Draft Investigation Work Plan for Brownfield Site Available for Public Comment

The public is invited to comment on a draft work plan being reviewed by the New York State Department of Environmental Conservation (NYSDEC) to investigate the ABC – Block 26 (the “Site”) located at 5-29 and 5-37 46th Avenue, Long Island City, NY. Please see the map for the site location. Documents related to the cleanup of this site can be found at the location(s) identified on the left-hand side of this page under “Where to Find Information.”

Draft Investigation Work Plan: The draft investigation work plan, called a “Remedial Investigation Work Plan,” was submitted to NYSDEC under New York’s Brownfield Cleanup Program. The investigation will be performed by Plastic Center Realty Sub, LLC (“Participant”) with oversight by NYSDEC and the New York State Department of Health (NYSDOH).

How to Comment: NYSDEC is accepting written comments about the draft investigation work plan for 30 days, from **May 11th** through **June 10th, 2016**. The proposed plan is available for public review at the location(s) identified on the left-hand side of this page under “Where to Find Information.” Please submit comments to the NYSDEC project manager listed under Project Related Questions in the “Who to Contact” area on the left-hand side of this page.

Site Description: ABC Block 26 (Block 26, Lots 17 and 21) is 2.13 acres and is located on the city block bound by Anable Basin to the north; a four-story industrial and manufacturing building to the east; 46th Avenue to the south; and 5th Street to the west. Lot 21 is occupied by a paved parking lot and a single-story warehouse used by artists, a web/graphic design company, and an industrial design company. The asphalt-paved lot on Lot 21 hosts the Long Island City Flea Market on weekends. Lot 17 is occupied by a single-story warehouse facility used by a furniture rental company. Historical uses of the property included the following: an oil refinery which contained up to 30 tanks of various sizes, and a chemical manufacturer. Environmental investigations performed to date indicate that the site soil and groundwater is contaminated with petroleum, semi-volatile organic compounds and metals associated with historic use. However, a complete environmental investigation has not yet been performed.

Highlights of the Proposed Site Investigation: The investigation will define the nature and extent of contamination in soil, surface water, groundwater and any other parts of the environment that may be affected. Key components of the investigation work include:

- Installing and sampling soil borings to identify possible on-site sources of contamination;
- Collecting soil vapor, sub-slab soil vapor and indoor air samples; and

BROWNFIELD CLEANUP PROGRAM

- Installing and sampling groundwater wells to identify possible impacts from areas of concern both on-site and off-site.

Next Steps: NYSDEC will consider public comments, revise the plan as necessary, and approve the work plan. NYSDOH must concur with the plan. After the work plan is approved, the activities detailed in the work plan will be implemented.

When the investigation is completed, a report will be prepared and submitted to the NYSDEC that summarizes the results. NYSDEC will review the report, make any necessary revisions and, if appropriate, approve the report.

After the investigation, a cleanup plan, called a “Remedial Work Plan” will be developed and a Decision Document will be proposed. The cleanup plan will include an evaluation of the proposed site remedy, or recommend a no action or no further action alternative. The goal of the cleanup plan is to ensure the protection of public health and the environment. NYSDEC will present the proposed cleanup plan to the public for its review and comment during a 45-day comment period. NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the Site ID, C241174) at:

<http://www.dec.ny.gov/cfm/xtapps/dereexternal/index.cfm?pageid=3>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by DEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:
