Site Description: The Site is located in the Long Island City section of Queens in a zoned manufacturing area with residential zoning approximately 300 feet to the south. The Site had been a residential building with garages beginning in 1898, was vacant from 1947-1950, was used for sheet metal work from 1967-1983 and was converted from sheet metal work to dry cleaning in 1997. The Site is currently an active dry cleaning facility. The one-story building foundation is slab-on-grade

D D K PRO CLEANERS (Continued) **S109826034**

and contains dry cleaning machines, garment storage area, storage, boiler room, office, customer service area, bathroom and partial basement. The building covers the entire footprint of the site. The building has three 4th-generation dry cleaning machines on a secondary containment concrete slab, five washers and a dryer, several empty 15-gal waste containers, spill containment material container, a spotting stand, ten press machines, three sets of shirt machines, four air compressors, two refrigerated dryers and a sump. The Site and building are approximately 5000 square feet in size (0.11 acres). A residential building is located immediately to the northwest (0.01 miles), a stonework building is to the northeast, a fine arts furniture building to the southwest and 13th Street to the southeast.

Env Problem:	Based upon investigations conducted to date, the primary contaminants of concern at the site include tetrachloroethene (PCE) and dichloroethene (DCE). One round of groundwater sample collection was performed in June 2009 via two Geoprobe borings located in the sidewalk in front of the site building. Groundwater samples were analyzed via EPA Methods 8260/8270. No soil samples were collected for analysis during the investigation. The following maximum concentrations with contaminants were observed in groundwater: 26ppb PCE and 63ppb DCE. These results demonstrate that groundwater standards have been exceeded for PCE and DCE. The nearest surface water body is the East River, which is located approximately 2000 feet (0.3 miles) to the west. Groundwater is approximately 7 to 8 feet below grade and most likely flows west under the Site to the East River, however direction of flow has not been specifically determined to date. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:	Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th

JUNG SUN LAUNDRY SITE (Continued) **S110246984**

Street and 37th Avenue. Site Features: The site consists of four property lots. The main site features included single story buildings on three lots and an open area on the fourth lot. There were three inter-connected single story buildings, which occupied three adjacent lots. Recently (late summer 2013)the new owner demolished the structures on two lots down to the slab. The previous owner still owns one lot and the abandoned structure on that lot is still there. Approximately one third of the Site is made up of the fourth lot, which has and continues to be an open area which extends to the west up to 23rd Street. The open area also houses a tractor trailer sized metal storage container. The site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site property is currently inactive and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The nearest residential area is located north (upgradient) of the site, on the other side of 37th Avenue. There is a residential area approximately 400 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930s to the late 1980s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980s to the mid 1990s. Prior uses that appear to have led to site contamination include poor housekeeping and spills associated with the dry cleaning operation. An adjacent property owner conducted a Phase I Environmental Site Assessment in September 2003, a Phase 2 Limited Subsurface Investigation in October 2003 and a Phase 2 Limited Groundwater Investigation in December 2003. The Department conducted a Site Characterization from August 2007 through March 2010. In October 2010, the Site was placed on the Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 site.Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the southwest.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During 2012 remedial investigation PCE, TCE and 1,2-DCE have been found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The unrestricted use RSCOs for PCE has been exceeded. Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC have been detected in on-site shallow groundwater at concentrations up to 11000 parts per billion (ppb), 1200 ppb, 21000 ppb, 130 ppb and 390 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. Per April and June 2012 groundwater data, the groundwater plume has migrated approximately 400 feet off-site. Soil Vapor & Indoor Air: PCE and TCE were detected in on-site soil vapor at levels up to 280,000 microgram per cubic meter (g/m3) and 130,000 g/m3, respectively, and off-site at levels up to 13,000 g/m3 and 420 g/m3, respectively. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted. Significant Threat: The site poses a significant environmental threat because the area overlies a sole-source aquifer

JUNG SUN LAUNDRY SITE (Continued) **S110246984**

	and because there is an ongoing release of PCE and TCE from soil into groundwater.
Health Problem:	Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended.

Updated By: JAQUINN
Site Description: LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge. SITE FEATURES: The property extends 335 feet from the north to the south and 117 feet from the west to the east. The entire property is occupied by a 30,000 square feet, one story, slab-on-grand masonry building. A small courtyard is located in the central portion of the building on the western side. The site and surrounding areas are generally level.CURRRENT ZONING/USE(S): The site is currently zoned commercial. The site is currently used as a marble fabrication shop, an automotive repair shop, and a production studio. Another tenant occupies the other one-third of the building for storage of sheet metal and supplies for an off-site manufacturing business. No metal fabrication, cutting, or manufacturing associated with this business takes place on this site. PAST USE OF SITE: National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. OPERABLE UNIT(S): The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigating for soil and groundwater contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below

NATIONAL RUBBER & BACKING CORP (Continued) **1000259753**

	ground surface and flows in a westerly direction toward the East River. The depth to bedrock varies across the investigation area from 10 to 15 feet below surface.
Env Problem:	NATURE AND EXTENT OF CONTAMINATION:Based upon investigations to date, the primary contaminants of concern at the site include toluene. Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) in groundwater in MW-2, which is above the respective groundwater standard of 5 ppb. Other wells have shown levels of toluene in the 10,000s ppb. Benzene, ethylbenzene, and xylenes have all been shown to be elevated. These previous investigations have identified exceedances of standards, criteria and guidance for those contaminants in soil as well. Elevated levels of benzene and toluene were also noted in the soil vapor as well. The groundwater plume appears to be migrating off-site, however the extent of the plume is unknown. In 2011, the concentration of toluene was found as high as 130,000 ppb in an off-site location. Off-site impacts have been delineated and the extent of the toluene plume does not appear to impact the East River. SPECIAL RESOURCES IMPACTED/THREATENED : None known.SIGNIFICANT THREAT: A significant threat is posed from potential exposure to site related contaminants from soil vapor intrusion both on and off-site structures. Exposures to contaminated groundwater are not expected because public water serves the area residents.
Health Problem:	Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by pubic water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

Updated By: RJCOZZY
Site Description: The property is located within an urban industrialized section of Long Island City. The site extends 335 feet from the north to the south and 117 feet from the west to the east. The entire site is occupied by a 30,000 square feet, one story building. There is a small courtyard in the central portion of the building, on its western side. The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site.See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028.
Env Problem: See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028

RAVENSWOOD POWER STATION (Continued) **S102239646**

Record Upd:	10/31/2013
Updated By:	GWCROSS
Site Description:	Location: The Ravenswood former MGP site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough of Queens. The property is noted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens CountyThe site is located within the boundary of a complex of active electric and steam generating facilities in a predominantly industrial and commercial area. The site is bordered on the east by light industrial and commercial buildings and on the west by the East River. The site formerly housed a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The precise location of the MGP structures has not been fully established because of the extensive reworking of the property associated with construction of the power plants which now occupy and surround the original MGP site.Remedial History: A portion of the site was remediated under the Voluntary Cleanup Program. See site V000368. The principal VCP issue was the presence of a No. 6 oil spill from an in-plant pipeline. Petroleum-impacted soil was excavated in 2005. No MGP tar-contaminated soil was identified at that time, but MGP related structures or soil contamination may remain in other portions of the site or at depth.
Env Problem:	Extensive soil removal has taken place on the site, both for the construction of the power plants that occupy the site, and for remediation of a No. 6 oil spill. Although it appears that significant portions of the former MGP have been excavated down to bedrock, it is not known to what extent MGP structures and MGP soil contamination may remain in the deep subsurface.A bedrock steam tunnel lies beneath the East River at this location, allowing waste steam from the turbine plants to be provided to the steam-heat distribution system in Manhattan. Tar from the former MGP can be seen dripping from the roof of this tunnel, roughly 150 feet below ground surface. The source of the tar has not been determined. The tunnel can not be accessed by the public, and is only occasionally used by utility workers. Engineering controls are in place to prevent direct contact with the tar by utility workers.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Operable Unit:	01
Material ID:	338486
Material Code:	0008

RAVENSWOOD POWER STATION (Continued) **S102239646**

Material Name: Diesel
Case No.: Not reported
Material FA: Petroleum
Quantity: 8
Units: Gallons
Recovered: 8
Resource Affected: Not reported
Oxygenate: False

Tank Test:

Site ID: 239166
Spill Number/Closed Date: 9601426 / 5/30/1996
Spill Date: 4/28/1996
Spill Cause: Tank Failure
Spill Source: Passenger Vehicle
Spill Class: Known release with minimal potential for fire or hazard. DEC Response. Willing Responsible Party. Corrective action taken.
Cleanup Ceased: Not reported
Cleanup Meets Standard: False
SWIS: 4101
Investigator: CAENGELH
Referred To: Not reported
Reported to Dept: 4/28/1996
CID: 312
Water Affected: Not reported
Spill Notifier: Responsible Party
Last Inspection: Not reported
Recommended Penalty: False
UST Involvement: False
Remediation Phase: 0
Date Entered In Computer: 4/28/1996
Spill Record Last Update: 6/27/1996
Spiller Name: Not reported
Spiller Company: CON EDISON
Spiller Address: 4 IRVING PLACE
Spiller City,St,Zip: NEW YORK, NY 10003
Spiller County: 999
Spiller Contact: Not reported
Spiller Phone: (0) -
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 244873
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"
Remarks: hole in gas tank - cleaned up

Date Record Added:	11/30/2000
Date Record Updated:	04/05/2007
Updated By:	dcwalsh
Site Description:	The proposed Ravenswood 250-Megawatt (MW) Combined Cycle Generating Station site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough and County of Queens, New York and denoted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of an active electric and steam generating facility in a predominantly industrial and commercial area. The area addressed by this Voluntary Cleanup Agreement is the footprint of a proposed 250-MW combined cycle electric generating plant. The site is bordered on the east by light industrial and commercial buildings; on the south by the existing Ravenswood Generating Station; on the north by the existing Ravenswood Gas Turbine facility; and on the west by the existing Ravenswood Steam Plant and the East River. The site was formerly a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The site is currently occupied by a paved parking lot for Ravenswood employees. Site investigation has been completed at the site.
Env Problem:	The Site investigation conducted at the site revealed the presence of petroleum contamination related to a release from an on-site no. 6 oil pipeline. In addition, the site is underlain by former MGP facilities, including gas holders, piping and drip pots. Investigation has not revealed any areas of discrete coal tar deposits, however, the volunteer has proposed to open all encountered pipes and drip pots, drain them and permanently closed them in place or remove them if they interfere with future construction activities.

RAVENSWOOD POWER STATION (Continued) **S102239646**

The area of petroleum contamination will be excavated and removed. The volunteer submitted and the Department approved a Remedial Action Work Plan for the site which consisted of the above remedies. This RAWP has been implemented, and the volunteer has submitted the Remedial Action Summary Report, which is under review by NYSDEC and NYSDOH.

Health Problem: Human exposures to contaminated soil and groundwater are unlikely. Most of the contaminated soil has been removed, the site is fenced and secured, and the site will be covered with buildings and pavement. Exposure to groundwater is unlikely since the area is served by a public water supply.

SHWS:
Program: HW
Site Code: 58682
Classification: SIGNIFICANT THREAT TO THE PUBLIC HEALTH OR ENVIRONMENT - ACTION REQUIRED.
Region: 2
Acres: 1.100
HW Code: 241016
Record Add: 11/18/1999
Record Upd: 05/28/2013
Updated By: JHOCONNE
Site Description: Location:The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtraks Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features:The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to

STANDARD MOTOR PRODUCTS INC (Continued) **1000310304**

Standard Motor Products. Current Zoning/Use(s):The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the buildings roof. Historical Use(s): The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990.Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility.The Record of Decision was issued on March 23, 2009, and the Remedial Design/Remedial Action Order on Consent was signed in April 2010.Site Geology and Hydrogeology:The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level).The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem: Nature and Extent of Contamination: A site investigation in 1990 was initiated after an oily sheen was observed in a puddled area on the southeast side of the property. Soil samples from this area revealed elevated levels of petroleum hydrocarbons and volatile organic compounds (VOCs), primarily 1,1,1-trichloroethane. Approximately 2,700 sq. ft. of soil was excavated to a depth of 18 inches and stockpiled on-site. Further investigation determined that soils in

STANDARD MOTOR PRODUCTS INC (Continued) **1000310304**

the area of the rear loading platform contained elevated levels of petroleum hydrocarbons and VOCs (trichloroethane TCA, triclhoroethene - TCE and other related chlorinated VOCs). Contaminated soils extended beyond the area excavated. Subsequent groundwater samples taken indicated contamination with TCA and lead. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Soil - Arsenic was detected at 19 ppm, which is above the applicable soil cleanup objectives (SCOs). Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 ppb. Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane 1,1,1-TCA) has been found at concentrations of up to 180 ppb.Soil Vapor- The highest concentrations of chlorinated VOCs were detected at SB-05. Sub-slab samples contained PCE at concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3 and up to 450 ug/m3 respectively.Significant Threat: The site presents a significant environmental threat. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation.

Health Problem: The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

LTANKS:

Site ID:	153383
Spill Number/Closed Date:	9509528 / 3/23/2004
Spill Date:	11/1/1995
Spill Cause:	Tank Failure
Spill Source:	Commercial/Industrial
Spill Class:	Known release that creates potential for fire or hazard. DEC Response. Willing Responsible Party. Corrective action taken.
Cleanup Ceased:	Not reported
Cleanup Meets Standard:	False
SWIS:	4101
Investigator:	SMMARTIN
Referred To:	Not reported
Reported to Dept:	11/1/1995
CID:	357
Water Affected:	Not reported
Spill Notifier:	DEC
Last Inspection:	Not reported
Recommended Penalty:	False
UST Involvement:	False
Remediation Phase:	0
Date Entered In Computer:	11/1/1995
Spill Record Last Update:	3/23/2004
Spiller Name:	Not reported
Spiller Company:	SAME
Spiller Address:	Not reported
Spiller City,St,Zip:	NN
Spiller County:	999
Spiller Contact:	AVIS REDMAN
Spiller Phone:	(718) 392-0200
Spiller Extention:	Not reported
DEC Region:	2
DER Facility ID:	130150
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MARTINKAT"02/18/04: Reassigned from KRIMGOLD to Martinkat.
Remarks:	OIL IN TANK ROOM

Material:

Site ID:	153383
Operable Unit ID:	1020065
Operable Unit:	01
Material ID:	360474
Material Code:	0002A
Material Name:	#4 Fuel Oil
Case No.:	Not reported
Material FA:	Petroleum
Quantity:	-1
Units:	Gallons
Recovered:	No
Resource Affected:	Not reported
Oxygenate:	False

Tank Test:

Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent

S & G WOODWORKING INC (Continued) **1008892201**

to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

Site Description:	The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Site Description: See also Site no. V00600Location:The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features:The entire site is occupied by a one story building which covers approximately 21,900 sq.ft. Historical Use:Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis.

Env Problem: Nature and Extent of Contamination:Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g.,

LEVCO METALS PROPERTY (Continued) **U003391190**

2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994.Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem:	Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore, inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion.

Site Description: Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor.Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west.Current Zoning/Use(s):The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses.Historic Use(s):The Site was a commercial building occupied by various manufacturing and warehousing entities including a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology:The Site is generally level and the surrounding area slopes downward from north to south.The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest.The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Env Problem: Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations.Soil ? There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples.Groundwater ? On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24

KAUFMAN ASTORIA STUDIOS (Continued) **U001831683**

ppb)were detected in groundwater samples at levels exceeding groundwater standards.Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb -50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site.Sub-slab soil vapor ? Sixteen petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzene (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air ? Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air ? PCE was detected in the outdoor air sample at a concentration well below the concentrations found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat:The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDEC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination.CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System is scheduled to be installed during the summer break.

DEC Memo:	12/31/10-HRAHMED-Spoke to Rene Lewis (917 420 8330) of Alliance Mechanical. As per him, 5-7 gal of #6 oil spill from the vent line due to overfill. Noticed oil stain on the wall and side walk. PTC powewashed the wall and the sidewalk. There was no spill in the tankroom. Uploaded closure report and some picture in eDocs.This case is closed.
Remarks:	Caller advised overfill of tank. Clean up is in process.

Updated By: MJKOMORO
Site Description: Location:The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site.Site Features:The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site.Current Zoning/Uses:The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment.- 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories- 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses:In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003.Site Geology and Hydrogeology:Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeastMiscellaneous:There are no PBS, CBS records for the multiple addresses of the Site.
Env Problem: The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab.The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds.Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the Site.The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses.After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery.The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

Env Problem:	Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present.Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

Mobil Greenpoint spillTransferred from Miller to Rommel.10/12/04Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking).I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC:1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that "we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly." AZ4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a "clean fill" recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ10-27-2008 I have

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Data Release Frequency: Biennially

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

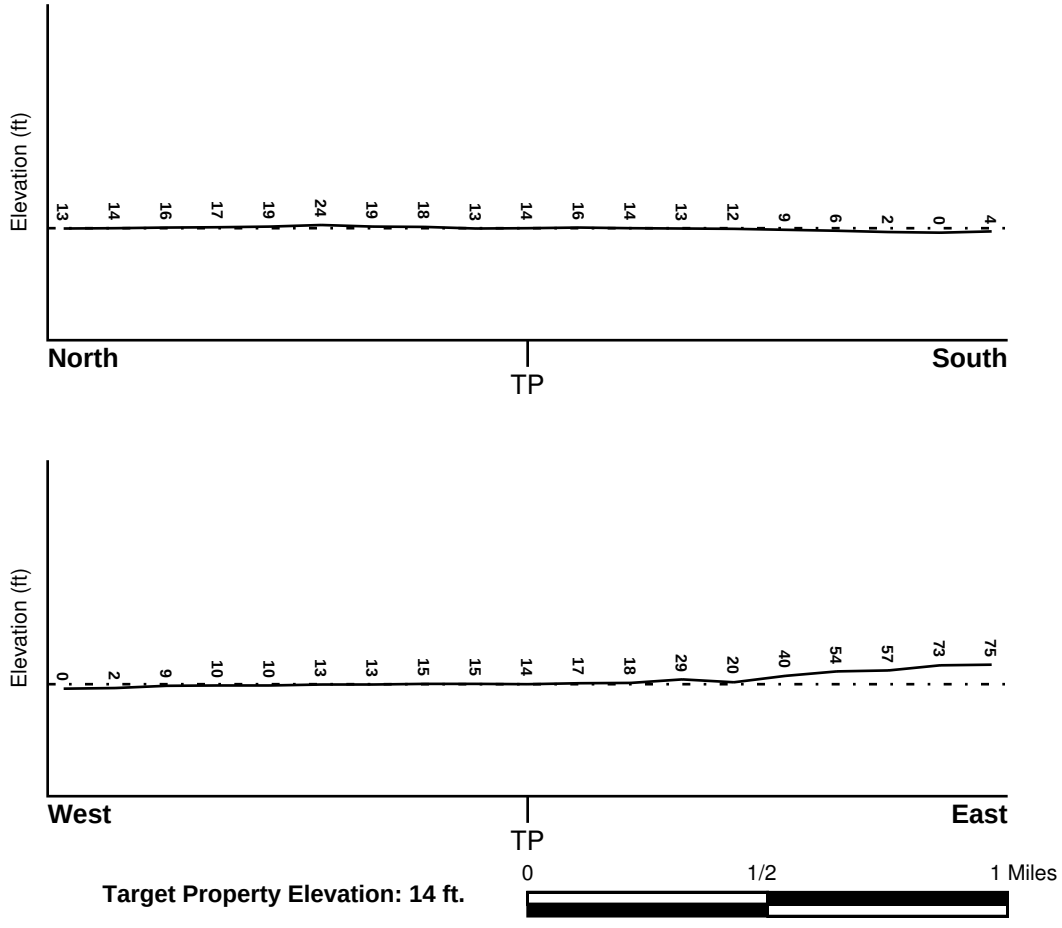
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 14 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
QUEENS, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data

Additional Panels in search area:

- 3604970047B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Sanborn® Library search results
Certification # D3A8-4CA6-9D89

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Langan Engineering, Inc. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

QUITCLAIM DEED

THIS INDENTURE, made as of the 14th day of September, 2011

BETWEEN

ELECTRIC REALTY COMPANY, L.L.C., a Delaware limited liability company having an address at c/o Kraupner Group, 457 Knickerbocker Avenue, Brooklyn, New York 11237 (the "Grantor"),

AND

44 LIC LLC, a New York limited liability company having an address at c/o Vorea Holdings, LLC 184 N. 8th Street, New York, New York 11237 (the "Grantee").

WITNESSETH, that Grantor, in consideration of Ten Dollars ($10.00) and other valuable consideration paid by Grantee, does hereby remise, release and quitclaim unto Grantee, the heirs or successors and assigns of Grantee forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the in the City of New York, County of Queens and State of New York, and known as part of 27-21 44th Drive, Long Island City, New York (the "Property"), as more particularly described on Schedule A annexed hereto and made a part hereof,

TOGETHER WITH all right, title and interest, if any, of Grantor in and to any streets and roads abutting the above described Property to the center lines thereof;

TOGETHER WITH the appurtenances and all the estate and rights of Grantor in and to said Property; and

TO HAVE AND TO HOLD the Property herein granted unto Grantee, the heirs or successors and assigns of Grantee, forever.

AND Grantor, in compliance with Section 13 of the Lien Law, covenants that Grantor will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvements at the Property and will apply the same first to the payment of the cost of the improvements before using any part of the total of the same for any other purpose.

IN WITNESS WHEREOF, Grantor has duly executed this deed the day and year first above written.

ELECTRIC REALTY COMPANY, L.L.C.,
a New York limited liability company

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT—THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the 18TH day of July in the year 2013

BETWEEN 4418 PURVES LLC, 410 OGDEN AVENUE, TEANECK, NEW JERSEY, 07666

party of the first part, and 44 LIC LLC, 31-87 STEINWAY STREET, SUITE 5, ASTORIA, NEW YORK 11103
party of the second part,
WITNESSETH, that the party of the first part, in consideration of TEN ($10.00) dollars
paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

All that certain Lot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the County of Queens, Block 268, Lots 22 and 23 and known as 44-18 Purves Street, Long Island City, New York, the property being transferred being the same premises described in the deed to the party of the first part herein by deed dated 2/3/2010 recorded 2/17/2010 in CRFN 201000005432, See Schedule A annexed hereto for a metes and bounds description.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.
AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose. The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 268** **LOT: 22**

(2) **Property Address: 44-18 PURVES STREET, QUEENS, NY 11101**

(3) **Owner's Name:** **44 LIC LLC**

Additional Name:

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

APPENDIX M- RESUMES

Jessica P. Alzamora, PE, LEED AP

Senior Staff Engineer/ Project Scientist
Environmental Engineering & Construction Monitoring

8 years in the industry ~ 7 years with Langan

Ms. Alzamora has over eight years of experience in environmental, site/civil, and geotechnical engineering. Her experience involves site investigation and remediation, environmental site assessments, utility assessments and design, water system analysis, and stormwater management design in New York, New Jersey, Nevada, and Connecticut. Her construction/field experience includes remedial excavation oversight, excavation and disposal of contaminated soils, installation and sampling of groundwater monitoring wells, soil sampling, health and safety air-monitoring, construction oversite/inspection, earthwork inspection, caisson installation, pavement inspection, and general surveying practices. Ms. Alzamora has experience in the evaluation of laboratory analytical data, design of sub-slab depressurization and soil vapor extraction systems, and preparation of construction documents and environmental reports (investigation, spill closure, final engineering reports, remedial action plans, health and safety plans). Ms. Alzamora is proficient in the latest Microsoft applications, AutoCAD, Land Development Desktop, and gINT.

1.0 INTRODUCTION

This Remedial Investigation (RI) Report was prepared on behalf of Purves Development, LLC (the "Volunteer") for the property located at 27-21 44th Drive and 44-18 Purves Street (Tax Block 268, Lots 4 and 23) in the Long Island City neighborhood of Queens, New York (the "Site"). The Site was accepted into the Brownfield Cleanup Program on July 1, 2014. A Site Location Map is provided as Figure 1. This RI Report presents environmental data and findings from remedial investigation conducted from December 2, 2013 through March 14, 2014 and incorporates previous environmental data from October 2013. The objective of this RI is to supplement the existing environmental data to determine, to the extent possible, the nature and extent of contamination in soil, soil vapor, and groundwater. Information presented in this RI Report will be used to evaluate appropriate remedial action alternatives.

The remainder of this report is organized as follows:

- Section 2.0 describes the Site setting and the physical characteristics of the Site.
- Section 3.0 describes the Site background including results of previous investigations and identified potential areas of concern (PAOC).
- Section 4.0 presents the investigation field procedures.
- Section 5.0 describes the field observations and analytical results.
- Section 6.0 presents an assessment of the exposure risks of Site contaminants to human, fish, and wildlife receptors.
- Section 7.0 presents the nature and extent of contamination in all Site media as determined through the field investigation and analysis of environmental samples.
- Section 8.0 summarizes the results of the investigation and presents conclusions based on field observations and analytical results.

2.0 SITE PHYSICAL CHARACTERISTICS

2.1 Site Description

The Site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City neighborhood of Queens, New York and includes two contiguous tax lots (Tax Block 268, Lots 4 and 23). The Site is located in an urban area, characterized by commercial and manufacturing buildings and vacant land, on the block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west.

The approximately 11,500 square-foot Site is developed with a vacant one-story garage/warehouse building with a basement on Lot 4. Lot 23 is vacant and partially covered with a deteriorating concrete slab that has been overgrown with vegetation. The sidewalk elevation along Purves Street (east side of the Site) is approximately el 8 (Queens Highway Datum). The sidewalk elevation along 44th Drive (west side of Site) is approximately 15 feet higher than the sidewalk elevation along Purves Street. A Site location map is provided as Figure 1, and a Site boundary map is provided as Figure 2.

There is an egress easement benefiting Lot 4 providing access to Purves Street across Lot 23. This easement is shown in Figure 2.

2.1.1 Surrounding Property Land Use

The Site is located in an urban setting that is characterized by commercial and manufacturing buildings and vacant land. The surrounding property usage is summarized below:

DIRECTION	ADJACENT PROPERTIES	SURROUNDING PROPERTIES
North	A two-story commercial building identified as "JME Enterprises, Inc." and "L.I.C Auto Repair" and a one-story commercial building identified as "Queens Plaza Automotive Warehouse"	Multi-story residential/commercial buildings with ground-level commercial space
South	Vacant lots	Multi-story residential/commercial buildings and vacant lots
East	Purves Street and a two-story commercial building identified as "Sculpture Center"	Multi-story residential/commercial buildings and vacant land

DIRECTION	ADJACENT PROPERTIES	SURROUNDING PROPERTIES
West	One-story garage identified as "Global Auto Electric d/b/a Manny Auto Electric"	Multi-story residential/commercial buildings with ground-level commercial space

Land use within a half mile of the Site is highly urbanized and include cross streets, subway tunnels, and park land. There are no sensitive receptors such as schools, hospitals, or day care centers within 500 feet of the Site.

Due to the highly urbanized setting, major infrastructure (storm drains, sewers, and underground utility lines) exists within the streets surrounding the Site (44th Drive, Purves Street, Jackson Avenue). The presence of infrastructure may influence contaminant migration from some of the potential up-gradient sources. The New York City Metropolitan Transit Authority (MTA) M and E subway lines extend underneath Jackson Avenue approximately 200 feet north of the Subject Property.

The nearest ecological receptor is the Dutch Kills Lateral Canal, which is located approximately 0.25 miles south of the Site.

2.1.2 Topography

The sidewalk elevation along Purves Street (east side of Subject Property) is approximately el 8 (Queens Highway Datum). The surface of lot 23 ranges from approximately el 7.5 (in the western portion of lot 4) to el. 9.2 (in the eastern portion of lot 4). The sidewalk elevation along 44th Drive (west side of Subject Property) is approximately 10 feet higher than the sidewalk elevation along Purves Street. The first floor of the Lot 4 building is roughly at the same elevation as the 44th Drive sidewalk. The Lot 4 basement level top of slab is at approximately el 6.5.

2.1.3 Surface Water and Drainage

No stormwater drains were observed on the Site. Infiltration of on-Site precipitation to the water table is likely minimal within the footprint of the existing building in the western portion of the Site (Lot 4); however, the eastern portion of the Site does not contain a continuous impervious cover and infiltration to the water table is likely. The majority of runoff drains to city sewers. Rainwater that does infiltrate the ground percolates downwards towards the water table and joins the anticipated regional flow, which is estimated to flow west and southwest into the East River and Newtown Creek. However, based on our Site groundwater gauging, localized groundwater is estimated to flow towards the north and northeast.

2.2 Geologic Conditions

2.2.1 Regional Geology

The Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York and Parts of Bergen and Hudson Counties New Jersey, by Charles A. Baskerville (1994) indicate that the Site is underlain by bedrock of the Cambrian-Ordovician Hartland formation, which consists of inter-bedded mica schist, gneiss, and amphibolite. According to Langan's experience completing geotechnical investigations in this area, depth to bedrock is approximated at 50 to 70 feet bgs. The general subsurface condition in this area is estimated to consist of fill, underlain by medium, well-graded sand with various amounts of silt, cobbles, and boulders, to the top of bedrock.

2.2.2 Site Geology

Lot 4 is covered with a concrete building basement slab and Lot 23 is partially covered with a deteriorating concrete slab that has been overgrown with vegetation. Beneath the Site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet below grade surface (bgs) in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Environmental borings terminated at maximum depths up to 18 feet bgs. Bedrock was not encountered during the RI, but is estimated to range from 50 feet to 70 feet bgs based on Langan's experience conducting geotechnical investigations in the neighborhood.

2.3 Hydrogeologic Conditions

2.3.1 Regional Hydrogeology

The "hydrologic cycle" describes the movement of water through the environment, including the air, ground and surface water bodies. Within the ground, water ("groundwater") is contained within the unconsolidated geologic materials and fractured bedrock. The upper surface of the groundwater reservoir is marked by the water table surface, which fluctuates seasonally, in response to precipitation events and tides (along shorelines). The overburden deposits typical to the project area can have low to moderate hydraulic conductivities. The bedrock is relatively impermeable except where concentrations of fractures, faults or joints are present. Preferential flow occurs through the more permeable zones of the overburden, such as individual sand or gravel layers, and through bedrock fractures and joints. Groundwater depth

and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, utilities, and coverage by impervious surfaces. Groundwater in New York City is not used as a potable (drinking) water source. Residents of New York City receive their drinking water supply from surface reservoirs located in upstate New York.

Based on the proximity to the East River and Newtown Creek, the inferred regional groundwater flow direction for the area surrounding the Site is to the west and southwest. However, Historical USGS Topographic Quadrangle Maps (1900 and 1924)) show that a creek/river that fed the Newtown Creek to the south historically existed immediately to the northeast of the Site.

2.3.2 Site Hydrogeology

The most recent synoptic groundwater measurements were collected from seven on-Site and two off-Site wells during the March 14, 2104 gauging event. Based on these measurements, groundwater underlying the Site ranged from approximately el 1.25 to el 2.94 (7.95 to 3.26 feet bgs). Based on a groundwater contour map derived from the March 2014 measurements, localized groundwater flow is estimated to flow north to northeast. Groundwater elevation data recorded during the environmental investigation is summarized in Table 1.

Wetlands on or near the Site were evaluated by reviewing the National Wetlands Inventory and NYSDEC regulated wetlands. There are no wetlands on or adjacent to the Site. The nearest wetland is Dutch Kills Lateral Canal which is located approximately 0.25 miles south of the Site.

3.0 SITE BACKGROUND

3.1 Site Developmental History

Available records indicate that the property has been developed since as early as 1889. The Site is located in a densely developed urban area. Lots 4 was improved with one-story buildings, from at least 1941, that extended onto off-Site Lot 22. The structure on Lot 23 was demolished circa 1970 and the lot has been used for storage or been vacant ever since. Off-Site Lot 22 was improved with a multiple-story building between 1924 and 2006.

Historic use of Lot 4 includes a garage with gasoline filling pump island, paper warehouse and photo chemical warehouse. Lot 4 contains a potential gasoline underground storage tank (UST) in the basement of the building. Historic use of Lot 23 and off-Site Lot 22 includes manufacturing, labs, leather goods business, and plating equipment business. In general, historic use of the Site involves the storage, application, and disposal of hazardous substances.

Lot 4 is subject to NYSDEC review under the Spills Program (Spill No. 1302045, reported on May 29, 2013).

3.2 Previous Investigation Reports

Available environmental reports are included in Appendix A and summarized in chronological order below.

October 2013, Phase II Subsurface Investigation Report, prepared by Environmental Business Consultants (EBC)

This subsurface investigation was conducted to investigate environmental conditions identified in an October 2011 Phase I ESA prepared by EBC for Lot 4 and to investigate general environmental conditions on Lot 23. The October 2011 Phase I was not available for review. The Phase II report included a brief summary of the 2011 Phase I ESA which identified previous Site uses including: a photo chemical warehouse, garage with a gasoline tank, paper warehouse, metal plating facility, welding and repair shop, leather goods building. The suspected gasoline UST on Lot 4 was identified as a Recognized Environmental Concern (REC).

The Phase II investigation included collection and analysis of soil and groundwater samples. Observations and laboratory results are summarized by media type below.

- Soil – Petroleum staining and odor was identified in the vicinity of the underground tanks on southwestern side of Lot 4. Field screening with a photoionization detector (PID) found readings up to 300 ppm. Additionally, elevated concentrations of petroleum volatile organic compounds (VOC) were detected within one soil sample collected adjacent to the tanks; however, only n-propylbenzene was reported above NYSDEC Unrestricted Use Soil Cleanup Objectives (SCO). Based on these observations and associated analytical data, a spill was called in to NYSDEC and Spill No. 1302045 was assigned. Soil samples collected on Lot 23 and off-Site Lot 22 identified detections of chlorinated VOCs; however, chlorinated concentrations were below New York State's Unrestricted Use SCOs. Metals were not analyzed as part of this investigation.
- Groundwater – Chlorinated VOCs were identified in groundwater above New York State groundwater standards. Tetrachloroethene (PCE) concentrations ranged from non-detect on-Site along the southwestern portion of the Site to 950 µg/L off-Site in the northeastern portion of off-Site Lot 22. Trichloroethene (TCE) concentrations ranged from non-detect on-Site along the southwestern portion of the Site to 150 µg/L off-Site in the northeastern portion of off-Site Lot 22. Additionally, several petroleum VOCs and SVOCs were identified above New York State groundwater standards in the vicinity of the suspected tank in Lot 4.

January 13, 2014 Phase I ESA prepared by Langan

A Phase I ESA was conducted in accordance with requirements of ASTM 1527-05 and 1527-13. To the extent that ASTM 1527-13 differs in definition and terminology from ASTM 1527-05, this report followed the current ASTM 1527-13 terminology. The report identified the following RECs:

- REC 1 – Historic Site Use - Historic use of Lot 4 includes a garage with a gasoline tank in 1936; a paper warehouse and photo chemical warehouse in 1947; and an auto body shop from 1977 to at least 2006. Lots 23 and off-Site Lot 22 were part of an operation identified as "Controller Manufacturing" between 1936 and 1950. From 1970 through 2006, off-Site Lot 22 is shown as welding and repairs with city directory listings that include Rozilda labs, leather goods, plating equipment, manufacturing and Artisan Designs. The historic uses involve the storage, application, and disposal of hazardous substances.
- REC 2 – Documented Site Contamination - Soil and groundwater contaminant concentrations were identified above New York State standards. Elevated soil and groundwater concentrations of petroleum volatile organic compounds (VOC) were

detected adjacent to the suspected tank. Additionally, chlorinated VOCs were identified in groundwater.

- REC 3 – NYSDEC Spill and Potential On-Site Underground Storage Tank - A gasoline UST is potentially located in the Lot 4 building basement. The tank was identified on a 1936 Sanborn map and a previous report indicated the presence of a vent pipe that was traced to a concrete patch in the basement floor. Remnants of a concrete dispenser island were visible immediately behind the garage door. Site constraints prevented a geophysical survey to document the presence of the tank. Petroleum staining, odor and elevated field instrument readings were identified in the vicinity of the potential UST. Elevated concentrations of petroleum volatile organic compounds (VOCs) were detected within the impacted soil. Based on these observations and associated analytical data, a spill was called in to the New York State Department of Environmental Conservation (NYSDEC) and Spill No. 1302045 was assigned.
- REC 4 – Surrounding Property Use - Current and historic uses of the adjoining and/or surrounding properties include gasoline filling stations, manufacturing facilities, auto repair stations/garages with gasoline tanks, iron works, drycleaners, a chemical laboratory, an oil-burning utility company, and printing facilities. Additionally, two open spills (Spill Numbers 1000528 and 9913082) were identified on properties less than 700 feet from the Subject Properties. A Brownfield Cleanup Program site with documented soil and groundwater contamination was identified on the adjacent property to the south of the Site. The BCP site is shown on Figure 3. Monitoring wells were identified on surrounding properties, which may indicate past or current environmental monitoring. Additionally, a Voluntary Cleanup Program site contaminated with creosote, petroleum and solvents was identified approximately 1,400 feet northeast of the Site.

3.3 Summary of Potential Areas of Concern (PAOC)

Based on the Phase I ESA and October 2013 Phase II Subsurface Investigation, the following potential areas of concern (PAOC) were identified:

1. Known VOC and SVOC Groundwater Impacts: The October 2013 investigation found chlorinated solvent impacts (e.g., PCE and TCE) to groundwater along the northwestern border near Purves Street. Chlorinated solvent groundwater concentrations seem to indicate an off-Site source (off-Site groundwater concentrations are higher than on-Site concentrations); however, based on the historic use of the lots for manufacturing, leather goods and plating equipment, it is possible that there are impacts related to Site

operations. Analytical results from the October 2013 investigation also found groundwater exceedances of petroleum-related compounds in Lot 4.

2. Potential Underground Storage Tank (UST) and Petroleum-Impacted Soil in the Western Portion of Lot 4: Petroleum-impacted material was identified through field observations of staining and odor, and analytical results during the October 2013 subsurface investigation. The petroleum-impacted material was identified on the west side of Lot 4 in the area of a suspected UST.

3. Potential Soil Vapor Contamination: Analytical results found petroleum and chlorinated-solvent related VOCs in the Site subsurface at concentrations in excess of the ambient air sample. The VOCs are a potential source of soil vapor impacts on the Site.

4. Urban Fill: Fill was identified across the Site and may contain contaminant (e.g., VOC, SVOCs, metals, and PCB) concentrations above Part 375 Restricted Residential Use SCOs.

4.0 REMEDIAL INVESTIGATION

The remedial investigation was completed in two sampling events between December 2 and 13, 2013 and March 7 and 14, 2014. The objectives of the remedial investigation were to further investigate the PAOCs identified at the Site. The RI included soil, groundwater, and soil vapor sampling and analysis. A summary of samples collected during the RI is provided in Table 2.

The RI consisted of the following:

- Advancement of fifteen soil borings (EB01 through EB06 and SB01 through SB09) and collection of 34 soil samples, including two duplicate samples
- Collection of eleven groundwater samples, including two duplicates, from monitoring wells (MW01, MW02, MW03, MW06, MW07, MW08, MW09, MW10, and MW11)
- Survey of groundwater monitoring wells to determine local groundwater flow direction
- Installation of eleven soil vapor probes (SV01 through SV11) and collection of eleven soil vapor samples and two ambient air samples.

Site investigation was conducted in accordance with New York Codes, Rules and Regulations (NYCRR) Title 6 Part 375 (6 NYCRR Part 375), the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation (May 2010), the NYSDEC Draft Brownfield Cleanup Program Guide (May 2004), and the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006). Details of the field investigations are described herein. Photo documentation of the RI activities is provided in Appendix C.

4.1 Utility Mark-out

Prior to beginning of the field investigation, the New York One Call Center was contacted for Code 753 utility mark-outs.

4.2 Geophysical Survey and Utility Location

On December 2, 2013, prior to initiating intrusive subsurface activities for the RI, Nova Geophysical Services (Nova) of Douglaston, New York completed a geophysical survey of the Site. Langan was on-Site to document the survey. The survey used ground-penetrating radar

(GPR) to identify potential USTs and locate buried utilities in the vicinity of each boring location. The geophysical survey identified utilities located through the project area and proposed boring locations were relocated to avoid potential utility conflicts. Note that a clear geophysical signal was not possible in the area of the potential gasoline UST due to accumulated water on the basement floor in the western portion of Lot 4 along 44th Drive.

On March 6, 2014, prior to initiating additional subsurface activities for the second sampling event, Nova scanned along the 27-21 44th Drive sidewalk to identify potential USTs and locate buried utilities in the vicinity of boring location EB01/MW08.

The geophysical report is in Appendix B.

4.3 Historic Fill and Soil Investigation

During the RI, fifteen environmental soil borings were advanced to depths of approximately 10 to 18 feet bgs. Nine borings were completed between December 2 and 13, 2014 and six soil borings were completed between March 7 and 14, 2014. Soil samples from each boring were visually classified for soil type, grain size, and texture and screened for visual, olfactory, and instrumental evidence of anthropogenic impacts. Instrument screening for the presence of organic vapors was performed with a hand-held photoionization detector (PID). Following sample collection, all borings not converted to monitoring wells were backfilled with soil cuttings and sand. The surface was restored with a concrete patch. The RI investigation is further detailed below.

4.3.1 Investigation Methodology

The soil investigation included fifteen environmental soil borings (SB01 through SB09 and EB01 through EB06). Boring locations were selected to further evaluate PAOCs. The borings advanced between December 2 and 13, 2013 were completed by Laurel Environmental Associates, Ltd. (Laurel) of Huntington Station, New York and borings advanced between March 7 and 14, 2014 were completed by AARCO Environmental Services Corp. (AARCO) of Lindenhurst, New York. Langan was on-Site to document boring activities and collect samples. Soil borings were completed to depths between 10 and 18 feet bgs using direct-push Geoprobe® 6610DT and 7822DT boring rigs. Boring locations are presented on Figure 5.

Soil samples were collected continuously throughout the depth of each soil boring using 5-foot Macro-Core® sample barrels with new, dedicated acetate liners. Soil samples retrieved from each boring were visually classified for soil type, grain size and texture. Each sample was screened for visual, olfactory and instrumental evidence of anthropogenic impacts. Instrument

screening for the presence of VOCs was performed with a PID equipped with a 10.6electron volt (eV) lamp. Following sample collection, all borings were backfilled with soil cuttings and sand, or were converted to groundwater monitoring wells. Boring logs documenting observations are included as Appendix D.

4.3.2 Sampling Methodology

Seventeen soil samples (one to three samples per soil boring, plus one duplicate sample) were collected during the sampling event between December 2 and 13, 2013. Seventeen soil samples (two to three samples per boring, including one duplicate) were also collected during the sampling event between March 7 and 14, 2014. Generally, one sample was collected from shallow fill (0-2 feet bgs), one sample from the depth interval exhibiting the highest degree of contamination (e.g. staining, odor or elevated PID readings) or at the groundwater interface, and one sample from the boring terminus.

Soil samples were analyzed for NYSDEC Part 375 VOCs by Environmental Protection Agency (EPA) Method 8260, SVOCs by EPA Method 8270, polychlorinated biphenyls (PCB) by EPA Method 8082, pesticides by EPA 8081A, and metals by EPA Methods 6010B/7471A. Samples submitted for VOC analysis were collected directly into EnCore® samplers.

Sample containers were labeled, placed in a laboratory-supplied cooler and packed on ice (to maintain a temperature of 4°C). The coolers were picked up at the end of each day by a laboratory courier provided by the laboratory and transported under standard chain-of-custody protocol to Alpha Analytical, Inc. (Alpha) of Westboro, Massachusetts; a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-certified laboratory. Laboratory certifications are provided in Appendix E.

4.4 Groundwater Investigation

A total of nine monitoring wells (MW01 through MW03 and MW06 through MW11) were installed during the RI. MW04 and MW05 were omitted from the number system. Monitoring wells were sampled to investigate potential impacts to groundwater associated with the identified PAOCs. Sample rationale is provided in Table 2.

4.4.1 Monitoring Well Installation and Development Methodology

The monitoring wells extended to approximately 10 to 18 feet bgs and were constructed with one-inch diameter, Schedule 40, polyvinyl chloride (PVC) pipe with five or ten feet of pre-packed, 0.01-inch slotted screens. The monitoring wells were screened across the water table interface to allow for the monitoring of light non-aqueous phase liquid (LNAPL), if present.

Monitoring well screens in the area of the dense non-aqueous phase liquid (DNAPL) impacts (eastern side of Site) were screened to the top of the silt/clay layers to monitor for DNAPL, if present. Clean sand (Morie #2) was generally used to fill the annulus around each pre-packed well screen to a height of approximately one foot above the top of the screened interval. The remainder of the annular space was filled with a layer of hydrated bentonite clay seal (minimum of one foot) followed by soil cuttings or clean sand to near the ground surface. Construction of indoor and sidewalk monitoring wells was completed with a flush-mount, steel well cover set into concrete for protection. Monitoring well locations are shown on Figure 4, and well construction logs are included in Appendix F.

Groundwater monitoring wells were developed after installation. The wells were developed by surging a one inch foot valve across the well screen to agitate and remove fines. The foot valve was surged across the well screen in 2- to 3-foot increments for approximately 2 minutes per increment. After surging, the wells were purged via pumping groundwater through dedicated polyethylene tubing using a peristaltic pump until the water became clear and at least 3 well volumes were removed. Development water was places in labeled drums. Following installation and development, wells were allowed to recover for at least one week before groundwater was purged and sampled.

A Langan field engineer completed synoptic groundwater gauging prior to groundwater sampling on December 10, 2013 and again on March 14, 2014. Groundwater elevations are provided in Table 1. A groundwater iso-contour map based on a synoptic round of measurements collected during the March 2014 sampling event is presented as Figure 4.

4.4.2 Groundwater Sampling

On December 10, 2013 and March 14, 2014, monitoring wells were surveyed by a New York State-licensed surveyor to identify groundwater elevations and groundwater flow direction at the Site. Prior to sampling, the static water level was measured to the nearest 0.01 ft with a decontaminated oil/water interface probe. Groundwater elevations and inferred groundwater flow direction are presented on Figure 4.

A sample was collected from wells MW01, MW02, MW03, MW06 (plus duplicate), and MW07 on December 10, 2013 and from MW08, MW09, MW10, and MW11 (plus duplicate) on March 14, 2014. Sampling was completed in accordance with procedures set forth the EPA's low-flow groundwater sampling procedure to allow for collection of a representative sample ("Low-Flow [Minimal Drawdown]) Ground-Water Sampling Procedures", EPA/540/S-95/504, April 1996. A peristaltic pump and dedicated polyethylene tubing were used to collect the samples. Purging consisted of pumping, at minimum, the stabilized drawdown volume plus the pump's

tubing volume, and waiting until the physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, turbidity, and hydrogen ion concentration [pH]) stabilized. Groundwater samples were collected directly from the pump discharge line into pre-cleaned, laboratory-provided containers. Groundwater sample logs are included in Appendix F.

The sample containers were labeled, placed in a laboratory-supplied cooler, and packed on ice (to maintain a temperature of 4°C). Sample coolers were picked up at the Site by a laboratory courier and delivered to Alpha under standard chain of custody protocol for analysis of TCL VOCs via EPA Method 8260, TCL SVOCs via EPA Method 8270, PCBs via EPA Method 8082A, pesticides via EPA Method 80801B, and dissolved (filtered) and unfiltered TAL metals via EPA 6000/7000 Series Methods.

4.5 Soil Vapor Investigation

4.5.1 Soil Vapor Installation

Four soil vapor points were installed on December 3, 2013 by Laurel and seven soil vapor points were installed on March 7, 2014 by AARCO. Langan documented installation activities and collected vapor samples. Installation and sampling logs are included in Appendix G. Geoprobe® 6610DT and 7822DT drill rigs were used to create a 2-inch diameter hole. A new, dedicated stainless-steel screen implant/soil vapor probe (3/8-inch in diameter, and approximately 6 inches in length) was threaded to polyethylene tubing (0.313-inch diameter) and lowered to the bottom of the hole. Approximately one or two feet of sand (Morie #2) filter pack was installed around the screen implant by pouring the material into the annulus. The remaining annular space was backfilled to grade with hydrated bentonite. Installation depth for each soil vapor point is documented in logs included in Appendix G. Vapor points beneath the existing Lot 4 slab were installed to depths between one and two feet below the basement slab (rather than "sub-slab soil vapor" points installed immediately below the basement slab) based on proposed development excavation and due to the proximity of the groundwater table. The existing Lot 4 basement slab will be removed during development and remediation. Soil vapor locations are shown in Figure 5.

4.5.2 Air Sampling and Analysis

A pre-sample tracer gas test was performed using helium gas. The helium gas tracer test is a quality assurance/quality control (QA/QC) measure to confirm the integrity of the implant seals by evaluating if surface outdoor air intrusion will impact the soil vapor sample (i.e., that no "short circuiting" has occurred). The helium was introduced into an upside-down five-gallon container over the surface of the sampling location being tested. The edges of the bucket

were sealed to the surface with hydrated bentonite to maintain a high concentration of helium within the container. The sample tubing from the implant was extended out of the probe hole through an air-tight fitting installed on the container and into a real-time helium monitoring instrument. With the sample train activated and drawing air at less than 0.2 liters per minute, the outlet air is monitored using a real-time helium monitoring instrument. A detection of helium would indicate that the seal was compromised and must be replaced. None of the soil vapor sample locations during the RI failed the helium tracer gas test, indicating that all seals were intact.

A MultiRAE gas meter with a flow rate less than 0.2 liters per minute was attached to the polyethylene tubing, and a total volume of at least three times that of the tubing and screen setup was purged. The purged soil vapor was also monitored for VOCs and the value was recorded. After purging was complete, a laboratory-supplied 6-liter Summa canister with a flow controller (with a laboratory-preset flow rate of 0.05 liters per minute) was attached to the polyethylene tubing. Each Summa canister arrived from the lab with approximately 22 to 30 inches of mercury vacuum. Sampling was started by fully opening the canister valve. The sample was collected over a period of approximately 120 minutes. When approximately 6 liters of sample had been collected or the canister pressure dropped below 5 inches of mercury, the sample was stopped by closing the valve.

Two outdoor/ambient air samples were also collected into a 6-liter Summa canister; one for each day of sampling. The soil vapor and ambient air samples were transported from the Site to Alpha by a laboratory-provided courier for analysis of VOCs via EPA Method TO-15. Alpha is an ELAP certified laboratory.

Soil vapor sampling locations are shown in Figure 5. A summary of soil vapor samples collected and associated rationale is provided in Table 2. The soil vapor sampling logs are included in Appendix G. Methodologies used for soil vapor assessment conform to the NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006.

4.6 Quality Control Sampling

During the RI, coded field duplicate samples, ambient air samples, and trip blanks were collected and submitted for laboratory analysis. During the course of the investigation, the following quality control samples were collected:

Soil samples

- Two coded field duplicate samples.

Groundwater samples

- Two coded field duplicate samples.
- Two trip blank samples.

Soil Vapor Samples

- Two ambient air samples.

Coded field duplicates were collected to determine the accuracy of the analytical methods. The duplicates were collected from the same material as the primary sample by splitting the volume of sample collected in the field into two sample containers. The samples are termed "coded" because they were labeled in such a manner that the laboratory would not be able to determine that they are duplicate samples. This serves to eliminate possible bias that could arise during analysis. The field duplicates were analyzed for the same parameters as the samples being duplicated.

The trip blank samples were collected to assess the potential for contamination of the sample containers and samples during the trip from the laboratory, to the field, and back to the laboratory for analysis. Trip blanks contain approximately 40 milliliters of acidic water (doped with hydrochloric acid) that is sealed by the laboratory when the empty sample containers are shipped to the field, and unsealed and analyzed by the laboratory when the sample shipment is received from the field. The trip blank samples were analyzed for TCL VOCs.

Field blank samples were not included in the sampling program because new dedicated disposable sampling equipment (e.g., nitrile gloves, laboratory supplied glassware, EnCore sampler, acetate liners, etc.) was used during the investigation.

4.7 Data Validation

The RI data was sent to a third party data validator for review in accordance with the EPA validation guidelines for organic and inorganic data review. The DUSRs are included in Appendix I.

4.7.1 Data Usability Summary Report Preparation

A data usability summary report (DUSR) will be prepared for each SDG following data validation. The DUSRs will be reviewed by the Quality Assurance Officer (QAO). The DUSR will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and COC procedures, and a summary assessment of precision, accuracy,

representativeness, comparability, and completeness for each analytical method. For each of the organic analytical methods, the following will be assessed:

- Holding times;
- Instrument tuning;
- Instrument calibrations;
- Blank results;
- System monitoring compounds or surrogate recovery compounds (as applicable);
- Internal standard recovery results;
- MS and MSD results;
- Target compound identification;
- Chromatogram quality;
- Pesticide cleanup (if applicable);
- Compound quantization and reported detection limits;
- System performance; and
- Results verification.

For each of the inorganic compounds, the following will be assessed:

- Holding times;
- Calibrations;
- Blank results;
- Interference check sample;
- Laboratory check samples;
- Duplicates;
- Furnace atomic absorption analysis QC;
- ICP serial dilutions; and
- Results verification and reported detection limits.

Based on the results of data validation, the validated analytical results reported by the laboratory will be assigned one of the following usability flags:

- "U" - Not detected at given value;

- "UJ" - Estimated not detected at given value;
- "J" - Estimated value;
- "R" - Result not useable; and
- No Flag - Result accepted without qualification.

4.8 Field Equipment Decontamination

Macro-Core® sample barrels used during the RI were cleaned with Alconox and rinsed with water at the start of work, between holes, and at the completion of the work. Direct contact of sampling equipment with the ground was avoided. Groundwater sampling equipment including interface probe, water quality meters, and sampling pump were also cleaned with Alconox and rinsed with water between sampling locations during groundwater sample collection.

Decontamination occurred at the sampling locations, and all liquids were temporarily contained in pails, buckets, etc. Decontamination wastewater was drummed for disposal.

4.9 Investigation-Derived Waste Management

All investigation-derived wastes (IDW) generated during the RI were containerized. Drill cuttings were used to backfill soil borings. Aqueous waste from monitoring well development and purging and decontamination water were placed into four UN/DOT-approved 55-gallon steel drums with closed tops. The drums were staged in a secured area on-Site pending off-Site disposal.

5.0 FIELD OBSERVATIONS AND ANALYTICAL RESULTS

This section summarizes the comprehensive field observations and laboratory analytical results for the Site during the RI. Soil analytical results are compared to the Part 375-6.8(a) Unrestricted Use SCOs and Restricted Residential Use SCOs. Groundwater analytical results are compared to the Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) for Class GA groundwater. Soil vapor results are compared to ambient air concentrations that were measured at the time of soil vapor sampling. The nature and extent of the Site contamination are discussed separately in Section 7.0.

Investigation locations for the Site include fifteen soil borings, nine monitoring wells, and eleven soil vapor points

Samples collected from these investigation locations include:

- Soil
    - 34 samples analyzed for Part 375 VOCs, SVOCs, metals, PCBs, and pesticides
- Groundwater
    - Eleven samples analyzed for VOCs, SVOCs, total and dissolved metals, PCBs, and pesticides
- Soil Vapor
    - Eleven samples analyzed for VOCs

Investigation locations are shown on Figure 5, and a summary of the soil, groundwater, and soil vapor samples is provided in Table 2.

The following sections describe the field observations and analytical data associated with the RI.

5.1 Geology and Hydrology

Provided below is a description of the stratigraphic layers and hydrogeology observed in the Site subsurface. A groundwater contour map is provided as Figure 4.

5.1.1 Urban Fill

A layer of urban fill ranging from about 8 to 11 feet bgs was encountered in borings within Lot 23. Fill was identified to depths of 5 to 11 feet bgs in Lot 4. This layer generally consisted of

medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal fragments.

5.1.2 Native Soil Layers

The fill is underlain by a layer of gray-brown to gray-black silt or clay layer with some silt, trace fine sand, and trace organics. This layer was encountered below the fill layer and extended to at least 18 feet bgs.

5.1.3 Bedrock

Bedrock was not encountered during the RI; however, the depth to bedrock in this area is estimated to range from about 50 to 70 feet bgs based on Langan's experience. Bedrock is anticipated to consist of predominantly hard sound gray schist.

5.1.4 Hydrogeology

Synoptic groundwater measurements were collected from seven on-Site and two off-Site wells on December 10, 2013 and March 14, 2014. Based on the most recent measurements, groundwater underlying the Site ranged from approximately el 1.25 to el 2.94 Queens Highway Datum. Based on a groundwater contour derived from the March 2014 measurements, groundwater is estimated to flow north to northeast. A map showing groundwater elevations, contours and inferred flow lines is provided as Figure 4. Water level data for all monitor wells is included in Table 1.

5.2 Soil Findings

5.2.1 Field Observations

Staining was observed in EB02 near the location of the existing UST. Petroleum odors were observed in EB02 and organic odors were observed in SB06, SB08, EB01, EB02, EB03, and EB04. PID readings above background were observed between 0.5 parts per million (ppm) in SB04 and 707.9 ppm in SB02.

Maximum PID readings per boring are included in the table below:

Soil Boring ID (feet bgs)	Observed Fill Interval (feet bgs)	Highest Observed PID Interval (feet bgs)	Max PID Reading (ppm)
SB01	0 to 10	11 to 12	421.8
SB02	0 to 10	11 to 12	707.9
SB03	0 to 12	-	0.0
SB04	0 to 11	10 to 11	0.5

Soil Boring ID (feet bgs)	Observed Fill Interval (feet bgs)	Highest Observed PID Interval (feet bgs)	Max PID Reading (ppm)
SB05	0 to 10	1 to 2	3.1
SB06	0 to 6	5 to 6	24.2
SB07	0 to 5	5 to 6	5.1
SB08	0 to 10.5	10 to 11	5.3
SB09	0 to 6.5	5 to 6	27.1
EB01	0 to 15	-	0.0
EB02	0 to 11	8 to 9	6.7
EB03	0 to 7	-	0.0
EB04	0 to 5	-	0.0
EB05	0 to 12	12.5 to 13.5	40.0
EB06	0 to 7	6.5 to 7.5	21.7

5.2.2 Analytical Results

Thirty-five soil samples, including two duplicates, were collected during the RI. All soil samples were analyzed for Part 375 VOCs, SVOCs, PCBs, metals, and pesticides. A summary of laboratory detections for soil samples collected with comparison to Unrestricted Use SCOs and Restricted Residential Use SCOs is provided in Table 3. SCO exceedances are shown on Figure 6. Full laboratory reports are included in Appendix H.

The following is a summary of SCO exceedances organized by analytical parameter. Unrestricted Use SCO exceedances are listed below and compounds that exceed Restricted Residential Use SCOs are **bold**. Note: * indicates that exceedances were only detected at an off-Site location.

VOCs

- acetone (not a contaminant of concern)

SVOCs

- phenol
- **benzo(a)anthracene**
- **benzo(a)pyrene**
- **benzo(b)fluoranthene**
- benzo(k)fluoranthene
- **chrysene**
- **indeno(1,2,3-cd)pyrene**
- **dibenzo(a,h)anthracene**
- 3-methylphenol/4-methylphenol

Metals

- **arsenic**
- **barium**
- hexavalent chromium
- **trivalent chromium**
- **copper**
- **manganese**
- nickel
- silver
- **lead**
- **mercury**
- selenium
- zinc

PCBs

- Aroclor 1260

Pesticides

- No pesticides exceedances.

5.3 Groundwater Findings

5.3.1 Field Observations

No free product or sheen was observed on groundwater during the RI; however, petroleum odors and elevated PID readings were observed at monitoring well MW09. PID headspace readings ranged from 0.0 ppm to 112 ppm (highest reading in monitoring well MW09) during the groundwater sampling events. Refer to section 5.1.4 for a discussion of hydrogeology.

5.3.2 Analytical Data

Nine groundwater samples, one sample per well, and two duplicate samples were collected. All groundwater samples were analyzed for VOCs, SVOCs, metals, pesticides, and PCBs. A summary of laboratory detections for groundwater samples collected during the RI with comparison to NYSDEC TOGS 1.1.1 AWQS for Class GA groundwater is provided in Table 4. Groundwater exceedances are shown on Figure 7. Full laboratory reports are included in Appendix H.

The following is a summary of exceedances organized by analytical parameter. Note: * indicates that exceedances were only detected at an off-Site location.

VOCs

- 1,1,1-trichloroethane
- 1,1-dichloroethane*
- 1,2,4-trimethylbenzene
- cis-1,2-dichloroethene
- isopropylbenzene
- n-butylbenzene
- n-propylbenzene
- sec-butylbenzene
- PCE
- toluene
- TCE
- vinyl chloride*

SVOCs

- benzo(a)pyrene
- indeno(1,2,3-cd)pyrene
- benzo(b)fluoranthene
- phenol
- 1,2-dichlorobenzene*
- 1,3-dichlorobenzene*

Dissolved Metals

- chromium*
- iron
- manganese
- selenium*
- sodium

Pesticides

- alpha-BHC

PCBs

- No PCBs were detected.

5.4 Soil Vapor Findings

Eleven soil vapor samples and two ambient air sample were collected over two days during the RI and were submitted for laboratory analyses of VOCs. Soil vapor analytical results were compared to ambient air collected during each day of sampling. A summary of laboratory results for each day of soil vapor sampling is provided in Table 5A and 5B. Full laboratory reports are included in Appendix H.

Total VOCs ranged from 181.11 µg/m^3 in SV02 to 2,563.02 µg/m^3 in SV10. During the December 10, 2013 sampling event, VOCs detected at greater concentrations in soil vapor than ambient air include. Note: * indicates that exceedances were only detected at an off-Site location.

- 1,1,1-trichloroethane
- 1,2,4-trimethylbenzene
- 1,3,5-trimethylbenzene
- 1,3-butadiene
- chloroform
- cyclohexane
- methyl tert butyl ether
- o-Xylene
- PCE
- carbon tetrachloride*
- 2,2,4-trimethylpentane
- 2-butanone
- 4-ethyltoluene
- 4-methyl-2-pentanone
- ethanol
- ethylbenzene
- methylene chloride
- p- & m- xylenes
- TCE
- acetone
- benzene
- carbon disulfide
- tetrahydrofuran
- heptane
- isopropanol
- n-hexane
- propylene
- toluene

During the March 7, 2014 sampling event, VOCs detected at greater concentrations in soil vapor than ambient air include:

- 1,1,1-trichloroethane
- 1,1-dichloroethane
- 1,2,4-trimethylbenzene
- 1,3,5-trimethylbenzene
- 1,3-butadiene
- 2-butanone
- ethylbenzene
- isopropanol
- 4-ethyltoluene
- 4-methyl-2-pentanone
- acetone
- benzene
- bromomethane
- carbon disulfide
- Freon-113
- n-hexane
- carbon tetrachloride
- chloroform
- cyclohexane
- 2-Hexanone
- ethanol
- ethyl acetate
- heptane
- o-xylene

- p/m-xylene
- PCE
- TCE
- 4-Ethyltoluene
- styrene
- tetrahydrofuran
- trichlorofluromethane
- tertiary butyl alcohol
- toluene
- vinyl chloride

PCE, TCE and benzene, toluene, ethylbenzene and xylene (BTEX) were detected in the soil vapor samples at greater concentrations than the ambient air sample and are considered the primary soil vapor contaminants of concern. PCE was found in all soil vapor samples, including ambient air, except for SV05 and ranged from 2.04 µg/m^3 (SV04) to 652 µg/m^3 (SV10). At soil vapor point SV10, PCE was detected at a concentration 153 times greater than ambient air and BTEX was detected at a concentration of 1,323.9 µg/m^3 (229 times greater than ambient air). TCE was found in three soil vapor samples and ranged from 11.1 µg/m^3 (SV01) to 54.8 µg/m^3 (SV10). A map showing soil vapor sample locations and results is provided as Figure 8.

5.5 Quality Control Results

Quality control sample results were verified during data review. Two duplicate samples were collected from soil and two from groundwater. Two trip blanks were collected and analyzed. Laboratory results for duplicate samples are presented in Table 3 and 4. Full laboratory reports are provided in Appendix H.

5.6 Data Usability

Data validation will be performed by a third party in accordance with the EPA validation guidelines for organic and inorganic review using Analytical Services Protocol Category B laboratory reports provided by Alpha.

5.7 Evaluation of Potential Areas of Concern

This section discusses the results of the RI with respect to the PAOCs identified at the Site prior to the start of the RI. The PAOCs are described in detail in Section 3.3.

5.7.1 PAOC-1: Known Groundwater Impacts

PAOC-1 Findings Summary

Groundwater exceedances of petroleum-related compounds were identified on the western side of Lot 4 (near the potential UST) and on the northeastern side of Lot 4 on the border shared with off-Site Lot 22. Chlorinated solvent groundwater impacts (PCE and TCE) were identified along the northeastern border near Purves Street. Chlorinated solvent groundwater concentrations were highest in MW1, the off-Site and most eastern monitoring well. Concentrations of chlorinated solvents in the groundwater decreased towards the west. In addition, soil samples did not indicate elevated levels of contaminants relating to the chlorinated solvents. This indicates a potential off-Site source.

Other groundwater impacts from SVOCs (only found off-Site in MW01) and metals (iron, manganese, sodium and selenium) are attributed to regional conditions and the general quality of fill in this area of New York City.

PAOC-1 Conclusions

Groundwater in the northeast portions of Lot 23 is impacted with PCE and TCE, with the highest concentrations found off-Site along Purves Street. The data shows there is an off-Site source. Groundwater in the western and northern portions of Lot 4 and likely the western portion of Lot 23 is impacted with petroleum-related compounds. Petroleum is likely related to historic Site operations and the potential UST. Groundwater in the central portion of off-Site Lot 22 is impacted with chromium. The off-Site chromium exceedance in groundwater may be the result of Site activities including manufacturing, labs, leather goods business, and plating equipment business. Other groundwater impacts from SVOCs and metals were found at one or more locations throughout the Site and are attributed to regional conditions.

5.7.2 PAOC-2: Potential UST and Petroleum Impacted Soil in the Western Portion of Lot 4:

PAOC-2 Findings Summary

Based on historic Sanborn maps, a potential gasoline UST was identified in the western portion of Lot 4. The geophysical survey performed on December 2, 2013 identified utilities located throughout the project area; however, a clear geophysical signal was not possible in the area of the potential gasoline UST due to accumulated water on the basement floor. A concrete patch, approximate 4 ft x 9 ft, was identified in the vicinity of the suspected UST. On March 7, 2014, during advancement of EB02 (adjacent to potential UST), refusal was encountered at the original proposed boring location at approximately 8 inches below grade within the existing concrete slab. In the bottom of the drilling shoe, petroleum odor and elevated PID readings up to 150.0 ppm were observed.

Petroleum-impacted material was identified through field observations of staining, odor, and elevated PID readings within boring EB02. EB02 was installed within the approximate location

of the existing UST. Staining, odors, and elevated PID readings were observed within approximately 5 to 10 feet bgs of EB02. Analytical results also indicate petroleum-impacted material within the vicinity of the potential UST. Petroleum-related VOC and SVOC exceedances were detected in soil, soil vapor and/or groundwater. The RI findings are consistent with previous Site investigation that resulted in a spill reporting to NYSDEC (Spill No. 1302045)

PAOC-2 Conclusions

Field observations indicate a petroleum release from the suspected UST adjacent to boring EB02. Analytical results from samples collected near the suspected tank (western portion of lot 4) found VOC and SVOC impacts in soil, soil vapor and/or groundwater. Petroleum impacts appear to be delineated because impacts were not observed in the 44th Drive sidewalk boring and groundwater monitoring well.

5.7.3 PAOC-3: Potential Soil Vapor Contamination

PAOC-3 Findings Summary

Eleven soil vapor samples (SV01 through SV11) were collected throughout the Site to investigate potential impacts to soil vapor.

Soil vapor analytical results were compared to ambient air collected on each day of sampling. Several VOCs, including petroleum and chlorinated-solvent related VOCs, exceeding the background concentrations were detected in all soil vapor samples throughout the Site. Maximum soil vapor concentrations (SV10) were identified for PCE at 652 µg/m^3 (153 times greater than ambient air), TCE at 54.8 µg/m^3 (51 times greater than ambient air) and BTEX at 1,323.9 µg/m^3 (229 times greater than ambient air).

PAOC-3 Conclusions

Soil vapor at the Site contains VOCs, most notably petroleum and chlorinated-solvent related VOCs, at concentration in excess of the ambient air samples collected. The highest soil vapor concentrations were identified in the eastern portion of the Site along Purves Street, corresponding to the location of elevated chlorinated concentrations in groundwater.

5.7.4 PAOC-4: Urban Fill:

PAOC-4 Findings Summary

Samples from the urban fill layer, potentially historic fill, contained VOC, PCB, SVOCs, and metals above Unrestricted Use SCOs. SVOC and metal concentrations exceeded Restricted Residential Use SCOs.

PAOC-4 Conclusions

Anomalously high concentrations of lead exceeding Restricted Residential Use SCOs were identified in fill at 0 to 2 feet bgs and 5 to 10 feet bgs throughout lot 4 and the southwest portion of lot 23. Anomalously high concentrations of chromium exceeding Restricted Residential Use SCOS were identified in shallow Site soil/fill (surface grade to approximately 6 feet bgs) in the eastern portion of Lot 4 and western portion of Lot 23.

6.0 QUALITATIVE HUMAN AND FISH/WILDLIFE EXPOSURE ASSESSMENT

6.1 Human Health Exposure Assessment

Site Setting

Human health exposure risk was evaluated for both current and future Site and off-Site conditions, in accordance with the May 2010 NYSDEC Final DER-10 Technical Guidance for Site Investigation and Remediation. The assessment includes an evaluation of potential sources and migration pathways of Site contamination, potential receptors, exposure media, and receptor intake routes and exposure pathways.

Current Conditions

The Site is comprised of two lots; Lots 4 and 23. Lot 4 is improved with a vacant one-story commercial building with garage/warehouse. Lot 23 is vacant and partially covered with a deteriorating concrete slab that has been overgrown with vegetation.

Proposed Conditions

The proposed development includes demolition of existing Site building and construction of a multi-story, residential building, which will encompass the entire footprint of the Site. Construction may require excavation of soil and fill material in select locations up to a maximum depth of four feet to accommodate foundation components. General excavation for development is not expected below the groundwater table. Additional excavation may be required to remediate the Site.

Summary of Environmental Conditions

Soil/fill samples found VOCs, PCBs, and several SVOCs and metals that exceed their respective Unrestricted Use SCOs, with SVOCs and metals above Restricted Residential Use SCOs. Soil contaminants of concerns (COC) include VOCs, SVOCs, PCBs and metals.

Several SVOC exceedances were detected in EB02, EB04, SB03, SB06, SB07, SB08, and SB09. Metal exceedances were detected in EB01 (off-Site boring on the 44th Drive sidewalk), EB02, EB03, EB04, EB06, SB05, SB06, SB07, SB08, and SB09. The PCB, Aroclor 1260, was detected in SB02.

Groundwater samples showed concentrations of VOCs, SVOCs, pesticides and metals which exceeded their respective TOGS AWQS throughout the Site. Chlorinated solvents (PCE and TCE) in groundwater were reported at the highest concentrations in off-Site monitoring well MW01 in the Purves Street sidewalk. The highest on-Site concentrations of chlorinated

solvents were found in MW02, along the eastern border near Purves Street. Chlorinated solvent groundwater concentrations seem to indicate an off-Site source (off-Site groundwater concentrations are higher than on-Site concentrations). VOC and SVOC exceedances of petroleum-related compounds were found within groundwater in Lot 4 and on the border between Lot 4, Lot 23, and off-Site Lot 22. Metal exceedances were reported throughout the Site. One pesticide exceedance, Alpha-BHC, was detected in MW06.

Soil vapor samples revealed the presence of several VOCs, including petroleum and chlorinated-solvent related VOCs.

Conceptual Site Model

A conceptual Site model has been developed based on the findings of the RI. The purpose of the conceptual Site model is to develop a simplified framework for understanding the distribution of impacted materials, potential migration pathways, and potentially complete exposure pathways, as discussed below.

Potential Sources of Contamination

Potential sources of contamination at the Site have been identified in Section 3.3 and are based on investigations completed for the Site. The potential sources of contamination were identified as historic use of the Site, potential UST, groundwater contamination (likely from an off-Site source), and urban fill.

Exposure Media

The impacted media includes soil, soil vapor, and groundwater. Analytical data indicates that the fill material underlying the Site is contaminated with a VOC, PCB, SVOCs and metals. Groundwater impacts include a pesticide, VOCs and metals. Soil vapor across the Site is contaminated with VOCs.

Because VOCs are present at elevated concentrations in soil vapor, there is potential, in the absence of remediation, engineering and/or institutional controls, for vapors to accumulate under the proposed building slabs and impact indoor air within the proposed building.

Receptor Populations

Lot 4 is currently vacant and capped with asphalt and concrete. The lot 4 building is locked. Lot 23 and off-Site Lot 22 are vacant and partially capped with deteriorating concrete and overgrown with vegetation. The owner is currently pursuing fencing to enclose Lot 23 in preparation for development. Human receptors are limited to occasional Site visitors and workers involved in pre-development (e.g., investigation) activities. The entire Site will be enclosed with fencing during development by the contractor. During development, human

receptors are limited to construction and remediation workers; authorized guests such as regulators, consultants and clients visiting the Site and the public adjacent to the Site. Under future conditions, receptors will include the new building tenants, workers, and visitors to the residential properties including children.

Potential Exposure Pathways – On-Site

Current Conditions

Soil at the Site has been shown to be contaminated. The Site surface cover is composed of concrete (building slab) in Lot 4 and Lot 23 is partially capped with deteriorating concrete and overgrown with vegetation. There is a potential exposure pathway if the Site surface cover is penetrated (e.g., during Site investigation when boring or test pit excavations are performed). The potential pathway is through dermal absorption, inhalation and ingestion. Activity is limited to authorized guests.

Groundwater at the Site has been shown to be contaminated. Groundwater in New York City is not used as a potable water source. There is a potential exposure pathway during groundwater sampling associated with Site investigation. The potential pathway is through dermal absorption, inhalation and ingestion. Activity is limited to authorized guests.

Soil vapor at the Site has been shown to be contaminated. There is a potential exposure pathway during soil vapor sampling associated with Site investigation. The potential pathway is through inhalation. Activity is limited to authorized guests.

Construction/Remediation Condition

Construction and remediation activities at the Site may result in potential exposures to Site contaminants. Construction and remedial activities include construction of foundation components and excavation and removal of impacted soil and exposure to groundwater during potential dewatering. Therefore, the potential exists for exposure of soil and groundwater COCs to construction and remediation workers via dermal absorption, ingestion, and inhalation. In addition, activities may result in exposure to the public adjacent to the Site through potential generation and off-Site migration of dust or vapor containing Site COCs.

Soil vapor results indicated the presence of VOCs; therefore, the potential exists for construction and remediation workers to be exposed to soil vapor COCs via inhalation. Activities may also result in exposure to the public adjacent to the Site through volatilization of vapors into the air and potential off-Site migration.

Proposed Future Conditions

The proposed development is anticipated to include a multi-story, residential building that will encompass the entire footprint of the Site. Upon completion of the new development, the Site will be capped with the concrete building foundation. This barrier will prevent direct exposure to impacted soil and groundwater that may be left in place; therefore the pathway will not be complete.

There is no pathway for ingesting groundwater COCs, since the Site and surrounding areas obtain their drinking water supply from surface water reservoirs located upstate and not from groundwater; therefore, the groundwater will not be pumped from wells or intended for consumption.

The presence of VOCs in the soil, groundwater, and soil vapor creates potential, in the absence of remediation, engineering and/or intuitional controls, for VOC vapors to volatilize and potentially accumulate in the proposed building and impact future users. Points of exposure include potential cracks in the foundation or lower-level slab of the proposed development. Routes of exposure may include inhalation of vapors entering the building.

Potential Exposure Pathways – Off-Site

Soil has the potential to be transported off-Site by wind in the form of dust or on the tires of vehicles or equipment leaving the Site during development and remediation activities. Other identified exceedances are considered unlikely to have a potential off-Site exposure pathway. Metals and SVOC impacts to groundwater are attributed to historic fill or regional groundwater quality and are not considered a localized concern. TCE and PCE impacts to groundwater in the northeast corner of the Site are likely from an off-Site source, as detailed in Section 5.7.1. Petroleum impacts in Lot 4 do not appear to be migrating off-Site based on the soil boring and groundwater well in the 44th Drive sidewalk.

Evaluation of Human Health Exposure

Based upon the conceptual Site model and the review of environmental data, complete on-Site exposure pathways appear to be present based on the current, construction and remediation, and future conditions. The complete exposure pathways indicate there is a risk of exposure to humans from Site contaminants via exposure to soil, soil vapor, and groundwater.

Complete exposure pathways have the following five elements: 1) a contaminant source; 2) a contaminant release and transport mechanism; 3) a point of exposure; 4) a route of exposure; and 5) a receptor population. A discussion of the five elements comprising a complete pathway as they pertain to the Site is provided below.

Current Conditions

Contaminant sources include urban fill with varying levels of SVOCs and metals, one VOC and PCB, a potential abandoned UST and petroleum impacts to soil and groundwater, TCE and PCE in groundwater, and PCE, TCE, BTEX and other VOCs in soil vapor.

Contaminant release and transport mechanisms include contaminated soil transported as dust or disturbed during excavation (dermal, ingestion), volatilization of contaminants from the soil and groundwater matrices to the soil vapor phase (inhalation), and existing soil vapor contaminants (inhalation).

The point and route of exposure and receptor population is authorized guests and investigation personnel ingesting, inhaling or coming into contact with contaminated soil, groundwater and soil vapor.

Under current conditions, the likelihood of exposure to humans is limited, as the Site surface cover generally prevents contact with soils, groundwater is not currently accessible, and soils are not currently being disturbed except during investigation. In addition, the existing building on Lot 4 is kept locked and activity is limited to authorized guests.

All five elements exist; therefore, completed exposure pathways are present. However, the risk can be minimized by maintaining Site security, and monitoring and wearing the appropriate personal protective equipment during investigation activities. Potential exposures would be of short duration limited only to intrusive activities. In accordance with a Health and Safety Plan and a Community Air Monitoring Plan, measures such as conducting an air-monitoring program, donning personal protective equipment, and applying vapor and dust suppression measures to prevent off-Site migration of contaminants during investigation will be implemented. Such measures would prevent completion of these potential migration pathways.

Construction/Remediation Activities

During development and remediation activities, the contaminant sources are the same as for current conditions. Points of exposure include disturbed and exposed contaminated soil during excavation, contaminated dust and organic vapors arising from the excavation activities, and contaminated groundwater that will be encountered during excavation and potential dewatering operations. Routes of exposure include ingestion and dermal absorption of contaminated soil and groundwater, inhalation of organic vapors arising from contaminated soil and groundwater, and inhalation of dust arising from contaminated soil. The receptor population includes the construction and remediation workers and, to a lesser extent, the public adjacent to the Site.

All five elements exist; therefore, completed exposure pathways are present. However, the risk can be minimized by applying appropriate health and safety measures, such as monitoring the air for organic vapors and dust, using vapor and dust suppression measures, maintaining Site security, and wearing the appropriate personal protective equipment. In accordance with a Health and Safety Plan, a Soil Management Plan, and a Community Air Monitoring Plan, measures such as conducting an air-monitoring program, donning personal protective equipment, and applying vapor and dust suppression measures to prevent off-Site migration of contaminants during construction will be implemented. Such measures would prevent completion of these potential migration pathways.

Proposed Future Conditions

For the proposed future conditions, some residual contaminants may remain and may include those listed under current conditions. Contaminant release and transport mechanisms include volatilization of contaminants from soil vapor or the groundwater matrix to the soil vapor phase. Points of exposure include potential cracks in the foundation or lower-level slab of the proposed development. Routes of exposure may include inhalation of vapors entering the building; these routes may not exist depending on the effectiveness of the remediation. The receptor population includes the building tenants, residential property employees, and visitors.

All five elements exist; therefore, a complete exposure pathway is present. However, the risk can be minimized by proper installation of soil vapor mitigation measures (e.g., vapor barrier) and the composite Site cap system.

Off-Site Migration

The potential off-Site migration of Site contaminants is not expected to result in a complete exposure pathway for current, construction and remediation, or future conditions for the following reasons:

- Air monitoring will be conducted for particulates (i.e., dust) and VOCs during all intrusive activities as part of a community air monitoring program. Dust and/or vapor suppression techniques will be employed to limit potential for off-Site migration of Site soils and vapors.
- Vehicle tires and undercarriages will be washed as necessary prior to leaving the Site to prevent tracking material off-Site.
- The Site is located in a highly urbanized area with continuous impervious (i.e. concrete or asphalt) surface covering.
- Groundwater in New York City is not used as a potable water source.

Human Health Exposure Assessment Conclusions

The following conclusions were developed from this human health exposure assessment:

1. There is a moderate risk of exposure under current conditions. Exposure to dust from contaminated soil is limited by the Site cover consisting of a concrete slab and vegetation. The exposure risk can be avoided or minimized by following appropriate health and safety and vapor and dust suppression measures during investigation activities.
2. There is a moderate risk of exposure during construction and remediation activities. This risk can be avoided or minimized by following the appropriate health and safety, vapor and dust suppression, and Site security measures.
3. The existence of a complete exposure pathway for Site contaminants to human receptors during proposed future conditions is unlikely, as a large quantity of soil will be excavated and transported to an off-Site disposal facility, groundwater is not used as a potable water source in New York City, and the potential pathway for soil vapor intrusion into the building would be addressed through the use of soil vapor mitigation measures (e.g., vapor barrier and depressurization system).
4. It is unlikely that a complete exposure pathway exists for the migration of Site contaminants to off-Site human receptors for current, construction phase, or future conditions. Monitoring and control measures would be used during investigation and construction to prevent completion of this pathway. Under future conditions, the Site will be remediated and engineering controls can be implemented to prevent completion of this pathway.

6.2 Fish and Wildlife Exposure Assessment

NYSDEC DER-10 requires an on-Site and off-Site Fish and Wildlife Resources Impact Analysis (FWRIA) if certain criteria are met. Based on the requirements stipulated in Section 3.10 and Appendix 3C of DER-10, there was no need to prepare an FWRIA for the Site. A completed form of DER-10 Appendix 3C is included as Appendix J.

7.0 NATURE AND EXTENT OF CONTAMINATION

This Section evaluates the nature and extent of soil, groundwater and soil vapor contamination. The nature and extent of the contamination is derived from a combination of field observations and analytical data that were discussed in Section 5.0.

7.1 Urban Fill

The Site-wide fill layer, potentially historic fill, extends from surface grade to depths of 8 to 11 feet bgs in Lot 23, and to depths of 5 to 11 feet bgs in lot 4. The fill layer contained varying levels of impacts that are discussed in more detail in this section. The discussion is divided by the following contaminant classifications:

1. SVOC-Contaminated Material
2. Metals-Contaminated Material
3. VOC-Contaminated Material
4. PCB-Contaminated Material

7.1.1 SVOC-Contaminated Material

SVOCs were detected at concentrations exceeding Unrestricted Use SCOs in soil collected from the historic fill in seven of fifteen soil borings. Compounds that were detected above Restricted Residential Use SCOs are in **bold**. The COCs include:

- 3-methylphenol/4-methylphenonl
- **benzo(a)anthracene**
- **benzo(a)pyrene**
- **benzo(b)fluoranthene**
- benzo(k)fluoranthene
- **chrysene**
- **dibenzo(a,h)anthracene**
- **indeno(1,2,3-cd)pyrene**
- phenol

SVOC exceedances are mostly ubiquitous and were generally detected at concentrations typical of New York City urban fill throughout the Site.

7.1.2 Metal-Contaminated Material

Metals were detected at concentrations exceeding Unrestricted Use SCOs in soil collected from the historic fill in twelve of fifteen soil borings. Arsenic, barium, chromium, copper, lead, manganese, and mercury were detected above Restricted Residential Use SCOs. Anomalously higher lead concentrations were reported in the central and western portions of the Site and

include potentially hazardous lead concentrations (up to 1,800 mg/kg). Anomalously high concentrations of chromium exceeding Restricted Residential Use SCOS were identified in shallow Site soil/fill (surface grade to approximately 6 feet bgs) in the eastern portion of Lot 4 and western portion of Lot 23. Potential Site sources include historic Site operations or the quality of fill previously placed at the Site.

7.1.3 VOC-Contaminated Material

One VOC, acetone, was detected in boring SB04 at a concentration of 0.2 mg/kg from 0 to 1 feet bgs, in boring SB09 at a concentration of 0.053 mg/kg from 5 to 6 feet bgs, and in boring EB01 at a concentration of 0.055 mg/kg from 15 to 17 feet bgs. These concentrations are three to four orders of magnitude below the Restricted Residential SCOs and are not considered a contaminant of concern.

7.1.4 PCB-Contaminated Material

One PCB, Aroclor 1260, exceeded the Unrestricted Use SCO in boring SB02 between 6 to 7 feet bgs. The concentration of Aroclor 1260 did not exceed the Restricted Residential SCO.

7.2 Groundwater Contamination

Evaluation of the Site groundwater analytical results identified the following COCs for groundwater, which are discussed in more detail in this Section:

1. VOC Contamination
2. SVOC Contamination
3. Metals Contamination
4. Pesticide Contamination

7.2.1 VOC Contamination

VOC exceedances of TOGS AWQS were found in groundwater at monitoring wells MW01 (off-Site well on Purves Street), MW02, MW03, MW06, MW09, and MW10. The COCs include the following VOCs: 1,1,1-trichloroethane, 1,1-dichloroethane, 1,2,4-Trimethylbenzene, cis-1,2-dichloroethene (1,2-DCE), isopropylbenzene, n-butylbenzene, n-propylbenzene, sec-butylbenzene, tetrachloroethene, toluene, trichloroethene, and vinyl chloride. The three groundwater contaminant issues include the following:

- PCE and TCE exceedances were found along the eastern border of the Site near Purves Street and are likely related to an off-Site source (off-Site groundwater concentrations

are higher than on-Site concentrations). Maximum PCE and TCE concentrations were 1,500 µg/l and 440 µg/l, respectively at the off-Site monitoring well MW01. Chlorinated groundwater contaminants are limited to the eastern portion of the Site and appear to be contained by the potential silt/clay confining layer at approximately 10 to 15 feet below the Purves sidewalk grade.

- Petroleum related groundwater exceedances were identified in Lot 4 and likely associated with the UST and historic Site operations (e.g., garage, manufacturing). Isopropylbenzene was detected at 5.9 µg/l adjacent to the suspected UST; however, petroleum impacts were not identified in the 44th Drive sidewalk boring/monitoring well located immediately west of the suspected tank. Toluene was identified in MW10 at 7.8 µg/l along the northeastern boundary of Lot 4. No other exceedances of toluene in groundwater were detected at the Site.

7.2.2 SVOC Impacts

SVOC exceedances of TOGS AWQS were limited to the off-Site well (MW01) on Purves Street and MW10 near the northern property line of Lot 4. Concentrations of 1,2-dichlorobenzene, 1,3-dichlorobenzene, benzo(a)pyrene, benzo(b)fluoranthene, indeno(1,2,3-cd)pyrene, and phenol were detected above TOGS standards. Exceedances of SVOCs in MW01 (off-Site well) and MW10 are likely the result of the urban fill or an off-Site source. The off-Site SVOC impacts from MW01 did not appear to be migrating onto the Site based on nearby monitoring well MW02.

7.2.3 Metal Impacts

Groundwater samples were submitted for analysis of unfiltered and dissolved metals. The filtered samples contained exceedances of chromium, iron, manganese, sodium, and selenium. Metals in the groundwater likely arise from the quality of the fill material and are related to regional groundwater quality. The chromium exceedance in groundwater in off-Site Lot 22 may be the result of Site activities including manufacturing, labs, leather goods business, and plating equipment business. Chromium groundwater contamination was localized to the one off-Site monitoring well and does not appear to be a Site-wide issue. Chromium in groundwater was not identified in other off-Site monitoring wells and does not appear to be migrating.

7.2.4 Pesticide Impacts

Alpha-BHC exceeded the TOGS AWQS and was limited to MW06 in the central portion of lot 4. Pesticides were not detected in soil samples; however, the exceedance may be the result of the fill condition. Pesticide contamination in groundwater at the Site does not appear to be migrating off-Site.

7.3 Soil Vapor Contamination

Total VOCs ranged from 181.11 µg/m^3 in SV02 to 2,563.02 µg/m^3 in SV10. VOCs detected at greater concentrations in soil vapor than ambient air include: 1,1,1-trichloroethane, 1,1-dichloroethane, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 2-butanone, 4-ethyltoluene, 4-methyl-2-pentanone, acetone, benzene, bromomethane, carbon disulfide, carbon tetrachloride, chloroform, cyclohexane, dichlorodifuoromethane, ethanol, ethyl acetate, ethylbenzene, freon-113, heptane, isopropanol, methyl tert butyl ether, methylene chloride, n-hexane, o-Xylene, p- & m- xylenes, tertiary butyl alcohol, propylene, PCE, tetrahydrofuran, toluene, TCE, trichlorofluromethane, and vinyl chloride.

Site-wide VOC impacts to soil vapor may result from the potential UST, historic use of the Site or an unknown off-Site source to the east of the Site along Purves Street.

8.0 CONCLUSIONS

The RI was implemented between December 2, 2013 and March 14, 2014. The findings summarized herein are based on both qualitative data (field observations and instrumental readings), and laboratory analytical results of soil, groundwater, and soil vapor samples collected during the RI. Findings and conclusions are as follows:

1. Stratigraphy: Overburden at the Site consists of an urban fill layer, potentially historic fill, beneath the Site surface cover (concrete slab in lot 4 and deteriorating concrete with overgrown vegetation in lot 23), extending to depths of approximately 8 to 11 feet bgs within lots 22 and 23, and to 5 to 11 feet bgs in lot 4. The fill layer is comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal fragments. Underlying the fill are native soil deposits comprised of gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. This layer was encountered below the fill layer and extended to at least 18 feet bgs. Bedrock was not encountered during this investigation; however, based on Langan's experience in this area, it is estimated to be hard sound gray schist bedrock at depths of approximately 50 to 70 feet bgs.
2. Hydrogeology: Groundwater underlying the Site ranged from approximately el 1.25 to el 2.94 (7.95 to 3.26 feet bgs). Based on a groundwater contour derived from the March 2014 measurements, local groundwater flow is estimated to flow north to northeast.
3. Urban Fill Impacts: The fill layer contained VOC, PCB, SVOC, and metal exceedances of Unrestricted Use SCO. SVOC and metal concentrations exceeded Restricted Residential Use SCOs. The VOC (acetone) was not detected above the Restricted Residential SCO and is not a COC. The PCB was found only in the northeast corner of the Site adjacent to Purves Street. SVOCs and metals were detected at concentrations exceeding the SCOs throughout the fill layer. Anomalously high concentrations of lead exceeding Restricted Residential Use SCOs were identified in fill at 0 to 2 feet bgs and 5 to 10 feet bgs throughout lot 4 and the southwest portion of lot 23. Anomalously high concentrations of chromium exceeding Restricted Residential Use SCOS were identified in shallow Site soil/fill (surface grade to approximately 6 feet bgs) in the eastern portion of Lot 4 and western portion of Lot 23
4. Suspected UST and Petroleum Impacted Soil: One suspected UST was identified during the investigation in the western portion of lot 4. Petroleum-impacted material was identified through field observations (staining, odor, and elevated PID readings) and analytical results. The petroleum-impacted material was identified in Lot 4 near the suspected UST.

5. Groundwater Impacts: Groundwater VOC, SVOC, metal, and pesticide concentrations exceeded TOGS AWQS.
    a. PCE and TCE exceedances were found along the eastern border of the Site near Purves Street and are likely related to an off-Site source (off-Site groundwater concentrations are higher than on-Site concentrations).
    b. Petroleum related groundwater exceedances were identified in Lot 4 likely associated with the UST and historic Site operations (e.g., garage, manufacturing).
    c. Metals and SVOC contaminants in the groundwater likely arise from the quality of the fill material and are related to regional groundwater quality. The off-Site chromium exceedance in groundwater may be the result of Site activities including manufacturing, labs, leather goods business, and plating equipment business.
6. Soil Vapor Impacts: Soil vapor sample results show the presence of multiple VOCs above ambient air sample results across the Site. The highest concentrations of PCE, TCE, and BTEX concentrations were identified along the eastern boundary of the Site adjacent to Purves Street.
7. Sufficient analytical data was gathered during this RI to establish Site-specific soil cleanup levels and to develop a remedy for the Site. The remedy will be described and evaluated in a Remedial Action Work Plan (RAWP) prepared in accordance with NYS BCP guidelines. The remedy for the Site will need to address fill impacted with a VOC, PCB, SVOCs, metals and petroleum; groundwater impacted with VOCs, SVOCs, metals and a pesticide; soil vapor impacted with VOCs; and a contingency for the removal and closure of the encountered UST.

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the official compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential Use SCOs
2. Only detected compounds are shown in the table.
3. NYSDEC Part 375 Unrestricted Use SCO exceedances are highlighted.
4. NYSDEC Part 375 Restricted Residential Use SCO exceedances are highlighted and **bold**.
5. Non-detected compounds with reporting limits that exceed NYSDEC Part 375 Unrestricted Use SCO are *italicized*.
6. VOCs = Volatile Organic Compounds
7. SVOCs = Semivolatile Organic Compounds
8. ND = Not Detected
9. mg/kg = milligrams per kilogram
10. ~ = Indicates that no regulatory limit has been established for this analyte
11. Duplicate sample DUP01_030714 was collected from EB05_5-6.5 and DUP01 was collected from SB02_11-12

Qualifiers:

U = Analyte included in the analysis, but not detected.
J = Analyte detected at or above the Method Detection Limit but below the Reporting Limit; therefore, the result is an estimated concentration
UJ = Indicates that the detection limit for the analyte is approximate. Identifies a deficiency in the date generation process.

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the official compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential Use SCOs
2. Only detected compounds are shown in the table.
3. NYSDEC Part 375 Unrestricted Use SCO exceedances are highlighted.
4. NYSDEC Part 375 Restricted Residential Use SCO exceedances are highlighted and **bold**.
5. Non-detected compounds with reporting limits that exceed NYSDEC Part 375 Unrestricted Use SCO are *italicized*.
6. VOCs = Volatile Organic Compounds
7. SVOCs = Semivolatile Organic Compounds
8. ND = Not Detected
9. mg/kg = milligrams per kilogram
10. ~ = Indicates that no regulatory limit has been established for this analyte
11. Duplicate sample DUP01_030714 was collected from EB05_5-6.5 and DUP01 was collected from SB02_11-12

Qualifiers:

U = Analyte included in the analysis, but not detected.
J = Analyte detected at or above the Method Detection Limit but below the Reporting Limit; therefore, the result is an estimated concentration
UJ = Indicates that the detection limit for the analyte is approximate. Identifies a deficiency in the date generation process.

Table 3A
Soil Sample Detection Summary -VOCs and SVOCs
27-21 44th Drive and 44-18 Purves Street

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the official compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential Use SCOs
2. Only detected compounds are shown in the table.
3. NYSDEC Part 375 Unrestricted Use SCO exceedances are highlighted.
4. NYSDEC Part 375 Restricted Residential Use SCO exceedances are highlighted and **bold**.
5. Non-detected compounds with reporting limits that exceed NYSDEC Part 375 Unrestricted Use SCO are *italicized*.
6. VOCs = Volatile Organic Compounds
7. SVOCs = Semivolatile Organic Compounds
8. ND = Not Detected
9. mg/kg = milligrams per kilogram
10. ~ = Indicates that no regulatory limit has been established for this analyte
11. Duplicate sample DUP01_030714 was collected from EB05_5-6.5 and DUP01 was collected from SB02_11-12

Qualifiers:

U = Analyte included in the analysis, but not detected.
J = Analyte detected at or above the Method Detection Limit but below the Reporting Limit; therefore, the result is an estimated concentration
UJ = Indicates that the detection limit for the analyte is approximate. Identifies a deficiency in the date generation process.

8. mg/kg = milligrams per kilogram
9. ~ = Indicates that no regulatory limit has been established for this analyte
10. Duplicate sample DUP01_030714 was collected from EB05_5-6.5 and DUP01 was collected from SB02_11-12

Qualifiers:
U = Analyte included in the analysis, but not detected
J = Analyte detected at or above the Method Detection Limit but below the Reporting Limit; therefore, the result is an estimated concentration

Notes:
1. Groundwater sample analytical results were compared to NYSDEC Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance Values for class GA. groundwater
2. Only detected compounds are shown in the table.
3. TOGS AWQS exceedances are highlighted and **bold**.
4. Non-detected compounds with reporting limits that exceed TOGS AWQS are *italicized*.
5. Duplicate sample DUP02 was collected from MW06 and MWDUP01_031414 was collected from MW11.
6. VOCs = Volatile Organic Compounds
7. SVOCs = Semivolatile Organic Compounds
8. ND = Not Detected
9. mg/kg = milligrams per kilogram
10. ~ = Indicates that no regulatory limit has been established for this analyte
11. - = Indicates that compound was not analyzed

Qualifiers:
U = Analyte included in the analysis, but not detected.
J = Analyte detected at or above the Method Detection Limit but below the Reporting Limit; therefore, the result is an estimated concentration.
UJ = Indicates that the detection limit for the analyte is approximate. Identifies a deficiency in the date generation process.

Notes:
1. Groundwater sample analytical results were compared to NYSDEC Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance Values for class GA. groundwater
2. Only detected compounds are shown in the table.
3. TOGS AWQS exceedances are highlighted and **bold**.
4. Non-detected compounds with reporting limits that exceed TOGS AWQS are *italicized*.
5. Duplicate sample DUP02 was collected from MW06 and MWDUP01_031414 was collected from MW11.
6. VOCs = Volatile Organic Compounds
7. SVOCs = Semivolatile Organic Compounds
8. PCBs = Polychlorinated Biphenyls
9. ND = Not Detected
10. mg/kg = milligrams per kilogram
11. ~ = Indicates that no regulatory limit has been established for this analyte
12. - = Indicates that compound was not analyzed

Qualifiers:
U = Analyte included in the analysis, but not detected.
J = Analyte detected at or above the Method Detection Limit but below the Reporting Limit; therefore, the result is an estimated concentration

Notes:
1. Only detected compounds are shown in table.
2. µg/m3 = micrograms per cubic meter.
3. Soil vapor analytical results are compared to ambient air collected on 3/7/2014.
4. Compounds detected above ambient air concentrations are highlighted and **bold.**

Qualifiers:
U= Analyte included in the analysis, but not detected.

1.0 INTRODUCTION

Environmental Business Consultants (EBC) has prepared the following Phase II Subsurface Investigation Report for properties located at 27-21 44th Drive and 44-18 Purves Street (Block 268, Lots 4, 22, 23), in Long Island City, Queens, New York 11101 ("the Site"). The subsurface investigation was conducted to investigate recognized environmental conditions identified in a Phase I Environmental Site Assessment report prepared for Lot 4 by EBC in October 2011 as well as the general environmental condition of Lots 22 and 23. The work was conducted on behalf of 44 LIC LLC to identify and characterize potential contaminants within the surface/subsurface soils and groundwater at the Site to support future redevelopment.

1.1 Site Location and Description

The Site is located in the City of New York and Borough of Brooklyn (Kings County) and is identified as Block 268, Lots 4, 22 and 23. The Site includes three adjoining lots located between Purves Street and 44th Drive with frontage on both streets. Lot 4 is a square shaped lot consisting of 100.4 feet of street frontage on 44th Drive, and a maximum of 98.46 feet deep. Lot 4 is developed with a 1-story warehouse and full walkout cellar that opens to the adjoining lots along Purves Street which is at a lower elevation. The building can be accessed from 44th Drive or from the cellar level through Lots 22 and 23.

Lots 22 and 23 are adjacent rectangular lots each with 25 feet of frontage along Purves Street and are 100 feet deep. Both lots are currently vacant with vegetative cover. The total area of the three lots combined is 14,600 ft^2 (0.335 acres). The property is owned by 44 LIC, LLC.

The area surrounding the subject property consists of a mix of residential and commercial properties. The elevation of the Site is approximately 17 feet above the National Geodetic Vertical Datum (NGVD). The depth to groundwater beneath the Site was encountered at approximately 9 feet below basement level on Lot 4 and below surface grade of Lots 22 and 23. Based on regional groundwater contour maps, groundwater is expected to flow to the west toward the East River.

1.2 Site Background

1.2.1 Phase I Environmental Site Assessment, October 2011

A Phase I Environmental Site Assessment (ESA) was completed by Environmental Business Consultants, in October of 2011 for a portion of the Site (Block 268, Lot 4).

The Phase I report indicated that historical information (DOB records, Sanborn Maps, City Directory listings, and internet search) reviewed for the subject site identified the subject site as being developed in the early 1920's with the one-story building (with full basement) that currently stands at the site. In 1936, the building was used as a first floor parking garage, and the basement was used for storage of furniture. The 1936 Sanborn map shows a gasoline tank in the front of the building. In 1947, the basement was used as a paper warehouse, and the first floor parking garage space was used as a photo chemical warehouse. The gasoline tank is not drawn on the 1947 Sanborn map. The 1970 Sanborn map simply labels the building as commercial or manufacturing in 1960, but city directory listings

provided for 1962 indicate the building was used as an automotive/truck rental facility. All of the Sanborn maps from 1977 to 2006 label the building as an auto body shop, which correlates with the city directory listings and internet findings, which note Tul Mor Auto Service, Inc. in 1970, Alvic Foreign Auto Repair in 1983, NE Auto Repair, Inc. in 2000 and Northeastern Auto Repair, Inc. in the mid 2000's.

EBC concluded that based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, the following recognized environmental conditions were noted for the site:

- Evidence indicating the presence of a gasoline underground storage tank underneath the concrete slab of the basement floor. The 1936 Sanborn map notes a gasoline tank near the front of the building. A vent pipe indicative of a gasoline tank is visible on the roof of the building near the southern garage door, and the remnants of a concrete dispenser island are visible immediately behind the garage door. The vent pipe was traced to the basement to a patch in the concrete floor.

Based on the age of the gasoline tank (85 years), EBC recommended the following actions:

- A Phase II Subsurface Investigation to include the collection and laboratory analysis of both soil and groundwater samples.
- Remove the gasoline tank and collect endpoint soil samples in accordance with NYS DER 10 / Technical Guidance for Site Investigation and Remediation
- Properly register and deregister the underground storage tank with the NYSDEC by completing and submitting a NYSDEC Petroleum Bulk Storage Application.
- Submit a Tank Removal Affidavit with the New York City Fire Department.
- Submit a Tank Closure Report to the NYSDEC.

Although the Phase I Report did not include recommendations for lots 22 and 23, the environmental history of both lots were evaluated in the Phase I. Lots 22 and 23 were originally developed prior to 1885 as 2 and 3-story residential buildings. From 1936 through 1950 both lots were part of an operation identified as "Controller Manufacturing". From 1970 through 2006 Lot 22 is shown as "welding and Repairs with directory listings that include Rozilda labs, Leather Goods, plating equipment, manufacturing and Artisan Designs. Lot 23 is shown as vacant from 1970 on with a single listing for Russell Cress Co. in 2005. The building on Lot 22 was demolished in 2008 and both lots are vacant.

2.0 SUBSURFACE INVESTIGATION

The field work portion of the Phase II was performed on May 10 and 17, 2013 and consisted of the collection and analysis of soil and groundwater samples. Drilling services were provided by Eastern Environmental Solutions of Manorville, NY. Analytical services were provided by Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301)

2.1 Soil Sampling

Four soil borings were performed in Lots 22 and 23 to a depth of 20 feet below grade on May 10, 2013. Due to restricted access an additional two borings were performed around the suspect tank in Lot 4 of the Site to a depth of 10 feet below the basement slab on May 17, 2013. The approximate locations of the tank and the soil borings are shown on **Figure 2**.

Soil samples from each soil boring location were collected using a five foot steel dual tube sampler with acetate liners and Geoprobe direct-push equipment. For each of the soil borings, soil samples were collected continuously from grade to the termination depth of the soil boring. Soil cores were field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination by a qualified environmental professional. Boring logs are provided in **Appendix A**.

During the May 10, 2013 site visit four soil borings were advanced to 20 feet below grade in Lots 22 and 23 (44-18 Purves Street). A sample was retained from the groundwater interface (7-10') of soil boring B1 and B2. A deeper sample was retained (12-15') from soil sample locations B3 and B4. Soil boring B2 exhibited a slight odor and low PID (10-20 ppm) readings around the groundwater interface. Due to limited access to the building basement on Lot 4 no borings were performed on May 10, 2013

An additional two soil borings were performed on May 17, 2013 around the suspect underground storage tank on Lot 4 of the Site. A soil sample was retained from the interval that exhibited the highest degree of contamination (B1(5-8'), B2(4-7')). Both borings showed physical evidence of petroleum contamination with PID readings from 0-400 ppm.

2.1.1 Soil Results

All of the soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and delivered by laboratory dispatched courier to Phoenix Laboratories. Soil sample results were compared to the NYSDEC Part 375-6 Unrestricted Use Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). Analytical data for the soil samples are summarized in **Tables 1** through **2**, and a copy of the laboratory analytical reports are included in **Appendix B**.

VOCs

Only One VOC (n-Propylbenzene) was detected within the soil samples above its corresponding NYSDEC Part 375.6 Unrestricted Soil Cleanup Objectives (USCOs). The compound was detected within soil boring Tank B2. Soil sample B3(12-15') showed detections of cis-1,2-Dichloroethene, Tetrachloroethene, and Trichloroethene, but the levels were below UUSCOs.

SVOCs
No SVOCs were reported above their corresponding UUSCOs in any of the soil samples retained.

2.2 Groundwater Sampling

Following the installation of soil boring B1, B3, B4, Tank B1, and Tank B2, EBC installed a 1-inch diameter temporary PVC monitoring well. A groundwater sample was collected from the temporary monitoring well utilizing disposable polyethylene tubing, and a low-flow peristaltic pump.

The groundwater sample was collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice. Groundwater samples GW1, GW3, and GW4 were submitted for analysis of VOCs by EPA Method 8260. Groundwater samples Tank GW1 and Tank GW2 were submitted for analysis of VOCs by EPA Method 8260 and SVOCs by EPA Method 8270 (CP51 List), to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301).

2.2.1 Groundwater Sample Results

Groundwater sample results were compared to the water quality standards specified in NYSDEC Groundwater Quality Standards (GQSs). Analytical data for the groundwater samples are summarized in **Tables 3 and 4** and a copy of the laboratory analytical report is provided in **Appendix B.**

VOCs
Several chlorinated VOCs were detected within the groundwater samples collected from locations GW1, GW3, and GW4. In addition, several petroleum VOCs were detected within the groundwater samples collected from locations Tank GW1 and Tank GW2. The findings are summarized below:

GW1	Tetrachloroethene (19 µg/L)
GW3	1,1,1-Trichloroethane (18 µg/L), cis-1,2-Dichloroethene (190 µg/L), Tetrachloroethene (950 µg/L), trans-1,2-Dichloroethene (6.6 µg/L), Trichloroethene (150 µg/L), and Vinyl Chloride (5.6 µg/L).
GW4	1,1,1-Trichloroethane (15 µg/L), cis-1,2-Dichloroethene (130 µg/L), Tetrachloroethene (610 µg/L), trans-1,2-Dichloroethene (14 µg/L), Trichloroethene (90 µg/L), and Vinyl Chloride (5.1 µg/L).
Tank GW1	n-Propylbenzene (21 µg/L).
Tank GW2	Isopropylbenzene (47 µg/L), Naphthalene (66 µg/L), n-Propylbenzene (110 µg/L).

SVOCs
Several SVOCs were detected within the groundwater samples Tank GW1 and Tank GW2. The findings are summarized below:

Tank GW1	Benzo(a)anthracene (11 µg/L), Benzo(b)fluoranthene (13 µg/L), Benzo(k)fluoranthene (5.1 µg/L), Chrsyene (11 µg/L), Indeno(1,2,3-cd)pyrene (5.8 µg/L).
*Tank GW2	Fluoranthene (73 µg/L), Naphthalene (57 µg/L), Phenanthrene (51 µg/L), Pyrene (69 µg/L).

*Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated Report Limit (RL) was reported for the semivolatile analysis.

3.0 CONCLUSIONS

Subsurface soils at the site are primarily made up of urban fill material to a maximum depth of 4 feet, followed by a silty sand to approximately 15 feet below grade and coarse sand to the boring terminus. The groundwater was encountered at a depth of approximately 9 feet below grade of Lots 22 and 23.

Lots 22 and 23
No VOCs or SVOCs were detected above UUSCOs within any of the soil samples from Lots 22 and 23. Groundwater samples showed concentrations of several chlorinated VOCs above NYSDEC Groundwater Quality Standards including tetrachloroethene (PCE) at a concentration of 950 ug/L. Based on the historic use of the lots for controller manufacturing, leather goods and plating equipment and the chlorinated solvent detections in soil, it's possible that the contaminants are site related.

Lot 4
Elevated concentrations of petroleum VOCs were detected within one soil sample, but only one VOC, n-Propylbenzene, was reported above its respective UUSCO. No SVOCs were detected above UUSCOs within either of the soil samples retained. The groundwater results showed several petroleum VOCs and SVOCs over NYSDEC Groundwater Quality Standards in each sample including n-propylbenzene. Based on field observations and the elevated levels of petroleum VOCs in soil and groundwater in the vicinity of the UST, a spill was reported to the NYSDEC as required by Law (Spill No. 1302045).

LABORATORY REPORTS

PHOENIX
Environmental Laboratories, Inc.

Monday, May 20, 2013

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 4416-4418 PURVES ST.
Sample ID#s: BD71472 - BD71478

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

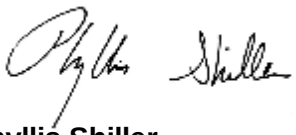
This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,



Phyllis Shiller

Laboratory Director

Sample Criteria Exceedences Report

GBD71472 - EBC

Requested Criteria: 375, 375RRS, 375RS

State: NY

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Thursday, May 23, 2013

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 27-21 44TH
Sample ID#s: BD80732 - BD80737

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller

Laboratory Director

3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quanitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Elevated surrogate recovery was observed for volatiles due to matrix interference.

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quanitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Elevated reporting limits for volatiles due to the presence of non-target compounds.

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

TRIP BLANK INCLUDED 100% SOLID ASSUMED

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1.0 EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) prepared this Phase I Environmental Site Assessment (ESA) on behalf of Silvercup Properties, LLC (the "User") for the property located at 27-21 44th Drive and 44-18 Purves Street ("Subject Property") in Queens, New York. The Subject Property occupies Tax Block 268, Lots 4, 22, and 23 in the Long Island City neighborhood of the borough of Queens. This Phase I ESA was performed in support of potential acquisition of the Subject Property.

The Subject Property is located in an urban area characterized by commercial and manufacturing buildings and vacant land on the block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. The approximately 14,145 square-foot Subject Property is developed with a one-story commercial building with garage/warehouse space on Lot 4. Lots 22 and 23 are vacant with no observable improvements. The sidewalk elevation along Purves Street (east side of Subject Property) is approximately el 8 (Queens Highway Datum). The sidewalk elevation along 44th Drive (west side of Subject Property) is approximately 15 feet higher than the sidewalk elevation along Purves Street.

Based on a previous investigations conducted at the Subject Property, groundwater depth ranges from approximately 5 to 10 feet below grade surface (bgs). Based on topography, regional groundwater flow is inferred to be to the west to southwest towards the East River. The New York City Metropolitan Transit Authority (MTA) M and E subway lines extend underneath Jackson Avenue approximately 175 feet north of the Subject Property.

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Practice E1527-05 and E1527-13 (Standard Practice for ESA: Phase I ESA Process), and the United States Environmental Protection Agency's (USEPA) 2006 All Appropriate Inquiry (AAI) Rule (40 CFR Part 312) now in effect. To the extent that ASTM 1527-13 differs in definition and terminology from ASTM 1527-05, this report follows the current ASTM 1527-13 terminology. Completion of a Phase I ESA in accordance with the ASTM Practice and AAI Rule is needed to qualify for the bona fide prospective purchaser liability protections available under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA). The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a recognized environmental condition (REC).

The Phase I ESA identified the following RECs, de minimis conditions, and other environmental concerns associated with the Subject Property:

REC 1 – Historic Site Use

Historic use of Lot 4 includes a garage with a gasoline tank in 1936; a paper warehouse and photo chemical warehouse in 1947; and an auto body shop from 1977 to at least 2006. Lots 22 and 23 were part of an operation identified as "Controller Manufacturing" between 1936 and 1950. From 1970 through 2006, Lot 22 is shown as welding and repairs with city directory listings that include Rozilda labs, leather goods, plating equipment, manufacturing and Artisan Designs. The historic uses involve the storage, application, and disposal of hazardous substances. Leaks, spills, or discharges of solvents, petroleum products, polychlorinated biphenyls (PCB), metals and/or other hazardous substances used at the historic facilities may have adversely impacted soil, groundwater, and/or soil vapor.

REC 2 – Documented Site Contamination

Soil and groundwater contaminant concentrations were identified above New York State standards. Elevated soil and groundwater concentrations of petroleum volatile organic compounds (VOC) were detected adjacent to the suspected tank. Additionally, chlorinated VOCs were identified in groundwater. Onsite PCE groundwater concentrations ranged from non-detect along the southwestern portion of the site to 950 µg/L at a monitoring well in the northeastern portion of Lot 22. Onsite TCE concentrations ranged from non-detect along the southwestern portion of the site to 150 µg/L in the northeastern portion of Lot 22.

REC 3 – NYSDEC Spill and Potential On-Site Underground Storage Tank

A gasoline underground storage tank (UST) is potentially located in the Lot 4 building basement. The tank was identified on a 1936 Sanborn map and previous reports indicate the presence of a vent pipe that was traced to a concrete patch in the basement floor. Remnants of a concrete dispenser island were visible immediately behind the garage door. Site constraints prevented a geophysical survey to document the presence of the tank. Petroleum staining, odor and elevated field instrument readings were identified in the vicinity of the potential UST. Elevated concentrations of petroleum volatile organic compounds (VOCs) were detected within the impacted soil. Based on these observations and associated analytical data, a spill was called in to the New York State Department of Environmental Conservation (NYSDEC) and Spill No. 1302045 was assigned.

REC 4 – Surrounding Property Use

Current and historic uses of the adjoining and/or surrounding properties include gasoline filling stations, manufacturing facilities, auto repair stations/garages with gasoline tanks, iron works,

drycleaners, a chemical laboratory, an oil-burning utility company, and printing facilities. Additionally, two open spills (Spill Numbers 1000528 and 9913082) were identified on properties less than 700 feet from the Subject Properties. Voluntary Cleanup Program and Brownfield Cleanup Program sites with documented soil and groundwater contamination were identified on surrounding properties. Monitoring wells were identified on surrounding properties, which may indicate past or current environmental monitoring. Leaks, spills, or discharges of solvents, petroleum products, and/or other hazardous substances associated with surrounding property use may have adversely impacted groundwater and/or soil vapor beneath the Subject Property.

De Minimis Condition

Staining was observed on the Lot 4 building office and basement floor and the garage/warehouse walls and floor. The concrete floor slab beneath each area of staining appeared to be competent and significant subsurface impact is unlikely.

Non-ASTM Environmental Concerns

The building was constructed in the 1930s, potentially with materials that contain asbestos, lead-based paint, or polychlorinated biphenyls (PCBs). In addition, the building contained fluorescent light ballasts, which may contain PCBs.

No Historic RECs (HRECs) or Controlled RECs (CRECs) were identified.

2.0 INTRODUCTION

Langan was retained by Silvercup Properties, LLC (the "User") to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 27-21 44th Drive and 44-18 Purves Street ("Subject Property") in Queens, New York. The Subject Property occupies Tax Block 268, Lots 4, 22, and 23 in the Long Island City neighborhood of the borough of Queens. This Phase I ESA was performed in support of potential acquisition of the Subject Property by Silvercup Properties, LLC.

The purpose of this ESA is to accomplish the following:

> (1) Identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.
>
> (2) Be consistent with the criteria of United Stated Environmental Protection Agency 40 CFR Part 312 Subpart C Standards and Practices §312.20 All Appropriate Inquiries.

2.1 Scope of the ESA

This ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with ASTM E1527-13. Any significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 are noted in Section 9.0 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Subject Property; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing

persons knowledgeable about the Subject Property; and conducting a site inspection. The specific scope of this assessment included the following:

1. A site reconnaissance to inspect on-site conditions and assess the Subject Property and surrounding property uses and natural surface features. Photographs taken as part of the site reconnaissance are provided in Appendix A.
2. A review of the responses to a User/Client Questionnaire. The completed Questionnaire is provided in Appendix B.
3. A review of a previous environmental report for the Subject Property. The report is provided in Appendix C.
4. A review of environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search distance. The environmental database report was provided by Environmental Data Resources, Inc. (EDR), and is included in Appendix D.
5. Filing of Freedom of Information Act (FOIA) requests with federal, state, and local agencies. Copies of the FOIA requests are included in Appendix E.
6. A review of New York City Department of Buildings (NYCDOB) records, zoning resolutions and a Planning Commission Zoning Map. Available NYCDOB records and the Zoning Map are included in Appendices F and G, respectively.
7. A review of physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils, and hydrologic data.
8. A review and interpretation of aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Subject Property. Copies are included in Appendices H, I, J and K, respectively.
9. A review of an Environmental Lien search for the Subject Property. A copy of the environmental lien search report is included as Appendix L.
10. A review of published radon occurrence maps to evaluate whether the Subject Property is located in an area with a propensity for elevated radon levels.

2.2 Assumptions, Limitations, and Exceptions

This Phase I ESA report was prepared for the User for the property at 27-21 44th Drive and 44-18 Purves Street (Tax Block 268, Lots 4, 22, and 23) in Queens, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this

report for any property other than the Subject Property addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 2.1, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E 1527-05 and E1527-13. To the extent that ASTM 1527-13 differs in definition and terminology from ASTM 1527-05, this report follows the current ASTM 1527-13 terminology. Sampling (e.g. soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Subject Property. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs at the Subject Property. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular Subject Property. Therefore, Langan cannot "insure" or "certify" that the Subject Property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-05 and E1527-13 and are intended exclusively for the purpose stated herein, at the specified Subject Property, as it existed at the time of our site visit.

3.0 SITE DESCRIPTION

3.1 Location and Description

The Subject Property is located at 27-21 44th Drive and 44-18 Purves Street and occupies Tax Block 268, Lots 4, 22, and 23 in Queens, New York. The Subject Property is located in the Long Island City neighborhood of the borough of Queens on the block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. The approximately 14,145 square-foot Subject Property is developed with a one-story commercial building with garage/warehouse space on Lot 4. Lots 22 and 23 are vacant with no observable improvements. A Site location Map is included as Figure 1. Site reconnaissance photographs are presented in Appendix A.

Based on observations of the surrounding area during the site reconnaissance, the Subject Property is located in an urban area primarily characterized by commercial and manufacturing buildings and vacant land. The sidewalk elevation along Purves Street (east side of Subject Property) is approximately el 8 (Queens Highway Datum). The sidewalk elevation along 44th Drive (west side of Subject Property) is approximately 15 feet higher than the sidewalk elevation along Purves Street.

Based on a previous investigations conducted at the Subject Property groundwater depth ranges from approximately 5 to 10 feet below grade surface (bgs). Based on topography, regional groundwater flow is inferred to be to the west to southwest towards the East River. The New York City Metropolitan Transit Authority (MTA) M and E subway lines extend underneath Jackson Avenue approximately 175 feet north of the Subject Property.

3.2 Description of Site Improvements

Improvements at the Subject Property are summarized in the following table:

SITE IMPROVEMENTS	
Size of the Subject Property	Lot 4: 9,600 square feet; Lot 22: 2,500 square feet; Lot 23: 2,500 square feet
Buildings/Spaces/Structures	Lot 4: 1-story commercial building with warehouse/garage and full basement; Lots 22 and 23: vacant
Surface Water	Surface water is not located on the Subject Property.

SITE IMPROVEMENTS	
Potable Water Source	New York City
Sanitary and Storm Sewer Utilities	New York City
Electrical Utilities	Con Edison
Construction Completion Date	Circa 1931
General Construction Type	Brick and concrete masonry
Cooling and Ventilation System Type	Window air conditioning and ventilation fans.
Heating System Type	Wall-mounted electric heating units
Emergency Power	N/A

3.3 Title Records

Langan researched ownership records for the Subject Property at the Automated City Register Information System (ACRIS) website (http://www.nyc.gov/html/dof/html/jump/acris.shtml). Available deed information is listed in the following table:

Block 268, Lot 4		
Date	**First Party**	**Second Party**
9/14/2011	Electric Realty Company, LLC	44 LIC LLC
9/14/2011	Electric Realty Company, LLC	44 LIC LLC
2/29/2000	Eagle Electric Manufacturing	Electric Realty Company, LLC
10/8/1971	Latouraine Bickfords Foods Inc.	Eagle Electric Mfg Co Inc.
Block 268, Lot 22		
Date	**First Party**	**Second Party**
7/18/2013	4418 Purves LLC	44 LIC LLC
2/3/2010	Parisi Roth LLC	4418 Purves LLC

Block 268, Lot 22 (continued)		
Date	**First Party**	**Second Party**
11/21/2007	Purves Studios LLC	Parisi Roth LLC
7/11/2007	Purves Studios LLC	Parisi Roth LLC
3/9/2007	Purves Studios LLC	Thomson Purves, LLC
7/27/2001	Sara Garden Armstrong	Purves Studios LLC
6/16/2000	Alkeda Corp	Armstrong, Sara Garden
5/2/1998	Weiss, Kurry	Alkeda Corp
Block 268, Lot 22		
Date	**First Party**	**Second Party**
7/18/2013	4418 Purves LLC	44 LIC LLC
2/3/2010	Parisi Roth LLC	4418 Purves LLC
11/14/2007	Parisi, Dino	Parisi Roth LLC
7/11/2007	Parisi, Dino	Parisi Roth LLC
6/6/2006	Lonschein (Referee, Richard	Parisi, Dino
3/13/2001	Coleman, James	Plaza Homes LLC
9/4/1985	Coleman, Alyce M	Coleman, James W
11/29/1976	Welsh Alice Extrix Of	Alyce M Coleman
12/19/1974	Woodwhi Corporation	Alyce M Coleman

The use of the Subject Property (Lot 4) as an electric manufacturing facility between 1971 and 2011 is considered a REC.

4.0 USER PROVIDED INFORMATION

4.1 User Questionnaire and Owner/Operator Questionnaires

As per ASTM E1527-13, a questionnaire was provided to the User in order to obtain specialized User knowledge. Mark Gold, Principal with Silvercup Properties, LLC, completed the User questionnaire. Mr. Gold indicated that he is not aware of environmental leins or activity and use limitations filed against the property. Additionally, Mr. Gold is not aware of specialized knowledge about the property and believes the property reasonably represents the fair market value. Mr. Gold indicated that he is aware of past uses, chemicals present at the property, and spills and provided a previous environmental report that provided additional detail. The completed questionnaire is included in Appendix B and the previous environmental report is included in Appendix C.

An owner/operator questionnaire was provided to the owner's representative during the Phase I site reconnaissance; however, the completed questionnaire was not completed at the time this Phase I report was finalized.

4.2 Previous Environmental Reports

One previous environmental report was available for review. The report is summarized below and included in Appendix C.

October 2013, Phase II Subsurface Investigation Report, prepared by Environmental Business Consultants (ECB)

The subsurface investigation was conducted to investigate environmental conditions identified in an October 2011 Phase I ESA prepared for Lot 4 by EBC and to investigate general environmental conditions on Lots 22 and 23. The report included a brief summary of the 2011 Phase I ESA which identified previous site uses as a photo chemical warehouse, garage with a gasoline tank, paper warehouse, metal plating, welding and repairs, leather goods. These previous site uses are considered a REC because of the potential impact to soil, groundwater and/or soil vapor at the Subject Property.

The Phase II investigation included collection and analysis of soil and groundwater samples. Observations and laboratory results are summarized by media type below.

- Soil – Petroleum staining and odor was identified in the vicinity of the underground tanks on southwestern side of Lot 4. Field screening with a photoionization detector (PID) found readings up to 300 ppm. Additionally, elevated concentrations of petroleum volatile organic compounds (VOCs) were detected within one soil sample collected adjacent to the tanks; however, only n-propylbenzene was reported above New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives (SCOs). Based on these observations and associated analytical data, a spill was called in to NYSDEC and Spill No. 1302045 was assigned. Soil samples collected on lots 22 and 23 identified detections of chlorinated VOCs; however, chlorinated concentrations were below New York State's unrestricted use SCOs. Metals were not analyzed as part of this investigation.
- Groundwater – Chlorinated VOCs were identified in groundwater above New York State groundwater standards. Onsite PCE concentrations ranged from non-detect along the southwestern portion of the site to 950 µg/L at a monitoring well in the northeastern portion of Lot 22. Onsite TCE concentrations ranged from non-detect along the southwestern portion of the site to 150 µg/L in the northeastern portion of Lot 22. Additionally, several petroleum VOCs and SOVCs were identified above New York State groundwater standards in the vicinity of the tanks in Lot 4.

Documented soil and groundwater exceedances of New York State standards are considered a REC.

5.0 ENVIRONMENTAL RECORDS

A regulatory database search was provided by EDR and is included in Appendix C. The EDR report provides a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-13. Langan reviewed each environmental database on a record-by-record basis to evaluate whether the sites identified represent a potential for environmental impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Any Orphan Sites that were identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below.

The following table lists the number of sites identified in standard and additional environmental record databases, within the prescribed search radius and appearing in the EDR Report.

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	**Minimum Search Area**	**Subject Property listed**	**Number of Sites Within Minimum Search Area**
USEPA DATABASES			
National Priorities List (NPL)	1 Mile Radius	No	0
Delisted NPL	1/2 Mile Radius	No	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS-NFRAP	1/2 Mile Radius	No	0
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (7/11/2013)	1 Mile Radius	No	3
RCRA Treatment, Storage, and Disposal Facilities (TSDF)	1/2 Mile Radius	No	0
RCRA Generators (7/11/2013)	Subject Property and Adjoining	No	0
FINDS	Subject Property	No	0
Environmental Response Notification System (ERNS)	Subject Property	No	0

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	**Minimum Search Area**	**Subject Property listed**	**Number of Sites Within Minimum Search Area**
Engineering Controls (EC) Sites Lists	Subject Property	No	0
Institutional Controls (IC) Sites Lists	Subject Property	No	0
NYSDEC DATABASES			
Hazardous Waste Disposal Sites (SHWS) (11/13/2013)	1 Mile Radius	No	14
Hazardous Substance Waste Disposal Site Inventory (HSWDS)	1/2 Mile Radius	No	0
Solid Waste or Landfill Facilities (SWF/LF) (10/8/2013)	1/2 Mile Radius	No	2
Leaking Storage Tanks (LTANKS) (9/25/2013)	1/2 Mile Radius	No	45
SPILLS Information Database (NY SPILLS) (9/25/2013)	1/8 Mile Radius	No	17
EC Sites Lists	Subject Property	No	0
IC Sites Lists	Subject Property	No	0
NY Voluntary Cleanup Program (VCP) (11/13/2013)	1/2 Mile Radius	No	3
Brownfields (11/13/2013)	1/2 Mile Radius	No	2
Solid Waste Disposal Sites Registered Recycling Facility List (SWRCY)	1/2 Mile Radius	No	0
Chemical Bulk Storage (CBS) Underground storage tank (UST) and aboveground storage tanks (AST) Databases	Subject Property and Adjoining	No	0
Major Oil Storage Facilities (MOSF) UST and AST Databases	Subject Property and Adjoining	No	0
Registered and Historical Drycleaners (DRYCLEANERS) (10/17/2013)	1/4 Mile Radius	No	1
Petroleum Bulk Storage Facilities (PBS) UST and AST Databases	Subject Property and Adjoining	Yes	0
EDR (PROPRIETARY) DATABASES			
EDR Former Manufactured Gas Plant (MGP) Sites	1 Mile Radius (N/A)	No	0

N/A Not Applicable; databases with a "Not Applicable" Minimum Search Radius are databases reviewed as part of the Phase I ESA but not required as per ASTM E1527-13.

A description of the reviewed databases is provided in the EDR Report (Appendix D). A summary of sites identified within the prescribed search area is presented below:

5.1 Federal Agency Database Findings

No NPL, Delisted NPL, CERCLIS and CERCLIS-NFRAP, RCRA Generators, RCRA TSDF, EC, IC, FINDS or ERNS sites were listed within their respective minimum search distances as specified by ASTM E1527-13. Information regarding other sites located on the Federal Agency database within the search radius of the Subject Property is provided below.

CORRACTS

CORRACTS is a list of handlers with RCRA Corrective Action Activity. Three CORRACTS sites were identified within the search criteria. Based on distance from the Subject Property (over 3,000 feet), the sites are not considered RECs.

5.2 State Agency Database Findings

No HSDWS, SWRCY, EC, IC, PBS UST and AST, CBS UST and AST, or MOSF listings were identified within their respective minimum search distances as specified by ASTM E1527-13. Information regarding other sites located on State agency databases within the search radius of the Subject Property is provided below.

SHWS

The State Hazardous Waste Sites (SHWS) records are states' equivalent to CERCLIS. The SHWS database in maintained by the NYSDEC. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup will be paid for by potentially responsible parties. Fourteen sites within one mile of the Subject Property were identified on the SHWS list; however, all sites are located more than 1,700 feet from the Subject Property and are not considered RECs.

Solid Waste or Landfill Facilities

The Solid Waste Facilities/Landfill (SWF/LF) database is an inventor of solid waste disposal facilities or landfills in a particular state. The Subject Property was not included in the SWF/LF database. Two SWF/LF facilities were identified within a ½-mile radius; however, they are located more than 1,800 feet from the Subject Property and are not considered RECs.

Leaking Storage Tanks Database

The Leaking Storage Tanks (LTANKS) database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The primary causes of the LTANK

incidents include tank test failures, tank failures, and tank overfills. As per ASTM E1527-13, the approximate minimum search distance required for LTANK incidents is within ½ mile of the Subject Property. The Subject Property was not listed in the LTANK/HIST LTANK database; however, 45 LTANK incidents were identified at other properties within a ½-mile radius. Forty-three of the LTANK incidents are closed. One of open incidents is located more than 2,300 feet from the Subject Property and is not considered a REC. The remaining open incident is described below:

Site Name: Court Plaza

Site Address: 5 Court Square

Location: Approximately 650 feet west of the Subject Property

Description: Spill No. 1000528 was reported on April 13, 2010. A 2,000-gallon #2 fuel oil tank failed a tank test after oil was observed on water in subway tunnel directly underneath the site. Based on its close proximity to the Subject Property, this open LTANK incident is considered a REC as the release may have impacted soil vapor or groundwater at the Subject Property.

Spills Database

The Spills database, maintained and updated by NYSDEC, is an inventory of sites where spills have been identified and reported to the NYSDEC. The Subject Property was not listed in the Spills database within the EDR report; however, a search of the online database identified an open spill at the Subject Property.

Site Name: Vacant Business Place

Site Address: 27-21 44th Place

Location: Subject Property

Description: Spill No. 1302045 was reported on May 29, 2013. The spill indicated an unknown amount of gasoline that affected soil and groundwater. The spill has not been closed. Based on the impact to soil and groundwater at the Subject Property, this spill is considered a REC.

Seventeen spills were identified within 1/8 mile of the Subject Property. Sixteen of the Spills incidents are closed. The remaining open incident is described below:

Site Name: Gasgo

Site Address: 27-01 Jackson Avenue

Location: Approximately 400 feet north of the Subject Property

Description: Spill No. 9913082 was reported on February 16, 2000 when contaminated soil was discovered during removal of ten underground storage tanks. Contaminated soil (698 tons) was removed and the spill was closed by NYSDEC. In May 2013, additional information was identified that indicated the potential for off-site migration of petroleum contamination that was unknown at the time of the spill closure. The spill number was reopened and remains open at the time this Phase I ESA was finalized. This incident is considered a REC as the release may have impacted soil vapor or groundwater at the Subject Property.

VCP

Voluntary Cleanup Agreements Program uses private monies to get contaminated sites remediated to levels allowing the sites' productive use. The Subject Property was not listed in the VCP database; however, three VCP sites were identified within the search criteria. Of the three site, two of the sites are located more than 1,600 feet from the Subject Property and are not considered RECs. The remaining VCP site is described below:

Site Name: Outlet City, Queens Blvd & Jackson Ave

Site Address: Queens Blvd & Jackson Ave

Location: Approximately 1,400 feet northeast of the Subject Property

Description: The 2.5- acre site is located on Jackson Avenue between Orchard Street to the east, Queens Boulevard to the west, and the Long Island Railroad yard to the south. The site is contaminated with creosote, petroleum, and solvents. Total VOCs were detected in groundwater up to 30,000 ppb. Creosote in the form of both light non-aqueous phase liquid (LNAPL) and dense non-aqueous phase liquid (DNAPL) are present at the site. Based on the documented soil and groundwater contamination at this site and its proximity to the Subject Property, this site is considered a REC as the release may have impacted soil vapor or groundwater at the Subject Property.

Brownfields

The Brownfields database is a list of contaminated sites enrolled in the New York State Brownfield Cleanup Program. The Subject Property was not listed in the Brownfields database. Two properties were identified in the database; however, one of the sites is located more than 2,400 feet from the Subject Property and is not considered a REC. The remaining Brownfield site is described below:

Site Name: Queens Plaza Residential Development

Site Address: 28-10 Jackson Avenue

Location: Approximately 1,000 feet east of the Subject Property

Description: The 0.5- acre site (a portion of the Outlet City development described in the VCP section above) had a release of approximately 5,000-gallons of creosote with extensive soil and groundwater contamination that includes the presence of LNAPL and residual DNAPL. This site is considered a REC as the release may have impacted soil vapor or groundwater at the Subject Property.

Drycleaners

The NY Dry Cleaners database includes registered dry cleaning facilities in the State of New York. The Subject Property was not included in the NY DRYCLEANERS list; however, one NY Dry Cleaner was identified within 1/4-mile of the Subject Property and is described below:

Site Name: Top Star Fabricare

Site Address: 43-43 Queens Street

Location: Approximately 660 feet east of the Subject Property.

Description: No additional information was provided. Due to the lack of information and the close proximity to the Subject Property, the drycleaner is considered a REC as the potential leaks or spills of petroleum products, solvents and/or other hazardous materials typically found at these facilities may have adversely impacted groundwater and/or soil vapor at the Subject Property.

5.3 Local Regulatory Agency Findings

FOIA Requests

FOIA requests were submitted during the week of December 3, 2013 to the following federal, state, and local agencies via written correspondence:

- New York City Department of Environmental Protection (NYCDEP);
- New York City Department of Health (NYCDOH);
- New York City Fire Department (FDNY);
- New York State Department of Health (NYSDOH);
- NYSDEC; and

- USEPA, Region 2.

Responses have not yet been received. Should future responses alter the conclusions of this Phase I ESA, an addendum will be issued. Copies of the FOIA requests are included in Appendix E.

NYCDOB

Langan conducted a records search through the NYCDOB online query system on December 5, 2013. Copies of the NYCDOB property profile and COs are included in Appendix F. The following is a summary of findings.

Lot 4

Lot 4 has a Department of Finance classification of G2- Garage/Gas Station. A records search identified one building on the lot and the Certificate of Occupancy (CO) documents a one story garage and Buick factory. There are no open Environmental Control Board (ECB) violations related to the Subject Property. The classification of the Subject Property as a Garage/Gas Station is considered a REC.

Lot 22

The Subject Property has a Department of Finance classification of V1-Vacant Land. Certificate of Occupancy (CO) documents issued in 1957 indicates a one story factory and office building with cellar and boiler room. Boiler records indicate one boiler; however, the year of installation is unknown. There are no open Environmental Control Board (ECB) violations related to the Subject Property.

Lot 23

NYCDOB property profile was not found for this block/lot.

Zoning Department

According to the New York City Planning Commission Zoning Map 9b, the Subject Property is located in a M1-5/R9 manufacturing district. According to the zoning map and the list of City Environmental Quality Review Environmental Designations available on the New York City Department of City Planning website, the Subject Property is not listed with a restrictive E-Designation. A copy of the zoning map is provided in Appendix G.

5.4 Physical Setting Sources

5.4.1 Topography

The Subject Property is at an elevation of approximately 14 feet NGVD 1929, based on the USGS 7.5-series, Brooklyn, NY-NJ Topographic Quadrangle map, dated 1995. The sidewalk elevation along Purves Street (east side of Subject Property) is approximately el 8 (Queens Highway Datum). The sidewalk elevation along 44th Drive (west side of Subject Property) is approximately 15 feet higher than the sidewalk elevation along Purves Street.

5.4.2 Geology

Geological surface features (e.g., rock outcroppings) were not observed at the Subject Property. Based on a review of the Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York and Parts of Bergen and Hudson Counties New Jersey, by Charles A. Baskerville (1994), the Site is underlain by bedrock of the Cambrian-Ordovician Hartland formation, which consists of inter-bedded mica schist, gneiss, and amphibolite. According to a geotechnical investigation conducted by Langan in the area, depth to bedrock is approximately 50 to 70 ft bgs. The general subsurface condition of the site consists of about 10 ft of fill, underlain by medium well graded sand with various amounts of silt, cobbles, and boulders, to the top of bedrock.

5.4.3 Hydrology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flow towards areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, utilities, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Based on a previous investigations conducted at the Subject Property groundwater depth ranges from approximately 5 to 10 feet bgs. Based on topography, regional groundwater flow is inferred to be to the west to southwest towards the East River. MTA subway tunnels border the Subject Property to the north underneath Jackson Avenue. The tunnels may provide a hydraulic barrier to groundwater flow originating north of the Subject Property.

Groundwater in New York City is not used as a potable water source. Potable water provided to the City of New York is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

5.5 Historical Use Information

Langan reviewed available historic resources (including aerial photographs, Sanborn and topographic maps, and city directories) dated 1889 to 2011. Findings of the review are presented below.

5.5.1 Aerial Photographs

Langan reviewed aerial photographs of the Subject Property and surrounding areas for the years 1924, 1941, 1954, 1966, 1975, 1984, 1994-1995, 2006, 2008 – 2009, and 2011. The photographs indicate that the Subject Property has been located in a densely developed urban area and improved with a multiple-story building on Lot 22 since at least 1924. The 1941 map indicates the Subject Property is improved with one-story buildings on Lots 4 and 22. The 2008 photograph does not show the Subject Property. The building on Lot 22 is no longer identified in the 2009 photograph. Surrounding properties have been generally occupied by multiple-story buildings. The review of the aerial photographs did not reveal evidence of RECs. Copies of aerial photographs are included in Appendix H.

5.5.2 Sanborn Fire Insurance Maps

Langan reviewed Sanborn Maps for the Subject Property for the years 1889, 1915, 1936, 1947, 1950, 1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1990-1996, 1999, and 2001-2006. Sanborn Maps constitute a database of prior uses of real property for many cities and towns in the United States. Copies of the maps are provided in Appendix I. A summary of the Sanborn Maps is presented on the following table.

SANBORN MAP SUMMARY	
YEAR	**COMMENTS**
1889	**Subject Property:** The Subject Property is located on the block identified as 194 and contains six lots; one contains a two-story residential building with basement. **Surrounding Area:** Surrounding properties are primarily multiple-story residential and commercial buildings, including material junk yards and the County Court House. The following REC was identified: • A garage is located at 15 Purves Street, approximately 50 feet east of the Subject Property.

SANBORN MAP SUMMARY	
YEAR	**COMMENTS**
1915	**Subject Property:** The Subject Property contains a total of three lots; one contains a two-story residential building with basement. **Surrounding Area:** Surrounding properties are primarily multiple-story residential office, and commercial buildings including the County Court House, the Manhattan Steam Bakery, and American Express Co.. The following REC was identified: • A N.Y. Substation is located at the adjoining property to the east of the Subject Property.
1936	**Subject Property:** The Subject Property is on the block identified as Block 268 and is depicted as a garage with a gasoline tank (Lot 4) and a controller manufacturing facility (Lot 22). The two-story residential building is no longer shown on Lot 23. **Surrounding Area:** Surrounding properties are primarily multiple-story residential office, and commercial buildings. The following RECs were identified: • A N.Y. Substation is located at the adjoining property to the east of the Subject Property; • A filling station with four gasoline tanks is located at the adjoining property to the west of the Subject Property; • An iron works is located at 44-12 Purves Street, approximately 40 feet north of the Subject Property; • A garage with a gasoline tank is located at 44-33 Purves Street, approximately 100 feet east of the Subject Property; • A garage with a gasoline tank is located at 26-36 Jackson Avenue, approximately150 feet northeast of the Subject Property; • A gasoline tank is located at 44-25 Purves Street; approximately 75 feet east of the Subject Property; • A manufacturer of bottles is located at 28-31 Thomson Avenue, approximately 150 feet south of the Subject Property; • A laundry facility is located at 27-01 Jackson Avenue, approximately 225 feet northeast of the Subject Property; • A printing facility is located at 27-12 Thomson Avenue, approximately 150 feet southwest of the Subject Property.

SANBORN MAP SUMMARY	
YEAR	**COMMENTS**
1947	**Subject Property:** The Subject Property is depicted as paper warehouse (Lot 4) and a controller manufacturing facility (Lot 22), a building identified as "stage" is located on Lot 23. Lot 4 is also identified as a photo chemical warehouse. **Surrounding Area:** Surrounding properties are primarily multiple-story residential office, and commercial buildings. The following RECs were identified: • An iron works is located at the adjoining property to the east of the Subject Property; • A filling station with four gasoline tanks is located at the adjoining property to the west of the Subject Property; • A chemical lab is located at the adjoining property south of the Subject Property; • A contractors yard with two gasoline tanks is located at the adjoining property to the south of the Subject Property; • A contractors yard with a gasoline tank is located at 44-17 Purves Street, approximately 50 feet east of the Subject Property; • A manufacturer of welding equipment is located at 26-26 Jackson Avenue, approximately 100 feet northeast of the Subject Property; • A manufacturer of printing inks is located at 44-23 Purves Street, approximately 50 feet east of the Subject Property; • A garage and disinfectant warehouse is located at 43-30 Dutch Kills, approximately 150 feet east of the Subject Property;
1950	**Subject Property:** The Subject Property is unchanged. **Surrounding Area:** Surrounding properties are generally unchanged.
1970	**Subject Property:** The Subject Property contains a building depicted as commercial/manufacturing (Lot 4), a multi-story welding facility (Lot 22) and a vacant lot (Lot 23). Lot 23 is now depicted as a portion of a larger lot. **Surrounding Area:** The surrounding area remains primarily unchanged, the northern adjoining properties are now depicted as a junk yard and parking, the southern adjoining property is now a paper facility and no longer contains gasoline tanks. The following REC was identified: • A filling station is located at 27-01 Jackson Avenue, approximately 320 feet northeast of the Subject Property;
1977,1979	**Subject Property:** The Subject Property is unchanged with the exception of Lot 4 is now depicted as an auto body shop. **Surrounding Area:** The surrounding area remains primarily unchanged with the exception of the chemical lab located at the adjoining property to the south is now an auto repair shop.

SANBORN MAP SUMMARY	
YEAR	**COMMENTS**
1980, 1985, 1986	**Subject Property:** The Subject Property is unchanged. **Surrounding Area:** The surrounding area remains primarily unchanged with the exception of the filling station with four gasoline tanks located at the adjoining property to the west is now depicted as an auto repair and parking facility and no longer contains the tanks.
1988-1996	**Subject Property:** The Subject Property is unchanged. **Surrounding Area:** The surrounding area remains primarily unchanged with the exception of Eagle Electric Manufacturing Company located at 27-12 Thomson Avenue, approximately 150 feet southwest of the Subject Property. The junk yard located on the adjoining property to the north is no longer labeled.
1999	**Subject Property:** The Subject Property is unchanged. **Surrounding Area:** The surrounding area remains primarily unchanged with the exception of the adjoining property to the north is now depicted as a warehouse and an oil burner utility company is located at 44-39 Purves Street, approximately 140 feet southeast of the Subject Property.
2001-2006	**Subject Property:** The Subject Property is unchanged with the exception of Lot 23 is now labeled as storage. **Surrounding Area:** The surrounding area remains primarily unchanged with the exception of the gasoline tank located at 44-17 Purves Street is no longer shown.

Langan's Sanborn Map review revealed that the Subject Property was developed with a two-story residential building with a basement as early as 1889. In 1936, the Subject Property included a garage with gasoline tank (Lot 4) and a manufacturer of controllers (Lot 22). Between 1947 and 1950 Lot 4 was a paper warehouse and photo chemical warehouse. Lot 22 has been a welding and repair facility since 1970. Lot 4 has been an auto body shop since 1977. Lot 23 has been a storage facility since 2001. The use of the Subject Property as a garage, manufacturer, photochemical warehouse, and auto body shop are considered RECs. Potential spills or leaks of petroleum products, solvents, or other hazardous substances at the above facilities may have adversely impacted groundwater and/or soil at the Subject Property. Surrounding properties have been primarily occupied by manufacturing, commercial, residential and office buildings.

The following RECs were identified on surrounding properties:

- Gasoline storage was located at the following properties:
    - 27-17 Thomson Avenue from 1936 to 1979;
    - 44-33 Purves Street, approximately 100 feet east of the Subject Property since 1936;
    - 44-25 Purves Street, approximately 75 feet east of the Subject Property in 1936;

  - 26-36 Jackson Avenue, approximately 150 feet northeast of the Subject Property in 1936;
  - 28-11 Thomson Avenue (adjoining property to the south) from 1947 to 1950;
  - 44-17 Purves Street, approximately 50 feet east of the Subject Property in 1947 to 1999;
  - 27-01 Jackson Avenue, approximately 320 feet northeast of the Subject Property since 1970.
- A N.Y. Substation was located at 44-13 Purves Street (adjoining property to the east) between 1915 and 1936;
- A printing facility was located at 27-12 Thomson Avenue, approximately 150 feet southwest of the Subject Property in 1936;
- Iron works were located at the following properties:
  - 44-12 Purves Street, approximately 40 feet north of the Subject Property in 1936;
  - 44-19 Purves Street (adjoining property to the east) between 1947 and 1950
- A laundry facility was located at 27-01 Jackson Avenue, approximately 225 feet northeast of the Subject Property in 1936;
- A chemical lab was located at 27-33 44th Drive (adjoining property to the south) from 1947 to 1970;
- An oil burning utility company was located at 44-39 Purves Street, approximately 150 feet southeast since 1999;
- Manufacturing facilities were located at the following properties:
  - 28-31 Jackson Avenue, approximately 150 feet south of the Subject Property in 1936;
  - 26-26 Jackson Avenue, approximately 100 feet northeast of the Subject Property;
  - 44-23 Purves Street, approximately 50 feet east of the Subject Property, from 1947 to 1999;
- Garages/Auto Repair facilities were located at the following properties:
  - 15 Purves Street, approximately 50 feet east the Subject Property in 1989
  - 43-30 Dutch Kills, approximately 150 feet east of the Subject Property in 1947;
  - 27-33 44th Drive (adjoining property to the south) from 1977;
  - 27-17 Thomson Avenue (adjoining property to the west) from 1980.

5.5.3 Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Subject Property. Quadrangle maps were available for the Subject

Property for the years 1897, 1900, 1924, 1947, 1956, 1966, 1967, 1979, and 1995. Based on a review of the historic topographic maps, the Subject Property was developed within a densely developed urban area as early as 1897. The Dutch Kills Creek is located approximately 1,300 feet southeast of the Subject Property and the East River is located approximately 4,250 feet west of the Subject Property. The Long Island Railroad tracks are located approximately 300 feet southeast of the Subject Property. The review of historic topographic maps did not reveal evidence of RECs. Copies of the topographic maps are provided in Appendix J.

5.5.4 City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1922 through 2013. A copy of the City Directory Abstract is provided in Appendix K. The Subject Property was listed in the directory for several commercial businesses including an auto repair, garage, professional boxing and car rental facilities between 1934 and 2013.

Surrounding property listings included various commercial and manufacturing businesses. An unidentified factory was listed at 44-19 Purves Street (adjoining property to the east) in 1945. A cleaning facility was listed at 44-24 Purves Street (adjoining property to the south) in 1934. . Based on the proximity of the facility to the Subject Property, the historical use as a cleaning facility constitutes a REC.

5.5.5 Environmental Lien Search

Langan contracted EDR to conduct an Environmental Lien search for the Subject Property. The results of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, revealed that there are no Environmental Liens or other Activity and Use Limitations (AUL) associated with the Subject Property. A copy of the Environmental Lien Search is provided in Appendix L.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The Site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and then progressing to the adjoining and surrounding properties. The assessment of the adjoining and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures.

6.1.1 Date and Time of Inspection

The Site reconnaissance was performed at 7:30 am on December 10, 2013 by Jessica Alzamora of Langan. The weather at the time of the initial inspection is described as snowing and approximately 30°F. Ms. Alzamora was accompanied during the Site reconnaissance by Adam Jolly, a representative of the site owner.

6.2 General Site Setting and Reconnaissance Observations

The approximately 14,145 square-foot Subject Property is developed with a one-story commercial building with garage/warehouse space on Lot 4. Lots 22 and 23 are vacant with no observable improvements. The sidewalk elevation along 44th Drive (western entrance of the building) was observed to be approximately 15 feet higher than the sidewalk elevation along Purves Street (eastern site boundary).

The building was vacant at the time of the inspection and in poor condition. Several areas of the building were observed to have deteriorated flooring, walls, and ceilings, including a loft located on the north side of the building, which was inaccessible due to deteriorated flooring. The roof was also inaccessible at the time of the inspection.

The basement was approximately 15 feet tall and had painted brick walls, fluorescent lighting and concrete floors. Wall-mounted, electric heating units, window fans and air-conditioning units were observed in the building. Portions of the concrete flooring appeared to be in poor condition. Approximately ten one-gallon paint containers, one five-gallon container of cement, and five one-quart containers of enamel and cleaners were observed at the time of the inspection. Staining was observed on the concrete flooring in the vicinity of the containers, however the concrete appeared to be in good condition at these location. Floor drains were not

observed. A water heater and a broken water pipe were leaking along the southern wall of the basement. An out-of-service coal boiler was identified in the basement near the northern wall.

The first floor of the building contains a lobby area and office. Finishing materials include 12-inch by 12-inch floor tiles and carpet, painted brick walls with wood panels, and drop ceilings with fluorescent lighting. There was debris throughout the office building.

The loft and roof were not accessible at the time of the inspection. The loft flooring was in poor condition with visible deterioration. A review of aerial photographs of the building indicates the roof is coated with a tar compound and contains two units located on the north side of the building and a skylight.

Pits, Ponds, Lagoons

Langan did not observe pits, ponds, or lagoons on the Subject Property.

Pools of Liquid

Liquid was observed in the basement of the building due to a broken water pipe. The water is seen to drain to a nearby room that was full of debris and the flooring was not visible.

Storm Drains, Wells, and Cisterns

Storm drains, wells, and cisterns were not observed at the Subject Property.

Polychlorinated Biphenyl (PCB) Transformers and Suspect Equipment

Fluorescent lighting ballasts observed throughout the Subject Property may contain PCBs. Other suspect PCB-containing equipment was not observed.

Storage Containers, Drums, and Chemical Storage Areas

Approximately ten one-gallon paint containers, one five-gallon container of cement, and five one-quart containers of enamel and cleaners were observed in the basement. Staining was observed on the concrete flooring in the vicinity of the containers, however the concrete appeared to be in good condition.

Air Emissions or Wastewater Discharges

Air emissions or wastewater discharges were not observed on the Subject Property.

Sumps

A sump was observed in the basement of the building. No staining was observed in the location of the sump.

USTs or ASTs

USTs or ASTs were not observed at the Subject Property, however, a patch of concrete and evidence of previous environmental borings were observed in the area where a potential UST is presumed to be located near the western wall of the basement.

Monitoring Wells or Remedial Activities

Several monitoring wells were observed at the Subject Property, five of wells were installed by Langan as part of the concurrent environmental investigation, and two from previous investigation work at the Subject Property.

Stained or Discolored Soil

Stained or discolored soil was not observed at the Subject Property.

Leachate or Seeps

Leachate or seeps were not observed at the Subject Property.

Adjoining and Surrounding Property Uses

The Subject Property is adjoined by Purves Street followed by a two-story commercial building identified as "Sculpture Center" to the east; vacant lots to the south; 44th Drive followed by a one-story garage identified as "Global Auto Electric d/b/a Manny Auto Electric" to the west; and a two-story commercial building identified as "JME Enterprises, Inc." and "L.I.C Auto Repair" and a one-story commercial building identified as "Queens Plaza Automotive Warehouse" to the north. An active filling station was identified at the northeast corner of the intersection of 43rd Avenue and Jackson Avenue, approximately 275 feet northeast of the Subject Property. The surrounding area is primarily comprised of multiple-story retail, commercial, manufacturing, and vacant land.

Site Reconnaissance Conclusions

The following REC was identified on the Subject Property:

- UST – A suspect gasoline UST is located near the west wall in the basement of the building. Leaks or spill of petroleum products associated with the UST has the potential to adversely impact groundwater and/or soil vapor at the Subject Property.

The following RECs were identified on surrounding properties:

- Auto repair facilities identified as "JME Enterprises, Inc." /"L.I.C Auto Repair" and "Queens Plaza Automotive Warehouse" adjoin the property to the north;
- A filling station was observed at 27-19 43rd Avenue, approximately 275 feet of the Subject Property.

Based on the close proximity to the Subject Property, these facilities have the potential to adversely impact groundwater and/or soil vapor at the Subject Property and are considered RECs.

The following are considered additional (non-ASTM) environmental concerns:

- Based on the ages of the building, ACM, LBP, and PCB may be present in building materials;
- Water infiltration observed in the building creates the potential for mold growth

The following are considered de minimis conditions:

- Staining was observed on the concrete floor in the first floor office and garage/warehouse and near the east entrance in the basement; however, the concrete in these locations appeared to be in good condition. The staining is therefore considered a de minimis condition.

7.0 INTERVIEWS

7.1 Site Owner/ User

A owner questionnaire was provided to Adam Joly, a representative of the site owner, during the site reconnaissance on December 10, 2013. The questionnaire was not completed by the time this report was finalized.

A User questionnaire was provided to Mark Gold, Principle of Silvercup Properties, LLC. The completed questionnaire was received on December 31, 2013 and is discussed in further detail in Section 4.1. The completed questionnaire is included in Appendix B.

7.2 Site Occupants

The Subject Property is currently vacant.

7.3 Owners/Tenants of Adjacent Properties

Owners/tenants of adjacent properties were not interviewed as part of this Phase I ESA.

8.0 ADDITIONAL SERVICES

8.1 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

According to the USEPA radon map, Queens is considered a Zone 3 area, which indicates the predicted average indoor radon levels are less than 2 picoCuries per liter (pCi/L). The NYSDOH maintains a database of radon test results on a local and county level. According to the NYSDOH, a total of 413 radon tests have been conducted in New York County with results indicating that 0.3 % of living areas and 3% of basements have radon concentrations above 4 pCi/L, the USEPA action level. According to the NY Radon database as reported in the EDR Radius Map Report, a total of 81 radon tests have been conducted in Queens County with an average radon level of 0.6205 pCi/L for living area and 0.970 pCi/L for basement. Based on this data, it is unlikely that elevated levels of radon gas are present at the Subject Property.

8.2 Asbestos-Containing Material, Lead-Based Paint, and PCBs

A formal survey to identify ACM, LBP and/or PCB-containing material was not conducted as part of this Phase I ESA. The building was constructed in the 1930s, potentially with building materials that contain ACM, LBP, or PCBs. In addition, the building contained fluorescent light ballasts, which can contain PCBs. These materials should be identified and handled appropriately prior to any demolition or renovation activities at the Subject Property.

9.0 DEVIATIONS AND DATA GAPS

9.1 Deviations

Langan has performed a Phase I ESA of the Subject Property utilizing a standard of good commercial and customary practice that is consistent with the ASTM E 1527-05 and E1527-13. Significant deviations were not made to the above referenced standards.

9.2 Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to ASTM E 1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA was completed without data gaps, with the exception that responses to all FOIA requests have not been and interviews with the site owner and adjacent property owners were not conducted. Sufficient information has been provided from other data sources to render conclusions regarding the presence of RECs at the Subject Property. As such, this data gap is not expected to impact the overall conclusions of the Phase I. Should additional information provided in the FOIA responses alter the conclusions of this Phase I ESA, we will issue an addendum to this report.

10.0 FINDINGS, OPINIONS, AND CONCLUSIONS

This Phase I ESA was conducted in accordance with the ASTM Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process) and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC.

The Phase I ESA identified the following RECs, de minimis conditions, and other environmental concerns associated with the Subject Property:

REC 1 – Historic Site Use

Historic use of Lot 4 includes a garage with a gasoline tank in 1936; a paper warehouse and photo chemical warehouse in 1947; and an auto body shop from 1977 to at least 2006. Lots 22 and 23 were part of an operation identified as "Controller Manufacturing" between 1936 and 1950. From 1970 through 2006, Lot 22 is shown as welding and repairs with city directory listings that include Rozilda labs, leather goods, plating equipment, manufacturing and Artisan Designs. The historic uses involve the storage, application, and disposal of hazardous substances. Leaks, spills, or discharges of solvents, petroleum products, polychlorinated biphenyls (PCB), metals and/or other hazardous substances used at the historic facilities may have adversely impacted soil, groundwater, and/or soil vapor.

REC 2 – Documented Site Contamination

Soil and groundwater contaminant concentrations were identified above New York State standards. Elevated soil and groundwater concentrations of petroleum volatile organic compounds (VOC) were detected adjacent to the suspected tank. Additionally, chlorinated VOCs were identified in groundwater. Onsite PCE groundwater concentrations ranged from non-detect along the southwestern portion of the site to 950 µg/L at a monitoring well in the northeastern portion of Lot 22. Onsite TCE concentrations ranged from non-detect along the southwestern portion of the site to 150 µg/L in the northeastern portion of Lot 22.

REC 3 – NYSDEC Spill and Potential On-Site Underground Storage Tank

A gasoline underground storage tank (UST) is potentially located in the Lot 4 building basement. The tank was identified on a 1936 Sanborn map and previous reports indicate the presence of a vent pipe that was traced to a concrete patch in the basement floor. Remnants of a concrete dispenser island were visible immediately behind the garage door. Site constraints prevented a geophysical survey to document the presence of the tank. Petroleum staining, odor and

elevated field instrument readings were identified in the vicinity of the potential UST. Elevated concentrations of petroleum volatile organic compounds (VOCs) were detected within the impacted soil. Based on these observations and associated analytical data, a spill was called in to the New York State Department of Environmental Conservation (NYSDEC) and Spill No. 1302045 was assigned.

REC 4 – Surrounding Property Use

Current and historic uses of the adjoining and/or surrounding properties include gasoline filling stations, manufacturing facilities, auto repair stations/garages with gasoline tanks, iron works, drycleaners, a chemical laboratory, an oil-burning utility company, and printing facilities. Additionally, two open spills (Spill Numbers 1000528 and 9913082) were identified on properties less than 700 feet from the Subject Properties. Voluntary Cleanup Program and Brownfield Cleanup Program sites with documented soil and groundwater contamination were identified on surrounding properties. Monitoring wells were identified on surrounding properties, which may indicate past or current environmental monitoring. Leaks, spills, or discharges of solvents, petroleum products, and/or other hazardous substances associated with surrounding property use may have adversely impacted groundwater and/or soil vapor beneath the Subject Property.

De Minimis Condition

Staining was observed on the Lot 4 building office and basement floor and the garage/warehouse walls and floor. The concrete floor slab beneath each area of staining appeared to be competent and significant subsurface impact is unlikely.

Non-ASTM Environmental Concerns

The building was constructed in the 1930s, potentially with materials that contain asbestos, lead-based paint, or polychlorinated biphenyls (PCBs). In addition, the building contained fluorescent light ballasts, which may contain PCBs.

No Historic RECs (HRECs) or Controlled RECs (CRECs) were identified.

12.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312 10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Properties. They have developed and performed the AAIs in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are provided in Appendix L.

APPENDIX B- USER QUESTIONNAIRE

LANGAN

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), 188 the user must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by the EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquires" is not complete.

General Information

User/Client Name (s): SILVERCUP PROPERTIES LLC

Property Name: 44TH-PURVES LIC

Address: 27-21 44TH DRIVE, LONG ISLAND CITY, NY, 11101

QUEENS BLOCK 268, LOTS 4, 22, 23

Property Type: VACANT BUILDING AND VACANT LAND

Type of Property Transaction:

- Purchase of property ☒
- Financing of property ☐
- Sale of property ☐
- Ground Lease ☐
- Build to Suit Lease ☐
- Other_____

Reason Why Phase I ESA is required: ENVIRONMENTAL DUE DILIGENCE

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).

Yes	No
☐	☒

Did a search of recorded land title records (or judicial records, where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

Note 1 – In certain jurisdictions, federal, tribal, state or local statutes or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

LANGAN

	Yes	No
(2.) Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)). Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	☐	☒
(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐	☒
(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).	**Yes**	**No**
(a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Part 5.]	☒	☐
(b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	☐	☐
(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).	**Yes**	**No** report attached
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,	☒	☐
(a.) Do you know the past uses of the property?	☒	☐
(b.) Do you know of specific chemicals that are present or once were present at the property?	☒	☐
(c.) Do you know of spills or other chemical releases that have taken place at the property?	☒	☐
(d.) Do you know of any environmental cleanups that have taken place at the property?	☐	☒
(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).	**Yes**	**No**
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	☒	☐ report attached

1.0 INTRODUCTION

Environmental Business Consultants (EBC) has prepared the following Phase II Subsurface Investigation Report for properties located at 27-21 44th Drive and 44-18 Purves Street (Block 268, Lots 4, 22, 23), in Long Island City, Queens, New York 11101 ("the Site"). The subsurface investigation was conducted to investigate recognized environmental conditions identified in a Phase I Environmental Site Assessment report prepared for Lot 4 by EBC in October 2011 as well as the general environmental condition of Lots 22 and 23. The work was conducted on behalf of 44 LIC LLC to identify and characterize potential contaminants within the surface/subsurface soils and groundwater at the Site to support future redevelopment.

1.1 Site Location and Description

The Site is located in the City of New York and Borough of Brooklyn (Kings County) and is identified as Block 268, Lots 4, 22 and 23. The Site includes three adjoining lots located between Purves Street and 44th Drive with frontage on both streets. Lot 4 is a square shaped lot consisting of 100.4 feet of street frontage on 44th Drive, and a maximum of 98.46 feet deep. Lot 4 is developed with a 1-story warehouse and full walkout cellar that opens to the adjoining lots along Purves Street which is at a lower elevation. The building can be accessed from 44th Drive or from the cellar level through Lots 22 and 23.

Lots 22 and 23 are adjacent rectangular lots each with 25 feet of frontage along Purves Street and are 100 feet deep. Both lots are currently vacant with vegetative cover. The total area of the three lots combined is 14,600 ft^2 (0.335 acres). The property is owned by 44 LIC, LLC.

The area surrounding the subject property consists of a mix of residential and commercial properties. The elevation of the Site is approximately 17 feet above the National Geodetic Vertical Datum (NGVD). The depth to groundwater beneath the Site was encountered at approximately 9 feet below basement level on Lot 4 and below surface grade of Lots 22 and 23. Based on regional groundwater contour maps, groundwater is expected to flow to the west toward the East River.

1.2 Site Background

1.2.1 Phase I Environmental Site Assessment, October 2011

A Phase I Environmental Site Assessment (ESA) was completed by Environmental Business Consultants, in October of 2011 for a portion of the Site (Block 268, Lot 4).

The Phase I report indicated that historical information (DOB records, Sanborn Maps, City Directory listings, and internet search) reviewed for the subject site identified the subject site as being developed in the early 1920's with the one-story building (with full basement) that currently stands at the site. In 1936, the building was used as a first floor parking garage, and the basement was used for storage of furniture. The 1936 Sanborn map shows a gasoline tank in the front of the building. In 1947, the basement was used as a paper warehouse, and the first floor parking garage space was used as a photo chemical warehouse. The gasoline tank is not drawn on the 1947 Sanborn map. The 1970 Sanborn map simply labels the building as commercial or manufacturing in 1960, but city directory listings

provided for 1962 indicate the building was used as an automotive/truck rental facility. All of the Sanborn maps from 1977 to 2006 label the building as an auto body shop, which correlates with the city directory listings and internet findings, which note Tul Mor Auto Service, Inc. in 1970, Alvic Foreign Auto Repair in 1983, NE Auto Repair, Inc. in 2000 and Northeastern Auto Repair, Inc. in the mid 2000's.

EBC concluded that based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, the following recognized environmental conditions were noted for the site:

- Evidence indicating the presence of a gasoline underground storage tank underneath the concrete slab of the basement floor. The 1936 Sanborn map notes a gasoline tank near the front of the building. A vent pipe indicative of a gasoline tank is visible on the roof of the building near the southern garage door, and the remnants of a concrete dispenser island are visible immediately behind the garage door. The vent pipe was traced to the basement to a patch in the concrete floor.

Based on the age of the gasoline tank (85 years), EBC recommended the following actions:

- A Phase II Subsurface Investigation to include the collection and laboratory analysis of both soil and groundwater samples.
- Remove the gasoline tank and collect endpoint soil samples in accordance with NYS DER 10 / Technical Guidance for Site Investigation and Remediation
- Properly register and deregister the underground storage tank with the NYSDEC by completing and submitting a NYSDEC Petroleum Bulk Storage Application.
- Submit a Tank Removal Affidavit with the New York City Fire Department.
- Submit a Tank Closure Report to the NYSDEC.

Although the Phase I Report did not include recommendations for lots 22 and 23, the environmental history of both lots were evaluated in the Phase I. Lots 22 and 23 were originally developed prior to 1885 as 2 and 3-story residential buildings. From 1936 through 1950 both lots were part of an operation identified as "Controller Manufacturing". From 1970 through 2006 Lot 22 is shown as "welding and Repairs with directory listings that include Rozilda labs, Leather Goods, plating equipment, manufacturing and Artisan Designs. Lot 23 is shown as vacant from 1970 on with a single listing for Russell Cress Co. in 2005. The building on Lot 22 was demolished in 2008 and both lots are vacant.

2.0 SUBSURFACE INVESTIGATION

The field work portion of the Phase II was performed on May 10 and 17, 2013 and consisted of the collection and analysis of soil and groundwater samples. Drilling services were provided by Eastern Environmental Solutions of Manorville, NY. Analytical services were provided by Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301)

2.1 Soil Sampling

Four soil borings were performed in Lots 22 and 23 to a depth of 20 feet below grade on May 10, 2013. Due to restricted access an additional two borings were performed around the suspect tank in Lot 4 of the Site to a depth of 10 feet below the basement slab on May 17, 2013. The approximate locations of the tank and the soil borings are shown on **Figure 2**.

Soil samples from each soil boring location were collected using a five foot steel dual tube sampler with acetate liners and Geoprobe direct-push equipment. For each of the soil borings, soil samples were collected continuously from grade to the termination depth of the soil boring. Soil cores were field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination by a qualified environmental professional. Boring logs are provided in **Appendix A**.

During the May 10, 2013 site visit four soil borings were advanced to 20 feet below grade in Lots 22 and 23 (44-18 Purves Street). A sample was retained from the groundwater interface (7-10') of soil boring B1 and B2. A deeper sample was retained (12-15') from soil sample locations B3 and B4. Soil boring B2 exhibited a slight odor and low PID (10-20 ppm) readings around the groundwater interface. Due to limited access to the building basement on Lot 4 no borings were performed on May 10, 2013

An additional two soil borings were performed on May 17, 2013 around the suspect underground storage tank on Lot 4 of the Site. A soil sample was retained from the interval that exhibited the highest degree of contamination (B1(5-8'), B2(4-7')). Both borings showed physical evidence of petroleum contamination with PID readings from 0-400 ppm.

2.1.1 Soil Results

All of the soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and delivered by laboratory dispatched courier to Phoenix Laboratories. Soil sample results were compared to the NYSDEC Part 375-6 Unrestricted Use Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). Analytical data for the soil samples are summarized in **Tables 1** through **2**, and a copy of the laboratory analytical reports are included in **Appendix B**.

VOCs

Only One VOC (n-Propylbenzene) was detected within the soil samples above its corresponding NYSDEC Part 375.6 Unrestricted Soil Cleanup Objectives (USCOs). The compound was detected within soil boring Tank B2. Soil sample B3(12-15') showed detections of cis-1,2-Dichloroethene, Tetrachloroethene, and Trichloroethene, but the levels were below UUSCOs.

SVOCs
No SVOCs were reported above their corresponding UUSCOs in any of the soil samples retained.

2.2 Groundwater Sampling

Following the installation of soil boring B1, B3, B4, Tank B1, and Tank B2, EBC installed a 1-inch diameter temporary PVC monitoring well. A groundwater sample was collected from the temporary monitoring well utilizing disposable polyethylene tubing, and a low-flow peristaltic pump.

The groundwater sample was collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice. Groundwater samples GW1, GW3, and GW4 were submitted for analysis of VOCs by EPA Method 8260. Groundwater samples Tank GW1 and Tank GW2 were submitted for analysis of VOCs by EPA Method 8260 and SVOCs by EPA Method 8270 (CP51 List), to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301).

2.2.1 Groundwater Sample Results

Groundwater sample results were compared to the water quality standards specified in NYSDEC Groundwater Quality Standards (GQSs). Analytical data for the groundwater samples are summarized in **Tables 3 and 4** and a copy of the laboratory analytical report is provided in **Appendix B.**

VOCs
Several chlorinated VOCs were detected within the groundwater samples collected from locations GW1, GW3, and GW4. In addition, several petroleum VOCs were detected within the groundwater samples collected from locations Tank GW1 and Tank GW2. The findings are summarized below:

GW1	Tetrachloroethene (19 µg/L)
GW3	1,1,1-Trichloroethane (18 µg/L), cis-1,2-Dichloroethene (190 µg/L), Tetrachloroethene (950 µg/L), trans-1,2-Dichloroethene (6.6 µg/L), Trichloroethene (150 µg/L), and Vinyl Chloride (5.6 µg/L).
GW4	1,1,1-Trichloroethane (15 µg/L), cis-1,2-Dichloroethene (130 µg/L), Tetrachloroethene (610 µg/L), trans-1,2-Dichloroethene (14 µg/L), Trichloroethene (90 µg/L), and Vinyl Chloride (5.1 µg/L).
Tank GW1	n-Propylbenzene (21 µg/L).
Tank GW2	Isopropylbenzene (47 µg/L), Naphthalene (66 µg/L), n-Propylbenzene (110 µg/L).

SVOCs
Several SVOCs were detected within the groundwater samples Tank GW1 and Tank GW2. The findings are summarized below:

Tank GW1	Benzo(a)anthracene (11 µg/L), Benzo(b)fluoranthene (13 µg/L), Benzo(k)fluoranthene (5.1 µg/L), Chrsyene (11 µg/L), Indeno(1,2,3-cd)pyrene (5.8 µg/L).
*Tank GW2	Fluoranthene (73 µg/L), Naphthalene (57 µg/L), Phenanthrene (51 µg/L), Pyrene (69 µg/L).

*Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated Report Limit (RL) was reported for the semivolatile analysis.

3.0 CONCLUSIONS

Subsurface soils at the site are primarily made up of urban fill material to a maximum depth of 4 feet, followed by a silty sand to approximately 15 feet below grade and coarse sand to the boring terminus. The groundwater was encountered at a depth of approximately 9 feet below grade of Lots 22 and 23.

Lots 22 and 23
No VOCs or SVOCs were detected above UUSCOs within any of the soil samples from Lots 22 and 23. Groundwater samples showed concentrations of several chlorinated VOCs above NYSDEC Groundwater Quality Standards including tetrachloroethene (PCE) at a concentration of 950 ug/L. Based on the historic use of the lots for controller manufacturing, leather goods and plating equipment and the chlorinated solvent detections in soil, it's possible that the contaminants are site related.

Lot 4
Elevated concentrations of petroleum VOCs were detected within one soil sample, but only one VOC, n-Propylbenzene, was reported above its respective UUSCO. No SVOCs were detected above UUSCOs within either of the soil samples retained. The groundwater results showed several petroleum VOCs and SVOCs over NYSDEC Groundwater Quality Standards in each sample including n-propylbenzene. Based on field observations and the elevated levels of petroleum VOCs in soil and groundwater in the vicinity of the UST, a spill was reported to the NYSDEC as required by Law (Spill No. 1302045).

LABORATORY REPORTS

PHOENIX
Environmental Laboratories, Inc.

Monday, May 20, 2013

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 4416-4418 PURVES ST.
Sample ID#s: BD71472 - BD71478

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

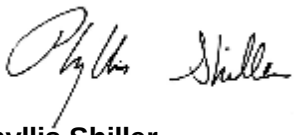
This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,



Phyllis Shiller

Laboratory Director

Sample Criteria Exceedences Report

GBD71472 - EBC

Requested Criteria: 375, 375RRS, 375RS

State: NY

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 27-21 44TH
Sample ID#s: BD80732 - BD80737

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller

Laboratory Director

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quanitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Elevated surrogate recovery was observed for volatiles due to matrix interference.

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quanitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Elevated reporting limits for volatiles due to the presence of non-target compounds.

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

TRIP BLANK INCLUDED 100% SOLID ASSUMED

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 07/11/2013 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 8 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/13/2013 has revealed that there are 14 NY SHWS sites within approximately 1 mile of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2013 has revealed that

there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 09/25/2013 has revealed that there are 45 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 3 NY CBS AST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 09/25/2013 has revealed that there are 17 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that there are 35 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 37 EDR US

EXECUTIVE SUMMARY

Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	ERT desk reports Location- e/s Purves St., 500 ft s/o Jackson Ave, Queen, LIC - Vactor vehicle #60624 inadvertently released 1500 gallons of oil/water substance onto street and sewer. The back latch was not fully engaged, thus when the vactor reached it capacity (1500

COMMERCIAL AREA (Continued) **S106698303**

gallons) and the vacuum stopped, the seal from the rear latched opened thus releasing it contents. Con Edison crews quickly repaired rear vactor and then vacuumed the affected sewer pumping 1500 gallons + 500 gallons from another vactor = 2000 gallons. I responded to location along with DEC Tim DeMeo & DEP Keith Williams. There were NO signs of oil in the affected sewer. Both DEC & DEP were satisfied with Con Edison's cleanup operations to the affected street & sewer. DEP Williams indicated that this sewer was a combination type which leads to a sewer treatment plant. Cleanup operation completed.

Remarks: BROKEN SEAL ON VACTOR TRUCK LEAKED 1500 GAL WHICH RAN INTO A STORM DRAIN. CLEAN UP PENDING - CREWS ON SITE. eMIS # 154890.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"2/17/2000 ECO Lum was at the site and wrote a ticket for failure to notify. After Lum issued ticket, this call was received on the Hotline. Rommel said the site appeared to be within standards, tanks were excavated, soil was stock piled and covered. Anticipate sample report to be submitted soon.07/18/2005: Sent letter to Michael Mazza, site owner, requesting information. M. Brand NYSDEC DER Albany.07/27/2005: Spoke with Michael Mazza, site owner. Site was completely renovated, 10 old tanks removed, four new tanks installed, 600-700 tons of contaminated soil removed. Mazza will send in information. M. Brand NYSDEC DER Albany.08/03/2005: Received information from site owner. Information included:- Disposal tickets and invoices for the off-site disposal of 698.01 tons of contaminated soil;- Laboratory analyses for samples of stockpiled soil;- Test results for gasoline dispensers and new tanks dated 09/19/2002 (for new tanks installed in 2000);- Petroleum Bulk Storage Registration Certificate for four new tanks installed on 02/01/2000; and,- Invoice for recent inspection (03/01/2004) of facility and underground tanks by the NYC Fire Department Bureau of Fire Protection. M. Brand NYSDEC DER Albany.09/07/2005: Information reviewed and determined to be acceptable documentation of site cleanup. Site closed and NFA letter sent to site owner. M. Brand NYSDEC DER Albany.5/10/13-Vought-Received email from NYCOER Shaminder Chawla (Ph:212-442-3007 email ShaminderC@dep.nyc.gov) that "I have one Pre-App meeting today at 10 AM. Site is an old Gas station with closed spill #9913082. BTEX in soil: 139,000 ppb BTEX in gw: 353,700 ppb Attached figure indicates gw plume migration. If you are available, I like to talk about this around 9.45 AM". Attached to email was PDF with site plan and soil and groundwater data that was recently collected in 5/3/13. Vought spoke with RSE and spill reopened due to possible off-site migration of petroleum contaminants that was unknown at the time of this closure, Environmental conditions related to this spill case which were unknown to the Department at the time of this closure and information received, in whole or part, after the Department's spill case closure, which indicates the corrective action was not sufficiently protective of human health and/or the environment. Spill assigned to DEC Kann as

GASGO (Continued) **S104510008**

per RSE and Vought provided information for Kann to NYCOER Chawla. Groundwater analyticals recently collected show up to 353,700ppb BTEX and soil up to 139,000ppb BTEX. OER Chawla noted that a new purchaser has three weeks to decide to buy the site and their decision is partially based on DEC requirements and would like to set up a meeting on 5/13 to discuss. OER Chawla noted that they are looking to develop site with a slab on grade foundation with ground floor retail shops. OER Chawla noted that tank location was excavated to 11'bg to groundwater and sidewalk along 43rd Street was also excavated to 11'bg as part of a utility installation. Vought noted that a RAP must be approved prior to site development.5/10/13: J.Kann - left a phone message for Shaminder Chawla (OER) and also sent an email to him requesting any additional information that he may have on the site (i.e. is there a complete report that was prepared by Advanced Cleanup Technologies?).5/13/13: J.Kann - received a Phase II from ACT. A tank closure report from 2000 was also submitted. Scheduled a meeting for Wednesday may 15 at 9am. Spoke to Shaminder Chawla at OER and Paul Stewart of ACT. Meeting time is acceptable.5/15/13: J.Kann - met with potential buyer of the property, their attorney and environmental consultant. Shaminder Chawla of OER was also present. Sign in sheet is edoced. Discussed steps in moving forward and possible requirements for remediation (which includes off-site gw well installation and sampling, as well as on-site excavation below groundwater).5/23/13: J.Kann - recvd a work plan from ACT on 5/22/13 which included the installation of 5 off site wells. Approval letter was sent on 5/23 noting that one proposed well was on the other side of a subway line (edoced).

Remarks: WHILE UNCOVERING TANKS FOR REMOVAL, CONTAMINATED SOIL WAS DISCOVERED. SAMPLES TAKEN.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

their insurance company info.Hub International **insurance broker**contact: Cynthia ChinPH. (212) 338-285810:09 AM:- spoke with Mr. Sokol. Eastmond is at the site to do tank only test and then will expose the fill line. asked Mr. Sokol to wait for excavation along fill line as may need approval from MTA.10:14 AM:- spoke with Haroon in System Safety at MTA. Haroon mentioned that contractor doesn't need any approval from MTA for sidewalk breaking or fill line repair. asked Haroon to send someone to the site to guide contractor if deeper excavation is required (due to proximity to the subway structure).Haroon Aslam **spill case manager in MTA**PH. (646) 252-3607 (646) 252-5777email: haroon.aslam@nyct.com10:18 AM:- spoke with Mr. Sokol. asked him to finish tank only test first and expose fill line. informed Mr. Sokol that no deeper excavation should be performed until MTA approves the work.11:45 AM:- visited site. met Mr. Sokol and Haroon. eastmond crew was working to test tank. spoke with Rene at Eastmond. they have applied for DOT permit and expect to start work on 04/19/10. inspected track area with Mr. Sokol and Haroon. area was in same condition with little more oil than previous site visit. some odors at the end of platform in leak area. Haroon asked to contact Rajen Udeshi at MTA about approval for excavation near subway structure.04/16/10-Hiralkumar Patel.9:38 AM:- sent email to Mr. Sokol with Mr. Udeshi's contact info.Rajen UdeshiCapital Program Management2 Broadway, 7th FloorNew York, NY 10004Ph. (646) 252-3673email: rajen.udeshi@nyct.com04/16/10-Hiralkumar Patel.11:01 AM:- received email from Mr. Sokol. after installing new fill and vent line and repairing manhole on tank, Eastmond tested tank system and it passed the test. Mr. Sokol will submit test result, once available.04/19/10-Hiralkumar Patel.11:55 AM:- spoke with Jen at MTA. they haven't got fingerprint sample results back yet.12:47 PM:- received email from Mr. Sokol. they spoke with MTA who approved to excavated up to four feet without any engineer report. so Eastmond will expose old fill line tomorrow. Mr. Sokol also mentioned that their insurance company has hired Tetra Tech.2:51 PM:- received message from Sandra from Tetra Tech.Sandra GaurinTetra Tech EM Inc.Ph. (973) 384-9799 (O) (973) 659-9996 Ext. 245 (201) 572-0835 (C)Fax (973) 659-1287email: sandra.gaurin@tetratech.com3:20 PM:- left message for Ms. Gaurin.04/20/10-Hiralkumar Patel.2:15 PM:- visited site. met Ms. Gaurin, Mr. Sokol and Rene. Eastmond crew exposed old fill line. when contractor tried to pull out fill line from ground, fill line separated in two pieces from coupling. no broken threads observed on pipe and looks like fill line was not properly installed. found that piece of fill line towards building was anchored in ground at coupling joint. piece of fill line towards building was corroded but no holes found. corrosion holes found in piece of fill line towards sidewalk. fresh oil found under fill line. asked Ms. Gaurin to get DOT and MTA permits before further work. Eastmond will cover excavation with plastic and then backfill with clean sand as need permit for further work. Eastmond collected two soil samples (from same area) for fingerprint and age analysis.inspected subwary track area with Ms. Gaurin. found oil on tracks. asked Ms. Gaurin to submit claim number and insurance claim handler's information.asked Mr. Sokol to submit tank test result.04/23/10-Hiralkumar Patel. received email from Ms. Gaurin (at 5:24 PM on 04/21/10) with contact info for project manager at insurance company. Ms. Gaurin is preparing work plan for further work and asked whether groundwater sample from temporary geoprobe is sufficient for initial groundwater quality check or permanent well is required.Dawn KrigstinIronshore

COURT PLAZA (Continued) **S110309405**

Environmental **insurance carrier**Ph. (646) 826-6785email: Dawn.Krigstin@Ironshore.comspoke with Ms. Gaurin and informed her that permanent well is not required right now, but will be required if finds groundwater contamination in groundwater sample via temporary geoprobe.04/23/10-Hiralkumar Patel. received email from Mr. Sokol (at 7:51 PM on 04/22/10) with tank test result.12:34 PM:- received email from Jen from MTA including result of fingerpint analysis. sample collected from subway track area was found #2 oil.04/26/10-Hiralkumar Patel.10:18 AM:- received call from Mr. Daniels, environmental person at Chartis insurance which is second insurance company for the site. Mr. Daniels mentioned that both insurance companies are involved in project. asked Mr. Daniels to submit insurance claim project manager's info and clear information about who is going to handle entire cleanup project.Larry DanielsChartis InsuranceAIGPh. 10-Hiralkumar Patel. after discussing with DEC Austin, case transferred to DEC Vadim due to groundwater contamination and impact

COURT PLAZA (Continued) **S110309405**

to the MTA tunnel.**refer to spill # 1000435 also.**11/8/10 - reassigned from Tibbe to JMOCONNE - sent email to TetraTech (Gaurin) asking for reports/work plans submitted but not reviewed (JOC)01/14/11 - spoke with Sandra Gaurin, Tetratech. She will prepare and provide two separate documents: work plan for installing permanent well at location of former temp to allow removal of free product in the short term; separate work plan for delineation of contam soil and gw - to be written as dynamic work plan - will include some means to evaluate whether oil migrated down along outside front (north side) of building where fill line enters building; same along inside of wall (basement has soil floor); will include sensitive receptor survey; recognized that MTA approval is needed for all work due to proximity of subway (JOC)11/28/11 - Raphael Ketani. I reviewed the Tetra Tech Inc. 11/23/11 response letter to the DEC 10/11/11 letter commenting on the additional Site Investigation Work Plan and the Interim Remedial Measure Work Plan dated April 2010. The letter described the tentative work schedule. During this week, the NYCDOT permit applications are supposed to be processed. I spoke to Sandra Gaurin (gor-in) of Tetra Tech (973) 630-8040 about this. She said that some changes were required. So the applications were resubmitted. She is hopeful that the applications will finally be accepted so that December 12 field activities can commence. I also asked her why Tetra Tech was going to use the Membrane Inter Phase screening. She said that this was Mr. O'Connell's suggestion so that Tetra Tech doesn't have to go back and forth with doing many rounds of soil sampling and taking many soil samples that need to be sent off for analysis. She said that the vapor analysis from the penetration points will tell them where the worst contamination is. I told her that the DEC will still require that soil end points be taken after all of the soil that can be excavated has been removed. She said that she expected to do in-situ treatment due to the close location to the subway. I asked her what type of building was being serviced by the fuel system. She said that it's a residential/commercial building near the court house.The letter also dealt with vertical delineation of the contamination and soil and groundwater sampling. I approved the 11/23/11 Tetra Tech letter in an e-mail to Ms. Gaurin.12/5/11 - Raphael Ketani. Ms. Gaurin (973) 630-8040 sent me an e-mail. The MIP investigation will take place between 12/19 and 12/22, and the recovery well installation will take place on 1/3/12.3/7/12 - Raphael Ketani. Today I received the TetraTech March 2012 Remedial Investigation Report. The soil and groundwater were sampled on 12/21/11. Four MIPS and two soil borings (SB-1 and SB-2) were installed. MIP-1 was installed next to the old fuel line. MIP-2 was 15 feet southwest of MIP-1 and MIP-4 was 6 feet to the northeast. The soil results for MIP-2 did not have any VOC exceedences and no BNA (bases-neutral-acid) hits. The soil results for MIP-4 at 9 feet bgs were: 3360 ppb ethylbenzene, 5310 ppb toulene, and 59,300 ppb total xylenes. The deeper soil results for MIP-4 had only one exceedence, 945 ppb of total xylenes. The great majority of the soil contamination at MIP-1 was in the 10.5 foot to 12 foot interval. These results were up to: 10,800 ppb ethylbenzene, 6240 ppb toluene, 67,100 ppb total xylenes, 23,700 ppb naphthalene, and 284 ppb benzene. There were no significant detections for the BNA analytes. The other MIP results and the results from the regular soil borings were either without exceedences or non-detect. A groundwater sample was taken at MIP-3, which is about 35 away from the old fuel line. The results were entirely non-detect.The RIR also included the

COURT PLAZA (Continued) **S110309405**

figures from the 2010 soil testing and sampling. The testing and sampling locations defined the limits of the investigation area. The results indicated that there were significant exceedences at TTB-1, 2, 5, 6, 8 and 10. I spoke to Ms. Gaurin (973) 630-8040 about the RIR. I told her that soil removal or remediation should take place at the locations of MIP-1, MIP-4, and TTB-1, 2, 5, 6, 8 and 10. I also told her that the groundwater sample which was taken at MIP-3 didn't reflect the groundwater conditions near the spill site as it was too far away (about 35 feet distance). Ms. Gaurin said that there had been a few inches of product on the water table, but it had disappeared. I asked her why the MIP-3 sampling didn't find the product. She responded that the MTA had been collecting the product that had seeped into the subway. So she assumed it had all gone there. I told her that the DEC didn't believe that this was true and that there should be some product near the old fuel pipe. I asked Ms. Gaurin to submit a work plan for excavating the contaminated soil in the affected areas. She said that excavation couldn't be done as there were too many utilities. I then told her to try treatment solutions. She said that she wasn't sure they would work. Lastly, I told Ms. Gaurin to submit a site plan showing where the utilities are in relationship to the MIP locations and the TTB locations. She said that she will.In the end, I determined that soil treatment and the installation of a well right next to MIP-1 would be necessary. I sent an e-mail to Ms. Gaurin (973) 630-8040 stating that the second investigation had been inadequate regarding the delineation of the soil contamination. I mentioned in the e-mail that high soil contamination was found at TTB-1, 2, 5, 6, 8 and 10, and at MIP-1 and MIP-4. I also stated that borings should have been performed extending away from these locations until the limit of the soil contamination had been found. Lastly, I asked for a scaled drawing showing where all of the utilities were.Ms. Gaurin responded by e-mail that the TTB series of borings were meant for only internal TetraTech use in order to evaluate the MIP responses. That is why they were in the appendices. She also stated that they were performed in 2010 and don't reflect current conditions.12/11/12 - Raphael Ketani. Ms. Gaurin (973) 630-8040 called to say that she just recently realized that the DEC hadn't been sent the information that was requested some time ago. She said that the project manager had left and so things came to a standstill regarding the project. She will send the DEC the information very soon. 12/24/12 - Raphael Ketani. I reviewed the Addendum to the Remedial Investigation Report dated April 2012 and revised December 2012. The information in the revised Addendum confirmed the results of the earlier March 2012 Remedial Investigation Report and contained additional data.The additional information and data consisted of the fact that only 4 Membrane Interface Probe MIP locations could be installed due to the presence and density of the utilities. In the Addendum, it is stated that there is universal refusal at 20 feet bgs. However, it is not mentioned whether this is due to the presence of the subway tunnel. Also, the silt content of the soil markedly increased from about 14 to 15 feet bgs. Again, this may be due to the method of subway tunnel construction - the silt acting as a protective layer from ground vibration from the street above. Groundwater recovery was limited to 11 to 14 feet bgs.MIP-1 had a strong Flame Ionization Detection (FID) response at 12 feet, but less below 12.5 feet. MIP-2 near the former TTB-5 location had an FID response starting at 5 feet with the strongest response at 10 to 12 feet bgs. The response declined below

COURT PLAZA (Continued) **S110309405**

this horizon. MIP-3, which is 35 feet to the west of the former fill pipe location, had lower FID responses than MIP-2 at 12 and 16 feet below grade. MIP-4 near the former location of TTB-10 had FID responses starting at 6.5 feet bgs. There was no FID response at 12 feet bgs. Soil impacts appear to diminish to the west. A soil sample taken where the fill line had entered the building did not indicate contamination. There were no reports of product in the subway since the line was replaced during April 2010. There were significant VOC exceedences at TTB-1, 2 and 5 to 10 (but not at TTB-4 and 11 to 13). There were also significant VOC exceedences at the locations of MIP-1, MIP-4. This implies that there is still high soil contamination along the west and north sides of the 15 foot by 15 foot main impact area. The highest soil contamination was found between 3 feet and 8 feet bgs. VOC groundwater results were high at TTGW-1 (15 feet bgs). The groundwater sample which was taken at MIP-3 didn't reflect the groundwater conditions near the spill site as it was too far away (about 35 feet distance). TetraTech recommended allowing Monitored Natural Attenuation to remediate the remaining contamination. They would also conduct groundwater monitoring.12/26/12 - Raphael Ketani. A letter was drafted and submitted to Hassan Hussein, EE III and supervisor of Unit C in Region 2, for his review. In the letter, the DEC requested that a method be determined for remediating the soil contamination at TTB-1, 2 and 5 to 10, and at MIP-1 and MIP-4. It was also requested that they find a way to reduce the VOC contamination in the groundwater. Court Square LLC was given until January 18, 2013 to submit a remedial action work plan.The latest ownership information for 5 Court Square (block and lot 81 and 9) is: Court Square LLC, c/o Fisher Associates Real Estate, 152 West 57th Street, 12th Floor, NY, 10019.12/27/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 1/18/2013 - Raphael Ketani. I received the January 2013 Remedial Action Work Plan and began my review.1/23/13 - Raphael Ketani. I finished my review of the RAWP. TetraTech will use RegenoOx to reduce or remove the soil contamination at TTB-1, 2, 5 and 10 and MIP-1 and MIP-4. Seven temporary injection points will be installed 10 feet apart. About 1440 lbs. of solution will be injected between 3 to 8 feet below grade. ORC Advanced will be used to remediate the groundwater at TT-GW1. They will inject 120 lbs. of solution at 4 temporary points. The solution will be injected between 15 and 20 feet below grade. Two sampling events will be performed on a quarterly basis after the injections are completed. Soil and groundwater samples will be taken from 4 temporary points within the injection area. The soil and groundwater samples will be tested for VOCs and SVOCs. The work schedule will be submitted after they get approvals from the NYC DOT and the MTA. The Remedial Action Report will be submitted after the treatments and sampling are completed. CP-51 standards will be used to compare the soil results. TOGS 1.1.1 standards will be used to compare the groundwater results.I found the RAWP to be deficient for the following reasons:(1) they intend to address the soil contamination at TTB-1, 2, 5 and 10. However, the DEC's letter approving the revised April 2012 Remedial Investigation Report Addendum (Revised December 2012) dated 12/27/12 instructed Court Square LLC to remediate the soil contamination at TTB-1, 2 and 5 TO 10, not 5 and 10.(2) there is no discussion regarding the siltyness of the soil and its impact on the movement of the solution(3) the site is near the subway tunnel, will the MTA only give approval to the injections if the solution is in a weak form? if

COURT PLAZA (Continued) **S110309405**

so, then the solution may not be effective(4) Figure 2 - Treatment Area Map = the actual solution injection locations are not shownAdditionally, Court Square LLC must consider the following before the injections take place:(1) they need to comply with the Federal underground injection control (UIC) regulations. Also, they should review the DEC guidance (IGP-22);(2) information is needed regarding the dosing of the solutions (i.e. mass of chemical per mass of VOCs and SVOCs);(3) how will the conditions in the subsurface be kept oxic?(4) it is recommended that groundwater be extracted from the proposed injecton area to minimize displacement of the dissolved plume. The pre-extracted water could be used to prepare the treatment solutions;(5) how will the treatment solutions be prevented from migrating off site? are there downgradient control wells? A response letter was drafted for the review of Mr. Hussein. The letter stated the above deficiencies and listed the 5 above pre-injection items. The submission of a revised Remedial Action Work Plan was requested with a due date for the work plan of March 1, 2013. Mr. Hussein approved the letter and it was sent out. 3/1/13 - Raphael Ketani. Ms. Gaurin (973) 630-8040 sent an e-mail requesting an extension of the submission deadline for the work plan to March 15, 2013. She said that they needed to get additional contractor quotes. I granted the extension.3/21/13 - Raphael Ketani. I received and reviewed the revised Remedial Action Work Plan dated March 2013. Tetra Tech plans to inject the treatment solutions at the 10 locations indicated in the DEC 1/25/13 letter. These are TTB-1, TTB-2, TTB-5 to TTB-10 and MIP-1 and MIP-4. About 1440 lbs. of RegenOx will be injected at a depth of 3 to 8 feet bgs. A 5% solution will be used. There will be two rounds of injections two weeks apart. About 120 lbs. of ORC Advanced will be injected into the saturated zone at 15 to 20 feet bgs at the locations TTGW-1, TTB-5 to TTB-7 and TTB-9. The treatment solutions will be allowed to work for 9 to 12 months. After this period of time, there will be two rounds of confirmatory soil and groundwater sampling on a quarterly basis. The samples will be tested for VOCs and SVOCs. If the MTA doesn't approve the plan, then excavation will take place in order to remove the contamination. A USEPA form 40 CFR Part 144 will be submitted to the EPA.I approved the revised work plan in an e-mail to Ms. Gaurin and indicated that the DEC would like the work to proceed as soon as possible.5/15/13 - Raphael Ketani. I tried to contact Ms. Gaurin (973) 630-8040 regarding progress at the site, but could only leave a voice message and send an e-mail.Later, Ms. Gaurin sent me an e-mail stating: We submitted draft engineering drawings to the MTA just after receiving your approval and we only heard back from them last week. We need to pick up the marked up copies of our drawings and address their comments. Then we will resubmit the drawings for review/approval which may take MTA several weeks. We will contact you as soon as we receive MTA approval and are ready to schedule the injection.8/23/13 - Raphael Ketani. I hadn't received any correspondences from Ms. Gaurin regarding progress at the site. Therefore, I sent her an e-mail requesting an update.8/24/13 - Raphael Ketani. Ms. Gaurin sent me an e-mail today stating that Tetra Tech received the comments on the drawings from the MTA. Tetra Tech intends to resubmit the drawings with the responses to the comments sometime during September 2013. Until the drawings are finalized, a drilling contractor will not be retained or scheduled. It is expected that no work will take place until October or later.

Remarks: leaking fill line/repairs and clean up pending

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

EAGLE ELECTRIC MANUFACTURING CO (Continued) **1000279162**

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Waste code: F008
Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	I spoke with Andrew. The tank has been reoved and cont. soil has been stockpiled. This soil needs to be removed due to space limitations. He feels that they are not able to find clean endpoints. A gepprobe will be out on Fri 1/ 11/ 07- 1/9/08 - Raphael Ketani. An abandoned gasoline tank was discovered and contaminated soil beneath it on 1/4/08. The contact is Andrew Rudko of AKRF, Inc. (646) 388-9526.I spoke to Mr. Rudko about the site. The site is a small triangular area. He said that it used to be a car repair replace with one 550 gal. tank and one pump. He said the tank was abandoned in place with concrete. The great majority of the soil has been excavated, but the contractor is waiting to get a hauler for the gasoline contaminated soil. The site will be a temporary parking lot for the building and parking lot across the street. Groundwater is at about 14 feet - he

ROCKROSE CONSTRUCTION CORP (Continued) **S108981768**

has drilled nearby at another site and hit water there at that depth. I told Mr. Rudko that additional borings will be needed to see whether the contamination had migrated under the streets. He said he will do borings to the edge of the property, and if contamination is found, then he will get the permits and do borings further out.2/7/08 - Raphael Ketani. I tried to contact Mr. Rudko, but could only leave a message.Mr. Rudko returned my call. He said that they had removed the gas tank and found lots of contamination. Initially, they excavated 9 truck loads of soil and shipped it out. Then, on 2/5/08, they excavated more soil until the site was jammed up with excavated soil. This was also shipped out. Mr. Rudko feels that the contamination extends all the way to the Hunter Street sidewalk and maybe under it. I told him that he needs to delineate the extent of the contamination. Mr. Rudko said that they will use ORC to remediate any soil that can not be removed. I told him that DEC wants all of the contaminated soil either removed or treated. 2/19/08 - Raphael Ketani. I had tried to make an unannounced site visit last thursday, but was unsuccessful. I could not find the site. I called up Mr. Rudko and he told me the site is at the intersection of Crescent Street, Hunter Street, and 44th Road. I will make another attempt at a site visit.I found the site. It consisted of a big water filled pit and a pile of slightly odoress artificial fill material. I met Mark Accetturi, Environmental Specialist of AKRF (646) 388-9521, at the site. There was no sheen on the water. Mr. Accetturi told me that the pit had been dry until the recent rains. The water level was about 10 feet below grade. I told him that AKRF should get someone to suck out the water. He said that this will be done in the near future. There was a large pile of artificial fill (soil mixed with other material) with slight odor of gasoline. Mr. Accetturi told me that they had taken out the one tank from about the middle of the hole and two lifts from the Citicorp (southwest) side of the hole. A black pipe with a metal clamp was sticking out of the sidewall at the southwest side. It was not apparent where the pipe went to. The area around the hole had concrete pavement. I was told by the excavator operator that 12 trucks were scheduled to come today to take away the soil pile. I took 5 pictures. I noticed a 4 story building across the street with commercial space at the street level and residences above. A commercial building abutted the site property. There was nothing much else to see. So I left.3/12/08 - Raphael Ketani. Today I received a progress report and remedial action plan dated 3/11/08 from Mr. Rudko, Senior Vice President of AKRF. The report and plan stated that a 550 gal. gasoline tank was discovered on site which was resting on soil. The soil beneath the tank was contaminated, though the tank appeared to be intact. Contaminated soil was removed from the site. Four borings were advanced to the groundwater to delineate the extent of soil contamination. Two sites of contamination were discovered. One to the east and extending from the tank and another separate one to the southwest (maybe related to a broken sewer pipe). Contaminated groundwater was pumped out and the excavation was backfilled after 2/20/08. AKRF will install 4 wells in order to monitor the groundwater conditions. Water and soil treatment will be proposed if the contamination persists.The analytical results were as follows:groundwater; SB-1=no VOCs, few low SVOC hits SB-2=VOC hits to 1394 ppb total xylenes, no SVOCs SB-3=no VOCs and no SVOCs SB-4=VOC hits to 2370 ppb total xylenes, no SVOCs SB-5=no VOCs and no SVOCssoil; EP-1=few low VOCs, combustion SVOCs in thousands of ppb EP-2=no VOCs, combustion SVOCs in high thousands of ppb to 713,300

ROCKROSE CONSTRUCTION CORP (Continued) **S108981768**

ppb EP-4=1 significant VOC, naphthalene 6000 ppb, high SVOCs in high thousands to 62000 ppb EP-1S=no VOCs, no SVOCs WC-4=VOCs in tens of thousands ppb to 150,000 ppb with total xylenes at 640,000 ppb, SVOC hits but none significant EP-1B=many very low VOCs, no SVOCs EP-1N=many very low VOCs, no SVOCs EP-1W=many very low VOCs, no SVOCs EP-1E=11 VOCs to 83,100 ppb, 3600 ppb naphthalene, combustion SVOCs, but not significant I spoke to Mr. Rudko. He said that they are not sure how far the contaminated soil extends. So they are not done excavating. If it extends off site, then they will consider using ORC or another treatment solution to remediate the contamination. He said that he also needs to determine the direction of groundwater flow. He said that bedrock dips to the south and so he thinks that's the direction of groundwater flow, but he'll see. 4/1/08 - Raphael Ketani. I spoke to Mr. Rudko (646) 388-9526. He said that nothing is happening right now at the site. He is trying to line up a driller to install borings on all 3 sides of the site. He will take soil and groundwater samples. He will keep me posted.8/19/08 - Raphael Ketani. I tried to reach Mr. Rudko, but could only leave a message regarding groundwater and soil sampling, and delineation of the extent of the contamination.9/3/08 - Raphael Ketani. I tried to reach Mr. Rudko, but could only leave a message regarding groundwater and soil sampling, and delineation of the extent of the contamination.As there has been no contact with Mr. Rudko in 5 months and he is not reachable, I sent a letter to Ivan Moskowitz, Esq. at Swidler Berlin LLP, 405 Lexington Avenue, NY, 10174. He is the lawyer representing the owners of the site, 4329 Crescent LLC, 399 Park Avenue, NY, 10022-4614. The block and lot are 4343 and 0001. The main address is 4319 Crescent Street.9/11/08 - Raphael Ketani. The letter to 4329 Crescent LLC, c/o Swidler Berlin LLP came back NOT DELIVERABLE AS ADDRESSED. 9/15/08 - Raphael Ketani. I tried to reach Mr. Rudko, but could only leave a message regarding groundwater and soil sampling, and delineation of the extent of the contamination.Also, I sent the 9/3/08 letter to 4329 Crescent LLC at 399 Park Avenue, and to Swidler Berlin LLP the corrected zip code of 10017. 9/22/08 - Raphael Ketani. The letter to Swidler Berlin LLP came back with a Post Office indicating Not Deliverable As Addressed. I called up a phone number for Swidler Berlin (212) 891-9536 and was told that Swidler Berlin no longer exists. One of their offices merged with Bingam McCutchen (the same phone number as above). She said that Mr. Moskowitz works for Bingam McCutchen and that his direct number is (212) 705-7537.I called Mr. Moskowitz, but could only leave a message regarding the site. Mr. Moskowitz called me back. He said that he still represent 4329 Crescent LLC. He will contact them to see why there is no progress with the investigation.9/25/08 - Raphael Ketani. Patricia Dunphy of Rockrose Development Corp. (212) 984-1795 called earlier this week regarding the site. I tried to return her call, but could only leave a voice mail. Later this morning, I received a call from Steven Eisner (212) 984-1705 of Rockrose. He said that the reason the sidewalk wells weren't installed is because they are doing foundation dewatering across the street to the west at 3000 Crescent Street. The building that was there was knocked down 3 weeks ago. He said that once the foundation is put in, then they will install the wells. I asked him whether they had found any contaminated water. He said no. He said he will let me know when the foundation dewatering is done in 6 to 8 weeks. 10/27/08 - Raphael Ketani. I tried to contact Mr. Eisner regarding the dewatering of the neighboring site, but could only leave a message.Mr. Eisner called me back. He said that the

ROCKROSE CONSTRUCTION CORP (Continued) **S108981768**

foundation wont be installed until February 2009. Then they will install 4 wells.2/13/09 - Raphael Ketani. I spoke to Mr. Eisner. He said that the foundation construction and dewatering is still taking place. He said that the wells will probably be installed at the end of February and a report will be submitted to DEC by March 13. I said that would be alright. Mr. Eisner added that Mr. Rudko is no longer with AKRF and the case is now being handled by Kate Bruner of AKRF (646) 388-9525. 2/17/09 - Raphael Ketani. Kate Brunner called me to say that she will give me an update regarding the project at the end of February.2/26/09 - Raphael Ketani. Ms. Brunner called. She said that the dewatering for the foundation should end in a week. The well installation will take place in mid-March with a 4" geoprobe.3/16/09 - Raphael Ketani. Mr. Eisner (212) 984-1705 called to say that they are still working on the foundation for the building across the street. They expect to finish in May. Once they're finished, then they will install the wells. 4/23/09 - Raphael Ketani. I talked to Ms. Brunner (212) 696-0670. She said that the construction contractor had finished dewatering the site a couple of weeks ago. She added that applications had been submitted to the City for sidewalk permits. There is a tentative date of 5/4/09 for starting the boring work.7/13/09 - Raphael Ketani. I spoke to Ms. Brunner. She said that she had received the soil and groundwater analytical report. However, she was out. So the review couldn't take place until she had a chance to look at it. She said that the results looked very good. Right now, the report is undergoing internal review. Once AKRF is done with it, then the report will be forwarded to DEC. I told her to send the report as soon as possible.9/11/09 - Raphael Ketani. I left a message for Ms. Brunner that the DEC never received the groundwater analytical report.9/14/09 - Raphael Ketani. Ms. Brunner (212) 696-0670 called me today. She said that the groundwater survey didn't take place until July 2009 due to access problems. The developer they were working with as a client has split into two entities. One entity is responsible for pursuing the environmental evaluation and reporting. This is the client and this entity is still reviewing the environmental report. However, Ms. Brunner said that she expects to send the DEC the environmental report in two weeks. She added that the analyticals were all non-detect.9/25/09 - Raphael Ketani. Today I received the Supplemental Subsurface Investigation dated 9/24/09 and submitted by AKRF. I began my review. 9/29/09 - Raphael Ketani. I finished my review. They recovered soil samples from only 2 of the 4 borings that were attempted on 5/11/09. They state that, for technical reasons, they could not recover soil samples from MW-1 and MW-3, but they don't explain what this means. Soil samples were submitted for MW-2 and MW-4. MW-2 is at the eastern corner of the site and MW-4 is at the southwest corner of the site. Groundwater flow is to the east. The soil samples were completely non-detect for VOCs. There were a number of SVOC hits, but they were all below TAGM, except for some benzo series hits which were just slightly above TAGM. Groundwater samples for the four wells were entirely non-detect for VOCs. Samples from wells MW-1 to MW-3 were completely non-detect for SVOCs. The groundwater sample from MW-4 had a number of SVOC hits, but they were below TAGM, except for five combustion product hits (mostly the benzo series) which were slightly above TAGM.From re-reviewing the 3/11/08 investigation report, it appears that there are a lot of ashes and cinders at the site. This was determined by the presence of high concentrations of the combustion product SVOC analytes in soil samples from various locations. From the end point

ROCKROSE CONSTRUCTION CORP (Continued) **S108981768**

sample results for EP-1N, EP-1S, EP-1W, and EP-1B, it appears that the contaminated soil was removed. However, the results for EP-1E showed several SVOC hits to 4300ppb, including naphthalene and 2-methylnaphthalene, and four other low level SVOCs, but all of the other SVOCs were non-detect. The VOCs were all non-detect, also. It seems as if they did a reasonable job of digging out the contamination.Though questions remain regarding the 03/11/08 report and the 9/24/09 report:1) the 3/11/08 report lists boring locations SB-1, SB-2, and SB-4, but the data package shows EP-1, EP-2 , and EP-4. Are these the same borings? Also, what happened with the soil sample for SB-3?2) why were no borings conducted between W SB-1 and MW-2?3) what does the number "434" mean on Figure 2 from the 3/11/08 report?4) there is no explanation as to why they couldn't recover soil samples from MW-1 and MW-3, except to say that "for technical reasons" they couldn't do it. What are the technical reasons?5) a number of VOCs are listed as above TAGM on Figure 3 in the 9/24/09 report for the soil sample from EP-1E. However, these analytes are not in the analytical data report for the end point samples. Where did this information come from and how much above TAGM are the hits?Aside from answering these questions, the DEC requires that they perform one more soil borings. One halfway between W SB-1 and MW-2. 10/9/09 - Raphael Ketani. Ms. Brunner called me back. She answered the five questions:1) SB-1, SB-2, and SB-4 are EP-1, EP-2, and EP-4. There was some confusion regarding the numbering of the samples due to the previous use of a different numbering system. 2) we agreed to have one more soil boring performed halfway between W SB-1 and MW-2 just to see what the contamination is, if any3) number "434" is the block number from the block and lot tax maps4) soil samples couldn't be recovered because they kept hitting refusal. The geoprobe wasn't strong enough to apply enough torque to get a sample and the sampling tool was thin so that a stronger machine would have broken the tool. They stepped out from these locations and sampled elsewhere with a heavier rig.5) the analytes for EP-1E come from the 2008 report. Ms. Brunner just wanted to show what had been detected PRIOR to excavation of the site. 10/15/09 - Raphael Ketani. I received an e-mail today from Ms. Brunner regarding the location of the additional boring that DEC had requested (see E-docs). I sent a response e-mail in which I approved the location.11/5/09 - Raphael Ketani. I tried to contact Ms. Brunner (212) 696-0670, but could only leave a voice mail.11/6/09 - Raphael Ketani. I received the following e-mail from Ms. Brunner:The soil boring was completed at 43-29 Crescent Street as planned. We got the preliminary VOC and SVOC data back and all concentrations are less than TAGM RSCOs so we'll be requesting closure. We are preparing a revised report for submittal to DEC and we are still on-track to get you the report in mid-November.11/16/09 - Raphael Ketani. Today I received the 11/12/09 Supplemental Subsurface Investigation report from Ms. Brunner at AKRF. I review the report for the soil analyses for SB-5. The results were completely non-detect for VOCs and SVOCs. Based upon the soil and groundwater analytical results in the case file, I have determined that there are minimal impacts to the environment and to people. Therefore, I am closing the spill case.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact:	Not reported
Contact address:	PEARSON ST LONG ISLAND CITY, NY 11101
Contact country:	US
Contact telephone:	Not reported
Contact email:	Not reported
EPA Region:	02
Land type:	Facility is not located on Indian land. Additional information is not known.
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name:	INTERNATIONAL FASTENER RESEARCH CORP.
Owner/operator address:	NOT REQUIRED NOT REQUIRED, WY 99999
Owner/operator country:	US
Owner/operator telephone:	(212) 555-1212
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Owner/operator name:	INTERNATIONAL FASTENER RESEARCH CORP.
Owner/operator address:	NOT REQUIRED NOT REQUIRED, WY 99999
Owner/operator country:	US
Owner/operator telephone:	(212) 555-1212
Legal status:	Private
Owner/Operator Type:	Operator
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

MATSON MFG CO INC (Continued) **1000384219**

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Facility name: MATSON MFG CO INC
Classification: Not a generator, verified

Date form received by agency: 07/08/1999
Facility name: MATSON MFG CO INC
Classification: Not a generator, verified

Date form received by agency: 08/07/1980
Facility name: MATSON MFG CO INC
Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 04/17/1986
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110009468931

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:
Program: BCP
Site Code: 379475
Site Description: Location: This Brownfield site is approximately 0.5 acres in size and is a portion of the Outlet City VCP site(#V00081) located at 28-10 Jackson Avenue, Long Island City. The site is located in Queens County, on Jackson Ave between Orchard Street to the east, Queens Blvd. to the west and Long Island Railroad yard to the south. The G-Train runs underneath Jackson Avenue bordering the site to the north. The nearest residential structure is located approximately 100ft to the west across Orchard street. Site Features: This 0.5 acre site is an empty lot in a congested commercial/industrial area of Queens County. Current Zoning/Uses(s): The current zoning at the site is Industrial and Retail. The surrounding area is zoned Special Long Island City Mixed Use District (LIC) and is a longstanding mix of residential, commercial, industrial and cultural uses at varying densities.Historical Uses: The site had formerly been used for chemical manufacturing. From 1901-1978, West Chemical Co. owned the property and manufactured commercial and disinfectant products such as disinfectants, insecticides, soaps, floor wax, and paper products dispensing machines. Manufacturing operations employed various chemical substances including creosote, coal and acids, cresylic acids, degreasing solvents, iodine, and assorted oils and pesticides. Metal plating and gasoline filling operations were also conducted at the property. Intended use for this site is to build a multi-tenant high-rise residential apartment building with ground floor commercial space and a basement.The Remedial Work Plan was publicly noticed in June/July 2007 and was approved by the state on August 16,2007. The remedial action has not yet been done (Sept. 2011).Site Geology and Hydrogeology: Site geology consists of mostly sand at varying depths due to presence of shallow bedrock. Groundwater is approximately 8 -10ft below grade.
Env Problem: The release of approximately 5000 gallons of creosote caused extensive soil and groundwater contamination that includes the presence of LNAPL and residual DNAPL. This site is considered a significant threat to the environment.Contaminants in soil which exceed soil cleanup objectives primarily include: Naphthalene, 2-Methylnaphthalene, Acenaphtene, Dibenzofuran, Flourene, Benzene, Ethylbenzene, and total Xylenes.Contaminants in groundwater which exceed groundwater standards primarily include: 2-methylphenol, phenol, Napthalene, 2-methylnaphthalene, benzene, Toluene, Ethylbenzene, and total xylenes.
Health Problem: The remedial investigation documented that subsurface soils and groundwater are contaminated with volatile organic compounds, semi volatile organic compounds, and chlorinated solvents. Exposures via

QUEENS PLAZA RESIDENTIAL DEVELOPMENT (Continued) **S108524793**

drinking water are not expected because this mixed industrial/residential neighborhood is served by public water. The new building proposed for the site will include a vapor barrier and sub-slab depressurization system to prevent exposures via vapor intrusion. Additionally, the site will be capped with asphalt and managed through the site management plan which minimizes the potential for direct contact with residual soil contamination.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID:	373035
DEC Memo:	1/21/2010 Sangesland spoke to Shawn at Crompco. He said the tank failed a test yesterday and a spill report was called in. Today they isolated the tank and retested. He said the tank passed, but the "suction line inside the tank" failed. Sangesland asked Shawn to call back and talk directly to Jake Krimgold to determine if this can be closed out.1/21/10. J.Krimgold spoke to Shawn from Crompco. Agreed that the failure of the suction line inside the tank could not lead to a release. Case closed.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
