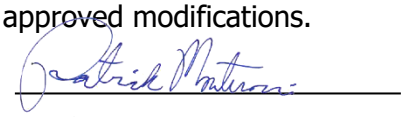
QEP Certification:

I, Patrick Montuori, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and DER Green Remediation (DER-31) and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.



Patrick Montuori - Project Manager

1.0 INTRODUCTION

This report presents the results of the Kew Gardens Site Off-Site Site Characterization (Site No. C241177A) completed by HRP Associates, Inc. (HRP) in March 2024. The purpose of the Site Characterization (SC) is to characterize potential soil vapor intrusion (SVI) impacts to off-site receptors related to chlorinated volatile organic compound (CVOC) contamination which has been identified at the Kew Gardens Site located in Queens, New York (Site #C241177, referred to herein as "the Site"), and to determine whether a Site poses a threat to human health and the environment, and whether the threat requires further investigation, or if sufficient information exists to make a decision regarding remediation at the Site. This SC was completed for the New York State Department of Environmental Conservation (NYSDEC).

Interpretations presented within this report are based primarily on the investigations described herein. Site history and background information were compiled by HRP based on a review of documents obtained from the NYSDEC and local, state, and federal regulatory databases.

The SC included the completion of SVI structure sampling on private property. References to the private properties' locations and addresses, and sample locations on private properties have been redacted or removed from this report. Off-site sample locations have been removed from figures. Field forms, lab reports and Data Usability Summary Reports (DUSRs) which included references to sample locations, have been removed from this report.

1.1 Report Organization

The text of this report is divided into five sections. Immediately following the text are the figures, tables, and appendices. A summary of each report section is provided below:

Section 1.0 Introduction: Report organization followed by Site description, a records review (historical records review, and regulatory database records), on-site and off-site commercial/industrial history, a review of previous environmental investigations, and description of identified areas of concern (AOCs).

Section 2.0 Physical Characteristics of the Study Area: A description of physical characteristics of the Site and surrounding area including topography, soils, geology, and hydrogeology based on information from previous environmental investigations and published resources.

Section 3.0 Study Area Investigation: Summarizes field activities associated with the SC, including SVI structure sampling, exterior soil vapor point installation and sampling, any deviations from the SC work plan, and a summary of green and sustainable best management practices (BMPs) implemented during the investigation.

Section 4.0 Findings: Presents both observations and the analytical results of the SVI structure sampling and exterior soil vapor point sampling performed for the SC, a brief description of data validation and data usability, and a description of potential future investigation activities.

Section 5.0 References: Provides a list of references used throughout this report.

1.2 Site Description

The Site is located in Kew Gardens, Queens. The Site location is depicted on **Figure 1**. The 0.177-acre Site consists entirely of a twelve-story mixed-use commercial/residential building. The Site and surrounding study area are depicted in **Figure 2**.

The property is zoned commercial (C4-4) according to the New York City zoning and land use map. Properties surrounding the Site include municipal buildings, commercial, residential, and mixed-use properties. At present the area surrounding the Site includes:

North: One-story commercial building, followed by the intersection of Queens Boulevard and 82nd Avenue.
South: Eight story mixed-use building with apartments above retail stores, followed by 82nd Road.
East: Queens Boulevard and two Metropolitan Transit Authority (MTA) subway lines (E- and F-Train Kew Gardens Union Turnpike – Briarwood), followed by an eight-story New York City (NYC) government office building (250 feet).
West: Twenty-story commercial hotel, followed by a 4-story mixed-use building (100 feet) and residential properties (180 feet), followed by Kew Gardens Road.

Property use surrounding the Site as mapped by the New York City Department of City Planning is depicted on **Figure 3**.

1.3 Historical Records Review

Available local, state, and federal environmental regulatory database records, aerial photographs, historical topographic maps, Sanborn Fire Insurance Company maps, and city directories were obtained via Environmental Database Resources, Inc. (EDR) on August 4, 2022. These records were reviewed to understand the commercial and industrial history of the Site and surrounding area. Historical records were reviewed for properties within a 500' radius to identify potential secondary sources of SVI. Off-site properties which may have historically used chlorinated solvents are identified in the *Site Characterization Work Plan Addendum for the Kew Gardens Off-Site* (Work Plan Addendum), prepared by HRP dated October 19, 2022. Historical records obtained through EDR can be found in **Appendix A**.

1.3.1 On-Site Industrial/Commercial History

The Site was first developed between 1942 and 1951 and was historically utilized for commercial purposes. The Site has historically been used as stores (1951-2006) including a dry cleaner from 1972-2015. The Site was levelled in 2017 for redevelopment into the current Site building. Between 2015 and 2020, CVOC impacts to Site environmental media were investigated and remediated and in December 2020 the Site was redeveloped into a twelve-story mixed use commercial/residential building. Previous environmental investigations and remediation are discussed further in **Section 1.4**.

1.3.2 Off-Site Industrial/Commercial History

The area surrounding the Site currently and has historically consisted primarily of commercial and residential properties, as shown on **Figure 3**. Two properties within 500 feet of the Site were identified as potential historic users of chlorinated solvents based on their labels on Sanborn maps as "Furniture Manufacturing and Printing" and "Auto Repair," respectively. One property was identified based on a Resource Conservation and Recovery Act (RCRA) record as a historic conditionally exempt small quantity generator of halogenated solvents (waste code F001), including tetrachloroethene (PCE), trichloroethene (TCE), methylene chloride, 1,1,1-trichloroethane (1,1,1-TCA), carbon tetrachloride, and chlorinated fluorocarbons. Whether chlorinated solvents were used at these properties and specific industrial/commercial processes in which they were used are unknown. The properties listed above were not identified as areas of concern based on their respective distances from the Site (between 200-500 feet from the Site's boundary). Locations of the off-site properties with potential for historic chlorinated solvent use are included in the Work Plan Addendum dated October 19, 2022.

1.4 Previous Environmental Investigation and Remediation

In preparation of this work plan HRP reviewed the following previous investigation reports and associated documents:

- Remedial Investigation (RI) Report, prepared by Advanced Cleanup Technologies, Inc. (ACT), dated February 2019.
- Final Engineering Report (FER), prepared by P.W. Grosser Consulting Engineer & Hydrogeologist, PC (PWGC), dated December 2020.

These documents also included summaries of other previous environmental reports.

In March 2015, a Phase I Environmental Site Assessment (ESA) identified the historic usage of the Site as a dry cleaner as a Recognized Environmental Concern (REC). Following the Phase I ESA, a series of subsurface investigations conducted between 2016 and 2018 by ACT and PWGC identified CVOCs, primarily PCE, at concentrations exceeding applicable NYSDEC standards, criteria, and guidance (SCGs) in on-site soil, groundwater, and soil vapor. The Site was entered into the NYSDEC Brownfield Cleanup Program (BCP) in 2016. The findings of the investigations, which were summarized in the 2019 RI Report, include the following:

- On-site soil was found to contain concentrations of PCE exceeding the Unrestricted Use (UU) and Restricted Residential Use (RRU) Soil Cleanup Objectives (SCOs) for the Site. Based on locations of CVOC impacts, ACT identified a former dry-cleaning machine on the north-central portion of the Site as the most probable source of a PCE release. ACT also suggested that subsurface drains on the Site may have acted as a conduit to transport CVOC contamination to subsurface soils on the western portion of the Site.
- PCE and breakdown products TCE, cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride, were detected at concentrations exceeding NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1 Class GA criteria throughout the Site. The highest concentrations of CVOCs in groundwater were found in groundwater beneath the north-central portion of the Site, in the area of the former dry-cleaning machine.
- PCE, TCE, and cis-1,2-DCE, were detected in soil vapor at concentrations at which the New York State Department of Health (NYSDOH) Soil Vapor/Indoor Air matrices

recommend mitigation in each of 12 soil vapor points installed across the Site. The highest CVOC concentrations were detected in soil vapor on the north-central portion of the Site, in the area of the former dry-cleaning machine.

During the RI and prior to redevelopment, several Interim Remedial Measures (IRMs) were performed at the Site, including demolition of the former building and removal and disposal of impacted soil and fill.

Further remedial action was completed in 2020 as part of a Track 4 Restricted Residential cleanup. The Site remedy included additional excavation and off-site disposal of impacted soils, installation of a soil cover system, installation of a soil vapor extraction (SVE) system to mitigate residual PCE concentrations in soil and soil vapor, installation of a sub-slab depressurization system (SSDS) beneath the Site building, and implementation of in-situ chemical oxidation (ISCO) injections to reduce PCE contamination in groundwater.

A Site Management Plan (SMP) was developed for continued monitoring and maintenance of on-site engineering (SSDS, SVE, and site cover system) and institutional controls, which are enforced by an environmental easement. Remediation of the Site was determined to be complete in December 2020 when the Site was awarded a Certificate of Completion.

1.5 Areas of Concern (AOCs)

Based on the findings of previous investigations, and discussions with NYSDEC and NYSDOH, the purpose of this SC is to evaluate potential exposure pathways from PCE and CVOC breakdown product contamination (the contaminants of concern identified on-site) to off-site receptors through SVI. SVI in the Site building has been effectively mitigated by a SSDS. However, since mitigation was completed, SVI structure sampling has not been conducted in off-site buildings. Properties in the immediate area surrounding the Site were identified as AOCs and solicited for investigation as part of this SC. The off-site study area, which includes properties solicited for SVI structure sampling, is depicted on **Figure 2**. Properties towards the east and northeast of the Site were not solicited both due to their distance from the Site (Queens Boulevard, an eight-lane highway exists between the Site and neighboring properties to the east and northeast) and MTA subway lines which act as a subsurface air gap, disrupting potential soil vapor migration pathways between the Site and neighboring properties to the east and northeast.

2.0 PHYSICAL CHARACTERISTICS OF THE STUDY AREA

The following section discusses the physical characteristics and setting of the Site.

Limited soil screening was performed as part of this SC. The SC did not include comprehensive soil and groundwater investigations. Descriptions of physical characteristics included in this report rely primarily on previous investigations conducted on the Site and published resources.

2.1 Site Topography

The Site lies at an elevation of approximately 87 feet above mean sea level (amsl). The surrounding area is relatively flat, sloping gently north towards Willow Lake and Meadow Lake.

2.2 Soils

Based on soil borings installed during the RI, Site soils generally consist of silty sand, overlain by up to five feet of fill material. A discontinuous silt and clay layer was observed as shallow as 7 feet below grade (ft bg) in thicknesses ranging from less than 1 foot to 6 feet. Off-site soil borings installed northwest of the Site along 82nd Avenue as part of this SC (depicted on **Figure 2**) indicate soils consisted of fine to coarse sand with little to trace amounts of gravel from 0-10 ft bg as well as discontinuous silt and clay layers observed from 3-10 ft bg. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey classifies the Site area as Urban Land.

2.3 Geology

The USGS "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey" indicate the bedrock underlying the Sites is part of the Hartland Formation, a mica-schist and quartz feldspar granulite. Bedrock has not been encountered in any of the on-site investigations reviewed by HRP which advanced soil borings to a maximum depth of 80 ft bg. Depth to bedrock in the area of the Site is estimated to be approximately 600 to 700 feet below sidewalk grade, based on logs from USGS observation wells (Buxton & Shernoff, 1999). Bedrock is overlain by unconsolidated coastal plain deposits belonging to the Upper Cretaceous Monmouth Group, Matawan Group, and Magothy Formation which consist of silty clay, glauconitic sandy clay, sand, and gravel (Fisher et al., 1970).

2.4 Hydrogeology

2.4.1 Surface Water and Wetlands

No surface water bodies are present on-site or adjoining the Site. The nearest surface water body is Willow Lake, located approximately 0.4 miles north of the Site. No State Regulated or National Wetland Inventory wetland areas are mapped within one mile of the Site.

2.4.2 Groundwater

Previous investigations encountered groundwater beneath the Site at a depth of approximately 68 ft bg. Groundwater was determined to flow in the northeastern direction based on a groundwater contour map prepared for the RI. Groundwater flow direction is shown on **Figure 2**.

Based on a review of DEC Info Locator and state and federal well records obtained through EDR, no water wells were identified in the study area (AOC properties) surrounding the Site. Potable water is provided to the Site and study area by the City of New York (sourced from a mix of the Catskill, Croton, and Delaware System reservoirs). The nearest well identified by the EDR record search is located approximately 1,000 ft northwest of the Site on Union Turnpike and was identified through a New York State database.

3.0 STUDY AREA INVESTIGATIONS

In order to investigate the AOCs described in **Section 1.5**, HRP conducted SVI structure sampling and installed and sampled exterior soil vapor points surrounding the Site.

The work was completed in accordance with the *Region 2 P-Sites Work Plan* (SC Work Plan) dated August 29, 2022, *Site Characterization Work Plan Addendum for 124-22 Queens Boulevard, Kew Gardens Off-Site* (Work Plan Addendum), prepared by HRP dated October 19, 2022, *HRP's Generic Field Activities Plan* (FAP), *Health and Safety Plan* (HASP), *Quality Assurance Project Plan* (QAPP) on-file with the NYSDEC, and *DER-10 Technical Guidance for Site Investigation and Remediation* (May 2010). Investigation locations are depicted on **Figure 2**.

Deviations based on field conditions are noted in **Section 3.4**.

The following activities were conducted as part of this SC.

- Solicitation of off-site properties for SVI structure sampling via certified mail, sent by the NYSDEC, dated December 1, 2022.
- Solicitation of off-site properties for SVI structure sampling via email and phone correspondence, conducted by HRP personnel during the 2022-2023 and 2023-2024 heating seasons.
- A ground penetrating radar (GPR) survey conducted to identify subsurface utilities and obstructions at each of the two off-site properties in which sub-slab vapor points were installed, and to clear boring locations within the right-of-way of 82nd Avenue (February 7, 2023, and August 31, 2023, respectively).
- SVI structure sampling at 2 off-site properties and resampling at 1 off-site property (February 7-8, 2023, and January 24-25, 2024).
- Installation of 3 exterior soil vapor points within the right-of-way of 82nd Avenue immediately north of the Site (August 31, 2023).
- Sampling of exterior soil vapor points within the right-of-way of 82nd Avenue (September 6, 2023).

3.1 Geophysical Investigations and GPR Survey

On February 7, 2023 and August 31, 2023, GPR surveys were conducted by East Coast Geophysics (East Coast). GPR surveying is a nonintrusive, subsurface geophysical investigation technique that detects subsurface structures by transmitting electromagnetic waves from an antenna into the ground. The antenna then monitors the strength and time delay of the return signal. The return signal is then evaluated for any anomalies, which by their size, shape and orientation can be interpreted as voids, USTs, utility pipelines, soil-bedrock interface, or areas of different sediment compaction. A radio frequency (RF) line locator was also used to identify subsurface utility lines based on the presence of 120 hertz signal (electric) and transmitted signals from the RF transmitter.

The objective of the surveys was to clear sub-slab soil vapor sample locations in the lowest levels of buildings undergoing SVI structure sampling and to clear boring locations along the right-of-way of 82nd Avenue. A 5-foot radius was scanned around each of the proposed sub-slab soil vapor points and any underground utilities or reinforcing rebar were marked out with chalk or paint.

3.2 Soil Vapor Intrusion (SVI) Investigations

To assess the potential migration of soil vapor contamination and evaluate SVI exposure pathways, HRP and NYSDEC solicited four properties surrounding the Site for SVI structure sampling. On December 1, 2022, letters requesting access for SVI structure sampling were sent to each property by NYSDEC via certified mail. In addition, HRP solicited property owners via telephone and email using available contact information obtained through online directories. The properties solicited are listed below. Off-site property addresses and locations have been removed from this report. SVI structure sampling properties are located within the off-site study area depicted on **Figure 2**.

Off-Site Property #	Access Granted?
1	Access granted for 2022-2023 sampling event. Access declined for 2023-2024 re-sampling.
2 & 3	Property owner declined sampling.
4 (4-1, -2, and -3)	Yes. Initial sampling event completed during 2022-2023 season. Resampling completed during 2023-2024 season.

SVI structure sampling was performed at two of the four off-site properties solicited due to access.

The owner of Property 1 provided access for sampling during the 2022-2023 heating season. Based on results of the initial sampling event, NYSDEC and NYSDOH requested HRP solicit access for resampling of the property during the 2023-2024 heating season, however, the property owner declined access for resampling.

The attorney for Properties 2 and 3 declined access for sampling due to a full vacate order placed on the property from NYC Department of Buildings (DOB). HRP solicited the attorney for access by phone and email during the 2023-2024 heating season in case of a change in status with NYCDOB, however the attorney was unresponsive.

The owner of Property 4 (which includes properties 4-1, -2, and -3) provided access for sampling during the 2022-2023 heating season and for resampling (requested by NYSDEC and NYSDOH) during the 2023-2024 heating season.

SVI structure sampling properties are located within the off-site study area depicted on **Figure 2**. Precise off-site property locations and addresses have been redacted from this report. Outdoor air sampling locations are summarized in the succeeding Outdoor Air Sampling Locations table.

SOIL VAPOR INTRUSION STRUCTURE SAMPLING LOCATIONS			
SVI Location	**Location Description**	**Sub-Slab Soil Vapor/Air Samples**	**Justification**
Property 1	Mixed use building. Lowest level consists of an unfinished basement used for laundry.	2023: • Sub-slab soil vapor • Basement indoor air • First floor indoor air	Investigate impacts to soil vapor and indoor air at a property surrounding the Site.
Property 4 (Includes 4-1, -2, -3)	Residential/commercial use building, built on-grade with a partial basement.	See below	Investigate impacts to soil vapor and indoor air at a property surrounding the Site.
Property 4-1	Lowest level consists of slab-on-grade maintenance rooms and a laundry room. Samples collected in a storage room/work shop (sub-slab/indoor air pair) and a stairwell (indoor air only).	2023: • Sub-slab soil vapor • First floor indoor air (2)	Investigate impacts to soil vapor and indoor air at a property surrounding the Site.
		2024: • Sub-slab soil vapor • First floor indoor air (2)	Confirm source of identified methylene chloride impacts to indoor air within workshop during 2023 sampling.
Property 4-2	Lowest level consists of a partial basement used as a boiler room and storage for maintenance staff. First floor sample collected in lobby.	2023: • Sub-slab soil vapor • Basement indoor air • First floor indoor air	Investigate impacts to soil vapor and indoor at a property surrounding the Site.
		2024: • Sub-slab soil vapor • Basement indoor air • First floor indoor air	Confirm source of identified TCE and cis-1,2-DCE impacts to indoor air within building lobby during 2023 sampling.
Property 4-3	Lowest level consists of slab-on-grade apartments and commercial retail spaces. Samples collected in an office.	2023: • Sub-slab soil vapor • First floor indoor air (2)	Investigate impacts to soil vapor and indoor air at a property surrounding the Site.

OUTDOOR AIR SAMPLING LOCATIONS			
Sample Date	**Sample ID**	**Location Description**	**Justification**
2/7/2023	OA-1_2.7.23	Back door entrance (north) of Property 4-3	To collect a representative outdoor air sample for comparison to indoor air samples for all soil vapor/indoor air samples collected in 2023
1/25/2024	P4-1-OA	Back door entrance (north) of Property 4-1	To collect a representative outdoor air samples for comparison to indoor air samples collected at Property 4-1 collected in 2024

OUTDOOR AIR SAMPLING LOCATIONS			
Sample Date	**Sample ID**	**Location Description**	**Justification**
1/25/2024	P4-2-OA	Back door entrance (north) of Property 4-2	To collect a representative outdoor air sample for comparison to indoor air samples collected at Property 4-2 collected in 2024

HRP conducted SVI structure sampling at each of the two off-site properties on February 7, 2023, and SVI structure resampling at Property 4-1 on January 24, 2024.

At each location, SVI structure sampling was conducted in general accordance with the NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006* (updated May 2017), the SC Work Plan and Work Plan Addendum.

Sub-slab soil vapor points were installed into sub-slab soil (a depth of approximately 6 inches) using a handheld hammer drill and a half-inch drill bit. Prior to sub-slab soil vapor sampling, a leak test was performed on each vapor point using a helium tracer gas and a minimum of 3 tubing volumes of air were purged from each vapor point.

Each SVI investigation included the installation of a temporary sub-slab soil vapor point and the simultaneous collection of a sub-slab soil vapor sample, at least one indoor air sample on the lowest occupied floor, and at least one outdoor air sample. Three separate locations were sampled at Property 4 (4-1, -2, and -3) to sufficiently delineate potential SVI pathways at a property surrounding the Site and to screen for SVI through three concrete slabs of the building.

Property 4-1 underwent an additional sampling event in 2024 to confirm methylene chloride impacts identified in indoor air within the workshop area and to investigate the source of methylene chloride and persistence of the indoor air impacts. The resampling event included the sampling of all 2023 sample locations.

Property 4-2 also underwent an additional sampling event in 2024, to confirm TCE and cis-1,2-DCE impacts identified in indoor air within the building lobby and to investigate the source of TCE and cis-1,2-DCE and the persistence of the indoor air impacts. The resampling event included the sampling of all 2023 sample locations in the building.

Carbon tetrachloride impacts were identified within the basement indoor air sample at Property 1, and a solicitation for resampling was performed, but the property owner declined to provide access for a resampling event.

Twenty-two (21 regular, 1 duplicate sub-slab soil vapor) sub-slab soil vapor and air samples were collected using 6-liter summa canisters outfitted with 24-hour regulators not exceeding flow rates of 0.2 liters per minute (L/min). Each sample was submitted under chain of custody to Pace Analytical Services Inc. (Pace), a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory to be analyzed for VOCs by EPA Method TO-15. SVI sampling forms, including helium tracer gas test results, sample start and stop times canister pressures, and NYSDOH Indoor Air Quality Questionnaire and Building Inventory forms, including building chemical inventories, were

completed for each property. These forms were redacted from this report as they contain property addresses.

3.3 Exterior Soil Vapor Point Installation and Sampling

HRP installed three permanent soil vapor points in the right-of-way along 82nd Avenue to screen for potential soil vapor migration towards the north and northwest of the Site. Soil vapor points were installed to a maximum depth of 9 ft bg. Soil vapor points were installed by advancing a 9-inch stainless steel screen and tubing into the vadose zone, set at a depth of one foot above the groundwater table interface. The annular space around the tubing was backfilled with a #0 filter sand pack and sealed with bentonite above the sand pack. Bentonite was hydrated at the time of installation, and points were finished with an 8-inch locking road box. During soil vapor point installation, soil was continuously sampled with a macrocore sampler and screened with an 11.7 electron-volt (eV) photoionization detector (PID).

Five (3 regular, 1 duplicate, 1 outdoor air) permanent soil vapor point samples were collected with 6-liter summa canisters fitted with 2-hour regulators not exceeding flow rates of 0.2 L/min. Each sample was submitted under chain of custody to an ELAP certified laboratory to be analyzed for VOCs by EPA Method TO-15. Exterior soil vapor point sampling forms, including helium tracer test results, sample start and stop times, and canister pressures are presented in **Appendix B**. Soil boring and soil vapor point construction logs are provided in **Appendix C**. Soil vapor point locations are depicted on **Figure 2**.

3.4 Deviations from Work Plan

Deviations from the SC Work Plan and Work Plan Addendum made during the SC were as follows:

- The Work Plan Addendum proposed SVI structure sampling at up to three off-site properties, however access was only granted to two properties as described above.
- The Work Plan Addendum scope of work did not include permanent vapor point installation and sampling. The three permanent soil vapor points were installed in the right-of-way north of the Site to screen for potential migration of soil vapor impacts in that direction.
- The Work Plan Addendum indicated indoor air samples would be analyzed for PCE, TCE, cis-1,2-DCE, and vinyl chloride via EPA TO-15 Selective Ion Monitoring (SIM) analysis. The laboratory reporting limits achieved for the contaminants using standard TO-15 analysis were below the lowest applicable guidance values in the NYSDOH Soil Vapor/Indoor Air matrices and therefore it was determined SIM analysis was not necessary.

3.5 Green and Sustainable Remediation Best Management Practices (BMPs)

Through the course of the SC, HRP implemented Green and Sustainable Best Management Practices (BMPs) to reduce negative impacts to air, water, solid waste, etc. The Site Investigation Green and Sustainable Remediation Calculation Sheet included as **Appendix D**, summarizes BMPs implemented as part of the SC and environmental impact reductions versus traditional field activity approaches.

In consultation with NYSDEC, quantifiable impact reductions achieved by green and sustainable remediation BMPs implemented during the SC investigations (e.g., tons of carbon reduced, gallons of fuel saved, pounds of waste reduced) may be included in Site fact sheets to promote public awareness of NYSDEC green and sustainable BMPs.

BMPs implemented as part of the SC and environmental impact reductions versus traditional field activity approaches are summarized below. Total reductions included 1 drum (0.24 tons) of soil IDW saved, 1.15 pounds of cardboard saved, 194 gallons of gasoline saved, 2.9 gallons of diesel saved, 2,772 miles of travel saved, and 1.732 tons of carbon dioxide (CO_2) emissions saved.

BMP 1) Efforts were made to reduce sampling locations by using data visualization techniques to refine the conceptual site model and scope of work for this project. These efforts considered investigation-derived waste (IDW) generation and combustion emissions associated with Site mobilizations and drill rig operations. The implementation of this BMP influenced the succeeding BMPs listed below.

BMP 2a) Efforts were made to schedule Site visits and field work to reduce energy consumption and air emissions associated with mobilizations to and from the Site. Specifically, property access was coordinated to conduct the two February 2023 off-site SVI structure sampling events in one mobilization from HRP's office (as opposed to two separate mobilizations). In addition, the February 2023 GPR survey was conducted at the same time as the February 2023 SVI structure sampling events (as opposed to a separate mobilization). Additionally, the August 2023 GPR survey was conducted in the same mobilization as the soil vapor point installation. This BMP saved three round trips to the Site from HRP's Clifton Park office reducing gasoline consumption by 74.22 gallons and reducing CO_2 emissions by 0.72 tons.

BMP 2b) HRP personnel "car-pooled" by sharing a vehicle during the 2023 and 2024 SVI mobilizations which require two people per visit, reducing energy consumption and emissions associated with taking multiple vehicles to the Site. This BMP saved four round trips to the Site from HRP's Clifton Park office reducing gasoline consumption by 99 gallons and reducing CO_2 emissions by 0.96 tons.

BMP 3a) To reduce investigation derived waste (IDW), 30 feet of soil borings were installed using the direct push drilling method instead of installation via hollow-stem augers. This BMP saved 4.41 cubic feet of IDW and 0.24 tons of soil from disposal.

BMP 3b) The need for off-site disposal of IDW was eliminated by implementing BMP 3a (above), which saved one round trip for the IDW disposal subcontractor, reducing gasoline consumption by 21 gallons and reducing CO_2 emissions by 0.020 tons.

BMP 4) To reduce energy consumption associated with drill rig operation, exterior soil vapor points were installed using direct push methodologies instead of hollow-stem augers. This BMP saved 2.4 gallons of diesel and 0.027 tons of CO_2 emissions.

BMP 5) To reduce energy consumption associated with drill rig operation, the drill rig was shut off when not in use. This BMP saved 0.5 gallons of diesel and 0.0056 tons of carbon dioxide CO_2 emissions.

BMP 6) To reduce waste, cardboard generated from labware (summa canisters) was reused for return shipments to the laboratory. This BMP reduced waste cardboard by 1.15 pounds.

4.0 FINDINGS

To identify SVI pathways to off-site receptors, HRP submitted sub-slab soil vapor, indoor air, and ambient outdoor air samples to Pace a NYSDOH ELAP-certified laboratory for analysis of TO-15 VOCs. VOC detections in SVI structure samples and exterior soil vapor point samples collected as part of the SC are presented in **Tables 1** and **2**, respectively. Laboratory analytical reports (for exterior soil vapor point data only) are included in **Appendix E**. A NYSDEC-approved data validator, Environmental Data Services, provided data validation services for this project. DUSRs (for exterior soil vapor point data only) are included in **Appendix F**. The SVI structure sampling laboratory analytical reports and DUSRs included addresses of private properties, and have been removed from this report. A general description of the analytical results is provided below.

4.1 Standards, Criteria, and Guidance Values (SCGs)

Compounds detected in the sub-slab soil vapor and air samples collected during this SC were compared to the following SCGs:

- All SVI structure sampling analytical results were compared to the May 2017 NYSDOH Soil Vapor/Indoor Air Decision Matrices A, B, and C; and 2024 samples were compared to the February 2024 NYSDOH Soil Vapor/Indoor Air Decision Matrices D, E, and F in addition to Matrices A, B, and C. Cumulatively, matrices A through F are herein referred to as the "Decision Matrices." The Decision Matrices provide recommended actions based on the concertation of eight CVOCs and 13 petroleum-related VOCs in the indoor air in conjunction with the concentrations found in the sub-slab soil vapor samples. The eight CVOCs included in Decision Matrices A, B, and C are PCE, TCE, cis-1,2-DCE, 1,1,1-TCA, 1,1-dichloroethene (1,1-DCE), carbon tetrachloride, methylene chloride, and vinyl chloride. The 13 petroleum-related VOCs included in Decision Matrices D, E, and F are benzene, ethylbenzene, naphthalene, cyclohexane, isooctane, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, o-xylene, m-xylene, p-xylene, heptane, hexane, and toluene. Recommended actions include "No Further Action," "Identify Source(s) and/or Resample or Mitigate," "Monitor," and "Mitigate."

- Indoor air sampling results were compared to Air Guidance Values (AGVs) and Immediate Action Levels identified in NYSDOH's *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, *October 2006,* and subsequent updates. NYSDOH provides AGVs for the CVOCs PCE, TCE, and methylene chloride, and immediate action Levels for PCE and TCE.

4.2 Soil Vapor Intrusion Structure Sampling

SVI structure sampling was conducted at two properties as a part of this investigation. During the investigation, NYSDOH questionnaires were completed to record details regarding each building's use, construction, ventilation, as well as an inventory of chemical products stored within the building, and a sketch of building floor plans. The SVI structure sampling field forms and laboratory analytical reports included addresses of private properties, and have been redacted from this report. SVI structure sampling analytical results and Decision Matrices recommendations for each location are presented on **Table 1**. Observations relevant to identifying SVI exposure pathways and analytical

results from the sub-slab soil vapor and air samples collected for EPA Method TO-15 analysis are summarized for each property below.

Property 1

Observations
A mixed-use residential/commercial building is located at Property 1. The basement is constructed of a concrete slab floor and finished sheet rock walls. Both the concrete floor and the basement walls were found to be in good condition. The basement area is used as an entryway to the building, a laundry room, and an elevator machine room.

The chemical inventory of the building found laundry detergents, dryer sheets, and bleach. The chemical products were located in the laundry room and regularly rotated as it is a communal laundry room for the residents in the building.

Analytical Results
Carbon tetrachloride was detected in the basement indoor air sample at a concentration of 1.2 micrograms per cubic meter (µg/m³). Based on the carbon tetrachloride concentrations detected in the basement indoor air sample, the Decision Matrices recommend "Identify Source(s) and Resample or Mitigate." Based on studies of residential homes (as summarized in the USEPA Compilation of Background Indoor Air Studies), the concentrations detected in the basement indoor air sample collected at Property 1 exceed the 95th Percentile concentration (1.1 µg/m³) for carbon tetrachloride. Carbon tetrachloride has historically been used as a solvent in household cleaning products (USDHHS, 2005). Carbon tetrachloride has also been found within the headspace of chlorine bleach (sodium hypochlorite)-containing products, and the formation of carbon tetrachloride has been shown to increase when chlorine bleach is mixed with surfactants or soaps (Odabasi, 2008). Carbon tetrachloride was not detected in the sub-slab soil vapor sample collected at the property, and the basement indoor air sample was collected near an active laundry room used by tenants of the building. Within the active laundry room, indoor air may be impacted due to potential bleach and surfactant/soap reactions either via mixing during input or residual bleach/detergent agitation during wash cycles which could result in an elevated concentration of carbon tetrachloride in the basement indoor air. No contaminants of concern were detected at concentrations at which the Decision Matrices recommend further action. No VOCs were detected above AGVs or Immediate Action Levels in any of the indoor air samples collected at the property. Considering the concentrations of carbon tetrachloride detections in sub-slab soil vapor samples collected from off-site properties (non-detect – 4 µg/m³), and that carbon tetrachloride was not identified as a contaminant of concern in on-site investigations, the carbon tetrachloride concentrations detected in the basement indoor air sample collected from Property 1 are not indicative of SVI and may be attributed to consumer products, building materials, or furnishings at the location.

Property 4

Observations
A mixed-use residential and commercial use building is located Property 4. Three areas of the building were investigated (4-1, -2, -3) to account for the lateral extent of the building and the three concrete slabs.

Property 4-1

Observations
Property 4-1 is built on grade and is constructed of concrete walls and a concrete slab floor. The concrete floor was observed to be in good condition. The lowest level is primarily used as a storage room and a workshop for building maintenance staff, with tenant laundry facilities and a trash compactor also located on the lowest level.

The chemical inventory of the building contained dozens of products used for building maintenance which were stored in various conditions (open, partially used, etc.) including solvents, disinfectants, adhesives, bathroom cleaners, paints and primers, wood stain, water proofers, enamels, motor oil, antifreeze, stainless steel cleaner, window cleaner, lighter fluid, kerosene, herbicides, insecticides, wood glue, soaps, and degreasers. Empty gasoline storage containers were also found in the workshop area. During the 2023 sampling event, the ambient background concentration of VOCs in indoor air was detected at 1.7 parts per million (ppm) with an 11.7 eV PID within the workshop area.

Analytical Results - 2023
Methylene chloride was detected at a concentration of 78 µg/m³ within the workshop indoor air sample, a concentration at which the Decision Matrices recommend "Identify Source(s) and/or Resample or Mitigate." Based on studies of residential homes (as summarized in the USEPA Compilation of Background Indoor Air Studies), methylene chloride was detected at concentrations within the 90th Percentile (2.0-510 µg/m³). In addition, methylene chloride was detected at a concentration exceeding its AGV (60 µg/m³) in the workshop indoor air sample. Additional VOCs detected within the workshop indoor air sample included m, p-xylene (32 µg/m³), o-xylene (11 µg/m³), and toluene (100 µg/m³). Each of these VOCs were detected at concentrations at which the Decision Matrices recommend "Identify Source(s) and/or Resample or Mitigate." No contaminants of concern were detected at concentrations at which the Decision Matrices suggest further action.

Many different commercially available chemicals contain methylene chloride, xylenes, and toluene including paint strippers, adhesives, automotive care products, lubrication oil, aerosol and pesticide products, spray paints, and metal cleaning products. Many of these products were found within the workshop and were stored in various conditions.

Due to the concentrations of methylene chloride, xylenes, and toluene detected within the workshop indoor air sample described above, a resampling event was performed during the 2023-2024 heating season to confirm indoor air impacts were not related to SVI.

Analytical Results - 2024
Methylene chloride, xylenes, and toluene were not detected at concentrations which the Decision Matrices recommend further action during the 2024 resampling event. Other VOCs were detected in the sub-slab, indoor air, and outdoor air samples within the building at concentrations at which the Decision Matrices recommend no further action. No VOCs were detected above AGVs or Immediate Action Levels in any of the indoor air samples collected at the property. The workshop was not observed to be actively used for maintenance activities during the 2024 sampling event.

Considering the concentrations of methylene chloride, xylenes, and toluene detected in sub-slab soil vapor collected from the off-site properties, and that these VOCs were not identified as a contaminant of concern in on-site investigations, the VOCs detected in the 2023 workshop indoor air sample were likely related to use of consumer products in the workshop during the 2023 sampling event.

Property 4-2

Observations
The building consists of a basement which is constructed of concrete walls and a concrete slab floor. Both the concrete slab and basement walls were found to be in good condition. The basement is used as a boiler room. The chemical inventory of the basement was limited to spray paints and compressor oil.

Analytical Results – 2023
TCE and cis-1,2-DCE were detected at concentrations at which the Decision Matrices recommend "Identify Source(s) and Resample or Mitigate" within the building lobby first floor indoor air sample. TCE was detected at a concentration of 2.6 µg/m³ and cis-1,2-DCE was detected at a concentration of 2.1 µg/m³ in the building lobby. Based on studies of residential homes (as summarized in the USEPA Compilation of Background Indoor Air Studies), TCE was detected at a concentration within the 95th Percentile (0.56-3.3 µg/m³) and cis-1,2-DCE was detected at a concentration exceeding the 95th Percentile (non-detect to 1.2 µg/m³). Additionally, TCE was detected at a concentration exceeding its AGV (2.0 µg/m³). TCE and cis-1,2-DCE were not detected at concentrations in sub-slab soil vapor samples at which the Decision Matrices recommend further action and were not detected in the basement boiler room basement indoor air sample.

Due to the concentrations of TCE and cis-1,2-DCE detected within the building lobby indoor air sample described above, a resampling event was performed during the 2023-2024 heating season to confirm indoor air impacts were not related to SVI.

Analytical Results - 2024
VOCs were detected in the sub-slab, indoor air, and outdoor air samples within the building at concentrations at which the Decision Matrices recommend no further action. No VOCs were detected above AGVs or Immediate Action Levels in any of the indoor air samples collected at the property. TCE was detected at concentrations below Decision Matrices guidance values and cis-1,2-DCE was not detected in any sample collected from the central portion of the building during the 2024 sampling event.

Considering the concentrations of TCE (non-detect – 1.8 µg/m^3) and cis-1,2-DCE (non-detect – 3.1 µg/m^3) detected in off-site sub-slab soil vapor samples and that these CVOCs were not detected in any other indoor air samples collected from Property 4 or other off-site properties, the TCE and cis-1,2-DCE concentrations detected in the first floor lobby are indicative of SVI. The TCE and cis-1,2-DCE detections may be attributed to a transient source such as freshly dry-cleaned clothing brought into the building or from the clothing of a building resident or worker who uses solvents at work.

Property 4-3

Observations
Property 4-3 is built on grade and is constructed of a concrete slab floor and finished walls. Both the concrete slab and walls were found to be in good condition. The lowest is used as retail spaces and apartments. Samples were collected in an optometry office.

The chemical inventory of the building found toilet bowl cleaner and an aerosol air freshener.

Analytical Results
VOCs were detected in the sub-slab, indoor air, and outdoor air samples within the building at concentrations at which the Decision Matrices recommend no further action. No VOCs were detected above AGVs or Immediate Action Levels in any of the indoor air samples collected in building.

4.3 Exterior Soil Vapor Point Sampling

Observations

Permanent soil vapor point sampling was conducted at three newly installed vapor points north and northwest of the Site, along 82nd Street. No evidence of contamination (elevated PID readings, odors, sheen, staining, etc.) were observed during screening of soil. Locations of permanent soil vapor points are shown on **Figure 2**.

Analytical Results

VOCs, including PCE, were detected in each of the locations, but at concentrations which were not indicative of an increased potential for SVI impacts to adjacent buildings. PCE was detected in all three exterior soil vapor point samples at concentrations ranging from 0.660 J – 5.1 µg/m³. The PCE breakdown products TCE, cis-1,2-DCE, and vinyl chloride were not detected in the samples. Results from exterior soil vapor point sampling are presented in **Table 2** and are depicted on **Figure 5**.

4.4 Data Validation and Usability

Analytical data obtained during the SC were validated to evaluate the usability of the data. The Data Usability Summary Reports (DUSRs) indicated that all data was qualified as usable. Detailed information on data quality is included in the DUSRs in **Appendix F**.

5.0 CONCLUSIONS

The purpose of the SC is to is to characterize potential off-site groundwater and SVI impacts related to CVOC contamination which has been identified at the 124-22 Queens Boulevard, Kew Gardens Site, and to determine whether a Site poses a threat to human health and the environment, and whether the threat requires further investigation, or if sufficient information exists to make a decision regarding remediation at the Site.

The information collected during this investigation leads HRP to draw the following conclusion:

- No off-site SVI impacts were identified by sampling completed for the SC. At the two off-site properties where SVI structure sampling was performed, the NYSDOH Decision Matrices recommended "No Further Action" (Property 4) and "Identify Source(s) and Resample or Mitigate" (Property 1).

5.1 Data Gaps

- SVI structure sampling could not be completed at all the properties solicited during the SC, primarily due to lack of access granted by property owners. SVI impacts and potential exposure may exist in properties which could not be sampled within the off-site study area, particularly properties near the site and/or site-related contamination. The NYSDEC and NYSDOH will continue to solicit off-site properties for SVI structure sampling during future heating seasons through a long-term monitoring/tracking program.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by HRP Associates, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/09/2022 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/09/2022 has revealed that there are

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 18 NY UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

EXECUTIVE SUMMARY

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/09/2022 has revealed that there are 12 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

SWIS:	4101
Town:	New York City
Record Added Date:	08/24/2018
Record Updated Date:	11/16/2021
Update By:	GWBURKE
Site Description:	"Site description: This project (124-22 Queens Boulevard, Kew Gardens Site-Off-Site, C241177A) was created to investigate potential impacts at off-site from the 124-22 Queens Boulevard, Kew Gardens Site (C241177) using the State Superfund. Site Location: The off-site area is located in the immediate vicinity of the 124 22 Queens Boulevard, Kew Gardens Site and initially includes adjacent area between 82nd Avenue to the northwest, 82nd Road southeast and to the east Queens Boulevard. Off-site area is located in a residential and commercial area in the central portion of the borough of Queens in New York City. Site Features: The off-site area includes multi-storied commercial & residential structures and paved areas including sidewalks. Current Zoning and Land Use: The general area of the BCP on-site area is zoned for C4 4 district. The surrounding parcels are currently used for a combination of commercial, residential and governmental use, as well as utility right of ways. Past Use of the Site: A portion of the site was used as a dry cleaner from 1986 until 2015. The surrounding area has/is used for residential and commercial purposes. Site Geology and Hydrogeology: Off-site area yet to be investigated. However, subsurface soil beneath the on-site consists of orange fine sands and silt down to approximately 9 feet in depth. After that depth, a gray to black layer of silty clay was encountered. Groundwater elevations at the site were encountered at around 65 feet bgs, with a flow generally towards the south. "
Env Problem:	"There is currently no information available for the off-site area associated with the BCP site; this section will be revised as additional information becomes available. This site represents an off-site project to investigate the area surrounding, and downgradient of, BCP Site C241177 (124-22 Queens Boulevard, Kew Gardens Site-Off-Site). Nature and Extent of Contamination: Based upon the subsurface investigations conducted to date, the primary contaminants of concern for the BCP site (C241177) are chlorinated volatile organic compounds (CVOCs), including tetrachloroethylene (PCE) and its breakdown products trichloroethylene (TCE), dichloroethene (DCE) and vinyl chloride (VC). CVOCs were therefore the focus of the investigation for the off-site project. Soil: The highest PCE concentration (510 ppm) in one soil sample collected at a depth of 16 to 18 feet bgs. PCE also detected in several soil samples collected from shallower depths just below the former basement slab ranging from 1.5 to 35 ppm. Groundwater - PCE and its associated degradation products were found in groundwater throughout the site in

124-22 QUEENS BOULEVARD, KEW GARDENS SITE-OFF-SITE (Continued) **S123159095**

	excess of their individual groundwater standard (typically 5 ppb). The maximum concentration of PCE at the site was 1300 ppb. As noted, degradation products were also found, with TCE (max. 2100 ppb), DCE (max. 2000 ppb) and VC (max. 430 ppb) also being detected in several groundwater samples in excess of standards. Soil vapor: Eight soil vapor samples were collected and analyzed during the RI. The extent of CVOC soil vapor impacts was evident in all samples. PCE was detected in all soil vapor samples at concentrations ranging from 430 to 250,000 micrograms per cubic meter (ug/m3). The highest concentration of PCE in soil vapor was detected proximate to the former dry cleaning machine area. TCE contamination ranging from 19 to 4300 ug/m3. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Hazardous Waste Summary:

Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	U228
Waste Description:	ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Town:	New York City
Record Added Date:	08/24/2015
Record Updated Date:	01/08/2021
Update By:	JCGRATHW
Site Description:	"Site Location: The 124-22 Queens Boulevard, Kew Gardens Site is 0.179 acres and is located in a residential and commercial area in the central portion of Queens, NY. The site is on the west side of Queens Boulevard between 82nd Avenue and 82nd Road. Site Features: The site had a two-story commercial building with partial basement that was demolished during 2017. The building had four commercial units that were previously occupied by a former dry cleaner, and three vacant units. The building had a footprint of approximately 4,800 square feet and was built in 1951. Approximately 2900 square feet of unpaved area existed behind the building. During the 2017

124-22 QUEENS BOULEVARD, KEW GARDENS SITE (Continued) **S118372387**

	Interim Remedial Measure (IRM), the slab and most of the contaminated soil was excavated and disposed off-site. Current Zoning and Land Use: The site area is zoned C4-4 (commercial). The surrounding parcels are currently used for a combination of commercial, residential and governmental use, as well as utility rights of way. Past Use of the Site: A portion of the site was used as a dry cleaner from 1986 until 2015. Past use of the remainder of the site was mainly as commercial and office space. Site Geology and Hydrogeology: Subsurface soil beneath the site consists of orange fine sands and silt down to approximately 9 feet in depth. After that depth, a gray to black layer of silty clay was encountered. Groundwater at the site was encountered at around 65 feet below grade surface (bgs), with a flow towards the north. "
Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern were chlorinated volatile organic compounds (CVOCs), including tetrachloroethylene (PCE) and its breakdown products trichloroethylene (TCE), dichloroethene (DCE) and vinyl chloride (VC). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

DEC Region:	2
DER Facility ID:	175517
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY 06/23/95: BATTISTA WAS ORIGINAL LEAD. TRANSFERRED TO DGS MONITOR. SMM. 5-19-2012 Contacted S. Frank of LiRo. Conveyed the existing info and requested to investigate. He will get back to me in 3-4 weeks. AZ 1-7-2014 The following e-mail was sent to S. Frank/V. Brevdo: Dear Steve, I have reviewed a Work Plan to investigate the reported #4 fuel spill. The Work Plan is approved. A visual inspection of the piping and fill ports should be performed. If piping and/or fill ports are found they should be investigated. If contamination is found during the investigation it has to be fully delineated. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alexander Zhitomirsky 6-12-2015 Reviewed an investigation summary report for this site dated February 26, 2015. The report stated that three wells were installed. No contamination was encountered. However, the wells are installed at a distance from the presumed location of the tanks. The exact location of the tanks is unknown. I have contacted S. Frank over the phone and we discussed the site. S. Frank will ask LiRO's personnel to inspect the site and see if it is feasible to install wells closer to the tanks. AZ 4-4-2016 Reviewed an investigation summary report for this site dated November 9, 2015. The report stated that three wells were and one soil boring were installed at the site. No contamination was encountered. However, the wells are installed at a distance from the presumed location of the tank. The exact location of the tank is unknown. According to LiRo, due to the physical footprint of the restructured Site building, court administration restrictions and subsurface utility obstructions, additional soil or groundwater sampling in closer proximity to the former UST is not possible. LiRo recommended closure of this spill. I concur with this recommendation. AZ 4-4-2016 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Spill Closure Request dated November 9, 2015. The report stated that three

125-01 QUEENS BLVD/QUEENS (Continued) **S100145071**

wells and one soil boring were installed at the site. No contamination was encountered. However, the wells are installed at a distance from the presumed location of the former tank. The exact location of the former tank is unknown. According to LiRo, due to the physical footprint of the restructured Site building, court administration restrictions and subsurface utility obstructions, additional soil or groundwater sampling in closer proximity to the former UST is not possible. LiRo recommended closure of this spill. Based on this information, I concur with this request. This spill is closed The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

CON EDISON MANHOLE: 1351 (Continued) **1017778911**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	34633
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
E00 - Piping Secondary Containment - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/26/1973
Capacity Gallons:	7500

DEC Memo:	"05/28/19-Hiralkumar Patel. 9:21 AM:- spoke with Scott Sterling at Metro Env. they tested that tank system which failed in wet portion. Metro sent email to their client and informed them about test failure and suggested to remove product, but has not received any response yet. asked Scott to submit copy of test result and property owner's contact info. PBS #: 2-349313, 2-601479 as per PBS # 2-349313, the site has one (1) 10,000 gal #2 oil UST, converted to non-regulated use in June 1994. as per PBS # 2-601479, the site has one (1) 5,000 gal #2 oil UST, in-service, installed in Jan. 1987. other spill #: 0402081. the spill was reported on 05/25/2004 as a 10,000 gal #2 oil tank system failed in wet portion. during further investigation, slow leak was noted in petrometer line. the tank system was tested tight after repairs. case closed. 10:15 AM:- spoke with Ms. Allan, property manager. she mentioned that the 5,000 gal tank system was tested prior to a refinance process. the failed system was pumped out on 05/24/19 for further investigation/repairs. 45 Kew Gardens Owners, Inc. **property owner** c/o Century Management Services Inc. 440 9th Ave,15th Floor New York, NY 10001 Attn.: Cynthia Allan Ph. (212) 560-6463 email: callan@centuryny.com 10:32 AM:- sent letter to Ms. Allan requiring report submission by the end of 07/14/19. letter emailed to Ms. Allan. case assigned to DEC Sekhon. 7/3/19 - Sekhon Mark - Mercury Tank - 917 -559 5519 mlsalamack@aol.com Environmental contractor told that On 6/27/19,the tank was washed out and on 28th the tank was entered and it was discovered that the tank had been previously epoxy coated. The tank is an underground tank located under the 82nd avenue entrance path to the building. When the grade level cover was opened it was noted that the tank itself is in extremely compromised condition. No obvious signs of leakage were found below the top area of the tank, it is obvious that water had accumulated in the area above the tank in the vicinity of the manway for many years, contributing to the poor condition. All the lines were individually tested from inside the tank and found to be tight. The tank itself was isolated and tested and the tank by itself did fail a test. 7/9/19 - Sekhon samples to lab, waiting for results. 7/24/19 - Sekhon Submitted sample results reviewed/discussed with DEC

RESIDENCE (Continued) **S106471753**

Kumar and are in acceptaple range. and lines are separately tested, no leaks. Results DEcDOCs. 7/25/19 - Sekhon Results forwarded to DEC Leszek for his review. 8/15/19 Sekhon email response from DEC Leszek on 8/15/19 (8:19am) Harmandeep, The test results are acceptable, and you can close the spill if you are comfortable with this. After you close spill 1901919, could you email Mark at mlsalamack@aol.com that the spill is closed? Also, in the email, please inform him that before tank closure, the owner needs to email a pre-work notification to pbs.r2@dec.ny.gov. After the tank is closed, an application must be submitted to the address displayed in Section A of the attached pre-work application. Documentation of proper closure should be provided, including a copy of the tank closure affidavit by the contractor, photos, invoices, job tickets, bills of lading, or disposal manifests. For a tank closed in place, also provide evidence that the tank was filled to its capacity with inert solid material. Thanks, Leszek 10/28 - Sekhon PBS - 2-601479 (closed on 10/3/19) Required documentation submitted, discussed with DEC Leszek and are acceptable. DECDOCs. Spill closed. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 129065
DEC Memo: "4/1/09 - Austin - Transferred from Needs Reassignment to Zhune for further work to remediate and close - end 4/21/15-Zhune called Patricia Feeney (718)546-3090. Monik piked up the phone and said Patricia is out in the field and will be back at 2:00pm. Monik took the message and will give it to her when she is back. Patricia.feeney@doc.nyc.gov 8/2/15-Zhune emailed Patricia requesting the spill closure documentation. 9/15/15-Patricia Feeney Assistant Comissioner from NYC Department of correction sent the following documentation. Accoding with the letter of affidavit. On January 13, 2002 Gemstar Contruccion Corporation purged, cleaned and property disposed of one 5000 gallon underground storage tank incluiding all associated piping at 126-06 82nd Avenue and all work was performed according to Federal, State and local regulations as well as manufacturer specifications. 4/4/16- Zhune spoke to Patricia. Patricia said the construction management was unable to find more information (borings)regarding the closure of the tank. I Let her know that a letter is going to be send it with requirements. she gave me her address. 4/13/16- A CSL letter was sent to: Patricia Feeney 17-41 Hazen Street East Elmhurst NY 11370 4/3/18-The tank was removed 16 years ago. No spill found, no documents are available, except the tank replacement documents, which were uploaded in D2. This spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, and no information that this tank test failure will be an issue in the future . Spill closed. "
Remarks: "TANK IS BEING PUMPED OUT - WILL DO A TANK ONLY TEST AND THEN A TEST OF THE LINES WILL BE DONE TO DETERMINE WHERE LEAK IS."

DEC Memo:	"4/5/2017 - Feng - Duty Desk. Spoke to Stephen Frank of LiRo Engineering (718-321-3136 x423). There is one excavator with broken arm and hydraulic fluid leaked to the soil, estimated to be 3-5 gallons. Plan to get another machine to bring that excavator out and try to remove the soil and drum it. Expected this should have been done while we speak. He will make a call and get back to me with more info. email from Stephen Frank Hi June,I attached a photo showing the broken piece of equipment. Unfortunately, there was an injury when the machine fell and because of that, NYC Department of Buildings issued a Stop Work Order and the broken equipment cannot be removed (and the soil removed) until the City s investigation of the accident is completed. I expect it will be at least two or three days. I will let you know when the Stop Work has been lifted and the removal work can begin.Feel free to call me if you have any questions. Steve 5/5/2017 - email from Stephen Frank Hi June,The site is still under a Stop Work Order from Department of Buildings. I will let you know if I hear anything about how much longer it may be. Thanks Steve 5/31/2017 - Feng - This spill is transferred from June Feng to Jeffrey Vought as per Jeffrey Vought. 7/14/17-Vought-Message on Duty Desk phone from Steve Frank(Liro email:FrankS@liro.com Ph:716-882-5476x423) inquiring as to who new Project Manager for this spill was. Vought returned call and left message with contact information and request to return call. Vought received call from and spoke to Frank and the equipment was removed and two drums of soil were removed. Pilings are being installed and future us of site will be a parking lot for Queens Criminal Court House. No endpoint samples required byu Vought due to future use as parking lot, minor amount of spill (3-5 gallons), and low VOCs associated with hydraulic oil. Spill closed by Vought. Vought sent copy of closed spill report to Liro(Frank) via email."
Remarks:	"Spill to the soil. Clean up pending."

MANHOLE # 628 (Continued) **S104511432**

Spiller Company: 999
Contact Name: RICHARD ROACH
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis #130681 Notes: 4-1-00 1225hrs 1qt unknown oil on 100gal water in manhole 628. There is a regualtor tank in the hole. Sample taken. Flush truck was contaminated while flushing hole and will be quarantined at College Point Yard. 4-1-00 Vactor remains on location until results are back. Entire structure was double washed and rinsed using slix and citrus cleaner. All solids and liquids removed using vactor. Requested troubleman to inspect structure for source of oil. No source was found. Observed no oil, only soot from burnout. 4-1-00 1930hrs LSN 00-03110 16ppm PCB DEC Notes: Fire. No mention made in caller remarks about fire. Being treated as hazardous. 4/1/00 Manhole fire affected 2 PILC feeder cables. These feeders service 4 hospitals in the area. Con Ed crew saw sheen in manhole after fire was extinguished and assumed >50ppm PCB since this is an emergency and they can't wait for sample results. Used flush truck to empty manhole. Truck is staying on-site until results are received. If clean, will go to 3rd Ave Flush facility. If contaminated, to Astoria for de-con. (JHO) 4/12/00 Sent letter regarding report to hotline that did not mention fire condition."
Remarks: "ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION ON TOP OF 100 GALLONS OF WATER. AMOUNT REPORTED AS 1 QUART. SAMPLE TAKEN AND CLEANUP IS PENDING LAB RESULTS. CON ED # 130681 - NO CALL BACK REQEUSTED."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"01/17/14-Hiralkumar Patel. after discussing with DEC Vought, case transferred from Vought to Patel. notes from 06/13/1994 to 01/17/2014 are on e-docs due to space limitation. 05/19/14-Hiralkumar Patel. alternate addresses: none. no PBS record found. other spill # 9402791 was reported on 05/26/1994 as 350 gal #2 oil released due to leak in oil line. case closed and merged with the subject spill case. Michael Losak / Zhen S. Losak **property owners** 117 82nd Avenue Kew Gardens, NY 11415-1423 PH. (516) 605-4732 (C) (631) 927-6564 (O) email: mlosak@poly-pak.com reviewed available documents. summary: - one 1,000 gal UST was tested on 06/13/1994 and found leaking - the UST was removed on 06/15/1994 - tank excavation was 26 ft deep - tank was found in good shape and leak was suspected from plumbing joints (fill and vent line connections) - found contamination in endpoint samples - soil contamination noted in southern portion of the excavation, towards the building - STIP was signed in Jan. 1995, by property owner at that time ---------- - groundwater is located between 60 and 90 ft bg - SVE system was installed in past - two wells (MEW-1 and MEW-2) were installed in Feb. 1995. only one well MEW-1 was deep enough to intersect the water table - during well monitoring, free phase product noted in well MEW-1 first time in Mar. 1996 - property was transferred to current owner on 07/11/1996 ---------- - in Mar. 1997, five additional wells (MW-A through MW-E) were installed to delineate product noted in well MEW-1 - well MEW-1 (also listed as MW-1) is located in northwest of the former tank location - well MEW-2 is located in east of the former tank location. well MEW-2 is in area where contamination was noted in endpoint samples, but this well ends at 55 ft depth and does not go into water table - all other wells (MW-A through MW-E) are located in north, northeast and northwest of the former tank location - most product found in well MEW-1 and sometime in MW-B which is close to MEW-1 - well monitoring data available from Mar. 1996 to Aug. 2000 and then from Jun. 2009 to Nov. 2009 - as per two invoices from Milro (dated 01/02/2001 and 09/10/2001), monitoring wells were monitored until Feb. 2001. as per the last invoice dated 09/10/2001, all wells were found clean on 02/24/2001 ---------- - there are no invoices between 09/10/2001 and 01/11/2009 11:41 AM:- spoke with Donna Amoscato at EnviroTrac. informed her that the last update report from EnviroTrac is dated 12/22/2009 which includes summary of work done till Nov. 2009. asked her to submit an update report for work done since Nov. 2009. 2:44 PM:- spoke with Mr. Losak, property owner. informed him about case status. 4:00 PM:- visited site. found three monitoring wells: MW-A, MW-C, MW-D. could not find wells (MW-1, MW-2, MW-B and MW-E) which were located in former tank area. a vent pipe is located along building's northern foundation wall. 05/20/14-Hiralkumar Patel. 10:28 AM:- spoke with Dave. asked him to schedule well gauging and sampling. 05/29/14-Hiralkumar Patel. 10:15 AM:- visited site. met Dave. he located all wells. while removing previous installed sock in MW-1, string broke and sock stucked around 30 ft depth. Dave mentioned that a drilling machine is needed to

117 82ND AVE (Continued) **S101174404**

remove the sock from well MW-1. found around 0.4 ft of product in well MW-B. no product found in other wells. groundwater was found at different depths: around 45 ft in well MW-2; around 60-65 ft in wells MW-1 and MW-B; around 75 ft in well MW-E; and around 90 ft in wells MW-A, MW-C and MW-D. Dave bailed product from well MW-B prior to my arrival to the site. well MW-B was gagued again, but very minor product found on water. based on available information, asked Dave to collect following samples: - product sample from MW-B for fingerprint analysis - groundwater sample from wells MW-A, MW-B, MW-C, MW-D, MW-E and MW-2 06/10/14-Hiralkumar Patel. 10:14 AM:- received email from Donna from EnviroTrac including report for work done in 2010. 06/23/14-Hiralkumar Patel. received email from Shalini Isaac (shalini.isaac@testamericainc.com) from Test America including groundwater/product sample results. found some SVOCs (max: 700 ppb of Phenanthrene) in well MW-B only. no contamination found in other samples. fingerprint result shows sample closely resembles to #2 fuel oil. 2:21 PM:- sent email to Ms. Haas at TestAmerica including standby contractor authorization form. sent original in mail. 07/03/14-Hiralkumar Patel. 10:48 AM:- approved EnviroTrac invoice # DC2029.00-13 for project management, site visit and groundwater sampling. 7/30/14-Vought-Contract Payment Package (Test America Labs) dated 7/7/14. Work included analyses including product identification and soil/groundwater analyses. Vought approved invoice as DEC Patel out of office for extended period. 08/19/14-Hiralkumar Patel. approved EnviroTrac invoice # DC2029.00-14 for project management, review of old data and site visit for well gauging and sampling. 08/29/14-Hiralkumar Patel. approved EnviroTrac invoice # DC2029.00-15 for report preparation. 10:53 AM:- spoke with Dave and inquired him about the report. he will submit report soon. 09/02/14-Hiralkumar Patel. 11:06 AM:- received email from EnviroTrac including update report. 10/28/14-Hiralkumar Patel. approved EnviroTrac invoice # DC2029.00-16 for report submission. 11/05/14-Hiralkumar Patel. discussed with DEC Austin. he asked to review following data: - distance of water supply well from the site - boring/well logs for soil type beneath the site - product thickness in well(s) reviewed available information. the closest possibly active water supply well (near Bessemer St and 116th St) is within 1 mile from the site. boring/well logs shows presence of silty sand with cobbles and boulders from ground level to 87 ft bg. free phase product was mostly found in two wells: MEW-1 and MW-B. these both wells are installed in area of former tank. product thickness in these wells MEW-1 (aka MW-1) and MW-B were minimal at the end of 2000. when the wells were re-gauged in June 2009, more product was found in MEW-1 (0.23 ft) and MW-B (0.86 ft). weekly monitoring of the wells from June to Nov. 2009 showed less than 0.06 ft product in well MEW-1 only. after 2009, wells were gauged in May 2014, when 0.4 ft of product was found in MW-B. product thickness in MEW-1 could not be measured as absorbent sock in the well got stuck at around 30 ft bg while being removed. after reviewing available information, Austin asked to re-gauge all existing wells and remove any free phase product. 10:30 AM:- spoke with Dave and asked him to gauge existing wells and remove any free phase product observed. he will submit schedule. 12/09/14-Hiralkumar Patel. 1:46 PM:- spoke with Dave. he inspected site last week. he was able to remove stucked absorbent sock from well MEW-1, which had no oil on it. during gauging, found 0.03 ft product in well MW-B only. Dave will submit letter report next week. 12/17/14-Hiralkumar Patel. 1:45 PM:- received email from Dave including update report.

117 82ND AVE (Continued) **S101174404**

12/18/14-Hiralkumar Patel. discussed with DEC DeMeo. based on available investigation/remediation, no further work needed at the site. 9:21 AM:- sent email to Dave. informed him that no further work needed at the site. asked him to abandon the existing wells and to submit letter confirming well abandonment. 01/05/15-Hiralkumar Patel. 2:30 PM:- sent email to DEC Farrar including final ISR. email copied to DEC Austin and DEC DeMeo. 01/12/15-Hiralkumar Patel. approved EnviroTrac invoice # DC2029.00-17 for site visit and well gauging. 01/28/15-Hiralkumar Patel. approved EnviroTrac invoice # DC2029.00-18 for project management and report preparation/submission. 03/12/15-Hiralkumar Patel. as I was out of office, DEC DeMeo approved EnviroTrac invoice # DC2029.00-19 for well abandonment field work. 03/16/15-Hiralkumar Patel. case closed based on available information."

Remarks: "MARK TIBBE IS HANDLING. TANK WILL BE REMOVED. REFER TO 9402791 (that spill was closed and consolidated with this one)."

DEC Region:	2
DER Facility ID:	158187
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL GASOLINE CONTAMINATION FOUND DURING EXCAVATION OF TANKS. 3/24/05: Letter sent to Angel Chang, Con Ed: The Department has reviewed the referenced Remedial Investigation Report (RIR) prepared by LFR Levine Fricke, dated September 22, 2004. The RIR has also been reviewed by the New York State Department of Health (NYSDOH). During site investigation activities in February 2001, soil samples collected from the immediate vicinity of the former gasoline dispenser island indicated concentration of BTEX and related volatile compounds which exceed, but are within the same order of magnitude as, TAGM 4046 Recommended Soil Cleanup Objectives. This soil contamination appears to be confined to an area of approximately 20 feet long by 10 feet wide, and a depth of 7 to 23 feet below grade. Soils shallower than this depth were excavated and removed as part of the tank and pump island removal in 2000. Soil samples collected beneath this depth were non-detect for these same compounds. A maximum boring depth of 36 feet was reached without encountering groundwater. As a result of these findings, it was determined that

QUEENS BLVD CPP (Continued) **S102560394**

the only exposure route for these contaminants was through soil gas release to indoor air (to the parking garage in the adjacent building). In conjunction with NYSDOH, Con Ed and the Department developed a work plan to directly sample soil gas from beneath the basement slab of the building, as well as ambient air samples from various locations in the building basement (i.e., parking garage, stair well, boiler room, etc.). The results of these soil gas and ambient air samples are presented in the RIR. The RIR indicates that VOC concentrations in ambient air samples are generally equal to or greater than the VOC concentrations in soil gas beneath the building. The conclusion drawn is that residual gasoline contamination in the soil is not contributing to air quality in the basement - the major contributing factor appears to be operation of motor vehicles inside the parking garage. The Department and NYSDOH are in agreement with these conclusions. Removal of the remaining mass of contaminated soil in the vicinity of the former pump island is impractical due to the depth as well as engineering constraints (the contaminated soil is located immediately adjacent to the building foundation, hence the original concern about soil gas impacting indoor air quality). Based on the contaminant concentration and depth, coupled with the findings of the RIR, the Department concludes that no further action is required by Con Edison to investigate or remediate this site. Spill # 9712141 will be closed. (JHO)"

Remarks: "tank was removed on above date dec rep jane oconnell was on scene at that time no spill was reported per her order now a spill has been determineed to have occured calling for number "

Tank Info:

Tank Number:	001
Tank Id:	18934
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)

THE CLASSIC AT KEW GARDENS (Continued) **A100321670**

J02 - Dispenser - Suction Dispenser
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	10000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	02/15/2007
Register:	True

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

NYSDEC Petroleum Bulk Storage Permit #2-207322 needs to be updated - Property Manager needs to contact NYSDEC Permit Office at 718-482-6454 5-6-14 Dupigny Notes from Sangesland left phone voice message 10/27/11 8/05/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. 8/17/2015: Rashad As per NYC building records 119-49 Union Turnpike has alternate addresses of 118-24 Queens Boulevard, 118-30 Queens Boulevard, 119-45 Union Turnpike, and 119-67A Union Turnpike. According to PBS# 2-207322 there is a 5,000 gallon #2fuel oil underground tank. The last test date was 9/20/2010 and the next test date is 9/20/2015, the spill report is dated 9/3/2010. There are 2 other closed spill cases for this site, spill#9704594 dated 7/16/1997 and spill#1310301 dated 1/27/2014. Spill#9704594 summary indicates that spill occurred from fill vent onto sidewalk however when DEC Raphael inspected sidewalk, concrete had been replaced also Raphael indicated I visited the boiler room in the basement and saw that the area was also clean and odor free , spill was closed on 1/22/2007. Spill#1310301 summary indicated overfill of tank which led to spilling into basement, adjacent businesses were evacuated until product was removed and odor had dissipated, All boro and DEC discovered that the vent pipe was had corrode over time and had several leak spots. Summary of All Boro Reports from D2 indicates tank was repaired and pass tank tightness test, excavation of the concrete surrounding the oil lines took place, soil samples were taken and case was closed as per Mahat on 1/21/2015. Spill will be closed due to previous spill case#1310301 which remediated the same site and tank (PBS registration has one 5,000 gallon tank at location), including soil testing and tank

Driver stuck tank with the superintendent of building. Driver measures 30 inches before delivery...delivered 889 gallons...measured 40 inches after delivery. Tank size 64 inches

BOULEVARD TOWERS CONDOS (Continued) **U003128066**

- 5k tank. Spill from vent. 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 10/20/06 - Raphael Ketani. Mr. Baricko of Mystic Transportation (718) 932-9075 was the contact in 1997. Charles Boettiger (718) 932-9075 was another contact. The driver of the fuel truck stuck the tank and could only account for 3000 gallons of the 5000 gallon capacity. The site is: Boulevard Towers Condominiums, 119-49 Union Turnpike, Forest Hills, 11375. From the PBS record #2-207322, the manager is: Carlton Management, 8747 Marengo Street, Holliswood, NY, 11423. The phone number is (718) 479-9393. I could only leave a voice mail at the Carlton phone. So I sent CSL letters to both parties. 1/12/07 - Raphael Ketani. I have not had any response from the condo corp. or the management company. I sent a strongly worded CSL to both parties. 1/19/07 - Raphael Ketani. Fran Goldin of Andrea Bunis Management (212) 302-5544, 45 W. 45 Street, NY, 10023, called to say that her company took over management of the building 2 years ago and they have no documentation. She said the super. is Erol (646) 763-2210 or (718) 793-5775 and he remembers a little about the situation. She said that Carlton Management may have the documentation. She asked to be called if Carlton does have something. I managed to contact Sheila Lamia at Carlton. She said that Carlton transfered all of their records to Andrea Bunis. I called Ms. Goldin back and she said that she will look again in her files. 1/22/07 - Raphael Ketani. I went to the site and met Erol. He said he was there and remembers the spill. He said that it was not a problem with the tank, but a large spill on the sidewalk. He said that there are two oil fill ports in the sidewalk and a vent pipe in front of the building. He showed me them and I took pictures. He said that when the oil delivery guy comes, he pumps lots of oil very fast. So in order to get all of the air out of the tank, you have to open the fuel port nearest the building. Otherwise, it will not fill properly. He said that two times in the past, the most recent in 1997, the delivery guy pumped the oil into the fill port nearest the building, rather than the fill port by the edge of the street. He said that this caused the air not to come out, but instead oil. He said lots of oil spilled out the vent pipe and all over the sidewalk and the street. He said that the fire department had been there to clean up the mess, as well as a cleanup company. I looked around and noticed that there was a lot of recently (maybe past 5 years or so) poured concrete sidewalk. Erol said that all of this concrete had been replaced due to the spill. The area was absolutely clean. I visited the boiler room in the basement and saw that the area was also clean and odor free. Based upon my inspection, and my conversion with Erol, I am closing the spill case. "

Remarks: "DRIVER STUCK TANK WITH BLDG OWNER PRESENT-AFTER FILLING HE COULD ONLY ACCOUNT FOR ABOUT 3300 OUT OF 5000 GALLONS OF OIL.POSS CAUSE IA A LEAK TO THE VENT PIPE"

DEC Memo:	"1/27/14: Mahat DEC Demeo and DEC Mahat responded to the spill. It was over fill due to double delivery on the site. First, Chief Oil Company made the delivery (Unknown amount but more than 2500gallon) and few hours later Summit Transport made another 2700 gallon. The tank was UST and it holds 5000 gallon. Tank was overfilled during the second delivery. Super of the building (Erol Halili @ 646.763.2210) was on the site during the second delivery. When delivery personnel and Super acknowledge the leak from the vent pipe they stopped the fueling. Shortly after that they went down to check the basement which was flooded with fuel oil. Sean Sinnerich (Building Manager @ 718.997.6211 & 516.216.9124(c)) told that the tank was tested for tightness two years ago. Summit called in for the spill and retained All Boro for cleanup response. Fuel oil on the basement travelled to the Basement side of the Chase Bank area and created some odor/vapor issue. Fire Department was on the site and advise Chase to use ventilate the area. Chase was temporarily shut down because of the strong vapor issue. In addition, Starbucks next to chase was also felt few vapor issue and voluntarily evacuated. Candes Naves (Starbucks Manager @ 718.290.7057) DEP (Alex Catro @ 347.865.1238) was on the site for the inspection of the illegal connection of the

BOULEVARD TOWERS CONDOS (Continued) **U003128066**

storm drainage system. He is transferring the case to the Connection Department within DEP. Access to the Chase back basement was provided by Steven Triferi (Chase Engineer @ 646.739.1369). Also, Chase property manager Jack Ronaldi (@ 917.529.4940) was on the site to for his part of investigation. Currently, All Boro crews are cleaning all the fuel oil and associated impacts on the basements. Order has be reduced with some ventilations. And they are also working on test the tightness of the tank. Initial attempt for the tightness test was failed because of the some lean along the pipe lines. Tank along test was not able to performed because of the tank was buried underground leaving a manhole. All Boro and DEC discovered that the vent pipe was had corrode over time and had several leak spots. Now, they are working on to track down the vent pipe connection to the tank and perform the TT. It also, appears that the soil above the tank is contaminated due to the tank overfills. At the end of the day, it was discovered that the fill line was corroded and could not pass the TT. DEC required them to emptied out the tank. Pictures that are associated with the spill and the tank are uploaded on the edocs. 3/5/14: Mahat E/C: An email was received from Mr. Quintana with drum manifest including few pictures. Pictures were of the trench pipe that was cut off before entering the sump pump. Picture illustrate that the rain/storm water was not entring the building which eventually will lead to the NYC sanitary system. 12/03/14: Mahat e/c: A closure report has been submitted to the Department. It has been uploaded on D2 for reference. Report contain : manifest , end point sample, TT result (Passed) and spill closure request. Report is in review. 1/8/15: Mahat e/c : DEC Mahat sent an email to Mr. Quintana in after reviewing the closure report dated November 2014. Mr. Quintana, The Department has reviewed your closure report dated November 26, 2014 for above spill case. Following items are missing on the report: 1.Ground water level/datum. 2.Chain of custody for sample # 1 and sample #2. 3.Eligible/Printed name on the manifest. Please submit a complete closure report including missing item DEC is waiting for a complete closure report. 1/16/15: Mahat DEC Mahat reviwed the closure report. 1/21/15: Mahat DEC Mahat reviewd the case. End point samples were below CP51 guidance value. UST area was over excavated before taking any samples. Ground water is below 14 feet below the froind level and exvacation was perfromed upto 10 feet below the ground. Hence, this provide an indication that ground water has not been impacted by the spill event. No further remediation and delination action plans is required by the Department. Hence, the spill case will be closed in the database. "

Remarks: "Oil spilled to a concrete basement. Clean up is pending crew arrival."

NYC DOT KEW LOOP YARD (Continued) **S105055112**

Remarks:	this spil report. Prject reassigned to Ketani for review of document to determine if the matter can be closed out. -end 7/11/08 - Raphael Ketani. The case does not have a paper file and there are no E-docs. Mr. Austin gave me a package of documents containing a cover letter from ROUX Associates, a print out of the spill report, a 7/11/2003 letter from SHAW Environmental regarding the removal of a tank, and accompanied by the soil analytical results, and soil sampling map, and a PBS print out. I closed out an earlier spill case for the same site and the same tank. The case is #0009835. I reviewed the soil analyticals from the SHAW report. There were no VOC hits, and only some low level SVOC hits which were below TAGM limits. Most of the SVOC hits were the benzo series of the analytes. Based upon the analytical results in the SHAW report, I am closing the spill case. " "tank test failure"

Date Record Added:	09/24/2019
Date Rec Updated:	01/23/2020
Updated By:	LSZINOMA
Site Description:	"Location: The Long Island Railroad (LIRR) Kew Gardens site is an electrical substation for the Long Island Railroad. The site is located 200 feet west of the intersection of Austin St. and 84th Rd. in Kew Gardens, Queens. It is located in an urban area bordered by LIRR tracks to the south and west and by large apartment buildings to the north and east. Site Features: The site is approximately 0.25 acres in area and includes an 1800 square foot, one story brick building and a 3100 square foot transformer yard. The entire site is fenced and inaccessible to the public. The site is covered with several inches of crushed stone railroad ballast. Current Use: The site is railroad property operated by LIRR as an electrical substation to convert alternating current to direct current for the LIRR. Historic Use: The historic use of the site is the same as the current use. The site was used for railroad purposes until the LIRR constructed electric substations that utilized mercury rectifiers begining in the early 1930s until 1951. The last of the mercury rectifiers was removed and replaced with non-mercury solid state components in the early 1980s. Mercury contamination was found in and around this substation during a 2000 site investigation. At that time a soil removal was conducted in the area around the loading dock at the western end of the building. An area of approximately 225 square feet was excavated to a depth of 6 inches resulting in the removal of approximately 5 cubic yards of mercury contaminated soil. Site Geology and Hydrology: The depth to groundwater is approximately 85 feet in the vicinity of the site. Groundwater flow direction is to the north-northwest. Soils at the site are sand, clay, and gravel from unconsolidated glacial outwash."
Env Problem:	"Nature and Extent of Contamination - Soil samples were analyzed for the presence of volatiles, semi-volatiles, metals, and PCBs. Investigations have indicated that mercury is the only contaminant of concern at this site. Mercury is found in on-site soils in the vicinity of an entrance at the eastern corner of the building, near the building's loading dock on its northwestern side, and in a small area of the transformer yard on the southeast side of the building. Forty surface and 94 subsurface soil samples were collected and analyzed as part of the RI. Nine surface soil samples and seven subsurface soil samples exceeded the industrial soil cleanup objective (SCO) for mercury of 5.7 parts per million (ppm). Two of these samples, both surface soil, exceeded 100 ppm with a maximum concentration of 348 ppm. The maximum depth of mercury contamination in soils was 12 feet with a concentration of 30 ppm. A sample taken from 2-4 feet below the bottom of a cesspool at the site slightly

KEW GARDENS G07 (LIRR) (Continued) **S106122268**

exceeded the SCO for mercury with a concentration of 6.8 ppm. The mercury contaminated areas of concern are an approximately 230 square foot combined area adjacent to the building entrance in the eastern corner, a small area in the transformer yard, and the cesspool bottom. Exceptionally difficult drilling conditions at the site precluded the planned installation of two downgradient monitoring wells. As a substitute soil borings were advance to a depth of 20 feet beneath the two areas of greatest contamination. Mercury was not detected in soil samples from those depths. The upgradient monitoring well had no contaminants exceeding groundwater standards. A 33 point indoor air mercury vapor study in five locations was conducted. The greatest concentration detected was 0.110 micrograms per cubic meter (g/m3) in a sample taken from a sub-basement floor drain. The other four detections ranged in concentration from 0.010 to 0.020 g/m3. Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for industrial use. Residual contamination in the soil is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Historic Use: The historic use of the site is the same as the current use. The site was used for railroad purposes until the LIRR constructed electric substations that utilized mercury rectifiers begining in the early 1930s until 1951. The last of the mercury rectifiers was removed and replaced with non-mercury solid state components in the early 1980s. Mercury contamination was found in and around this substation during a 2000 site investigation. At that time a soil removal was conducted in the area around the loading dock at the western end of the building. An area of approximately 225 square feet was excavated to a depth of 6 inches resulting in the removal of approximately 5 cubic yards of mercury contaminated soil. Site Geology and Hydrology: The depth to groundwater is approximately 85 feet in the vicinity of the site. Groundwater flow direction is to the north-northwest. Soils at the site are sand, clay, and gravel from unconsolidated glacial outwash."

Env Problem: "Nature and Extent of Contamination - Soil samples were analyzed for the presence of volatiles, semi-volatiles, metals, and PCBs. Investigations have indicated that mercury is the only contaminant of concern at this site. Mercury is found in on-site soils in the vicinity of an entrance at the eastern corner of the building, near the building's loading dock on its northwestern side, and in a small area of the transformer yard on the southeast side of the building. Forty surface and 94 subsurface soil samples were collected and analyzed as part of the RI. Nine surface soil samples and seven subsurface soil samples exceeded the industrial soil cleanup objective (SCO) for mercury of 5.7 parts per million (ppm). Two of these samples, both surface soil, exceeded 100 ppm with a maximum concentration of 348 ppm. The maximum depth of mercury contamination in soils was 12 feet with a concentration of 30 ppm. A sample taken from 2-4 feet below the bottom of a cesspool at the site slightly exceeded the SCO for mercury with a concentration of 6.8 ppm. The mercury contaminated areas of concern are an approximately 230 square foot combined area adjacent to the building entrance in the eastern corner, a small area in the transformer yard, and the cesspool bottom. Exceptionally difficult drilling conditions at the site precluded the planned installation of two downgradient monitoring wells. As a substitute soil borings were advance to a depth of 20 feet beneath the two areas of greatest contamination. Mercury was not detected in soil samples from those depths. The upgradient monitoring well had no contaminants exceeding groundwater standards. A 33 point indoor air mercury vapor study in five locations was conducted. The greatest concentration detected was 0.110 micrograms per cubic meter (g/m3) in a sample taken from a sub-basement floor drain. The other four detections ranged in concentration from 0.010 to 0.020 g/m3. Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for industrial use.

KEW GARDENS G07 (LIRR) (Continued) **S106122268**

	Residual contamination in the soil is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

update. Operating supervisor J.Dekanchuk reports environmental ops crew , Forbes, Breakenridge, and Ahluwalia started a partial > 50 clean up on vault 9318.Two barrels of solid waste was removed. 260 gallons of oil was pumped out of transformer into tanker. Earthen sump was dug out by Walker, Stubbs, and Stanford to clean soil and cemented. Vault was double washed with bio gen 760 and wash water was pumped into tanker. Two soil samples were taken from sump and delivered to Astoria chem lab for testing. Three drums of solid waste was picked up by Astoria transportation. Tag remains in place pending removal of transformer and completion of clean up. UPDATE 22-MAY-2005 1302. Lab Sequence Number: 05-04790-001 Results of Analysis

DEC Memo:	"No TTF Letter sent - They were already far along on the repairs- Sangesland spoke to Rene Lewis at Alliance Mechanical. He said there were leaks in the Return Line, and inconclusive results for the fill & vent lines. 3/25/09 Additional testing: Fill line passed, Vent line Failed Lines have be repaired and retested. Rene Lewis will do a new tank system test later this week & submit a tank test failure Closure Report directly to Jake Krimgold by first week of April. *****Note: PBS #2-159638 is expired and has the old management company on it*** New management: Mr Ari Schertz, Aras Properties, 92 Washington St, Cederhurst, NY 11516 4/03/09. J.Krimgold review a closure report submetted by Alliance Mechanical & Demolition, LLC. Based on the report the tank innitially faled the test due a fill line. The line was excavated and replaced. Tank system retested and passed. No contamination was descovered during pipe excavation. NFA."
Remarks:	"Caller states they had a test failure. No spill or resources affected. Tank feeds both addresses."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO 11/14/2003-Vought-Reviewed letter received by DEC on 2/3/03 from Petroleum Tank Cleaners (Mark Salamack 718-624-4842). Tank that failed test was a 20000-gallon fuel oil tank. Tank was isolated and retested and failed second test. Soil samples were taken through the bottom of the tank and submitted for analysis and cam back within acceptable limits . No contamination was found during excavation and visual inspection of the tank found no visible leaks. We seek to fill this tank with cement slurr. We are seeking your written permission to do so . Vought referred spill to assigned project manager (Zhao). 12/10/2003 - JZ - Remediation investigation report is required which should follow the DEC guidance. Further investigation must be conducted to adequately characterize site hydrogeology, and to delineate the full extent of petroleum contamination. Depending upon the extent of the contamination, this investigation could include but is not limited to a scaled site map with boring location, soil boring log, groundwater flow, records of soil and groundwater sample depth, location, date and time collected, Chain of custody for sample lab analysis, samples lab results with EPA methods 8021 and 8270 and metals analysis. Tank could be closed in place only if the report shows that the results were within an acceptable limits and there is no possible migratrion contaminations. 10/21/2004 - JZ: Tank was inspected by Petroleum Tank Cleaners, Inc. Holes were found at vent pipe and top of the tank. 3 samples were collected from 1 foot below tank bottom by drilling through. Analytical results are under TAGM guidence. No further action is required."
Remarks:	"RESULTS OF TESTING AND RECOMMENDATIONS TO BE GIVEN TO PROPERTY OWNER."

Site Description:	"Location: The 0.093 acre site is located at 87-83 139th Street in Jamaica, NY, in an urban area. Site Features: The site currently consists of a 2-story commercial building, with a small alley located adjacent to the northern side of the building. Current Zoning and Land Use: The site is currently zoned as C2-4 (commercial) and is located adjacent to a commercial facility to the north, and a residential property to the south. Past Use of the Site: This site was utilized by Duraspec Electroplating from 1998 to 2015. Duraspec performed chromium, nickel, cadmium, copper, gold, nickel, silver, and zinc electroplating. The facility had a wastewater treatment area in the eastern portion of the building. In July 2000 a fire in a neighboring building caused damage to some electroplating process tanks and containers of virgin chemicals stored in the alley. A second fire occurred inside the facility in August 2000 which resulted in significant damage to its plating tanks and wastewater treatment units. A significant amount of plating solutions and untreated wastewater were released to the floor. The property was sold in January 2016. Facility decommissioning and closure is being completed by the new owner under an approved RCRA Closure Plan. EPA ID no. NYD012379798 is associated with the site. Site Geology and Hydrogeology: Groundwater st the site is approximately 40 ft below grade. "
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Soil: Prior to remediation, soil samples collected during previous investigations identified cadmium at concentrations of up to

FORMER DURASPEC ELECTROPLATING (Continued) **S121933854**

	1200 parts per million (ppm) and chromium at concentrations of up to 4000 ppm. Groundwater: Groundwater samples were collected which identified petroleum VOCs such as ethylbenzene up to 38 parts per billion (ppb) and xylene up to 8 ppb. The VOCs are likely attributable to a spill on an adjacent gas station. No VOCs or dissolved metals were detected at concentrations exceeding the groundwater standards. Soil Vapor: Soil vapor samples identified trichloroethene at a concentration up to 82.8 ug/m3. Remedial actions have successfully achieved soil cleanup objectives for Commercial Use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 549987
Site Description: "Location: The 0.093 acre site is located at 87-83 139th Street in Jamaica, NY, in an urban area. Site Features: The site currently consists of a 2-story commercial building, with a small alley located adjacent to the northern side of the building. Current Zoning and Land Use: The site is currently zoned as C2-4 (commercial) and is located adjacent to a commercial facility to the north, and a residential property to the south. Past Use of the Site: This site was utilized by Duraspec Electroplating from 1998 to 2015. Duraspec performed chromium, nickel, cadmium, copper, gold, nickel, silver, and zinc electroplating. The facility had a wastewater treatment area in the eastern portion of the building. In July 2000 a fire in a neighboring building caused damage to some electroplating process tanks and containers of virgin chemicals stored in the alley. A second fire occurred inside the facility in August 2000 which resulted in significant damage to its plating tanks and wastewater treatment units. A significant amount of plating solutions and untreated wastewater were released to the floor. The property was sold in January 2016. Facility decommissioning and closure is being completed by the new owner under an approved RCRA Closure Plan. EPA

FORMER DURASPEC ELECTROPLATING (Continued) **S121933854**

ID no. NYD012379798 is associated with the site. Site Geology and Hydrogeology: Groundwater st the site is approximately 40 ft below grade. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Soil: Prior to remediation, soil samples collected during previous investigations identified cadmium at concentrations of up to 1200 parts per million (ppm) and chromium at concentrations of up to 4000 ppm. Groundwater: Groundwater samples were collected which identified petroleum VOCs such as ethylbenzene up to 38 parts per billion (ppb) and xylene up to 8 ppb. The VOCs are likely attributable to a spill on an adjacent gas station. No VOCs or dissolved metals were detected at concentrations exceeding the groundwater standards. Soil Vapor: Soil vapor samples identified trichloroethene at a concentration up to 82.8 ug/m3. Remedial actions have successfully achieved soil cleanup objectives for Commercial Use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

A second fire occurred inside the facility in August 2000 which resulted in significant damage to its plating tanks and wastewater treatment units. A significant amount of plating solutions and untreated wastewater were released to the floor. The property was sold in January 2016. Facility decommissioning and closure is being completed by the new owner under an approved RCRA Closure Plan. EPA ID no. NYD012379798 is associated with the site. Site Geology and Hydrogeology: Groundwater st the site is approximately 40 ft below grade. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Soil: Prior to remediation, soil samples collected during previous investigations identified cadmium at concentrations of up to 1200 parts per million (ppm) and chromium at concentrations of up to 4000 ppm. Groundwater: Groundwater samples were collected which identified petroleum VOCs such as ethylbenzene up to 38 parts per billion (ppb) and xylene up to 8 ppb. The VOCs are likely attributable to a spill on an adjacent gas station. No VOCs or dissolved metals were detected at concentrations exceeding the groundwater standards. Soil Vapor: Soil vapor samples identified trichloroethene at a concentration up to 82.8 ug/m3. Remedial actions have successfully achieved soil cleanup objectives for Commercial Use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Description: "Location The site is located at 87-46 123rd Street in the Richmond

87-46 123RD STREET (Continued) **S121493094**

Hill section in Queens, New York and is identified as Block 9331 and Lot 30 on the New York City Tax Map. The site is 95,123-square feet and is bounded by residential and commercial properties (a storage yard) to the north, 89th Avenue to the south, 123rd Street to the east, and the Long Island Railroad (LIRR) Richmond Hill Line and 121st Street to the west. Site Features The site contains 12 buildings including several one-story metal and one- to three-story masonry buildings, and four distinct outdoor areas including a parking lot along 123rd Street, central basement-level courtyard, and two exterior areas adjoining the LIRR to the west. Current Zoning and Land Use Currently, the site is used for commercial purposes and is the location of GRM Information Management, a document storage repository. Past Use of the Site The first known site development consisted of four residential structures located at the northeastern portion of the property in 1896. The site was subsequently used for industrial purposes, including the following manufacturing facilities: Keiner Williams Stamping Company (circa 1911 to 1965); Dynamic Electronics New York Inc. (after 1965); and, Dependable Knitwear (after 1965). The site has been used as a document repository since 1982. Site Geology and Hydrogeology The stratigraphy of the site, from the surface down, generally consists of variable texture sands with gravel, silt and some clay loam (the upper 4 to 6 feet are considered to be likely fill). Depth to bedrock is unknown (refusal on dense soil and/or rock was encountered at a maximum depth of 10 feet). Available USGS data indicate likely bedrock elevations at approximately 300 to 400 feet in this portion of Queens. Elevation of the property ranges from 48.94 to 60.30 feet. Depth to groundwater ranges from 39.80 to 45.93 feet at the site, and groundwater flow is generally from northeast to southwest beneath the site. NOTE: Project completed under NYC OER volunteer program. A remedial program was conducted and a certified Remedial Action Report (equivalent to a FER) was submitted to NYC OER and approved. NYC OER issued a Notice of Completion for the project on May 16, 2017. "

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

USGS TOPOGRAPHIC MAP

Target Property Map:	14105978 JAMAICA, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

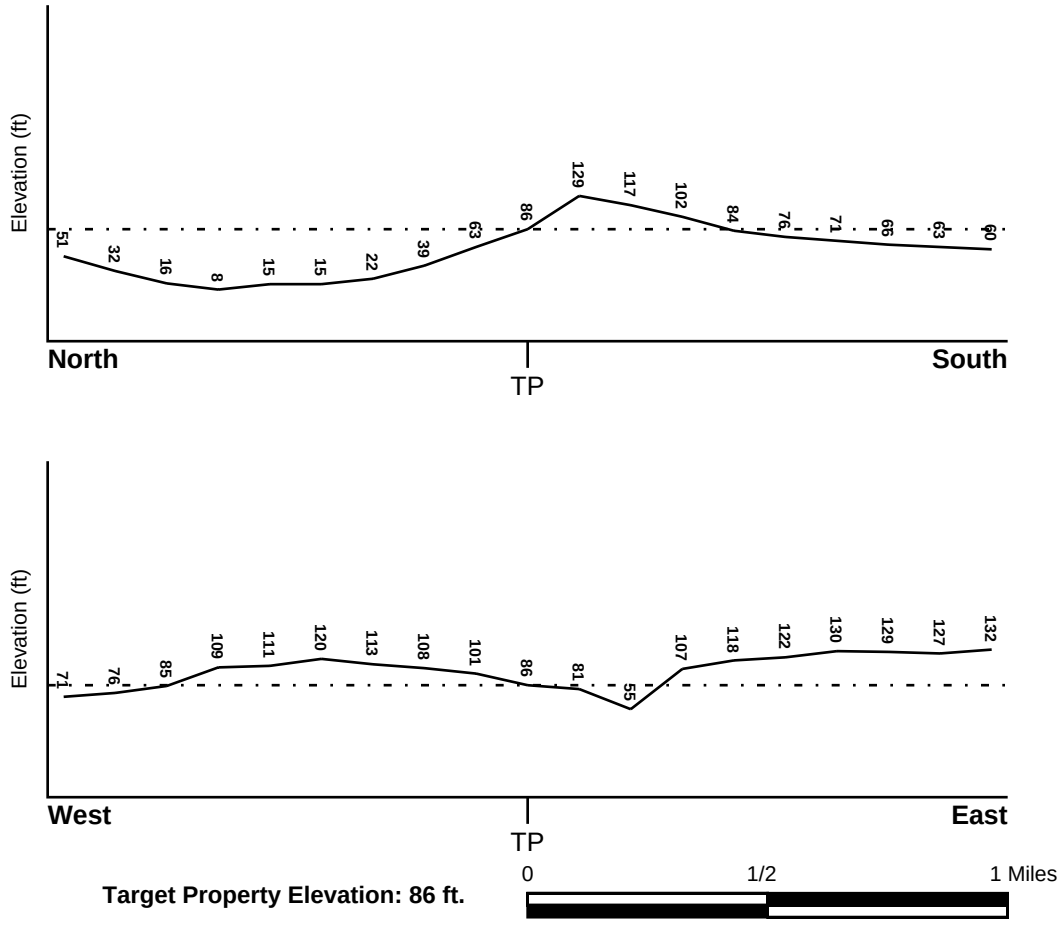
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 86 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970229F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
JAMAICA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Living Area	0.620 pCi/L	97%	0%	3%
Basement	0.970 pCi/L	93%	6%	1%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

APPENDIX D

Site Investigation Green and Sustainable Remediation Calculation Sheet

Appendix E
Site Investigation Green and Sustainable Remediation Calculation Sheet
Kew Garden Off-Site
Site # C241177A
124-22 Queens Boulevard
Queens, New York

BMP No.	Activity	Negative Impact	Green Remediation Option/ Best Management Practice (BMP)	Comments and Assumptions	Impact Reduction						
					Material & Waste	Water	Energy	Air	Sustainable Transportation	Species & Habitat Protection	Educational Programing and Outreach
PROJECT PLANNING BMPs											
1	Various Investigation Activities	* Drill cuttings (soil) IDW generated during soil boring installation *Combustion emissions associated with site mobilizations and drill rig operation	Reduce sampling locations by using data visualization techniques to refine CSM/SOW	N/A	N/A	N/A	N/A	N/A	N/A	N/A	BMPs and impact reductions to be included on fact sheet †
2a	HRP Mobilization to and from Site	Fuel consumption and combustion emissions associated with HRP travel	* Reduce mobilizations by consolidating schedules: * Conduct GPR in same mobilization as drilling/SVI. * Conduct sub-slab SVI in same mobilization as drilling work. * Coordinate property access to compress sub-slab SVI sampling schedules.	* 360 miles per round trip from HRP office in Clifton Park, NY to NYC. * GPR was conducted in same mobilization as SVI at the Site, saving 1 round trip. * GPR was conducted in the same mobilization as exterior soil vapor point installation, saving 1 round trip. * Sub-slab SVI sampling was performed at 2 locations. Schedules were reduced from 2 mobilizations (one mobilization per location) to 1 mobilizations, saving 1 round trip. * Cargo van/light duty truck, 14.55 miles/gallon[1] * 25 gallons of gasoline saved. * 8,774 grams (19.34 lbs.) CO2 emitted per gallon, light duty truck[3]	N/A	N/A	74.22 gallons of gasoline	1,436lbs./ 0.72 tons CO2 emissions	Total travel reduced by 3 round trips or 1,080 miles.	N/A	BMPs and impact reductions to be included on fact sheet †
2b	HRP Mobilization to and from Site	Fuel consumption and combustion emissions associated with HRP travel	Car-pool using a single passenger vehicle whenever two or more HRP personnel are required for a site visit.	* 360 miles per round trip from HRP office in Clifton Park, NY to NYC. * Crew of two HRP personnel car-pooled for SVI sampling at 2 locations, saving 2 round trips. * Total travel reduced by 4 round trips or 1,440 miles of travel. * Cargo van, 14.55 miles/gallon[1] * 99 gallons of gasoline saved. * 8,774 grams (19.34 lbs.) CO2 emitted per gallon, light duty truck[3]	N/A	N/A	99 gallons of gasoline	1,915 lbs./ 0.96 tons CO2 emissions	Total travel reduced by 4 round trips or 1,440 miles.	N/A	BMPs and impact reductions to be included on fact sheet †
FIELD WORK BMPs											
3a	Drilling (Soil Boring/Monitoring Well/Soil Vapor Point Installation)	Drill cuttings (soil) IDW generated during soil boring installation	Reduce drill cutting generation by installing soil borings and soil vapor points using the direct push method instead of hollow stem auger method	* 30 ft of soil borings were installed using direct push/2-inch macrocores instead of 4-inch hollow stem auger. * Soil from all borings points was removed as IDW. * 2-inch macrocores were used instead of 4-inch hollow stem augers during soil vapor point, soil boring installation. * Soil weighs 110 lbs (0.055 tons) per cu ft.	4.41 cubic feet of soil 0.24 tons saved from disposal	N/A	N/A	N/A	N/A	N/A	BMPs and impact reductions to be included on fact sheet †
3b	Drilling (IDW Disposal)	Fuel consumption and combustion emissions associated with off-site IDW disposal	Eliminate need for off-site disposal of IDW via implementation of BMP 3a (above)	* 4.41 cubic feet of soil saved by implementing BMP 3a * 1 cubic foot = 7.48 gallons; 33.03 gallons of IDW saved * 1 drum of IDW saved from off-site disposal * Disposal facility in Hatfield, PA is located 126 miles from the Site * 1 pickup event saved; 252 miles round trip from Site to disposal facility * Box truck averages 12 miles/gallon; 21 gallons of gas saved * 8,774 grams (19.34 lbs.) CO2 emitted per gallon	N/A	N/A	21 gallons gasoline	406.14 lbs/ 0.020 tons CO2 emissions	Total travel reduced by 1 round trip or 252 miles	N/A	BMPs and impact reductions to be included on fact sheet †

Appendix E

Queens, New York

BMP No.	Activity	Negative Impact	Green Remediation Option/ Best Management Practice (BMP)	Comments and Assumptions	Impact Reduction						
					Material & Waste	Water	Energy	Air	Sustainable Transportation	Species & Habitat Protection	Educational Programing and Outreach
4	Drilling (Soil Boring/Monitoring Well/Soil Vapor Point Installation)	Fuel consumption and combustion emissions associated with drill rig operation	Install permanent soil vapor points with protective road boxes which allow for re-sampling, reducing drill rig operation time and mobilizations associated with re-installing points.	* 3 borings installed to 10 ft bg with direct push drill rig. * 10 minutes to install soil boring to 10 ft bg with direct push drill rig, compared to 30 mins to install one soil vapor point to 10 ft with hollow stem auger. * Total drill rig operation time reduced by 60 minutes. * Geoprobe 7822 DT, Kubota 03 Series 4-cylinder engine, 2.4 gallons of diesel/hour operating at 70% engine output2. * 2.4 gallons of diesel saved. * 10,217 grams (22.53 lbs.) CO2 emitted per gallon, construction equipment3	N/A	N/A	2.4 gallons of diesel	54.07 lbs./ 0.027 tons of CO2 emissions	N/A	N/A	BMPs and impact reductions to be included on fact sheet †
5	Drilling (Soil Boring/Monitoring Well/Soil Vapor Point Installation)	Fuel consumption and combustion emissions associated with drill rig operation	Shut off drill rig when not in use.	* 1 drilling days. * Drill rig operation time reduced by one hour per day, for a total of 1 hours. * Geoprobe 7822 DT, Kubota 03 Series 4-cylinder engine, 0.5 gallons of diesel/hour operating at 15% engine output (when idling)[2]. * 0.5 gallons of diesel. * 10,217 grams (22.53 lbs.) CO2 emitted per gallon, construction equipment[3]	N/A	N/A	0.5 gallons of diesel	11.265 lbs./ 0.0056 tons of CO2 emissions	N/A	N/A	BMPs and impact reductions to be included on fact sheet †
6	Soil/Groundwater /Air Sampling	Waste cardboard generated from	Re-use cardboard for summa canister shipping or recycle	* 4 cardboard boxes used to ship summa canisters for TO-15 samples. * Each box is equivalent to 0.0067 cu ft of cardboard. * 4 boxes are equivalent to 0.027 cu ft of cardboard. * 1 cu ft cardboard weighs 43 lbs.	1.15 lbs. of cardboard	N/A	N/A	N/A	N/A	N/A	BMPs and impact reductions to be included on fact sheet †
Totals					**Soil IDW: 1 drum, 0.24 tons** **Cardboard: 1.15 lbs.**	**N/A**	**194.22 gallons gasoline** **2.9 gallons of diesel**	**1.733 tons CO2**	**2,772 miles of travel**	**N/A**	**BMPs and impact reductions to be included on fact sheet †**

Notes:
Activity – Describe the field activity including duration, amount material consumed.
Negative Impact- describe and quantify the negative impact on material and waste, water, energy air emissions (i.e. 300 ft of plastic tubing consumed, amount of fuel used on-site and to mobilize to the site, etc.)
Green and Sustainable Remediation Option/ Best Management Practice (BMP) – see partial list included in Appendix C of Field Activity Plan
Impact Reduction- quantify the reduction of material, air emissions, energy consumption etc.
Comment and Assumptions- list basis of calculations.
1 - Fuelly.com, 2021 Chevrolet Express 2500 MPG. (Based on data from 6 vehicles, 224 fuel-ups and 72,559 miles of driving, the 2021 Chevrolet Express 2500 gets a combined Avg MPG of 14.55 with a 0.20 MPG margin of error.)
2- Kubota Corporation, Kubota 03 Series (4 -Cylinder) V2403-M-DIE3B Specification Sheet
3 - United States Environmental Protection Agency, Office of Transportation and Air Quality, U.S. Transportation Sector Greenhouse Gas Emissions 1990-2020, May 2022; 2021 Chevrolet Express is listed as a light duty truck
† - Quantifiable impact reductions achieved by green and sustainable remediation BMPs may be included in site fact sheets to promote public awareness of NYSDEC green and sustainable BMPs.

Qualifications:

B Analyte is found in the associated laboratory blank as well as in the sample.

Analyte & Samples(s) Qualified:

1,2-Dibromoethane (EDB)

23I1192-01[SV-1_9.6.23], 23I1192-02[SV-2_9.6.23], 23I1192-03[SV-3_9.6.23], 23I1192-04[SV-3_9.6.23-DUP], 23I1192-05[OA-9.6.23], B352252-BLK1, B352252-DUP1

E Reported result is estimated. Value reported over verified calibration range.

Analyte & Samples(s) Qualified:

Ethanol

23I1192-05RE1[OA-9.6.23], B352252-DUP1

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

Hexachlorobutadiene

B352252-BS1

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Naphthalene

23I1192-01[SV-1_9.6.23], 23I1192-02[SV-2_9.6.23], 23I1192-03[SV-3_9.6.23], 23I1192-04[SV-3_9.6.23-DUP], 23I1192-05[OA-9.6.23], B352252-BS1, B352252-DUP1

R-04 Duplicate relative percent difference (RPD) is outside of control limits. RPD is a less useful indicator of sample precision for sample results that are <5 times the reporting limit (RL).

Analyte & Samples(s) Qualified:

4-Ethyltoluene

B352252-DUP1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,3-Dichlorobenzene, Hexachlorobutadiene

B352252-BS1, S093501-CCV1

Z-01 Calibrations RSD for this compound is >30% but <40%.

Analyte & Samples(s) Qualified:

Naphthalene

23I1192-01[SV-1_9.6.23], 23I1192-02[SV-2_9.6.23], 23I1192-03[SV-3_9.6.23], 23I1192-04[SV-3_9.6.23-DUP], 23I1192-05[OA-9.6.23], B352252-BLK1, B352252-BS1, B352252-DUP1, S093501-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
B	Analyte is found in the associated laboratory blank as well as in the sample.
E	Reported result is estimated. Value reported over verified calibration range.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
R-04	Duplicate relative percent difference (RPD) is outside of control limits. RPD is a less useful indicator of sample precision for sample results that are <5 times the reporting limit (RL).
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
Z-01	Calibrations RSD for this compound is >30% but <40%.

Data Usability Summary Reports (DUSRs)

ENVIRONMENTAL
Data Services, Inc.

DATA USABILITY SUMMARY REPORT
124-22 QUEENS BOULEVARD, QUEENS, NEW YORK

Client: HRP Associates, In., Clifton Park, New York
SDG: 23I1192
Laboratory: Con-Test, East Longmeadow, Massachusetts
Site: 124-22 Queens Boulevard, Queens, New York
Date: December 22, 2023

EDS ID	Client ID	Laboratory ID	Matrix
1	SV-1_9.6.23	23I1192-01	Air
2	SV-2_9.6.23	23I1192-02	Air
3	SV-3_9.6.23	23I1192-03	Air
4	SV-3_9.6.23-DUP	23I1192-04	Air
5	OA-9.6.23	23I1192-05	Air

A Data Usability Summary Review was performed on the analytical data for five air samples collected on September 6, 2023 by HRP at the 124-22 Queens Boulevard site in Queens, New York. The samples were analyzed under "Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition January 1999, EPA/625/R-96/010B", Compendium Method TO-15, "Determination of Volatile Organic Compounds (VOCs) in Air Collected in Specially-Prepared Canisters and Analyzed by Gas Chromatography/Mass Spectrometry (GC/MS)".

Specific method references are as follows:

Analysis	*Method References*
VOCs	USEPA Method TO-15

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods and the USEPA Region II Data Review Standard Operating Procedures (SOPs) as follows:

- SOP Number HW-31, Revision 6, September 2016: Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15.

The following items/criteria were reviewed for this report:

Organics

- Data Completeness
- Cover letter, Narrative, and Data Reporting Forms
- Canister Certification Blanks
- Canister Certification Pressures Differences

- Chains-of-Custody and Traffic Reports
- Holding Times and sample preservation
- Laboratory Control Sample (LCS) recoveries
- GC/MS Tuning
- Method Blank Contamination
- Initial and Continuing Calibration Summaries
- Surrogate Recoveries
- Compound Quantitation
- Internal Standard (IS) Area Performance
- Field Duplicate Sample Precision

Data Usability Assessment

There were no rejections of data.

The data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedances of QC criteria.

Data Completeness

- The data is a complete Category B data package as defined under the requirements for the NYS Department of Environmental Conservation Analytical Services Protocol.

Cover letter, Narrative, and Data Reporting Forms

- All criteria were met.

Canister Certification Blanks

- The batch blank checks were non-detect or < RL.

Canister Certification Pressures Differences

- All criteria were met.

Chains-of-Custody and Traffic Reports

- All criteria were met.

Holding Times

- All samples were analyzed within 30 days for air samples.

Laboratory Control Samples

- The following table presents LCS percent recoveries (%R) outside the QC limits. A low %R may indicate a potential low bias while a high %R may indicate a potential high bias. For a low %R, positive results are considered estimated and qualified (J) while non-detects are estimated and qualified (UJ). For a high %R, positive results are considered estimated and qualified (J). Results are valid and usable, however possibly biased.

LCS ID	Compound	%R	Qualifier	Affected Samples
B352252-BS1	Hexachlorobutadiene	171%	None	All Associated ND
	Naphthalene	143%	J	1-5

GC/MS Tuning

- All criteria were met.

Method Blank

- The following table lists method blanks with contamination and the samples associated with the blanks that had results qualified as a consequence of the blank contamination. Detected sample concentrations of methylene chloride, 2-butanone, toluene or acetone (common laboratory contaminants) less than ten times (10x) the highest associated blank (after taking sample dilution levels, percent moisture and sample volume into account) are negated and qualified with a (U). For all other compounds, an action level of five times (5x) the highest associated blank concentration is used.

Sample ID	Compound	Conc. ppbv	Qualifier	Affected Samples
B352252-BLK1	1,2-Dibromomethane	0.0088	U	1-5

Initial Calibration

- All %RSD and mean RRF criteria were met.

Continuing Calibration

- The following table presents compounds that exceeded percent difference (%D) and/or RRF values <0.05 (0.01 for poor performers) in the continuing calibration (CCAL). A low RRF indicates poor instrument sensitivity for these compounds. Positive results for these compounds in the affected samples are considered estimated and qualified (J). Non-detect

results for these compounds in the affected samples are rejected (R) and are unusable for project objectives. A high %D may indicate a potential high or low bias. All results for these compounds in affected samples are considered estimated and qualified (J/UJ).

CCAL Date	Compound	%D/RRF	Qualifier	Affected Samples
09/12/23 (1017)	1,3-Dichlorobenzene	31.9%	UJ	All Samples
	Hexachlorobutadiene	61.0%		
	1,3,5-Trimethylbenzene	31.6%	J	

Surrogate Recoveries

- All samples exhibited acceptable surrogate percent recoveries (%R).

Compound Quantitation

- Several samples were analyzed at a dilution due to high concentrations of target compounds. The reporting limits were adjusted accordingly. No action was required.
- EDS sample 5 exhibited a high concentration of ethanol and was flagged (E) by the laboratory. No dilution was performed so this sample was qualified estimated (J).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	SV-3_9.6.23 ppbv	SV-3_9.6.23-DUP ppbv	RPD	Qualifier
Acetone	8.5	11	26%	None
Benzene	0.55	0.53	4%

Please contact the undersigned at (561) 475-2000 if you have any questions or need further information.

Signed: Nancy Weaver Dated: 12/23/23

Nancy Weaver
Senior Chemist

Data Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	The analyte is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
NJ	The analysis has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the samples.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the samples.
