Hadley Landfill, located in South Hadley, MA. Appropriate due diligence was performed to determine that this urban fill does not contain any listed hazardous waste or is itself a characteristic hazardous waste.

A total of 2 composite characterization soil samples were submitted to a fixed laboratory, collected from the soil waste stockpile. Soil sample B3SP-031006 was selected for the analyses of VOCs by EPA Method 8260B, SVOCs by EPA Method 8270C, polychlorinated biphenyls (PCBs) by EPA Method 8082, total petroleum hydrocarbons (TPH) by the CT Extractable Method, the RCRA 8 metals by mass analysis by EPA Method 6010B, except Hg which was analyzed by EPA method 7471, and the RCRA 8 metals by the toxicity characteristic leaching

procedure (TCLP) analysis by EPA Method 6020A/7471. Additional analyses on this sample included conductivity. Soil sample AOC 1&2-B3-030806 was analyzed for VOCs (both mass and TCLP) by EPA Method 8260B, TPH by the CT Extractable Method, TCLP Pesticides by EPA Method 8081A, PCBs by EPA Method 8082, TCLP Herbicides by EPA Method 8151A, Total and TCLP SVOCs by EPA Method 8270C, and the RCRA 8 metals by both mass and TCLP analysis by EPA Method 6010B/7471A. Additional analyses on this sample included ignitability, corrosivity, reactivity (CN & S), conductivity, and total organic carbon.

The physical description of the soil, based upon a visual observation, is as follows: Brown, SAND, some (-) med. Sand and trace (+) Silt, loose. It is my professional opinion that based on the attached analytical data this soil meets the Massachusetts requirements and is suitable for daily or intermediate cover and/or shaping projects at the WSI South Hadley Landfill, located in South Hadley, MA.

As more soil is potentially generated for disposal on this project, it will continue to be sampled at the same frequency and for similar sampling parameters, as referenced above. The volume of soil certified for disposal will be amended in subsequent opinion letters, based on the availability of additional analytical data.

Should you have any other questions or require additional information, please fell free to contact me at (203) 230-2040.

Sincerely,
Earth Technology Inc.

RE: **Professional Engineer Opinion Letter**
Building 3 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Ortisi:

On behalf of Atlas Park, LLC, Earth Technology Inc. (ETI) has prepared this letter to provide information regarding the disposal of historic urban fill. ETI estimates approximately 100 cubic yards of contaminated soil generated at The Shops At Atlas, 80-00 Cooper Avenue, Glendale, New York (herein referred to as the site) will require disposal. This redevelopment project is located on a former previous light industrial site. Historic operations appear to have contaminated the site's urban fill with low-level petroleum hydrocarbons, low-level volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs).

The site is located in a historically developed commercial and residential area. Although releases to the subsurface on nearby properties are documented, these releases are not anticipated to have affected the remediation area where the contaminated soil for disposal was generated.

Based on the attached analytical data (i.e. 1 soil sample – Bldg3-SP-051706), it is my professional opinion that up to 500 cubic yards of contaminated soil generated from Building 3 at the 80-00 Cooper Avenue site located in Glendale, NY should satisfy the concentration requirements for the various constituents tested. The waste characterization analysis is supplied from a Massachusetts certified lab. The concentrations of constituents analyzed and detected should meet the criteria listed in Table 1 of the Massachusetts Department of Environmental Protection policy # COMM-97-001 entitled "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection." Based on the attached analytical data, the contaminated soil is acceptable for reuse as cover material or shaping projects in the lined cell of the WSI South Hadley Landfill, located in South Hadley, MA. Appropriate due diligence was performed to determine that this urban fill does not contain any listed hazardous waste or is itself a characteristic hazardous waste.

A total of 1 composite characterization soil sample was submitted to a fixed laboratory, collected from the soil waste stockpile. The soil sample was selected for VOCs (both mass and TCLP) by EPA Method 8260B, TPH by modified EPA Method 8100, PCBs by EPA Method 8082, SVOCs (both mass and TCLP) by EPA Method 8270C, the MA Table 1 metals by mass analysis by EPA Method 6010B, except Hg which was analyzed by EPA method 7471A, and the RCRA 8 metals by TCLP analysis by EPA Method 6010B, except Hg which was analyzed by EPA method

7471A. Additional analyses on this sample included ignitability, pH, reactivity, CN and S reactivity, CR^{3+} and Cr^{6+} chromium, total solids, conductance, and total organic carbon.

The physical description of the soil, based upon a visual observation, is as follows: Brown, SAND, some (-) med. Sand and trace (+) Silt, loose. It is my professional opinion that based on the attached analytical data this soil meets the Massachusetts requirements and is suitable for daily or intermediate cover and/or shaping projects at the WSI South Hadley Landfill, located in South Hadley, MA.

As more soil is potentially generated for disposal on this project, it will continue to be sampled at the same frequency and for similar sampling parameters, as referenced above. The volume of soil certified for disposal will be amended in subsequent opinion letters, based on the availability of additional analytical data.

Should you have any other questions or require additional information, please fell free to contact me at (203) 230-2040.

RE: **Professional Engineer Opinion Letter**
Building 3 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Ortisi:

On behalf of Atlas Park, LLC, Earth Technology Inc. (ETI) has prepared this letter to provide information regarding the disposal of historic urban fill. ETI estimates up to 20 cubic yards of contaminated soil generated at The Shops At Atlas, 80-00 Cooper Avenue, Glendale, New York (herein referred to as the site) will require disposal. This redevelopment project is located on a former previous light industrial site. Historic operations appear to have contaminated the site's urban fill with low-level petroleum hydrocarbons, low-level volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs).

The site is located in a historically developed commercial and residential area. Although releases to the subsurface on nearby properties are documented, these releases are not anticipated to have affected the remediation area where the contaminated soil for disposal was generated.

Based on the attached analytical data (i.e. 1 soil sample – WC-Bldg3SP3-100406), it is my professional opinion that up to 20 cubic yards of contaminated soil generated from Building 3 at the 80-00 Cooper Avenue site located in Glendale, NY should satisfy the concentration requirements for the various constituents tested. The waste characterization analysis is supplied from a Massachusetts certified lab. The concentrations of constituents analyzed and detected should meet the criteria listed in Table 1 of the Massachusetts Department of Environmental Protection policy # COMM-97-001 entitled "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection." Based on the attached analytical data, the contaminated soil is acceptable for reuse as cover material or shaping projects in the lined cell of the WSI South Hadley Landfill, located in South Hadley, MA. Appropriate due diligence was performed to determine that this urban fill does not contain any listed hazardous waste or is itself a characteristic hazardous waste.

A total of 1 composite characterization soil sample was submitted to a fixed laboratory, collected from the soil waste stockpile. The soil sample was selected for VOCs (both mass and TCLP) by EPA Method 8260B, TPH by modified EPA Method 8100, TCLP Pesticides by EPA Method 1311/8081A, PCBs by EPA Method 8082, TCLP Herbicides by EPA Method 1311/8151A, SVOCs (both mass and TCLP) by EPA Method 8270C, select metals (As, Cd, Cr, Hg, and Pb) by mass analysis by EPA Method 6010B, except Hg which was analyzed by EPA method

7471A, and the RCRA 8 metals by TCLP analysis by EPA Method 6010B, except Hg which was analyzed by EPA method 7471A. Additional analyses on this sample included ignitability, pH, reactivity, CN and S reactivity, Cr^{3+}, Cr^{6+}, % solids, specific conductance, and TOC.

The physical description of the soil, based upon a visual observation, is as follows: Brown, SAND, some (-) med. Sand and trace (+) Silt, loose. It is my professional opinion that based on the attached analytical data this soil meets the Massachusetts requirements and is suitable for daily or intermediate cover and/or shaping projects at the WSI South Hadley Landfill, located in South Hadley, MA.

As more soil is potentially generated for disposal on this project, it will continue to be sampled at the same frequency and for similar sampling parameters, as referenced above. The volume of soil certified for disposal will be amended in subsequent opinion letters, based on the availability of additional analytical data.

RE: **Building 8 Stockpiled Soils**
The Shops at Atlas Park
Glendale, NY

Mr. Tomicic:

Waste characterization sampling has been completed on the soil stockpiles located at Building 8, The Shops at Atlas Park, Glendale, New York. There are currently two waste stockpiles at the aforementioned location. The attached analytical data corresponds to the following locations.

Waste Stockpile within Building 8 (150 cubic yards)

- SP-BLD8-120705(1)
- SP-BLD8-120705(2)
- SP-BLD8-120705(3)
- SP-BLD8-120705(4)
- B8-SPS-111505
- B8-SPN-111505

Waste Stockpile Outside (South Side) Building 8 (250 yards)

- SW Vault – 1B
- SW Vault – 1C
- SW Vault – 1D
- SW Vault – 1A
- SW Vault – 2B
- SW Vault – 2C
- SW Vault – 2D
- SW Vault – 2A

Should you have any other questions or require additional information, please fell free to contact me at (212) 479-5400.

Re: **RecTec Approval Letter**
Building 8 Soils, The Shops At Atlas Park, Glendale, NY

Dear Mr. Tomicic:

Recycle Technology, LLC (RecTec) has reviewed the analytical data associated with the Building 8 soil stockpile located at The Shops At Atlas, 8000 Cooper Avenue, Glendale, New York. This soil was generated on a former previous light industrial site and is considered an urban type fill material with ABC Rubble. The following soil samples were reviewed for acceptance purposes:

- BLDG.8-STKP-011606 (waste characterization sample)
- SP-BLD8-120705(1)
- SP-BLD8-120705(2)
- SP-BLD8-120705(3)
- SP-BLD8-120705(4)
- B8-SPS-111505
- B8-SPN-111505
- SW Vault – 1B
- SW Vault – 1C
- SW Vault – 1D
- SW Vault – 1A
- SW Vault – 2B
- SW Vault – 2C
- SW Vault – 2D
- SW Vault – 2A

RecTec will accept the soil represented by the aforementioned analysis for beneficial re-use as an asphaltic aggregate base material. If you have any questions please do not hesitate to call me, at (508) 248-4040.

Sincerely,

William McCambridge

RECYCLING PERMIT

Recycle Technology, LLC "RecTec"		P.O Box 368 Charlton City, MA	
Name of Permittee		Mailing Address	
William McCambridge	April 06, 2005	A	W050453
Contact Person	Effective Date	Class	Permit No.
(508) 248-4040	April 06, 2010		MV5082484040
Phone Number	Expiration Date		MA/EPA Identification No.

This is to certify that the above named company is authorized to manage regulated recyclable materials pursuant to M.G.L. Chapter 21C and 310 CMR 30.200.

This permit authorizes recycling of the following materials only:

Material Description	Waste Code	Amount
Used and unused waste oil petroleum contaminated soils including gasoline and/or other light oil[1] contaminated soils	MA01	100,000 tons per year of petroleum contaminated soils, no more 30,000 tons/year shall be light oil contaminated soils.

DESCRIPTION OF RECYCLING OPERATIONS

Re-use of petroleum contaminated soil into a cold mix asphalt product using the following operations; screening, pug mill mixing, and portable crushing. Screenings shall be crushed and used in the cold mix asphalt product.

LOCATION OF RECYCLING OPERATIONS
Recycle Technology, LLC
17 Griffin Road
Charlton City, MA 01508

[1] Light oil shall mean petroleum products that are light distillates such as gasoline, kerosene and jet fuel.

JAN-25-2006 10:03 AM RECYCLE TECHNOLOGY 508 248 4050 P.04

THIS PERMIT AUTHORIZES ONLY THE NAMED PERMITTEE TO ENGAGE IN THE ACTIVITIES DESCRIBED ABOVE. THIS PERMIT DOES NOT GRANT ANY RIGHTS NOT OTHERWISE GRANTED BY FEDERAL, STATE, OR LOCAL STATUTES, ORDINANCES, OR REGULATIONS. THE PERMITTEE SHALL COMPLY AT ALL TIMES WITH ALL STATE AND FEDERAL REGULATIONS AND STATUTES APPLICABLE TO THE MANAGEMENT OF REGULATED RECYCLABLE MATERIALS.

ISSUED BY THE DEPARTMENT OF ENVIRONMENTAL PROTECTION

DATE: 04/06/05

BY: John F. Kronopolus

Section Chief
Bureau of Waste Prevention

SECTION A

GENERAL CONDITIONS

General Conditions

I. General Condition of Recycling Permit

(1) The permittee shall comply with all applicable provisions of 310 CMR 30.000, Hazardous Waste Regulations; and in particular, with 30.205 (General Conditions for All Recycling Permits) and 30.206 (Additional General Conditions of Facility Permits). The permittee is considered a Class A, Level III recycling facility subject to all applicable provisions of 310 CMR 30.000 and 310 CMR 30.200 and the associated Annual Compliance Assurance Fee(s) established in 310 CMR 4.03. Pursuant to 310 CMR 4.03(7), failure to pay any applicable fee(s) may result in permit suspension or permit revocation, and may result in the denial of any pending permit application(s) made by or on behalf of the permittee.

(2) Within 6 months of the effective date of this permit, the permittee shall submit to the Department a permit modification to construct a permanent storage building in accordance with General Law Chapter 30A, Section 13. Approval of the permit modification will allow the continued operation of the approved recycling activity for five (5) years from the effective date of this permit. Failure to submit a permit modification (HW26) by October 6, 2005 will result in immediate suspension of all approved recycling activities.

(3) Failure to construct and operate said permanent storage building by April 6, 2006 will result in immediate suspension of all approved recycling activities.

II. Appeal Rights and Time Limits:

This permit is an action of the Department. If you are aggrieved by this action you may request an adjudicatory hearing. A request for a hearing must be made in writing and postmarked within 21 days of the date this permit was issued.

Contents of Hearing Request:

Under 310 CMR 1.01(6)(b), the request must clearly and concisely state the facts which are the grounds for the request and the relief sought. Additionally, the request must state why the permit is not consistent with applicable laws and regulations.

Filing Fee and Address:

The hearing request, along with a valid check payable to the Commonwealth of Massachusetts in the amount of $100.00, must be mailed to:

Commonwealth of Massachusetts
Department of Environmental Protection
P. O. Box 4062
Boston, Massachusetts 02211

The request will be dismissed if the filing fee is not paid, unless the appellant is exempt or granted a waiver as described below.

Exemptions:

The filing fee is not required if the appellant is a city or town (or municipal agency), county, or district of the Commonwealth of Massachusetts, or a municipal housing authority.

Waiver:

The Department may waive the adjudicatory hearing-filing fee for a person who shows that paying the fee will create an undue financial hardship. A person seeking a waiver must file, together with the hearing request as provided above, an affidavit setting forth the facts believed to support the claim of undue financial hardship.

SECTION B

SPECIFIC CONDITIONS

Specific Conditions

I. Conditions of Acceptance

(1) RecTec is authorized to accept petroleum contaminated soils (PCS) shipped to the facility under 310 CMR 30.000, a 21E Bill of Lading, in accordance with 310 CMR 40.0034 and 310 CMR 40.0035, or a Material Shipping Record subject to the following conditions:

(a) PCS shipped to the facility from out-of-state locations or from in-state locations subject to 310 CMR 40.0032(3) but not subject to 310 CMR 40.0034 and 40.0035 shall be accompanied by a Material Shipping Record in a form specified by the Department in Attachment I.

(b) The completed 21E Bill of Lading or the Material Shipping Record and any accompanying documentation including analytical data shall be maintained at the facility in accordance with the record keeping requirements of the Facility's recycling permit;

(c) The Facility may limit the analytical requirements for the receipt of petroleum contaminated soil to the Oil and Hazardous Material(s)[2] that are known to constitute the release, and those additional Oil and Hazardous Materials that are known or may reasonably be suspected to be present in the soil either as anthropogenetic[3] contaminants or from other known or suspected releases at or in the vicinity of the site, provided that:

(i) The source(s) of the release of the petroleum contamination is known[4];

(ii) The Oil and Hazardous Material and hazardous constituents of the petroleum released are known;

(iii) The generator, using due diligence, determines that there is no reason to suspect or believe that the PCS have been impacted by any releases of Oil or Hazardous Materials other than that of the known source OR identifies the additional Oil and Hazardous Materials that are suspected or known to be present in the soil, in addition to those associated with the known release, including any anthropogenic contaminants.

---

[2] The term Oil and Hazardous Materials (OHMs) as used in this section shall include both the materials listed as OHMs in 310 CMR 40.000 and the hazardous constituents listed in 310 CMR 30.160.

[3] Anthropogenic contaminants refers to any hazardous constituents or Oil and Hazardous Materials present in the soil that are ubiquitous and consistently present in the environment and in the vicinity of the site of generation; and attributable to atmospheric deposition of industrial process or engine emissions, fill materials containing wood or coal ash, and/or petroleum residues that are incidental to the normal operation of motor vehicles. In urban locations, this may include but not be limited to such constituents as: As, Cd, Cr, Pb, and TPH.

[4] Known-as documented by the provisions of Section I, Item (1), Paragraph (v) of this permit.

(iv) Due diligence shall consist of a search of information and records reasonably available to the generator of the contaminated soil sufficient to make the determination required by Section B, Specific Conditions, Paragraph I.(1)(c)(iii). Such records and information may include, but are not limited to, those of the generator, location of generation (i.e. facility if not the generator), the Department's Bureau of Waste Site Cleanup, and the municipality (i.e. Board of Health, Fire Department) within which the site is located.

(v) The generator and/or associated Licensed Site Professional (LSP) shall include sufficient information justifying the limiting of the analytical requirements as part of the Site History Information accompanying the 21E Bill of Lading or Material Shipping Record depending on whether or not the generator site is in-state or out of state. This shall include, at a minimum, the following:

(i) the analytical parameters selected;
(ii) any screening analytical data (i.e. total data for TCLP or headspace data)[5];
(iii) the laboratory analytical data;
(iv) a description of the release;
(v) a physical description of the soil including the classification method used;
(vi) a description of the site location with regards to current and former usage;
(vii) a statement as to whether any other releases have occurred at or in the vicinity of the site which may have impacted the site including the types of Oil and Hazardous Materials constituting those releases;
(viii) a statement as to whether the location is suspected or known to be impacted by any anthropogenic contaminants including identification of those contaminants; and
(ix) a statement that the generator has used due diligence in making the determination.

(2) The concentrations of hazardous constituents in PCS accepted by the facility shall comply with the acceptance criteria specified in Table 1 - Acceptance Criteria, Page 17 subject to the following:

[5] The facility may use the total analysis data expressed as mg/kg dry weight as a screening tool in determining TCLP testing as outlined in the memorandum found in Attachment III. The headspace screening procedure may also be used as a screening tool only.

(a) The presence of any chlorinated solvent(s) (HVOCs) as a hazardous constituent(s) in the petroleum contaminated soil should not cause the soil to be either a listed or characteristic hazardous waste pursuant to 310 CMR 30.000. Also, the PCS can not exceed the Toxicity Characteristic limit specified in 310 CMR 30.125 for any constituent using the TCLP test (310 CMR 30.155) except for benzene, toluene and xylene (BTEX) when these compounds are associated petroleum contamination and not any other solvent containing material (i.e. cleaning solvents, paint, etc.) as documented by information gathered in Section B, Specific Conditions, Paragraph I.(1)(c) of this permit.

(b) The concentration of lead, using EPA test method 6010 B, in the aggregate after incorporation of contaminated soil shall not exceed 300 mg/kg prior to incorporation of the asphalt.

(c) The facility shall maintain and implement a Quality Assurance & Quality Control Plan, as specified in Section B, Specific Conditions, Paragraph VI of this permit to document that the contaminated soil processed complies with the acceptance criteria for the Facility.

(3) The Facility may not accept petroleum contaminated soils contaminated with Oil and Hazardous Materials (including pathogens) other than those specified in this facility permit, excluding PAHs, BNAs or trace metals (e.g.. vanadium) which are normally constituents either of petroleum products or of the asphalt emulsion, unless the Facility modifies its Class A recycling permit.

(4) The Facility may accept other petroleum contaminated soils that are not subject to management under 310 CMR 40.0000 provided that the Department has issued a Class A Level I recycling permit to the site of generation. This does not include process waste streams such as wastewater treatment sludge, fly ash, coal ash, bottom aggregate or tank bottoms, which may not be accepted in any event. These materials and others may be considered for acceptance only if they are approved under a Beneficial Used Determination (BUD) pursuant to 310 CMR 19.000 and a modification to this permit.

(5) Site Identification Number - The Facility shall assign a unique tracking number to each Material Shipping Record. The number shall be unique to each generator site. Should more than one Material Shipping Record be required for a given location the same tracking number shall be assigned to each record for that particular site. Each tracking number shall be prefixed by the year (YY) and month (MM) the Material Shipping Record was received by the facility. As an example January 1994 would be 9401 followed by the unique facility assigned number.

(6) Petroleum Contaminated Soil (PCS) entering the Facility should be recorded in an Incoming Shipment Inspection Form that contains the site identification number, the amount of material, the type of contamination (light i.e. gasoline oil or heavy oil), and the site location (in-state or out of state). In addition to the log a folder should be kept of each generator site that contain at a minimum the following information;

(a) Site Description
(b) Analytical Data on Petroleum Contaminated Soil
(c) Shipping Papers as required by Specific Conditions, Section I. Conditions of Acceptance
(d) Weigh tickets

(7) Reporting out-of-state Shipments - The Facility shall submit to the Department's Central Regional Office, within fifteen (15) days of the last day of each calendar month, a summary report of all petroleum contaminated soils received at the facility from out-of-state locations using a format specified by the Department in Attachment II.

II. Accumulation of Recyclable Materials to Prevent Speculative Accumulation

(1) RecTec shall comply with the speculative accumulation provisions set forth in 310 CMR 30.010, 310 CMR 30.205(14) and as otherwise specified.

(a) Within any one calendar year an amount of recycled PCS equal to or greater than 75% of the total amount of PCS accumulated on-site in that year shall leave the RecTec facility as product. Proper documentation such as weigh bills and receipts indicating the percent PCS contained in each load shall be kept to demonstrate compliance with this requirement.

(b) Accumulated PCS shall include the amount of PCS received in any given calendar year plus any amount of PCS not recycled and carried over from the previous calendar year.

(c) Material that has been used/reused on-site (for only approved uses specified in Specific Conditions, Section II, (2) below or that is stored on-site may not be counted as recycled material in the speculative accumulation determination in Specific Conditions, Section II, (1)(a) above.

(2) RecTec shall be restricted on the amount of recycled product used for on-site paving. The use of recycled material for on-site "paving" shall be restricted to the processing area, finished product storage area and the area just outside the incoming soil storage building to ensure proper drainage away from the permanent storage building and as a dust control measure, were necessary. RecTec shall obtain approval from the Department for any other on-site paving use of the recycled product.

III. Authorized Storage and Storage Capacity

(1) RecTec shall endeavor to process all regulated recyclable materials on the day that the materials enter the facility until April 6, 2006 when a permanent storage building is constructed and operating. In the event that overnight in-transit storage must take place, that storage shall be limited to the following:

(a) PCS shall not be removed from the truck in which it is delivered;

(b) The PCS shall be managed in compliance with 310 CMR 40.0034(4) in a manner that is protective of health, safety, public welfare and the environment (i.e., truck locked, tarp in place to protect the load, truck stored on hard surface with runoff controls, etc.);

(c) Overnight in-transit storage is limited to two trucks (150 tons of PCS), and

(d) All in-transit PCS stored overnight at the RecTec facility must be completely processed on the next business day.

(2) (a) Within six (6) months of the effective date of this permit, RecTec shall submit to the Department a permit modification (BWP HW 26) that contains plans for a permanent storage building for the incoming petroleum contaminated soil at the proposed location as indicated on Figure 3 of the permit application and Plate 1 of this permit. This proposed building shall be constructed such that rain water and snow melt cannot come in contact with the stored materials. The permanent building shall be used to store incoming unprocessed soil to a maximum amount of 7,500 cubic yards, including any "in-process" or "semi-processed" soil which is material not completely processed into recycled product at the conclusion of daily operations and screenings.

(b) After obtaining Department approval and within twelve (12) months of the effective date of the permit, RecTec shall obtain all other local and state approvals for the construction and utilization of the permanent storage building as described in (2)(a) above and shall construct and operate in said building.

(3) Residuals from the soil processing shall be managed as follows:

(a) Oversized stone removed from screening operation waiting to be crushed with the portable crushing unit shall be placed in the processing area covered with a tarp or other impermeable material. This material shall be crushed and used as an aggregate to produce the recycled product.

(b) Other debris such as wood, metal, plastic, etc. shall be stored in one or more covered roll-off containers and properly recycled or disposed of off-site.

(4) RecTec is authorized to accept 100,000 tons (approx. 66,000 cubic yards) per year of petroleum contaminated soil. For this facility recycling permit, the conversion factor of one (1) cubic yard equals one and five-tenths (1.5) tons (1 yard^3 = 1.5 tons) shall be used.

(5) RecTec is restricted to 4,000 tons (approx. 2,600 cubic yards) per month of light oil contaminated soils and shall exceed a total amount of 30,000 tons (20,000 cubic yards) per year of light oil contaminated soils.

(6) RecTec is authorized to store a maximum amount of 11,500 tons (approx. 7,500 cubic yards) of unprocessed petroleum contaminated soil at any one time within the permanent storage building.

(7) At any one time, no more than 5,600 tons (approx. 3,700 cubic yards) of the authorized storage capacity of 11,500 tons (7,500 cubic yards) may be unprocessed light oil contaminated soil.

IV. Facility Operations

(1) Acceptance of Petroleum Contaminated Soil

The contaminated soil shall only be accepted for recycling if it meets the following conditions:

(a) The soil must meets the acceptance criteria specified in Table I, Page 17 of this permit. The soil must be classified as being contaminated with either light oil (gasoline, etc) or heavy oil (fuel oils, etc.).

(b) Each load must be accompanied by the proper shipping papers and laboratory analysis do document the load meets the acceptance criteria.

(c) Each load must be free of large visible quantities of wood, plastic, metal, etc.

(d) The soil must have an aggregate gradation which will allow its use in the production of base course or sub-base material within the pavement structure. The QA/QC plan shall specify procedures to ensure a good quality of material will be accepted.

(2) Delivery of PCS

(a) Once a vehicle arrives at the RecTec facility, it is weighed in at the weighing scale. Upon arrival of the vehicle at the weigh in station, the staff of RecTec will inspect the Bill of Lading and upon completion of inspection of the Bill of Lading, will inspect the vehicle itself to insure that the vehicle is in proper mechanical operating condition. The amount of material delivered shall be recorded and maintained according to the procedures contained in the record keeping section of this permit, Section D, Recordkeeping and Reporting.

(b) Each incoming load must be visually inspected for the presence of free liquids, if the presence of free liquids is suspected RecTec shall use the Paint Filter Test, as referenced in 310 CMR 30.156 to determine the presence or absence of free liquids in waste. The Paint Filter Liquid Test is defined as Method 9095, as specified in "Test Methods for Evaluating Solid Waste Physical/Chemical [Methods]" in EPA Publication No. SW-846.

(c) RecTec personnel will also inspect the load to make sure that there is sufficient freeboard between the actual top of the trailer and the level to which the oily soils have been placed within the trailer, make sure that the liners and covers on the material are in place. Upon inspection of all of the above and upon finding that the truck is in suitable condition, personnel from RecTec will direct the vehicle to the storage building.

(d) All PCS delivered to the permittee shall be off-loaded only at the designated storage area and at no other location within the facility.

(e) The information gathered in this Section must be documented on an "Incoming Inspection Form."

(3) Storage of PCS

See Section III, Specific Conditions, Paragraph III of this permit

(4) Processing of Incoming Petroleum Contaminated Soil

The cold mix asphalt emulsion process includes screening of PCS, crushing of oversized stone, and using a pug mill to mix the PCS with asphalt emulsion at 2 to 6 percent by weight concentration using a pug mill to produce a cold mix asphalt type product[6] suitable for re-use. This equates to approximately 8 to 15 gallons of asphalt emulsion per ton of PCS. A flow diagram of the recycling process is outlined on page 11, Figure 1 "Diagram of Recycling Processes" of the permit application.

(5) Use/Reuse of Regulated Recyclable Material

(a) RecTec is authorized by this Recycling Permit to produce only a cold mix asphalt product for use as base course and/or sub-base material using petroleum contaminated soil. The cold mix asphalt product shall be produced from the processing of only PCS, asphalt emulsion, and aggregate obtained from crushing oversize stones removed during the screening operations.

(b) RecTec shall apply for a modification to this Recycling Permit and obtain Department approval for that modification for any new products that incorporate PCS accepted under the authority of this Recycling Permit.

(c) RecTec shall apply for a modification to this Recycling Permit and obtain Department approval and a Beneficial Use Determination (BUD) before adding aggregate waste materials subject to the BUD process into the permit-approved cold mix asphalt products utilizing PCS.

[6] A cold mix asphalt product contains an aggregate mixed with asphalt emulsion to produce asphalt products suitable for road base materials.

(d) Oversized stone removed during the screening operation shall be covered and remain in the processing area until crushed with a portable crusher. All crushed stone from this screening operation will be used as an aggregate that is added to the screened PCS and asphalt emulsion mixture to obtain the appropriate particle size distribution to yield the desired product.

(e) The cold mix asphalt product authorized by this permit shall be used only as a base course[7] and/or sub-base[8] material (Figure 2 of the permit application and Attachment IV of this permit) in the construction and maintenance of public, private, and commercial roadways, parking lots and driveways. It shall not be used as a top coarse, sub grade[9] or fill material used to grade or shape a road base.

(f) The base course and sub-base shall meet the physical specifications for their production and intended use as formally specified by the Massachusetts Highway Department, the Massachusetts Turnpike Authority, the New York State Department of Transportation, the American Association of State Highway and Transportation Officials, the American Society for Testing and Materials, the Federal Aviation Administration, the Federal Highway Administration, or other Official standards specified by government agencies.

(g) The cold mix asphalt product used as base course and sub-base material shall meet the "Specifications for Grain Size Distribution of Soils and Soil Aggregate mixtures Used as Bases and Sub-Bases, Table 1 in Attachment V of this permit. The base course and sub-base materials shall have final bitumen[10] content of 1 to 3 percent. The frequency of testing shall be done in accordance with the QA/QC Plan. Other parameters that shall be evaluated include grain size distribution and density to ensure the materials meet engineering standards for its intended use. Analytical procedures and results of these tests shall be documented in the QA/QC Plan.

(6) Deposition of Material

(a) The recycled material shall not be used as a top coarse paving material and other non-paving purposes, such as a sub-grade material that is used to shape, grade, level, or used as fill beneath paved or unpaved roadways, parking lots, and driveways.

(b) RecTec shall develop an Outgoing Material Shipping Form that shall be given to all purchasers and recipients of product containing recycled contaminated soil from the facility. This Form shall contain the following information:

---

[7] Base course – The layer of material immediately beneath the surface.
[8] Sub-base – The course of material immediately below the base course.
[9] Subgrade – The soil prepared to support a structure or a pavement system. It is the foundation of the pavement structure.
[10] A class of black or dark colored (solid or semi-solid) cementitous materials composed principally of high molecular weight hydrocarbons, of which asphalt tars, pitches, and asphalites are typical.

(i.) identify the name and address of the purchaser of the PCS,

(ii.) identify the name and address of the recipients,

(iii.) a location identifier (city/town, street address, etc.) of were the final product will be used and its intended use (base coarse or sub-base)

(iv.) the amount and percent of PCS in the final product,

(v.) a notice specifying that the recycled product(s) were produced using regulated recyclable materials and shall not be used as a fill material beneath paved or unpaved road or driveway construction, as a general fill or grading material, or as a top coarse.

(vi.) the Outgoing Material Shipping Form shall be signed by the purchaser/truck driver and a copy of the Outgoing Material Shipping Form for each shipment shall be made available for Department review upon request.

(7) Incorporation of Beneficial Use Determination approved materials with PCS subject to this permit.

(a) The use of other regulated aggregates such as Asphalt, Brick and Concrete (ABC) rubble, Recycled Asphalt Product (RAP) or other materials along with the PCS and asphalt emulsion mixture are not allowed under this Class A permit, unless a Beneficial Use Determination (BUD) has been obtained pursuant to 310 CMR 19.00.

(b) New products incorporating BUD-approved materials may be produced under this permit only if the BUD explicitly approves the reuse of the material in the process and the product is approved as a modification to this Permit, Transmittal # W050453.

V. Compliance with Department of Environmental Protection Regulations

(1) The permittee shall comply with the Section B, Special Conditions that are established in this permit by the Department pursuant to 310 CMR 30.202(2) of the Massachusetts Hazardous Waste Regulations ("Hazardous Waste Regulations"). Should there be any differences between the application and attachments to this permit and the provisions of this section, the provisions of this section shall govern. In addition to complying with 310 CMR 30.000, the permittee shall remain in compliance with all applicable requirements contained in any federal or state regulations, including but not limited to, 310 CMR 7.00, 310 CMR 16.00, 310 CMR 19.00 and any other policies, terms, and conditions that the Department may require with regard to the management of PCS.

(2) Nothing in this permit shall be construed as the Department's approval of the end use of any product produced under the terms of Section B, Specific Conditions, Paragraph IV.(5), above. This permit addresses only the recycling of PCS at the Facility, and any liability arising from the use of products containing PCS rests solely with the Facility. The Facility releases and indemnifies the Commonwealth of Massachusetts and the Department of Environmental Protection from and against any claims brought by third parties or other governmental agencies for property damage, personal injury, natural resource damages, response actions, or any other costs or damages related directly or indirectly to the use of products containing PCS produced by the Facility under the terms of this permit.

VI. The Quality Assurance and Quality Control Plan

The QA/QC Plan shall:

(1) Include material specifications (chemical and physical) for the processed aggregate and final product(s) based on accepted standards such as: ASTM Standard, the Massachusetts Highway Department, the Massachusetts Turnpike Authority, the Asphalt Institute or other industry wide accepted standards.

(2) Identify the intended use(s) of the final product(s).

(3) Document recycling through representative sampling and analysis for both chemical and physical data that both the recycled petroleum contaminated soil, produced aggregate (crushed stone removed by screening operations), and final manufactured product comply with the facility's permit and the product specifications identified in Section B, Specific Conditions, Paragraph IV.

(4) Specify sampling and analytical procedures. These procedures shall allow for the correlation of input and processed material, and product.

(5) Provide that all sampling and analytical procedures are performed in accordance with accepted standard methods such as EPA Standard Methods-SW846, ASTM Standards or any equivalent methods identified by the Department.

(6) Provide for the maintenance of such data in a summary form at the Facility.

(7) Include all associated documentation, including analytical reports and data summaries, shall be supplied to the Department for its inspection and/or approval upon request and kept at the facility in accordance with the record keeping requirements in the Facility's current permit.

(8) The Incoming Inspection Form shall be used in the review of all 21E Bill of Ladings and Material Shipment Records (Shipping Records) by the Facility. The Form will document that all Shipping Records have been completed in full; are accompanied by the required analytical, site history and all other documentation required by the Company for acceptance of the soil. It will:

(a) be signed by the reviewing employee;

(b) state whether the material was accepted or rejected; and

(c) include a statement by the facility that justifies reduced or the limiting of any analytical tests by the Facility.

TABLE 1 - ACCEPTANCE CRITERIA

Contaminant	Concentration	EPA Test Method or CMR citation
Total Arsenic (As)	≤30 mg/kg	6010 B
Total Cadmium (Cd)	≤30 mg/kg	6010 B
Total Trivalent Chromium (Cr)	≤500 mg/kg	6010 B
Total Mercury (Hg)	≤10 mg/kg	7471 A
Total Lead (Pb)	≤1000 mg/kg	6010 B
Chlorinated/Halogenated Solvents (HVOCs)	≤5 mg/kg	8021/8260
Total Volatile Organic Compounds (VOCs)	≤500 mg/kg	8260
Total Petroleum Hydrocarbons (TPH)	≤60,000 mg/kg	M 8100
Characteristic Hazardous Waste (TCLP)	None[11]	310 CMR 30.155
Listed Hazardous Waste other than MA01	None	310 CMR 30.130
Ignitable, Corrosive, Reactive Hazardous Wastes (D001, D002, D003)	None	310 CMR 30.122, 30.123 ,30.124
Free Liquids	None	9095
Total Organic Carbon (TOC)	≤10%	
Polychlorinated Biphenyls (PCBs)[12]	<1 mg/kg	8082

[11] The test results do not exceed TC limits specified in 310 CMR 30.125 except for benzene, toluene, and xylene (BTEX) when these compounds are know to have originated from a release of petroleum products (gasoline, diesel, oils, etc.) and not as a result of a release of solvents contained in paints or cleaning agents.

[12] These levels do not relieve the generator or facility from complying with any applicable Federal requirements under RCRA or TSCA.

Re: CERO – SWM, Charlton, Recycle Technology, LLC, Determination of Need for Site Assignment - Large Operation, BWP SW 02, Transmittal Number: W950444

Dear Mr. McCambridge:

The Department of Environmental Protection (the "Department" or "DEP") has completed its technical review of the permit application listed above and has determined that the application is technically complete.

The Department issued the Draft Permit for this facility on August 26, 2004. Pursuant to the provisions of 310 CMR 16.05(7)(e), the Department accepted written comments on this permit for twenty-one (21) days from the date of issuance. The Department did not receive any comments during the comment period. Therefore, the Department hereby issues the Final Permit for this facility.

Thank you, and if you have any questions regarding this Draft Determination, please contact Mike Penny of the Division of Solid Waste Management at (508) 792-7650 Ext. 2835.

Very truly yours,

John J. Regan

RECYCLE TECHNOLOGY, LLC
FINAL PERMIT
BWP SW 02 - DETERMINATION OF NEED

Draft Permit Issued: August 26, 2004
Final Permit Issued: September 21, 2004

Applicant Name:	Recycle Technology, LLC ("Applicant")
Mailing Address:	17 Griffin Road P.O. Box 368 Charlton City, MA 01508 Contact: William McCambridge
Name of Facility:	Recycle Technology, LLC
Facility Address:	17 Griffin Road P.O. Box 368 Charlton City, MA 01508
DEP Region:	Department of Environmental Protection ("Department" or "DEP") Central Regional Office (CERO), Worcester
Permit No:	W950444 (Transmittal #)

I. FACILITY DESCRIPTION

A. Facility

1. Owner: Recycle Technology, LLC
17 Griffin Road
Charlton City, MA 01508

2. Operator: Recycle Technology, LLC
17 Griffin Road
Charlton City, MA 01508

3. Description:

a) Type(s) of Recyclables/Waste Accepted: Asphalt pavement, brick and concrete rubble (ABC rubble) that is clean and not mixed with or contaminated by any other wastes or debris

(b) Approved amount of Recyclables/Waste Received: The facility may accept on average of four hundred (400) tons per day of ABC rubble not to exceed five hundred tons per day maximum. The maximum annual tonnage of ABC rubble accepted at the facility shall not exceed one hundred thousand (100, 000) tons (400 tons per day X 250 days per year).

B. Permit Application Information for BWP SW 02 Determination of Need

1. Applicant Name: Recycle Technology, LLC

2. Transmittal Number/Permit Number: W950444

3. Start Date of Application: May 31, 2004

4. Date of Fee Receipt: May 31, 2004

5. Application Prepared by:

George Camougis
17 Griffin Road, P.O. Box 368
Charlton City, MA 01508

6. Title of Submittal(s) and Date of Receipt at DEP, CERO:

Application for Determination of Need, Large Operation
Recycling of Asphalt, Brick and Concrete Rubble
Submitted by: Recycle Technology, LLC
17 Griffin Road, P.O. Box 368, Charlton City, MA
Received by DEP-CERO: May 27, 2004

7. Project Description:

The application requests an approval for a Determination of Need for Site Assignment for the recycling of asphalt pavement, brick and concrete (ABC rubble) that is clean and not mixed with or contaminated by any other waste or debris. The proposed operation will be located at 17 Griffin Road, Charlton, MA. The facility will accept and store up to ten thousand (10,000) tons of ABC rubble for processing. A contractor with portable crushing equipment will then crush the

ABC rubble. A screener will be used to produce aggregate products of various gradations suitable for specific engineering applications. The processed material will be segregated into individual product stockpiles. The quantity of processed ABC rubble stored on site shall not exceed ten thousand (10,000) tons.

II. DETERMINATION OF NEED (DON) APPLICATION REVIEW AND APPROVAL

This application complies with the requirements of 310 CMR 16.05, the Site Assignment Regulations for Solid Waste Facilities and was reviewed in accordance with Section 16.05 (6) Determination of Need for Site Assignment. The Department hereby approves the permit request with the following conditions.

III. GENERAL PERMIT CONDITIONS

1. The operation of this facility shall not adversely affect the public health, safety or the environment.

2. The operation, maintenance and closure of this facility shall be performed in compliance with other applicable Local, State and Federal laws and regulations.

3. The Department reserves the right to rescind, suspend or modify this permit by the imposition of additional conditions based upon a determination of actual, or the threat of, adverse impacts from the construction, operation, maintenance or closure of the facility.

4. The Applicant shall provide the Department, within a reasonable time, any information which the Department may request and which is deemed by the Department to be relevant in determining whether a cause exists to modify, revoke, or suspend this permit, or to determine whether the Applicant is complying with the terms and conditions of the permit.

5. Failure to comply with the provisions of this Determination of Need, and other Department approvals, including Bureau of Waste Prevention approvals, shall be grounds for permit suspension and revocation.

IV. SPECIFIC PERMIT CONDITIONS

1. The facility may accept on average of four hundred (400) tons per day of ABC rubble not to exceed five hundred tons per day maximum. The maximum annual tonnage of ABC rubble accepted at the facility shall not exceed one hundred thousand (100, 000) tons

(400 tons per day X 250 days per year). The operating hours for receipt of material shall be: Monday through Friday 7:00 am to 5:00 pm

2. The quantity of finished material stored on site shall not exceed ten thousand (10,000) tons.

3. The quantity of material stored on site prior to processing shall not exceed ten thousand (10,000) tons.

4. The quantity of material stored while "in-process" shall not exceed two thousand (2,000) tons.

5. The quantity of waste (all residuals, residues and off-specification product) stored on site shall not exceed forty (40) tons. The quantity of commingled non-hazardous waste (e.g. wood, plastic) shall not exceed one (1) percent by weight.

6. The facility will be subject to inspections without prior notice, to periodically enter upon and inspect the facility and relevant operating records to determine and compel compliance with applicable regulations and conditions of the Determination.

7. The Applicant shall maintain on the premises, a daily log of all materials received and shipped. This information shall be reported annually to the Department.

8. The Department shall be notified within twenty-four (24) hours of any incidents which occur at the facility that could affect the public health, safety, environment or operations of the facility.

9. In the event the facility operations are discontinued for any reason, the Applicant shall arrange for and incur all costs associated with the removal and disposal of all nuisance products from the site to an approved solid waste management facility within ninety (90) days of closure.

10. In the event the facility ceases operations and to insure proper removal and disposal of materials on site, the Department will require the Applicant to provide Financial Assurance Mechanism (FAM) in accordance with 310 CMR 19.051. The Financial Assurance Mechanism shall be approved by the Department prior to the start of operations at the Facility.

11. The Permittee shall prevent the occurrence of dust or odor conditions, which cause or contribute to a condition of air pollution as defined in Regulation 310 CMR 7.01 and 7.09.

12. Visible emissions from receiving, handling, and processing of the approved material shall not exceed 5% opacity at all times. The Permittee shall ensure no visible emissions from the storage of approved material.

13. The Applicant shall comply with 310 CMR 7.06 and take all necessary action to minimize visible emissions from vehicular traffic entering and leaving the facility. Such action may include but is not limited to sweeping, water treatment and truck tire washing.

14. Noise from the facility during routine operation shall not exceed the Department's noise guidelines and shall not cause a condition of air pollution as defined in Regulation 310 CMR 7.01 and 7.10.

15. All vehicles entering, waiting and leaving the facility shall comply with the requirements at 310 CMR 7.11 for exhaust and sound emissions, including unnecessary idling.

16. Grinding or processing of approved material shall be done only with a portable unit meeting the definition of "non-road engine" as defined in 40 CFR 89 as it may be amended. See Attachment A for the current definition from 40 CFR 89.

The Department reserves the right to rescind, suspend or modify the Determination by the imposition or amendment of conditions based on determinations of any actual or potential adverse impacts from the facility. It is the Applicant's responsibility to comply with all other applicable Federal State and Local statues or regulations as a pre-requisite to the operation of the facility.

Please be advised that if this Determination is rescinded or suspended, this facility shall be regulated under all applicable sections of Massachusetts General Laws (MGL), Chapter 111, Section150A, and the regulations promulgated thereunder at 310 CMR 16.00 "Site Assignment Regulations for Solid Waste Facilities", and 310 CMR 19.000 "Solid Waste Management Facility Regulations". Failure to comply with these requirements may lead to legal action including but not limited to, criminal prosecution, court imposed civil penalties, or civil administrative penalties assessed by the Department.

V. RIGHT OF APPEAL

A. **Right to Appeal** - This permit has been issued pursuant to Massachusetts General Laws (MGL), Chapter 111, Section 150A and 310 CMR 16.05: Determination of Need, of the " **Site Assignment Regulations for Solid Waste Facilities".** Any person aggrieved by the issuance of this determination, may file an appeal for judicial review of said decision, in accordance with the provisions of MGL Chapter 111, Section 150A and MGL Chapter 30A, not later than thirty days following the receipt of the final decision.

B. Notice of Appeal- Any aggrieved person intending to appeal the decision to the superior court shall provide notice to the Department of intention to commence such action. Said notice of intention shall include the Department File Number/ Transmittal Number, and shall identify with particularity the issues and reason(s) why it is believed the approval decision was not proper. Such notice shall be provided to the Office of General Counsel of the Department, and the Regional Director for the regional office which made the decision. The appropriate addresses to send such notices are:

1. Office of General Counsel
   Department of Environmental Protection
   One Winter Street-Third floor
   Boston, MA 02108

2. Regional Director
   Department of Environmental Protection
   Central Regional Office
   627 Main Street
   Worcester, MA 01608

No allegation shall be made in any judicial appeal of this decision unless the matter complained of was raised at the appropriate point in the administrative review procedures established in those regulations, provided that matter may be raised upon a showing that it is material and that it was not reasonably possible with due diligence to have been raised during such procedures, or that the matter sought to be raised is of critical importance to the public health or environmental impact of the permitted activity. Unless the person requesting an appeal requests and is granted a stay of the terms and conditions of the approval by a court of competent jurisdiction, this decision shall remain effective.

Thank you, and if you should have any questions or comments regarding this matter, please contact Mike Penny of the Division of Solid Waste Management at (508) 767-2835.

Very truly yours,

John J. Regan
Section Chief
Solid Waste Management Program

W:\SWM\Final2004\REC TEC BWP SW 02 PMT

ATTACHMENT A
40 CFR 89 Definition of Non-Road Engine

Under 40 CFR 89, "*Non-road engine*" means:

(1) Except as discussed in paragraph (2) of this definition, a nonroad engine is any internal combustion engine:

(i) In or on a piece of equipment that is self-propelled or serves a dual purpose by both propelling itself and performing another function (such as garden tractors, off-highway mobile cranes and bulldozers); or

(ii) In or on a piece of equipment that is intended to be propelled while performing its function (such as lawnmowers and string trimmers); or

(iii) That, by itself or in or on a piece of equipment, is portable or transportable, meaning designed to be and capable of being carried or moved from one location to another. Indicia of transportability include, but are not limited to, wheels, skids, carrying handles, dolly, trailer, or platform.

(2) An internal combustion engine is not a nonroad engine if:

(i) the engine is used to propel a motor vehicle or a vehicle used solely for competition, or is subject to standards promulgated under section 202 of the Act; or

(ii) the engine is regulated by a federal New Source Performance Standard promulgated under section 111 of the Act; or

(iii) the engine otherwise included in paragraph (1)(iii) of this definition remains or will remain at a location for more than 12 consecutive months or a shorter period of time for an engine located at a seasonal source. A location is any single site at a building, structure, facility, or installation. Any engine (or engines) that replaces an engine at a location and that is intended to perform the same or similar function as the engine replaced will be included in calculating the consecutive time period. An engine located at a seasonal source is an engine that remains at a seasonal source during the full annual operating period of the seasonal source. A seasonal source is a stationary source that remains in a single location on a permanent basis (i.e., at least two years) and that operates at that single location approximately three months (or more) each year. This paragraph does not apply to an engine after the engine is removed from the location.

Re: Charlton – RecTec
Class A, Level III
Recycling Permit

Attention: William McCambridge

Transmittal #W050453

Dear Mr. McCambridge:

On June 8, 2004, Recycle Technology, LLC (RecTec) submitted an application for a Class A, Level III, Hazardous Waste Recycling Permit (Transmittal #W050453). The application proposed the recycling of petroleum contaminated soils into asphalt products. These products will be utilized as base course and sub-base material in the construction and maintenance of public, private, and commercial roadways, parking lots and driveways and shall not be used as a top course or sub grade or fill material.

The Department has reviewed the information submitted, including the application and the October 26, 2004, response to the Department's October 8, 2004, Statement of Technical Deficiency and hereby approves and grants the applicant, Recycle Technology, LLC, a Class A permit for the recycling of soils contaminated with petroleum products in its cold mix asphalt batching process.

Please contact Keith Anderson at (508) 767-2751 if you have any questions concerning this permit.

Very truly yours,

John F. Kronopolus

CERTIFICATION

Recycle Technology, LLC (RecTec) hereby certifies that (1) it has read all of this document (Permit #TR050453), (2) it understands everything in this document, (3) it agrees to comply with all the requirements set forth in this document, (4) the individual whose signature appears below has full authority to sign this document on behalf of RecTec and that by doing so, he/she is legally binding RecTec to comply with all the requirements set forth in this document.

I certify under penalty of law that I have personally examined and am familiar with the information contained in this document and all attachments and that I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for violations of this permit, 310 CMR 30.000, M.G.L.c.21C and M.G.L.c.21E, including possible fines and imprisonment.

RECYCLING PERMIT

Recycle Technology, LLC "RecTec"	P.O Box 368 Charlton City, MA		
Name of Permittee	Mailing Address		
William McCambridge	April 06, 2005	A	W050453
Contact Person	Effective Date	Class	Permit No.
(508) 248-4040	April 06, 2010	MV5082484040	
Phone Number	Expiration Date	MA/EPA Identification No.	

This is to certify that the above named company is authorized to manage regulated recyclable materials pursuant to M.G.L. Chapter 21C and 310 CMR 30.200.

This permit authorizes recycling of the following materials only:

Material Description	Waste Code	Amount
Used and unused waste oil petroleum contaminated soils including gasoline and/or other light oil[1] contaminated soils	MA01	100,000 tons per year of petroleum contaminated soils, no more 30,000 tons/year shall be light oil contaminated soils.

DESCRIPTION OF RECYCLING OPERATIONS

Re-use of petroleum contaminated soil into a cold mix asphalt product using the following operations; screening, pug mill mixing, and portable crushing. Screenings shall be crushed and used in the cold mix asphalt product.

LOCATION OF RECYCLING OPERATIONS
Recycle Technology, LLC
17 Griffin Road
Charlton City, MA 01508

[1] Light oil shall mean petroleum products that are light distillates such as gasoline, kerosene and jet fuel.

JAN-25-2006 07:50 AM RECYCLE TECHNOLOGY 508 248 4050 P.05

THIS PERMIT AUTHORIZES ONLY THE NAMED PERMITTEE TO ENGAGE IN THE ACTIVITIES DESCRIBED ABOVE. THIS PERMIT DOES NOT GRANT ANY RIGHTS NOT OTHERWISE GRANTED BY FEDERAL, STATE, OR LOCAL STATUTES, ORDINANCES, OR REGULATIONS. THE PERMITTEE SHALL COMPLY AT ALL TIMES WITH ALL STATE AND FEDERAL REGULATIONS AND STATUTES APPLICABLE TO THE MANAGEMENT OF REGULATED RECYCLABLE MATERIALS.

ISSUED BY THE DEPARTMENT OF ENVIRONMENTAL PROTECTION

DATE: 04/06/05

John F. Kronopolus
Section Chief
Bureau of Waste Prevention

SECTION A

GENERAL CONDITIONS

General Conditions

I. General Condition of Recycling Permit

(1) The permittee shall comply with all applicable provisions of 310 CMR 30.000, Hazardous Waste Regulations; and in particular, with 30.205 (General Conditions for All Recycling Permits) and 30.206 (Additional General Conditions of Facility Permits). The permittee is considered a Class A, Level III recycling facility subject to all applicable provisions of 310 CMR 30.000 and 310 CMR 30.200 and the associated Annual Compliance Assurance Fee(s) established in 310 CMR 4.03. Pursuant to 310 CMR 4.03(7), failure to pay any applicable fee(s) may result in permit suspension or permit revocation, and may result in the denial of any pending permit application(s) made by or on behalf of the permittee.

(2) Within 6 months of the effective date of this permit, the permittee shall submit to the Department a permit modification to construct a permanent storage building in accordance with General Law Chapter 30A, Section 13. Approval of the permit modification will allow the continued operation of the approved recycling activity for five (5) years from the effective date of this permit. Failure to submit a permit modification (HW26) by October 6, 2005 will result in immediate suspension of all approved recycling activities.

(3) Failure to construct and operate said permanent storage building by April 6, 2006 will result in immediate suspension of all approved recycling activities.

II. Appeal Rights and Time Limits:

This permit is an action of the Department. If you are aggrieved by this action you may request an adjudicatory hearing. A request for a hearing must be made in writing and postmarked within 21 days of the date this permit was issued.

Contents of Hearing Request:

Under 310 CMR 1.01(6)(b), the request must clearly and concisely state the facts which are the grounds for the request and the relief sought. Additionally, the request must state why the permit is not consistent with applicable laws and regulations.

Filing Fee and Address:

The hearing request, along with a valid check payable to the Commonwealth of Massachusetts in the amount of $100.00, must be mailed to:

Commonwealth of Massachusetts
Department of Environmental Protection
P. O. Box 4062
Boston, Massachusetts 02211

The request will be dismissed if the filing fee is not paid, unless the appellant is exempt or granted a waiver as described below.

Exemptions:

The filing fee is not required if the appellant is a city or town (or municipal agency), county, or district of the Commonwealth of Massachusetts, or a municipal housing authority.

Waiver:

The Department may waive the adjudicatory hearing-filing fee for a person who shows that paying the fee will create an undue financial hardship. A person seeking a waiver must file, together with the hearing request as provided above, an affidavit setting forth the facts believed to support the claim of undue financial hardship.

SECTION B

SPECIFIC CONDITIONS

Specific Conditions

I. Conditions of Acceptance

(1) RecTec is authorized to accept petroleum contaminated soils (PCS) shipped to the facility under 310 CMR 30.000, a 21E Bill of Lading, in accordance with 310 CMR 40.0034 and 310 CMR 40.0035, or a Material Shipping Record subject to the following conditions:

(a) PCS shipped to the facility from out-of-state locations or from in-state locations subject to 310 CMR 40.0032(3) but not subject to 310 CMR 40.0034 and 40.0035 shall be accompanied by a Material Shipping Record in a form specified by the Department in Attachment I.

(b) The completed 21E Bill of Lading or the Material Shipping Record and any accompanying documentation including analytical data shall be maintained at the facility in accordance with the record keeping requirements of the Facility's recycling permit;

(c) The Facility may limit the analytical requirements for the receipt of petroleum contaminated soil to the Oil and Hazardous Material(s)[2] that are known to constitute the release, and those additional Oil and Hazardous Materials that are known or may reasonably be suspected to be present in the soil either as anthropogenetic[3] contaminants or from other known or suspected releases at or in the vicinity of the site, provided that:

(i) The source(s) of the release of the petroleum contamination is known[4];

(ii) The Oil and Hazardous Material and hazardous constituents of the petroleum released are known;

(iii) The generator, using due diligence, determines that there is no reason to suspect or believe that the PCS have been impacted by any releases of Oil or Hazardous Materials other than that of the known source OR identifies the additional Oil and Hazardous Materials that are suspected or known to be present in the soil, in addition to those associated with the known release, including any anthropogenic contaminants.

---

[2] The term Oil and Hazardous Materials (OHMs) as used in this section shall include both the materials listed as OHMs in 310 CMR 40.000 and the hazardous constituents listed in 310 CMR 30.160.

[3] Anthropogenic contaminants refers to any hazardous constituents or Oil and Hazardous Materials present in the soil that are ubiquitous and consistently present in the environment and in the vicinity of the site of generation; and attributable to atmospheric deposition of industrial process or engine emissions, fill materials containing wood or coal ash, and/or petroleum residues that are incidental to the normal operation of motor vehicles. In urban locations, this may include but not be limited to such constituents as: As, Cd, Cr, Pb, and TPH.

[4] Known-as documented by the provisions of Section I, Item (1), Paragraph (v) of this permit.

(iv) Due diligence shall consist of a search of information and records reasonably available to the generator of the contaminated soil sufficient to make the determination required by Section B, Specific Conditions, Paragraph I.(1)(c)(iii). Such records and information may include, but are not limited to, those of the generator, location of generation (i.e. facility if not the generator), the Department's Bureau of Waste Site Cleanup, and the municipality (i.e. Board of Health, Fire Department) within which the site is located.

(v) The generator and/or associated Licensed Site Professional (LSP) shall include sufficient information justifying the limiting of the analytical requirements as part of the Site History Information accompanying the 21E Bill of Lading or Material Shipping Record depending on whether or not the generator site is in-state or out of state. This shall include, at a minimum, the following:

(i) the analytical parameters selected;
(ii) any screening analytical data (i.e. total data for TCLP or headspace data)[5];
(iii) the laboratory analytical data;
(iv) a description of the release;
(v) a physical description of the soil including the classification method used;
(vi) a description of the site location with regards to current and former usage;
(vii) a statement as to whether any other releases have occurred at or in the vicinity of the site which may have impacted the site including the types of Oil and Hazardous Materials constituting those releases;
(viii) a statement as to whether the location is suspected or known to be impacted by any anthropogenic contaminants including identification of those contaminants; and
(ix) a statement that the generator has used due diligence in making the determination.

(2) The concentrations of hazardous constituents in PCS accepted by the facility shall comply with the acceptance criteria specified in Table 1 - Acceptance Criteria, Page 17 subject to the following:

[5] The facility may use the total analysis data expressed as mg/kg dry weight as a screening tool in determining TCLP testing as outlined in the memorandum found in Attachment III. The headspace screening procedure may also be used as a screening tool only.

(a) The presence of any chlorinated solvent(s) (HVOCs) as a hazardous constituent(s) in the petroleum contaminated soil should not cause the soil to be either a listed or characteristic hazardous waste pursuant to 310 CMR 30.000. Also, the PCS can not exceed the Toxicity Characteristic limit specified in 310 CMR 30.125 for any constituent using the TCLP test (310 CMR 30.155) except for benzene, toluene and xylene (BTEX) when these compounds are associated petroleum contamination and not any other solvent containing material (i.e. cleaning solvents, paint, etc.) as documented by information gathered in Section B, Specific Conditions, Paragraph I.(1)(c) of this permit.

(b) The concentration of lead, using EPA test method 6010 B, in the aggregate after incorporation of contaminated soil shall not exceed 300 mg/kg prior to incorporation of the asphalt.

(c) The facility shall maintain and implement a Quality Assurance & Quality Control Plan, as specified in Section B, Specific Conditions, Paragraph VI of this permit to document that the contaminated soil processed complies with the acceptance criteria for the Facility.

(3) The Facility may not accept petroleum contaminated soils contaminated with Oil and Hazardous Materials (including pathogens) other than those specified in this facility permit, excluding PAHs, BNAs or trace metals (e.g.. vanadium) which are normally constituents either of petroleum products or of the asphalt emulsion, unless the Facility modifies its Class A recycling permit.

(4) The Facility may accept other petroleum contaminated soils that are not subject to management under 310 CMR 40.0000 provided that the Department has issued a Class A Level I recycling permit to the site of generation. This does not include process waste streams such as wastewater treatment sludge, fly ash, coal ash, bottom aggregate or tank bottoms, which may not be accepted in any event. These materials and others may be considered for acceptance only if they are approved under a Beneficial Used Determination (BUD) pursuant to 310 CMR 19.000 and a modification to this permit.

(5) Site Identification Number - The Facility shall assign a unique tracking number to each Material Shipping Record. The number shall be unique to each generator site. Should more than one Material Shipping Record be required for a given location the same tracking number shall be assigned to each record for that particular site. Each tracking number shall be prefixed by the year (YY) and month (MM) the Material Shipping Record was received by the facility. As an example January 1994 would be 9401 followed by the unique facility assigned number.

(6) Petroleum Contaminated Soil (PCS) entering the Facility should be recorded in an Incoming Shipment Inspection Form that contains the site identification number, the amount of material, the type of contamination (light i.e. gasoline oil or heavy oil), and the site location (in-state or out of state). In addition to the log a folder should be kept of each generator site that contain at a minimum the following information;

(a) Site Description
(b) Analytical Data on Petroleum Contaminated Soil
(c) Shipping Papers as required by Specific Conditions, Section I. Conditions of Acceptance
(d) Weigh tickets

(7) Reporting out-of-state Shipments - The Facility shall submit to the Department's Central Regional Office, within fifteen (15) days of the last day of each calendar month, a summary report of all petroleum contaminated soils received at the facility from out-of-state locations using a format specified by the Department in Attachment II.

II. Accumulation of Recyclable Materials to Prevent Speculative Accumulation

(1) RecTec shall comply with the speculative accumulation provisions set forth in 310 CMR 30.010, 310 CMR 30.205(14) and as otherwise specified.

(a) Within any one calendar year an amount of recycled PCS equal to or greater than 75% of the total amount of PCS accumulated on-site in that year shall leave the RecTec facility as product. Proper documentation such as weigh bills and receipts indicating the percent PCS contained in each load shall be kept to demonstrate compliance with this requirement.

(b) Accumulated PCS shall include the amount of PCS received in any given calendar year plus any amount of PCS not recycled and carried over from the previous calendar year.

(c) Material that has been used/reused on-site (for only approved uses specified in Specific Conditions, Section II, (2) below or that is stored on-site may not be counted as recycled material in the speculative accumulation determination in Specific Conditions, Section II, (1)(a) above.

(2) RecTec shall be restricted on the amount of recycled product used for on-site paving. The use of recycled material for on-site "paving" shall be restricted to the processing area, finished product storage area and the area just outside the incoming soil storage building to ensure proper drainage away from the permanent storage building and as a dust control measure, were necessary. RecTec shall obtain approval from the Department for any other on-site paving use of the recycled product.

III. Authorized Storage and Storage Capacity

(1) RecTec shall endeavor to process all regulated recyclable materials on the day that the materials enter the facility until April 6, 2006 when a permanent storage building is constructed and operating. In the event that overnight in-transit storage must take place, that storage shall be limited to the following:

(a) PCS shall not be removed from the truck in which it is delivered;

(b) The PCS shall be managed in compliance with 310 CMR 40.0034(4) in a manner that is protective of health, safety, public welfare and the environment (i.e., truck locked, tarp in place to protect the load, truck stored on hard surface with runoff controls, etc.);

(c) Overnight in-transit storage is limited to two trucks (150 tons of PCS), and

(d) All in-transit PCS stored overnight at the RecTec facility must be completely processed on the next business day.

(2) (a) Within six (6) months of the effective date of this permit, RecTec shall submit to the Department a permit modification (BWP HW 26) that contains plans for a permanent storage building for the incoming petroleum contaminated soil at the proposed location as indicated on Figure 3 of the permit application and Plate 1 of this permit. This proposed building shall be constructed such that rain water and snow melt cannot come in contact with the stored materials. The permanent building shall be used to store incoming unprocessed soil to a maximum amount of 7,500 cubic yards, including any "in-process" or "semi-processed" soil which is material not completely processed into recycled product at the conclusion of daily operations and screenings.

(b) After obtaining Department approval and within twelve (12) months of the effective date of the permit, RecTec shall obtain all other local and state approvals for the construction and utilization of the permanent storage building as described in (2)(a) above and shall construct and operate in said building.

(3) Residuals from the soil processing shall be managed as follows:

(a) Oversized stone removed from screening operation waiting to be crushed with the portable crushing unit shall be placed in the processing area covered with a tarp or other impermeable material. This material shall be crushed and used as an aggregate to produce the recycled product.

(b) Other debris such as wood, metal, plastic, etc. shall be stored in one or more covered roll-off containers and properly recycled or disposed of off-site.

(4) RecTec is authorized to accept 100,000 tons (approx. 66,000 cubic yards) per year of petroleum contaminated soil. For this facility recycling permit, the conversion factor of one (1) cubic yard equals one and five-tenths (1.5) tons (1 yard^3 = 1.5 tons) shall be used.

(5) RecTec is restricted to 4,000 tons (approx. 2,600 cubic yards) per month of light oil contaminated soils and shall exceed a total amount of 30,000 tons (20,000 cubic yards) per year of light oil contaminated soils.

(6) RecTec is authorized to store a maximum amount of 11,500 tons (approx. 7,500 cubic yards) of unprocessed petroleum contaminated soil at any one time within the permanent storage building.

(7) At any one time, no more than 5,600 tons (approx. 3,700 cubic yards) of the authorized storage capacity of 11,500 tons (7,500 cubic yards) may be unprocessed light oil contaminated soil.

IV. Facility Operations

(1) Acceptance of Petroleum Contaminated Soil

The contaminated soil shall only be accepted for recycling if it meets the following conditions:

(a) The soil must meets the acceptance criteria specified in Table I, Page 17 of this permit. The soil must be classified as being contaminated with either light oil (gasoline, etc) or heavy oil (fuel oils, etc.).

(b) Each load must be accompanied by the proper shipping papers and laboratory analysis do document the load meets the acceptance criteria.

(c) Each load must be free of large visible quantities of wood, plastic, metal, etc.

(d) The soil must have an aggregate gradation which will allow its use in the production of base course or sub-base material within the pavement structure. The QA/QC plan shall specify procedures to ensure a good quality of material will be accepted.

(2) Delivery of PCS

(a) Once a vehicle arrives at the RecTec facility, it is weighed in at the weighing scale. Upon arrival of the vehicle at the weigh in station, the staff of RecTec will inspect the Bill of Lading and upon completion of inspection of the Bill of Lading, will inspect the vehicle itself to insure that the vehicle is in proper mechanical operating condition. The amount of material delivered shall be recorded and maintained according to the procedures contained in the record keeping section of this permit, Section D, Recordkeeping and Reporting.

(b) Each incoming load must be visually inspected for the presence of free liquids, if the presence of free liquids is suspected RecTec shall use the Paint Filter Test, as referenced in 310 CMR 30.156 to determine the presence or absence of free liquids in waste. The Paint Filter Liquid Test is defined as Method 9095, as specified in "Test Methods for Evaluating Solid Waste Physical/Chemical [Methods]" in EPA Publication No. SW-846.

(c) RecTec personnel will also inspect the load to make sure that there is sufficient freeboard between the actual top of the trailer and the level to which the oily soils have been placed within the trailer, make sure that the liners and covers on the material are in place. Upon inspection of all of the above and upon finding that the truck is in suitable condition, personnel from RecTec will direct the vehicle to the storage building.

(d) All PCS delivered to the permittee shall be off-loaded only at the designated storage area and at no other location within the facility.

(e) The information gathered in this Section must be documented on an "Incoming Inspection Form."

(3) Storage of PCS

See Section III, Specific Conditions, Paragraph III of this permit

(4) Processing of Incoming Petroleum Contaminated Soil

The cold mix asphalt emulsion process includes screening of PCS, crushing of oversized stone, and using a pug mill to mix the PCS with asphalt emulsion at 2 to 6 percent by weight concentration using a pug mill to produce a cold mix asphalt type product[6] suitable for re-use. This equates to approximately 8 to 15 gallons of asphalt emulsion per ton of PCS. A flow diagram of the recycling process is outlined on page 11, Figure 1 "Diagram of Recycling Processes" of the permit application.

(5) Use/Reuse of Regulated Recyclable Material

(a) RecTec is authorized by this Recycling Permit to produce only a cold mix asphalt product for use as base course and/or sub-base material using petroleum contaminated soil. The cold mix asphalt product shall be produced from the processing of only PCS, asphalt emulsion, and aggregate obtained from crushing oversize stones removed during the screening operations.

(b) RecTec shall apply for a modification to this Recycling Permit and obtain Department approval for that modification for any new products that incorporate PCS accepted under the authority of this Recycling Permit.

(c) RecTec shall apply for a modification to this Recycling Permit and obtain Department approval and a Beneficial Use Determination (BUD) before adding aggregate waste materials subject to the BUD process into the permit-approved cold mix asphalt products utilizing PCS.

---

[6] A cold mix asphalt product contains an aggregate mixed with asphalt emulsion to produce asphalt products suitable for road base materials.

JAN-25-2006 07:56 AM RECYCLE TECHNOLOGY 505 248 4050

(d) Oversized stone removed during the screening operation shall be covered and remain in the processing area until crushed with a portable crusher. All crushed stone from this screening operation will be used as an aggregate that is added to the screened PCS and asphalt emulsion mixture to obtain the appropriate particle size distribution to yield the desired product.

(e) The cold mix asphalt product authorized by this permit shall be used only as a base course[7] and/or sub-base[8] material (Figure 2 of the permit application and Attachment IV of this permit) in the construction and maintenance of public, private, and commercial roadways, parking lots and driveways. It shall not be used as a top coarse, sub grade[9] or fill material used to grade or shape a road base.

(f) The base course and sub-base shall meet the physical specifications for their production and intended use as formally specified by the Massachusetts Highway Department, the Massachusetts Turnpike Authority, the New York State Department of Transportation, the American Association of State Highway and Transportation Officials, the American Society for Testing and Materials, the Federal Aviation Administration, the Federal Highway Administration, or other Official standards specified by government agencies.

(g) The cold mix asphalt product used as base course and sub-base material shall meet the "Specifications for Grain Size Distribution of Soils and Soil Aggregate mixtures Used as Bases and Sub-Bases, Table 1 in Attachment V of this permit. The base course and sub-base materials shall have final bitumen[10] content of 1 to 3 percent. The frequency of testing shall be done in accordance with the QA/QC Plan. Other parameters that shall be evaluated include grain size distribution and density to ensure the materials meet engineering standards for its intended use. Analytical procedures and results of these tests shall be documented in the QA/QC Plan.

(6) Deposition of Material

(a) The recycled material shall not be used as a top coarse paving material and other non-paving purposes, such as a sub-grade material that is used to shape, grade, level, or used as fill beneath paved or unpaved roadways, parking lots, and driveways.

(b) RecTec shall develop an Outgoing Material Shipping Form that shall be given to all purchasers and recipients of product containing recycled contaminated soil from the facility. This Form shall contain the following information:

---

[7] Base course – The layer of material immediately beneath the surface.
[8] Sub-base – The course of material immediately below the base course.
[9] Subgrade – The soil prepared to support a structure or a pavement system. It is the foundation of the pavement structure.
[10] A class of black or dark colored (solid or semi-solid) cementitous materials composed principally of high molecular weight hydrocarbons, of which asphalt tars, pitches, and asphalites are typical.

(i.) identify the name and address of the purchaser of the PCS,

(ii.) identify the name and address of the recipients,

(iii.) a location identifier (city/town, street address, etc.) of were the final product will be used and its intended use (base coarse or sub-base)

(iv.) the amount and percent of PCS in the final product,

(v.) a notice specifying that the recycled product(s) were produced using regulated recyclable materials and shall not be used as a fill material beneath paved or unpaved road or driveway construction, as a general fill or grading material, or as a top coarse.

(vi.) the Outgoing Material Shipping Form shall be signed by the purchaser/truck driver and a copy of the Outgoing Material Shipping Form for each shipment shall be made available for Department review upon request.

(7) Incorporation of Beneficial Use Determination approved materials with PCS subject to this permit.

(a) The use of other regulated aggregates such as Asphalt, Brick and Concrete (ABC) rubble, Recycled Asphalt Product (RAP) or other materials along with the PCS and asphalt emulsion mixture are not allowed under this Class A permit, unless a Beneficial Use Determination (BUD) has been obtained pursuant to 310 CMR 19.00.

(b) New products incorporating BUD-approved materials may be produced under this permit only if the BUD explicitly approves the reuse of the material in the process and the product is approved as a modification to this Permit, Transmittal # W050453.

V. Compliance with Department of Environmental Protection Regulations

(1) The permittee shall comply with the Section B, Special Conditions that are established in this permit by the Department pursuant to 310 CMR 30.202(2) of the Massachusetts Hazardous Waste Regulations ("Hazardous Waste Regulations"). Should there be any differences between the application and attachments to this permit and the provisions of this section, the provisions of this section shall govern. In addition to complying with 310 CMR 30.000, the permittee shall remain in compliance with all applicable requirements contained in any federal or state regulations, including but not limited to, 310 CMR 7.00, 310 CMR 16.00, 310 CMR 19.00 and any other policies, terms, and conditions that the Department may require with regard to the management of PCS.

(2) Nothing in this permit shall be construed as the Department's approval of the end use of any product produced under the terms of Section B, Specific Conditions, Paragraph IV.(5), above. This permit addresses only the recycling of PCS at the Facility, and any liability arising from the use of products containing PCS rests solely with the Facility. The Facility releases and indemnifies the Commonwealth of Massachusetts and the Department of Environmental Protection from and against any claims brought by third parties or other governmental agencies for property damage, personal injury, natural resource damages, response actions, or any other costs or damages related directly or indirectly to the use of products containing PCS produced by the Facility under the terms of this permit.

VI. The Quality Assurance and Quality Control Plan

The QA/QC Plan shall:

(1) Include material specifications (chemical and physical) for the processed aggregate and final product(s) based on accepted standards such as: ASTM Standard, the Massachusetts Highway Department, the Massachusetts Turnpike Authority, the Asphalt Institute or other industry wide accepted standards.

(2) Identify the intended use(s) of the final product(s).

(3) Document recycling through representative sampling and analysis for both chemical and physical data that both the recycled petroleum contaminated soil, produced aggregate (crushed stone removed by screening operations), and final manufactured product comply with the facility's permit and the product specifications identified in Section B, Specific Conditions, Paragraph IV.

(4) Specify sampling and analytical procedures. These procedures shall allow for the correlation of input and processed material, and product.

(5) Provide that all sampling and analytical procedures are performed in accordance with accepted standard methods such as EPA Standard Methods-SW846, ASTM Standards or any equivalent methods identified by the Department.

(6) Provide for the maintenance of such data in a summary form at the Facility.

(7) Include all associated documentation, including analytical reports and data summaries, shall be supplied to the Department for its inspection and/or approval upon request and kept at the facility in accordance with the record keeping requirements in the Facility's current permit.

(8) The Incoming Inspection Form shall be used in the review of all 21E Bill of Ladings and Material Shipment Records (Shipping Records) by the Facility. The Form will document that all Shipping Records have been completed in full; are accompanied by the required analytical, site history and all other documentation required by the Company for acceptance of the soil. It will:

(a) be signed by the reviewing employee;

(b) state whether the material was accepted or rejected; and

(c) include a statement by the facility that justifies reduced or the limiting of any analytical tests by the Facility.

Re: CERO–SWM, Charlton, Recycle Technology, LLC, Determination of Need for Site Assignment - Modification, BWP SW 18, Transmittal Number: W058573

Dear Mr. McCambridge:

The Department of Environmental Protection (the "Department" or "DEP") has completed its technical review of the permit application listed above and has determined that the application is technically complete.

The Department issued the Draft Permit for this facility on April 14, 2005. Pursuant to the provisions of 310 CMR 16.05(7)(e), the Department accepted written comments on this permit for twenty-one (21) days from the date of issuance. The Department did not receive any comments during the comment period. Therefore, the Department hereby issues the Final Permit for this facility.

Thank you, and if you have any questions regarding this Final Determination, please contact Mike Penny of the Division of Solid Waste Management at (508) 792-7650 Ext. 2835.

Very truly yours,

John J. Regan
Section Chief
Solid Waste Management Program

3. Description:

a) Type(s) of recyclables/waste accepted: The facility, in accordance with a previously issued DON (#W950444), may accept asphalt pavement, brick and concrete rubble (ABC rubble) that is clean and not mixed with or contaminated by any other wastes or debris. Additionally, the facility in accordance with this modification, may accept coal bottom ash for use as an additive to the ABC rubble processing operation.

(b) Approved amount of recyclables/waste received: The facility, in accordance with a previously issued DON (#W950444), may accept on average of four hundred (400) tons per day of ABC rubble not to exceed five hundred (500) tons per day maximum. The maximum annual tonnage of ABC rubble accepted at the facility shall not exceed one hundred thousand (100,000) tons (400 tons per day X 250 days per year).

Additionally, the facility in accordance with this modification, may accept on average of one hundred sixty (160) tons per day of coal bottom ash not to exceed two hundred (200) tons per day maximum. The maximum annual tonnage of coal bottom ash shall not exceed forty thousand (40,000) tons (160 tons per day X 250 days per year).

B. Permit Application Information for BWP SW 18 Determination of Need - Modification

1. Applicant Name: Recycle Technology, LLC

2. Transmittal Number/Permit Number: W058573

3. Start Date of Application: January 7, 2005

4. Date of Fee Receipt: January 7, 2005

5. Application Prepared by:

George Camougis
P.O. Box 368
Charlton City, MA 01508

6. Title of Submittal(s) and Date of Receipt at DEP, CERO:

Application for Determination of Need - Modification

BWP SW 18 Transmittal #W058573
Submitted by: Recycle Technology, LLC
17 Griffin Road, Charlton City, MA
Received by DEP-CERO: January 5, 2005

7. Project Description:

The Applicant received a negative determination of need for a site assignment from the Department on September 21, 2004 (permit #W950444). The determination allows for the recycling of no more than one hundred thousand (100,000) tons per year of clean ABC rubble at the REC TEC facility located at 17 Griffin Road Charlton, MA. The facility is allowed to accept and store up to ten thousand (10,000) tons of ABC rubble for processing. A contractor with portable crushing equipment crushes the ABC rubble and a screener is used to produce aggregate products of various gradations suitable for specific engineering applications. The processed material is then segregated into individual product stockpiles. The quantity of processed ABC rubble stored on site shall not exceed ten thousand (10,000) tons.

The Applicant requests to modify the DON by adding coal bottom ash to the processing and recycling of the ABC rubble. The Applicant intends to blend the ash with processed ABC rubble in various ratios to produce recycled aggregate products suitable for various uses and applications.

II. DETERMINATION OF NEED - MODIFICATION APPLICATION REVIEW AND APPROVAL

This application complies with the requirements of 310 CMR 16.05, the Site Assignment Regulations for Solid Waste Facilities and was reviewed in accordance with Section 16.05 (6) Determination of Need for Site Assignment and 16.05 (9) Project Modifications. The Department hereby approves the permit request with the following conditions.

III. GENERAL PERMIT CONDITIONS

1. The operation of this facility shall not adversely affect the public health, safety or the environment.

2. The operation, maintenance and closure of this facility shall be performed in compliance with other applicable Local, State and Federal laws and regulations.

3. The Department reserves the right to rescind, suspend or modify this permit by the imposition of additional conditions based upon a determination of actual, or the threat of, adverse impacts from the construction, operation, maintenance or closure of the facility.

4. The Applicant shall provide the Department, within a reasonable time, any information which the Department may request and which is deemed by the Department to be relevant in determining whether a cause exists to modify, revoke, or suspend this permit, or to determine whether the Applicant is complying with the terms and conditions of the permit.

5. Failure to comply with the provisions of this Determination of Need, and other Department approvals, including Bureau of Waste Prevention approvals, shall be grounds for permit suspension and revocation.

IV. SPECIFIC PERMIT CONDITIONS

1. The facility may accept on average of four hundred (400) tons per day of ABC rubble not to exceed five hundred tons per day maximum. The maximum annual tonnage of ABC rubble accepted at the facility shall not exceed one hundred thousand (100,000) tons (400 tons per day X 250 days per year). The operating hours for receipt of material shall be: Monday through Friday - 7:00 am to 5:00 pm

2. The facility may accept on average of one hundred sixty (160) tons per day of coal bottom ash not to exceed two hundred (200) tons per day maximum. The maximum annual tonnage of coal bottom ash accepted at the facility shall not exceed forty thousand (40,000) tons (160 tons per day X 250 days per year). The operating hours for receipt of material shall be: Monday through Friday - 7:00 am to 5:00 pm

3. The quantity of finished material (ABC and coal bottom ash mix) stored on site shall not exceed fifteen thousand (15,000) tons.

4. The quantity of ABC rubble stored on site prior to processing shall not exceed ten thousand (10,000) tons.

5. The quantity of coal bottom ash stored on site prior to processing shall not exceed five thousand (5,000) tons.

6. The quantity of ABC rubble stored while "in-process" shall not exceed two thousand (2,000) tons.

7. The quantity of coal bottom ash stored while "in-process" shall not exceed one thousand (1,000) tons.

8. The quantity of waste (all residuals, residues and off-specification product) stored on site shall not exceed forty (40) tons. The quantity of commingled non-hazardous waste (e.g. wood, plastic) shall not exceed one (1) percent by weight.

9. The facility will be subject to inspections without prior notice, to periodically enter upon and inspect the facility and relevant operating records to determine and compel compliance with applicable regulations and conditions of the Determination.

10. The Applicant shall maintain on the premises, a daily log of all materials received and shipped. This information shall be reported annually to the Department.

11. The Department shall be notified within twenty-four (24) hours of any incidents which occur at the facility that could affect the public health, safety, environment or operations of the facility.

12. In the event the facility operations are discontinued for any reason, the Applicant shall arrange for and incur all costs associated with the removal and disposal of all nuisance products from the site to an approved solid waste management facility within ninety (90) days of closure.

13. In the event the facility ceases operations and to ensure proper removal and disposal of materials on site, the Department requires the Applicant to provide a Financial Assurance Mechanism (FAM) in accordance with 310 CMR 19.051. The FAM shall be approved by the Department prior to acceptance of coal ash at the facility.

14. The Permittee shall prevent the occurrence of dust or odor conditions, which cause or contribute to a condition of air pollution as defined in Regulation 310 CMR 7.01 and 7.09.

15. Visible emissions from receiving, handling, and processing of the approved material shall not exceed 5% opacity at all times. The Permittee shall ensure no visible emissions from the storage of approved material.

16. The Applicant shall comply with 310 CMR 7.06 and take all necessary action to minimize visible emissions from vehicular traffic entering and leaving the facility. Such action may include but is not limited to sweeping, water treatment and truck tire washing.

17. Noise from the facility during routine operation shall not exceed the Department's noise guidelines and shall not cause a condition of air pollution as defined in Regulation 310 CMR 7.01 and 7.10.

18. All vehicles entering, waiting and leaving the facility shall comply with the requirements at 310 CMR 7.11 for exhaust and sound emissions, including unnecessary idling.

19. Grinding or processing of approved material shall be done only with a portable unit meeting the definition of "non-road engine" as defined in 40 CFR 89 as it may be amended. See Attachment A for the current definition from 40 CFR 89.

The Department reserves the right to rescind, suspend or modify the Determination by the imposition or amendment of conditions based on determinations of any actual or potential adverse impacts from the facility. It is the Applicant's responsibility to comply with all other applicable Federal State and Local statues or regulations as a pre-requisite to the operation of the facility.

Please be advised that if this Determination is rescinded or suspended, this facility shall be regulated under all applicable sections of Massachusetts General Laws (MGL), Chapter 111, Section150A, and the regulations promulgated thereunder at 310 CMR 16.00 "Site Assignment Regulations for Solid Waste Facilities", and 310 CMR 19.000 "Solid Waste Management Facility Regulations". Failure to comply with these requirements may lead to legal action including but not limited to, criminal prosecution, court imposed civil penalties, or civil administrative penalties assessed by the Department.

V. RIGHT OF APPEAL

A. Right to Appeal - This permit has been issued pursuant to Massachusetts General Laws (MGL), Chapter 111, Section 150A and 310 CMR 16.05: Determination of Need, of the " **Site Assignment Regulations for Solid Waste Facilities".** Any person aggrieved by the issuance of this determination, may file an appeal for judicial review of said decision, in accordance with the provisions of MGL Chapter 111, Section 150A and MGL Chapter 30A, not later than thirty days following the receipt of the final decision.

B. Notice of Appeal- Any aggrieved person intending to appeal the decision to the superior court shall provide notice to the Department of intention to commence such action. Said notice of intention shall include the Department File Number/ Transmittal Number, and shall identify with particularity the issues and reason(s) why it is believed the approval decision was not proper. Such notice shall be provided to the Office of General Counsel of the Department, and the Regional Director for the regional office which made the decision. The appropriate addresses to send such notices are:

1. Office of General Counsel
   Department of Environmental Protection
   One Winter Street-Third floor
   Boston, MA 02108

2. Regional Director
Department of Environmental Protection
Central Regional Office
627 Main Street
Worcester, MA 01608

No allegation shall be made in any judicial appeal of this decision unless the matter complained of was raised at the appropriate point in the administrative review procedures established in those regulations, provided that matter may be raised upon a showing that it is material and that it was not reasonably possible with due diligence to have been raised during such procedures, or that the matter sought to be raised is of critical importance to the public health or environmental impact of the permitted activity. Unless the person requesting an appeal requests and is granted a stay of the terms and conditions of the approval by a court of competent jurisdiction, this decision shall remain effective.

Thank you, and if you should have any questions or comments regarding this matter, please contact Mike Penny of the Division of Solid Waste Management at (508) 767-2835.

Very truly yours,

John J. Regan
Section Chief
Solid Waste Management Program

W:\SWM\Final2005\REC TEC BWPSW18 Draft PMT

ATTACHMENT A
40 CFR 89 Definition of Non-Road Engine

Under 40 CFR 89, "*Non-road engine*" means:

(1) Except as discussed in paragraph (2) of this definition, a nonroad engine is any internal combustion engine:

(i) In or on a piece of equipment that is self-propelled or serves a dual purpose by both propelling itself and performing another function (such as garden tractors, off-highway mobile cranes and bulldozers); or

(ii) In or on a piece of equipment that is intended to be propelled while performing its function (such as lawnmowers and string trimmers); or

(iii) That, by itself or in or on a piece of equipment, is portable or transportable, meaning designed to be and capable of being carried or moved from one location to another. Indicia of transportability include, but are not limited to, wheels, skids, carrying handles, dolly, trailer, or platform.

(2) An internal combustion engine is not a nonroad engine if:

(i) the engine is used to propel a motor vehicle or a vehicle used solely for competition, or is subject to standards promulgated under section 202 of the Act; or

(ii) the engine is regulated by a federal New Source Performance Standard promulgated under section 111 of the Act; or

(iii) the engine otherwise included in paragraph (1)(iii) of this definition remains or will remain at a location for more than 12 consecutive months or a shorter period of time for an engine located at a seasonal source. A location is any single site at a building, structure, facility, or installation. Any engine (or engines) that replaces an engine at a location and that is intended to perform the same or similar function as the engine replaced will be included in calculating the consecutive time period. An engine located at a seasonal source is an engine that remains at a seasonal source during the full annual operating period of the seasonal source. A seasonal source is a stationary source that remains in a single location on a permanent basis (i.e., at least two years) and that operates at that single location approximately three months (or more) each year. This paragraph does not apply to an engine after the engine is removed from the location.

Re: Major Permit Modification - Form R
Modern Trash Removal of York, Inc.
Permit No. 100113
Windsor and Lower Windsor Townships
York County

Dear Mr. Pedersen:

I am pleased to enclose a permit modification for a revision to the approved Form R permit modification. It is issued in accordance with the Pennsylvania Solid Waste Management Act, Act 97, as amended.

Compliance with the limitations and stipulations that have been set forth in your permit is mandatory. You have the right to appeal any limitation or stipulation as stated on your permit.

Any person aggrieved by this action may appeal, pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. Section 7514, and the Administrative Agency Law, 2 Pa. C.S. Chapter 5A, to the Environmental Hearing Board, Second Floor, Rachel Carson State Office Building, 400 Market Street, P.O. Box 8457, Harrisburg, PA 17105-8457, 717-787-3483. TDD users may contact the Board through the Pennsylvania Relay Service, 800-654-5984. Appeals must be filed with the Environmental Hearing Board within 30 days of receipt of written notice of this action unless the appropriate statute provides a different time period. Copies of the appeal form and the Board's rules of practice and procedure may be obtained from the Board. The appeal form and the Board's rules of practice and procedure are also available in Braille or on audiotape from the Secretary to the Board at 717-787-3483. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

If you have any questions concerning the enclosed permit and/or the requirements set forth by the Pennsylvania Solid Waste Management Act, please call me at the above number.

Sincerely,

Francis P. Fair
Program Manager

FORM NO. 13-A

MODIFICATION TO SOLID WASTE DISPOSAL AND/OR PROCESSING PERMIT

Under the provisions of Act 97, the Solid Waste Management Act of July 7, 1980, as amended, Solid Waste Permit Number 100113 issued on August 17, 1978 to:

Modern Trash Removal of York, Inc.
R.D. #9, Box 316
York, PA 17402

Windsor and Lower Windsor Townships
York County

is hereby modified as follows:

This permit modification is issued approving a revision to the Form R Permit Modification (issued June 6, 1993). The revision adds Municipal Sewage Sludge, Municipal and Infectious/Pathological Incinerator Ash, Auto Shredder Fluff, Non-PCB Transformers/Electrical Equipment, PCB Capacitors, and Fluorescent Light Bulbs to the Form R approved waste types. This permit modification is based on the following submissions:

1. Application for major permit modification to the existing Form R (Residual Waste) Permit, prepared by Modern Landfill & Recycling, received June 6, 1996, containing the following:

   Form A - Application for Municipal or Residual Waste Permit
   Form B - Professional Certification
   Form C - Compliance History
   Form R - Waste Analysis and Classification Plan
   Form 46 - Relationship Between Municipal Waste Management Plans and Permits

2. Additional information submitted by Modern Landfill & Recycling, received August 12, 1996, containing a Permit Application - General Information Form, proof of Publication and certified mail receipts of Contiguous Property Owners.

This modification shall be attached to the existing Solid Waste Permit described above and shall become a part thereof effective on JUL 29 1997

FOR THE DEPARTMENT OF ENVIRONMENTAL PROTECTION

3. Letter dated June 19, 1997, from Modern Landfill, received by the Department July 1, 1997, containing comments on the draft permit conditions.

PERMIT CONDITIONS:

1. Before Municipal Sewage Sludge can be accepted from a new generator, a Form 43 - Request For Approval to Dispose of or Process Sewage Sludge, must be submitted to and approved by the Department. The approval process used by the Department for the Form 43's will consist of a review completed within 15 days of submission. If the Department has no comments on the Form 43 within 15 days, the Modern Landfill may accept the material identified on the Form 43. All Municipal Sewage Sludge from generators not currently approved must be stabilized or digested prior to disposal as per Section 273.515(c).

2. All Municipal Sewage Sludge from generators currently approved for disposal must be stabilized or digested in accordance with Department Guidelines, as per Section 273.515(c). Within 90 days of permit issuance, an evaluation of all generators disposing of sewage sludge in the landfill must be completed. This evaluation must identify those generators who are disposing of waste which is not stabilized or digested in accordance with Department Guidelines. A compliance schedule must be developed and submitted to the Department for approval for each generator identified. The schedule must include the time frame for achieving compliance for each generator identified.

3. Before Municipal Waste Incinerator Ash is accepted for disposal, Form 36 - Request for Approval to Dispose of Municipal Incinerator Ash and Form 41 - Municipal Incinerator Ash Residue Monitoring Report, must be submitted to and approved by the Department. Before Pathological/Infectious Waste Incinerator Ash is accepted for disposal, the following must be submitted to and approved by the Department: Form 35 - Request For Approval to Dispose of Processed Infectious or Chemotherapeutic Waste Streams, Form 40 - Infectious Waste Incinerator Ash Residue Microbiological Monitoring Report, and Form 44 - Infectious Waste Incinerator Ash Residue Monitoring Report. The approval process used by the Department for Forms 35, 36, 40, 41, and 44 will consist of a review completed within 15 days of submission. If the Department has no comments on Forms 35, 36, 40, 41, or 44 within 15 days, the Modern Landfill may accept the material identified on the forms.

4. Before Auto Shredder Fluff is accepted for disposal, a Form U - Request to Process or Dispose of Residual Waste, shall be submitted for review. Approval will be based on applicant's Waste Analysis Plan. Total PCB level shall not exceed 50 mg/kg (ppm) on a dry weight basis. The generator shall establish an ongoing monitoring program to sample the output material to ensure that the Auto Shredder Fluff waste meets the above acceptance standard.

5. Before Non-PCB Transformers/Electrical Equipment is accepted for disposal, a Form U - Request to Process or Dispose of Residual Waste, shall be submitted. The transformers must be emptied and cleaned before acceptance at the landfill.

6. PCB Capacitors (large or small) generated from a construction/demolition project may be accepted under the Form S. provided that the PCB concentrations fall within Modern Landfill's acceptance limit.

7. Fluorescent light bulbs from nonmanufacturing sources are acceptable as municipal waste if they are co-mingled with municipal waste. If fluorescent light bulbs are co-mingled with municipal-like residual waste, they will be acceptable as municipal-like residual waste. Before fluorescent light bulbs from a bulb manufacturer are accepted for disposal, a Form U - Request to Process or Dispose of Residual Waste, shall be submitted.

8. Nothing herein shall be construed to supersede, amend or authorize violation of the provisions of any valid and applicable local law ordinance, or regulation, provided that said local law, ordinance or regulation is not preempted by the Pennsylvania Solid Waste Management Act, the Act of July 7, 1980, Act 97, 35 P.S. 6018.101, et seq.

Mr. Mark Pederson, Site Engineer
Republic Services of PA, LLC
4400 Mount Pisgah Road
York, PA 17402

Re: Revision to Auto Shredder Fluff and Form R
Modern Landfill
Permit No. 100113
APS ID No. 532314
Windsor and Lower Windsor Townships
York County

Dear Mr. Pederson:

Enclosed is a permit modification to Solid Waste Permit No. 100113 for the operation of Modern Landfill, issued in accordance with Article V of the Solid Waste Management Act, 35 P.S. Sections 6018.101, et seq.

This modification approves revisions to the May 5, 2004 permit modification for the use of auto shredder fluff as alternative daily cover, and revisions to the July 29, 1997 permit modification for the Form R, Waste Analysis and Classification Plan. This modification replaces the permit modification issued on February 10, 2005.

Compliance with the terms and conditions set forth in the permit is mandatory. You have the right to file an appeal as to these terms and conditions.

Any person aggrieved by this action may appeal, pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. Section 7514, and the Administrative Agency Law, 2 Pa. C.S. Chapter 5A, to the Environmental Hearing Board, Second Floor, Rachel Carson State Office Building, 400 Market Street, PO Box 8457, Harrisburg, PA 17105-8457, 717-787-3483. TDD users may contact the Board through the Pennsylvania Relay Service, 800-654-5984. Appeals must be filed with the Environmental Hearing Board within 30 days of receipt of written notice of this action unless the appropriate statute provides a different time period. Copies of the appeal form and the Board's rules of practice and procedure may be obtained from the Board. The appeal form and the Board's rules of practice and procedure are also available in braille or on audiotape from the Secretary to the Board at 717-787-3483. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST REACH THE BOARD WITHIN 30 DAYS. YOU DO NOT NEED A LAWYER TO FILE AN APPEAL WITH THE BOARD.

IMPORTANT LEGAL RIGHTS ARE AT STAKE, HOWEVER, SO YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD (717-787-3483) FOR MORE INFORMATION.

If you have any questions about the enclosed permit or requirements of the Solid Waste Management Act, please call Mr. Ajaz Uddin at 717-705-4942.

Sincerely,

John F. Krueger

FORM NO. 13-A

MODIFICATION TO SOLID WASTE DISPOSAL AND/OR PROCESSING PERMIT

Under the provisions of Act 97, the Solid Waste Management Act of July 7, 1980, as amended, Solid Waste Permit Number 100113, issued on August 17, 1978 to:

Modern Trash Removal of York, Inc.
RD 9, Box
York, PA 17402

Windsor and Lower Windsor Townships, York County

is hereby modified as follows:

° This permit modification is issued based on the following submission:

Application for Minor Permit Modification, prepared by Rettew Associates, Inc., received August 27, 2004, including the following:

- Form GIF, General Information Form
- Form A, Application for Municipal Waste Permit
  Proof of Public Notifications
- Form B, Professional Certification
- Form B-1, Application for Certification
- Form HW-C, Compliance History
  - > Appendix A, Requested changes to Auto Shredder Fluff permit conditions
  - > Appendix B, Requested changes to Form R permit conditions and administrative changes
  - > Appendix C, Radiation Monitoring Permit Modification
- Supporting Information

This modification shall be attached to the existing Solid Waste Permit described above and shall become a part thereof effective on MAR 1 2005.

FOR THE DEPARTMENT OF ENVIRONMENTAL PROTECTION

Modern Trash Removal of York, Inc.
Windsor and Lower Windsor Townships, York County
Permit No. 100113

MAR 1 2005

PERMIT CONDITIONS:

The following conditions from the permit modification issued May 5, 2004, For Use of Auto Shredder Fluff as Alternative Daily Cover are revised as follows:

1. Permit Condition No. 1: Bulk Product Waste from the shredding of automobiles or household appliances from which PCB small capacitors have been removed (shredder fluff or autofluff) may be utilized as alternative daily cover at Modem Landfill.

2. Permit Condition No. 2: Prior to initial acceptance of a generator's shredder or autofluff, this waste stream must be sampled and analyzed for TCLP extractable lead, cadmium, and PCBs in accordance with Baumgartner & Associates, Inc., Protocols For Sampling, Analysis and Data Review of Shredder Residue (see Attachment 1). Statistical analysis of sample results, as outlined in the Protocol, must demonstrate that the shredder/autofluff does not exceed TCLP limits and must leach < 10 ug/L PCBS.

3. Permit Condition No. 3: The maximum amount of time the shredder/autofluff may be exposed as alternative daily cover after placement is 48 hours.

New Permit Condition:

4. Quarterly sampling and analysis of each generator's shredder or autofluff must be conducted in accordance with the Baumgartner Protocols. Analyses for TCLP lead, cadmium, and total PCBs shall be conducted on a minimum of one composite sample and these results submitted to the Department for review. The Department reserves the right to modify the sampling and analysis requirements for the shredder or autofluff destined for use as daily cover at Modem Landfill.

The following conditions from the permit modification issued July 29, 1997, Approving the Form R, Waste Analysis and Classification Plan, are revised as follows:

5. Permit Condition No. 4: Before PCB containing waste is accepted for disposal, a Form U, Request to Process or Dispose of Residual Waste, shall be submitted for review. Approval will be based on applicant's Waste Analysis Plan. Total PCB level shall not exceed 50 mg/kg (ppm) on a dry weight basis unless specifically exempted by 40 CFR Part 761 as promulgated July 29, 1998 and effective August 28, 1998 - e.g. auto shredder fluff. The generator shall establish a monitoring program to sample and analyze their waste stream to ensure that the PCB containing waste meets acceptance standards.

Permit Condition No. 5: Before non-PCB or previously PCB containing transformers, electrical equipment, or large capacitors are accepted for disposal, a Form U, Request to Process or Dispose of Residual Waste, shall be submitted. They must be drained, rinsed, and have free liquids removed before acceptance at the landfill.

MAR 1 2005

7. Permit Condition No. 6: Small PCB capacitors generated from a construction/demolition project may be accepted under the Form U process, unless specifically exempted by 40 CFR Part 761 as promulgated July 29, 1998 and effective August 28, 1998.

8. Permit Condition No. 9: This permit modification recognizes changes and revisions made to the existing Form R, Waste Analysis and Classification Plan, received August 27, 2004 by the DEP Southcentral Regional Office.

9. Nothing herein shall be construed to supersede, amend or authorize violation of the provisions of any valid and applicable local law, ordinance, or regulation, provided that said local law, ordinance or regulation is not preempted by the Pennsylvania Solid Waste Management Act, the Act of July 7, 1980, Act 97, 35 P.S. 6018.101, et seq.

Re: Permit Modification
Form R - Approval
Permit No. 100113
Windsor and Lower Windsor Townships
York County

Dear Mr. Kuhn:

I am pleased to enclose a Permit Modification approving a Form R submission for Modern Trash Removal of York, Inc. received November 4, 1992. It is issued in accordance with the Pennsylvania Solid Waste Management Act, Act 97.

Compliance with the limitations and stipulations that have been set forth on your permit is mandatory. You have the right to appeal any limitation or stipulation as stated on your permit.

Any person aggrieved by this action may appeal, pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. Section 7514, and the Administrative Agency Law, 2 Pa. C.S. Chapter 5A, to the Environmental Hearing Board, Second Floor, Market Street State Office Building, 400 Market Street, P.O. Box 8457, Harrisburg, PA 17105-8457, (717) 787-3483. TDD users may contact the Board through the Pennsylvania Relay Service, (800) 654-5984. Appeals must be filed with the Environmental Hearing Board within 30 days of receipt of written notice of this action unless the appropriate statute provides a different time period. Copies of the appeal form and the Board's rules of practice and procedure may be obtained from the Board. The appeal form and the Board's rules of practice and procedure are also available in braille or on audiotape from the Secretary to the Board at (717) 787-3483. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

If you have any questions concerning the enclosed permit and/or the requirements set forth by the Pennsylvania Solid Waste Management Act, please call me at the above number.

Sincerely,

Francis P. Fair

   - Form 46 - Relationship between Municipal Waste Management Plans and Permit.
   - Form U - Request to Process or Dispose of Residual Waste
   - Amendment for the Form R/S dated April 30, 1993 (Attachment)

3. Modern Trash Removal of York, Inc. is hereby authorized to accept and dispose of residual wastes associated with the following general categories:

General Category Code	Waste Type
000	-Combustion Residues
100	-Metallurgical Process Residues
200	-Sludges, Scales

This modification shall be attached to the existing Solid Waste Permit described above and shall become a part thereof effective on (date) JUN 16 1993

FOR THE DEPARTMENT OF ENVIRONMENTAL RESOURCES

300	-Chemical Wastes
400	-Generic Wastes
500	-Special Handling Residues
700	-Industrial Equipments, Scrap
800	-Non-Coal Mining Waste
900	-Other Specific Wastes (attachment)
Forms S	-Municipal-Like Residual Wastes (attachment)

4. The Permittee may not accept any residual wastes whose chemical constituents are not consistent with the categories identified in the Waste Analysis and Classification Plan. Any residual waste that does not fall into these categories cannot be accepted unless a major modification of this plan is approved by the Department.

5. In addition to the waste streams previously approved by the Department as identified in Table 4-3A attached to this permit modification, Modern Trash Removal of York, Inc. is authorized to accept the following residual wastes from the following listed generators submitted under this permit application:

	Waste Code	Generator Name	Estimated Volume/Year
A.	004	Donsco, Inc.	1,080 tons
B.	104	Surtech Industries	72 tons

6. The Permittee shall submit a complete and accurate application to the Department to dispose of residual waste on the appropriate forms of the Department (Form U) for each residual waste from each generator which is proposed for disposal. A complete application contains all information set forth by 25 Pa. Code Subsection 271.611. The application shall be sent to the Department's Southcentral Regional Office by certified mail with return signature card or hand delivered. The Permittee may begin accepting the waste upon receiving written approval from the Department or after the fifteenth (15) business working day (hereinafter "waiting period") from the date the application was received by the Department. If the Department does not object during the waiting period, the Permittee may accept the waste. The absence of disapproval by the Department during or after the waiting period does not constitute an approval or final action by the Department. Should the Department determine that a waste which was accepted by the Permittee is not consistent with the submitted application or the approved Waste Analysis and Classification Plan, the Permittee may be subject to any or all applicable enforcement actions of the Solid Waste Management Act or the Department's Rules and Regulations promulgated thereafter.

7. The disposal facility shall maintain a completed Form S for all generators who dispose of municipal-like residual waste. The Form S shall include documentation to denote that the waste is non-hazardous. The permittee shall not accept any municipal waste-like residual waste which was not listed in the revised Form S dated April 30, 1993 without prior written approval from the Department.

8. The Permittee shall submit, quarterly to the Department an amended Appendix to the permit which lists all residual wastes currently approved for disposal at the facility. The amended Appendix shall provide the information pertaining to name of the generator, waste type, and the date that the waste was first accepted for disposal. The Appendix shall also provide the above information for small quantity generators and small quantity type wastes from large quantity generators, if applicable.

9. Small quantity waste generators as defined per Subsection 287.51 shall provide documentation to the disposal facility on a yearly basis that the residual waste is non-hazardous. These records shall be maintained at the disposal facility for inspection by agents of the Department.

10. The Department may require additional tests of certain types of municipal-like residual waste in order to prevent potential harm or threat of harm to the health, safety or welfare of the people or the environment.

11. Combined loads of residual wastes, municipal-like residual wastes, or waste from small quantity generators can be received at the facility provided generator logs are maintained and that acceptance does not violate the generating county plan or any regulations adopted by the county.

12. All residual wastes accepted for disposal at this facility are subject to the fees required by the Municipal Waste Planning, Recycling and Waste Reduction Act (101).

13. Hazardous waste as defined under 25 Pa. Code 261 may not be accepted at the facility for disposal. Any residual waste generator whose analysis reaches 85% of the hazardous waste limit shall provide additional analysis, documentation, etc. to justify that the waste is below the hazardous waste limit.

14. The Permittee shall notify the Department at the earliest time of any rejected waste loads. This notification shall include names of responsible persons or municipalities and, if possible, the method by which an alternative processing or disposal facility will be selected.

15. All laboratories used for testing of residual wastes shall have a laboratory quality assurance/quality control protocol available at the disposal facility office for review by the Department.

16. The Permittee shall send the host county and municipality copies of the forms described in Condition 6 at the same time as the submission to the Department is made unless alternative notification are approved by the county and municipality.

17. Each application for disposal of residual waste as described in Condition 6 shall contain a copy of the generator's source reduction strategy on the appropriate forms of the Department (Form 25R).

18. The facility's annual operations report shall contain certification that a copy of the Chemical Analysis of Residual Waste Annual Report By the Generator (Form 26R) has been received for each residual waste generated by large quantity residual waste generators (including a hazardous waste determination for small volume waste types). If the Form 26R is not supplied annually to the facility by the generator, the facility may no longer accept that waste until such time as the Form 26R is supplied.

19. This modification does not supersede the average and maximum daily waste acceptance volumes of the original permit issued December 4, 1990 and modified May 27, 1993. Fluctuations in residual waste acceptance volumes must not conflict with these limitations.

20. Nothing in this permit shall be construed to supersede, amend, or authorize a violation of any of the provisions of any valid and applicable local law, ordinance, or regulations, providing that said local law, ordinance, or regulation is not preempted by the Pennsylvania Solid Waste Management Act, the Act of July 7, 1980, P.L. 380, No. 97, P.S. 6018.101, et seq.

ATTENTION: Mr. Anthony Kar
Chemist

SUBJECT: Form R/Form S

Dear Mr. Kar:

As requested on our Form R/S meeting on 03/25/93, the following amendments have been made to our Modern Landfill submittal:

FORM R

1. **Please change 15 days to 15 working days on Page 6.**

   See Page #6.

2. **Please provide justification for the 10% acceptance criteria for Petroleum Hydrocarbons.**

   See Page #32.

3. Add Method # to Petroleum Hydrocarbon Methodology.

   See Figure 4-5 Analytical Procedures, Section B "Supplemental Analyses" Using Standard Techniques. This is located on Page #36.

4. **Please provide a statement requiring re-analysis for pre-acceptance and recertification criteria when a TCLP parameter exceeds 85% of its regulatory limit.**

See the bottom of Page #33.

5. **Please add "MSDS Sheets" in Table 4-3 under Residual Waste Code 411.**

See Page #21.

6. **Please specify chemistry for cyanide/sulfide test.**

See Page #35.

7. **Please outline the ASTM cyanide screen utilized by Modern Landfill.**

Modern Landfill utilizes Method Number ASTM D-5049-90. A sodium hydroxide solution is used. In accordance with the method, Modern Landfill utilizes 2.5 N NaOH -- 100 grams of NaOH pellets dissolved into one liter of deionized water. The concentrated sulfuric acid (H_2SO_4) used with the method is assayed as H_2SO_4 w/w Min 95% - Max 98%.

8. **Amendment of the screening procedures to allow for "routine" fingerprinting of wastes in lieu of "required" fingerprinting.**

See Page Numbers: Table of Contents, Figures and Tables, 2, 5, 9, 10, 12, Tables 4-1, Figure 4-5.

9. **Addition of RWC #925 to Table 4-3 and the 900 Series List.**

See Table 4-3, Page 21 and 22 and the 900 Series List, Page 23.

FORM S

1. **Make the following changes to the Form S:**

- **Asbestos - ADD "construction/demolition".**
- **Asphalt - DROP - RWC #413.**
- **Carbon Filters - ADD "Municipal Water Treatment".**
- **Cardboard w/Paint/Varnish Drippings - ADD "Dried".**
- **Ceramic Insulation Wastes - DROP - RWC #414.**
- **CPE (Polyurethane) Material - DROP - RWC #407.**
- **Creosote - ADD "Non-Manufactured".**
- **Detergents - DROP - RWC #310.**
- **Electric Components Waste - DROP-RWC #410.**
- **Fiberglass (Glass Reinforced Plastics - DROP - RWC #408.**

- o Finished Wood Waste - DROP - RWC #403.
- o Fluorescent Light Bulbs - DROP - RWC #410.
- o Furnace Refractory - ADD "Non-Chromium".
- o Glass Waste - DROP - RWC #406.
- o Leather Scraps - DROP - RWC #401.
- o Linoleum - DROP - RWC #415.
- o Municipal Incinerator Ash - DROP - RWC #006.
- o Non-Hazardous Industrial Process Equipment - ADD "Construction/Demolition".
- o Photographic Waste - DROP - RWC #412.
- o Polyurethane - DROP - RWC #407.
- o Waste Powder Coating/Powder Coating - DROP - RWC #306.
- o PVC Material - DROP - RWC #409.
- o Respirator Cartridges - ADD "Non-Hazardous".
- o Pharmaceutical Products - ADD "Non-Narcotic, Non-Controlled".
- o Rubber/Elastomer - DROP - RWC #402.
- o Sawdust - DROP - RWC #403.
- o Spray Booth Filters - ADD "Unleaded, Non-Solvent Based, Non-Metallic Paint/Varnish".
- o Wire/Wire Scraps - ADD "not exceeding 50 PPM".
- o Wood Waste/Floor Blocks - DROP - RWC #403.

1. See Pages #41 and 42.

If you have any questions concerning this Form R/Form S submittal, please feel free to contact me at (717) 246-2686 or Jim Kuhn at (717) 755-2199.

Sincerely,

Mark C. Pedersen
Environmental Engineer

REQUEST FOR APPROVAL TO PROCESS/DISPOSE OF MUNICIPAL WASTE-LIKE RESIDUAL WASTE

(Revised 4/93)

- ...sive Waste - Water Soluble
- ...al Droppings (Manure)
- Animal Processing Waste - butcher operations only
- Asbestos Containing waste from construction/demolition projects (shingles, transite, etc.)
- Batteries dry cell only - flashlight, radio, etc.)
- Candy Wrapper Manufacturing Waste
- Carbon Filters - Municipal drinking water facility
- Cardboard with Paint and Varnish Drippings (dry)
- Carpet or Fabric Scraps (Yarn, Fiber & Elastic)
- Clothing Scraps
- Creosote Treated Lumber (Railroad Ties, Telephone Poles, Floor Blocks - Demolition Material: non-manufacturing waste)
- Dead Animals - Road Kill (Non-Experimental)
- Drum Liner Waste (RCRA Empty, Non-Hazardous w/Residue)
- Empty Raw Material Bags (Previously Containing Powders, Pellets, or Flakes)
- Empty Raw Material and Finished Product Containers (Cans, Fiber Containers)
- Empty (dried) Commercial Paint Cans
- Fencing (chain-link & barbed)
- Fiberboard Fabrication Dust
- Floor Sweepings - Dirt, No Oil Contaminated, Process Contaminated Material
- Foam Type Wastes (Rigid Plastic Foam, Expanded Polystyrene Foam, Polyurethane, etc.)
- Fresh Air Intake Filters
- Furnace Insulation (Non-Asbestos)
- Furnace Refractory - Hot Air Heat Treat (non-chromium containing)
- Gaskets (Rubber, Cork, etc.)
- ... (from Street Sweeping Operations)
- ...andescent Light Tubes/Bulbs
- Industrial Demolition/Debris from Burned Buildings
- Manufactured Building Debris
- Markers and Paint Sticks
- Metal Banding
- Municipal Waste Landfill Leachate (for Treatment at Facility Plant)
- Non-Hazardous Industrial Process Equipment (with or without Residues) (Construction/Demolition Only)
- Nylon Materials
- Obsolete Piping (PVC, Clay, Ductile, HDPE, Ceramic, Metal, ABS, etc.)
- Off-Spec Commercial Products in Original Consumer Containers
- Off-Spec Cured Resins
- Off-Spec Labels/Packaging
- Off-Spec or Outdated Food Products
- Off-Spec Plastic
- Oil Filters (Hot Drained Non Terne Plated)
- Over-the-Counter Products (pharmaceutical wastes - non-narcotic, non controlled substances)
- Packing/Shipping Material
- Paint Residue (Solidified) - Latex - Less than Five Gallon In Size
- Paper - Uncontaminated packaging material
- Personal Protective Equipment (Non-Hazardous and Non-Medical tyvek suits, gloves, booties, etc.)
- Plant Trash
- Plastic Sheeting
- Plastic Waste (cups/plates/utensils, cuttings/trimmings)
- ...ssure Treated Lumber/Railroad Ties
- ...cess and Filtercake Waste (from food production processes)
- Pump Packing Material (rope)
- Rags Non Hazardous
- Raw Material in Original Raw Material Bags

RCRA Empty (Non-Hazardous) Containers with Dry Residue
Respirator Cartridges (Non-Hazardous)
Screen Waste (Plastic, Vinyl, Metal)
Spent Water Softener Resin/Carbon Filters from Treatment of Potable Water
Spill Materials from Foods
Spray Booth Paint/Varnish Filters, Dry (Non-metallic and non-regulated solvent based)
[illegible]lon Materials
[illegible]s
Uncontaminated Soils (from Well Drilling)
Unusable (Outdated, or Off-Spec) Commercial Products
~~Waste Powder Coating~~
Wire and Wire Scraps (Conduit, Electrical Insulation - no PCB's exceeding regulatory limit)
Wood Pallets & Wood Debris
Wood Waste and Floor Blocks Treated/Untreated - demolition material only

SPECIAL WASTE PRE-ACCEPTANCE AND RECERTIFICATION CRITERIA

(PHYSICAL/CHEMICAL)

TABLE 4-4

TOTAL STATE (as received, wet weight)	Acceptance Criteria
pH Range	2.1 - 12.47
Cyanide (Total)	<250 mg/kg
Sulfides (Reactive)	<500 mg/kg*
*Total Petroleum Hydrocarbon (Leachable)	7.5%
Polychlorinated Biphenyls	<50 mg/kg
Total Solids Content	No Free Liquids
Radiation	Equal to Background
Flammability Potential	Expected Absence or Presence of Flammability
Cyanide Screen	Negative Color Change
Sulfide Screen	Expected Absence or Presence of Sulfide - Additional Quantitative Analysis Required for Postive Screens
Water Mix Reactivity	Non-Reactive
Physical Appearance	Expected Absence or Presence of Physical Appearance

*Justification: Modern Landfill does not have a NPDES discharge limit on TPH or oil and grease. Based on a NPDES discharge limit of 15 mg/l oil and grease (as required for a facility with similar treatment capabilities to Modern Landfill), a removal efficiency of 99% for oil and grease as detailed by the Great Lakes Environmental Handbook and a fifty times attenuation factor; Modern Landfill has arrived at a maximum leachable TPH value of 7.5%.

LEACHATE MAXIMUM VALUES (ALL VALUES EXPRESSED AS MG/L UNLESS OTHERWISE SPECIFIED	
pH	2.0 - 12.50 Standard Units
Arsenic	< 5.0
Barium	<100.0
Cadmium	< 1.0
Chromium (total)	< 5.0
Lead	< 5.0
Mercury	< 0.2
Selenium	< 1.0
Silver	< 5.0
Endrin	< 0.02

Lindane	< 0.40
Methoxychlor	< 10.0
Toxaphene	< 0.5
2,4 D	< 10.0
2,4,5-TP (silvex)	< 1.0
Benzene	< 0.5
Carbon Tetracholride	< 0.5
Chlorobenzene	<100.0
Chloroform	< 6.0
M-Cresol	<200.0
O-Cresol	<200.0
P-Cresol	<200.0
1,4 Dichlorobenzene	< 7.5
1,2 Dichloroethane	< 0.5
1,1 Dicholoethylene	< 0.7
2,4 Dinitrotoluene	< 0.13
Heptachlor (and its' hyroxide)	< 0.008
Hexachloro-1,3-Butadiene	< 0.5
Hexachlorobenzene	< 0.13
Hexachloroethane	< 3.0
Methyl Ethyl Ketone	< 200.0
Nitrobenzene	< 2.0
Pentachlorophenol	< 100.0
Pyridine	< 5.0
Tetracholorethylene	< 0.7
Trichloroethylene	< 0.5
2,4,5-Trichlorophenol	< 400.0
2,4,6-Trichlorophenol	< 2.0
Vinyl Chloride	< 0.2

NOTE: Leachable Maximum Values (all values expressed as mg/l unless otherwise specified.)

NOTE: In the event that a TCLP parameter exceeds 85 percent of its regulatory limit, a new sample will be acquired from the generator and will be analyzed for the parameter in question to assure that the material is acceptable for disposal as a non-hazardous waste. This will not be applicable to RADER and RCRA exempted wastes, e.g. leather scraps.

Mr. Boris Tomicic
Earth Technologies
250 Sackett Point Road
N. Haven, CT 06473

RE: Shops at Atlas Park
Glendale, New York

Dear Mr. Tomicic:

Please be advised that Clean Earth of Philadelphia, Inc. is proposing to accept the non hazardous material generated from the above referenced site for the duration of the project contingent upon satisfying our analytical and approval requirements. In addition to supplying the analysis, the generator must also provide the facility with a signed Form U, site profile form, and sampling diagram to complete the review process. These documents along with the analysis shall serve, as confirmation that the material destined for treatment at CEP is non hazardous and is compliant with PADEP Permit No. 301220.

If you should have any questions or require any additional information, please feel free to contact me at (215) 724-5520.

Sincerely,
CLEAN EARTH OF PHILADELPHIA, INC.

Thomas J. Kushnir
General Manager

3201 South 61st Street

CLEANEARTH
of Philadelphia

16 October 2006

Mr. Alan Parker
Allied Environmental Services
2163 Merrick Ave
Merrick, NY 11566

Re: Atlas Park, LLC
Glendale, NY
WC-Bldg7-100406

Dear Mr. Parker ,

In regards to the above referenced non-petroleum contaminated soil, the 90 tons, identified as WC-Bldg7-100406 in the analysis, has been approved and will use the existing approval # 6602 for acceptance in to Clean Earth of Philadelphia.

Processing of the soil for ultimate reuse will be performed under PADEP solid waste permit number 301220, issued to Clean Earth of Philadelphia.

Sincerely,

Dane M. Tanner
Clean Earth of Philadelphia
Laboratory Director/Approval manager

29 November 2005

Allied Waste Services
2163 Merrick Ave
Merrick, NY 08876

Re: Atlas Park, LLC
8000 Cooper Avenue
Glendale, NY

In regards to the above referenced fuel oil contaminated soil, the non-hazardous material has been issued approval # 6602 for acceptance in to Clean Earth of Philadelphia. The approval is based on the material being accurately represented by the analytical data received from Allied Waste Services. We currently have analysis to accept 900 tons of material. Processing of the soil will be performed under PADEP solid waste permit number 301220, issued to Clean Earth of Philadelphia.

Sincerely,

Dane M. Tanner
Clean Earth of Philadelphia
Laboratory Director/Approval manager

d.	Attached is information from the generator certifying that a hazardous waste determination has been done and that the waste is not hazardous waste as defined in 40 CFR 261, as incorporated by reference at 25 Pa. Code 261a.1. Caution: If 'No', the application form is incomplete.	☒ Yes	☐ No	
e.	Is the waste treated hazardous waste?	☐ Yes	☒ No	
	If 'Yes', list the hazardous waste code(s) that apply to the hazardous waste before treatment.			
	If 'Yes', what treatment option was selected?			
	What limit was required to be met by the treatment option?			
	Provided a copy of the certification required under 40 CFR 268.7(a), as incorporated by reference at 25 Pa. Code 268a.1, that the waste meets all the land disposal restriction requirements, as specified in 40 CFR Part 268, Subpart D (Land Disposal Restrictions-Treatment Standards).	☒ Yes	☐ No	
f.	Has the waste been delisted as a hazardous waste by DEP or US EPA?	☐ Yes	☒ No	☐ N/A
g.	Has the waste been accepted for disposal/processing at another Pennsylvania facility? If 'Yes', list the facility permit ID number(s).	☐ Yes	☒ No	
h.	Has an application for disposal/processing of the waste at another Pennsylvania facility been submitted? If 'Yes', list the facility permit ID number(s).	☐ Yes	☒ No	

WASTE ANALYSIS

a.	Has a detailed physical and chemical characterization of the waste and its leachate been conducted? If 'No', provide detailed explanation supporting use of generator knowledge in lieu of actual chemical analysis.	☒ Yes	☐ No
	If 'Yes', attached is a description of the waste sampling method, in accordance with the waste sampling plan as required in §271.611(a)(3) or §287.132(a)(3).	☒ Yes	☐ No
b.	Laboratory Registration Number New York # 11393/11840		

PROCESS INFORMATION

a.	Attached is a detailed description of the manufacturing and/or pollution control processes producing the waste. If 'No', provide explanation. Historical light industrial site w/ limited site history	☐ Yes	☒ No
b.	Attached is a schematic of the manufacturing and/or pollution control processes producing the waste. If 'No', provide explanation. Not available	☐ Yes	☒ No
c.	Attached is the substantiation for a confidentiality claim (if portions of the information submitted are confidential).	☐ Yes ☐ No	☒ N/A

RESIDUAL WASTES

Categories of residual wastes that qualify for the waiving of chemical analysis by the Department are listed below. Check the appropriate box(es) that match the waste proposed to be accepted for disposal.

- ☐ burnt demolition debris
- ☐ cured rubber scrap
- ☐ fabric/cloth/textile/leather wastes (excluding treatment sludges)
- ☐ food wastes (excluding treatment sludges)
- ☐ metal scrap (excluding powdered grindings or if contaminated with fluids or oils)
- ☐ shingle scrap
- ☐ waste plastic (excluding extrusion manufacturing & uncured resins)
- ☐ Other (explain)
- ☐ carpet scraps
- ☐ empty containers (uncontaminated)
- ☐ fiberglass insulation scrap
- ☐ hot drained used oil filters (non-terne plated)
- ☐ sawdust (excluding treated wood)
- ☐ waste paper
- ☐ wood wastes (excluding treated wood)

All waste types not listed above must be approved in writing in the permit by the Department prior to processing or disposal facility acceptance.

CONSTRUCTION/DEMOLITION PROCESSING AND/OR USE AT THE FACILITY

Will any special handling procedures (besides direct disposal) described in the waste acceptance plan, be used when managing the waste? If 'Yes', describe.	☐ Yes	☒ No
Is this material re-used for construction or operation of the facility? If 'Yes', describe.	☐ Yes	☒ No

Indicate which samples were taken for TPH, TOX and composite sample sites.

SAMPLING NARRATIVE

All sampling performed was in accordance with EPA SW-846 Protocol and regulations of PADER and NJDEP.
All Samples are discreet grabs unless otherwise noted.
Indicate the individual samples taken for analysis with letters or numbers.

Visual examination revealed that this section was the most highly contaminated area: _____

Which sample(s) were taken for TPH analysis: BLDG8-R1-062106

Which sample(s) were taken for TOX analysis: BLDG8-R1-062106

Which sample(s) were composited for waste classification analysis: BLDG8-R1-062106

Approval Number: _____

NON-HAZARDOUS WASTE CERTIFICATION SHEET

PCB Certification

I, the undersigned, under penalty of law, do hereby certify that the material to be submitted to the Clean Earth of Philadelphia (CEP) facility does not contain polychlorinated biphenols (PCBs) at concentration greater than 50 ppm as defined in 40 CFR 761.

Herbicide/Pesticides Certification

I, the undersigned, under penalty of law, do hereby certify that the material to be submitted to the Clean Earth of Philadelphia facility does not contain Herbicides or Pesticides at concentrations that would render it as hazardous waste defined in 40 CFR 261.

Non-Hazardous Waste Certification

I, the undersigned, under penalty of law, do certify that the material submitted to the Clean Earth of Philadelphia facility is not a listed hazardous waste, nor does it contain a listed hazardous waste, nor does it exhibit any of the characteristics of a hazardous waste as defined in 40 CFR 261.

The undersigned also acknowledges they have used due diligence in determining the Non-Hazardous status, of the said material, as defined in 40 CFR. Should at any time after delivery, the material accepted by Clean Earth of Philadelphia be found non-conforming to the above, it becomes the responsibility of the Generator/Agent to remove the waste from Clean Earth of Philadelphia property within (5) days of notification.

It is the Generator/Agent's responsibility to abide by all Federal, State, and Local regulations associated with the removal of their waste. If the waste is not removed within the specified time period said disposal shall be arranged by a Clean Earth of Philadelphia representative and billed to the Generator/Agent at cost plus basis. Furthermore, the Generator/Agent will be responsible for any and all costs for decontamination required at CEP that is related to the Generator/Agent's material and all liability for such nonconforming waste shall revert to the Generator/Agent.

GENERATOR CERTIFICATION

Generator certifies that the material being offered for transport is as described above, and to the best of his/her knowledge, does not contain any constituents that are characteristic of a hazardous waste. The Contractor will not accept any hazardous waste for disposal under the control of this Bill of Lading, therefore, the generator is responsible for any and all costs associated with the proper disposal of any such waste, that is determined to be hazardous by certified lab analysis or knowledge of generation, at an approved facility. The generator further certifies that this waste conforms to the characterization and acceptance requirements of the receiving facility listed on this document.

GENERATOR CERTIFICATION

Generator certifies that the material being offered for transport is as described above, and to the best of his/her knowledge, does not contain any constituents that are characteristic of a hazardous waste. The Contractor will not accept any hazardous waste for disposal under the control of this Bill of Lading, therefore, the generator is responsible for any and all costs associated with the proper disposal of any such waste, that is determined to be hazardous by certified lab analysis or knowledge of generation, at an approved facility. The generator further certifies that this waste conforms to the characterization and acceptance requirements of the receiving facility listed on this document.

GENERATOR CERTIFICATION

Generator certifies that the material being offered for transport is as described above, and to the best of his/her knowledge, does not contain any constituents that are characteristic of a hazardous waste. The Contractor will not accept any hazardous waste for disposal under the control of this Bill of Lading, therefore, the generator is responsible for any and all costs associated with the proper disposal of any such waste, that is determined to be hazardous by certified lab analysis or knowledge of generation, at an approved facility. The generator further certifies that this waste conforms to the characterization and acceptance requirements of the receiving facility listed on this document.

GENERATOR CERTIFICATION

Generator certifies that the material being offered for transport is as described above, and to the best of his/her knowledge, does not contain any constituents that are characteristic of a hazardous waste. The Contractor will not accept any hazardous waste for disposal under the control of this Bill of Lading, therefore, the generator is responsible for any and all costs associated with the proper disposal of any such waste, that is determined to be hazardous by certified lab analysis or knowledge of generation, at an approved facility. The generator further certifies that this waste conforms to the characterization and acceptance requirements of the receiving facility listed on this document.

To Whom This May Concern:

Enclosed is a completed copy of a Uniform Hazardous Waste Manifest or a Non-Hazardous Waste Manifest regarding waste received at our facility on 2/7/05.

This copy and the copy of the manifest you retain when the waste was initially shipped must be retained in your files as proof that the waste was transported and received by an authorized designated facility.

The following outline our storage and treatment methods:

1. S01 Container Storage
2. S02 Tank Storage
3. T23 Chemical Precipitation
4. T46 Ultra Filtration
5. T49 Carbon Filtration
6. T50 Fuel Blending

All products of our fuel blending process are burned for energy recovery.

Thank you for choosing Bridgeport United Recycling for you treatment and recycling needs.

Very truly yours,

William R. Morris

To Whom This May Concern:

Enclosed is a completed copy of a Uniform Hazardous Waste Manifest or a Non-Hazardous Waste Manifest regarding waste received at our facility on 3/27/02.

This copy and the copy of the manifest you retain when the waste was initially shipped must be retained in your files as proof that the waste was transported and received by an authorized designated facility.

The following outline our storage and treatment methods:

1	S01	Container Storage
2	S02	Tank Storage
3	T23	Chemical Precipitation
4	T46	Ultra Filtration
5	T49	Carbon Filtration
6	T50	Fuel Blending

All products of our fuel blending process are burned for energy recovery.

Thank you for choosing Bridgeport United Recycling for you treatment and recycling needs.

Very truly yours,

William R. Morris

"An Equal Opportunity Employer"

To Whom This May Concern:

Enclosed is a completed copy of a Uniform Hazardous Waste Manifest or a Non-Hazardous Waste Manifest regarding waste received at our facility on 12-14-05

This copy and the copy of the manifest you retain when the waste was initially shipped must be retained in your files as proof that the waste was transported and received by an authorized designated facility.

The following outline our storage and treatment methods:

1.	S01	Container Storage
2.	S02	Tank Storage
3.	T23	Chemical Precipitation
4.	T46	Ultra Filtration
5.	T49	Carbon Filtration
6.	T50	Fuel Blending

All products of our fuel blending process are burned for energy recovery.

Thank you for choosing Bridgeport United Recycling for you treatment and recycling needs.

Very truly yours,

William Morris
