Re: **Proposed Offsite Well Locations**
34-11 Beach Channel Drive Site, Far Rockaway, New York
NYSDEC BCP Site #C241141
FPM File No. 1087g-13-05

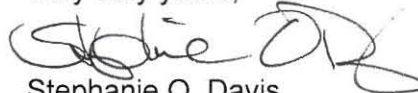

Dear Ms. Barraza:

FPM Group, Ltd. (FPM) is hereby transmitting the attached figure, which shows the revised proposed locations for the offsite wells to be installed in accordance with the Remedial Investigation (RI) Work Plan for the above-referenced New York State Department of Environmental Conservation (NYSDEC) site. The purpose of this transmittal is to obtain NYSDEC concurrence on the revised proposed locations for the offsite monitoring wells.

The initially-proposed locations for the offsite wells, shown on Figure 3.1.1 on page 3-3 of the RI Work Plan, are closely spaced. The proposed locations are more widely spaced and we feel are better located to assess the groundwater conditions in the shallow and intermediate sands based on information gathered to date.

Please confirm if you concur with our recommendations for the relocation of the proposed offsite wells. Should you have any questions or comments, please do not hesitate to call me at (631) 737-6200, ext. 228.

Very truly yours,

Stephanie O. Davis
Senior Hydrogeologist
