CERTIFICATION

I, Paul Stewart, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Site located at 148-28 Hillside Avenue Jamaica, New York. I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 148-28 Hillside Avenue in the central portion of the borough of Queens in New York City and is identified as Block 9694 and Lot 17 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 17,450 square feet in area and has a building footprint of approximately 1,920 square feet. Currently, the Site is an auto repair facility, occupied by Arm Auto Services. A diagram of site features is shown in Figure 2.

Summary of Proposed Redevelopment Plan

The proposed future redevelopment of the Site consists of a 10-story mixed-use building. There is a cellar, which will accommodate 33 parking spaces, utility rooms and a centrally located elevator. The first floor will have two commercial units, 15 parking spaces at grade and a ramp to access the 33 parking spaces in the cellar. Floors 2 through 10 will consist of 8 studio, 33 one-bedroom and 38 two-bedroom units. The proposed building will consist of a partial build out of the lot, which will be approximately 14,100 square feet in the cellar. The excavation depth at the property will be approximately 13 feet bgs.

Summary of Past Uses of Site and Areas of Concern

According to Sanborn maps, as of 1888, the Site contained a three-story residential building. By 1925, a one-story filling station with gasoline tanks had also been constructed. By 1942, the three-story building was identified as mixed-use and it was demolished by 1963. By 1967, the gasoline tanks were no longer identified, and by 1992 the building was identified as an auto repair shop. The property remained substantially unchanged through 2006.

According to ACT's Phase I Environmental Site Assessment dated July 14, 2015, five abandoned 550-gallon gasoline underground storage tanks were present in front of the building. One inactive 250-gallon waste oil underground storage tank was observed in the interior of the repair shop. According to the site contact, six underground storage tanks were removed from the

property approximately 25 years ago. The GPR survey detected disturbed soil that likely was the former location of removed underground storage tanks.

The AOCs identified for this site include:

1. Abandoned and former underground gasoline storage tanks;
2. Inactive underground waste oil tank;
3. In-ground hydraulic vehicle lifts;
4. Exterior storm drains and interior floor drains;

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Conducted a geophysical investigation to identify the approximate locations of current USTs and former tank pits.
3. Installed ten soil borings across the entire project Site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed six soil vapor probes around Site perimeter and collected six samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property is approximately 67 feet above mean sea level.
2. Ten soil borings were advanced to depths of 12 to 15 feet below grade and ground water was not encountered. Two attempts were made to collect groundwater and refusal was encountered at depths of 17 and 31 feet below grade. Groundwater investigation is required and will be performed prior to issuance of Notice to proceed.
3. Groundwater flow is estimated to be from the north to the south beneath the Site.
4. Depth to bedrock is approximately 400 feet bgs at the Site.

5. The stratigraphy of the site, from the surface down, generally consists of fill material up to 3.5 feet in depth underlain by silt and clay followed by poorly graded sand to the total depth of investigation of 18 feet bgs.
6. Soil quality data was compared to Unrestricted and Restricted Residential Use Soil Cleanup Objectives (UUSCOs and RRSCOs) contained in NYSDEC 6 NYCRR Part 375. VOC compounds including acetone (maximum of 110 µg/kg) and tetrachloroethene (11,000 µg/kg) were detected above their Unrestricted Use SCOs in two shallow soil samples. Two SVOCs, Benzo(a)anthracene (1,550 µg/kg) and Chrysene (1,560 µg/kg) exceeded Unrestricted Use SCOs in one shallow soil sample. Benzo(a)anthracene also exceeded Restricted Residential Use SCOs. One Pesticide, 4,4'-DDT (max. of 5.06 µg/kg) exceeded its Unrestricted Use Soil Cleanup Objective. Several metals were identified and lead (1100 mg/Kg) and selenium (7.18 mg/Kg) exceeded Unrestricted Use SCOs. Lead also exceeded Restricted Residential Use SCOs. Overall, with the exception of PCE disposal, the soil chemistry is similar to sites with historic urban fill in New York City.
7. Soil vapor samples collected during the RI were compared to the compounds listed in Table 3.1 Air Guidance Values derived by the New York State Department of Health (NYSDOH) located in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006, updated June 2007 for the soil vapor/indoor air matrices, updated September 2013 for tetrachloroethylene (PCE), and updated August 2015 for trichloroethylene (TCE). Soil vapor sampling detected several petroleum related and chlorinated compounds. Highest concentrations were detected for 2-Butanone at 1100 ug/m³. Petroleum related (BTEX) compounds were detected at a maximum concentration of 299 ug/m³. Chlorinated compound Tetrachloroethylene PCE was detected in all six samples and ranged in concentrations from 50 to 2,700 ug/m³, compared to a NYSDOH screening value of 30 ug/m³. Trichloroethylene was detected in one soil vapor sample in the east section of the site at 55 ug/m³, above the NYSDOH screening value of 2 ug/m³. Concentrations of PCE and TCE are above the NYSDOH guidance matrix and require mitigation.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Chung Lam is considering enrollment in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.40-acre site located at 148-28 Hillside Avenue in the central portion of the borough of Queens in New York City. The redevelopment plans for the property consist of a 10-story mixed-use building with 48 parking spaces.

An initial subsurface investigation was performed by ACT in June 2015. That subsurface investigation was supplemented with an additional subsurface investigation performed between November 18 and 19, 2015. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 148-28 Hillside Avenue in the central portion of the borough of Queens in New York City and is identified as Block 9694 and Lot 17 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 17,450 square feet in area and has a building footprint of approximately 1,920 square feet. Currently, the Site is an auto repair facility, occupied by Arm Auto Services. A diagram of site features is shown in Figure 2.

1.2 Proposed Redevelopment Plan

The proposed future redevelopment of the Site consists of a 10-story mixed-use building. There is a cellar, which will accommodate 33 parking spaces, utility rooms and a centrally located elevator. The first floor will have two commercial units, 15 parking spaces at grade and a ramp to access the 33 parking spaces in the cellar. Floors 2 through 10 will consist of 8 studio, 33 one-bedroom and 38 two-bedroom units. The proposed building will consist of a partial build out of the lot, which will be approximately 14,100 square feet in the cellar. The excavation depth at the property will be approximately 13 feet bgs.

1.3 Description of Surrounding Property

Figure 1 shows the surrounding land usage. The Site is bounded by Hillside Avenue to the north followed by a two-story mixed-use building with apartments above commercial businesses. To the east of the property is a one-story commercial building occupied by a supermarket. To the south, a six-story residential apartment building and a two-story religious building are located. To the west is a two-story commercial building occupied by the National Organization of Industrial Trade Unions. The area in the vicinity of the Site is composed predominantly of residential, commercial and mixed-use buildings.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

According to Sanborn maps, as of 1888, the Site contained a three-story residential building. By 1925, a one-story filling station with gasoline tanks had also been constructed. By 1942, the three-story building was identified as mixed-use and it was demolished by 1963. By 1967, the gasoline tanks were no longer identified, and by 1992 the building was identified as an auto repair shop. The property remained substantially unchanged through 2006.

According to the Phase I Environmental Site Assessment prepared by ACT dated July 14, 2015, five abandoned 550-gallon gasoline underground storage tanks were present in front of the building. Evidence of an inactive 250-gallon waste oil underground storage tank was observed in the interior of the repair shop. According to the site contact, six underground storage tanks were removed from the property approximately 25 years ago. The GPR survey detected disturbed soil that likely was the former location of removed underground storage tanks.

2.2 Previous Investigations

ACT completed a Phase I Environmental Site Assessment dated July 14, 2015. The assessment revealed the following recognized environmental conditions:

- Historical industrial use of the subject property
- A vapor encroachment condition at the subject property

The Phase I Environmental Site Assessment prepared by ACT on July 14, 2015 is included as Appendix D.

2.3 Site Inspection

On November 18, 2015, Paul Stewart, a Qualified Environmental Professional performed an inspection of the Site. The inspection revealed that the property was composed of a one-story commercial building occupied by Arm Auto Services. The inspection located evidence of an inactive waste oil UST, which was oriented during the GPR survey. The locations of soil borings advanced in June 2015 were also observed. Evidence of a tank field containing six abandoned 550-gallon USTs with concrete-sealed fill ports was observed in the northwest portion of the site.

2.4 Areas of Concern

The AOCs identified for this site include:

1. Abandoned and former underground gasoline storage tanks;
2. Inactive underground waste oil tank;
3. In-ground hydraulic vehicle lifts;

4. Exterior storm drains and interior floor drains;

A diagram showing features associated with the Site is presented in Figure 2.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Professional (QEP) responsible for preparation of this RIR is Paul P. Stewart.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

ACT performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Conducted a geophysical investigation to identify the approximate locations of current USTs, former tank pits and drilling obstructions.
3. Installed ten soil borings across the entire project Site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed six soil vapor probes around Site perimeter and collected six samples for chemical analysis;

5. Attempted groundwater sampling at two locations but met refusal each time. The maximum depth achieved prior to refusal was 31 feet bgs.

4.1 Geophysical Investigation

A Ground Penetrating Radar (GPR) Survey of the site was conducted on June 19, 2015. The purpose of the GPR Survey was to identify the locations and depths of all known or suspected underground storage tanks (USTs) and former UST tank pits at the property and to identify potential drilling obstructions. Access was limited to the areas that were unimpeded with surface structures, vehicles and debris.

The GPR survey was performed utilizing an SIR-3000 GPR Unit and a 400-megahertz transducer. The transducer was pulled along pre-determined transects at right angles to each other in a 5 foot by 5 foot overlapping grid pattern so as to form a rectangular grid over the surface. The radar signal reflects off stratigraphical materials and foreign objects in the subsurface and back to the transducer based upon differences in the conductivity and dielectric constant of subsurface features. The radar signal is then converted into an electrical signal that is visually displayed on a video monitor. Prior to initiating the survey, the GPR equipment was calibrated by pulling the radar antenna over areas of ground surface.

An area of disturbed soil indicative of a former UST pit with approximate dimensions of 18 by 28 feet was identified in the northeast portion of the Site. Concrete sealed fill ports were observed within a reinforced concrete tank pad above six abandoned USTs in the northwest portion of the Site. An inactive waste oil UST was identified with approximate dimensions of 7 by 8 feet within the interior of the auto repair facility. Subsurface utilities were also observed traversing the Site. The approximate locations of the current and former USTs and subsurface utilities are provided in Figure 2.

GPR is primarily used as a preliminary survey of a property for the development of subsurface information prior to a formal site assessment. Surface cover or obstructions, subsurface soil types and buried debris can mask or conceal the presence and precise locations of underground structures or even suggest their presence when none exist. The presence, absence or precise locations of underground structures indicated during a GPR survey should be confirmed by excavation, subsurface sampling or other invasive procedures.

4.2 Soil Borings

A total of eight exterior soil borings (SB-1, SB-2B, SB-3 through SB-8) were advanced throughout the property utilizing a truck mounted Geoprobe-style drill unit in combination with a 5-foot macro-core soil sampler. The two interior soil borings (SB-9 and SB-10) were advanced utilizing a portable Geoprobe-style drill unit with a 4-foot macro-core soil sampler. A diagram showing the locations of soil borings is shown in Figure 2.

Soil below the pavement was accessed by breaking the overlying asphalt/concrete with a rotating star bit or jackhammer. The soil sampler was advanced through the subsurface, which collected continuous samples from ground surface to the terminal depth of investigation. Disposable acetate liners were utilized at each drilling flight, which were extracted from the borehole for detailed examination and containerization of selected stratigraphy for laboratory analysis. Between boreholes, the sampling equipment was decontaminated to reduce the occurrence of cross contamination upon mobilization to subsequent boreholes.

A geologist classified the soil to identify properties relevant to the investigation. Generally, the lithology consisted of fill material to the depth of up to 3.5 feet bgs underlain by stratified silt and clay followed by poorly graded sand to the terminal extent of investigation of 18 feet bgs.

Soil boring SB-1 was advanced on the south side of the abandoned gasoline USTs. Soil generally consisted of fill material as indicated by the observation of asphalt to 2 feet underlain by low plasticity clay to 4.5 feet bgs. From 4.5 to 18 feet bgs, the soils consisted of predominantly medium to coarse-grained poorly graded sand with gravel. The maximum PID readings observed was 19 parts per million (ppm) at a depth of 1 foot. Groundwater was not encountered. No discoloration indicative of environmental impacts were noted during the advancement of the soil boring, however an odor was noted at the 0.5 to 2.0 foot strata. At the depth of the maximum PID reading and observation of odor, a two-foot interval soil sample was collected from the shallow zone (0 to 2 feet bgs). A two-foot interval soil sample was collected from the lower strata (13 to 15 feet bgs).

Soil boring SB-2B was advanced on the northwest corner of the abandoned gasoline USTs. Soil generally consisted of medium grained poorly graded sand to 2 feet bgs underlain by low plasticity silt with fine-grained gravel to 5 feet bgs followed by fine to coarse-grained poorly graded sand with fine to coarse-grained gravel to the terminal depth (15 feet bgs) of investigation. PID readings were 0.0 ppm throughout the boring. Groundwater was not

encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement or the soil boring. In the absence of indications of contamination, a two-foot interval deep soil sample was collected from the terminal depth (13 to 15 feet bgs).

Soil boring SB-3 was advanced in the northeast corner of the abandoned gasoline USTs. Soil generally consisted of fill material to a depth of 1 foot bgs as evidenced by asphalt underlain by high plasticity clay to 4 feet bgs followed by coarse-grained poorly graded sand to the terminal depth (15 feet bgs) of investigation. PID readings were from 0.0 ppm throughout the boring. Groundwater was not encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement of the soil boring. In the absence of indications of contamination, a shallow soil sample was collected at the 0 to 3 foot interval due to insufficient sample volume for a two-foot aliquot and a two-foot interval soil sample was collected from the lower strata (13 to 15 feet bgs).

Soil boring SB-4 was advanced on the east side of the abandoned gasoline USTs. Soil generally consisted of medium to coarse-grained poorly graded sand with gravel from ground surface to the terminal depth (15 feet bgs) of investigation. PID readings were 0.0 ppm throughout the boring. Groundwater was not encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement of the soil boring. In the absence of indications of contamination, a two-foot interval deep soil sample was collected of the terminal depth (13 to 15 feet bgs).

Soil boring SB-5 was advanced outside the building on the north side of the waste oil UST. Soil generally consisted of low plasticity silt with fine gravel to 4 feet bgs underlain by medium-grained poorly graded sand with occasional gravel followed by silty sand with fine to coarse gravel from 12 feet bgs to the terminal depth (15 feet bgs) of investigation. PID readings were 0.0 ppm throughout the boring. Groundwater was not encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement of the soil boring. In the absence of indications of contamination, a two-foot interval soil sample was collected from the shallow zone (0 to 2 feet bgs) and a two-foot interval soil sample was collected from the lower strata (13 to 15 feet bgs).

Soil boring SB-6 was advanced in the location of a former UST tank field in the northeast corner of the Site. The soil generally consisted of low plasticity silt from ground surface to 4.5 feet bgs underlain by silty sand with fine to coarse gravel to 7 feet bgs followed by medium-grained poorly graded sand with coarse-grained gravel to the terminal depth (15 feet bgs) of the

soil boring. PID readings were 0.0 ppm throughout the boring. Groundwater was not encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement of the soil boring. In the absence of indications of contamination, a two-foot interval soil sample was collected from the shallow zone (0 to 2 feet bgs) and a two-foot interval soil sample was collected from the lower strata (13 to 15 feet bgs).

Soil boring SB-7 was advanced in the southeast portion of the Site. Refusal was met on the first and second attempt at approximately 10 feet bgs and on the third attempt to 15 feet bgs. The soil consisted of fill material to 1.5 feet bgs with dark brown fine to medium-grained poorly graded sand with dark olive gray high plasticity clay interspersed with asphalt and coal. From 1.5 to 2 feet bgs, moist, dense, dark brown clays with gravel fragments were observed. From 2 to 5 feet bgs, moist, very dense, medium brown high plasticity clay with olive gray layers of fine-grained gravel were observed. Orange medium to coarse-grained poorly graded sand with layers of tan fine-grained poorly graded sand was encountered from 5.5 to 15 feet bgs with an increasing proportion of gravel with depth. PID readings were 0.0 ppm throughout the boring. Groundwater was not encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement of the soil boring. In the absence of indications of contamination, a two-foot interval soil sample was collected from the shallow zone (0 to 2 feet bgs) and a two-foot interval soil sample was collected from the lower strata (10 to 12 feet bgs).

Soil boring SB-8 was advanced in the southwest exterior portion of the Site. The first attempt met refusal at 9 feet bgs and difficult drilling conditions were noted during the second attempt. The soil consisted of fill material interspersed in a silt and clay matrix as evidenced by asphalt and coal fragments to 3.5 feet bgs. From 3.5 to 5 feet bgs, orange/light brown fine-grained poorly graded sand with coarse gravel was observed. From 5 to 9 feet bgs, orange to light brown medium to coarse-grained poorly graded sand with tan fine-grained poorly graded sand layers were observed. From 9 to 10 feet bgs, the soil was similar to the 5 to 9 foot interval with the addition of coarse-grained gravel. From the 10 to 12 foot interval, red/green poorly graded sand with rock fragments were observed. PID readings were 0.0 ppm throughout the boring. Groundwater was not encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement of the soil boring. In the absence of indications of contamination, a two-foot interval soil sample was collected from the shallow zone (0 to 2 feet bgs) and a two-foot interval soil sample was collected from the lower strata (10 to 12 feet bgs).

Soil boring SB-9 was advanced near the waste oil UST inside the northern portion of the auto repair shop. The soil containing fill material evidenced by the presence of ash and coal to 2.5 feet bgs, consisted of dry, loose, black poorly graded gravel with low plasticity silt and sand. The fill material was underlain to 4 feet bgs by dry, dense, brownish orange low plasticity silt and clay with gravel. From 4 to 12 feet bgs, dry, loose, orange-light brown-tan fine to very coarse poorly graded sand with gravel was observed. PID readings were 0.0 ppm throughout the boring. Groundwater was not encountered. No odors or discoloration indicative of environmental impacts were noted during the advancement of the soil boring. In the absence of indications of contamination, a two-foot interval soil sample was collected from the shallow zone (0 to 2 feet bgs) and a two-foot interval soil sample was collected from the lower strata (10 to 12 feet bgs).

Soil boring SB-10 was advanced in the auto body section inside the southwest portion of the service station. The soil containing fill material evidenced by the presence of ash and coal to 2.5 feet bgs, consisted of dry, loose, black poorly graded gravel with some silt and sand underlain by dry, dense, brownish orange fine-grained silt and clay with rock fragments to 5 feet bgs. The soil had a blackened appearance from 0 to 2.5 feet bgs. From 5 to 12 feet bgs, dry, loose, orange-light brown-tan fine to very coarse poorly graded sand with rock fragments was observed. A coarse-grained gravel layer was observed from 10.5 to 11 feet bgs. A maximum PID reading of 42 ppm was recorded from 1 to 1.5 feet in depth. The olfactory evidence of contamination was observed from the surface to the total depth of the soil boring. Groundwater was not encountered. Two-foot interval soil samples were collected from the shallow zone (0 to 2 feet bgs) with elevated PID readings and the lower strata (10 to 12 feet bgs).

Field notes from the sampling events are contained in Appendix A. Boring logs were prepared by a geologist and are attached in Appendix B.

4.3 Temporary Groundwater Wells

Two attempts were conducted to collect a representative groundwater sample from the Upper Glacial aquifer in temporary groundwater wells. A truck-mounted Geoprobe-style drill rig was utilized to advance the drill rods. A two-foot mill-slotted groundwater sampler was attached to the terminus of the drill rods. An electronic water level meter was utilized to detect if the groundwater table had infiltrated into the interior of the groundwater sampler.

The first attempt was advanced to a depth of 17 feet bgs in the southeast portion of the Site at soil boring SB-7. The second attempt was advanced to a depth of 31 feet bgs in the northeast portion of the Site at soil boring SB-6. During the advancement of the soil boring, frequent measurements were taken to observe if the presence of groundwater was within the interior of the groundwater sampler, however no indications of groundwater were observed.

4.4 Soil Vapor Probes

On June 25, 2015, ACT personnel collected 6 soil vapor samples from the Site. Three sub-slab soil vapor samples (SS-1 through SS-3) were collected from the interior of the building. Sub-slab soil vapor sample, SS-1 was collected in the southern portion of the building; SS-2 was collected on the west side of the northern portion of the building SS-3 was collected on the northeast portion of the building. Three soil vapor samples (SV-4 through SV-6) were collected beneath the asphalt parking lot. Soil vapor sample, SV-4 was collected near the abandoned gasoline USTs on the northwest portion of the site; SV-5 was collected near the former excavation for the removed USTs on the northeast portion of the site; and SV-6 was collected near the central portion of the southern rear exterior parking area of the site.

4.5 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. Soil has been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Soil sampling was conducted by driving a macro-core sampler with either a truck-mounted drill rig or a portable drill rig. The macro-core sampler contained a disposable acetate liner driven to the desired interval. The acetate liner was removed from the sampler to classify the soil for stratigraphical characteristics and to obtain soil for analysis. The sampling equipment was decontaminated with a mixture of rinse water and Alconox between soil boring locations. The required preservative was measured by the analytical laboratory, in the appropriate glassware. The field personnel measured an aliquot of approximately 5 grams of soil utilizing a disposable T-handle for each individual soil sample to analyze for VOCs. The soil sample was containerized in additional glassware for analysis of SVOCs, TAL Metals and Pesticides and PCBs. The glassware containing the soil sample was placed in a cooler with ice packs until refrigeration. Proper chain-of-custody documentation accompanied the soil samples to the analytical laboratory.

Eighteen soil samples were collected for chemical analysis during this RI. Figure 2 shows the location of samples collected in this investigation. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 1 through 4. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

On June 25, 2015 ACT personnel collected 6 soil vapor samples from the Site. All work was performed in general conformity to the New York State Department of Health's *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, October 2006 (NYSDOH Guidance). All sampling locations are indicated in Figure 2.

Three sub-slab soil vapor samples (SS-1 through SS-3) were collected from the interior of the building. Each sub-slab soil vapor sample was collected utilizing a power drill, a 1-foot long drill bit, dedicated polyethylene tubing and volatile organic compound (VOC) free putty for sealant. The polyethylene tubing was inserted approximately 6 inches beneath the concrete floor.

In addition, three soil vapor samples (SV-4 through SV-6) were collected beneath the asphalt parking lot. Each soil vapor sample was collected approximately 4 feet below the asphalt pavement utilizing a slide hammer, hollow drive rod and retractable soil vapor implant.

Each soil vapor sample was collected by attaching the portion of the polyethylene tube emerging from the ground to a low flow vacuum pump that purged the probe of soil vapor at a rate that did

not exceed 0.2 liters per minute. A 6-Liter stainless steel Summa canister with a flow regulator set to a flow rate of approximately 0.025 liters per minute was then connected to the polyethylene tubing and allowed to collect soil vapor for approximately 4 hours until the canisters were full.

The six soil vapor samples were transmitted under chain of custody to York Analytical Laboratories, Inc. (NYSDOH #10854). All samples were analyzed for VOCs in accordance with USEPA Method TO-15. Copies of the laboratory reports are contained in Appendix A.

Groundwater Sampling

Collection of groundwater samples was attempted from the ground surface to 31 feet bgs at temporary well TW-6 and from ground surface to 17 feet bgs at temporary well TW-7.

Unfortunately, groundwater was not encountered during the installation of the temporary groundwater wells at both locations where sampling was attempted.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Benjamin Gulizia.
Chemical Analytical Laboratory	The chemical analytical laboratory used in the RI is NYS ELAP certified York Analytical Laboratories.
Chemical Analytical Methods	Soil analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); EPA Method 7473 for Hg • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000);

	Soil vapor analytical method: • VOCs by EPA Method TO-15 (rev. 2000);
--	---

Results of Chemical Analyses

Laboratory data for soil is summarized in Table 1 through 4. Laboratory data deliverables for all samples evaluated in this RIR are provided in Appendix C.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy beneath the Site is composed of the Upper Glacial aquifer from the ground surface to approximately 95 feet bgs and is composed of sand as the dominant fraction, along with varying amounts of gravel, silt and clay. Beneath the Upper Glacial aquifer is the Raritan confining unit, predominantly composed of low permeable clay with few sand layers, which extends to a depth of approximately 270 feet bgs. The Lloyd aquifer is encountered beneath the Raritan confining unit and is composed of poorly to moderate permeability sand and gravel in a clayey matrix, which extends to the top of bedrock at 400 feet bgs that consists of crystalline metamorphic or igneous lithology in the vicinity of the Site.

During the current investigation, soil samples collected from borings installed up to 15 feet bgs generally consisted of up to 3.5 feet of fill material underlain by stratified silt and clay followed by poorly graded sand to the terminal extent of investigation of 15 feet bgs.

Hydrogeology

The Site is located approximately 1.6 miles southeast of Willow Lake and 3.1 miles northeast of the Bergen Basin. The vicinity of the Site is approximately 67 feet above mean sea level. The topography of the area slopes to the south. The inferred regional groundwater gradient in the vicinity of the site is expected to flow to the south towards Jamaica Bay.

Groundwater was not encountered during this RI. The USGS estimates that groundwater beneath the site is approximately 43 feet bgs.

5.2 Soil Chemistry

The analytical results for the soil samples are summarized in Tables 1 through 4. Soil quality data was compared to Unrestricted, Restricted Residential and Commercial use Soil Cleanup Objectives (UUSCOs, RRSCO and CSCOs) contained in 6 NYCRR Part 375.

It can be seen from Table 1 that the VOCs, Tetrachloroethene and Acetone were detected above their UUSCOs in SB-9 (0-2') and SB-10 (0-2'), respectively. Tetrachloroethene, is commonly utilized as a metal parts degreaser and may be associated with incidental spillage around the inactive waste oil UST. Acetone is a common laboratory artifact and its presence may be attributed to introduction during laboratory analysis.

Table 2 indicates that the SVOCs Chrysene and Benzo(a)anthracene were detected in soil sample SB-7A (0-2') above UUSCO and RRSCO, respectively.

Table 3 indicates that the Pesticide, 4,4'-DDT, was detected above its UUSCO in SB-1 (0-2') and SB-6 (0-2'). PCBs were not detected in any soil sample.

Table 4 indicates that metals were observed in eleven of the eighteen soil samples at levels above UUSCOs. Lead was detected in soil sample SB-10 (0-2') above its CSCO. The presence of Lead in shallow soil may be attributed to historic fill, which was encountered during the advancement of soil boring SB-10.

In summary, two VOCs (Tetrachloroethene and Acetone) and one SVOC (Chrysene) were detected above their respective UUSCO. One SVOCs (Benzo(a)anthracene) was detected above its RRSCO and one metal (Lead) was detected above its CSCO. Metals and SVOCs detected in subsurface soil are commonly found in urban fill materials that were observed in at least one soil boring installed beneath the property. The presence of VOCs, SVOCs and Lead in the shallow soil will require special handling and offsite disposal during future site development.

5.3 Soil Vapor Chemistry

Significant levels of Tetrachloroethylene (max. of 2,700 $\mu\text{g}/\text{m}^3$) compared to a NYSDOH screening value of 30 $\mu\text{g}/\text{m}^3$ were detected in soil vapor during the subsurface investigation across the site. This RI identified Tetrachloroethylene above its UUSCO in shallow soil near the

inactive waste oil UST (SB-9). Trichloroethylene was detected in one soil vapor sample in the east section of the site at $55 \mu\text{g}/\text{m}^3$, above the NYSDOH screening value of $2 \mu\text{g}/\text{m}^3$. BTEX compounds, including exceedances of soil vapor standards for Benzene ($17 \mu\text{g}/\text{m}^3$) and Ethylbenzene ($27 \mu\text{g}/\text{m}^3$), and low levels of toluene and xylenes, were detected in soil vapor along the west side of the service station. An exceedance of chloroform ($31 \mu\text{g}/\text{m}^3$) was found in the northeast corner of the site.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 1 through 4.

5.4 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.5 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

#8346-JANY

148-28 Hillside Ave, Jamaica, NY

GPR Survey

Area $\approx 10,000$ SF

Depth ≈ 10 ft.

Grid $\approx 5 \times 5'$

File #s 229-275

229-238 = Waste Oil UST (B)

239-251 = Disturbed Area (A) Area of removed UST's

252-275 = UST Pad (C)

GPR survey for UST's.

Disturbed soils area A $\approx 28 \times 18'$

Anomaly B = Waste oil UST $\approx 7 \times 8'$

Anomaly C = UST Pad Depth $\approx 2'$

Approx. 6 UST's ≈ 550 gal each

Signal not that good. Rebar concrete above.

Several utilities as noted in area.

Several cemented fills.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on November 23, 2015 and listed below. The project was identified as your project: **8346-JANY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15K0797

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Sample Notes:

Sample Prepared by Method: EPA 3550C

CAS No.	Parameter	Result	Flag	Units	Reported to LOD/MDL	LOQ	Dilution	Reference Method	Date/Time Prepared	Date/Time Analyzed	Analyst
92-52-4	1,1'-Biphenyl	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: NELAC-NY10854,NJDEP	11/25/2015 05:45	11/25/2015 22:58	KH
95-94-3	1,2,4,5-Tetrachlorobenzene	ND		ug/kg dry	94.3	188	2	EPA 8270D Certifications: NELAC-NY10854,NJDEP	11/25/2015 05:45	11/25/2015 22:58	KH
120-82-1	1,2,4-Trichlorobenzene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
95-50-1	1,2-Dichlorobenzene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: NELAC-NY10854	11/25/2015 05:45	11/25/2015 22:58	KH
122-66-7	1,2-Diphenylhydrazine (as Azobenzene)	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: NELAC-NY10854,NJDEP	11/25/2015 05:45	11/25/2015 22:58	KH
541-73-1	1,3-Dichlorobenzene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: NELAC-NY10854	11/25/2015 05:45	11/25/2015 22:58	KH
106-46-7	1,4-Dichlorobenzene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: NELAC-NY10854	11/25/2015 05:45	11/25/2015 22:58	KH
58-90-2	2,3,4,6-Tetrachlorophenol	ND		ug/kg dry	94.3	188	2	EPA 8270D Certifications: NELAC-NY10854,NJDEP	11/25/2015 05:45	11/25/2015 22:58	KH
95-95-4	2,4,5-Trichlorophenol	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP	11/25/2015 05:45	11/25/2015 22:58	KH
88-06-2	2,4,6-Trichlorophenol	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
120-83-2	2,4-Dichlorophenol	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
105-67-9	2,4-Dimethylphenol	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
51-28-5	2,4-Dinitrophenol	ND		ug/kg dry	94.3	188	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
121-14-2	2,4-Dinitrotoluene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
606-20-2	2,6-Dinitrotoluene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
91-58-7	2-Chloronaphthalene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
95-57-8	2-Chlorophenol	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
91-57-6	2-Methylnaphthalene	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP	11/25/2015 05:45	11/25/2015 22:58	KH
95-48-7	2-Methylphenol	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
88-74-4	2-Nitroaniline	ND		ug/kg dry	94.3	188	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
88-75-5	2-Nitrophenol	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP,PADEP	11/25/2015 05:45	11/25/2015 22:58	KH
65794-96-9	3- & 4-Methylphenols	ND		ug/kg dry	47.3	94.3	2	EPA 8270D Certifications: CTDOH,NELAC-NY10854,NJDEP	11/25/2015 05:45	11/25/2015 22:58	KH

Notes and Definitions

SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
IS-06	Internal standard perylene-d12 did not meet acceptance criteria. The sample was reanalyzed to confirm matrix interference. Compounds affected are: Benzo(g,h,i)perylene, Dibenzo(a,h)anthracene and Indeno(1,2,3-cd)pyrene.
IS-04	This internal standard was suppressed due to matrix effects.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.
*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 25, 2015 and listed below. The project was identified as your project: **8346-JANY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15F1016

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Approved By:

Benjamin Gulizia
Laboratory Director

Date: 06/29/2015

Notes and Definitions

S-D	The surrogates were spiked at twice the normal concentration and recovery is within limits.
SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-MISpk	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The SRM was within acceptance limits, therefore data are acceptable.
M-DB	Analyte in Method Blank >MDL. Sample conc. >10 X blank conc.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 25, 2015 and listed below. The project was identified as your project: **8346-JANY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15F1017

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

460-00-4	Surrogate: p-Bromofluorobenzene	89.8 %	72-118								

Notes and Definitions

QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW -846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record - AIR

1.0 EXECUTIVE SUMMARY

Property Address: 148-28 Hillside Avenue, Jamaica, NY 11435.

Property Usage: A commercial building.

Property Description: The subject property consists of a one-story commercial building occupied by Arm Auto Services. The building has a footprint of approximately 1,920 square feet, and the property is approximately 17,450 square feet in area.

Advanced Cleanup Technologies, Inc. (ACT) has performed the Phase I Environmental Site Assessment in conformance with the scope of limitations of ASTM Practice E 1527-13 of 148-28 Hillside Avenue, Jamaica, NY 11435, the “subject property.” Any exceptions to or deletions from this practice are described in Section 2.2 of this report. This assessment has revealed the following recognized environmental conditions in connection with the subject property:

- Historical industrial use of the subject property (Sections 5.2, 5.4, and 5.5)
- A vapor encroachment condition at the subject property (Section 5.6 and 6.12)

No controlled recognized environmental conditions were identified at the subject property. A controlled recognized environmental condition is a recognized environmental condition resulting from

a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

No historical recognized environmental conditions were identified at the subject property. An historical recognized environmental condition is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to required controls.

No *de minimis* conditions were identified at the subject property. A *de minimis* condition is one that generally does not present a material risk of harm to public health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies (excluding local asbestos and lead situations).

2.0 INTRODUCTION

Pursuant to the request of Eastone Capital LLC, as our client, ACT has conducted a Phase I Environmental Site Assessment (ESA) of 148-28 Hillside Avenue, Jamaica, NY 11435. The Assessment was performed to meet or surpass the industry standard established by ASTM's Standard Practice for Environmental Site Assessments (E 1527-13). This ESA was conducted in accordance with and subject to the proposal dated June 3, 2015.

2.1 Purpose

The purpose of this report is to assess the subject property for evidence of Recognized Environmental Conditions (RECs) in accordance with the provisions of ASTM Standard E 1527-13. As defined by the ASTM, the term recognized environmental condition means “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” A material threat is “a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment.”

2.2 Detailed Scope of Services

The Phase I ESA includes a visual inspection of the subject property, improvements, and surrounding properties to identify potential recognized environmental conditions. The adjacent

properties were viewed from the subject property and roadways to determine potential sources of contamination or environmental impacts that could migrate to the subject property.

Research into historical uses of the property and surrounding land and a review of regulatory agency files and databases pertaining to the property and surrounding properties were performed. Interviews with property representatives regarding past and present conditions and interviews with local government officials were performed to determine if environmental issues exist at the subject property.

The Phase I ESA also contains non-ASTM items, including a limited visual screening for suspect asbestos-containing materials and lead based paint and a review of regulatory agency documents regarding lead in drinking water and radon in the vicinity of the subject property.

2.3 Significant Assumptions

Information and records provided by the user, outside vendors, and regulatory agencies consulted by ACT are assumed to be correct and complete.

2.4 Limitations and Exceptions

This practice constitutes “All Appropriate Inquiry” (AAI) into the previous ownership and uses of the property consistent with good commercial or customary practice in accordance with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA, 42 U.S.C. 9601). Data gaps may occur in the event that a portion of the AAI practice cannot be fully performed as per ASTM E 1527-13, despite the good faith effort of the environmental professional. This practice does not address local or state environmental assessment obligations that may be applicable to the property.

The purpose of this ESA is to assess the subject property with respect to the presence of hazardous substances or petroleum products in accordance with provisions of ASTM Standard E 1527-13. This practice is intended to permit the user, which may be a perspective purchaser or tenant, an owner, a lender or a property manager, to satisfy requirements to qualify as an innocent land owner, contiguous property owner, or bona fide prospective purchaser, hereinafter known as the Landowner Liability Protections (LLPs).

The innocent landowner defense applies to individuals who were not aware of contamination at a property despite completion of AAI at the time of purchase; government entities that acquired a property via escheat, eminent domain, or involuntary transfer or acquisition; and individuals who inherited a property.

The contiguous property owner liability protection applies to owners who have completed AAI prior to purchase and were not aware of a contiguous property not owned by them that has or may have impacted their property. Knowledge of impact from a contiguous property exempts the owner from the contiguous property owner liability. The bona fide prospective purchaser liability protection signifies that the purchaser made all appropriate inquiries into the subject property prior to its purchase.

This Phase I ESA has been prepared to assess the potential environmental liabilities at the subject site with respect to data that Advanced Cleanup Technologies, Inc. has accumulated during the Phase I ESA. The conclusions presented in this report are based solely on the observations of the site at the time of the assessment. Data provided, including information provided by others, were utilized in assessing the site conditions. The accuracy of this Phase I ESA is subject to the accuracy of the information provided. Advanced Cleanup Technologies, Inc. is not responsible for areas not seen or information not collected.

This Phase I ESA was performed at the request of Eastone Capital LLC in accordance with ASTM E 1527-13. The report has been prepared for the sole use of Eastone Capital LLC; no other party may use the report without written consent from ACT and Eastone Capital LLC.

2.5 Special Terms and Conditions

No special terms or condition are in addition to the scope outlined in Section 2.2 of this Phase I Environmental Site Assessment.

2.6 User Responsibilities

This practice does not address the continuing obligations of the user, including protection of activity and use limitations (AULs), which are legal or physical restrictions or limitations on the use of, or access to, a site or facility; (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. This practice also does not address the duty to take reasonable steps to prevent future releases or the duty to comply with legally required release-reporting obligations.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The address of the subject property is 148-28 Hillside Avenue, Jamaica, NY 11435. The New

York City tax map identification number is Block 9694, Lot 17.

3.2 Site and Vicinity Characteristics

The subject property is located in a residential and commercial area in the central portion of the borough of Queens in New York City. The immediate vicinity of the subject property contains residential, commercial, and mixed-use buildings. The subject property is located approximately 1.6 miles southeast of Willow Lake and 3.1 miles northeast of the Bergen Basin.

3.3 Current Use of the Property

The subject property currently contains a one-story commercial building occupied by Arm Auto Services. The current may have affected the environmental quality of the subject property.

3.4 Description of Structures, Roads and Other Improvements

The subject property is located along the southern side of Hillside Avenue between 148th Street to the west and 150th Street to the east. Electric, water, and natural gas services enter the property underground from the north. The utility meters are located in the building. Heat is supplied to the building by natural gas HVAC equipment and by natural gas ceiling units located throughout the building. Hot water is supplied to the building by a natural gas heating tank located in the bathroom. The building is connected to the municipal sewer system.

3.5 Current Use of Adjoining Properties

The exterior conditions of adjacent properties were viewed from the subject property and adjacent roadways.

North:	A two-story mixed-use building with apartments above a hardware store, real estate office, laundromat, and bar.
South:	A six-story residential apartment building and a two-story religious building.
East:	A one-story commercial building occupied by a supermarket.
West:	A two-story commercial building occupied by the National Organization of Industrial Trade Unions.

The adjacent properties do not appear to be impacting the environmental quality of the subject property.

4.0 USER PROVIDED INFORMATION

A User Questionnaire was provided to the real estate representatives of the subject property. The completed User Questionnaire has not been provided to ACT at the time of this report.

4.1 Environmental Liens

An environmental lien search is an inquiry into the existence of environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state, or local laws.

An environmental lien search was not included in the scope of work of this assessment and therefore was not performed. However, if the findings of a lien search performed by any other party reveal the presence of an environmental related lien on the subject property, this information should be forwarded to ACT for review, and any significant findings will be added to this assessment as an addendum.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

In an effort to determine the potential impact from hazardous waste activities or petroleum products at the subject property, adjacent properties and surrounding area, a review of database information on waste sites within one mile of the subject property was conducted. The database report information was provided to ACT by Environmental Data Resources, Inc. on September 3, 2014.

The review included a search of the following Federal, United States Environmental Protection Agency (USEPA), and New York State Department of Environmental Conservation (NYSDEC) databases:

- USEPA National Priorities List (NPL) and Delisted NPL Sites.
- USEPA Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS Non-NFRAP) and CERCLIS No Further Remedial Action Planned (CERCLIS NFRAP) Sites.
- NYDEC listing of Inactive Hazardous Waste Disposal and Registry Qualifying Sites or State equivalent NPL and CERCLIS Sites.
- USEPA and NYSDEC Resource Conservation and Recovery Act (RCRA) Hazardous Waste Treatment Storage and Disposal (TSD) facilities, RCRA corrective action activity (CORRACTS) sites, and Hazardous Waste generator/transporter facilities.
- USEPA and NYSDEC Brownfield and Voluntary Cleanup Sites.

- NYSDEC Solid Waste Management Facilities Database.
- NYSDEC listing of Leaking Underground Storage Tanks (LUSTs) and Spills List.
- NYSDEC listing of Petroleum Bulk Storage Facilities, Major Oil Storage and Chemical Bulk Storage Facilities.
- USEPA Emergency Response and Notification System (ERNS).
- USEPA and NYSDEC Institutional Controls/Engineering Controls (IC/EC).

The NPL and CERCLIS databases are maintained by the USEPA and contain records for each of the hazardous waste facilities nominated or chosen for cleanup under Superfund. The NPL database was searched for sites within a radius of 1 mile from the subject property. The subject property is not listed in the NPL database. No NPL sites are located within 1 mile of the subject property.

The Delisted NPL database was searched for sites within a radius of ½ mile from the subject property. The subject property is not listed in the Delisted NPL database. No Delisted NPL sites are located within ½ mile of the subject property.

The CERCLIS database was searched for sites within a radius of ½ mile from the subject property. The subject property is not listed in the CERCLIS Non-NFRAP database. No CERCLIS Non-NFRAP sites are located within ½ mile of the subject property.

The CERCLIS-NFRAP database was searched for sites within a radius of ½ mile from the subject property. The subject property is not listed in the CERCLIS-NFRAP database. No CERCLIS-NFRAP sites are located within ½ mile of the subject property.

The RCRA database includes listings of properties that are undergoing Corrective Action. The subject property is not listed in the Corrective Action database. No RCRA Corrective Action sites are located within 1 mile of the subject property.

RCRA database includes listings of properties that are considered Hazardous Waste Treatment, Storage or Disposal (TSD) facilities. The subject property is not listed in the RCRA TSD database. No RCRA TSD sites are located within ½ mile of the subject property.

The RCRA database includes listings of properties that are considered Hazardous Waste Generators or Transporters. The subject property is not listed in the RCRA Hazardous Waste Generator/Transporter database. Six RCRA Hazardous Waste Generator/Transporter sites are located within ¼ mile of the subject property. The closest site, A & C French Cleaners at 147-28 Hillside Ave, is located 0.061 miles west of the subject property. It is listed with EPA ID NYD981083942 and is identified as a “Conditionally Exempt Small Quantity Generator,” generating 100 kg or less of hazardous waste per calendar month. The wastes are identified as ignitable wastes and halogenated solvents. Due to the non-proximate location of the site, it is unlikely to affect the environmental quality of the subject property.

The NYDEC publication of Inactive Hazardous Waste Disposal and Registry Qualifying Sites in New York State contains a listing of all properties and facilities in New York state that have been

identified as containing toxic or hazardous wastes and/or contamination in various forms. The subject property is not listed in the database. Two Inactive Hazardous Waste Disposal Sites or Registry Qualifying Sites are located in the database within 1 mile of the subject property. The closest site, Jamaica Gas and Light MGP at Beaver Road and 158th Street, is located 0.464 miles southeast of the subject property. The site is a former manufactured gas plant. Due to the non-proximate location and lower elevation of the site, it is unlikely to affect the environmental quality of the subject property.

The NYDEC Solid Waste Landfill Facility database (SWLF) includes properties that are active solid waste disposal sites. The SWLF database was searched for sites within a radius of ½ mile of the subject property. The subject property is not listed in the SWLF database. One SWLF site is located within ½ mile of the subject property. The site, Wayside Auto Body Inc. at 139-23 Queens Boulevard, is located 0.446 miles west of the subject property. The site is an active vehicle dismantling. Due to the non-proximate location of the site, it is unlikely to affect the environmental quality of the subject property.

The NYDEC publication of Brownfield/Voluntary Cleanup Sites in New York State contains a listing of all properties and facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. The subject property is not listed in the database. Two Brownfield/VCP sites are located within ½ mile of the subject property. The closest site, Queens Family Court Building at 89-14 Parsons Boulevard, is located 0.327 miles east of the subject property. Due to the non-proximate location and lower elevation of the site, it is unlikely to affect the environmental quality of the subject property.

The NYDEC Spills and Leaking Underground Storage Tank (LUST) lists were searched for all reported spills within ½ mile of the subject property. The subject property is not listed in the Spill/LUST database. A total of 63 spills or LUSTs have occurred within ½ mile of the subject property. The closest site with an open spill number, American Sevashram, Inc. at 153-14 90th Avenue, is located 0.284 miles east-southeast of the subject property. Spill number 98-11864 was opened on December 17, 1998. The #2 fuel oil spill was caused by a tank test failure. Corrective action has been taken. Due to the non-proximate location and lower elevation of the site, it is unlikely to affect the environmental quality of the subject property.

The NYDEC listing of Petroleum Bulk Storage (PBS), Major Oil Storage (MOSF) and Chemical Bulk Storage (CBS) facilities was searched for any listings within ¼ mile of the subject property. The subject property is listed in the PBS database as Arm Aur Service Inc. Six 550-gallon underground storage tanks that held gasoline were closed in place on September 1, 1993. The property is registered with facility ID 2-338389.

A total of 62 PBS or CBS facilities are located within ¼ mile of the property. The closest site, at 87-75 148th Street, is located 0.033 miles southwest of the subject property. An aboveground storage tank was removed from the site. The site is registered in the PBS database with facility ID 2-283916.

The ERNS database is a Federal listing of properties which emergency responses were made to in reference to hazardous waste. The subject property is not listed in the ERNS database.

The USEPA and NYSDEC Institutional Controls/Engineering Controls (IC/EC) database was searched for the subject property. The subject property is not listed in the IC/EC database.

5.2 Local Regulatory Agencies

The New York City Department of Buildings (DOB) file contains a property file for Block 9694, Lot 17. The property address is listed as 148-26 to 148-30 Hillside Avenue, Queens, NY 11435. The owner is listed as Mark Ekerling. The building is classified as a G2 garage/gas station, and the property is zoned in an R7A district. The building has a footprint of approximately 1,920 square feet, and the property is approximately 17,450 square feet in area. The construction date is estimated to be 1954.

The property is listed as having no open DOB or Environmental Control Board violations. Two Certificates of Occupancy (C of Os) are listed for the subject property on the DOB website. A C of O dated October 11, 1943 indicates that a gasoline station was located at the property. A C of O dated July 12, 1966 indicates that a one-story auto repair shop was located at the property.

The New York City Department of Health, Department of Environmental Protection, and Bureau of Fire Prevention have not responded to our information requests at the time of this report. Pertinent information received from these agencies will be provided in an addendum to this report.

5.3 Physical Setting Source

The topography of the area is generally level. The vicinity of the site is approximately 67 feet above mean sea level. The ground surface in the vicinity of the property is covered with asphalt and concrete pavement and residential, commercial, and mixed-use buildings.

The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 200 feet below ground surface where the Raritan confining unit is encountered. The major aquifer systems beneath the subject property are the Upper glacial, Jameco, and Lloyd aquifers. Bedrock beneath the subject property is located approximately 500 feet below ground surface. Regional ground water in the vicinity of the subject property is expected to flow northwest.

5.4 Historical Use Information of the Subject Property and Adjacent Properties

Historical fire insurance maps for the years 1888 through 2007 were obtained from Environmental Data Resources Inc. and reviewed by ACT.

Summary	Subject Property	As of 1888, the subject property contained a three-story residential building. By 1925, a one-story filling station with gasoline tanks had also been constructed. By 1942, the three-story building was identified as mixed-use; it was demolished by 1963. By 1967, the gasoline tanks were no longer identified, and by 1992 the building was identified as an auto repair shop. The property remained substantially unchanged through 2006.
	North	As of 1888, the property consisted of undeveloped land. By 1925, seven two-story commercial buildings had been constructed, which remained through 2006.
	South	As of 1888, the property contained three two-story residential buildings, one of which was replaced with a six-story residential building by 1942. By 1990, one of the two-story building had been demolished; a two-story commercial building had been constructed by 1995. By 2006, the remaining two-story residential building had been demolished.
	East	As of 1888, the property contained a three-story residential building, which was replaced with a one-story commercial building by 1942. The property remained substantially unchanged through 2006.
	West	As of 1888, the property consisted of undeveloped land. By 1925, a two-story commercial building had been constructed, which remained through 2006.
	General Vicinity	As of 1888, the vicinity was a partially developed residential and commercial area, which became fully developed by 1925. It remained substantially unchanged through 2006.

5.5 Historical City Directories

Historical city directories for the years 1928 through 2013 were obtained from Environmental Data Resources Inc. and reviewed by ACT.

Year	Occupants
1922	Unlisted.
1934	National Diners and Sunrise Luncheonette & Bar.
1939	Crescent Auto Supply Corp.
1945	Crescent Auto Service and Empire Diner.

1950	Unlisted.
1962	Crescent Auto Service.
1967	Crescent Auto Service.
1970	Arm Auto Service Inc.
1976	Arm Auto Service Inc.
1983	Arm Auto Service Inc.
1991	Angel Auto Towing and Arm Auto Service Inc.
1996	Unlisted.
2000	Unlisted.
2005	Arm Auto Service Inc. and Always Fast Towing.
2008	Arm Auto Service Inc.
2013	Arm Auto Service Inc.

5.6 Previous Environmental Reports

ACT performed a subsurface investigation at the subject property On June 24 and 25, 2015. The investigation included a Ground Penetrating Radar (GPR) survey and the installation and laboratory sampling of soil and soil vapor samples.

The GPR survey identified an area of disturbed soil where former underground storage tanks were probably located, an area of six underground gasoline storage tanks, and an area of an interior underground waste oil storage tank.

No soil contamination was observed beneath the site with the exception of a trace concentration of selenium, which is indicative of historical fill material commonly found in the soil within the metropolitan area.

Soil vapor quality beneath the subject property contained tetrachloroethene and trichloroethene above NYSDOH indoor air guidelines. In addition, benzene, ethylbenzene and chloroform were detected slightly above USEPA soil vapor screening levels and several other VOCs below NYSDOH screening levels. The presence of these compounds in soil vapor beneath the property is indicative of residual vapor contamination associated with historical auto repair operations at the site and should not impede the future use or development of the subject property.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Steven Walls of ACT performed a site inspection on June 12, 2015. Mark, the property owner, provided access. The property was traversed on foot.

6.2 General Site Setting

The subject property is located in a residential and commercial area in the central portion of Queens. The topography of the area is generally level. The immediate vicinity of the subject property contains residential, commercial, and mixed-use development.

6.3 Exterior Observations

The subject property contains a one-story commercial building. The exterior of the building is constructed of brick and concrete, and the building has a flat and pitched metal and tar roof. A large asphalt parking lot is located along the north and east sides of the building.

Solid waste is stored in a dumpster at the front of the building. There is no evidence of hazardous waste within the solid waste. Two exterior storm drains were observed at the rear of the building. No stains, odors, or evidence of spills were observed in the vicinity of the drains or throughout the property.

6.4 Interior Observations

The building contains one commercial unit. The interior of the building consists of concrete and tile floors; brick, concrete, sheetrock, plaster, and panel walls; and plaster, sheetrock and wood ceilings. The main entrance of the building is located on the northern property boundary along Hillside Avenue. Roll-up doors are located along the north and east sides of the building.

Arm Auto Services occupies the building. The building is used for shop, office, and storage space. Three in-ground and two aboveground lifts were observed in the shop. According to the site contact, the property has been occupied by an auto repair shop since 1918 and was previously occupied by a gasoline station until the 1990s. The building does not have a basement.

Three floor drains were observed throughout the building. No stains, odors, or evidence of spills were observed in the vicinity of the drains. Typical oil stains were observed throughout the building.

6.5 Asbestos

A visual inspection of the property for suspect asbestos-containing materials (ACM) such as pipe and boiler insulation, ceiling tiles, and floor tiles was conducted. Approximately 2,000 square feet of suspect asbestos-containing floor tiles were observed in the offices. The floor tiles were in fair condition, were found in a low traffic area, and have a low potential for disturbance. Therefore, the suspect asbestos material is unlikely to discharge.

These findings comprise only a preliminary inspection of the subject property for ACM and should not be interpreted as a formal asbestos survey. All federal, state, and local regulations should be followed with respect to asbestos if renovations or demolition are to be performed at the property.

6.6 Hazardous Materials

A visual inspection of the property was conducted for evidence of potential hazardous material contamination. Several 55-gallon drums containing waste oil and waste anti-freeze were observed at the property. The drums were in fair conditions with minor stains. Paints, lubricants, oil, shop supplies, and welding tanks were observed in various locations throughout the property. The containers, supplies, and tanks were in good condition with no associated stains or spills.

A groundwater monitoring well was observed at the front of the building. The well is indicative of a previous environmental investigation performed at the property. No areas of stressed vegetation or excavated areas were observed anywhere on the property. No pits, ponds, or lagoons indicative of hazardous waste disposal were observed at the property.

6.7 Storage Tanks

Five abandoned aboveground storage tanks were observed at the front of the building. The tanks have capacities of 550 gallons and contained gasoline. The fill pipes are located directly on the tanks. According to the site contact, the tanks were abandoned approximately 25 years ago.

One inactive underground storage tank is located in the shop area. The tank has a capacity of 250 gallons and contained waste oil. The fill pipe is located directly on the tank. According to the site contact, six underground storage tanks were removed from the property approximately 25 years ago. The tanks had capacities of 550 gallons and contained gasoline.

6.8 Radon

The New York State Department of Health maintains records of average radon levels by

county. The average level for Queens County is 1.2 picoCuries per Liter (pCi/L). This level is considered to be within the normal background range. The United States Environmental Protection Agency standard for radon is 4.0 pCi/L.

6.9 Potable Water

The subject property is supplied water by the local municipality. The municipality monitors the quality of this water for organic and inorganic constituents, including lead, in accordance with federal law. The municipality must maintain lead concentrations at less than 15 micrograms per liter.

6.10 Lead Based Paint

A visual inspection of the property for chipped, peeling, or cracking paint was performed. No areas of deteriorated paint were observed at the property. Painted surfaces were in fair condition.

These findings comprise only a preliminary inspection for lead-based paint at the subject property and should not be interpreted as a formal lead-based paint inspection. All federal, state, and local regulations should be followed with respect to lead-based paint if renovations or demolition activities affecting painted surfaces are to be performed.

6.11 PCBs

Three in-ground and two aboveground lifts were observed at the property. The lifts were in good condition with typical stains. No electrical transformers were observed at the property. The building does not contain an elevator. The building does not contain any equipment that could contain substantial amounts of PCB-contaminated oil.

6.12 Vapor Encroachment Assessment

A Vapor Encroachment Assessment was performed on the subject property in accordance with ASTM E 2600-10, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, June 2010. A Vapor Encroachment Assessment determines whether there actually is or is a potential for volatile vapors to encroach upon the subject property, producing a vapor encroachment condition. A vapor encroachment condition is the presence or likely presence of vapors in the subsurface of the subject property caused by the release of vapors from contaminated soil or groundwater either on or near the subject property.

A subsurface investigation at the subject property found levels of tetrachloroethene and

trichloroethene that exceeded NYSDOH indoor air guidelines. The contamination is indicative of a vapor encroachment condition associated with historical auto repair operations at the property.

7.0 INTERVIEWS

7.1 Interview with Owner

A Property Owner/Representative Questionnaire has not been returned at the time of this report.

7.2 Interview with Site Manager

A property manager was not available during the site inspection for interview.

7.3 Interview with Occupants

No site occupants were available during the site inspection for interview.

7.4 Interviews with Local Government Officials

ACT attempted to contact officials at the New York City Department of Buildings and Department of Environmental Protection to obtain information indicating recognized environmental conditions in connection with the subject property. No officials were available for interview regarding the subject property.

7.5 Interviews with Others

No additional interviews were conducted as part of this assessment.

8.0 FINDINGS

During the course of this Phase I ESA, ACT has identified the historical industrial use of the subject property and the vapor encroachment condition at the subject property as known or suspected recognized environmental conditions.

No controlled recognized environmental conditions, no historical recognized environmental

conditions, and no *de minimis* conditions were identified at the subject property. No significant data gaps were identified during this assessment.

9.0 OPINION

Based on the scope of work performed, it is ACT's professional opinion that the historical industrial use of the subject property and the vapor encroachment condition at the subject property are environmental conditions that could adversely affect the property's environmental quality and that warrant further environmental study.

10.0 CONCLUSIONS

Advanced Cleanup Technologies, Inc. (ACT) has performed the Phase I Environmental Site Assessment in conformance with the scope of limitations of ASTM Practice E 1527-13 of 148-28 Hillside Avenue, Jamaica, NY 11435, the "subject property." Any exceptions to or deletions from this practice are described in Section 2.2 of this report. This assessment has revealed the following recognized environmental conditions in connection with the subject property:

- Historical industrial use of the subject property (Sections 5.2, 5.4, and 5.5)
- A vapor encroachment condition at the subject property (Section 5.6 and 6.12)

11.0 RECOMMENDATIONS

ACT recommends that soil vapor at the subject property be mitigated by including a vapor barrier and sub-slab depressurization system in future development plans to eliminate potential vapor exposure to building occupants. The cost for this task should not exceed \$50,000.00.

12.0 DEVIATIONS

No deviations from the detailed scope of services outlined in Section 2.2 were performed as part of this Phase I ESA.

13.0 ADDITIONAL SERVICES

No additional services beyond the detailed scope of services outlined in Section 2.2 were performed as part of this Phase I ESA.

15.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

This practice must be conducted by an Environmental Professional (EP) or under the supervision of an EP, “a person meeting the education, training, and experience requirements as set forth in 40 CFR Part 312.10(b).” Individuals who do not qualify as EPs may assist in the performance of the AAI if appropriately trained and supervised by an EP. At a minimum, the EP must be involved in the planning of the site reconnaissance and interviews. The EP is also responsible for the review of the Phase I Environmental Site Assessment and interpretation of the information obtained via the Phase I Investigation.

ACT declares that to the best of our professional knowledge and belief we meet the definition

Page 20**

of EP defined in 312.10 of 40 CFR Part 312. ACT has the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. ACT has developed and performed the All Appropriate Inquiry in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was
"DEMEO"09/18/06 This spill was transferred from Albany to Region2.
Zhune called Nickolaos Vatakis (ph:(646)261-0120). TTK letters were
sent to:Mr. Nickolaos Vatakis Mr.Dimitrios Vatakis147-05 Hillside
Avenue 84-33 150th StreetJamaica, NY 11435 Briarwood, NY
1143509/25/06 Mr. Vatakis sent passing tank test results from May
2003. I called him back to request documentation from November 2002.
07/16/07 Case Closed. Vent pipe not tight caused tank failed the
test. Vent was fixed retested and passed the test. Results of
tightness test was sent
Remarks: uncover and inspect and retest

retest work. bf4/1/08 Spoke to D. Rattenberg. He wanted to know what is required of him to close case. I told him I need letter responding to ttf letter from PTC. He will have them send letter. bf4/11/08 Yesterday, received message from D. Rattenberg. He wanted to know if I received paperwork for closure. I called back and left message on machine that i have not received anything as far as I know and that he can fax what he has to me. bf4/23/08 Spoke to Vincent. Tank will be repaired soon. bf 8/27/08 On 8/21/08, received message from David Grossman. He is awaiting final report from PTC. (212)564-7250. bf9/17/08 Received fax from Mark Salamack of PTC. Suction line failed. This line runs from the tank underground for a length of approximately 5 feet and then is aboveground inside the building. Underground pipe was exposed and no contamination or sign of leak. PID meter did not show any elevated levels of contaminants. Suction and return lines replaced. Tank passed on 3/13/08. Passing tightness test report included. NFA. bf

Remarks: Tank test failure... tester says it looks like an air vent leak. Will evacuate the tank and do further testing.

Container Type: DM - Metal drums, barrels
Handling Method: R Material recovery of more than 75 percent of the total material.
Specific Gravity: 01.00
Waste Code: D039 - TETRACHLOROETHYLENE 0.73 MG/L TCLP
Quantity: 00004
Units: G - Gallons (liquids only)* (8.3 pounds)
Number of Containers: 001
Container Type: DF - Fiberboard or plastic drums (glass)
Handling Method: T Chemical, physical, or biological treatment.
Specific Gravity: 01.00
Year: 2001

Document ID: NYC2488847
Manifest Status: Completed after the designated time period for a TSDF to get a copy to the DEC

ADDRESS: 90-36 150TH STREET
JAMAICA, NY 11431
QUEENS

SOURCE: NY Department of Environmental Conservation

Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0002
Common Name of Substance: #4 Fuel Oil (On-Site Consumption)

Tightness Test Method: 21
Date Test: 11/09/2009
Next Test Date: 11/09/2014
Pipe Model: Not reported
Modified By: BKFALVEY
Last Modified: 03/23/2010

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
B01 - Tank External Protection - Painted/Asphalt Coating
I04 - Overfill - Product Level Gauge (A/G)
L00 - Piping Leak Detection - None
C03 - Pipe Location - Aboveground/Underground Combination
E00 - Piping Secondary Containment - None
F01 - Pipe External Protection - Painted/Asphalt Coating
H00 - Tank Leak Detection - None
K00 - Spill Prevention - None

Tank Number: 01
Tank ID: 58622
Tank Status: Closed - In Place
Material Name: Closed - In Place
Capacity Gallons: 3000
Install Date: Not reported
Date Tank Closed: 07/01/2000
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported

She says ABC did the work, they will prepare a closure report and submit it as soon as the client pays. Sangesland spoke to Mark at the management company. He believes ABC did too much work and charged too much. Sangesland asked for 3 items:1) Copy of passing tank test2) Summary of what work was done on the tank/system to repair the leak3) Statement that EITHER "no contamination was found" or "Contamination was removed and clean endpoints taken".Sangesland reviewed a letter from Colonial Mgmt dated June 12, 2012. It says:"As per our phone conversation please find attached the tank test report performed by ABC Tank Repair and Lining INC. back on March 12, 2012. As I (Mark Colton Colonial

to Region 2. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE" Universal Construction Mr. Hemlell 718-850-6446 Cut open & clean tank. Sent letter 1/27/06 to obtain more info. Sent strong followup 2/21/06. 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 2/1/13 TJDT/C with Deo Ramattan (917 929 8028), a representative of Hindu Temple where reported tank test failure was reported approximately 15 years ago. Temple was previously a synagogue and was converted to gas in approximately 2000 - UST's were then abandoned. No records are available. Original TTF report by ProTest does not indicate if failure was due to wet/dry leak. Options to resolve open spill were discussed with caller including soil borings around tanks or removal of tanks and direct observation. Caller is attempting to locate historical documentation and will be obtaining price quotes to perform additional investigation as discussed. 10/10/14 - Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: noneno other spill record found. PBS #: 2-117153. as per PBS record, the site has one (1) 1,500 gal #2 oil UST, closed-in-place in Sep. 1999. as per tank testing result from Protest dated 12/17/1998 (stored on edoc), there were two 2,000 gal #2 oil USTs. test result stated hole in vent pipe for tank #1 and big hole in tank #2. America Sevashram Sangha Inc. **property owner** PH. (718) 523-75152/12/15 TJDSpill reassigned from DeMeo to Patel Remarks: CONTACT PHONE NUMBER FOR OWNER (212) 532-0843. SPILER NOTIFIED OF RESULTS. VCP: Program Type: VCP Site Code: 58313 HW Code: V00506 Site Class: N SWIS: 4101 Region: 2 Town: New York City Acres: Not reported Date Record Added: 10/04/2001 Date Record Updated: 02/12/2013 Updated By: IXMUNTEA Site Description: Duraspec Electroplating Facility is located at 87-83 139th Street, Jamaica, Queens, NY, 11435, Block 9685, Lot 50. The facility is an active RCRA facility NYD012379798. The surrounding area is commercial and residential. The site is one block south of Hillside Avenue, between 88th Road and 88th Avenue. The site is bordered by 139th Street to the west, residential buildings to the east and south, and by a driveway to the north. The site is 0.25 acres. The site consists of a 2- story steel frame construction with a driveway and a small parking area. The plating factory which operates on site uses cyanides, VOCs, strong bases, and metals (gold, silver, chromium, nickel, zinc). The site owner entered into the Voluntary Cleanup Program in order to address the environmental concerns associated with a fire incident at the site. The investigation report has not been submitted to complete the investigation. The VCP Agreement has been terminated due to the Volunteer's unresponsiveness and lack of progress. Env Problem: After numerous negotiations in December 2004 a revised investigation work plan was received and approved. The investigative field work started in March 2005 and was completed in June 2005. The RIR has not been submitted yet. A spill number was opened during the field investigation work because of elevated petroleum contaminants in soil. The petroleum contaminants are presumed to come from a Mobil Gas Station adjacent to the Duraspec Plating Facility (see spill nos. 0004528 and 0101410). There is also a spill opened for the site (0006286). Health Problem: Not reported

"Both of our tanks failed and had to be worked on. One tank has been abandoned and filled with slurry and we have changed over to gas. The other tank was repaired where the problem was and no passed the second test". Vought left message with Zalak to find out nature of repair and whether contaminated soil was encountered.11/14/2003-Vought-Spoke with Zalak. No contamination noted. Contractor is 917-559-5519 (Mark Salamack). One tank 2" fill and vent was installed. Vought called and left message for Mark to return call to DEC.11/17/2003-Vought-Spoke with Salamack who will be sending in report.11/20/2003-Vought-Reviewed fax sent from PTC. Soil analyticals shows two soil samples sent for analysis. Soil analyticals show 11670ppb xylenes(SB2), 4770ppb propylbenzene(SB2), 12900ppb 1,3,5-trimethylbenzene(SB2), 41200ppb 1,2,4-trimethylbenzene (SB2) and 23100ppb naphthalene(SB1). Tank was filled by concrete slurry and building now uses natural gas. DEC requires due to sensitive receptor nature of school: 1)excavation of tank 2)collection of endpoint samples 3)disposal manifests 4)detailed observations including school basement/sump observations. Vought called Zalak to explain requirements and left message to return call to DEC.12/10/03 - PROJECT TRANSFERRED FROM VOUGHT TO SAWYER2/3/2006 - letter requested further info prepared and sent.3/06 - resampled above water table - clean. closed Remarks: Not reported Material: Site ID: 121133 Operable Unit ID: 861651 Operable Unit: 01 Material ID: 513786 Material Code: 0001A Material Name: #2 Fuel Oil

The spill number was due to a tank test failure. The tanks that failed the tightness test were closed and removed 12/97.In 12/97, six USTs were closed and removed. Five 4000gal single-walled gas USTs, one 1200gal single-walled fuel oil UST and one 550gal single-walled waste oil UST and piping was removed. Based on elevated PID readings from the soil within the former tank excavation, spill #9710432 was opened. A total of 4175 tons of impacted material was removed from the site. Post-ex soil samples were collected and analyzed for VOCs and SVOCs. The sample results were all below TAGM guidance levels. A closure letter was submitted by Exxon Company on 1/28/99. Subsequently, spill #9710432 was closed. 3/8/05 NFA issued. (KMF)Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. Remarks: (3) 4K TANKS,TANKS 1 & 2 MANIFOLDED (REGULAR UNLEADED),TANK #3 (MIDGRADE),SYSTEMS TEST,FAILED PETRO TITE,TANKS 1&2 FAILED WITH A LEAKRATE OF-.171GPH,TANK #3 FAILED AT -.160GPH,NO ACTION. SOURCE: NY Department of Environmental Conservation				
SHWS: Program: HW Site Code: 378997 Classification: A Region: 2 Acres: .750 HW Code: 241063 Record Add: 03/27/2007 Record Upd: 02/26/2013 Updated By: GWCROSS Site Description: Location: The Jamaica Gas Light Manufactured Gas Plant(MGP) site is comprised of one 0.76 acre parcel of land located in Jamaica, New York, Queens County. Site Features: The site is relatively flat, vacant and fenced. Current Zoning/Use(s): The site is currently vacant land that is zoned for residential use. Historical Use(s): Based on Sanborn maps, the Jamaica Gas Light MGP site began operations sometime prior to 1901. The site was subsequently used as a gas holder site until sometime between 1925 and 1941. Geology and Hydrology: The site is underlain by sandy soils, overlying consolidated bedrock roughly 100ft below grade. Depth to water table approximately 25-35ft bgs. Env Problem: Nature and Extent of Contamination: The primary contaminants of concern include volatile organic compounds (BTEX) and polycyclic aromatic hydrocarbons. The Site Characterization study demonstrated that MGP wastes are present in the subsurface, at locations close to the property line. Off site migration of contaminated groundwater (and possibly NAPL) is likely. A Remedial Investigation is slated to begin in spring , 2013. Health Problem: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. DEC Memo: 08/07/08 - LZKelvin Cullen of Diversified Realty Corp. faxed information about the 4,000 gallon tank. A tightness test conducted on May 20, 2003, revealed that a dry portion part of the tank failed the test. The tank was permanently closed in place on April 25, 2004.

The spill case is closed.07-02-08 - LZI visited the site. The superintendent, Jorge Lopez, showed me the place where the tank which had failed TTT was closed in place in 2004--a new AST replaced it.

The fill port and the fill line, common for the new and the old tanks, are aboveground (photo 1). The 4,000-gallon tank closed in place has its fill lines cut off (photo 2), and the tank is filled with soil(photo 3). The are below the fill line is intact concrete.

Updated By: BXANDERS

Site Description: Location: The Jamaica Holder Station is comprised of two parcels of land near Liberty Avenue in Queens, New York, Queens County. The site is between 158th and 159th Streets. Site Features: The FDA building, parking, and the Nursing Science Building of York College CUNY are located on the site. Current Zoning/Use(s): The current land use for the parcels includes a college building and Federal Building. Past Use of the Site: The site operated as a gas distribution facility from 1944 to 1975. There was a 10.6 million cubic foot tar-sealed, remote gas distribution holder, a boiler room, and an office. The site was operated by Brooklyn Union Gas (BUG), a predecessor company to National Grid. BUG sold the property in 1987. Geology and Hydrogeology: Site geology consists of two unconsolidated units varying in thickness across the site. These units consist of fill ranging from 2.5 feet to 11 feet below ground surface, and well-graded sand ranging from 2.5 to greater than 45 feet below ground surface. Groundwater was encountered at depths ranging from approximately 11 to 34 feet below ground surface. The flow is northeast to southwest.

Env Problem: Prior to Remediation: Based upon investigations conducted to date, there are no contaminants of concern at the site. Soil- There were no detections of contaminants above SCO's. Groundwater - There was only one PAH constituent (benzo(a)anthracene) detected above standards, at a concentration of 0.002 ug/L. The Site Characterization Report was approved in January 2013, with No Further Action for the site.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking water or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Dump: Not reported

Structure: Not reported

Lagoon: Not reported

Landfill: Not reported

Database Descriptions

NPL: NPL National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices. NPL - National Priority List Proposed NPL - Proposed National Priority List Sites.

NPL Delisted: DELISTED NPL The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. DELISTED NPL - National Priority List Deletions

CERCLIS: CERCLIS CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL. CERCLIS - Comprehensive Environmental Response, Compensation, and Liability Information System

NFRAP: CERCLIS-NFRAP Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site. CERCLIS-NFRAP - CERCLIS No Further Remedial Action Planned

RCRA COR ACT: CORRACTS CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. CORRACTS - Corrective Action Report

RCRA TSD: RCRA-TSDF RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. RCRA-TSDF - RCRA - Treatment, Storage and Disposal

RCRA GEN: RCRA-LQG RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. RCRA-LQG - RCRA - Large Quantity Generators RCRA-SQG - RCRA - Small Quantity Generators. RCRA-CESQG - RCRA - Conditionally Exempt Small Quantity Generators.

Federal IC / EC: US ENG CONTROLS A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. US ENG CONTROLS - Engineering Controls Sites List US INST CONTROL - Sites with Institutional Controls.

ERNS: ERNS Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances. ERNS - Emergency Response Notification System

Database Descriptions

State/Tribal CERCLIS: SHWS Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites SHWS - Inactive Hazardous Waste Disposal Sites in New York State

State/Tribal SWL: SWF/LF Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. SWF/LF - Facility Register

State/Tribal LTANKS: LTANKS Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. LTANKS - Spills Information Database HIST LTANKS - Listing of Leaking Storage Tanks. INDIAN LUST R5 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R1 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R10 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R6 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R8 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R4 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R7 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R9 - Leaking Underground Storage Tanks on Indian Land.

State/Tribal Tanks: TANKS This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency. TANKS - Storage Tank Facility Listing UST - Petroleum Bulk Storage (PBS) Database. CBS UST - Chemical Bulk Storage Database. MOSF UST - Major Oil Storage Facilities Database. AST - Petroleum Bulk Storage. CBS AST - Chemical Bulk Storage Database. MOSF AST - Major Oil Storage Facilities Database. CBS - Chemical Bulk Storage Site Listing. MOSF - Major Oil Storage Facility Site Listing. INDIAN UST R4 - Underground Storage Tanks on Indian Land. INDIAN UST R10 - Underground Storage Tanks on Indian Land. INDIAN UST R7 - Underground Storage Tanks on Indian Land. INDIAN UST R8 - Underground Storage Tanks on Indian Land. INDIAN UST R6 - Underground Storage Tanks on Indian Land. INDIAN UST R1 - Underground Storage Tanks on Indian Land. INDIAN UST R9 - Underground Storage Tanks on Indian Land. INDIAN UST R5 - Underground Storage Tanks on Indian Land.

State/Tribal IC / EC: ENG CONTROLS Environmental Remediation sites that have engineering controls in place. ENG CONTROLS - Registry of Engineering Controls INST CONTROL - Registry of Institutional Controls. RES DECL - Restrictive Declarations Listing. ENV RES DECL - Environmental Restrictive Declarations.

State/Tribal VCP: VCP New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites. VCP - Voluntary Cleanup Agreements

ST/Tribal Brownfields: ERP In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use. ERP - Environmental Restoration Program Listing BROWNFIELDS - Brownfields Site List.

US Brownfields: US BROWNFIELDS Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. US BROWNFIELDS - A Listing of Brownfields Sites

Database Descriptions

Other Haz Sites: US CDL A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. US CDL - Clandestine Drug Labs

DEPARTMENT OF HOUSING AND BUILDINGS
BOROUGH OF Queens, CITY OF NEW YORK

No. 28910
Date 10/11/43

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C.26-181.0 to C.26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the ~~new~~ ~~altered~~ ~~existing~~ building—premises located at

Hillside Ave. 88 103rd E. 148 St.

Block 969 Lot 17

conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

Dear Mr. Sgueglia:

In response to your Freedom of Information Law information request of 6/1/2015, the Division of Air/Noise Enforcement and Policy has searched its files for records pertaining to 148-28 Hillside Avenue and:

Has located and enclosed the requested documents.

A total of _____ pages of materials have been located, for which we are required to charge a fee of \$.25 per page. Please send your check, in the amount of \$_____, to:

Records Access Officer
NYC Department of Environmental Protection
59-17 Junction Boulevard, 19th Floor
Flushing, NY 11373

The check should be made payable to **The City of New York** and include the Log # noted below.

Upon receipt of the check, copies of these records will be sent to you.

Does not have the requested documents.

Sincerely,

Geraldine Kelpin
Director, Air/Noise Enforcement &
Policy

July 9, 2015

Gary Chen
Eastone Capital LLC
1979 Marcus Avenue, Suite 218
Lake Success, NY 11042

Re: Subsurface Investigation of
148-28 Hillside Avenue
Jamaica, NY 11435

Between June 24 and June 25, 2015 Advanced Cleanup Technologies, Inc. (ACT) performed a Subsurface Investigation at the subject property. The purpose for the investigation was to determine any environmental impacts associated with the property's historical usage as a one-story filling station with gasoline tanks since approximately 1925 and its current listing as Arm Auto Service Inc, a NYDEC Petroleum Bulk Storage Facility (PBS No. 2-338389), with five 550-gallon underground storage tanks and one 1,080-gallon underground storage tank that held gasoline and were closed in place on September 1, 1993.

The investigation included a Ground Penetrating Radar (GPR) survey, the installation and sampling of six (6) soil borings and six (6) soil vapor points and the analysis of 6 soil samples and 6 soil vapor samples by a NYSDOH-approval laboratory. The following sections detail the results of the subsurface investigation and our conclusions and recommendations concerning the environmental quality of the subject property.

GPR Survey

On June 19, 2015, a GPR survey was performed utilizing an SIR-3000 GPR Unit and a 500-megahertz transducer. The transducer was pulled along pre-determined transects, emitting radar into the subsurface. The radar signal reflects off stratigraphical materials and foreign objects in the subsurface and back to the transducer based upon differences in the conductivity and dielectric constant of subsurface features. The radar signal is then converted into an electrical signal that is visually displayed on a video monitor.

The radar antenna was pulled along transects at right angles to each other in a 5 foot by 5 foot overlapping grid pattern so as to form a rectangular grid over the surface. Prior to initiating the survey, the GPR equipment was calibrated by pulling the radar antenna over areas of concrete and asphalt. The results of the GPR survey are described below. Field notes generated during the

Gary Chen
Eastone Capital LLC
July 9, 2015

GPR survey are contained in Appendix 1. A diagram containing the results of the GPR survey is provided as Figure 1.

The GPR survey encompassed all accessible portions of the parking lot and suspect interior areas. One area on the eastern side of the property produced reflections consistent with disturbed soil, suggesting the presence of a backfilled underground storage tank pit (Anomaly A). The area of disturbed soil measured approximately 18 feet by 28 feet.

A suspect fill pipe was observed inside the existing auto repair shop. The GPR Survey in the vicinity of the pipe produced large, parabolic reflections indicative of an underground storage tank (Anomaly B). The dimensions of the reflections measured approximately 7 feet by 8 feet and were located beginning approximately 1.5 feet below ground surface (bgs).

A third area surveyed (Anomaly C) produced large, distinct parabolic reflections indicative of six individual underground storage tanks. The dimensions of the reflections measured approximately 29 feet by 30 feet and were located beginning approximately 2 feet bgs. The remaining areas produced reflections indicative of undisturbed soils and utility piping.

GPR is primarily used as a preliminary survey of a property for the development of subsurface information prior to a formal site assessment. Surface cover or obstructions, subsurface soil types and buried debris can mask or conceal the presence and precise locations of underground structures or even suggest their presence when none exist. The presence, absence or precise locations of underground structures indicated during a GPR survey should be confirmed by excavation, subsurface sampling or other invasive procedures.

Soil Boring Installation

Six soil borings were installed at the locations indicated in Figure 1. All soil borings were installed utilizing a truck mounted Geoprobe-style drill unit in combination with 5-foot macro-core soil samplers containing dedicated acetate liners. All soil borings were installed to a final depth of 15 feet bgs, where refusal was encountered. Groundwater was not encountered in any of the soil borings and was not accessible during the course of the investigation. Copies of the boring logs are included in Appendix 2.

Each soil boring was visually examined for lithology and the presence of contamination and field screened utilizing a Photovac 2020 hand held photoionization detector (PID). The PID is capable of detecting organic vapors at concentrations as low as 0.1 parts per million (ppm). All down hole drilling equipment was decontaminated between sampling events to minimize the possibility of cross-contamination.

Gary Chen
Eastone Capital LLC
July 9, 2015

Soil boring SB-1 was installed on the south side of the suspect UST area. The soil generally consisted of light brown to orange brown, very silty compact clay mixed with large pebbles to approximately 7 feet. At depths 7 to 15 feet bgs, soils consisted of light brown, medium to very coarse sands mixed with frequent gravel and pebbles. PID readings were 0.0 ppm throughout the boring with the exception of 19 ppm detected less than a foot bgs and attributable to surface runoff.

Soil boring SB-2A was installed in the northwestern portion of the lot adjacent to the suspect UST area, but encountered refusal at 9 feet bgs. Soil boring SB-2B was installed adjacent to SB-2A and consisted of dark brown to orange brown medium to coarse sand with frequent cobbles. PID readings were 0.0 ppm throughout the boring.

Soil boring SB-3 was installed on the northeastern side of the suspect UST area, where soil generally consisted of light brown to orange brown, very silty compact clay mixed with large pebbles to approximately 5 feet. At the depths 5 to 15 feet bgs, soil consisted of light brown, medium to very coarse sand with frequent gravel and pebbles. PID readings were 0.0 ppm throughout the boring.

Soil boring SB-4 was installed on the eastern side of the suspect UST area, where soil generally consisted of brown to orange-brown, coarse to medium grained sand with frequent pebbles. PID readings were 0.0 ppm throughout the boring.

Soil boring SB-5 was installed on the northern side of the suspect UST identified inside the auto repair shop. The soil generally consisted of orange-brown to orange, fine to coarse-grained silty sand with frequent pebbles. PID readings were 0.0 ppm throughout the boring.

Soil boring SB-6 was installed in the area of disturbed soil identified during the GPR survey, where soil generally consisted of orange-brown to orange, fine to coarse-grained silty sand with frequent pebbles. PID readings were 0.0 ppm throughout the boring.

Based on a lack of visual or olfactory evidence of contamination or elevated PID readings, soil samples were collected from each boring at a depth of 13 to 15 feet bgs. All 6 soil samples were containerized and placed in a cooler for laboratory analysis and transmitted under chain of custody to York Analytical Laboratories (NYSDOH # 10854). Soil samples were analyzed for VOCs in accordance with USEPA Method 8260, SVOCs in accordance with EPA Method 8270, and RCRA metals in accordance to USEPA Method 6010. Copies of the laboratory reports are contained as Appendix 2.

Gary Chen
Eastone Capital LLC
July 9, 2015

Soil Vapor Sampling

On June 25, 2015 ACT personnel collected 6 soil vapor samples from the subject property. All work was performed in general conformity to the New York State Department of Health's *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, October 2006 (NYSDOH Guidance). All sampling locations are indicated in Figure 1.

Three sub-slab soil vapor samples (SS-1 through SS-3) were collected from the interior of the building. Each sub-slab soil vapor sample was collected utilizing a power drill, a 1-foot long drill bit, dedicated polyethylene tubing and volatile organic compound (VOC) free putty for sealant. The polyethylene tubing was inserted approximately 6 inches beneath the concrete floor.

In addition, three soil vapor samples (SV-4 through SV-6) were collected beneath the asphalt parking lot. Each soil vapor sample was collected approximately 4 feet below the asphalt pavement utilizing a slide hammer, hollow drive rod and retractable soil vapor implant.

Each soil vapor sample was collected by attaching the portion of the polyethylene tube emerging from the ground to a low flow vacuum pump that purged the probe of soil vapor at a rate that did not exceed 0.2 liters per minute. A 6-Liter stainless steel Summa canister with a flow regulator set to a flow rate of approximately 0.025 liters per minute was then connected to the polyethylene tubing and allowed to collect soil vapor for approximately 4 hours until the canisters were full.

The six soil vapor samples were transmitted under chain of custody to York Analytical Laboratories, Inc. (NYSDOH #10854). All samples were analyzed for VOCs in accordance with USEPA Method TO-15. Copies of the laboratory reports are contained in Appendix A.

Soil Quality

The analytical results for soil samples SB-1, SB-2B, and SB-3 through SB-6 are summarized in Tables 1 through 3. The soil quality data was compared to unrestricted, restricted residential and commercial use soil cleanup objectives (UUSCOs, RRSCOs and CSCOs) contained in Table 6.8 of 6 NYCRR Part 375.

It can be seen from Table 1 that no VOCs were detected above laboratory method detection limits in SB-2B and SB-3 through SB-6. SB-1 contained trace levels of Acetone (18 µg/kg) and 2-Butanone (3.5 µg/kg), both below their corresponding UUSCOs.

Table 2 indicates that no SVOCs were detected above laboratory method detection limits in any of the soil samples. Concentrations of metals in soil beneath the property are summarized in Table 3. A total of 5 metals were detected in the soil samples. Selenium was the only metal to exceed its UUSCO in SB-4 and SB-6, with a maximum concentration of 7.18 mg/kg. Metals are

Gary Chen
Eastone Capital LLC
July 9, 2015

naturally occurring in metropolitan areas and commonly found at higher concentrations in urban areas due to the presence of fill materials and storm water runoff.

Soil Vapor Analysis

It can be seen from Table 4 that all soil vapor samples contained chlorinated and non-chlorinated VOCs. The New York State Department of Health (NYSDOH) only has indoor air guidelines for four compounds (Methylene Chloride, Tetrachloroethene, Trichloroethene and 1,1,1-Trichloroethane). Tetrachloroethene was detected in SS-2, SS-3, SV-4 and SV-5 above its screening level (100 ug/m^3) with a maximum concentration of $2,700 \text{ ug/m}^3$ in SS-3. Trichloroethene was also detected above its screening level of 5 ug/m^3 in SS-3 with a concentration of 55 ug/m^3 . Tetrachloroethene and Trichloroethene are common component of industrial solvents, paints, varnishes and degreasers. Methylene Chloride and 1,1,1-Trichloroethane were not detected in any of the soil vapor samples.

The NYSDOH has no screening levels for the remaining VOCs so their concentrations were compared to guidance values contained a November 2002 draft USEPA Subsurface Vapor Intrusion Guidance. Benzene was detected in SS-1 through SS-3 and SV-6 above its USEPA guidance value of 17 ug/m^3 with a maximum concentration of 23 ug/m^3 in SV-1. Chloroform was also detected above its USEPA guideline (1.1 ug/m^3) in SS-3 and SV-5 with a maximum concentration of 31 ug/m^3 in SV-5. Ethylbenzene was detected in SS-1 and SS-2 above its guidance value of 22 ug/m^3 with a maximum concentration of 27 ug/m^3 in SS-1. Benzene and Ethylbenzene are common components of petroleum products. Chloroform is a common industrial solvent. Their presence in soil vapor may be the result of area-wide historical industrial uses.

The remaining VOCs detected in soil vapor were found at trace concentrations. Many are commonly found in petroleum products and exhaust from motor vehicles. Their presence in soil vapor is consistent with the industrialized area that the site is located within.

CONCLUSIONS and RECOMMENDATIONS

The results of ACT's Subsurface Investigation are contained in this report. Based upon this investigation, ACT makes the following conclusions and recommendations:

- The GPR survey identified an area of disturbed soil where former underground storage tanks were probably located, an area of six underground gasoline storage tanks and an area of an interior underground waste oil storage tank.

Gary Chen
Eastone Capital LLC
July 9, 2015

- No soil contamination was observed beneath the site with the exception of a trace concentration of Selenium indicative of historical fill material commonly found in the soil within the metropolitan area.
- Soil vapor quality beneath the subject property contains Tetrachloroethene and Trichloroethene above NYSDOH indoor air guidelines. In addition, Benzene, Ethylbenzene and Chloroform were detected slightly above USEPA soil vapor screening levels and several other VOCs below NYSDOH screening levels. The presence of these compounds in soil vapor beneath the property is indicative of residual vapor contamination associated with historical auto repair operations at the site and should not impede the future use or development of the subject property.
- ACT recommends that soil vapor be mitigated by including a vapor barrier and sub-slab depressurization system in development plans to eliminate potential vapor exposure to future building occupants.

Please feel free to contact the undersigned should you have any questions or comments concerning the above.

Very truly yours,

A handwritten signature in black ink, appearing to read "P. P. Stewart".

Paul P. Stewart, MS
President

EXCLUSIONS AND DISCLAIMER

The purpose of this investigation was to assess the potential environmental liabilities at the subject site with respect to data, which Advanced Cleanup Technologies, Inc. has accumulated during the Phase II Environmental Site Assessment. The conclusions presented in this report are based solely on the observations of the site at the time of the investigation. Data provided, including information provided by others, was utilized in assessing the site conditions. The accuracy of this report is subject to the accuracy of the information provided. Advanced Cleanup Technologies, Inc. is not responsible for areas not seen or information not collected. This report is given without a warranty or guarantee of any kind, expressed or implied. Advanced Cleanup Technologies, Inc. assumes no responsibility for losses associated with the use of this report.

OWNER/REPRESENTATIVE QUESTIONNAIRE

ACT PROJECT NO. _____

PROPERTY ADDRESS: _____

1) Current owner of the Site? _____

2) Number of years owned? _____

3) Year of Building Construction? _____

4) Current Usage of the Site? _____

5) Current Occupants? _____

6) Previous Owner? _____

7) Previous Usage of the Site? _____

8) Previous Occupants? _____

9) Any knowledge of Environmental Issues regarding the Site? _____

10) Any knowledge of Environmental Issues regarding the Adjacent Properties? _____

11) Any previous Environmental Investigations performed at the Site? _____

If so, describe the investigation and provide documents _____

12) Any Environmental Liens associated with the Site? _____

This form was completed by:

Signature _____ **Date:** _____

Print Name/Title _____ **Phone #:** _____

Number of years associated with the Subject Property: _____

17.9 Qualifications of Environmental Professionals

CURRICULUM VITAE

PAUL P. STEWART
ADVANCED CLEANUP TECHNOLOGIES, INC.
960 SOUTH BROADWAY, SUITE 128
HICKSVILLE, NY 11801
BUSINESS: (516)-933-0655 x12

EDUCATION:

Professor	Polytechnic Institute, (NY) Environmental Law and Regulations	1996- 1999
J.D.	Vermont Law School, (VT) Environmental Law	1982
M.S.	Tufts University, (MA) Environmental Health Engineering	1979
B.S.	Boston University, (MA) Environmental Science	1978

PROFESSIONAL HISTORY:

PRESIDENT, ADVANCED CLEANUP TECHNOLOGIES, INC.

Joined the firm in February, 1989 with extensive expertise in the investigation of environmental contamination incidents. Has been employed by industrial facilities, retail petroleum distributors, insurance companies and financial institutions to investigate past and present chemical handling practices and conditions at subject locations.

Mr. Stewart has developed a Forensics department which directs all investigations into the occurrence of contamination and sources of its release. These services are geared towards identifying the nature, extent and causes of environmental contamination. He is also affiliated with Polytechnic Institute of New York where he is engaged in joint research into groundwater flow, chemical transport modeling and remediation as applied to major chemical releases.

PROFESSIONAL HISTORY (Continued)

ASSOCIATE ATTORNEY	RIVKIN, RADLER, DUNNE & BAYH EAB Plaza, Uniondale, NY 11556	1985- 1989
--------------------	--	---------------

A member of the Science/Causation Team and Environmental Practice Group with extensive experience in groundwater investigations and major environmental litigation. He coordinated the development of major scientific and technical issues involved in complex hazardous waste and toxic tort law suits including Agent Orange, Shell and many others.

His responsibilities included the allocation of liabilities and costs for the release of chemicals into the environment and developing appropriate levels of remedial action. He was also responsible for researching and evaluating evidence of property damage and environmental exposure in conjunction with the Real Estate Department, where he developed environmental due diligence procedures for commercial real estate transactions.

His additional responsibilities included investigating companies' chemical handling, transport and disposal practices and impacts on their regulatory requirements. This work involved surveying industrial activities and chemical release incidents at numerous facilities including literature research, public agency records review and the coordination of appropriate soil, soil vapor and ground water investigations. He also made appearances before federal, state and local regulatory agencies and successfully negotiated the resolution of regulatory compliance issues under numerous statutory frameworks.

ASSOCIATE ATTORNEY	ESCHEN & ESCHEN North Broadway, Hicksville, NY	1983- 1985
--------------------	---	---------------

Responsible for personal injury and property damage trials and depositions. Successfully perfected numerous appellate briefs and issues including negligence, contract and insurance law. Appearance before regulatory and penal tribunals. Applications of land use development and management law.

INTERN EXAMINER	U.S. PATENT & TRADEMARK OFFICE Washington, D.C.	1981
-----------------	--	------

Screened applications for statutory compliance. Prepared legal memoranda in support of official determinations in pending actions.

AFFILIATIONS:

American Chemical Society

American Society of Testing and Materials

-3-

CERTIFICATIONS AND LICENSES:

New Jersey Certification in Subsurface Evaluations
Approved ASTM Instructor on Environmental Site Assessments
New York State Restricted Handler Class II
Portable Gas Chromatography Chemist
Licensed to practice law in New York and Florida

SELECT PRESENTATIONS:

The Scene of the Accident: Forensic Engineering in Hazardous Waste Litigation, Purdue University Industrial Waste Symposium, in Indiana, May 10, 1988.

A Case Study of Petroleum Contamination, Environmental Claim Seminar, St. Paul, Minnesota, May 14, 1990.

PUBLICATIONS:

Numerous technical reports and articles on environmental health engineering and science including the following:

Evaluation of an Ecological Habitat in an Urban New England Environment, 1978.

Environmental Impact Analysis, Construction of the Kennedy Memorial Library, 1978.

Pretreatment of Chromium Waste Sludge from Metal Plating Facility, 1979.

Environmental Impact Analysis, Expansion of the Block Island Sewage Treatment Plant, 1979.

Environmental Report, 11th Annual ALI-ABA Conference on Environmental Law, Vermont Law School Forum, 1981.

Official Comments, Final Environmental Impact Statement, Proposed Runaway Extension and Industrial Park Development, Lebanon Municipal Airport, Lebanon, New Hampshire, 1982.

Laboratory Scale Design, Treatment of Wastewater from Soda Manufacturing, 1985.

Development of a Groundwater Evaluation Program, Hazardous Waste and Toxic Torts Law and Strategy, 1985.

The scene of the Accident: Forensic Engineering in Hazardous Waste Litigation, Journal of the Industrial Waste Symposium, Prudue University, 1988.

History of Commercial use of Methyl tert-Butyl Ether in gasoline products, 1990.

PUBLICATIONS (Continued)

A Case Study of Petroleum Contamination, April 16, 1990.

Effect of Bentonite Diversion Wall on the Migration of Wastes at a Hazardous Waste Landfill,
Sato, C., A. Protopapas, P. Stewart, June, 1991.

RELATED PROJECT EXPERIENCE:

Beekman, New York

Performance of an environmental services audit of on-going groundwater remediation project.

Bellmore, New York

The investigation of soil and groundwater contamination associated with retail gasoline distribution facilities.

Brockton, Massachusetts

Performance of a soil, soil vapor and groundwater investigation associated with a retail dry cleaning facilities.

Falls Village, Connecticut

The investigation and remediation of soil and groundwater contamination associated with the release of fuel oil from an underground storage tank.

Garden City, New York

The investigation and remediation of chlorinated solvent contamination associated with printing industry wastes.

Pineola, North Carolina

The investigation of soil and groundwater contamination associated with the release of petroleum from a retail gasoline and bulk petroleum distribution facility.

Ridgefield, Connecticut

The investigation and remediation of soil and groundwater contamination associated with the release of fuel oil from an above ground petroleum storage facility.
