Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: 001
Tank Id: 14891
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
G00 - Tank Secondary Containment - None
B00 - Tank External Protection - None
K00 - Spill Prevention - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 06/15/1985
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

DEC Memo:	8/6/12-Vought-Primary off-hours responder. Vought called Peter Jayaseaara (Ph:347-865-1291) and spoke to Joeseph who noted that that approximately 500 gallons of #2 fuel oil was released from a 200-gallon #2 fuel oil AST in a vault and that the oil was leaking out of secondary contaiment vault and was impacted a drain in the boiler room in sub-basement of LaGuardia Community College. Jayaseaara noted that FDNY Hazmat was on-scene and that he also called Triumvirate Inc (response company) and they were enroute to the site. Vought called RSE and DEC Demeo (secondary responder) who performed site visit. This spill assigned to Vought as Demeo not an option in UIS (as Demeo recently transferred). Spill to be

LAGUARDIA COMMUNITY COLLEGE (Continued) **1001090143**

transferred to Demeo upon availability in UIS.8/8/12-Vought-Spill transferred from Vought to DEC Demeo as now available as PM in UIS.8/4/12 TJDRecall - 2K AST for emergency generator leaked from supply piping feeding 100 gallon day tank on roof of structure. Leaking piping was uncapped return line inside secondary containment. Estimated 1500 gallons of diesel fuel leaked inside secondary containment. Containment vault was not tight - allowed product to migrate into adjoining sub-basement rooms. Building personnel shut power to affected areas of building which shut down transfer pump to rooftop day tank. Drainage trenches in basement had minor impacts due to migration of product - prior to DEC arrival absorbents were put in place to prevent further migration of product to sump pit. Facility owner retained Triumvirate Environmental for emergency cleanup - they responded with vac truck and recovered seperate phase product from tank vault and affected adjoining rooms. DEC required trenches and sump pit to be cleaned prior to putting sump pump back in service. Needs follow-up inspection.8/7/12 TJDSite inspection. DEC was contacted by Laguardia College EH&S personnel requesting reinspection as cleanup was reported to have been completed and required repairs had been made. At time of inspection, DEC met with EH&S Manager (Michael Spath from CUNY) and Triumvirate Environmental personnel. All required cleanup actions have been completed - affected concrete surfaces, trenches and sump pit have been degreased and pressure washed. Standing water in trenches and sump pit appear free of seperate phase product and sheen. DEC authorized EH&S staff to return sump pump to service. As per Laguardia College personnel, 2K AST is to remain out of service as a determination is made regarding the need for this tank. Required cleanup actions have been completed. Awaiting closure documentation.9/10/12 TJDFile review. All required closure documentation has been received. A total of 6 drums (contaminated absorbents) and 5,237 gallons of oil/water mixture were recovered and properly disposed of as part of remedial process. No further action is required. Spill closed.

Remarks: 2251 THE CALLER STATED A REPORT OF A LARGE SPILL WAS CAUSED BY A FAILED UNIT. WATER WAS IMPACTED. THE SPILL IS NOT CONTAINED. THE CLEAN UP IS PENDING THE CALLERS ARRIVAL ON SCENE. THE CALLER WILL UPDATE NYSDEC UPON ARRIVAL.

Town:	New York City
Acres:	2.500
Date Record Added:	11/30/2000
Date Record Updated:	11/16/2012
Updated By:	JAMORAS
Site Description:	Location: The site is located in Queens County, on Jackson Ave between Orchard Street to the east, Queens Blvd. to the west and Long Island Railroad yard to the south. The G-Train runs underneath Jackson Avenue bordering the site to the north. The nearest residential structure is located approximately 100ft to the west across Orchard street. Site Features: This 2.5 acre site consists of 12 multi-story buildings and associated parking area located in a congested commercial/industrial area of Queens County. The only occupied structure on-site is a NYC Transit Authority building.

OUTLET CITY, QUEENS BLVD. & JACKSON AVE. (Continued) **S105684691**

Current Zoning/Uses(s): The current zoning at the site is Industrial and Retail. The surrounding area is zoned Special Long Island City Mixed Use District (LIC) and is a longstanding mix of residential, commercial, industrial and cultural uses at varying densities.Historical Uses: The site had formerly been used for chemical manufacturing. From 1901-1978, West Chemical Co. owned the property and manufactured commercial and disinfectant products such as disinfectants, insecticides, soaps, floor wax, and paper products dispensing machines. Manufacturing operations employed various chemical substances including creosote, coal and acids, cresylic acids, degreasing solvents, iodine, and assorted oils and pesticides. Metal plating and gasoline filling operations were also conducted at the property. In 11/78, Outlet City acquired title to the property from West Chemical. During Outlet City's ownership, a flea market and various vendor operations have been conducted at the property. The site is being investigated under the Voluntary Cleanup Program (VCP) under a 1997 agreement. Previous investigations in the late 1980's and early 1990's led to the property entering the VCP.Site Geology and Hydrogeology: Site geology consists of mostly sand at varying depths due to presence of shallow bedrock. Groundwater is approximately 8 -10ft below grade

Env Problem: Nature and Extent of Contamination: The site is contaminated with creosote, petroleum, and solvents. Both soil and groundwater are affected. The majority of the contamination is located in Areas D and E where Creosote in the form of both LNAPL (Light Non-Aqueous Phase Liquid) and DNAPL (Dense Non-Aqueous Phase Liquid) is present. LNAPL in Area D & E ranges from 0 - 6ft.Total on-site VOCs (Volatile Organic Compounds) including both chlorinated hydrocarbons and petroleum constituents are present in groundwater from non-detect - 30,000ppb. Total on-site SVOCs (Semi-Volatile Organic Compounds) are present in groundwater from non-detect to over 100,000ppb. An off-site investigation has not been completed at this site. A ventilation IRM is in place in the basement of building No. 4, where creosote LNAPL enters the basement during large rain events. The ventilation system was designed and installed in 2004. The ventilation system was started up on June 8, 2004. The final engineering report for this IRM was approved in September 2006. Bi-annual air testing is collected to evaluate the effectiveness of the ventilation IRM.

Health Problem: Exposures to contaminated groundwater is not expected because the area is served by public water. Soils contaminated with etrachloroethene are beneath the site, however, exposure to this soil is not expected because the site is capped with asphalt. Indoor air samples collected in a portion of the on-site building contained levels of tetrachloroethene that exceeded the New York State Department of Health Guideline for tetrachloroethene in Indoor Air. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures near the site.

DEC Memo:	On 7/14/05, J Peck called RIR Com. Cynthia Roby doesn't work there now. Left mesasage to return call concerning spill. Could not determine owner of property from Property Shark or Acris. Called George Falidas on 7/14/05, left message to call back. On 1/19/05, reattempted to determine owner of property. No success. 3/30/07 - Austin - Trasferred to Ketani for further review - end5/21/07 - Raphael Ketani. I reactiviated the case today. There was very little in the case file. Some printed pages for spill #0305345 (which doesn't pertain to the case, except the memo from Mr. Sigona to Mr. Hassan), an 11/7/05 letter from Joseph Peck of DEC to George Faildas regarding the spill, printouts from Google Earth and Property Shark, and a printout of the spill report for this case.I did a search of

FALIDAS ASSCOCIATES (Continued) **1007264881**

ACRIS, the NYC Property Tax database, and Property Shark and determined that 25-15 Queens Plaza North is just one part of the range of properties (25-01 to 25-27 Queens Plaza North) owned by Falidas Associates. It is also known by Bridge Plaza North. The block and lot are: 00415 and 0004. I called up George Falidas (718) 392-0514 of Falidas Associates and was connected to his brother, John Falidas.I made a field visit and met John Falidas. He showed me the basement of one of the properties owned by Falidas Associates and which is near to where the tank failed 2 buildings away. We entered a work room rented by a garment making company. The floor and walls and bathroom were clean. There were no signs of oil and no oil odors. Mr. Falidas said that he had paid lots of money to get the oil cleaned up years ago and the responsible party never paid anything to him. Mr. Falidas had a package of documents from the EPA and the DEC and showed them to me. These were the RCRA Subtitle C Site Identification Form, letters from South Mall Analytical Labs to PTC, and a DEC Spill Report. He gave me copies of these documents. I was particularly interested in the old DEC spill report form as this document wasn't in the case file.Next, I visited the 2 story building between Mr. Falidas' building and the site of origin of the spill. I met Sandro Cestaro of Atlantic Precious Metal Casting, Inc. (718) 937-7100. He showed me his basement. There were some signs of a thin film of mud in one corner of the basement, but no signs or odors of oil, even though this was the building where the oil first entered. Lastly, I went to the site of the oil spill. The auto parts service place had burned completely, according to the old spill report case notes. This site was 41-22 to 41-30 27 Street. The site was sold to developers who later built an apartment building that was finished in early 2007. This building is listed as 41-28 27 Street. I met the super., Leonardo Colon. He took me to the lowest point in the building. This was a parking garage. There were no signs of oil nor any odors. He said he was new here and didn't know much about the building. The building management company is Golden Management and the contact person is Brandon Wechsler (718) 230-2600, ext 111.I took 3 pictures of the apartment building and the neighboring properties. I remember seeing the dig out for the foundation for the building when I passed by the site many months back. They went down below the bottom of the foundation for the neighboring building which contains Atlantic Precious. This is a depth of about 15 feet or so. Based upon my site visits and the fact that the old auto parts area has been dug out, and the lack of evidence of a spill, I am closing the spill case.

Remarks: SPILL AT A COMMERCIAL BLD CALLER IS A TENANT AND REQ A CALL FROM DEC SPILL HAS NOT BEEN CLEANED UP BEEN SMELLING THIS FOR ABOUT 3 WEEKS

Site Description:	Location: The site is located at 21-16 44th Road, LIC, NY 11101 (Tax Block 438, Lot 26). The site occupies the northweastern portion of the block bounded by 44th Rd. to the north, 44th Dr. to the south, 21st St. to the west and 23rd St. to the east. The site is in urban area. The property is approximately 1/2 mile from the East River. Site Features: The Information Technology HS building and its court yard occupy the site. Current Zonning/Use(s): The site is used as a High School. The surrounding area is zoned M3-1 Heavy Manufacturing. The adjacent parcels are currently used for a combination of commercial, manufacturing, and residential.Historical Use(s): The site was formerly occupied by a four story, 30,000 square foot warehouse and its court yard. It was historically operated as a cloth manufacturing factory, a metal plating factory, and a 5,000 square foot parking lot. The plating factory had one dry well on the first floor, one in the courtyard, and two in the basement. During the plating processes the waste from the metal cleaning and plating baths were disposed of through these dry wells. Following implementation of remedial actions, the building was renovated and is currently occupied by the Information Technology High School. The terms of the Voluntary Cleanup Agreement have been met. The remediation at the site has been completed. The remedial systems are operating under a NYSDEC-approved Site Management Plan which has provisions for frequent system monitoring, maintenance, and periodic reporting.Site Geology and Hydrogeology: The site is underlain by 2 to 5 feet of urban fill materials. Below this there are interbeded layers of sand, clay and marl of Cretaceous and Pleistocene age. The bed rock is 23 to 29 feet below grade. The groundwater is 12 to 15 feet below grade and flows generally south.
Env Problem:	Nature and Extent of Contamination: Prior to Remediation:a) contaminants: The Phase I and Phase II Investigation identified the contaminants of concern as chlorinated volatile organic compounds (CVOCs), particularly PCE and its breakdown products in soil, groundwater, and soil vapor; metals in the dry well sediments; and lead-contaminated soil in the parking lot. The site contamination was related to the previous manufacturing industries which operated in the former warehouse building. b) areal/depth extent: The plating factory occupied the first floor and the basement of the building and it had drum storage areas inside and in the court yard adjacent to the building. The sources of contamination under the building in soil and groundwater were determined to be four dry wells and a drum storage area in the court yard.c) concentrations: PCE in soil ranged from 0 to 300 ppm; in groundwater 5 ppb to 36,000 ppb; and 5 ppbv to 80,0000 ppbv in soil gas. Post-Remediation: A Subslab Depressurization System (SSDS), and a groundwater pump and treatment systems are currently operating under a NYSDEC-approved Site Management Plan (SMP). The terms of the Voluntary Cleanup Agreement have been met. The remediation at the site has been completed. The SMP has provisions for frequent system monitoring and maintenance, and for periodic reporting to NYSDEC. There are Deed Restrictions

21-16 44TH RD (Continued) **S103560285**

recorded against the site.

Health Problem: The Site was a former warehouse and has been redeveloped as an Information and Technology High School. Contaminated soils beneath the building have been removed and disposed of off-site. Human exposures to residual contaminated soil is unlikely as the site is covered by the on-site building and pavement. Ingestion of groundwater as a potable drinking water source is not expected since the area is served by public water supply. Potential exposures via soil vapor intrusion into the school have been mitigated by the installation and operation of sub-slab depressurization system, a vapor barrier, a eight-inch thick competent concrete slab, and the building's positive-pressure heating and ventilation system. Monthly sampling of soil vapor and quarterly sampling of groundwater will ensure that remedial systems are working properly.

The terms of the Voluntary Cleanup Agreement have been met. The remediation at the site has been completed. The remedial systems are operating under a NYSDEC-approved Site Management Plan which has provisions for frequent system monitoring, maintenance, and periodic reporting.Site Geology and Hydrogeology: The site is underlain by 2 to 5 feet of urban fill materials. Below this there are interbeded layers of sand, clay and marl of Cretaceous and Pleistocene age. The bed rock is 23 to 29 feet below grade. The groundwater is 12 to 15 feet below grade and flows generally south.

Env Problem: Nature and Extent of Contamination: Prior to Remediation:a) contaminants: The Phase I and Phase II Investigation identified the contaminants of concern as chlorinated volatile organic compounds

21-16 44TH RD (Continued) **S103560285**

(CVOCs), particularly PCE and its breakdown products in soil, groundwater, and soil vapor; metals in the dry well sediments; and lead-contaminated soil in the parking lot. The site contamination was related to the previous manufacturing industries which operated in the former warehouse building. b) areal/depth extent: The plating factory occupied the first floor and the basement of the building and it had drum storage areas inside and in the court yard adjacent to the building. The sources of contamination under the building in soil and groundwater were determined to be four dry wells and a drum storage area in the court yard.c) concentrations: PCE in soil ranged from 0 to 300 ppm; in groundwater 5 ppb to 36,000 ppb; and 5 ppbv to 80,0000 ppbv in soil gas. Post-Remediation: A Subslab Depressurization System (SSDS), and a groundwater pump and treatment systems are currently operating under a NYSDEC-approved Site Management Plan (SMP). The terms of the Voluntary Cleanup Agreement have been met. The remediation at the site has been completed. The SMP has provisions for frequent system monitoring and maintenance, and for periodic reporting to NYSDEC. There are Deed Restrictions recorded against the site.

Health Problem: The Site was a former warehouse and has been redeveloped as an Information and Technology High School. Contaminated soils beneath the building have been removed and disposed of off-site. Human exposures to residual contaminated soil is unlikely as the site is covered by the on-site building and pavement. Ingestion of groundwater as a potable drinking water source is not expected since the area is served by public water supply. Potential exposures via soil vapor intrusion into the school have been mitigated by the installation and operation of sub-slab depressurization system, a vapor barrier, a eight-inch thick competent concrete slab, and the building's positive-pressure heating and ventilation system. Monthly sampling of soil vapor and quarterly sampling of groundwater will ensure that remedial systems are working properly.

Site Description: Location: The site is located at 21-16 44th Road, LIC, NY 11101 (Tax Block 438, Lot 26). The site occupies the northweastern portion of the block bounded by 44th Rd. to the north, 44th Dr. to the south, 21st St. to the west and 23rd St. to the east. The site is in urban area. The property is approximately 1/2 mile from the East River. Site Features: The Information Technology HS building and its court yard occupy the site. Current Zonning/Use(s): The site is used as a High School. The surrounding area is zoned M3-1 Heavy Manufacturing. The adjacent parcels are currently used for a combination of commercial, manufacturing, and residential.Historical Use(s): The site was formerly occupied by a four story, 30,000 square foot warehouse and its court yard. It was historically operated as a cloth manufacturing factory, a metal plating factory, and a 5,000 square foot parking lot. The plating factory had one dry well on the first floor, one in the courtyard, and two in the basement. During the

21-16 44TH RD (Continued) **S103560285**

plating processes the waste from the metal cleaning and plating baths were disposed of through these dry wells. Following implementation of remedial actions, the building was renovated and is currently occupied by the Information Technology High School. The terms of the Voluntary Cleanup Agreement have been met. The remediation at the site has been completed. The remedial systems are operating under a NYSDEC-approved Site Management Plan which has provisions for frequent system monitoring, maintenance, and periodic reporting.Site Geology and Hydrogeology: The site is underlain by 2 to 5 feet of urban fill materials. Second and third tank test performed by Federal Electrical Supply Corporation (718-729-5700). The reason for spill report was initial tank test failure. As a result of failure vent

I G FEDERAL ELECTRICAL SUPPLY (Continued) **U000401648**

line, fill line, suction line and return line were replaced by Petroleum Tank Cleaners. Tank was tested again on 2-6-2002 and failed again because testers failed to close off return line to day tank. Tank and system was tested for third time and passed on 2-14-2002. Isaac Mungra and Anthony (PTC) confirmed that there was no soil or groundwater contamination. Tank tests and repair invoices were provided. Spill closed by Vought.

DEC Memo:	05/22/09 CSL was sent to Getty Petroleum Marketing1500 Hempstead TurnpikeEast Meadow, NY 11554Attn: Scott Hanley08/31/09- Tyree sent the Subsurface Investigation Report dated June/22/09. The report stated that the piping and the four(4) product dispensers were removed in May 2009. The USTs has been drain of all fuel and are scheduled to be abondoned. On May 22,2009 the subsurface investigation activities were initiated , Based upon recent analytical datas it appears that the source of the soil and

GETTY S/S #344 - GETTY PROPERTIES (Continued) **S104278677**

groundwater contamination is located in the area of the USTs and pump island.A total of seven (7)soil/groundwater borings were installed as part of the investigation. Soil samples were collested from ground surface to depths ranging from thirty-five(35) feet to forty (40) feet below grade. Groundwater was encountered at (27) feet below grade.The analytical results for soil samples indicate No VOCs exceeding the RSCOs. Some SVOC'S were slighly exceding the RSCOs for the samples ND-W, ND-E, WD-N, WD-S and B-TFE(13-14 ft).The analytical results for grounswater indicate Methyl-tert Butyl Ether and Benzene slighly exceeding the RSCOs. SVOC"s ara not exceding the RSCOs.As per Scott Hanley Getty Marketing (516) 542-5023 and Kevin Shean Getty Realty Corporation (516) 478-5400 there is no plan for developing the site until 20015. The site is going to be used for vehicle repair inside and for storage of vehicle outside. Getty Marketing leased the property. Getty Realty Corporation owns the property. Spill Closed

Remarks: CALLER STATES THAT THEY GOT TEST RESULTS BACK FROM A PHASE 2 SHOWING SOIL CONTAMINATION CLEAN UP IS PENDING.

DEC Memo:	Tyree Closure letter dated 7/8/2008 states:"The above noted site utilizes one 4,000 gallon premium grade gasoline underground storage tank (UST), one 4,000 gallon regular grade gasoline UST and one 4,000 gallon diesel fuel UST. On April 10, 2008 WCC Tank Technology, Inc. performed an inspection of the interior tank lining for all three USTs. The results of the inspection revealed that the tanks failed on the visual inspection and the tank lining thickness. The tanks did pass on the tank metal thickness. It should also be noted that the three tanks were tightness tested and all passed, as such there was no release to the environment. A copy of the tank inspection report is included with this report. The NYSDEC was immediately notified and spill No. 08-00383 was assigned to the site. The three tanks were re-lined subsequent to the initial inspection. On June 20, 2008 the three tanks and the associated piping system were tightness tested. The results of the tightness test indicated that all of the tanks and the associated piping passed. A copy of the tightness testing report is included with this report."Based on this information, the DEC is closing this spill case.

DEC Memo: 4/25/07 bf: sent ttf letter to:Eric LevorQueens Plaza Realty Corp.25-12 41 AvenueLong Island City, NY 11101-38825/25/07 received passing tightness test results by fax from Eric Lovor. Tried calling him at number on fax:(718)392-2123. No answer. To close this spill, he needs to submit a response to ttf letter. bf5/29/07 Called E. Levor again and there was no answer. Called Emergency Contact # from PBS facility info (718)263-2418 and left message to call me back. bf6/4/07 Called E. Levor at (718)392-2123. The number is no longer in service. I then left a message at (718)263-2418. bf6/5/07 Received 2 messages from Edith Levor to call back. (718)392-2123. Called her at 3:45 Pm and she said that the tank failed the test because there were two sets of vent pipes. The old vent pipe was never disconnected. She said she will call Advanced Tank after she hangs up with me and have them prepare a response to the ttf letter. bf11/8/07 Called E. Levor. Left message that i still have not received letter from Advanced Tank and to call me back. Called Vinnie the Tank Doctor (718)727-0666. He said that there was an open line from a hot water heater and he plugged the line. No contaminated soil was found. He faxed paperwork to E. Levor. He was not in his office and requested I call him Monday. He will check to see if he still has the fax. bf11/26/07 Received message from E. Levor. Called her back and left message on her machine. bf1/22/10 Inspected site and issued NOV for expired registration, failure to monitor unmetered tank for leaks, and failure to contain/reomve petroleum discharge. Administrative settlement conference is scheduled for 2/17/10 at 10:30 AM. bf2/17/10 PBS Settlement Conference held today. Attended by Edith and Eric levor. Provided 6/7/07 letter from Tank Doctor Inc. stating that 2 unused lines from top of tank were disconnected in building. Removed lines and tank retested and passed. NFA. bf

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"4/12/04-Vought-Spill transferred from Tomasello to Rommel as per Rommel.04/11/06 - DER rem Bureau E staff sent out RFI letter to site owner (Rwz LLc). Department gave owner until 4/28/06 to respond.04/20/06 - Staff received call from Liam Horgan (212.785-0266 liam@art-corp.net), Assessment Resources & Technologies, Inc. (hired by owner), indicated he would send site data to Department. ORC remediation of groundwater is ongoing. 07/19/06 - Staff received

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

remedial summary report from Assessment Resources & Technologies, Inc. (A.R.T., Inc.). Report indicates site has been treated with ORC using injection field of wells since October 2003. The reports indicates that the ORC Injection Field is effectively remediating the groundwater contamination. Additional monitoring well sampling is planned for August 2006. 08/14/06 - DER, Bureau E staff received call from Bob Corroon (representing RWZ LLC)requesting status of site closure by Department. Staff indicated project transferred back down to region 2. It is anticipated that they willl review data gathered in August and make a determination as to whether or not site can be closed.05/29/07 - DER, Bureau E staff received call from Bob Corroon (representing RWZ LLC)(rcorroon@ix.netcom.com and (212)751-4620, ext 103) requesting status of site closure by Dept and an interest to close spill. Evidently, property is up for sale. Staff indicated project transferred back down to Region 2. Staff to provide Mr. Corroon with Regional project contact. Staff provided information to Mr. Corroon, via email, in P.M. on May 29.10/24/07-Zhune discussed with Randy and based on the data he asked me to transfer this case to the remediation group. 02/20/08 - Debra Shapiro, consultant for the current site owner called and asked about the report prepared by ART company to make further recommendations of investigation, remedy or closure. Debra stated ART's report was prepared by ART for the previous site owner and she does not have it. I asked Zhune to locate report if available.6/4/2008 Mimi from ELM (212-581-8023 ext 3) called to ask about the status of the report. She sent another copy of her companies plan in early May 2008. After the call Sangesland tracked the report to Vadim's office. Mimi will contact Vadim to set up a new case manager and a file review by DEC.6/4/08 DEC Case Manager transferred from V. Brevdo to J.A. Maisonave. - JAM6/26/08 Telephone conversation with Mimi R. from ELM. We discussed rpt dated May 5, 2008. Conceptual remedy is to excavate two areas of soil contamination. Latest GW results are from July 2007, and suggest no adverse impacts to GW. DEC suggests that an up to date round of GW samples be collected to verify. We will schedule a meeting when GW sample results are available. Rpt is uploaded to eDocs as three different files. - JAM7/18/08 Received a memo today via email from ELM summarizing groundwater sampling results for the July 7, 2008 sampling event. Minor concentrations of VOCs were detected in the wells downgradient of the former tank field (Benzene detected at 363ug/L and total VOCs at 571ug/L in well MW-1(ART)). Memo uploaded to eDocs. - JAM7/23/08 Meeting held at Region 2 offices on July 22, 2008.Attendence:Joseph Maisonave, NYSDECJonathan Kolleeny, NYSDECMimi Raygorodetsky, ELMDik Glass, RLIC RealtyMichael DelCioppo, RLIC RealtyMeeting was held to discuss future remedial plans for site. ELM's first proposal was to excavate two areas of site; northwest corner and north central areas have soil contamination.Issues:1) The northwest corner of the site, location of the two former USTs, has residual soil (from 10'-18') and groundwater contamination (Benzene and MTBE detected in July 2008 sampling event). ELM will excavate the area but requests leaving a 1:1 slope on the sidewall adjacent to the sidewalk to eliminate the requirement to shore and stabilize the sidewalk.The NYSDEC does not suggest leaving a 1:1 slope because the most contaminated soil (based on boring logs and analytical sampling) will be left in place. The NYSDEC requests a proposal to fully address soil contamination in the northwest corner.2) The north-central area of the site contains 2 oil/water separators and petroleum impacts were observed in the field, however, laboratory

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

data were returned with no exceedences for VOCs. ELM requests leaving that soil in place after removing the oil water separators.The NYSDEC requests that two groundwater monitoring wells be installed directly downgradient from the oil water separators and sampled to be sure that groundwater is not impacted. Grossly contaminated soil should be removed when removing the oil/water separators and end-point soil samples should be collected.I expect a summary report for the installation of the two wells with groundwater analytical results and a remedial action proposal for the soil in the northwest corner of the site. - JAM8/25/08 Spoke to Mimi R. today. The current structure foundation was removed as well as two oil water separators and 1 UST. No end-point samples were collected. ELM is proposing doing GPR to locate more potential USTs and installing the 2 downgradiet monitoring wells that the DEC requested in the last meeting. - JAM9/18/08 Reviewed the Spill Investigation and Remediation Work Plan dated Sept. 3, 2008 submitted by ELM. The work plam proposes the following:1. Use ground-penetrating radar to conduct a geophysical survey and to determine whether there are any remaining underground tanks.2. Advance a minimum of 3 soil borings, one in each location of two oil/water separators and one UST, which were removed during deconstruction of the former building.3. Install two monitoring wells in the northeast portion of the site.4. Inject RegenOx in the area of the former USTs in the norhtwest portion of the site.I sent an approval letter today with one requirment. Confirmatory soil sampling must be performed subsequent to the RegenOx injections. Soil borings should be advanced as close as possible to former "T" boring locations to collect confirmatory samples.ELM also plans to install a vapor barrier and a passive venting system beneath the foundation of the new structure, which will be built on the northern portion of the site. The rest of the site will be capped with either asphalt, concrete of clean fill. The work plan and the approval letter are uploaded to eDocs. - JAM9/22/08 ELM notified Dennis McChesney at the EPA about the RegenOx injection, as per EPA UIC Program regulations. EPA will review and respond. - JAM10/03/08 Visited the site today. ELM advanced 5 soil borings yesterday and installed the two monitoring wells along 43rd Ave today. Visibly contaminated soil and odors were observed in each soil boring, however PID readings were relatively low (max reading was around 200ppm). Soil samples were taken at each boring from the interval with the highest PID reading, which was directly above the water table at each boring location. The RegenOx injection will occur when EPA UIC Program approval is given. - JAM10/20/08 Spoke with Rich Kampf at ELM. ELM proposes to expand the RegenOx injection area to include the "D-boring" area. I verbally approved this proposal and asked for a formal addendum to the remedial work plan. I requested that ELM submit the supporting calculations for the amount of RegenOx to be injected. I also requested the Investigation Summary Report from work performed in early October 2008 be submitted as well. - JAM10/29/08 Reviewed the Addendum to Spill Investigation and Remediation Work Plan submitted by ELM dated October 29, 2008. This addendum summarizes investigations performed on October 2 and 3, 2008 as per the approved work plan date September 3, 2008. ELM advanced 5 soil borings (SB-1 through SB-5) and installed 2 monitoring wells at locations SB-4 and SB-5. Evidence of soil contamination was found near the water table (interval 10-15 feet) in all soil borings. Compounds detected were Ethylbenzene, Xylenes and Naphthalene. Groundwater contamination was observed in both wells MW-4 and MW-5. Compounds detected were

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

Benzene, Ethylbenzene, Xylene and Naphthalene. Please see table in report for concentrations.ELM proposes expanding RegenOx injections to address contamination observed in this area (D-boring area). ELM will inject 200lbs of RegenOx in each of 23 injection points. A total of 4,200 lbs of RegenOx will be injected at the D-boring area. Rpt is uploaded to eDocs.I sent a letter today approving this work plan. Confirmatory soil and groundwater sampling must be conducted quarterly beginning one month after the RegenOx injections to evaluate its effectiveness. Approval letter uploaded to eDocs. - JAM10/30/08 RegenOx injections commenced in the T-boring area today. I visited the site to witness the first injection point. ELM estimates the injections will take 8 days for both the T-boring and D-boring areas. - JAM12/10/08 Received call from Mimi Raygorodetsky and follow-up email was received from Nicole Gorelick. ELM will perform confirmatory soil & GW sampling at site on 12/11/08 and 12/12/08 to evaluate effectiveness of RegenOx injections. Email is uploaded to eDocs. - JAM12/15/08 Received a call from Nicole Gorelick at ELM. Soil borings were advanced in the T-boring area and the D-boring area on Friday, 12/12/08 to evaluate the effectiveness of the RegenOx injections. When trying to sample wells ELMMW-5 and MW-1 (ART), they appeared to be damaged from construction activities on-site and could not be sampled. Ms. Gorelick said she will be back at the site tomorrow to sample wells MW-2 (ART), MW-3 (ART) and ERMMW-5. A summary report will be submitted when results are available. - JAM12/16/08 Visited site today. I walked site with Mimi Raygorodetsky and Nicole Gorelick from ELM and saw 5 wells, two of which were damaged by construction activities (MW-1 ART and ELMMW-4). I said that these monitoring wells may need to be reinstalled based on results from other 3 monitoring wells, which were sampled today. A rpt summarizing soil samples collected last week and GW samples collected today will be submitted. - JAM1/12/09 Received an email report today from ELM titled Post-Injection Effectiveness Monitoring. ELM completed the in-situ chemical oxidation using RegenOx from October 30 through November 12, 2008. The effectiveness monitoring consisted of collecting soil samples from five soil borings and groundwater samples from accessible wells on- and off-site.Monitoring wells ELM MW-4, MW-2(ART) and MW-3(ART) were sampled on December 16, 2008. MW-1 (ART) and ELM MW-5 were not sampled because they were destroyed by construction activities on-site. Groundwater quality improved significantly in well ELM MW-4, however, groundwater quality in MW-2 (ART) showed increases for Benzene and MTBE. VOC concentrations in MW-3(ART) remained non-detect.Soil samples showed some improvement post-injection, however there were also increases in some conpounds that ELM attributes to sample variability and intervals between separate sample events were not exactly duplicated.Since the overall soil and groundwater conditions improved, ELM proposes that no additional injection rounds be performed in the T and D boring areas. ELM says that ELM MW-1 will be replaced within the next two weeks and groundwater monitoring events will continue. Email report uploaded to eDocs. - JAM1/14/09 Emailed Mimi Raygorodetsky at ELM and said that DEC would like to see GW results from replacement well MW-1 before determining if future injections are not necessary. - JAM1/15/09 Received a call from Nicole Gorelick at ELM. They will be reinstalling well MW-1 tomorrow morning and sampling the well next Friday. - JAM2/3/09 Received an email from Mimi Raygorodetsky at ELM on 2/2/09. Monitoring well ELM MW-1R was installed on January 16, 2009 to replace the previously

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

destroyed well ART-MW-1. ELM MW-1R was installed out of the building footprint and approximately 10 feet away from the previous well (see figure). The well was sampled on January 23, 2009 and while purging, petroleum odors and a sheen were observed. Groundwater sample results showed eight VOCs detected above TOGS. Most notable was Benzene at 267ug/L.Since sediments was noted in well ELM MW-4 during the last sampling event, ELM attempted to purge the well on January 19. 2009. While purging, petroleum odors and a sheen was observed.I spoke with Mimi today and sent a follow-up email which stated:"I have reviewed the data you have provided in the last two emails. The DEC will not require additional remediation at this time; however, quarterly groundwater monitoring should continue for at least two additional events and monitoring reports should be submitted to the DEC for review. Based on those groundwater results, additional sampling may be required."ELM's email is uploaded to eDocs. - JAM7/15/09 Received a "Remedial Action Report" prepared by ELM dated June 26. 2009. The report summarizes all investigative and remedial work performed on-site to date, including a summary of the Phase I and Phase II Site Investigations. The following is included in the report:Section 3 REMEDIATION1. Pre-demolition removal of ASTs, one 1,200-gallon lube oil UST, sediment from trenches and drains within the on-site structures and oil and sludges from the oil-water separators located on-site - Jan 2008.2. Removal of 2 oil-water separators and an adjacent UST during demolition from the D-boring area - July 2008.3. RegenOx injection program - Oct 3 - Nov 12, 2008.4. Effectiveness monitoring of soil and groundwater - Dec 2008.5. Re-installation and sampling of ELM-1R in the T-boring area - Jan 2009.6. Soil excavation and removal for construction purposes - Nov 2008 - Feb 20097. Installation of passive SSDS - Feb 20098. Installation of a 15-ml poly sheeting soil vapor barrier - Feb 2009.9. Capping of the site with impermeable surfaces and clean fill in landscaped area - Scheduled for Spring 2009.10 Qrtly GW monitoring - Ongoing.The report is uploaded to eDocs without the Attachments. - JAM7/21/09 Reviewed the Quarterly Groundwater Sampling Report submitted by ELM on July 1, 2009. On April 24, 2009, groundwater samples were collected from groundwater monitoring wells ART MW-2 and ART MW-3. ELM-MW-1R was found to be filled with sediment and could not be sampled and ELM-MW-5 was destroyed during construction activities. ELM-MW-4 contained 1.1 feet of free product and could not be sampled. Total VOC concentrations from ART-MW-2 and ART-MW-3 are 108ug/L and 46ug/L, respectively. Report uploaded to eDocs.I called Mimi Raygorodetsky at ELM today to discuss future work. Mimi said that on Friday, July 24, 2009, ELM will perform another round of groundwater sampling, collect a sample of the product for fingerprint analysis, and perform the first product recovery event. Product recovery will be performed weekly, thereafter. I also requested that at least 3 monitoring wells be installed. Two to replace the destroyed wells ELM-MW-1R and ELM-MW-5, and one to installed downgradient and across the street of ELM-MW-4 and ELM-MW-5. I also requested that an up-to-date groundwater flow direction be calculated.ELM will submit a work plan to reinstall the wells within 2 weeks. - JAM8/31/09 Reviewed the Spill Investigation and Remediation Work Plan submitted by ELM dated August 7, 2009 and submitted via email on August 18, 2009. ELM proposed gauging and bailing product from well ELMMW-4 on a weekly basis and to collect a sample of the product for fingerprint analysis. The first gauging and bailing event occurred on July21, 2009. A sample of the product was collected on that date as

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

well.Additional work includes reinstalling monitoring wells ELMMW-1R and ELMMW-5 that were destroyed during construction of the new building. An off-site monitoring well will be installed down-gradient and across the street from ELMMW-4.I wrote a letter today approving the work plan with the following adjustments:1.Vacuum enhanced fluid recovery should be implemented on ELMMW-4.2.At least one additional monitoring well should be installed approximately 15 to 20 feet to the east of well ELMMW-4 to delineate the free product plume. If product is encountered in this well, another well should be installed further to the east.3.Soil sampling should be conducted during installation of the well across 43rd Avenue and the well to the east of well ELMMW-4. Soil should be continuously screened with a PID. Two (2) soil samples should be collected from each well for laboratory analysis: one sample from the soil interval with the highest PID reading, and another sample from the interval directly above the water table. If there are no elevated PID readings, only the sample from above the water table need be collected.The work plan and my approval letter are uploaded to eDocs. - JAM10/1/09 Received Quarterly Groundwater Monitoring Rpt for 3rd Qtr 2009 submitted by ELM via email on 9/30/09 and dated 8/28/09. GW samples were collected from wells ART MW-2 and ATR MW-3 on July 24, 2009. Wells ELM MW-1 and ELM MW-5 were not sampled because they were destroyed and well ELM MW-4 was not sampled because it contained 3.3 feet of free product. Sample results showed very minor levels of dissolved phase VOCs in ART MW-2 and ART MW-3. ELM states that there was an overall reduction in VOCs since RegenOx injection. Report with sample result tables is uploaded to eDocs.ELM has been monitoring the wells weekly for free product and, if free product is detected it is being hand bailed. On 10/1/09 I visited the site to observe the first vacuum enhanced fluid recovery event on well ELM MW-4. Additional wells will be drilled as per my letter dated 8/31/09. A summary report of all product gauging and recovery events will follow. - JAM10/16/09 Received updated weekly product recovery table submitted by ELM. On October 15, 2009, well ELM-MW-4 contained 0.22ft of free product, which was recovered using a bailer. The delineation wells are scheduled to be installed on Monday, October, 26. - JAM10/23/09 Received updated weekly product recovery table submitted by ELM. On October 22, 2009, well ELM-MW-4 contained 0.19ft of free product, which was recovered using a bailer. Delineation wells will be installed next week 10/26 through 10/28. - JAM10/28/09 Visited site today to observe install'n of 4 additional monitoring wells. At time of my visit, three wells were installed and none showed any signs of contamination. Next week all wells will be surveyed and sampled for dissolved phase contamination. - JAM12/2/09 Reviewed the Product Recovery Table submitted by ELM on 11/20/09 and 12/2/09. The last three recovery events are tabulated below:Date Prod. dpth DTW P.Thck Final DTW Prod Removed10/29/09 16.35 16.53 0.18 16.86 0.4 11/18/09 14.33 14.46 0.13 14.58 0.2 12/2/09 14.46 14.62 0.16 14.75 1.2 ELM will continue to visit the site to recover product weekly. A report will be submitted summarizing the installation of the additional monitoring wells. - JAM3/19/10 Reviewed Well Install'n and Quarterly Groundwater Sampling Rpt for 4th Qtr 2009 submitted by ERM, dated Dec. 17, 2009. On October 27 and 28, 2009, 2 new monitoring wells and 2 replacement wells were installed. Soil samples were collected from new wells only because soil data is already available for replacement wells. According to data, no VOCs or SVOCs were detected that exceeded SCOs in either of newly installed monitoring wells. Free product also was not observed in any of 4

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

newly installed wells.Groundwater samples were collected from all accessible wells without product on November 4, 2009 (ELM MW-4 was not sampled because it contained free product). No VOCs or SVOCs were detected in groundwater samples from ELM MW-6 and ELM MW-7 exceeding NYSDEC TOGS. The other wells each contained several VOCs, with some VOC concentrations exceeding TOGS.On October 1, 2009, ERM performed one VEFR event on well ERM MW-4 and removed approx. 50 gallons of free product/water mixture. ERM recommends continuing to sample GW quarterly for at least 2 more quarters. Product continues to be bailed from ERM MW-4 on a weekly basis. Well Installation and Quarterly Groundwater Sampling Report is uploaded to eDocs. - JAM3/19/10 Received call from Mimi Raygorodetsky and Jesse Mausner at ERM. In Feb. 2010, approx. 1.5 feet of free product was measured in well ERM-MW-4. ERM plans to schedule another VEFR event. I advised ERM to install more wells and/or soil borings in close proximity to well ERM MW-4 to determine where product originated from. Due to heavy rain events, product may have been desorbed from soil column near well ERM MW-4. Recommendations for future work will be included in next quarterly monitoring rpt (to be submitted). - JAM4/28/10 Reviewed the Quarterly Monitoring Report submitted by ELM dated April 8, 2010 submitted via email on April 16, 2010. Groundwater samples were collected on February 3, 2010 and results continue to show a reduction of VOCs in ELM-MW-1R, ART-MW-2 and ART-MW-3. The report does not summarize free product gauging and recovery events since April 2009. The next sampling event is scheduled for May 2010. Report uploaded to eDocs.I issued an email today notifying the RP that product monitoring and recovery should be performed monthly and that DEC should receive monthly updates. I also requested that the data from the monthly events be summarized in the quarterly monitoring/sampling reports. Email uploaded to eDocs. - JAM4/29/10 Received Free Product Remdiation Scope of Work submitted by ELM on April 28, 2010 via email. Work plan proposes using Laser Induced Fluorescence / Ultraviolet Optical Scanning Tool (LIF/UVOST) to delineate free product plume around ELM-MW-4. LIF/UVOST will be advanced into subsurface using direct-push geoprobe and will obtain real time scan of subsurface. ELM proposes installing permanent monitoring wells where mobil phase product is detected.I issued an approval letter on April 28, 2010 with the following requirements:1. Each boring should be extended to a depth 5 feet below the water table or the extent feasible since bedrock is shallow in the area.2. At any location where residual or free phase petroleum contamination is encountered, a permanent monitoring well should be installed. At a minimum, one monitoring well should be installed between existing wells ELM-MW-4 and ELM-MW-73. During monitoring well installation, soil should be continuously screened with a PID. Soil samples should be collected from the soil interval with the highest PID reading, and another sample from the interval directly above the water table. If there are no PID readings but contamination was detected using UVOST, then a soil sample should be collected from depth intervals where UVOST detected contamination.The work plan and approval letter are uploaded to eDocs. - JAM5/7/10 Site Visit. LIF/UVOST investigation completed today with six borings advanced around ELM-MW-4. Free phase product was observed in four of the six borings around well ELM-MW-4. Three monitoring wells will be installed and soil and grounwater samples will be collected.Product is delineated toward the street. Product most likely extends beneath the building. A summary report will be submitted when soil and groundwater sample results are

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

returned. -JAM6/8/10 Spoke to Emily from ELM today. All the wells were gauged this month and approx. 5 inches of product was contained in well ELM-MW-4. She will submit a letter documenting the gauging event and will include a submission date for the investigation summary report. - JAM03/01/11: This spill case transferred from J. Maisonave to J. Kolleeny. Reviewed LNAPL Remediation Rpt by ELM, dated 2/17/11 (in eDocs). Rpt presents product gauging data and GW sampling data, showing free product in well ELM-MW4 has been reduced to 0.08 ft; most notable dissolved-phase impact was in well ELM-MW-1R2, which had 100 ug/L of benzene in Oct. 2010 (up from 65 ug/L benzene in July 2010). Rpt requests spill closure. I sent letter (in eDocs) to Michael Del Cioppo, cc's to Dik Glass, Emily Guyer & Mimi Raygorodetsky, saying spill cannot yet be closed due to measurable free product and other impacts; required continued product recovery (suggested by vac truck), and quarterly GW sampling, until no measurable product in wells, at which point spill closure will be reconsidered. - J. Kolleeny08/23/11: On Aug. 5, 2011, spoke with Emily Guyer of ELM (consultant), discussed various approaches to product recovery and conditions for spill closure. She suggested use of absorbent socks to remove product from well MW-4, which has persistent small amounts of product (several inches). I agreed to give this a try, since she indicated that vac truck was not very effective and constant use would be cost prohibitive. I also requested GW sampling on at least semi-annual basis. On 8/15/11, received email from Ms. Guyer with attached memo (in eDocs) summarizing our discussion and proposing use of absorbent socks and semi-annual sampling as remedial approach moving forward, and stating that once sufficient data are collected, ELM will re-evaluate effectiveness of this approach. On 8/23/11, I sent email (in eDocs) to Michael Del Cioppo, cc's to Emily Guyer, Mimi Raygorodetsky & Pete Zimmerman of ELM, approving this proposal. - J. Kolleeny07/25/12: Received phone call from Mimi Raygorodetsky of ELM, stating that they've been following approved plan of absorbent socks/manual bailing of traces of product in well MW-4, and as of April 2012, there has been no LNAPL in well; they then performed a round of GW sampling and found very low VOC levels (below TOGS); she stated they will submit a letter rpt summarizing product recovery work, GW sampling results, and requesting spill closure. - JK08/08/12: Received email from Mimi R. of ELM, asking if I've had chance to review closure request rpt she sent over on 7/25/12. I responded that I never received rpt. She determined that because rpt pdf file, sent by email on 7/25/12, was "secured" (ELM does this for all their pdfs that have an electronic signature), DEC's servers would not accept email with attachment. She unsecured rpt and re-sent. Will review. - J. Kolleeny08/20/12: After review of ELM's Product Recovery Rpt and Request for Spill Closure dated 7/23 12 (in eDocs), I sent email to Mimi Raygorodetsky on 8/15/12 noting that rpt contains inconsistencies in text and graph regarding product thickness, in hundredths of inches vs. hundredths of feet. Mimi replied that my observation is correct; they will revise rpt and re-issue under cover name of Integral Consulting, which has taken over ELM. - J. Kolleeny09/05/12: On 9/4/12, received Revised Product Recovery Rpt and Request for Spill Closure by Integral Consulting, Inc., dated 8/27/12 (in eDocs). Rpt summarizes measurement and recovery of free product in well MW-4 since DEC approved use of absorbent socks to address product in that well, and results of round of GW sampling performed on 6/6-7/12. Rpt presents graph showing product thickness

STRUCTURAL DISPLAY CO., INC (Continued) **S103824757**

in inches from 7/26/11 through 5/21/12, with measurements fluctuating from about 2.5 to 4.5 inches until 4/1/12, after which product thickness decreased dramatically and then was non-detect for 4 events. Text states that 1.08 inches of product (i.e., 0.09 ft) were detected on 4/13/12, but that no measurable product has been detected in well for four separate events since 4/19/12. GW samples collected in June 2012 from 6 on-site and 4 off-site wells (including well MW-4) showed low levels of VOCs in several wells, up to about 70 ug/L total VOCs in ELM-MW-5R. These minor impacts appear to be adequately delineated by clean (or nearly clean) sentinel wells, indicating there is no off-site migration of contamination. Based on absence of measurable free product in MW-4 for 4 consecutive gauging events and minor, delineated residual dissolved GW impacts with no off-site migration, Integral requests spill closure. On 9/5/12, I closed spill case and sent spill closure letter (in eDocs) by email to Michael Del Cioppo, cc's to Mimi Raygorodetsky, James L'Esperance & Pete Zimmerman of Integral, advising in email that DEC should be notified when wells have been decommissioned and provided with documentation of this. - J. Kolleeny

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"12/30/02 TJDInternational Masonary Institute contacted to provide a summary of activities at site including complete analytical data from sampling event. Fax transmission with incomplete data had been received. Demeo left message with John Cozultini who will have the appropriate individual repond to NYSDEC request for addional information.1/2/02 TJDDennis Holaway (International Masonary Institute) called today in response to DEC request for additional information. A complete set of laboratory data faxed to DEC this morning. Lab analysis reveals chemical concentrations above TAGM. Remedial work is required.Tank is reportably a 2,500 gal UST buried inside building. No PBS registration is found for this address. Mr. Hollaway was provided contact information for (5) environmental contractors. A contractor will be selected and a work plan submitted.Based on 11/28/01 tank closure report - which indicated only SVOC contamination - and 10/5/01 DEC Region 2 telephone conference which requested soil borings per approved work plan, additional borings were advanced and analyzed and determined that fill across site placed during construction of building was contaminated with low level SVOC's. Case closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"Sent tank test failure letter to Varderame. 11/15/2002 ARS11/14/2003-Vought-Reviewed report dated 6/26/03 from Verderame Realty (Bruce Bauer 718-786-1100). Site will no longer be using oil and will be converting to gas. Closure of a 2000-gallon #2 fuel oil UST and collection of post excavatin endpoint samples by Bluestone Environmental (Andrew Cozzi 732-469-5188). "The UST excavation base was at approximately 8 to 8.5 feet below the concrete floor". "The soil in the excavation was a fill that consisted of dark brown sand with construction debris such as bricks and pieces of concrete". Five soil samples were submitted for analyses for 8260/8270. Soil analyticals show two 1,3,5-trimethylbenzene exceedances up to 9110ppb, benzo(a)anthracene up to 1010ppb, benzo(a)pyrene up to 631ppb, benzo(b)fluoranthene up to 1110ppb, benzo(k)fluoranthene up to 579ppb, and chrysene up to 1210ppb. These exceedances are attributable to fill material. Spill closed by Vought after conference with DEC Rommel.
Remarks:	tank test failure - it will be cleaned and retested next week

DEC Memo:	3/94: MW-4 had a sheen of product. MW-1 had 7500 ppb, MW-2 had 9600 ppb and MW-3 had 350 ppb of benzene.8/94: Installed MW-5,6 & 7. MW-4 had 0.19 ft of LPH. Depth to water 13 ft. The SVE system is operable and manifolded to MW-2,3 & 4. MW-1 had 3000 ppb, MW-2 had 5200 ppb, MW-3 had 360 ppb, MW-5 had 1400 ppb, MW-6 had 590 ppb and MW-7 had 24 ppb benzene. Sunoco will investigate and submit current tank test results. 12/10/2003 Reassigned from Tipple to Sun.02/03/2004-Sun-File Update by Sun:Quarterly Monitoring and Sampling Report (October through December 2003), by EnviroTrac (Anthony Fiorentine,

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

631-471-1500): On 11/08/2003, liquid phase hydrocarbons (LPH) were detected in MW-4 at a thickness of 0.20 feet (ft.). The depth to water ranged from 22.78 ft. (MW-6) to 26.00 ft. (MW-4) below the surface on 11/8/2003. Six (6) wells (MW-1,2, 3, 5, 6 & 7) were sampled on 11/8/2003. BTEX concentrations ranged from not detected (ND) in 3 of the 7 wells to 58,000 micrograms per liter (ug/l) (MW-2).MTBE concentrations ranged from ND (MW-3) to 3,800 ug/l (MW-7). On 11/8/2003 and 12/21/2003, a three percent Biosolve surfactant and water solution was injected into MW-4. MW-4 was then han surged with a surge block and groundwater was removed from a down-gradient well (MW-7) with a submersible pump. LPH was not detected during the December 2003 short term remediation event (STRE).03/11/2004-Sun-File Update by Sun: On 03/10/2004, Sun sent a letter and Stipulation Agreement to Russell Hammond of Sunoco requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of March 31, 2004 for signing the Stipulation Agreement by the Respondent.10/31/05: Project reassigned from Sun to Andersen. Enhanced fluid recovery and Biosolve application are being utilized in two hotspots, MW2 and MW4.12/8/05: December 8 meeting between Sunoco, DEC, and EnviroTrac. Biosolve remediation is not very successful. EnviroTrac and Sunoco think that source may be present and plan to do soil borings to identify source. Soil is likely very heterogenous. Site is now a pay commuter parking lot, so work can only be done on weekends.1/4/06: Reviewed the quarterly report dated January 2006. Six wells sampled on November 20, 2005. Trace amounts of LPH in MW-4. Max BTEX 28,300 (MW-2) and 560 ppb (MW-2). Biosolve last used in August 2005. 5/3/06: Reviewed the first quarterly 2006 report. Wells sampled on 1/21/06. LPH is present in MW 4 at a depth of 0.25 ft. Max BTEX 22,900 in MW2. Max MTBE 91 ppb in MW7. Sent RAP required letter, due 7/3/06.8/18/06: Meeting on 8/17/06 with Sunoco, EAR, and NYSDEC. RAP submitted. Regenox will be used. Three monthly Regenox installations will be completed. Regenox will be injected into twelve temporary borings, with injection span the vertical interval 15 to 35 feet below grade. Monitoring wells will be gauged and sampled monthly during Regenox application. RAP approved.10/20/06: First mobilization to drill borings for Regenox application will occur on 10/21/06 8am-4pm.11/9/06: Second mobilization for Regenox application will occur on 11/11/06.12/18/06: Sent email to Jamie Brown of EAR to followup on status of next quarterly report. Received email from Jamie Brown:"The next report will be completed and submitted to you mid - January 2007. Please let me know if you have any other questions."2/13/07: Emailed Jamie Brown to followup on the status of the next quarterly report.2/20/07: Reviewed update report. Regenox in use. Wells sampled on 12/23/06. Max BTEX 58,900 ppb (MW4), max MTBE 220 ppb (MW7). LPH in MW2 at depth of 0.48 ppb. 3/23/07: Meeting on 3/22/07 with Sunoco, NYSDEC, and EnviroTrac. LPH appeared last quarter because the Regenox mobilized contaminants. The second phase of Regenox application may be scheduled for April 2007.4/13/07: Regenox application scheduled for 4/14/07.6/11/07: Received update report. Wells sampled on 3/24/07. Max BTEX 37,400 ppb (MW4), max MTBE 120 ppb (MW7). LPH in MW2 at a depth of 0.29 ft. Product recovered from MW2 and an absorbent sock put in well. Overall decrease in contaminant concentration. 10/12/07: Emailed Russell Hammond regarding overdue report.10/16/07: Received email from Russell Hammond. Report will be submitted by the end of this week.3/18/08:

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Reviewed October 2007 - December 2007 Project Status Report. Max BTEX 47,100 ppb (MW4). Max MTBE 140 ppb (MW2). When will the next phase of Regenox application occur?3/19/08: Received email from Karen Waryas (Waryas@ENVIRO-ASMNT.COM):"Phase 2 of the Regenox application at SUN-LIC32-32 occurred in April andMay of 2007. It was mentioned in the June 2007 PSR, but regretfully wasnot put into the site history section of the September or December 2007PSRs. I apologize for this oversight, and it will be remedied forfuture submissions. I put in an inquiry with my supervisor today as towhen the third phase is expected to occur and will let you know as soonas I hear any information."5/15/08 - Carlson: Reviewed January - March 2008 Project Status Report. Wells sampled on 3/22/08. Maximum BTEX concentration 23,600 ppb (MW2). Maximum MTBE concentration 74 ppb (MW2). Geochemical parameters are being monitored to evaluate progress of Regenox. When will third phase of Regenox occur?9/4/08 - Carlson: Reviewed April - June 2008 Project Status Report. Wells sampled on 6/28/08. Maximum BTEX concentration 31,800 ppb (MW2). Maximum MTBE concentration 110 ppb (MW7). General increase in contaminant concentrations. When will third phase on Regenox application occur?10/8/08 - Carlson: Meeting with Russell Hammond of Sunoco and Karen Waryas of EAR. Regenox won't be used again. Workplan for soil borings due by 10/30/08. A new RAP will be required afterwards. 11/5/08 - Carlson: Received email with Subsurface Summary letter. Email stated that a workplan will be submitted in two weeks.12/22/08 - Carlson: Reviewed July 2008 - September 2008 Project Status Report. Wells sampled on 9/20/08. Maximum BTEX concentration 29,700 ppb (MW2). No mention of overdue workplan in report. Emailed Karen to followup on workplan submittal.12/29/08 - Carlson: Received email from Karen. Workplan will be submitted when Russell Hammond gets back from vacation.1/8/09 - Carlson: Approved investigation workplan for installation of three soil borings.1/28/09 - Carlson: Reviewed September 2008 - December 2008 Update Report. Wells sampled on 12/20/08. Maximum BTEX concentration 37,620 ppb (MW4). On-site borings will be completed.1/29/09 - Carlson: Meeting with Sunoco and Envirotrac.4/5/09 - Carlson: Received investigation letter-report dated April 8, 2009. Three soil borings installed. High soil impact in all borings. A workplan for additional soil delineation will be submitted by may 8th.5/22/09 - Carlson: Reviewed update report. Wells sampled on 3/28/09. Maximum BTEX concentration 37,700 ppb (MW4). Maximum MTBE concentration 64 ppb (MW2). Workplan for additional delineation overdue.6/1/09 - Carlson: Meeting held with Sunoco and EAR.6/5/09 - Carlson: Reviewed work plan dated 5/29/09. Five soil borings proposed. Sent email requiring revision workplan with 1) deeper minimum boring depth to account for smear zone and 2) continuous sampling of entire boring for all on-site borings except SB1. Revised work plan due in 30 days.8/6/09 - Carlson: Approved revised work plan. Investigation Report due in 90 days.10/6/09 - Carlson: Reviewed update report. Wells sampled on June 27, 2009. High dissolved concentrations in MW2 and MW4. No update on work plan implementation provided.12/3/09 - Carlson: Reviewed update report. Wells sampled on 9/19/09. Trace LNAPL in MW1. Maximum BTEX concentration 27,800 ppb (MW2). Investigation report overdue.12/8/2009 - Carlson: Meeting with Sunoco. Upgradient source?, access issue on upgradient property.3/18/2010 - Carlson: Received notification. Field work scheduled for 3/20/2010.3/19/2010 - Carlson: Reviewed October 2009 - December 2009 Quarterly Update Report. LNAPL sheen in MW1 in October 2009. However, low dissolved concentrations

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

in MW1 in December 2009. Field work cancelled, will probably be rescheduled for next Saturday.4/7/2010 - Carlson: Received notification - field work scheduled for 4/7 and 4/10.7/2/2010 - Carlson: Reviewed January - March 2010 update report and RIR. SB4 - SB 6 installed. Soil and gw impact in SB4. Three more borings will be installed, as per 7/17/09 work plan.9/9/2010 - Carlson: Reviewed April - June 2010 Quarterly Report. SB- 7 - 9 installed. Soil impact in SB- 4, 7, 8, 9. Issued letter requiring work plan for installation of three monitoring wells at SB-4, SB-7, and to the south of SB-9, and one soil boring adjacent to MW1. Due 10/11/2010.1/31/11 - Obligado - I reviewed an investigation workplan. The workplan didn't propose a well at SB7. I emailed a letter to Jaime Brown and Russel hammond requiring revised work plan with well at SB7. Due within 15 days.3/30/11 - Obligado - I reviewed a revised work plan which incorporated the changes I requested. Sent approval letter.11/28/11 - Carlson: Reviewed 2nd and 3rd Quarter 2011 Update Reports. MW8-10 installed. Groundwater impact in all three new monitoring wells. 11/30/11 - Carlson: Issued letter requiring an off-site delineation work plan and a remedial action plan by 1/13/2012.2/10/2012 - Carlson: Reviewed December 2011 update report. Delineation workplan and RAWP to be submitted.1/10/2013 - Reviewed 1Q2012 dated 4/2012, 2Q2012 dated 7/2012 and 3Q2012 dated 10/2012. DTW 22.57 (MW-7) to 28.44 (MW-8) on 9/15/2012. MW-6, 30 BTEX, 1.2 MTBE. MW-2, 25,100 BTEX, less than 140 MTBE. MW-9, 34,030 BTEX, less than 400 MTBE. MW-4, 18,399 BTEX, less than 250 MTBE. MW-8, 798 BTEX, less than 76 MTBE. MW-7, 2,790 BTEX, less than 100 MTBE. MW-1, 18.1 BTEX, less than 13 MTBE. MW-3, 10.3 BTEX, less than 21 MTBE. MW-10, 15,740 BTEX, less than 93 MTBE. 4/5/2013 - 4Q2012, 1/9/2013, by CGE. Groundwater sampled on 12/15/2012. DTW 22.87 (MW-7) to 28.62 (MW-8). NO LNAPL. MW-6, 96 BTEX. MW-9, 27,650 BTEX, less than 190 MTBE. MW-4, 23,210 BTEX, less than 280 MTBE. MW-8, 1,851 BTEX, less than 160 MTBE. MW-2, 24,220 BTEX, less than 62 MTBE. MW-7, 2,040 BTEX, 31 MTBE. MW-1, 22.4 BTEX, less than 9.0 MTBE. MW-10, 15,960 BTEX,, less than 150 MTBE.7/26/2013 - 1Q2013, 4/2013, by CGE. The monitoring was done on 3/23/2013. DTW 22.81 (MW-7) to 28.77 (MW-8). NO LNAPL. MW-6, 170 BTEX, 6.1 MTBE. MW-2, 21,780 BTEX, <76 MTBE. MW-9, 35,130 BTEX, <290 MTBE. MW-4, 22,684 BTEX, <270 MTBE. MW-7, 1,870 BTEX, <42 MTBE. MW-10, 10,440 BTEX, <110 MTBE.

BROWNFIELDS:
Program: BCP
Site Code: 57873
Site Description: The site is located in an urban area of Queens Co. and is surrounded by mixed industrial and residential uses. The site facility occupies an entire city block. The sites contamination resulted from the release of lubricating oils, paint thinners, solvents and related contaminated materials generated and used during the manufacturing process. Volunteer decided to not transition to Brownfield Cleanup Program, and the project remains in the Voluntary Cleanup Program. See Site #V00331.

CLOSED-LACKOF RECENT INFO (Continued) **S100494133**

transferred from DEC Vought to DEC Piper as per DEC Austin.2/26/07- DEC Piper left message at GES requesting callback and info.5/7/07- DECP iper receoved fax from GES stating oil dicovery is separate fro mPerc cont. There is a 20K #2 oil tank adjacent to the MW. It is believed that oil was pumped in from delivery due to wrong fill. Oil has reoccured in well. CSL sent to Mgmt. Agent.5/10/07- DECP iper spoke w. owner. He informed me there is no way oil was delivered to MW. In that case lines or tank may be leaking. He will test tank and lines and perform subsurface investigation.7/20/07- DEC Piper recieved tank test results. Tank failed Inspection revealed a hole on top of tank. Samples were collected thrpough bottom of tank though are clean of VOC and slight SVOCs. 2/3/08- DEC Piper spoke w. Don Carlo Env. Borings were completed around tank. and along street. Street samples were clean though boring made by others showed contamination. Adjacent boring were clean. Piper instructed Danny Sing to have proposal generated to clean and inspect tank and perform borings though bottom.4/16/08- DEC Piper - I met Don Carlo, Danny Sing and Ted Yen on site. I explained to them that product was discovered in the mw-11 adjacent ot the fill. The tank failed a tightness test and samples were collected from the ends of the tank. Further investigation is needed. Two borings down to groundwater will be completed adjacent to fill, and three boring will be conducted through the bottom of the tank. A third boring and gw sample will be collected in the boiler rooom which is downgradient of the tank.I recieved additional boring results. Soil and groundwater were below tagm. No free product was observed. Tank was slurriyed after inspection. Based on work to date, this spill is closed. See e--docs if warranted.

Remarks: CALLER HAS FOUND OIL FLOATING IN TOP OF THE WELLS DURING A QUARTERLY SAMPLING EVENT. oNE WELL WAS AFFECTED AND IS NEAR THE BOILER ROOM OF THE BUILDING. UNKNOWN AS TO HOW THE PRODUCT GOT INTO THE WELL AND SMELLS LIKE A FUEL OIL MATERIAL. HAS NOT BEEN EXCATED IT YET.

CLOSED-LACKOF RECENT INFO (Continued) **S100494133**

Region: 2
Town: New York City
Acres: 1.800
Date Record Added: 11/30/2000
Date Record Updated: 10/10/2012
Updated By: JHOCONNE
Site Description: Location:The Site is located in an urban area of Long Island City, Queens at 32-00 Skillman Avenue and is surrounded by mixed commercial, industrial and residential uses. The former ACCO Brands, Inc. (ACCO) facility is bounded by Skillman Avenue and the Sunnyside Rail Yard to the north; 32nd Place to the east; Queens Blvd. to the south; and Van Dam Street to the west. Surrounding land uses include multi-family residential properties, community and educational institutions, and various commercial, industrial, and retail uses.Site Features:The Site is approximately 1.8 acres in size and the former ACCO facility occupies the entire city block.Current Zoning/Use(s):The site was formerly owned by ACCO Brands Inc., which was a subsidiary of Fortune Brands, Inc. The site is located in an industrial zoned area. The upper floors of the Site are currently used for commercial and light industrial purposes, the basement is unoccupied, and a penthouse which houses a private racquet club, fitness center, spa and restaurant occupies the rooftop of the Site.Historical Use(s):The facility was constructed in 1950 and ACCO (or its predecessor corporations) occupied the facility from 1952. The site was reportedly occupied by several automotive service centers and gasoline stations prior to 1950. During their occupancy of the facility, ACCO manufactured staplers and stapler components. Paints, thinners, solvents and cleaners were used as part of the manufacturing process and may have led to site contamination. Wastes generated included paint filters, sludge, rags, and paint.Operable Units:The Site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination." Operable unit 1 (OU-1) is the on-Site source area which included the basement of the building. Operable unit 2 (OU-2) consists of the off-Site dissolved groundwater plume and associated soil vapor issues.Site Geology and Hydrogeology:The site is underlain by silty sand with varying amounts of gravel, silts and clays. Soil borings indicate a laterally pervasive low permeability layer beneath the entire footprint of and to the west of the Site. Parts of the low permeability layer, which dips to the south-southeast, are compromised by a layer of organic peat. TCE has been detected in the shallow, intermediate and deep aquifer zones at the Site. Depth to groundwater in the shallow aquifer is approximately 10 grade with a flow to the northwest. Depth to groundwater in the intermediate aquifer is 35 below grade with a flow to the west-northwest. Depth to groundwater in the deep aquifer is 60 below grade with a flow to the north-northwest.
Env Problem: Nature and Extent of Contamination:OU-1 Soil - Based upon investigations conducted to date, the primary contaminants of concern for OU-1 soils include trichloroethene (TCE) and its breakdown products that were noted in an unlined pit in the basement of the facility. The extent of impacted soils is confined to the western half of the footprint of the basement. Concentrations of TCE found in soils on site ranged from 79 ppm to 256 ppm, which exceeds the Soil

CLOSED-LACKOF RECENT INFO (Continued) **S100494133**

Cleanup Objectives (SCO) for the protection of groundwater (0.47 ppm). Maximum concentrations were noted at a depth of 16-16.5 feet below the basement floor. OU-1 Groundwater - TCE and its breakdown products were encountered in both shallow groundwater samples collected at approximately 15 below grade and deep groundwater samples collected at approximately 49 below grade. Concentrations of TCE in shallow groundwater on site ranged from 108 ppb to 129,000 ppb, which exceeds the Groundwater Standard of 5 ppb. Concentrations of TCE found in deep groundwater on site ranged from 700 ppb to 1280 ppb. Maximum groundwater contaminant concentrations are encountered in the western half of the Site.OU-1 Soil Vapor - The maximum sub-slab soil vapor concentration of TCE found in samples collected beneath the on-site building were 160,000 ug/m3 in the eastern portion of the basement and 260,000 ug/m3 in the northern portion of the basement.OU-2 Groundwater TCE and its breakdown products were encountered in shallow, intermediate and deep groundwater samples. Depth to groundwater is approximately 10 below ground surface (bgs) in the shallow aquifer, approximately 35 bgs in the intermediate aquifer, and approximately 60 bgs in the deep aquifer. Maximum concentrations of TCE found in shallow off-site groundwater samples were 140,000 ppb. Maximum concentrations of TCE found in intermediate off-site groundwater samples were 45,800 ppb. Maximum concentrations of TCE found in deep off-site groundwater samples were 65 ppb. Approximate plume length is 500 down gradient from the site.OU 2 Soil Vapor - Off-site studies of soil vapor intrusion were conducted at the several locations. Concentrations of TCE in sub-slab and indoor air samples collected in two off-site locations during the Remedial Investigation exceeded the recommended action levels as established by NYSDOH. Vapor mitigation systems have been installed in these buildings.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with a building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in the indoor air due to vapor intrusion in the on-site building. A soil vapor extraction system was installed beneath the on-site building, which prevents vapors beneath the slab from entering the building. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent inhalation of site contaminants in indoor air due to soil vapor intrusion.

soil contaminationSubmit map summarizing all soil results greater than TAGM.Propose remediation.Rommel10/15/04 Transferred from Rommel to Foley. (KMF)4/27/05 Received 2004 Annual GW Monitoring Report. GZA sampled wells on 2/18/04 and 10/6/04. Objective is to determine effectiveness of MNA. Not sampling for geochemical indicators. Sampling for TBA. MW-1,2,3,4,6 were purged and sampled. The sample from MW-5 was not analyzed since no target compounds were detected during previous sampling events. MW-1 exhibited a petroleum odor and slight sheen during both events. MW-2 had a slight odor but no sheen. MW-3 did not exhibit odor and ran dry during purging. MW-4 had a slight odor during both. MW-5 ran 2.9ppm on the PID and MW-6 ran 1.1ppm on the PID. Purge water from MW-5 had a strong organic or sulfur odor in Feb. MW-6 had a slight odor in Feb.Oct 04- BTEX ranged from ND(MW-2,3,4) to 164ppb(MW-1). MTBE ranged from ND(MW-4) to 41ppb(MW-1).12/22/05 Annual report received. MW-1, within the former source area, continued to exhibit low concentrations of most targeted compounds, including MTBE. Napthalene and TBA have increased, perhaps due to biodegradation. Napthalene and TBA were detected in low concentrations in MW-2 and benzene at a slight exceedance. In MW-3, MTBE was detected at its lowest conc to date, while TBA was at its highest to date. Xylenes were detected above MDL for the first time. MW-4 did not contain any targeted compounds exceeding GWQS. MW-6 contained MTBE at a slight exceedance. Napthalene, 1,2,4-trimethylbenzene and total xylenes were detected above standard for the first time in MW-6 during the 10/05 event. Semi-annual sampling continues. An annual report will be submitted 12/06.3/22/06 Reassigned from Foley to Tang.(KMF)04/12/2007: This spill case was transferred to A. Doronova. - AD04/13/2007: Reviewed UST closure report and oil/water separator system closure report submitted by GZA, dated October 2006. UST closure report states that one 5,000-gallon UST was abandoned in place. During UST closure four samples were taken through four holes drilled two feet below the bottom of UST. No targeted VOC or PAH compounds were detected at concentrations exceeding their respective RSCOs in any of the soil samples. Based on this information GZA recommends NFA for this UST.During oil/water separator closure GZA performed some activities including: Collecting and analysing composite soil samples from the impacted area; collecting and analysing 5 post-excavation soil samples; removing from the site approximately 112 tons of impacted soil. Four of five post-excavation soil samples had elevated PID readings from 267 to 458 ppm. Lab results indicated elevated concentrations of VOC in these 4 samples. The excavation of contaminated soil could not be done because of structural building components. GZA is currently in preparation of RAP to address the impacted soils and groundwater at the site. AD04/16/2007: Spoke with Ben Alter of GZA. He told me that RAP will be ready for submittal around June 2007. They already installed new groundwater monitoring wells in the vicinity of closed oil/water separator to better delineate GW contamination. I ask him to submit also a complete and detailed map of the site, which he promised to do. AD05/02/2007: Received a letter from Ben Alter of GZA with attached soil sampling map and monitoring well location map. Submitted maps are not exactly what I asked for. Locations of oil-water separator, 5,000 gallon UST and 8 diesel former USTs are not indicated on both maps. Soil borings and end-point soil samples are not time color-coded. Will wait for RAP submittal. AD05/14/2007: Spoke to Mr. Alter of GZA. Asked him about date of RAP submittal. He said it will be ready before July. He

SPILL NUMBER 0103168 (Continued) **S105055149**

will also send revised maps for the site. GZA will do sampling round including newly installed wells MW-7 and MW-8 in two weeks. Analytical results will be submitted in RAP. AD05/18/2007: Received a map with locations of abandoned UST and oil/water separator with indication of the excavated limit. AD08/2007: Spoke to Ben Alter of GZA regarding RAP submittal. He said that the owner still did not decide on the plan. Promised to call me back. AD10/07/2007: Received a call from Tyree Env. This company is a new consultant for the site. They will prepare and submit RAP to DEC. AD11/07/2007: Received a call from Robert Ott of Tyree Env. (phone: 631-249-3150, ext 280) He asked for a meeting with us to discuss remedial action plan for this site. Scheduled the meeting for Tuesday November 13, 2007. AD11/13/2007: Jon Kolleeny and I attended a meeting with Robert Ott of Tyree Env. Tyree Env. will prepare work plan for delineation of contamination inside the building and then propose remedial action plan for the area of concern. AD01/18/2008: Called and left a message to R. Ott regarding investigation work plan submission. AD01/29/2008: Spoke with Robert Ott of Tyree. He said that work plan proposal was submitted to the owner for approval. Asked me if we can send them a letter to expedite the plan's review. AD01/30/2008: Sent a Investigation Needed Letter to Ms. Carry Anne Vinch of Ryder with a request to expedite investigation plan submission. AD03/03/2008: Spoke with R. Ott of Tyree. He said that scope of work was approved by owner and now they in a process of the work plan preparation. He plans to submit it in the beginning of April 2008. AD04/17/2008: Received a letter from Ryder. It states that Tyree Brothers Env. Services (TBES) did propose to implement investigation work for Ryder, but however Ryder did not retained them to perform any work, or prepare any plans. It says, that Ryder is presently reviewing options to move this site to closure. Called and left a message to Ms. Vinch of Ryder. AD04/25/2008: Called and left a message to Ms. Vinch of Ryder. Spoke with J. Kolleeny regarding this site. Sent Ms. Vinch an email, stating that we will prepare STIP for the site to ensure timely cleanup. AD04/30/2008: Received a phone call from Ms. Vinch of Ryder. She requested a meeting with DEC at the site. Told her that it can be arranged in DEC building. Ms. Vinch will call latter with a date for the meeting. AD05/14/2008: Did not receive any calls from Ms. Vinch of Ryder. Called and left a message. AD05/15/2008: Received a call from Ms. Vinch of Ryder. Scheduled a meeting with them on May 29, 2008. AD05/27/2008: Received Annual Groundwater Monitoring report. Will review. AD05/29/2008: Received a call from Ms. Vinch. She asked to re-schedule the meeting for Thursday, June 5, 2008 due unavailability of their consultant. AD06/05/2008: J. Kolleeny and I attended the meeting with Carrie Vinch 0f Ryder Truck and Brian Moore of CHCI. We discussed current site conditions. It was agreed that a work plan for additional groundwater investigation will be submitted to DEC in the mid-June. Based on the results of the investigation, recommendations will be made for further actions. AD07/16/2008: Received an email from Brian Moore of CHCI saying:Ms. Doronova - Thank you for taking time out of your busy schedule to meet with us last month to discuss the status of the assessment activities underway at the above-referenced Ryder facility at 10-20 44th Road in Long Island City.We are putting the final touches into the work plan being developed to address the items we discussed during our meeting last month, and we will be submitting it shortly for your review and approval. We appreciate the opportunity you provided for us to discuss the cases at this

SPILL NUMBER 0103168 (Continued) **S105055149**

property, and we look forward to your review of the scope when submitted. Please do not hesitate to contact us should you have any questions, comments, or concerns.Most sincerely,Brian D. MooreCarriageHouse Consulting, Inc.Ph: 508.315.3146Cell: 508.479.356007/23/2008: Received PDF version of the work plan from Brian Moore. Will review. Downloaded to eDocs. AD07/28/2008: Received a hard copy of the work plan AD07/30/2008: Sent an approval letter to Ms. Carry-Vinch with the following comments: Two soil samples per boring must be collected: one - directly above the water table and the second - from the sampling interval with the highest PID reading. In the absence of any field indication of contamination, a single soil sample just above the water table should be collected; Laboratory analysis for VOCs and SVOCs, specified on page 3 (third paragraph from top of the page) of the work plan, must be conducted for all samples collected. AD08/22/2008: Received an email from B. Moore of CHCI saying: "Ms. Doronova - In preparing the driller for the new well installation work planned forthis facility (DEC already approved), we have reviewed the previous wellconstruction details more in-depth and would like DEC to re-considerplans for well replacement. In lieu of replacement of MW-3 and 4, we would like to have DEC approve augmenting the network in thoseareas to confirm hydrological conditions and better assist with the conceptual model development for this location in general.Please review the attached and let us know if it meets with your approval.Original went into regular mail last night.We have proactively pre-marked for this work, and await your authorizationto proceed with the revised scope. Thanks again,Brian D. MooreCarriageHouse Consulting, Inc.Ph: 508.315.3146Cell: 508.479.3560http://www.carriagehouseinfo.com"Downloaded the WP addendum to eDocs. Will review. AD09/09/2008: Reviewed the revised WP. Sent an approval letter to K. Zias (cc: J. Kolleeny of DEC and B. Moore of CHCI). AD09/18/2008: Received an email from B. Moore of CHCI, saying: "Ms. Doronova -CHCI anticipates initiating the drilling portion of this Work Plan at this site beginning next Wed., by 10AM or 11AM, continuing through the end ofThursday.We look forward to potentially seeing you there if you decide to visit.Sincerely,Brian D. MooreCarriageHouse Consulting, Inc."Will visit the site. AD09/24/2008: Visited the site. Met with B. Moore of CHCI at the site. They already completed installation of the replacement for MW-3. Observed installation of the monitoring well MW-4S and PID screening of soil samples. PID ranged from ND to 942 ppm (v) at 10' depth. Asked B. Moore to collect soil sample from this interval for lab. analysis. CHCI will complete installation of 3 wells at the parking lot today, and will continue to install wells inside the building tomorrow. Wells will be sampled in two weeks. AD09/25/2008: Received a call from B. Moore of CHCI. He said that they installed well MW-9 with difficulties and he was questioning if it is reasonable to install well MW-10. The highest PID reading from boring for MW-9 was - 848 ppm (v). Discussed this with J. Kolleeny. Asked B. Moore to move location for well MW-10 10-15 feet to the east from MW-9. AD10/16/2008: Received a phone call from B. Moore of CHCI. During GW sampling they discovered a free product in the monitoring well MW-1. It looks as weathered light fuel oil. They collected a sample for fingerprint analysis and groundwater sample for lab analysis. The free product was bailed out of the well to find recovery rate. All data will be analyzed and conclusions and recommendations will be made. AD11/05/2008: Spoke with B. Moore of

SPILL NUMBER 0103168 (Continued) **S105055149**

CHCI. Asked him about MW-01. He said that absorbent sock was placed into the well to collect the free product. Yesterday, they replaces the sock. CHCI proposes to implement IRM for this well by installing skimmer to recover free product. Requested to submit a brief work plan for this IRM for our approval. AD12/18/2008: Received a phone call from B. Moore of CHCI. He was at the site to check for free product in well MW-1. He said that CHCI will propose to install additional well to delineate the free product. Asked him to submit brief work plan with the proposed well location. Also requested to send me an email stating the current field findings. AD02/09/2009: Received a phone call from B. Moore regarding UST closure report and oil/water separator system closure report, which was submitted by GZA in October 2006. UST closure report stated that one 5,000-gallon UST was abandoned in place. During UST closure four samples were taken through four holes drilled two feet below the bottom of UST. No targeted VOC or PAH compounds were detected at concentrations exceeding their respective RSCOs in any of the soil samples. Based on this information GZA recommended NFA for this UST. Mr. Moore was wondering if NFA letter could be issued by DEC for this particular tank. Later received an email from Mr. Moore saying:"Ms. Doronova - As we have discussed, the attached Work Plan addendum is based on the presence of NAPL in well MW-1. Historical GW flow has fluctuated, and that is the reason for the two well placement downgradient of the current/former UST areas.Thank you again for your consideration in these matters, and we look forwardto getting these new wells installed and then complete the SSI!Sincerely,Brian D. MooreCarriageHouse Consulting, Inc.Ph: 508.315.3146Cell: 508.479.3560"DL the work plan to eDocs. Will review. AD02/23/2009: Reviewed the work plan. CHCI proposes to install two additional wells in the southern and southwestern portions of the site to delineate the extent of LNAPL. Wells will be located downgradient from well MW-1 and current/former UST areas. Will send a letter. AD02/24/2009: Sent an approval letter with a comment regarding soil sampling interval. AD02/26/2009: Visited the site to observe installation of additional wells. Met at the site Nathan Stevens - hydrogeologist of CHCI. GeoSearch company was subcontracted to perform the installation. Wells MW-13 and MW-14 were installed downgradient of well MW-1.Headspace PID readings ranged from 1,7ppm at 15' bgs to 53.5ppm at 8-10' bgs for MW-14 and from 1.6ppm at 15' bgs to 188ppm at 6-8' bgs for MW-13. Soil from intervals with highest PID readings and just above the water table interval were collected for lab analysis. Took some pictures. DL them to Ryder Truck file. Results of current soil sampling and following groundwater sampling will be presented in ASI summary report. AD 03/12/2009: Spoke with B. Moore regarding UST closure report, which was submitted by GZA in October 2006. Asked him to submit a letter request. AD03/16/2009: Received the letter from CHCI which states that no evidence of petroleum release was encountered during the in-place closure of this UST and requests to issue a letter affirming this conclusion. Mr. Moore was wondering if NFA letter could be issued by DEC for this particular tank. Discussed with J. Kolleeny this request. No NFA can be issued, because no any spill cases were open for this tank. Will prepare a statement letter. AD03/26/2009: In response to CHCI request sent the statement letter, which says that the Department agrees, based on information provided, that open spill case 9712701 is not associated with this particular UST. AD06/12/2009: Called and spoke with B. Moore of CHCI regarding the summary report submission. He said that

SPILL NUMBER 0103168 (Continued) **S105055149**

the report will be submitted till the end of June 2009. AD06/24/2009: Received an e-mail from B. Moore of CHCI saying:"Ms. Doronova - As a follow up to our telephone call the other day, I wanted to send this email confirming the status of the Supplemental Site Investigation Report planned for the for the Ryder Facility at 10-20 44th Road in Long Island City.To-date, we have compiled the data from more than twenty individual reports from the last 17 years into this investigation (greater than individual 100 soil samples on-site) and we have supplemented that data set with a round of soil borings and well installation work in 9/2008, followed by additional drilling in 2/2009, and initiated passive NAPL recovery activities in one of the former UST areas. Please note that we have been continuing our monthly visits to keep track of the NAPL and sheens in site-related wells as part of the DEC approved IRM. In fact, we are out there his morning checking the wells again for NAPL. We have identified a single subsurface investigation report missing from the file from 2002, and have requested a copy of the same get pulled from the former consultant's archive. This report has the construction details on MW-5, and is believed to be the only missing report to our file. Once received, reviewed, and incorporated, the SSI will be complete. As we have not received this single final report yet, I would be more comfortable getting and incorporating the information from MW-5 construction into this SSI rather than rushing it to completion in the next six days. So taking into consideration our continued monitoring efforts at this site, we would like to receive your authorization to complete the SSI including the data from MW-5 installation to offer a full and complete investigation for the file, and serve as a basis for associated conclusions and further recommendations related to remediation.This site remains a big priority for Ryder, and we really want the SSI to serve the intended purpose outlined in our previous correspondence and meetings, as well as the DER-10 Guidance. Please give me a call if you have any questions or require additional information in considering our request.Respectfully,Brian D. MooreCarriageHouse Consulting, Inc.Ph: 508.315.3146Cell: 508.479.3560"Called and spoke with Brian. Postponed the report submission till July 15, 2009. Sent him the report from April 29, 2002, with the construction details on MW-5 installation, which was missing from their files. AD07/10/2009: Received a call from B. Moore. He said that CHCI plans to continue delineation of GW contamination and asked to postpone Investigation Report submission, so they can include work plan for additional investigation into this report. Approved the postponement of the submission till August 1, 2009. AD07/31/2009: Received Supplemental Site Investigation Report from CHCI. DL pdf copy to eDocs. Will review. AD09/25/2009: Received an e-mail from B. Moore of CHCI saying:"Ms. Doronova - Attached please find the electronic copy of the Work Plan Addendum for continued NAPL recovery efforts at the Ryder facility at 10-20 44th Road in LIC, NY. We have continued our monthly visits, and desire to do so through December, reporting results from the same in Jan, 2010. For the next 12 months, CHCI and Ryder also desire to conduct quarterly NAPL monitoring and groundwater sampling at this location, inclusive of sampling for select MNA parameters.Any changes in NAPL recovery strategy will be discussed and presented in the Jan, 2010 IRM Status Update report. We also propose a Jan 2011 IRM Status Update report.Thank you for your attention to these matters, and please get in touch with any questions or comments, hard copy in mail.Brian D. MooreCarriageHouse Consulting, Inc.Ph:

SPILL NUMBER 0103168 (Continued) **S105055149**

508.315.3146Cell: 508.479.3560"DL to eDocs. Will review. AD10/27/2009: Reviewed the work plan addendum. It proposes to decrease LNAPL recovery frequency from monthly to quarterly due to low free product recovery rates, starting in January 2010, and also to conduct quarterly groundwater monitoring for a period of one year to collect and analyze data for further remedial actions. AD10/30/2009: Discussed the work plan with J. Kolleeny of DEC. Issued an approval letter with the following comments: " - Quarterly groundwater monitoring at the site should start before the end of this year; - If the results of the first groundwater monitoring event indicate highly elevated levels of contamination in the site wells, then DEC may require that a more active remedial approach be developed."AD05/03/2010: Received a Groundwater Monitoring report for 1st quarter of 2010. DL pdf copy to eDocs. Will review. AD06/10/2010: Reviewed the report. It states that on February 25 through 26, 2010 CHCI conducted the quarterly monitoring well gauging, monitoring, NAPL recovery, and sampling at this site. The thickness of NAPL detected in well MW-1 was a "sheen" (less than 0.01 feet) during the February 25, 2010 gauging and sampling event, and NAPL was not detected in wells MW-13 and MW-14.On February 25 and 26, 2010 CHCI performed groundwater monitoring and sampling at the site. Groundwater monitoring activities also included the measurement of temperature, conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and acidity/alkalinity (pH) at each of the site's sixteen (16) wells. CHCI collected groundwater samples from the 16 site wells. Samples from six out sixteen wells were ND for TVOCs (wells: MW-3, MW-3S, MW-4S, MW-5, MW-8, MW-9. Four monitoring wells (MW-2, MW-4, MW-6 and MW-12) exhibited very low TVOCs concentration ranging fron 1.1ppb in well MW-4 to 5ppb in well MW-12. Moderate TVOCs were detected in two site wells: MW-1 - 428ppb, and well MW-13 - 412ppb.Most contaminated site wells are: well MW-10 - 7,249ppb, well MW-11 - 4,555ppb and well MW-14 - 7,964ppb.During the monitoring visit, NAPL has been recovered from the monitoring well network using deployment/recovery of absorbent booms to facilitate NAPL recovery. During previous reporting periods, NAPL recovery efforts had included deployment of a passive Keck-brand skimmer in well MW-1, but repeated comparisons to the effectiveness of adsorbent booms indicated greater recovery rates were achieved using the passive booms rather than the skimmer.During this reporting period, only passive booms were utilized to adsorb NAPL present in wells MW-1, MW-13, and MW-14. Boom replacement were conducted for wells MW-13 and MW-14 with one (1) 1.5" boom each, and for MW-1 with one (1) 3" boom. Approximately 4.613 gallons of NAPL in total have been recovered since program start, and approximately 0.45 gallons were recovered during this reporting period. CHCI will continue quarterly monitoring and recovery activities, with the next sampling and IRM visits scheduled for May and August, 2010. No response is needed. AD07/29/2010: Received a Groundwater Monitoring report for 2nd quarter of 2010. DL pdf copy to eDocs. Will review. AD10/16/2010: Received a Groundwater Monitoring report for third quarter of 2010. DL pdf copy to eDocs. Will review. AD12/17/2010: Reviewed the report. It states that on August 24 through 25, 2010 CHCI conducted the quarterly monitoring well gauging, monitoring, NAPL recovery, and sampling. NAPL was not detected in any of the on site wells. Groundwater monitoring activities also included the measurement of temperature, conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and acidity/alkalinity (pH) at each of the site's sixteen (16)

SPILL NUMBER 0103168 (Continued) **S105055149**

monitoring wells. CHCI collected groundwater samples from the sixteen (16) wells for analyses of VOCs. During the sampling event of August 24 and 25, 2010, samples from six out sixteen wells were ND for TVOCs (wells: MW-3, MW-3S, MW-4S, MW-5, MW-8, MW-9. Five monitoring wells (MW-2, MW-4, MW-6 and MW-12 and MW-14) exhibited very low TVOCs concentration ranging from 3.6ppb in well MW-6 to 18ppb in well MW-14. Moderate levels of TVOCs were detected in three site wells: MW-1 - 413ppb, MW-11 - 610ppb and well MW-13 - 359ppb. Most contaminated site wells are: well MW-10 - 9,595ppb, which is increase from 7,249ppb, and well MW-7 - 3,394ppb.During this reporting period, only passive booms were utilized to adsorb NAPL present in wells MW-1, MW-13, and MW-14. The three booms currently being used in the wells were all removed and replaced, as they were at their absorbent capacity. These booms include one (1) 1.5" boom each for MW-13 and MW-14, and one (1) 3" boom for MW-1. Since start of the NAPL recovery activities in 2008, approximately 5.933 gallons of NAPL have been recovered from the groundwater monitoring well network, approximately 0.88 gallons of which were recovered during this reporting period. Recovered NAPL and absorbents continue to be stored onsite, placed inside a 55-gallon capacity drum set within a secondary containment. No response is needed. AD03/25/2011: Received a phone call from B. Moore of CHCI. He asked if they can sample the wells. Told him that since the site is on quarterly GW monitoring no approval from DEC is needed. Later received an e-mail from B. Moore of CHCI saying:"Ainura - As we discussed this morning, we were expecting a letter back from DEC in time to authorize the sampling event for this month (March 2011) to align with previous years so we may compare in future submittals. Based on our discussion, we acknowledge that (at a minimum) Annual groundwater monitoring is currently required at this site, and potentially more frequent for those wells exhibiting higher concentrations (e.g., MW-7/10). We would appreciate also learning how DEC staff has been implementing CP-51 on soil objectives/cleanup levels, and we were considering an off-site downgradient well on the distant side of 44th Drive, and pilot testing remedial additive injections under the building to stabilize GW conditions around the former UST area. Thank you in advance for your attention to these matters, and we look forward to hearing back from you. Brian Moore"Sent him an e-mail saying:"Hi, Brian: As per our afternoon phone conversation, CHCI should proceed with quarterly groundwater sampling according to NYSDEC correspondence from October 30, 2009, and based on the new and historical data, a remedial action plan to address residual groundwater contamination at the site should be prepared and submitted to DEC in a timely manner. If you would like to exclude some of the wells from the groundwater sampling program, based on their ND results for VOCs, you should propose it in your next report or in an official letter. Sincerely, Ainura"AD06/20/2011: Received an e-mail from Brian Moore saying:"Ms. Doronova - Attached please find the GMG outlining results from the March sampling event at Site #9712701, which we are also sending you a hard copy of and a disk with the attached eCopy (in DEC naming convention). The work plan was developed with the intention of obtaining authorization to initiate feasibility evaluations at this site and preliminary RIR activities, including pilot testing/bench-scale tests in efforts to stabilize site groundwater conditions and allow for bioremediation to continue. I hope you have a pleasant long weekend, and look forward to your review of the attached. Thanks in advance for your time. Brian D. MooreCarriageHouse Consulting, Inc."DL the report to eDocs.

SPILL NUMBER 0103168 (Continued) **S105055149**

Will review. AD06/21/2011: Reviewed the Remedial Investigation Work Plan dated May 27, 2011 pertaining to the above-referenced site, submitted by Carriage House Consulting, Inc. (CHCI), which stated that high levels of VOCs remain in two wells in the former USTs area and that free product sheen was present in wells MW-01, MW-13 and MW-14. The work plan proposes a soil and groundwater investigation in the vicinity of former gasoline USTs. CHCI will install two additional monitoring wells and two injection wells at the site, with collection of soil and groundwater samples for laboratory analysis. A report summarizing all findings, with conclusions and recommendations for further remedial action, will be prepared and submitted to DEC.The site plan with locations of the proposed wells is missing. Called and spoke with B. Moore regarding submission of the site map. Also asked to indicated on the map - locations of the former USTs fields. He agreed to re-submit the work plan. AD06/28/2011: Received a Remedial Investigation Work Plan Addendum dated June 28, 2011, submitted by Carriage House Consulting, Inc. The work plan includes the required site map with depiction of the proposed wells locations. CHCI will install two additional monitoring wells and two injection wells at the site, with collection of soil samples for bench-scale analysis and groundwater samples for VOCs and field parameters analysis as a preparation for a pilot study. Location of injection well IW-01 is questionalbe. Called and spoke with B. Moore regarding relocation of the proposed injection well IW-01 up gradient of highly contaminated monitoring well MW-07. He agreed to this change. AD07/05/2011: Discussed with Brian Moore details of the anticipated pilot study work plan. Requested some info on the free product identification. Discused the addendum to the work plan with J. Kolleeny. Will issue an approval letter. AD07/06/2011: Approved the addendum to the investigation work plan with the following comments:" Two soil samples must be collected from each boring/well and analyzed for VOCs and SVOCs - one from the sampling interval with the highest PID reading and the second from the interval directly above the water table-. In the absence of any field indications of contamination, a single soil sample should be collected from just above the water table. Proposed injection well IW-01 should be relocated up-gradient of monitoring well MW-07."Based on the result of this investigation a work plan for anticipated pilot study will be submitted to DEC.Sent the letter to Carrie Vinch of Ryder Truck. DL pdf copy of the letter to eDocs. AD07/07/2011: Received a Remedial Investigation Work Plan Confirmation, submitted by Carriage House Consulting, Inc. (CHCI) on behalf of Ryder Transportation Services. Will review. AD09/09/2011: Reviewed the WP Confirmation from CHCI. CHCI states that, out of sixteen site wells in total, elevated levels of dissolved groundwater contamination remain in only six monitoring wells: MW-01, MW-07, MW-10, MW-11, MW-13 and MW-14. Based on the data, CHCI recommends continuing quarterly groundwater monitoring for these six wells while reducing the frequency of groundwater monitoring for ten other wells from a quarterly to an annual basis, due to insignificant VOC levels in those wells. Monitoring reports will continue to be prepared and submitted to DEC on a quarterly basis. Tpo send a letter. AD09/23/2011: Received an e-mail from B. Moore saying:"Ms. Doronova - We have tentatively scheduled the groundwater sampling event for the Ryder location at 10-20 44th Road in Long Island City, NY under DEC Case #9712701 for 9/29/11 and 9/30/11 (second day if required to complete Task). In the event this schedule changes during the next few days, we will give you a call or email you to advise. Have a nice

SPILL NUMBER 0103168 (Continued) **S105055149**

weekend! Brian Moore"AD10/06/2011: Discussed the CHCI recommendation with J. Kolleeny of DEC. Issued and sent an approval letter to C. Vinch of RyderTruck. DL pdf copy of the letter to eDocs. AD12/08/2011: Received an e-mail from CHC saying:"Ainura Doronova - Per your request I am forwarding to you the Groundwater Monitoring Report for the Ryder site in Long Island City. The hard copy with included CD was delivered via UPS today. Please do not hesitate to call if you need anything more.Regards, Estee SchmaltzCarriageHouse Consulting, Inc.8 Pleasant StreetSouth Natick, Massachusetts508.315.3146"DL the pdf copy of the report to eDocs. AD01/20/2012: Reviewed the report.02/23/2012: Received the following e-mail from CHCI:"Ainura Doronova - The Groundwater Monitoring Report for the Ryder Facility in Long Island City has been delivered to the NYSDEC. Please find attached an electronic version for your records and review. Also included in this report is a request from the Department to issue correspondence authorizing the installation of a monitoring well within the 44th Drive right of way as depicted on Figure 5 for distribution to the appropriate City and Borough entities. Please let me know if you need additional information, or if there are additional forms to fill out for this next step. Regards,Estee SchmaltzCarriageHouse Consulting, Inc.8 Pleasant StreetSouth Natick, Massachusetts508.315.3146eschmaltz@carriagehouseinfo.com"DL to eDocs. Will review. AD03/07/2012: Reviewed the report. It states that during the sampling event of December 29, 2011, GW samples were collected from five of the six wells. Moderatly elevated levels of VOCs were detected in samples collected from wells MW-1 (370ppb) and MW-13 (251ppb) on the western portion of the parcel; and significant levels of VOCs were detected in samples collected from wells MW-7 (3,812ppb), MW-10 (16,731ppb) on the eastern portion of the site. Well MW-11 had 316ppb. During the monitoring visits NAPL has been recovered from the existing and expanded site-related monitoring well network using absorbent booms. During previous reporting periods, NAPL recovery efforts had included deployment of a passive Keck-brand skimmer in well MW-1, but comparison indicated greater recovery rates were achieved using the passive booms rather than the skimmer.During this reporting period, only passive booms were utilized to absorb NAPL present in wells MW-1, MW-13, and MW-14. The boom located in well MW-1 was flipped on December 29, 2011 because it was not at its absorbent capacity. The booms located in wells MW-13 and MW-14 were removed and replaced. Since the expansion of the site-related groundwater monitoring well network, and the increase in site monitoring and NAPL recovery activities in 2008, approximately 8.133 gallons of NAPL have been recovered, approximately 0.53 gallons of which were recovered during this reporting period. Recovered NAPL and absorbents continue to be stored on site, placed inside a 55-gallon capacity drum set within a secondary containment.The analytical results from the December 29, 2011 sampling event demonstrate that many of the dissolved hydrocarbon concentrations in groundwater have remained relatively stable since the March and September 2011 sampling events. The only exception is well MW-10, whose results increased since the September 2011 sampling event. Physical and geochemical monitoring results from this event indicate that groundwater conditions at this property are generally anaerobic, reducing, and slightly basic.CHCI will proceed with implementation of the DEC approved work plan and request to issue a Sidewalk Permit letter for installation of off-site well across 44th Drive. To issue

SPILL NUMBER 0103168 (Continued) **S105055149**

a letter. AD03/13/2012: Issued and sent a Sidewalk Permit Request letter to B. Moore of CHCI. DL pdf copy of the letter to eDocs. AD06/05/2012: Received a hard copy of the Groundwater Monitoring Report for the first quarter of 2012. DL pdf copy to eDocs. Will review. AD06/27/2012: Reviewed the report. It states that during the sampling event on March 27 and 28, 2012 CHCI conducted monitoring well gauging, geochemical monitoring, NAPL recovery, and sample collection. Wells MW-4 and MW-4S were inaccessible during this monitoring event until March 28, 2012. During the March 2012 event, light NAPL was not detected in any of the wells monitored. During this reporting period, only passive booms were utilized to absorb NAPL present in wells MW-1, MW-13, and MW-14. Since the expansion of the monitoring well network, and the increase in site monitoring and NAPL recovery activities in 2008, approximately 8.573 gallons of NAPL have been recovered from the site monitoring well network, approximately 0.44 gallons of which were recovered during this reporting period.Groundwater samples were collected from thirteen of the nineteen wells. Samples collected from wells MW-1, MW-13 on the western portion of the parcel and samples collected from wells MW-7, MW-10 and MW-11 on the eastern portion of the parcel indicated concentrations above Standards. The TVOCs ranged from 1.4ppb in well MW-2 to 9,987ppb in well MW-10.Low levels of VOCs indicated in the following wells:1. MW-2 - 1.4ppb;2. MW-3 - 1.6ppb;3. MW-3S - 41ppb;4. MW-4 - 6.7ppb;5. MW-6 - 2.9ppb;6. MW-12 - 5.1ppb;7. MW-14 - 8.5ppb.Moderatly elevated levels of VOCs were detected in samples collected from wells:8. MW-1 - 404ppb;9. MW-11 - 361ppb;10. MW-13 - 228.3ppbSignificant levels of VOCs were detected in samples collected from wells:11. MW-7 - 3,374,1 ppb slight decrease from 3,812ppb in December 2011;12. MW-10 - 9,987ppb a decrease from 16,731ppb in December 2011.In addition to expanding the monitoring well network during the next quarter, CHCI will also be initiating the bench-scale pilot study with the goal of increasing aerobic degradation, which also requires new well installation activities pursuant to the approved Work Plans.Upon completion of the delineation work for soil and groundwater impact, CHCI will evaluate evidence of natural attenuation and/or biodegradation processes at this site. AD08/22/2012: received the following e-mail from B. Moore:"Ainura - We are mailing a hard copy to you today at your office, but we have attached our eCopy for your use and Department records. we hope to install the off-site well early next month, and will advise you of our schedule!Brian D. MooreCarriageHouse Consulting, Inc.Ph: 508.315.3146Cell: 508.479.3560http://www.carriagehouseinfo.com"DL PDF copy of the report to eDocs. Will review. AD09/21/2012: Reviewed the report. It states that on June 25, 2012, CHCI personnel conducted the quarterly site groundwater monitoring including monitoring wells gauging, geochemical monitoring, NAPL recovery, and GW sample collection.During the June 2012 event, light NAPL was not detected in any of the wells monitored. During this reporting period, only passive booms were utilized to absorb NAPL present in wells MW-1,MW-13, and MW-14.CHCI collected groundwater samples from 6 wells: MW-1, MW-7, MW-10, MW-11, MW-13, and MW-14.During the sampling event of June 25, 2012, samples from all six sampled wells yielded concentrations of one or more of the targeted analytes above the Class GA Groundwater Standards. The samples collected included wells MW-1, MW-13, and MW-14 on the western portion of the site and samples from wells MW-7, MW-10, and MW-11 on the eastern portion of the site.Moderatly elevated levels of VOCs were detected in samples

SPILL NUMBER 0103168 (Continued) **S105055149**

collected from wells:1. MW-1 - 280ppb from 404ppb in March 2012;2. MW-11 - 549ppb from 361ppb;3. MW-13 - 255ppb from 228.3ppbSignificant levels of VOCs were detected in samples collected from wells:4. MW-7 - 2,080ppb a decrease from 3,374,1 ppb in March 2012;5. MW-10 - 5,809ppb a decrease from 9,987ppb in March 2012.The report states that the analytical results from the June 2012 sampling event appear to demonstrate that the magnitude of dissolved hydrocarbon concentrations in groundwater has remained relatively stable and consistent with the 2011 sampling results. The exception is in samples collected from well MW-10, whose results have demonstrated a greater degree of variability throughout the year but are still relatively consistent with previous historical sampling results.Upon completion of the delineation work for soil and groundwater impact, the remedial investigation will evaluate whether geophysical conditions in the impacted formation yield evidence of natural attenuation and/or biodegradation processes at this site. CCI states that the data contained in this report demonstrate that groundwater quality at this site, while varying over time, remains above the applicable GA Standards, confirming the necessity of the remaining remedial investigative activities from the approved work plans. AD12/07/2012: Received Groundwater Monitoring Report for the 3rd Quarter of 2012. DL the report to eDocs. Will review. AD01/14/2013: Reviewed the report. It states that on September 27, 2012, CHCI conducted the quarterly site groundwater monitoring event including monitoring well gauging, geochemical monitoring, NAPL recovery, and sample collection. CHCI collected groundwater samples from monitoring wells MW-1, MW-7, MW-10, MW-11, MW-13, MW-14, and MW-15.During the sampling event of September 27, 2012, samples from all seven of the sampled wells yielded concentrations of one or more of the targeted analytes above the Class GA Groundwater Standards. The samples collected included wells MW-1, MW-13, MW-14, and MW-15 on the western portion of the parcel and samples from wells MW-7, MW-10, and MW-11 on the eastern portion of the parcel.Well MW-15 was ND. Well MW-14 had 3.5 ppb of TVOCs.Moderatly elevated levels of VOCs were detected in samples collected from wells:1. MW-1 - 232ppb from 280ppb in June 2012;2. MW-11 - 390ppb from 549ppb in June 2012;3. MW-13 - 222ppb from 255ppb in June 2012Significant levels of VOCs were detected in samples collected from wells:4. MW-7 - 1,705ppb a decrease from 2,080ppb in June 2012;5. MW-10 - 2,144ppb a decrease from 5,809ppb in June 2012.During this reporting period, only passive booms were utilized to absorb NAPL present in wells MW-1, MW-13, and MW-14. Therefore, gauging results reflect conditions at the property upon arrival and removal of the spent or partially spent booms. The booms include one 3-inch diameter boom for MW-1, and one 1.5-inch diameter boom each for MW-13 and MW-14. All three booms were replaced on September 27, 2012 as they were at their adsorptive capacity.Since the expansion of the site-related groundwater monitoring well network, and the increase in site monitoring and NAPL recovery activities in 2008, approximately 9.713 gallons of NAPL have been recovered from the site-related groundwater monitoring well network, approximately 0.44 gallons of which were recovered during this reporting period. Recovered NAPL and absorbents continue to be stored onsite, placed inside a 55-gallon capacity drum set within a secondary containment.CHCI states that the analytical results from the September 2012 sampling event demonstrate that the magnitude of dissolved hydrocarbon concentrations in groundwater has remained relatively stable and consistent with the 2011 sampling results. The

SPILL NUMBER 0103168 (Continued) **S105055149**

exception is in samples from MW-10, whose results have demonstrated a greater degree of variability throughout the year, with the most recent sampling results yielding the lowest amount of total VOCs to date, but are still relatively consistent with previous historical sampling results. Results from well MW-14 have yielded consistently low detections, and no analytes at all were detected from the new well, MW-15. Physical and geochemical monitoring results from this eventindicate that groundwater conditions at this property are generally anaerobic, reducing, and slightly acidic.The horizontal extent of the dissolved impact associated with these two AOCs is now defined by the newly-installed MW-15 in the downgradient direction, as this well did not yield any detections of VOCs. As part of the next quarter's field activities, CHCI will be initiating the bench-scale pilot study with the goal of increasing aerobic degradation, which also requires new well installation activities pursuant to the approved Work Plans.Upon completion of the delineation work for soil and groundwater impact, the Remedial Investigation will evaluate whether geophysical conditions in the impacted formation yield evidence of natural attenuation and/or biodegradation processes at this site. CHCI will continue with remedial investigative activities at the site. AD03/15/2013: Received a Groundwater Monitoring Report - Work Plan Addendum from CHCI. DL the report to eDocs. Will review. AD03/28/2013: Reviewed the report. It states that the site now has a network of seventeen (17) groundwater monitoring wells to monitor the extent of spill impact associated with this site. On December 19, 2012, CHCI conducted the quarterly site groundwater monitoring including wells gauging, geochemical monitoring, NAPL recovery, and GW samples collection. During the December 2012 event, LNAPL was not detected in any of the site wells monitored.CHCI collected groundwater samples from 7 monitoring wells: MW-1, MW-7, MW-10, MW-11, MW-13, MW-14, and MW-15.GW data - TVOCs (ppb):Non-detect or low levels of TVOCs:Well MW-15 was ND. Well MW-14 had 20 ppb of TVOCs.Moderatly elevated levels of VOCs were detected in samples collected from wells:1. MW-1 - 264ppb an increase from 232ppb in September 2012;2. MW-11 - 724ppb an increase from 390ppb in September 2012;3. MW-13 - 248ppb an increase from 222ppb in September 2012Significant levels of VOCs were detected in samples collected from wells:4. MW-7 - 1,654ppb a decrease from 1,705ppb in September 2012;5. MW-10 - 1,756ppb a decrease from 2,144ppb in September 2012.Based on the historic GW data, CHCI proposes application of Enhanced Fluid Recovery (EFR) technique on eight selected site wells instead previously proposed chemical oxidant injection. Quarterly groundwater sampling will continue at the site. Summary report with conclusions and recommendations for further actions will be submitted to DEC.03/29/2013: called and spoke with Esther Schmaltz of CHCI regarding details of the work plan addendum. She will sens an e-mail clarifying the proposed actions. Later received the following e-mail from Ms. Schmaltz:"Ainura Doronova - Per our phone conversation here is a brief outline of the activities we will be conducting at they Ryder site next Tuesday and Wednesday:(i) Install a total of four (4) monitoring and extraction wells within the area of the former gasoline USTs within the service bays of the building at the same exact locations previously-demarcated and authorized by the Department for drilling;(ii) Perform a single EFR event utilizing all accessible wells within the on-site building (MW-7, MW-10, MW-11, MW-12, new wells: MW-16, MW-17, MW-18, MW-19);(iii) Perform one (1)

SPILL NUMBER 0103168 (Continued) **S105055149**

limited periodic monitoring event of groundwater conditions within the target area approximately two (2) weeks and approximately six (6) weeks following completion of the EFR event - select wells;Please let me know if you need any additional information. Thank you for your assistance. Regards,Estee SchmaltzCarriageHouse Consulting, Inc."Discussed the work plan addendum with J. Kolleeny of DEC. Issued and sent an approval letter to Carrie Vinch with the following comment:" If EFR will not be effective in VOCs reductions in these wells, alternative remediation technologies should be proposed for the site."DL pdf copy of the letter to eDocs. AD06/03/2013: Received 1st quarter 2013 groundwater monitoring report from CHCI. DL to eDocs. Will review. AD07/15/2013: Reviewed the report. It states that on March 14 and 15, 2013, CHCI conducted the quarterly site groundwater monitoring event; including monitoring well gauging, geochemical monitoring, NAPL recovery, and sample collection.Free product:During the March 2013 event, light NAPL was detected only in monitoring well MW-1 as a petroleum sheen. Since the expansion of the site-related groundwater monitoring well network, and the increase in site monitoring and NAPL recovery activities in 2008, approximately 10.593 gallons of NAPL have been recovered from the groundwater monitoring well network, approximately 0.44 gallons of which were recovered during this reporting period. Recovered NAPL and absorbents continue to be stored on-site, placed inside a 55-gallon capacity drum set within a secondary containment.GW sampling:Groundwater monitoring activities included the measurement of temperature, conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and acidity/alkalinity (pH) at nine (9) of the site's monitoring wells.CHCI collected groundwater samples from the seventeen (17) monitoring wells (MW-1, MW-2, MW-3, MW-3S, MW-4, MW-4S, MW-5, MW-6, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, andMW-15).GW data - TVOCs (ppb):Non-detect or low levels of TVOCs:Wells; MW-2, MW-3, MW-4, MW-4S, MW-5, MW-6, MW-8, MW-9, MW-12, MW-14 and MW-15 were ND. Moderatly elevated levels of VOCs were detected in samples collected from wells:1. MW-1 - 336 ppb an increase from 264ppb in December 2012;2. MW-13 - 236ppb a slight decrease from 248ppb December 2012Significant levels of VOCs were detected in samples collected from wells:3. MW-7 - 1,956ppb an increase from 1,654ppb in December 2012;4. MW-10 - 1389ppb a decrease from 1,756ppb in December 2012.5. MW-11 - 706 ppb a slight decrease from 724ppb in December 2012.GW data indicates that groundwater at the site localized in two areas: eastern part of the property inside the garage 9wells MW-7, MW-10 and MW-11), and the vicinity of the diesel USTs in the south-western part of the site (well MW-1 with free product and MW-13).CHCI states that the horizontal extent of the dissolved impact associated with these two areas of concern is now defined by the newly-installed MW-15 in the southwest direction. As part of the next quarter's field activities, the wells previously-authorized for installation as part of the EFR activities will be installed, and an EFR event will be scheduled and implemented at this site to expedite GW cleanup. This remediation technique is being considered in replacement or in advance of the bench-scale pilot study for chemical enhancement of aerobic and/or anaerobic degradation mechanisms previously authorized by the Department, and the degree of 'rebound' documented following the EFR activities will help further determine the degree of source area impact remaining at this parcel. NRN. AD

Remarks: took soil samples at above location - soil was saturated - now

DEC Memo:	11/30/2005 Sangesland spoke to rep at Island tank. She said the site was dug out and endpoints were clean. She said a closure report would be sent ASAP.1/4/06-Hiralkumar Patel. Here is the summary of the report from Island Environmental Tank, Inc.* According to owner, the tank has previously been used for the purpose of storing #2 heating oil and owner doesn't know when this tank was installed.* UST was installed horizontally in the backfill material, with the top of the tank located approximately 4' below the surface.* A 1080 gal. capacity tank was removed in the presence of Mr. Vinny Lovari of Island Tank Enviromental. After removal from cavity, tank has been cut and washed and removed oil and water mixture with vac/truck.* No groundwater or static surface water was encountered in the tank cavity.* Tank had pits and holes.* Tank cavity was excavated approximately 30 cubic yard of soil in 55 gal. drums and disposed at Jamaica Recycling Inc. Jamaica, NY.* Tank cavity was backfilled and

COMMERCIAL BUILDING (Continued) **S107410496**

compacted in place.* 6 samples were taken out from cavity and tested at Severn Trent Laboratory, Edison, NJ.* The metal tank and all metal tank system components were removed from teh owner's property and disposed of as scrap metal at John Iron & Metal Co.,Inc. 33 Arthur Kill Road, Staten Island, NY.1/5/06-Hiralkumar Patel. No Further Action required letter has been sent to Mr. John Domenico.Case closed as per Mr. Jeff Vought.02/03/06-Hiralkumar Patel. Send out NFA again through fax (212-689-6082) as per John's request.

Remarks: tnak removal found oil on the tank. THERE IS 3 OR 4 DRUMS THAT NEES TO BE REMOVED. THE TANK HAS BEEN CUT UP.

Classification: N
Region: 2
Acres: .173
HW Code: 241127
Record Add: 10/15/2010
Record Upd: 10/31/2013
Updated By: MJKOMORO
Site Description: LOCATION: The site is located in an urban area. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings. See Site No. C241127SITE FEATURES: A 7500 square foot one-story concrete building occupies the entire lot. The back of the lot abuts adjacent buildings. The building has no basement.CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. HISTORICAL USES: The site was occupied by a commercial laundry and dry cleaner up until 2011, when the DEC investigation of the property began. Records indicate at least 10 years of use as a dry-cleaner. The building is currently vacant. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL in the vicinity of the site. Soils in the area are primarily sand.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building,and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade.

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

BROWNFIELDS:
Program: BCP
Site Code: 480014
Site Description: LOCATION: This is an off-site of the The Bridge Cleaners site located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: A 7500 square foot one-story concrete building occupies the entire lot. The back of the lot abuts adjacent buildings. The building has no basement.CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings.HISTORICAL USES: The site was occupied by a commercial laundry and dry cleaner up until 2011, when the DEC investigation of the property began. Records indicate at least 10 years of use as a dry-cleaner. The building is currently vacant. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL in the vicinity of the site. Soils in the area are primarily sand.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building,and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Significant Threat: "The site presents a significant environmental threat due to the ongoing releases of contaminants from source areas into groundwater."
Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Furthermore,

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

environmental sampling indicates that soil vapor intrusion represents a concern for on and off-site structures and additional evaluation is necessary to determine the extent of exposure to contamination in this media.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location:Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York.Site Features:The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Current Zoning/Use:The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility Historic Use:The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1,

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA) project. An extensive cleanup program was completed in 1996 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with recurring PCB contaminated sediment impacts.Operable Units:The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building.Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures.Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site.Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology:Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem: Nature and Extent of Contamination:Prior to Remediation:Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site:The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater from soils impacted by the COC's. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site.Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3:Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs.Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively.Operable Unit 4:Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm.Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs (18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm.Operable Unit 5:Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011.Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit.Operable Unit 6:Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs.Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified.Post Remediation:Remediation has been

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

	completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010.
Health Problem:	Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

Updated By:	JBVOUGHT

Site Description: The Site is located in the Long Island City section of Queens in a zoned manufacturing area with residential zoning approximately 300 feet to the south. The Site had been a residential building with garages beginning in 1898, was vacant from 1947-1950, was used for sheet metal work from 1967-1983 and was converted from sheet metal work to dry cleaning in 1997. The Site is currently an active dry cleaning facility. The one-story building foundation is slab-on-grade

D D K PRO CLEANERS (Continued) **S109826034**

and contains dry cleaning machines, garment storage area, storage, boiler room, office, customer service area, bathroom and partial basement. The building covers the entire footprint of the site. The building has three 4th-generation dry cleaning machines on a secondary containment concrete slab, five washers and a dryer, several empty 15-gal waste containers, spill containment material container, a spotting stand, ten press machines, three sets of shirt machines, four air compressors, two refrigerated dryers and a sump. The Site and building are approximately 5000 square feet in size (0.11 acres). A residential building is located immediately to the northwest (0.01 miles), a stonework building is to the northeast, a fine arts furniture building to the southwest and 13th Street to the southeast.

Env Problem:	Based upon investigations conducted to date, the primary contaminants of concern at the site include tetrachloroethene (PCE) and dichloroethene (DCE). One round of groundwater sample collection was performed in June 2009 via two Geoprobe borings located in the sidewalk in front of the site building. Groundwater samples were analyzed via EPA Methods 8260/8270. No soil samples were collected for analysis during the investigation. The following maximum concentrations with contaminants were observed in groundwater: 26ppb PCE and 63ppb DCE. These results demonstrate that groundwater standards have been exceeded for PCE and DCE. The nearest surface water body is the East River, which is located approximately 2000 feet (0.3 miles) to the west. Groundwater is approximately 7 to 8 feet below grade and most likely flows west under the Site to the East River, however direction of flow has not been specifically determined to date. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By:	JAMORAS
Site Description:	Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th

JUNG SUN LAUNDRY SITE (Continued) **S110246984**

Street and 37th Avenue. Site Features: The site consists of four property lots. The main site features included single story buildings on three lots and an open area on the fourth lot. There were three inter-connected single story buildings, which occupied three adjacent lots. Recently (late summer 2013)the new owner demolished the structures on two lots down to the slab. The previous owner still owns one lot and the abandoned structure on that lot is still there. Approximately one third of the Site is made up of the fourth lot, which has and continues to be an open area which extends to the west up to 23rd Street. The open area also houses a tractor trailer sized metal storage container. The site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site property is currently inactive and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The nearest residential area is located north (upgradient) of the site, on the other side of 37th Avenue. There is a residential area approximately 400 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930s to the late 1980s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980s to the mid 1990s. Prior uses that appear to have led to site contamination include poor housekeeping and spills associated with the dry cleaning operation. An adjacent property owner conducted a Phase I Environmental Site Assessment in September 2003, a Phase 2 Limited Subsurface Investigation in October 2003 and a Phase 2 Limited Groundwater Investigation in December 2003. The Department conducted a Site Characterization from August 2007 through March 2010. In October 2010, the Site was placed on the Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 site.Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the southwest.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During 2012 remedial investigation PCE, TCE and 1,2-DCE have been found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The unrestricted use RSCOs for PCE has been exceeded. Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC have been detected in on-site shallow groundwater at concentrations up to 11000 parts per billion (ppb), 1200 ppb, 21000 ppb, 130 ppb and 390 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. Per April and June 2012 groundwater data, the groundwater plume has migrated approximately 400 feet off-site. Soil Vapor & Indoor Air: PCE and TCE were detected in on-site soil vapor at levels up to 280,000 microgram per cubic meter (g/m3) and 130,000 g/m3, respectively, and off-site at levels up to 13,000 g/m3 and 420 g/m3, respectively. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted. Significant Threat: The site poses a significant environmental threat because the area overlies a sole-source aquifer

JUNG SUN LAUNDRY SITE (Continued) **S110246984**

	and because there is an ongoing release of PCE and TCE from soil into groundwater.
Health Problem:	Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended.

Updated By: JAQUINN
Site Description: LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge. SITE FEATURES: The property extends 335 feet from the north to the south and 117 feet from the west to the east. The entire property is occupied by a 30,000 square feet, one story, slab-on-grand masonry building. A small courtyard is located in the central portion of the building on the western side. The site and surrounding areas are generally level.CURRRENT ZONING/USE(S): The site is currently zoned commercial. The site is currently used as a marble fabrication shop, an automotive repair shop, and a production studio. Another tenant occupies the other one-third of the building for storage of sheet metal and supplies for an off-site manufacturing business. No metal fabrication, cutting, or manufacturing associated with this business takes place on this site. PAST USE OF SITE: National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. OPERABLE UNIT(S): The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigating for soil and groundwater contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below

NATIONAL RUBBER & BACKING CORP (Continued) **1000259753**

	ground surface and flows in a westerly direction toward the East River. The depth to bedrock varies across the investigation area from 10 to 15 feet below surface.
Env Problem:	NATURE AND EXTENT OF CONTAMINATION:Based upon investigations to date, the primary contaminants of concern at the site include toluene. Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) in groundwater in MW-2, which is above the respective groundwater standard of 5 ppb. Other wells have shown levels of toluene in the 10,000s ppb. Benzene, ethylbenzene, and xylenes have all been shown to be elevated. These previous investigations have identified exceedances of standards, criteria and guidance for those contaminants in soil as well. Elevated levels of benzene and toluene were also noted in the soil vapor as well. The groundwater plume appears to be migrating off-site, however the extent of the plume is unknown. In 2011, the concentration of toluene was found as high as 130,000 ppb in an off-site location. Off-site impacts have been delineated and the extent of the toluene plume does not appear to impact the East River. SPECIAL RESOURCES IMPACTED/THREATENED : None known.SIGNIFICANT THREAT: A significant threat is posed from potential exposure to site related contaminants from soil vapor intrusion both on and off-site structures. Exposures to contaminated groundwater are not expected because public water serves the area residents.
Health Problem:	Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by pubic water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

Site Description: The property is located within an urban industrialized section of Long Island City. The site extends 335 feet from the north to the south and 117 feet from the west to the east. The entire site is occupied by a 30,000 square feet, one story building. There is a small courtyard in the central portion of the building, on its western side. The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site.See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028.
Env Problem: See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028

Updated By:	GWCROSS
Site Description:	Location: The Ravenswood former MGP site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough of Queens. The property is noted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens CountyThe site is located within the boundary of a complex of active electric and steam generating facilities in a predominantly industrial and commercial area. The site is bordered on the east by light industrial and commercial buildings and on the west by the East River. The site formerly housed a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The precise location of the MGP structures has not been fully established because of the extensive reworking of the property associated with construction of the power plants which now occupy and surround the original MGP site.Remedial History: A portion of the site was remediated under the Voluntary Cleanup Program. See site V000368. The principal VCP issue was the presence of a No. 6 oil spill from an in-plant pipeline. Petroleum-impacted soil was excavated in 2005. No MGP tar-contaminated soil was identified at that time, but MGP related structures or soil contamination may remain in other portions of the site or at depth.
Env Problem:	Extensive soil removal has taken place on the site, both for the construction of the power plants that occupy the site, and for remediation of a No. 6 oil spill. Although it appears that significant portions of the former MGP have been excavated down to bedrock, it is not known to what extent MGP structures and MGP soil contamination may remain in the deep subsurface.A bedrock steam tunnel lies beneath the East River at this location, allowing waste steam from the turbine plants to be provided to the steam-heat distribution system in Manhattan. Tar from the former MGP can be seen dripping from the roof of this tunnel, roughly 150 feet below ground surface. The source of the tar has not been determined. The tunnel can not be accessed by the public, and is only occasionally used by utility workers. Engineering controls are in place to prevent direct contact with the tar by utility workers.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

VCP:

Program Type:	VCP
Site Code:	56967
HW Code:	V00368
Site Class:	C
SWIS:	4101
Region:	2
Town:	New York City
Acres:	Not reported
Date Record Added:	11/30/2000
Date Record Updated:	04/05/2007
Updated By:	dcwalsh
Site Description:	The proposed Ravenswood 250-Megawatt (MW) Combined Cycle Generating Station site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough and County of Queens, New York and denoted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of an active electric and steam generating facility in a predominantly industrial and commercial area. The area addressed by this Voluntary Cleanup Agreement is the footprint of a proposed 250-MW combined cycle electric generating plant. The site is bordered on the east by light industrial and commercial buildings; on the south by the existing Ravenswood Generating Station; on the north by the existing Ravenswood Gas Turbine facility; and on the west by the existing Ravenswood Steam Plant and the East River. The site was formerly a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The site is currently occupied by a paved parking lot for Ravenswood employees. Site investigation has been completed at the site.
Env Problem:	The Site investigation conducted at the site revealed the presence of petroleum contamination related to a release from an on-site no. 6 oil pipeline. In addition, the site is underlain by former MGP facilities, including gas holders, piping and drip pots. Investigation has not revealed any areas of discrete coal tar deposits, however, the volunteer has proposed to open all encountered pipes and drip pots, drain them and permanently closed them in place or remove them if they interfere with future construction activities.

RAVENSWOOD POWER STATION (Continued) **S102239646**

The area of petroleum contamination will be excavated and removed. The volunteer submitted and the Department approved a Remedial Action Work Plan for the site which consisted of the above remedies. This RAWP has been implemented, and the volunteer has submitted the Remedial Action Summary Report, which is under review by NYSDEC and NYSDOH.

Health Problem: Human exposures to contaminated soil and groundwater are unlikely. Most of the contaminated soil has been removed, the site is fenced and secured, and the site will be covered with buildings and pavement. Exposure to groundwater is unlikely since the area is served by a public water supply.

SHWS:
Program: HW
Site Code: 58682
Classification: SIGNIFICANT THREAT TO THE PUBLIC HEALTH OR ENVIRONMENT - ACTION REQUIRED.
Region: 2
Acres: 1.100
HW Code: 241016
Record Add: 11/18/1999
Record Upd: 05/28/2013
Updated By: JHOCONNE
Site Description: Location:The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtraks Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features:The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to

STANDARD MOTOR PRODUCTS INC (Continued) **1000310304**

Standard Motor Products. Current Zoning/Use(s):The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the buildings roof. Historical Use(s): The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990.Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility.The Record of Decision was issued on March 23, 2009, and the Remedial Design/Remedial Action Order on Consent was signed in April 2010.Site Geology and Hydrogeology:The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level).The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem: Nature and Extent of Contamination: A site investigation in 1990 was initiated after an oily sheen was observed in a puddled area on the southeast side of the property. Soil samples from this area revealed elevated levels of petroleum hydrocarbons and volatile organic compounds (VOCs), primarily 1,1,1-trichloroethane. Approximately 2,700 sq. ft. of soil was excavated to a depth of 18 inches and stockpiled on-site. Further investigation determined that soils in

STANDARD MOTOR PRODUCTS INC (Continued) **1000310304**

the area of the rear loading platform contained elevated levels of petroleum hydrocarbons and VOCs (trichloroethane TCA, triclhoroethene - TCE and other related chlorinated VOCs). Contaminated soils extended beyond the area excavated. Subsequent groundwater samples taken indicated contamination with TCA and lead. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Soil - Arsenic was detected at 19 ppm, which is above the applicable soil cleanup objectives (SCOs). Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 ppb. Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane 1,1,1-TCA) has been found at concentrations of up to 180 ppb.Soil Vapor- The highest concentrations of chlorinated VOCs were detected at SB-05. Sub-slab samples contained PCE at concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3 and up to 450 ug/m3 respectively.Significant Threat: The site presents a significant environmental threat. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation.

Health Problem: The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

Updated By: MJKOMORO
Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent

S & G WOODWORKING INC (Continued) **1008892201**

to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

Site Description:	The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Site Description: See also Site no. V00600Location:The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features:The entire site is occupied by a one story building which covers approximately 21,900 sq.ft. Historical Use:Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis.

Env Problem: Nature and Extent of Contamination:Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g.,

LEVCO METALS PROPERTY (Continued) **U003391190**

2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994.Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem:	Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore, inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion.

LEVCO METALS PROPERTY (Continued) **U003391190**

Date Record Added: 07/23/2002
Date Record Updated: 06/11/2013
Updated By: JHOCONNE
Site Description: See also Site no. 241009Location:The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features:The entire site is occupied by a one story building which covers approximately 21,900 sq.ft. Historical Use:Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, under the State Superfund Program the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis. The additional groundwater monitoring is being addressed under the Voluntary Cleanup Program. Hydrogeology:Groundwater flows to the east.
Env Problem: Nature and Extent of Contamination:Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. These actions were completed under the State Superfund (SSF) Program. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 under the SSF Program which concluded that there were no off-site vapor issues.Soil - Prior to IRM: elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994 under the SSF Program.Groundwater - On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The SSF Record of Decision (ROD) recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas - An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.
Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface and will be removed as part of a site-wide redevelopment. A sub-slab depressurization system will be incorporated into the new building to prevent soil vapor intrusion from site related contaminants of concern.

Site Description: Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor.Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west.Current Zoning/Use(s):The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses.Historic Use(s):The Site was a commercial building occupied by various manufacturing and warehousing entities including a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology:The Site is generally level and the surrounding area slopes downward from north to south.The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest.The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Env Problem: Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations.Soil ? There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples.Groundwater ? On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24

KAUFMAN ASTORIA STUDIOS (Continued) **U001831683**

ppb)were detected in groundwater samples at levels exceeding groundwater standards.Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb -50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site.Sub-slab soil vapor ? Sixteen petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzene (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air ? Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air ? PCE was detected in the outdoor air sample at a concentration well below the concentrations found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat:The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDEC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination.CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System is scheduled to be installed during the summer break.

DEC Memo:	12/31/10-HRAHMED-Spoke to Rene Lewis (917 420 8330) of Alliance Mechanical. As per him, 5-7 gal of #6 oil spill from the vent line due to overfill. Noticed oil stain on the wall and side walk. PTC powewashed the wall and the sidewalk. There was no spill in the tankroom. Uploaded closure report and some picture in eDocs.This case is closed.
Remarks:	Caller advised overfill of tank. Clean up is in process.

Updated By: MJKOMORO
Site Description: Location:The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site.Site Features:The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site.Current Zoning/Uses:The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment.- 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories- 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses:In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003.Site Geology and Hydrogeology:Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeastMiscellaneous:There are no PBS, CBS records for the multiple addresses of the Site.
Env Problem: The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab.The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds.Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.
Health Problem: Not reported

Updated By:	SRHEIGEL

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the Site.The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses.After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery.The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

Env Problem:	Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present.Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

Mobil Greenpoint spillTransferred from Miller to Rommel.10/12/04Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking).I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC:1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that "we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly." AZ4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a "clean fill" recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ10-27-2008 I have

460 KINGSLAND AVENUE LLC (Continued) **U003074537**

received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/11/2013

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

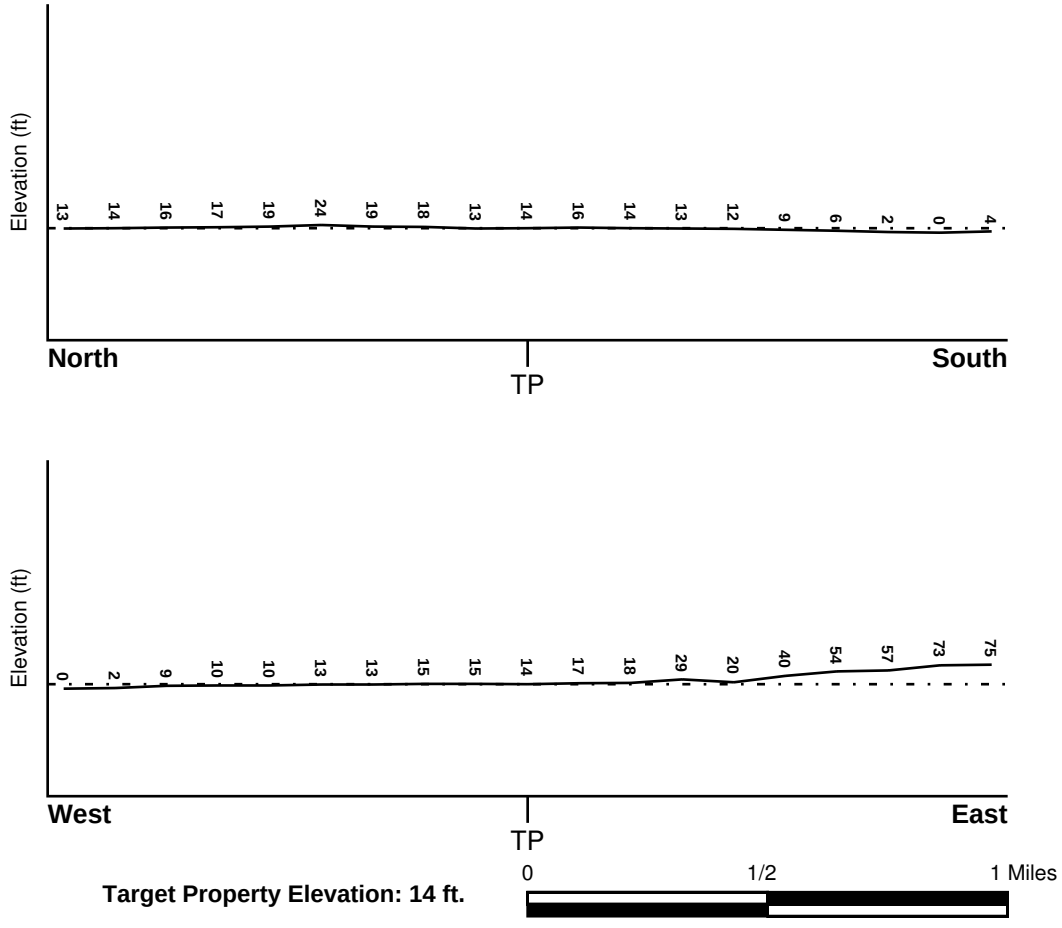
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 14 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
QUEENS, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data

- 3604970047B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

QUITCLAIM DEED

THIS INDENTURE, made as of the 14th day of September, 2011

BETWEEN

ELECTRIC REALTY COMPANY, L.L.C., a Delaware limited liability company having an address at c/o Kraupner Group, 457 Knickerbocker Avenue, Brooklyn, New York 11237 (the "Grantor"),

AND

44 LIC LLC, a New York limited liability company having an address at c/o Vorea Holdings, LLC 184 N. 8th Street, New York, New York 11237 (the "Grantee").

WITNESSETH, that Grantor, in consideration of Ten Dollars ($10.00) and other valuable consideration paid by Grantee, does hereby remise, release and quitclaim unto Grantee, the heirs or successors and assigns of Grantee forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the in the City of New York, County of Queens and State of New York, and known as part of 27-21 44th Drive, Long Island City, New York (the "Property"), as more particularly described on Schedule A annexed hereto and made a part hereof,

TOGETHER WITH all right, title and interest, if any, of Grantor in and to any streets and roads abutting the above described Property to the center lines thereof;

TOGETHER WITH the appurtenances and all the estate and rights of Grantor in and to said Property; and

TO HAVE AND TO HOLD the Property herein granted unto Grantee, the heirs or successors and assigns of Grantee, forever.

AND Grantor, in compliance with Section 13 of the Lien Law, covenants that Grantor will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvements at the Property and will apply the same first to the payment of the cost of the improvements before using any part of the total of the same for any other purpose.

IN WITNESS WHEREOF, Grantor has duly executed this deed the day and year first above written.

ELECTRIC REALTY COMPANY, L.L.C.,
a New York limited liability company

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT—THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the 18TH day of July in the year 2013

BETWEEN 4418 PURVES LLC, 410 OGDEN AVENUE, TEANECK, NEW JERSEY, 07666

party of the first part, and 44 LIC LLC, 31-87 STEINWAY STREET, SUITE 5, ASTORIA, NEW YORK 11103
party of the second part,
WITNESSETH, that the party of the first part, in consideration of TEN ($10.00) dollars
paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

All that certain Lot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the County of Queens, Block 268, Lots 22 and 23 and known as 44-18 Purves Street, Long Island City, New York, the property being transferred being the same premises described in the deed to the party of the first part herein by deed dated 2/3/2010 recorded 2/17/2010 in CRFN 201000005432, See Schedule A annexed hereto for a metes and bounds description.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.
AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose. The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 268** **LOT: 22**

(2) **Property Address: 44-18 PURVES STREET, QUEENS, NY 11101**

(3) **Owner's Name:** **44 LIC LLC**

Additional Name:

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

APPENDIX M- RESUMES

Jessica P. Alzamora, PE, LEED AP

Senior Staff Engineer/ Project Scientist
Environmental Engineering & Construction Monitoring

8 years in the industry ~ 7 years with Langan

Ms. Alzamora has over eight years of experience in environmental, site/civil, and geotechnical engineering. Her experience involves site investigation and remediation, environmental site assessments, utility assessments and design, water system analysis, and stormwater management design in New York, New Jersey, Nevada, and Connecticut. Her construction/field experience includes remedial excavation oversight, excavation and disposal of contaminated soils, installation and sampling of groundwater monitoring wells, soil sampling, health and safety air-monitoring, construction oversite/inspection, earthwork inspection, caisson installation, pavement inspection, and general surveying practices. Ms. Alzamora has experience in the evaluation of laboratory analytical data, design of sub-slab depressurization and soil vapor extraction systems, and preparation of construction documents and environmental reports (investigation, spill closure, final engineering reports, remedial action plans, health and safety plans). Ms. Alzamora is proficient in the latest Microsoft applications, AutoCAD, Land Development Desktop, and gINT.

Joel B. Landes, PE

Senior Associate/ Program Director
Environmental Engineering & Project Management

37 years in the industry ~ 13 years with Langan

Mr. Landes has over thirty-seven years of diversified experience directing environmental engineering and consulting projects for Fortune 500 manufacturing firms, real estate developers and public utilities. His experience includes management of environmental compliance for a major pharmaceutical company and as an environmental affairs consultant for private clients. He has expertise redeveloping former industrial, chemical, petroleum storage and manufactured gas plant sites into residential and commercial use through the New York State Brownfield Cleanup Program. He has lead environmental studies for acquisitions and divestitures of pharmaceutical and industrial facilities; industrial site selection and permitting.

He currently oversees all Langan environmental services in the New York City Metropolitan area including Phase I and II Environmental Site Assessments, remedial investigations, feasibility studies; remedial measure design and implementation.

Re: Geophysical Survey Report
Commercial Property-
27-21 44th Drive
Long Island City, New York 11101

Dear Mr. Good:

Nova Geophysical Services (NOVA) is pleased to provide findings of our geophysical survey at the above referenced project site located at 27-21 44th Drive, Long Island City, New York (the "Sites"). Please see attached Geophysical Survey map for more details.

INTRODUCTION TO GEOPHYSICAL SURVEY

NOVA performed a Geophysical survey consisting of Ground Penetrating Radar (GPR), Electromagnetic (EM) surveys and comprehensive subsurface utility (CSUL) surveys at the project Site. The purpose of this survey is to clear and marked proposed environmental boring areas and to identify any underground storage tanks (USTs), anomalies, and subsurface structures located at the project site on December 2nd, 2013.

The equipment selected for this investigation will be included a CSUL Pipe and Cable Locator (a magnetic detector), Ditch-Witch utility locator, Electromagnetic detector (Geonics EM61), Software and Sensor's 250 MHz ground-penetrating radar (GPR).

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

GEOPHYSICAL METHODS

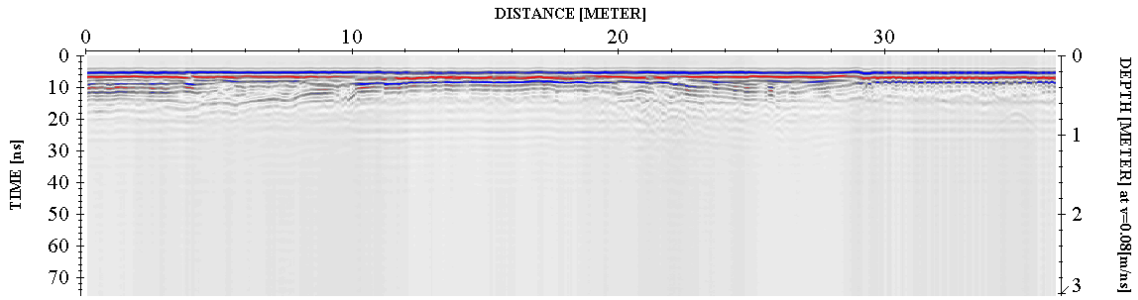
The project site was screened using the GPR by carrying the instrument over the project area at the site in 4' x 4' traverses. When evidence of anomalies were observed, they were clearly marked for further evaluation. A Ditch-witch(tm) utility locator would then be used to determine if the anomalies were utilities or other large sub-surface metal objects. Finally, GPR profiles were collected over each metal-detector anomaly and inspected for reflections, which could be indicative of major anomalies.

GPR data profiles were collected for the areas of the Site specified by the client. The surveyed area consisted of paved areas with concrete (interior of the site building) and none paved areas.

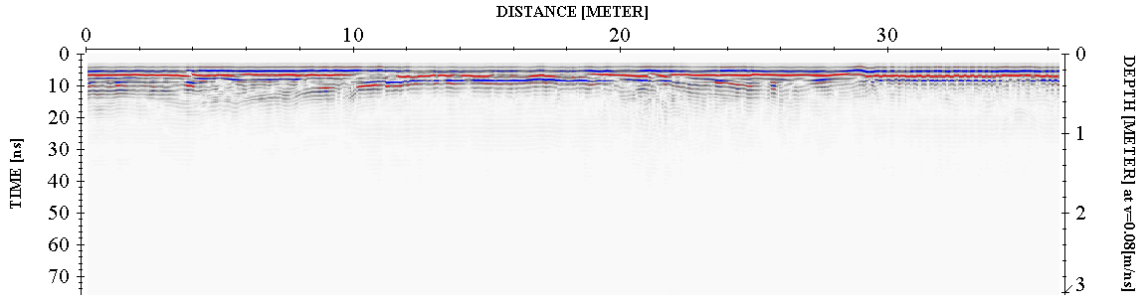
DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies NOVA processed the collected data. The processes flow is briefly described at this section.

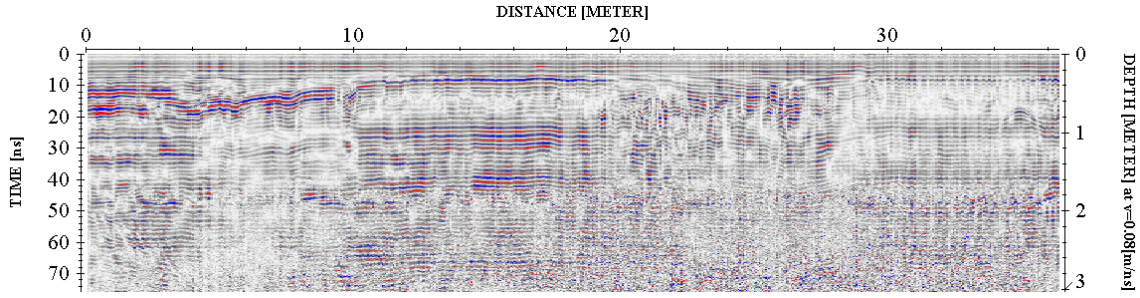
Step 1. Import raw RAMAC data to standard processing format



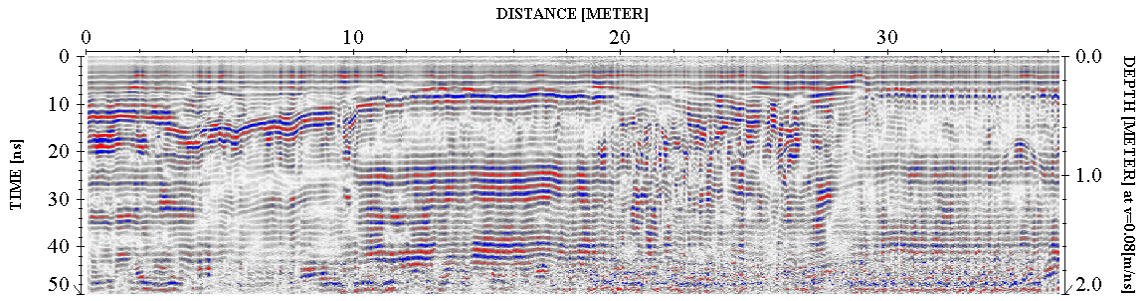
Step 2. Remove instrument noise *(dewow)*



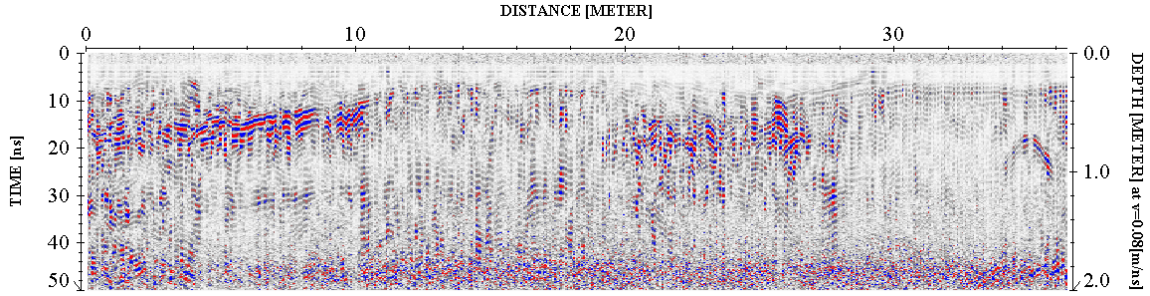
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and describes the subsurface anomalies more accurately.

PHYSICAL SETTINGS

Nova observed following physical conditions at the time of the survey:

The weather: Mostly sunny
Temp: 42 degrees
Surface: Paved and none paved.
Geophysical Noise Level (GNL): Geophysical Noise Level (GNL) low to high (accumulated water within the site building) at the time of the survey.

RESULTS

The results of the geophysical survey identified following at the project Site:

- Geophysical survey identified minor anomalies located throughout of the project areas.
- Geophysical survey identified utilities located throughout of the project area. All of these anomalies (utilities) were clearly marked during the survey.
- Nova cleared and marked all of the proposed boring locations at the time of the survey.
- Geophysical Survey Plan portrays the areas investigated during the geophysical survey.

If you have any questions please do not hesitate to contact the undersigned.
Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Engineer

LANGAN

Log of Boring **SB08** Sheet 1 of 1

Project: 27-21 44th Drive & 44-18 Purves Street	Project No.: 170281401
Location: Long Island City, New York	Elevation and Datum: Approx. 6.8
Drilling Company: Laurel Environmental	Date Started: 12/3/13 — Date Finished: 12/3/13
Drilling Equipment: Geoprobe 6610 DT	Completion Depth: 15 ft — Rock Depth: Not Encountered
Size and Type of Bit: 2" Direct Push	Number of Samples: Disturbed — Undisturbed — Core
Casing Diameter (in) — Casing Depth (ft)	Water Level (ft.): First — Completion — 24 HR.
Casing Hammer: NA — Weight (lbs): NA — Drop (in)	Drilling Foreman: Steve Bitetto
Sampler: 5' Macrocore	Inspecting Engineer: J.P. Diggins
Sampler Hammer: NA — Weight (lbs): NA — Drop (in): NA	

Material Symbol	Elev. (ft)	Sample Description	Depth Scale	Sample Data: Number	Type	Recov. (in)	Penetr. resist BL/6in	PID Reading (ppm)	Remarks (Drilling Fluid, Depth of Casing, Fluid Loss, Drilling Resistance, etc.)
	+6.8		0						
	+6.4	0-0.4' Concrete Slab							
		0.4-2' Dark brown to gray brown f-c SAND, trace gravel, trace brick fragments, loose, moist, well graded, organic decay odor (FILL)	1	1	5' Acetate Sleeve	24/60		0.0	SB08_1-2 (09:00)
			2					0.0	
			3						
			4						
		5-5.5' As above (0.4-2'), wet	5					0.0	
			6	2	5' Acetate Sleeve	6/60			
			7						
			8						
			9						
	-3.7	10-10.5' Black brown GRAVEL, some m-c sand, loose, wet, well graded, sheen, organic decay odor (FILL)	10						SB08_10-11 (09:05)
		10.5-13' Black brown CLAY, some silt, trace s. SAND, trace organics, plastic, moist	11					5.3	
			12	3	5' Acetate Sleeve	36/60		2.2	
	-6.2		13					1.2	
			14						
			15						End of Boring at 15 ft bgs
			16						
			17						
			18						
			19						
			20

APPENDIX E LABORATORY CERTIFICATION

COPY

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER

Expires 12:01 AM April 01, 2014
Issued April 01, 2013

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. CHRISTOPHER WAKEFIELD
ALPHA ANALYTICAL
8 WALKUP DR
WESTBOROUGH, MA 01581-1019

NY Lab Id No: 11148

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards (2003) for the category
ENVIRONMENTAL ANALYSES POTABLE WATER
All approved analytes are listed below:

Drinking Water Bacteriology	
Coliform, Total / E. coli (Qualitative)	SM 18-21 9222B(97)/40CFR141.21(F)6i
	SM 18-21 9223B (97) (Colilert)
Standard Plate Count	SM 18-21 9215B
Drinking Water Metals I	
Arsenic, Total	EPA 200.8 Rev. 5.4
Barium, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Cadmium, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Chromium, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Copper, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Iron, Total	EPA 200.7 Rev. 4.4
Lead, Total	EPA 200.8 Rev. 5.4
Manganese, Total	EPA 200.7 Rev. 4.4
Mercury, Total	EPA 245.1 Rev. 3.0
Selenium, Total	EPA 200.8 Rev. 5.4
Silver, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Zinc, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Drinking Water Metals II	
Aluminum, Total	EPA 200.7 Rev. 4.4
Antimony, Total	EPA 200.8 Rev. 5.4
Beryllium, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Nickel, Total	EPA 200.7 Rev. 4.4
	EPA 200.8 Rev. 5.4
Thallium, Total	EPA 200.8 Rev. 5.4
Drinking Water Metals III	
Calcium, Total	EPA 200.7 Rev. 4.4
Magnesium, Total	EPA 200.7 Rev. 4.4
Sodium, Total	EPA 200.7 Rev. 4.4
Drinking Water Miscellaneous	
Organic Carbon, Total	SM 18-21 5310C (00)
Perchlorate	EPA 332.0 Rev. 1
Drinking Water Non-Metals	
Alkalinity	SM 18-21 2320B (97)
Calcium Hardness	EPA 200.7 Rev. 4.4
Chloride	EPA 300.0 Rev. 2.1
Color	SM 18-21 2120B (01)
Cyanide	SM 18-21 4500-CN E (99)
Fluoride, Total	EPA 300.0 Rev. 2.1
	SM 18-21 4500-F C (97)
Nitrate (as N)	SM 18-21 4500-NO3 F (00)
Nitrite (as N)	SM 18-21 4500-NO3 F (00)
Solids, Total Dissolved	SM 18-21 2540C (97)
Specific Conductance	SM 18-21 2510B (97)

Serial No.: 48541

Property of the New York State Department of Health. Certificates are valid only at the address shown, must be conspicuously posted, and are printed on secure paper. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify the laboratory's accreditation status.

NY Lab Id No: 11148

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards (2003) for the category
ENVIRONMENTAL ANALYSES POTABLE WATER
All approved analytes are listed below:

Drinking Water Non-Metals	
Sulfate (as SO4)	EPA 300.0 Rev. 2.1
Drinking Water Trihalomethanes	
Bromodichloromethane	EPA 524.2
Bromoform	EPA 524.2
Chloroform	EPA 524.2
Dibromochloromethane	EPA 524.2
Total Trihalomethanes	EPA 524.2
Fuel Additives	
Methyl tert-butyl ether	EPA 524.2
Naphthalene	EPA 524.2
Microextractibles	
1,2-Dibromo-3-chloropropane	EPA 504.1
1,2-Dibromoethane	EPA 504.1
Volatile Aromatics	
1,2,3-Trichlorobenzene	EPA 524.2
1,2,4-Trichlorobenzene	EPA 524.2
1,2,4-Trimethylbenzene	EPA 524.2
1,2-Dichlorobenzene	EPA 524.2
1,3,5-Trimethylbenzene	EPA 524.2
1,3-Dichlorobenzene	EPA 524.2
1,4-Dichlorobenzene	EPA 524.2
2-Chlorotoluene	EPA 524.2
4-Chlorotoluene	EPA 524.2
Benzene	EPA 524.2

Volatile Aromatics	
Bromobenzene	EPA 524.2
Chlorobenzene	EPA 524.2
Ethyl benzene	EPA 524.2
Hexachlorobutadiene	EPA 524.2
Isopropylbenzene	EPA 524.2
n-Butylbenzene	EPA 524.2
n-Propylbenzene	EPA 524.2
p-Isopropyltoluene (P-Cymene)	EPA 524.2
sec-Butylbenzene	EPA 524.2
Styrene	EPA 524.2
tert-Butylbenzene	EPA 524.2
Toluene	EPA 524.2
Total Xylenes	EPA 524.2
Volatile Halocarbons	
1,1,1,2-Tetrachloroethane	EPA 524.2
1,1,1-Trichloroethane	EPA 524.2
1,1,2,2-Tetrachloroethane	EPA 524.2
1,1,2-Trichloroethane	EPA 524.2
1,1-Dichloroethane	EPA 524.2
1,1-Dichloroethene	EPA 524.2
1,1-Dichloropropene	EPA 524.2
1,2,3-Trichloropropane	EPA 524.2
1,2-Dichloroethane	EPA 524.2
1,2-Dichloropropane	EPA 524.2
1,3-Dichloropropane	EPA 524.2

Serial No.: 48541

Property of the New York State Department of Health. Certificates are valid only at the address shown, must be conspicuously posted, and are printed on secure paper. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify the laboratory's accreditation status.

WESTBOROUGH, MA 01581-1019

NY Lab Id No: 11148

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards (2003) for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Acrylates		**Benzidines**	
Acrolein (Propenal)	EPA 624	Benzidine	EPA 625
	EPA 8260C		EPA 8270D
Acrylonitrile	EPA 624	**Chlorinated Hydrocarbon Pesticides**	
	EPA 8260C	4,4'-DDD	EPA 608
Ethyl methacrylate	EPA 8260C		EPA 8081B
Amines		4,4'-DDE	EPA 608
2-Nitroaniline	EPA 8270D		EPA 8081B
3-Nitroaniline	EPA 8270D	4,4'-DDT	EPA 608
4-Chloroaniline	EPA 8270D		EPA 8081B
4-Nitroaniline	EPA 8270D	Aldrin	EPA 608
Aniline	EPA 8270D		EPA 8081B
Carbazole	EPA 625	alpha-BHC	EPA 608
	EPA 8270D		EPA 8081B
Pyridine	EPA 625	alpha-Chlordane	EPA 8081B
	EPA 8270D	beta-BHC	EPA 608
Bacteriology			EPA 8081B
Coliform, Fecal	SM 18-21 9221E (99)	Chlordane Total	EPA 608
	SM 18-21 9222D (97)		EPA 8081B
Coliform, Total	SM 18-21 9221B (99)	delta-BHC	EPA 608
	SM 18-21 9222B (97)		EPA 8081B
Standard Plate Count	SM 18-21 9215B	Dieldrin	EPA 608
Benzidines			EPA 8081B
3,3'-Dichlorobenzidine	EPA 625	Endosulfan I	EPA 608
	EPA 8270D		EPA 8081B
		Endosulfan II	EPA 608

Serial No.: 48542

Property of the New York State Department of Health. Certificates are valid only at the address shown, must be conspicuously posted, and are printed on secure paper. CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. CHRISTOPHER WAKEFIELD
ALPHA ANALYTICAL
8 WALKUP DR
WESTBOROUGH, MA 01581-1019

NY Lab Id No: 11148

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards (2003) for the category:
ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Polychlorinated Biphenyls	
PCB-1016	EPA 8082A
PCB-1221	EPA 608 EPA 8082A
PCB-1232	EPA 608 EPA 8082A
PCB-1242	EPA 608 EPA 8082A
PCB-1248	EPA 608 EPA 8082A
PCB-1254	EPA 608 EPA 8082A
PCB-1260	EPA 608 EPA 8082A
PCB-1262	EPA 8082A
PCB-1268	EPA 8082A
Polynuclear Aromatics	
Acenaphthene	EPA 625 EPA 8270D
Acenaphthylene	EPA 625 EPA 8270D
Anthracene	EPA 625 EPA 8270D
Benzo(a)anthracene	EPA 625 EPA 8270D
Benzo(a)pyrene	EPA 625

Polynuclear Aromatics	
Benzo(a)pyrene	EPA 8270D
Benzo(b)fluoranthene	EPA 625 EPA 8270D
Benzo(ghi)perylene	EPA 625 EPA 8270D
Benzo(k)fluoranthene	EPA 625 EPA 8270D
Chrysene	EPA 625 EPA 8270D
Dibenzo(a,h)anthracene	EPA 625 EPA 8270D
Fluoranthene	EPA 625 EPA 8270D
Fluorene	EPA 625 EPA 8270D
Indeno(1,2,3-cd)pyrene	EPA 625 EPA 8270D
Naphthalene	EPA 625 EPA 8270D
Phenanthrene	EPA 625 EPA 8270D
Pyrene	EPA 625 EPA 8270D
Priority Pollutant Phenols	
2,3,4,6 Tetrachlorophenol	EPA 8270D

Serial No.: 48542

MR. CHRISTOPHER WAKEFIELD
ALPHA ANALYTICAL
8 WALKUP DR
WESTBOROUGH, MA 01581-1019

NY Lab Id No: 11148

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards (2003) for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved analytes are listed below:

Metals I	
Manganese, Total	EPA 6010C EPA 6020A
Nickel, Total	EPA 6010C EPA 6020A
Potassium, Total	EPA 6010C
Silver, Total	EPA 6010C EPA 6020A
Sodium, Total	EPA 6010C
Metals II	
Aluminum, Total	EPA 6010C EPA 6020A
Antimony, Total	EPA 6010C EPA 6020A
Arsenic, Total	EPA 6010C EPA 6020A
Beryllium, Total	EPA 6010C EPA 6020A
Chromium VI	EPA 7196A
Mercury, Total	EPA 7471B
Selenium, Total	EPA 6010C EPA 6020A
Vanadium, Total	EPA 6010C EPA 6020A
Zinc, Total	EPA 6010C EPA 6020A

Metals III	
Cobalt, Total	EPA 6010C EPA 6020A
Molybdenum, Total	EPA 6010C EPA 6020A
Thallium, Total	EPA 6010C EPA 6020A
Tin, Total	EPA 6010C
Minerals	
Chloride	EPA 9251
Sulfate (as SO4)	EPA 9038
Miscellaneous	
Boron, Total	EPA 6010C
Cyanide, Total	EPA 9012B EPA 9014
Formaldehyde	EPA 8315A
Phenols	EPA 9065
Specific Conductance	EPA 9050A
Nitroaromatics and Isophorone	
1,3,5-Trinitrobenzene	EPA 8330
1,3-Dinitrobenzene	EPA 8330
2,4,6-Trinitrotoluene	EPA 8330
2,4-Dinitrotoluene	EPA 8270D EPA 8330
2,6-Dinitrotoluene	EPA 8270D

WELL CONSTRUCTION SUMMARY

Well No. MW08

PROJECT: 27-21 49th Drive	PROJECT NO.: 170281401
LOCATION: Queens NY	ELEVATION AND DATUM: Ø
DRILLING AGENCY: AARCO Environmental Services	DATE STARTED: 3/7/2014 DATE FINISHED: 3/7/2014
DRILLING EQUIPMENT: Geoprobe 7822 DT	DRILLER: John Dougherty
SIZE AND TYPE OF BIT: 2.5" Direct Push	LANGAN REP.: S. Harrison

METHOD OF INSTALLATION

A geoprobe 7822 DT drill rig was used to advance boring to 18 ft. bgs, AARCO was instructed to install a bentonite seal from 5 to 7 ft. bgs with a 1 ft. sand pack. Well screen was set from 8 to 18 ft bgs.

METHOD OF WELL DEVELOPMENT

Surged well with surge block and used a check valve to manually purge groundwater into 55 gallon drums on 3/7/14.

TYPE OF CASING: PVC DIAMETER: 1 inch	TYPE OF BACKFILL MATERIAL: No. 2 SAND

WELL CONSTRUCTION SUMMARY

Well No. MW09

PROJECT: 27-21 44th Drive	PROJECT NO.: 170281401
LOCATION: Queens, NY	ELEVATION AND DATUM: Ø
DRILLING AGENCY: AARCO Environmental Services	DATE STARTED: 3/7/14 DATE FINISHED: 3/7/14
DRILLING EQUIPMENT: Geoprobe 6610 DT	DRILLER: Chuck Blumberg
SIZE AND TYPE OF BIT: 2.5" Direct Push	LANGAN REP.: P. Farnham

METHOD OF INSTALLATION

A geoprobe 6610 DT drill rig was used to advance borhy to 15 ft. bgs. AARCO backfilled with No. 2 SAND from 15 to 13' bgs and dropped 1"-diameter prepacked screen from 13 to 3 ft. and installed hydrated bentonite from 3 to 1 ft. and No. 2 SAND from 1 ft bgs to grade level.

METHOD OF WELL DEVELOPMENT

Surged well with surge block and used a check valve to manually purge groundwater into 55-gallon drums on 3/7/14

TYPE OF CASING: PVC DIAMETER: 1 inch	TYPE OF BACKFILL MATERIAL: No. 2 SAND

WELL CONSTRUCTION SUMMARY

Well No. MW10

PROJECT: 27-21 44th Drive	PROJECT NO.: 170281401
LOCATION: Queens, New York	ELEVATION AND DATUM: Ø
DRILLING AGENCY: AARCO Environmental Services	DATE STARTED: 3/7/14 DATE FINISHED: 3/7/14
DRILLING EQUIPMENT: Geoprobe 6610 DT	DRILLER: Chuck Blumberg
SIZE AND TYPE OF BIT: 2.5" Direct Push	LANGAN REP.: P. Farnham

METHOD OF INSTALLATION

A geoprobe 6610 DT drill rig was used to advance boring to 10 ft bgs. After 30 mins, the IP did not detect water; however, groundwater was detected @ 3.6' bgs in adjacent MW06. AARCO advanced boring to 14 ft bgs, dropped 10' of pre-packed screen (1" diameter) from 14 to 4 ft. and installed bentonite from 3 to 1 Ft.

METHOD OF WELL DEVELOPMENT

Surged well with surge block and used a check valve to manually purge groundwater into 55-gallon drums on 3/7/14.

TYPE OF CASING: PVC DIAMETER: 1 inch	TYPE OF BACKFILL MATERIAL: No. 2 SAND

WELL CONSTRUCTION SUMMARY

Well No. MW11

PROJECT: 27-21 44th Drive	PROJECT NO.: 170281401
LOCATION: Queens, New York	ELEVATION AND DATUM: B
DRILLING AGENCY: AARCO Environmental Services	DATE STARTED: 3/7/2014 DATE FINISHED: 3/7/2014
DRILLING EQUIPMENT: geoprobe 7822DT	DRILLER: John Dougherty
SIZE AND TYPE OF BIT: 2.5" Direct Push	LANGAN REP.: S. Harrison

METHOD OF INSTALLATION

A geoprobe 7822DT drill rig was used to advance boring to 13.5 ft bgs. AARCO dropped 10 ft of prepacked well screen (1" diameter) from 13.5 to 3.5 ft bgs and installed hydrated bentonite from 2.5 to 1.5 ft and filter pack from 1.5 ft bgs to grade level.

METHOD OF WELL DEVELOPMENT

Surged well with surge block and used a check valve to manually purge groundwater into 55 gallon drums on 3/7/14.

TYPE OF CASING: PVC DIAMETER: 1 inch	TYPE OF BACKFILL MATERIAL: No. 2 SAND

Sample Time: (1235)

NOTES:

1. Stabilization is achieved after all parameters have stabilized for three successive readings.
2. Dissolved Oxygen stabilization = 10% for values greater than 0.5 mg/L, if three Dissolved Oxygen values are less than 0.5 mg/L, consider the values as stabilized)
3. Turbidity (10% for values greater than 5 NTU; if three Turbidity values are less than 5 NTU, consider the values as stabilized)
4. The pump's flow rate must be able to "turn over" at least one flow-through-cell volume between measurements (every five minutes). Flow cell volume for the Horiba U-52 is 250 mL.

1055	8.23	2.14	29.1	16.34	7.05	-130		6.13ft. ~2 gallons purged	
Collected Sample @ 1100									While sampling well continues to dry up.
							SH 3/14/2014		

NOTES:

1. Stabilization is achieved after all parameters have stabilized for three successive readings.
2. Dissolved Oxygen stabilization = 10% for values greater than 0.5 mg/L, if three Dissolved Oxygen values are less than 0.5 mg/L, consider the values as stabilized)
3. Turbidity (10% for values greater than 5 NTU; if three Turbidity values are less than 5 NTU, consider the values as stabilized)
4. The pump's flow rate must be able to "turn over" at least one flow-through-cell volume between measurements (every five minutes). Flow cell volume for the Horiba U-52 is 250 mL.

1" = 0.041 gal/ft

Lab Number: L1324383
Report Date: 12/11/13

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 27-21 44TH DRIVE **Lab Number:** L1324383
Project Number: 170281401 **Report Date:** 12/11/13

Case Narrative (continued)

Report Submission

This final report replaces the partial report issued December 9, 2013, and includes the results of all requested analyses.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

The WG657412-3 Method Blank, associated with L1324383-08, has a concentration above the reporting limis for bromomethane. Since the sample was non-detect for this target analyte, no further actions were taken. The results of the original analysis are reported.

Metals

The WG656801-1 Method Blank, associated with L1324383-03 through -11, has a concentration above the reporting limit for iron. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no qualification of the results was performed.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Lisa Westerlind

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

Report Format: DU Report with 'J' Qualifiers

Project Name:	27-21 44TH DRIVE	**Lab Number:**	L1324383
Project Number:	170281401	**Report Date:**	12/11/13

Data Qualifiers

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Last revised November 12, 2013 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Certificate/Lab ID: PH-0574. ***NELAP Accredited Solid Waste/Soil.***

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Nickel, Selenium, Silver, Sodium, Thallium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223, Enumeration and P/A), E. Coli. – Colilert (SM9223, Enumeration and P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform-EC Medium (SM 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), E. Coli – Colilert (SM9223 Enumeration), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterococcus - Enterolert.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics (SW 8260), Acid Extractables (Phenols) (SW 8270), Benzidines (SW 8270), Phthalates (SW 8270), Nitrosamines (SW 8270), Nitroaromatics & Cyclic Ketones (SW 8270), PAHs (SW 8270), Haloethers (SW 8270), Chlorinated Hydrocarbons (SW 8270).)

Lab Number: L1324502
Report Date: 12/11/13

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 27-21 44TH DRIVE **Lab Number:** L1324502
Project Number: 170281401 **Report Date:** 12/11/13

Case Narrative (continued)

Report Submission

This final report replaces the partial report issued December 10, 2013, and includes the results of all requested analyses.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

The surrogate recovery for L1324502-05 is below the acceptance criteria for dibromofluoromethane (50%), due to a known matrix effect caused by the high pH of the sample (>10).

The WG657412-3 Method Blank, associated with L1324502-02, has a concentration above the reporting limit for bromomethane. Since the sample was non-detect for this target analyte, no further actions were taken. The results of the original analysis are reported.

Semivolatile Organics

L1324502-08 has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.

PCBs

The surrogate recoveries for L1324502-02 were below the acceptance criteria for decachlorobiphenyl (29%/26%); however, re-extraction achieved similar results for 2,4,5,6-tetrachloro-m-xylene (28%/28%) and decachlorobiphenyl (23%/23%). The results of both extractions are reported.

The surrogate recoveries for L1324502-06 were below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (28%/27%) and decachlorobiphenyl (22%/22%); however, re-extraction achieved similar results for 2,4,5,6-tetrachloro-m-xylene (15%/15%) and decachlorobiphenyl (11%/11%). The results of both extractions are reported.

Pesticides

L1324502-02 and -08 have elevated detection limits due to the dilutions required by the sample matrices.

Project Name: 27-21 44TH DRIVE **Lab Number:** L1324502
Project Number: 170281401 **Report Date:** 12/11/13

Case Narrative (continued)

The surrogate recoveries for L1324502-08 are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene and decachlorobiphenyl (all 0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

Metals

The WG657417-4 MS recovery, performed on L1324502-02, is below the acceptance criteria for mercury (0%). A post digestion spike was performed with an acceptable recovery of 87%.

The WG657417-3 Laboratory Duplicate RPD, performed on L1324502-02, is outside the acceptance criteria for mercury (87%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the Laboratory Duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The lower value for the two columns has been reported due to obvious interference.

Report Format: DU Report with 'J' Qualifiers

Project Name:	27-21 44TH DRIVE	**Lab Number:**	L1324502
Project Number:	170281401	**Report Date:**	12/11/13

Data Qualifiers

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Last revised November 12, 2013 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Certificate/Lab ID: PH-0574. ***NELAP Accredited Solid Waste/Soil.***

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Nickel, Selenium, Silver, Sodium, Thallium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223, Enumeration and P/A), E. Coli. – Colilert (SM9223, Enumeration and P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform-EC Medium (SM 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), E. Coli – Colilert (SM9223 Enumeration), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterococcus - Enterolert.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics (SW 8260), Acid Extractables (Phenols) (SW 8270), Benzidines (SW 8270), Phthalates (SW 8270), Nitrosamines (SW 8270), Nitroaromatics & Cyclic Ketones (SW 8270), PAHs (SW 8270), Haloethers (SW 8270), Chlorinated Hydrocarbons (SW 8270).)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: 170281401 **Report Date:** 12/13/13

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The samples were field filtered for Dissolved Metals.

Total Metals

The WG658044-4 MS recoveries for calcium (210%), iron (230%), and sodium (168%), performed on L1325079-01, do not apply because the sample concentration is greater than four times the spike amount added.

The WG658044-4 MS recovery, performed on L1325079-01, is above the acceptance criteria for manganese (137%). A post digestion spike was performed with an acceptable recovery of 121%.

The WG658044-3 Laboratory Duplicate RPD, performed on L1325079-01, is above the acceptance criteria for chromium (25%); however, the sample and duplicate results are less than five times the reporting limit. Therefore, the RPD is valid.

Dissolved Metals

The WG658080-4 MS recovery for iron (30%), performed on L1325079-01, does not apply because the sample concentration is greater than four times the spike amount added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
