EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

3608 REVIEW AVENUE
LONG ISLAND CITY, NY 11101

COORDINATES

Latitude (North):	40.7338890 - 40° 44' 2.00"
Longitude (West):	73.9382840 - 73° 56' 17.82"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	589653.2
UTM Y (Meters):	4509547.5
Elevation:	18 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 08/13/2018 has revealed that there are 7 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2

EXECUTIVE SUMMARY

CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/09/2018 has revealed that there are 22 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2018 has revealed that there are 22 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/16/2018 has revealed that there are 43 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 18 NY UST sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 4 NY MOSF UST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 26 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

FUELS PROGRAM: This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations.

A review of the FUELS PROGRAM list, as provided by EDR, and dated 08/22/2018 has revealed that there are 2 FUELS PROGRAM sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 3 NY HSWDS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 07/01/2018 has revealed that there are 45 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Updated By: JXGRECO

Site Description: Location: The 0.34 acre (14,664 square foot) site is located at 36-04 Review Avenue in the Borough of Queens, NY in an urban area. It is situated at the southwest corner of Review Avenue and Greenpoint Avenue. The site is bordered to the east by Review Avenue, to the south by industrial buildings owned by the same owner and occupied by the same operator, to the west by Railroad Avenue, and to the north by the approach to the Greenpoint Avenue Bridge. Site Features: The Site currently consists of a combination of one- and two-story industrial buildings totaling approximately 0.28 acres (12,390 square feet). The remainder of the site is paved parking for the building. Current Zoning and Land Use: The site is currently zoned as manufacturing M3-1 and is surrounded by warehouses and industrial uses. The nearest residential properties are located across the street to the east on Review Avenue. The site is currently occupied by Allied Extruders, a manufacturer of polyethylene and polypropylene film and bags. Past Use of the Site: Allied Extruders has occupied the site since approximately 1980. Prior to that time, the site was occupied by numerous industrial uses including Eastern Distillery Company (alcoholic beverage distillery), Andrews Lead Company (a lead pipe and sheet metal manufacturer), Carbona Products Company (manufacturer of carbon tetrachloride dry cleaning chemicals), Foundry Chemicals Company (unknown chemical manufacturer) and Paragon Smelting Company (lead and metal smelter). In addition, there are a number of suspected underground storage tanks at the site. It is unknown what is or was stored in those tanks. Site Geology and Hydrogeology: Six soil borings conducted in early 2017 identified soil consisting mainly of dark brown fine silty sand and some clay down to 20 feet below ground surface (ft-bgs), which was the boring terminus. Groundwater was encountered between 5 and 20 ft-bgs, due to varying surface elevations. General flow is expected to be to the west towards Newtown Creek, which is located approximately 450 feet from the site.

Env Problem: Nature and Extent of Contamination: A Phase II investigation was conducted in February 2017. Soils and groundwater were analyzed for

volatile organic compounds (VOCs, semi-volatile organic compounds, metals, pesticides and PCBs. Contaminants of concern identified include petroleum and chlorinated VOCs including carbon tetrachloride (CCl₄) and its daughter compound chloroform, trichloroethene (TCE), and 1,1,1-trichloroethane (TCA). Soil Samples were collected from 2 to 15 ft-bgs based on observations and field screening. Elevated concentrations of VOCs were detected in the soil samples, specifically CCl₄ at a maximum concentration of 4500 parts per million (ppm), chloroform at a maximum concentration of 120 ppm, TCE at a maximum concentration of 700 ppm, and TCA at a maximum concentration of 1500 ppm. These concentrations all exceed the Protection of Groundwater SCOs and, with the exception of chloroform, exceed the Industrial Use SCOs. Groundwater CCl₄ was detected at a maximum concentration of 15,000 parts per billion (ppb), chloroform at a maximum concentration of 8900 ppb, TCE at a maximum concentration of 3300 ppb, and TCA at a maximum concentration of 3600 ppb. In addition, other VOCs were detected at concentrations exceeding the applicable AGWS including 1,1-dichloroethane at 750 ppb, 1,1-dichloroethene at 250 ppb, and toluene at 3200 ppb. Soil Vapor No soil vapor samples were taken as part of the Phase II investigation. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Spiller Company: 001
Contact Name: DENNIS HUACON
DEC Memo: "04/03/06 Sharif Rahman- Left a messege for Dennis Huacon,DEP to get more information about the site. 04/26/06 Sharif Rahman- I spoke with Dennis Huacon of NYCDEP,(718)595-4722. As per Dennis, there was an oil spill from two diesel pumps located at NY Paving ,Inc.NYS DEC was not notified that time.Spill was not significant but light oil sheen was observed on newtown creek water.DEP wants DEC to investigate the spill event and NY Paving's storm water catch basin. I spoke to RSE in presence of Jeff vought and as per conversation among us it is impractical to investigate the spill cause and impact now almost after six months.There is no evidence on water or surface now. spill is closed."

Remarks: "OLD SPILL, BUT NYCDEP WANTS DEC TO INVESTIGATE IT ANYWAY, DUE TO SOMEONE TELLING DEP THAT THERE IS AN ADDITIONAL PIPE THAT LEADS TO WATERWAYS THAT THEY ARE NOT AWARE OF: WAS IN COURT: FOR FURTHER PLEASE CALL DENNIS AND HE'LL EXPLAIN FURTHER."

DEC Memo: "162528. 1/13/2006 03:15 HRS T. COLUMBIA #03807 ENV OPS SUPV REPORTS THAT J. DAVIS #17027 MECH A ENV OPS FOUND APPROX 1 PT OF UNKNOWN OIL IN TM9588 FDR 1Q08. THIS WAS FOUND WHILE CLEANING THE STRUCTURE ON THE ANODE INSTALLATION PROGRAM ON ACCT#80153. THERE WAS NO SMOKE, FIRE, OR INJURIES RELATED TO THE SPILL, NOR WERE ANY SEWERS, WATERWAYS, OR PRIVATE PROPERTY AFFECTED. THE UNIT WAS PACKED WITH DIRT AND THE OIL WAS DISCOVERED WHILE CLEANING UNDER THE UNIT AND AS A RESULT OF THIS, VACTOR# 60724 WAS CONTAMINATED AND WILL REMAIN ON LOCATION PENDING LAB RESULTS. THIS LOCATION IS IN F/O A GETTY OIL TERMINAL AND THE OIL APPEARS TO SMELL LIKE DIESEL FUEL. THERE WAS A SUMP IN THE STRUCTURE BUT UNKNOWN WHAT TYPE AT THIS TIME. WAREHOUSE HISTORICAL RECORDS DATED 11/23/1993 INDICATE PCB AS 10 PPM. ENV STOP TAG# 34189 WAS PLACED AND THREE LIQUID SAMPLES TAKEN ON E PRIORITY

HAZ MAT UNIT WOULD LIKE A FAXED COPY OF RESULTS SENT TO THEM AT HAZ MAT # 1 IN CARE OF NAPOLI. FAX # 212-860-9485 PHONE # IS 212-860-9230. EMAIL ADDRESS IS DAVOLIO2@AOL.COM . CIG MORRIS NOTIFIED @ 2014HRS. BECAUSE OF FIRE WILL TREAT AS OVER 500. PPM. EPA # IS NYP-004-107389. TANKER ORDERED. G JACOBI ENVIROMENTAL O/S NOTIFIED AND WILL SEND SPILL VAN AND ENVIROMENTAL OPS CREW TO LOCATION. CALLED GAGLIO ENVIROMENTAL SENIOR SPECIALIST. WAITING FOR CALL BACK. NOTIFIED ENVIROMENTAL MANAGER K BAROUCH @ 2045HRS. WILL CONTINUE UPDATING AS INFOMATION IS REPORTED. ENVIROMENTAL STOP TAG # 14843. FIRE DEPT LEFT LOCATION. UPDATE 17-FEB-2003 2120HRS T BELLEW REPORTS FIRE DID START TO BURN AGAIN AND HE SPRAYED DRY CHEM ON IT TO PUT IT BACK OUT. FIRE IS NOW OUT. UPDATE:17-FEB-2003 2310HRS. JAMES D'AVOLIO HAZ MAT REPORTS A NEW FAX NUMBER TO GIVE TO CIG. 718-446-8261. NOTIFIED MORRIS CIG OF THIS NEW #. HIS OFFICE # IS 718-476-6288. HE WOULD LIKE A COPY OF THE HISTORICAL AND THE NEW SAMPLE RESULTS WHEN THEY COME IN. Update : 0130 Hrs. Env. Ops crews set up Zones, cordoned off area around Internal Vault, Drummed any snow that may have been splashed with oil when the Vault door blew off, Placed Vault door next to Vault in Hot Zone and will determine cleanup standard for door after sample results are known. #9 Entered the Vault with an Air line respirator because the Transformer was still smoking. No oil was left inside the transformer to get a sample from, so one oil sample was taken from the floor next to the burnt transformer. This sample was turned into a split sample one for Con Ed, and the other was given to the DEP. The capacity of the transformer when full is about 50 gallons but only about 8 gallons was observed next to the unit on the floor inside the Vault. A Commissioner's order was given to remove the transformer and complete the cleanup within 24 hours. Will be following up with FOD and the Transformer group to expedite removal of all three units on feeder 1Q17 in this internal Vault. Crew on location to hold Zones and secure area until the AM when Units are removed and the cleanup can be completed. UPDATE 2-18-03 0549 HRS CHEM LAB # 03-01374-00 - 14 PPM. UPDATE 2-18-03 0850 HOURS, R. COSENTINO REPORTS, AS REQUESTED BY THE FDNYC - MR. BERNAD PIERRE - ERT, WILL FAX NEW CHEM LAB RESEULTS #03-01374-001 14 PPM, TO MR. NAPOLI OF THE FDNYC HAZ MAT #1. FAX NUMBER 212 860-9485. UPDATE: 2/18/03 - 1300 A. STUBBS - ENV. OPS., REPORTS STRUCTURE DOUBLE WASHED WITH BIO GEN 760. 1 DRUM NON HAZ OIL DEBRIS WAS GENERATED. REST OF DEBRIS WAS REMOVED BY VACTOR 60724. TAG REMAINS PENDING TRANSF REMOVAL. Update - 2/19/03 1915hrs J. Gaglio env. ops mgr reports at 1730hrs the last of the three single phase transformers was removed from the vault. AT 1912hrs the floor and the remainder of the area inside the vault was completely cleaned by env. ops. All the items listed on the commissioners order issued on 2/17/03 have been completed. J. Gaglio will call ERT to confirm this with them to pass info onto DEP. Update - 1930hrs - 2/19/03 R. Hutchinson OS env. ops reports after all 3 units were removed double washed all affected areas. Removed all sediment and oil absorbant floor with vactor and all oily solid debris was put into a drum and brought back to college point under 1 trip rule. Removed env. stop tag # 14843. As per FER J. Ciciliato the new units to be installed are not being installed in this cubicle. Job closed. Update - Cleanup was completed by double washing all structures involved with safety wash. Event involved material and event involved persons list updated."

Contact Name: ROBERT GRUBMAN
DEC Memo: "4/21/10 - Notifier contacted DEC Public Affairs - Complained of oil film on personal vehicle parked at that location - unk. source - requesting investigation by DEC 4/21/10 - Raphael Ketani. I met Robert Grubman (516) 567-2436 at the site, 34-02 Review Avenue. The site was a parking area between two buildings owned by Storage Plus, a personal storage company that provides storage cubicle space to the public. The parking spot for Mr. Grubman's silver Jeep Cherokee was in the back of the parking area and against a fence separating the parking area from the railroad. There were no electrical transformers nearby, nor any heavy equipment in the vicinity that might have hydraulic systems. Mr. Grubman showed me the material that was on his car. It looked like sprayed oil, but my PID meter didn't register any volatiles. The fine droplets didn't have an odor (see E-docs). the droplets were more numerous on the driver's side of the car, the top, and the back. He said that he had washed the droplets off of the windshield as he couldn't see out. There were no droplets on the ground, or on the chain link fence or the sign on the fence. There were no droplets on the black car parked next to his on the passenger side and no droplets on the silver SUV parked next to his car on the driver's side. I asked Mr. Grubman how long his car had been parked here. He said two days. I asked him whether the cars on either side had been parked here as long. He said that the black car had been here two days, also. Mr. Grubman said that a train had parked on the tracks next to his car. I told him that it was possible that the train had a pinhole hydraulic line leak, but that I didn't see any evidence of this as there were no signs of droplets on the fence or the ground. He said that he didn't want to have something potentially toxic on the car. I told him to go to a car wash and get the car cleaned. He said that he was going to contact AMTRAK and have them deal with the oil or whatever it is. I told him that was his choice. I added that if this happens again, then he can contact DEC again and we will investigate the incident. After this, I left the site. The source of the droplets is unknown. They may have landed on his car when he was parked somewhere else, but he didn't notice them until he saw them now in the daylight. As there doesn't appear to be a threat to people or the environment from the limited presence of the droplets, and as the source is unknown, I am closing the spill case. "

DEC Memo:	"3/5/07 - Raphael Ketani. I called up Fred Cornell of Sims Hugoneu (cell (201) 739-9687). He said that the barge had been sitting overnight when it sunk. He suspects there is a hole in the hull, but he doesn't know for sure. He said that, sometimes, when the tug boat operator pushes a barge, he hits or bumps into something. The barge didn't contain oil or oil holding tanks. It is a non-motorized barge. It just had scrap metal and this was unloaded. There is no sheen from the barge. The Coast Guard has been notified. The barge will be refloated and repaired. I asked him why this was called into the Spill Response Hotline when there was no oil in or on the barge. He said that he was just being cautious about the incident. Based upon my conversation with Mr. Cornell and the information above, I am closing the spill case."

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS AND CRITERIA AIR POLLUTANT MAJOR

DEC Memo: "Spoke with Bill. Underground line failed test. Investigation required.(sr) 06/25/12 Rec'd Work Plan to investigate the horizontal and vertical extent of subsurface petroleum impacts.(sr) 08/07/12 LNAPL delineation work completed, summary report will be sent to DEC shortly.(sr) 02/06/13 Remedial Investigation Report in edocs. The site is an active scrap metal recycling facility located at the confluence of Dutch Kills and Newtown Creek. The Dutch Kills is located to the west of the site. Newtown Creek is located to the south of the site, property to the north is rail road track operated by LIRR. The adjoining properties to the east of the site are utilized by others for commercial and or industrial operations. Spill was identified when the pressure test of the underground line failed (AST 150,000 gallon). Leak was identified. Franklin Company disconnected the feed and return line. Integral Engineering performed remedial investigation. Twenty five soil borings and twenty one monitoring wells were installed through out the site. Monitoring wells were installed in soil borings with significant impacts and visible LNAPL at the groundwater interface. Five permanent monitoring wells were installed in phase I. Petroleum impacted soil/fill was observed in SB-6/MW-2 at 7-10 ft bgs in the northern corner of the Site, adjacent to the rip-rap bulkhead along the Dutch Kills Basin. Three separate plumes of LNAPL are present at the site. Plume A consists of weathered and biodegraded diesel fuel, located to the northwest of AST and west of the underground pipeline trench in the vicinity of MW-1(3.81ft), MW-2(2.28ft), MW-9(0.11 ft), MW-10(0.37 ft), MW-11(0.38ft) and MW-13(2.62ft). Plume A is believed to be downgradient of the source of the diesel fuel release. Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench, in the vicinity of MW-19(0.12 ft) and MW-20(0.28 ft). Plume B is also appears to be result of an additional segments of corroded and impaired pipings. There are no active sources for Plume A and Plume B as the underground pipelines were removed. Plume C consists of a more viscous and highly weathered unidentified LNAPL in the vicinity of MW-15(0.50 ft) and MW-16(0.43 ft). The following wells are identified with no LNAPL and are being used to illustrate the outer limits of Plume A, B and C: MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-14, MW-17, MW-18, MW-21. Ground water was encountered at depth of 5 ft bgs throughout the site. Recovery effort was performed on Plume A to remove product and monitor for product recharge to evaluate the optimal locations for long term recovery efforts. Plume area A appears to be the greatest available volume of recoverable LNAPL. The

S111836487

proposed IRM includes installation of recovery wells and electric belt skimmers. Three recovery wells(RW-1, RW-2 and RW-3)were installed in Plume A. Additional recovery wells/belt skimmers setups are anticipated for plume B and C as part of the IRM. 03/01/13 Rec'd email from Kevin Mccarthy(212-962-439x314) regarding Offsite investigation on LIRR proerty.They are checking the issue with their attorney.(sr) 3/12/14-Vought-DEC Rahman received email from DEC lan Beilby dated 3/11/14 that Hi Sharif, Any new progress on this investigation? I checked edocs but it looks like there has been no activity in the past year. DEC Rahman forwarded email to Vought and Vought spoke to DEC Demeo and spill to be assigned to DEC Mahat. 4/2/14-Vought-Sent email to DEC Beilby with cc to DEC Mahat that lan, The case has been reassigned to Santosh Mahat (cc'd above) and you may also reach him at 718-482-4038. Thanks. Spill reassigned from Rahman to Mahat. 9/3/14: Mahat DEC Mahat contacted Mr. Kevin McCarty @ 212-962-4303 inquiring more information about the current status of the remediation actions. Mr. McCarty mentioned that the remediation is still going on and he is recovering free products from couple of recovery wells. He is using belt skimmer to collect free products. A report is due from November 2012-present day. 9/25/14 TJD Spill #1405728 associated with housekeeping was identified during inspection of facility as part of Newtown Creek/Dutch Kills sheen trackdown investigation on 8/26/14. Spill of waste oil was observed following the acceptance and dumping of debris reported to have been brought to the facility by NYC Housing Authority. The spill was cleaned immediately by facility personnel. Above spill note is for reference only as surface spill is not directly related to reported AST tightness test failure and subsequent removal of AST and installation of monitoring well network and recovery system. DEC REQUIRE : 1. Need all laboratory data from monitoring well even with no product well. 2. Measure Groundflow dirrection 3. Dissolved GW sampling at plume edge wells 4. Monitoring recovery wells by dispenser line - Deleniation. 5/20/15: Mahat DEC Mahat received an email uodate from James L'Esperance (Integral). Santosh, Sims has just informed me that they plan on commencing work on the stormwater basin at their Queens facility tomorrow. This work will involve excavating soil from the area of Spill #12-00318, as discussed during our site meeting and in the Remedial Action Letter submitted in April. Sims intends on starting the work tomorrow. I m anticipating that the work will last 2-4 weeks. Integral will have a geologist on-site during all excavation activities. Please feel free to give me a call to discuss if you have any questions. Thanks, James James L'Esperance Integral Consulting Inc. - www.integral-corp.com 61 Broadway, Suite 1601 - New York, NY 10007 Tel: 212.440.6708 - Cell: 646.285.4808 - Fax: 212.962.4302 8/6/15: Mahat DEC Mahat received an email from the contractor regarding the backfill material: Email: Santosh, Here s the information on the imported recycled concrete fill that we discussed. Allocco Recycling is a NYSDEC registered C&D facility. This material will be used as backfill beneath pavement. Let me know if there s anything else you need. Thanks! James L'Esperance The backfill documents has been uploaded on D2 for reference. 8/13/15: Mahat Site Visit: DEC Mahat and DEC Omar visited the site during the side wall sample collection. All collected sampled will be analyzed for the EPA 8260 and EPA 8270. A complete report will be forwarded to the Department one the results is published. 8/18/15: Mahat DEC Mahat request Mr. L'Esperance to provide a weekly report on the site: Here an update: Weekly Progress

Report for SIMS Metal Management (Queens) August 18, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 In May 2015, SIMS Metal Management (SMM) began excavating the area of open spill #12-00318 down to approximately 5 ft bgs as part of their plans to install a storm water retention basin. Due to space restrictions on-site, the excavation is being performed in several stages. Two soil stockpiles (COMP-1 and COMP-2) were generated and separated based on the degree of contamination from visual and olfactory inspection, as well as measuring volatiles with a PID. Soil from COMP-2 was significantly more impacted than soil from COMP-1. Waste characterization samples were collected in mid-June, and the soil was removed from the Site upon approval from Clean Earth New Jersey (CENJ). Material from COMP-1 (approximately 30 cubic yards) was transported to CENJ of Carteret in mid July. Material from COMP-2 (approximately 240 cubic yards) was transported to the same facility from July 29-31. On August 5, SMM s contractor (NOVA) began installing supports and sheathing within the excavation. On August 13, Integral (James L Esperance and Stacey Ng) collected a total of ten sidewall endpoint samples outside of the sheathing, representing the material to be left in place. All soil samples will be analyzed for CP-51 list VOCs (via USEPA Method 8260C) and SVOCs (via USEPA Method 8270D), in accordance with the Remedial Action Letter, dated April 16, 2015. A groundwater bottom sample will be collected once all of the sheathing is installed and all material is removed from the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). Please let me know if you have any questions. Thanks, James 8/24/15: Mahat Weekly Update: Weekly Progress Report for SIMS Metal Management (Queens) August 24, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 Last week, the contractor (NOVA) completed the installation of sheathing around the extents of the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). The water bottom sample is tentatively scheduled for Monday, August 31. Please let me know if you have any questions. Thanks, James 8/28/15: Mahat DEC Mahat received an email informing the water bottom sample will be taken on August 31, 2015. Result of the samples will be forwarded to the Department for review. 9/1/15: Mahat DEC Mahat received another update on the case: Update: Last week, SMM s contractor (NOVA), began excavating the remaining material left in the footprint of the future retention basin. From Aug. 24-27, NOVA removed approximately 1,000-1,300 cubic yards of material and stockpiled the soil to the southwest of the excavation. Large wood debris and impacted boulders/concrete were taken to an approved facility for proper disposal. On Friday, Aug. 28, NOVA completed removing all required material, at which point, Integral collected waste characterization samples according to the sampling protocol for Clean Earth of New Jersey (CENJ). This stockpile is referred to as COMP-3 and will remain covered on-site until approval from CENJ. Upon receipt of the results from the lab analysis, CENJ will provide trucks to begin hauling material off-site to its facility in Carteret, NJ. This is expected to begin sometime during the week of September 7, 2015. Yesterday, Aug. 31, Integral returned to site to collect the bottom endpoint groundwater sample. We anticipate receiving analytical results next week. 9/4/15: Mahat DEC Mahat received endpoint sample those were collected from the side walls and bottom of the excavation. All laboratory result has been uploaded on D2 for

SIMS METAL MANAGEMENT (Continued)

S111836487

reference. All collected wall samples are Below CP 51 guidance value. GW water sample was below TOGS standards with exception of Naphthalene, Benzo(b)fluranthene, Cherysene and Indeno are slightly above TOGS Standard. Based on the laboratory result, no further remedial action is warranted on the excavated area. However, there are 6 1" monitoring well that needed GW samples. James will collect water sample from those MW and analyzed for EPA 8260 and EPA 8270 for the confirmation. More remediation plan will be drafted once the result is out. DEC is waiting for sample report. 9/15/15: Mahat DEC Mahat sent an email to Mr. L'Esperance: Email: James, I have reviewed the site map and soil samples submitted on 9/4/15. Almost all soil samples are below CP 51 guidance values. There is nothing to discuss on this portion of the site for further remediation unless GW sample is opposite. The Department is also interested to know the current status of the former underground pipeline that runs behind the building. Feel free to contact me if you have any questions or concerns. Ps. we can conduct a conference call once GW result is out. 10/07/15: Mahat DEC Mahat received an email from Mr. L'Esperance: Email: Santosh, I ve just received the groundwater results for the trench wells at the site (see attached). MW-19 was not sampled because its cap and casing are damaged beyond repair. MW-21 was not sampled because it was dry at the time of sampling. Please let me know when you d like to discuss the results. Thanks, James 10/8/15: Mahat DEC Mahat sent an email to Mr. L'Espernace confirming further remediation on the site is not warranted by the Department. Email: James, Thank you for the info and update. The Department is satisfied with all the lab results. Please prepare a standard report for the closure of the spill case. Let me know if you have any questions or concerns. Santosh Mahat - Environmental Engineer DEC Mahat is waiting for a complete closure report for review. 2/9/16: Mahat DEC Mahat contacted Mr. L'Espernace inquiring about the status of the closure report. The report has been submitted to SIMS for a review. Once the report is done reviewing by SIMS rep. it will be forwarded to the Department. 4/12/16: Mahat DEC Mahat uploaded the closure report submitted to the Department. Based on the report, the Department does not warrant any further action on the site. Spill case is closed on NYSDEC Spill database. 4/25/16: Mahat e/c: A spill closure letter has been sent and uploaded on D2 for reference. 8/10/16: Mahat e/c: DEC Mahat received an email update from the consultant via email. He notified the Department that the free product has been detected MW-16. Email: Hi Jeff and Santosh, As discussed on Friday, 0.17 feet (about 2 inches) of separate-phase product was discovered in MW-16, which is a 1 well located in the former pipeline trench northeast of where the excavation occurred. The product was bailed out and the well re-gauged; no product was immediately detected. As discussed, Sims and Integral will bail the well every two days, and also gauge the well on a regular basis for the next two months. I ll keep both of you updated with the results of this exercise. Thanks, James Based on the email, the spill case has been re-opened and further investigation/action is required. As per the email, the consultant will be gauging the MW for another two months and bail MW every two days. 10/21/16 - Austin - Transferred from Santosh Mahat (transferred out of Spills unit) to Jeff Vought for continuance of the work - end 1/17/17-Vought-Received email from DEC Ian Bielby that Jeff, Sorry to bother you on this spill but I see this spill is reopened due to some reappearance of NAPL. I m trying to determine if there are potential impacts to newtown creek as a result of this information. Can you

SIMS METAL MANAGEMENT (Continued)

S111836487

tell me whether there are any wells close to Newtown creek that have NAPL? Vought performed full D2 file review and produced Non-FOIL summary site plans. Vought noted that reports describe three LNAPL plumes (Plumes A, B, C) and Plume A was addressed via excavation of the entire plum to 5' below the water table. Plume B and C were addressed reportedly via hand bailing. Vought noted however that Plumes B and C were never delineated and also documentation does not specify how these plumes were remediated. 1/18/17-Vought-Sent letter to Simsmetal East LLC, approving of email proposal dated 8/10/16 and requiring submission of a RIWP including: 1)Product recovery data for well MW16 as per 8/10/16 Email from Integral 2)Delineation of soil and groundwater contamination of Plume C at MW-16 3)Submission of Historical IRM data for Plume C 4)quarterly sampling of wells surrounding Plume C. CC'd on letter were Intergral(L'Esperance), OGC Urda and DEC Bielby. Vought also added letter to D2. Vought sent email reply to DEC Bielby that Ian, You never need to apologize as you are never a bother lol. In response to your email query below, and as I recently took over this project from Santosh (who has departed Spills), I have reviewed all available files in D2 and drafted up my usual technicolor Non-FOIL summary site plans which are attached above. To answer your question on potential impacts to Newtown Creek there were historical impacts to the Creek with a documented sheen in 2012 from what the reports call LNAPL Plume A . Furthermore data from this time also showed up to .5 of LNAPL in well MW-2 which was immediately adjacent to the Creek. In 2016, Plume A was entirely excavated to 5 feet below the water table as part of the installation of a new storm water retention basin. Endpoint samples from the Plume A excavation only showed minor detections of VOCs above Unrestricted SCOs and a bottom groundwater sample from the excavation only showed 85ppb benzene and 30ppb naphthalene. There were also two additional LNAPL plumes at the site (Plumes B and C) which were remediated via bailing of wells. Note that Plumes B and C are separated from the Creek by the remedial excavation of Plume A so it is unlikely that these plumes are currently impacting the Creek. Due to the disappearance of LNAPL from the site as well as minimal dissolved groundwater concentrations, the spill was closed on 4/25/16. On 8/10/16, we received an email from the consultant that .17 of LNAPL was observed in MW-16 which was identified as part of Plume C. In this email the consultant proposed manual bailing of the well and submission of a report. At that point the Department re-opened the Spill. As I have just reviewed the entire file, I am sending out a letter (attached above) to the consultant via separate email today (with a copy to you) requiring submission of a RIWP including: 1) Product recovery data for well MW16 (Plume C) 2) Delineation of soil and groundwater contamination of Plume C 3) Submission of Historical IRM LNAPL recovery data for Plume C 4) Quarterly sampling of wells surrounding Plume C. Hope this this helps and as always let me know if you need anything else, Thanks! 1/18/17-Vought-Sent email to Integral (L'Esperance) with cc to OGC Urda and DEC Bielby that James, I have taken over the above referenced spill from Santosh Mahat as he is no longer with the Spills Unit and as such I have reviewed all available reports for the site that are in our document system. I have attached the Department s spill reopening and requirement letter above and look forward to the submission of an RIWP that includes the requirements on the letter. An original of the letter is in the US mail to SIMS Metal East. Thanks. 1/19/17-Vought-Received email from Integral (Keith

S111836487

dropped drastically across the site immediately following the skimmer start-up, with the last measurable product thickness being recorded on 07/07/2014 (this was before product noted again in Aug. 2016) - DEC sent email on 05/20/15 approving plan for installation of a stormwater retention basin that required excavation of material from the area of the former diesel AST - excavation extended to 5 ft bg, which was slightly below the average water table depth in the area (about 4.5 ft bg) - a slight sheen was noted on the water table within the excavation - no sheen noted in Dutch Kills located adjacent to excavation area - approx. 1,000 cu. yd. of soil was removed - collected total of nine (9) endpoint sidewall soil samples and one bottom groundwater sample (as excavation extended below water table) - groundwater samples were also collected from the seven former pipeline trench wells - no contamination was noted in soil or groundwater samples the subject spill case was reported due to tightness test failure of underground lines of 150,000 gal diesel AST at the site. during further investigation, the underground supply/return lines were found corroded. the faulty lines and the tank were removed from the site. multiple soil borings and groundwater monitoring wells were installed during subsurface investigation/remediation. three separate LNAPL plumes (A, B and C) were identified: - Plume A consists of weathered and biodegraded diesel fuel, located in the area to the north of and adjacent to the AST. this plume was remediated via product recovery using skimmers and excavation for installation of stormwater retention basin. - Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench in the vicinity of wells MW-19 and MW-20 (near northeast corner of on-site building which is first building to the east of the former tank) - Plume C consists of a more viscous and highly weathered unidentified LNAPL, concentrated in the vicinity of the former pipeline trench in the vicinity of wells MW-15 and MW-16 (near northwest corner of on-site building which is second building to the east of the former tank) the spill case was closed on 04/25/2016 based on review of Spill Closure Report dated 02/10/16 (summarized above), but re-opened as product was noted again in existing well MW-16 (Plume C). on 01/18/2017, DEC Vought sent letter requiring delineation of Plume C, IRM data for Plume C and quarterly sampling of well around Plume C. 10:35 AM:- left message for Keith at Integral. 10:56 AM:- received call from Keith and Katie from Integral. Keith mentioned that no work has been conducted since case re-opening. asked Keith to send copy of IRM Report dated 06/10/13 (as incomplete report in file), Remedial Action Letter dated 04/16/15 (which is missing) and email dated 08/10/16 (if available). 12:02 PM:- left message for Mr. Cunningham. Prolerized Schiabo-Neu Company **property owner as per NYC ACRIS** (partnership of Hugo Neu & Sons, Inc., Proler International Corp. and Schiavone-Bonomo Corp.) Simsmetal East LLC. **owner listed on PBS record** One Linden Avenue East Jersey City, NJ 07305 Attn.: Craig Cunningham Ph. (201) 577-3200 / 3158 (201) 725-8515 email: craig.cunningham@simsmm.com 12:20 PM:- sent email to Mr. Cunningham including copy of letter dated 01/18/2017. asked him to immediately submit required information/documents. email copied to Keith and Katie. 12:25 PM:- received call from Mr. Cunningham and inquired him about required documents as per letter dated 01/18/17. he mentioned that Integral is doing groundwater monitoring. informed him about discussion with Keith/Kathryn (who mentioned that no remedial activities conducted by Integral at the site since case reopening)

earlier today. asked Mr. Cunningham to schedule a site inspection and well gauging. 12:33 PM:- sent email to Mr. Cunningham and asked him to schedule a site inspection. informed him that all well locations should be clear for inspection/gauging. email copied to Keith and Katie. 1:50 PM:- received email from Katie including IRM Report and Remedial Action Letter. remedial action letter included proposed work for installation of stormwater retention basin. the IRM report is missing Appendix A (Well Gauging Data). 07/11/18-Hiralkumar Patel. 11:44 AM:- received email from Katie. she mentioned that their IT department look through James L Esperance s email archives, but did not find the email from August 10, 2016. also, she did not find the actual attachment A to the IRM report, but submitted the well gauging data from 2012-2014. reviewed well gauging data in IRM report. area of Plume A was remediated via excavation to install a stormwater retention basin. wells MW-19 and MW-20 were located in area of Plume B. during well monitoring between Aug. 2012 and Oct. 2014, product was not found in well MW-19 after Nov. 2013; and in well MW-20 after Nov. 2012. wells MW-15 and MW-16 were located in area of Plume C. during well monitoring between Aug. 2012 and Oct. 2014, product was not found in well MW-15 after Sept. 2013 (except 2.5 in. in Nov. 2013); and in well MW-16 after Nov. 2013. 1:30 PM:- sent email to Katie and asked her to schedule a site inspection to gauge all existing wells. email copied to Keith. 07/26/18-Hiralkumar Patel. received email from Katie (at 1:57 PM on 07/25/18) including copy of email dated 08/10/16 (from James to DEC Vought/Mahat). Katie also confirmed site inspection at 10 AM on 08/02/18. 08/02/18-Hiralkumar Patel. 10:00 AM:- visited site with DEC Sekhon. met Keith (Integral), Katie (Integral), Eric Knorr (facility manager) and Mr. Cunningham. Mr. Cunningham mentioned that only one well MW-16 is left at the site and all other wells were either closed or destroyed. free phase product was noted outside a bailer previously placed in the 1-inch well. Katie mentioned that the well MW-16 has been gauged multiple times since detection of product in Aug. 2016. she also stated that product sample was collected from the well recently for fingerprint analysis. mixture of degraded diesel fuel and lubricating oil is found in the well. well MW-16 was gauged. groundwater was found at 5.5 ft bg, with 4 inches of product on top. a previously used utility vault was noted approx. five ft east of well MW-16 location. Mr. Cunningham mentioned that the concrete vault was taken out-of-service when they removed generator from the site. the concrete vault is approx. 6 ft deep. informed Mr. Cunningham/Keith that the Department requires further remediation at the site either by 1) replacing 1-in well with larger diameter well/adding more wells to the east (as there were no well to the east of MW-16 in past) and installation of belt skimmer, or 2) using existing vault for product recovery by drilling holes in vault's walls/floor to allow product accumulation, or 3) excavation/removal of contaminated material in the area of MW-16. Mr. Cunningham will discuss remedial options with property owner and will send a work plan. Eric Knorr Facility Manager PH. (718) 786-6031 (646) 531-0822 (C) email: eric.knorr@simsmm.com 12:03 PM:- received call from Keith. he mentioned that property owner has planned to use existing concrete vault for product recovery. he will submit plans for that. 2:14 PM:- received email from Katie including well gauging data and fingerprint analysis result. product sample was collected on 07/13/18 and results show that the sample contained a mixture of both diesel fuel oil (#2 fuel oil) and a lubricating, motor or waste oil. well MW-16 was gauged multiple times between July

Contact Name: JAMES GERACI
DEC Memo: "06/30/2005 - M. Brand, NYSDEC DER, spoke with James Geraci, Getty Terminal Manager (718-729-6500 x270) about spill of 02/07/2005. Spill was caused by JK Transport during loading procedure. Driver noted that during the removal of the loading head from trailer, the rubber seal became loose and approximately 30-gallons of gasoline was spilled into the catch basin at Loading Rack #3. Getty called in the spill to NYSDEC, given spill #0411874. Tyree Organization was called to site by Getty to clean up the spill. The gasoline was fully contained in the facility collection system (the catch basin is connected to an oil/water separation system). Absorbent pads were used to recover product and water was used to flush the remaining gasoline into the o/w separator reservoir. Tyree vacuumed 85-gallons of gasoline/water mixture out of the reservoir. Getty noted that NYSDEC spill responders Zhao and Demeo were informed and/or present during cleanup operations and gave facility a verbal approval of the remediation. Geraci of Getty faxed in documentation of cleanup effort including an internal Getty Terminal Oil and Hazardous Substance Spill Report and Additional Statement, dated 02/07/2005, and a manifest from Tyree Organization for the disposal of 85-gallons of gasoline/water mixture, also dated 02/07/2005. The spill was closed based on the lack of environmental impact and adequate documentation of remedial efforts. - M. Brand, NYSDEC DER Albany"
Remarks: "IT ALL WENT INTO THE CATCH BASIN: AND IS CONTAINED:"

Site Description:

Location: The Review Avenue Development I (RAD I) property is located at 37-30 Review Avenue, Long Island City, Queens County. This site is 3 acres in size and is northwest and adjacent to the Review Avenue Development II (aka Former Quanta Resources C241005) Site, separated only by Preston Alley which is an access alley/paper street that is part of the RAD I property. The Long Island Railroad tracks border the property along the southwest, Review Avenue and Calvary Cemetery border the property to the northeast and an industrial property borders the property to the northwest. Site Features: The majority of the site is paved with only a very small portion of the property along the Long Island Railroad tracks being unpaved. There are two

Env Problem:

brick buildings currently in use on site. The larger building, referred to as Building #1 is located toward the back of the property near the Long Island Railroad tracks. It has large overhead doors and is a commercial/industrial building. The smaller building, referred to as Building # 2, is located at the front of the property, on Review Avenue, and is a two story commercial office building. Current Zoning/Uses: The site is currently zoned for commercial and industrial uses. Building #1 is currently being leased by a truck repair shop and other commercial business. Building #2 is being used primarily as commercial office space with the lowest level of the building being used for warehousing and maintenance. Warehousing and maintenance has included the construction of movie sets, with paints, polyurethane, and lacquers being used on a regular basis. The open parking areas are being used as a commercial bus parking area and for utility contractor parking as well as for parking for the tenant of the buildings. All of the surrounding properties are in commercial or industrial use. Historic Uses: The earliest Sanborn map (1898) shows the parcel as part of the Eastern Distilling Company. No further development records are provided on the Sanborn maps until 1950 when the Site was shown as being occupied by the Van Iderstine Company poultry feed building. The Sanborn maps indicate that between 1979 and 1993, various operations, including Bekins Trucking and Nanco Contracting, leased the site from the Van Iderstine Company. Since approximately 1993 the site has been used for other purposes, mostly similar to the current uses described above (truck repair, bus parking area, commercial office space, warehouse space). Site Geology and Hydrogeology: The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to coarse sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs) and metals. The analytical data collected on this site includes data for: Groundwater The Remedial Investigation completed in June 2005, as well as prior investigations included groundwater monitoring wells on both the RAD I and RAD II property. Shallow groundwater monitoring wells MW-1, MW-2 and MW-4R were installed on the RAD I property. These wells were used to help determine the extent/distribution of petroleum products in the form of a light non-aqueous phase liquid (LNAPL) which is present on the water table over much of the site. Additional monitoring wells were installed to isolate the monitoring zones for LNAPL and groundwater. Groundwater wells GAGW-07 and GAGW-08 were double cased through the LNAPL zone to obtain representative samples of groundwater not impacted by the LNAPL. LNAPL wells were installed with screens in the LNAPL zone so LNAPL samples could be obtained. Below is a summary of the groundwater and LNAPL data that was collected. Groundwater samples were collected from groundwater monitoring wells GAGW-07 and GAGW-08 as part of the RAD II remedial investigation. Samples were analyzed for VOCs, SVOCs, PCBs, metals and natural attenuation parameters. Groundwater sampling results indicated the presence of 1,2 dichloroethene at 12 parts per billion (ppb) and trichloroethene at 14 ppb exceeding the groundwater standard of 5 ppb for each VOC. No other site related contaminants appear to be impacting groundwater above standards. LNAPL LNAPL samples were collected from LNAPL

monitoring wells MW-10, GAL-10, GAL-11, GAL-12, GAL-13, GAL-18, GAL-21, GAL-22, GAL-23, and GAL-24. LNAPL samples were analyzed for VOCs, SVOCs, PCBs, and metals. Results of VOC LNAPL analysis indicated the presence of benzene at .025 parts per million (ppm) toluene at 1.8 ppm, xylene at 1.4 ppm, trichlorethene at .054 ppm, and tetrachloroethene at .056 ppm,. In addition, PCB-aroclor 1242 was detected at 19 ppm and PCB-aroclor 1260 was detected at 15 ppm. Soil - The majority of RAD I property is currently paved. Soil sampling was conducted in connection with UST, concrete trench and sump removals (IRM) from the property. The post excavation samples collected as part of this work indicated that residual soil contaminant concentrations were well below commercial use soil cleanup objectives (CSCOs). This included VOCs and SVOCs associated with the former UST and fuel system that was removed. Toluene was detected at 4.8 ppm and total xylene was detected at 12.1 ppm well below the CSCO for these compounds of 500 ppm. Benzo(a)anthracene was detected at 1.4 ppm below the CSCO of 5.6 ppm and chrysene was detected at 1.5 ppm below the CSCO of 56 ppm.. Some contaminated subsurface soils are likely to remain within the residual LNAPL impacted area after the implementation of the area-wide LNAPL recovery remedy presented in the ROD for former Quanta Resources (a.k.a. RAD II) property. Data does not indicate any off-site impacts in soil related to this site. Soil Vapor - The Record of Decision for the Quanta Resources (RAD II) Site required a soil vapor intrusion study (Data Gap Investigation) on the RAD I property. This Data Gap Investigation was performed by Geosyntec in October 2010 to investigate baseline soil vapor conditions on the RAD I property and assess the potential for soil vapor intrusion concerns within buildings existing on the RAD I property. The soil vapor survey collected baseline soil vapor conditions beneath the RAD I parcel at 10 paved locations outside of the existing building perimeters. The results indicated the presence of vinyl chloride (ND to 2,300 ug/m3) and TCE (ND to 860 ug/m3) at various depths in the soil vapor and within close proximity to the onsite buildings. Sub-slab soil vapor sampling was then conducted in building #2 following building inspections performed at both buildings on the property. Building #1 was (and continues) to be used as open warehouse and a diesel truck mechanics shop, so no further sampling was conducted there. Building #2 is primarily office space with lower level storage and maintenance. The results of the sub-slab sampling conducted in building #2 indicate the presence of several compounds above guidance thresholds. This includes cis-1,2 dichloroethene (ND to 1,700 ug/m3), tetrachloroethene (ND to 21ug/m3), trichloroethene (680 to 1,700 ug/m3) and vinyl chloride (ND to 790 ug/m3). However, further actions were not required at the time due to the use of solvents within the building by the occupants.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling has indicated that soil vapor intrusion does not represent a

U003200549

current exposure pathway given the use of the site. However, an additional soil vapor intrusion evaluation is recommended if the building use changes and solvents are no longer being used. Sampling has indicated that soil vapor intrusion is not an off-site concern.

DEC Memo:

"This spill site cleanup has been consolidated under Spill No. 9813881. DEC (Sigona) responded with DEC (Austin). Arrived on scene at 12 Noon on 2/16/99 found a large puddle of product (unl gasoline) on the east side of property. The spill was caused by leak through flange at pig exit section. The product did not enter creek. There is an existing gw remediation system and spill assigned to DEC (O'Dowd). Product was contained on surface near leaking flange, ground and parking lot. Vac truck arrived at 1:45 PM 2/16/99 and began pumping gasoline mixed with foam into truck. Buckeye will make arrangements to continue removing free product until fluid is picked up. They will have bulldozer remove soil and gravel tomorrow. DEC (Sigona) will return for further direction. Buckeye & DEC (Sigona) monitored vapor levels using HNu and respirator. DEC (Sigona) conducted follow-up inspection on 2/17/99 found that Buckeye's contractors EMS & CCS excavated 40' x 15' section down 0.5-1.5 ft below grade loaded in 20 cu yd roll off. Monitoring well next to spilled area on southeast side of property contained 1.5 fresh product. Soil was contaminated to depth of 6 ft below grade based on GW depth. There was slight sheen in two distinct locations on west and east side of property. West side there is sheen south of surge tank, on east side sheen is south of parking area. Buckeye deployed a 150-ft hard boom and is deploying two sorbant booms to absorb product. Buckeye will dig a

S102144242

recovery trench 6-8 feet below grade on south side of parking lot and near surge tank near shoreline to recover free product. Requested soil samples with EPA 8021 + MTBE for endpoint analysis. DEC (Sigona) will follow-up. This gasoline spill case has been reassigned from DEC (Sigona) to Rommel on January 7, 2004. see spill nos. 9813884 05/12/04 Transferred from Rommel to Foley. Current status: 330gal LNAPL recovered since 1992. Ten monitoring wells and one recovery well on site. Detected 0.02' LNAPL on 3/31/04. No data on monitoring wells. 5/13/04 Mailed letter to M. Mengel, Buckeye. Required VOC/MTBE quarterly sampling, replacement of MW-3 and addition of well northwest of recovery system, monitoring of retaining boom, scaled site map and groundwater contour map. Deadline 6/30/04. 5/21/04 Copy of 5/13 letter sent to Kurt Trumbauer (EMS Env'tl) returned as not deliverable as addressed at 5 Highland Ave, Bethlehem PA. Resent to 602 E High St, Carlisle PA. 5/25/04 Spoke with Martin Mengel, Buckeye Pipe Line, and EMS contractor- Planning on doing sampling, 8260 + MTBE. Possibly putting well at corner of bulkhead. A lot of interference due to fuel lines. MW-3 is between fuel lines and will be reinstalled. Ordered phase 1 property usage from EDR to get surrounding property usage. Car recycling yard nearby(Prolerized-Schiabo Neu Company). Extended deadline to receive sampling report expected by 7/15/04. Buckeye will evaluate results of existing wells and surrounding landuse data to determine off-site well locations if necessary. Data from new wells would be submitted after they are installed, surveyed, mapped and results evaluated. Will document inspections of retaining boom twice monthly. 5/27/04 Received email from M.Mengel documenting our discussion on 5/25/04. 6/21/04 VM from M. Mengel. Will be sending DMR to Reg. Water Eng. and myself. Will not copy M. Tipple or A. Sigona. Wells were sampled a couple of weeks ago and rpt will be in by 7/15. 6/28/04 Update report received. 0.02' LNAPL in RW in 5/04. The boom was inspected and was found with no accumulation of product. 7/13/04 Received report summarizing the initial groundwater sampling results(2Q04). Sampling will continue on a quarterly basis. The wells were surveyed and sampled for VOCs/MTBE on 6/10/04. MW-3 is scheduled for repairs and MW-11 will be installed soon along with a few test borings to evaluate soil conditions near the recovery well. MW-3 was dry. BTEX ranged from ND(MW-2, MW-9, MW-10)to 10260ppb(MW-7). MTBE ranged from ND(MW-1, MW-9, MW-10) to 3300ppb(MW-7). No product has been detected within the retaining boom area. Area is tidal and a tidal study will be completed during upcoming remedial investigation activities. 7/15/04 Monitoring wells MW-3R (replacement for MW-3), MW-11 and MW-12 were installed. 7/16/04 Site is inspected twice per month for system functionality and well gauging. Received report. 0.02' LNAPL in RW in 6/04. 8/20/04 Well gauging/functionality report received. 0.02' LNAPL in RW in 7/04. Two additional wells (MW-11, MW-12) were installed on 7/15/04 as part of the assessment activities. MW-3 was replaced with MW-3R. Well logs and construction diagrams will be included in the upcoming Site Characterization Report. 9/23/04 Received August 2004 well gauging/functionality report. Add'l well (MW-11) was installed as close as practical(due to presence of product piping) to bulkhead west of RW-1. Also installed MW-12 adjacent to bulkhead to more closely investigate that area. MW-12 contained 0.11'(8/5/04) and 0.22'(8/19/04) of product which appeared to be old. EMS indicates that recharge is very slow, that thickness may build up in well as tide fluctuates, and that product recharge rate when well is bailed is very slow. EMS installed passive product

S102144242

collection bailer on 8/19/04. Retaining boom was observed to be satisfactory. MW-1,6,&8 were inaccessible on 8/5/04 and MW-1,6,8&2 were inaccessible on 8/19/04. 10/8/04 Spoke to M. Mengel. Site Characterization Report expected by 10/22. 10/20/04 Received Sept 2004 well gauging/functionality report. MW-12 contained 0.21' product during the 9/14/04 event. Product was not observed 9/30 nor 10/5. A passive recovery bailer was installed on 8/19/04. 10/21/04 Received site characterization report prepared by EMS Environmental. Six soil borings(P-1 thru P-6) and eight excavations(H-1 thru H-8) completed. The borings were advanced around RW-1 to a depth of 5'bgs or refusal. The excavations were to 5'bgs for footers for a new cable run tray. Soil samples were collected from P-1, P-3, H-1, H-4 and H-6. Trace LPH was detected in P-1, P-2 and P-5 and 0.2 was detected in P-6. Contaminated soil noted in MW-12. Slug tests were also performed. Tidal study concluded that wells are impacted by the tides. Fluctuation between high and low tide ranged from 0.5 to over 1'. 11/12/04 3Q04 monitoring rpt received. BTEX ranged from ND(MW-2,5,9,10) to 5300ppb(MW-12). MTBE ranged from ND(MW-2,5,9,10,11) to 3700ppb(MW-7). MW-1 and MW-8 were not accessible. 11/17/04 Approved delineation. RAP due 1/3/05. 12/6/04 3Q04 monitoring report received. 0.02' LNAPL detected in RW-1. MW-1 and MW-8 not sampled due to inaccessibility. BTEX ranged from ND(MW-2, MW-5, MW-10, MW-11) to 5300ppb(MW-12). MTBE from ND(MW-2, MW-5, MW-10, MW-11) to 3700ppb(MW-7). GW is approx 1-4'bgs. 12/16/04 Spoke to Haz, EMS Env. They will be submitting a RAP which will propose pump and treat with a trench which will run along the bulkhead. Requested they include info on areas of influence. 12/20/04 Spoke to Tom Dalton, EMS Env.(610-866-7799) Expect RAP to be late due to review by Buckeye Pipeline Co. Extended deadline to 2/3/05. He will send letter documenting this. (Rec'd 12/22/04) 1/27/05 Spoke to T. Dalton, EMS Env. Requested deadline extension to 4/3/05. He will send letter formally requesting extension. 2/1/05 Received 4Q04 monitoring results from 12/30/04. (MW-1 and MW-8 were not sampled since they were covered due to construction activities.) RW-1 had an avg of 0.02' of LNAPL. BTEX ranged from ND(MW-2, MW-5, MW-9, MW-10) to 8225ppb(MW-7). MTBE ranged from ND (MW-2, MW-5, MW-9, MW-10, MW-11, MW-12) to 210ppb(MW-7). 2/1/05 Denied request to reducing sampling frequency to twice a year. 3/24/05 M. Mengel will be mailing RAP today. 3/28/05 Received RAP. 7/22/05 2Q05 monitoring report (samples collected 6/13/05)- MW-1 was covered with rock due to construction and was not gauged/sampled. MW-8 was filled with dirt and was not gauged/sampled. Repair is scheduled for second visit in July. LNAPL not observed in MWs. 0.01' in RW-1. DTW was observed at 2.42'bgs(MW-6) to 4.90'bgs(MW-11). BTEX ranged from ND(MW-2,9,10) to 7585ppb(MW-7). MTBE ranged from ND(MW-2,5,9,10,11,12) to 161ppb(MW-3R). 12/14/05 3Q05 monitoring report received. Results from 9/27/05. LNAPL was observed in RW-1 at an average thickness of 0.02'. In-well Scavenger system continues to operate in the well to remove product and treat groundwater. No dissolved concentrations in MW-2,5,8,9,10. Benzene detections ranged from 17.2ppb(MW-11) to 257ppb(MW-7). Total BTEX ranging 1892ppb(MW-4)to 7295ppb(MW-7). MTBE detected in MW-6 at 158ppb. 2/24/06 Received 4Q05 monitoring report for samples collected from nine monitoring wells(MW-2 and MW-4 thru MW-11) on 12/30/05. No LNAPL was present in MWs during gauging. Recovery well, RW-1, contained an average thickness of 0.02' during twice monthly gauging. DTW was measured between 0.00ft(MW-8, water level was at top of well) and 4.69ft(MW-11) bgs. GW flow is toward

the NE and NW with avg hydraulic gradient of 0.006ft/ft and is tidally influenced. No exceedances of GWQS in wells MW-2, MW-5, MW-6, MW-8, MW-9 and MW-10. Total BTEX concentrations were 2ppb(MW-4), 7127ppb(MW-7) and 499ppb(MW-11). 5/5/06 Received 1Q06 monitoring report. Gauged nine MWs and a reference point on the bulkhead(BP-1). MW-1, MW-3R and MW-12 were not gauged or sampled due to equipment located over the wells. LPH was observed in RW-1 at 0.01ft on 3/8/06 and 0.02' on 3/27/06. A cone of depression was observed to be localized to RW-1. 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 8/23/06 Received 2Q06 monitoring report dated Aug 14, 2006 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on June 29, 2006. An immeasurable amount of free product was observed and removed from MW-1. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from MW-1 and MW-10. Groundwater flow is tidally influenced. Analytical results showed exceedences of VOCs in 7 of the twelve wells. Currently the groundwater pump in RW-1 is under repairs and should be reinstalled by the end of August. - JAM 10/20/06 Received 3Q 2006 monitoring rpt dated Oct 16, 2006, prepared by EMS Env. Twelve monitoring wells (MW-1 thru MW-12) were gauged on Sept 15, 2006. An unmeasurable amount of free product was observed and removed from MW-3R, MW-6 and MW-7. Product was observed in recovery well RW-1 at thickness of 0.01 ft. A cone of depression was observed due to pumping from RW-1. During this monitoring event, GW flow was moving in radial direction from MW-1 and MW-10. GW flow is tidally influenced. Analytical results showed exceedences of VOCs in seven of twelve wells (wells MW-1 and MW-8 were not sampled due to site flooding). - JAM 2/8/07 Received 4Q06 monitoring report dated Feb 5, 2007 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on Dec 6, 2006. Product was observed in recovery well RW-1 at a thickness of 0.02 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from MW-6. Groundwater flow is tidally influenced. Analytical results showed exceedences of VOCs in seven of the twelve wells. - JAM 4/26/07 Received 1Q07 monitoring report dated Apr 26, 2007 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on Mar 22, 2007. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from wells MW-1, MW-6 and MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences of VOCs in nine of the twelve wells. - JAM 8/3/07 Received 2Q07 monitoring report dated July 27, 2007 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on June 12, 2007. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from wells MW-1, MW-6 and MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences of VOCs in nine of the twelve wells. - JAM 11/8/07 Received 3Q07 monitoring report dated October 30, 2007 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on Sept 5, 2007. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to

S102144242

pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from Mw-1, MW-6 and MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences of VOCs in eight of the twelve wells. - JAM 2/19/08 Received 4Q07 monitoring report dated Feb 7, 2008 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on Dec 10, 2007. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences of VOCs in nine of the twelve wells. - JAM 3/11/08 Spoke to Danielle Trittenbach today. RAP was never implemented. I will review RAP and speak with consultant to discuss any modifications if possible or necessary. -JAM 6/17/08 Received 1Q08 monitoring rpt dated May 15, 2008, prepared by EMS Env. Twelve monitoring wells (MW-1 thru MW-12) were gauged on March 25, 2008. Product was observed in recovery well RW-1 at thickness of 0.01 ft. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from wells MW-1, MW-6 and MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences of VOCs in eight of the twelve wells. Report uploaded to eDocs. - JAM 9/22/08 Received 2Q08 monitoring report dated August 14, 2008 and prepared by EMS Env. Eleven monitoring wells (MW-1 through MW-11) were gauged on June 23, 2008. MW-12 was not sampled because of construction equipment on top of it. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from well MW-6. Groundwater flow is tidally influenced. Analytical results showed exceedences for VOCs in eight of the eleven wells sampled. Report uploaded to eDocs. - JAM 1/13/09 Received 3Q08 monitoring rpt dated October 27, 2008 and prepared by EMS Env. twelve monitoring wells (MW-1 through MW-12) were gauged on June 23, 2008. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from well MW-6. Groundwater flow is tidally influenced. Analytical results showed exceedences for VOCs in nine of the eleven wells sampled. Report uploaded to eDocs. - JAM 7/24/09 Reviewed 4Q08 monitoring report dated January 23, 2009 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on December 15, 2008. Product was observed in recovery well RW-1 at a thickness of 0.02 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from wells MW-1 and MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences for VOCs in eight of the twelve wells sampled with a maximum concentration of 6,313ug/L for total VOCs in MW-7. Report uploaded to eDocs. - JAM 7/24/09 Reviewed 1Q09 monitoring report dated April 30, 2009 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on March 16, 2009. Product was observed in recovery well RW-1 at a thickness of 0.02 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from wells MW-6 and MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences for VOCs in ten of the twelve wells sampled with a maximum concentration of 5,123ug/L for total

S102144242

VOCs in MW-7. Report uploaded to eDocs. - JAM 10/15/09 Reviewed 1Q09 monitoring report dated September 3, 2009 and prepared by EMS Env. Twelve monitoring wells (MW-1 through MW-12) were gauged on June 25, 2009. Product was observed in recovery well RW-1 at a thickness of 0.01 feet. A cone of depression was observed due to pumping from RW-1. During this monitoring event, groundwater flow was moving in a radial direction from wells MW-1, MW-6, MW-7 and MW-8. Groundwater flow is tidally influenced. Analytical results showed exceedences for VOCs in 9 of the 12 wells sampled with a maximum concentration of 6,232ug/L for total VOCs in MW-6. Report uploaded to eDocs. - JAM 05/31/11: This spill case transferred from J. Maisonave to J. Kolleeny. Changed priority ranking to P2, because remedial system is operating and site is in monitoring phase. - JK 06/25/12: On 6/19/12, contacted Michael Serfes of EMS Env'tl, Buckeye's consultant for this spill, and requested monitoring rpts from 3rd quarter 2009 to present on a CD. On 6/25/12, received CD with quarterly rpts from 3rd quarter 2009 to 1st quarter 2012. Will review. - JK 08/09/12: Reviewed GW Monitoring Progress Rpt for 1st Quarter 2012 by EMS Env'tl, Inc., dated 5/2/12 (in eDocs). Rpt summarizes operation of remedial system during 1st quarter 2012 and gives results of 3/7/12 GW monitoring & sampling event. Site has GW extraction system with separate-phase hydrocarbon (SPH) scavenger. System recovered 0.05 gals SPH during this quarter, has recovered 599.28 gals to date. System recovered and treated 2,200 gals of GW during quarter, with avg. flow rates 32.3 gals/day in Jan., 55.2 gals/day in Feb., and 19.3 gals/day in March 2012. Rpt states that no free product has been detected in any monitoring wells since Dec. 2006; however, recovery well RW-1 had 0.01 ft of product on 3/7/12. GW sample results show MW-7 had 3,329 ug/L total BTEX (up from 3,171 ug/L in Dec. 2011), MW-11 had 160 ug/L tBTEX (up from 30 ug/L in Dec. 2011), MW-12 had 515 ug/L tBTEX (up from 145 ug/L in Dec. 2011). Other wells had low levels of dissolved contam or no contam. Rpt states that quarterly GW monitoring & sampling will be conducted in June 2012. - J. Kolleeny 08/27/12: On 8/22/12, received hard copy of 2nd quarter 2012 mon rpt; but with no CD with pdf file of rpt. On 8/23, sent email to Mike Serfes of EMS Env'tl (mserfes@emsen.com) requesting pdf file of rpt. On 8/24/12, sent email to Mike: Mike, I've looked over 2nd quarter 2012 progress rpt, and noticed that Site History section of rpt ends at preparation of March 2005 Remedial Action Plan by EMS Env'tl. I also saw mention in our spills database that RAP was received, but there is no mention of whether or not DEC approved RAP, and I also do not have electronic version of RAP in database. Do you know if RAP was formally approved by DEC? Does entire remedial system consist of one GW recovery well (plus 500-gal product holding tank and two 250-lb carbon treatment vessels)? Also, would it be possible to provide a pdf file of RAP? Let's talk about this spill site once you're back in office. On 8/27/12, received reply from Mike: Jon, LIC 2nd Q 2012 is attached [in eDocs]. Your question: Does entire remedial system consist of one GW recovery well (plus 500-gal product holding tank and two 250-lb carbon treatment vessels)?... Yes! I'll check on RAP history and get back to you. - JK 08/28/12: Reviewed Site Monitoring & Sampling Rpt for 2nd Quarter 2012 by EMS Env'tl, Inc., dated 7/31/12 (in eDocs). Rpt summarizes operation of remedial system (i.e., GW extraction system with separate-phase hydrocarbon (SPH) scavenger) during 2nd quarter 2012 and gives results of 6/7/12 GW monitoring & sampling event. System recovered 0.11 gals SPH during this quarter, and has recovered 599.39 gals to date. System recovered and treated 6,600

S102144242

gals of GW during quarter, with avg. flow rates 86.6 gals/day in April, 54.8 gals/day in May, and 76.66 gals/day in June 2012. Rpt states that no free product has been detected in any monitoring wells since Dec. 2006; however, recovery well RW-1 had 0.01 ft of product on 6/7/12. GW sample results show MW-7 had 1,573 ug/L total BTEX (down from 3,329 ug/L in March 2012), MW-8 had 431 ug/L tBTEX (up from 47 ug/L in March 2012), MW-11 had 275 ug/L tBTEX (up from 160 ug/L in March 2012), and MW-12 had 112.5 ug/L tBTEX (down from 515 ug/L in March 2012). Other wells had low levels of dissolved contam or no contam. Rpt states that quarterly GW monitoring & sampling will be conducted in September 2012. - J. Kolleeny 09/20/12: On 9/19/12, spoke with Michael Serfes of EMS Env'tl, Inc., who confirmed that RAP had been submitted to DEC, but that RAP had never been implemented. He agreed to forward pdf file of RAP for DEC's records. I asked that EMS also prepare a rpt summarizing history of this project and proposing actions to move spill towards closure. He agreed to do so. - JK 11/01/12: Received email from Devin Shay of GES, in response to email from Vadim Brevdo of DEC inquiring about impacts from Hurricane Sandy to sites with remedial systems: Vadim, I see from your email that you are seeking updates on remediation projects that may have been affected by storm. As of this week, Buckeye has asked us to assume consulting and remediation duties for their project in Long Island City (DEC Spill #9813881). We had a crew on site this morning to assess small pump & treat system that operates at that site. Based on our check, site was flooded and 500-gal product recovery tank was turned up on end, resulting in release of recovered product. I just received confirmation from previous consultant that tank contained 55 gals of recovered product. Our field crew estimated about 10 gals of product remaining in tank, so there is a reportable release of an estimated 45 gals. There is no longer any product leaking from tank. There is visual evidence that product impacted surface soil in vicinity of tank. Our remediation plan for this as of right now is to hand-shovel surface soils in vicinity of release and drum them for disposal. Our crew shut down system and disconnected controls. Tomorrow Buckeye will have a backhoe on site to right tank. Piping and electrical for system appear to have sustained serious damage. We will have to continue our assessment of this to determine if/when and restart of system is applicable. Please advise me if Dept will require notification of this release via spill hotline, or if you would rather update record from this email. Typically we would call this in but I m sure you are experiencing an influx of new records. I don t want to assume anything. We will proceed as you direct. I sent email reply: Devin, Although under normal circumstances I would recommend reporting this as a new spill and then consolidating it with existing spill number, I think in this case you have a good point and there's no need to alert our spill response staff since you seem to have situation well under control, and they probably have other more urgent situations to deal with at the moment. So, you can refrain from calling in a new spill rpt and I will update existing spill remarks with your summary of this incident. Thanks for being proactive on this, and let's discuss this site in near future. - J. Kolleeny 11/05/12: Reviewed Site Monitoring & Sampling Rpt for 3rd Quarter 2012 by EMS Env'tl, Inc., dated 11/5/12 (in eDocs). Rpt summarizes operation of on-site GW extraction system with separate-phase hydrocarbon (SPH) scavenger during 3rd quarter 2012 and gives results of 9/27/12 GW monitoring & sampling event. System recovered ~1.39 gals SPH during this quarter, and has recovered

S102144242

600.78 gals to date. System recovered and treated 13,600 gals of GW during quarter, with avg. flow rates of 316.7 gals/day in July, 23.3 gals/day in Aug., and 113.3 gals/day in Sept. 2012. Rpt states that no free product has been detected in any monitoring wells since Dec. 2006; however, recovery well RW-1 had 0.02 ft of product on 9/27/12. GW sampling results for 9/27/12 show well MW-7 had 2,539 ug/L total BTEX (up from 1,573 ug/L in June 2012), MW-8 had 1,527 ug/L tBTEX (up from 431 ug/L in June 2012), MW-11 had 284 ug/L tBTEX (up slightly from 275 ug/L in June 2012), and MW-12 had 548 ug/L tBTEX (up from 112.5 ug/L in June 2012). Other wells had low levels or no dissolved contam. Rpt states that quarterly GW monitoring & sampling will be conducted in December 2012. - J. Kolleeny 11/08/12: On 11/7/12, I sent email to Devin Shay of GES: Devin, Can you provide an update on this situation? Has visually impacted soil near overturned product recovery tank been dug out? If so, was an end-point soil sample collected? Has tank been returned to an upright position? If soil has not yet been dug out, then please collect one or more end-point soil samples when impacted soil is removed. Also, today I received 3rd quarter 2012 monitoring rpt for this site from EMS Env'tl. Are they still working on this project, or are they just fulfilling a last requirement or two? I have been trying (so far, without success) to obtain an electronic copy (pdf file) of a RAP they submitted for this site in 2005, which was never implemented. I had been in contact with Michael Serfes of EMS. I had also asked that EMS prepare a rpt with a comprehensive history of all investigative and remedial activities performed at site, with an evaluation of existing remedial system and proposal for further remedial actions leading to spill closure. Is this something that GES can now take on? Please let me know. On 11/8/12, received reply from Devin: Jon, We were out there last Friday to right tank and we hand-dug out 4 drums of soil. We did not collect an end point sample. I will get back to you ASAP on other issues very soon. - J. Kolleeny 11/13/12: Spoke with Devin Shay of GES, asked if they were able to use PID to determine area of impacted soil when they dug out recent surface spill caused by Hurricane Sandy. He said that background readings on PID were too high for it to be useful for delineation of soil impacts, but he stated that they could see lateral and vertical extent of impacts based on soil staining, and he was confident they had removed virtually all impacted soil. He also stated that GES intends to perform a site-wide soil investigation to evaluate current conditions, and they will prepare site summary rpt with further remedial proposals as per my request. I asked that a work plan be submitted for soil investigation. - J. Kolleeny 11/19/12: On 11/16/12, received email from Devin Shay of GES with attached March 2005 RAP prepared by EMS Env'tl (received by Kerry Foley, see 3/28/05 entry above). RAP in eDocs. - JK 12/20/12: Received email from Devin Shay of GES: Jon, Attached is copy of letter sent to Central Office regarding DMR for Buckeye LIC project. Please let me know if you have any questions on this. Attached letter (in eDocs) states that on-site remed system was damaged by Hurricane Sandy and is shut down, so system had no discharge for November 2012. - JK 01/11/13: On 1/8/13, I received phone call from Karen Baker, SPDES Compliance Coordinator at DEC Central Office, explaining that Buckeye is in violation of SPDES permit by not submitting a Discharge Monitoring Rpt (DMR) for November 2012, even though they did not treat/discharge any GW. She explained there is a box on DMR form that should be checked to indicate no discharge. She asked that I contact Buckeye's consultant

S102144242

GES and explain this to them, ask them to submit DMR. I contacted Devin Shay of GES by phone (left messages), he called back and left mssg saying he'd already sent DMR to Albany. I then sent him email: Devin, I got your phone message replying to my phone messages, thanks. However, I am confused. In your message, you said you had sent Albany same DMR rpt that you sent me. However, I don't have any record of receiving a DMR rpt prepared by GES. All I received was a letter stating that remedial system at site is off and no water has been treated or discharged since October 29, 2012. This is not what they need; they still need to receive DMR rpt, which I'm told has a box you can check for system not operating or something to that effect. I received a phone call from Karen Baker, from Division of Water in Central Office, and she said that while they are not requiring facilities impacted by Hurricane Sandy to submit DMRs for October 2012, they are requiring them for November 2012 and if rpts are not received, Notices of Violation are automatically generated and sent out. She also advised that it would be better to also submit a rpt for Oct. 2012 if that's possible. Please give me another call to discuss. Also, Ms. Baker's number is 518-402-8174, if you want to discuss this issue with her, which seems like a good idea. Spoke with Devin on 1/9/13, he said he would prepare & submit DMR as requested. On 1/10/13, received email from Devin with updated Nov. 2012 DMR (in eDocs). - JK 01/28/13: Received Discharge Monitoring Rpt for December 2012 by GES, dated 1/25/13 (in eDocs). Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and no GW was treated or discharged by system in Dec. 2012. - J. Kolleeny 02/01/13: On 1/22/13, received email from Devin Shay of GES with attached pdf file of work plan for subsurface investigation. After review, I contacted Devin and requested revisions to plan and submission of hard copy plus CD with pdf file. Devin agreed to this. - JK 02/12/13: Received revised Subsurface Investigation Work Plan by GES, dated 2/6/13 (in eDocs). Plan proposes 15 soil borings to top of water table, using soft dig technologies, to delineate shallow soil impacts. Soil samples will be collected and sent for lab analysis, and results will be presented in rpt of findings. I sent approval letter (in eDocs) to Ms. Krista Snyder (Remediation Specialist, Buckeye Partners, 5 TEK Park, 9999 Hamilton Blvd., Breinigsville, PA 18031, ksnyder@buckeye.com), cc to Devin Shay of GES, noting that results of investigation should be used to evaluate current on-site remedial system, and if it is determined that system is not adequate to address site conditions, then rpt of findings should include new remedial proposal to address all petroleum impacts at site. - J. Kolleeny 03/11/13: Reviewed Discharge Monitoring Rpt for January 2013 by GES, dated 2/25/13 (in eDocs). Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and no GW was treated or discharged by system in Jan. 2013. - J. Kolleeny 10/18/13: I was copied on email from Suzanne Rowlett of DEC Region 2 Div. of Water to Krista Snyder of Buckeye Partners, L.P.: Thank you for forwarding DMR reports to me. As discussed on phone on this date I conducted a Reconnaissance inspection of above listed site. I was accompanied by Mr. Selvin Southwell and Ms. Jean Occidental, both of Division of Water in Region 2 Office. Facility has received a Satisfactory rating. Attached is a copy of inspection rpt. Hard copy available upon your request. I uploaded rpt to eDocs. - J. Kolleeny 10/21/13: Received Discharge Monitoring Rpt for September 2013 (dated 10/10/13) via email from Krista Snyder of Buckeye Partners, L.P. (in

S102144242

eDocs). Reviewed rpt, which notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in Sept. 2013. - J. Kolleeny 11/07/13: Reviewed Site Monitoring Rpt for January-August 2013 by GES, dated 10/22/13 (in eDocs). Rpt presents results of well gauging and sampling in Feb., May and August 2013, and shallow soil sampling in March 2013. Well gauging in Feb. 2013 showed MW-1 had 0.04 ft of product, MW-11 had 0.03 ft, and MW-12 had 0.04 ft; gauging in May found MW-1 had 0.01 ft of product; gauging in Aug. 2013 showed no free product in wells. Feb. 2013 GW sampling showed well MW-7 had 1,689 ug/L total BTEX (down from 2,539 ug/L tBTEX in Sept. 2012) and 3,962.5 ug/L total VOCs (no tVOC data prior to Feb. 2013); well MW-8 had 1,479 ug/L tBTEX (down from 1,527 ug/L in Sept. 2012) and 1,729 ug/L tVOCs (no tVOC data prior to Feb. 2013). May 2013 GW data show well MW-1 had 621 ug/L tVOCs; well MW-7 had 4,421 ug/L tVOCs; well MW-8 had 784 ug/L tVOCs; well MW-11 had 1,066 ug/L tVOCs; well MW-12 had 1,050 ug/L tVOCs. Aug. 2013 GW sampling showed well MW-1 had 535 ug/L tVOCs; well MW-7 had 4,386.5 ug/L tVOCs; well MW-8 had only 14 ug/L tVOCs; well MW-11 had 854 ug/L tVOCs; well MW-12 had 1,279 ug/L tVOCs. March 2013 soil sampling results show numerous sampling locations with VOCs detected significantly above CP-51 cleanup objectives. Rpt states that quarterly GW monitoring & sampling will be conducted in Nov. 2013. I contacted Devin Shay of GES to point out that rpt does not make any recommendations for further investigative or remedial action, as requested in my 2/12/13 work plan approval letter. Devin requested a meeting to discuss investigation results and remedial options. I scheduled a meeting at R2 office for Dec. 10, 2013. - J. Kolleeny 12/04/13: On 11/25/13, received Discharge Monitoring Rpt for October 2013 (dated 11/15/13) via email from Krista Snyder of Buckeye Partners, L.P. (in eDocs). Reviewed rpt, which notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in Oct. 2013. - J. Kolleeny 12/10/13: Planned meeting with Devin Shay of GES and Krista Snyder of Buckeye Co. to discuss remedial options could not be attended by Ms. Snyder due to inclement weather. Instead, we held conference call. Devin suggested as remedial approach excavating contaminated soil to depth of 4 ft (GW is shallow at site) from two main areas of site, and decommissioning on-site remedial system (currently not operational). I agreed with this approach, but noted that soil sample near well MW-7 (not included in planned excavation areas) was also very hot and requested they find way to address this area, possibly by digging by hand to extent feasible. Devin said he would prepare work plan and incorporate my suggestions. - J. Kolleeny 12/27/13 On 12/20/13, received Discharge Monitoring Rpt for November 2013 (dated 12/19/13) via email from Krista Snyder of Buckeye Partners, L.P. (in eDocs). Reviewed rpt, which notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in Nov. 2013. - J. Kolleeny 01/16/14: Received Discharge Monitoring Rpt for December 2013 (dated 1/7/14) via email from Krista Snyder of Buckeye Partners, L.P. (in eDocs). Reviewed rpt, which notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in Dec. 2013. - J. Kolleeny 01/30/14: On 1/29/14, received Soil Excavation Work Plan by GES, dated 1/17/14 (reportedly submitted at that time, but not received). Rpt presents results of March 2013 soil sampling showing

S102144242

significant impacts at many sampling locations throughout site. Work plan proposes to excavate contaminated soil from three areas of site, to depth of 4 ft bgs. Also proposes to collect end-pt grab samples from every 50 linear ft of sidewalls, and bottom samples at an appropriate frequency. Excavation summary rpt will be provided to DEC. GES expects 3 wells to be destroyed during excavation, and work plan proposes to replace these wells at ~ same locations. GES proposes MNA for residual GW contam, with quarterly monitoring & reporting. I contacted Devin Shay of GES and requested reduced distances between proposed sidewall end-point soil samples and more specifics regarding bottom end-pt samples. Devin agreed to revise work plan with additional and more specific end-pt sampling locations. - J. Kolleeny 02/05/14: on 2/3/14, received revised Soil Excavation Work Plan by GES (in eDocs). Plan includes proposed 25 post-excavation end-pt soil sampling locations as per my 1/30/14 discussion with Devin Shay of GES. I sent letter (in eDocs) approving work plan to Krista Snyder of Buckeye Co., cc to Devin Shay of GES, noting that if follow-up GW monitoring indicates natural attenuation is not occurring, add'l remedial actions may be needed. - JK 02/24/14: Received Discharge Monitoring Rpt for January 2014 (dated 2/21/14) via email from Krista Snyder of Buckeye Partners, L.P. (in eDocs). Reviewed rpt, which notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in January 2014. - J. Kolleeny 02/25/14: On 2/14/14, received email from Devin Shay of GES with attached pdf file of letter requesting approval of permanent shutdown and removal of on-site recovery system, which was damaged during Hurricane Sandy and was not recovering much even before then, and which is not worth repairing/reactivating in light of current remedial plan for soil excavation. Letter mentions that well gauging during 2013 has indicated limited occurrence of separate-phase hydrocarbons (SPH). I contacted Devin Shay and asked that letter be revised to provide details of limited SPH occurrences during 2013, and to state how residual free product would be addressed if it reappears in replacement wells installed after planned soil excavation. On 2/24/14, received revised letter requesting system shutdown/removal (in eDocs). Letter notes that wells MW-1, MW-11 & MW-12 had minor, sporadic occurrences of SPH during 2013, with product thickness up to 0.04 ft in MW-1 and MW-12 in Feb. 2013. In May 2013, only 0.01 ft was detected in MW-1, in Aug. 2013, no SPH was detected, in Dec. 2013, only 0.01 ft was detected in MW-11. No SPH was detected in recovery well RW-1 in 2013. Letter also states that minimal to no recovery of SPH is anticipated with any further operation of system; if permanent shutdown is approved, Buckeye will seek to close out SPDES permit for site. Letter further states that after soil excavation, if SPH appears in replacement wells, it will be addressed by hand bailing or install'n of absorbent socks. On 2/25/14, I sent letter (in eDocs) approving system shutdown request to Krista Snyder of Buckeye, cc to Devin Shay of GES. - JK 03/27/14: Reviewed Discharge Monitoring Rpt for February 2014, dated 3/24/14 (in eDocs), received via email from Krista Snyder of Buckeye Partners, L.P. on 3/24/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in February 2014. - J. Kolleeny 04/15/14: Reviewed Discharge Monitoring Rpt for March 2014, dated 4/14/14 (in eDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 4/15/14. Rpt notes that on-site remedial

S102144242

system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in March 2014. - J. Kolleeny 05/14/14: Reviewed Site Monitoring Rpt for Oct.-Dec. 2013 by GES, dated 1/27/14 (in DecDocs). Rpt presents results of Dec. 2013 GW sampling event, showing well MW-7 had 2,504 ug/L total VOCs (down from 4,386.5 ug/L in Aug. 2013), well MW-11 had 776 ug/L tVOCs (down from 854 ug/L in Aug. 2013), well MW-12 had 1,494 ug/L tVOCs (up from 1,279 ug/L in Aug. 2013). No LNAPL was detected in any wells. Rpt states that next quarterly GW monitoring/sampling event will be conducted in Feb. 2014. - J. Kolleeny 06/03/14: Reviewed Discharge Monitoring Rpt for April 2014, dated 5/27/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 5/27/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in April 2014. - J. Kolleeny 06/18/14: Reviewed Discharge Monitoring Rpt for May 2014, dated 6/13/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 6/17/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in May 2014. - J. Kolleeny 06/19/14: Reviewed Site Monitoring Rpt Jan.-March 2014 by GES, dated 4/28/14 (in DecDocs). Results of 2/25/14 well gauging show well MW-11 had 0.01 ft of product; product was bailed and GW sample was collected. Results of 2/25/14 dissolved-phase GW sampling show well MW-5 had 243 ug/L total VOCs (up from 69 ug/L in Dec. 2013), well MW-7 had 2,204 ug/L tVOCs (down from 2,504 ug/L in Dec. 2013), well MW-8 had 526 ug/L tVOCs (not sampled in Dec. 2013, had 14 ug/L tVOCs in Aug. 2013 and had 784 ug/L in May 2013), well MW-11 had 937 ug/L tVOCs (up from 776 ug/L in Dec. 2013), well MW-12 had 427 ug/L tVOCs (down from 1,494 ug/L in Dec. 2013). Rpt states that next quarterly GW monitoring/sampling will be conducted in May 2014. Rpt does not mention approved soil excavation plan as a Future Activity Planned. - J. Kolleeny 07/25/14: Reviewed Discharge Monitoring Rpt for June 2014, dated 7/21/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 7/24/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in June 2014. - J. Kolleeny 09/22/14: Reviewed Discharge Monitoring Rpt for July 2014, dated 8/19/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 8/22/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in July 2014. - J. Kolleeny 09/29/14: Reviewed Discharge Monitoring Rpt for August 2014, dated 9/23/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 8/22/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in August 2014. - J. Kolleeny 10/06/14: On 10/3/14, received email from Devin Shay of GES, with attached letter dated 10/2/14 (in DecDocs) stating that results of private utility mark-out and geophysical subsurface anomaly survey showed presence of utilities in part of area proposed for soil excavation in Feb. 2014 remedial plan (in part of proposed excavation area along Newtown Creek bulkhead). Letter revises proposed excavation area to exclude area of identified utilities, and states that GES is prepared to execute revised excavation plan following DEC review and approval, with tentative start date of 10/13/14. I sent

BUCKEYE PIPELINE COMPANY (Continued)

S102144242

letter (in DecDocs) to Krista Snyder of Buckeye, cc to Devin Shay of GES, approving revised excavation plan. - JK 10/15/14: Reviewed Site Monitoring Rpt for April-June 2014 by GES, dated 8/1/14 (in DecDocs). Rpt presents results of 5/20/14 well gauging & sampling event. Nine mon wells and 1 recovery well were gauged, no LNAPL was detected. Nine mon wells were sampled, results showed well MW-5 had 129 ug/L total VOCs (down from 243 ug/L in Feb. 2014), well MW-6 had 1,568 ug/L tVOCs (up dramatically from 6.7 ug/L in Feb. 2014), well MW-7 had 4.5 ug/L tVOCs (all naphthalene), down dramatically from 2,204 ug/L in Feb. 2014; MW-11 had 724 ug/L tVOCs (down from 937 ug/L in Feb. 2014), well MW-12 had 977 ug/L tVOCs (up from 427 ug/L in Feb. 2014). Rpt speculates that GW samples from wells MW-6 & MW-7 may have been mis-labeled in field, switching samples. Rpt also states that well MW-8 could not be sampled during this event due to insufficient volume of water in well. Rpt lists future activities planned as quarterly GW monitoring and sampling in August 2014, and remedial soil excavation scheduled for Sept. 2014. - J. Kolleeny 10/24/14: Visited site to observe remedial excavation. Met with Nathan Pratt of GES. Area along Newtown Creek bulkhead had been excavated and backfilled; during this work, ~44 gals of product/water mixture were vacuumed from excavation. Due to small size of site, they are backfilling excavated areas before moving on to excavate other areas. At time of this visit, a section of central area of site had been excavated; I observed gasoline odors and some stained soil. End-point soil samples from excavated areas indicate significant residual impacts, with PID readings between 800 and 1,000 ppm; however, removal of significant amt of contaminated soil should help GW quality at site improve. I inspected inspected section of Newtown Creek bordering site and observed no sheen on water. - J. Kolleeny 10/28/14: Returned to site with supervisor Vadim Brevdo to observe ongoing soil excavation. Again, petroleum odors and some soil staining were evident. They've been digging down to about 4 ft below grade in center-east part of site, getting PID readings over 800 ppm, backfilling as they go with clean gravel or clean sand. See photos in DecDocs. - J. Kolleeny 10/29/14: Reviewed Discharge Monitoring Rpt for September 2014, dated 10/24/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 10/28/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in September 2014. - J. Kolleeny 11/20/14: On 11/18/14, I was copied on email from Devin Shay of GES to Suzanne Rowlett of DEC Region 2 Div. of Water, with attached letter (in DecDocs) requesting closure of SPDES permit associated with former remedial system at site. Letter states that discharge piping leading to a surface outfall proximal to Newtown Creek has been removed from site, and that remedial system has been disassembled & removed from site. I sent email to Devin: Devin, Thanks for copying me on this letter. I see letter states that remediation system has been removed from site. Does this mean product holding tank and two 55-gal drums are now gone? They were present when I visited site several times in late October, during remedial soil excavation work. Also, what exactly will become of that large-diameter recovery well? On 11/20/14, Devin sent email reply: Jon Everything is gone except product tank, which we currently have scheduled to be cleaned and removed first week of December. Railroad ties will be loaded out that week, too. As far as recovery well goes, long term I think we would want to abandon that and close it out, but I thought it would stay open until site gets an

BUCKEYE PIPELINE COMPANY (Continued)

S102144242

NFA. I sent email reply: Devin, I agree that recovery well should not be abandoned until spill case is closed, but I had impression when I visited site that top of well is open to atmosphere. If this is correct, GES should arrange to cover or seal top of well so that nothing can accidentally (or intentionally!) get into well and reach GW. Please let me know if this can be done. Devin sent reply: Jon agreed, we will get a cover for this. - J. Kolleeny 11/20/14: Reviewed Discharge Mon Rpt for October 2014, dated 11/19/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 11/20/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in October 2014. Rpt also notes that a request for closure of SPDES Permit regulating this discharge has been submitted to DEC, and on 10/22/14, remedial system was dismantled and discharge pipe was excavated and removed from site. - JK 01/07/15: Reviewed Discharge Mon Rpt for November 2014, dated 12/19/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 12/22/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in November 2014. Rpt also notes that a request for closure of SPDES Permit regulating this discharge has been submitted to DEC, and on 10/22/14, remedial system was dismantled and discharge pipe was excavated and removed from site. - JK 01/30/15: Reviewed Discharge Mon Rpt for December 2014, dated 1/26/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 1/28/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in December 2014. Rpt also notes that a request for closure of SPDES Permit regulating this discharge has been submitted to DEC, and on 10/22/14, remedial system was dismantled and discharge pipe was excavated and removed from site. - JK 02/24/15: Reviewed Site Monitoring Rpt July-Sept. 2014 by GES, dated 10/30/14 (in DecDocs). Results of Aug. 2014 well gauging show no LNAPL detected in any wells; results of Aug. 2014 GW sampling show well MW-2 was ND (same as in May 2014), well MW-4 had 42.3 ug/L total VOCs (up from 38 ug/L in May 2014), well MW-5 had 227.3 ug/L tVOCs (up from 129.3 ug/L in May 2014), well MW-6 had 32.2 ug/L tVOCs (down from 1,568 ug/L in May 2014), well MW-7 had 3,139 ug/L tVOCs (up from 4.5 ug/L in May 2014, had 2,204 ug/L tVOCs in Feb. 2014), well MW-8 had 644 ug/L tVOCs (not sampled in May 2014, had 526 ug/L tVOCs in Feb. 2014), well MW-10 was ND (same as in May 2014), well MW-11 had 671 ug/L tVOCs (down from 724 ug/L in May 2014), well MW-12 had 1,308 ug/L tVOCs (up from 977 ug/L in May 2014). Rpt lists future activities: on-site P&T system will be permanently taken off-line and dismantled, remedial soil excavation will be completed during Oct. 2014, replacement monitoring wells will be installed in Nov. 2014, quarterly GW monitoring & sampling will be performed in Nov. 2014. - J. Kolleeny 02/27/15: Reviewed Discharge Mon Rpt for January 2015, dated 2/26/14 (in DecDocs), rcvd via email from Krista Snyder of Buckeye Partners, L.P. on 2/27/14. Rpt notes that on-site remedial system has been off-line since 10/29/12 due to damage by Hurricane Sandy, and that no GW was treated or discharged by system in January 2015. Rpt also notes that a request for closure of SPDES Permit regulating this discharge has been submitted to DEC, and on 10/22/14, remedial system was dismantled and discharge pipe was excavated and removed from site. - JK 05/13/15: Reviewed Discharge Mon Rpt for Feb. 2015, dated 5/8/15 (in DecDocs), rcvd via email from

S102144242

Krista Snyder of Buckeye Partners on 5/11/15. First page of doc is a DEC Single Opportunity to Resolve Violation Without Penalty signed by Krista Snyder, noting that all requested pages of DMR are attached (apparently, Buckeye rcvd a violation notice, for failing to submit DMR for Feb. 2015). First page of DMR (cover letter) states that remedial system was dismantled/removed from site in Oct. 2014 (with DEC approval in Feb. 2014), and that on behalf of Buckeye, GES requested permission to close discharge permit in Nov. 2014. Letter continues that in DEC correspondence dated 3/17/15, SPDES permit was closed, so no DMR was prepared for Feb. 2015; however, Feb. 2015 DMR documenting no discharge for Feb. 2015 is now attached (apparently in response to violation notice). - J. Kolleeny 05/18/15: Received Discharge Mon Rpt (DMR) for March 2015 by GES, dated 5/12/15 (in DecDocs), as cc on email from Krista Snyder of Buckeye to Suzanne Rowlett of DEC Div. of Water. Ms. Snyder's email stated: Suzanne, Please find March 2015 SPDES Discharge Rpt for above referenced permit number attached. Due to issuance of a permit discontinuation letter dated March 17, 2015, this will serve as final Discharge Rpt for this permit. First page of DMR (cover letter) states that remedial system was dismantled/removed from site in Oct. 2014 (with DEC approval in Feb. 2014), and that on behalf of Buckeye, GES requested permission to close discharge permit in Nov. 2014. Letter continues that in DEC correspondence dated 3/17/15, SPDES permit was closed. DMR documents no discharge for March 2015. - J. Kolleeny 05/26/15: Reviewed Remedial Excavation Summary Rpt - Oct. thru Dec. 2014 by GES, dated 2/16/15 (in DecDocs). Rpt summarizes remedial excavation performed between 10/15/14 and 11/4/14. Three areas were excavated - Area A in SE central part of site, Area B near Newtown Creek bulkhead, and Area C small area around well MW-7. Total of 1,240.34 tons of petroleum-impacted soil were removed; 22 post-excavation soil samples were collected. Sample results showed 7 out of 15 sidewall samples and 5 out of 7 bottom samples had VOC concentrations above CP-51 soil cleanup levels. Hottest post-ex samples were A West 6 with 856,320 ug/kg total VOCs, A Bottom 12 with 653,350 ug/kg tVOCs, and A North 7 with 646,950 ug/kg tVOCs. In Area B, worst samples were B Bottom with 212,560 ug/kg tVOCs and B North with 184,390 ug/kg tVOCs. One post-ex sample from Area C (around MW-7) had 198,760 ug/kg tVOCs. Monitoring wells MW-1, MW-8 and MW-9 were destroyed by excavation activities. GES installed 4 new wells from Nov. 16-19, 2014, and 4th quarter 2014 GW sampling was conducted on Nov. 18-20, 2014. GW sample results showed well MW-7 had 3,601 ug/L tVOCs (up from 3,139 ug/L in Aug. 2014), well MW-11 had 586 ug/L tVOCs (down from 671 ug/L in Aug. 2014), well MW-12 had 1,674 ug/L tVOCs (up from 1,308 ug/L in Aug. 2014), new well MW-14 had 2,407 ug/L (1st sampling), new well MW-15 had 4,999 ug/L tVOCs (1st sampling), new well MW-16 had 2,516 ug/L tVOCs. - J. Kolleeny 06/15/15: Reviewed Site Monitoring Rpt Jan. - March 2015 by GES, dated 5/22/15 (in DecDocs). Results of Feb. 2015 well gauging & sampling showed two wells had detections of separate-phase hydrocarbons (i.e., LNAPL): MW-14 and RW-1 both had 0.01 ft of product. GW samples showed well MW-7 had 2,211 ug/L total VOCs (down from 3,601 ug/L in Nov. 2014), well MW-11 had 264 ug/L tVOCs (down from 586 ug/L in Nov. 2014), well MW-12 had 1,876.5 ug/L tVOCs (up from 1,674 ug/L in Nov. 2014), well MW-15 could not be located under snow cover, well MW-16 had 315 ug/L tVOCs (down from 2,516 ug/L in Nov. 2014). Rpt states that quarterly GW monitoring and sampling will be conducted in May 2015. - J. Kolleeny 04/11/16: Reviewed Site

S102144242

Monitoring Rpt for April-June 2015 by GES, dated 12/1/15 (in DecDocs), received by email on 4/11/16 in response to my request for 2nd quarter 2015 rpt. Results of well gauging in April 2015 showed LNAPL in two wells: MW-14 had 0.05 ft and RW-1 had 0.01 ft. GW sampling in April 2015 showed well MW-5 had 178 ug/L total VOCs (up from 124 ug/L when last sampled in Nov. 2014), well MW-7 had 2,014 ug/L tVOCs (down from 2,211 ug/L in Feb. 2015), well MW-11 had 334 ug/L tVOCs (up from 264 ug/L in Feb. 2015), well MW-12 had 1,376 ug/L tVOCs (down from 1,877 ug/L in Feb. 2015), well MW-15 had 905 ug/L tVOCs (down from 4,999 ug/L in Nov. 2014), well MW-16 had 303 ug/L tVOCs (down from 315 ug/L in Feb. 2015). Other wells were ND, had low tVOCs, not sampled due to LNAPL, or have been destroyed. GES states that quarterly GW monitoring & sampling will be conducted in Aug. 2015. - JK 04/11/16: Reviewed Site Monitoring Rpt for July-Sept. 2015 by GES, dated 2/5/16 (in DecDocs), received 2/8/16. Results of Sept. 2015 well gauging showed 3 wells with detections of LNAPL: MW-12 had 0.12 ft, MW-14 had 0.02 ft, and RW-1 had 0.01 ft. GW sampling in Sept. 2015 showed well MW-5 had 78 ug/L total VOCs (down from 178 ug/L in April 2015), well MW-7 had 1,093 ug/L tVOCs (down from 2,014 ug/L in April 2015), well MW-11 had 5,887 ug/L tVOCs (up from 334 ug/L in April 2015), well MW-15 had 9,966 ug/L tVOCs (up from 905 ug/L in April 2015), well MW-16 had 270 ug/L tVOCs (down from 303 ug/L in April 2015). Other wells were either ND, had low tVOCs, were not sampled due to presence of LNAPL, or have been destroyed and not replaced. Rpt states that quarterly GW monitoring & sampling will be conducted in December 2015. - JK 04/11/16: Reviewed Site Monitoring Rpt for Oct.-Dec. 2015 by GES, dated 2/8/16 (in DecDocs), received 2/11/16. Results of well gauging in Dec. 2015 showed LNAPL only in well RW-1, at 0.02 ft. GW sampling in Dec. 2015 showed well MW-5 had 73 ug/L total VOCs (down from 78 ug/L in Sept. 2015), well MW-7 had 1,124 ug/L tVOCs (up from 1,093 ug/L in Sept. 2015), well MW-11 had 239 ug/L tVOCs (down from 5,887 ug/L in Sept. 2015). Wells MW-2, MW-12, MW-14, MW-15, MW-16, and MW-17 could not be sampled due to temporary obstructions blocking wells, related to maintenance activities at site. Other wells were ND, had low tVOCs or have been destroyed. Rpt states that quarterly GW monitoring & sampling will be conducted in Feb. 2016. - JK 07/15/16: Reviewed Site Monitoring Rpt for Jan.-March 2016 by GES, dated 6/14/16 (in DecDocs). Results of well gauging on 3/9/16 showed LNAPL in two wells: MW-12 (1.49 ft) and MW-14 (0.02 ft). Wells were gauged again on 4/12/16 to confirm LNAPL detection, and MW-12 had 1.22 ft. On 4/14/16, wells were gauged again and LNAPL was found in MW-12 (0.80 ft), MW-14 (0.01 ft) and RW-1 (0.01 ft). Vac truck extraction was performed, recovering 45 gals of total fluids, and an absorbent sock was installed in MW-12. GES will continue to gauge these three wells and vac wells as needed. GW samples were collected from 10 wells on 3/9/16; results showed well MW-5 had 149 ug/L total VOCs (up from 73 ug/L in Dec. 2015), well MW-7 had 408 ug/L tVOCs (down from 1,124 ug/L in Dec. 2015), well MW-11 had 293 ug/L tVOCs (up from 239 ug/L in Dec. 2015), well MW-15 had 2,000 ug/L tVOCs (down from 9,966 ug/L in Sept. 2015, not sampled in Dec. 2015), well MW-16 had 28 ug/L tVOCs (down from 270 ug/L in Sept. 2015, not sampled in Dec. 2015). Rpt states that quarterly GW monitoring & sampling will be performed in May 2016. I sent email to Devin Shay of GES: Devin, I just reviewed 1st quarter 2016 mon rpt for this site, and I see that a fairly significant amount of product was detected in well MW-12 in March and April. Rpt states that well monitoring and sampling will continue on a quarterly basis. In light

S102144242

of product detections, well MW-12 (plus MW-14 & RW-1, which had minor product detections) should be gauged on a monthly basis until it becomes clear that product has been eliminated or reduced to trace amounts. I have one other comment on rpt there s a section in rpt called Discussion of GW Sampling Results, but this section does not constitute a discussion of results in sense I understand that term, it merely lists VOC ranges detected in various wells and states where data can be found. Future rpts for this site should include an evaluation of data and remedial progress, with discussion of trends or lack thereof, and should include recommendations for further remedial actions as necessary to expeditiously move this spill case towards closure. - J. Kolleeny 10/06/16: Reviewed Site Monitoring Rpt for April-June 2016 by GES dated 8/25/16 (in DecDocs). Gauging of three wells (RW-1, MW-12 & MW-14) on 4/21/16 showed no LNAPL detected; gauging of these 3 wells on 5/9/16 showed 0.01 ft of LNAPL in wells RW-1 and MW-12; gauging of 12 site wells on 5/16/16 showed 0.01 ft of LNAPL in wells RW-1, MW-12 and MW-14; gauging of 3 wells on 6/3/16 showed 0.04 ft of LNAPL in wells RW-1 and MW-12; rpt states that absorbent socks were put in wells RW-1, MW-12 & MW-14. GW sampling on 5/16/16 showed well MW-5 had 179 ug/L total VOCs (up from 149 ug/L in March 2016), well MW-7 had 768 ug/L tVOCs (up from 408 ug/L in March 2016), well MW-11 had 345 ug/L tVOCs (up from 293 ug/L in March 2016), well MW-12 had 2,383 ug/L tVOCs (not sampled in March 2016 or Sept. 2015; had 1,376 ug/L tVOCs when last sampled in April 2015), well MW-14 had 1,010 ug/L tVOCs (not sampled since Nov. 2014, when it had 2,407 ug/L tVOCs), well MW-15 had 853 ug/L tVOCs (down from 2,000 ug/L in March 2016), well MW-16 had 49 ug/L tVOCs (up from 28 ug/L in March 2016); other wells were ND or had very minor VOC levels. Rpt states that monthly gauging and LNAPL collection activities will continue, & that quarterly GW monitoring & sampling will be conducted in Sept. 2016. - JK 10/07/16: On 10/6/16, I sent email to Devin Shay of GES: Devin, I ve reviewed Site Mon Rpt for April-June 2016. Rpt indicates that liquid levels were measured in 3 wells (RW-1, MW-12, and MW-14) on April 21st, May 9th, and June 3rd, and that liquid levels were collected from all 12 site wells on May 16th. However, Table 1 only presents well gauging data for May 16th. For future rpts, can you please modify Table 1 to include all gauging data for all site visits during reporting period on which liquid levels were measured? On 10/7/16, received email reply from Devin: Jon Yes we can do that. - J. Kolleeny 12/27/16: Reviewed Site Monitoring Rpt July-Sept. 2016 by GES dated 12/23/16 (in DecDocs). Gauging of select wells in July 2016 showed 0.01 ft of LNAPL in wells RW-1 & MW-14; gauging of all site wells in Aug. 2016 showed 0.02 ft of LNAPL in well RW-1; gauging of select wells in Sept. 2016 showed 0.01 ft of LNAPL in MW-14 and sheens in RW-1 & MW-12; in each instance, absorbent socks were set in these 3 wells. GW sampling in Aug. 2016 showed well MW-5 had 113 ug/L total VOCs (down from 179 ug/L in May 2016), well MW-7 had 490 ug/L tVOCs (down from 768 ug/L in May 2016), well MW-11 had 324 ug/L tVOCs (down from 345 ug/L in May 2016), well MW-12 had 1,828 ug/L tVOCs (down from 2,383 ug/L in May 2016), well MW-14 had 1,075 ug/L tVOCs (up from 1,010 ug/L in May 2016), well MW-15 had 1,305 ug/L tVOCs (up from 853 ug/L in May 2016), well MW-16 had 37 ug/L tVOCs (down from 49 ug/L in May 2016). Rpt states that quarterly GW sampling & monthly well gauging & LNAPL recovery efforts (w/absorbent socks) will continue, with next quarterly event in Nov. 2016. - J. Kolleeny 04/17/17: Reviewed Site Monitoring Rpt Oct. thru Dec. 2016 by GES, dated 3/1/17 (in DecDocs).

Gauging of three historically product-impacted wells in Oct. 2016 found 0.01 ft of LNAPL in RW-1, absorbent socks were set in each well; gauging of all 12 mon wells & 1 recovery well in Nov. 2016 found no measurable LNAPL, absorbent socks were replaced in three wells; gauging of three wells in Dec. 2016 found no measurable LNAPL, but sheen was observed in MW-14; absorbent socks were set in all three wells. GW sampling in Nov. 2016 showed 4 wells were ND; well MW-5 had 59 ug/L total VOCs (down from 113 ug/L in Aug. 2016), well MW-7 had 680 ug/L tVOCs (up from 490 ug/L in Aug. 2016), well MW-11 had 226 ug/L tVOCs (down from 324 ug/L in Aug. 2016), well MW-12 had 1,648 ug/L tVOCs (down from 1,828 ug/L in Aug. 2016), well MW-14 had 812 ug/L tVOCs (down from 1,075 ug/L in Aug. 2016), well MW-15 had 876 ug/L tVOCs (down from 1,305 ug/L in Aug. 2016), well MW-16 had 19 ug/L tVOCs (down from 37 ug/L in Aug. 2016). Rpt states that GES will continue monthly well gauging and LNAPL collection activities, GES will provide oversight for vac extraction of liquids at wells MW-12, MW-14 and RW-1 which have shown intermittent LNAPL during 2016, and quarterly GW monitoring and sampling will be performed in February 2017. - J. Kolleeny 08/15/17: Reviewed Site Monitoring Rpt Jan.-March 2017 by GES dated 6/23/17 (in DecDocs). Gauging of 3 wells (RW-1, MW-12 & MW-14) in Jan. 2017 showed no LNAPL detected, an absorbent sock was set in MW-12; gauging of all 13 site wells in Feb. 2017 showed no LNAPL detected (except for sheen in MW-14); gauging of all wells in March 2017 showed 0.02 ft of LNAPL in both MW-12 & MW-14; product was bailed; all absorbent socks were removed to allow evaluation of LNAPL recovery for next month's gauging event. GW sampling on 2/27/17 showed well MW-5 had 39 ug/L total VOCs (down from 59 ug/L in Nov. 2016), well MW-7 had 156 ug/L tVOCs (down from 680 ug/L in Nov. 2016), well MW-11 had 216 ug/L tVOCs (down from 226 ug/L in Nov. 2016), well MW-12 had 1,279 ug/L tVOCs (down from 1,648 ug/L in Nov. 2016), well MW-14 had 1,175 ug/L tVOCs (up from 812 ug/L in Nov. 2016), well MW-15 had 335 ug/L tVOCs (down from 876 ug/L in Nov. 2016), well MW-16 had 39 ug/L tVOCs (up from 19 ug/L in Nov. 2016). Rpt lists future activities as continued monthly well gauging and LNAPL recovery, performance of site-wide monitoring during vac extraction activities on wells MW-12, MW-14 & RW-1 during 2nd quarter 2017, quarterly GW monitoring & sampling in June 2017. - J. Kolleeny 11/13/17: Reviewed Site Monitoring Rpt April-June 2017 by GES dated 8/8/17 (in DecDocs). Gauging of wells MW-12, MW-14 & RW-1 on 4/12/17 found 1.56 ft of LNAPL in MW-14; 4 gals were bailed from well. Gauging of all wells on 5/16/17 showed 0.64 ft of LNAPL in MW-14; a vac truck was used on MW-12, MW-14 & RW-1, recovering 125 gals of water/LNAPL mix. Gauging of all wells on 5/17/17 showed 0.40 ft of LNAPL in MW-14 and trace of LNAPL on probe in wells MW-12 & RW-1; no recovery was performed. Gauging of all wells on 6/14/17 showed 0.02 ft of LNAPL in MW-14; ~0.5 gal of LNAPL was bailed from well and absorbent sock was place in well. June 2017 GW sampling showed well MW-5 had 26.5 ug/L total VOCs (down from 39.4 ug/L in Feb. 2017), well MW-7 had 178 ug/L tVOCs (up from 156 ug/L in Feb. 2017), well MW-11 had 213 ug/L tVOCs (down from 215.5 ug/L in Feb. 2017), well MW-12 had 607 ug/L tVOCs (down from 1,279 ug/L in Feb. 2017), well MW-14 had 1,434 ug/L tVOCs (up from 1,175 ug/L in Feb. 2017), well MW-15 had 560 ug/L tVOCs (up from 335 ug/L in Feb. 2017); other wells sampled were either ND or had very low tVOCs. Rpt states that wells show overall decreasing trends in tVOCs (over various monitoring periods). Monthly well gauging & LNAPL recovery and quarterly GW sampling & reporting will continue, with next quarterly event in

Sept. 2017. - JK 12/19/17: Reviewed Site Monitoring Rpt July-Sept. 2017 by GES dated 12/18/17 (in DecDocs). Monthly gauging of wells MW-12, MW-14 & RW-1 showed MW-14 had 0.02 ft of LNAPL on 7/17/17 (0.25 gals of product were bailed from well), trace of LNAPL in MW-14 & RW-1 on 8/15/17, and quarterly gauging of all 12 mon wells & 1 recovery well on 9/11/17 showed no LNAPL detected, although Table 1 indicates that absorbent socks were changed in MW-14 & RW-1, and LNAPL was observed on interface probe in RW-1. GW sampling on 9/11/17 showed well MW-5 had 50 ug/L total VOCs (up from 26.5 ug/L in June 2017), well MW-7 had 64 ug/L tVOCs (down from 178 ug/L in June 2017), well MW-11 had 269 ug/L tVOCs (up from 213 ug/L in June 2017), well MW-12 had 1,198 ug/L tVOCs (up from 607 ug/L in June 2017), well MW-14 had 1,143 ug/L tVOCs (down from 1,434 ug/L in June 2017), well MW-15 had 734 ug/L tVOCs (up from 560 ug/L in June 2017), well RW-1 had 1,029 ug/L tVOCs (sampled at my request; seems to be first time sampled). Rpt states that monthly gauging of select wells for presence of LNAPL will continue, and quarterly gauging and sampling of all wells will continue, with next quarterly event in December 2017. I sent email to Krista Manley (RP), cc's to Devin Shay and Lori Tuovila of GES: Dear Ms. Manley: I have reviewed Site Mon Rpt for July thru Sept. 2017, prepared by GES and dated 12/18/17. Rpt presents well gauging data for July, Aug. & Sept. 2017 and results of GW sampling performed in Sept. 2017. Rpt notes that recovery well RW-1 at site was sampled in Sept at DEC's request. Based on GW data presented, DEC requests that well RW-1 continue to be sampled during quarterly monitoring events. Quarterly sampling of wells MW-2, MW-10 & MW-17 may be discontinued at this time, due to consistently low or non-detect results for petroleum compounds in those wells, and/or presence of nearby wells that adequately cover same area of site. Wells MW-2, MW-10 & MW-17 should not be abandoned, but should continue to be gauged during quarterly mon events for presence of LNAPL and for depth to water measurements. These wells should be sampled again in anticipation of a spill closure request (along with all other site wells), & DEC reserves right to require intermittent sampling of these wells at our discretion. Please feel free to contact me if you have any questions or comments. - J. Kolleeny 03/12/18: On 2/2/18, received email from Lori Tuovila of GES: Dear Mr. Kolleeny: Attached please find Quarterly Monitoring Rpt prepared by GW & Env't Svcs (GES) on behalf of Buckeye Pipe Line Co. (Buckeye). This rpt summarizes results of activities conducted from Oct. thru Dec. of 2017 at Site. Liquid-level gauging & bailing were completed at wells MW-12, MW-14 & RW-1 on 10/18/17 & 12/14/17. Quarterly site-wide gauging & GW sampling were completed on 11/13/17. If you have any questions or concerns, please contact Devin Shay of GES at (800) 220-3069, ext. 4051, or Krista Manley of Buckeye at (610) 904-4486. On 3/12/18, I reviewed rpt dated 2/2/18 (in DecDocs). Gauging of 3 wells in Oct. 2017 found trace of LNAPL in RW-1; gauging of all 12 wells in Nov. 2017 and of 3 wells in Dec. 2017 found no measurable LNAPL. GW sampling on 11/13/17 showed well MW-5 had 61 ug/L total VOCs (up from 50 ug/L in Sept. 2017), well MW-7 had 175 ug/L tVOCs (up from 64 ug/L in Sept. 2017), well MW-11 had 205 ug/L tVOCs (down from 269 ug/L in Sept. 2017), well MW-12 had 1,193 ug/L tVOCs (close to 1,198 ug/L in Sept. 2017), well MW-14 had 1,510 ug/L tVOCs (up from 1,143 ug/L in Sept. 2017), well MW-15 had 498 ug/L tVOCs (down from 734 ug/L in Sept. 2017), well MW-16 had 18 ug/L tVOCs (was ND in Sept. 2017). Other wells were ND for VOCs. Graphs of tBTEX & tVOCs over time in App. B show general decreasing trend (with

BUCKEYE PIPELINE COMPANY (Continued)

S102144242

some recent increases); benzene graph shows considerable benzene persisting in MW-12 & MW-14. Rpt states that monthly well gauging for LNAPL & quarterly GW sampling will continue, with next sampling event in 1st qtr 2018. - JK 07/12/18: Reviewed Site Monitoring Rpt January-March 2018 by GES, dated 5/16/18 (in DecDocs). Gauging of wells MW-12, MW-14 & RW-1 in Jan. 2018 showed no measurable LNAPL, but LNAPL was observed on interface probe when removed from MW-14 & RW-1. Gauging of all 12 site wells in Feb. 2018 showed no measurable LNAPL in any well, but LNAPL was again observed on outside of probe when removed from MW-14 & RW-1. Gauging of MW-12, MW-14 & RW-1 in March 2018 showed 0.42 ft of LNAPL in MW-14; a fresh absorbent sock as installed in well. GW sampling in Feb. 2018 showed well MW-5 had 6 ug/L total VOCs (down from 61 ug/L in Nov. 2017), well MW-7 had 31 ug/L tVOCs (down from 175 ug/L in Nov. 2017), well MW-11 had 63 ug/L tVOCs (down from 205 ug/L in Nov. 2017), well MW-12 had 444 ug/L tVOCs (down from 1,193 ug/L in Nov. 2017), well MW-14 had 1,051 ug/L tVOCs (down from 1,510 ug/L in Nov. 2017), well MW-15 had 37 ug/L tVOCs (down from 498 ug/L in Nov. 2017), well MW-16 had 5 ug/L tVOCs (down from 18 ug/L in Nov. 2017), well RW-1 had 586 ug/L tVOCs (not sampled in Nov. 2017; had 1,029 ug/L tVOCs in Sept. 2017). Rpt notes that wells located within plume of elevated VOCs in GW have shown overall decreases. Rpt states that monthly well gauging for LNAPL & quarterly GW sampling will continue in 2nd quarter of 2018. - J. Kolleeny 10/09/18: Met with Nelson Klitzka of Buckeye Partners, Devin Shay of GES, and Joe Ricker of EarthCon (sub to GES) to discuss site. Mr. Ricker presented data showing that GW plume has diminished in extent and VOC levels have decreased since remedial action (soil excavation) in 2014, and that data show no ongoing source area. He also presented data regarding mass flux from site towards Newtown Creek, calculated by taking avg. BTEX levels at discrete points along line parallel to bulkhead and adding them up. Calculations suggest that only ~0.05 lbs of BTEX per year is discharging into Creek. Mr. Ricker suggested that these data taken together make a case for spill closure. I acknowledged that these data are useful in support of a spill closure petition, but noted that 0.42 ft of LNAPL was detected in well MW-14 in March 2018, and that DEC usually requires 4 quarters of monitoring showing no LNAPL reappearance to establish that LNAPL has been eliminated to extent feasible. I also stated that dissolved VOCs in MW-14 (over 1,600 ug/L as of May 2018) are still too high for spill closure, considering sensitivity of site location, on Newtown Creek, which is an EPA Superfund Site. GES stated they are not requesting spill closure at this time. I suggested surging a surfactant into MW-14 and using a vac truck to recover residual LNAPL & contaminated GW as a possible way to expedite spill closure, or possibly over-drilling & replacing MW-14. GES agreed to consider these and other remedial alternatives. - J. Kolleeny 10/11/18: Reviewed Site Monitoring Rpt April-June 2018 by GES, dated 8/8/18 (in DecDocs). Gauging of wells MW-12, MW-14 & RW-1 in April 2018 showed 0.01 ft of LNAPL in well MW-14, and LNAPL was seen on outside of interface probe when removed from RW-1; absorbent sock was replaced in MW-14. Gauging of all 12 site wells in May 2018 showed no LNAPL detected in any well; absorbent socks were replaced in MW-14 & RW-1. Gauging of MW-12, MW-14 & RW-1 in June 2018 showed no measurable LNAPL, but a trace was observed on probe when removed from MW-14 & RW-1. GW sampling on 5/22/18 showed well MW-5 was ND (had 6 ug/L total VOCs in Feb. 2018), well MW-7 had 162 ug/L tVOCs (up from 31 ug/L in Feb. 2018), well MW-11 had 81 ug/L tVOCs (up from 63 ug/L in

BUCKEYE PIPELINE COMPANY (Continued)

S102144242

Feb. 2018), well MW-12 had 799 ug/L tVOCs (up from 444 ug/L in Feb. 2018), well MW-14 had 1,624 ug/L tVOCs (up from 1,051 ug/L in Feb. 2018), well MW-15 had 128 ug/L tVOCs (up from 37 ug/L in Feb. 2018), well MW-16 was ND (had 5 ug/L tVOCs in Feb. 2018), well RW-1 had 934 ug/L tVOCs (up from 586 ug/L in Feb. 2018). Rpt states that in-plume wells MW-5, MW-7, MW-11, MW-12, MW-14 & MW-15 have shown general decrease in VOCs over time, since remedial soil excavation was performed in 2014, and graph of Total VOCs over time for these wells show that tVOCs are currently lower than historical highs, however, most in-plume wells show an uptick in VOCs in 2nd quarter 2018, and it's not clear that there has been a decreasing trend since Aug. 2017. Rpt states that monthly well gauging, LNAPL collection, and quarterly GW sampling will continue in 3rd quarter of 2018. - J. Kolleeny "

Date achieved compliance: Not reported

Evaluation lead agency: EPA

FINDS:

Registry ID: 110004360888

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: JARNAIL SINGH
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 10/30/06 Reassigned from Tang to Sun. (JS/MS) 5/2/07: Sun/Sellberg sent a letter certified mail to Abo Service Station Corp (c/o Garelick) at 53-26 Van Dam Street requiring that a letter report be submitted to address a tank test failure that was reported in 4/2004. (JS/MS) 6/26/07: MS was notified by RP that all documents were submitted in May of 2004 to J.Rommel, however these files are MIA. 8/2/07: RP will be submitting some old documents by 8/17/07 and a report from Energy Tank and Environmental Services, Inc. (ETESI) was located. MS to review for possible closure. (JS/MS) 8/21/07: ETESI states in its report that upon closer examination of the tank system, no cracks or imperfections were found on the shear off valve as was suspected in the original tank test. They believed that the reason for the failure may have been that the ball valve by the submersible pump wasn't closed completely prior to testing and/or the test technician didn't fully tighten his test fitting into the test port on the shear off valve. They re-tested the tank system in May of 2004 and it passed. Therefore, this spill case was closed today on 8/21/07. An NFA letter will be sent to the RP as well as to ETESI. (JS/MS) 8/11/08: Transferred to Kolleeny/Mandac (MM)"
Remarks: "Found an impact valve leaking under the MPD. There is a containment sump underneath which is where the material went. Will replace the

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO Sangesland DDO Heavy rains caused runoff. Sheen in catch basin. 6/12/2003 - Maryann from Community Board #2 (718-533-8773) called to say the Auto Body Shop is dumping oil into the sewers. Both DEP and Fire Dept are aware of the problem. DeMeo will make a site visit. 7/10/2003 DeMeo made a site visit in June. The address given was a tire shop. There was an auto repair next door. Inspection was made of both facilities and everything was OK. There was evidence of oil staining around the street storm drain, but nothing that could lead back to either of the businesses. 7/10/03 - AUSTIN - SPOKE WITH MARYANN OF C.B. #2 - BRIEFED HER ON THE RESULTS OF DEMEO'S INSPECTION IN JUNE, AND EXPLAINED THAT UNLESS WE CAUGHT THE PERSON IN THE ACT, WE COULD NOT TAKE DIRECT LEGAL ACTION. SHE HAD CONTACTED DEP AS WELL (NO STATUS GIVEN ON WHAT ACTIONS THEY WOULD TAKE). TOLD HER WE COULD CHECK PERIODICALLY AS PART OF OUR ROUTINE PASSINGS THROUGH THAT AREA

DEC Memo:

"08/18/08 - LZ The June 16, 2008, quarterly monitoring report covering March- May of 2008 shows no LNAPL in any of six monitoring wells. Total BTEX were found from 0.00 to 26 ppb; MTBE up to 2 ppb; total SVOCS up to 747 ppb. As requested by the Department to complete its files, Tyree Brothers Environmental Services, Inc., sent a report, dated April 27, 2005, containing results of removal of contaminated soil and water from vicinity of the 2,000-gallon tank. About 24.22 tons of soil were removed and six borings conducted to install monitoring wells. Soil analyzes indicate elevated contamination at some locations: for example, at MW-2, total xylenes (2,390 ppb); at MW-6, acetone (247 ppb); at MW-1, chrysene (509 ppb); and contaminated groundwater that has shown improved quality over years (data in subsequent reports). The spill case is closed. 03/25/08 - LZ Prepared by Tyree Organization, the quarterly monitoring report for the period December 2007-February 2008 does not reveal LNAPL in any of seven gauged monitoring wells; no MTBE was detected; total SVOCS concentrations varied from non-detected to 509 ppb; total BTEX was from non-detected to 34 ppb. 12/30/07 - Zielinski The December 18, 2007, quarterly monitoring report for September-November 2007 shows that no LNAPL was detected in any of six monitoring wells. Total BTEX was in the range from non-detect to 51.68 ppb, MTBE in the range from non-detect to 2.56 ppb, total SVOCS from 0.00 ppb to 257.84 ppb. Gauging was performed monthly, and absorbent material was placed in all monitoring wells. 09-19-07 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period June-August 2007 does not reveal LNAPL in any of seven gauged monitoring wells. Also, no MTBE was detected. Total BTEX: 56.19 ppb(MW-6) the results show that since August 2005, concentrations of benzene, toluene, and total xylenes have been diminished. 03/09/07 - Zielinski The March 9, 2007, quarterly monitoring report for December 2006-February 2007 shows that LNAPL was detected in Well 3(7 wells present). Total BTEX was in the range from nondetect to 48.37 ppb, MTBE in the range from nondetect to 5.94 ppb(eDocs). 12/15/06 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period September-November 2006 shows that Well 3 contained LNAPL. Also, total BTEX ranged from nondetect to 141.51 ppb, MTBE ranged from nondetect to 3.96 ppb, and total semivolatiles from 12.83 to 57.54 ppb. Thus, these numbers indicate that concentration of contaminants has been decreased since summer of 2006. 10/18/06 - Zielinski A quarterly monitoring report for the period July-September 2006, prepared by Tyree Organization, 208 Route 109, Farmingdale, NY 11735, indicates that: - free product was detected in well #3. Six other wells do not indicate any presence of LNAPL - total BTEX was in range of non-detect to 257.56 ppb - total SVOC was in range of 1.43 to 392.44 ppb The facility continues remediation by employing a passive bailer in well #3. 1/31/05-Vought-Spoke to Ed Waldron (Tyree) and spill amount is 800-1000 gallons for a 1000 gallon fuel oil UST. Tank was removed and is in soil. Soil excavation is continuing. Waldron wanted to know when to stop digging. Vought instructed to dig to groundwater and arranged site visit for 2/3/05 at 10am. 11/8/2005 - Investigation plan was approved. Six GW monitoring wells were installed. Two wells have free product. Weekly pump out is performed by Tyree. Stipulation Agreement will be issued."

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "10/17/05-Vought-Received call from Ed Waldron (Tyree 631-300-5285). Spill called in due to gasoline and in creek behind terminal. Waldron discovered that source is from leaking underground line. Terminal and pipeline shut down to prevent further release. Excavation of soil resulted in 10'x10' pit with groundwater at bottom. Vac truck onsite to remove free product. Spill transferred to Zhao. Vought called Waldron and informed him that spill was transferred to Zhao. Waldron indicated that gasoline was still entering excavation.
10/17/05-Vought-Off hours duty responder. Received second call from hotline that FDNY Hazmat on scene and problem was happening again . Vought performed site visit. FDNY onscene due to odor complaints from neighborhood of gasoline fumes. Source of fumes was open excavation in which gasoline has accumulated. Odor complaints were of outdoor ambient air and not sewer impact. Onscene was Getty Petroleum (James Geraci), Tyree (Ed Waldron), NYCDEP (John Wilson) and FDNY Hazmat. USCG notified and responded but left scene by time of DEC site visit. Small amount of free product (approximately 15'x5 entering Newton Creek but was not contained due to possible fire hazard. Tyree will remain onsite entire night ensuring continued performance of recovery pump. Approximately 4000-gallons of product/water mix recovered so far. Free product entered Newton Creek via impacted sewer (total length of approx 150'). Boom and pads placed in sewer to recover free product. Pipeline was repaired with collar however Getty awaiting DEC policy on whether collar can be used permanently or entire line needs to be replaced. Getty willing to perform tightness test of line. Line is currently empty and entire terminal shut down. Impacted soil from excavation to be removed tonight by Clean Harbors. 11/8/2005 - jz: Zhao performed an investigation on site on 10/17/2005. Three monitoring wells were installed. Re-visit on 11/3/2005. Line was pressure tested in 11/2003 and all passed. Pipes are in good condition with no sign of corrosion besides the hole. No more free

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

DEC Memo:	"Sangesland spoke to plumber at the site. He says the smell of gasoline was coming out of the sewer pipe itself, not from the open soil around the hole. Problem is in the DEP Sewer system and is probably caused by someone in the neighborhood dumping gasoline down a drain. DEP is aware of the problem and says this is a transient problem. A check was made of PBS or Spills in the area, none were found. Spill Closed "

Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use: The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing. Site Features: The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site. Past Uses of the Site: The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentaclic Corporation, Sea Lion

Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a \$15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway. A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC's Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil lying above the groundwater table. See Site Code C241005 for post ROD updates.

Env Problem: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089

Health Problem: Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminants. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Update By: JXGRECO
Site Description: Location: The Former Quanta Resources Site, a.k.a. Review Avenue Development II Site (RAD II) is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. This site is adjacent to the Review Avenue Development I (RAD I) (seperated only by Preston Alley which is a access alley/paper street). The Long Island Railroad tracks boarder the property along the southwest. Site Features: The site is a fenced, open gravel parking lot. All above ground and below ground tanks, structures, and buildings were removed as part of an interim remedial measure in 2008. Current Zoning/Uses: The RAD II site is currently being used as a parking lot. It is zoned for commercial and industrial uses. Historical Uses: The RAD II property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map

from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in November 1981. Site Geology and Hydrogeology: The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to coarse sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the water table under the site.

Env Problem: Nature and Extent of Contamination: A viscous light non-aqueous phase liquid (LNAPL) is present at the watertable over the entire site. The LNAPL is a weathered petroleum. Groundwater flow is toward the south-southwest toward the Newtown Creek. The extent of the LNAPL has been delineated and it has not migrated beyond the Long Island Railway tracks downgradient. Known or suspected contaminants include: Petroleum, Chlorinated Solvents, other VOCs, and metals, impacting the soil and groundwater. An LNAPL collection and treatment system has been completed and is operating on-site. Significant Threat: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.

Health Problem: Exposure to contaminated groundwater or soil is unlikely because the area is served by public water and access to the site is restricted by fencing. The potential for exposure via soil vapor intrusion off-site will be evaluated during the remedial design and will also be evaluated if new construction is planned on-site in the future.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSLEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D008
. Waste name: LEAD

. Waste code: D018
. Waste name: BENZENE

DEC Memo: "9/17/14: Mahat DEC DeMeo was on the site. Spill is assigned to DEC DeMeo for follow up. Point of Contact : Anthony Veloso 718.72.0990 9/25/14 TJD Waste oil spill observed through chain link fence at above location. DeMeo entered location and met onsite with site manager Mr. Veloso. Spill of less than 5 gallons of mixed automotive waste fluids was associated with maintenance of heavy equipment on asphalt/concrete surfaces and was associated with poor housekeeping. Facility representatives, upon notification, immediately contained product with absorbents and were completing cleanup while DEC was onsite. Site manager has forwarded photos of area of concern following cleanup. Staining noted on asphalt/concrete however gross contamination has been removed. No further action is required at this time. Spill closed. Site personnel have been notified of their obligation to perform maintenance activities without unlawful discharges of petroleum to the environment and further educated on spill reporting requirements."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company: 001
Contact Name: RON TRAMPOSH
DEC Memo: "07/21/06-Hiralkumar Patel. spoke with Ron (FAX: 718-762-0545) at Core Environmental. he has been hired by bank to do phase I and Phase II investigation. during PHase I investigation, he found two 3000 gal USTs which was in use to store #6 oil. owner abandoned these tanks after test. bank asked Ron to do limited PHase II investigation and during soil boring in front of tank, Ron found contaminated soil right above groundwater table. groundwater is approx. 11 ft bg. Ron took soil and groundwater sample and will get lab results by Tuesday July 25, 2006. Ron will fax owner's information. PBS#: 2-610272. 08/23/06 Rahman- I had a site meeting yesterday with Mr. Taffel and Mr. tramposch.After the discussion, it was decided that extensive delineation of soil/ground water is required for that site,specifically, ground water flow directions/and extent of contamination.A csl was sent to Review Realty Associates, LLP 362 Kingsland Avenue Brooklyn, NY 11222 Attn: Mendy Taffel 08/31/06 Rahman- Temporarily assigned case manager for this site is Raphael Ketani. 01/24/07 Rahman- Limited Phase II ESI by Core Environmental.Eleven soil borings were advanced for soil sampling and later on,ten borings were converted to monitoring wells, ground water was sampled for analysis.VOCs were not detected above the TAGM values in soil samples.There were some SVOCs exceedances in soil that are typical to New York city fill which include ash and burned material.Among VOCs, only Toluene exceeded the limit slightly in ground water,all other VOCs were nondetect.No SVOCs found in ground water. 2 USTs were closed in place on June,2006.Considering the industrial nature of the local area and absence of sensitive receptor, no further action is recommended."
Remarks: "THIS WAS A SOIL SAMPLE THAT FOUND CONTAMINATION."

FINDS:

Registry ID: 110004566844

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

 Site Description:

Location: The 37-88 Review Avenue property (Subject Property) is located in an industrial area of Long Island City, Queens, New York. The Subject Property is bounded to the east, south and west by industrial properties. To the north of the Subject Property is the First Calvary Cemetery. The Subject Property is approximately 500 feet southeast of the intersection of Greenpoint Avenue and Review Avenue. Site Features: The Subject Property is currently improved by a multi-story warehouse with a partial mezzanine located in the eastern portion of the parcel, a roof-top parking area with access to offices located on the first and second floors, and a paved drive-way and parking area in the western portion of the parcel (Appendix E Figure 2). The entire Subject Property is covered by either pavement

or the slab of the building. Current Zoning and Land Use: The Subject Property is currently active and leased to numerous tenants. The Subject Property is zoned as a manufacturing district (M3-1 heavy manufacturing district). Surrounding properties to the east, south and west are used for industrial/manufacturing purposes. Directly to the north and across Review Avenue is a cemetery and currently zoned by New York City as residential (R4). Past Use of the Site: The Subject Property historically was part of a larger parcel that was used for various industrial purposes, including a petroleum refinery, chemical manufacturing, warehouse/storage, and waste transfer since the mid-1800's. Pratt Manufacturing Company operated the larger parcel from 1887 until 1892, when it was sold to Standard Oil Company of New York (SOCONY). SOCONY may have utilized portions of the larger parcel for the manufacture of wax, lubricating oils, burning oils, grease compounding, and as a cooperage from approximately 1892 through 1949. After 1949, these operations were decommissioned and various property sale transactions took place, concluding in 1951. Contamination is from one or more third-party sources including the adjacent Quanta Resources site (a/k/a Review Avenue Development II ("RAD II")) and the Former Pratt Oil Works (FPOA) site. Chemical fingerprinting analysis links contamination present at 37-88 Review Avenue to both sources. The fingerprinting and other sampling was completed as part of remedial investigations (2005-2014). To date, no remedial activities have been completed at the subject property. Site Geology and Hydrogeology: Stratigraphy at the Subject Property is characterized by urban fill overlying sand deposits with gravel and silt lenses, followed at depth by a clay unit. The fill is composed of a mixture of heterogeneous soil intermixed with brick fragments, asphalt, wire, concrete, plastic and other debris, and ranging in thickness from 5 to 20 feet. Underlying the fill is an upper sand and gravel unit. Below the upper sand and gravel deposit lies a discontinuous, shallow silt and silty-clay horizon. The Subject Property lies between a local topographic high to the northeast and Newtown Creek to the southwest (a tidally influenced regional groundwater discharge area). Groundwater flow beneath the property located to the west was interpreted to flow to the south-southwest. To the east of the Subject Property, groundwater flow was observed to the south-southeast. Depth to groundwater at the Subject Property ranges from approximately 12 feet below ground surface to 20 feet below ground surface.

FINDS:

Registry ID: 110004561448

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: JHOCONNE
Site Description:

Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry

Env Problem: Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.
Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U154

. Waste name: METHANOL (I)

. Waste code: U239

. Waste name: BENZENE, DIMETHYL- (I,T)

Site Description: Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of

these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000

ppb to 63 ppb in the most recent sampling round.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

FINDS:

Registry ID: 110001581075

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSLEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- . Waste code: F001
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F002
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

FINDS:

Registry ID: 110000616432

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HW Code: 224009
Record Add: 11/18/1999
Record Upd: 12/16/2003
Updated By: kstang
Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

ZHAO 9/4/97 mmmm:BUCKEYE COMPLETED REROUTING OF PIPELINE TO METRO
TERMINAL. 6 COVERED ROLLOFFS FROM FCI ON STREET WITH CONTAMINATED
SOIL. STILL NEED TO INVESTIGATE SOURCE. 5/24/04 - Spill is
re-assigned to Zhao from Mulqueen. 4/12/2005 JZ: Based an on-site
inspection and documents review, the case mentioned contamination
might came from up-gradient former MOSF site. The site has been
demolished and excavated to build a wastewater treatment plant. From
Metro terminals annual GW monitoring results, there is no groundwater
contamination issue. No further action is required."

Remarks: "BUCKEYE PIPELINE INSTALLING NEW FUEL OIL PIPELINE ALONG KINGSLAND
AVENUE FOR METRO TERMINAL. CONTAMINATED SOIL AND GROUNDWATER
ENCOUNTERED."

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GASOLINE AND DIESEL PRODUCERS

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ETHANOL FACILITY/GASOLINE AND DIESEL PRODUCERS

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site Description: Location: The site is located at 460 Kingsland Avenue in the Greenpoint section of Brooklyn, New York (Figure 1). 460 Kingsland Avenue is located within a commercial/industrial area and is bordered by Newtown Creek to the east (which has served as an industrial water way for nearly 140 years), Kingsland Avenue to the west, Greenpoint Avenue (John Jay Byrne) Bridge to the north, and OU-4 to the south. To the east, Newtown Creek has been designated a Federal Superfund Site and is under the jurisdiction of the United States Environmental Protection Agency (USEPA). Site Features: The property is composed of an approximate 3.55-acre parcel, identified as Block 2612 Lot 20 on the Brooklyn tax map. Land surface elevations are approximately 7 feet above mean sea level (AMSL) within the southeastern portion of and gradually rise to approximately 11 feet (AMSL) within the northwestern portion of the site. Currently, the site contains two abutting one-story buildings. Current Zoning and Land Use: The property is zoned M3-1 for heavy manufacturing and industrial use. Exterior areas are paved and used for parking and storage. The site is subleased to numerous third parties for parking, storage, and for use as office space. Past Use of the Site: Historical maps indicate the site and surrounding areas were undeveloped marshlands until the late 1800s when the land was filled for industrial development. The northern portion of the site was operated by the Columbus Distilling

Company and the Chris Cunningham Boiler Works from approximately 1892 to 1919. The southern portion of the site was operated by ExxonMobil s predecessors as part of a petroleum refinery operation from approximately 1892 to 1920. By approximately 1920, refinery operations had expanded to include the entirety of 460 Kingsland Avenue. The refinery operations within the site continued until 1966. Under ExxonMobil s former operations, 460 Kingsland Avenue also served as a petroleum bulk storage yard. An oil water separator (OWS) was located along southern site boundary. Based on a review of historic aerial photographs, the OWS appears to have been filled sometime between 1961 and 1966. In 1967, ExxonMobil s predecessors sold the property to a freight company and a trucking terminal was built, which currently remains on-site. On or about August 29, 1981, a former site owner reported that the bulkhead had collapsed into Newtown Creek, along with considerable amounts of fill/soil, asphalt parking lot and concrete curb stop. The bulkhead collapse was repaired with fill and a new steel sheet pile bulkhead was installed along the property. As documented in the Updated PCB Source Evaluation Report (September 7, 2012), PCB contamination in this area appears to be attributable to PCB-laden fill materials associated with the bulkhead reconstruction. Site Geology and Hydrogeology: The stratigraphic units underlying the site form three distinct hydrogeologic units; the shallow aquifer, the shallow confining unit, and, the regional aquifer. The shallow aquifer is primarily comprised of the saturated fill materials deposited above the historical creek and marsh sediments. The depth to groundwater in the shallow aquifer varies from approximately 1.5 to 8.5 feet below land surface (ft/bls) within the site and the saturated thickness of the shallow aquifer within the site is typically less than 10 feet. The shallow confining unit is made up of deposits from the historical creek and marsh sediments. Historically, marsh land and open water covered the entirety of 460 Kingsland Avenue. The shallow confining unit ranges in thickness from approximately 5 to 20 feet across the site. The shallow confining unit has very low groundwater movement rates such that, it isolates the shallow aquifer from the underlying regional aquifer. This causes confined or semi-confined conditions within the regional aquifer. The geology of the shallow confining unit is identified as a clay or peat material with varying levels of silt. The regional aquifer is found throughout the site below the shallow aquifer and shallow confining unit. It is made up of fine to medium grained sands, with varying amounts of silt and coarser materials and was found to be at least 10 to 15 feet in thickness. Groundwater movement is consistent in the regional aquifer compared to the shallow aquifer, due to the sand and silty sand material that comprise this layer.

Env Problem: Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

translation of the old spill file: HEAVY FUEL OIL. 03/29/04 Related to Mobil Greenpoint spill Transferred from Miller to Rommel. 10/12/04 Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimeter of the property in order to compare background contamination with the site contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?) (they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner) 516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.) 516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal) requesting his assistance with this case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company (212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information: borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, monitoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of action in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022 (212) 421-2150 confirming the additional items that should be submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect

the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the shallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a clean fill recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted

to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hampston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ 3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Office has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

that he would call me back once he has the contact of the cleanup company, Tradewinds. 3/30/07 - Austin - Trasferred to Ketani for further review - end 5/18/07 - Raphael Ketani. The spill took place on 11/4/03 and involved a bad seal on a truck. I spoke to Artie Baldwin of Trade Winds (516) 779-7824. I asked him whether he knew how bad the spill was and whether he had any documentation regarding the cleanup. He said that his company had just moved to a new office and so it will take him a while to look for the records. I told him that would be fine. 8/1/07 - Raphael Ketani. I spoke to Mr. Baldwin. I told him that DEC still hasn't received any documentation that the spill was cleaned up. He said he will have his son look for the information when he gets back to the office. There is no paper file for the case. 8/27/07 - Raphael Ketani. Vido from EXXON-MOBIL (718) 389-3052 called to say that he had the paperwork for the cleanup of the spill. He said he will mail me copies of the package of documents. I told him to do so quickly. 9/21/07 - Raphael Ketani. On 8/31/07 I received copies of the manifests for the cleanup of the sprayed oil. Having received the manifests and based on the spill being a spraying of oil and the age of the spill, I am closing the case. "

Remarks: "bad seal on tank. cleanup crew being called."

DEC Memo: "Spill from pipeline at an MOSF facility. Approx 20 gal spilled to creek. Booms deployed. Cleanup crew on site. Vought responded to the site. 05/09/08-Ahmed- DEC Vought and Ahmed went to the site for investigation at 1:00pm. Met Eric W. Sauerman of BP (Brooklyn Terminal manager, Tel-718 389 5966, cell-917 577 0682). Michael Coyne of Delta Environment, remediation consultant of BP was trying to pump some oil from the small recovery tank (Capacity-2000 g, 1500 g filled) to a big recovery tank. The housing pipe to the pump was cracked. Delta started the pump and oil approx. 200g spilled from

S111065422

that crack. FDNY, NYPD were on site. USCG and National Response Center were notified. Major portion of the spill (approx 150g) was contained by the secondary containment structure. Approx. 30 gallon spilled on the pavement which was absorbed by absorbent pads and soft booms. Approx. 20g spilled to the storm drain of the adjacent property (Carpet Cleaner, 301 Norman Ave) which leads to the New Town creek. Carpet cleaners had a vac truck onsite and they recovered some oil from the storm drain. Some absorbent pads were placed to secure the storm drain. BP called Atlantic Response to contain and clean sheen on the creek. Altantic Response responded with 50 minutes with their boat onsite and they place hard booms and absorbent pads to contain and absorb the sheen. Earth Technology showed up with their vac truck to vac out the secondary containment area. Their was a 10ftX2ft unpaved area between the recovery tank and fence. DEC Ahmed and Voght noticed that instructed Eric to excavate that area and backfill and pave that with concrete. Pet(917 623 4914) from USCG called DEC Ahmed to inquire current status. Eric faxed a incident report. 05/12/08-Ahmed-DEC ahmed and Patel went to the site. No sheen was observed on the creek and storm drain of the neighbour property. 5/13/08-Ahmed- Called Eric about the status of exvacation in the unpaved area. Sent a CSL to BP Ammoco. Chris Meyer (914 765 8804) of Delta called DEC Ahmed to discuss about the excavation. Delta would excavate in that area, backfill it and pave with concrete. They would submit material disposal manifest in one month. 06/16/2008-Hasan Ahmed-Eric Sauerman or BP forwarded Cleanup Report submitted by Christopher Meyer of Delta Consultants on 06/12/2008-Soil Cleanup-the area between the tank 36 and the fence was scraped to a depth of 8-9 inches to remove all product soaked impacted soil. On the neighbouring Joydan Company property, an area of visibly impacted soil was identified along the fence line located adjacent to tank 36, measured approx. 30ft X 2 ft. The contaminated soil was excavated to a depth of 10-12 inches, where the pre-existing blacktop layer of asphalt was encountered. Both the area was repaired with crush stone, which was then compacted. After relocation of Tank 36, the area would be patched with asphalt. A member of Alphine Environmental on behalf of Delta pressure washed the bulkhead from the storm water outfall between the two properties approx. 75 upstream. Materials disposal manifest were attached in the report. A No Further Action letter was sent on 06/16/08. This case is closed. "

Remarks: "TOTAL MIXTURE VOLUME 264 GALLONS BUT 240 WAS CONTAINED; CRACK IN LINE; CLEAN UP IN PROGRESS;"

Tank ID: 31
Tank Location: ABOVEGROUND
Install Date: 08/94
Product: UNKNOWN
Tank Type: Steel/carbon steel
Tank Internal: None
Tank External: CATHODIC PROTECTION
Pipe Location: Aboveground
Pipe Type: Steel/Iron
Pipe Internal: None
Pipe External: Painted/Asphalt Coating
Secondary Containment: None
Leak Detection: None
Overfill Protection: Not reported
Dispensing Mthd: Gravity
Test Date: Not reported
Date Closed: Not reported
Status of Data: Minor Errors
Capacity (gal): 275
Lat/Long: 41|43|48 / 73|56|20
Federal ID: Not reported
Inspected Date: 05/13/1997
Inspector: AS
Renew Date: 10/31/2001
Inspected State: Not reported
Pipe Flag: True
Vessel ID: Not reported
Reserve Flag: True

Date Legal Agent Filed with Secretary of State: 01/22

Tank ID: 33
Tank Location: ABOVEGROUND ON SADDLES LEGS, STILTS, RACK, OR CRADLE
Install Date: 09/95
Product: UNLEADED GASOLINE
Tank Type: Steel/carbon steel
Tank Internal: Epoxy Liner
Tank External: NONE
Pipe Location: Aboveground
Pipe Type: Steel/Iron
Pipe Internal: Not reported
Pipe External: Painted/Asphalt Coating
Secondary Containment: Concrete Dike
Leak Detection: None
Overfill Protection: High Level Alarm
Dispensing Mthd: Suction
Test Date: Not reported
Date Closed: Not reported
Status of Data: Minor Errors
Capacity (gal): 200

Spiller Contact: JOHN QUATRALE
Spiller Phone: (917) 846-4423
Spiller Extension: CELL
DEC Region: 2
DER Facility ID: 259898
DEC Memo: "11/04/2005- 3:00 pm - DEC on site, Piper/Vought. Contaminated soil/groundwater observed in excavation. Believed to be from Exxon/mobil Greenpoint spill as two adjacent recovery wells are onsite actively recovering product from Exxon Mobil. Actions currently underway by E/M to recover floating free phase product. Dual Phase recovery well 50' downgradient from excavation. No recent spill materials observed. Referred to remediation- Koon Tang 11/10/05 Reassigned to Foley. 11/14/05 Spoke to John Quatralle, Verizon (516-292-8166, cell 917-846-4423, john.n.quatralle@verizon.com). Will be submitting tank closure report in a month. Contamination began at approximately 2'bgs. He thinks it is due to old refinery lines that were uncovered. He has been in contact with Steve Trifeletti of EM who provided refinery maps identifying the area as part of the refinery. Verizon is not willing to do fingerprint sampling. (Due to the age of Greenpoint, may use MTBE as an indicator.) 3/20/06 UST Removal and Request for Spill Closure Report received by Ryan Piper on 2/13/06. Forwarded to K. Foley. Verizon removed 133 tons of contaminated soil. Endpoints show exceedances for PAHs. ExxonMobil is currently operating a free product recovery well(RW-17) which yields approx 1000gal of product per week. R. Piper contacted Ed Hampston in Central Office to provide info and determine actions necessary, if any. 4/26/06 - after reviewing the closure report, it is appearant that the contamination is related to historic use of the site, and not due to any release from the tank removed. This spill is closed and consolidated into Mobil Off-Site Plume (S224087) for tracking. - KST"

Remarks: "RELATED TO ADJACENT PROPERTY WHICH IS AN EXON MOBILE SITE. EXON MOBILE TANK FAILURE, DEC REPRESENTATIVE ON SITE TODAY JEFF VOIGHT."

DEC Region: 2
DER Facility ID: 164013
DEC Memo: "6/18/08. J. Krimgold reviewed the letter-report submitted by ROUX Associate inc. dated June 2, 2008 with request to close the spill case. The letter-report contains no new info besides what the Department has already in its files. The 12 pages attached to the letter is nothing but printouts from our website or copies of documents (application, failed test reports, etc.) that was already submitted to the Department. Nothing in the letter-report points to the investigation of the cause of the test failure or removal of the release. Request for the spill case closure was denied. JMK.
12-27-2011 This spill was assigned to Leszek Zielinski on 06/28/10. Then this spill was reassigned from V. Brevdo to Alex Zhitomirsky on 12-27-2011, as per V. Brevdo instructions. Emailed LiRo and received the following response by S. Frank: We will pull together whatever information we have and forward it to you. AZ 2-7-2012 Site demolition and construction completed at site by May 2011. On 7/22/11 LiRo met with the site personnel and gathered additional information relevant to spill 0012519. LiRo prepared a letter to address DEC concerns from the July 2008 spill closure denial and submitted to DEC on January 23, 2012. Received and filed e-copies from LiRo. AZ 4-19-2012 Received on January 26, 2012, and reviewed Tank Closure Sample Results and Spill Closure Request dated January 23, 2012. The report stated that in August 2005, EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM Levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH) typically indicative of urban fill material. The site layout has changed significantly due to demolition and construction activities. Because of this, the former tank location is unknown. Based on this information, LiRo requested closure of spill#0012519. This spill was closed and a letter was sent to S. Frank/F. Ashkan/V. brevod: Dear Steve, I have reviewed tank closure sample results and spill closure request for the above spill number submitted to DEC on January 26, 2012. A tank test failure of the tank#1 was recorded at this site. As a result, a spill #0012519 was issued. EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001 in August 2005. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded.

S104950988

EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH) typically indicative of urban fill material. Based on this information, this spill number is closed. All wells associated with this spill should be properly abandoned. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. Sincerely, Alex Zhitomirsky "

Remarks: "UNCOVER ISOLATE AND RETEST"

DEC Region: 2
DER Facility ID: 199295
DEC Memo:

"09/05/06 -Zielinski This spill case reassigned from CO to Region 2. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. Spill transferred to Greco as part of Spills Closure Initiative in July, 2005. Contacted original callers company and determined the spill name and address was originally put into system incorrectly as 20-90 Review Ave. (also incorrectly listed as 20090 Review Ave.). Neither of the above addresses is an actual address in Queens County, however, 28-90 is, and 28-90 has two tanks similar to the ones referenced in the spill report. 28-90 is also a the home of a company that is a client of the tank test company which called in the tank test failures. Spill name and address were changed to 28-90 Review Ave. The company at that address is AA Truck Rental. JDG 8/3/05 Contacted Mr. PJ McDermott 718- 937-8611 at AA Trucking. Mr. McDermott is checking records and will get back to me. JDG 8/3/05 11/21/05 Tried to recontact Mr. McDermott, but he was unavailable. JDG 12/30/05 Tried to recontact Mr. McDermott, but he was unavailable. Left message. JDG 01/04/06 Insufficient documentation was received following several attempts. Have documentation that the tanks passed tightness tests in 1998, and were later closed in place in 1999, however, there is no record of a cleanup. Project needs further work, as release was characterized as requiring a major excavation. Should be returned to region 2 for further investigation at end of Spill Closure Initiative. 9/8/06 - Jon Greco of Central Office sent an email stating: Most recently, the owner's representative (Mr. Michael Paskoff, who has been performing tank tests at the site for many years, and it was his firm that called in the release 13 years ago) has asked that I close the spill, as it was called in solely due to an inconclusive tank test. He has copied me on a letter to the owner (Mr. Eric Roberts) and the letter reports that while the original tests were inconclusive, the tanks were retested later that day and were found to be tight. He goes on to say that no repairs were made and no excavations were performed by his firm. Finally, he claims the tests were observed by Inspector Geldman, of the NYC Fire Department. Reviewed PBS records, confirmed tank tested tight. Spills Closed. _ KST "

Remarks: "INCONCLUSIVE TEST RESULT TO REPAIR & RETEST - CALLED AGAIN AT 1300 OTHER 4000 GAL TANK ALSO FAILED MAJOR EXCAVATION."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was
VOUGHT 10/10/95: This is additional information about material
spilled from the translation of the old spill file: 14(550) TANKS
C/SOIL. 12/10/96 MMM: TYREE PULLED TANKS, UPGRADED STATION AND DID
INVESTIGATION. NO FREE PRODUCT LEFT ON GW. HIGH DISSOLVED BEING
ADDRESSED WITH SVES SYSTEM. STIP RETURNED SIGNED.3/14/03 REASSIGNED
FROM ROMMEL TO VOUGHT. 12/17/2003-Vought-See closed diesel spill
#0106824 at same location. 3/19/04-Vought-File review by vought:
Summary of Underground Tank Removals (Tyree Org)-April 1994. Tanks
removed as part of station rebuild activities . A total of eighteen
underground storage tanks were cleaned and removed from the site.
Twelve were gasoline USTs, two were diesel USTs, one was waste oil
and the remaining three are of unknown contents. Groundwater at ten
feet below grade. A total of 625 tons of soil was removed from the
excavation. Five endpoint soil samples were collected. Method 8021
was inadvertently ommitted from the analysis request . A soil vapor
extraction trench was constructed along Van Dam street, two feet from
the sidewalk so that the venting system would create a barrier for
the potential migration of soi vapoprs based on the reported regional
westerly groundwater flow . Four monitoring wells were installed as
per DEC. One fuel oil tank remains to be removed and upon remova, one
additional monitoring well will be installed. Soil analyticals from
well installation show 7200ppb benzene(MW2), 72400ppb
naphthalene(MW-2), 1435000ppb xylene(W-2), 2490ppb benzene(MW-4),
10770ppb xylene(MW-4). Groundwater Monitoring Report (Tyree
Org)-1-16/95. A one thousand(1000) gallon fuel oil tank was removed
in June 1995. A monitoring well, MW-5, was installed at this location
in August . No free product was encountered. The groundwater flow
direction comes onto the site from the north and travels southerly.
Once on site, the water flow turns a little to the

Site

Database(s)

EDR ID Number
EPA ID Number

GETTY #00219 (Continued)

S105142547

south-southeasterly direction . Groundwater analyticals show 105ppb benzene(MW-1), 3260ppb benzene(MW-2) and 86400ppb MTBE(MW-2). Report recommends installation of upgradient well and performance of a soil vapor extraction test. Letter from DEC(Mulqueen) to Getty(Ochotorena)-6/26/95. Stipulation Agreement sent to Getty. Stipulation Agreement from Getty-6/30/95. Stipulation signed by Getty. Corrective Action Plan from Tyree-10/5/95. Summary of Underground Fuel Oil tank Removal Activities-January 1996. Removal of one (1000-gallon) fuel oil UST. Five endpoint soil samples were collected for analysis. A groundwater sample will have to be collected to determine if the groundwater is protected . The background soil sampling will be performed once the location is reviewed by the DEC and sidewalk opening permits are obtained . Three Geoprobe borings will be performed. This location is reported to be located in a former refinery . Soil analyticals show minor SVOC exceedences (646ppb benzo(a)anthracene, 595ppb benzo(a)pyrene). Quarterly Monitoring Reports from Tyree (October 1995 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the south. Groundwater analyticals show 145ppb benzene(W-1), 4150ppb benzene(W-2), 5.19ppb xylene(W-3), 437ppb toluene(W-5). Remedial Action Plan (Tyree Org)-July 1996. The soil is intermixed with occasional charred material up to 6 inch in diameter and ashy soil located at the north end of the site . Soil venting pilot test performed on 4/18/96. The results of monitoring and the well survey indicate that groundwater on site flows predominantly west . The groundwater flow was previously incorrectly shown to flow southerly . Surrounding area is commercial. Pilot test results indicate that an approximate radius of infuence between 16 and 22 feet can be achieved with an applied cacuum of 34 to 53 inches . Since the contamination is minimal and localized no groundwater remediation is proposed at this time . Quarterly Monitoring Reports from Tyree (April 1996 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the east-southeast. Groundwater analyticals show 146ppb benzene(W-1), 793ppb benzene(W-2) and 437ppb toluene(W-5). Quarterly Monitoring Reports from Tyree (March 1996 thru December 2000). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 17ppb benzene(W-1) and 4ppb benzene(W-2). Remedial activities described as none . Letter from Tyree to DEC(Rommmel)-6/15/01. Letter sent requesting removal of wells 3 and 4 from the monitoring/sampling regimen leaving wells 1,2 and 5. These changes will be effected as of July 1, 2001. If there are any objections to these changes, please notify us in writing . Quarterly Monitoring Reports from Tyree (March 2001 thru June 2001). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 30ppb benzene(W-1) and 24ppb benzene(W-2). Remedial activities described as none . Quarterly Monitoring Reports from Tyree (July 2001 thru September 2001). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 31ppb benzene(W-2). Remedial activities described as none . Historical Data Compilation (Tyree Org)-December 2001. Compilation including request for no further action. Quarterly Monitoring Reports from Tyree (January 2002 thru December 2003). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 43.3ppb benzene(W-1) and 63ppb MTBE(W-2). Remedial activities described as none . 3/23/04-Vought-DEC requires: 1)groundwater samples from

downgradient locations of W-1 and W-2 2)submission of a soil and groundwater remediation plan. Vought sent letter with requirements on 3/23/04. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/20/2005 - Feng - Geoprobe Investigation Report by Tyree, dated November 29, 2004. on 11/10/2004 Tyree did two (2) groundwater sampling, B-1 and B-2, downgradient to W-1 and W-2, and four (4) soil samples, B-3 to B-6, in the vicinity of the former gasoline tankfield as per DEC Vought's letter on 3/23/2004. Groundwater analyticals show that some VOCs and SVOCs were slightly high and exceeded TAGM 4046. and soil samples collected from B-3 to B-6 show slightly high VOCs in B-3. Based on this report, Tyree recommended further remediation at this site is not necessary. groundwater monitoring wells be sampled on a quarterly basis and be monitored for natural attenuation . 10/18/2005 - Feng - Quarterly Monitoring Report, by Tyree, 4/2005 - 6/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. 90ppb BTEX and 20ppb MTBE in W-1. keep monitoring. 11/2/2005 - Feng - Quarterly Monitoring Report, by Tyree, 7/2005 - 9/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, increasing, 143ppb BTEX and 21ppb MTBE. W-2, 1 BTEX and 5 MTBE. W-3, 6 MTBE. 12/19/2005 - Feng - Quarterly Monitoring Report, by Tyree, 9/2005 - 11/2005. Active Lukoil gasoline retail/service station. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, decreased and 68 ppb BTEX and 11 ppb MTBE. W-2, non-detected BTEX and 3 ppb MTBE. W-3, non-detected BTEX, 4 ppb MTBE. EFR on W-1, 0.01 gallon of gasoline has been removed. 05/25/06-Sun-Based on the Quarterly Monitoring Report, prepared by Tyree,dated April 6, 2006, Total BTEX ranged from Non-detect to 29 ppb, and MTBE concentrations ranged from 3 ppb to 9 ppb. No free product was detected in any monitoring wells. Based on these low concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

(C) 05/10/06-Hiralkumar Patel. Left message for Kenny.
05/11/06-Hiralkumar Patel. Spoke to operator at Midcounty. she gave message to Kenny, but Kenny is out in field and will call back tomorrow morning. Received message from Kenny. they are going to do tank test again on Saturday May 13, 2006. 05/15/06-Hiralkumar Patel. Received call from Mr. Khouri. as per him, they found problem with fill line and after repair they did test again and system passed the test. asked him to send me letter report stating cause of problem and observations. Mr. Kasper from Midcounty Mechanical came to office to drop off tank test results and letter. as per letter, they have excavated the top of the tank and performed a test and found a leak on the vent line where it passes through the foundation wall to the outside of the building. replaced vent line and tested again and system passed the test. based on tank test results, case is closed. NFA sent out to Mr. Khouri."
Remarks: "PBS No: 2-31174 -PBS No. not found in UIS, may be invalid. REMOVING LINES AND DOING PRESSURE TEST"

Site Description:

Empire State Varnish Company, Inc. is located at 38 Varick Street, Brooklyn, NY. The Property is situated along the east side of Varick Street approximately 200 feet from the corner of Bridgewater Street in the Greenpoint section of Brooklyn. The irregular shaped Property also fronts on Bridgewater Street. The Property is zoned M3-1 and consists of an approx. 30,000 sq. ft. lot improved with several small buildings utilized for the production of varnish and paint. Empire has been producing paint and varnish on-site since the 1930's. The production process involves heating and mixing natural or synthetic resins with a vegetable oil. This mixture is then cooled and blended with a volatile solvent in large kettles. The oils primarily used by Empire are soybean and linseed oils. The volatile solvent commonly used by Empire is mineral spirits. The mineral spirits were stored on-site in underground storage tanks until the early 1980's. The facility currently uses only aboveground tanks or 55-gallon drums to store raw materials or finished product on-site. A consent order was completed to close the site under RCRA. Since this site is located across from Exxon site (Greenpoint), Exxon showed interest in acquiring this property to extract the free product in groundwater migrating from their site. RCRA agreed to transfer the Empire site to DER to close the site under the remediation program. Consent order has been amended to transfer the responsibility to DER. Empire has submitted a closure plan and ROUX Associates has submitted a report with the details of their investigation. Closure activities begun in August 2007. All the underground and above ground tanks were removed along with the drums, containers, chemical equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activities were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008.

Env Problem:

Other than physical hazards at the site there are no significant environmental hazards from this site. The groundwater at the site is contaminated but the contamination was contributed from the Exxon Mobil (Greenpoint) spill. Recent investigation results indicate the presence of free product in groundwater at the site. Closure activities begun in August 2007. All the underground and above ground tanks were removed along with the drums, containers, chemical

equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activities were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008. Now the ownership of the property is transferred to Exxon. The consultant for Exxon is installing extraction wells to remove the free product in the groundwater.

DEC Region: 2
Spill Cause: Unknown
Spill Class: C3
SWIS: 4101
Spill Date: 1994-11-15
Investigator: AXDORONO
Referred To: REPORT IS DUE
Reported to Dept: 1994-11-15
CID: Not reported
Water Affected: Not reported
Spill Source: Gasoline Station or other PBS Facility
Spill Notifier: Affected Persons
Cleanup Ceased: Not reported
Cleanup Meets Std: False
Last Inspection: Not reported
Recommended Penalty: False
UST Trust: True
Remediation Phase: 4
Date Entered In Computer: 1994-12-12
Spill Record Last Update: 2018-08-09
Spiller Name: ALEX JAVICK
Spiller Company: JEAN SATOSKI-OWNER
Spiller Address: Not reported
Spiller Company: 999
Contact Name: Not reported
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel. 3/28/05 - also see 8804104. KST 12/29/05 Transferred to E. Hampston via Spills Initiative. Wrote letter to owner requesting update/information. 11/02/06 Reassigned to Sun.(MS) 12/18/06 Sun sent letter certified mail to Jean Satoski (LIC Service Station), 49-01 Van Dam Street, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 2/27/07: Based on TCR results Sun/Sellberg sent a letter to Alex Javic of LIC Service Station requiring additional investigation be performed, and a report sent to the DEC by 4/13/2007. Letter is as follows: The investigation at a minimum must include the installation of soil borings/wells: around the area of the the former nine (9) 550-gallon underground storage tanks. Groundwater monitoring wells should be installed to the south (former location of S6), east (former location of S1) and west (former location of S4) of this area and groundwater flow direction will be determined. During drilling, the soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. Following well installation, a water sample must be obtained and

SPILL NUMBER 9107165 (Continued)

S106703575

submitted for EPA Method 8260/8270 analyses. Note that MTBE must be included on all soil and groundwater analyses. Prior to drilling activities, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, soil and groundwater sample analyses, site plan, and conclusions and recommendations must be submitted to the Department by April 13, 2007. (JS/MS) 4/5/07: MS spoke to Jill Haimson of Preferred Environmental (516)647-4211. She will submit a SIWP by 4/16/07. (JS/MS) 4/24/07: DEC received and approved the SIWP. SIR to be submitted by 7/16/07. Sent letter certified mail to RP and faxed same to consultant (Jill Haimson). (JS/MS) 6/6/07: MS called J. Haimson to check status of site investigation. Due to difficulties in obtaining on-site access, work had been delayed. SIR will be submitted later than original timeline. (JS/MS) 6/27/07: Preliminary results (field observations) were discussed by the DEC and the consultant via telephone on June 11th, and again on June 21st, 2007. RP is claiming an upgradient source to be the problem. (JS/MS) 9/21/07: An additional visit was done by the consultant in mid September to better assess surrounding properties as additional investigation is warranted. This investigation will include the evaluation of a suspected up-gradient source which may/may not be contributing to on-site groundwater contamination. (JS/MS) 10/18/07: Upon threat of legal action, Preferred finally submitted SIR (apparently RP had not given consent to submit?). DEC is currently reviewing. Onsite contamination exists in both soil and mainly groundwater across the site. Additional delineation will be necessary as well as possible ORC injection/treatment. (JS/MS) 11/14/07: Alex Javick met with JS and MS today to sign STIP and discuss remedial options. Plan is to start with ORC (iSOCS) - 6months, if not effective use chemical injection. Monitoring will take place quarterly. Submit signed stip to regional director on 11/15/07. (JS/MS) 11/26/07: STIP executed on 11/16/07 and returned on 11/21/07. Sent copy to owner via mail and consultant via email today. MS to discuss remediation details with Jill Haimson of Preferred. (JS/MS) 11/28/07: MS spoke to Jill. She will submit a RAP by 12/7/07 detailing use and placement of iSOCS as well as injection of regen-ox to boost remediation. (JS/MS) 12/17/07: DEC approved RAP as follows: ...The RAP proposes the application of Regen-Ox (manufactured by Regenesis) to address petroleum related soil and groundwater contamination at the site. In addition, Preferred proposed the installation of In-Situ submerged Oxygen Curtain (inFusionTM/iSOC) probes within four (4) onsite well locations. Pursuant to the Stipulation Agreement signed and dated effective November 16, 2007, the Department requires that within 45 days of the Department's approval of the RAP, Respondent shall implement the work outlined in the RAP. The Department approves the RAP with the following condition: Please specify the number, location and spacing between all proposed Regen-Ox injection points. RP has 45 days from RAP approval to perform the work outlined in the RAP. MS sent letter today to RP and will email Preferred tomorrow regarding injection points follow-up. (JS/MS) 1/17/08: Alex Javick in to meet about remedial systems. Will send STIP to Ms. Jean Satoski once received address from Mr. Javick. (JS/MS) 1/22/08: Stip #2 sent today to Ms. Jean Satoski at 84 Gun Club Road, Northport, NY 11768. Signed stip is due by 2/5/08. Added following to original letter to include operator's cooperation and Ms. Satoski's roles as RP: Presently, the operator of your station has initiated the required actions to

S106703575

address the above and has been fully cooperating with the Department. However, according to Department records, you are the certified property owner of 49-01 Van Dam Street, LIC, NY 11101 and therefore, also a responsible party. Signed STIP is due by 2/5/08. (JS/MS) 2/27/08: Received signed Stip from Satoski. Signed by Regional Director, Region 2 (JS/MM) 3/4/08: Sent photocopy of executed Stip to Satoski. Informed J. Hamison from Preferred about executed stip signed by both parties. (JS/MM) 4/17/08: RAP not executed yet. Satoski and Javic have not agreed on payment. Sent out violation of stip letters. Waiting for responses. (JS/MM) 4/22/08: Called Javic, not in office. Expecting phone call today. (JS/MM) 5/18/08: Received already approved RAP from Preferred. (JS/MM) 6/23/08: No info received from Preferred. (JS/MM) 08/11/08: Transferred to Kolleeny/Mandac (JK/MM) 12/12/08: Received Quarterly Groundwater Sampling/Baseline Sample Report from Bill Schlageter of Preferred Environmental dated 11-19-08. Under review. Next sampling event in December 2008. (JK/KG) 12/16/08: RAP implemented. May 28 and 29, 2008 - 14 wells were installed (4 groundwater monitoring wells, 4 solinst emitter wells, 6 chemical injection wells) July 24 and 25, 2008 - Regen-Ox injected into 6 injection wells August 21, 2008 - Solinst Waterloo Oxygen Emmitter Probes were installed in 4 wells September 8, 2008 - Groundwater samples were collected at MW-1, 2, 3, 4 and IW-1. Total VOCs: MW-1 2,192 ug/L, MW-2 11,950 ug/L, MW-3 19,898 ug/L, MW-4 7,963 ug/L, IW-1 3,070 ug/L IW-6 and E-2 were found to have product, 1.47 ft and 0.04 ft respectively. Wells are checked biweekly for product. If product is encountered it is hand bailed. Dissolved oxygen concentrations have increased since oxygen emmitters were installed. Next sampling event is scheduled for December 2008. (JK/KG) 12/18/08: Spoke with Bill Schlageter (Preferred Env.). I asked him about the well with 1.47 ft of product. He said Alex Javic is still checking the well twice a week. He is bailing the product and disposing of it into the waste oil tank on site. Bill said the product is about an inch to a couple of inches. He will send someone out within the next week to verify how many inches of product are in the well and will send me an email with the details. Based on the amount of product they will need to be more aggressive in removing the product. I suggested a vac truck. I also asked Bill to have the wells surveyed and include GW flow direction, gradient, and scale on the map. (JK/KG) 12/30/08: Spoke with Jill Haimson (Preferred Env.) about product in well. She will talk to Bill and find out if someone went to the site to gauge the product. She will email me the details. If no one went to the site she will have someone go this week. (JK/KG) 01/29/09: Have not received details about product in well or product recovery. Emailed Jill and Bill requesting an update. (JK/KG) 02/02/09: Rec'd following email from Schlageter on 1/29/08. Since we spoke, Preferred was out the site twice including a quarterly sampling event conducted January 23, 2009. During the first visit (January 5, 2009) , approximately eight inches of product was present in well (IW-6), none was detected in any other of the wells. The product was bailed from IW-6 and disposed of, subsequent to bailing, Preferred gauged the wells for twenty minutes and no product recharge was observed. During the January 23, 2009 sampling event, approximately 4 inches of product was detected in IW-6, again no recharge of product was observed subsequent to removal. No product was detected in any of the other wells on January 23, 2009. A complete description of monitoring and sampling events will be provided in the Quarterly sampling report to be submitted upon

S106703575

receipt of sampling data. Please feel free to contact me with any questions or concerns. Regards, Bill (JK/KG) 02/03/09: Responded to Bill, After talking with Jon, please continue with product recovery on a regular basis. If the amount of product increases or doesn't appear to be decreasing, a more aggressive remedial measure will be necessary. Based on the VOC concentrations in MW-2 and MW-3, further delineation or more injections may be necessary. First, I will need to review the results of the latest sampling event (when they are ready). (JK/KG) 04/14/09: Rec'd pdf of Quarterly Groundwater Sampling Report on 4/13/09; under review. (JK/KG) 04/15/09: Rec'd hardcopy of QMR. Wells were surveyed; groundwater flow direction is to the southwest. Weekly product recovery will continue and the next quarterly event is scheduled for April 2009. Groundwater on 1/23/09: MW-1: BTEX - 1,422 ug/L, Total VOCs - 2,533 ug/L, MTBE - 170 ug/L MW-2: BTEX - 3,590 ug/L, Total VOCs - 4,909 ug/L, MTBE - 180 ug/L MW-3: BTEX - 15,150 ug/L, Total VOCs - 21,338 ug/L, MTBE - 2,700 ug/L MW-4: BTEX - 11,174 ug/L, Total VOCs - 21,425 ug/L, MTBE - 1,600 ug/L IW-1: BTEX - 1,715 ug/L, Total VOCs - 2,739 ug/L, MTBE - 280 ug/L IW-4: BTEX - 1,652 ug/L, Total VOCs - 2,501 ug/L, MTBE - 200 ug/L E-4: BTEX - 4,664 ug/L, Total VOCs - 8,201 ug/L, MTBE - 1,700 ug/L (JK/KG) 04/20/09: Spoke to Schlageter on 4/16/09. I asked him to include historical analytical data in future reports. We discussed the product in IW-6; he said it appears to be old gasoline and the station manager is still hand bailing it. The product is being disposed of in the on-site waste oil tank. I told Schlageter that the product can not be disposed of in the waste oil tank. Preferred has gauged the wells since the January sampling event. I asked him to send me the gauging data by Monday (4/20). (JK/KG) 04/28/09: Rec'd March gauging data (in eDocs). On 3/6 product in IW-6 was about 6 inches and on 3/27 it was about 0.25 inches. (JK/KG) 05/04/09: Letters sent to J. Satoski and A. Javik on 4/30/09. A more aggressive approach to product recovery should be implemented by using mobile vacuum extraction. A RAP should also be prepared and submitted. It should propose additional remedial actions, such as another round of RegenOx injections. The next QMR is due 6/19/09. (JK/KG) 05/07/09: Spoke to Mr. Javick, he said he doesn't have the money to pay for the cleanup. He was reminded that he signed the Stipulation Agreement and that a report is due in June. (JK/KG) 06/22/09: Rec'd call from Bill Schlageter. He said quarterly monitoring has not been performed and Mr. Javick is not willing to pay for the cleanup. I called Mr. Javick and he said Ms. Satoski will pay 100%. I then spoke to Ms. Satoski and she confirmed that she has agreed to pay for remediation of the site. She will advise Preferred to proceed with site work once some checks clear in her bank account. Preferred is prepared to submit a supplemental RAP. (JK/KG) 06/23/09: Rec'd Supplemental Remedial Action Work Plan dated 6/23/09 and submitted by Preferred Environmental. Under review. (JK/KG) 06/25/09: Rec'd revised SRAWP dated 6/24/09. SRAWP proposes additional injections of RegenOx into the existing on-site injection wells, monitoring of groundwater field parameters, continued groundwater treatment via in-situ emitter probes, continued quarterly groundwater monitoring, and submission of monitoring reports to NYSDEC. A round of groundwater samples will be collected from monitoring wells MW-1, MW-2, MW-3, and MW-4 prior to the RegenOx injections. If free-phase product is detected in well IW-6, the product will be removed using vacuum-enhanced fluid recovery prior to the injections. The SRAWP was approved and letters were sent to Satoski and Javick. The deadline

S106703575

for submission of a groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, is August 7, 2009. The deadline for submission of a report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results is September 25, 2009. Email for Satoski is williamtaggard@mac.com (JK/KG) 07/20/09: Rec'd the following email from Schlageter: We will be conducting the injection this week (Monday-Wednesday) at 49-01 Van Dam Street, LIC. Prior to the injection, the required pre-injection sampling will be conducted from monitoring wells. Bryan from our office will be on-site and as always, you can contact me or Jill with any questions. Thank You, Bill (JK/KG) 08/31/09: Spoke to Haimson. She didn't realize a report with the results of the baseline sampling was due 8/7/09. The report will be prepared and submitted next week. (JK/KG) 09/30/09: Follow-up with Preferred as the groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, and the report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results have not been submitted. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 03/23/2010: Received a pdf copy of Quarterly Monitoring Report for October 2009. DL to eDocs. Will review. AD 07/27/2010: Received an e-mail from Mr. Schlageter: Ainura: As we discussed, attached is the supplemental RAP for the above-referenced project. Please review and contact me to discuss. Thank you Bill William J. Schlageter Operations Manager/Senior Hydrogeologist Will review. AD 08/24/2010: Reviewed the supplemental work plan. It proposes to conduct EFR on a weekly basis for two months period on the site wells exhibiting a free product (wells IW-6 and E-4); to continue employment of 3 out of 4 oxygen emmitters; to conduct monthly monitoring activities; to perform air sparging of aquifer; and once free product has been addressed, to rehabilitate and re-install emitter probe into E-4 and reconnect oxygen supply to this well. Discussed this work plan with J. Kolleen of DEC. As it was noted, air sparging method usually combined with SVE to control vapors in unsaturated zone. Since SVE is not proposed here, implementation of air sparging alone is questionable. AD 08/26/2010: Called and spoke with B. Schlageter of Preferred. Requested to revise the work plan. AD 08/11/2010: Received a pdf copy of the 1st quarter 2010 GW monitoring report. DL the report to eDocs. AD 09/16/2010: Received an e-mail from Bill: Ms. Doronova: As we discussed, attached is the revised Supplement to the Remedial Action for the above-referenced property. The Supplemental action has been revised to omit the mobile air-sparg treatment upon your request. Please review and contact me with any comments. Upon your approval, we will implement the proposed action within one week. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 www.preferredenv.com DL the work plan to eDocs. Will review. AD 09/17/2010: Reviewed the revised work plan. It proposes to conduct weekly VEFR on two site wells (IW-6 and E-4) which exhibit free product, for a period of two months. Operation and maintenance of three oxygen emitters at the site will continue on a monthly basis. Preferred also recommends to suspend quarterly GW monitoring for a six months. AD 09/20/2010: Discussed this WP with J. Kolleen of DEC. AD 09/21/2010: Issued and

S106703575

sent an approval letter to Ms. Joan Satowski with the following comments: " Although Preferred requests that quarterly groundwater monitoring at the site be suspended for six months, the Department requires that quarterly groundwater monitoring continue; " Following completion of the VEFR events, quarterly groundwater monitoring data should be evaluated. If the results do not indicate significant improvement of groundwater quality at the site, and/or if free product continues to appear in the two affected wells, then an alternative remedial measure should be proposed to DEC. DI pdf copy of the letter to eDocs. AD 04/11/2011: Received an e-mail from Bill: Ainura: Attached is the quarterly sampling report for February 2011 for the above-referenced property. The report summarizes activities conducted from November 2010 through February 2011. Results of the quarterly sampling are favorable significant reduction of dissolved phase VOCs, however some residual free product remains present within IW-6. The next quarterly sampling is scheduled for May 2011. Please feel free to contact me with any questions. Thank you Bill William J. Schlageter DL the report to eDocs. Will review. AD 06/30/2011: Reviewed the report. It states that on February 2011 sampling, thirteen of the fourteen on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.49 ft). Floating product was also observed during the prior monitoring events in October 2010(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). An absorbent pad was installed within IW-6 to address free product. Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. Depth to GW water ranged from 6.48 ft. (E-2) to 8.37 ft. (MW-4) bgs. Groundwater flow has historically been determined to have a westerly influence within both northwesterly and south westerly flows historically observed. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for on-site sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest TVOCs was detected in MW-3 (7,625ug/L), which is located crossgradient of the tank farm and downgradient of the Luk Oil Station to the southeast. Concentrations of BTEX detected in groundwater samples ranged from 5,110 ug/L in the MW-3 to 61.5 ug/L in the MW-1 at an upgradient location, MTBE concentrations ranged from 17 ug/L in the IW-1 (crossgradient) location to 1,100 ug/L in the MW-3 location. Preferred states that TVOCs have dropped across the site by up to 94% and by more than 50% since the implementation of the supplemental remedial action. They report that MTBE concentrations have also significantly decreased across the site and conclude that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. The next quarterly sampling suppose to be conducted in May of 2011. AD 11/2011: Did not received ane reports. AD 01/12/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit all missing reports for 2011. Later received an e-mail from him saying: Ms. Doronova: As we discussed attached is the report from October. Please note that due to construction at the station property, we were forced to delay the next sampling event sampling until January 2012. Further, although concentrations continue to decrease, we have identified that there is an off-site contribution to the groundwater impacts believed to be the Luk Oil property across Gale Avenue (currently AmeriGas ??) Owner is Leelimits Petroleum. We are

Map ID

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

SPILL NUMBER 9107165 (Continued)

S106703575

petitioning to drop the sampling to a bi-annual schedule. Thank you, Bill DL the report to eDocs. Will review. AD 03/09/2012: Reviewed the report. It states that quarterly sampling activities resumed on August 2011 subsequent to the supplemental remedial efforts, which including VEFR activities and continued oxygen injection. The August 2011 quarterly sampling event included the following: " Measurement for floating product; " Measurement of water table elevation, temperature, and dissolved oxygen; " Purging and sampling of four monitoring wells, two injection wells and one emitter well; " Laboratory analysis of seven groundwater samples; and " Preparation of summary report including data summary and a groundwater flow map. Groundwater flow in August of 2011 was determined to be to the northwest towards Newtown Creek. During the August 2011 sampling, thirteen (13) of the fourteen (14) on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.50 ft). Floating product was also observed during the prior monitoring events in February 2011 (.49 ft.), October 2010 (.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. Concentrations of BTEX detected in groundwater samples ranged from 2,129 ug/L in the MW-4 to 54.1 ug/L in the MW-1. MTBE concentrations ranged from 220 ug/L in the MW-2 to 7.1 ug/L in the IW-1 location. The consultant states that August 2011 groundwater quality data was compared to the historic groundwater data developed for the property. To date since the initiation of remedial activities at the Subject Property, TVOCs have dropped by more than 61% since the last quarterly sampling event in February 2011. BTEX and MTBE concentrations have also significantly decreased across the site. This indicates that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. AD 09/19/2012: Sent an e-mail to B. Schlageter requiring submission of all missing reports. AD 12/2012: Did not receive the reports. Called and left a message. AD 02/2013: Spoke with B. Schlageter regarding reports submission. The property owner is very sick and Preferred did not visited the site for several months. He will get back with the site status update. AD 06/04/2013: Called and spoke with Bill of Preferred regarding this site. The site owner contacted them recently, so they are planning to start groundwater monitoring soon. Bill will look for unsubmitted reports and will give an update. AD 01/17/2014: Called and spoke with B. Schlageter of Preferred Env. No GW monitoring was done at the site since we spoke last time. Site owner was uncooperative. Requested to submit the most recent owner's contact information. Suggested to visit the site, sample all site wells and submit a summary report with conclusions and recommendations for further actions. AD 04/12/2016: Called and left a message to Mr. Joseph Macchia - who is listed as an authorized representative in PBS file. AD 04/13/2016: Called and spoke with Mr. William Tagert, (631-757-8829). He is a site owner's son. Because of his mather's health and old age, Mr. Tagert is looking after her business. Explained to him that the spill case is still open, and that he needs to contact environmental consultants to do a site current situation assessment. AD 04/14/2016: Received a call from Mr.

SPILL NUMBER 9107165 (Continued)

S106703575

Tagert. He said that he contacted Bill Schlageter from Preferred Environmental and scheduled site visit with sampling of wells. A report with conclusions and recommendations for further actions will be submitted to DEC. AD 04/26/2016: called and spoke with Mark of Preferred. He confirmed that his company gave a proposal to Mr. Tagert and is now waiting for his response. AD 02/08/2017: called and spoke with Mr. Tagert. He told me that he hired Preferred Env. again and they are planning to sample site wells. Called and left a message for Bill Schlageter. AD 09/27/2017: Called and spoke with Mr. Schlageter. He said that they performed GW sampling at the site in March 2017 and sampled 6 wells. Requested to submit the report. It was submitted shortly via e-mail. Checked the report. The contaminant levels are dropped significantly according to the lab results in comparison to historical data. The most contaminated well MW-3 has 1,600 ppb of TVOCs (was 21,000ppb in 2009). Mr. Schlageter said that there are some issues with the payments from the site owner, so they did not propose any remediation at the site yet. AD 09/28/2017: called and left a message to Mr. Tagert. AD 09/29/2017: Received a call from Mt. Tagert. Discussed the site conditions. Mentioned that the contaminants levels dropped significantly and that additional rounds of sampling is needed to confirm down gradient trend, and that ORC socks or EFR should be considered for the site to expedite the cleanup. Mr. Tagert will contact Preferred Environmental to discuss further actions for the site. AD 11/2017: Called and left a message to Mr. Schlageter. AD 01/25/2018: Called and spoke with B. Schlageter regarding GW sampling report. They just got their results from the lab. The report will be submitted to DEC in two weeks. AD 04/18/2018: Called and left a message to Bill. AD 07/03/2018: Called and left a message to Mr. Schlageter. AD 08/02/2018: Called and left a message to Mr. Schlageter. Sent him an e-mail requesting GW sampling report submission. AD 08/09/2018: called and spoke with Mr. Schlageter. He will submit the report tomorrow, August 10th, 2018. AD"

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Acres: 0.51
HW Code: 224129
Record Add: 10/28/2008
Record Upd: 04/10/2018
Updated By: SXDEWES

Site Description: Location: The 0.51 acre site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is located approximately 1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007

as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Meeker Avenue Plume Trackdown Site Characterization in the area of this site was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (approximately 138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). -Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 8,200,000 ug/m³, and in indoor air up to 170 ug/m³. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m³, and in indoor air up to 12 ug/m³. Significant Threat: The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

DEC Memo: "6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain

visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personnel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4' in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260 Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington) 8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal from the site building. IPT to confirm the permits needed before initiating work. URS will be providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel

beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)" "Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground."

Spiller Company: JOHN P PICONE CONSTRUCTIO
Spiller Address: Not reported
Spiller Company: 001
Contact Name: JIMMY PYNN
DEC Memo: "Prior to Sept. 2004 data translation this spill Lead_DEC Field was
VOUGHT 6/12/2002-VOUGHT-Non-regulated material. Facility is
permitted for bulkhead construction as per NYSDEC Permits. Spill
closed by Vought. 07/16/02 Picone was installing new timber fenders
along the east side of Whale Creek using creosote treated fenders.
The cresote from newly installed fenders bled for a time into the
water, thereby causing a sheen on the water surface. DEC instructed
Picone to install an oil boom along the fender and a second
containment boom to the north of the work zone. The fender
installation is now complete and a sheen is no longer visible. Picone
is due to switch out the booms again this week. The work is complete
and a sheen is no longer visible. jmr "

Remarks: "SPILLER WAS INSTALLING SOME CREOSOTE TIMBERS AS PART OF A NEW BULK
HEAD. THERE IS SOME TYPE OF SHEEN COMING OFF OF THE TIMBERS. CALLER'S
AGENCY IS THE ENVIRONMENTAL CONSULTANT ON THE SITE. AREA IS CONTAINED
BY SOME DOCKS. SPILLER HAS BEEN DIRECTED TO PUT A BOOM IN PLACE.
SPILLER TO MAKE ARRANGEMENTS FOR CLEAN UP. CALLER HAS BEEN WORKING
WITH JENNIFER ROMMEL ON THE PROJECT AND ALREADY LEFT HER A MESSAGE AS
WELL."

DEC Memo: "DEC Hassan Ahmed made a site visit. 07/03/08-HRAHMED-Ahmed went for investigation. DEP John Rosso, James Pynn and Brian Alford from Bidwell Environmental were present at the site. As per DEP Pynn, during the Construction crews were cutting the pipe that ran between the abundant tank and the building, some residual oil spilled on the excavation area due to gravity. The contractor immediately pump the spilled oil into steel drums. Ahmed took some pictures, minor stain

Remarks: on the soil was observed. Ahmed told DEP Pynn that the contractor has to excavate more to take out all contaminated soil, atleast using a PID to determine the extent of excavation. DEP Pynn told he will send a report summerizing the excavation work along with some pictures which will be taken after the excavation. 07/17/08-HRAHMED-Ahmed received email from DEP John Russo and some pictures taken after the excavation work. As per John, a CM EH&S Inspector took PID readings in the excavation area after clean-up was performed. The readings were taken at the north, south, east, and west side walls of the excavation using a MultiRAE multi-gas meter which includes a PID. The readings were all non-detect (zero) for VOCs. As per the picture the excavation looks clean. This case is closed. "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRINGOLD 8/13/2004 Sangesland spoke with Ernest Livingston. He said as a pile was being hammered into place, they may have ruptured an old buried tank. Unknown what the material is, but it is green. Several years ago they had a similar Green Spill which turned out to be Hazardous. They shut down the work site and called a Haz Mat company to figure things out. No product is entering the creek. It is all contained in the excavation. Krimgold responded to the site. 8/18/04 - AUSTIN - RECD CALL FROM WINNIE LANHAM OF DEP HEALTH AND SAFETY FOR SITE(718-609-8715). SHE INDICATED THAT DEP HAD TAKEN SAMPLE OF NON-AQUEOUS GREEN LIQUID (ABOUT 50 GALS OF TOTAL 1000 GALS FLUID RECOVERD BY CLEAN VENTURES (THEIR CONTRACTOR)), AND WAS AWAITING PRIORITY POLLUTANT RESULTS. SHE WILL FAX LOCATION MAP SO THAT WE CAN FORWARD TO JENN ROMMEL FOR POSSIBLE DETERMINATION AS TO WHAT THIS MATERIAL MAY BE AS PART OF MOBIL GREENPOINT PLUME PROJECT. - END 9/7/04. J.Krimgold left message for Winnie Lanham. 9/8/04.

J.Krimgold spoke to Ms. W. Lanham (DEP). They completed removal of contaminated soil in construction area. The material spilled appeared to be an antifreeze. Contaminated soil was disposed of as petroleum contaminated. Ms. Lanham will submit a report in a week. They will also perform soil delineation to assure no contamination left behind. 4/20/05. J.Krimgold reviewed the letter report submitted by DEP on April 20, 2005. No contaminants were found above TAGMs levels. NFA letter. "

- . Waste name: Not Defined
- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

FINDS:

Registry ID: 110004334872

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013752313

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "12/15/08 - Raphael Ketani. The spill was called in by John Browne of the NYC Dept. of Consumer Affairs Enforcement Section (718) 349-0465. A scully nozzle had come apart and there was a 4 gal. spill of #2 oil to a concrete floor at 245 Meserole Avenue, Brklyn. A cleanup crew from Reliable Fuel (718) 845-0500 was enroute. 12/16/08 - Raphael Ketani. I tried to contact Reliable Fuel, but could only leave a message. Richard Santoro of Reliable Fuel called to say that the Dept. of Weights and Measures was conducting a 100 gal. fuel transfer for a pump. The ring came off the hose at the end and the spill occurred. Speed Dri was put down and the spill was cleaned up. The pump is back in business. Mr. Browne called me back and said that he kept his truck on site until the cleanup was completed. Based upon the small size of the spill and the quick cleanup, I am closing the spill case."
Remarks: "A scully nozzle came apart causing oil to spill onto the concrete floor. Spill is contained and clean up crew is enroute by Reliable fuel. (Note: See http://www.scully.com/ss_pproduct.html for what a scully nozzle is, and how it works - R. Austin)"

Updated By: JXGRECO
Site Description:

Location: The 0.88-acre site is located at 27-10 49th Avenue in the Borough of Queens, NY in a commercial/urban area. It is situated at the southeast corner of 49th Avenue and 27th Avenue. The site is bordered to the east by the Dutch Kills, to the south by commercial property, to the west by 27th Avenue, and to the north by the 49th Avenue. The Dutch Kills is part of the Newtown Creek NPL site. Site Features: The site currently consists of a two-story warehouse with offices located on the first and second floor. The remainder of the site is paved parking for the building. Current Zoning and Land Use: The site is currently zoned as manufacturing M3-2 and is surrounded by warehouses and industrial uses. The nearest residential properties are located 0.54-miles east of the site. The site is currently vacant and rehabilitation is pending. Past Use of the Site: The site was developed with one small commercial building of unknown use, which was demolished sometime between 1954 and 1961. Sometime between 1961 and 1966, a larger building was developed on the subject property, was operated by Truck Sales & Services. The property has been owned by Kinloch Company Inc. since 1990. Black Bear Lubricants Inc., which mixed and packaged engine oils, hydraulic oils, gear lubricant, transmission oils, grease, and industrial lubricants on the property, operated on the property since at least 2000. Black Bear ceased operations in December 2017. Walter s Limousine Service and Carey Limousine both operated on the property since at least 2000. Walter s Limousine Service ceased operation sometime between 2005 and 2010. Carey Limousine is currently still in operation. Site Geology and Hydrogeology: A total of 45 shallow borings were advanced to depths between four and 12 feet below the ground surface (bgs). The stratigraphy of the site, from the surface down, consists of approximately 9 feet of fill material containing brick, concrete, fly ash, slag, fine silty sands, clay, and fine gravels. This urban fill is underlain by native material consisting of fine to medium sands with some silt. Groundwater was encountered between 8 and 12-ft bgs. General flow was reported to be toward the east in the direction of the Dutch Kills. The Dutch Kills flows from the north toward the south.

Env Problem:

Nature and Extent of Contamination: In late 2017 and early 2018, intrusive environmental investigation work was performed for a potential property transaction related to the site. Based on the petroleum contamination which was encountered Spill No. 1802299 was generated on 5/29/2018 by the owner s representatives. The focus of the remedial investigation was aimed at petroleum, as closed USTs, oil/water separators, hydraulic lifts and petroleum repackaging operations were known to have existed in the past. Soils and

groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PCBs. Soil vapor and indoor air was analyzed for TO-15 contaminants. Contaminants of concern identified include chlorinated VOCs (including tetrachloroethene (PCE) and trichloroethene (TCE)), SVOCs, metals including barium and lead, and PCBs. Soil Samples were collected from 2 to 12-ft bgs based on observations and field screening. Elevated concentrations of CVOC PCE were detected in the soil samples with a maximum concentration of 61.6 parts per million (ppm). The maximum barium and lead concentrations were 1,310 and 3,850 parts per million respectively. These concentrations exceed the Protection of Groundwater SCOs and do not exceed commercial SCOs. Groundwater A total of four SVOCs were detected in groundwater. Chrysene was reported with a maximum concentration of 123 ppb, fluoranthene was reported at 652 ppb, phenanthrene was reported at 1,010 ppb and pyrene was reported at 721 ppb. A groundwater sample collected from a temporary well nearest the Dutch Kills had a reported total PCB concentration of 0.972 ppb. Soil Vapor Soil vapor concentrations of PCE ranged from 480 to 1,100 ug/m3. TCE ranged from 39 to 120 ug/m3. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation
Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters

with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

ENG CONTROLS:

Site Code: 58835
HW Code: 241002
Control Code: 18
Control Type: ENG
Date Record Added: 03/18/2016
Date Rec Updated: 03/25/2016
Updated By: NNCRAWFO
Site Description:

Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Env Problem:

Nature and Extent of Contamination Prior to Completion of Remediation
Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and

Site Description: Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs

(benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at

concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Env Problem:

southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and

Site Description: Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site

Env Problem:

redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Nature and Extent of Contamination Prior to Completion of Remediation

Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth

Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem:

The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by

fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Site Code: 58835

Site Description: Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this

facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site.

Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation

Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Site Code: 58835

Site Description: Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates

that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation
Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).
Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Site Code: 58835

Site Description: Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation
Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI,

surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Site Description: Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek.

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation
Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs

(benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethylhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117).

Health Problem: The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Site Description: Location: The 1.21 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Porter Avenue between Anthony and Lombardy Streets. Site Features: The site is covered by several two-story buildings and two (2) separate open lots. The site is surrounded by other commercial and industrial properties. A large National Grid energy facility is located one block south of the site across Lombardy Street. Sergeant William Dougherty Playground is located one block northwest of the site across Anthony Street, and the elevated Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block southwest of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is

ACME STEEL PARTITION CO (Continued)

S118950559

currently used as a marble and granite distribution warehouse and a fruit distribution warehouse at 72 Anthony Street, and a City-Wide truck maintenance shop at 498 Porter Avenue. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a brass foundry from the 1960's to 1993, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009. Based on an extensive records search and several inspections, it was determined that waste paint, waste oil, waste degreasers, and waste water precipitate were generated at the property during site operations. Numerous floor drains with unknown outfall locations existed within the property, and were identified as potential injection wells. Several storage tanks that were used as dip tanks for degreasing products were located in the northeast corner of the site, where evidence of releases existed. In addition, the open lot adjacent to the 72 Anthony Street building was used as a drum storage area that held all chemical wastes from the surrounding ACME facilities. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~110' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~130-135' below ground surface). Groundwater is approximately 45-55' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,000' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminants of concern at the site are tetrachloroethene (PCE) and trichloroethene (TCE). Both PCE (up to 6,900 ppb) and TCE (up to 12,000 ppb) have been found at concentrations well above the Part 703.5 class GA standard of 5 ppb. The plume of PCE and TCE-contaminated groundwater has migrated at least 400' off-site. - Soil PCE has been found in on-site soils at concentrations up to 220 ppm, which is above the soil cleanup objective for unrestricted use (1.3 ppm). - Soil Vapor Concentrations of PCE have been found up to 19,000 ug/m³. Concentrations of TCE have been found up to 1,300 ug/m³. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

Updated By: JXGRECO

Site Description: Location: The site is located at 513 Porter Avenue in the Greenpoint section of the Borough of Brooklyn. It is bounded by Cherry Street to the north, Porter Avenue to the east, and Anthony Street to the south. Site Features: The site was once occupied by 5 contiguous, 1-story masonry construction buildings with an area of 39,000 sq. ft. (181.95 ft. x 200 ft.) constructed in 1950 (now demolished). Sergeant William Dougherty Playground was located immediately west of the site (now partially demolished and closed). The eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located immediately north of the site. A small residential area is located two block south of the site. Current Zoning and Land Use: The site is located in a manufacturing area. The site is currently used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project scheduled which began in November 2014. Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. The property was acquired via eminent domain by the NYSDOT as part of the Kosciuszko Bridge replacement project in 2010. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminants of concern at the site are tetrachloroethene (PCE), trichloroethene (TCE), and lead. PCE (up to 70 ppb), TCE (up to 80 ppb), and lead (up to 254 ppb) have been found at concentrations slightly above their Part 703.5 class GA standards of 5, 5, and 25 ppb respectively. - Soil Vapor PCE has been found in soil vapor at concentrations up to 11,000 ug/m³. TCE has been found at concentrations up to 106 ug/m³. - Soil PCE has been found in on-site soils at concentrations up to 2.2 ppm, which is slightly above the soil cleanup objective for unrestricted use (1.3 ppm). Lead had been found up to 6,400 ppm, which is well above the soil cleanup objective for restricted residential use (400 ppm). Lead-hazardous soils were also identified on-site (TCLP levels up to 35 mg/l; 5 mg/l standard). Significant Threat: No significant threat determination has been made at this time.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public

Site Description: Location: The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site. Site Features: The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site.

FORMER NEY SMELTING AND REFINING COMPANY (Continued)

S113916765

Current Zoning/Uses: The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment. - 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories - 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses: In the early 1900's the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003. Site Geology and Hydrogeology: Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeast Miscellaneous: There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem:

The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab. The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds. Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Site Description:

Location: The approximately 1/2 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the northeast corner of the intersection of Lombardy Street and Varick Avenue. Site Features: The site is completely covered by two (2) masonry block buildings. Current Zoning and Land Use(s): The site is zoned for manufacturing. The site is currently utilized as a warehouse. Numerous commercial and industrial properties are located to the north, east, and west of the site. A National Grid energy facility is located south of the site across Lombardy Street. The Brooklyn-Queens Expressway (I-278) is located 1 block north of the site. A residential area is located 2 blocks southwest of the site. Newtown Creek is located 4 blocks east of the site. Past Use(s) of the Site: The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular area was specifically targeted for investigation based on its previous use as a lacquer storage facility in the 1930s, as a soap manufacturer from the early 1950s to 1989, and on data collected by the Department during investigations conducted at an adjacent site between 2007-2009 (ACME Steel - Brass Foundry) which indicated the presence of an additional source area along Varick Avenue between Anthony and Lombardy Streets. This investigation was conducted in several phases, and was completed in the Spring of 2013. Site Geology and Hydrogeology: The site is underlain by a sand unit (~110' thick) with a discontinuous clayey silt/silty sand unit within the sand unit, and the Raritan formation. Groundwater is present at a depth of approximately 45-50' below ground surface in the vicinity of the site. Groundwater flows north towards Newtown Creek, which lies approximately 1,600' northeast of the site.

Env Problem:

Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 8,400 ppb, and in deep groundwater up to 20,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. - Soil PCE has been found in soil up to 23,000 ppm @ 1-1.5' below grade adjacent to a site-related cesspool, which is well above the soil cleanup objective for unrestricted use (1.3 ppm). Significant Threat: The site poses a significant environmental threat due to the ongoing release of PCE from source areas into soil and groundwater and a significant threat to public health due to the concentrations of PCE detected in groundwater and soil, in conjunction with the proximity of occupied structures.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in on-site structures should be evaluated. In addition, off-site sampling indicates soil

Site Description: Location: The 1.01 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. Site Features: The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block south of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street. Historical Use(s): The Department began a Site

Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009. Based on an extensive records search and several inspections, it was determined that waste paint, waste oil, waste degreasers, and waste water precipitate were generated at the property during site operations. Numerous floor drains with unknown outfall locations existed within the property, and were identified as potential injection wells. In addition, an underground storage tank that was used as a dip tank and for storing degreasing products was located in the northwest corner of the site. Several pipes that originated from the dip tank discharged to a floor drain in the loading dock area.

Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 ppb, well above Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). The plume of TCE-contaminated groundwater has migrated at least 400' off-site. - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 3,100 ug/m³. Concentrations of TCE in soil vapor have been found up to 4,500 ug/m³, and in indoor air up to 13 ug/m³. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located 4 blocks to the north. Current Zoning/Use(s): The site is zoned for (M1) manufacturing. According to the NYC Planning, M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently used for sheet metal fabrication. Historical Use(s): The Department began a Site Characterization in this area during the spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on interviews with multiple residents indicating the site's former usage as a commercial dry cleaner from the 1950's to the mid 1990's (including one former employee), and a Department database which lists the cleaners as a generator of F002 waste (spent halogenated solvents). The Meeker Avenue Plume Trackdown Site Characterization in the area of the site was conducted in several phases, and was completed in the summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-8' thick), a sand/silty sand unit (approximately 100' thick), a discontinuous clay/silt unit (approximately 1-10' thick) within the sand/silty sand unit, a sand and gravel unit (approximately 1-3' thick), and the Raritan Formation (located 108-113' below ground surface). Groundwater is approximately 24' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 3,000' northeast of the site.

Env Problem:

Nature and Extent of Contamination: Groundwater: The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 46,000 ppb, which is well above the Part 703.5 class GA standard of 5 ppb. PCE has also been found in deep groundwater (atop the Raritan clay) at 4,500 ppb. The plume of PCE-contaminated groundwater has migrated at least 1,200' downgradient of the site. Soil: PCE has been found in on-site soils at concentrations up to 273 ppm, above the soil cleanup objective for commercial use (150 ppm). Soil Vapor: PCE has been found in soil vapor beneath the site at concentrations up to 48,200,000 ug/m³. TCE has been found at concentrations up to 230,000 ug/m³. Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE from source areas into soil and groundwater.

Health Problem:

Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

. Waste code: D000

. Waste name: Not Defined

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

SHWS:

Program: HW
Site Code: 505634
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.67
HW Code: 224211
Record Add: 03/18/2015
Record Upd: 04/10/2018
Updated By: SXDEWES
Site Description: Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a

EPA ID Number

GOODMAN BROTHERS STEEL DRUM CO INC (Continued)

1000190383

storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used by a furniture manufacturing company. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of \$28,000 for numerous violations. In February 2003 a limited subsurface investigation was performed at the site; a total of nine soil borings were installed with soil samples collected from all nine borings and groundwater samples collected at four locations. The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site, and appears to be a perched unit. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).

Env Problem:

Nature and Extent of Contamination: - Groundwater The primary contaminants of concern at the site are tetrachloroethene (PCE) and its daughter compounds (trichloroethene, cis-1,2 dichloroethene and vinyl chloride); 1,1,1, trichloroethane (1,1,1 TCA); BTEX compounds (benzene, toluene, ethylbenzene, and xylene); and PCBs. These compounds have been found well above their respective Part 703.5 Class GA standards (shown in parenthesis). PCE has been found up to 30,000 ppb (5 ppb); trichloroethene (TCE) up to 2,800 ppb (5 ppb); cis-1,2 dichloroethene (DCE) up to 140,000 ppb (5 ppb); vinyl chloride up to 2,300 ppb (2 ppb); 1,1,1-TCA up to 15,000 ppb (5 ppb); benzene up to 2,400 ppb (1 ppb); toluene up to 54,000 ppb (5 ppb); ethylbenzene up to 2,400 ppb (5 ppb); total xylenes up to 12,100 ppb (5 ppb); and PCBs (Arochlor-1260) up to 940 ppb (0.09 ppb). All the contaminants listed above (except PCBs) have migrated off-site. - Soil Numerous compounds have been found in excess of their unrestricted use soil cleanup objective (shown in parenthesis). PCE has been found up to 260 ppm (1.3 ppm); TCE up to 140 ppm (0.47 ppm); DCE up to 70 ppm (0.25 ppm); 1,1,1-TCA up to 22 ppm (0.68 ppm); benzene up to 13 ppm (0.06 ppm); toluene up to 520 ppm (0.7 ppm); ethylbenzene up to 88 ppm (1 ppm); total xylenes up to 368 ppm (0.26 ppm); PCBs up to 80 ppm (0.1 ppm); lead up to 1,300 ppm (63 ppm); and mercury up to 240 ppm (0.18 ppm). Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil and groundwater.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this

contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures.

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Updated By: GWCROSS

Site Description: Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn, NY in Kings County. It is bounded by Newtown Creek to the east, Maspeth Ave. to the south, Vandevort Ave. to the west, and Lombardy St. to the north. Site Features: The site is currently known as the Greenpoint Energy Center, and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial. The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large MGP and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood also contains a large petroleum spill, apparently unrelated to the MGP. A VCA to address the northeast corner of the property was listed under V00631. This work was undertaken to allow expansion of the existing liquefied gas facility, and included a relatively small portion of the site. A site-wide RI began in the summer of 2012. The RI will be conducted in 3 phases and is scheduled to conclude in late 2014. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with lenticular silt and till deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek.

Env Problem: According to the USEPA a preliminary assessment (PA) was prepared for the site dated September 24, 1986. The PA was not submitted or reviewed. A draft preliminary site investigation report was submitted to the Department in June 2004 for the northeast corner of the site. This report noted MGP DNAPL found across the site in the shallow depths (0-5 feet bgs). This material caused most of the soil samples to fail standards for several SVOCs including naphthalene, benzo(a)pyrene, and benzo(a)anthracene. The area noted was addressed in an IRM, but should be representative of a best-case for the site as a whole as it was in an area which was not actually part of the MGP operations. These exceedances represent a significant threat to the environment. This material is also known to contribute to groundwater contamination and sediment contamination. The site's

GREENPOINT ENERGY FACILITY (Continued)

S104787368

location, adjacent to Newtown creek, means there is a potential for DNAPL to be leaking into the creek, contaminating sediments and surface water. A RI is currently ongoing. The first phase, begun in July 2012 is focused on the eastern portion of the site, adjacent to Newtown Creek.

Health Problem: Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. Per Bart Polozzitti of Keyspan(516-545-5511), major renovations have occurred at the site. The tank may have been removed, he will forward relevant information when gathered. 01/02/07-Zhune got an e-mail from Bart Polozzitti requesting additional time to get the information. He said hopefully he will get it by 02/17/07. Bart Polozzitti cell # 646-2350403 01/09/07 Bart sent the information a tightness test report from Tanknology Corp. and a letter is included. The letter state the following: The subject underground storage tank (361A)located at 287 Maspeth Ave. Brooklyn, New York was tightness tested unsuccessfully on January 7, 1993. The other three fuel tanks on the same facility (Nos. 363, 364 &365) were tested tight on the same day. After repairing the vent connections causing the ullage leak above the level of product, the tank was retested on January 25, 1993 and passed. There was no release at any time to the surrounding environment. Spill Closed "

Brooklyn, New York. The surrounding area is dominated by industrial and commercial uses with a limited residential area northwest of the site.

Env Problem: The site is impacted by MGP residuals. Coal tar is present at the site. KeySpan has proposed to remediate the most accessible contamination and leave the remaining contamination in place. The proposed remedy is under review by the department.

Health Problem: Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

cleanup report by the end of 06/30/17. letter emailed to Mr. Lauro and Brittany. case assigned to DEC Zhune. 8/1/17- Brittany email-As discussed, attached to this email is analytical data, tables and an end point sample location map for NYSDEC review for Spill No. 1701762. Below is a detailed summary of the work that is taking place during the removal and installation of two USTs at the National Grid Greenpoint Energy Center, located at 287 Maspeth Avenue in Brooklyn. National Grid is in the process of removing a 4,000-gallon gasoline UST and a 1,000-gallon diesel UST. Upon removal of the USTs, the Contractor will install 27 concrete filled piles, pour a bottom slab and install two new 10,000-gallon USTs in the same location. Existing piping will be removed after the new tanks are in place and the excavation backfilled. End point samples will also be collected for piping excavation as requested by DEC. On May 23, 2017 during excavation related to existing tank removal, some soils were identified that appeared to be impacted due to elevated PID readings and a diesel odor. D&B notified the NYSDEC of a historical petroleum release at the site and a spill case initiated. Soil with elevated PID readings was segregated. Upon removal of the USTs, 14 end point samples were collected and analyzed for the tank excavation. Please see attached for a site plan of the existing fueling station that has been marked with approximate end point sample locations. Table 1, which provides a summary of the removed tanks is attached for reference. Table 2, which provides a summary of PID Readings is also attached for reference. Analytical data related to the endpoint sampling indicates that all VOCs were non detect with the exception of sample GBN which has one exceedance. For sample GBN, benzene was detected at a concentration of 250 ug/kg which exceeds for unrestricted use. This concentration of benzene does not exceed for restricted industrial use. There were several SVOC exceedances for unrestricted and restricted use; however, the Site is known to contain historic fill. Soil borings taken from the area near the USTs show historic fill present up to 12-17 feet below grade. Additionally, the National Grid Greenpoint Energy Center is a former MGP site and is adjoined by Newtown Creek, a designated Superfund site to the east. As the DEC has requested that the tank closure report include piping excavation endpoint samples, the report cannot be finalized until the new tank installation is complete. However, due to the results of the endpoint sampling below the old USTs, we are requesting NYSDEC review/approval of analytical data provided to close Spill No. 1701762 at this time. A groundwater sample was collected from the base of the former UST excavation. The groundwater sample indicate one VOC (1500 ug/lit Naphthalene)and multiple SVOCs exceedance their repective NYSDEC GWGS. Following the product piping, vent piping and dispensers island removal, five (5) soil sample were collected from those respective areas. All VOC concntrations were determined to be below their respective SCO's limits. However, the two (2) samples analyzed via EPA Methos 8270, sample 2 and sample 4, exhibited concentrations of several SVOCs above their respective SCOs. On July 30, 2018 I received an email from John Miller and I spoke with him. The email stated that My name is John Miller and I am the NYSDEC project manager for Greenpoint MGP Site (224052). I was informed recently that National Grid is hoping to close out a spill at the site. My understanding is that any contamination that remains related to the spill would be address under the MPG program. I only just to heard of this issue last week, but after speaking with Grid it sounds like reasonable approach. I wanted to confirm with you

Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being

1008892201

factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Last EDR Contact: 09/10/2018
Next Scheduled EDR Contact: 12/24/2018
Data Release Frequency: Varies

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

Version Date:	2013
North Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3604970202F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
3604970206F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles ESE
Site Name:	Phelps Dodge Refining Corp
Site EPA ID Number:	NYD039138789
Groundwater Flow Direction:	DEPENDENT ON WELL PUMPING RATES.
Measured Depth to Water:	not available.
Hydraulic Connection:	Salt water intrusion may be present at the site. Information about the hydraulic connection between aquifers underlying the site is not available. The depth to bedrock is approximately 60 feet.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS RADON

AREA RADON INFORMATION

Federal EPA Radon Zone for QUEENS County: 3

Note: Zone 1 indoor average level > 4 pCi/L.
: Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.
: Zone 3 indoor average level < 2 pCi/L.

Federal Area Radon Information for QUEENS COUNTY, NY

Number of sites tested: 81

<u>Area</u>	<u>Average Activity</u>	<u>% <4 pCi/L</u>	<u>% 4-20 pCi/L</u>	<u>% >20 pCi/L</u>
Living Area	0.620 pCi/L	97%	0%	3%
Basement	0.970 pCi/L	93%	6%	1%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
