### **CERTIFICATION**

I, Michael D. Burke, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan (RIWP) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation.

---

Michael D. Burke, PG, CHMM

## **1.0 INTRODUCTION**

This Remedial Investigation Work Plan (RIWP) was prepared on behalf of 37-11 30th Street Holdings LLC (the Applicant) for the proposed development located at 37-11 30<sup>th</sup> Street and 30-14 37<sup>th</sup> Avenue in the Long Island City neighborhood of Queens, New York (the site). The Applicant will implement the RIWP after the site is enrolled in the New York State Brownfield Cleanup Program (BCP), pursuant to the forthcoming Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC).

The objective of the scope of work defined in the RIWP is to investigate and characterize the nature and extent of environmental impacts at and emanating from the site and to provide sufficient information to evaluate remedial alternatives, as required. This RIWP was developed in accordance with the process and requirements identified in the NYSDEC Division of Environmental Remediation (DER)-10 *Technical Guidance for Site Investigation and Remediation* (May 2010) and the New York State Department of Health (NYSDOH) "Guidance for Evaluating Soil Vapor Intrusion in the State of New York, with updates" (October 2006).

---

## **2.0 SITE BACKGROUND**

### **2.1 Site Description**

The site is located at 37-11 30<sup>th</sup> Street and 30-14 37<sup>th</sup> Avenue in the Long Island City neighborhood of Queens, New York and is identified as Tax Block 372, Lot 21 and a part of Lot 8, on the Queens Borough Tax Map. A site location map is provided as Figure 1. The site encompasses an area of about 26,978 square-feet (0.61 acres) and is occupied by a one- to three-story warehouse building with multiple partial cellar levels and a stockyard/ storage area in the northern part of Lot 8 (37-11 30<sup>th</sup> Street), and a two-story residential building in Lot 21 (30-14 37<sup>th</sup> Avenue). A lighting, audio, and production rental and warehousing company most recently occupied the buildings in Lot 8, and the development in Lot 21 is designated for residential use. The site is bound by 37<sup>th</sup> Avenue to the north, 31<sup>st</sup> Street to the east, 38<sup>th</sup> Avenue to the south, and 30<sup>th</sup> Street to the west. The elevated N and Q subway tracks run north-south above 31<sup>st</sup> Street, which are about 100 feet east of the site. A site plan is provided as Figure 2.

According to New York City Planning Commission Zoning Map 9a, the site is situated within the Long Island City Special Mixed Use Paired District (M1-2/R6A). This paired district promotes development and expansion of the longstanding mix of residential, commercial, industrial, and cultural use throughout the area. M1 districts typically include retail and light industrial uses such as woodworking shops, repair shops, and wholesale service and storage facilities, and R6A districts promote residential development. The surrounding properties are zoned for residential (R5) and manufacturing (M1-2) uses.

As a result of the City Environmental Quality Review (CEQR) process, Block 372, Lot 21 was assigned an E-Designation (E-218) on October 7, 2008 by the New York City Department of City Planning (NYCDPC) as part of the Dutch Kills Rezoning (CEQR No. 08DCP021Q). The E-Designation requires coordination with the New York City Office of Environmental Remediation (OER) to obtain a Notice to Proceed (NTP) or a Notice of No Objection (NNO) prior to obtaining building permits. The E-Designation addresses environmental requirements for hazardous materials (Hazmat) and noise (window wall attenuation and alternative means of ventilation) during development.

### **2.2 Surrounding Property Land Use**

The site is located in a mixed-use area with commercial, residential, and institutional uses. The following is a summary of surrounding property usage:

Direction	Adjoining and Adjacent Properties			Surrounding Properties
	Block No.	Lot No.	Description	
North	599	1	37 <sup>th</sup> Avenue followed by Supreme Glass and Windows (30-01 37 <sup>th</sup> Avenue)	31 <sup>st</sup> Street (N and Q subway lines beneath) followed by multi-story and multi-family residential, commercial, and industrial buildings
West	371	23	30 <sup>th</sup> Street followed by a two-story industrial building (29-16 37 <sup>th</sup> Avenue)	Old Ridge Road followed by multi-story and multi-family residential buildings and industrial buildings
		27	30 <sup>th</sup> Street followed by a three-story industrial building (37-12 30 <sup>th</sup> Street)	
		29	30 <sup>th</sup> Street followed by a two-story industrial building (37-14 30 <sup>th</sup> Street)	
		31	30 <sup>th</sup> Street followed by a two-story industrial building (37-20 30 <sup>th</sup> Street)	
		32	30 <sup>th</sup> Street followed by a two-story commercial office building (37-22 30 <sup>th</sup> Street)	
		33	30 <sup>th</sup> Street followed by a one-story industrial building (37-24 30 <sup>th</sup> Street)	
		34	30 <sup>th</sup> Street followed by a two-story industrial building (37-28 30 <sup>th</sup> Street)	
South	372	7	Two-story public institution building (37-31 30 <sup>th</sup> Street)	Multi-story residential, mixed-use commercial and industrial buildings
		8	One-story industrial/ warehouse building (37-11 30 <sup>th</sup> Street)	
East	372	22	Two-story residential-commercial mixed-use building (30-16 37 <sup>th</sup> Avenue)	31 <sup>st</sup> Street (N and Q subway lines beneath) followed by multi-story mixed-use residential-commercial and commercial office buildings

Direction	Adjoining and Adjacent Properties			Surrounding Properties
	Block No.	Lot No.	Description	
East	372	8	One-story industrial/ warehouse building (37-11 30 <sup>th</sup> Street)	31 <sup>st</sup> Street (N and Q subway lines beneath) followed by multi-story mixed-use residential-commercial and commercial office buildings

Public infrastructure (storm drains, sewers, and underground utility lines) exists within the streets surrounding the site.

Land use within a half-mile radius is urban and includes residential, commercial, institutional, and light industrial buildings and public parks. The nearest ecological receptor is Dutch Kills Green, located about 2,150 feet southwest of the site. Sensitive receptors, as defined in DER-10, located within a half mile of the site include those listed below:

Number	Name (Approximate distance from site)	Address
1	Dutch Kills Playground (about 0.12 miles northwest of the site)	36 <sup>th</sup> Avenue and Crescent Street Queens, NY 11106
2	The Oliver Wendell Holmes Intermediate School 204 (about 0.12 miles north of the site)	36-41 28th Street Queens, NY 11106
3	Queensbridge Early Childhood Development Center (about 0.15 miles west of the site)	38-11 37th Street Queens, NY 11101
4	PS 112 Dutch Kills (about 0.17 miles northwest of the site)	25-05 37th Avenue Queens, NY 11101
5	Growing up Green Charter School (about 0.23 miles southwest of the site)	39-37 28th Street Queens, NY 11101
6	Baccalaureate School for Global Education (about 0.24 miles northeast of the site)	34-12 36th Avenue Queens, NY 11106
7	A.R.R.O.W. Field House (about 0.27 miles northeast of the site)	35-30 35 <sup>th</sup> Street Queens, NY 11106
8	Newcomers High School (about 0.29 miles southeast of the site)	28-01 41st Avenue Queens, NY 11101
9	PS 166 Henry Gradstein (about 0.32 miles northeast of the site)	33-09 35th Avenue Queens, NY 11106

<b>Number</b>	<b>Name (Approximate distance from site)</b>	<b>Address</b>
10	All Children's Child Care (about 0.34 miles northeast of the site)	35-01 24th Street Queens, NY 11106
11	Academy for New Americans (about 0.36 miles southeast of the site)	30-14 30th Street Queens, NY 11102
12	Andrew Landi Early Childhood Development Center (about 0.41 miles northeast of the site)	21-20 35th Avenue Queens, NY 11106
13	Sixteen Oaks Grove (about 0.41 miles northwest of the site)	13-19 37 <sup>th</sup> Avenue Queens, NY 11101
14	PS 111 Jacob Blackwell (about 0.45 miles northeast of the site)	37-15 13th Street Queens, NY 11101
15	Jackson Developmental Center and Children's Services (about 0.47 miles northeast of the site)	36-02 14th Street Queens, NY 11106
16	Playground 35 XXXV (approximately 0.48 miles northeast of the site)	35-01 Steinway Street Queens, NY 11101

## **2.3 Site Physical Conditions**

### **2.3.1 Topography**

According to the architectural drawing entitled "Z-001.00" prepared by Aufgang Architects, surface sidewalk elevations range from about el 41.55 feet<sup>1</sup> (at the southwest corner) to el 44.5 feet (on the north side). The topography of the site is generally level, with the surrounding land sloping towards the northeast.

### **2.3.2 Site Geology**

According to soil descriptions provided in the Focused Subsurface Investigation prepared by Merritt Environmental Consulting Corp. (Merritt) and dated July 7, 2014 (Appendix A), the subsurface strata beneath the proposed brownfield site consists of historic fill material generally characterized by sand with varying amounts of concrete, brick, and debris. The fill was limited to the upper five feet in each of the six borings advanced at the site. Native deposits that predominantly consist of fine- to coarse-grained sand with varying amounts of silt and silty clay were observed below the fill. Bedrock was not encountered during the 2014 Focused Subsurface Investigation; however, competent bedrock was encountered at depths ranging from about 40 to 50 feet bgs during a 2017 geotechnical investigation performed by Langan in

<sup>1</sup> Elevations in this RIWP refer to North American Vertical Datum of 1988 (NAVD88), which is about 1.1 feet above mean sea level at Sandy Hook, NJ.

the vicinity of the site. According to the United States Geological Survey (USGS) Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, dated 1994, bedrock beneath the site is the Hartland formation. The Hartland formation typically consists of gray sillimanite-garnet-microcline gneiss and fine-grained biotite-muscovite-quartz schist interlayered with quartz-plagioclase-muscovite pegmatite, hornblende amphibolite, and coarse granoblastic-textured amphibolite gneiss

### **2.3.3 Hydrogeology**

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, coverage by impervious surfaces, and subsurface structures. Other factors influencing groundwater include depth to bedrock, the presence of anthropogenic fill, and variability in local geology and groundwater sources or sinks.

Infiltration of precipitation to the water table is likely minimal due to the presence of impervious surfaces throughout the site. The majority of runoff drains to city sewers and then to one of the several wastewater treatment plants that serve the city. Groundwater in New York City is not used as a potable water source. Potable water provided to the City of New York is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

Groundwater was encountered during the 2014 Focused Subsurface Investigation at about 27 feet below grade surface (bgs) and is assumed to flow toward the west-northwest. The inferred regional groundwater flow direction for the area surrounding the site is to the west-northwest towards the East River. Groundwater elevations and flow direction will be established during the Remedial Investigation (RI).

### **2.3.4 Wetlands**

Wetlands on or near the site were evaluated by reviewing the National Wetlands Inventory and NYSDEC regulated wetlands map. There are no wetlands on or adjacent to the site.

## **2.4 Summary of Previous Environmental Investigations**

Previous environmental reports were reviewed to inform this RIWP. These reports, including copies of all soil boring logs, are summarized below and are included in Appendix A. Figures including spider diagrams showing exceedances for all previous investigation locations for soil,

groundwater, and soil vapor are included as Figures 3, 4, and 5. A sample collection summary table for subsurface investigations is included as Table 1.

1. Phase I Environmental Site Assessment (ESA), prepared by Hillman Consulting LLC, dated April 8, 2014
2. Focused Subsurface Site Investigation, prepared by Merritt Environmental Consulting Corp., dated July 7, 2014
3. Limited Subsurface Investigation, prepared by Hydro Tech Environmental Corp., dated December 2017

*Phase I ESA, prepared by Hillman Consulting LLC, dated April 8, 2014*

Hillman Consulting LLC (Hillman) conducted a Phase I ESA in April 2014. This Phase I ESA was conducted in general conformance with ASTM International's Standard Practice for Environmental Site Assessments E1527-13 and the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) Rule, for the purpose of identifying Recognized Environmental Conditions (RECs) in connection with the proposed brownfield site.

The following RECs were identified in the Phase I:

*REC 1 – Historic On-Site Operations*

The site historically operated as a plastics manufacturer (The Marblette Corp. Mfg. of Plastic Materials) from at least 1930 to about 1980. During this time period, plastic was typically made using a mixture of synthetic chemicals, chlorinated solvents, and petroleum products. Leaks or spills of petroleum products, solvents, and/or other hazardous materials associated with plastics manufacturing during the 50 years of on-site operations may have adversely affected soil, groundwater and/or soil vapor at the site.

*REC 2 - Historic Petroleum Storage and Use*

Documents indicate two underground storage tanks (UST), including a 2,000-gallon and 550-gallon UST, and 5,000-gallon above-ground storage tank (AST) were closed-in-place on July 7, 2000. The documents were prepared by U.S.A. Tank Maintenance, Inc. and were provided to the NYC Fire Department for documentation purposes. The tanks were not registered on the NYSDEC Petroleum Bulk Storage (PBS) database. Historical records documented the 5,000-gallon AST was installed in 1947, the 2,000-gallon UST was installed in 1933, and the 550-gallon UST was installed in 1941. According to historic Sanborn Fire Insurance Maps, a 10,000-gallon tank was also depicted at the site from 1947 to 1950; however the tank was not listed on any regulatory records. The property was listed in the Leaking Tanks (LTANK) database due to a tank test failure on April 21, 1998. According to records provided by NYSDEC, three soil borings were advanced in the vicinity of the tank in February 2000 as part of an investigation for

a proposed building expansion. No evidence of impacts to the subsurface was noted during the investigation, and NYSDEC closed the LTANKS case on September 15, 2004; however, undocumented spills or releases of petroleum products associated with the tanks or piping may have adversely affected soil, groundwater, or soil vapor.

### *REC 3 - Historical Use at Surrounding Properties*

Historical uses of adjoining and surrounding properties included auto repair facilities (1936, 1947-1950, 1999-2010), gasoline filling stations (1947-1950, 1970-1996, 2001-2006) dry cleaners (2004-2009), and various manufacturing facilities (1970-1996, 2001-2006). Records identified multiple lots in the surrounding area assigned with an Environmental Designation (E-Designation) for Hazardous Materials. The Hazardous Materials E-Designation requires appropriate subsurface investigation and remediation, if necessary, of each property assigned prior to redevelopment. Undocumented spills or releases of petroleum products or hazardous substances associated with historical uses of nearby properties including petroleum bulk storage may have adversely affected groundwater or soil vapor beneath the site.

### *Focused Subsurface Site Investigation, prepared by Merritt Environmental Consulting Corp., dated July 7, 2014*

Merritt Environmental Consulting Corp. (Merritt) completed a Focused Subsurface Site Investigation at the site in June 2014 to determine if soil and groundwater conditions at the site were impacted as a result of the historical use as a plastics manufacturing and historical petroleum bulk storage on site. The investigation included a geophysical survey, advancement of six soil borings, installation of four temporary groundwater monitoring wells, and collection of soil and groundwater samples. Field observations and laboratory analytical results are summarized below:

- Geophysical Survey: The geophysical survey identified two subsurface anomalies in locations consistent with the reported closed-in-place 2,000-gallon, and 550-gallon USTs. The 2,000-gallon UST was identified off-site in the sidewalk along 31<sup>st</sup> Street, which adjoins Lot 8 to the east. The 550-gallon UST was identified in the sidewalk along 30<sup>th</sup> Street, which adjoins Lot 8 to the west. Abandoned vent and fill lines were observed in the vicinity of the closed-in-place 5,000-gallon AST located in the east-central portion of Lot 8.
- Soil: Four soil borings were advanced up to 32 feet bgs using a track-mounted GeoProbe<sup>®</sup> rig in the vicinity of an oil/water separator and closed-in-place 2,000-gallon UST (B-3), along the western portion of the site (B-4), and in the northwest exterior stockyard/ storage area (B-5 and B-6). Two soil borings (B-1 and B-2) were advanced to six feet bgs in the vicinity of the closed-in-place 5,000-gallon heating oil AST. No evidence of petroleum impacts (e.g., staining, odors or photoionization detector [PID] readings above background) was observed during the soil boring investigation. Soil

samples were analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs). With the exception of methylene chloride (concentration of 0.004 milligrams per kilogram [mg/kg]), no VOCs were detected in soil samples. In addition, no SVOCs or PCBs were detected in soil samples.

- Groundwater: One VOC, chloroform (maximum concentration of 20 micrograms per liter [ $\mu\text{g/L}$ ]), was detected in monitoring well B-3GW at a concentration above the New York Codes, Rules and Regulations (NYCRR) Part 703.5 Groundwater Quality Standards (GQS). Chlorinated VOCs (CVOCs) including tetrachloroethene (PCE) (concentration of 3.5  $\mu\text{g/L}$  in monitoring well B-3GW) and 1,1,1-trichloroethane (concentration of 2.2  $\mu\text{g/L}$  in monitoring well B-4GW) were detected in two monitoring wells along the eastern and western perimeters of the site, but at concentrations below the NYSDEC GQS.

Limited Subsurface Investigation, prepared by Hydro Tech Environmental Corp., dated December 2017

Hydro Tech Environmental Corp. (Hydro Tech) performed a Limited Subsurface Investigation at the site in December 2017 to determine, to the extent practical, the nature and extent of contamination in soil, groundwater, and soil vapor. The investigation included advancement of 9 soil borings, installation of 5 groundwater monitoring wells, installation of 6 sub-slab and 3 soil vapor sampling points, and collection and analysis of soil, groundwater, soil vapor, sub-slab vapor, indoor air, and outdoor ambient air samples. Langan was provided with copies of the site sampling location plan, boring logs, monitoring well installation/ sampling logs, soil vapor sampling logs, laboratory analytical reports, and analytical result summary tables for soil, groundwater, and soil vapor samples collected during the limited investigation. Laboratory analytical results are summarized below:

- Soil: Metals including copper, mercury and lead were detected at concentrations above Title 6 NYCRR Part 375 Restricted Use Restricted-Residential (RRU) Soil Cleanup Objectives (SCOs). Metals including barium, hexavalent chromium, and zinc were detected at concentrations above Part 375 Unrestricted Use (UU) SCOs. One VOC, acetone, was detected at a concentration above the Part 375 UU SCOs. Soil samples collected throughout the site exceeded UU and/or RRU SCOs for the following metals (metals with concentrations exceeding the RRU SCOs are shown in bold):
  - Barium - 371 mg/kg in SP-9 (0'-2') (UU SCO 50 mg/kg, RRU SCO 400 mg/kg)
  - Hexavalent Chromium – 1.67 mg/kg in SP-4 (15'-17') (UU SCO 1 mg/kg)
  - **Copper** – 168 mg/kg in SP-9 (15'-17') to 312 mg/kg in SP-9 (0'-2') (UU SCO 50 mg/kg, RRU SCO 270 mg/kg)
  - **Lead** – 176 mg/kg in SP-4 (0'-2') to 2,900 mg/kg in SP-2 (0'-2') (UU SCO 63 mg/kg, RRU SCO 400 mg/kg)

- **Mercury** – 0.35 mg/kg in SP-4 (0'-2') to 3.19 mg/kg in SP-1 (0'-2') (UU SCO 0.18 mg/kg, RRU SCO 0.81 mg/kg)
- Zinc – 121 mg/kg in SP-5 (0'-2') to 713 mg/kg in SP-9 (0'-2') (UU SCO 109 mg/kg)
- Groundwater: Dissolved metals including magnesium, manganese, and sodium were detected at concentrations above the NYSDEC GQS. PCE was detected at concentrations ranging between 0.3 and 1.5 µg/L in three monitoring wells located in the west-central portion of the site (MW-3, MW-4, and MW-5). Detected concentrations of PCE in groundwater samples were below the NYSDEC GQS. Groundwater samples collected throughout the site exceeded NYSDEC GQS for the following total and dissolved metals:
  - Dissolved Magnesium – 40,900 µg/L in MW-1 to 49,000 µg/L in MW-2 (NYSDEC GQS 35,000 µg/L)
  - Dissolved Manganese - 359 µg/L in MW-2 to 968 µg/L in MW-1 (NYSDEC GQS 300 µg/L)
  - Dissolved Sodium – 30,600 µg/L in MW-5 to 309,000 µg/L in MW-1 (NYSDEC GQS 20,000 µg/L)
- Indoor Air, Sub-Slab Vapor, and Soil Vapor: Indoor air analytical results were compared to the Air Guidance Values (AGV) specified in the New York State Department of Health (NYSDOH) guidance document. PCE was detected at a concentration of 68 micrograms per cubic meter (µg/m<sup>3</sup>) in indoor air sample IA-1, and at 66 µg/m<sup>3</sup> in indoor air sample IA-2, which is two-times greater than the NYSDOH AGV of 30 µg/m<sup>3</sup>. PCE concentrations detected in sub-slab vapor samples ranged from 7 µg/m<sup>3</sup> at SSB-6 to 12,000 µg/m<sup>3</sup> at SSB-1. Trichloroethene (TCE) concentrations detected in sub-slab vapor samples ranged from 7.70 µg/m<sup>3</sup> at SSB-2 to 16 µg/m<sup>3</sup> at SSB-1. TCE was detected at concentrations between 0.26 µg/m<sup>3</sup> and 0.46 µg/m<sup>3</sup> in indoor air samples collected. Currently the site buildings are vacant and unoccupied.

In addition, NYSDOH provides decision matrices for eight chlorinated VOCs (carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, TCE, methylene chloride, PCE, 1,1,1-trichloroethane, and vinyl chloride). The decision matrices recommend a range of activities based on the soil vapor and sub-slab and indoor air sample results collected. Two of the eight VOCs, PCE and TCE, that can be evaluated using the NYSDOH decision matrices were detected in sub-slab vapor samples. Based on the concentrations detected, the NYSDOH decision matrices recommend mitigation for PCE and monitoring for TCE.

## 2.5 Areas of Concern

Based on site history and the findings of the previous studies, the areas of concern (AOCs) to be further investigated during the RI, and shown on Figure 6, are described below:

### **AOC 1: Historic Fill**

Material from unknown sources may have been used as backfill during various phases of the site development history. According to boring logs from the 2014 Focused Subsurface Investigation performed by Merritt, the fill layer extends up to 5 feet bgs across the site. Fill material consisted of sand with crushed brick, concrete and construction debris. Soil samples collected during the 2017 Limited Subsurface Investigation performed by Hydro Tech identified metals, including copper, lead, and mercury, in shallow fill exceeding the RRU SCOs.

### **AOC 2: Historical Site Use**

The site historically operated as a plastics manufacturer (The Marblette Corp. Mfg. of Plastic Materials) from at least 1930 to about 1980. During this time period, plastic was typically made using a mixture of synthetic chemicals, solvents, and petroleum products. Releases of petroleum products, solvents, and/or other hazardous materials associated with plastics manufacturing during the 50 years of on-site operations may have adversely affected soil, groundwater and/or soil vapor.

### **AOC 3: Historical and Suspect Petroleum Storage on Site**

Historical records indicate one 550-gallon UST located in the sidewalk adjoining the site along 30<sup>th</sup> Street was installed in 1941 and closed-in-place on July 7, 2000. According to Sanborn Fire Insurance Maps, a 10,000-gallon tank was also depicted at the site from 1947 to 1950 in the east-central part of the site; however the tank was not listed on any regulatory records. Undocumented releases of petroleum products associated with the closed-in-place UST or suspect 10,000-gallon UST or associated piping may have adversely affected soil, groundwater, or soil vapor.

### **AOC 4: PCE and TCE Impacted Soil Vapor**

During the 2017 Limited Subsurface Investigation by Hydro Tech, chlorinated solvents, including PCE and TCE, were detected in soil vapor and sub-slab vapor samples throughout the site. PCE was detected at a concentration of 68 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) in indoor air sample IA-1, and at 66  $\mu\text{g}/\text{m}^3$  in indoor air sample IA-2, which is two-times greater than the NYSDOH AGV of 30  $\mu\text{g}/\text{m}^3$ . PCE concentrations detected in sub-slab vapor samples ranged from 7  $\mu\text{g}/\text{m}^3$  at SSB-6 to 12,000  $\mu\text{g}/\text{m}^3$  at SSB-1. Trichloroethene (TCE) concentrations above the NYSDOH AGV of 2  $\mu\text{g}/\text{m}^3$  were detected in three soil vapor samples collected throughout the western part of Lot 8 (within the proposed BCP site boundary). TCE concentrations detected in soil vapor samples ranged from 7.70  $\mu\text{g}/\text{m}^3$  at SSB-2 to 16  $\mu\text{g}/\text{m}^3$  at SSB-1. Based on a comparison of PCE and TCE concentrations detected in soil vapor and sub-slab vapor to NYSDOH decision matrices, mitigation is recommended for both CVOCs.

### **AOC 5: Historical Use of Adjoining Properties**

Historical uses of adjoining and surrounding properties included auto repair facilities (1936, 1947-1950, 1999-2010), gasoline filling stations (1947-1950, 1970-1996, 2001-2006) dry cleaners (2004-2009), plastics manufacturing (1930-1980), and various manufacturing facilities (1970-1996, 2001-2006). In addition, 37-29 31<sup>st</sup> Street (about 230 feet southeast and upgradient of the site) was formerly an auto repair and gasoline filling station (1936, 1970-1996) and was identified by NYSDEC as a Significant Threat Site based on documented concentrations of chlorinated solvents in soil vapor. Undocumented spills or releases of petroleum products or hazardous substances associated with historical uses of nearby properties may have adversely affected groundwater or soil vapor beneath the site.

### **3.0 SCOPE OF WORK**

The objective of this RIWP is to investigate and characterize “the nature and extent of the contamination at and/or emanating from the brownfield site,” per Environmental Conservation Law (ECL) Article 27, Title 14 (Brownfield Cleanup Program). The rationale for each sampling location in relation to the AOCs and analytical parameters for each proposed sample are provided in Table 2. The field tasks are discussed in more detail in the following sections.

#### Geophysical Survey

- The survey will attempt to locate any unidentified USTs or underground structures and identify utilities on site. Sampling locations may be relocated as necessary based on the findings of the geophysical survey.

#### Soil Borings and Sampling

- Advance 9 soil borings to about 30 to 35 feet bgs
- Advance 4 soil borings to top of bedrock, estimated to about 40 to 50 feet bgs
- Collect three to four soil samples from each soil boring location for a total of 52 soil samples (plus quality assurance/quality control [QA/QC] samples) for laboratory analysis

#### Monitoring Well Installation and Sampling

- Install and develop 9 permanent monitoring wells at select shallow soil boring locations. The four deep borings will be completed with coupled permanent monitoring wells (one shallow and one deep), for a total of 13 wells.
- Collect one groundwater sample from each monitoring well (plus QA/QC samples) for laboratory analysis
- Survey and gauge monitoring wells to evaluate groundwater elevations and establish groundwater flow direction
- Develop a groundwater contour map

#### Sub-Slab Vapor, Indoor Air, and Ambient Air Sampling

- Install four sub-slab vapor points directly below the existing building slabs
- Install two soil vapor points to a depth of 5 feet below grade surface
- Collect one vapor sample from each vapor point (plus QA/QC samples [duplicate and outdoor ambient air]) for laboratory analysis

- Collect one co-located indoor air sample for each of the four sub-slab points to evaluate vapor intrusion potential

Modifications to this scope of work may be required: 1) due to site operations, equipment or restrictions; 2) in the event that unexpected contamination is detected and additional analytical data is needed; and 3) to attempt to confirm that impacts are adequately characterized and delineated in compliance with the Brownfield Law, regulations and applicable investigation guidance documents (e.g., DER-10). NYSDEC and NYSDOH will be contacted to obtain approval for these modifications.

The field investigation will be completed in accordance with NYSDEC DER-10 Guidance, the procedures specified in the Health and Safety Plan (HASP) and Quality Assurance Project Plan (QAPP) included as Appendices B and C, respectively. The site access agreement is included in Appendix D. A Community Air Monitoring Plan will be implemented during this investigation (see Section 3.8.2).

The names, contact information and roles of the principal personnel who will participate in the investigation, including project managers, and subcontractors are listed below. The HASP (Appendix B) contains emergency contact information (HASP Table 5) and a map with a route to the nearest hospital (HASP Figure 2). Resumes for Langan employees involved in the project are included in the QAPP (Appendix C).

### **3.1 Geophysical Survey**

We will coordinate with a geophysical contractor to clear subsurface testing locations of potential subsurface utilities and to locate any USTs. The geophysical survey will be completed using a collection of geophysical instruments, including electromagnetic and utility line locator instruments and ground-penetrating radar (GPR). Borings will be relocated as necessary to avoid subsurface utilities, infrastructure, or other impediments identified during the survey.

### **3.2 Soil Investigation**

#### **3.2.1 Drilling and Logging**

An environmental drilling subcontractor will advance at least 13 soil borings (designated SB01 through SB13) to further investigate the AOCs identified in Section 2.5. A plan showing the proposed boring locations is included as Figure 3. A Langan engineer will document the work, screen the soil samples for environmental impacts, and collect environmental samples for laboratory analyses. Work will comply with the safety guidelines outlined in the HASP (Appendix B).

Nine soil borings will be advanced to about 30 to 35 feet bgs using direct-push drilling technology (Geoprobe<sup>®</sup>). The four deep soil borings will be advanced to bedrock (expected at about 40 to 50 feet bgs) using a track-mounted Sonic<sup>®</sup> drill rig. Soil will be screened continuously to the boring termination depth with a PID equipped with a 10.6 electron volt (eV) bulb and for visual and olfactory evidence of environmental impacts (e.g., staining and odor). Soil descriptions will be recorded in a field log. Boring logs will be presented in the Remedial Investigation Report (RIR).

#### **3.2.2 Soil Sampling and Analysis**

Up to four grab soil samples will be collected for laboratory analysis from each boring. One sample will be collected from the 0-2 foot bgs interval. A second sample will be collected at variable intervals within the historic fill layer, if encountered, or from the interval exhibiting the greatest degree of contamination, where observed (based on the presence of staining, odor, and/or PID readings above background). A third sample will be collected from native material at the groundwater interface. If field evidence of contamination is noted (e.g., PID readings above background, staining, odor), a fourth sample will be collected where this evidence is absent, to document the vertical extent of impacted soil. The proposed soil samples are summarized in Table 2. Non-disposable, down-hole drilling equipment and sampling apparatus will be decontaminated between locations with Alconox<sup>®</sup> and water.

The samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of about 4°C) for delivery to a

NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Soil samples will be analyzed using the latest USEPA methods as follows:

- Target Compound List (TCL) VOCs by USEPA methods 8260C/5035
- TCL SVOCs by USEPA method 8270D
- PCBs by USEPA method 8082A
- Target Analyte List (TAL)/ Part 375 List metals (including cyanide and hexavalent and trivalent chromium) by USEPA Methods 6010C/7471B/9010C/7196A.
- Pesticides and herbicides by USEPA methods 8081B and 8151A for historic fill samples, respectively

Relevant QA/QC procedures to be followed are described in the QAPP in Appendix C.

### **3.3 Groundwater Investigation**

#### **3.3.1 Monitoring Well Installation**

Nine soil borings, including four the borings that are advanced to the bedrock contact, will be converted to permanent groundwater monitoring wells. In addition, four permanent wells will be paired with the deep wells, forming a monitoring well couplet. A plan showing the proposed well locations is included as Figure 3. Wells will be installed across the observed water table and will be constructed with 2-inch diameter, threaded, flush-joint, polyvinyl chloride (PVC) casing and 0.01-inch slot well screens. Each of the four deep wells will include a 5-foot screen at the bedrock contact. Clean sand will be used to fill the annulus around the screen up to about two feet above the top of the screened interval. A 2-foot bentonite seal will be installed above the sand and the borehole annulus will be grouted to the surface. If significant confining units are encountered during drilling, double-cased wells will be installed to prevent contamination from crossing the confining layer. The wells will be finished with flush-mounted steel manhole covers.

Following installation, the wells will be developed using a surge block across the well screen to agitate and remove fines. The surge block will be moved within the well screen in 2- to 3-foot increments for approximately 2 minutes per increment. After surging, the well will be purged via pumping until the water becomes clear (having turbidity less than 50 Nephelometric Turbidity Units [NTU]). The well will then be allowed to sit for a minimum of one week prior to collecting groundwater samples.

### **3.3.2 Monitoring Well Survey**

The location and elevation of the groundwater monitoring wells (top of casing elevations) will be surveyed. This data will be used with the groundwater well gauging data to prepare a groundwater contour map and document the direction of groundwater flow. Vertical control will be established by surveying performed relative to the NAVD88 datum by a NYS-licensed land surveyor. Elevations of the top of monitoring well casings and protective well casings will be surveyed to the nearest 0.01 foot.

### **3.3.3 Groundwater Sampling and Analysis**

One groundwater sample will be collected from each of the 13 wells, as summarized in Table 2. Prior to sampling, the monitoring wells will be gauged for static water levels and purged. Purging will consist of pumping, at minimum, the stabilized drawdown volume plus the pump's tubing volume, and waiting until the physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, turbidity) stabilize within the ranges specified in the USEPA's Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples From Monitoring Wells, revised September 19, 2017. Samples will be collected with a submersible pump and dedicated polyethylene tubing. The pump will be decontaminated with Alconox<sup>®</sup> and water between each sample location. Development and purge water will be containerized for off-site disposal.

The groundwater samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of about 4°C) for delivery to the laboratory. Groundwater samples will be analyzed using the latest USEPA methods as follows:

- TCL VOCs by USEPA method 8260C
- TCL SVOCs by USEPA method 8270D (1,4-dioxane by 8270 SIM isotope dilution)
- PCBs by USEPA method 8082A
- Metals (filtered and unfiltered) by USEPA method 6010C/7470
- Pesticides and herbicides by EPA methods 8081B and 8151A, respectively
- Perfluoralkyl Substances (PFAS) by EPA Method 537 (three samples)

QA/QC procedures to be followed are described in the QAPP in Appendix C.

### **3.4 Soil Vapor and Sub-Slab Vapor Investigation**

#### **3.4.1 Soil Vapor and Sub-Slab Vapor Point Installation**

Four sub-slab vapor points and two soil vapor points will be installed in accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York, with updates" (October 2006). A plan showing the proposed sub-slab and soil vapor locations is included as Figure 3. The sub-slab vapor points will be installed below the existing building slab using a concrete core or hammer drill to about 2 inches beneath the base of the slab. Soil vapor points will be installed by advancing vapor probes to about 5 feet below grade. The sub-slab and soil vapor collection points will consist of inert sample tubing (i.e., polyethylene or Teflon). The annulus (i.e., the sampling zone) around the installed tubing will be filled with a clean, coarse sand pack followed by a hydrated bentonite seal to surface grade.

#### **3.4.2 Soil Vapor and Sub-Slab Vapor Sampling and Analysis**

Samples will be collected in general accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York, with updates" (October 2006). The proposed vapor samples are summarized in Table 2. Before collecting vapor samples, one to three vapor probe volumes (i.e., the volume of the sample implant and tubing) will be purged from each sample point at a rate of less than 0.2 liters per minute using a RAE Systems MultiRAE<sup>®</sup> meter. Purged sub-slab vapor will be monitored for VOCs and methane with the MultiRAE<sup>®</sup> during this process.

A helium tracer gas will be used in accordance with NYSDOH protocols to serve as a QA/QC technique to document the integrity of each sub-slab vapor sampling point seal before and after sampling. The tracer gas will be introduced into a container surrounding the vapor point and seal. Helium will be measured from the sampling tube and inside the container. If the sample tubing contains more than 10% of the tracer gas concentration that was introduced into the container, then the seal is considered compromised and should be enhanced or reconstructed to reduce outside air infiltration.

After the integrity of each seal is confirmed, sub-slab and soil vapor samples will be collected into laboratory-supplied, batch-certified clean 2.7- or 6-liter Summa<sup>®</sup> canisters with calibrated flow controllers. Sub-slab vapor samples will be collected over an 8-hour sampling period. All vapor samples will be analyzed for VOCs by USEPA Method TO-15.

A log sheet for each sub-slab and soil vapor sample will be completed to record sample identification, date and time of sample collection, sampling depth, name of the field engineer responsible for sampling, sampling methods and equipment, vapor purge volumes, volume of vapor extracted, flow rate, and vacuum of canisters before and after sample collection.

### **3.4.3 Ambient Air and Indoor Air Sampling**

An ambient air sample will be collected at a height above the ground to represent the breathing zone (about 3 to 5 feet). The air sample will be collected over an 8-hour sampling period (concurrently with the sub-slab and indoor air samples) and analyzed for VOCs by USEPA TO-15 to evaluate potential outdoor air interferences with the sampling apparatus.

Four indoor air samples will be co-located with the sub-slab vapor samples, as described in Table 2, and collected over an 8-hour sampling period (concurrently with the sub-slab vapor samples) to evaluate vapor intrusion potential. The samples will be analyzed for VOCs by USEPA TO-15.

QA/QC procedures to be followed are described in the QAPP in Appendix C.

### **3.5 Data Management and Validation**

Laboratory analyses of soil, groundwater, vapor, and air samples will be conducted by a NYSDOH ELAP-approved laboratory in accordance with USEPA SW-846 methods and NYSDEC Analytical Services Protocol (ASP) Category B deliverable format. Environmental data will be reported electronically using the database software application EQulS as part of NYSDEC's Environmental Information Management System (EIMS). Preliminary (draft) soil vapor intrusion data will be provided to the NYSDEC and NYSDOH Project Managers as soon as it is available along with copies of completed product inventories and building questionnaires.

Table 2 summarizes the proposed samples and laboratory analyses. QA/QC procedures required by the NYSDEC ASP and SW-846 methods, including initial and continuing instrument calibrations, standard compound spikes, surrogate compound spikes, and analysis of other samples (blanks, laboratory control samples, and matrix spikes/matrix spike duplicates), will be followed. The laboratory will provide sample bottles, which will be pre-cleaned and preserved in accordance with the SW-846 methods. Where there are differences in the SW-846 and NYSDEC ASP requirements, the NYSDEC ASP shall take precedence.

Data validation will be performed in accordance with the USEPA validation guidelines for organic and inorganic data review. Validation will include the following:

- Verification of QC sample results (both qualitative and quantitative).
- Verification of sample results (both positive hits and non-detects).
- Recalculation of 10 percent of all investigative sample results.
- Preparation of Data Usability Summary Reports (DUSRs).

The DUSRs will be prepared and reviewed by the Program Quality Assurance Monitor (PQAM). The DUSRs will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and COC procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. A detailed assessment of each sample delivery group (SDG) will follow. Additional details on the DUSRs are provided in the QAPP in Appendix C.

### **3.6 Management of Investigation-Derived Waste**

Soil cuttings will be returned to the borehole unless:

- Free product or grossly-contaminated soil is present in the cuttings;
- The borehole has penetrated a confining layer;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability; and
- The soil cannot fit into the borehole.

Boreholes requiring disposal of drill cuttings will be filled with hydrated bentonite chips or clean sand and capped with asphalt or concrete. Excess investigation-derived waste (IDW), including soil cuttings, purged groundwater, and decontamination fluids, will be containerized in properly-labeled and sealed United Nations/Department of Transportation (UN/DOT)-approved 55-gallon drums and staged for future waste characterization and off-site disposal at a facility permitted to accept the waste. The drums will be staged in a secure area on-site, pending receipt of laboratory data and off-site disposal to an appropriate facility.

### **3.7 Air Monitoring**

Air monitoring will be conducted for site workers and the community (Community Air Monitoring Program). Air monitoring results will be recorded in the field book during the investigation activities. Fugitive particulate (dust) generation that could affect site workers or the community is not expected for the following reasons:

- Most of the work area and the boring locations are paved with asphalt or concrete; therefore, vehicle movement will not generate dust
- Intrusive work is limited to boring, sub-slab vapor point, and well installation, which does not generate large volumes of soil cuttings or dust

### **3.7.1 Worker Air Monitoring**

Air monitoring of the breathing zone will be performed periodically during drilling and sampling activities to document health and safety protection for the work team. VOCs will be monitored with a PID in accordance with the HASP (Appendix B). If air monitoring during intrusive operations identifies the presence of VOCs, the field engineer will follow the guidelines outlined in the HASP regarding action levels, permissible exposure, engineering controls, and personal protective equipment. If the VOC action level is exceeded, work will cease and the work location will be evacuated. Monitoring will continue until the levels drops to permissible limits, at which point, work will resume with continued monitoring. If high levels persist, field activities will be halted and the work relocated to another area. If dust emissions are observed, work will stop and dust suppression measures (i.e., water spray) will be implemented.

### **3.7.2 Community Air Monitoring Plan**

In addition to air monitoring in the worker breathing zone, community air monitoring will be performed in compliance with the NYSDOH Generic Community Air Monitoring Plan (CAMP) during all intrusive work for the duration of the investigation. The CAMP is included in Appendix E.

The CAMP will consist of continuous monitoring for VOCs and dust emissions during ground-intrusive activities (i.e., soil boring and monitoring well installation). Concentrations of VOCs and dust emissions will be measured at both the upwind (one) and downwind (two) CAMP stations before the start of the RI to establish background concentrations. During the RI, VOCs and dust emissions will be measured at the start of each workday, and at one-minute intervals throughout the day at the downwind and upwind downwind perimeter of the work zone, which will be established at points on the site where the general public or site employees may be present. VOC Monitoring will be conducted with a PID equipped with a 10.6 eV lamp. VOC community air monitoring requirements will be conducted until it is determined that the site is not a source of organic vapors. Dust emissions will be monitored using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM10) and capable of averaging a period of 15 minutes (or less) for comparison to the airborne particulate action level (e.g., DustTrak). If dust emissions are observed, work will stop and dust suppression measures will be used. The results will be presented in the daily reports (see DER-10 for details).

### **3.8 Qualitative Human Health Exposure Assessment**

A Qualitative Human Health Exposure Assessment will be conducted in accordance with Appendix 3B of the NYSDEC DER-10, *Technical Guidance for Site Investigation and Remediation*. The assessment will be submitted in the RIR.

## **4.0 REPORTING**

### **4.1 Remedial Investigation Report**

Following completion of the RI and receipt of analytical data, an RIR will be prepared. The report will include:

- A summary of the site history and previous investigations
- A description of site conditions
- Sampling methodology and field observations
- An evaluation of the results and findings
- Conclusions and recommendations for any further assessment (if warranted), and remedial action objectives

The report will summarize the nature and extent of contamination at each area of concern and identify unacceptable exposure pathways (as determined through a Qualitative Human Health Exposure Assessment).

The report will include soil boring and well construction logs, sampling logs, tabulated analytical results, figures, and laboratory data packages. The tabulated analytical results will be organized in table format and include sample location, media sampled, sample depth, field/laboratory identification numbers, analytical results and the applicable Standards, Criteria, and Guidance (SCGs) pertaining to the site and contaminants of concern for comparison. The report will include scaled figures showing the locations of soil borings, monitoring wells, and sub-slab vapor points, sample concentrations above SCGs for each media, groundwater elevation contours and flow direction, and, if appropriate, groundwater contaminant concentration contours.

### **4.2 Daily Reports**

Daily reports will be submitted to NYSDEC and NYSDOH Project Managers by the end of each day following the reporting period and will include:

- An update of progress made during the reporting day
- Locations of work and quantities of material imported and exported from the site
- References to alpha-numeric map for site activities
- A summary of any and all complaints with relevant details (names, phone numbers)
- A summary of CAMP findings, including exceedances

- An explanation of notable site conditions

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to the RIWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the RIWP will be addressed directly to NYSDEC Project Manager via personal communication.

Daily Reports will include a description of daily activities keyed to an alpha-numeric map for the site that identifies work areas. These reports will include a summary of CAMP results, odor and dust problems and corrective actions, and all complaints received from the public.

The NYSDEC-assigned project number will appear on all reports.

#### **4.3 Monthly Reports**

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers by the 10th of each month and will include:

- Activities relative to the site during the previous reporting period and those anticipated for the next reporting period, including a quantitative presentation of work performed (i.e. tons of material exported and imported, etc.)
- Description of approved activity modifications, including changes of work scope and/or schedule
- Sampling results received following internal data review and validation, as applicable
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays

#### **4.4 Other Reporting**

Photographs will be taken of all remedial activities and submitted to NYSDEC in digital format. Photos will illustrate all remedial program elements and will be of acceptable quality. Representative photos will be provided of each contaminant source, source area and site structures before, during and after remediation. Photos will be included in the daily reports as needed, and a comprehensive collection of photos will be included in the Final Engineering Report.

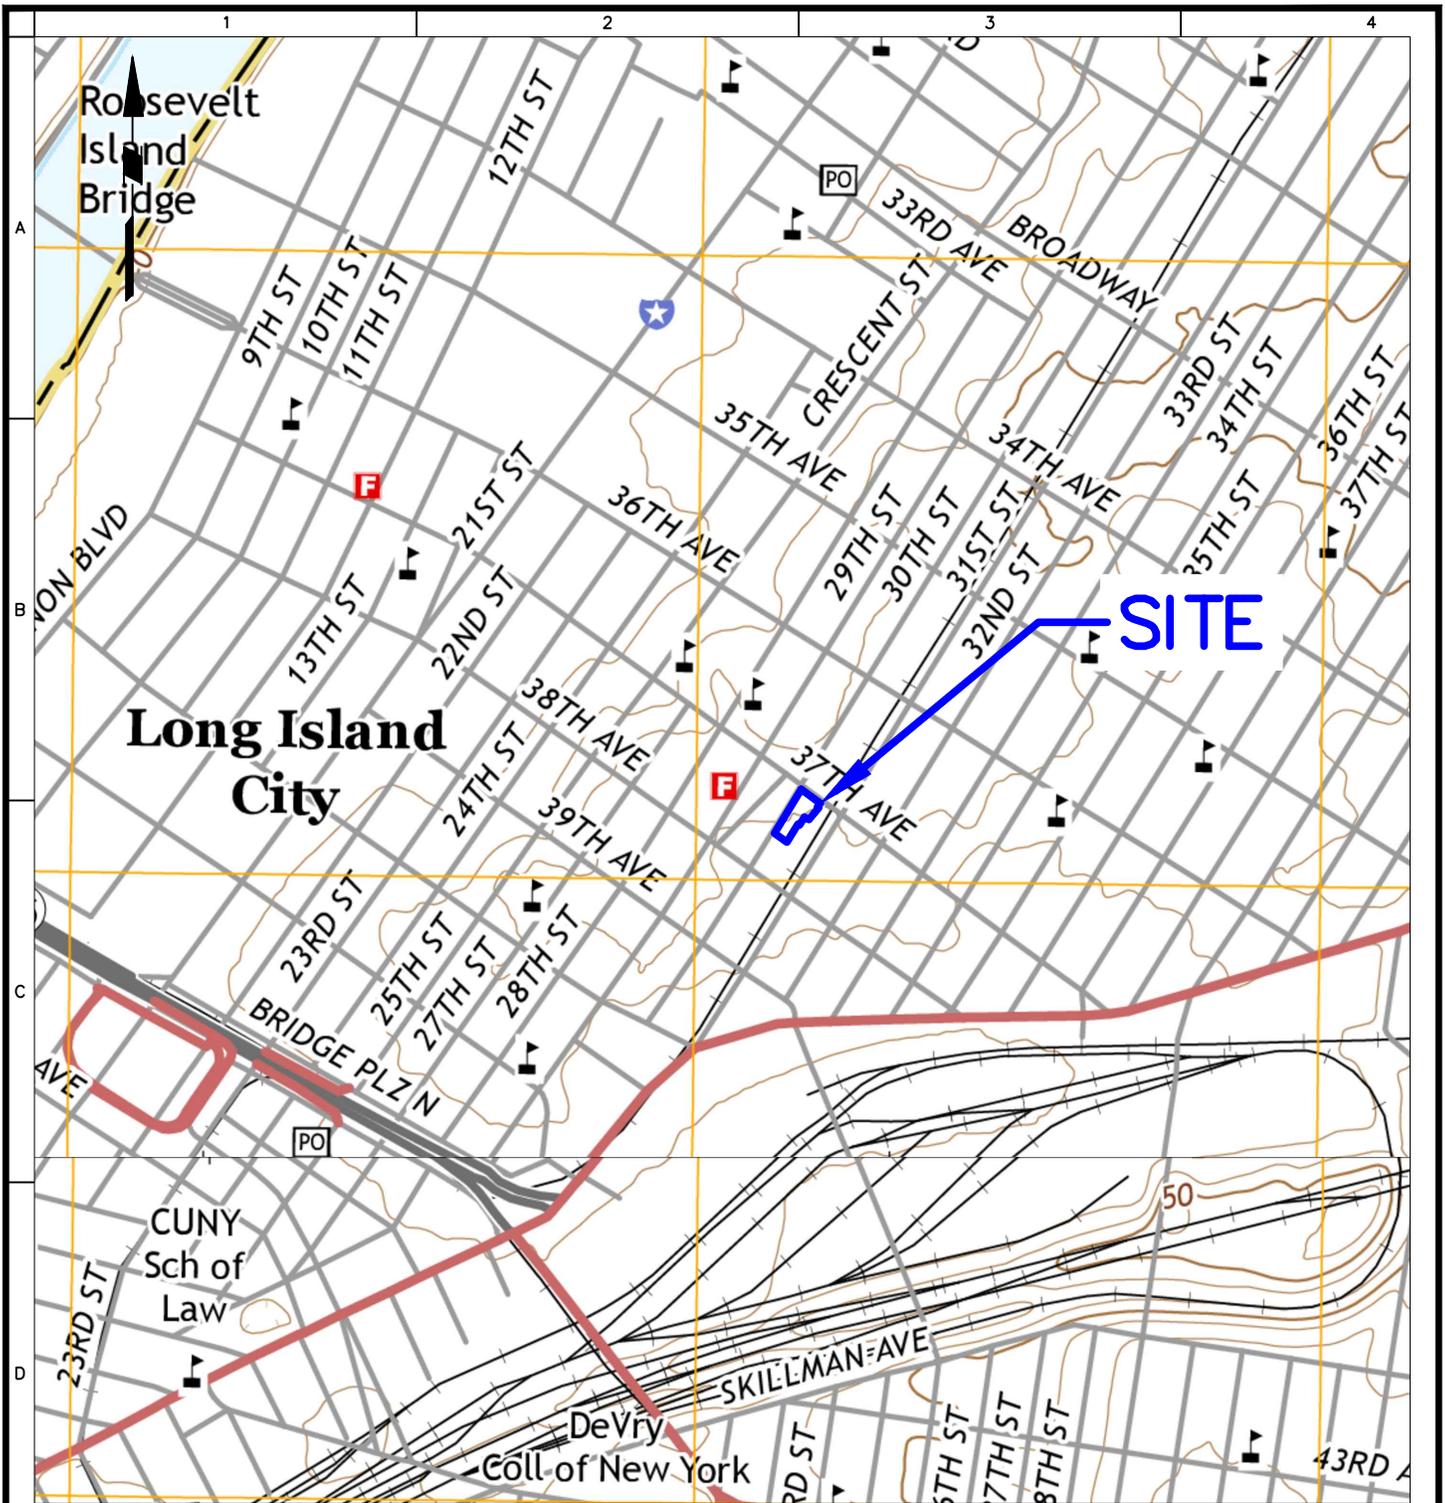

Job-site record keeping for all remedial work will be appropriately documented. These records will be maintained on-site at all times during the project and be available for inspection by NYSDEC and NYSDOH staff.

## 5.0 SCHEDULE

The table below presents an anticipated schedule for the proposed RI and reporting following the approval of the RIWP and execution of the BCA. If the schedule changes, it will be updated and submitted to the NYSDEC.

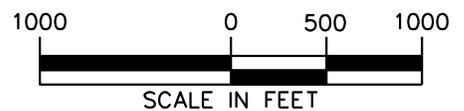

Activity	Weeks after BCA Execution and RIWP Approval							
	1	2	3	4	5	6	7	8
Coordinate/ Contact Driller and Laboratory								
Perform Geophysical Survey								
Install Soil Borings, Collect Soil Samples								
Install Sub-Slab Vapor Points, Collect Sub-Slab Vapor, Indoor Air, and Ambient Air Samples								
Install Monitoring Wells								
Collect Groundwater Samples and Gauge Wells								
Perform Monitoring Well Survey								
Receive Laboratory Analytical Results								
Data Validation								
Preparation and Submission of Remedial Investigation Report

1	SB01_depth	Grab	SB01	Investigate AOC 1, AOC 2, and AOC 4	upper 2 feet of historic fill	Part 375-list* of VOCs, SVOCs, PCBs, Pesticides/Herbicides*, and Metals	
2	SB01_depth				greatest degree of impacts or historic fill layer		
3	SB01_depth				immediately below impacts		
4	SB01_depth		native material/ groundwater interface				
5	SB02_depth		upper 2 feet of historic fill				
6	SB02_depth		SB02	Investigate AOC 1, AOC 2, AOC 4, and AOC 5	immediately below impacts		
7	SB02_depth				greatest degree of impacts or historic fill layer		
8	SB02_depth				native material/ groundwater interface		
9	SB03_depth		SB03	Investigate AOC 1, AOC 2, and AOC 3	upper 2 feet of historic fill		
10	SB03_depth				greatest degree of impacts or historic fill layer		
11	SB03_depth				immediately below impacts		
12	SB03_depth		native material/ groundwater interface				
13	SB04_depth		SB04	Investigate AOC 1, AOC 2, AOC 3, AOC 4, and AOC 5	upper 2 feet of historic fill		
14	SB04_depth				greatest degree of impacts or historic fill layer		
15	SB04_depth				immediately below impacts		
16	SB04_depth		native material/ groundwater interface				
17	SB05_depth		SB05	Investigate AOC 1, AOC 2, AOC 4, and AOC 5	upper 2 feet of historic fill		
18	SB05_depth				greatest degree of impacts or historic fill layer		
19	SB05_depth				immediately below impacts		
20	SB05_depth		native material/ groundwater interface				
21	SB06_depth		SB06	Investigate AOC 1, AOC 2, AOC 4, and AOC 5	upper 2 feet of historic fill		
22	SB06_depth				greatest degree of impacts or historic fill layer		
23	SB06_depth				immediately below impacts		
24	SB06_depth		native material/ groundwater interface				
25	SB07_depth		SB07	Investigate AOC 1, AOC 2, AOC 4, and AOC 5	upper 2 feet of historic fill		
26	SB07_depth				greatest degree of impacts or historic fill layer		
27	SB07_depth				immediately below impacts		
28	SB07_depth		native material/ groundwater interface				
29	SB08_depth		SB08	Investigate AOC 1	upper 2 feet of historic fill		
30	SB08_depth				greatest degree of impacts or historic fill layer		
31	SB08_depth				immediately below impacts		
32	SB08_depth		native material/ groundwater interface				
33	SB09_depth		SB09	Investigate AOC 1, AOC 2 and AOC 5	upper 2 feet of historic fill		
34	SB09_depth				greatest degree of impacts or historic fill layer		
35	SB09_depth				immediately below impacts		
36	SB09_depth		native material/ groundwater interface				
37	SB10_depth		SB10	Investigate AOC 1, and AOC 5	upper 2 feet of historic fill		
38	SB10_depth				greatest degree of impacts or historic fill layer		
39	SB10_depth				immediately below impacts		
40	SB10_depth		native material/ groundwater interface				
41	SB11_depth		SB11	Investigate AOC 1, AOC 2 and AOC 5	upper 2 feet of historic fill		
42	SB11_depth				greatest degree of impacts or historic fill layer		
43	SB11_depth				immediately below impacts		
44	SB11_depth		native material/ groundwater interface				
45	SB12_depth		SB12	Investigate AOC 1, AOC 2 and AOC 5	upper 2 feet of historic fill		
46	SB12_depth				greatest degree of impacts or historic fill layer		
47	SB12_depth				immediately below impacts		
48	SB12_depth		native material/ groundwater interface				
49	SB13_depth		SB13	Investigate AOC 1, AOC 2, and AOC 4	upper 2 feet of historic fill		
50	SB13_depth				greatest degree of impacts or historic fill layer		
51	SB13_depth				immediately below impacts

**Areas of Concern (AOCs):**

- AOC 1 - Historic fill with elevated metals concentrations
- AOC 2 - Historical site use
- AOC 3 - Historical and suspect petroleum storage
- AOC 4 - Tetrachloroethene (PCE) and trichloroethene (TCE) impacts to soil vapor
- AOC 5 - Historical use of adjoining properties

**Notes:**

1. Sample depth intervals will be determined in the field.
2. Soil samples to be analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Part 375-list compounds.
3. If field evidence of contamination is noted (e.g., PID readings above background, staining, odor), a fourth sample will be collected where this evidence is absent, to document the vertical extent of impacted soil.
4. TBD = to be determined (in the field)
5. VOC = volatile organic compound
6. SVOC = semivolatile organic compound
7. PCB = polychlorinated biphenyl
8. TCL = Target Compound List
9. TAL = Target Analyte List
10. QA/QC = quality assurance/quality control
11. NA = not applicable
12. PFAS = perfluorinated chemicals
13. \* = Only pesticides and herbicides will be collected from the historic fill interval
14. \*\* = Three (3) groundwater samples will be collected for PFAS analysis

**RE: Phase I Environmental Site Assessment**  
37-11 30<sup>th</sup> Street  
Long Island City, New York 11101  
Hillmann Project No: Z33293

Dear Ms. Webb:

Hillmann Consulting, LLC, is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in accordance with the scope and limitations of ASTM Practice E 1527-13, which is the latest version of the E1527 standard published by the ASTM.

This report is for the exclusive use of the entities named on the front cover, its affiliates, designates and assignees, rating agencies, prospective bond holders and bond holders, and no other party shall have any right to rely on any service provided by Hillmann Consulting, LLC, without prior written consent.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact the Project Manager at 908-688-7800.

Very Truly Yours,  
Hillmann Consulting, LLC

Craig Downs  
National Accounts Manager

## List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AST	– Aboveground Storage Tank
ASTM	– American Standard for Testing Materials
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DNPL	– Delisted National Priority List
ENG	– Engineering
ERNS	– Emergency Response Notification System
FDNY	– Fire Department, City of New York
FOI	– Freedom of Information
FOIA	– Freedom of Information Act
FOIL	– Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
INST	– Institutional
ISRA	– Industrial Site Recovery Act
LBP	– Lead-Based Paint
LQG	– Large Quantity Generator
LTANK	– Leaking Storage Tank
MSDS	– Material Safety Data Sheet
NCDOH	– Nassau County Department of Health
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NJDEP	– New Jersey Department of Environmental Protection
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
NYCDEP	– New York City Department of Environmental Protection
NYCDOB	– New York City Department of Building
NYSDEC	– New York State Department of Environmental Conservation
OPRA	– Open Public Records Act
PADEP	– Pennsylvania Department of Environmental Protection
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System
REC	– Recognized Environmental Condition
SCDHS	– Suffolk County Department of Health Services
SQG	– Small Quantity Generator
TSDF	– Treatment Storage and/or Disposal Facility
USEPA	– United States Environmental Protection Agency
UST	– Underground Storage Tank

## 1.0 EXECUTIVE SUMMARY

Hillmann Consulting, LLC (Hillmann), performed a Phase I Environmental Site Assessment (ESA) of 37-11 30<sup>th</sup> Street, Long Island City, New York (the Property). This assessment has been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-13 for Phase I Environmental Site Assessments.

### 1.1 Project Details Summary Table

A summary of the pertinent details of the project is provided below:

PROJECT SUMMARY TABLE					
<b>Name of Client</b>		VNB New York Corp.			
<b>Client Project No.:</b>		N/A

## 1.2 Findings Summary Table

The following table summarizes the key findings of this assessment. This table, alone, does not constitute the complete assessment. The report must be reviewed in its entirety.

Assessment Section	No Sig. Concern	Potential Env Concern	REC	Recommended Follow-up	Est. Cost Budget	Rep. Ref.
User Provided Info		A Hazardous Substances Survey & Report, provided by the owner, stated public agency documents indicated that several additional tanks had been installed at the Property including a 2000 gallon tank buried in 1933 for an oil burning system, a 550 gallon tank buried in 1941 and a 5000 gallon UST installed in 1947.	REC	NA		3.0
Data Gaps	X					2.5
Regulatory Review		The Property was listed on the LTANKS database and was given a closed status as of September 15, 2004.	HREC	NA		4.1
Historical Review		According to Sanborn fire insurance maps, the Property was historically used for plastic manufacturing from at least 1930s until the early 1980s	Yes	Phase II	\$10,000-\$15,000	4.4
Site Use	X					5.2
Adjoining Properties		The adjoining properties were listed on the City Directories provided by EDR and Sanborn fire insurance maps with multiple auto repair facilities, filling stations and manufacturing facilities.	Yes	Phase II	(See Above)	4.1.2 5.2.8
Hazardous Materials	X					5.3
Bulk Petroleum Storage		Sanborn fire insurance maps indicate the 5,000-gallon tank has existed at the Property since at least 1970. Prior to 1970, a 10,000-gallon tank was depicted at the Property from at least 1947 to 1950. The 10,000-gallon tank was not listed on the regulatory documents supplied by EDR.	REC	NA		5.3
PCBs	X					5.3
Waste / Discharges	X					5.3
Asbestos Containing Materials (ACM)		ACM may be present based on bldg. age.		Compliance with applicable regulations.	Unk	7.1
Lead Based Paint (LBP)	X					7.2
Radon	X					7.3
Mold		Water stained sheetrock ceiling in basement.		Repair of any water intrusions into the Property.	Unk	7.4
Wetlands	X					7.5

NA = Not Applicable, TBD = To Be Determined, UNK = Unknown,

### **1.3 General Description, Current and Historic Property Use**

The Property consists of an irregular shaped 1.10 acre parcel bounded by 30<sup>th</sup> Street to the northwest, 37<sup>th</sup> Avenue to the northeast and 31<sup>st</sup> Street to the southeast. The Property is located in an urban developed area characterized by a mix of residential and commercial buildings and manufacturing and warehousing facilities. The terrain of the Property appeared to be gently sloping from the north to south. No natural surface water bodies were noted at the Property.

The Property is improved with a 1 and 3-story warehousing building with a basement. The building area is approximately 44,060-ft<sup>2</sup>. The Property building is currently occupied by See Factor Industry, a warehouse and distributor of lighting and sound equipment.

The existing warehousing building was constructed circa 1920 and was used for the manufacturing of plastic products since at least the 1930s until the early 1980's, when the Property use was switched to warehousing and distribution of sound and lighting equipment. Prior to 1920, this area consisted of a garage on the northwest side of the Property and residences on the north side of the Property with the remainder of the Property consisting of vacant land dating back to at least 1915. Prior to 1915, the Property consisted of vacant land.

### **1.4 Findings, Opinions, and Conclusions**

#### **1.4.1 Notable Findings**

- The existing building was constructed circa 1920 and was historically used for the manufacturing of plastic products (The Marblette Corp. Mfg. of Plastic Materials) from at least the 1930s until the early 1980's when the Property was changed to its current usage for the warehousing and distribution of sound and lighting equipment. Based on the industrial nature of the former tenant(s), the potential for historical use of hazardous materials and petroleum products on the Property is likely. In addition, the historical operations occurred during a time of less stringent environmental regulations, and the potential exists that a release of chemicals may have occurred at the Property.
- The Property is currently heated by a natural gas system. The Property was previously heated by an oil fired system equipped with a 5,000-gallon fuel oil storage tank. The Property was listed on the regulatory database supplied by EDR as a LTANKS, HIST AST and AST site in reference to the former storage tank. According to the AST and HIST AST databases, one 5,000-gallon fuel oil AST was closed in place on July 7, 2000 at the site. The LTANKS listing indicates a tank test failure occurred on April 21, 1998. According to DEC remarks in the database, in February 2000 three soil borings were taken on the site (in the tank area) as part of a structural investigation for a possible building expansion. There was no evidence of soil contamination and the DEC believed that there was no actual petroleum spill and the case was given a closed status as of September 15, 2004.

Hillmann was supplied with a Hazardous Substances Survey & Report prepared by MTS EnviroSurv and dated January 17, 1991. The report concluded that additional tanks were indicated on agency records. The only tank visually verified to be on the premises was the 4,500 gallon UST that was used for the existing building heating system. The report

concluded that several additional tanks had been installed on the Property since its initial development in 1914. The records show a 2,000 gallon tank buried in 1933 for an oil burning system; a 550-gallon tank buried in 1941 and a 5,000-gallon UST installed in 1947.

Hillmann was supplied with a tank closure documents prepared by USA Tank Maintenance Inc. and dated July 7, 2000. The letters stated that a 5,000-gallon, 2,000-gallon and a 550-gallon underground storage tanks were properly closed in place at the Property. Hillmann believes that the 4,500-gallon fuel oil tank mentioned in MTS's report is actually the 5,000-gallon heating oil tank closed in July of 2000.

Sanborn fire insurance maps indicate the 5,000-gallon tank had existed at the Property since at least 1970. Prior to 1970, a 10,000-gallon tank was depicted at the Property from at least 1947 to 1950. The 10,000-gallon tank was not listed on the regulatory documents supplied by EDR and no additional records indicating closure of this suspect tank was supplied to Hillmann.

No obvious visual evidence of any additional historic USTs was noted by Hillmann during the site reconnaissance. Due to the uncertain UST closure statuses (lack of confirmatory soil sampling) and potential of additional UST(s), the potential exists that a historic releases from the historic USTs has resulted in a subsurface impact to the Property.

- The Property is located within an area of Long Island City which had historically been occupied for industrial purposes. The adjoining properties were listed on the City Directories and Sanborn fire insurance maps, provided by EDR, with multiple auto repair facilities, gasoline filling stations and various manufacturing facilities. It was noted that numerous lots in the surrounding area have also been assigned an (E) designation for "*Hazardous Materials - Phase I and Phase II Testing Protocol.*" These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. Based on the adjoining nature of these sites, any historical contamination at these sites has had the potential to impact the Property. However, in that event it is unlikely that the Property would be held liable for corrective action due to migration of contaminants from off-site onto the Property.

#### **1.4.2 Non-ASTM Scope Considerations**

Hillmann has also performed cursory evaluations for ASTM "Non-Scope" items, such as asbestos-containing materials (ACM), lead-based paint, radon, mold and wetlands. Our observations and research did not identify any notable concerns, except for the following:

- Considering the date of building construction, there is the potential for asbestos-containing materials at the Property. Suspect non-friable ACM observed at the Property included sheetrock wall systems and the roofing systems in good condition. Suspect friable materials included thermal systems insulation, including pipe insulation, in the basement level of the building. Additional quantities of ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a cursory evaluation regarding the potential presence of ACM at the Property.

A limited asbestos screening was performed as part of a Hazardous Substance Survey and Report in 1990. Samples of boiler, duct and pipe insulation and air cell were tested and found to be positive for asbestos.

- Considering the date of construction of the building, lead-based paint may be present at the Property. In general, interior painted surfaces within the space were noted to be in good to fair condition on the first floor and fair to poor condition on the second floor. However, due to the non-residential usage of the Property, lead-based paint is not considered to be a significant environmental concern and no further investigation is recommended at this time.
- During the assessment, Hillmann conducted a cursory inspection of the accessed areas of the building for evidence of excessive or amplified mold growth, or for conditions favorable for mold growth. Water stained ceiling sheetrock was observed on the basement ceiling. Visible mold growth was not observed in these areas. No other obvious evidence of excessive or amplified mold growth, or conditions favorable for mold growth, was observed on the Property during the site assessment.

#### **1.4.3 Significant Data Gaps**

No data gaps that significantly impacted Hillmann's ability to identify RECs in connection with the Property have been identified.

#### **1.4.4 Recognized Environmental Conditions**

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property.

*Recognized Environmental Conditions (RECs):*

- The presence of the historical industrial use of the Property and adjoining properties represents evidence of a recognized environmental condition.
- The suspected historic storage tanks at the Property represent evidence of a recognized environmental condition.

*Controlled Recognized Environmental Conditions (CRECs):*

- No evidence of any CRECs in connection with the Property was identified.

*Historical Recognized Environmental Conditions (HRECs):*

- The documented closure of the 5,000-gallon heating oil storage tank and subsequent closure of the LTANKS case represents evidence of a historical recognized environmental condition.

## **1.5 Recommendations**

### **1.5.1 Recognized Environmental Conditions**

Based on the findings of the Phase I Environmental Site Assessment, no further investigation is recommended at this time, except for the following:

- The presence of the historical industrial use of the property represents evidence of a recognized environmental condition. Hillmann recommends conducting a Phase II Subsurface Investigation on the subject Property.
- As part of the Phase II, Hillmann recommends conducting an additional investigation, including a ground penetrating radar survey and soil borings, to determine if any USTs (in the area of the suspect UST locations) or resulting contamination exist at the subject Property. If any storage tanks are discovered during the Phase II of the subject Property, the tank(s) should be properly closed in accordance with NYSDEC regulations with confirmatory soil sampling.

### **1.5.2 Non-ASTM Considerations**

The following should be considered with regard to further investigation or management of Non-ASTM considerations addressed by this report:

- Compliance with all applicable rules and regulations pertaining to asbestos is recommended.
- Repair of any water intrusions into the Property in order to prevent potential mold growth and prevent future conditions favorable for mold growth.

---

## 2.0 INTRODUCTION

### 2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the “landowner liability protections,” or “LLPs”): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be “*de minimis conditions*” are not considered to be RECs nor CRECs. *De minimis condition* is defined by the ASTM as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

The chief components of this assessment are described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.
- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.
- A review of standard physical record sources for available topographic, geologic and groundwater data.
- Review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.
- Review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

### **2.1.1 Non-ASTM Scope Considerations**

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental concerns that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A cursory visual inspection for the presence of suspect ACM within the accessed areas of buildings on the Property.

Lead-Based Paint (LBP): A cursory visual inspection of the condition of painted surfaces in the accessed areas of buildings on the Property.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the potential for elevated indoor levels of radon gas to occur in the area of the Property.

Mold: A cursory visual inspection within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors.

Wetlands: A cursory review of data published by the US Fish and Wildlife Service regarding the presence or absence of mapped wetlands on the Property. The US Fish and Wildlife Service wetlands data is typically provided to Hillmann by Environmental Data Resources, Inc. (EDR).

## **2.2 Property Location/Legal Description**

The Property consists of a single parcel located on Block 372 of Long Island City, Queens County, New York. The tax map number designation includes Block 372, Lot 8. The Property is bounded by 30<sup>th</sup> Street to the northwest, 37<sup>th</sup> Avenue to the northeast and 31<sup>st</sup> Street to the southeast; 38<sup>th</sup> Avenue is located approximately 100 feet to the southwest. The latitude and longitude are approximately North 40.7548 degrees, West 73.9319 degrees.

## **2.3 Significant Assumptions**

The following significant assumptions are made:

- Hillmann has assumed that the information obtained from EDR during the course of this assessment is an accurate and complete representative summary of the information contained in the referenced regulatory agency records, except when such information is obviously contradicted by other data.
- Hillmann has assumed that the information used to prepare this assessment that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources was an accurate and complete representative summary of the information possessed by those individuals, representatives or sources.
- Hillmann has assumed that the site operations at the time of the site visit reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, Hillmann has also assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not made known to us, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.
- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, Hillmann has assumed that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

## **2.4 Limitations and Exceptions**

### **2.4.1 Limiting Conditions**

Hillmann was unaware of any significant limiting conditions at the time of the assessment.

### **2.4.2 Other Exceptions or Deletions:**

No other exceptions or deletions from the ASTM Standard E 1527-13 are reported.

## 2.5 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions.

Data Gap:	Significant (Yes/No)?	Discussion
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

## 2.6 Special Terms and Conditions

Hillmann has prepared this Phase I Environmental Site Assessment using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. The methodology of this Phase I Environmental Site Assessment was consistent with the ASTM Standard Practice for E 1527-13. Findings within this report are based on information collected from observations made on the day of the site visit and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation or other construction purposes. Hillmann makes no representation or warranty that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on our visual observations of the Property, the research findings reasonably obtained, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Hillmann relies completely on the information, whether written, graphic or verbal, provided by the subject Property contact(s) or as shown on any documents reviewed or received from the subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, Hillmann did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Property and neighboring properties that could impact the Property. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM Standard E 1527-13. The information provided in the regulatory database report is assumed to be correct and complete.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. "Reasonable efforts" are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify subsurface equipment that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

Unless otherwise specified in Section 2.1 of this report, an ASTM Vapor Encroachment Screening of the Property utilizing the information collected during the course of this assessment is excluded from the scope of service for this assessment.

Hillmann is not a professional title insurance firm and makes no guarantee, explicit or implied, that the records which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

### 3.0 USER PROVIDED INFORMATION

#### 3.1 Prior Environmental Reports/Documentation

The following prior environmental reports or documentation were obtained and reviewed:

Hazardous Substances Survey & Report -37-11 30<sup>th</sup> Street, Long Island City, NY; prepared by MTS EnviroSurv and dated January 17, 1991. The report concluded the following:

*“Building heat was supplied by an oil-burning furnace located in the basement Boiler Room of the 3-story building. The unit was jacketed in sheet metal and contained a fiberglass thermal barrier. It burned #2 fuel oil which was stored in a 4,500 gallon underground tank buried under the pavement in the storage room adjacent the Boiler Room. There were a few oil stains observed on the floor near the furnace but they were minor. Testing the tanks for leaks was beyond the scope of the Phase 1 Study. Had the furnace or any of its associated above ground piping sustained any significant leaks the concrete paved floor would have served as a sufficient barrier, preventing seepage of oil and subsequent contamination of the soil below.”*

*“The fuel oil fill port and tank vent were located on the 31<sup>st</sup> Street side. There were a few stains observed on the pavement near the fill port but they were minor.”*

*“Most of the ACM observed in the building was in friable condition and in areas frequented by building tenants and service personnel. The presence of friable asbestos in these areas created a potential human health risk from exposure to airborne asbestos fibers. It is therefore recommended that this material be removed and/ or replaced.”*

*“The only tank visually verified to be on the premises was the 4,500 gallon underground unit being used for the existing building heating system. Public agency documents indicated that several additional tanks had been installed on the property since its initial development in 1914: The records show a 2000 gallon tank buried in 1933 for an oil burning system. Further, the records show a 550 gallon tank buried in 1941 and a 5000 gallon UST installed in 1947. None of these tanks were physically in evidence at the site but may be presumed on the property. The tank currently in use and described by the owner; did not fit any of the records found in the agency review.”*

*“In addition to the data on tanks, the agency review indicated that prior occupants stored very large quantities of formaldehyde at the site. Formaldehyde is a substance listed as toxic by the federal Environmental Protection Agency. There also appeared to be plastic manufacture performed at the site. Such operations could have involved the use of hydrocarbons or other organic chemicals considered hazardous by the EPA. It also appeared that lead melting was conducted in the early 1950's. Testing soils or Groundwater for contamination by these parameters was beyond the scope of a Phase I Survey.”*

Tank Certification Letters; prepared by US Tank Maintenance Inc. and dated July 7, 2000. The letters stated the following:

*“This is to certify that the fuel oil tanks (5,000-gallon, 550-gallon and 2,000-gallon) located on the above subject premise has been emptied and purged of combustible or toxic vapors. Vent line was left open. The fill terminal was capped and filled with concrete on June 28, 2000, June 30, 2000 and July 07, 2000.”*

### **3.2 Title Records/Environmental Liens/Activity and Use Limitations**

Review of title records is not included in the scope of work for this assessment project. No information regarding environmental liens or activity and use limitations was provided to Hillmann by the Client.

### **3.3 Specialized Knowledge or Experience**

No indication of any specialized knowledge or experience regarding the Property was reported to Hillmann by the Client.

### **3.4 Commonly Known or Reasonably Ascertainable Information**

No commonly known or specialized knowledge of the Property was reported to Hillmann by the Client.

### **3.5 Property Value Reduction due to Environmental Conditions**

No information was provided by the Client to Hillmann regarding a reduction of the Property value due to environmental problems or conditions.

### **3.6 Reason for Performing Phase I ESA**

It is Hillmann's understanding that the Phase I ESA was being performed in consideration of a pending real estate transaction involving the Property.

## 4.0 RECORDS REVIEW

### 4.1 Standard Environmental Record Sources

An EDR Radius Map report was obtained from Environmental Data Resources of Milford, CT. The EDR Radius Map Report provided a search of standard environmental record sources in general accordance with the requirements of the ASTM E1527-13. Hillmann has reviewed the EDR Radius Map report and a summary of findings is presented in the following tables and report sections. Hillmann also reviewed the list of unmapped sites (referred to by EDR as “Orphan List” sites). Unmapped sites identified as falling within an applicable specific search distance or warranting discussion in the report, if any, have been included in the information presented below. Detailed descriptions of the meaning and significance of the regulatory databases can be found in the EDR Radius Map Report in Appendix E.

Regulatory Database	Search Distance	Property Listed?	Adj. Properties Listed?	Total Listings Within Search Distance
Fed. NPL/Proposed NPL	1-mile	No	No	0
Fed. Delisted NPL	½-mile	No	No	0
Fed. CERCLIS	½-mile	No	No	0
Fed. CERC-NFRAP	½-mile	No	No	0
Fed. RCRA CORRACTS	1-mile	No	No	1
Fed. RCRA TSD	½-mile	No	No	0
Fed. RCRA LQG	Site & Adj.	No	No	
Fed. RCRA SQG	Site & Adj.	No	No	
Fed. RCRA CESQG	Site & Adj.	No	No	
Fed. ENG Control List	Site	No		
Fed. INST Control List	Site	No		
Fed. ERNS	Site	No		
State/Tribal Hazardous Waste Site	1-mile	No	No	11
State/Tribal Landfill/Solid Waste	½-mile	No	No	2
State/Tribal Leaking Storage Tanks	½-mile	Yes	No	45
State/Tribal Registered Storage Tanks	Site & Adj.	Yes	Yes	
State/Tribal Eng. Control List	Site	No		
State/Tribal Inst. Control List	Site	No		
State/Tribal Voluntary Cleanup Sites	½-mile	No	No	3
State/Tribal Brownfields	½-mile	No	No	2
Supplemental Databases	Site & Adj.	No	Yes	

#### 4.1.1 Property Listings

The following Property listings were identified:

- AST, HIST AST, LTANKS – See Factor Industry Inc., 37-11 30<sup>th</sup> Street: According to the AST and HIST AST databases, one 5,000-gallon fuel oil AST was closed in place on July 7, 2000 at the site. The LTANKS listing indicates a tank test failure occurred on April 21, 1998. According to DEC remarks in the database, in February 2000 three of soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. There was no evidence of soil contamination and the DEC believed that

there was no actual petroleum spill and the case was given a closed status as of September 15, 2004. Considering the closed status, the LTANKS listing is considered a HREC in connection with the Property warranting no additional investigation at this time.

#### 4.1.2 Adjoining Property Listings

The following adjoining property listings were identified:

- EDR US Historical Cleaners, NY E Designation – Lot 33, Tax block 371 at 3724 30<sup>th</sup> Street: This site adjoins the Property to the north-northwest and is up gradient based on area topography. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials\* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. According to the EDR US Historical Cleaners database, a drycleaners by the name of “Denim Washing Inc.” existed at the site from at least 2004 to 2009.
- SPILLS, E Designation – Lot 7, Taxblock 372 at 37-31 30<sup>th</sup> Street: This site adjoins the Property to the northwest and is up gradient based on area topography. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials\* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. According to the SPILLS database, on July 23, 2003, an unknown quantity of waste oil was released due to poor housekeeping. Corrective action was taken and the listing was assigned a closed date of September 3, 2003.
- E Designation, UST, HIST UST – Abbeys Automate Inc. at 37-29 31<sup>st</sup> Street: This site adjoins the Property to the east-southeast and is down gradient based on area topography. This site is listed with the name Lot 6, Tax block 373 on the E Designation database. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials\* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. The UST database indicates two 4,000-gallon gasoline USTs were closed in place at the site in 1998.
- E Designation, EDR US Historical Auto Station – Lot 23, Tax block 372 at 3018 37<sup>th</sup> Avenue: This site adjoins the Property to the north-northeast and is up gradient based on area topography. According to the E Designation database, the E designation was put into effect on October 7, 2008. The description is listed as “Hazardous Materials\* Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. The EDR US Historical Auto Station database indicates the site was occupied by an auto repair facility in 2004.
- EDR US Historical Auto Station – 3020 37<sup>th</sup> Avenue: This site adjoins the Property to the north-northeast and is up gradient based on area topography. The EDR US Historical Auto

Station database indicates the site was occupied by an auto repair facility from at least 1999 to 2010.

#### **4.1.3 ASTM Search Distance Findings**

The following is a summary of the findings of the regulatory database review with regard to sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this report informative and yet concise, Hillmann has provided a brief discussion of the listed site(s) for each database category that appears most likely to impact the Property based on distance, topography and/or case status. A copy of the full EDR Radius Map Report, including available details of all listed sites, is included in Appendix E.

Note that listings for the following databases, if identified, would be discussed above in Sections 4.1.1 and 4.1.2: Registered Storage Tanks, Federal RCRA Generators, Federal and State INST and ENG Controls, ERNS.)

**Federal NPL:** No NPL listings were identified within a one-mile radius of the Property.

**Federal Delisted NPL:** No DNPL listings were identified within a ½-mile radius of the Property.

**Federal CERCLIS:** No CERCLIS listings were identified within a ½-mile radius of the Property.

**Federal CERCLIS-NFRAP:** No CERC-NFRAP listings were identified within a ½-mile radius of the Property.

**Federal RCRA-CORRACTS:** One (1) CORRACTS listing was identified within a one-mile radius of the Property. The site is Con-Edison – Ravenswood Tunnel at 3854 Vernon Boulevard NW Corner, located approximately 3,743 feet to the west-northwest and at a lower elevation relative to the Property. According to the database, the RFA was completed and it was determined that an RFI was not necessary. Considering the distance and topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

**Federal RCRA-TSD:** No TSD listings were identified within a ½-mile radius of the Property.

**State/Tribal Hazardous Waste Sites:** Eleven (11) SHWS listings were identified within a one-mile radius of the Property. The closest site in proximity to the Property is Amtrak Sunnyside Yard at 39-29 Honeywell Street, located approximately 840 feet to the south and at a lower elevation relative to the Property. Considering the distance and topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

**State/Tribal Landfill/Solid Waste Disposal Sites:** Two (2) SWF/LF listings were identified within a ½-mile radius of the Property. The closest site in proximity to the Property is City Used Auto Center Inc. at 37-25 21<sup>st</sup> Street, located approximately 2,107 feet to the northwest and at a lower elevation relative to the Property. Additionally, this site was listed on the SPILLS database. According to the SPILLS database, on March 11, 2003 it was reported that

approximately 50-gallons of transmission fluid, 1-gallon of battery acid, 50-gallons of antifreeze, 50-gallons of motor oil, an unknown quantity of auto waste fluids and an unknown quantity of gasoline had been deliberately released at the site. Corrective action was taken and the listing was given a spill closed date of January 29, 2007. The SWF/LF database indicates the site is an inactive vehicle dismantling facility. Considering the status, distance and topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

**State/Tribal leaking Storage Tanks:** Forty-five (45) LTANKS listings were identified within a ½-mile radius of the Property. The closest non-adjacent up gradient site with an active status is listed as Apartment Building TTF at 34-20 32<sup>nd</sup> Street, located approximately 1,853 feet to the northeast and at a higher elevation relative to the Property. The database listing indicated that a tank test failure was reported on March 6, 2012. According to the DEC Memo, “03/06/12-Zhune spoke to Ray from PTC. He said they test the UST and failed. The tank was emptied and cleaned. PTC installed a temporary tank.” Considering the status and distance away from the Property, this site does not represent a REC in connection with the Property.

**State/Tribal Voluntary Cleanup Sites:** Three (3) VCP listings were identified within a ½-mile radius of the Property. The closest listing in proximity to the Property is Levco metal finishes at 34-11 36<sup>th</sup> Street, located approximately 1,177 feet to the east and at a lower elevation relative to the Property. Considering contamination at the site is being voluntarily addressed and the topographic gradient away from the Property, this site does not represent a REC in connection with the Property.

**State/Tribal Brownfields:** Three (3) BROWNFIELDS listings were identified within a ½-mile radius of the Property. The closest site in proximity to the Property is Fresh Cleaners & Laundry Inc. at 39-26 30<sup>th</sup> Street, located approximately 952 feet to the southwest and at a lower elevation relative to the Property. Considering the topographic gradient away from the Property, this listing does not represent a REC in connection with the Property.

Review of the sites identified within the ASTM search parameters did not identify any nearby or surrounding area sites that are considered to be a REC in connection with the Property, unless as discussed otherwise previously in this section.

## **4.2 Additional Environmental Record Sources**

### **4.2.1 Supplemental Database Listings**

Hillmann reviewed the EDR Radius Map report for listings on supplemental databases that were searched in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases, if identified, would be discussed in Section 4.1.1 and 4.1.2. None of the other supplemental database listings identified by the EDR Radius Map report are considered to be a REC in connection with the Property.

## 4.2.2 Local Agency & Internet Research

Hillmann performed a search of available local and municipal agencies for pertinent information pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Hillmann also conducted a cursory internet search of the Property address for information indicative of a REC. The following table summarizes the findings of the research:

Source:	Inquiry Made?	Type:	Outcome:
NYC Building Department	Yes	Internet	Hillmann reviewed available on-line records pertaining to the Property. No records indicating a potential environmental concern were identified.
NYC Fire Department	Yes	Storage tank search request sent	Response not received prior to report completion.
NYC Department of Environmental Protection	Yes	FOI Request	Response not received prior to report completion.
NYS Department of Environmental Conservation	Yes	Internet	Hillmann reviewed available on-line records pertaining to the Property. The search revealed a Spill record which indicated on April 21, 1998 a tank test failure occurred at the Property. The spill was closed on September 15, 2004. Additionally, bulk storage tank information was identified which indicated a 5,000-gallon aboveground vaulted tank was closed in place at the Property on July 7, 2000.
NYS Department of Environmental Conservation	Yes	FOI Request	Response not received prior to report completion.
USEPA Envirofacts search <a href="http://www.epa.gov/enviro/index.html">http://www.epa.gov/enviro/index.html</a>	Yes	Internet	The Property address was searched. No results for the Property were found.
<a href="http://www.google.com">www.google.com</a>	Yes	Internet	The Property address was searched. No information indicative of a REC was identified.
Other:	NA		

## 4.3 Physical Setting Sources

### 4.3.1 USGS 7.5 Minute Topographic Map

The USGS 7.5 minute series topographic map covering the Property (Central Park, NY/NJ Quadrangle) was reviewed. The maps indicated an approximate elevation at the Property of 40 feet above mean sea level. The topography indicated by the map appeared to be gently sloping downward to the south. The closest down gradient water body depicted by the map consisted of the Dutch Kills, a tributary of the East River, located approximately 1-mile to the south of the Property.

### 4.3.2 Soils

Based on USDA Soil Conservation Service (SCS) data summarized by the EDR Geocheck-Physical Setting Source Addendum, the soil type at the Property is classified as “Urban Land”. The Urban land designation indicates that a majority of the original soils on the site have been disturbed by development or covered with impervious surfaces, such as buildings or pavement.

### 4.3.3 Geology

Based on geologic data summarized by the EDR Geocheck - Physical Setting Source Addendum, the geologic formation in the vicinity of the Property is described as a stratified sequence of the Mesozoic Era, Cretaceous System, and Upper Cretaceous Series.

### 4.3.4 Hydrology

No site specific hydro-geologic data was available for the Property. Based on the drainage/topography of the Property and surrounding area, the inferred direction of groundwater flow appears to be towards the south. A detailed subsurface investigation of the Property would be needed to accurately determine site specific groundwater data such depth, gradient and flow direction.

## 4.4 Historical Use – Property and Adjoining Properties

Hillmann has conducted research in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the Property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

### 4.4.1 Fire Insurance Maps

Hillmann obtained a Certified Sanborn Map Report from EDR in order to research published historic fire insurance maps for the Property and surrounding area. The following is a summary of site use information interpreted from a review of the report:

YEAR(S)	DESCRIPTION	
1898	<b>Property:</b>	The Property is depicted as vacant lots with a dwelling on the north side.
	<b>Adjacent Properties:</b>	The sites adjacent to the northeast and northwest of the Property are depicted with vacant land and dwellings. The sites adjacent to the southeast and southwest of the Property were depicted with vacant land.
1915	<b>Property:</b>	The northwest portion of the Property is labeled as “McLaughlins Garage,” a dwelling is present on the north side of the Property and the remainder of the Property is depicted as vacant land.
	<b>Adjacent Properties:</b>	The site adjacent to the northeast portion of the property is depicted with residences and vacant land. The sites to the southeast of the Property are depicted an auto storage facility, a print shop, a wagon shed and vacant land. Vacant land is depicted to the southwest of the Property. The sites northwest of the Property are depicted with vacant land and dwellings.

YEAR(S)	DESCRIPTION	
1936	<b>Property:</b>	The north side of the Property is depicted with dwellings, apartments and "City Garage." The center of the Property is depicted with the existing Property building and is labeled as "The Marblette Corp. Mfg. of Plastic Materials." The southeast side of the Property is labeled as "Kettles & Kilns" and "Lead Molding." The northwest section of the Property is depicted as an office and a warehouse. The southern portion of the Property is depicted with "Superior Commercial Body Builders Inc."
	<b>Adjacent Properties:</b>	The site adjacent to the northeast portion of the Property is depicted with residences and vacant land. The sites to the southeast of the Property are depicted an auto repair facility, warehouses and vacant land. An auto repair facility is depicted to the southwest of the Property. The sites northwest of the Property are depicted with vacant land and dwellings.
1947 and 1950	<b>Property:</b>	The north side of the Property is depicted with dwellings, apartments. The center of the Property is depicted with the existing Property building and is labeled as "The Marblette Corp. Mfg. of Plastic Materials." The southeast side of the Property is labeled as "Kettles & Kilns," "Storage," "Warehouse" and "Lead Molding." The northwest section of the Property is labeled as "Shipping & Storage," Office & Warehouse" and "Laboratory". A 10,000-gallon storage tank is depicted in the southern corner of the Property.
	<b>Adjacent Properties:</b>	The site adjacent to the northeast portion of the property is depicted with residences. The sites to the southeast of the Property are depicted with a printing facility, storage facilities and stores. An auto body and filling station are depicted to the southwest of the Property. The sites northwest of the Property are depicted with warehouses and dwellings.
1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995 and 1996	<b>Property:</b>	The existing Property building is depicted and is labeled "The Marblette Corp. Mfg. of Plastic Materials." The southeast side of the Property is labeled as "Kettles & Kilns," "Storage," "Warehouse" and "Lead Molding." The northwest section of the Property is labeled as "Shipping & Storage," "Warehouse" and "Parking." A 5,000-gallon storage tank is depicted in the southern corner of the Property.
	<b>Adjacent Properties:</b>	The site adjacent to the northeast portion of the Property is depicted with offices, commercial buildings and residences. The sites to the southeast of the Property are depicted with a manufacturing facility and auto repair facility. An auto wash and filling station are depicted to the southwest of the Property. The sites northwest of the Property are depicted with offices, warehouses, dwellings and a manufacturing facility.
2001, 2002, 2003, 2004, 2005 and 2006	<b>Property:</b>	The existing Property building is depicted. The southeast side of the Property is labeled as "Kettles & Kilns," "Storage," "Warehouse" and "Lead Molding." The northwest section of the Property is labeled as "Shipping & Storage," "Warehouse" and "Parking."
	<b>Adjacent Properties:</b>	The site adjacent to the northeast portion of the Property is depicted with offices and commercial buildings, residences and auto repair facility. The sites to the southeast of the Property are depicted with a loft and auto repair facility. An auto repair facility is depicted to the southwest of the Property. The sites northwest of the Property are depicted with offices, warehouses and a manufacturing facility.

#### 4.4.2 City Directories

Hillman obtained an EDR City Directory Abstract report to obtain data of historic city directory listings for the Property. The following is a generalized summary of the findings of City Directory Research:

YEAR(S)	SUMMARY	
1934 to 2013	<b>Property:</b>	The Property address of 3711 30 <sup>th</sup> Street was listed with "See Factor Industry" on the 1983, 1991, 2000, 2005, 2008 and 2013 directories. Additionally, "Darshan Singh" and "Kawasar Ahmed" are listed on the 2000 directory. The Property Address 3709 30 <sup>th</sup> Street is listed with "Reid, Anna" on the 1934 directory, "Kress & Kress Attys At Law" on the 1970 directory and "Kress Attorney," "Santiago Villares" and "Dibenedetto Atty" on the 2000 diectory. The Property address of 3707 30 <sup>th</sup> Street was listed with "Codyss Shoe Repair TN Leo Cody" on the 1934 directory. The Property address 3713 30 <sup>th</sup> Street was listed with various owner names on the 1934 and 2000 directories. The Property address of 3008 37 <sup>th</sup> Avenue was listed with "Merchant Services of Queens" and "HNA Entertainment" on the 2013 directory and with "Scarola Vito Benedetta Ice" on the 1934 directory. The Property address of 3010 37 <sup>th</sup> Avenue is listed with several owner names on the 1934 and 1945 directories.

	<b>Adjacent Properties:</b>	Various stores, businesses and residential occupants were listed. Commercial occupants of note include “Rudd Mfg Co. Water Heaters” on the 1939 and 1945 directories for 3714 30 <sup>th</sup> Street; “Capital Fuel Oil Co” on the 1967, 1970 and 1976 directories for 3722 30 <sup>th</sup> Street; “Imperial Machine Corp” on the 1976, 1983, 1991 and 2000 directories and “Kaiser Machine Corp” on the 1970 directory for 3724 30 <sup>th</sup> Street; “Marblette Co. The Plastic Mfrs” on the 1962, 1967 and 1970 directories for 3731 30 <sup>th</sup> Street; “Ready Service Station,” “Clements Bros Auto Body Fender Repair,” and “Mikay Service Station” on the 1950 directory for 37-38 31 <sup>st</sup> Street; “Cyber Metal Tech” on the 2005, 2008 and 2013 directories and “Angel Auto Collision Inc” on the 1983 directory for 3729 31 <sup>st</sup> Street; “Clements Bros Auto Body Fender Repair” on the 1962 and 1967 directories, “Warren Ed Gas Station” and “Ready Service Station” on the 1945 directory and “Medecky Jul Auto Repair” on the 1939 directory for 3738 31 <sup>st</sup> Street and “Moon Auto Repairs” on the 2005 and 2008 directories, “Crown Auto Body Shop” on the 1991 and 2000 directories and “Astoria Auto Tech” on the 1991 directory for 3020 37 <sup>th</sup> Avenue.
--	-----------------------------	---

**4.4.3 Historical Topographic Map Review**

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical topographic maps were not researched for this assessment.

**4.4.4 Aerial Photograph Review**

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

**4.4.5 Petroleum/Natural Gas Well Review**

Hillmann reviewed historical record sources for evidence of historic petroleum and/or natural gas wells at the Property. No record of any historical petroleum/natural gas wells at the Property was identified.

Hillmann reviewed historical record sources for evidence of historic petroleum and/or natural gas wells at the Property.

**4.4.6 Historical Records Data Failure**

Historic land use data prior to 1898 was not obtained during this assessment. The date of the first developed use of the Property was determined to be a garage on the northwest side of the Property and dwellings on the north side of the Property circa 1915 and the current Property building on the remainder of the Property circa 1920. The earliest usage of the Property was determined to be an auto garage and residences. It is Hillmann’s opinion that a data gap regarding historical records was not encountered during this assessment.

**4.4.7 Summary of Historic Use Research**

The existing warehousing building was constructed circa 1920 and was used for the manufacturing of plastic products since at least the 1930s until the early 1980’s, when the

Property use was switched to warehousing and distribution of sound and lighting equipment.. Prior to 1920, this area consisted of a garage on the northwest side of the Property and residences on the north side of the Property with the remainder of the Property consisting of vacant land dating back to at least 1915. Prior to 1915, the Property consisted of vacant land.

Adjoining properties appear to have been historically occupied by a mix of residences, offices auto repair facilities and filling stations, manufacturing facilities and commercial businesses since the early 20<sup>th</sup> century. The adjoining properties were listed on the City Directories and Sanborn fire insurance maps, provided by EDR, with multiple auto repair facilities, gasoline filling stations and various manufacturing facilities. It was noted that numerous lots in the surrounding area have also been assigned an (E) designation for “Hazardous Materials - Phase I and Phase II Testing Protocol.” These designations assure that appropriate testing and remediation, if necessary, occur on properties that are being rezoned. Based on the adjoining nature of these sites, any historical contamination at these sites has had the potential to impact the Property.

## 5.0 SITE RECONNAISSANCE

### 5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjacent public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, Hillmann accessed and observed representative areas of building interiors to the extent they were made safely accessible with the cooperation of the site escort.

The site reconnaissance was conducted by Ms. Stephanie Lamb on April 2, 2014. Weather conditions at the time of the assessment included a temperature of approximately 45 degrees F and clear skies. Hillmann was escorted by Mr. Bob See, the Property owner.

#### 5.1.1 Significant Inaccessible Areas

Hillmann is not aware of any areas of the Property that were inaccessible at the time of the inspection.

### 5.2 General Site Setting

#### 5.2.1 Site and Vicinity Characteristics

The Property consists of an irregular shaped parcel bounded by 30<sup>th</sup> Street to the northwest, 37<sup>th</sup> Avenue to the northeast and 31<sup>st</sup> Street to the southeast. The parcel has an area of approximately 48,038 ft<sup>2</sup>. Virtually 100 % of the Property is covered by the building and the asphalt paved parking lot on the north corner of the Property. The Property is located in an urban developed area characterized by a mix of residential and commercial buildings and manufacturing and warehousing facilities.

#### 5.2.2 Topographic Characteristics

The terrain of the Property appeared to be very gently sloping from the north to south. No natural surface water bodies were noted at the Property.

#### 5.2.3 General Description of Structures

The Property is improved with a 1 and 3-story warehousing building with a basement. The 1<sup>st</sup> and 2<sup>nd</sup> floors of the building are used for the storage and distribution of lighting and sound equipment with the 3<sup>rd</sup> floor used as office space. The building area is approximately 44,060-ft<sup>2</sup>.

#### 5.2.4 Sources of Heating and Cooling

The Property building is heated via a gas fired boiler located in the main basement area and natural gas ceiling mounted blowers. Cooling appears to be provided by an electric HVAC system.

### 5.2.5 Potable Water Source/Sewage Disposal System

Potable water and sewer services are provided via municipal utility services.

### 5.2.6 Current Use(s) of the Property

The Property building is occupied by See Factor Industry, a warehouse and distributor of lighting and sound equipment.

### 5.2.7 Past Use(s) of the Property

No obvious indication of past Property usage likely to have involved the use, treatment, storage, disposal or generation of hazardous substances or petroleum products was observed at the time of the site visit. Please refer to Section 4.4 for findings of historical site use research.

### 5.2.8 Current Use(s) of the Adjoining Properties

The following describes adjacent and abutting properties:

Dir	Street Address	Description
NE	30-01 37 <sup>th</sup> Avenue 30-14 37 <sup>th</sup> Avenue 30-16 37 <sup>th</sup> Avenue 30-18 37 <sup>th</sup> Avenue	Industrial/Manufacturing Residential Mixed-Use Residential/Commercial Parking
SE	37-21 31 <sup>st</sup> Street 37-29 31 <sup>st</sup> Street	Mixed-Use Residential/Commercial Transportation/Utility
SW	37-36 31 <sup>st</sup> Street 37-37 30 <sup>th</sup> Street	Industrial/Manufacturing Public Facility/Institution
NW	37-24 30 <sup>th</sup> Street 37-22 30 <sup>th</sup> Street 37-12 - 37-20 30 <sup>th</sup> Street 29-16 37 <sup>th</sup> Avenue	Industrial/Manufacturing Commercial/Office Industrial/Manufacturing Industrial/Manufacturing

No visual observations indicative of a potential environmental concern were noted of the adjoining properties.

### 5.2.9 Past Use(s) of the Adjoining Properties

No indication of past uses of the adjoining properties was noted at the time of the site visit. Please refer to Section 4.4 for the findings of historical site use research.

### 5.2.10 Current/Past Uses of Surrounding Area

The Property is located in an urban area of the Queens Borough of New York City. The vicinity of the Property consists of a densely developed urban area with a mix of commercial buildings, residential properties, manufacturing facilities, warehouses and auto repair facilities. No indications of past Property uses that differ substantially from current conditions were observed at the time of the site visit.

### **5.3 Interior & Exterior Observations**

#### **5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products**

No other significant storage/usage of hazardous substances and petroleum products was observed.

#### **5.3.2 Drums**

No drums were observed at the Property.

#### **5.3.3 Other Hazardous Substances/Petroleum Products**

No other containers of hazardous substances or petroleum products were noted on the Property at the time of the site visit.

#### **5.3.4 Unidentified Substance Containers**

No unidentified containers suspected of containing hazardous substances or petroleum products were noted on the Property at the time of the site visit.

#### **5.3.5 Storage Tanks**

The Property is currently heated by a natural gas system. The Property was previously heated by an oil fired system equipped with a 5,000-gallon fuel oil storage tank. The Property was listed on the regulatory database supplied by EDR as a LTANKS, HIST AST and AST site in reference to the former storage tank (see Section 4.1.4 for details of these listings).

Hillmann was supplied with a Hazardous Substances Survey & Report prepared by MTS EnviroSurv and dated January 17, 1991. The report concluded that additional tanks were indicated on agency records (see Section 3.1 for details). The only tank visually verified to be on the premises was the 4,500 gallon UST that was used for the existing building heating system. The report concluded that several additional tanks had been installed on the Property since its initial development in 1914. The records show a 2,000 gallon tank buried in 1933 for an oil burning system; a 550 gallon tank buried in 1941 and a 5,000 gallon UST installed in 1947.

Hillmann was supplied with a tank closure documents prepared by USA Tank Maintenance Inc. and dated July 7, 2000. The letters stated that a 5,000-gallon, 2,000-gallon and a 550-gallon underground storage tanks were properly closed in place at the Property. Hillmann believes that the 4,500-gallon fuel oil tank mentioned in MTS's report is actually the 5,000-gallon heating oil tank closed in July of 2000.

Sanborn fire insurance maps indicate the 5,000-gallon tank had existed at the Property since at least 1970. Prior to 1970, a 10,000-gallon tank was depicted at the Property from at least 1947 to 1950. The 10,000-gallon tank was not listed on the regulatory documents supplied by EDR and no additional records indicating closure of this suspect tank was supplied to Hillmann.

No obvious visual evidence of any additional historic USTs was noted by Hillmann during the site reconnaissance. Due to the uncertain UST closure statuses (lack of confirmatory soil sampling), and potential for additional UST, the potential exists that a historic releases has resulted in a subsurface impact to the Property.

#### **5.3.6 Polychlorinated Biphenyls (PCBs)**

No suspected PCB containing electrical or hydraulic equipment was identified.

#### **5.3.7 Odors**

No strong, unusual or pungent odors were noted on the Property.

#### **5.3.8 Pools of Liquid**

No pools of liquid were noted at the Property.

#### **5.3.9 Interior Stains or Corrosion**

No interior stains or corrosion were noted at the Property.

#### **5.3.10 Interior Drains/Sumps**

No floor drains or sump pits were noted at the Property other than for storm water or sewage management.

#### **5.3.11 Exterior Pits/Ponds/Lagoons**

No evidence of exterior pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal.

#### **5.3.12 Stained Soil, Pavement/Stressed Vegetation**

No evidence of stained soils or stressed vegetation was identified on the Property.

#### **5.3.13 On-Site Solid Waste Dumping/Fill Material**

No evidence of on-site solid waste dumping was noted at the Property. Historic urban fill materials are presumed to exist at the Property considering the long history of site development.

#### **5.3.14 Wastewater**

Sanitary sewage and storm water runoff generated on-site are discharged into the New York City sewer system. No other waste discharges were noted at the Property.

#### **5.3.15 Septic Systems**

No indication of septic systems was noted on the Property.

**5.3.16 Wells**

No indication of a well was noted on the Property.

## 6.0 INTERVIEWS

### 6.1 Interviews with Past and Present Owners and Occupants

Type	Name; Affiliation/Title	Summary
Key Site Manager	Bob See/Owner	Mr. See was interviewed regarding the uses and conditions of the Property relative this assessment and compliance with ASTM E1527-13. Pertinent information, where obtained, is referenced in the appropriate sections of the report.
Property Occupants	Not applicable	Hillmann was not able to interview individual building occupants.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjacent or Nearby Properties	Not applicable	The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjacent or nearby property owners or occupants were not conducted.

### 6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.2.2.

## **7.0 NON-ASTM SCOPE CONCERNS**

In accordance with our contract agreement, Hillmann has conducted cursory evaluations of the following “Non-ASTM Scope Considerations” that are outside of the requirements of the ASTM E1527-13 standard:

### **7.1 Asbestos-Containing Material (ACM)**

Considering the date of building construction, there is the potential for asbestos-containing materials at the Property. Suspect non-friable ACM observed at the Property included sheetrock wall systems and the roofing systems in good condition. Suspect friable materials included thermal systems insulation including pipe insulation in the basement level of the building. Additional quantities of ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a cursory evaluation regarding the potential presence of ACM at the Property.

A limited asbestos screening was performed as part of a Hazardous Substance Survey and Report in 1990. Samples of boiler, duct and pipe insulation and air cell were tested and found to be positive for asbestos.

### **7.2 Lead-Based Paint**

Considering the date of construction of the building, lead-based paint may be present at the Property. In general, interior painted surfaces within the space were noted to be in good to fair condition. However, due to the non-residential usage of the Property, lead-based paint is not considered to be a significant environmental concern and no further investigation is recommended at this time.

### **7.3 Radon**

According to data compiled by the USEPA, as summarized by the EDR Radius Map Report with GeoCheck, the Property is located in an area with a low potential for radon concentrations that exceed current USEPA action guidelines. Queens County is classified as a Zone 3 or ‘low risk’ area for radon.

### **7.4 Mold**

During the assessment, Hillmann conducted a cursory inspection of the accessed areas of the building for evidence of excessive or amplified mold growth, or for conditions favorable for mold growth. Water staining was observed on the ceiling sheetrock in the main basement. Visible mold growth was not observed in these areas. No other obvious evidence of excessive or amplified mold growth, or conditions favorable for mold growth, was observed on the Property during the site assessment.

## **7.5 Wetlands**

Based on a review of the EDR Radius Map Report with GeoCheck, no NWI mapped wetlands were indicated on or immediately adjacent to the Property.

It is emphasized that the absence of NWI mapped wetland areas indicated by the EDR report does not necessarily rule out the potential presence of regulated wetland areas on or immediately adjoining the Property. A wetland delineation should be sought from a qualified firm if a more comprehensive determination regarding the presence or absence of wetlands on or adjacent to the Property is warranted.

## 8.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. Hillmann has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Re: 5,000 gallon fuel tank abandonment at 37-11 30th St. LIC

Dear Mr. Caruana,

ABC Tank Repair and Lining, inc. will provide the supervision, manpower, equipment and material to perform the following services at the referenced location:

Pump out/ pressure wash existing 5,000 gallon tank at referenced location. Tank is then to be filled with concrete slurry, and affidavit sent to NYFD. Any and all compliance with New York State DEC is customer's responsibility.

Our lump sum price is \$5,775.00 plus disposal charges of \$.50 per gallon for any wash water generated and any water that may be found in the tank.

Terms of payment: \$2,500.00 deposit balance due, net upon completion of job. All prices are subject to tax.

If the terms, prices and conditions meet your approval, please sign and return to ABC. For our mutual convenience our Fax# is (718) 272-3147.

Hoping to be of service I remain

Sincerely,

  
Mark Salamack

**HAZARDOUS SUBSTANCES  
SURVEY & REPORT**

**37-11 30TH STREET  
LONG ISLAND CITY, NEW YORK**

**PRESENTED TO  
CHEMICAL BANK**

**PROJECT NO. R-302  
Rev. 1**

**January 17, 1991**

**REPORT PREPARED & CERTIFIED BY  
ARTHUR GERUNDA, PRESIDENT**

**NYC CERT. #03337; NYS CERT. #AH88-07511**

**NOTE: THIS DOCUMENT IS SOLELY INTENDED TO MEET THE PRE-LOAN REQUIREMENTS OF THE INSTITUTION NOTED ABOVE.  
NO AUTHORIZATION IS GIVEN TO DISTRIBUTE THIS REPORT TO ANY PARTIES NOT INVOLVED IN THE TRANSACTION FOR WHICH  
THE REPORT WAS PUBLISHED. THIS DOCUMENT IS NOT TO BE USED AS THE BASIS FOR ANY REMEDIAL ACTION.**

**EXECUTIVE SUMMARY**

The property that was surveyed and is the subject of this report was found to be free of any overt signs of contamination due to exposure to organic chemicals, hydrocarbons, toxic wastes or other reactive substances.

*Asbestos Containing Material (ACM) was found in the building in the form of thermal insulation associated with the building heat system.*

There were no materials of construction that were suspected of containing, as constituents, urea-formaldehyde foams or resins or polychlorinated biphenyls (PCBs).

**CONDITION & UTILIZATION**

The property was located at 37-11 30th Street in Long Island City, New York. It contained attached commercial warehouse buildings used for storage of theatrical lighting equipment and a small vacant parcel used for parking. The buildings were single story except for one 3-story unit. Construction of the buildings dates back to circa 1915. All were in good condition and appeared to be well maintained.

37-11 30TH CORPORATION  
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK  
PROJECT NO. R-302

**SURVEY & OBSERVATIONS**

An inspection of the property began with the interior of the buildings, which were all similarly constructed. The buildings were attached and each was accessible from the interior. The main building had 3 stories with a basement. The others were single story with no basements.

The structures had poured concrete frames with poured concrete floors. The roofs were wood with wood joist and steel I-beam supports. **There was no sprayed or troweled-on fireproofing observed on any structural members.**

**NO UREA-  
FORMALDEHYDE**

Inspections were made of spaces between walls and above ceilings to find insulation used for heat conservation. There were no thermal insulation materials observed that were suspected of containing urea-formaldehyde foams or resins

Building heat was supplied by an oil-burning furnace located in the basement Boiler Room of the 3-story building. The unit was jacketed in sheetmetal and contained a fiberglass thermal barrier.

37-11 30TH CORPORATION  
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK  
PROJECT NO. R-302

ACM FOUND  
IN BASEMENT

It burned #2 fuel oil which was stored in a 4,500 gallon underground tank buried under the pavement in the storage room adjacent the Boiler Room. There were a few oil stains observed on the floor near the furnace but they were minor. Testing the tanks for leaks was beyond the scope of the Phase I Study. Had the furnace or any of its associated above ground piping sustained any significant leaks the concrete paved floor would have served as a sufficient barrier, preventing seepage of oil and subsequent contamination of the soil below.

Also located in the Boiler Room was a decommissioned furnace. This unit was jacketed in a cementitious thermal packing. The unit was attached to an exhaust duct which was covered with the same material. Samples from the boiler and the duct were taken and subjected to laboratory analysis which revealed that the material contained asbestos. The ACM on both the furnace and the duct was in friable condition. The furnace contained approximately 180 square feet of ACM while the duct constituted roughly 250 square feet.

There was a pipe emanating from the decommissioned boiler that was covered with additional ACM. The material was friable and constituted about 8 linear feet.

The balance of pipes in the basement storage areas were, for the most part, uninsulated or covered with a fiberglass wrap. There were however, several runs of pipe that were covered with ACM.

37-11 30TH CORPORATION  
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK  
PROJECT NO. R-302

ACM FOUND  
ABOVE  
BASEMENT

The material was in friable condition and constituted approximately 100 linear feet.

An inspection of the upper floors of the building followed. The 3-story building was accessed by a steel staircase and a freight elevator. The other buildings were all accessible from inside. Most areas of each building were used for storage of theatrical lighting equipment and supplies.

Interior partitions were brick as well as sheetrock. The ceilings were covered with sheetmetal attached directly to the wood roof supports. All pipes and risers were exposed. Most of the pipes were either uninsulated or covered with a fiberglass wrap. **There were a few lengths of ACM observed near the entrance to the basement that constituted 40 linear feet.**

Additional asbestos pipe lagging was observed in the wood shop. It constituted roughly 80 linear feet.

An additional 40 linear feet was observed near the Bay door entrance to the 3-story building. The material was in friable condition.

An additional 3 linear feet of ACM was observed on a steam riser in the second floor storage area. The condition of the material had deteriorated due to worker activity.

**37-11 30TH CORPORATION  
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK  
PROJECT NO. R-302**

**NO STAINS,  
DEBRIS OR  
OTHER SYMPTOMS  
OF DUMPING  
OR SPILLING**

The exterior of the building was brick. Entrances were on both the 30th and 31st Street sides of the building. There were several bay doors located on both sides of the building.

There was about 15 feet of concrete paved sidewalk from the edge of the building to the curb on both sides. All pavements were free of stains, pitting and other symptoms of exposure to hydrocarbons, toxic wastes or other reactive substances.

There was a fenced in parking lot adjacent to the 3-story building which was paved with gravel. It was used to park and store delivery trucks and storage trailers. Weeds and vegetation were observed growing in the lot. All vegetation appeared healthy and showed no signs of inhibited growth from exposure to harsh or toxic substances. A closer inspection revealed abundant growth of subterranean roots. There were no stains or any other symptoms of dumping or spilling. The security fence had closing gates to further restrict access by outsiders.

The fuel oil fill port and tank vent were located on the 31st Street side. There were a few stains observed on the pavement near the fill port but they were minor.

**NO PCB's**

There were no transformers or other electric devices observed on the property that were suspected of containing PCB's.

**37-11 30TH CORPORATION  
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK  
PROJECT NO. R-302**

The surrounding area was primarily commercial with similarly constructed warehouse buildings lining the block. There were no industrial or heavy commercial operations that were observed within a 1/2 mile radius of the site that were suspected of generating, processing or improperly storing hazardous or toxic substances.

(Note: The property's owner has reported that storage tanks installed on the building's roof were removed prior to his purchase of the site. The tank installation was discovered during the development of the historical profile found below.)

**REMEDIAL ACTION**

Most of the ACM observed in the building was in friable condition and in areas frequented by building tenants and service personnel. The presence of friable asbestos in these areas created a potential human health risk from exposure to airborne asbestos fibers. It is therefore recommended that this material be removed and/or replaced. Estimated cost for removal and replacement of all ACM is \$14,000.

37-11 30TH CORPORATION  
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK  
PROJECT NO. R-302

**LABORATORY ANALYSIS**

Bulk samples of materials suspected of containing asbestos were subjected to Polarized Light Microscopy analysis at the facilities of Laboratory Testing Services, Inc., an EPA and NIOSH approved laboratory located in Westbury, New York.

**HISTORICAL PROFILE**

**NEW YORK CITY MUNICIPAL AGENCY REVIEW**

To determine if prior owners, tenants or utilization of the subject premises had the potential to cause residual contamination, **MTS EnviroSurv** has performed a search of records of the New York City Fire Department, Bureau of Fire Prevention, Underground Storage Tank Section and the New York City Department of Buildings (Queens County). Specific Activities or events that could adversely affect the environmental quality of the subject premises have been tabulated and can be found below.

37-11 30TH CORPORATION  
37-11 30TH STREET. LONG ISLAND CITY, NEW YORK  
PROJECT NO. R-302

Summary of Findings

The only tank visually verified to be on the premises was the 4500 gallon underground unit being used for the existing building heating system. Public agency documents indicated that several additional tanks had been installed on the property since its initial development in 1914. The records show a 2000 gallon tank buried in 1933 for an oil burning system. Further, the records show a 550 gallon tank buried in 1941 and a 5000 gallon UST installed in 1947. None of these tanks were physically in evidence at the site but may be presumed on the property. The tank currently in use and described by the owner, did not fit any of the records found in the agency review.

The Fire Marshall's office showed no record of any tanks. This indicated that the existing tank was not duly registered. There was insufficient information available to determine if leak testing of the tank in service was required by existing State Law. Leak testing of tanks in or out of service was beyond the scope of a Phase I Survey.

5000. -  
is Basement  
Tank by  
oil Burn

37-11 30TH CORPORATION  
37-11 30TH STREET, LONG ISLAND CITY, NEW YORK ...  
PROJECT NO. R-302

In addition to the data on tanks, the agency review indicated that prior occupants stored very large quantities of formaldehyde at the site. Formaldehyde is a substance listed as toxic by the federal Environmental Protection Agency. There also appeared to be plastic manufacture performed at the site. Such operations could have involved the use of hydrocarbons or other organic chemicals considered hazardous by the EPA. It also appeared that lead melting was conducted in the early 1950's. Testing soils or groundwater for contamination by these parameters was beyond the scope of a Phase I Survey.

**NEW YORK CITY FIRE DEPARTMENT.**  
**UNDERGROUND STORAGE TANK SECTION**

No record found

**NEW YORK CITY DEPARTMENT OF BUILDINGS**

Records indicate past utilization of site had the potential for causing residual contamination see below.

A complete index of all work performed at the site was not available on either the Card Index System or the 2 Computer Systems used by the Department of Buildings. The following information represents all applications found while performing a thorough search of block and lot records.

**GENERAL ANALYSIS**

This report is based on the observations made on December 13, 1990 at the site described. The survey was a Pre-Loan Phase I inspection made to meet the requirements of **Chemical Bank** and to determine if there were any overt signs of contamination present at the site, any hazard due to friable Asbestos, or if there was any indication of noncompliance with Federal or Local Environmental Regulations. This report applies only to those portions of the building, property, rooms, public access areas and utility areas inspected. The observations reported do not apply to those areas or items not seen, not capable of being seen or otherwise difficult to inspect.

This report is not to be construed or used as a guarantee, a warranty, a prediction of future condition or an estimate of value.

LAB. NO.: 90-03292(065)

CLIENT: MTS Enviro Surv  
258-B Orinoco Drive  
Brightwaters, New York 11718  
Attn: Mr. Art Gerunda

CLIENT'S P.O. NO: 9004

MATERIAL: Four (4) Bulk Samples

SUBMITTED FOR: Asbestos Determination

## 1.0 BACKGROUND:

Laboratory Testing Services, Inc. received four (4) bulk samples - labeled R-302, for asbestos determination from MTS Enviro Surv, Brightwaters, New York.

## 2.0 PROCEDURE:

Analysis of friable samples was done in accordance with EPA "Interim Method for the Determination of Asbestos in Bulk Insulation Samples" (EPA-600/M4-82-020, Dec. 1982).

This method utilizing Polarized Light Microscopy is applicable to all bulk samples of friable insulation materials submitted for identification and quantification of asbestos components.

Analysis of non-friable materials is performed by a modified version of (EPA-600/M4-82-020). Non-friable substances are not within the scope of the EPA method. Quantification of asbestos in these samples may deviate from the accurate range normally obtained from (EPA/600/M4-82-020).

## 3.0 APPLICABLE QUALIFICATIONS:

Our Laboratory is accredited under the National Voluntary Laboratory Accreditation Program (NVLAP) for bulk asbestos analysis. Our laboratory has been assigned NVLAP Laboratory Code Number 1332. This program is performed under the United States Department of Commerce, National Institute of Standards and Technology (formerly National Bureau of Standards), Gaithersburg, Maryland.

Laboratory Testing Services, Inc. is an approved laboratory in the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP Identification # 10837).

## 4.0 RESULTS:

The following results were obtained from our tests.

CURRENT OWNER NAME.....: National Rail Passenger Corp.

CURRENT OWNER ADDRESS.: 400 N. Capitol St. NW, Washington, DC

OWNER(S) DURING USE...: Pennsylvania R.R.; Amtrak

OPERATOR DURING USE...: Amtrak Sunnyside Yard

OPERATOR ADDRESS.....: 39-29 Honeywell St., Long Island City, NY

PERIOD ASSOCIATED WITH HAZARDOUS WASTE: From To

SITE DESCRIPTION:

The Amtrak maintenance yard is a 100-acre site located in the Sunnyside section of Queens. This location was originally a wetlands area, but was filled in sometime prior to 1910, when it was occupied by the Pennsylvania R.R. Over the years, as a result of transformer maintenance and malfunctions, PCB oil has contaminated the soil surrounding the engine house. A preliminary subsurface investigation has been completed, and PCB soil contamination has been confirmed. A consent order between NYSDEC and Amtrak has been negotiated and an RI/FS workplan is being finalized. Amtrak has also installed a sump system as an interim remedial measure to collect contaminated oil and groundwater.

Soil and groundwater contamination has been confirmed.

**ASSESSMENT OF HEALTH PROBLEMS:**

Shallow groundwater beneath the Amtrak Railroad Yard is heavily contaminated with oils and fuels. Oily groundwater flows northerly and has seeped into basements of adjacent office buildings. The interim remedial work will include treatment of groundwater in the vicinity of the former diesel fuel storage tanks. Limited sampling of basement air has revealed no detectable contaminants, although odor complaints are regular. Periodic monitoring of nearby basements will continue. There is no use of groundwater in the area. PCB contamination appears to be prevalent around the entire yard area. A cleanup program, focusing on employee protection, has been performed on regularly used surface areas with heavy contamination (work pits, tables, lunch room, etc.). Some potential for exposure still exists in areas of lesser usage. This will be addressed in the Remedial Investigation.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

**EXECUTIVE SUMMARY**

**EXECUTIVE SUMMARY**

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**TARGET PROPERTY INFORMATION**

**ADDRESS**

3711 30TH STREET  
 LONG ISLAND CITY, NY 11101

**COORDINATES**

Latitude (North): 40.7548000 - 40° 45' 17.28"  
 Longitude (West): 73.9319000 - 73° 55' 54.84"  
 Universal Transverse Mercator: Zone 18  
 UTM X (Meters): 590164.1  
 UTM Y (Meters): 4511875.5  
 Elevation: 40 ft. above sea level

**USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY**

Target Property Map: 40073-G8 CENTRAL PARK, NY NJ  
 Most Recent Revision: 1995  
 South Map: 40073-F8 BROOKLYN, NY  
 Most Recent Revision: 1995

**AERIAL PHOTOGRAPHY IN THIS REPORT**

Portions of Photo from: 2010, 2011

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

TC3894263.2s EXECUTIVE SUMMARY 4

**EXECUTIVE SUMMARY**

**STANDARD ENVIRONMENTAL RECORDS**

**Federal RCRA CORRACTS facilities list**

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/10/2013 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

**Federal RCRA generators list**

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

**EXECUTIVE SUMMARY**

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 8 RCRA-CESQG sites within approximately 0.25 miles of the target property.

**State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

TC3894263.2s EXECUTIVE SUMMARY 6

**EXECUTIVE SUMMARY**

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 02/17/2014 has revealed that there are 2 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

**State and tribal landfill and/or solid waste disposal site lists**

NY SWFLF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWFLF list, as provided by EDR, and dated 12/12/2013 has revealed that there are 2 NY SWFLF sites within approximately 0.5 miles of the target property.

**State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 45 NY LTANKS sites within approximately 0.5 miles of the target property.

**EXECUTIVE SUMMARY**

**State and tribal registered storage tank lists**

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 12/30/2013 has revealed that there are 30 NY UST sites within approximately 0.25 miles of the target property.

TC3894263.2s EXECUTIVE SUMMARY 11

**EXECUTIVE SUMMARY**

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

**Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/17/2014 has revealed that there are 11 NY Spills sites within approximately 0.125 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/10/2013 has revealed that there are 29 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

TC3894263.2s EXECUTIVE SUMMARY 19

**EXECUTIVE SUMMARY**

**EDR HIGH RISK HISTORICAL RECORDS**

**EDR Exclusion Records**

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 57 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 20 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

 DEC Region: 2  
 DER Facility ID: 173083  
 DER Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"8/18/2004 Sangesland spoke to Manny Caruana, Building Supervisor at See Factor Industry Inc. to discuss the specifics of what the DEC needs to close out this spill9/13/2004 Sangesland spoke again with Manny Caruana and asked him to send in the soil borings he has along with the tank closure documents.9/15/2004 Mr. Caruana hand delivered a package of documents to the DEC office. Included was a summary letter outlining the testing and closure of the tank. After the tank failed the tank test in 1998, it was not retested, however Mr. Caruana says he inspected the interior of the tank and said it was still secure. He states that the initial test was faulty because of a dry leak on the vent line. In 2000 the tank was abandoned by USA tanks and an abandonment certification was forwarded to the NYC Fire Dept. The building now operates on natural gas. In Feb 2000 several soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. Three of these borings were approx. 10 ft from the abandoned tank and went down to 20 ft depth. There was no evidence of any soil contamination. Based on this information, the DEC believes that there was no actual petroleum spill at this site and this case has been

**SPILL NUMBER 0304292 (Continued)** **S106016421**

"SANGESLAND" F & N was hired to conduct a phase 1 & phase 2 on a vacant lot. Part of this lot had been used as a gas station in the past. Several tanks were identified. During excavations to install footings for a new building, a waste oil tank was found and the top was damaged. During the heavy rains on 7/22/2003, water displaced the waste oil in the tank and the oil poured out into the trench area. F&N is going back to pump out the remaining oil and to "Guzzle" out the contaminated soil in the trench. F&N put in a proposal to the property owner to remove all of the remaining tanks on the site 9/3/2003. Sangesland reviewed a Spill Closure Report prepared by F&N and dated August 19, 2003. Report outlines how a tank was found, pulled, contaminated soil "Guzzled" out and endpoint samples taken. All endpoint samples were clean. Spill Closed  
 CALLER STATES A CONSTRUCTION COMPANY UNEARTH A WASTE OIL TANK YESTERDAY, AND SOMETIME LAST NIGHT WHEN IT WAS RAINING, THE TANK FILLED WITH WATER AND OVERFLOWED ONTO THE GROUND - CLEAN UP IS STARTING AT THIS TIME

 Classification: Conditionally Exempt Small Quantity Generator

**Hazardous Waste Summary:**  
 Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D035  
 Waste name: METHYL ETHYL KETONE

Waste code: F003  
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005  
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. Environmental Interests/Information System  
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**DEC Memo: Prior to Sept. 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"4/29/2002 - Sangesland spoke to property owner (Mr. Ron Levy).Mr. Levy did not feel comfortable with ProTest and requested information on how to close out this spill.Isolate and retest just the tank and just the piping. Once the spill is closed out, owner will abandon the tank and switch to gas. 6/10/2002 Man hole on top of tank was left open. Gasket was replaced and the tank passed the retest.7/3/2002 Mr. Levy called. He will send a copy of the tank test which shows that the tank passed the second test. He also said that he will be pulling the tank out and wanted to know the proper procedures. Sangesland provided Mr. Levy with a contact at PBS.6/16/05 Heltzman: See PBS 2-607788. Tank was removed July 2002. Closed.**

**FINDS:**

Registry ID: 110004334006

Environmental Interest/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "VOUGHT/TIPPLE"2/27/2002-VOUGHT-Cleanup and sampling performed by Milro (516)379-1500. 12/05/2001- Milro performed 3 borings along line to delineate spill. 12/27/2001-12/28/2001 Milro removes approximately 5 cubic yards of impacted soil. Disposal manifests were provided to the NYSDEC. 12/28/2002-site visit by Vought confirms that no more impacted soil remains in basement. Excavation was backfilled, restored with a concrete slab and epoxied. Groundwater was no impacted and spill closed 2/27/2002 by Vought. defective oil lines caused spill of up to 275 gallons (approx 100-200 gallons) spilled under neith the house - there is no way for the to get to the spill - they did run a new oil line

Environmental Interest/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Contact Phone: Not reported  
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was \*02-28-05. Reassigned to Tibbe. Spill reopened due to pending investigation by NYCT.08-11-05. NYCT performed an investigation. Only one soil boring showed SVOC contamination above TAGM but it did not have any corresponding gw contamination nor was there any visual or olfactory indication of petroleum contamination. Elevated SVOCs are mostly likely due to fill material identified in the soil borings.  
 Not reported  
 Remarks: U/G TANK IN FRONT OF BLDG. WHEN IT RAINS IT OVERFLOWS ON TO DIRT

Environmental Interests/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019781244

Environmental Interests/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 12/06/08-Zhune spoke to Vincent Theurer from approved oil. He said on July the oil line was leaking. Approved Oil removed the line and replaced. It was a underground line. 12/06/08 Customer called complaining small oil coming by the concrete. We went there we saw a little decoloration where the old oil line was. Vincent told her to hire an environmental company to perform soil samples. He said the owner is Mary Zuk (718) 7861061. 12/06/08- Mary Zuk called she said I saw oil stain on the concrete and oil smell. I called the oil

APPROVED OIL COMPANY (Continued)

company. 03/16/09- Zhune. A.B.C Tank sent a letter on 03/13/09. The letter states: I am writing on behalf of the owner of 36-25 29th Street, Long Island City, NY regarding the clean up of spill #0809977.ABC Tank supplied the necessary labor, materials and equipment to perform the following:On January 07,2009-February 03,2009 ABC Tank broke up cement, dug up a 5' long by 3' wide trench where a buried fuel line was replaced in June 2008 by others. ABC Tank removed (7) drums of contaminated soil from the affected area. ABC Tank obtained (2) end-point samples 3' deep from the area. A copy of the soil sample results has already been sent to DEC.02/23/09-Results of soil samples were received. Two soil samples were taken from right and left side of the excavation. The results showed that there were no indication of VOC's in the soil analysed. Most of the SVOC's were below the TAG standards except for the benzo series: Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene and Dibenzo(a,h)anthracene which are above the TAG standards. Spill Closed.

Remarks:

1156 The caller advised dispatch the clean up is pending. The tank is located inside the home. Unknown amount of heating oil has spilled due to equipment failure. No water ways affected.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

MAP FINDINGS

UNITED CLEANERS (Continued) 1000398420

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interests/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

the clean up. Violeta Leano 718-784-3530 -- Owner  
 tleano@yahoo.com 02/24/12- On 02/15/12 AB Environmental emailed the report dated 02/9/12. The soil contaminated in the impacted area was removed. The excavation was completed as best that could be accomplished with out compromising the foundation. One endpoint sample was collected at the bottom of the excavation (7feet). The endpoint sample analytical result indicated that all detected constituents are within acceptable limit. Spill Closed. Report eDocs. Found line broken. Been leaking for years

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

SUNNYSIDE YARD (Continued) 1000323850

Hazardous Waste Summary:  
 Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.  
 Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.  
 Waste code: D008  
 Waste name: LEAD  
 Waste code: D009  
 Waste name: MERCURY  
 Waste code: D018  
 Waste name: BENZENE  
 Waste code: D035  
 Waste name: METHYL ETHYL KETONE  
 Waste code: D039  
 Waste name: TETRACHLOROETHYLENE  
 Waste code: F005  
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.  
 Waste code: B007  
 Waste name: B007  
 Waste code: D001
