Dear Ms. Zheng:

Amec Environment & Engineering, PC is pleased to present this quarterly monitoring report for the first round of quarterly groundwater sampling at the above-referenced facility. The sampling occurred in July 2018. The following report details the field activities and results associated with this event.

If you have any questions, please do not hesitate to call our Office.

Respectfully,

**Amec Environment & Engineering, PC**

TOGS	Technical & Operational Guidance Series
VOCs	Volatile Organic Compound

## **1.0 INTRODUCTION**

Amec Environment & Engineering, PC (Amec) prepared this Quarterly Groundwater Monitoring Report on behalf of Stalingrad Ventures, LLC for the former Hygrade Polishing and Plating (Hygrade) property located in at 22-07 41<sup>st</sup> Avenue, Long Island City, NY (the Site). The site location is shown on Figure 1. This monitoring program was completed in accordance with an Interim Remedial Measures (IRM) Work Plan dated May 17, 2017 (Ref. 1) and approved by the New York State Department of Environmental Conservation (NYSDEC).

### **1.1 SITE DESCRIPTION**

The Site currently encompasses a 100 foot by 25 foot property developed with a four-story office building and basement level that covers the entirety of the lot. The NYC Tax Map designates the Site as Queens County; Block: 409; Lot: 6. The neighborhood surrounding the subject property consists of a highly urbanized area of Long Island City with adjacent properties consisting of commercial and industrial land use.

### **1.2 BACKGROUND**

The subject property was first developed with the current building circa 1920s. In 1962, Hygrade purchased the subject property to operate their metal polishing and electroplating facility. The operations consisted of plating finishes performed at the former Hygrade facility included chromium, brass (copper & zinc), nickel, and zinc. This process involved gathering parts placed in baskets or hung on racks. The parts would then be dipped in various baths containing alkaline, plating solutions, stripping solutions, and rinses. As a result of these processes, wastewater was generated. The wastewater was treated onsite using a wastewater treatment unit. The treated wastewater was then discharged to the New York City municipal sewer system.

Plating and polishing operations ceased around March 2013 when Stalingrad Ventures, LLC (the current owner) purchased the property. Upon purchase of the subject property, the current owner performed a cleanup of the Hygrade facility under a New York City Department of Environmental Protection (NYCDEP) Commissioner's Order that had been issued to the former owner.

Stalingrad Ventures, LLC continued cleaning up and restoring the building after the NYCDEP Commissioner's Order was satisfied. This included removing the concrete surfacing from the walls, washing and resurfacing the floors, removal of approximately 581 tons of soil from the

basement and replacing it with sand. In 2015, Stalingrad Ventures, LLC entered into a Brownfield Cleanup Agreement for the site.

A Remedial Investigation completed under this program revealed that elevated levels of chlorinated Volatile Organic Compounds (VOCs) and metals were present in the groundwater beneath the building and isolated to the shallow water table. Furthermore, previous investigations (by Amec and others) identified the northerly portion of the Site (in the area of wells of BMW-1 and BMW-2) as containing the highest concentration of metal contaminants and the southerly portion of the Site (in the area of wells of BMW-3 and BMW-4) as containing the highest concentration of VOCs contaminants. The remedial investigation established that the groundwater contamination decreased significantly in off-site groundwater wells collected on the northeast corner of 22nd Street and 41<sup>st</sup> Avenue.

In December 2017, as part of the NYSDEC-approved IRM, Amec treated the groundwater beneath the basement floor using in-situ injections. The injections consisted of two different bio-remediation products. In the northerly portion of the Site, where the metals were prevalent, Peroxychem Metafix® was applied as part of the injection program. In the southerly portion of the Site, where the VOCs were prevalent, Peroxychem EHC® was applied as part of the injection program. Details of the injection program are described in the IRM Construction Completion Report which is currently in preparation. As part of the injection program, wells BMW-1 through BMW-4 were abandoned to prevent any short circuiting of the injection products. These wells were re-installed after the completion of the injection program.

In April 2018, Amec completed the first Quarterly Groundwater Monitoring program at the Site. The laboratory analytical results collected from this first round of monitoring indicated that the December 2017 bio-remediation program was very effective in addressing the VOCs and Metal contamination at the subject property. The concentrations of both VOCs and Metals in the groundwater displayed a significant decrease since the products were injected.

### **1.3 CONTAMINANTS OF CONCERNS**

The contaminants of concern (COCs) in the groundwater below the Site are the VOCs which are identified as tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2 dichloroethene (cis 1,2-DCE), and vinyl chloride. With respect to metals, the COCs at the Site are identified as Cadmium,

Chromium, and to a lesser degree, Nickel. More recently, Per and Polyfluoroalkyl Substances (PFAS) compounds have also become a COC.

## **2.0 FIELD PROCEDURES**

An Amec field crew mobilized to the Site on July 26 and 27, 2018 to complete this quarterly groundwater sampling event. The groundwater monitoring wells were sampled using low-flow sampling procedures. A Geotech™ brand peristaltic pump was used to evacuate the water from the wells. New high density polyethylene (HDPE) tubing was used for the collection of each sample. The wells were purged at a rate of 100 and 500 ml per minute. Temperature, specific conductance, pH, dissolved oxygen, turbidity and redox were recorded as the well was pumped. These readings were logged on field forms and are included in Appendix A. The purged water was contained in 5-gallon plastic pails and staged in the basement pending disposal.

Water level indicators were decontaminated with Alconox and laboratory-issued contaminant and PFAS-free certified water after use at each monitoring well location. All other downhole equipment/material were designated for each monitoring well location.

Groundwater samples collected from the on-site basement wells include BMW-1, BMW-2, BMW-3, and BMW-4. Groundwater collected from the downgradient off-site wells include MW-5, MW-6S, and MW-6D. Lastly, a groundwater sample was collected from the upgradient monitoring well MW-E. A sample location map depicting the locations of the groundwater monitoring wells is included in Figure 2.

## **3.0 LABORATORY ANALYTICAL DATA**

Amec subcontracted analytical laboratory, Alpha Analytical of Westborough, MA (an ELAP-certified laboratory) for analysis of Volatile Organic Compounds (VOCs), TAL Metals (both dissolved and total) and PFAS (1,4 dioxane was included in a previous round of sampling and was not detected in the samples). For the purposes of tracking the progress of the December 2017 injection program, water samples were also collected for microbial and geochemical analysis. All groundwater samples remained in a cooler with ice until delivered to the laboratory.

The laboratory analytical results were tabulated and compared to the NYSDEC Technical Operational TOGS Ambient Water Quality Standards (NY TOGS standard) (if applicable). The following sections summarizes the results.

### **3.1 VOLATILE ORGANIC COMPOUNDS**

Basement Sample Locations – The laboratory report indicates that the site-related VOCs contaminants are still present in the basement at low concentrations, similar to the previous Quarterly Sampling event conducted in April 2018. Using EPA method 8260C, TCE, cis 1,2-DCE and vinyl chloride were detected in the water samples collected from the four basement monitoring wells. However, the detections of PCE in all four wells were below NY TOGS groundwater standards. The remaining three VOC COCs were detected above the NY TOGS standards in three of the four basement monitoring wells. There were no exceedances of the TOGS Standards in two of the wells. The following summarizes the concentrations of VOC contaminants for the basement monitoring wells.

- ) PCE was detected in water samples collected from wells BMW-1, BMW-2, and BMW-4 at concentrations below the NY TOGS standard of 5 ug/l. It was not detected in well BMW-3, the well that initially had the highest concentration of this compound. For comparison, the groundwater from basement monitoring well BMW-3 had a concentration of 20,700 ug/l of PCE on March 27, 2014 and on July 26, 2018 had a value of non-detect.
- ) TCE was detected in all four basement wells with detections exceeding the NY TOGS standard of 5 ug/l only in the water sample collected from well BMW-3. For comparison, the groundwater from well BMW-3 had a concentration of 2,600 ug/l of TCE on February 19, 2014 and on July 26, 2018 had a value of 5.5 ug/l.
- ) Cis 1,2-DCE was detected in water samples collected from all four basement monitoring wells with exceedances above the NY TOGS standard of 5 ug/l in the water samples collected at BMW-3 and BMW-4. For comparison, the groundwater from well BMW-3 had a cis 1,2-DCE concentration of 2,600 ug/l on February 19, 2014 and on July 26, 2018 had a value of 180 ug/l.
- ) Vinyl Chloride was detected in water samples collected from all four basement monitoring wells with exceedances above the NY TOGS standard of 2 ug/l in the water samples collected at BMW-3 and BMW-4 at concentrations of 47 ug/l and 3.1 ug/l; respectively.. For comparison, the groundwater from well BMW-3 had a concentration of 1,070 ug/l of VC on February 19, 2014 and on July 26, 2018 had a value of 47 ug/l.
- ) 2-Butanone (also known as Methyl Ethyl Ketone or MEK) was detected above the NY TOGS standards for water samples collected from BMW-3. However, this is believed to be

attributed to the PVC glue used to repair these wells after the EHC injection process was completed.

- | Acetone was detected for samples collected at BMW-3 but this may be attributed to a laboratory cleaning agents or to the PVC glue used at the site.

Sidewalk Sample Locations – The site-related VOCs contaminants, PCE, TCE, and cis 1.2-DCE, were detected in the water samples from the downgradient monitoring wells located in the sidewalk at low concentrations and below the NY TOG Standards in wells MW-5 and MW-6D. Vinyl Chloride was detected in the water samples from the downgradient monitoring wells located in the sidewalk at low concentrations and below the NY TOG Standards in wells MW-6S and MW-6D. The VOCs PCE, TCE, and cis 1.2-DCE, were detected at concentrations exceeding the NY TOGS Standard for the sample collected from well MW-6S. Well MW-6S is a water table well located directly downgradient of basement monitoring well BMW-3, the well that has historically displayed the highest levels of VOC contamination. In addition, the VOC, acrylonitrile was detected at in the water sample from well MW-6S above the NY TOGS Standards. Acrylonitrile was not detected in the basement monitoring wells and has not been identified as a site-related VOC. There were no detections above the NY TOGS standards for the upgradient monitoring well, MW-E.

The laboratory results for VOCS are tabulated on Table 1.

### **3.2 TAL METALS**

Basement Sample Locations – The laboratory data indicates site-related metal contaminants are still present in the basement at similar concentrations to the previous Quarterly Sampling event conducted in April 2018. Cadmium was only detected in excess of the NY TOGS standard of 5 ug/l in the water sample collected from well BMW-2. Nickel was only detected in excess of the NY TOGS standard of 100 ug/l in the water samples collected from BMW-2 and BMW-3. Chromium was not detected in excess of the NY TOGS of 50 ug/l in any of the water samples collected from the basement monitoring wells. For comparison, the groundwater from well BMW-2 had a Chromium concentration of 4,120 ug/l on March 27, 2014 and on July 27, 2018 had a value of 1.85 ug/l.

The naturally occurring metals iron, magnesium, manganese, and sodium were detected at concentrations in excess of the NY TOGS standards in the water samples collected from the basement monitoring wells. This is typical in urban areas like Queens.

Sidewalk Sample Locations – The same naturally occurring metals detected above NY TOGS standards in the water samples collected from the basement monitoring wells – iron, magnesium, manganese and sodium -- were also detected in the wells located in the sidewalk. The site-related metal contaminants, cadmium, chromium and nickel, were not detected above the NY TOGS standards in the samples collected from the downgradient and upgradient sidewalk wells.

The laboratory results for TAL metals are tabulated on Table 2.

### **3.3 PFAS**

As of the date of this report, there are no applicable New York State standard in which to compare PFAS levels to. In May 2016, the United States Environmental Protection Agency (EPA) established drinking water health advisory of 0.07 ppb for the combined concentrations of Perfluorooctanoic Acid (PFOA) and Perfluorooctanesulfonic Acid (PFOS) and 400 ppb for Perfluorobutane Sulfonate (PFBS). The concentration of the combined value of PFOA and PFOS exceeded the EPA health advisory (HA) in water samples collected from all monitoring well locations including the upgradient well. The greatest concentrations were detected below the building in samples collected from basement monitoring wells BMW-3 and BMW-4, the wells that had historically displayed the highest VOC detections. None of the groundwater results exceed the EPA drinking water advisory for PFBS.

The laboratory results for PFAS are tabulated on Table 3.

### **3.4 BACTERIAL ANALYSIS**

A water sample was collected from BMW-3 for the bacterial analysis of Dehalococcoides (DHC) and the associated functional genes (BVC, TCR, and VCR), bacteria that have been shown to degrade chlorinated solvents. The sample was submitted to Microbial Insights, Inc. of Knoxville, Tennessee. The aforementioned bacteria have the capability to reduce the concentration of various chlorinated VOCs such as PCE, TCE, and vinyl chloride through bacterial consumption.

The laboratory report indicated that the DHC and the corresponding functional genes were detected. DHC was detected at a level of  $7.22 \times 10^{-4}$  cells/mL. The corresponding functional genes were detected at concentrations between  $3.75 \times 10^{-3}$  cells/mL and  $2.47 \times 10^{-4}$  cells/mL. For comparison, the water sample collected from BMW-3 in November 2016, detected DHC and BVC at 0.3 cells/mL (TCR and VCR were non-detect). Subsequently, the water sample collected from BMW-3 during the April 2018 sampling event indicated that DHC and the associated functional genes were not detected at a detection level of  $5.0 \times 10^{-1}$  cell/mL. It is believed that the aquifer around this well were disturbed when the well was replaced during the EHC injection program. Since that time, the bacterial appear to be thriving.

### **3.5 GEOCHEMICAL ANALYSIS**

Water samples were collected from BMW-2 and BMW-3 to evaluate the geochemistry of the groundwater and further assess the efficiency of the December 2017 injection program. A water sample collected from BMW-2 was collected and submitted for analysis of chloride, nitrogen / nitrate, sulfate, alkalinity, and hardness. A water sample collected from BMW-3 was collected and submitted for chloride, nitrogen / nitrate, sulfate, alkalinity, methane, ethene, ethane, total organic carbon, and dissolved organic carbon. The results of the geochemical parameters are tabulated in Table 4.

Ethene, and ethane are known degradation products of chlorinated solvents. In this case, a water sample collected from BMW-3 detected the presence of these compounds at concentrations ranging from 0.807 to 10.1 ug/l, indicating that completed degradation of the chlorinated solvents is occurring. Methane, a key indicator of bacterial activity was also detected at 788 ug/l. Chloride formation is a direct measurement of reductive dechlorination process provided there are no high background chloride concentrations nor the water used for injecting the substrate had high levels of chlorine in it. In this case, chloride was detected at a concentration of 442,000 ug/l and 190,000 ug/l for the water samples collected BMW-2 and BMW-3 respectively. Nitrate and sulfate are known to be key components of the dechlorination process indicating that reducing conditions are established in the reactive zone. In this case, the water samples collected from BMW-1 and BMW-3 indicated that these compounds are present in the groundwater, however, nitrate and sulfate concentrations need to display a reduction over time to indicate reductive zones are being established. Lastly, total organic carbon and dissolved organic carbon are known to provide substrate for microbes known to degrade chlorinated solvents. A concentration of 20,000 ug/l of total organic carbon in water is understood to support reductive dechlorination. In this case, a

water sample collected from BMW-2 indicated that total organic carbon and dissolved organic carbon are present concentrations of 5,000 ug/l indicating substrate for microbes is present in the water but not at concentrations to confirm reductive dechlorination.

## **4.0 DISCUSSION**

### VOCs and TAL Metals:

Tables 5 and 6 summarizes the concentration of site-related contaminants from previous groundwater investigations (by Amec and others) performed at the subject property. Figures 3 and 4 illustrates the concentration of site related VOCs and Metals over time for each well location.

The laboratory analytical results for the sampling conducted in April 2018 indicated that the December 2017 injection program was effective in reducing the concentration of contaminants significantly, many to concentrations of non-detect or below the NYTOGS standard. The water samples collected from BMW-3 and BMW-4 during the July 2018 event show a slight increase of cis-1,2-DCE and vinyl chloride from the previous round of sampling possibly indicating the breakdown of the parent products; PCE and TCE. Overall, the laboratory analytical results for the sampling conducted in July 2018 display similar concentrations to those seen in the previous sampling event. The detection of methane is an indication of bacterial activity. The detections of ethane and ethane indicate complete destruction of the chlorinated compounds is occurring.

### PFAS

The groundwater beneath the site was first collected for PFAS analysis during the previous sampling event in April 2018. The laboratory analytical data revealed presence of PFAS above the EPA drinking water advisory. PFAS levels were highest underneath the basement and decreases in the direction of the downgradient wells. Based on the results from the April 2018 sampling event, the underlying groundwater will continue to be monitored for PFAS. As shown on Table 7, the laboratory analytical results for the sampling conducted in July 2018 display similar concentrations to those seen in the previous sampling event.

### Bacteria and Geochemical Parameters

The laboratory analytical results from this sampling event showed that dechlorinating bacteria is present in the groundwater. In addition, geochemical data collected for the groundwater strongly suggests that degradation processes are occurring. The data of the bacterial analysis in

conjunction with the data of the geochemical parameters suggests that microbes in the groundwater are effective in the reductive dechlorination of contaminants at the site.

#### Direction of Ground Water Flow

Based on the elevation of the groundwater measured in the upgradient and downgradient monitoring wells, the direction of groundwater flow is to the west. The measured water table elevation are included on Table 8. A site-specific water table map is indicated on Figure 6.

## **5.0 CONCLUSION**

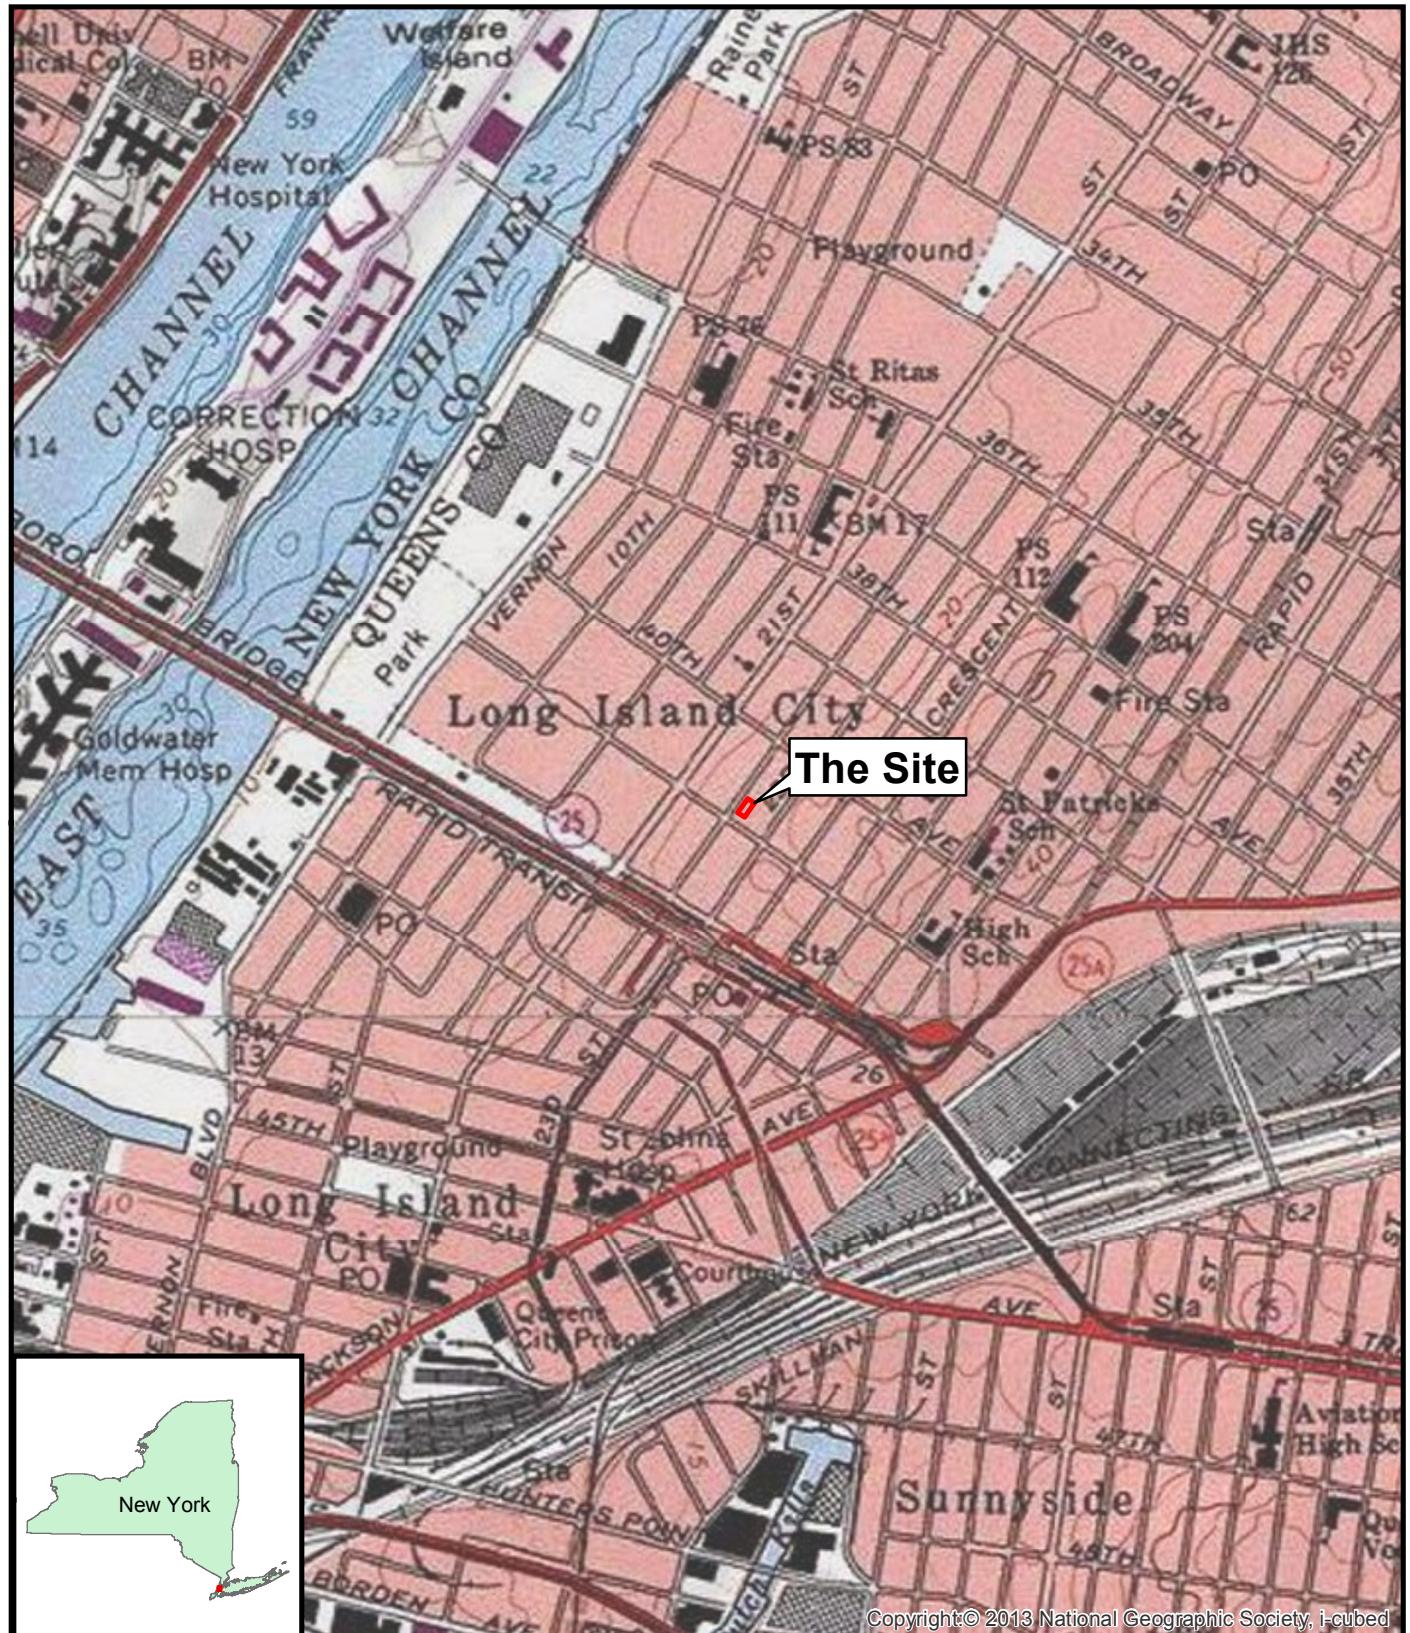

Laboratory analytical results collected during this quarterly round of monitoring display similar concentrations of VOCs and metals to those detected in the previous sampling event conducted in April 2018. Since the previous event, the concentration of the breakdown products of site-related VOCs has slightly increased, the dechlorinating microbes are present in the groundwater, and the geochemistry of the groundwater suggests that the reductive dechlorination is occurring. Continued monitoring is recommend to confirm that these constituents continue to decrease in concentration over time.

PFAS constituents were detected at similar concentration to those detected during the previous sampling event conducted in April 2018. These detections exceed the EPA's health advisory for drinking water supplies. This area of Queens is serviced by reservoirs located in upstate New York and the basement is sealed with a new 8-inch thick concrete slab. Therefore, there are no current receptors affected by the presence of PFAS. At the request of the NYSDEC, an Alternatives Analysis for PFAS remediation is being performed.

Notes:

**Bold** Analyte detected for sample

**E** Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

**NSG** No Standard Given

**J** indicates estimated value; concentration is below the reporting limit but above the minimum detection limit

**EPA** EPA drinking water guideline, May 2016

\* Guideline value for combined concentrations of PFOS and PFOA

\*\* Due to analyte exceedance above laboratory instrument, the tabulated value is from second laboratory run after a 1 to 10 dilution factor

\*\*\* Duplicate was collected with the BMW-4 sample

**APPENDIX B –  
CERTIFIED LABORATORY ANALYTICAL REPORTS AND DATA USABILITY  
SUMMARY REPORTS**

**DATA USABILITY SUMMARY REPORT  
JULY 2018 GROUNDWATER SAMPLING EVENT  
FORMER HYGRADE POLISHING AND PLATING COMPANY  
LONG ISLAND CITY, NEW YORK**

## **1.0 INTRODUCTION**

Groundwater samples were collected at the Former Hygrade site in July 2018 and submitted to Alpha Analytical Laboratories located in Mansfield, Massachusetts, and Westborough, Massachusetts, for analysis. Samples were analyzed by the following methods:

- Volatile Organic Compounds (VOCs) by USEPA Method 8260C
- Per- and Polyfluorinated Alkyl Substances (PFAS) by USEPA Method 537(M)
- Total and Dissolved Metals by USEPA Methods 6020B/7470A

Results were reported in the following sample delivery groups (SDGs):

- L1828998
- L1828999
- L1829069
- L1829077

A Data Usability Summary Report (DUSR) review was completed based on the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation guidance (NYSDEC, 2010). Sample event information included in this DUSR is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Qualification Action Summary

Laboratory deliverables included:

- Category B deliverables as defined in the NYSDEC Analytical Services Protocols (NYSDEC, 2005).

The DUSR review included the following evaluations. A table of the project control limits for VOCs and metals is presented in Attachment A. Control limits specified by the laboratory and in Method 537 were used for PFAS review. DUSR review checklists and applicable laboratory QC summary forms are included in Attachment B to document QC outliers associated with qualification actions.

- Lab Report Narrative Review
- Data Package Completeness and COC records (Table 1 verification)
- Sample Preservation and Holding Times
- Instrument Calibration (report narrative/lab-qualifier evaluation)
- QC Blanks
- Laboratory Control Samples (LCS)

- Matrix Spike/Matrix Spike Duplicates (MS/MSD)
- Surrogate Spikes (if applicable)
- Internal Standards (if applicable)
- Field Duplicates
- Target Analyte Identification and Quantitation
- Raw Data (chromatograms), Calculation Checks and Transcription Verifications
- Reporting Limits
- Electronic Data Qualification and Verification

The following laboratory or data review qualifiers are used in the final data presentation:

U = target analyte is not detected above the reported detection limit

J = concentration is estimated

J+ = concentration is estimated and potentially biased high

Results are interpreted to be usable as reported by the laboratory unless discussed in the following sections.

## 2.0 EXECUTIVE SUMMARY

Based on the DUSR review the majority of sample results are interpreted to be usable as reported by the laboratory. Results for a subset of samples were qualified due to blank contamination, internal standard recoveries, LCS recoveries, and/or MS/MSD recoveries.

## 3.0 DATA QUALIFICATION ACTIONS AND OBSERVATIONS

### Sample Receipt

The trip blank TRIP BLANK-07218 was correctly logged into the laboratory as indicated on the COC; however, the intended trip blank suffix may have been 072718 (rather than 07218) to match the date on the COC. The trip blank identification was not changed during data validation.

The Sample Receipt and Container Information sheets for a subset of samples appeared to have incorrect pH measurements reported. The laboratory reviewed the information and provided corrected documentation.

### VOCs

The following samples were analyzed at two to five-fold dilutions due to concentrations of target analytes. Reporting limits for non-detect analytes are elevated (2-5X):

BMW-3-072618  
MW-6S-072618

Reporting limits for bromomethane in samples BMW-1-072718 and BMW-2-072718 were qualified estimated (UJ) based on low recovery in the LCS. Qualified results are summarized in Table 3 with reason code LCS-L.

An MS/MSD was performed using sample BMW-1-072718. MS/MSD percent recoveries and relative percent differences (RPDs) were within control limits for all VOCs except vinyl chloride. The positive detection of vinyl chloride in sample BMW-1-072718 was qualified estimated (J+) based on a slight high recovery in the MS. The MSD recovery was within 70-130 control limits. The qualified result is included on Table 3 with reason code MS-L.

A field duplicate (DUP-072618) was collected at location BMW-4. Results matched well for all VOCs.

### PFAS

Low concentration detections of 6:2 fluorotelomer sulfonate in samples BMW-1-072718 and BMW-2-072718 were qualified non-detect (U) based on contamination in the associated laboratory method blank. Qualified results are summarized in Table 3 with reason code BL1.

For PFAS samples BMW-3-072618 and MW-E-072618, percent recoveries of one or more extracted internal standards were outside the 50-150 control limits specified by the laboratory. Positive and non-detect results for target compounds associated with internal standards outside control limits were qualified estimated (J+ or UJ). Qualified results are summarized in Table 3 with reason code IS-L or IS-H as applicable.

An MS/MSD was performed for sample BMW-1-072718. MS/MSD percent recoveries and relative percent differences (RPDs) were within control limits for PFAS compounds.

A field duplicate (DUP-072618) was collected at location BMW-4. Results matched well for all PFAS compounds.

### Metals

Detections of total and dissolved antimony were qualified non-detect (U) in a subset samples based on detections in the method blanks.

Detections of total and dissolved aluminum, and dissolved nickel, in a subset of samples were qualified non-detect (U) or estimated (J) based on detection in the field blank.

Detections of total chromium in a subset of samples were qualified non-detect (U) based on detections in the field blank.

Detections of dissolved copper in a subset of samples were qualified estimated (J) based on detections in the method blank and field blank.

Detections of total and/or dissolved iron in a subset of samples were qualified estimated (J) or non-detect (U) based on detections in the method blank and field blank. Detections of total thallium and dissolved zinc in a subset of samples were qualified estimated (J) or non-detect (U) based on detection in the method blank. Qualified results are summarized in Table 3 with reason codes BL1 and/or BL2.

An MS or MS/MSD was performed for samples BMW-3-072618 and BMW-1-072718. MS percent recoveries for BMW-3-072618 were within control limits for all total metals, and all dissolved metals except:

Iron (137)  
Potassium (132)

Detections of dissolved iron and potassium in sample BMW-3-072618 were qualified estimated (J+) and may represent potential high biases.

MS/MSD percent recoveries and relative percent differences (RPDs) for BMW-1-072718 were within control limits for all total metals, and all dissolved metals except:

Antimony (127)  
Magnesium (127, 136)

Detections of dissolved antimony and magnesium in sample BMW-1-072718 were qualified estimated (J+) and may represent potential high biases. The qualified results are summarized in Table 3 with reason code MS-H.

A field duplicate (DUPLICATE) was collected at location BMW-4. Results matched well for all total and dissolved metals.

## NYSDEC DUSR PROJECT CHEMIST REVIEW RECORD

Project: Hy grade

Method: 8260C

Laboratory: Alpha Analytical

SDG(s): L 1828999

Date: 10/16/18

U829077

Reviewer: Julie Ricordi

Review Level  NYSDEC DUSR

USEPA Region II Guideline

1.  Case Narrative Review and COC/Data Package Completeness

COMMENTS

Were problems noted? OK

Are Field Sample IDs and Locations assigned correctly? YES NO (circle one)

Were all the samples on the COC analyzed for the requested analyses? YES NO (circle one)

2.  Holding time and Sample Collection

Note: TB identified as TRIP BLANK-07218 per COC; no action taken since log in matches COC  
All samples were analyzed within the 14 day holding time. YES NO (circle one) since log in matches COC

3.  QC Blanks

Are method blanks free of contamination? YES NO (circle one)

Are Trip blanks free of contamination? YES NO (circle one)

Are Rinse blanks free of contamination? YES NO NA (circle one)

4.  Instrument Tuning – Data Package Narrative Review

Did the laboratory narrative identify any results that were not within method criteria? YES NO (circle one)

If yes, use professional judgment to evaluate data and qualify results if needed

5.  Instrument Calibration – Data Package Narrative Review

Did the laboratory narrative identify compounds that were not within criteria in the initial and/or continuing calibration standards? YES NO (circle one)

Initial Calibration %RSD = 20% (30% for 1,1-DCE, chloroform, 1,2-DCP, toluene, ethylbenzene, VC)

Initial Avg RRF and Continuing RRF should be  $\geq$  0.05 and 0.10 for Chloromethane, 1,1-Dichloroethane, Bromoform and 0.30 for Chlorobenzene and 1,1,2,2-Tetrachloroethane

Continuing Calibration %D = 20%

Did the laboratory qualify results based on initial or continuing calibration exceedances? YES NO  
If yes to above, use professional judgment to evaluate data and qualify results if needed

6.  Internal Standards – Data Package Narrative Review

(Area Limits = -50% to +100%, RTs within 30 seconds of daily CCAL standard (or ICAL mid-point if samples follow ICAL))

Did the laboratory narrative identify any sample internal standards that were not within criteria? YES NO (circle one)

Did the laboratory qualify results based on internal standard exceedances? YES NO

If yes to above, use professional judgment to evaluate data and qualify results if needed

7.  Surrogate Recovery - Region II limits (water 80-120%, soil 70-130%)

Were all results within Region II limits? YES NO (circle one)

8.  Matrix Spike - Region II limits (water and soil 70-130%, water RPD 20, soil RPD 35)

Were MS/MSDs submitted/analyzed? YES NO

Were all results within the Region II limits? YES NO NA (circle one)

See attached summary for gear!

9.  **Duplicates** - Region II Limits (water RPD 50, soil RPD 100)

Were Field Duplicates submitted/analyzed?  YES  NO

BMW-4-072618 / Dup-072618:

Were all results within Region II limits? (soil RPD<100, water RPD<50)  YES  NO NA

OIC

10.  **Laboratory Control Sample Results** - Region II (Water and soil 70-130%)

Were all results were within Region II control limits?  YES  NO (circle one)

*See attached for evals*

11.  **Raw Data Review and Calculation Checks**

*See attached*

12.  **Electronic Data Review and Edits**

Does the EDD match the Form Is?  YES  NO (circle one)

13.  **Tables and TIC Review**

**Table 1** (Samples and Analytical Methods)

**Table 2** (Analytical Results)

**Table 3** (Qualification Actions)

Were all tables produced and reviewed?  YES  NO (circle one)

**Table 4** (TICs) Did lab report TICs?  YES  NO (circle one)

## NYSDEC DUSR PROJECT CHEMIST REVIEW RECORD

Project: Hygrade

Method: S37 Mod.

Laboratory: Alpha Analytical

Date:

Reviewer:

SDG(s): L1828998

L1829069

Review Level  NYSDEC DUSR

USEPA Region II Guideline

1.  Case Narrative Review and Data Package Completeness COMMENTS  
Were problems noted? See attached  
Were all the samples on the COC analyzed for the requested analyses? YES NO (circle one)  
Are Field Sample IDs and Locations assigned correctly? YES NO (circle one)  
*10/18/18 CL*  
2.  Holding time and Sample Collection Note A subset of pH recordings in log in documentation were entered incorrectly and were revised by the lab upon Water: 24 days from collection to extraction; 28 days from extraction to analysis questioning docs.  
Hold time met for all samples? YES NO (circle one) Dilutions for PFOS & PFBS in  
*Sub set of samples were extracted 4 to 5 days after expiration of QC Blanks + 1 day HT; affected results verified & certified for HT.*  
Are method blanks free of contamination? YES NO (circle one)  
Are rinse blanks free of contamination? YES NO NA (circle one)  
Are field reagent blanks free of contamination? YES NO NA (circle one)  
3.  Instrument Tuning – Data Package Narrative Review See attached for blank eval and qual 6:2 FTS in L1829069  
Did the laboratory narrative identify any results that were not within method criteria? YES NO (circle one)  
If yes, use professional judgment to evaluate data and qualify results if needed  
4.  Internal Standards – Data Package Narrative Review  
(Area Limits = -50% to +100%, RTs within 30 seconds of daily CCAL standard (or ICAL mid-point if samples follow ICAL))  
Did the laboratory narrative identify any sample internal standards that were not within criteria? YES NO (circle one) See attached for extracted IS summaries; injected IS  
Did the laboratory qualify results based on internal standard exceedances? YES NO  
If yes to above, use professional judgment to evaluate data and qualify results if needed  
5.  Instrument Calibration – Data Package Narrative Review See attached for qual *all OK*  
Did the laboratory narrative identify compounds that were not within criteria in the initial and/or continuing calibration standards? YES NO (circle one)  
Initial Calibration %RSD = 15%, Continuing Calibration %D = 20%  
Did the laboratory qualify results based on initial or continuing calibration exceedances? YES NO  
If yes to above, use professional judgment to evaluate data and qualify results if needed  
6.  Surrogate Recovery (lab limits) No qual; prof. judgment  
Were all results within limits? YES NO (circle one)  
Were any recoveries < 10%? (use professional judgment)  
*See IS above*  
7.  Matrix Spike (lab limits)  
Were MS/MSDs submitted/analyzed? YES NO  
*BMW-1-072718: OK*  
Were all results within limits? YES NO NA (circle one)

9.  **Duplicates** (RPD limits = water 50)

Were Field Duplicates submitted/analyzed?  YES  NO

*BMW-4-072618 / Dup-072618 : OIC*  
Were RPDs within criteria?  YES  NO  NA (circle one)

10.  **Laboratory Control Sample Results** (lab limits)

Were all results within limits?  YES  NO (circle one)

11.  **Raw Data Review and Calculation Checks**

*See attached*

12.  **Electronic Data Review and Edits**

Does the EDD match the Form Is?  YES  NO (circle one)

13.  **Tables**

**Table 1** (Samples and Analytical Methods)

**Table 2** (Analytical Results)

**Table 3** (Qualification Actions)

Were all tables produced and reviewed?  YES  NO (circle one)

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Perfluorinated Alkyl Acids by Isotope Dilution

L1828998: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes.

Please refer to the surrogate section of the report for details.

See checklist

L1828998-01, -02, -04, and -06: The samples were re-extracted on dilution outside of method holding time in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range. ✓ HT for PFOS is The WG1146058-1 Method Blank, associated with L1828998-01, -02, -04, and -06, has a concentration dilutions above the reporting limit for 6:2FTS. The results of the original analysis are reported and are qualified with a "B" for any associated sample concentrations that are less than 10x the blank concentration for this analyte.

OK [ ] The continuing calibration standard WG1144723-3, associated with L01828998 as well as the associated QC, had the response for Perfluoro[1,2-13C2]Tetradecanoic Acid (M2PFTEDA) (49%D) above the acceptance criteria for the method. The associated target analytes were within acceptance criteria, therefore no further action was taken.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Perfluorinated Alkyl Acids by Isotope Dilution

L1829069-01 and -02: The samples were re-extracted on dilution out of method holding time in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis checklist was performed only for the compound(s) that exceeded the calibration range. *See checklist*

The WG1144996-1 Method Blank, associated with L1829069-01 and -02, has a concentration above the reporting limit for 6:2FTS. The results of the original analysis are reported and are qualified with a "B" for any associated sample concentrations that are less than 10x the blank concentration for this analyte.

The WG1144996-4/-5 MS/MSD recoveries, performed on L1829069-01, are outside the acceptance criteria for perfluorobutanesulfonic acid (pfbs) (286% MSD only) and perfluorooctanesulfonic acid (pfos) (0%/299%).

The unacceptable percent recoveries are attributed to the elevated concentrations of target compounds present in the native sample.

The WG1147316-4/-5 MS/MSD recoveries, performed on L1829069-01, are outside the acceptance criteria for perfluorobutanesulfonic acid (pfbs) (180%/180%) and perfluorooctanesulfonic acid (pfos) (201% MS only). *See checklist*

The unacceptable percent recoveries are attributed to the elevated concentrations of target compounds present in the native sample.

The continuing calibration standard WG1145801-1, associated with L1829069 as well as the associated QC, had the response for the extracted internal standard Perfluoro[1,2-13C2]Tetradecanoic Acid (M2PFTEDA) (44.5%D) below the acceptance criteria for the method. The associated target analyte was within acceptance criteria, therefore no further action was taken.

OK  
no qual

## NYSDEC DUSR PROJECT CHEMIST REVIEW RECORD

Project: Hygrate

Method(s): 6010B / 7470A

Laboratory: Alpha Analytical

Date: 10/16/18

Reviewer: Julie Ricardi

SDG(s): L1828999

L1829017

Review Level  NYSDEC DUSR

USEPA Region II Guideline

1.  Case Narrative Review and Data Package Completeness COMMENTS  
Were problems noted? *See attached*  
Were all the samples on the COC analyzed for the requested analyses? YES NO (circle one)  
*See attached preservation documentation and email to lab re pH*  
Are Field Sample IDs and Locations assigned correctly? YES NO (circle one)  
*in measurement; errors in documentation were corrected by lab*  
*reports revised*
2.  Holding time and Sample Collection  
Were all samples were all prepped and analyzed with the holding time (6 month) YES NO
3.  QC Blanks  
Are method blanks clean? YES NO (circle one)  
*See attached*  
Are Initial and continuing calibration blanks clean? YES NO (circle one)
4.  Instrument Calibration - Data Package Narrative Review *Field blank* *See attached*  
Did the laboratory narrative identify any results that were not within criteria in the initial and/or continuing calibration standards? YES NO (circle one)  
  
Initial calibration criteria based on method guidance and continuing calibration standards recovery 90-110% (80-120% Hg)  
  
Did the laboratory qualify results based on initial or continuing calibration exceedances? YES NO  
If yes to above, use professional judgment to evaluate data and qualify results if needed
5.  Laboratory Control Sample Results  
Were all results were within 80-120% limits? YES NO (circle one)  
*See attached; no quals*
6.  Matrix Spike  
Were MS/MSDs submitted/analyzed? YES NO  
  
Were all results were within 75-125% limits? YES NO NA (circle one)
7.  Duplicates  
Were Field Duplicates submitted/analyzed? YES NO  
*BMW-4 - 072618 | DUP - 072618 : OK - All Total: initially a hit*  
Aqueous RPD within limit? (20%) YES NO NA (circle one)  
Soil RPD within limit? (35%) YES NO NA (circle one)  
Lab Dup RPD <20% for water, 35% for soil values > 5X the CRQL (or ± CRQL) YES NO NA result; u-gdld due to blank content
8.  Were both Total and Dissolved metals reported? YES NO NA (circle one)  
If the dissolved concentration is > 20% of the total concentration then estimate (J) both results using professional judgment *OK* *prof. judgment*
9.  Percent solids < 50% for any soil/sediment sample? YES NO NA (circle one)  
If yes, estimate all results using professional judgment

10.  **Raw Data Review and Calculation Checks**

*See attached*

11.  **Electronic Data Review and Edits**

Does the EDD match the Form Is?  YES  NO (circle one)

12.  **DUSR Tables Review**

**Table 1** (Samples and Analytical Methods)

**Table 2** (Analytical Results)

**Table 3** (Qualification Actions)

Were all tables produced and reviewed?  YES  NO (circle one)

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Total Metals

The WG1141310-3 MS recoveries for calcium (0%), iron (10%), manganese (60%), and sodium (260%), performed on L1828999-01, do not apply because the sample concentrations are greater than four times the spike amount added. ✓

#### Dissolved Metals

L1828999-09: The Field Blank has a concentration above the reporting limit for iron. The result was confirmed. See The WG1141765-1 Method Blank, associated with L1828999-01 through -07 and -09, has a concentration above the reporting limit for sodium. L1828999-01 through -07 have concentrations greater than 10x the blank concentration for this analyte, and no corrective action is required. The concentration in L1828999-09 is less than 10x the blank concentration; therefore, the result is qualified with a "B". checklist ↓

The WG1141765-3 MS recovery, performed on L1828999-01, is outside the acceptance criteria for antimony (127%). A post digestion spike was performed and yielded an unacceptable recovery of 72%, and the serial dilution recovery was not applicable; therefore, this element fails the matrix test and the results reported in the native sample should be considered estimated. See MS/MSD Summary

The WG1141765-3 MS recoveries for calcium (260%), iron (137%), magnesium (147%), and sodium (340%), performed on L1828999-01, do not apply because the sample concentrations are greater than four times the spike amounts added. ✓

The WG1141765-3 MS recovery, performed on L1828999-01, is outside the acceptance criteria for potassium (132%). A post digestion spike was performed and was within acceptance criteria. See MS/MSD Summary

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Total Metals

The WG1142264-2 LCS recovery, associated with L1829077-01 and -02, is above the acceptance criteria for mercury (121%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analysis are reported. ✓

The WG1143616-3/-4 MS/MSD recoveries for calcium (MS at 140%), manganese (0%/0%) and sodium (0%/0%), performed on L1829077-01, do not apply because the sample concentrations are greater than four times the spike amounts added. ✓

The WG1143616-3 MS recovery for antimony (134%), performed on L1829077-01, does not apply because the sample concentration is greater than four times the spike amount added. ✓

#### Dissolved Metals

The WG1143665-3/-4 MS/MSD recoveries for calcium (190%/200%), manganese (0%/0%) and sodium (150%/170%), performed on L1829077-01, do not apply because the sample concentrations are greater than four times the spike amounts added. ✓

The WG1143665-3/-4 MS/MSD recoveries, performed on L1829077-01, are outside the acceptance criteria for antimony (MS at 127%) and magnesium (127%/136%). A post digestion spike was performed and was within acceptance criteria.

*J + Sb, Mg in filtered sample*

**Attachments:** image001.png

Hi Julie -

The lab checked LIMS and fixed these errors. I will have the reports re-issued for you.

We apologize for any inconvenience.

Best Regards,  
Nadine

On Tue, Oct 16, 2018 at 3:47 PM Ricardi, Julie A <[julie.ricardi@woodplc.com](mailto:julie.ricardi@woodplc.com)> wrote:

Hi Nadine,

I'm reviewing the data packages for Hygrade SDGs L1828999 and L1829077, and there are some pH measurements that I want the lab to check if possible. In the Sample Receipt and Container Information sheets, some of the Initial and Final pH measurements aren't consistent with what would be expected, but the narrative did not mention any problems with sample receipt/sample preservation.

Please see the attached pages from the two data packages, and check the circled entries. I may be misunderstanding the information, but these entries are inconsistent from other samples in the sets (I didn't include pages that made sense to me).

ALSO – Can you give me a summary of which lab analyzed which methods for each of the following four SDGs:

L1828998 --PFAS

L1828999 –Metals, VOCs

L1829069 --PFAS

L1829077 –Metals, VOCs

Thanks very much!

Julie

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Lab Number:** L1828998  
**Report Date:** 08/15/18

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Perfluorinated Alkyl Acids by Isotope Dilution

L1828998: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

L1828998-01, -02, -04, and -06: The samples were re-extracted on dilution outside of method holding time in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

The WG1146058-1 Method Blank, associated with L1828998-01,-02,-04, and -06, has a concentration above the reporting limit for 6:2FTS. The results of the original analysis are reported and are qualified with a "B" for any associated sample concentrations that are less than 10x the blank concentration for this analyte.

The continuing calibration standard WG1144723-3, associated with L01828998 as well as the associated QC, had the response for Perfluoro[1,2-13C2]Tetradecanoic Acid (M2PFTEDA) (49%D) above the acceptance criteria for the method. The associated target analytes were within acceptance criteria, therefore no further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

- Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.
- Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.
- Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.
- Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.
- Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** HYGRADE  
**Project Number:** 3612162331

**Lab Number:** L1828998  
**Report Date:** 08/15/18

**Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

**Westborough Facility:**

**Drinking Water**

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO3-F: Nitrate-N, Nitrite-N; SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B

EPA 332: Perchlorate; EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

**Non-Potable Water**

SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, EPA 350.1: Ammonia-N, LACHAT 10-107-06-1-B: Ammonia-N, EPA 351.1, SM4500NO3-F, EPA 353.2: Nitrate-N, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), EPA 600/4-81-045: PCB-Oil.

Microbiology: SM9223B-Colilert-QT, Enterolert-QT, SM9221E, SM9222D.

**Mansfield Facility:**

**Drinking Water**

EPA 200.7: Al, Ba, Be, Cd, Cr, Cu, Mn, Ni, Na, Ag, Ca, Zn. EPA 200.8: Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. EPA 245.1 Hg. EPA 522.

**Non-Potable Water**

EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.

EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.

EPA 245.1 Hg.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Total Metals

The WG1141310-3 MS recoveries for calcium (0%), iron (10%), manganese (60%), and sodium (260%), performed on L1828999-01, do not apply because the sample concentrations are greater than four times the spike amount added.

#### Dissolved Metals

L1828999-09: The Field Blank has a concentration above the reporting limit for iron. The result was confirmed.

The WG1141765-1 Method Blank, associated with L1828999-01 through -07 and -09, has a concentration above the reporting limit for sodium. L1828999-01 through -07 have concentrations greater than 10x the blank concentration for this analyte, and no corrective action is required. The concentration in L1828999-09 is less than 10x the blank concentration; therefore, the result is qualified with a "B".

The WG1141765-3 MS recovery, performed on L1828999-01, is outside the acceptance criteria for antimony (127%). A post digestion spike was performed and yielded an unacceptable recovery of 72%, and the serial dilution recovery was not applicable; therefore, this element fails the matrix test and the results reported in the native sample should be considered estimated.

The WG1141765-3 MS recoveries for calcium (260%), iron (137%), magnesium (147%), and sodium (340%), performed on L1828999-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1141765-3 MS recovery, performed on L1828999-01, is outside the acceptance criteria for potassium (132%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

- Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.
- Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.
- Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.
- Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.
- Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** HYGRADE/STALINGRAD  
**Project Number:** 3612162331

**Lab Number:** L1828999  
**Report Date:** 08/03/18

**Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

**Westborough Facility:**

**Drinking Water**

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO<sub>3</sub>-F: Nitrate-N, Nitrite-N; SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B

EPA 332: Perchlorate; EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

**Non-Potable Water**

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Project Name:** HYGRADE  
**Project Number:** 3612162331

**Lab Number:** L1829069  
**Report Date:** 08/20/18

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Perfluorinated Alkyl Acids by Isotope Dilution

L1829069-01 and -02: The samples were re-extracted on dilution out of method holding time in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

The WG1144996-1 Method Blank, associated with L1829069-01 and -02, has a concentration above the reporting limit for 6:2FTS. The results of the original analysis are reported and are qualified with a "B" for any associated sample concentrations that are less than 10x the blank concentration for this analyte.

The WG1144996-4/-5 MS/MSD recoveries, performed on L1829069-01, are outside the acceptance criteria for perfluorobutanesulfonic acid (pfbs) (286% MSD only) and perfluorooctanesulfonic acid (pfos) (0%/299%).

The unacceptable percent recoveries are attributed to the elevated concentrations of target compounds present in the native sample.

The WG1147316-4/-5 MS/MSD recoveries, performed on L1829069-01, are outside the acceptance criteria for perfluorobutanesulfonic acid (pfbs) (180%/180%) and perfluorooctanesulfonic acid (pfos) (201% MS only).

The unacceptable percent recoveries are attributed to the elevated concentrations of target compounds present in the native sample.

The continuing calibration standard WG1145801-1, associated with L1829069 as well as the associated QC, had the response for the extracted internal standard Perfluoro[1,2-13C2]Tetradecanoic Acid (M2PFTEDA) (44.5%D) below the acceptance criteria for the method. The associated target analyte was within acceptance criteria, therefore no further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

- Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.
- Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.
- Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.
- Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.
- Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** HYGRADE  
**Project Number:** 3612162331

**Lab Number:** L1829069  
**Report Date:** 08/20/18

**Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

- 122 Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS). EPA Method 537, EPA/600/R-08/092. Version 1.1, September 2009.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

**Westborough Facility:**

**Drinking Water**

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO<sub>3</sub>-F: Nitrate-N, Nitrite-N; SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B

EPA 332: Perchlorate; EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

**Non-Potable Water**

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Report Date:** 08/08/18

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Total Metals

The WG1142264-2 LCS recovery, associated with L1829077-01 and -02, is above the acceptance criteria for mercury (121%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analysis are reported.

The WG1143616-3/-4 MS/MSD recoveries for calcium (MS at 140%), manganese (0%/0%) and sodium (0%/0%), performed on L1829077-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1143616-3 MS recovery for antimony (134%), performed on L1829077-01, does not apply because the sample concentration is greater than four times the spike amount added.

#### Dissolved Metals

The WG1143665-3/-4 MS/MSD recoveries for calcium (190%/200%), manganese (0%/0%) and sodium (150%/170%), performed on L1829077-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1143665-3/-4 MS/MSD recoveries, performed on L1829077-01, are outside the acceptance criteria for antimony (MS at 127%) and magnesium (127%/136%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

- Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.
- Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.
- Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.
- Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.
- Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** HYGRADE  
**Project Number:** 3612162331

**Lab Number:** L1829077  
**Report Date:** 08/08/18

**Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

**Westborough Facility:**

**Drinking Water**

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO<sub>3</sub>-F: Nitrate-N, Nitrite-N; SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B

EPA 332: Perchlorate; EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

**Non-Potable Water**

SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, EPA 350.1: Ammonia-N, LACHAT 10-107-06-1-B: Ammonia-N, EPA 351.1, SM4500NO<sub>3</sub>-F, EPA 353.2: Nitrate-N, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO<sub>4</sub>-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), EPA 600/4-81-045: PCB-Oil.

Microbiology: SM9223B-Colilert-QT, Enterolert-QT, SM9221E, SM9222D.

**Mansfield Facility:**

**Drinking Water**

EPA 200.7: Al, Ba, Be, Cd, Cr, Cu, Mn, Ni, Na, Ag, Ca, Zn. EPA 200.8: Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. EPA 245.1 Hg. EPA 522.

**Non-Potable Water**

EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.

EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.

EPA 245.1 Hg.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

August 14, 2018: This final report includes the results of all requested analyses.

August 02, 2018: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

The analysis of Volatile Fatty Acids was subcontracted. A copy of the laboratory report is included as an addendum. Please note: This data is only available in PDF format and is not available on Data Merger.

#### Dissolved Organic Carbon

The samples were field filtered; a filter blank was not received.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

- Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.
- Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.
- Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.
- Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.
- Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** HYGRADE  
**Project Number:** 3612162331

**Lab Number:** L1829000  
**Report Date:** 08/14/18

**Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

**Westborough Facility:**

**Drinking Water**

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO<sub>3</sub>-F: Nitrate-N, Nitrite-N; SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B

EPA 332: Perchlorate; EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

**Non-Potable Water**

SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, EPA 350.1: Ammonia-N, LACHAT 10-107-06-1-B: Ammonia-N, EPA 351.1, SM4500NO<sub>3</sub>-F, EPA 353.2: Nitrate-N, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO<sub>4</sub>-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), EPA 600/4-81-045: PCB-Oil.

Microbiology: SM9223B-Colilert-QT, Enterolert-QT, SM9221E, SM9222D.

**Mansfield Facility:**

**Drinking Water**

EPA 200.7: Al, Ba, Be, Cd, Cr, Cu, Mn, Ni, Na, Ag, Ca, Zn. EPA 200.8: Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. EPA 245.1 Hg. EPA 522.

RE: **L1829000**

Pace Workorder: 27607

Dear Nadine Yakes:

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, July 31, 2018. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Ruth Welsh".

## ANALYTICAL RESULTS QUALIFIERS

Workorder: 27607 L1829000

### DEFINITIONS/QUALIFIERS

- MDL Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
- PQL Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
- ND Not detected at or above reporting limit.
- DF Dilution Factor.
- S Surrogate.
- RPD Relative Percent Difference.
- % Rec Percent Recovery.
- U Indicates the compound was analyzed for, but not detected at or above the noted concentration.
- J Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
- 
- B The analyte was detected in the associated blank.
- d The analyte concentration was determined from a dilution.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Nitrogen, Nitrate

L1829076-01: The sample was analyzed for Nitrite within the method required holding time. An aliquot of sample was then preserved and analyzed for Nitrate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

- Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.
- Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.
- Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.
- Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.
- Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** HYGRADE  
**Project Number:** 3612162331

**Lab Number:** L1829076  
**Report Date:** 08/07/18

**Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

**Westborough Facility:**

**Drinking Water**

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO<sub>3</sub>-F: Nitrate-N, Nitrite-N; SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B

EPA 332: Perchlorate; EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

**Non-Potable Water**
