LIST OF ACRONYMS

Acronym	Definition
AOC	Area of Concern
CAMP	Community Air Monitoring Plan
COC	Contaminant of Concern
CPP	Citizen Participation Plan
CSM	Conceptual Site Model
DER-10	New York State Department of Environmental Conservation Technical Guide 10
FID	Flame Ionization Detector
GPS	Global Positioning System
HASP	Health and Safety Plan
HAZWOPER	Hazardous Waste Operations and Emergency Response
IRM	Interim Remedial Measure
NAPL	Non-aqueous Phase Liquid
NYC VCP	New York City Voluntary Cleanup Program
NYC DOHMH	New York City Department of Health and Mental Hygiene
NYC OER	New York City Office of Environmental Remediation
NYS DOH ELAP	New York State Department of Health Environmental Laboratory Accreditation Program
OSHA	Occupational Safety and Health Administration
PID	Photoionization Detector
QEP	Qualified Environmental Professional
RI	Remedial Investigation
RIR	Remedial Investigation Report
SCO	Soil Cleanup Objective
SPEED	Searchable Property Environmental Electronic Database

CERTIFICATION

I, Joshua Levine, P.E., am a Qualified Environmental Professional, as defined in RCNY §43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Project H Site, (E-Designation). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Joshua B. Levine, P.E.		
NYS Professional Engineer #084925	Date	Signature

Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at in the Halletts Point section of Astoria, Queens, New York and is identified as Block 916 Lots 1 and 10 (Famitech North), Block 490 Lot 1 (Famitech South), Block 490 Lot 11 (Zavas), and Block 915 Lot 6 (Astoria Equities) on the New York City Tax Map. Figure 1 shows the Site location and site boundaries. The Site is 6.74 acres. Currently, the Site contains four warehouse buildings and an outdoor lot used for storage of construction materials (Zavas). Two warehouse buildings are currently used by contractors for office space and equipment/materials storage (e.g., Navillus Tile Inc. in Famitech South, and Advanced Contracting Solutions, LLC in Famitech North Lot 10) and two buildings are vacant (Famitech North Lot 1 and Astoria Equities).

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of the demolition of the existing buildings and construction of a mixed-use development which includes housing, open space/esplanade, retail and parking. Although certain new buildings would include cellar space (primarily for parking), this space would be created through a combination of raising the grade around the building and limited excavation (likely less than eight feet). Construction would also entail some deeper excavation, e.g., for construction of elevator pits and certain utilities. The average depth to groundwater measured during the RI was 7.52 feet and ranged from 3.55 to 12.5 feet below land surface (bls). Layout of the proposed site development is presented in Figure 2. This RIR encompasses the proposed buildings 1-5 only as shown in Figure 2. A prior RI and RAWP were approved separately by the New York City Department of Environmental Protection (NYCDEP) for proposed buildings 6 and 7 due to their presence on the New York City Housing Authority Campus.

Summary of Past Uses of Site

Provided below are summaries of the former land uses previously identified in historic Phase I reports.

Famitech Property:

The property was historically occupied by various commercial, industrial, and utility establishments, including an apparent manufactured gas plant, a coal-fired electric generating station, several stone cutting and polishing establishments, machine works, a lumber yard, a manufacturer of masonry building blocks, a manufacturer of hampers, and a scaffold manufacturer.

Astoria Equities Property:

The property historically consisted of a portion of the Eagle Oil Works and a lumber storage yard for the Tisdale Lumber Company prior to construction of the current building. The building was constructed in 1969 and occupied by various construction and building material businesses from 1969 – 2000 (e.g., Allied Corrugated Box Corp., Mack-Chicago, Mack Allied Corp., Goodison Marble, Kemron Environmental Services) prior to its recent use by LaserTone for printing ink cartridge storage and distribution.

Zavas Property:

Based upon the Phase I, the property contained historical operations including a wood dipping operation, Iron Works company, Star Ribbon Manufacturing Company, Morey and Company Machinists, National Rayon Company, Ang & Lemin Silk Manufacturers, lumber storage, and hamper manufacturing.

Areas of Concern

The following AOCs were identified by for the Site.

Famitech (North and South)

1. Former Gas Works – Based on historical operation of a former Manufactured Gas Plant in the Famitech north parcel.
2. Historic Fill across both Famitech north and South sites due to filling operations to raise grade across the site and extend land adjacent to the East River.

Astoria Equities:

1. Areas of lumber staging as part of historic operations – potential for leaching from dip-treated wood.
2. Historic Fill across the Site.

Zavas:

1. Historic operations – 60,000gal above ground storage tank (AST) onsite used for lumber treatment
2. Historic Fill across the Site.

Summary of the Work Performed under the Remedial Investigation

Roux Associates performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 38 soil borings across the entire project Site, and collected 79 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed 21 groundwater monitoring wells converted from soil borings throughout the Site to establish groundwater flow and collected 22 groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed 39 soil vapor probes around Site perimeter and collected 39 samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from 4.75 to 8.71 feet above Queens Borough Datum.
2. Depth to groundwater ranges from 3.55 to 12.03 feet at the Site.
3. Groundwater flow is generally from east to west beneath the Site towards the East River.
4. Depth to bedrock is variable and was observed at depths ranging from 6 to 23 feet during the RI, but has historically been identified as deep as 38 feet at the Site.

5. The stratigraphy of the site, from the surface down, consists of approximately 6 to 10 feet of historic fill underlain by approximately 3 to 13 feet of sandy silt/river deposits, which is underlain by bedrock.

6. Soil samples collected during the RI showed widespread detections of SVOCs and Metals above the Part 375 Restricted Residential SCOs in surficial soil samples and sporadic detections of SVOCs and metals in isolated hotspots. VOCs were not detected in excess of the Part 375 Restricted Residential SCOs across the Site.

7. Groundwater samples collected during the RI showed relatively low level concentrations of petroleum related VOCs in isolated monitoring wells across the Site, not indicative of a significant petroleum spills.

8. Soil vapor samples collected during the RI showed low level concentrations of several chlorinated and petroleum related VOCs.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Halletts Vendee LLC is participating in the New York City Office of Environmental Remediation (NYC OER) "E"-designation program to investigate and remediate a 6.5-acre site located within the Halletts Point section of Astoria, Queens, New York. Mixed commercial and residential use is proposed for the property. The RI work was performed between November 25 and December 20, 2013. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located in the Halletts Point section of Astoria, Queens, New York and is identified as Block 916 Lots 1 and 10 (Famitech North), Block 490 Lot 1 (Famitech South), Block 490 Lot 11 (Zavas), and Block 915 Lot 6 (Astoria Equities) on the New York City Tax Map. Figure 1 shows the Site location and site boundaries. The Site is 6.74 acres. Currently, the Site contains four warehouse buildings and an outdoor lot used for storage of construction materials (Zavas). Two warehouse buildings are used by contractors for office space and equipment/materials storage (e.g., Navillus Tile Inc. in Famitech South, and Advanced Contracting Solutions, LLC in Famitech North Lot 10) and two buildings are vacant (Famitech North Lot 1 and Astoria Equities).

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of the demolition of the existing buildings and construction of a mixed-use development which includes housing, open space/esplanade, retail and parking. Although certain new buildings would include cellar space (primarily for parking), this space would be created through a combination of raising the grade around the building and limited excavation (likely less than eight feet). Construction would also entail some deeper excavation, e.g., for construction of elevator pits and certain utilities. The average depth to groundwater measured during the RI was 7.52 feet and ranged from 3.55 to 12.5 feet bls. Layout of the proposed site development is presented in Figure 2. This RIR encompasses the area

covered by the proposed buildings 1-5 only as shown in Figure 2. A prior RI and RAWP were approved separately for proposed buildings 6 and 7 due to their presence on the New York City Housing Authority (NYCHA) Campus.

1.3 Description of Surrounding Property

A description of surrounding properties is provided below.

Famitech (North and South) Property

North	26th Avenue, Whitey Ford Field (NYC Department of Parks and Recreation) further north
South	Storage yard for Allied Building Products Corp (Zavas Property)
East	1st Street, 27th Avenue; Astoria Houses (NYCHA); Marble Techniques Inc.; LaserTone Inc.
West	East River

Astoria Equities Property

North	26th Avenue, Whitey Ford Field (NYC Department of Parks and Recreation) further north
South	Custom CAS Inc. (woodworking), 27th Avenue further South
East	Residential apartments; 2nd Street
West	Famitech Property; 1st Street

Zavas Property

North	Famitech South property
South	Halletts Point Playground
East	1st Street, Astoria Houses (NYCHA) further east
West	East River

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Famitech Property (North and South):

The property was historically occupied by various commercial, industrial, and utility establishments, including an apparent coal gasification plant, a coal-fired electric generating station, several stone cutting and polishing establishments, machine works, a lumber yard, a manufacturer of masonry building blocks, a manufacturer of hampers, and a scaffold manufacturer.

Astoria Equities Property:

The property historically consisted of a portion of the Eagle Oil Works and a lumber storage yard for the Tisdale Lumber Company prior to construction of the current building. The building was constructed in 1969 and occupied by various construction and building material businesses from 1969 – 2000 (e.g., Allied Corrugated Box Corp., Mack-Chicago, Mack Allied Corp., Goodison Marble, Kemron Environmental Services) prior to its current use by LaserTone for printing ink cartridge storage and distribution.

Zavas Property:

Based upon the Phase I, the property contained historical operations including an Iron Works company, Star Ribbon Manufacturing Company, Morey and Company Machinists, National Rayon Company, Ang & Lemin Silk Manufacturers, lumber storage, and hamper manufacturing.

2.2 Previous Investigations

Provided below is a summary of previous environmental investigations performed on the Site.

Phase I and Phase II Environmental Assessments

Property Solutions Inc. (PSI) prepared separate Phase I and Phase II Environmental Assessments for the Famitech, Astoria Equities, and Zavas properties in 2008. PSI identified several AOCs for each property and conducted geophysical surveys, soil, groundwater, and surface water sampling to investigate the Site. Soil vapor sampling was not performed during the Phase II's.

In general, the Phase II's identified widespread SVOC and metal impacts in soil likely attributed to historic fill operations across the three properties. VOC source areas were not identified in soil. Limited groundwater sampling across the Site identified isolated locations with low concentrations of dissolved petroleum related VOCs above groundwater standards at the Famitech and Astoria Equities properties. A source for the groundwater contamination was not identified during the Phase II but was estimated to have been attributed to either historic operations on Site or upgradient sources. The geophysical surveys conducted during the Phase II's did not identify the presence of USTs.

USTs were previously identified and removed on the Famitech north parcel in 1998 (3,000 gal No. 2 fuel oil UST) and on the Zavas property in 2003 (5,000 gallon fuel oil UST). NYSDEC issued a No Further Action Letter in March 1998 for the Famitech UST based upon their review and approval of a Tank Closure Summary Report. New York City Fire Department (FDNY) records identified the 2003 Zavas property UST removal, but no tank location or tank removal summary report was provided and no NYSDEC records were identified for the Zavas tank removal.

The PSI Phase I and Phase II Environmental Assessments are provided in Appendix A.

2.3 Site Inspection

A Site Inspection was conducted by Roux Associates Inc. on November 11, 2013 prior to conducting the RI. The four warehouse buildings and outdoor construction materials staging lot noted in Section 1.1 were all occupied with commercial tenants at the time of inspection. Based upon visual examination of the buildings, surficial staining was observed during the Site inspection. This was limited to isolated petroleum stains on surficial concrete warehouse floors in the Famitech South property. No indications of historic Areas of Concern including fill materials or tanks/manufactured gas works were visibly evident during the site inspection.

In addition, a Site inspection was conducted with Roux Associates and the New York City Office of Environmental Remediation during the RI on December 11, 2013.

2.4 Areas of Concern

The following AOCs were identified for the Site.

Famitech (North)

1. Former Gas Works – Based on historical operation of a former Manufactured Gas Plant in the Famitech north parcel.
2. Historic Fill across the Site due to filling operations to raise grade across the site and extend land adjacent to the East River.

Famitech (South)

1. Historic Fill across the Site.

Astoria Equities:

1. Areas of lumber staging as part of historic operations – potential for leaching from dip-treated wood.
2. Historic Fill across the Site.

Zavas:

1. Historic operations – 60,000 gal above ground storage tank (AST) onsite used for lumber treatment.
2. Historic Fill across the Site.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Joshua B. Levine, P.E.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Roux Associates performed the following scope of work:

Famitech (North)

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 16 soil borings across the entire project Site, and collected 32 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed 8 groundwater monitoring wells converted from soil borings throughout the Site to establish groundwater flow and collected 8 groundwater samples for chemical analysis to evaluate groundwater quality; and
4. Installed 14 soil vapor probes around Site perimeter and collected 14 samples for chemical analysis.

Famitech (South)

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 7 soil borings across the entire project Site, and collected 13 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed 4 groundwater monitoring wells converted from soil borings throughout the Site to establish groundwater flow and collected 4 groundwater samples for chemical analysis to evaluate groundwater quality; and
4. Installed 7 soil vapor probes around Site perimeter and collected 7 samples for chemical analysis.

Astoria Equities

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);

2. Installed 9 soil borings across the entire project Site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality;

3. Installed 5 groundwater monitoring wells converted from soil borings throughout the Site to establish groundwater flow and collected 5 groundwater samples for chemical analysis to evaluate groundwater quality; and

4. Installed 10 soil vapor probes around Site perimeter and collected 10 samples for chemical analysis.

Zavas

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);

2. Installed 6 soil borings across the entire project Site, and collected 14 soil samples for chemical analysis from the soil borings to evaluate soil quality;

3. Installed 4 groundwater monitoring wells converted from soil borings throughout the Site to establish groundwater flow and collected 4 groundwater samples for chemical analysis to evaluate groundwater quality; and

4. Installed 8 soil vapor probes around Site perimeter and collected 8 samples for chemical analysis.

4.1 Geophysical Investigation

On November 5, 2013, Diversified Geophysics, Inc. performed a series of geophysical investigations on the properties collectively known as Project H, located in the vicinity of the intersection of 1st street with 27th Avenue, in Astoria, Queens, New York. The investigations were comprised of an interior survey of the Famitech South property, and continued with an exterior survey of the Zavas property; interior and exterior survey of the Famitech North property; and finished with a survey of the interior of the Astoria Equities property.

The geophysical investigation was comprised of a series of Ground Penetrating Radar (GPR) traverses and site-wide radio frequency/electromagnetic (RF/EM) scans. GPR data was collected with Sensors and Software 250 MHz Noggin SmartCart®. All utility services entering or exiting the buildings were visually examined by locating meter rooms and/or speaking with the facilities

manager. All boring locations were selected and cleared for drilling, subsequent to the geophysical survey at each individual proposed site.

The geophysical report can be found in Appendix B.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of 38 soil borings were advanced throughout the Sites; 16 locations at Famitech North, 7 at Famitech South, 9 at Astoria Equities, and 6 at Zavas. All soil borings were installed by means of the sonic rotary method. The sonic rotary method resulted in the advancement of a four-inch core barrel into an undisturbed formation using downward pressure and sonic vibrations. Typically, a larger diameter casing was advanced around the core barrel in order to prevent borehole collapse during the extraction of the core barrel. The sample (collected in 5-foot intervals) was extruded from the core barrel and collected in polyethylene bags. Following sample collection, the core barrel was returned to the borehole and advanced to the next desired depth interval. Due to the nature and equipment used in this drilling, soil samples were collected in a continuous manner from the beginning of the boring to the target depth (bedrock).

Soil borings and soil samples were field screened for volatile organic compounds (VOCs) using a photoionization detector (PID) equipped with a 10.6 eV lamp. All soils were visually inspected for evidence of impacts (e.g., odors, staining, and visible free product) and the lithology was recorded according to the Unified Soils Classification System (USCS).

Roux Associates collected at least two composite soil samples from each soil boring, one from the 0-2 foot interval just below surface, and one from the interval exhibiting the highest PID reading. If no evidence of contamination was identified during field screening, in addition to the surface soil sample, a soil sample from the two foot depth interval directly above groundwater and/or bedrock will be collected.

Boring logs were prepared by a geologist and are attached in Appendix C. A map showing the location of soil borings, monitoring wells and soil vapor points is shown in Plate 1.

Groundwater Monitoring Well Construction

Twenty-one 2-inch diameter groundwater monitoring wells were installed (converted from soil borings) between December 3 and December 20, 2013. All wells were installed using a Sonic® drill rig and constructed with eight to twelve feet of 20-Slot screen to a depth of approximately 12-17 feet below Site grade.

Monitoring well locations are shown in Plate 1.

Survey

The soil boring, monitoring well and soil vapor point locations and elevations were surveyed by Angle of Attack via rod and level on December 18 through December 23, 2013.

Water Level Measurement

Each groundwater monitoring well was gauged with an oil water interface probe. Water level gauging data is included in Table 1. Free product was not observed in any of the 21 monitoring wells during the groundwater gauging round conducted on December 23, 2013.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Seventy-nine soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2 through 7. Plate 1 shows the locations of samples collected in this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

Twenty-four groundwater samples were collected for chemical analysis during this RI including QA/QC samples. Groundwater sample collection data is reported in Tables 8 through 12. Sampling logs with information on purging and sampling of groundwater monitor wells is included in Appendix D. Plate 1 shows the locations of monitoring wells used for groundwater sampling. Laboratories and analytical methods are shown below. Groundwater sampling purge logs can be found in Appendix D.

Soil Vapor Sampling

A total of thirty-nine soil vapor points were installed throughout the various properties; fourteen at Famitech North, seven at Famitech South, ten at Astoria Equities, and eight at Zavas. All soil vapor points were installed using Cox-Colvin soil vapor pins, as approved by the NYCOER, with the exception to three traditional soil vapor points installed adjacent to Cox Colvin soil vapor pins at the Famitech North, Famitech South, and Astoria Equities properties. The three traditional soil vapor points were installed using 6" stainless steel screens and are identified with an "A" following the soil vapor point identification (e.g., SV-FN-08A). Soil vapor sampling locations are shown in Plate 1. Soil vapor sample collection data is reported in Table 13. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006.* Soil vapor sampling logs can be found in Appendix E.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Alpha Analytical.
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Alpha Analytical of Westborough, MA.
Chemical Analytical	Soil analytical methods:

Factor	Description
Methods	• TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); • TCLP Metals by EPA Method 1311 Groundwater analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 13, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix F.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Provided below is a description of the geological and hydrogeologic conditions identified during the Remedial Investigation.

Stratigraphy

The Site is generally characterized by historic fill from ground surface to bedrock consisting of anthropogenic materials such as brick, concrete, ash, and coal with intermittent sandy and/or gravely silt and silty sand layers. Dark brown silt and vegetative matter (peat) was observed in the deeper borings, consistent with historical river deposits. The geology in the area of the Site is highly variable and consists primarily of metamorphic rock. In the direct vicinity of the site, bedrock consists of Manhattan Formation (schist) underlain by the Inwood Formation (marble). During this investigation, Roux Associates observed both the Manhattan and Inwood Formations with depth to bedrock variable across the site. This observation was consistent with the majority of results from previous reports. Bedrock in Famitech North was encountered at a depth of approximately 9 to 23 feet below land surface (bls), in Famitech South at 8 to 14 ft bls, in Astoria Equities at 7 to 20 ft bls, and in Zavas at 6.5 to 12.5 ft bls.

Hydrogeology

A table of water level data for all monitoring wells is included in Table 1. The average depth to groundwater is 7.52 feet bls and the range in depth is 3.55 to 12.03 feet bls. A map of groundwater elevations with groundwater contours and inferred flow lines is shown in Plate 2. Groundwater flow is from east to west towards the East River. It is suspected that groundwater under the site is tidally influenced in proximity to the East River, although multiple rounds of groundwater gauging at different tidal stages were not conducted to confirm tidal influence.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 7. Plates 3A through 3D show the locations and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Restricted Residential Soil Cleanup Objectives (SCOs).

Famitech North

VOCs

VOCs were not detected at concentrations above New York State Department of Environmental Conservation (NYSDEC) Part 375 Restricted ResidentialSCOs for any of the 32 soil samples collected during the RI.

SVOCs

Fourteen SVOCs, mostly polyaromatic hydrocarbons (PAHs), were detected in 14 of the 32 soil samples analyzed. SVOC contamination was detected in the samples collected from the shallow 0-2 ft bls sample intervals in 12 of the 16 borings and in the deeper intervals in 2 soil borings. SVOCs of concern include the following:

- acenaphthene (maximum of 420,000 micrograms per kilogram (µg/kg) in SB-FN-07/15-17');
- anthracene (maximum of 410,000 µg/kg in SB-FN-07/15-17');
- benzo[a]anthracene (maximum of 230,000 µg/kg in SB-FN-07/15-17');
- benzo[a]pyrene (maximum of 94,000 µg/kg in SB-FN-07/15-17');
- benzo[b]fluoranthene (maximum of 88,000 µg/kg in SB-FN-07/15-17');
- benzo[k]fluoranthene (maximum of 28,000 µg/kg in SB-FN-07/15-17');
- chrysene (maximum of 360,000 µg/kg in SB-FN-07/15-17');
- dibenzo[a,h]anthracene (maximum of 25,000 µg/kg in SB-FN-07/15-17');
- fluoranthene (maximum of 410,000 µg/kg in SB-FN-07/15-17');
- fluorene (maximum of 190,000 µg/kg in SB-FN-07/15-17');
- indeno[1,2,3-c,d]pyrene (maximum of 30,000 µg/kg in SB-FN-07/15-17');
- naphthalene (maximum of 750,000 µg/kg in SB-FN-07/15-17');
- phenanthrene (maximum of 4,400,000 µg/kg in SB-FN-07/15-17'); and
- pyrene (maximum of 760,000 µg/kg in SB-FN-07/15-17').

The detection of PAHs in most of the borings is typical of historical fill in urban and industrialized areas and reflective of area background levels, however, at the concentrations found in boring SB-FN-07/15-17', is indicative of petroleum contamination.

Metals

Several metals were identified at concentrations above Restricted Residential SCOs in soil samples collected beneath Famitech North, as summarized below:

- Arsenic in MW-FN-05/0-2' (18 milligrams per kilogram (mg/kg)), MW-FN-08/0-2' (27 mg/kg), and SB-FN-07/0-2' (30 mg/kg);
- cadmium in SB-FN-07/0-2' (6 mg/kg);
- lead in SB-FN-05/0-2' (690 mg/kg) and SB-FN-07/0-2' (860 mg/kg); and
- mercury in SB-FN-05/0-2' (0.95 mg/kg) and SB-FN-06/0-2' (0.91 mg/kg).

The detection of metals in the subsurface soil is typical of historical fill in urban and industrialized areas and is reflective of area background levels.

In addition, all 32 soil samples were analyzed to determine whether hazardous levels of metals existed in the subsurface soil via toxicity characteristic leaching procedure (TCLP). Analytical results indicated that no characteristically hazardous concentrations of lead exist in surficial soil at Famitech North.

Pesticides and PCBs

Pesticides and PCBs were either not detected or detected at concentrations below the Restricted Residential SCOs for all soil samples collected.

Famitech South

VOCs

VOCs were not detected at concentrations above the Part 375 Unrestricted SCOs for any of the 13 soil samples collected during the RI.

SVOCs

Seven SVOCs were detected in 7 of the 14 soil samples analyzed. SVOC contamination was detected in the samples collected from the shallow 0-2 ft bls sample intervals only. SVOCs of concern include the following:

- benzo[a]anthracene (maximum of 6,400 µg/kg in SB-FS-03/0-2');
- benzo[a]pyrene (maximum of 6,600 µg/kg in SB-FS-03/0-2');

- benzo[b]fluoranthene (maximum of 7,000 µg/kg in SB-FS-03/0-2');
- benzo[k]fluoranthene (maximum of 5,300 µg/kg in SB-FS-03/0-2');
- chrysene (maximum of 6,100 µg/kg in SB-FS-03/0-2');
- dibenzo[a,h]anthracene (maximum of 2,200 µg/kg in SB-FS-03/0-2'); and
- indeno[1,2,3-c,d]pyrene (maximum of 6,200 µg/kg in SB-FS-03/0-2').

The detection of PAHs in most of the borings is typical of historical fill in urban and industrialized areas and reflective of area background levels.

Metals

Three metals were identified at concentrations above Restricted Residential SCOs in soil samples collected beneath Famitech South, as summarized below:

- barium in MW-FS-01/13-14' (430 mg/kg) and MW-FS-02/0-2' (440 mg/kg);
- chromium in SB-FS-02/0-2' (200 mg/kg); and
- lead in MW-FS-02/0-2' (410 mg/kg).

The detection of metals in the subsurface soil is typical of historical fill in urban and industrialized areas and is reflective of area background levels.

In addition, all 13 soil samples were analyzed to determine whether hazardous levels of metals existed in the subsurface soil via toxicity characteristic leaching procedure (TCLP). Analytical results indicated that no characteristically hazardous concentrations of lead exist in surficial soil at Famitech South.

Pesticides and PCBs

Pesticides and PCBs were either not detected or detected at concentrations below the Restricted Residential SCOs for all soil samples collected.

Astoria Equities

VOCs

VOCs were not detected at concentrations above the Part 375 Unrestricted SCOs for any of the 18 soil samples collected during the RI.

SVOCs

Seven SVOCs, mostly polyaromatic hydrocarbons (PAHs), were detected in 5 of the 18 soil samples analyzed. SVOC contamination was detected in the samples collected from the shallow 0-2 ft bls sample intervals in 6 of the 7 borings and in the deeper intervals in 1 soil boring. SVOCs of concern include the following:

- benzo[a]anthracene (maximum of 33,000 µg/kg in MW-AE-04/0-2');
- benzo[a]pyrene (maximum of 26,000 µg/kg in MW-AE-04/0-2');
- benzo[b]fluoranthene (maximum of 37,000 µg/kg in MW-AE-04/0-2');
- benzo[k]fluoranthene (maximum of 11,000 µg/kg in MW-AE-04/0-2');
- chrysene (maximum of 33,000 µg/kg in MW-AE-04/0-2');
- dibenzo[a,h]anthracene (maximum of 4,700 µg/kg in MW-AE-04/0-2'); and
- indeno[1,2,3-c,d]pyrene (maximum of 20,000 µg/kg in MW-AE-04/0-2').

The detection of PAHs in most of the borings is typical of historical fill in urban and industrialized areas and reflective of area background levels.

Metals

Two metals were identified at concentrations above Restricted Residential SCOs in soil samples collected beneath Astoria Equities, as summarized below:

- lead in MW-AE-05/0-2' (1,200 mg/kg) and SB-AE-02/13-15 (13,000 mg/kg); and
- mercury in SB-AE-03/2-3' (1.8 mg/kg) and SB-AE-04/0-2' (0.92 mg/kg).

The detection of metals in the subsurface soil is typical of historical fill in urban and industrialized areas and is reflective of area background levels.

In addition, all 18 soil samples were analyzed to determine whether hazardous levels of metals existed in the subsurface soil via toxicity characteristic leaching procedure (TCLP). Analytical results indicated that characteristically hazardous concentrations of lead exist in surficial soil in one soil sample (MW-AE-05/0-2'). This is the only soil sample out of 79 total samples collected across the greater Halletts Point Site that was deemed hazardous via TCLP metals analyses.

Pesticides and PCBs

Pesticides and PCBs were either not detected or detected at concentrations below the Restricted Residential SCOs for all soil samples collected.

Zavas

VOCs

VOCs were not detected at concentrations above the Part 375 Unrestricted SCOs for any of the 14 soil samples collected during the RI.

SVOCs

Fifteen SVOCs were detected in 14 of the 32 soil samples analyzed. SVOC contamination was detected in the samples collected from the shallow 0-2 ft bls sample intervals in 2 of the 14 borings and in the deeper intervals in 5 soil borings. SVOCs of concern include the following:

- acenaphthene (maximum of 110,000 micrograms per kilogram (µg/kg) in SB-ZA-03/4-5');
- anthracene (maximum of 170,000 µg/kg in SB-ZA-03/4-5');
- benzo[a]anthracene (maximum of 320,000 µg/kg in SB-ZA-03/4-5');
- benzo[a]pyrene (maximum of 290,000 µg/kg in SB-ZA-03/4-5');
- benzo[b]fluoranthene (maximum of 330,000 µg/kg in SB-ZA-03/4-5');
- benzo[k]fluoranthene (maximum of 130,000 µg/kg in SB-ZA-03/4-5');
- chrysene (maximum of 290,000 µg/kg in SB-ZA-03/4-5');
- dibenzo[a,h]anthracene (maximum of 37,000 µg/kg in SB-ZA-03/4-5');
- dibenzofuran (maximum of 110,000 µg/kg in SB-ZA-03/4-5');
- fluoranthene (maximum of 880,000 µg/kg in SB-ZA-03/4-5');
- fluorene (maximum of 130,000 µg/kg in SB-ZA-03/4-5');
- indeno[1,2,3-c,d]pyrene (maximum of 200,000 µg/kg in SB-ZA-03/4-5');
- naphthalene (maximum of 110,000 µg/kg in SB-ZA-03/4-5');
- phenanthrene (maximum of 990,000 µg/kg in SB-ZA-03/4-5'); and
- pyrene (maximum of 760,000 µg/kg in SB-ZA-03/4-5').

The detection of PAHs in most of the borings is typical of historical fill in urban and industrialized areas and reflective of area background levels, however, at the concentrations found in boring SB-ZA-03/4-5', is indicative of petroleum contamination.

Metals

Several metals were identified at concentrations above Restricted Residential SCOs in soil samples collected beneath Zavas, as summarized below:

- Arsenic in MW-FN-05/0-2' (18 milligrams per kilogram (mg/kg)), MW-FN-08/0-2' (27 mg/kg), and SB-FN-07/0-2' (30 mg/kg);
- barium in MW-ZA-02/9-11' (640 mg/kg), and SB-ZA-03/5-6.5' (610 mg/kg);
- chromium in MW-ZA-02/9-11' (270 mg/kg); and
- copper in MW-ZA-03/4-5' (670 mg/kg);

The detection of metals in the subsurface soil is typical of historical fill in urban and industrialized areas and is reflective of area background levels.

In addition, all 14 soil samples were analyzed to determine whether hazardous levels of metals existed in the subsurface soil via toxicity characteristic leaching procedure (TCLP). Analytical results indicated that no characteristically hazardous concentrations of lead exist in surficial soil at Zavas.

Pesticides and PCBs

Pesticides and PCBs were either not detected or detected at concentrations below the Restricted Residential SCOs for all soil samples collected.

5.3 Groundwater Chemistry

Twenty-four groundwater samples were collected including quality assurance/quality control (QA/QC) samples. Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 8 through 12. Exceedances of applicable groundwater standards are shown.

Plates 4A through 4D show the locations and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs).

Famitech North

VOCs

Five VOCs were detected at concentrations above AWQSGVs in two monitoring wells. VOCs of concern include the following:

- benzene (maximum of 8.1 µg/L in MW-FN-05);
- ethylbenzene (7 µg/L in MW-FN-05);
- m+p-xylene (6.2 µg/L in MW-FN-05);
- naphthalene (72 µg/L in MW-FN-05); and
- toluene (5.7 µg/L in MW-FN-05).

SVOCs

Seven SVOCs were detected in three groundwater samples above AWQSGVs. Compounds indicative of historic fill as well as degraded oil were detected at low levels in wells at Famitech North. Compounds detected include:

- benzo[a]anthracene (maximum of 0.32 µg/L in MW-FN-05);
- benzo[a]pyrene (maximum of 0.21 µg/L in MW-FN-08);
- benzo[b]fluoranthene (maximum of 0.26 µg/L in MW-FN-08);
- benzo[k]fluoranthene (0.11J µg/L in MW-FN-08);
- chrysene (maximum of 0.23 µg/L in MW-FN-05);
- indeno[1,2,3-c,d]pyrene (0.18J µg/L in MW-FN-08); and
- naphthalene (73E µg/L in MW-FN-05).

Metals

Several metals including iron, manganese, selenium, and sodium were detected at concentrations above AWQSGVs in both filtered and unfiltered groundwater samples. This is indicative of saltwater intrusion from the nearby tidally influenced East River. Lead was detected above

AWQSGVs in unfiltered samples only MW-FN-01 and MW-FN-07. Antimony was detected in filtered samples in MW-FN-06 (4.8 µg/L).

PCBs

There were no PCBs detected in groundwater samples.

Pesticides

No pesticides were detected in groundwater samples with the exception of dieldrin in MW-FN-06 (0.023 µg/L) and MW-FN-08 (0.015 µg/L).

Famitech South

VOCs

Thirteen VOCs were detected at concentrations above AWQSGVs in two monitoring wells. VOCs of concern include the following:

- 1,2,4,5-tetramethylbenzene (12 µg/L in MW-FS-01 and MW-FS-03);
- 1,2,4-trimethylbenzene (maximum of 120 µg/L in MW-FS-01);
- 1,3,5-trimethylbenzene (16 µg/L in MW-FS-01);
- benzene (maximum of 97 µg/L in MW-FS-01);
- ethylbenzene (maximum of 190 µg/L in MW-FS-01);
- isopropylbenzene (maximum of 58 µg/L in MW-FS-01);
- m+p-xylene (maximum of 350 µg/L in MW-FS-01);
- naphthalene (maximum of 590 µg/L in MW-FS-01);
- n-propylbenzene (maximum of 14 µg/L in MW-FS-03);
- o-xylene (maximum of 250 µg/L in MW-FS-01);
- p-isopropyltoluene (16 µg/L in MW-FS-03);
- styrene (13 µg/L in MW-FS-01); and
- toluene (maximum of 140 µg/L in MW-FS-01).

The detection of VOCs in MW-FS-01 and MW-FS-03 located in Famitech South suggest a possible historic release onsite or directly upgradient.

SVOCs

Four SVOCs were detected in two groundwater samples above AWQSGVs. Compounds indicative of historic fill as well as degraded oil were detected at low levels in wells in Famitech South. Compounds detected include:

- acenaphthene (39 µg/L in MW-FS-01);
- benzo[a]anthracene (0.2 µg/L in MW-FS-01);
- chrysene (0.22 µg/L in MW-FS-01); and
- naphthalene (maximum of 210 µg/L in MW-FS-01).

Metals

Several metals including iron, manganese, selenium, and sodium were detected at concentrations above AWQSGVs in both filtered and unfiltered groundwater samples. This is indicative of saltwater intrusion from the nearby tidally influenced East River. Barium, chromium, and lead were detected above AWQSGVs in unfiltered samples only in MW-FS-01.

PCBs

There were no PCBs detected in groundwater samples.

Pesticides

No pesticides were detected in groundwater samples.

Astoria Equities

VOCs

Only one VOC was detected at concentrations above AWQSGVs in MW-AE-01 (chloroform at 11 µg/L).

SVOCs

No SVOCs were detected above AWQSGVs at Astoria Equities.

Metals

Several metals including antimony, iron, manganese, and sodium were detected at concentrations above AWQSGVs in both filtered and unfiltered groundwater samples. This is indicative of saltwater intrusion from the nearby tidally influenced East River. Lead was detected above AWQSGVs in unfiltered samples only in MW-AE-05.

PCBs

There were no PCBs detected in groundwater samples.

Pesticides

No pesticides were detected in groundwater samples.

Zavas

VOCs

Four VOCs were detected at concentrations above AWQSGVs in three monitoring wells. VOCs of concern include the following:

- 1,2,4-trimethylbenzene (maximum of 7.3 µg/L in MW-ZA-04);
- benzene (maximum of 2.9 µg/L in MW-ZA-02);
- isopropylbenzene (maximum of 8 µg/L in MW-ZA-01); and
- naphthalene (maximum of 12 µg/L in MW-ZA-04).

SVOCs

Nine SVOCs were detected in nine groundwater samples above AWQSGVs. Compounds indicative of historic fill as well as degraded oil were detected at low levels in wells in the Zavas property. Compounds detected include:

- acenaphthene (maximum of 130 µg/L in MW-ZA-04);
- benzo[a]anthracene (maximum of 6 µg/L in MW-ZA-04);
- benzo[a]pyrene (maximum of 2.8 µg/L in MW-ZA-04);
- benzo[b]fluoranthene (maximum of 2.5 µg/L in MW-ZA-04);
- benzo[k]fluoranthene (maximum of 0.92J µg/L in MW-ZA-04);
- chrysene (maximum of 7.4 µg/L in MW-ZA-04);
- indeno[1,2,3-c,d]pyrene (maximum of 1.3 µg/L in MW-ZA-04);
- naphthalene (maximum of 29 µg/L in MW-ZA-04); and
- phenanthrene (maximum of 120 µg/L in MW-ZA-04).

Metals

Three metals including iron, manganese, selenium, and sodium were detected at concentrations above AWQSGVs in both filtered and unfiltered groundwater samples. This is indicative of

saltwater intrusion from the nearby tidally influenced East River. No other metals were detected above AWQSGVs at Zavas.

PCBs

There were no PCBs detected in groundwater samples.

Pesticides

No pesticides were detected in groundwater samples.

5.4 Soil Vapor Chemistry

A total of 39 soil vapor points were installed throughout the Site. All interior points (with the exception of three traditional soil vapor points) were installed using the Cox-Colvin soil vapor pin method. The pins protrude approximately 3 inches below the slab. The traditional soil vapor points were installed to a depth of 2 to 3 feet below ground surface, and the interior traditional SV points were installed to a depth of 2 feet below the slab. Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 13. Soil vapor results were compared to New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion, October 2006.

Famitech North

All soil vapor samples contained low-level detections of both petroleum-related VOCs and chlorinated VOCs. Chlorinated VOCs were detected in nine locations in Famitech North.. VOCs of concern include the following:

- 1,1,1-trichloroethane (maximum of 220 µg/m^3 in SV-FN-04; detected in two samples); and
- Tetrachloroethene (PERC) (maximum of 50.9 µg/m^3 in SV-FN-04; detected in eight total samples).

Plate 5A shows the soil vapor sample locations and post the concentrations for soil vapor samples with detected concentrations of VOCs.

Famitech South

All soil vapor samples contained low-level detections of both petroleum-related VOCs and chlorinated VOCs. Chlorinated VOCs were detected in seven SV points in Famitech South. VOCs of concern include the following:

- 1,1,1-trichloroethane (maximum of 102 µg/m^3 in SV-FS-04; detected in seven total samples);
- Tetrachloroethene (PERC) (maximum of 138 µg/m^3 in SV-FS-05; detected in six total samples); and
- Trichloroethene (TCE) (maximum of 148 µg/m^3 in SV-FS-03; detected in two total samples).

Plate 5B shows the soil vapor sample locations and post the concentrations for soil vapor samples with detected concentrations of VOCs.

Astoria Equities

All soil vapor samples (with the exception of SV-AE-02, SV-AE-07, and SV-AE-08) contained low-level detections of both petroleum-related VOCs and chlorinated VOCs. Chlorinated VOCs were detected in five SV points in Astoria Equities. VOCs of concern include the following:

- 1,1,1-trichloroethane (maximum of 161 µg/m^3 in SV-FN-04; detected in five total samples);
- *Cis*-1,2-dichloroethene (maximum of 9.24 µg/m^3 in SV-AE-09);
- Tetrachloroethene (PERC) (maximum of 92.2 µg/m^3 in SV-AE-04; detected in three total samples); and
- Trichloroethene (TCE) (maximum of 53 µg/m^3 in SV-AE-09; detected in two total samples).

Plate 5C shows the soil vapor sample locations and post the concentrations for soil vapor samples with detected concentrations of VOCs.

Zavas

All soil vapor samples contained low-level detections of both petroleum-related VOCs and chlorinated VOCs. Chlorinated VOCs were detected in eight SV points in Zavas. VOCs of concern include the following:

- 1,1,1-trichloroethane (maximum of 79.7 µg/m^3 in SV-ZA-04; detected in six total samples);
- Tetrachloroethene (PERC) (maximum of 30.2 µg/m^3 in SV-ZA-09; detected in eight total samples); and
- Trichloroethene (TCE) (maximum of 7.52 µg/m^3 in SV-ZA-04; detected in two total samples).

Plate 5D shows the soil vapor sample locations and post the concentrations for soil vapor samples with detected concentrations of VOCs.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site. One soil sample out of 79 samples collected (MW-AE-05 (0-2 ft bls)), contained lead at concentrations in excess of the TCLP standard of 5 mg/L, indicating that a hotspot of characteristically hazardous lead soil exists on the Site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

J - Estimated value
U - Indicates that the compound was analyzed for but not detected
PI - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
DUP - Duplicate sample
µg/kg - Micrograms per kilogram
ft bls - Feet below land surface
NYSDEC - New York State Department of Environmental Conservation
-- No NYSDEC Part 375 Standards available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards
Boxed data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

J - Estimated value
U - Indicates that the compound was analyzed for but not detected
PI - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
DUP - Duplicate sample
µg/kg - Micrograms per kilogram
ft bls - Feet below land surface
NYSDEC - New York State Department of Environmental Conservation
-- No NYSDEC Part 375 Standards available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards
Boxed data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

J - Estimated value
U - Indicates that the compound was analyzed for but not detected
PI - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
DUP - Duplicate sample
µg/kg - Micrograms per kilogram
ft bls - Feet below land surface
NYSDEC - New York State Department of Environmental Conservation
-- No NYSDEC Part 375 Standards available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards
Boxed data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

J - Estimated value
U - Indicates that the compound was analyzed for but not detected
PI - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
DUP - Duplicate sample
µg/kg - Micrograms per kilogram
ft bls - Feet below land surface
NYSDEC - New York State Department of Environmental Conservation
-- No NYSDEC Part 375 Standards available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards
Boxed data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

J - Estimated value
U - Indicates that the compound was analyzed for but not detected
PI - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
DUP - Duplicate sample
µg/kg - Micrograms per kilogram
ft bls - Feet below land surface
NYSDEC - New York State Department of Environmental Conservation
-- No NYSDEC Part 375 Standards available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards
Boxed data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

J - Estimated value
U - Indicates that the compound was analyzed for but not detected
PI - The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported
DUP - Duplicate sample
µg/kg - Micrograms per kilogram
ft bls - Feet below land surface
NYSDEC - New York State Department of Environmental Conservation
-- No NYSDEC Part 375 Standards available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards
Boxed data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

J - Estimated value
E - Indicates value exceeded calibration range
U - Indicates that the compound was analyzed for but not detected
HF - Field parameter with a holding time of 15 minutes
DUP - Duplicate sample
ug/m^3 - Micrograms per cubic meter
Bold data indicates that parameter was detected

J - Estimated value
E - Indicates value exceeded calibration range
U - Indicates that the compound was analyzed for but not detected
HF - Field parameter with a holding time of 15 minutes
DUP - Duplicate sample
ug/m^3 - Micrograms per cubic meter
Bold data indicates that parameter was detected

Table 13. Summary of Volatile Organic Compounds in Soil Vapor, Project H Remedial Investigation
Zavas, Astoria Equities and Famitech Parcels, Astoria, New York

Parameter (Concentrations in ug/m^3)	**Sample Designation:** / **Sample Date:**	SV-ZA-08 12/16/2013	SV-ZA-09 12/16/2013	SV-ZA-10 12/20/2013
Tetrachloroethene		**22**	**30.2**	**3.22**
Tetrahydrofuran		0.59 U	0.59 U	**2.12**
Toluene		**4.79**	**2.67**	**8.78**
trans-1,2-Dichloroethene		0.793 U	0.793 U	0.793 U
trans-1,3-Dichloropropene		0.908 U	0.908 U	0.908 U
Trichloroethene		1.07 U	**2.76**	1.07 U
Trichlorofluoromethane		**1.63**	**2.48**	**1.88**
Vinyl acetate		0.704 U	0.704 U	0.704 U
Vinyl chloride		0.511 U	0.511 U	0.511 U

J - Estimated value
E - Indicates value exceeded calibration range
U - Indicates that the compound was analyzed for but not detected
HF - Field parameter with a holding time of 15 minutes
DUP - Duplicate sample
ug/m^3 - Micrograms per cubic meter
Bold data indicates that parameter was detected

TYPICAL DATA BOX INFORMATION

SAMPLE ID → SV-FS-04 | 12/20/13 ← SAMPLE DATE

ANALYTES	Analyte	
	VOCs	
	1,1,1-Trichloroethane	102
	1,1-Dichloroethane	32.7
	Acetone	42.8
	Ethanol	132
	Freon 113	20.9
	Toluene	18.5

ANALYTES → CONCENTRATIONS (ug/m³)

Concentrations in µg/m³
µg/m³ -Micrograms per cubic meter
VOCs - Volatile Organic Compounds
ND - Compound was analyzed for but not detected

NOTES:

1. Monitoring well elevations and locations were surveyed on December 23, 2013 by Angle Of Attack Land Surveying.
2. Elevations are based upon borough of Queens highway datum.
3. Survey base map sourced from Control Point Associates, Inc. file C08003.01, Drawing V-001.1 Revision 2, dated 4/9/12.
