Site Description: Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility. Historic Use: The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA) project. An extensive cleanup program was completed in 1998 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with recurring PCB contaminated sediment impacts. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure

AMTRAK SUNNYSIDE YARD (Continued)

S103575644

pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem:

Nature and Extent of Contamination: Prior to Remediation: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater from soils impacted by the COCs. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for

AMTRAK SUNNYSIDE YARD (Continued)

S103575644

PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above, (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs (18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-39 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010. Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

Tank Number: A08  
 Tank Id: 196356  
 Material Code: 0008  
 Common Name of Substance: Diesel

Equipment Records:

- D00 - Pipe Type - No Piping
- E00 - Piping Secondary Containment - None
- H00 - Tank Leak Detection - None
- B01 - Tank External Protection - Painted/Asphalt Coating
- C00 - Pipe Location - No Piping
- F00 - Pipe External Protection - None
- I04 - Overfill - Product Level Gauge (A/G)
- K01 - Spill Prevention - Catch Basin
- A00 - Tank Internal Protection - None
- G01 - Tank Secondary Containment - Diking (Aboveground)
- J02 - Dispenser - Suction Dispenser
- L00 - Piping Leak Detection - None

Tank Location: 3  
 Tank Type: Steel/Carbon Steel/Iron  
 Tank Status: In Service  
 Pipe Model: Not reported  
 Install Date: 12/01/2004  
 Capacity Gallons: 2000  
 Tightness Test Method: NN  
 Date Test: Not reported  
 Next Test Date: Not reported

 DEC Memo: 10/12/2011 - Sangesland reviewed a "Request for Closure" submittal from RiteWay Tank dated Oct 12, 2011. Problem was a Tank Test Failure that was traced to a hole in the sidewalk fill line. The sidewalk was opened and 58 drums of contaminated soil was removed. The line was replaced and 4 end point samples were taken. Clean fill was put back and the sidewalk was repoured. Based on the end point lab results, this spill case has been closed out. Lab results, manifests, photos etc are all in eDocs attachments.

**Remarks:** tank test failure. retest pending. believed to be line failure

 Updated By: MJKOMORO  
 Site Description: LOCATION: The site is located in an urban area. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings. See Site No. C241127SITE FEATURES: A 7600 square foot one-story concrete building occupies the entire lot. The back of the lot abuts adjacent buildings. The building has no basement.CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. HISTORICAL USES: The site was occupied by a commercial laundry and dry cleaner up until 2011, when the DEC investigation of the property began. Records indicate at least 10 years of use as a dry-cleaner. The building is currently vacant. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL in the vicinity of the site. Soils in the area are primarily sand.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012.

FRESH CLEANERS & LAUNDRY INC (Continued)

1001125032

Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade.

BROWNFIELDS:

Program: BCP  
 Site Code: 480014  
 Site Description: LOCATION: This is an off-site of the The Bridge Cleaners site located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: A 7500 square foot one-story concrete building occupies the entire lot. The back of the lot abuts adjacent buildings. The building has no basement. CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings. HISTORICAL USES: The site was occupied by a commercial laundry and dry cleaner up until 2011, when the DEC investigation of the property began. Records indicate at least 10 years of use as a dry-cleaner. The building is currently vacant. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL in the vicinity of the site. Soils in the area are primarily sand.  
 Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the

FRESH CLEANERS & LAUNDRY INC (Continued)

1001125032

property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Significant Threat: The site presents a significant environmental threat due to the ongoing releases of contaminants from source areas into groundwater.  
 Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Furthermore, environmental sampling indicates that soil vapor intrusion represents a concern for on and off-site structures and additional evaluation is necessary to determine the extent of exposure to contamination in this media.

Environmental Interest/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Region: 2  
 DER Facility ID: 127909  
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "M TIBBE" 7/15/05 - Mike H left message at Board of Education - also spoke with Albert Cardino (718-784-5250), School Fireman and in charge of fuel oil tanks. On 9/2 - Bob C - spoke with Al Cardino, who said to call the school custodian (Tom Logan) at 718-937-8214, who would have the records and could fax them. Called Tom on 9/7 & left message. 11/15/2005: Lead transferred to Joe White as part of the Spill Initiative Project. 12/08/2005: Mr. James Merlo contacted Joe White and is checking to see if a new tank test has been performed on this tank. He will provide documentation so spill can be closed. 1/5/2006: The associated PBS# 2-478741 indicates that the tanks 001 and 002 have been closed in place as of 6/1/2001. The remaining tank 003 is an above ground tank that does not require a tank test. Given that the spill was a tank failure and the underground tanks are no longer in service I am closing out this spill ----- joe white

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Spiller Extention: Not reported  
 DEC Region: 2  
 DEC Facility ID: 127449  
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL" This spill case was reassigned from DEC (Sigona) to Rommelon 02/10/2004.02/28/05. Transferred from Rommel to Tibbe. Site being investigated by NYCT Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned.12/15/05: Transferred back to Tibbe from Bureau B.08-30-06: NYCT attempted to perform a subsurface investigation but continually encountered refusal. A new subway tunnel, ventilation bulding and utilities were constructed in the area of the former tanks and associated contamination. It would appear that the contamination was removed during construction because of the large excavation that was required to construct these facilities, but NYCT has no reports or manifests to indicate how much was removed. Further investigation does not appear to be possible due to the underground structures and utilities.  
 Remarks: Free product found in groundwater monitoring well

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004430857

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019701875

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

 Updated By: JHOCONNE

Site Description: See also Site no. V00600. Location: The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The entire site is occupied by a one story building which covers approximately 21,900 sq. ft. Historical Use: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis.

Env Problem: Nature and Extent of Contamination: Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues. Soil: Prior to IRM, elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994. Groundwater: On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethane, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore,

LEVCO METAL FINISHES (Continued) U003391190

inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion.

 Updated By: JHOCOWNE  
 Site Description: See also Site no. 241009. Location: The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The site is now a paved parking lot. Current Zoning and Land Use: The site is used as a parking lot. The zoning is commercial. Past Use of the Site: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. The entire site was occupied by a one story building which covers approximately 21,900 sq.ft. Site Geology and Hydrogeology: Groundwater flows to the east.  
 Env Problem: Nature and Extent of Contamination: Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. These actions were completed under the State Superfund (SSF) Program. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010

LEVCO METAL FINISHES (Continued)

U003391190

under the SSF Program which concluded that there were no off-site vapor issues. Soil - Prior to IRM: elevated concentrations of volatile organic compounds (e.g. 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994 under the SSF Program. Groundwater - On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The SSF Record of Decision (ROD) recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas - An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.  
 Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface and will be removed as part of a site-wide redevelopment. A sub-slab depressurization system will be incorporated into the new building to prevent soil vapor intrusion from site related contaminants of concern.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Registry ID: 11000446467

Environmental Interest/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.  
 FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Hazardous Waste Summary:  
 Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

**JUNG SUN LAUNDRY CORP (Continued)** 1000232222

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039  
Waste name: TETRACHLOROETHYLENE

Waste code: F002  
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005  
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: U210  
Waste name: ETHENE, TETRACHLORO-

Violation Status: No violations found

Evaluation Action Summary:  
Evaluation date: 08/28/2002  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: EPA

Evaluation date: 02/27/1996

 Updated By: JAMORAS  
 Site Description: Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th Street and 37th Avenue. Site Features: The site consists of four property lots. The main site features included single story buildings on three lots and an open area on the fourth lot. There were three inter-connected single story buildings, which occupied three adjacent lots. Recently (late summer 2013) the new owner demolished the structures on two lots down to the slab. The previous owner still owns one lot and the abandoned structure on that lot is still there. Approximately one third of the Site is made up of the fourth lot, which has and continues to be an open area which extends to the west up to 23rd Street. The open area also houses a tractor trailer sized metal storage container. The site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site property is currently inactive and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The nearest residential area is located north (upgradient) of the site, on the other side of 37th Avenue. There is a residential area approximately 400 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930s to the late 1980s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980s to the mid 1990s. Prior uses that appear to have led to site contamination include pool

**JUNG SUN LAUNDRY SITE (Continued)** S110246984

housekeeping and spills associated with the dry cleaning operation. An adjacent property owner conducted a Phase I Environmental Site Assessment in September 2003, a Phase 2 Limited Subsurface Investigation in October 2003 and a Phase 2 Limited Groundwater Investigation in December 2003. The Department conducted a Site Characterization from August 2007 through March 2010. In October 2010, the Site was placed on the Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 site. Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the southwest.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During 2012 remedial investigation PCE, TCE and 1,2-DCE have been found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The unrestricted use RSCOs for PCE has been exceeded. Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC have been detected in on-site shallow groundwater at concentrations up to 11000 parts per billion (ppb), 1200 ppb, 21000 ppb, 130 ppb and 390 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. Per April and June 2012 groundwater data, the groundwater plume has migrated approximately 400 feet off-site. Soil Vapor & Indoor Air: PCE and TCE were detected in on-site soil vapor at levels up to 280,000 microgram per cubic meter (g/m3) and 130,000 g/m3, respectively, and off-site at levels up to 13,000 g/m3 and 420 g/m3, respectively. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted. Significant Threat: The site poses a significant environmental threat because the area overlies a sole-source aquifer and because there is an ongoing release of PCE and TCE from soil into groundwater.

Health Problem: Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended.

 DEC Memo: DEC Piper spoke W. Isaac at Eastmond. There was an overflow of 6 oil out the vent, unsure if spill was to soil or concrete. Piper left message for Roger Romance requesting call back. Vought to follow in am. 11/7/07-Vought-Performed site visit and spill out of vent. Vought spoke with AL Eastmond Issac Mungra and site was initially cleaned by Metro Fuel (spiller) and then Eastmond followed up with powerwash. Minor amounts of non impacted speedily dry on sidewalk with no odors or staining and no spill in basement as per Mungra. Clean

Remarks: to sidewalk. No drains , soil affected. Cleanup under way by Rapid Waste. Spill cleaned, closed. Caller advised 20 gallons of oil spilled onto side of building and sidewalk no sewer of soil was affected. Caller advised that the owner advised they only ordered 5k gallons when they actually ordered 6k. Clean up is in progress by rapid waste.

Environmental Interest/Information System  
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department

**KAUFMAN ASTORIA STUDIOS (Continued)** 1005639711

of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 HW Code: 241139  
 Record Add: 01/25/2012  
 Record Upd: 12/17/2012  
 Updated By: KALEWAND  
 Site Description: Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor. Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historic Use(s): The Site was a commercial building occupied by various manufacturing and warehousing entities including a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface. Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Env Problem: Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations. Soil ? There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples. Groundwater ? On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24

EMMIS BROADCASTING INCORPORATED (Continued) U001831683

ppb) were detected in groundwater samples at levels exceeding groundwater standards. Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb - 50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site. Sub-slab soil vapor ? Sixteen petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzine (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air ? Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air ? PCE was detected in the outdoor air sample at a concentration well below the concentrations found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat: The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination. CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System is scheduled to be installed during the summer break.

 DEC Memo: 12/31/10-HRAHMED-Spoke to Rene Lewis (917 420 8330) of Alliance Mechanical. As per him, 5-7 gal of #6 oil spill from the vent line due to overflow. Noticed oil stain on the wall and side walk. PTC powerwashed the wall and the sidewalk. There was no spill in the tankroom. Uploaded closure report and some picture in eDocs. This case is closed.

Remarks: Caller advised overflow of tank. Clean up is in process.

**BROWNFIELDS:**  
 Program: BCP  
 Site Code: 490213  
 Site Description: Site Location: The proposed site location is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, 11101, in Queens County. There is an automobile dealership and a multi-story brick building housing multiple commercial businesses to the west and a vacant 5 story building, various commercial and light commercial industrial businesses to the north. To the east is an automobile dealership and service center and to the south is the NYC Subway tunnel and various commercial buildings. Site Features: The site contains a 6,500 square foot one-story garage concrete block frame building constructed with a concrete slab, and the remainder of the site is a paved parking lot. Current Zoning and Land Use: The site is located with the Dutch Kills sub-district within the Special Long Island City district and has an E-Designation 219 status. Past Use of site: The site has been used by several companies, including a gasoline service station, an automobile repair and carwash, and an automotive dealership. Site Geology and Hydrogeology: The geology of Queens county is part of the Long Island hydrogeologic system and Long Island Lowlands. The surface of the Long Island Lowlands is modified and covered by glacial deposits from the most recent glaciations (Wisconsin Stage), and consists of moraine deposits, glacial drift, and outwash materials. In a roughly north-south cross section, the geology can be characterized as a wedge-shaped layer of Cretaceous and Pleistocene unconsolidated sediments, thickening to the south-southeast. Several impermeable layers of clay are found within this sediment package, general creating three distinct aquifers. Bedrock on this site is 100 feet below grade surface. Several impermeable clay layers are found within this sediment package, generally creating three distinct aquifers. The site is at an elevation of approximately 23 feet above mean sea level (site topography is generally flat, with a slope to the west). The nearest water body is the East River, located 1.18 miles to the west of the site. Groundwater is located approximately 10-14 feet below ground surface and groundwater flow direction is from northeast to southwest.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System  
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for

**TEITELBAUM CLEANERS (Continued)** 1000400106

information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site Description: Location: The 11,200 square foot (0.26 acre) site is located at 3545 35th Street, Long Island City, NY in an urban area. The site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The site is occupied by a 1 to 2 story commercial dry cleaner. Current Zoning/Use(s): The site is zoned as M1-5, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The Site is an industrial building conducting dry cleaning operations since 1975. The site is a RCRA large quantity generator (EPA ID # NYD981132459) of spent solvent, waste code F002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site (site no. 241139) generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater in the vicinity of the site was encountered at approximately 17 to 20 feet bgs and flows towards the southwest.

TEITELBAUM CLEANERS (Continued)

1000400106

Env Problem: Nature and Extent of Contamination: Information is based on the results of a site characterization investigation performed at the nearby Former Luft Co. Inc. Cosmetics Manufacturer site (241139). That investigation was triggered by the discovery of elevated levels of cVOCs in the indoor air and sub-slab vapor of the school building on that site. The subsequent Supplemental Site Investigation (SSI) indicated that elevated concentrations of cVOCs (namely PCE) existed along the adjacent sidewalk on the western side of 35th Street and the south-eastern section of the school building. The addendum to the SSI ascertained that the Former Luft Cosmetics site was not a source of the contamination. Seven groundwater wells were installed upgradient and cross gradient of the school and samples taken at the groundwater interface. One well was installed adjacent to and another just downgradient of the Teitelbaum site. Groundwater Several cVOCs associated with chlorinated solvents, namely, tetra-chloroethylene (PCE) and its breakdown products tri-chloroethylene (TCE) and cis-1,2-dichloroethylene (cis-DCE), were detected at elevated levels from groundwater samples taken at the groundwater interface at locations along the adjacent sidewalk and downgradient of the Site. PCE, cis-DCE and TCE concentrations were at orders of magnitude of the TOGS SCG of 5 g/l; trans-DCE and 1,1-DCE were also detected at levels above the SCG. Concentrations of cVOCs decreased in the downgradient direction consistent with the inferred contaminant plume. The groundwater flow direction was identified as southwesterly by the Addendum to the Supplemental Site Investigation Report (ASSIR) of the nearby Former Luft Co. Inc. Cosmetics Manufacturer site. Significant Threat: Evaluation of significant threat will be made following completion of the Site Characterization. This Site has entered the Brownfield Cleanup Program (BCP), Executed Brownfield Cleanup Agreement signed on 01/09/2014. See site no. C224149 for further updates.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

BROWNFIELDS:  
 Program: BCP  
 Site Code: 487391  
 Site Description: Location: The 11,200 square foot (0.26 acre) site is located in an urban area in the Astoria section of the Borough of Queens. The Site is bordered by 35th Street and residential buildings to the west by a 2 story commercial/industrial building to the north, by a parking

TEITELBAUM CLEANERS (Continued)

1000400106

lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The Site is currently improved with one 100 ft by 100 ft (approximately 10,000 square feet) commercial/manufacturing building. The ground floor is currently utilized for dry cleaning operations and a portion of the building contains a second floor for office space and storage. Current Zoning/Use(s): The site is zoned M1-5 (manufacturing and light industrial) and is surrounded by industrial, commercial and residential uses. Historical Use(s): The site has been a commercial dry cleaner operating under various names and ownership since 1952. Site Geology/Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. Groundwater in the vicinity of the site was encountered at 17-20 feet bgs and flows towards the southwest.

Env Problem: No environmental investigations or sampling have occurred at the Site. However, information was obtained from environmental investigations performed at the nearby former Luff Co. Inc. Cosmetics Manufacture site (241139). The analytical results from that investigation revealed that elevated concentrations of chlorinated solvents (specifically tetrachloroethylene or PCE and its breakdown products) are present in the underlying and upgradient groundwater. Groundwater samples taken adjacent to, and downgradient from the Site revealed concentrations of PCE at 2,200 ppb, TCE at 550 ppb, and DCE at 12,000 ppb.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

AIRS (AFS):

Airs Minor Details:  
 EPA plant ID: 110001594310

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"6/4/2002 - Sangesland called Dave Fazin at Crown Leak Detection (516-939-2959) to find out if repair work was ever done to this tank. If so, Crown needs to submit a letter stating that: tank was welded, past a tank test, no visible sign of leakage.4/14/06 - L. Alden - suggested action: Re-establish contact with Crown Leak Detection or site owner.11/16/06 - Austin - Reassigned to Ketani for follow-up/review - and 12/1/06 - Raphaela Ketani. The original caller was David Fazin of Crown Leak Detector (516) 939-2959. The TTF was on 3/26/02 and was the result of a failed epoxy patch. The patch was supposed to be re-welded and the tank system retested. Gus Tsambas (718) 721-2688 was involved with the site. PBS case #2-607845 with a 1500 gal. tank in service with #2 oil. The owners are Aligus Realty Co., 25-26 33 Street, Astoria, NY, 11103, (718) 721-2688. I made contact with Mr. Tsambas. The phone number was his home. He said he has the passing test results and he will send it to me. He said that the tank sits on the concrete floor and the patch is on the top of the tank. He said that no oil was released.12/1/06 - Raphaela Ketani. Mrs. Gallun of the Gallun Agency (718) 729-8120 called to ask what DEC needed to close the spill case. I told her we needed a new tank

ALGUS REALTY (Continued)

S105995477

system test showing that the system is tight. She said she will have the super. call the oil company and arrange such a test, and send me the results. 1/4/07 - Raphaela Ketani. I received the passing tank test results from Mr. Tsambos. Based upon these results and Mr. Tsambos' statement to me on 12/1/06 that no oil was released, I am closing the spill case.1/10/07 - Raphaela Ketani. I received a copy of the passing tank test results from the Gallan Agency - Insurance and Real Estate.

S108129775

collected, SVOC Exceedances noted. Shaw stated supplemental investigation will be performed to further delineate petroleum impacted soils and groundwater impacts. 8/23/04 TJDShaw submitted (8/19/04) a work plan for supplemental investigation. Site is being developed for the construction of a new public school. As part of the project a new underground parking garage is to be built, which will involve excavating soils to a depth of 15 feet. Additional soil borings are planned in the area of previously identified contamination. Work plan was verbally approved on this date with requirement that SHAW notify DEC a minimum of 48 hours prior to scheduling sampling event. 8/23/04 TJDMultiple spills on single address. Spill 0104171 closed and cross referenced to 0101345. 11/17/05 - L. Alden - Called Mike Sherwood, Shaw Group, at (645) 492-3162. Left message. 12/19/05 - L. Alden - Called Sherwood back. Shaw is not doing the additional investigation on this site. Called his client, Lee Guterman, at the NYC School Construction Authority, (718) 472-8502. This property will be the site of the Frank Sinatra School. Anna Ciecierska, (718) 752-5028, returned my call. She didn't know the specifics of the project but would look into the file to determine where they were with the investigation/cleanup effort. 12/20/05 - L. Alden - Anna Ciecierska called back today. She had a report from February 2005 where the consultant had delineated the contaminated soil. She indicated that removal of contaminated soil was to commence within a week or two. She would wait to get the report before submitting a request to close the spill. 5/01/06 - L. Alden - Mark Hudok, GZA Geoenvironmental, (973)256-7800, called. He was preparing a remediation plan and called to discuss post-excavation sampling that would be necessary after removal of contaminated soil. Recommended action: Review excavation plan and post-excavation results. 8/15/2006 Sangelsand received a call from Jennifer Kahn of SCA requesting guidance on who the DEC case manager was for this site. Apparently in 2005 the project was sent up to DEC Albany for work and was then transferred back to DEC Region 2. Because the site is already into the remediation phase, the case is being transferred to the Region 2 Remediation Group (Koon Tang). 08/15/06: Transferred to Yau. (Yau)08/16/06: Visited the school site with Joe. Met with the representatives from SCA. Told them additional groundwater samples will be required at the soil/groundwater interface. Will send in report as soon as results come back. (Yau)08/24/06: Received report along with lab analytical results from SCA. Both soil and groundwater results are good except for N-2, N-3, and W-2. 1. The benzo(a)anthracene and benzo(a)pyrene exceeded TAGM slightly for the soil samples. 2. The o-xylene and dibenz(a,h)anthracene exceeded the TOGS standard slightly. DEC will approve the construction of a school building on top of this site. (Yau)10/16/06 Re-assigned from Yau to Chanda (Chanda)12/20/06/DEC received a phone call from Mr. Drew Pardus, school construction Authority. Ph:(718)752-5036. He said that last week soil excavated from the construction site and soil samples were sent to lab analysis. He will send in report as soon as possible as result come back. (Chanda)02/27/07: DEC received Endpoint Soil and Groundwater Sampling Results prepared by Shaw Environmental and Infrastructure, Inc., dated 2/26/07. 3/14/07: DEC reviewed all report and documents regarding this spill. Based on the information presented to the Department DEC closed this spill. (Chanda)3/15/07: A NFA letter was issued to Ms. Lee Guterman, Manager, IEH Department, SCA, and copy to Mr. Bob Kanaparthi, SCA and Michael R. Sherwood Shaw Environmental &

SHWS:

Program: HW  
 Site Code: 58682  
 Classification: Significant threat to the public health or environment - action required.  
 Region: 2  
 Acres: 1.100  
 HW Code: 241016  
 Record Add: 11/18/1999  
 Record Upd: 05/28/2013  
 Updated By: JHCCONNE  
 Site Description:

Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtrak's Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the buildings roof. Historical Use(s): The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990. Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are

STANDARD MOTOR PRODUCTS INC (Continued)

1000310304

lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. The Record of Decision was issued on March 23, 2009, and the Remedial Design/Remedial Action Order on Consent was signed in April 2010. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill. Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem:

Nature and Extent of Contamination: A site investigation in 1990 was initiated after an oily sheen was observed in a puddled area on the southeast side of the property. Soil samples from this area revealed elevated levels of petroleum hydrocarbons and volatile organic compounds (VOCs), primarily 1,1,1-trichloroethane. Approximately 2,700 sq. ft. of soil was excavated to a depth of 18 inches and stockpiled on-site. Further investigation determined that soils in the area of the rear loading platform contained elevated levels of petroleum hydrocarbons and VOCs (trichloroethane TCA, trichloroethene - TCE and other related chlorinated VOCs). Contaminated soils extended beyond the area excavated. Subsequent groundwater samples taken indicated contamination with TCA and lead. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Soil - Arsenic was detected at 19 ppm, which is above the applicable soil cleanup objectives (SCOs). Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 ppb. Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane (1,1,1-TCA) has been found at concentrations of up to 180 ppb. Soil Vapor - The highest concentrations of chlorinated VOCs were detected at S9-05. Sub-slab samples contained PCE at a concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3

STANDARD MOTOR PRODUCTS INC (Continued)

1000310304

and up to 450 ug/m3 respectively. Significant Threat: The site presents a significant environmental threat. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation. The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

 DEC Memo: TTF letter sent to PBS address - see eDoc07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case.

VB1107/2013 - V. Brevdo Received call from Chief Operating Officer for Real Estate Company Ms. Duffrey Panayiotou - 718-204-1600 Ext. 30. I explained to Ms. Panayiotou that I need information and/or documents about what type of tank test failure it was - dry or actual leak. If they have confirmation it was a dry leak and no oil leaked and no impacts, I would look into available documents and may consider closing spill. If it was not a dry leak and oil was released that we need to negotiate appropriate course of action. Ms. Panayiotou stated she will look into this matter and get back to me by end of the day. I stated that I would like to hear back from her no later than 3 weeks from today. VB Caller reporting tank test failure

 DEC Memo: 11/30/2005 Sangesland spoke to rep at Island tank. She said the site was dug out and endpoints were clean. She said a closure report would be sent ASAP: 1/4/06-Hirakumar Patel. Here is the summary of the report from Island Environmental Tank, Inc. "According to owner, the tank has previously been used for the purpose of storing #2 heating oil and owner doesn't know when this tank was installed." UST was installed horizontally in the backfill material, with the top of the tank located approximately 4' below the surface." A 1080 gal. capacity tank was removed in the presence of Mr. Vinny Lovari of Island Tank Environmental. After removal from cavity, tank has been cut and washed and removed oil and water mixture with vactruck." No groundwater or static surface water was encountered in the tank cavity." Tank had pits and holes." Tank cavity was excavated approximately 30 cubic yard of soil in 55 gal. drums and disposed at Jamaica Recycling Inc. Jamaica, NY." Tank cavity was backfilled and compacted in place." 6 samples were taken out from cavity and tested at Severn Trent Laboratory, Edison, NJ." The metal tank and all metal tank system components were removed from the owner's property and disposed of as scrap metal at John Iron & Metal Co., Inc. 33 Arthur Kill Road, Staten Island, NY. 1/5/06-Hirakumar Patel. No Further Action required letter has been sent to Mr. John Domenico. Case closed as per Mr. Jeff Vought. 02/03/06-Hirakumar Patel. Send out NFA again through fax (212-689-6082) as per John's request.

Remarks: tank removal found oil on the tank. THERE IS OR 4 DRUMS THAT NEED TO BE REMOVED. THE TANK HAS BEEN CUT UP.

 DEC Memo: 4/25/07 bf: sent tf letter to:Eric LevorQueens Plaza Realty Corp,25-12 41 AvenueLong Island City, NY 11101-38825/25/07 received passing lighthouse test results by fax from Eric Levor. Tried calling him at number on fax:(718)392-2123. No answer. To close this spill, he needs to submit a response to tf letter. bf5/29/07 Called E. Levor again and there was no answer. Called Emergency Contact # from PBS facility info (718)263-2418 and left message to call me back. bf6/4/07 Called E. Levor at (718)392-2123. The number is no longer in service. I then left a message at (718)263-2418. bf6/5/07 Received 2 messages from Edith Levor to call back. (718)392-2123. Called her at 3:45 Pm and she said that the tank failed the test because there were two sets of vent pipes. The old vent pipe was never disconnected. She said she will call Advanced Tank after she hangs up with me and have them prepare a response to the tf letter. bf11/8/07 Called E. Levor. Left message that i still have not received letter from Advanced Tank and to call me back. Called Winnie the Tank Doctor (718)727-0666. He said that there was an open line from a hot water heater and he plugged the line. No contaminated soil was found. He faxed paperwork to E. Levor. He was not in his office and requested I call him Monday. He will check to see if he still has the fax. bf11/26/07 Received message from E. Levor. Called her back and left message on her machine. bf1/22/10 Inspected site and issued NOV for expired registration, failure to monitor unmetered tank for leaks, and failure to contain/remove petroleum discharge. Administrative settlement conference is scheduled for 2/17/10 at 10:30 AM. bf2/17/10 PBS Settlement Conference held today. Attended by Edith and Eric levor. Provided 6/7/07 letter from Tank Doctor Inc. stating that 2 unused lines from top of tank were disconnected in building. Removed lines and tank retested and passed. NFA. bf

 DEC Memo:

Prior to Sept. 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"3/11/2003 Sangesland responded to the site of an ECO/Police action at a junk yard.Site has been an active "Auto Parts" facility for approx 2 years. Site is an irregular T shaped lot (approx 120' x 200')Cement/asphalt appears to cover majority of the lot, unknown if this ground cover is complete and impervious to surface spills. No obvious floor drains could be seen. Unknown if rainwater, auto fluids run into the ground or directly off site. Central area of the yard appears to be the car dismantling area and contains the majority of the spilled auto fluids (oil, transmission fluid, etc.) There is no controlled spill containment area (no curbing, collection tank etc). Perimeter of yard was lined primarily with automobile racks (3 cars high). Ground staining appeared weathered and less severe than in the central area. Along with automotive liquids, the yard contained a large number of engines, transmissions, various engine parts and multiple automobile batteries (several appeared damaged and overturned). DEC Requirements: 1) Surface of the yard must be cleaned down to the cement/asphalt level. An integrity inspection will be made to determine if there are any floor drains or open cracks directly to the ground below. 2) A "Site Delineation" will be required at the property. A series of soil borings will be taken in a grid pattern over the area of the yard and soil/water samples tested to EPA Method 8260, 8770 & heavy metals. 3) Based on the results of the "Site Delineation", a "Site Remediation Plan" will need to be prepared which will identify the procedure to clean up the contamination identified in the delineation. 4/11/2003 - The owner of the property is believed to be "Virginia" 516-383-9358. She is somehow associated with "Yardley Associates". A call was made to this number in an attempt to get a mailing address, but no response was received. Lease holder to the site is: Jussain Zulfiqar

CITY USED AUTO CENTER INC (Continued)

S108145769

and/or Anwar Javed.5/7/2003 Sangesland spoke with Virginia Lupoli (owner) She inherited the property from her father, Yardley Associates LLC is the corporate name for the owner.Sangesland outlined the work which will be required on this site. 1) Power wash the lot to determine the condition of the black top or cement pavement.2) Geo Probe of site to determine the subsurface condition of the site.3) A 60 day limit will be put in the letter.4) A list of state contractors will be forwarded with the letter.Contact info:Yardley Associates LLCAttn: Virginia LupoliP.O. Box 237Cold Spring Harbor, NY 11724Fax # 631-385-447711/4/2003 Sangesland reviewed an Environmental Site Assessment for this site prepared by Dr. Norman Munroe (917-497-0190) of Astem Labs Inc. Report states that the entire site is capped with a cement pad between 8" and 24" thick. There did not appear to be any open preferential pathways directly to the soil. The report did not outline the path for rain water runoff or recharge.Report outlines soil boring work done on the site along with some ground water sampling.Some minor soil VOC hits (BTEX) in BH-2, BH-4 and BH-9One minor groundwater hit for Benzene & MTBE in BH-4SVOC's for soil and water were below regulatory limitsHeavy metal concentrations in soil samples exceeded regulatory limits for several metals including: lead arsenic, cadmium, chromium and copper. Based on this information, the case is closed with no further action required.  
 DEC SPILLS GROUP CALLED TO SITE OF POLICE ACTION AT A JUNK YARD. SITE HAD SPILLS OF AUTO RELATED LIQUIDS OVER ENTIRE YARD AREA.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was \*SUN\*04/05/2004-Sub-File Update by Sun-Update Report-October 2003 through November 2003- prepared by EnviroTrac-Ten (10) monitoring wells were gauged and sampled on 11/10/03. The groundwater flow

**MERIT OIL (Continued)**

**S102555815**

direction is towards the north. No measurable amount of free product was detected in any monitoring wells. Per DEC's approval, the air sparge (AS) and soil vapor extraction (SVE) systems were turned off on May 3, 2002. Prior to turning the system off, an air effluent sample was collected from the SVE system for BTEX and VOC analyses. The analytical results showed that the concentrations of Benzene, Toluene, Ethylbenzene and Xylene on all of the monitoring wells with the exception of MW-10 were found not detected (ND). The maximum concentration of BTEX is on MW-10 at 28.9 ppb. The concentrations of MTBE ranged from 1.6 ppb (MW-7) to 62 ppb (MW-8). See also spill 9700124. Rommel.05/09/05-File Update by Sun: A project review meeting was held on 05/05/05 between the Department, the Hess' Manager and Hess' consultant (EnviroTrac). Per EnviroTrac, Monitoring Well MW-8 appears to have been destroyed during construction activities in the sidewalk area adjacent to the location. A replacement well for MW-8 will be installed once the necessary permits are obtained from the New York City Department of Transportation (NYSDOT). EnviroTrac will inject calcium peroxide in the northern sidewalk of 38th Avenue to address the trace concentrations of MTBE detected in MW-8 in the past few times the well was sampled. The newly installed replacement well will be used to determine the effectiveness of the calcium peroxide injection. If concentrations of MTBE decrease to approximately 30 parts per billion (ppb), site closure will be proposed as discussed during an April 21, 2004 meeting between Hess, EnviroTrac and the Department. (WJS) 10/28/05: Project reassigned from Sun to Andersen. Monitoring report overdue. Need update on results of injecting calcium peroxide into MW-8. 11/21/05: NFA letter sent. contaminated soil discovered during tank removal

 DEC Memo: 2/21/08 Called Dominic Casamento (718)278-0806. left message to call me back. Sent ttf letter to Dominic Casamento 2403 41st LLC 14-38 31st Drive Long Island City, NY 11106 Mr. Casamento called back later in the day. He said Petroleum Tank Cleaners will be coming back on Monday to make necessary repairs. He said they told him it was a dry leak. I confirmed the above address as his mailing address. He is on vacation and will be returning Monday. b4/2/08 received fax from M. Salamack of PTC. Tank was emptied and lines and tank were isolated. vent line was hit by a vehicle as tank is under a driveway area. Vent line was replaced to a different area to prevent future accidents. Tank was released 3/10/08 and passed. Test results attached. NFA. bf DRY PORTION LEAK

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

ROSENWACH TANK CO LLC (Continued)

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGLHARDT"10/10/95. This is additional information about material spilled from the translation of the old spill file: PCSB:10/7/97: See spill #93059078/31/06 - Austin - Transferred from Engelhardt/O'Connell to myself - checked site (familiar with prior tenant, AAA, who is no longer in business; found a walled-in auto wrecking yard ("Astoria Used Auto Parts, Inc." - #7098602" on sign adjacent to office, no apparent persons on site) - no phone listing in phone directory - will need to contact persons on site to arrange an inspection - reassigned to Ketani to inspect site - end9/6/06 - Raphael Ketani. A search did not turn up a PBS record. By searching Property Shark, NYC Property Tax listings, and the NYS Department of Finance website, I found the following information/notes to: Sonic Properties, LLC, P.O. Box 250, Croton-On-Hudson, NY, 10520-0250:business: Astoria Used Auto Parts, Inc., 36-28 14 Street,

ROSENWACH TANK CO LLC (Continued) 1000101150

LIC, NY, 11106block & lot: 00350/0031party #1: Ge-Tselei Automotive, Inc. There were no phone numbers. I will send CSL letters to Sonic Properties and Astoria Used Auto Parts, Inc. I will also make an unannounced site visit. I made an unannounced site visit at about 2:35PM. A small doorway was open at the site, but not the large garage door. I walked in and met 2 workers. The site is paved in the front hall, but is soil in the back. The concrete looks as if it was laid maybe 4 years ago. An initial inspection of the concrete didn't turn up any cracks, but there were cars all over. Small pools of oil were on the concrete from the junked cars. There was no order to the storage of the cars and parts. Things were just draining onto the concrete. The 2 workers said that the junk yard was closed and told me that the owner was at the Getty station at the corner of 21 Street and 36 Avenue. I took pictures of the site and the neighboring exterior area. A worker from the Getty station picked up the mail that had been left on the ground just inside of the doorway of the junk yard and went back to the gas station. I went to the Getty station and one worker told me that the owner was "T. J.", but that he wouldn't be in for about 1/2 an hour. I came back later and met "T.J." He told me that he was not the owner, but that the owner was William Schwartz at (212) 608-6987. He said that Mr. Schwartz had bought the property 4 years ago and also owned the adjacent properties. I tried calling the (212) number, but it was a FAX machine. I will FAX a copy of the letter I had previously sent and I will put Mr. Schwartz's name on it as the owner. 9/7/06 - Raphael Ketani. I made several attempts on 9/6 and 9/7 to FAX the letter to Mr. Schwartz, but each attempt was unsuccessful. I will wait to see if the other 2 certified/return receipt letters are accepted by their respective recipients. 9/14/06 - Raphael Ketani. The return receipt card for the letter to Sonic Properties came back signed by Mr. Schwartz. I received a voice mail yesterday from Mr. Schwartz of Sonic Construction (917) 299-6599. He didn't understand what spill I was talking about in my letter. I tried to reach him, but could only leave a voice message. Mr. Schwartz called me back. He said that he recently bought the property. I told him that he has to hire a remediation company and get the contamination removed. He said that this could put him out of business. I told him that he assumed liability for the contamination when he bought the site. He asked who does remediation work. I told him that I can send him a list of contractors. He said his FAX number is (718) 937-5430. Mr. Schwartz said that pinning all of the cleanup responsibility on him isn't fair. I told him that he is the property owner and that he should have known about the contamination, or at least the bank should have, before buying the property. 9/25/06 - Raphael Ketani. I received a call from Mark Robin of Hydro Tech Environmental (631) 462-5866. He said that he has been contacted by the attorney for the owner of the site and told to put together an investigation proposal. He said the attorney is Jackie DiCrescio. I briefed Mr. Robin on the site. He said he will put together a proposal soon. 11/3/06 - Raphael Ketani. I received an Investigation Work Plan from Hydro Tech Environmental. I am reviewing the plan. 11/6/06 - Raphael Ketani. I finished my review of the November 1, 2006 Investigation Work Plan. The Department found the plan to be acceptable with the comment that should the groundwater require treatment, then larger bore wells will have to be installed, and perhaps for treating the soil. I sent a letter of approval and asked that the Department be notified several days in advance as to when the work will definitely start. 11/16/06 - Raphael

ROSENWACH TANK CO LLC (Continued) 1000101150

Ketani. I visited the site today to monitor some of the soil boring and sampling and groundwater sampling. I met Paul (cell (631) 241-7165) of Hydro Tech at the site. He was the head of the operation and the geologist. I took additional pictures of each half of the site - 3 for the left half and 1 for the right half. I monitored 3 soil borings that were drilled in the left half of the property (this includes SP-9). The samples that came up were all loose fill material down to the water table at 16 feet. The fill consisted of road aggregate type gravel or crushed stone, sand, broken red brick, and some silt. There was no evidence of layering or consistency. The most odorous samples were always in the 0' to 2' interval. The odors were of oil and at SP-9 the sample looked black. Groundwater was black, and strongly sulfurous. I asked Paul whether they were filling the holes in that they were making for the borings. He said "Yes." They were making good progress and so I left. 12/21/06 - Raphael Ketani. Today, I received the 12/1/06 Subsurface Investigation Report from Hydro Tech Environmental, Corp. I finished my review of the report today. The boring locations and the number of borings gave adequate coverage to the site. According to the report and by my own observations in the field during sampling, the materials encountered consisted of pieces of brick, asphalt, gravel, sand, silt, "black fill material," "white fill material," and concrete. This is all historical fill material and is present down to the water table at 16 feet (and probably into the water table). Petroleum odors were detected in soil samples at locations SP-2, SP-5 to SP-10, and SP-12. Soil samples from SP-6 and SP-12 were the only ones that had many detected VOCs. However, all of the detections were below the TAGM 4046 RSC0 limits. Soil samples from sites SP-4, SP-7, SP-8, and SP-12 had many SVOC hits, as opposed to the other samples which had either none or just one or two. The sites with the many SVOC hits had analytes which are typical combustion products and could be from the dark material that was encountered in the samples. The dark material could be a mixture of ash and cinders. Many of the analytes in the samples from sites 4, 7, 8, and 12 exceeded the TAGM RSC0 limits and ranged up to 11,000 ppb for benzo(a)anthracene at site 4. However, the analyte concentrations were very similar from site to site. So the material and origin are probably the same. The exceedences were moderate in concentration for historical fill. Lastly, the PCB hits were minimal. While there is some groundwater contamination at SP-12, this was the only site that had exceedences. None of the sites had soil contamination that warranted soil excavation for VOCs. As regards SVOCs, the exceedences appeared in the combustion products and are probably from the historical fill and also don't warrant excavation. Based upon the Subsurface Investigation Report, I am closing the spill case.

Remarks: ANONYMOUS LETTER TO NYC DEOH ALLEGES DELIBERATE SPILLAGE BY AAA & CON-ED PRECEDING ABANDONATED OF YARD BY AAA.

 DEC Memo: TTF1/15/09. J.Kringold reviewed the letter-report submitted by Energy Fueling systems Corp and dated 12/22/08. According to the information provided in this letter, a 2000 gal tank failed the test due to a damaged (cut) vent pipe. The failed pipe was abandoned in place and new pipe run was installed. Tank with pipe was retested and passed the test. NFA. TANK TEST FAILURE ON A 2000 GALLON UST. UNK IF ANY PRODUCT WAS SPILLED.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "K FOLEY"12/15/03 Letter addressed to Sigona from Environmental Systems Group. On 10/30/03, Crompco conducted precision test on tanks. One 4000gal diesel UST failed the test. Energy Storage Systems reviewed the test data and suggested the test technician failed to plug the air eliminator on the pumps and therefore the tanks failed. On 12/9/03, Crompco retested the tanks and plugged the air eliminator and the tank passed. 12/19/03 Spoke to Andy at Energy Storage systems. As per Sigona's recommendation, he will submit a report summarizing the first and second testing episodes. Rommel12/23/03 Received letter from Mort Turoff at Energy Storage systems summarizing first and second tests. Diesel tank passed on 12/9/03 retest. Results on file. (KMF)1/9/04 Sent NFA. (KMF) liquid level failure

 Site Description: Location: The site is located in Queens County, on Jackson Ave between Orchard Street to the east, Queens Blvd. to the west and Long

OUTLET CITY, QUEENS BLVD. & JACKSON AVE. (Continued)

S105684691

Island Railroad yard to the south. The G-Train runs underneath Jackson Avenue bordering the site to the north. The nearest residential structure is located approximately 100ft to the west across Orchard street. Site Features: This 2.5 acre site consists of 12 multi-story buildings and associated parking area located in a congested commercial/industrial area of Queens County. The only occupied structure on-site is a NYC Transit Authority building. Current Zoning/Uses(s): The current zoning at the site is Industrial and Retail. The surrounding area is zoned Special Long Island City Mixed Use District (LIC) and is a longstanding mix of residential, commercial, industrial and cultural uses at varying densities. Historical Uses: The site had formerly been used for chemical manufacturing. From 1901-1978, West Chemical Co. owned the property and manufactured commercial and disinfectant products such as disinfectants, insecticides, soaps, floor wax, and paper products dispensing machines. Manufacturing operations employed various chemical substances including creosote, coal and acids, cresylic acids, degreasing solvents, iodine, and assorted oils and pesticides. Metal plating and gasoline filling operations were also conducted at the property. In 11/78, Outlet City acquired title to the property from West Chemical. During Outlet City's ownership, a flea market and various vendor operations have been conducted at the property. The site is being investigated under the Voluntary Cleanup Program (VCP) under a 1997 agreement. Previous investigations in the late 1980's and early 1990's led to the property entering the VCP. Site Geology and Hydrogeology: Site geology consists of mostly sand at varying depths due to presence of shallow bedrock. Groundwater is approximately 8 - 10ft below grade

Env Problem:

Nature and Extent of Contamination: The site is contaminated with creosote, petroleum, and solvents. Both soil and groundwater are affected. The majority of the contamination is located in Areas D and E where Creosote in the form of both LNAPL (Light Non-Aqueous Phase Liquid) and DNAPL (Dense Non-Aqueous Phase Liquid) is present. LNAPL in Area D Ramp: E ranges from 0 - 6ft. Total on-site VOCs (Volatile Organic Compounds) including both chlorinated hydrocarbons and petroleum constituents are present in groundwater from non-detect - 30,000ppb. Total on-site SVOCs (Semi-Volatile Organic Compounds) are present in groundwater from non-detect to over 100,000ppb. An initial off-site investigation was completed in 2013. Contamination, both VOCs and SVOCs has migrated off-site to the west and north. Due to flooding event caused by a homeless person removing piping in Building 10 to sell for scrap, the monitoring well in the narrow strip of land between the on-site buildings and the Sunnyside Yard could not be sampled. A ventilation IRM is in place in the basement of building No. 4 (but no longer operating), where creosote LNAPL enters the basement. The ventilation system was designed and installed in 2004. The ventilation system was started up on June 8, 2004. The final engineering report for this IRM was approved in September 2006. Bi-annual air testing was collected to evaluate the effectiveness of the ventilation IRM.

Health Problem:

Exposures to contaminated groundwater is not expected because the area is served by public water. Soils contaminated with etrachloroethene are beneath the site, however, exposure to this soil is not expected because the site is capped with asphalt. Indoor air samples collected in a portion of the on-site building contained levels of tetrachloroethene that exceeded the New York State Department of Health Guideline for tetrachloroethene in Indoor Air.

MAP FINDINGS

OUTLET CITY, QUEENS BLVD. & JACKSON AVE. (Continued) S105684691

NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures near the site.

 Record Add: 09/08/2010  
 Record Upd: 09/20/2011  
 Updated By: JBVOUGHT  
 Site Description: The Site is located in the Long Island City section of Queens in a zoned manufacturing area with residential zoning approximately 300 feet to the south. The Site had been a residential building with garages beginning in 1986, was vacant from 1947-1950, was used for sheet metal work from 1967-1983 and was converted from sheet metal work to dry cleaning in 1997. The Site is currently an active dry cleaning facility. The one-story building foundation is slab-on-grade and contains dry cleaning machines, garment storage area, storage, boiler room, office, customer service area, bathroom and partial basement. The building covers the entire footprint of the site. The building has three 4th-generation dry cleaning machines on a secondary containment concrete slab, five washers and a dryer, several empty 15-gal waste containers, spill containment material container, a spotting stand, ten press machines, three sets of shirt machines, four air compressors, two refrigerated dryers and a sump. The Site and building are approximately 5000 square feet in size (0.11 acres). A residential building is located immediately to the northwest (0.01 miles), a stonework building is to the northeast, a fine arts furniture building to the southwest and 13th Street to the southeast.  
 Env Problem: Based upon investigations conducted to date, the primary contaminants of concern at the site include tetrachloroethene (PCE) and dichloroethene (DCE). One round of groundwater sample collection was performed in June 2009 via two Geoprobe borings located in the sidewalk in front of the site building. Groundwater samples were analyzed via EPA Methods 8260/8270. No soil samples were collected

MAP FINDINGS

BEST-DDK CLEANERS (Continued) S109826034

for analysis during the investigation. The following maximum concentrations with contaminants were observed in groundwater: 26ppb PCE and 63ppb DCE. These results demonstrate that groundwater standards have been exceeded for PCE and DCE. The nearest surface water body is the East River, which is located approximately 2000 feet (0.3 miles) to the west. Groundwater is approximately 7 to 8 feet below grade and most likely flows west under the Site to the East River, however direction of flow has not been specifically determined to date. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment.  
 As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

 DEC Memo: On 7/14/05, J Peck called RIR Com. Cynthia Roby doesn't work there now. Left message to return call concerning spill. Could not determine owner of property from Property Shark or Acris. Called George Falidas on 7/14/05, left message to call back. On 1/19/05, attempted to determine owner of property. No success. 3/30/07 - Austin - Transferred to Ketani for further review - ends 5/21/07 - Raphael Ketani. I reactivated the case today. There was very little in the case file. Some printed pages for spill #0305345 (which doesn't pertain to the case, except the memo from Mr. Sigona to Mr. Hassan), an 11/7/05 letter from Joseph Peck of DEC to George Falidas regarding the spill, printouts from Google Earth and Property Shark, and a printout of the spill report for this case. I did a search of

FALIDAS ASSOCIATES (Continued)

1007264881

ACRIS, the NYC Property Tax database, and Property Shark and determined that 25-15 Queens Plaza North is just one part of the range of properties (25-01 to 25-27 Queens Plaza North) owned by Falidas Associates. It is also known by Bridge Plaza North. The block and lot are: 00415 and 0004. I called up George Falidas (718) 392-0514 of Falidas Associates and was connected to his brother, John Falidas. I made a field visit and met John Falidas. He showed me the basement of one of the properties owned by Falidas Associates and which is near to where the tank failed 2 buildings away. We entered a work room rented by a garment making company. The floor and walls and bathroom were clean. There were no signs of oil and no oil odors. Mr. Falidas said that he had paid lots of money to get the oil cleaned up years ago and the responsible party never paid anything to him. Mr. Falidas had a package of documents from the EPA and the DEC and showed them to me. These were the RCRA Subtitle C Site Identification Form, letters from South Mall Analytical Labs to PTC, and a DEC Spill Report. He gave me copies of these documents. I was particularly interested in the old DEC spill report form as this document wasn't in the case file. Next, I visited the 2 story building between Mr. Falidas' building and the site of origin of the spill. I met Sandro Cestaro of Atlantic Precious Metal Casting, Inc. (718) 937-7100. He showed me his basement. There were some signs of a thin film of mud in one corner of the basement, but no signs or odors of oil, even though this was the building where the oil first entered. Lastly, I went to the site of the oil spill. The auto parts service place had burned completely, according to the old spill report case notes. This site was 41-22 to 41-30 27 Street. The site was sold to developers who later built an apartment building that was finished in early 2007. This building is listed as 41-28 27 Street. I met the super, Leonardo Colon. He took me to the lowest point in the building. This was a parking garage. There were no signs of oil nor any odors. He said he was new here and didn't know much about the building. The building management company is Golden Management and the contact person is Brandon Wechsler (718) 230-2600, ext 111. I took 3 pictures of the apartment building and the neighboring properties. I remember seeing the dig out for the foundation for the building when I passed by the site many months back. They went down below the bottom of the foundation for the neighboring building which contains Atlantic Precious. This is a depth of about 15 feet or so. Based upon my site visits and the fact that the old auto parts area has been dug out, and the lack of evidence of a spill, I am closing the spill case.

Site Description: LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge. SITE

**NATIONAL RUBBER & BACKING CORP (Continued)**

1000259753

**FEATURES:** The property extends 335 feet from the north to the south and 117 feet from the west to the east. The entire property is occupied by a 30,000 square feet, one story, slab-on-grade masonry building. A small courtyard is located in the central portion of the building on the western side. The site and surrounding areas are generally level. **CURRENT ZONING/USE(S):** The site is currently zoned commercial. The site is currently used as a marble fabrication shop, an automotive repair shop, and a production studio. Another tenant occupies the other one-third of the building for storage of sheet metal and supplies for an off-site manufacturing business. No metal fabrication, cutting, or manufacturing associated with this business takes place on this site. **PAST USE OF SITE:** National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. **OPERABLE UNIT(S):** The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigating for soil and groundwater contamination. **SITE GEOLOGY AND HYDROGEOLOGY:** The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below ground surface and flows in a westerly direction toward the East River. The depth to bedrock varies across the investigation area from 10 to 15 feet below surface.

**Env Problem:** NATURE AND EXTENT OF CONTAMINATION: Based upon investigations to date, the primary contaminants of concern at the site include toluene.

Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) in groundwater in MW-2, which is above the respective groundwater standard of 5 ppb. Other wells have shown levels of toluene in the 10,000s ppb. Benzene, ethylbenzene, and xylenes have all been shown to be elevated. These previous investigations have identified exceedances of standards, criteria and guidance for those contaminants in soil as well. Elevated levels of benzene and toluene were also noted in the soil vapor as well. The groundwater plume appears to be migrating off-site, however the extent of the plume is unknown. In 2011, the concentration of toluene was found as high as 130,000 ppb in an off-site location. Off-site impacts have been delineated and the extent of the toluene plume does not appear to impact the East River. **SPECIAL RESOURCES IMPACTED/THREATENED:** None known. **SIGNIFICANT THREAT:** A significant threat is posed from potential exposure to site related contaminants from soil vapor intrusion both on and off-site structures. Exposures to contaminated groundwater are not expected because public water serves the area residents.

**Health Problem:** Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by public water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

**Dump:** False  
**Structure:** True

 HW Code: V00173  
 Site Class: N  
 SWIS: 4101  
 Region: 2  
 Town: New York City  
 Acres: Not reported  
 Date Record Added: 11/30/2000  
 Date Record Updated: 02/01/2005  
 Updated By: RUCOZY  
 Site Description: The property is located within an urban industrialized section of Long Island City. The site extends 335 feet from the north to the south and 117 feet from the west to the east. The entire site is occupied by a 30,000 square foot, one story building. There is a small courtyard in the central portion of the building, on its western side. The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028.  
 Env Problem: See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028  
 Health Problem: Not reported

 Site Description: Location: The Ravenswood former MGP site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough of Queens. The property is noted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of a complex of active electric and steam generating facilities in a predominantly industrial and commercial area. The site is bordered on the east by light industrial and commercial

KEYSPAN (Continued) S102239646

buildings and on the west by the East River. The site formerly housed a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The precise location of the MGP structures has not been fully established because of the extensive reworking of the property associated with construction of the power plants which now occupy and surround the original MGP site. Remedial History: A portion of the site was remediated under the Voluntary Cleanup Program. See site V000368. The principal VCP issue was the presence of a No. 6 oil spill from an in-plant pipeline. Petroleum-impacted soil was excavated in 2005. No MGP tar-contaminated soil was identified at that time, but MGP related structures or soil contamination may remain in other portions of the site or at depth.  
 Env Problem: Extensive soil removal has taken place on the site, both for the construction of the power plants that occupy the site, and for remediation of a No. 6 oil spill. Although it appears that significant portions of the former MGP have been excavated down to bedrock, it is not known to what extent MGP structures and MGP soil contamination may remain in the deep subsurface. A bedrock steam tunnel lies beneath the East River at this location, allowing waste steam from the turbine plants to be provided to the steam-heat distribution system in Manhattan. Tar from the former MGP can be seen dripping from the roof of this tunnel, roughly 150 feet below ground surface. The source of the tar has not been determined. The tunnel can not be accessed by the public, and is only occasionally used by utility workers. Engineering controls are in place to prevent direct contact with the tar by utility workers.  
 Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

VCP:  
 Program Type: VCP  
 Site Code: 56967  
 HW Code: V00368  
 Site Class: C  
 SWIS: 4101  
 Region: 2  
 Town: New York City  
 Acres: Not reported  
 Date Record Added: 11/30/2000  
 Date Record Updated: 04/05/2007  
 Updated By: dcwalsh  
 Site Description: The proposed Ravenswood 250-Megawatt (MW) Combined Cycle Generating Station site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough and County of Queens, New York and denoted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of an active electric and steam generating facility in a predominantly industrial and commercial area. The area addressed by this Voluntary Cleanup Agreement is the footprint of a proposed 250-MW combined cycle electric generating plant. The site is bordered on the east by light industrial and commercial buildings; on the south by the existing Ravenswood Generating Station; on the north by the existing Ravenswood Gas Turbine facility; and on the west by the existing Ravenswood Steam Plant and the East River. The site was formerly a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The site is currently occupied by a paved parking lot for Ravenswood employees. Site investigation has been completed at the site.  
 The Site investigation conducted at the site revealed the presence of petroleum contamination related to a release from an on-site no. 6 oil pipeline. In addition, the site is underlain by former MGP facilities, including gas holders, piping and drip pots. Investigation has not revealed any areas of discrete coal tar deposits, however, the volunteer has proposed to open all encountered pipes and drip pots, drain them and permanently closed them in place or remove them if they interfere with future construction activities. The area of petroleum contamination will be excavated and removed. The volunteer submitted and the Department approved a Remedial Action Work Plan for the site which consisted of the above remedies. This RAVP has been implemented, and the volunteer has submitted the Remedial Action Summary Report, which is under review by NYSDEC and NYSDOH.

Health Problem: Human exposures to contaminated soil and groundwater are unlikely. Most of the contaminated soil has been removed, the site is fenced and secured, and the site will be covered with buildings and pavement. Exposure to groundwater is unlikely since the area is

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

**Federal NPL site list**

**NPL:** National Priority List  
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

EPA Region 10 Telephone 206-553-8665	

**Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013 Source: EPA  
Date Data Arrived at EDR: 11/11/2013 Telephone: N/A  
Date Made Active in Reports: 01/28/2014 Last EDR Contact: 01/09/2014  
Number of Days to Update: 78 Next Scheduled EDR Contact: 04/21/2014  
Data Release Frequency: Quarterly

**NPL LIENS: Federal Superfund Liens**

**Federal Superfund Liens.** Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Source: EPA

Data Release Frequency: No Update Planned

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

**Federal Delisted NPL site list**

**DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013 Source: EPA  
Date Data Arrived at EDR: 11/11/2013 Telephone: N/A  
Date Made Active in Reports: 01/28/2014 Last EDR Contact: 01/09/2014

Data Release Frequency: Quarterly

**Federal CERCLIS list**

**CERCLIS:** Comprehensive Environmental Response, Compensation, and Liability Information System  
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013 Source: EPA  
Date Data Arrived at EDR: 11/11/2013 Telephone: 703-412-9810

Data Release Frequency: Varies

**Federal CERCLIS NFRAP site List**

**CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013 Source: EPA

**Federal RCRA non-CORRACTS TSD facilities list**

**RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSD's treat, store, or dispose of the waste.

**VCP: Voluntary Cleanup Agreements**  
 New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

**State and tribal Brownfields sites**

**ERP: Environmental Restoration Program Listing**  
 In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

**ADDITIONAL ENVIRONMENTAL RECORDS**

**Local Brownfield lists**

**US BROWNFIELDS: A Listing of Brownfields Sites**  
 Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in those properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.  
 Date of Government Version: 09/24/2013 Source: Environmental Protection Agency

**Local Lists of Hazardous waste / Contaminated Sites**

**US CDL: Clandestine Drug Labs**  
 A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

**HIST SPILLS:** SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

**Other Ascertainable Records**

**RCRA NonGen / NLR:** RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

**UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

**HIST FTTS:** FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

**RAATS:** RCRA Administrative Action Tracking System  
 RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

**RMP:** Risk Management Plans  
 When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes (n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

**HSWDS:** Hazardous Substance Waste Disposal Site Inventory  
 The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

**SPDES:** State Pollutant Discharge Elimination System  
 New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

**E DESIGNATION:** E DESIGNATION SITE LISTING  
 The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

**2020 COR ACTION: 2020 Corrective Action Program List**  
 The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

**US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)**

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

**EPA WATCH LIST: EPA WATCH LIST**

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

**EDR HIGH RISK HISTORICAL RECORDS**

**EDR Exclusive Records**

**EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used waste oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

**EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations**

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

**CT MANIFEST: Hazardous Waste Manifest Data**  
 Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

**Electric Power Transmission Line Data**  
 Source: Rextag Strategies Corp.  
 Telephone: (281) 769-2247  
 U.S. Electric Transmission and Power Plants Systems Digital GIS Data

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

**AHA Hospitals:**  
 Source: American Hospital Association, Inc.  
 Telephone: 312-280-5991  
 The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

**Medical Centers: Provider of Services Listing**  
 Source: Centers for Medicare & Medicaid Services  
 Telephone: 410-786-3000  
 A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

**Nursing Homes**  
 Source: National Institutes of Health  
 Telephone: 301-594-6248  
 Information on Medicare and Medicaid certified nursing homes in the United States.

**Public Schools**  
 Source: National Center for Education Statistics  
 Telephone: 202-502-7300  
 The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

**Private Schools**  
 Source: National Center for Education Statistics  
 Telephone: 202-502-7300  
 The National Center for Education Statistics' primary database on private school locations in the United States.  
**Daycare Centers: Day Care Providers**  
 Source: Department of Health  
 Telephone: 212-676-2444

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NW: National Wetlands Inventory.** This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

**State Wetlands Data: Freshwater Wetlands**  
 Source: Department of Environmental Conservation  
 Telephone: 518-402-8961

**Scanned Digital USGS 7.5' Topographic Map (DRG)**  
 Source: United States Geologic Survey  
 A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

**USGS TOPOGRAPHIC MAP**

Target Property Map: 40073-G8 CENTRAL PARK, NY NJ  
Most Recent Revision: 1995  
South Map: 40073-F8 BROOKLYN, NY  
Most Recent Revision: 1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

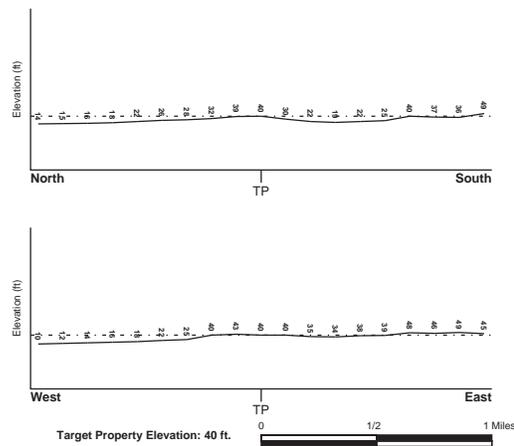

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General South

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

Target Property County: QUEENS, NY  
Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data  
Additional Panels in search area: 3604970032B - FEMA Q3 Flood data  
3604970040B - FEMA Q3 Flood data

**NATIONAL WETLAND INVENTORY**

NWI Quad at Target Property: CENTRAL PARK  
NWI Electronic Data Coverage: YES - refer to the Overview Map and Detail Map

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data\*:  
Search Radius: 1.25 miles  
Status: Not found

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT**

**GEOLOGIC AGE IDENTIFICATION**

Era: Mesozoic  
System: Cretaceous  
Series: Upper Cretaceous  
Code: uK (decoded above as Era, System & Series)  
Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND  
Soil Surface Texture: variable  
Hydrologic Group: Not reported  
Soil Drainage Class: Not reported  
Hydric Status: Soil does not meet the requirements for a hydric soil.  
Corrosion Potential - Uncoated Steel: Not Reported  
Depth to Bedrock Min: > 10 inches  
Depth to Bedrock Max: > 10 inches

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

**OTHER SOIL TYPES IN AREA**

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey  
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey  
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

### HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NW: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation  
Telephone: 518-402-8961

### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>®</sup> Information System

Source: EDR proprietary database of groundwater flow information  
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services  
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)  
Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### LOCAL / REGIONAL WATER AGENCY RECORDS

#### FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water  
Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water  
Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

#### STATE RECORDS

New York Public Water Wells

Source: New York Department of Health  
Telephone: 518-458-6731

### OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database

Department of Environmental Conservation  
Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

#### RADON

State Database: NY Radon

Source: Department of Health  
Telephone: 518-402-7556  
Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA  
Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

#### OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

### Instructions for Application for Records under FOIL

Completion of this form is voluntary. However, it will expedite access to the records you seek, if available.

- Please identify the types of records being requested.  
Description of the bureaus and/or records they retain are as follows:
  - Agency Chief Contracting Office (ACCO):** Contracts, Bids and Procurement records
  - Bureau of Customer Services (BCS):** Water bills, water metering
  - Bureau of Environmental Compliance (BEC):**
    - Asbestos Control Program, Hazardous Materials response
    - Air and Noise Permits and inspection records
  - Environmental Control Board (ECB) -** Notices of Violation and decisions (please indicate NOV #)
  - Bureau of Environmental Design and Construction (BEDC) -** design and construction of wastewater treatment plants, water-supply related projects and infrastructure projects
  - Office of Environmental Planning and Assessment (OEPA) -** SEQRA/CEQR and other environmental review-related records
  - Bureau of Wastewater Treatment (BWT) -** Industrial pretreatment program, sewer discharge violations, operation of wastewater treatment plants
  - Bureau of Water and Sewer Operations (BWSO) -** water and sewer main repair
  - Bureau of Water Supply (BWS) -** Watershed/aqueduct/reservoir operations, water quality
  - DEP Police -** Reports for watershed- area law enforcement incidents
- Please indicate whether you want to receive copies or you want to inspect the records prior to copies being made.
- Please describe, with the greatest amount of detail possible, the type of records you are requesting. Include, if available and when applicable, complaint numbers, contract numbers, addresses, block and lot information, Notice of Violation number, specific time frames or date of incident/occurrence, name of document/form, and account numbers. **Please DO NOT request information about more than one account, NOV, property, etc. per form.** Please use a separate form for each separate request.
- Please provide your name, firm/company name, address, phone number and e-mail address to where you want the response addressed.
- Please, either mail or fax the form to the DEP Records Access Officer at the address and number listed on the form. **DO NOT FAX AND MAIL THE FORM.**
- You will receive an acknowledgment of receipt of the request. After the search has been performed, bureau personnel will contact you to inform you of the results of the search.
- Please do not send payment for records until such time it has been requested. Copying fees are \$.25 per page.

# NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION

## Application for Records, Article 6 – New York State Public Officers Law, Freedom of Information Law

Complete Part I of this form. Please refer to instruction sheet for assistance in completing this form. If responsive records are located, you will be notified and informed of the required payment. Advance payment is required in check or money order payable to the City of New York before documents will be released. Either send the complete application to the Records Access Officer at NYC DEP, Bureau of Legal Affairs, 59-17 Junction Blvd., 19<sup>th</sup> Fl., Flushing, NY 11373, or fax to (718) 595-6543. **DO NOT FAX AND MAIL.**

### YEARS OF EXPERIENCE:

With Hillmann: 9 years

Total: 9 years

## PROFESSIONAL EXPERIENCE

Ms. Lamb has over nine years of experience supporting various areas of Hillmann's practice. Within the Environmental Health and Safety department, she functions as a Project Manager. In this role, she manages indoor air quality investigations, surveys and sick building syndrome investigations; and potable and non-potable water sampling. She is experienced in managing mold delineation and remediation management projects, performing microbial growth investigations and sampling as well as preparing scope of work remediation reports. She is experienced in Right to Know Reporting for New York City clients. She also conducts airborne lead, silica/respirable dust monitoring, lead based paint inspections, lead based paint risk assessments, indoor air quality, microbial investigations/SOW, and post water intrusion investigations.

Additionally, Ms. Lamb is skilled at performing Phase I environmental site assessments and transaction screens to meet environmental due diligence requirements under CERCLA.

Representative project experience includes:

**Verizon Communications, Inc., Various locations nationwide:** Since 1996, Hillmann has been providing asbestos and lead investigations, abatement design, air monitoring and mold and water sampling and emergency response services including IAQ, noise, confined space, characterization, and ventilation evaluation. Ms. Lamb is an Industrial Hygienist on this contract. Estimated cost to date: \$12,624,000. This contract is ongoing.

**HSBC Bank, Locations nationwide:** Hillmann is providing professional environmental services for this contract that consists of a complete environmental program, including Phase I environmental site assessments, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene and indoor air quality programs. Ms. Lamb is an Industrial Hygienist providing IAQ, water sampling, and mold investigations as required. This contract is ongoing; estimated cost to date: \$100,000.

**Cushman & Wakefield, Various locations nationwide:** Hillmann is providing environmental services for property managers for large commercial building owners, including Citibank. These services include asbestos surveys, project design, investigation, project management, bulk sampling and analysis. Ms. Lamb is an Industrial Hygienist for this contract, which is ongoing. Cost: \$2,040,000

**Allstate Insurance, Various locations:** Hillmann manages environmental aspects of water losses, including investigations, moisture mapping, testing, remediation protocol and clearance sampling. Ms. Lamb functioned as an Industrial Hygienist on the contract, which is ongoing. Estimated costs to date: \$801,739

**Encompass Insurance, Various locations nationwide:** Beginning in 2004 Hillmann has been performing microbial assessments, scope of work evaluations, microbial management, microbial clearances, cause and origin, and investigations. Ms. Lamb was an Industrial Hygienist on this contract, which is ongoing.

**Tishman Speyer Properties, Various locations nationwide:** Hillmann has provided the complete environmental program for Tishman Speyer's properties since 1987. Ms. Lamb functions as an Environmental Specialist for this project. Our services include phase I environmental site assessments, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene and indoor air quality programs. Estimated project cost: \$ 1,000,000 annually. This contract is ongoing.

**Citigroup – Complete Environmental Program, Various locations nationwide:**

Since 1995, Hillmann has been providing complete environmental program including Phase I environmental site assessments, asbestos and lead surveys, air monitoring, bid administration and O&M programs, industrial hygiene and indoor air quality programs, geology services, radon testing and hazardous materials assessments. Ms. Lamb functions as an Industrial Hygienist on this contract. Cost: \$8,250,000. This contract is ongoing.

**Brookfield Properties, One Liberty Plaza, New York, NY: Completed 2009.**

Beginning in 1987, Hillmann has managed the environmental aspects of the complete renovation of a 54-story high-rise office building totaling over 1.7 million square feet of space. Our services included asbestos and lead surveys, bid administration, design and monitoring and geotechnical services. We continue to provide environmental and industrial hygiene consulting to Brookfield. Ms. Lamb functioned as an Environmental Specialist on this contract Cost: \$286,000

## **Craig D. Downs, CHMM**

National Accounts Manager

### **EDUCATION:**

B.A. Environmental Science, Plattsburgh State University

Applied Environmental Science Program - William H. Miner Agricultural Research Institute

### **CERTIFICATION:**

Certified Hazardous Materials Manager (CHMM)

Certified Environmental and Safety Compliance Officer (CESCO)

Certified 40 Hour HAZWOPER Hazardous Waste Operations

OSHA 510 – Construction Industry Safety and Health Training Certificate

### **YEARS OF EXPERIENCE:**

With Hillmann: 11 years

Total: 12 years

### **PROFESSIONAL EXPERIENCE**

Mr. Downs is responsible for the business operations of Hillmann's national accounts for the Due Diligence division. He provides direct oversight of all of the department projects including bid preparation, report preparation and client relations. He also ensures technical and customer service support are provided effectively and efficiently to clients.

Mr. Downs performs Phase I Environmental Site Assessments to meet environmental due diligence requirements under CERCLA and ASTM Standards, including the quality assurance of technical reports. Mr. Downs also has experience in soil and groundwater investigations and remediation projects; environmental compliance audits, and UST management.

He also conducts IAQ inspections, surveys and sick building syndrome investigations as well as monitors workers for airborne contaminants, and provides environmental safety and awareness training. In addition, he has performed facility evaluations to determine lead content of paint on surfaces and made recommendations for appropriate response. He has overseen lead abatement and collected and evaluated dust samples for exposure assessments.

Relevant project experience includes:

**World Trade Center disaster site, New York, NY:** Mr. Downs was part of the Hillmann 24-Hour Emergency Response Team, which provided recovery services including damage assessments, clean-up planning, safety plans, and debris clean-up. Hillmann also provided asbestos monitoring, indoor air quality monitoring, mold delineation and remediation management, carbon monoxide and hydrocarbon testing, and health risk assessments of 30 projects at "Ground Zero"; which included performing anthrax testing.

**GAB Robins, New York, NY:** As Clerk-of-the-Work work to the insurer, Hillmann performed Environmental Health Risk Assessments and monitored and managed remediation of buildings affected by the World Trade Center disaster Site. Mr. Downs was the Project Manager for this project, which was completed in 2003. Cost: \$250,000.

**HSBC – Complete Environmental Program, Various locations nationwide:** Hillmann is providing a complete environmental program including Phase I Environmental Site Assessments, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene and indoor air quality programs. Mr. Downs functions as the Accounts Manager and Environmental Assessor for this contract, which is ongoing. Estimated cost to date: \$100,000

**Citigroup – Complete Environmental Program, Various locations nationwide:** Since 1995, Hillmann has been providing complete environmental program including Phase I Environmental Site Assessments, asbestos and lead surveys, air monitoring, bid administration and O&M programs, industrial hygiene and indoor air quality programs, geology services, radon testing and hazardous materials assessments. Mr. Downs functions as an Environmental Assessor and Accounts Manager for the Due Diligence on this contract. Estimated costs to date: \$8,250,000. This project is ongoing.

**TD Bank Phase I ESAs, Various locations:** Hillmann has performed Phase I Environmental Site Assessments (ESAs) at several properties on behalf of TD Bank, N.A. These assessments have been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05 for Phase I Environmental Site Assessments, and the TD Bank, N.A. Scope of Services for Phase I Environmental Site Assessment. Mr. Downs is the Environmental Assessor and Accounts Manager for the contract, which is ongoing.

Estimated costs to date: \$280,681.

**J.P. Morgan Chase, various locations, NY and NJ:** Hillmann is providing Phase I Site Assessments at various locations in the New York/New Jersey area for JP Morgan Chase. These assessments have been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05 for Phase I Environmental Site Assessments, and the JP Morgan Scope of Services for Phase I Environmental Site Assessment. Mr. Downs functions as the Account Manager and Environmental Assessor on these projects, this is an ongoing contract; estimated costs to date: \$775,000.

**Tishman Speyer Properties, Various locations nationwide:** Hillmann has provided a complete environmental program for Tishman Speyer's properties since 1987. Mr. Downs functions as an Environmental Assessor for this project. Our services include Phase I Environmental Site Assessments, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene and indoor air quality programs. Estimated project cost: \$ 1,000,000 annually. This project is ongoing

**Wachovia Bank ESAs, Various locations:** Hillmann has performed Phase I Environmental Site Assessments (ESAs) at numerous properties on behalf of Wachovia Bank. These assessments have been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05 for Phase I Environmental Site Assessments, and the Wachovia Bank Scope of Services for Phase I Environmental Site Assessment. Mr. Downs functions as the Account Manager and Environmental Assessor for the contract. Estimated costs to date: \$443,710.

**Adams Mark Hotel, Daytona Beach, FL:** Hillmann was retained by Pyramid Project Management to provide recovery services, which included performing a microbial and moisture evaluation and overall scope of work of the Adams Mark Hotel after the Hurricanes in 2004. Mr. Downs was a Project Manager and Environmental Specialist on this project, which was completed in 2005. Cost: \$218,000.

**Edificio Venezuela, San Salvador, El Salvador:** Hillmann provided environmental services for a Citigroup property in El Salvador. Services included a Phase I Environmental Site Assessment, industrial hygiene, lead and asbestos assessments and sampling, and water sampling. Mr. Downs was the Project Manager and Environmental Specialist on this project, which was completed in 2007. Costs: \$11,000.

**Citibank N.A. Large Phase I ESAs Portfolio Project,** Mr. Downs was the Project Manager and Site Assessor for this portfolio of Phase I Environmental Site Assessment projects conducted on large multi-family residential housing complexes (15 to 40 plus acre) throughout the NYC metro area. The complexes ranged from 10 to 30 buildings with 600 to 2,000-plus apartment units. These projects were completed in 2010; cost: \$45,450.

**Roselle Park BOE, Roselle Park, NJ:** Hillmann was responsible for Industrial Hygiene, Air Monitoring, and Asbestos Sampling services for this project, which was completed in 2005. Mr. Downs performed as an Environmental Assessor on the project. Cost: \$33,000.

**Cushman & Wakefield, location:** Hillmann is providing environmental services for property managers for large commercial building owners, including Citibank. These services include asbestos surveys, project design, investigation, project management, bulk sampling and analysis. Mr. Downs is an Environmental Assessor on this contract, which is ongoing. Cost: \$2,040,000.

**Monday Properties, 575 Lexington, New York, NY:** Hillmann is providing asbestos project design, investigation, Phase I Environmental Site Assessments and project management services, including bulk sampling and analysis, for several commercial properties. Mr. Downs is an Environmental Assessor for this contract, which is ongoing. Estimated costs to date: \$765,000

**Encompass Insurance, Various locations nationwide:** Beginning in 2004 Hillmann has been performing microbial assessments, scope of work evaluations, microbial management, microbial clearances, cause and origin, and investigations. Mr. Downs is an Industrial Hygienist on this contract. This project is ongoing; estimated cost to date: \$1,464,000.

**Allstate Insurance, Various locations:** Hillmann manages environmental aspects of water losses, including investigations, moisture mapping, testing, remediation protocol and clearance sampling. Mr. Downs is an Industrial Hygienist on this contract, which is ongoing. Estimated costs to date: \$801,739.

**MDB Community Housing Corp, Phase I ESAs Portfolio Project:** Mr. Downs was the Project Manager and Site Assessor for this portfolio of Phase I Environmental Site Assessment projects conducted on these multi-family residential buildings. Hillmann staff also performed brief evaluations for ASTM "Non-Scope" items, such as asbestos-containing materials, lead-based paint, radon and mold. This project was completed in 2009. Costs: \$7,200.

**Hyatt Regency Phase I ESAs, New Orleans, LA:** At the request of Grossberg, Yochelson, Fox & Beyda LLP and for Poydras Properties Hotel Holding, LLC, Hillmann performed a Phase I Environmental Site Assessments of the Hyatt Regency in New Orleans, Louisiana. This assessment has been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05. Mr. Downs was the Project Manager for the projects that were completed in 2007, 2009 and 2010. Estimated costs: \$6,000

**Kevon Office Centers, Pennsauken, NJ:** Hillmann performed a Phase I Environmental Site Assessment (ESA) of this property for Kevon Office Center, L.P. The assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05. Mr. Downs performed as the Project Manager and Site Assessor for this contract, which was completed in 2010. Cost: \$4,200

**Transaction Screen Environmental Site Assessments, Various locations, New York, NY:** KDX Ventures tasked Hillmann with providing transaction screen environmental site assessments at nine different locations throughout New York City. Mr. Downs performed as the Project Manager and Site Assessor for this contract, which was completed in 2009. Cost: \$8,700.

RE: Focused Subsurface Site Investigation  
37-11 30th Street  
AKA 30-02/12 37th Avenue  
Long Island City, New York

Dear Mr. Riley:

Merritt Environmental Consulting Corp. ("MECC") has completed this Focused Subsurface Site Investigation (the "FSSI") at the 37-11 30<sup>th</sup> Street property (the "Site"). MECC understands that this FSSI is intended for use as an environmental due diligence instrument. The Site contains a one-story and partial three-story warehouse/industrial building with several partial basements and a footprint estimated at 35,000 square feet. In addition, an exterior stockyard is included within the Site. The primary focus of this study was to determine if volatile organic compounds (VOCs) were released to subsurface soil or groundwater at actionable concentrations beneath the Site by past reported plastic manufacturing activities and secondly to evaluate soil and groundwater quality at closed in-place underground storage tanks (USTs). Six (6) soil borings were installed at the Site and laboratory analysis of grab soil samples detected no VOCs. Laboratory analysis of groundwater samples collected from the Site identified trace concentrations of a minor number of chlorinated VOCs, but none were reported to exceed applicable regulatory limits.

All soil and groundwater samples collected during this study were further analyzed under additional parameters by the laboratory as a precautionary measure (semi-volatile organic compounds and polychlorinated biphenyls). This laboratory data reported undetected substances in all soil and groundwater samples under these additional parameters. Three (3) abandoned underground heating USTs and one (1) abandoned subsurface oil/water separator were also discovered at the Site. MECC identified no evidence indicating that the USTs or the oil/water separator discharged petroleum to the environment. One (1) of the three (3) discovered heating oil USTs is reportedly 550-gallon in size and was not accessible during the field activities. However a single small heating oil UST is not considered a material threat of adverse impact on the environmental integrity of the Site. In addition, the interior of the Site building was near full of stocked materials with no access for drilling work. A ground penetrating radar (GPR) survey was conducted but again, access was limited both inside the building and at the exterior stockyard. However MECC believes this investigation was sufficient in scope to adequately determine that past industrial activities at the Site and at nearby properties have not adversely affected Site soil or groundwater quality, and that neither of the two (2) larger USTs or the oil/water separator discharged petroleum to the environment. MECC recommends no further investigation in connection with the potential of past off-site and/or off-site industrial operations, the closed in-place USTs or one (1) abandoned subsurface oil/water separator to adversely impact the environmental integrity of the Site.

## Background

The Site bordered to the west by 30<sup>th</sup> Street, to the north by 37<sup>th</sup> Avenue and the east by 31<sup>st</sup> Street in an urban setting. The Site contains two (2) attached structures: one (1) three-story building and one (1) single-story building as well as an exterior paved stockyard at its north side. The footprint of the Site buildings is roughly 35,000 square feet. The total size of the Site is approximately 1.1 acre. It appears that the oldest of the Site buildings consists of the four-story section (1920) and that the single-story portion may have been constructed in the 1940's. The Site is currently used as a warehouse for a stage and theater lighting company known as "See Factor." According to an excerpt of a Phase I Environmental Site Assessment (ESA) report recently completed by others, the Site was used for warehousing purposes by the current occupant since the 1980's. The ESA report stated that a plastics manufacturer occupied the Site from the 1930's to the early 1980's (the specific nature of this historical operation is unknown).

The ESA report also stated that, although no physical evidence of closed or unused USTs were observed, sources of historical information identified up to four (4) USTs at the Site. According to the excerpt of the ESA report, these USTs ranged in size from 550-gallons to 10,000-gallons. However, the ESA report did indicate that UST closure documents were reviewed, and they identified one (1) 5,000-gallon UST, one (1) 2,000-gallon UST and one (1) 550-gallon UST at the Site (these UST closure documents were not included with the excerpted ESA report reviewed by MECC). According to the ESA report, the UST closure documents are dated July 2000 and verified that these three (3) USTs were properly closed in-place. The number and sizes of the USTs described by the ESA report (as disclosed by the review of UST closure documents) generally confirm the statements made by the Site representative and match the findings of the GPR survey currently completed by MECC.

During the FSSI field activities, MECC observed what appeared to be a concrete filled fill line flush into the sidewalk at the 30<sup>th</sup> Street (west) side of the Site. A Site representative confirmed that this feature was a former fill line for a 550-gallon heating oil UST under the sidewalk, which was closed in-place in 2000. MECC also observed a UST vent pipe protruding from the 31<sup>st</sup> Street sidewalk adjacent to the single-story section of the Site building at the east side of the Site. The Site representative confirmed that this vent was once connected to a 5,000-gallon heating oil UST under the basement floor slab at the northeast section of the single-story building (see attached site sketch). The Site representative also pointed to an area where a 2,000-gallon heating oil UST is present beneath the sidewalk along 31<sup>st</sup> Street. The GPR survey generally confirmed the locations of the two (2) exterior USTs. However, because the basement under the northeast section of the Site was filled with debris and other materials, a GPR survey could not be conducted (the Site representative was able to generally point out the outline of this UST).

MECC observed a steel plate covering an approximately five-foot wide by five-foot long concrete-lined pit at the east side of the Site. Removal of the plate revealed an abandoned oil/water separator. No residues or fluids were observed in the pit and the Site representative stated that current operations never included use of the subsurface structure. It appears that the oil/water separator is connected to the local sewer system.

A small concrete shed is located at the exterior side of the north wall of the Site building. MECC observed one (1) abandoned water supply well in the shed. The Site representative confirmed that this well has not been in use for an extended period (he said that current operations never used the well, which was already abandoned when they began occupancy in the 1980's). MECC observed no groundwater monitoring wells at the Site or in public sidewalks at adjoining properties.

## **Topography and Geology**

The elevation of the Site is roughly 40 feet above mean sea level. Surface topography consists of a slight downward slope both to the east and west of the Site with minor relief. Based on MECC's review of published water table elevation isopleth maps, local groundwater flow is expected to be towards the west-northwest in the direction of the East River based on published water table elevation isopleth maps. Groundwater gauging conducted during the FSSI identified the water table at 27 feet below ground surface (bgs). Subsurface sediment beneath the Site generally consisted of coarse sand grading to medium to fine well sorted sand with minor lenses of interbedded silty clay. Fill material was limited to the upper five (5) feet at each boring and generally consisted primarily of sand with minor construction debris (crushed brick, concrete).

## **Scope of Work Completed**

All field activities associated with this FSSI were completed on June 25, 2014. Mr. Frank Galdun, Project Geologist with MECC, supervised the drilling contractor and conducted all field sampling activities.

MECC retained a qualified contractor first conduct the GPR survey of the Site. Again the scope of the GPR survey was limited by a large amount of stored material at the exterior stockyard and within the Site building and partial basement (this partial basement is located under the northeast corner of the Site building and contains the closed in-place 5,000-gallon heating oil UST). The GPR survey identified two (2) subsurface anomalies resembling USTs at the Site. Please refer to the site sketch for anomaly locations. MECC was unable to conduct the GPR survey of the reported location of the 5,000-gallon UST in the basement but the Site representative recalled its location. In addition, MECC observed abandoned fill and vent lines formerly connected to the UST and this finding also generally confirmed the location of this UST.

MECC retained a contractor to employ a track-mounted hydraulic direct-push drill rig to install four (4) soil borings at the Site (Soil Boring Nos. B3 through B6). Soil Boring B3 was placed adjacent to the oil/water separator and closed in-place UST at the east side of the Site. B4 was installed at the west side of the Site principally for groundwater sampling purposes (groundwater samples were collected for laboratory analysis from B3 and B4 to establish groundwater quality at hydraulic upgradient and downgradient positions relative to the single-story Site building). B5 and B6 were installed into the exterior stockyard. The maximum depth of the soil borings was 32 feet bgs. Groundwater was encountered at approximately 27 feet bgs at all borings. Soil quality field screening occurred to 20 feet bgs at B3 through B6, which were then extended directly to the water table for groundwater sampling. Because interior access was largely limited, MECC elected to collect four (4) groundwater samples for laboratory analysis as a precautionary measure (MECC's proposal for this FSSI estimated three groundwater samples). Soil samples were collected for laboratory analysis from B3, B5 and B6. No soil samples were retained for analysis at B4 since this boring was installed at the sidewalk away from any USTs and was intended principally for use as a groundwater sampling point.

In addition, two (2) soil borings (B1 and B2) were installed into the northeast partial basement adjacent to the closed in-place 5,000 gallon UST. These borings were installed using a hand-held electric hammer drill equipped with three-foot long attachable solid stem augers. The maximum depth of these two (2) borings was six feet bgs. Grab soil samples were collected for laboratory analysis from each of these borings.

### **Soil Quality Field Screening Results**

MECC conducted continuous physical evaluation of soil condition to determine if any evidence of contamination was present. In addition, the MECC employed a photoionization detector (PID) to determine if measurable levels of volatile organic vapors existed in the soil samples as they were extracted from the five-foot direct-push sampling sleeves, and from the basement borings. Continuous soil sampling was accomplished at the direct-push soil borings by inserting a five-foot plastic sleeve into a casing at the end of the drill rods and was driven into the subsurface. The sleeves were removed from the casings as they were extracted from the soil borings. Soil quality evaluation and soil sampling was conducted by cutting the sleeves longitudinally, exposing the collected soil. Soil samples were collected at three-foot intervals in the hand installed borings by employing a slide hammer tipped with a stainless steel sampling sleeve.

MECC identified no odors or unusual coloration in any of the soil samples. All PID readings at all borings showed undetected volatile organic vapors in soil. In addition, no sheens or odors were identified in water extracted from the direct-push soil borings during groundwater sampling activities.

### **Soil and Groundwater Sample Laboratory Analysis**

MECC collected one (1) grab soil sample for laboratory analysis from above the water table at B1, B2, B3, B5 and B6. Generally, these samples were collected from deeper intervals (typically at the maximum depth of soil sampling activities) at those locations where USTs and the oil/water separator were being investigated. Shallower soil samples were retained from the remaining borings to determine if near-surface sediment quality was adversely affected by past industrial operations. All samples (four groundwater, five soil) were analyzed at Veritech, a New York State Department of Health-Certified environmental laboratory (NYSDOH Cert. No. 10982). All samples were analyzed under EPA Method 8260 –VOCs. In addition, all samples were analyzed at Veritech for Semi-Volatile Organic Compounds (SVOCs) under EPA Method 8270, and for polychlorinated biphenyls (PCBs).

For groundwater sample collection, MECC installed dedicated one-inch diameter PVC well screen into all borings hydraulic direct-push borings. A ten-foot long well screen topped with solid riser was inserted into Borings B3 through B6 (well screens intersected the water table). Dedicated disposable one-quarter inch diameter flexible tubing fitted with a foot valve was then used to collect groundwater samples from each of the four (4) temporary well points. Groundwater was purged until apparent turbidity was visibly reduced and groundwater samples were collected from the well points for laboratory analysis. All groundwater samples were analyzed for VOC, SVOCs and PCBs at the laboratory.

All appropriate chain of custody documentation was completed before sample shipment to the laboratory. All samples were collected into laboratory-supplied containers with the appropriate preservatives. The samples were stored on ice and hand-delivered to the laboratory within one day of collection.

The soil samples are identified in the attached laboratory report as the following (sample identifications indicate boring number and depth of collection):

- B1 5'-6'
- B2 6'
- B3 19'-20'
- B5 4'-5'
- B6 19'-20'

One (1) VOC, methylene chloride, was detected in soil sample B1 5'-6' at a concentration of 0.004 mg/kg. Methylene chloride is commonly introduced into sample media by environmental laboratories, and is acknowledged by both regulators and the environmental consulting industry as a common laboratory-introduced VOC. Accordingly, MECC concludes that the reported presence of this VOC does not reflect actual soil quality. No other VOCs were detected in the soil samples. In addition, no SVOCs or PCBs were detected in any of the soil samples.

No SVOCs or PCBs were detected in any of the four (4) groundwater samples. VOCs were detected in certain groundwater samples and the following table summarizes the laboratory report.

Compound	B3GW	B4GW	B5GW	B6GW	NYSDEC TOGS Standards
Chloroform	20	6.2	1.5	ND	7
Perchloroethylene	3.5	ND	ND	ND	5
1,1,1-Trichloroethane	ND	2.2	ND	ND	5

**NOTES**

1. All results are expressed in micrograms per liter (ug/l), which can also be expressed as parts per billion (ppb).
2. Any result in bold exceeds New York State Department of Health Maximum Contaminant Level for drinking water, and the guidance values or standard listed in the NYSDEC Division of Water Technical and Operational Guidance Series (1.1.1) or "TOGS" *Water Quality Standards and Guidance Values*.
3. ND: Parameter non-detected, below method detection limits.

Chloroform was detected at low concentrations in three (3) samples. This substance is commonly introduced into sample media by environmental laboratories, and is acknowledged by both regulators and the environmental consulting industry as a common laboratory-introduced VOC. Accordingly, MECC concludes that the reported presence of this VOC does not reflect actual groundwater quality.

Perchloroethylene (PCE) was detected at a low concentration in B3GW. PCE is a chlorinated VOC commonly used in dry cleaning operations and for metal and circuit board degreasing. The detected level of PCE in the sample is below the applicable regulatory limit for groundwater quality and is therefore not considered a concern. 1,1,1-trichloroethane (also a chlorinated VOC) was detected in B4GW, but at what is considered a trace concentration only and is below the applicable regulatory limit. No other VOCs were detected in any of the four (4) groundwater samples.

**Conclusions/Recommendations**

The results of this study disclosed no evidence to suggest that Site soil or groundwater quality was adversely affected historical on-site or off-site industrial activities, or by historical heating USTs and abandoned oil water separator. Fill material encountered at the boring locations consisted of sand, crushed brick and concrete with no unusual coloration, odor or apparent substances that may cause it to contain elevated concentrations of heavy metals and/or SVOCs (i.e., ash, cinders, clinker). MECC recommends no further investigation in connection with the potential of historical on-site/off-site industrial activities, the closed in-place USTs, or the abandoned oil/water separator to adversely impact the environmental integrity of the Site.

Access to the interior of the Site building and the stockyard was largely limited by stored materials but MECC believes that the scope of work completed by this FSSI was adequate in addressing the concerns raised by the ESA report. One (1) of the closed in-place USTs was not located near any of the soil borings since it is located in the 30<sup>th</sup> Street sidewalk (a sidewalk opening permit issued by the City of New York

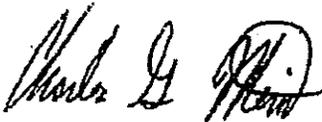

would have been necessary to drill at this UST area). However, based on the reported small size of this UST (550-gallons) and because it was reportedly properly closed in-place, MECC does not believe that it represents a material threat of adverse impact on the environmental integrity of the Site.

**Limitations of the FSSI**

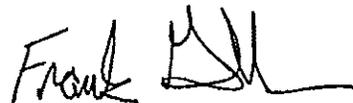

The scope of the FSSI is intended to aid in evaluating whether additional investigation would be prudent. The tasks that comprise this FSSI are not exhaustive or definitive. MECC has made no independent investigation of the accuracy of these secondary sources and has assumed them to be accurate and complete. MECC does not warrant the accuracy or completeness of information provided by secondary sources (MECC has no reason to believe that the secondary sources provided or acquired during this study contain intentionally false or misleading information). MECC does not warrant that all contamination that may exist under the Site has been discovered, that the Site is suitable for any particular purpose or that the Site is clean or free of liability.

If you have any questions concerning this document, please feel free to call our office.

Sincerely,

Charles G. Merritt  
President/LEED AP

Frank Galdun  
Project Geologist

FSSI  
37-11 30<sup>TH</sup> STREET, LONG ISLAND CITY, NEW YORK

---

**Photograph 1:** Three-story section of the Site building with the single-story section visible at background. Entrance to the exterior stockyard from 30<sup>th</sup> Street is visible at left-foreground. Photographer facing south at 30<sup>th</sup> Street.

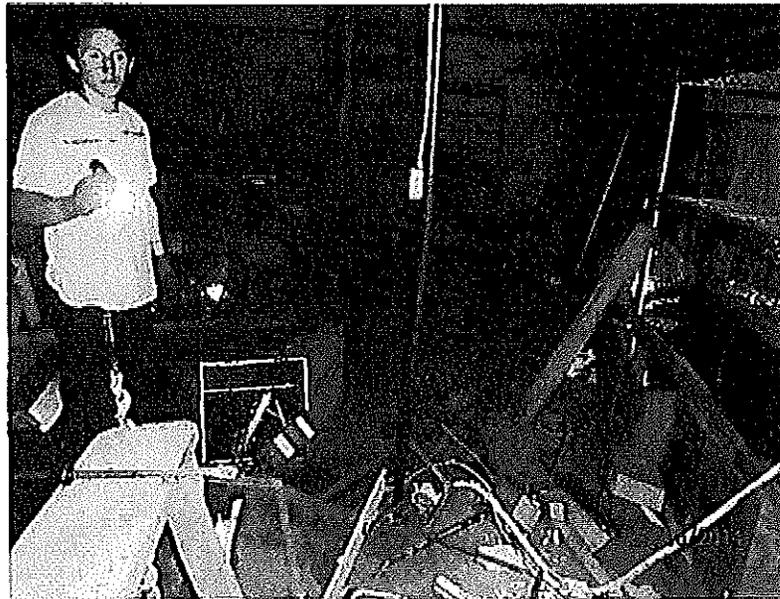

**Photograph 2:** East Site building section facing 31<sup>st</sup> Street. Concrete-plugged hole at lower foreground possibly represents sealed fill line to a closed in-place 2,000-gallon heating oil UST. Vent pipe for the closed in-place 5,000-gallon heating oil UST is visible at far background. Photographer facing north.

FSSI  
37-11 30<sup>TH</sup> STREET, LONG ISLAND CITY, NEW YORK

---

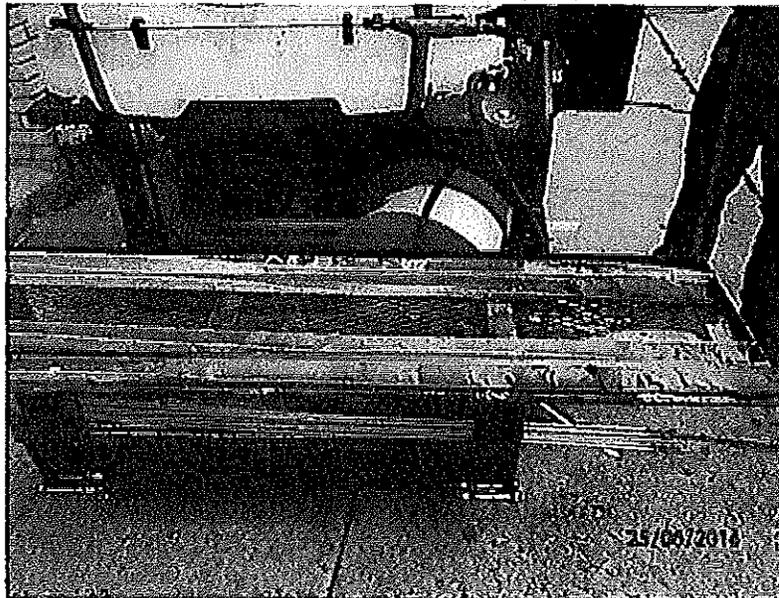

Photograph 3: Exterior stockyard looking east-northeast from 30<sup>th</sup> Street. Red house at background is an off-site structure.

Photograph 4: Area of the partial basement containing the closed in-place 5,000-gallon heating oil UST.

**Photograph 5:** Installation of B3 near the closed in-place 2,000-gallon heating oil UST and interior abandoned oil/water separator. Photographer facing west from 31<sup>st</sup> Street.

**Photograph 6:** Typical sediment type and condition encountered in B3 through B6.

---

**Purpose and Results**

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 08, 2017 and listed below. The project was identified as your project: **170313: 37-11 30th + 30-14 37 Ave.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 17L0337**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

Benjamin Gulizia  
Laboratory Director

**Date:** 12/14/2017
