RE: Phase I Environmental Site Assessment
37-11 30th Street
Long Island City, New York 11101
Hillmann Project No: Z33293

Dear Ms. Webb:

Hillmann Consulting, LLC, is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in accordance with the scope and limitations of ASTM Practice E 1527-13, which is the latest version of the E1527 standard published by the ASTM.

This report is for the exclusive use of the entities named on the front cover, its affiliates, designates and assignees, rating agencies, prospective bond holders and bond holders, and no other party shall have any right to rely on any service provided by Hillmann Consulting, LLC, without prior written consent.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact the Project Manager at 908-688-7800.

Very Truly Yours,
Hillmann Consulting, LLC

Craig Downs
National Accounts Manager

Stephanie Lamb
Project Manager

List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AST	– Aboveground Storage Tank
ASTM	– American Standard for Testing Materials
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DNPL	– Delisted National Priority List
ENG	– Engineering
ERNS	– Emergency Response Notification System
FDNY	– Fire Department, City of New York
FOI	– Freedom of Information
FOIA	– Freedom of Information Act
FOIL	– Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
INST	– Institutional
ISRA	– Industrial Site Recovery Act
LBP	– Lead-Based Paint
LQG	– Large Quantity Generator
LTANK	– Leaking Storage Tank
MSDS	– Material Safety Data Sheet
NCDOH	– Nassau County Department of Health
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NJDEP	– New Jersey Department of Environmental Protection
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
NYCDEP	– New York City Department of Environmental Protection
NYCDOB	– New York City Department of Building
NYSDEC	– New York State Department of Environmental Conservation
OPRA	– Open Public Records Act
PADEP	– Pennsylvania Department of Environmental Protection
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System
REC	– Recognized Environmental Condition
SCDHS	– Suffolk County Department of Health Services
SQG	– Small Quantity Generator
TSDF	– Treatment Storage and/or Disposal Facility
USEPA	– United States Environmental Protection Agency
UST	– Underground Storage Tank

1.0 EXECUTIVE SUMMARY

Hillmann Consulting, LLC (Hillmann), performed a Phase I Environmental Site Assessment (ESA) of 37-11 30th Street, Long Island City, New York (the Property). This assessment has been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-13 for Phase I Environmental Site Assessments.

1.1 Project Details Summary Table

A summary of the pertinent details of the project is provided below:

PROJECT SUMMARY TABLE					
Name of Client		VNB New York Corp.			
Client Project No.:		N/A			
Client Contact:		Ms. Gloria Webb			
Description of Project		Phase I Environmental Site Assessment			
Project Name:		37-11 30 th Street Corp			
Street Address:		37-11 30 th Street, Long Island City, NY			
City:	Long Island City	County:	Queens	State:	New York
Tax ID/Parcel Number:		Block 372 – Lot 8			
Zoning Designation:		M1-2/R6A			
Approx. Property Area:		1.10 acres			
Approximate Building Area:		44,060-ft ²			
Year Built:		Circa 1920			
General Type of Usage:		Assembly and Warehousing			
Property Owner:		37-21 30 th Street Corp			
Occupant(s):		See Factor Industry, Inc. – Assembly and Warehousing of Lighting and Sound Equipment			
Assessment Personnel:		Ms. Stephanie Lamb			
Property Contact:		Mr. Bob See/Owner			
Property Escort(s):		Mr. Bob See/Owner			
Inspection Date:		April 2, 2014			
Weather Conditions:		Clear, 45 degrees F			

1.2 Findings Summary Table

The following table summarizes the key findings of this assessment. This table, alone, does not constitute the complete assessment. The report must be reviewed in its entirety.

Assessment Section	No Sig. Concern	Potential Env Concern	REC	Recommended Follow-up	Est. Cost Budget	Rep. Ref.
User Provided Info		A Hazardous Substances Survey & Report, provided by the owner, stated public agency documents indicated that several additional tanks had been installed at the Property including a 2000 gallon tank buried in 1933 for an oil burning system, a 550 gallon tank buried in 1941 and a 5000 gallon UST installed in 1947.	REC	NA		3.0
Data Gaps	X					2.5
Regulatory Review		The Property was listed on the LTANKS database and was given a closed status as of September 15, 2004.	HREC	NA		4.1
Historical Review		According to Sanborn fire insurance maps, the Property was historically used for plastic manufacturing from at least 1930s until the early 1980s	Yes	Phase II	\$10,000-\$15,000	4.4
Site Use	X					5.2
Adjoining Properties		The adjoining properties were listed on the City Directories provided by EDR and Sanborn fire insurance maps with multiple auto repair facilities, filling stations and manufacturing facilities.	Yes	Phase II	(See Above)	4.1.2 5.2.8
Hazardous Materials	X					5.3
Bulk Petroleum Storage		Sanborn fire insurance maps indicate the 5,000-gallon tank has existed at the Property since at least 1970. Prior to 1970, a 10,000-gallon tank was depicted at the Property from at least 1947 to 1950. The 10,000-gallon tank was not listed on the regulatory documents supplied by EDR.	REC	NA		5.3
PCBs	X					5.3
Waste / Discharges	X					5.3
Asbestos Containing Materials (ACM)		ACM may be present based on bldg. age.		Compliance with applicable regulations.	Unk	7.1
Lead Based Paint (LBP)	X					7.2
Radon	X					7.3
Mold		Water stained sheetrock ceiling in basement.		Repair of any water intrusions into the Property.	Unk	7.4
Wetlands	X					7.5

NA = Not Applicable, TBD = To Be Determined, UNK = Unknown,

1.3 General Description, Current and Historic Property Use

The Property consists of an irregular shaped 1.10 acre parcel bounded by 30th Street to the northwest, 37th Avenue to the northeast and 31st Street to the southeast. The Property is located in an urban developed area characterized by a mix of residential and commercial buildings and manufacturing and warehousing facilities. The terrain of the Property appeared to be gently sloping from the north to south. No natural surface water bodies were noted at the Property.

The Property is improved with a 1 and 3-story warehousing building with a basement. The building area is approximately 44,060-ft². The Property building is currently occupied by See Factor Industry, a warehouse and distributor of lighting and sound equipment.

The existing warehousing building was constructed circa 1920 and was used for the manufacturing of plastic products since at least the 1930s until the early 1980's, when the Property use was switched to warehousing and distribution of sound and lighting equipment. Prior to 1920, this area consisted of a garage on the northwest side of the Property and residences on the north side of the Property with the remainder of the Property consisting of vacant land dating back to at least 1915. Prior to 1915, the Property consisted of vacant land.

1.4 Findings, Opinions, and Conclusions

1.4.1 Notable Findings

- The existing building was constructed circa 1920 and was historically used for the manufacturing of plastic products (The Marblette Corp. Mfg. of Plastic Materials) from at least the 1930s until the early 1980's when the Property was changed to its current usage for the warehousing and distribution of sound and lighting equipment. Based on the industrial nature of the former tenant(s), the potential for historical use of hazardous materials and petroleum products on the Property is likely. In addition, the historical operations occurred during a time of less stringent environmental regulations, and the potential exists that a release of chemicals may have occurred at the Property.
- The Property is currently heated by a natural gas system. The Property was previously heated by an oil fired system equipped with a 5,000-gallon fuel oil storage tank. The Property was listed on the regulatory database supplied by EDR as a LTANKS, HIST AST and AST site in reference to the former storage tank. According to the AST and HIST AST databases, one 5,000-gallon fuel oil AST was closed in place on July 7, 2000 at the site. The LTANKS listing indicates a tank test failure occurred on April 21, 1998. According to DEC remarks in the database, in February 2000 three soil borings were taken on the site (in the tank area) as part of a structural investigation for a possible building expansion. There was no evidence of soil contamination and the DEC believed that there was no actual petroleum spill and the case was given a closed status as of September 15, 2004.

Hillmann was supplied with a Hazardous Substances Survey & Report prepared by MTS EnviroSurv and dated January 17, 1991. The report concluded that additional tanks were indicated on agency records. The only tank visually verified to be on the premises was the 4,500 gallon UST that was used for the existing building heating system. The report

concluded that several additional tanks had been installed on the Property since its initial development in 1914. The records show a 2,000 gallon tank buried in 1933 for an oil burning system; a 550-gallon tank buried in 1941 and a 5,000-gallon UST installed in 1947.

Hillmann was supplied with a tank closure documents prepared by USA Tank Maintenance Inc. and dated July 7, 2000. The letters stated that a 5,000-gallon, 2,000-gallon and a 550-gallon underground storage tanks were properly closed in place at the Property. Hillmann believes that the 4,500-gallon fuel oil tank mentioned in MTS's report is actually the 5,000-gallon heating oil tank closed in July of 2000.

Sanborn fire insurance maps indicate the 5,000-gallon tank had existed at the Property since at least 1970. Prior to 1970, a 10,000-gallon tank was depicted at the Property from at least 1947 to 1950. The 10,000-gallon tank was not listed on the regulatory documents supplied by EDR and no additional records indicating closure of this suspect tank was supplied to Hillmann.

No obvious visual evidence of any additional historic USTs was noted by Hillmann during the site reconnaissance. Due to the uncertain UST closure statuses (lack of confirmatory soil sampling) and potential of additional UST(s), the potential exists that a historic releases from the historic USTs has resulted in a subsurface impact to the Property.

- The Property is located within an area of Long Island City which had historically been occupied for industrial purposes. The adjoining properties were listed on the City Directories and Sanborn fire insurance maps, provided by EDR, with multiple auto repair facilities, gasoline filling stations and various manufacturing facilities. It was noted that numerous lots in the surrounding area have also been assigned an (E) designation for "*Hazardous Materials - Phase I and Phase II Testing Protocol*." These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. Based on the adjoining nature of these sites, any historical contamination at these sites has had the potential to impact the Property. However, in that event it is unlikely that the Property would be held liable for corrective action due to migration of contaminants from off-site onto the Property.

1.4.2 Non-ASTM Scope Considerations

Hillmann has also performed cursory evaluations for ASTM "Non-Scope" items, such as asbestos-containing materials (ACM), lead-based paint, radon, mold and wetlands. Our observations and research did not identify any notable concerns, except for the following:

- Considering the date of building construction, there is the potential for asbestos-containing materials at the Property. Suspect non-friable ACM observed at the Property included sheetrock wall systems and the roofing systems in good condition. Suspect friable materials included thermal systems insulation, including pipe insulation, in the basement level of the building. Additional quantities of ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a cursory evaluation regarding the potential presence of ACM at the Property.

A limited asbestos screening was performed as part of a Hazardous Substance Survey and Report in 1990. Samples of boiler, duct and pipe insulation and air cell were tested and found to be positive for asbestos.

- Considering the date of construction of the building, lead-based paint may be present at the Property. In general, interior painted surfaces within the space were noted to be in good to fair condition on the first floor and fair to poor condition on the second floor. However, due to the non-residential usage of the Property, lead-based paint is not considered to be a significant environmental concern and no further investigation is recommended at this time.
- During the assessment, Hillmann conducted a cursory inspection of the accessed areas of the building for evidence of excessive or amplified mold growth, or for conditions favorable for mold growth. Water stained ceiling sheetrock was observed on the basement ceiling. Visible mold growth was not observed in these areas. No other obvious evidence of excessive or amplified mold growth, or conditions favorable for mold growth, was observed on the Property during the site assessment.

1.4.3 Significant Data Gaps

No data gaps that significantly impacted Hillmann's ability to identify RECs in connection with the Property have been identified.

1.4.4 Recognized Environmental Conditions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property.

Recognized Environmental Conditions (RECs):

- The presence of the historical industrial use of the Property and adjoining properties represents evidence of a recognized environmental condition.
- The suspected historic storage tanks at the Property represent evidence of a recognized environmental condition.

Controlled Recognized Environmental Conditions (CRECs):

- No evidence of any CRECs in connection with the Property was identified.

Historical Recognized Environmental Conditions (HRECs):

- The documented closure of the 5,000-gallon heating oil storage tank and subsequent closure of the LTANKS case represents evidence of a historical recognized environmental condition.

1.5 Recommendations

1.5.1 Recognized Environmental Conditions

Based on the findings of the Phase I Environmental Site Assessment, no further investigation is recommended at this time, except for the following:

- The presence of the historical industrial use of the property represents evidence of a recognized environmental condition. Hillmann recommends conducting a Phase II Subsurface Investigation on the subject Property.
- As part of the Phase II, Hillmann recommends conducting an additional investigation, including a ground penetrating radar survey and soil borings, to determine if any USTs (in the area of the suspect UST locations) or resulting contamination exist at the subject Property. If any storage tanks are discovered during the Phase II of the subject Property, the tank(s) should be properly closed in accordance with NYSDEC regulations with confirmatory soil sampling.

1.5.2 Non-ASTM Considerations

The following should be considered with regard to further investigation or management of Non-ASTM considerations addressed by this report:

- Compliance with all applicable rules and regulations pertaining to asbestos is recommended.
- Repair of any water intrusions into the Property in order to prevent potential mold growth and prevent future conditions favorable for mold growth.

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the “landowner liability protections,” or “LLPs”): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be “*de minimis conditions*” are not considered to be RECs nor CRECs. *De minimis condition* is defined by the ASTM as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

The chief components of this assessment are described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.
- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.
- A review of standard physical record sources for available topographic, geologic and groundwater data.
- Review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.
- Review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

2.1.1 Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental concerns that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A cursory visual inspection for the presence of suspect ACM within the accessed areas of buildings on the Property.

Lead-Based Paint (LBP): A cursory visual inspection of the condition of painted surfaces in the accessed areas of buildings on the Property.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the potential for elevated indoor levels of radon gas to occur in the area of the Property.

Mold: A cursory visual inspection within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors.

Wetlands: A cursory review of data published by the US Fish and Wildlife Service regarding the presence or absence of mapped wetlands on the Property. The US Fish and Wildlife Service wetlands data is typically provided to Hillmann by Environmental Data Resources, Inc. (EDR).

2.2 Property Location/Legal Description

The Property consists of a single parcel located on Block 372 of Long Island City, Queens County, New York. The tax map number designation includes Block 372, Lot 8. The Property is bounded by 30th Street to the northwest, 37th Avenue to the northeast and 31st Street to the southeast; 38th Avenue is located approximately 100 feet to the southwest. The latitude and longitude are approximately North 40.7548 degrees, West 73.9319 degrees.

2.3 Significant Assumptions

The following significant assumptions are made:

- Hillmann has assumed that the information obtained from EDR during the course of this assessment is an accurate and complete representative summary of the information contained in the referenced regulatory agency records, except when such information is obviously contradicted by other data.
- Hillmann has assumed that the information used to prepare this assessment that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources was an accurate and complete representative summary of the information possessed by those individuals, representatives or sources.
- Hillmann has assumed that the site operations at the time of the site visit reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, Hillmann has also assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not made known to us, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.
- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, Hillmann has assumed that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

2.4 Limitations and Exceptions

2.4.1 Limiting Conditions

Hillmann was unaware of any significant limiting conditions at the time of the assessment.

2.4.2 Other Exceptions or Deletions:

No other exceptions or deletions from the ASTM Standard E 1527-13 are reported.

2.5 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions.

Data Gap:	Significant (Yes/No)?	Discussion
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.6 Special Terms and Conditions

Hillmann has prepared this Phase I Environmental Site Assessment using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. The methodology of this Phase I Environmental Site Assessment was consistent with the ASTM Standard Practice for E 1527-13. Findings within this report are based on information collected from observations made on the day of the site visit and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation or other construction purposes. Hillmann makes no representation or warranty that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on our visual observations of the Property, the research findings reasonably obtained, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Hillmann relies completely on the information, whether written, graphic or verbal, provided by the subject Property contact(s) or as shown on any documents reviewed or received from the subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, Hillmann did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Property and neighboring properties that could impact the Property. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM Standard E 1527-13. The information provided in the regulatory database report is assumed to be correct and complete.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. "Reasonable efforts" are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify subsurface equipment that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

Unless otherwise specified in Section 2.1 of this report, an ASTM Vapor Encroachment Screening of the Property utilizing the information collected during the course of this assessment is excluded from the scope of service for this assessment.

Hillmann is not a professional title insurance firm and makes no guarantee, explicit or implied, that the records which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

3.0 USER PROVIDED INFORMATION

3.1 Prior Environmental Reports/Documentation

The following prior environmental reports or documentation were obtained and reviewed:

Hazardous Substances Survey & Report -37-11 30th Street, Long Island City, NY; prepared by MTS EnviroSurv and dated January 17, 1991. The report concluded the following:

“Building heat was supplied by an oil-burning furnace located in the basement Boiler Room of the 3-story building. The unit was jacketed in sheet metal and contained a fiberglass thermal barrier. It burned #2 fuel oil which was stored in a 4,500 gallon underground tank buried under the pavement in the storage room adjacent the Boiler Room. There were a few oil stains observed on the floor near the furnace but they were minor. Testing the tanks for leaks was beyond the scope of the Phase 1 Study. Had the furnace or any of its associated above ground piping sustained any significant leaks the concrete paved floor would have served as a sufficient barrier, preventing seepage of oil and subsequent contamination of the soil below.”

“The fuel oil fill port and tank vent were located on the 31st Street side. There were a few stains observed on the pavement near the fill port but they were minor.”

“Most of the ACM observed in the building was in friable condition and in areas frequented by building tenants and service personnel. The presence of friable asbestos in these areas created a potential human health risk from exposure to airborne asbestos fibers. It is therefore recommended that this material be removed and/ or replaced.”

“The only tank visually verified to be on the premises was the 4,500 gallon underground unit being used for the existing building heating system. Public agency documents indicated that several additional tanks had been installed on the property since its initial development in 1914: The records show a 2000 gallon tank buried in 1933 for an oil burning system. Further, the records show a 550 gallon tank buried in 1941 and a 5000 gallon UST installed in 1947. None of these tanks were physically in evidence at the site but may be presumed on the property. The tank currently in use and described by the owner; did not fit any of the records found in the agency review.”

“In addition to the data on tanks, the agency review indicated that prior occupants stored very large quantities of formaldehyde at the site. Formaldehyde is a substance listed as toxic by the federal Environmental Protection Agency. There also appeared to be plastic manufacture performed at the site. Such operations could have involved the use of hydrocarbons or other organic chemicals considered hazardous by the EPA. It also appeared that lead melting was conducted in the early 1950's. Testing soils or Groundwater for contamination by these parameters was beyond the scope of a Phase I Survey.”

Tank Certification Letters; prepared by US Tank Maintenance Inc. and dated July 7, 2000. The letters stated the following:

“This is to certify that the fuel oil tanks (5,000-gallon, 550-gallon and 2,000-gallon) located on the above subject premise has been emptied and purged of combustible or toxic vapors. Vent line was left open. The fill terminal was capped and filled with concrete on June 28, 2000, June 30, 2000 and July 07, 2000.”

3.2 Title Records/Environmental Liens/Activity and Use Limitations

Review of title records is not included in the scope of work for this assessment project. No information regarding environmental liens or activity and use limitations was provided to Hillmann by the Client.

3.3 Specialized Knowledge or Experience

No indication of any specialized knowledge or experience regarding the Property was reported to Hillmann by the Client.

3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or specialized knowledge of the Property was reported to Hillmann by the Client.

3.5 Property Value Reduction due to Environmental Conditions

No information was provided by the Client to Hillmann regarding a reduction of the Property value due to environmental problems or conditions.

3.6 Reason for Performing Phase I ESA

It is Hillmann's understanding that the Phase I ESA was being performed in consideration of a pending real estate transaction involving the Property.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

An EDR Radius Map report was obtained from Environmental Data Resources of Milford, CT. The EDR Radius Map Report provided a search of standard environmental record sources in general accordance with the requirements of the ASTM E1527-13. Hillmann has reviewed the EDR Radius Map report and a summary of findings is presented in the following tables and report sections. Hillmann also reviewed the list of unmapped sites (referred to by EDR as “Orphan List” sites). Unmapped sites identified as falling within an applicable specific search distance or warranting discussion in the report, if any, have been included in the information presented below. Detailed descriptions of the meaning and significance of the regulatory databases can be found in the EDR Radius Map Report in Appendix E.

Regulatory Database	Search Distance	Property Listed?	Adj. Properties Listed?	Total Listings Within Search Distance
Fed. NPL/Proposed NPL	1-mile	No	No	0
Fed. Delisted NPL	½-mile	No	No	0
Fed. CERCLIS	½-mile	No	No	0
Fed. CERC-NFRAP	½-mile	No	No	0
Fed. RCRA CORRACTS	1-mile	No	No	1
Fed. RCRA TSD	½-mile	No	No	0
Fed. RCRA LQG	Site & Adj.	No	No	
Fed. RCRA SQG	Site & Adj.	No	No	
Fed. RCRA CESQG	Site & Adj.	No	No	
Fed. ENG Control List	Site	No		
Fed. INST Control List	Site	No		
Fed. ERNS	Site	No		
State/Tribal Hazardous Waste Site	1-mile	No	No	11
State/Tribal Landfill/Solid Waste	½-mile	No	No	2
State/Tribal Leaking Storage Tanks	½-mile	Yes	No	45
State/Tribal Registered Storage Tanks	Site & Adj.	Yes	Yes	
State/Tribal Eng. Control List	Site	No		
State/Tribal Inst. Control List	Site	No		
State/Tribal Voluntary Cleanup Sites	½-mile	No	No	3
State/Tribal Brownfields	½-mile	No	No	2
Supplemental Databases	Site & Adj.	No	Yes	

4.1.1 Property Listings

The following Property listings were identified:

- AST, HIST AST, LTANKS – See Factor Industry Inc., 37-11 30th Street: According to the AST and HIST AST databases, one 5,000-gallon fuel oil AST was closed in place on July 7, 2000 at the site. The LTANKS listing indicates a tank test failure occurred on April 21, 1998. According to DEC remarks in the database, in February 2000 three of soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. There was no evidence of soil contamination and the DEC believed that

there was no actual petroleum spill and the case was given a closed status as of September 15, 2004. Considering the closed status, the LTANKS listing is considered a HREC in connection with the Property warranting no additional investigation at this time.

4.1.2 Adjoining Property Listings

The following adjoining property listings were identified:

- EDR US Historical Cleaners, NY E Designation – Lot 33, Tax block 371 at 3724 30th Street: This site adjoins the Property to the north-northwest and is up gradient based on area topography. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. According to the EDR US Historical Cleaners database, a drycleaners by the name of “Denim Washing Inc.” existed at the site from at least 2004 to 2009.
- SPILLS, E Designation – Lot 7, Taxblock 372 at 37-31 30th Street: This site adjoins the Property to the northwest and is up gradient based on area topography. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. According to the SPILLS database, on July 23, 2003, an unknown quantity of waste oil was released due to poor housekeeping. Corrective action was taken and the listing was assigned a closed date of September 3, 2003.
- E Designation, UST, HIST UST – Abbeys Automate Inc. at 37-29 31st Street: This site adjoins the Property to the east-southeast and is down gradient based on area topography. This site is listed with the name Lot 6, Tax block 373 on the E Designation database. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. The UST database indicates two 4,000-gallon gasoline USTs were closed in place at the site in 1998.
- E Designation, EDR US Historical Auto Station – Lot 23, Tax block 372 at 3018 37th Avenue: This site adjoins the Property to the north-northeast and is up gradient based on area topography. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. The EDR US Historical Auto Station database indicates the site was occupied by an auto repair facility in 2004.
- EDR US Historical Auto Station – 3020 37th Avenue: This site adjoins the Property to the north-northeast and is up gradient based on area topography. The EDR US Historical Auto

Station database indicates the site was occupied by an auto repair facility from at least 1999 to 2010.

4.1.3 ASTM Search Distance Findings

The following is a summary of the findings of the regulatory database review with regard to sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this report informative and yet concise, Hillmann has provided a brief discussion of the listed site(s) for each database category that appears most likely to impact the Property based on distance, topography and/or case status. A copy of the full EDR Radius Map Report, including available details of all listed sites, is included in Appendix E.

Note that listings for the following databases, if identified, would be discussed above in Sections 4.1.1 and 4.1.2: Registered Storage Tanks, Federal RCRA Generators, Federal and State INST and ENG Controls, ERNS.)

Federal NPL: No NPL listings were identified within a one-mile radius of the Property.

Federal Delisted NPL: No DNPL listings were identified within a ½-mile radius of the Property.

Federal CERCLIS: No CERCLIS listings were identified within a ½-mile radius of the Property.

Federal CERCLIS-NFRAP: No CERC-NFRAP listings were identified within a ½-mile radius of the Property.

Federal RCRA-CORRACTS: One (1) CORRACTS listing was identified within a one-mile radius of the Property. The site is Con-Edison – Ravenswood Tunnel at 3854 Vernon Boulevard NW Corner, located approximately 3,743 feet to the west-northwest and at a lower elevation relative to the Property. According to the database, the RFA was completed and it was determined that an RFI was not necessary. Considering the distance and topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

Federal RCRA-TSD: No TSD listings were identified within a ½-mile radius of the Property.

State/Tribal Hazardous Waste Sites: Eleven (11) SHWS listings were identified within a one-mile radius of the Property. The closest site in proximity to the Property is Amtrak Sunnyside Yard at 39-29 Honeywell Street, located approximately 840 feet to the south and at a lower elevation relative to the Property. Considering the distance and topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

State/Tribal Landfill/Solid Waste Disposal Sites: Two (2) SWF/LF listings were identified within a ½-mile radius of the Property. The closest site in proximity to the Property is City Used Auto Center Inc. at 37-25 21st Street, located approximately 2,107 feet to the northwest and at a lower elevation relative to the Property. Additionally, this site was listed on the SPILLS database. According to the SPILLS database, on March 11, 2003 it was reported that

approximately 50-gallons of transmission fluid, 1-gallon of battery acid, 50-gallons of antifreeze, 50-gallons of motor oil, an unknown quantity of auto waste fluids and an unknown quantity of gasoline had been deliberately released at the site. Corrective action was taken and the listing was given a spill closed date of January 29, 2007. The SWF/LF database indicates the site is an inactive vehicle dismantling facility. Considering the status, distance and topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

State/Tribal leaking Storage Tanks: Forty-five (45) LTANKS listings were identified within a ½-mile radius of the Property. The closest non-adjacent up gradient site with an active status is listed as Apartment Building TTF at 34-20 32nd Street, located approximately 1,853 feet to the northeast and at a higher elevation relative to the Property. The database listing indicated that a tank test failure was reported on March 6, 2012. According to the DEC Memo, “03/06/12-Zhune spoke to Ray from PTC. He said they test the UST and failed. The tank was emptied and cleaned. PTC installed a temporary tank.” Considering the status and distance away from the Property, this site does not represent a REC in connection with the Property.

State/Tribal Voluntary Cleanup Sites: Three (3) VCP listings were identified within a ½-mile radius of the Property. The closest listing in proximity to the Property is Levco metal finishes at 34-11 36th Street, located approximately 1,177 feet to the east and at a lower elevation relative to the Property. Considering contamination at the site is being voluntarily addressed and the topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

State/Tribal Brownfields: Three (3) BROWNFIELDS listings were identified within a ½-mile radius of the Property. The closest site in proximity to the Property is Fresh Cleaners & Laundry Inc. at 39-26 30th Street, located approximately 952 feet to the southwest and at a lower elevation relative to the Property. Considering the topographic gradient away from the Property, this listing does not represent a REC in connection with the Property.

Review of the sites identified within the ASTM search parameters did not identify any nearby or surrounding area sites that are considered to be a REC in connection with the Property, unless as discussed otherwise previously in this section.

4.2 Additional Environmental Record Sources

4.2.1 Supplemental Database Listings

Hillmann reviewed the EDR Radius Map report for listings on supplemental databases that were searched in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases, if identified, would be discussed in Section 4.1.1 and 4.1.2. None of the other supplemental database listings identified by the EDR Radius Map report are considered to be a REC in connection with the Property.

4.2.2 Local Agency & Internet Research

Hillmann performed a search of available local and municipal agencies for pertinent information pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Hillmann also conducted a cursory internet search of the Property address for information indicative of a REC. The following table summarizes the findings of the research:

Source:	Inquiry Made?	Type:	Outcome:
NYC Building Department	Yes	Internet	Hillmann reviewed available on-line records pertaining to the Property. No records indicating a potential environmental concern were identified.
NYC Fire Department	Yes	Storage tank search request sent	Response not received prior to report completion.
NYC Department of Environmental Protection	Yes	FOI Request	Response not received prior to report completion.
NYS Department of Environmental Conservation	Yes	Internet	Hillmann reviewed available on-line records pertaining to the Property. The search revealed a Spill record which indicated on April 21, 1998 a tank test failure occurred at the Property. The spill was closed on September 15, 2004. Additionally, bulk storage tank information was identified which indicated a 5,000-gallon aboveground vaulted tank was closed in place at the Property on July 7, 2000.
NYS Department of Environmental Conservation	Yes	FOI Request	Response not received prior to report completion.
USEPA Envirofacts search http://www.epa.gov/enviro/index.html	Yes	Internet	The Property address was searched. No results for the Property were found.
www.google.com	Yes	Internet	The Property address was searched. No information indicative of a REC was identified.
Other:	NA		

4.3 Physical Setting Sources

4.3.1 USGS 7.5 Minute Topographic Map

The USGS 7.5 minute series topographic map covering the Property (Central Park, NY/NJ Quadrangle) was reviewed. The maps indicated an approximate elevation at the Property of 40 feet above mean sea level. The topography indicated by the map appeared to be gently sloping downward to the south. The closest down gradient water body depicted by the map consisted of the Dutch Kills, a tributary of the East River, located approximately 1-mile to the south of the Property.

4.3.2 Soils

Based on USDA Soil Conservation Service (SCS) data summarized by the EDR Geocheck-Physical Setting Source Addendum, the soil type at the Property is classified as “Urban Land”. The Urban land designation indicates that a majority of the original soils on the site have been disturbed by development or covered with impervious surfaces, such as buildings or pavement.

4.3.3 Geology

Based on geologic data summarized by the EDR Geocheck - Physical Setting Source Addendum, the geologic formation in the vicinity of the Property is described as a stratified sequence of the Mesozoic Era, Cretaceous System, and Upper Cretaceous Series.

4.3.4 Hydrology

No site specific hydro-geologic data was available for the Property. Based on the drainage/topography of the Property and surrounding area, the inferred direction of groundwater flow appears to be towards the south. A detailed subsurface investigation of the Property would be needed to accurately determine site specific groundwater data such depth, gradient and flow direction.

4.4 Historical Use – Property and Adjoining Properties

Hillmann has conducted research in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the Property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

4.4.1 Fire Insurance Maps

Hillmann obtained a Certified Sanborn Map Report from EDR in order to research published historic fire insurance maps for the Property and surrounding area. The following is a summary of site use information interpreted from a review of the report:

YEAR(S)	DESCRIPTION	
1898	Property:	The Property is depicted as vacant lots with a dwelling on the north side.
	Adjacent Properties:	The sites adjacent to the northeast and northwest of the Property are depicted with vacant land and dwellings. The sites adjacent to the southeast and southwest of the Property were depicted with vacant land.
1915	Property:	The northwest portion of the Property is labeled as “McLaughlins Garage,” a dwelling is present on the north side of the Property and the remainder of the Property is depicted as vacant land.
	Adjacent Properties:	The site adjacent to the northeast portion of the property is depicted with residences and vacant land. The sites to the southeast of the Property are depicted an auto storage facility, a print shop, a wagon shed and vacant land. Vacant land is depicted to the southwest of the Property. The sites northwest of the Property are depicted with vacant land and dwellings.

YEAR(S)	DESCRIPTION	
1936	Property:	The north side of the Property is depicted with dwellings, apartments and “City Garage.” The center of the Property is depicted with the existing Property building and is labeled as “The Marblette Corp. Mfg. of Plastic Materials.” The southeast side of the Property is labeled as “Kettles & Kilns” and “Lead Molding.” The northwest section of the Property is depicted as an office and a warehouse. The southern portion of the Property is depicted with “Superior Commercial Body Builders Inc.”
	Adjacent Properties:	The site adjacent to the northeast portion of the Property is depicted with residences and vacant land. The sites to the southeast of the Property are depicted an auto repair facility, warehouses and vacant land. An auto repair facility is depicted to the southwest of the Property. The sites northwest of the Property are depicted with vacant land and dwellings.
1947 and 1950	Property:	The north side of the Property is depicted with dwellings, apartments. The center of the Property is depicted with the existing Property building and is labeled as “The Marblette Corp. Mfg. of Plastic Materials.” The southeast side of the Property is labeled as “Kettles & Kilns,” “Storage,” “Warehouse” and “Lead Molding.” The northwest section of the Property is labeled as “Shipping & Storage,” “Office & Warehouse” and “Laboratory”. A 10,000-gallon storage tank is depicted in the southern corner of the Property.
	Adjacent Properties:	The site adjacent to the northeast portion of the property is depicted with residences. The sites to the southeast of the Property are depicted with a printing facility, storage facilities and stores. An auto body and filling station are depicted to the southwest of the Property. The sites northwest of the Property are depicted with warehouses and dwellings.
1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995 and 1996	Property:	The existing Property building is depicted and is labeled “The Marblette Corp. Mfg. of Plastic Materials.” The southeast side of the Property is labeled as “Kettles & Kilns,” “Storage,” “Warehouse” and “Lead Molding.” The northwest section of the Property is labeled as “Shipping & Storage,” “Warehouse” and “Parking.” A 5,000-gallon storage tank is depicted in the southern corner of the Property.
	Adjacent Properties:	The site adjacent to the northeast portion of the Property is depicted with offices, commercial buildings and residences. The sites to the southeast of the Property are depicted with a manufacturing facility and auto repair facility. An auto wash and filling station are depicted to the southwest of the Property. The sites northwest of the Property are depicted with offices, warehouses, dwellings and a manufacturing facility.
2001, 2002, 2003, 2004, 2005 and 2006	Property:	The existing Property building is depicted. The southeast side of the Property is labeled as “Kettles & Kilns,” “Storage,” “Warehouse” and “Lead Molding.” The northwest section of the Property is labeled as “Shipping & Storage,” “Warehouse” and “Parking.”
	Adjacent Properties:	The site adjacent to the northeast portion of the Property is depicted with offices and commercial buildings, residences and auto repair facility. The sites to the southeast of the Property are depicted with a loft and auto repair facility. An auto repair facility is depicted to the southwest of the Property. The sites northwest of the Property are depicted with offices, warehouses and a manufacturing facility.

4.4.2 City Directories

Hillman obtained an EDR City Directory Abstract report to obtain data of historic city directory listings for the Property. The following is a generalized summary of the findings of City Directory Research:

YEAR(S)	SUMMARY	
1934 to 2013	Property:	The Property address of 3711 30 th Street was listed with “See Factor Industry” on the 1983, 1991, 2000, 2005, 2008 and 2013 directories. Additionally, “Darshan Singh” and “Kawasar Ahmed” are listed on the 2000 directory. The Property Address 3709 30 th Street is listed with “Reid, Anna” on the 1934 directory, “Kress & Kress Attys At Law” on the 1970 directory and “Kress Attorney,” “Santiago Villares” and “Dibenedetto Atty” on the 2000 diectory. The Property address of 3707 30 th Street was listed with “Codyss Shoe Repair TN Leo Cody” on the 1934 directory. The Property address 3713 30 th Street was listed with various owner names on the 1934 and 2000 directories. The Property address of 3008 37 th Avenue was listed with “Merchant Services of Queens” and “HNA Entertainment” on the 2013 directory and with “Scarola Vito Benedetta Ice” on the 1934 directory. The Property address of 3010 37 th Avenue is listed with several owner names on the 1934 and 1945 directories.

	Adjacent Properties:	Various stores, businesses and residential occupants were listed. Commercial occupants of note include “Rudd Mfg Co. Water Heaters” on the 1939 and 1945 directories for 3714 30 th Street; “Capital Fuel Oil Co” on the 1967, 1970 and 1976 directories for 3722 30 th Street; “Imperial Machine Corp” on the 1976, 1983, 1991 and 2000 directories and “Kaiser Machine Corp” on the 1970 directory for 3724 30 th Street; “Marblette Co. The Plastic Mfrs” on the 1962, 1967 and 1970 directories for 3731 30 th Street; “Ready Service Station,” “Clements Bros Auto Body Fender Repair,” and “Mikay Service Station” on the 1950 directory for 37-38 31 st Street; “Cyber Metal Tech” on the 2005, 2008 and 2013 directories and “Angel Auto Collision Inc” on the 1983 directory for 3729 31 st Street; “Clements Bros Auto Body Fender Repair” on the 1962 and 1967 directories, “Warren Ed Gas Station” and “Ready Service Station” on the 1945 directory and “Medecky Jul Auto Repair” on the 1939 directory for 3738 31 st Street and “Moon Auto Repairs” on the 2005 and 2008 directories, “Crown Auto Body Shop” on the 1991 and 2000 directories and “Astoria Auto Tech” on the 1991 directory for 3020 37 th Avenue.

4.4.3 Historical Topographic Map Review

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical topographic maps were not researched for this assessment.

4.4.4 Aerial Photograph Review

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

4.4.5 Petroleum/Natural Gas Well Review

Hillmann reviewed historical record sources for evidence of historic petroleum and/or natural gas wells at the Property. No record of any historical petroleum/natural gas wells at the Property was identified.

Hillmann reviewed historical record sources for evidence of historic petroleum and/or natural gas wells at the Property.

4.4.6 Historical Records Data Failure

Historic land use data prior to 1898 was not obtained during this assessment. The date of the first developed use of the Property was determined to be a garage on the northwest side of the Property and dwellings on the north side of the Property circa 1915 and the current Property building on the remainder of the Property circa 1920. The earliest usage of the Property was determined to be an auto garage and residences. It is Hillmann’s opinion that a data gap regarding historical records was not encountered during this assessment.

4.4.7 Summary of Historic Use Research

The existing warehousing building was constructed circa 1920 and was used for the manufacturing of plastic products since at least the 1930s until the early 1980’s, when the

Property use was switched to warehousing and distribution of sound and lighting equipment.. Prior to 1920, this area consisted of a garage on the northwest side of the Property and residences on the north side of the Property with the remainder of the Property consisting of vacant land dating back to at least 1915. Prior to 1915, the Property consisted of vacant land.

Adjoining properties appear to have been historically occupied by a mix of residences, offices auto repair facilities and filling stations, manufacturing facilities and commercial businesses since the early 20th century. The adjoining properties were listed on the City Directories and Sanborn fire insurance maps, provided by EDR, with multiple auto repair facilities, gasoline filling stations and various manufacturing facilities. It was noted that numerous lots in the surrounding area have also been assigned an (E) designation for “Hazardous Materials - Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. Based on the adjoining nature of these sites, any historical contamination at these sites has had the potential to impact the Property.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjacent public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, Hillmann accessed and observed representative areas of building interiors to the extent they were made safely accessible with the cooperation of the site escort.

The site reconnaissance was conducted by Ms. Stephanie Lamb on April 2, 2014. Weather conditions at the time of the assessment included a temperature of approximately 45 degrees F and clear skies. Hillmann was escorted by Mr. Bob See, the Property owner.

5.1.1 Significant Inaccessible Areas

Hillmann is not aware of any areas of the Property that were inaccessible at the time of the inspection.

5.2 General Site Setting

5.2.1 Site and Vicinity Characteristics

The Property consists of an irregular shaped parcel bounded by 30th Street to the northwest, 37th Avenue to the northeast and 31st Street to the southeast. The parcel has an area of approximately 48,038 ft². Virtually 100 % of the Property is covered by the building and the asphalt paved parking lot on the north corner of the Property. The Property is located in an urban developed area characterized by a mix of residential and commercial buildings and manufacturing and warehousing facilities.

5.2.2 Topographic Characteristics

The terrain of the Property appeared to be very gently sloping from the north to south. No natural surface water bodies were noted at the Property.

5.2.3 General Description of Structures

The Property is improved with a 1 and 3-story warehousing building with a basement. The 1st and 2nd floors of the building are used for the storage and distribution of lighting and sound equipment with the 3rd floor used as office space. The building area is approximately 44,060-ft².

5.2.4 Sources of Heating and Cooling

The Property building is heated via a gas fired boiler located in the main basement area and natural gas ceiling mounted blowers. Cooling appears to be provided by an electric HVAC system.

5.2.5 Potable Water Source/Sewage Disposal System

Potable water and sewer services are provided via municipal utility services.

5.2.6 Current Use(s) of the Property

The Property building is occupied by See Factor Industry, a warehouse and distributor of lighting and sound equipment.

5.2.7 Past Use(s) of the Property

No obvious indication of past Property usage likely to have involved the use, treatment, storage, disposal or generation of hazardous substances or petroleum products was observed at the time of the site visit. Please refer to Section 4.4 for findings of historical site use research.

5.2.8 Current Use(s) of the Adjoining Properties

The following describes adjacent and abutting properties:

Dir	Street Address	Description
NE	30-01 37 th Avenue 30-14 37 th Avenue 30-16 37 th Avenue 30-18 37 th Avenue	Industrial/Manufacturing Residential Mixed-Use Residential/Commercial Parking
SE	37-21 31 st Street 37-29 31 st Street	Mixed-Use Residential/Commercial Transportation/Utility
SW	37-36 31 st Street 37-37 30 th Street	Industrial/Manufacturing Public Facility/Institution
NW	37-24 30 th Street 37-22 30 th Street 37-12 - 37-20 30 th Street 29-16 37 th Avenue	Industrial/Manufacturing Commercial/Office Industrial/Manufacturing Industrial/Manufacturing

No visual observations indicative of a potential environmental concern were noted of the adjoining properties.

5.2.9 Past Use(s) of the Adjoining Properties

No indication of past uses of the adjoining properties was noted at the time of the site visit. Please refer to Section 4.4 for the findings of historical site use research.

5.2.10 Current/Past Uses of Surrounding Area

The Property is located in an urban area of the Queens Borough of New York City. The vicinity of the Property consists of a densely developed urban area with a mix of commercial buildings, residential properties, manufacturing facilities, warehouses and auto repair facilities. No indications of past Property uses that differ substantially from current conditions were observed at the time of the site visit.

5.3 Interior & Exterior Observations

5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

No other significant storage/usage of hazardous substances and petroleum products was observed.

5.3.2 Drums

No drums were observed at the Property.

5.3.3 Other Hazardous Substances/Petroleum Products

No other containers of hazardous substances or petroleum products were noted on the Property at the time of the site visit.

5.3.4 Unidentified Substance Containers

No unidentified containers suspected of containing hazardous substances or petroleum products were noted on the Property at the time of the site visit.

5.3.5 Storage Tanks

The Property is currently heated by a natural gas system. The Property was previously heated by an oil fired system equipped with a 5,000-gallon fuel oil storage tank. The Property was listed on the regulatory database supplied by EDR as a LTANKS, HIST AST and AST site in reference to the former storage tank (see Section 4.1.4 for details of these listings).

Hillmann was supplied with a Hazardous Substances Survey & Report prepared by MTS EnviroSurv and dated January 17, 1991. The report concluded that additional tanks were indicated on agency records (see Section 3.1 for details). The only tank visually verified to be on the premises was the 4,500 gallon UST that was used for the existing building heating system. The report concluded that several additional tanks had been installed on the Property since its initial development in 1914. The records show a 2,000 gallon tank buried in 1933 for an oil burning system; a 550 gallon tank buried in 1941 and a 5,000 gallon UST installed in 1947.

Hillmann was supplied with a tank closure documents prepared by USA Tank Maintenance Inc. and dated July 7, 2000. The letters stated that a 5,000-gallon, 2,000-gallon and a 550-gallon underground storage tanks were properly closed in place at the Property. Hillmann believes that the 4,500-gallon fuel oil tank mentioned in MTS's report is actually the 5,000-gallon heating oil tank closed in July of 2000.

Sanborn fire insurance maps indicate the 5,000-gallon tank had existed at the Property since at least 1970. Prior to 1970, a 10,000-gallon tank was depicted at the Property from at least 1947 to 1950. The 10,000-gallon tank was not listed on the regulatory documents supplied by EDR and no additional records indicating closure of this suspect tank was supplied to Hillmann.

No obvious visual evidence of any additional historic USTs was noted by Hillmann during the site reconnaissance. Due to the uncertain UST closure statuses (lack of confirmatory soil sampling), and potential for additional UST, the potential exists that a historic releases has resulted in a subsurface impact to the Property.

5.3.6 Polychlorinated Biphenyls (PCBs)

No suspected PCB containing electrical or hydraulic equipment was identified.

5.3.7 Odors

No strong, unusual or pungent odors were noted on the Property.

5.3.8 Pools of Liquid

No pools of liquid were noted at the Property.

5.3.9 Interior Stains or Corrosion

No interior stains or corrosion were noted at the Property.

5.3.10 Interior Drains/Sumps

No floor drains or sump pits were noted at the Property other than for storm water or sewage management.

5.3.11 Exterior Pits/Ponds/Lagoons

No evidence of exterior pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal.

5.3.12 Stained Soil, Pavement/Stressed Vegetation

No evidence of stained soils or stressed vegetation was identified on the Property.

5.3.13 On-Site Solid Waste Dumping/Fill Material

No evidence of on-site solid waste dumping was noted at the Property. Historic urban fill materials are presumed to exist at the Property considering the long history of site development.

5.3.14 Wastewater

Sanitary sewage and storm water runoff generated on-site are discharged into the New York City sewer system. No other waste discharges were noted at the Property.

5.3.15 Septic Systems

No indication of septic systems was noted on the Property.

5.3.16 Wells

No indication of a well was noted on the Property.

6.0 INTERVIEWS

6.1 Interviews with Past and Present Owners and Occupants

Type	Name; Affiliation/Title	Summary
Key Site Manager	Bob See/Owner	Mr. See was interviewed regarding the uses and conditions of the Property relative this assessment and compliance with ASTM E1527-13. Pertinent information, where obtained, is referenced in the appropriate sections of the report.
Property Occupants	Not applicable	Hillmann was not able to interview individual building occupants.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjacent or Nearby Properties	Not applicable	The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjacent or nearby property owners or occupants were not conducted.

6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.2.2.

7.0 NON-ASTM SCOPE CONCERNS

In accordance with our contract agreement, Hillmann has conducted cursory evaluations of the following “Non-ASTM Scope Considerations” that are outside of the requirements of the ASTM E1527-13 standard:

7.1 Asbestos-Containing Material (ACM)

Considering the date of building construction, there is the potential for asbestos-containing materials at the Property. Suspect non-friable ACM observed at the Property included sheetrock wall systems and the roofing systems in good condition. Suspect friable materials included thermal systems insulation including pipe insulation in the basement level of the building. Additional quantities of ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a cursory evaluation regarding the potential presence of ACM at the Property.

A limited asbestos screening was performed as part of a Hazardous Substance Survey and Report in 1990. Samples of boiler, duct and pipe insulation and air cell were tested and found to be positive for asbestos.

7.2 Lead-Based Paint

Considering the date of construction of the building, lead-based paint may be present at the Property. In general, interior painted surfaces within the space were noted to be in good to fair condition. However, due to the non-residential usage of the Property, lead-based paint is not considered to be a significant environmental concern and no further investigation is recommended at this time.

7.3 Radon

According to data compiled by the USEPA, as summarized by the EDR Radius Map Report with GeoCheck, the Property is located in an area with a low potential for radon concentrations that exceed current USEPA action guidelines. Queens County is classified as a Zone 3 or ‘low risk’ area for radon.

7.4 Mold

During the assessment, Hillmann conducted a cursory inspection of the accessed areas of the building for evidence of excessive or amplified mold growth, or for conditions favorable for mold growth. Water staining was observed on the ceiling sheetrock in the main basement. Visible mold growth was not observed in these areas. No other obvious evidence of excessive or amplified mold growth, or conditions favorable for mold growth, was observed on the Property during the site assessment.

7.5 Wetlands

Based on a review of the EDR Radius Map Report with GeoCheck, no NWI mapped wetlands were indicated on or immediately adjacent to the Property.

It is emphasized that the absence of NWI mapped wetland areas indicated by the EDR report does not necessarily rule out the potential presence of regulated wetland areas on or immediately adjoining the Property. A wetland delineation should be sought from a qualified firm if a more comprehensive determination regarding the presence or absence of wetlands on or adjacent to the Property is warranted.

8.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. Hillmann has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Craig Downs

Re: 5,000 gallon fuel tank abandonment at 37-11 30th St. LIC

Dear Mr. Caruana,

ABC Tank Repair and Lining, inc. will provide the supervision, manpower, equipment and material to perform the following services at the referenced location:

Pump out/ pressure wash existing 5,000 gallon tank at referenced location. Tank is then to be filled with concrete slurry, and affidavit sent to NYFD. Any and all compliance with New York State DEC is customer's responsibility.

Our lump sum price is \$5,775.00 plus disposal charges of \$.50 per gallon for any wash water generated and any water that may be found in the tank.

Terms of payment: \$2,500.00 deposit balance due, net upon completion of job. All prices are subject to tax.

If the terms, prices and conditions meet your approval, please sign and return to ABC. For our mutual convenience our Fax# is (718) 272-3147.

Hoping to be of service I remain

Sincerely,

Mark Salamack

37-11 30TH CORPORATION
37-11 30TH STREET, LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302

EXECUTIVE SUMMARY

The property that was surveyed and is the subject of this report was found to be free of any overt signs of contamination due to exposure to organic chemicals, hydrocarbons, toxic wastes or other reactive substances.

Asbestos Containing Material (ACM) was found in the building in the form of thermal insulation associated with the building heat system.

There were no materials of construction that were suspected of containing, as constituents, urea-formaldehyde foams or resins or polychlorinated biphenyls (PCBs).

CONDITION & UTILIZATION

The property was located at 37-11 30th Street in Long Island City, New York. It contained attached commercial warehouse buildings used for storage of theatrical lighting equipment and a small vacant parcel used for parking. The buildings were single story except for one 3-story unit. Construction of the buildings dates back to circa 1915. All were in good condition and appeared to be well maintained.

37-11 30TH CORPORATION
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302

SURVEY & OBSERVATIONS

An inspection of the property began with the interior of the buildings, which were all similarly constructed. The buildings were attached and each was accessible from the interior. The main building had 3 stories with a basement. The others were single story with no basements.

The structures had poured concrete frames with poured concrete floors. The roofs were wood with wood joist and steel I-beam supports. **There was no sprayed or troweled-on fireproofing observed on any structural members.**

**NO UREA-
FORMALDEHYDE**

Inspections were made of spaces between walls and above ceilings to find insulation used for heat conservation. There were no thermal insulation materials observed that were suspected of containing urea-formaldehyde foams or resins

Building heat was supplied by an oil-burning furnace located in the basement Boiler Room of the 3-story building. The unit was jacketed in sheetmetal and contained a fiberglass thermal barrier.

37-11 30TH CORPORATION
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302

**ACM FOUND
IN BASEMENT**

It burned #2 fuel oil which was stored in a 4,500 gallon underground tank buried under the pavement in the storage room adjacent the Boiler Room. There were a few oil stains observed on the floor near the furnace but they were minor. Testing the tanks for leaks was beyond the scope of the Phase I Study. Had the furnace or any of its associated above ground piping sustained any significant leaks the concrete paved floor would have served as a sufficient barrier, preventing seepage of oil and subsequent contamination of the soil below.

Also located in the Boiler Room was a decommissioned furnace. This unit was jacketed in a cementitious thermal packing. The unit was attached to an exhaust duct which was covered with the same material. Samples from the boiler and the duct were taken and subjected to laboratory analysis **which revealed that the material contained asbestos.** The ACM on both the furnace and the duct was in friable condition. The furnace contained approximately 180 square feet of ACM while the duct constituted roughly 250 square feet.

There was a pipe emanating from the decommissioned boiler that was covered with additional ACM. The material was friable and constituted about 8 linear feet.

The balance of pipes in the basement storage areas were, for the most part, uninsulated or covered with a fiberglass wrap. There were however, several runs of pipe that were covered with ACM.

37-11 30TH CORPORATION
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302

**ACM FOUND
ABOVE
BASEMENT**

The material was in friable condition and constituted approximately 100 linear feet.

An inspection of the upper floors of the building followed. The 3-story building was accessed by a steel staircase and a freight elevator. The other buildings were all accessible from inside. Most areas of each building were used for storage of theatrical lighting equipment and supplies.

Interior partitions were brick as well as sheetrock. The ceilings were covered with sheetmetal attached directly to the wood roof supports. All pipes and risers were exposed. Most of the pipes were either uninsulated or covered with a fiberglass wrap. **There were a few lengths of ACM observed near the entrance to the basement that constituted 40 linear feet.**

Additional asbestos pipe lagging was observed in the wood shop. It constituted roughly 80 linear feet.

An additional 40 linear feet was observed near the Bay door entrance to the 3-story building. The material was in friable condition.

An additional 3 linear feet of ACM was observed on a steam riser in the second floor storage area. The condition of the material had deteriorated due to worker activity.

**37-11 30TH CORPORATION
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302**

**NO STAINS,
DEBRIS OR
OTHER SYMPTOMS
OF DUMPING
OR SPILLING**

The exterior of the building was brick. Entrances were on both the 30th and 31st Street sides of the building. There were several bay doors located on both sides of the building.

There was about 15 feet of concrete paved sidewalk from the edge of the building to the curb on both sides. All pavements were free of stains, pitting and other symptoms of exposure to hydrocarbons, toxic wastes or other reactive substances.

There was a fenced in parking lot adjacent to the 3-story building which was paved with gravel. It was used to park and store delivery trucks and storage trailers. Weeds and vegetation were observed growing in the lot. All vegetation appeared healthy and showed no signs of inhibited growth from exposure to harsh or toxic substances. A closer inspection revealed abundant growth of subterranean roots. There were no stains or any other symptoms of dumping or spilling. The security fence had closing gates to further restrict access by outsiders.

The fuel oil fill port and tank vent were located on the 31st Street side. There were a few stains observed on the pavement near the fill port but they were minor.

NO PCB's

There were no transformers or other electric devices observed on the property that were suspected of containing PCB's.

**37-11 30TH CORPORATION
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302**

The surrounding area was primarily commercial with similarly constructed warehouse buildings lining the block. There were no industrial or heavy commercial operations that were observed within a 1/2 mile radius of the site that were suspected of generating, processing or improperly storing hazardous or toxic substances.

(Note: The property's owner has reported that storage tanks installed on the building's roof were removed prior to his purchase of the site. The tank installation was discovered during the development of the historical profile found below.)

REMEDIAL ACTION

Most of the ACM observed in the building was in friable condition and in areas frequented by building tenants and service personnel. The presence of friable asbestos in these areas created a potential human health risk from exposure to airborne asbestos fibers. It is therefore recommended that this material be removed and/or replaced. Estimated cost for removal and replacement of all ACM is \$14,000.

37-11 30TH CORPORATION
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302

LABORATORY ANALYSIS

Bulk samples of materials suspected of containing asbestos were subjected to Polarized Light Microscopy analysis at the facilities of Laboratory Testing Services, Inc., an EPA and NIOSH approved laboratory located in Westbury, New York.

HISTORICAL PROFILE

NEW YORK CITY MUNICIPAL AGENCY REVIEW

To determine if prior owners, tenants or utilization of the subject premises had the potential to cause residual contamination, **MTS EnviroSurv** has performed a search of records of the New York City Fire Department, Bureau of Fire Prevention, Underground Storage Tank Section and the New York City Department of Buildings (Queens County). Specific Activities or events that could adversely affect the environmental quality of the subject premises have been tabulated and can be found below.

37-11 30TH CORPORATION
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK
PROJECT NO. R-302

Summary of Findings

The only tank visually verified to be on the premises was the 4500 gallon underground unit being used for the existing building heating system. Public agency documents indicated that several additional tanks had been installed on the property since its initial development in 1914. The records show a 2000 gallon tank buried in 1933 for an oil burning system. Further, the records show a 550 gallon tank buried in 1941 and a 5000 gallon UST installed in 1947. None of these tanks were physically in evidence at the site but may be presumed on the property. The tank currently in use and described by the owner, did not fit any of the records found in the agency review.

The Fire Marshall's office showed no record of any tanks. This indicated that the existing tank was not duly registered. There was insufficient information available to determine if leak testing of the tank in service was required by existing State Law. Leak testing of tanks in or out of service was beyond the scope of a Phase I Survey.

5000. -
is Based
Tank by
oil Burn

37-11 30TH CORPORATION
37-11 30TH STREET, LONG ISLAND CITY, NEW YORK ...
PROJECT NO. R-302

In addition to the data on tanks, the agency review indicated that prior occupants stored very large quantities of formaldehyde at the site. Formaldehyde is a substance listed as toxic by the federal Environmental Protection Agency. There also appeared to be plastic manufacture performed at the site. Such operations could have involved the use of hydrocarbons or other organic chemicals considered hazardous by the EPA. It also appeared that lead melting was conducted in the early 1950's. Testing soils or groundwater for contamination by these parameters was beyond the scope of a Phase I Survey.

NEW YORK CITY FIRE DEPARTMENT.
UNDERGROUND STORAGE TANK SECTION

No record found

NEW YORK CITY DEPARTMENT OF BUILDINGS

Records indicate past utilization of site had the potential for causing residual contamination see below.

A complete index of all work performed at the site was not available on either the Card Index System or the 2 Computer Systems used by the Department of Buildings. The following information represents all applications found while performing a thorough search of block and lot records.

GENERAL ANALYSIS

This report is based on the observations made on December 13, 1990 at the site described. The survey was a Pre-Loan Phase I inspection made to meet the requirements of **Chemical Bank** and to determine if there were any overt signs of contamination present at the site, any hazard due to friable Asbestos, or if there was any indication of noncompliance with Federal or Local Environmental Regulations. This report applies only to those portions of the building, property, rooms, public access areas and utility areas inspected. The observations reported do not apply to those areas or items not seen, not capable of being seen or otherwise difficult to inspect.

This report is not to be construed or used as a guarantee, a warranty, a prediction of future condition or an estimate of value.

Brightwaters, New York 11718
Attn: Mr. Art Gerunda

CLIENT'S P.O. NO: 9004

MATERIAL: Four (4) Bulk Samples

SUBMITTED FOR: Asbestos Determination

1.0 BACKGROUND:

Laboratory Testing Services, Inc. received four (4) bulk samples - labeled R-302, for asbestos determination from MTS Enviro Surv, Brightwaters, New York.

2.0 PROCEDURE:

Analysis of friable samples was done in accordance with EPA "Interim Method for the Determination of Asbestos in Bulk Insulation Samples" (EPA-600/M4-82-020, Dec. 1982).

This method utilizing Polarized Light Microscopy is applicable to all bulk samples of friable insulation materials submitted for identification and quantification of asbestos components.

Analysis of non-friable materials is performed by a modified version of (EPA-600/M4-82-020). Non-friable substances are not within the scope of the EPA method. Quantification of asbestos in these samples may deviate from the accurate range normally obtained from (EPA/600/M4-82-020).

3.0 APPLICABLE QUALIFICATIONS:

Our Laboratory is accredited under the National Voluntary Laboratory Accreditation Program (NVLAP) for bulk asbestos analysis. Our laboratory has been assigned NVLAP Laboratory Code Number 1332. This program is performed under the United States Department of Commerce, National Institute of Standards and Technology (formerly National Bureau of Standards), Gaithersburg, Maryland.

Laboratory Testing Services, Inc. is an approved laboratory in the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP Identification # 10837).

4.0 RESULTS:

The following results were obtained from our tests.

(1)

Laboratory Testing Services

METHOD: 1) EPA-600/M4-82-020 / Polarized Light Microscopy
2) Modified EPA-600/M4-82-020 / Polarized Light Microscopy *

REGION: 2

SITE CODE: 241006

EPA ID:

NAME OF SITE : Amtrak Sunnyside Yard

STREET ADDRESS: 39-29 Honeywell St.

TOWN/CITY:

Long Island City

COUNTY:

Queens

ZIP:

11101

SITE TYPE: Open Dump- Structure- Lagoon- Landfill- Treatment Pond-
ESTIMATED SIZE: 100 Acres

SITE OWNER/OPERATOR INFORMATION:

CURRENT OWNER NAME.....: National Rail Passenger Corp.

CURRENT OWNER ADDRESS.: 400 N. Capitol St. NW, Washington, DC

OWNER(S) DURING USE....: Pennsylvania R.R.; Amtrak

OPERATOR DURING USE....: Amtrak Sunnyside Yard

OPERATOR ADDRESS.....: 39-29 Honeywell St., Long Island City, NY

PERIOD ASSOCIATED WITH HAZARDOUS WASTE: From To

SITE DESCRIPTION:

The Amtrak maintenance yard is a 100-acre site located in the Sunnyside section of Queens. This location was originally a wetlands area, but was filled in sometime prior to 1910, when it was occupied by the Pennsylvania R.R. Over the years, as a result of transformer maintenance and malfunctions, PCB oil has contaminated the soil surrounding the engine house. A preliminary subsurface investigation has been completed, and PCB soil contamination has been confirmed. A consent order between NYSDEC and Amtrak has been negotiated and an RI/FS workplan is being finalized. Amtrak has also installed a sump system as an interim remedial measure to collect contaminated oil and groundwater.

NATURE OF ACTION: IRM-oil collection

GEOTECHNICAL INFORMATION:

SOIL TYPE:

GROUNDWATER DEPTH:

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Soil and groundwater contamination has been confirmed.

ASSESSMENT OF HEALTH PROBLEMS:

Shallow groundwater beneath the Amtrak Railroad Yard is heavily contaminated with oils and fuels. Oily groundwater flows northerly and has seeped into basements of adjacent office buildings. The interim remedial work will include treatment of groundwater in the vicinity of the former diesel fuel storage tanks. Limited sampling of basement air has revealed no detectable contaminants, although odor complaints are regular. Periodic monitoring of nearby basements will continue. There is no use of groundwater in the area. PCB contamination appears to be prevalent around the entire yard area. A cleanup program, focusing on employee protection, has been performed on regularly used surface areas with heavy contamination (work pits, tables, lunch room, etc.). Some potential for exposure still exists in areas of lesser usage. This will be addressed in the Remedial Investigation.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

3711 30TH STREET
LONG ISLAND CITY, NY 11101

COORDINATES

Latitude (North): 40.7548000 - 40° 45' 17.28"
Longitude (West): 73.9319000 - 73° 55' 54.84"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 590164.1
UTM Y (Meters): 4511875.5
Elevation: 40 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

TC3894263.2s EXECUTIVE SUMMARY 4

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS**Federal RCRA CORRACTS facilities list**

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/10/2013 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 8 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

TC3894263.2s EXECUTIVE SUMMARY 6

EXECUTIVE SUMMARY

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 02/17/2014 has revealed that there are 2 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 45 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 12/30/2013 has revealed that there are 30 NY UST sites within approximately 0.25 miles of the target property.

TC3894263.2s EXECUTIVE SUMMARY 11

EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 02/17/2014 has revealed that there are 3 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1996, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/17/2014 has revealed that there are 11 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/10/2013 has revealed that there are 29 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

TC3894263.2s EXECUTIVE SUMMARY 19

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 57 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 20 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

	DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"9/18/2004 Sangesland spoke to Manny Caruana, Building Supervisor at See Factor Industry Inc. to discuss the specifics of what the DEC needs to close out this spill9/13/2004 Sangesland spoke again with Manny Caruana and asked him to send in the soil borings he has along with the tank closure documents 9/15/2004 Mr. Caruana hand delivered a package of documents to the DEC office. Included was a summary letter outlining the testing and closure of the tank. After the tank failed the tank test in 1998, it was not retested, however Mr. Caruana says he inspected the interior of the tank and said it was still secure. He states that the initial test was faulty because of a dry leak on the vent line. In 2000 the tank was abandoned by USA tanks and an abandonment certification was forwarded to the NYC Fire Dept. The building now operates on natural gas. In Feb 2000 several soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. Three of these borings were approx. 10 ft from the abandoned tank and went down to 20 ft depth. There was no evidence of any soil contamination. Based on this information, the DEC believes that there was no actual petroleum spill at this site and this case has been

"SANGESLAND" F & N was hired to conduct a phase 1 & phase 2 on a vacant lot. Part of this lot had been used as a gas station in the past. Several tanks were identified. During excavations to install footings for a new building, a waste oil tank was found and the top was damaged. During the heavy rains on 7/22/2003, water displaced the waste oil in the tank and the oil poured out into the trench area. F&N is going back to pump out the remaining oil and to "Guzzle" out the contaminated soil in the trench. F&N put in a proposal to the property owner to remove all of the remaining tanks on the site 9/3/2003. Sangesland reviewed a Spill Closure Report prepared by F&N and dated August 19, 2003. Report outlines how a tank was found, pulled, contaminated soil "Guzzled" out and endpoint samples taken. All endpoint samples were clean Spill Closed
CALLER STATES A CONSTRUCTION COMPANY UNEARTH A WASTE OIL TANK YESTERDAY, AND SOMETIME LAST NIGHT WHEN IT WAS RAINING, THE TANK FILLED WITH WATER AND OVERFLOWED ONTO THE GROUND - CLEAN UP IS STARTING AT THIS TIME

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL. ALL SPENT SOLVENT MIXTURES/BLEND CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS, AND ALL SPENT SOLVENT MIXTURES/BLEND CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE. ALL SPENT SOLVENT MIXTURES/BLEND CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "SANGESLAND"4/29/2002 - Sangesland spoke to property owner (Mr. Ron Levy).Mr. Levy did not feel comfortable with ProTest and requested information on how to close out this spill.Isolate and retest just the tank and just the piping. Once the spill is closed out, owner will abandon the tank and switch to gas. 6/10/2002 Man hole on top of tank was left open. Gasket was replaced and the tank passed the retest.7/3/2002 Mr. Levy called. He will send a copy of the tank test which shows that the tank passed the second test. He also said that he will be pulling the tank out and wanted to know the proper procedures. Sangesland provided Mr. Levy with a contact at PBS.6/16/05 Heltzman: See PBS 2-607788. Tank was removed July 2002.
Closed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company: DOROTHY CAVALCONTE
Contact Name: (718) 392-7334
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT/TIPPLE"/2/27/2002-VOUGHT-Cleanup and sampling performed by Milro (516)379-1500. 12/05/2001- Milro performed 3 borings along line to delineate spill. 12/27/2001-12/28/2001 Milro removes approximately 5 cubic yards of impacted soil. Disposal manifests were provided to the NYSDEC. 12/28/2002-site visit by Vought confirms that no more impacted soil remains in basement. Excavation was backfilled, restored with a concrete slab and epoxied. Groundwater was no impacted and spill closed 2/27/2002 by Vought. defective oil lines caused spill of up to 275 gallons (approx 100-200 gallons) spilled under neith the house - there is no way for the to get to the spill - they did run a new oil line
Remarks:
Material:
Site ID: 193939
Operable Unit ID: 847053
Operable Unit: 01

 DEC Memo:
 Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL" & mis 1326808/3000 09-48 hrsMark Satira #43600, Sr. Elec. Tech. with Underground East, reports at 09:20 hrs. found approx. 1 pint oil (dielectric fluid) spilled from a cut/clear 4-way 3-conductor joint onto floor of MH-11715. Joint was left sitting on arm: 2 ends sealed with shrink sleeves and 1 end bagged and taped, which was source of oil. Spill appears to be contained. No sewers or waterways appear to be affected. Env. stop tag #03084 placed. Sample taken on emergency priority turnaround. Cleanup pending results from Chem Lab. As per shift managers, Underground should remove this joint prior to cleanup. 8/03/00 10:26 hrs -- Notified W. Murphy of CIG. -- W.W. #17344 -- UPDATE @ 1755 HRS 7/3/00 TEST RESULTS RECEIVED SEQ #00-07489 @ <1PPM. #12255 VDC UPDATE 12-3-00 2000 HRS G. JACOBI OS FLUSH DEPT REPORTS IN MH11715. SERV BUR REMOVED 4W1W JOINT FROM STRUCTURE. THEY DOUBLE WASH HOLE WITH SLICKS AND VACTOR REMOVED ALL SOLID WASTE. THEY FOUND A SUMP THAT HAD BEEN CEMENTED. THEY DID NOT HAVE TO TAKE A SAMPLE FROM SUMP DUE TO IT BEING FOUND CEMENTED. THEY REMOVED E-S TAG#03084 LAZ # 04/25/Update - 12/6/00 - 1735 hrs - Cleanup complete. Incident is closed. UPDATE 1/29/03 VISUAL ---- NO CUT JOINTS OR CABLE OR CABLE ENDS FOUND IN STRUCTURE 1 QUART. CLEAN UP PENDING. CONED 132680. SPILL FROM CUT CABLE END.

Environmental Interest/Information System

RCRAinfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAinfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "02-28-05: Reassigned to Tibbe. Spill reopened due to pending investigation by NYCT.08-11-05: NYCT performed an investigation. Only one soil boring showed SVOC contamination above TAGM but it did not have any corresponding gw contamination nor was there any visual or offactory indication of petroleum contamination. Elevated SVOCs are mostly likely due to fill material identified in the soil borings. Not reported

FINDS:

Registry ID: 110004494226

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019781244

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 12/06/08-Zhune spoke to Vincent Theurer from approved oil. He said on July the oil line was leaking. Approved Oil removed the line and replaced. It was a underground line. 12/06/08 Customer called complaining smell oil coming by the concrete. We went there we saw a little decoloration where the old oil line was. Vincent told her to hire an environmental company to perform soil samples. He said the owner is Mary Zuk (718) 7861061. 12/08/08 Mary Zuk called she said I saw oil stain on the concrete and oil smell. I called the oil

APPROVED OIL COMPANY (Continued)

S109374375

company. 03/16/09- Zhune. A.B.C Tank sent a letter on 03/13/09. The letter states: I am writing on behalf of the owner of 36-25 29th Street, Long Island City, NY regarding the clean up of spill #0809977.ABC Tank supplied the necessary labor, materials and equipment to perform the following:On January 07,2009-February 03,2009 ABC Tank broke up cement, dug up a 5' long by 3' wide trench where a buried fuel line was replaced in June 2008 by others. ABC Tank removed (7) drums of contaminated soil from the affected area. ABC Tank obtained (2) end-point samples 3' deep from the area. A copy of the soil sample results has already been sent to DEC.02/23/09-Results of soil samples were received. Two soil samples were taken from right and left side of the excavation. The results showed that there were no indication of VOC's in the soil analysed. Most of the SVOC's were below the TAG standards except for the benzo series: Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene and Dibenzo(a,h)anthracene which are above the TAG standards. Spill Closed. 1156 The caller advised dispatch the clean up is pending. The tank is located inside the home. Unknown amount of heating oil has spilled due to equipment failure. No water ways affected.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

TC3894263.2s Page 664

UNITED CLEANERS (Continued)

1000398420

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAinfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAinfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System			
	RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 12/28/11- Zhune visited the site. RR Plumbing Service Corp. was going to replace the sewer line at this site. While digging they noiced oil smell. They stopped digging with the machine and started doing hand digging when they found soil contamination coming from a leaking return line. The line was shut down. AB Environmental is going to do

the clean up.Violeta Leano 718-784-3530 -- Owner
tleano@yahoo.com02/24/12: On 02/15/12 AB Environmental emailed the report dated 02/9/12.The soil contaminated in the impacted area was removed. The excavation was completed as best that could be accomplished with out compromising the foundation. One endpoint sample was collected at the bottom of the excavation(7feet). The endpoint sample analytical result indicated that all detected constituents are within acceptable limit. Spill Closed. Report eDocs. Found line broken. Been leaking for years

Environmental Interest/Information System		
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act. RCRAinfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAinfo allows RCRA program staff to track the notification, permit, compliance, and

Hazardous Waste Summary:

Waste code:

Waste name:

D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:

Waste name:

D002

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

S103575644

pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Transit Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology-Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem: Nature and Extent of Contamination: Prior to Remediation-Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater from soils impacted by the COC's. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for

Elevation			

AMTRAK SUNNYSIDE YARD (Continued)

S103575644

PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs (18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-4 ROD (No Action) was issued on March 30, 2010. Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

Problem was a Tank Test Failure that was traced to a hole in the sidewalk fill line. The sidewalk was opened and 58 drums of contaminated soil was removed. The line was replaced and 4 end point samples were taken. Clean fill was put back and the sidewalk was repoured. Based on the end point lab results, this spill case has been closed out. Lab results, manifests, photos etc are all in eDocs attachments. Remarks: tank test failure. retest pending, believed to be line failure

SHWS:

Program: HW
Site Code: 440982
Classification: N
Region: 2
Acres: .173
HW Code: 241127
Record Add: 10/15/2010
Record Upd: 10/31/2013
Updated By: MJKOMORO

Site Description: LOCATION: The site is located in an urban area. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings. See Site No. C241127SITE FEATURES: A 7500 square foot one-story concrete building occupies the entire lot. The back of the lot abuts adjacent buildings. The building has no basement.CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/RTX. HISTORICAL USES: The site was occupied by a commercial laundry and dry cleaner up until 2011, when the DEC investigation of the property began. Records indicate at least 10 years of use as a dry-cleaner. The building is currently vacant. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL in the vicinity of the site. Soils in the area are primarily sand.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building and provided results to DEC. In November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012.

TC3894263.2s Page 898

FRESH CLEANERS & LAUNDRY INC (Continued)

1001125032

Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade.

BROWNFIELDS:

Program: BCP
 Site Code: 480014
 Site Description: LOCATION: This is an off-site of the The Bridge Cleaners site located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: A 7500 square foot one-story concrete building occupies the entire lot. The back of the lot abuts adjacent buildings. The building has no basement.CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings.HISTORICAL USES: The site was occupied by a commercial laundry and dry cleaner up until 2011, when the DEC investigation of the property began. Records indicate at least 10 years of use as a dry-cleaner. The building is currently vacant. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL in the vicinity of the site. Soils in the area are primarily sand.
 Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the

FRESH CLEANERS & LAUNDRY INC (Continued)

1001125032

property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Significant Threat: "The site presents a significant environmental threat due to the ongoing releases of contaminants from source areas into groundwater."
 Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Furthermore, environmental sampling indicates that soil vapor intrusion represents a concern for on and off-site structures and additional evaluation is necessary to determine the extent of exposure to contamination in this media.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA plant ID: 110008115057
Plant name: AMOCO SERVICE STATION
Plant address: 34-17 NORTHERN BLVD
LONG ISLAND CITY, NY 11106
County: QUEENS
Region code: 02
Dunn & Bradst #: Not reported
Air quality cntl region: 043
Sic code: 5541
Sic code desc: GASOLINE SERVICE STATIONS
North Am. industrial class: Not reported
NAIC code description: Not reported
Default compliance status: IN COMPLIANCE WITH PROCEDURAL REQUIREMENTS
Potential uncontrolled emissions: 100 TONS/YEAR
Govt facility: ALL OTHER FACILITIES NOT OWNED OR OPERATED BY A FEDERAL, STATE, OR LOCAL GOVERNMENT
Current HPV: Not reported

DEC Region: 2
DER Facility ID: 127909
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE" 7/15/05 - Mike H left message at Board of Education - also spoke with Albert Cardino (718-784-5250), School Fireman and in charge of fuel oil tanks. On 9/2 - Bob C - spoke with Al Cardino, who said to call the school custodian (Tom Logan) at 718-937-8214, who would have the records and could fax them. Called Tom on 9/7 & left message. 11/15/2005: Lead transferred to Joe White as part of the Spill Initiative Project. 12/08/2005: Mr. James Merlo contacted Joe White and is checking to see if a new tank test has been performed on this tank. He will provide documentation so spill can be closed. 1/5/2006: Tha associated PBS# 2-478741 indicates that the tanks 001 and 002 have ben closed in place as of 6/1/2001. The remaining tank 003 is an above ground tank that does not require a tank test. Given that the spill was a tank failure and the underground tanks are no longer in service I am closing out this spill ----- joe white

 Spiller Phone: Not reported
 Spiller Extension: Not reported
 DEC Region: 2
 DER Facility ID: 127449
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" This spill case was reassigned from DEC (Sigona) to Rommelson 02/10/2004.022805: Transferred from Rommel to Tibbe. Site being investigated by NYCT Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned.12/15/05: Transferred back to Tibbe from Bureau B.08-30-06: NYCT attempted to perform a subsurface investigation but continually encountered refusal. A new subway tunnel, ventilation building and utilities were constructed in the area of the former tanks and associated contamination. It would appear that the contamination was removed during construction because of the large excavation that was required to construct these facilities, but NYCT has no reports or manifests to indicate how much was removed. Further investigation does not appear to be possible due to the underground structures and utilities.

Remarks: Free product found in groundwater monitoring well

Environmental Interest/Information System

RCRAinfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAinfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004430857

Environmental Interest/Information System

RCRAinfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAinfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019701875

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: 001
Tank id: 213692
Material Code: 0013
Common Name of Substance: Lube Oil

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
E00 - Piping Secondary Containment - None
I01 - Overfill - Float Vent Valve
F06 - Pipe External Protection - Wrapped
F02 - Pipe External Protection - Original Sacrificial Anode
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None

Tank Location: 2
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: JHOCONNE
Site Description:

See also Site no. V00600. Location: The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The entire site is occupied by a one story building which covers approximately 21,900 sq. ft. Historical Use: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis.

Env Problem: Nature and Extent of Contamination: Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues. Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethylene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994. Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore,

inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

TC3894263.2s Page 1128

JUNG SUN LAUNDRY CORP (Continued)

1000232222

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLORO BENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLORO BENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: U210
Waste name: ETHENE, TETRACHLORO-

Violation Status: No violations found

NY DRYCLEANERS
N/A

Relative: Lower
Actual: 19 ft.

SHWS:
Program: HW
Site Code: 374812
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 480
HW Code: 241102
Record Add: 12/13/2006
Record Upd: 10/08/2013
Updated By: JAMORAS
Site Description: Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th Street and 37th Avenue. Site Features: The site consists of four property lots. The main site features included single story buildings on three lots and an open area on the fourth lot. There were three inter-connected single story buildings, which occupied three adjacent lots. Recently (late summer 2013) the new owner demolished the structures on two lots down to the slab. The previous owner still owns one lot and the abandoned structure on that lot is still there. Approximately one third of the Site is made up of the fourth lot, which has and continues to be an open area which extends to the west up to 23rd Street. The open area also houses a tractor trailer sized metal storage container. The site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site property is currently inactive and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The nearest residential area is located north (upgradient) of the site, on the other side of 37th Avenue. There is a residential area approximately 400 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930s to the late 1990s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980s to the mid 1990s. Prior uses that appear to have led to site contamination include poor

TC3894263.2s Page 1142

JUNG SUN LAUNDRY SITE (Continued)

S110246984

housekeeping and spills associated with the dry cleaning operation. An adjacent property owner conducted a Phase I Environmental Site Assessment in September 2003, a Phase 2 Limited Subsurface Investigation in October 2003 and a Phase 2 Limited Groundwater Investigation in December 2003. The Department conducted a Site Characterization from August 2007 through March 2010. In October 2010, the Site was placed on the Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 site. Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the southwest.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During 2012 remedial investigation PCE, TCE and 1,2-DCE have been found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The unrestricted use RSCOs for PCE has been exceeded. Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC have been detected in on-site shallow groundwater at concentrations up to 11000 parts per billion (ppb), 1200 ppb, 21000 ppb, 130 ppb and 390 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. Per April and June 2012 groundwater data, the groundwater plume has migrated approximately 400 feet off-site. Soil Vapor & Indoor Air: PCE and TCE were detected in on-site soil vapor at levels up to 280,000 microgram per cubic meter (g/m3) and 130,000 g/m3, respectively, and off-site at levels up to 13,000 g/m3 and 420 g/m3, respectively. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted. Significant Threat: The site poses a significant environmental threat because the area overlies a sole-source aquifer and because there is an ongoing release of PCE and TCE from soil into groundwater.

Health Problem: Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended.

DEC Memo: DEC Piper spoke W. Isaac at Eastmond. There was an overfill of 6 oil out the vent, unsure if spill was to soil or concrete. Piper left message for Roger Romance requesting call back. Vought to follow up in am.11/7/07-Vought-Performed site visit and spill out of vent. Vought spoke with AL Eastmond Issac Mungra and site was initially cleaned by Metro Fuel (spiller) and then Eastmond followed up with powerwash. Minor amounts of non impacted speedily dry on sidewalk with no odors or staining and no spill in basement as per Mungra. Clean

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department

Site Description: Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor. Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historic Use(s): The Site was a commercial building occupied by various manufacturing and warehousing entities including a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations. Soil ? There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples. Groundwater ? On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24

Env Problem:

TC3894263.2s Page 1181

Map ID	Direction	Distance	Elevation	Site	Database(s)	EDR ID Number	EPA ID Number

EMMIS BROADCASTING INCORPORATED (Continued)

U001831683

ppb)were detected in groundwater samples at levels exceeding groundwater standards. Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb - 50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site. Sub-slab soil vapor ? Sixteen petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzene (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air ? Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air ? PCE was detected in the outdoor air sample at a concentration well below the concentrations found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat: The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDEC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination. CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System is scheduled to be installed during the summer break.

DEC Memo: 12/31/10-HRAHMED-Spoke to Rene Lewis (917 420 8330) of Alliance Mechanical. As per him, 5-7 gal of #6 oil spill from the vent line due to overfill. Noticed oil stain on the wall and side walk. PTC powewashed the wall and the sidewalk. There was no spill in the tankroom. Uploaded closure report and some picture in eDocs.This case is closed.

Remarks: Caller advised overfill of tank. Clean up is in process.

BROWNFIELDS:

Program: BCP
Site Code: 490213
Site Description: Site Location: The proposed site location is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, 11101, in Queens County. There is an automobile dealership and a multi-story brick building housing multiple commercial business to the west and a vacant 5 story building, various commercial and light commercial industrial businesses to the north. To the east is an automobile dealership and service center and to the south is the NYC Subway tunnel and various commercial buildings. Site Features: The site contains a 6,500 square foot one-story garage concrete block frame building constructed with a concrete slab, and the remainder of the site is a paved parking lot. Current Zoning and Land Use: The site is located with the Dutch Kills sub-district within the Special Long Island City district and has an E-Designation 218 status. Past Use of site: The site has been used by several companies, including a gasoline service station, an automobile repair and carwash, and an automotive dealership. Site Geology and Hydrogeology: The geology of Queens county is part of the Long Island hydrogeologic system and Long Island Lowlands. The surface of the Long Island Lowlands is modified and covered by glacial deposits from the most recent glaciations (Wisconsin Stage), and consists of moraine deposits, glacial drift, and outwash materials. In a roughly north-south cross section, the geology can be characterized as a wedge-shaped layer of Cretaceous and Pleistocene unconsolidated sediments, thickening to the south-southeast. Several impermeable layers of clay are found within this sediment package, general creating three distinct aquifers. Bedrock on this site is 100 feet below grade surface. Several impermeable clay layers are found within this sediment package, generally creating three distinct aquifers. The site is at an elevation of approximately 23 feet above mean sea level (site topography is generally flat, with a slope to the west). The nearest water body is the East River, located 1.18 miles to the west of the site. Groundwater is located approximately 10-14 feet below ground surface and groundwater flow direction is from northeast to southwest.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System) (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for

TC3894263.2s Page 1235

Map ID	MAP FINDINGS		
Direction			EDR ID Number
Distance			EPA ID Number
Elevation	Site	Database(s)	

TEITELBAUM CLEANERS (Continued)

1000400106

information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Acres: .260
HW Code: 241149
Record Add: 05/03/2013
Record Upd: 01/31/2014
Updated By: JHOCORNE

Site Description: Location: The 11,200 square foot (0.26 acre) site is located at 3545 35th Street, Long Island City, NY in an urban area. The site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The site is occupied by a 1 to 2 story commercial dry cleaner. Current Zoning/Use(s): The site is zoned as M1-5, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The Site is an industrial building conducting dry cleaning operations since 1975. The site is a RCRA large quantity generator (EPA ID # NYD981132459) of spent solvent, waste code F002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site (site no. 241139) generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater in the vicinity of the site was encountered at approximately 17 to 20 feet bgs and flows towards the southwest.

TC3894263.2s Page 1236

TEITELBAUM CLEANERS (Continued)

1000400106

Env Problem: Nature and Extent of Contamination: Information is based on the results of a site characterization investigation performed at the nearby Former Luft Co. Inc. Cosmetics Manufacturer site (241139). That investigation was triggered by the discovery of elevated levels of cVOCs in the indoor air and sub-slab vapor of the school building on that site. The subsequent Supplemental Site Investigation (SSI) indicated that elevated concentrations of cVOCs (namely PCE) existed along the adjacent sidewalk on the western side of 35th Street and the south-eastern section of the school building. The addendum to the SSI ascertained that the Former Luft Cosmetics site was not a source of the contamination. Seven groundwater wells were installed upgradient and cross gradient of the school and samples taken at the groundwater interface. One well was installed adjacent to and another just downgradient of the Teitelbaum site. Groundwater Several cVOCs associated with chlorinated solvents, namely, tetra-chloroethylene (PCE) and its breakdown products tri-chloroethylene (TCE) and cis-1,2-dichloroethylene (cis-DCE), were detected at elevated levels from groundwater samples taken at the groundwater interface at locations along the adjacent sidewalk and downgradient of the Site. PCE, cis-DCE and TCE concentrations were at orders of magnitude of the TOGS SCG of 5 g/l; trans-DCE and 1,1-DCE were also detected at levels above the SCG. Concentrations of cVOCs decreased in the downgradient direction consistent with the inferred contaminant plume. The groundwater flow direction was identified as southwesterly by the Addendum to the Supplemental Site Investigation Report (ASSIR) of the nearby Former Luft Co. Inc. Cosmetics Manufacturer site. Significant Threat: Evaluation of significant threat will be made following completion of the Site Characterization. This Site has entered the Brownfield Cleanup Program (BCP). Executed Brownfield Cleanup Agreement signed on 01/09/2014. See site no. C224149 for further updates.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

BROWNFIELDS:
Program: BCP
Site Code: 487391
Site Description: Location: The 11,200 square foot (0.26 acre) site is located in an urban area in the Astoria section of the Borough of Queens. The Site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking

TC3894263.2s Page 1250

Map ID	Direction	Distance	Elevation	Site	Database(s)	EDR ID Number	EPA ID Number

TEITELBAUM CLEANERS (Continued)

1000400106

lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The Site is currently improved with one 100 ft by 100 ft (approximately 10,000 square feet) commercial/manufacturing building. The ground floor is currently utilized for dry cleaning operations and a portion of the building contains a second floor for office space and storage. Current Zoning/Use(s): The site is zoned M1-5 (manufacturing and light industrial) and is surrounded by industrial, commercial and residential uses. Historical Use(s): The site has been a commercial dry cleaner operating under various names and ownership since 1952. Site Geology/Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. Groundwater in the vicinity of the site was encountered at 17-20 feet bgs and flows towards the southwest.

Env Problem: No environmental investigations or sampling have occurred at the Site. However, information was obtained from environmental investigations performed at the nearby former Luf Co. Inc. Cosmetics Manufacture site (241139). The analytical results from that investigation revealed that elevated concentrations of chlorinated solvents (specifically tetrachloroethylene or PCE and its breakdown products) are present in the underlying and upgradient groundwater. Groundwater samples taken adjacent to, and downgradient from the Site revealed concentrations of PCE at 2,200 ppb, TCE at 550 ppb, and DCE at 12,000 ppb.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

	DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"6/4/2002 - Sangesland called Dave Fazin at Crown Leak Detection (516-939-2959) to find out if repair work was ever done to this tank. If so, Crown needs to submit a letter stating that: tank was welded, past a tank test, no visible sign of leakage.4/14/06 - L. Alden - suggested action: Re-establish contact with Crown Leak Detection or site owner.11/16/06 - Austin - Reassigned to Ketani for followup/review - end12/1/06 - Raphael Ketani. The original caller was David Fazin of Crown Leak Detector (516) 939-2959. The TTF was on 3/26/02 and was the result of a failed epoxy patch. The patch was supposed to be rewelded and the tank system retested. Gus Tsambas (718) 721-2688 was involved with the site. PBS case #2-607845 with a 1500 gal. tank in service with #2 oil. The owners are Albus Realty Co., 25-26 33 Street, Astoria, NY, 11103, (718) 721-2688.I made contact with Mr. Tsambas. The phone number was his home. He said he has the passing test results and he will send it to me. He said that the tank sits on the concrete floor and the patch is on the top of the tank. He said that no oil was released.12/12/06 - Raphael Ketani. Mrs. Gallun of the Gallun Agency (718) 728-8120 called to ask what DEC needed to close the spill case. I told her we needed a new tank

 DEC Memo: 08/09/06 Rahman- Multiple spill cases at this site. Cross referenced to Spill # 0101345. I spoke with Francis Schultz of GZA, (973) 256-7800, she indicated that tanks have been removed and contaminated soil was excavated followed by end point sampling. A report will be sent to DEC. This spill case is closed referencing the old one (0101345).

S108129775

collected, SVOC Exceedances noted. Shaw stated supplemental investigation will be performed to further delineate petroleum impacted soils and groundwater impacts. 8/23/04 TJDSaw submitted (8/19/04) a work plan for supplemental investigation. Site is being developed for the construction of a new public school. As part of the project a new underground parking garage is to be built, which will involve excavating soils to a depth of 15 feet. Additional soil borings are planned in the area of previously identified contamination. Work plan was verbally approved on this date with requirement that SHAW notify DEC a minimum of 48 hours prior to scheduling sampling event. 8/23/04 TJDMultiple spills on single address. Spill 0104171 closed and cross referenced to 0101345. 11/17/05 - L. Alden - Called Mike Sherwood, Shaw Group, at (845) 492-3182. Left message. 12/19/05 - L. Alden - Called Sherwood back. Shaw is not doing the additional investigation on this site. Called his client, Lee Guterman, at the NYC School Construction Authority, (718) 472-8502. This property will be the site of the Frank Sinatra School. Anna Ciecierska, (718) 752-5028, returned my call. She didn't know the specifics of the remediation phase, the case is being transferred to the Region 2 Remediation Group (Koon Tang). 08/15/06 - L. Alden - Mark Hudok, GZA Geoenvironmental, (973) 256-7800, called. He was preparing a remediation plan and called to discuss post-excavation sampling that would be necessary after removal of contaminated soil. Recommended action: Review excavation plan and post-excavation results. 8/15/2006 Sangstad received a call from Jennifer Kahn of SCA requesting guidance on who the DEC case manager was for this site. Apparently in 2005 the project was sent up to DEC Albany for work and was then transferred back to DEC Region 2. Because the site is already into the remediation phase, the case is being transferred to the Region 2 Remediation Group (Koon Tang). 08/15/06 - Transferred to Yau. (Yau) 08/16/06: Visited the school site with Joe. Met with the representatives from SCA. Told them additional groundwater samples will be required at the soil/ groundwater interface. Will send in report as soon as results come back. (Yau) 08/24/06: Received report along with lab analytical results from SCA. Both soil and groundwater results are good except for N-2, N-3, and W-2. 1. The benzo(a)anthracene and benzo(a)pyrene exceeded TAGM slightly for the soil samples. 2. The o-xylene and dibenz(a,h)anthracene exceeded the TOGS standard slightly. DEC will approve the construction of a school building on top the this site. (Yau) 10/16/06 Re-assigned from Yau to Chanda (Chanda) 12/20/06 DEC received a phone call from Mr. Drew Pardus, School construction Authority. Ph: (718) 752-5036. He said that last week soil excavated from the construction site and soil samples were sent to lab analysis. He will send in report as soon as possible as result come back. (Chanda) 2/27/07 DEC received Endpoint Soil and Groundwater Sampling Results prepared by Shaw Environmental and Infrastructure, Inc., dated 2/26/07. 3/14/07 DEC reviewed all report and documents regarding this spill. Based on the information presented to the Department DEC closed this spill. (Chanda) 3/15/07: A NFA letter was issued to Ms. Lee Guterman, Manager, EHI Department, SCA, and copy to Mr. Bob Kanarapathi, SCA and Michael R. Sherwood Shaw Environmental &

SHWS:

Program: HW
Site Code: 58682
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 1.100
HW Code: 241016
Record Add: 11/18/1999
Record Upd: 05/28/2013
Updated By: JHOCONE
Site Description: Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtrak Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the buildings roof. Historical Use(s): The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990. Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are

TC3894263.2s Page 1269

STANDARD MOTOR PRODUCTS INC (Continued)

1000310304

lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. The Record of Decision was issued on March 23, 2009, and the Remedial Design/Remedial Action Order on Consent was signed in April 2010. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem:

Nature and Extent of Contamination: A site investigation in 1990 was initiated after an oily sheen was observed in a puddled area on the southeast side of the property. Soil samples from this area revealed elevated levels of petroleum hydrocarbons and volatile organic compounds (VOCs), primarily 1,1,1-trichloroethane. Approximately 2,700 sq. ft. of soil was excavated to a depth of 18 inches and stockpiled on-site. Further investigation determined that soils in the area of the rear loading platform contained elevated levels of petroleum hydrocarbons and VOCs (trichloroethane TCA, trichloroethene - TCE and other related chlorinated VOCs). Contaminated soils extended beyond the area excavated. Subsequent groundwater samples taken indicated contamination with TCA and lead. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Soil - Arsenic was detected at 19 ppm, which is above the applicable soil cleanup objectives (SCOs). Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 ppb. Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane (1,1,1-TCA) has been found at concentrations of up to 180 ppb. Soil Vapor - The highest concentrations of chlorinated VOCs were detected at SB-05. Sub-slab samples contained PCE at concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3

TC3894263.2s Page 1270

STANDARD MOTOR PRODUCTS INC (Continued)

1000310304

and up to 450 ug/m3 respectively. Significant Threat: The site presents a significant environmental threat. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation. The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

DEC Memo: TTF letter sent to PBS address - see eDocs07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB1107/2013 - V. Brevdo Received call from Chief Operating Officer for Real Estate Company Ms. Duffrey Panayiotou - 719-204-1600 Ext. 30. I explained to Ms. Panayiotou that I need information and/or documents about what type of tank test failure it was - dry or actual leak. If they have confirmation it was a dry leak and no oil leaked and no impacts, I would look into available documents and may consider closing spill. If it was not a dry leak and oil was released that we need to negotiate appropriate course of action. Ms. Panayiotou stated she will look into this matter and get back to me by end of the day. I stated that I would like to hear back from her no later than 3 weeks from today. VB

DEC Memo: A CSL letter was NOT sent to Mr. Laga. Based on his experience, he knows the standard DEC routine on cases like this. Sangesland left a voice message reviewing the procedure. Pulled tank. Excavate soil. Sample endpoints for VOC/SVOC. Submit report with results & manifests. 02/16/07 Rahman. Closure report from Franklin Company. VOC and Naphthalene are non detect in in a end point sample taken from the tank vault. Tank was 500 gallon, no holes/corrosion observed. SVOC (Benzo group) levels are slightly above the TAGM, which can be attributed as fill material. NFA required. address corrected from 29-76 to 29-27 as per a request from Franklin Company (Bob).
CONTAMINATED SOIL FOUND AFTER PULLING TANK. 500 GALLON TANK

DEC Memo: 11/30/2005 Sangesland spoke to rep at Island tank. She said the site was dug out and endpoints were clean. She said a closure report would be sent ASAP. 1/4/06-Hirakumar Patel. Here is the summary of the report from Island Environmental Tank, Inc. "According to owner, the tank has previously been used for the purpose of storing #2 heating oil and owner doesn't know when this tank was installed." UST was installed horizontally in the backfill material, with the top of the tank located approximately 4' below the surface." A 1080 gal. capacity tank was removed in the presence of Mr. Vinny Lovari of Island Tank Environmental. After removal from cavity, tank has been cut and washed and removed oil and water mixture with vac/truck." No groundwater or static surface water was encountered in the tank cavity." Tank had pits and holes." Tank cavity was excavated approximately 30 cubic yard of soil in 55 gal. drums and disposed at Jamaica Recycling Inc. Jamaica, NY." Tank cavity was backfilled and compacted in place." 6 samples were taken out from cavity and tested at Severn Trent Laboratory, Edison, NJ." The metal tank and all metal tank system components were removed from teh owner's property and disposed of as scrap metal at John Iron & Metal Co., Inc. 33 Arthur Kill Road, Staten Island, NY. 1/5/06-Hirakumar Patel. No Further Action required letter has been sent to Mr. John Domenico. Case closed as per Mr. Jeff Vought. 02/03/06-Hirakumar Patel. Send out NFA again through fax (212-689-6082) as per John's request.

Remarks:

trunk removal found oil on the tank. THERE IS 3 OR 4 DRUMS THAT NEEDS TO BE REMOVED. THE TANK HAS BEEN CUT UP.

DEC Memo: 4/25/07 bf: sent tf letter to Eric LevorQueens Plaza Realty Corp.25-12 41 AvenueLong Island City, NY 11101:38825/25/07 received passing tightness test results by fax from Eric Levor. Tried calling him at number on fax:(718)392-2123. No answer. To close this spill, he needs to submit a response to tf letter. bf5/29/07 Called E. Levor again and there was no answer. Called Emergency Contact # from PBS facility info (718)263-2418 and left message to call me back. bf6/4/07 Called E. Levor at (718)392-2123. The number is no longer in service. I then left a message at (718)263-2418. bf6/5/07 Received 2 messages from Edith Levor to call back. (718)392-2123. Called her at 3:45 Pm and she said that the tank failed the test because there were two sets of vent pipes. The old vent pipe was never disconnected. She said she will call Advanced Tank after she hangs up with me and have them prepare a response to the tf letter. bf11/8/07 Called E. Levor. Left message that i still have not received letter from Advanced Tank and to call me back. Called Vinnie the Tank Doctor (718)727-0656. He said that there was an open line from a hot water heater and he plugged the line. No contaminated soil was found. He faxed paperwork to E. Levor. He was not in his office and requested I call him Monday. He will check to see if he still has the fax. bf11/26/07 Received message from E. Levor. Called her back and left message on her machine. bf12/2/10 Inspected site and issued NOV for expired registration, failure to monitor unmetered tank for leaks, and failure to contain/remove petroleum discharge. Administrative settlement conference is scheduled for 2/17/10 at 10:30 AM. bf2/17/10 PBS Settlement Conference held today. Attended by Edith and Eric levor. Provided 6/7/07 letter from Tank Doctor Inc. stating that 2 unused lines from top of tank were disconnected in building. Removed lines and tank retested and passed. NFA. bf

 DEC Memo: Not reported

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "SANGESLAND"3/11/2003 Sangesland responded to the site of an ECO/Police action at a junk yard.Site has been an active "Auto Parts" facility for approx 2 years. Site is an irregular T shaped lot (approx 120' x 200')Cement/asphalt appears to cover majority of the lot, unknown if this ground cover is complete and impervious to surface spills. No obvious floor drains could be seen. Unknown if rainwater, auto fluids run into the ground or directly off site. Central area of the yard appears to be the car dismantling area and contains the majority of the spilled auto fluids (oil, transmission fluid, etc.) There is no controlled spill containment area (no curbing, collection tank etc). Perimeter of yard was lined primarily with automobile racks (3 cars high). Ground staining appeared weathered and less severe than in the central area.Along with automotive liquids, the yard contained a large number of engines, transmissions, various engine parts and multiple automobile batteries (several appeared damaged and overturned).DEC Requirements.1) Surface of the yard must be cleaned down to the cement/asphalt level. An integrity inspection will be made to determine if there are any floor drains or open cracks directly to the ground below.2) A "Site Delineation" will be required at the property. A series of soil borings will be taken in a grid pattern over the area of the yard and soil/water samples tested to EPA Method 8260, 8770 & heavy metals.3) Based on the results of the "Site Delineation", a "Site Remediation Plan" will need to be prepared which will identify the procedure to clean up the contamination identified in the delineation.4/11/2003 - The owner of the property is believed to be "Virginia" 516-359-9358. She is somehow associated with "Yardley Associates". A call was made to this number in an attempt to get a mailing address, but no response was received.Lease holder to the site is: Jussain Zulfikar

and/or Anwar Javed.5/7/2003 Sangesland spoke with Virginia Lupoli (owner) She inherited the property from her father, Yardley Associates LLC is the corporate name for the owner.Sangesland outlined the work which will be required on this site. 1) Power wash the lot to determine the condition of the black top or cement pavement.2) Geo Probe of site to determine the subsurface condition of the site.3) A 60 day limit will be put in the letter.4) A list of state contractors will be forwarded with the letter.Contact info:Yardley Associates LLCAttn: Virginia LupoliP.O. Box 237Cold Spring Harbor, NY 11724Fax # 631-385-447711/4/2003 Sangesland reviewed an Environmental Site Assessment for this site prepared by Dr. Norman Munroe (917-497-0190) of Assem Labs Inc. Report states that the entire site is capped with a cement pad between 8" and 24" thick. There did not appear to be any open preferential pathways directly to the soil. The report did not outline the path for rain water runoff or recharge.Report outlines soil boring work done on the site along with some ground water sampling.Some minor soil VOC hits (BTEX) in BH-2, BH-4 and BH-9One minor groundwater hit for benzene & MTBE in BH-4SVOC's for soil and water were below regulatory limitsHeavy metal concentrations in soil samples exceeded regulatory limits for several metals including: lead,arsenic, cadmium, chromium and copper. Based on this information, the case is closed with no further action required.
 DEC SPILLS GROUP CALLED TO SITE OF POLICE ACTION AT A JUNK YARD. SITE HAD SPILLS OF AUTO RELATED LIQUIDS OVER ENTIRE YARD AREA.

S102555815

direction is towards the north. No measureable amount of free product was detected in any monitoring wells. Per DEC's approval, the air sparge (AS) and soil vapor extraction (SVE) systems were turned off on May 3, 2002. Prior to turning the system off, an air effluent sample was collected from the SVE system for BTEX and VOC analyses. The analytical results showed that the concentrations of Benzene, Toluene, Ethylbenzene and Xylene on all of the monitoring wells with the exception of MW-10 were found not detected (ND). The maximum concentration of BTEX is on MW-10 at 28.9 ppb. The concentrations of MTBE ranged from 1.6 ppb (MW-7) to 62 ppb (MW-8). See also spill 9700124. Rommel.05/09/05-File Update by Sun: A project review meeting was held on 05/05/05 between the Department, the Hess' Manager and Hess' consultant (EnviroTrac). Per EnviroTrac, Monitoring Well MW-8 appears to have been destroyed during construction activities in the sidewalk area adjacent to the location. A replacement well for MW-8 will be installed once the necessary permits are obtained from the New York City Department of Transportation (NYSDOT). EnviroTrac will inject calcium peroxide in the northern sidewalk of 38th Avenue to address the trace concentrations of MTBE detected in MW-8 in the past few times the well was sampled. The newly installed replacement well will be used to determine the effectiveness of the calcium peroxide injection. If concentrations of MTBE decrease to approximately 30 parts per billion (ppb), site closure will be proposed as discussed during an April 21, 2004 meeting between Hess, EnviroTrac and the Department. (WJS) 10/28/05: Project reassigned from Sun to Andersen. Monitoring report overdue. Need update on results of injecting calcium peroxide into MW-8.11/21/05: NFA letter sent. contaminated soil discovered during tank removal

DEC Memo: 2/21/08 Called Dominic Casamento (718)278-0806. left message to call me back. Sent ttf letter to Dominic Casamento 2403 41st LLC 14-38 31st Drivt, Long Island City, NY 11106Mr. Casamento called back later in the day. He said Petroleum Tank Cleaners will be coming back on Monday to make necessary repairs. He said they told him it was a dry leak. I confirmed the above address as his mailing address. He is on vacation and will be returning Monday. b4/2/08 received fax from M. Salamack of PTC. Tank was emptied and lines and tank were isolated. vent line was hit by a vehicle as tank is under a driveway area. Vent line was replaced to a different area to prevent future accidents. Tank was released 3/10/08 and passed. Test results attached. NFA. bf DRY PORTION LEAK

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGLEHARDT"10/10/95. This is additional information about material spilled from the translation of the old spill file: PCB5.10/7/97: See spill #93059078/31/06 - Austin - Transferred from Engelhardt/O'Connell to myself - checked site (familiar with prior tenant, AAA, who is no longer in business; found a walled-in auto wrecking yard ("Astoria Used Auto Parts, Inc.", #7098602" on sign adjacent to office, no apparent persons on site) - no phone listing in phone directory - will need to contact persons on site to arrange an inspection - reassigned to Ketani to inspect site - end9/6/06 - Raphael Ketani. A search did not turn up a PBS record. By searching Property Shark, NYC Property Tax listings, and the NYS Department of Finance website, I found the following information: notices to: Sonic Properties, LLC, P.O. Box 250, Croton-On-Hudson, NY, 10520-0250; business: Astoria Used Auto Parts, Inc., 36-28 14 Street,

LIC, NY, 11106block & lot: 00350/0031pany #1: Ge-Tselei Automotive, Inc. There were no phone numbers. I will send CSU letters to Sonic Properties and Astoria Used Auto Parts, Inc. I will also make an unannounced site visit. I made an unannounced site visit at about 2:35PM. A small doorway was open at the site, but not the large garage door. I walked in and met 2 workers. The site is paved in the front half, but is soil in the back. The concrete looks as if it was laid maybe 4 years ago. An initial inspection of the concrete didn't turn up any cracks, but there were cars all over. Small pools of oil were on the concrete from the junked cars. There was no order to the storage of the cars and parts. Things were just draining onto the concrete. The 2 workers said that the junk yard was closed and told me that the owner was at the Getty station at the corner of 21 Street and 36 Avenue. I took pictures of the site and the neighboring exterior area. A worker from the Getty station picked up the mail that had been left on the ground just inside of the doorway of the junk yard and went back to the gas station. I went to the Getty station and one worker told me that the owner was "T. J.", but that he wouldn't be in for about 1/2 an hour. I came back later and met "T.J." He told me that he was not the owner, but that the owner was William Schwartz at (212) 608-6987. He said that Mr. Schwartz had bought the property 4 years ago and also owned the adjacent properties. I tried calling the (212) number, but it was a FAX machine. I will FAX a copy of the letter I had previously sent and I will put Mr. Schwartz's name on it as the owner. 9/7/06 - Raphael Ketani. I made several attempts on 9/6 and 9/7 to FAX the letter to Mr. Schwartz, but each attempt was unsuccessful. I will wait to see if the other 2 certified return receipt letters are accepted by their respective recipients. 9/14/06 - Raphael Ketani. The return receipt card for the letter to Sonic Properties came back signed by Mr. Schwartz. I received a voice mail yesterday from Mr. Schwartz of Sonic Construction (917) 299-6599. He didn't understand what spill I was talking about in my letter. I tried to reach him, but could only leave a voice message. Mr. Schwartz called me back. He said that he recently bought the property. I told him that he has to hire a remediation company and get the contamination removed. He said that this could put him out of business. I told him that he assumed liability for the contamination when he bought the site. He asked who does remediation work. I told him that I can send him a list of contractors. He said his FAX number is (718) 937-5430. Mr. Schwartz said that pinning all of the cleanup responsibility on him isn't fair. I told him that he is the property owner and that he should have known about the contamination, or at least the bank should have, before buying the property. 9/25/06 - Raphael Ketani. I received a call from Mark Robin of Hydro Tech Environmental (631) 462-5866. He said that he has been contacted by the attorney for the owner of the site and told to put together an investigation proposal. He said the attorney is Jackie DiCrescio. I briefed Mr. Robin on the site. He said he will put together a proposal soon. 11/3/06 - Raphael Ketani. I received an Investigation Work Plan from Hydro Tech Environmental. I am reviewing the plan. 11/6/06 - Raphael Ketani. I finished my review of the November 1, 2006 Investigation Work Plan. The Department found the plan to be acceptable with the comment that should the groundwater require treatment, then larger bore wells will have to be installed, and perhaps for treating the soil. I sent a letter of approval and asked that the Department be notified several days in advance as to when the work will definitely start. 11/16/06 - Raphael

1000101150

Ketani. I visited the site today to monitor some of the soil boring and sampling and groundwater sampling. I met Paul (cell (631) 241-7165) of Hydro Tech at the site. He was the head of the operation and the geologist. I took additional pictures of each half of the site - 3 for the left half and 1 for the right half. I monitored 3 soil borings that were drilled in the left half of the property (this includes SP-9). The samples that came up were all loose fill material down to the water table at 16 feet. The fill consisted of road aggregate type gravel or crushed stone, sand, broken red brick, and some silt. There was no evidence of layering or consistency. The most odorous samples were always in the 0' to 2' interval. The odors were of oil and at SP-9 the sample looked black. Groundwater was black, and strongly sulfurous. I asked Paul whether they were filling the holes in that they were making for the borings. He said "Yes." They were making good progress and so I left. 12/21/06 - Raphael Ketani. Today, I received the 12/1/06 Subsurface Investigation Report from Hydro Tech Environmental, Corp. I finished my review of the report today. The boring locations and the number of borings gave adequate coverage to the site. According to the report and by my own observations in the field during sampling, the materials encountered consisted of pieces of brick, asphalt, gravel, sand, silt, "black fill material," "white fill material," and concrete. This is all historical fill material and is present down to the water table at 16 feet (and probably into the water table). Petroleum odors were detected in soil samples at locations SP-2, SP-5 to SP-10, and SP-12. Soil samples from SP-6 and SP-12 were the only ones that had many detected VOCs. However, all of the detections were below the TAGM 4046 RSCO limits. Soil samples from sites SP-4, SP-7, SP-8, and SP-12 had many SVOC hits, as opposed to the other samples which had either no hits or just one or two. The sites with the many SVOC hits had analytes which are typical combustion products and could be from the dark material that was encountered in the samples. The dark material could be a mixture of ash and cinders. Many of the analytes in the samples from sites 4, 7, 8, and 12 exceeded the TAGM RSCO limits and ranged up to 11,000 ppb for benzo(a)anthracene at site 4. However, the analyte concentrations were very similar from site to site. So the material and origin are probably the same. The exceedences were moderate in concentration for historical fill. Lastly, the PCB hits were minimal. While there is some groundwater contamination at SP-12, this was the only site that had exceedences. None of the sites had soil contamination that warranted soil excavation for VOCs. As regards SVOCs, the exceedences appeared in the combustion products and are probably from the historical fill and also don't warrant excavation. Based upon the Subsurface Investigation Report, I am closing the spill case.

Remarks: ANONYMOUS LETTER TO NYC DEOH ALLEGES DELIBERATE SPILLAGE BY AAA & CON-ED PRECEDING ABANDONATED OF YARD BY AAA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "K FOLEY"12/15/03 Letter addressed to Sigona from Environmental Systems Group. On 10/30/03, Crompco conducted precision test on tanks. One 4000gal diesel UST failed the test. Energy Storage Systems reviewed the test data and suggested the test technician failed to plug the air eliminator on the pumps and therefore the tanks failed. On 12/9/03, Crompco retested the tanks and plugged the air eliminator and the tank passed. 12/19/03Spoke to Andy at Energy Storage systems.As per Sigona's recommendation, he will submit a report summarizing the first and second testing episodes. Rommel12/23/03 Received letter from Mort Turoff at Energy Storage systems summarizing first and second tests. Diesel tank passed on 12/9/03 retest. Results on file. (KMF)1/9/04 Sent NFA. (KMF) liquid level failure

Site Description: Location: The site is located in Queens County, on Jackson Ave between Orchard Street to the east, Queens Blvd. to the west and Long

TC3894263.2s Page 1347

OUTLET CITY, QUEENS BLVD. & JACKSON AVE. (Continued)

S105684691

Island Railroad yard to the south. The G-Train runs underneath Jackson Avenue bordering the site to the north. The nearest residential structure is located approximately 100ft to the west across Orchard street. Site Features: This 2.5 acre site consists of 12 multi-story buildings and associated parking area located in a congested commercial/industrial area of Queens County. The only occupied structure on-site is a NYC Transit Authority building. Current Zoning/Uses(s): The current zoning at the site is Industrial and Retail. The surrounding area is zoned Special Long Island City Mixed Use District (LIC) and is a longstanding mix of residential, commercial, industrial and cultural uses at varying densities.Historical Uses: The site had formerly been used for chemical manufacturing. From 1901-1978, West Chemical Co. owned the property and manufactured commercial and disinfectant products such as disinfectants, insecticides, soaps, floor wax, and paper products dispensing machines. Manufacturing operations employed various chemical substances including creosote, coal and acids, cresylic acids, degreasing solvents, iodine, and assorted oils and pesticides. Metal plating and gasoline filling operations were also conducted at the property. In 11/78, Outlet City acquired title to the property from West Chemical. During Outlet City's ownership, a flea market and various vendor operations have been conducted at the property. The site is being investigated under the Voluntary Cleanup Program (VCP) under a 1997 agreement. Previous investigations in the late 1980's and early 1990's led to the property entering the VCP Site Geology and Hydrogeology: Site geology consists of mostly sand at varying depths due to presence of shallow bedrock. Groundwater is approximately 8 -10ft below grade

Env Problem: Nature and Extent of Contamination: The site is contaminated with creosote, petroleum, and solvents. Both soil and groundwater are affected. The majority of the contamination is located in Areas D and E where Creosote in the form of both LNAPL (Light Non-Aqueous Phase Liquid) and DNAPL (Dense Non-Aqueous Phase Liquid) is present. LNAPL in Area D damp: E ranges from 0 - 6ft. Total on-site VOCs (Volatile Organic Compounds) including both chlorinated hydrocarbons and petroleum constituents are present in groundwater from non-detect - 30,000ppb. Total on-site SVOs (Semi-Volatile Organic Compounds) are present in groundwater from non-detect to over 100,000ppb. An initial off-site investigation was completed in 2013. Contamination, both VOCs and SVOs has migrated off-site to the west and north. Due to flooding event caused by a homeless person removing piping in Building 10 to sell for scrap, the monitoring well in the narrow strip of land between the on-site buildings and the Sunnyside Yard could not be sampled. A ventilation IRM is in place in the basement of building No. 4 (but no longer operating), where creosote LNAPL enters the basement. The ventilation system was designed and installed in 2004. The ventilation system was started up on June 8, 2004. The final engineering report for this IRM was approved in September 2006. Bi-annual air testing was collected to evaluate the effectiveness of the ventilation IRM.

Health Problem: Exposures to contaminated groundwater is not expected because the area is served by public water. Soils contaminated with etrachloroethene are beneath the site, however, exposure to this soil is not expected because the site is capped with asphalt. Indoor air samples collected in a portion of the on-site building contained levels of tetrachloroethene that exceeded the New York State Department of Health Guideline for tetrachloroethene in Indoor Air.

Actual: 16 ft.			

The Site is located in the Long Island City section of Queens in a zoned manufacturing area with residential zoning approximately 300 feet to the south. The Site had been a residential building with garages beginning in 1988, was vacant from 1947-1950, was used for sheet metal work from 1967-1993 and was converted from sheet metal work to dry cleaning in 1997. The Site is currently an active dry cleaning facility. The one-story building foundation is slab-on-grade and contains dry cleaning machines, garment storage area, storage, boiler room, office, customer service area, bathroom and partial basement. The building covers the entire footprint of the site. The building has three 4th-generation dry cleaning machines on a secondary containment concrete slab, five washers and a dryer, several empty 15-gal waste containers, spill containment material container, a spotting stand, ten press machines, three sets of shirt machines, four air compressors, two refrigerated dryers and a sump. The Site and building are approximately 5000 square feet in size (0.11 acres). A residential building is located immediately to the northwest (0.01 miles), a stonework building is to the northeast, a fine arts furniture building to the southwest and 13th Street to the southeast.

Env Problem: Based upon investigations conducted to date, the primary contaminants of concern at the site include tetrachloroethene (PCE) and dichloroethene (DCE). One round of groundwater sample collection was performed in June 2009 via two Geoprobe borings located in the sidewalk in front of the site building. Groundwater samples were analyzed via EPA Methods 8260/8270. No soil samples were collected

Map ID	Direction	Distance	Elevation	Site	Database(s)	EDR ID Number	EPA ID Number

BEST-DDK CLEANERS (Continued)

S109826034

for analysis during the investigation. The following maximum concentrations with contaminants were observed in groundwater: 26ppb PCE and 63ppb DCE. These results demonstrate that groundwater standards have been exceeded for PCE and DCE. The nearest surface water body is the East River, which is located approximately 2000 feet (0.3 miles) to the west. Groundwater is approximately 7 to 8 feet below grade and most likely flows west under the Site to the East River, however direction of flow has not been specifically determined to date. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment. As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo: On 7/14/05, J Peck called RIR Com. Cynthia Roby doesn't work there now. Left message to return call concerning spill. Could not determine owner of property from Property Shark or Acris. Called George Falidas on 7/14/05, left message to call back. On 1/19/05, reattempted to determine owner of property. No success. 3/30/07 - Austin - Transferred to Ketani for further review - end 5/21/07 - Raphael Ketani. I reactivated the case today. There was very little in the case file. Some printed pages for spill #0305345 (which doesn't pertain to the case, except the memo from Mr. Sigona to Mr. Hassan), an 11/7/05 letter from Joseph Peck of DEC to George Falidas regarding the spill, printouts from Google Earth and Property Shark, and a printout of the spill report for this case. I did a search of

TC3894263.2s Page 1379

FALIDAS ASSOCIATES (Continued)

1007264881

ACRIS, the NYC Property Tax database, and Property Shark and determined that 25-15 Queens Plaza North is just one part of the range of properties (25-01 to 25-27 Queens Plaza North) owned by Falidas Associates. It is also known by Bridge Plaza North. The block and lot are: 00415 and 0004. I called up George Falidas (718) 392-0514 of Falidas Associates and was connected to his brother, John Falidas. I made a field visit and met John Falidas. He showed me the basement of one of the properties owned by Falidas Associates and which is near to where the tank failed 2 buildings away. We entered a work room rented by a garment making company. The floor and walls and bathroom were clean. There were no signs of oil and no oil odors. Mr. Falidas said that he had paid lots of money to get the oil cleaned up years ago and the responsible party never paid anything to him. Mr. Falidas had a package of documents from the EPA and the DEC and showed them to me. These were the RCRA Subtitle C Site Identification Form, letters from South Mall Analytical Labs to PTC, and a DEC Spill Report. He gave me copies of these documents. I was particularly interested in the old DEC spill report form as this document wasn't in the case file. Next, I visited the 2 story building between Mr. Falidas' building and the site of origin of the spill. I met Sandro Cestaro of Atlantic Precious Metal Casting, Inc. (718) 937-7100. He showed me his basement. There were some signs of a thin film of mud in one corner of the basement, but no signs or odors of oil, even though this was the building where the oil first entered. Lastly, I went to the site of the oil spill. The auto parts service place had burned completely, according to the old spill report case notes. This site was 41-22 to 41-30 27 Street. The site was sold to developers who later built an apartment building that was finished in early 2007. This building is listed as 41-28 27 Street. I met the super., Leonardo Colon. He took me to the lowest point in the building. This was a parking garage. There were no signs of oil nor any odors. He said he was new here and didn't know much about the building. The building management company is Golden Management and the contact person is Brandon Wechsler (718) 230-2600, ext 111. I took 3 pictures of the apartment building and the neighboring properties. I remember seeing the dig out for the foundation for the building when I passed by the site many months back. They went down below the bottom of the foundation for the neighboring building which contains Atlantic Precious. This is a depth of about 15 feet or so. Based upon my site visits and the fact that the old auto parts area has been dug out, and the lack of evidence of a spill, I am closing the spill case.

Remarks: SPILL AT A COMMERCIAL BLD CALLER IS A TENANT AND REQ A CALL FROM DEC SPILL HAS NOT BEEN CLEANED UP BEEN SMELLING THIS FOR ABOUT 3 WEEKS

Site Description: LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge. SITE

TC3894263.2s Page 1385

Map ID	Direction	Distance	Elevation	Site	Database(s)	EDR ID Number	EPA ID Number

NATIONAL RUBBER & BACKING CORP (Continued)

1000259753

FEATURES: The property extends 335 feet from the north to the south and 117 feet from the west to the east. The entire property is occupied by a 30,000 square feet, one story, slab-on-grade masonry building. A small courtyard is located in the central portion of the building on the western side. The site and surrounding areas are generally level. CURRENT ZONING/USE(S): The site is currently zoned commercial. The site is currently used as a marble fabrication shop, an automotive repair shop, and a production studio. Another tenant occupies the other one-third of the building for storage of sheet metal and supplies for an off-site manufacturing business. No metal fabrication, cutting, or manufacturing associated with this business takes place on this site. PAST USE OF SITE: National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. OPERABLE UNIT(S): The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigating for soil and groundwater contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below ground surface and flows in a westerly direction toward the East River. The depth to bedrock varies across the investigation area from 10 to 15 feet below surface.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Based upon investigations to date, the primary contaminants of concern at the site include toluene.

Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) in groundwater in MW-2, which is above the respective groundwater standard of 5 ppb. Other wells have shown levels of toluene in the 10,000s ppb. Benzene, ethylbenzene, and xylenes have all been shown to be elevated. These previous investigations have identified exceedances of standards, criteria and guidance for those contaminants in soil as well. Elevated levels of benzene and toluene were also noted in the soil vapor as well. The groundwater plume appears to be migrating off-site, however the extent of the plume is unknown. In 2011, the concentration of toluene was found as high as 130,000 ppb in an off-site location. Off-site impacts have been delineated and the extent of the toluene plume does not appear to impact the East River. SPECIAL RESOURCES IMPACTED/THREATENED : None known. SIGNIFICANT THREAT: A significant threat is posed from potential exposure to site related contaminants from soil vapor intrusion both on and off-site structures. Exposures to contaminated groundwater are not expected because public water serves the area residents.

Health Problem: Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by public water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

Site Class: N
SWIS: 4101
Region: 2
Town: New York City
Acres: Not reported
Date Record Added: 11/30/2000
Date Record Updated: 02/01/2005
Updated By: RJCZYV
Site Description: The property is located within an urban industrialized section of Long Island City. The site extends 335 feet from the north to the south and 117 feet from the west to the east. The entire site is occupied by a 30,000 square feet, one story building. There is a small courtyard in the central portion of the building, on its western side. The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028.
Env Problem: See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028
Health Problem: Not reported

Site Description: **GWCR055**
Location: The Ravenswood former MGP site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough of Queens. The property is noted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of a complex of active electric and steam generating facilities in a predominantly industrial and commercial area. The site is bordered on the east by light industrial and commercial

S102239646

buildings and on the west by the East River. The site formerly housed a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The precise location of the MGP structures has not been fully established because of the extensive reworking of the property associated with construction of the power plants which now occupy and surround the original MGP site. Remedial History: A portion of the site was remediated under the Voluntary Cleanup Program. See site V000368. The principal VCP issue was the presence of a No. 6 oil spill from an in-plant pipeline. Petroleum-impacted soil was excavated in 2005. No MGP tar-contaminated soil was identified at that time, but MGP related structures or soil contamination may remain in other portions of the site or at depth.
Env Problem: Extensive soil removal has taken place on the site, both for the construction of the power plants that occupy the site, and for remediation of a No. 6 oil spill. Although it appears that significant portions of the former MGP have been excavated down to bedrock, it is not known to what extent MGP structures and MGP soil contamination may remain in the deep subsurface. A bedrock steam tunnel lies beneath the East River at this location, allowing waste steam from the turbine plants to be provided to the steam heat distribution system in Manhattan. Tar from the former MGP can be seen dripping from the roof of this tunnel, roughly 150 feet below ground surface. The source of the tar has not been determined. The tunnel can not be accessed by the public, and is only occasionally used by utility workers. Engineering controls are in place to prevent direct contact with the tar by utility workers.
Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Date Record Added:	11/30/2000						
Date Record Updated:	04/05/2007						
Updated By:	dcwalsh						
Site Description:	The proposed Ravenswood 250-Megawatt (MW) Combined Cycle Generating Station site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough and County of Queens, New York and denoted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of an active electric and steam generating facility in a predominantly industrial and commercial area. The area addressed by this Voluntary Cleanup Agreement is the footprint of a proposed 250-MW combined cycle electric generating plant. The site is bordered on the east by light industrial and commercial buildings; on the south by the existing Ravenswood Generating Station; on the north by the existing Ravenswood Gas Turbine facility; and on the west by the existing Ravenswood Steam Plant and the East River. The site was formerly a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The site is currently occupied by a paved parking lot for Ravenswood employees. Site investigation has been completed at the site.						
Env Problem:	The Site investigation conducted at the site revealed the presence of petroleum contamination related to a release from an on-site no. 6 oil pipeline. In addition, the site is underlain by former MGP facilities, including gas holders, piping and drip pots. Investigation has not revealed any areas of discrete coal tar deposits, however, the volunteer has proposed to open all encountered pipes and drip pots, drain them and permanently closed them in place or remove them if they interfere with future construction activities. The area of petroleum contamination will be excavated and removed. The volunteer submitted and the Department approved a Remedial Action Work Plan for the site which consisted of the above remedies. This RAMP has been implemented, and the volunteer has submitted the Remedial Action Summary Report, which is under review by NYSDRC and NYSDOH.						
Health Problem:	Human exposures to contaminated soil and groundwater are unlikely. Most of the contaminated soil has been removed, the site is fenced and secured, and the site will be covered with buildings and pavement. Exposure to groundwater is unlikely since the area is

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS**Federal NPL site list**

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 01/21/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 04/21/2014
	Data Release Frequency: Quarterly

NPL Site Boundaries**Sources:**

EPA's Environmental Photographic Interpretation Center (EPIC)
Telephone: 202-564-7333

EPA Region 3 Telephone 215-814-5418	EPA Region 7 Telephone: 913-551-7247
EPA Region 4 Telephone 404-562-8033	EPA Region 8 Telephone: 303-312-6774
EPA Region 5 Telephone 312-886-6686	EPA Region 9 Telephone: 415-947-4246
EPA Region 10 Telephone 206-553-8665	

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 01/09/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 04/21/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list**DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 01/09/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 04/21/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list**CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 02/28/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 06/09/2014
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/08/2013	Telephone: 703-603-8704
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 01/10/2014
Number of Days to Update: 151	Next Scheduled EDR Contact: 04/21/2014
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List**CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 02/28/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 06/09/2014

Federal RCRA non-CORRACTS TSD facilities list**RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/10/2013	Source: Environmental Protection Agency

Federal RCRA generators list**RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/10/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/02/2013	Telephone: (212) 637-3660
Date Made Active in Reports: 12/16/2013	Last EDR Contact: 03/13/2014
Number of Days to Update: 75	Next Scheduled EDR Contact: 07/14/2014

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/10/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/02/2013	Telephone: (212) 637-3660
Date Made Active in Reports: 12/16/2013	Last EDR Contact: 03/13/2014
Number of Days to Update: 75	Next Scheduled EDR Contact: 07/14/2014

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries**US ENG CONTROLS: Engineering Controls Sites List**

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2014	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 03/10/2014
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/23/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/17/2013	Source: Environmental Protection Agency

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in those properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/04/2013	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 12/10/2013	Telephone: 202-307-1000

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used waste oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Listing of Storage Tanks

A listing of underground storage tank sites located in Westchester County.

Date of Government Version: 12/18/2013
Date Data Arrived at EDR: 12/19/2013
Date Made Active in Reports: 02/11/2014
Number of Days to Update: 54
Source: Westchester County Department of Health
Telephone: 914-813-5161
Last EDR Contact: 11/04/2013
Next Scheduled EDR Contact: 02/17/2014
Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-289-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NW: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision: 1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

TC3894263.2s Page A-1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

TC3894263.2s Page A-2

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County: QUEENS, NY
Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data
Additional Panels in search area: 3604970032B - FEMA Q3 Flood data
3604970040B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property: CENTRAL PARK
NWI Electronic Data Coverage: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:
Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID: Not Reported
LOCATION FROM TP:
GENERAL DIRECTION GROUNDWATER FLOW:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Boundary			Classification				
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subinherent soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW[®] Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epencenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Instructions for Application for Records under FOIL

Completion of this form is voluntary. However, it will expedite access to the records you seek, if available.

- Please identify the types of records being requested.
Description of the bureaus and/or records they retain are as follows:
 - Agency Chief Contracting Office (ACCO):** Contracts, Bids and Procurement records
 - Bureau of Customer Services (BCS):** Water bills, water metering
 - Bureau of Environmental Compliance (BEC):**
 - Asbestos Control Program, Hazardous Materials response
 - Air and Noise Permits and inspection records
 - Environmental Control Board (ECB) -** Notices of Violation and decisions (please indicate NOV #)
 - Bureau of Environmental Design and Construction (BEDC) -** design and construction of wastewater treatment plants, water-supply related projects and infrastructure projects
 - Office of Environmental Planning and Assessment (OEPA) -** SEQRA/CEQR and other environmental review-related records
 - Bureau of Wastewater Treatment (BWT) -** Industrial pretreatment program, sewer discharge violations, operation of wastewater treatment plants
 - Bureau of Water and Sewer Operations (BWSO) -** water and sewer main repair
 - Bureau of Water Supply (BWS) -** Watershed/aqueduct/reservoir operations, water quality
 - DEP Police -** Reports for watershed- area law enforcement incidents
- Please indicate whether you want to receive copies or you want to inspect the records prior to copies being made.
- Please describe, with the greatest amount of detail possible, the type of records you are requesting. Include, if available and when applicable, complaint numbers, contract numbers, addresses, block and lot information, Notice of Violation number, specific time frames or date of incident/occurrence, name of document/form, and account numbers. **Please DO NOT request information about more than one account, NOV, property, etc. per form.** Please use a separate form for each separate request.
- Please provide your name, firm/company name, address, phone number and e-mail address to where you want the response addressed.
- Please, either mail or fax the form to the DEP Records Access Officer at the address and number listed on the form. **DO NOT FAX AND MAIL THE FORM.**
- You will receive an acknowledgment of receipt of the request. After the search has been performed, bureau personnel will contact you to inform you of the results of the search.
- Please do not send payment for records until such time it has been requested. Copying fees are \$.25 per page.

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION

Application for Records, Article 6 – New York State Public Officers Law, Freedom of Information Law

Complete Part I of this form. Please refer to instruction sheet for assistance in completing this form. If responsive records are located, you will be notified and informed of the required payment. Advance payment is required in check or money order payable to the City of New York before documents will be released. Either send the complete application to the Records Access Officer at NYC DEP, Bureau of Legal Affairs, 59-17 Junction Blvd., 19th Fl., Flushing, NY 11373, or fax to (718) 595-6543. **DO NOT FAX AND MAIL.**

PART I. APPLICATION – Check type of record(s) requested:

☐ Bid/ Procurement (ACCO)	☒ Notices of Violation and decisions (ECB)	☐ Sewer main/line repair/construction (BWSO)	☐ Water bill accounts/ metering (BCS)
☒ Asbestos (BEC)	☒ Environmental Review/SEQRA (OEPA)	☐ Water Quality (BWS/WQ)	☐ Personnel records (HRM)
☒ Hazardous materials emergency response (BEC)	☒ Industrial Pretreatment/ sewer discharge violations (BWT)	☐ Watershed/ reservoir operations (BWS)	☐ Wastewater Treatment Plant operations (BWT)
☒ Right To Know (BEC)	☐ Water main/line repair/construction (BWSO)	☐ Watershed area incident reports (DEP PD)	
☒ Air permits/complaints/ inspections (BEC)			
☐ Noise complaints/ inspections (BEC)			

I hereby apply to ☐ inspect or ☒ receive copies of the following records (use additional sheets as needed and attach):

Records regarding above and underground storage tanks, permits and/or violations, spills, hazardous materials and any other information of environmental concern as we are conducting a Phase I Environmental Site Assessment.

Location: 3711 30th Street, Long Island City, NY - Block: 372, Lot: 8

YEARS OF EXPERIENCE:

With Hillmann: 9 years

Total: 9 years

PROFESSIONAL EXPERIENCE

Ms. Lamb has over nine years of experience supporting various areas of Hillmann's practice. Within the Environmental Health and Safety department, she functions as a Project Manager. In this role, she manages indoor air quality investigations, surveys and sick building syndrome investigations; and potable and non-potable water sampling. She is experienced in managing mold delineation and remediation management projects, performing microbial growth investigations and sampling as well as preparing scope of work remediation reports. She is experienced in Right to Know Reporting for New York City clients. She also conducts airborne lead, silica/respirable dust monitoring, lead based paint inspections, lead based paint risk assessments, indoor air quality, microbial investigations/SOW, and post water intrusion investigations.

Additionally, Ms. Lamb is skilled at performing Phase I environmental site assessments and transaction screens to meet environmental due diligence requirements under CERCLA.

Representative project experience includes:

Verizon Communications, Inc., Various locations nationwide: Since 1996, Hillmann has been providing asbestos and lead investigations, abatement design, air monitoring and mold and water sampling and emergency response services including IAQ, noise, confined space, characterization, and ventilation evaluation. Ms. Lamb is an Industrial Hygienist on this contract. Estimated cost to date: \$12,624,000. This contract is ongoing.

HSBC Bank, Locations nationwide: Hillmann is providing professional environmental services for this contract that consists of a complete environmental program, including Phase I environmental site assessments, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene and indoor air quality programs. Ms. Lamb is an Industrial Hygienist providing IAQ, water sampling, and mold investigations as required. This contract is ongoing; estimated cost to date: \$100,000.

Cushman & Wakefield, Various locations nationwide: Hillmann is providing environmental services for property managers for large commercial building owners, including Citibank. These services include asbestos surveys, project design, investigation, project management, bulk sampling and analysis. Ms. Lamb is an Industrial Hygienist for this contract, which is ongoing. Cost: \$2,040,000

Allstate Insurance, Various locations: Hillmann manages environmental aspects of water losses, including investigations, moisture mapping, testing, remediation protocol and clearance sampling. Ms. Lamb functioned as an Industrial Hygienist on the contract, which is ongoing. Estimated costs to date: \$801,739

Encompass Insurance, Various locations nationwide: Beginning in 2004 Hillmann has been performing microbial assessments, scope of work evaluations, microbial management, microbial clearances, cause and origin, and investigations. Ms. Lamb was an Industrial Hygienist on this contract, which is ongoing.

Total: 12 years

PROFESSIONAL EXPERIENCE

Mr. Downs is responsible for the business operations of Hillmann's national accounts for the Due Diligence division. He provides direct oversight of all of the department projects including bid preparation, report preparation and client relations. He also ensures technical and customer service support are provided effectively and efficiently to clients.

Mr. Downs performs Phase I Environmental Site Assessments to meet environmental due diligence requirements under CERCLA and ASTM Standards, including the quality assurance of technical reports. Mr. Downs also has experience in soil and groundwater investigations and remediation projects; environmental compliance audits, and UST management.

He also conducts IAQ inspections, surveys and sick building syndrome investigations as well as monitors workers for airborne contaminants, and provides environmental safety and awareness training. In addition, he has performed facility evaluations to determine lead content of paint on surfaces and made recommendations for appropriate response. He has overseen lead abatement and collected and evaluated dust samples for exposure assessments.

Relevant project experience includes:

World Trade Center disaster site, New York, NY: Mr. Downs was part of the Hillmann 24-Hour Emergency Response Team, which provided recovery services including damage assessments, clean-up planning, safety plans, and debris clean-up. Hillmann also provided asbestos monitoring, indoor air quality monitoring, mold delineation and remediation management, carbon monoxide and hydrocarbon testing, and health risk assessments of 30 projects at "Ground Zero"; which included performing anthrax testing.

GAB Robins, New York, NY: As Clerk-of-the-Work work to the insurer, Hillmann performed Environmental Health Risk Assessments and monitored and managed remediation of buildings affected by the World Trade Center disaster Site. Mr. Downs was the Project Manager for this project, which was completed in 2003. Cost: \$250,000.

HSBC – Complete Environmental Program, Various locations nationwide: Hillmann is providing a complete environmental program including Phase I Environmental Site Assessments, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene and indoor air quality programs. Mr. Downs functions as the Accounts Manager and Environmental Assessor for this contract, which is ongoing. Estimated cost to date: \$100,000

Citigroup – Complete Environmental Program, Various locations nationwide: Since 1995, Hillmann has been providing complete environmental program including Phase I Environmental Site Assessments, asbestos and lead surveys, air monitoring, bid administration and O&M programs, industrial hygiene and indoor air quality programs, geology services, radon testing and hazardous materials assessments. Mr. Downs functions as an Environmental Assessor and Accounts Manager for the Due Diligence on this contract. Estimated costs to date: \$8,250,000. This project is ongoing.
