mentioned that they owns property for long time and they abandoned two 5,000 gal tanks about 7 years ago. during recent investigation, oily soil found near the boiler at 5-6 ft depth. Mr. Corroon suspects an old drywell in the area. asked Mr. Corroon to submit available reports for environmental investigation. 11:39 AM:- received email from Mr. Corroon. they are still negotiating the lease agreement and will provide futuer tenant's info, once lease is signed. 01/05/11-Hiralkumar Patel. 10:33 AM:- left message for Mr. Corroon to submit report(s). 01/10/11-Hiralkumar Patel. 12:38 PM:- received message from Mr. Corroon. he will talk to Keith at ELM group and ask to submit documents. 01/20/11-Hiralkumar Patel. 12:52 PM:- received call from Mr. Corroon. he will submit documents by 01/24/11. 01/21/11-Hiralkumar Patel. 3:57 PM:- received call from Mimi. she mentioned that due to confidentiality agreement between the owner and future tenant, they can not release the full langan report, but will include work summary in their report. Mimi mentioned that during field work, they found high PID, staining and product on tip of 1 inch diameter piezometer installed in boring. but no contamination found in soil or groundwater samples. Mimi will submit report on 01/24/11. 01/25/11-Hiralkumar Patel. received email from Mimi (at 5:40 PM on 01/24/11). she mentioned that owner is reviewing the report and she will send report by tomorrow. 4:16 PM:- received call from Mike from Langan. they did Phase I and Phase II investigations. asked him to submit copies of these reports. he will talk to his client and will send copies, if gets approval. 01/26/11-Hiralkumar Patel. 2:12 PM:- received letter report from Mimi including summary of reports prepared by Langan. 3:14 PM:- sent email to Mimi. asked her to submit complete Phase I and Phase II reports, prepared by Langan, for review. 3:27 PM:- received email from Keith from ELM. they got approval to release Langan's reports and will submit tomorrow. 01/31/11-Hiralkumar Patel. 11:00 AM:- received copy of Phase I and Phase II reports. abstract of Phase I: - prepared a Phase I for two properties: 29-01 Borden Ave (Block/Lot: 292/1) and 29-10 Hunters Point Ave (Block/Lot: 292/27) - Dutch Kills to the west of the property - Lot 1 is improved with an approx. 172,000 sq. ft. 1-story manufacturing building and Lot 27 is improved with an approx. 161,480 sq. ft. 1-story manufacturing building - both buildings are vacant - abandoned, generally east-west oriented railroad tracks are located in an overgrown vegetated area between the buildings - proposed development will include the demolition of existing structures and the construction of a FedEx warehouse/distribution facility - proposed design includes a one-story steel frame building with mezzanine level - a new 132,000 sq. ft. building will be located in the eastern section of the site - the first floor will consist of a 10-inch concrete slab that will be used primarily for vehicle parking and a partial mezzanine level will be used primarily as office and mechanical shop - the western section of the site will be paved parking area which extends to the western property line along the Dutch Kills - Lot 1 was occupied by Radio Engineering Laboratories from 1962-1970, by Warner Lambert Co., Inc-American Chiclet Division from 1977-1986, Waldes Truarc Inc. (a retaining ring manufacturer) in 1991 and Acosta Artdeco (concrete precast facility), Mountain Air Mechanical Inc. (cooling and heating sales and servicing) in 2005 - Lot 27 was occupied by the National Envelope corp. from approx. 1981-2006 less than ---------- - black staining was observed in the main interior loading dock of the building at Lot 1 - black staining on the wall of the boiler room in building at Lot

FEDEX (Continued) **S110612090**

27 - the center of the property (an area between two lots) was excavated to construct a basin with access to the Dutch Kills - the basin was filled in for development purposes between 1900 and 1924 - hazardous waste was generated at the site between 1994-2007 - on RCRA database, the subject property was listed as a large quantity generator in 1994-1996 and a small quantity generator from 2000-2007 in relation to waste generated at National Envelope at 29-10 Hunters Point Ave (Lot 27) less than ---------- - waste types included non-listed ignitable wastes, unknown waste, PCE and silver less than --------- - eight violation related to generation of hazardous waste were issued by US EPA to National Envelope (EPA ID# NYD001344886) between 1998 and 2007 (one on 10/06/1998, three on 05/19/2000 and four on 05/09/2007) less than ---------- - according to USGS maps, the subject property is relatively flat and the surrounding area slopes gently towards the west - groundwater at the site is approx. 8 ft bg and is presumed to flow west towards teh Dutch Kills - the subject site was not listed in the drycleaner database; however, one dry cleaner was identified 900 ft east, northeast of the site and is no longer in operation less than ---------- - 1898 Sanborn Map: the subject property is undeveloped; a proposed slip of the Dutch Kills extends through the center of the property - 1915 Sanborn Map: the subject site unchanged, except that the proposed slip is now labeled a basin - 1970 Sanborn Map: Lot 1 is improved with a one-story buiding constructed between 1956 and 1957 that is occupied by Radio Engineering Laboratories, Inc.; Lot 27 is improved with a one-story building, including a loft, offices and an electrical appliance warehouse, constructed between 1951 and 1952; the basin connected to the Dutch Kills was filled and the center of the property is occupied by railroad tracks that run east-west and then curve southeast along 30th street less than -------- - according to sanborn maps, the basin was apparently filled in the late 1940s for development purposes; however, based on 1924 aerial photograph, the basin was filled some time before 1924 - as per 1962 City Directory, Lot 1 was listed as AmerTran Transformers Division of Radio Engineering Lab less than ---------- - as per 1983 City Directory, Lot 1 was listed as Warner Lambert Company, which is a manufacturer of pharmaceuticals, gum, and candy - as per 1991 City Directory, Lot 1 was listed as Waldes Truarc Inc. (a retaining ring manufacturer) - multiple saw cut markings and steel plates observed in both buildings (indicating old sub-surface pits, drainage pit, hydraulic lifts etc.) - on lot 27, bank of four slop sinks (which is roller wash sink area) is located immediately east of the boiler room at the western extent of the manufacturing floor. sections of piping below the sinks were broken; however, a drain below one of the sinks discharged into a bucket fixed into the concrete floor less than -------- - additional slop sink is located, on lot 27, along the northern wall near the center of the building (this sink in area close to ink storage). slop sink drained through a hose into an area below 2 ft by 3 ft metal plate - the loading dock in Lot 1 contains two approx. 10 ft by 20 ft concrete pads, two 8 inch by 8 inch dry wells, and four steel plates ranging in size from 2 ft by 2 ft to 2 ft by 3 ft in the eastern portion of the loading dock; as per owner’s representative, these area may be related to a decommissioned UST - two fill ports and two vent pipes were observed along the southern exterior wall of the building on Lot 1 - a fill port and vent pipe were observed along the center of the western exterior wall in the parking lot adjacent to the boiler room in Lot 27 abstract of Phase II: - groundwater measurements recorded during

FEDEX (Continued) **S110612090**

the Phase II ranged from 6 to 11 ft bg and are likely influenced by tidal fluctuations of the Dutch Kills - conducted geophysical survey; confirmed location of 20,000 gal UST in western portion of the building on Lot 27 and identified two approx. 5,000 gal USTs in the central southernmost portion of the building on Lot 1 - scattered geophysical anomalies, indicative of unconsolidated soil, were identified throughout the site - installed 12 soil borings (SB1 through SB12) to depths ranging from 12 to 16 ft bg - two soil samples were collected per boring, except SB2 where recovery was limited - soil was observed to be historic urban fill material predominately of brown or grey-brown medium to fine sand with some silt, gravel, brick, wood and concrete - fill material extended into groundwater, upto 16 ft bg - petroleum-related odors and staining, residual petroleum in unsaturated soil, and PID readings ranging from 29.1 to 9,999 ppm were identified in boring SB-7 adjacent to the USTs in Lot 1 - heterogeneous fill material included creosote-impacted wood near the center of the subject property (in area of former basin) in borings SB5 and SB6 at depths between 10 and 12 ft bg; PID readings at this interval ranged from 60 to 96.1 ppm in SB5, but no PID readings detected in SB6 - heavy SVOC contamiantion found in sample at 10-12 ft in SB5, at 8-10 ft in SB6, at 6-8 ft in SB7, at 2-4 and 6-8 ft in SB9 and at 2-4 and 8-10 ft in SB10 - each of the 12 borings were converted into 1 inch diameter temporary monitoring wells with 10 ft of screen and groundwater samples were collected - petroleum related sheen was observed on the groundwater at SB7 less than ---------- - temporary well were not surveyed - found 530 ppb Naphthalene in groundwater from TMW-5 - eight sub-slab soil vapor samples were collected by drilling 6 inches beyond the floor slab - ambient air sample was collected in the parking lot of Lot 27 along the Dutch Kills - PCE contamination not found in samples, but TCE found in eight soil samples from seven borings (out of 12 boring) and two groundwater samples - reporting limit of TCE and PCE were 260 ppb for soil sample at 6-8 ft bg in SB7 and were 530 ppb for soil sample at 10-12 ft bg in SB5 less than ------- TCE in soil samples (in ppb): ----------SB2-------SB3-------SB3--------SB4-------SB5-------SB6------ -SB10-------SB11 2-4 ft 2-4 ft 8-10 ft 8-10 ft 2-4 ft 2-4 ft 8-10 ft 2-4 ft
TCE-------3.2--------51-------5.3--------3.6-------3.7-------5. 0-------5.7--------4.4 TCE in groundwater samples (in ppb): ----------TMW2------TMW3 TCE--------4.9-------1.3 soil-vapor analyticals (in ug/m3)

Lot 27: 29-10 Hunters Point Ave - alternate address: none - PBS #: 2-311774. as per PBS record, site has one 20,000 gal #2 oil UST in-service. UST

FEDEX (Continued) **S110612090**

installed in Jun 1952 and tested on 05/13/06. - spills on property: 9604370, 0102148, 0209638 and 0601095 - spill #: 9604370 was reported on 07/01/1996 due to 75 gal #2 oil spill during delivery due to defective gauge. case closed. - spill #: 0102148 was reported on 05/25/2001 due to tank test failure. case was closed based on passing retest result on 06/11/01. - spill #: 0209638 was reported on 12/19/2002 by FDNY due to findings of an unknown amount of ink spilled into Dutch Kills. as per DEC Zhao, a drain discharge found into Kills and dye test was planned (either by NYS DLE, NYC DEP or Coast Guard). spill closed. - spill #: 0601095 was reported on 04/28/2006 due to tank test failure. case was closed based on passing retest result. 3:33 PM:- sent email to Keith at ELM. asked him to send details about violation issued to National Envelope by EPA. email copied to Mike at Langan. 4:10 PM:- received call from Mimi. discussed project with Mimi and Keith. Mimi requested that Langan should not be included on any future correspondence. informed her that Langan was included as they prepared Phase I and Phase II reports, but as Langan works for potential tenant, agreed with Mimi's request. she will contact Langan to get more details aboout EPA violations issued to National Envelope. during discussion, asked Mimi to confirm integrity of the 20,000 gal tank by having tank tightness test (which is due in May 2011). also informed her that the department requires complete delineation of soil and groundwater (if applicable) contamination around the two 5,000 gal USTs in Lot 1, site-specific groundwater flow direction (via installation of minimum of three permanent at least 4 inch wells) and tidal survey. also informed her that if owner choose to remove the previously abandoned 5,000 gal USTs from Lot 1 then the wells may not be needed based on endpoint sample results. asked Mimi to provide following information by 02/11/11: - details about EPA violation on Lot 27 - schedule for tightness test for 20,000 gal UST on Lot 27 - whether soil/gw investigation or tanks removal on Lot 1 4:38 PM:- received email from Mike from Langan. Mike mentioned that EDR report only indicate about number of violations and its categories and doesn't have any further details. EPA violations were issued for the following categories: - pre-transport - preparedness and prevention - state statute or regulation - general - manifest 02/07/11-Hiralkumar Patel. 11:26 AM:- received call from Mimi. she spoke with Mr. Corroon. she mentioned that the 20,000 gal UST will be tested soon to confirm its integrity. she also mentioned that they are planning to do some geoprobes to delineate the contamination and will remediate the area when the exsiting building will be demolished. informed her that if building demolition occurs by end of April 2011 then the Department can wait for remediation at that time, otherwise onwer has to start remediation in May 2011. informed her that the property owner has to submit written document confirming that the remediation will start by May 2011 (whether building demolished or not). informed Mimi that the new building foundation must not be poured in contaminated zone until remediation is completed or a remedial action plan is approved. no CBS record found on any lot. DEC Vought will check haz-waste databases for any record. 2/15/11-Vought-Site also referred to Section A due to concentrations of up to 5880ug/m3 PCE found in soil vapor samples. Site was formerly occupied by National Envelope who left site (and also had documented on-site use of solvents). DEC Spills unit is currently managing investigation and remedation of #6 free product found at on-Site USTs. Owner is currently seeking to sell property to Federal Express so that they may demolish onsite

FEDEX (Continued) **S110612090**

structures and construct new onsite distribution center. A full file review needs to be performed to aid in site classification. 3/9/11-Vought-Meeting with RHWRE to discuss possible transfer of chlorinated solvent issue to another PM in Section A due to heavy workload. 03/21/11-Hiralkumar Patel. 4:33 PM:- sent email to Mimi inquiring update. 03/22/11-Hiralkumar Patel. 4:29 PM:- received email from Mimi. she mentioned that owner is still discussing about either investigation now or tank removal when building demolition occurs. Mimi will call back by next week with confirmed answer. 04/05/11-Hiralkumar Patel. received email from Mimi (at 6:27 PM on 04/01/11). she mentioned that on-site building will be demolished in 8-9 months and at that point, old UST and associated contamination will be removed. discussed with DEC Austin about delineation of soil/gw contamination and high PCE/TCE in soil-vapor samples. Austin asked to send email with brief discription about the project for possible transfer to Section A due to PCE/TCE concentration and historical use of chlorinated solvents on site. 2:49 PM:- sent email to DEC Austin with site description. 04/06/11-Hiralkumar Patel. 9:09 AM:- received response from DEC Jane indicating that as no contamination found in soil or groundwater samples, site would not require any further investigation under the superfund program. she mentioned that the department may require investigation if, during future work (petroleum investigation/remediation), any additional data is generated that identifies chlorinated solvents in soil or groundwater. discussed with DEC Austin. he asked for further investigation regarding chlorinated solvents. he asked to find out location of chlorinated solvent storage, operation, discharge points, drain structures etc. he mentioned that if the property owner doesn't know about storage/use/discharge location of chlorinated solvents, then the department requires soil/groundwater sampling on both lots with multiple borings/wells. 1:49 PM:- left message for Mimi. 1:51 PM:- left message for Mr. Corroon. 2:09 PM:- sent email Mimi and Mr. Corroon informing that the department requires further investigation of petroleum and chlorinated solvent contamination. asked them to call back to discuss further. 3:48 PM:- received call from Mimi. informed her that as building demolition would occur after 9 months, petroleum remediation would not occur for another year and the department does not agree with this time frame. as such the department requires complete delineation of petroleum contamination. also discussed about chlorinated solvent issue. Mimi mentioned that the property's insurance company is covering all issues except petroleum so any investigation under the spill number will be paid by property owner. and owner wants to investigate chlorinated solvent issue under other program so they can get coverage from insurance company. Mimi asked to send copy of regulation which allows spills section to require investigation of non-petroleum substance. discussed with DEC Austin. he mentioned that the department, not the spills section, requires the investigation of chlorinated solvent contamination. he mentioned that if responsible party refuse to do such investigation and inquires about authority of spills section, then case will be referred to legal. 4:18 PM:- left message for Mimi. 4:59 PM:- received message from Mimi. 04/07/11-Hiralkumar Patel. 10:46 AM:- received message from Mr. Corroon. 04/08/11-Hiralkumar Patel. 10:35 AM:- left message for Mimi. 04/11/11-Hiralkumar Patel. 11:57 AM:- received call from Mimi and Keith from ELM. Mimi asked about regulation for PCE investigation. informed Mimi that the department (not the spill section) requires PCE investigation and all

FEDEX (Continued) **S110612090**

DEC rules/regulation applies in this matter. informed her that after getting preliminary data, this case may be transferred to other section. Mimi mentioned that after findings of PCE use on property and PCE concentration in soil vapor samples, they did further investigation to locate locations of chemical storage/process/discharge/drains etc. and now instead of collecting soil samples, they wants to use other technique which reads only halogenated compounds in soil and groundwater during delineation work. this way they don't need to wait for lab results. asked Mimi to submit details about this technique so can be discussed with supervisor. Mimi also inquired about delineation of petroleum contamination. as discussed earlier, approved Mimi's request for visual delineation via geoprobe and not requiring soil/groundwater sampling as it is #6 oil and expecting to see stained soil if area is contaminated. 04/13/11-Hiralkumar Patel. 9:56 AM:- received message from Mr. Corroon. 04/14/11-Hiralkumar Patel. 2:05 PM:- spoke with Mr. Corroon. informed him about required investigation for petroleum as well as chlorinated solvent. during conversation Mr. Corroon mentioned that currently they don't have any insurance so there is no issue about covering cost of chlorinated spill investigation. 04/22/11-Hiralkumar Patel. received email from Mimi (at 7:16 PM on 04/21/11) including soil vapor contour map. she mentioned that heavy PCE contamination in soil-vapor samples were found on western side in southern lot (Lot 1), but as per Phase I, chlorinated solvent was used in northern building only (Lot 27). Mimi proposed visual observation of both properties, potential geophysical survey on western portion of the two properties and delineation of chlorinated solvent contamination around potential release points. she proposed to collect soil sample with most significant evidence of impact (PID/staining/odor etc.), if present or else collection of soil sample right above the water table. she also proposed collection of groundwater sample if contamination observed in boring. 04/29/11-Hiralkumar Patel. discussed proposed PCE investigation method with DEC Austin. before approving sampling strategy, Austin asked to inspect the site to find out possible PCE release areas (storage/process/discharge/drains/pit/damanged floor/stains etc.). 2:46 PM:- sent email to Mimi and asked her to schedule a site visit with full access to every rooms on property. email copied to Keith and Mr. Corroon. 05/03/11-Hiralkumar Patel. scheduled a site visit at 11 AM tomorrow. 05/04/11-Hiralkumar Patel. 11:00 AM:- visited site. met with Mr. Corroon, Keith (ELM) and Kenny (Midcounty Mechanical). Kenny mentioned that his company was contracted since 1971 to maintain/service electrical/mechanical parts. Kenny Midcounty Mechanical Ph. (347) 386-2891 email: midcountymechanical@verizon.net Kenny mentioned that the company was primarily making plain envelopes (cutting papers, applying glue and fold it). national envelope was also using three printing machines to print some utility company envelopes. three parallel printing machines were located in central western portion of lot 27 starting with one machine close to western foundation wall and close to 20,000 gal UST. former boring SB1 installed in parking lot, in area on other side of western foundation wall. no contamination found in boring SB1. as per Kenny, the company was storing ink in about 5-6 55 gal drum. inspected drum storage area, which is located close to former boring SB8. found sewage injection pit not far from the ink storage area. as per Kenny, all the drains inside the building is connected to this sewage injection pit and from this pit, sewage pumped out into city sewer system (pump

FEDEX (Continued) **S110612090**

was needed as city sewer is at higher elevation than pit inside the building). Kenny mentioned that about 6-7 years ago, company changed from oil based ink to water based ink. the former boring SB8 was installed in area between the ink storage and sewage injection pit. as no soil/groundwater/soil-vapor contamination found in SB-08, Keith mentioned that no further investigation is needed in former ink storage area. also inspected a machine shop where internal machines were being repaired. no sign of spills (odor or stain on concrete) observed in machine shop area. while discussing about EPA violations, Kenny mentioned that company received EPA violations due to illegal discharge of roller wash waste into city sewer system. inspected roller wash sink area. Kenny mentioned that workers were dumping roller washing waste into sewer system but was stopped after EPA's violation. during inspection, found pit in floor and found paper waste into the pit. Kenny mentioned that there was a paper waste compactor located on this pit. there was no use of any chemical in the pit. this pit was found closer to loading area closer to former boring SB2. inspected area of former 5,000 gal USTs in Lot 1. Kenny mentioned that their company changed from oil to gas heating system. Kenny remembers that both 5,000 gal tanks were cleaned and tested tight prior to abandoning in place. found two concrete pads where old boilers were located. found a dry well pit (0.5 ft by 0.5 ft) adjacent to both boiiler pads. Kenny suspect that oil found in SB7 could be result of oil dumping into two dry well pits. Keith will conduct a geoprobe investigation to delineation petroleum contamination. based on observations during the site visit, asked Keith to investigate in three areas: area around SB3, roller washing sink and area along the drain structure from the roller wash sink. also suggest him to conduct a soil-vapor delineation starting from SB3. Keith will discuss with his supervisor and submit work plan next week. asked Kenny to submit documents regarding testing of 5,000 gal tanks prior to abandoning. 4:49 PM:- sent email to Kenny and asked him to submit documents regarding cleaning/testing/abandoning of two 5,000 gal USTs in Lot 1. email copied to Keith and Mr. Corroon. 05/19/11-Hiralkumar Patel. 2:03 PM:- spoke with Mimi. they are currently reviewing the work plan and once client approves it, she will submit work plan by 05/23/11. 05/20/11-Hiralkumar Patel. 4:08 PM:- received eamil from Mimi. she hasn't got chance to review the work plan. she will send work plan soon after client's review. 05/24/11-Hiralkumar Patel. 11:06 AM:- spoke with Keith and asked him to submit work plan by 05/31/11. 06/01/11-Hiralkumar Patel. received work plan from Keith (at 1:08 PM on 05/31/11). abstract: - two 5,000 gal USTs on Lot 1 were closed-in-place on 07/27/06 - as per tanks closing firm, both tanks were pressure tested prior to closure and both tanks passed the test, but no documentation is available - two drains (or dry wells) were noted within the boiler room slab that appear to connect together with piping - there is an outflow pipe in one of the drains that leads to an unknown discharge point less than -------- - proposes to advance four soil borings to a depth of 12 ft bg, in the boiler room, in the vicinity of fomer boring SB7: one to the east, one to the west, one to the northeast and one to the northwest - soil samples from borings around SB7 will not be analyzed in a lab - highest concentration of TCE detected in soil was 55 ppb at 2-4 ft bg in SB3 and in groundwater was 4.9 ppb in TMW2 - two highest concentrations in soil-vapor samples, are located within the lot 1 building - the vapor concentration gradient increases in the direction of SV3, suggesting that any source for chlorinated solvents

FEDEX (Continued) **S110612090**

might be west of SV3 - even though several potential release points exist on lot 27, the chlorinated solvent contamination investigation focuses on the western loading dock/parking area in lot 1, west of SV3 - proposes installation of three soil borings in the parking lot to the west of SV3 - two soil samples (one with highest PID and one from six-inch interval above groundwater interface) and one groundwater sample will be collected from each boring in area of former SV3 and samples will be analyzed for chlorinated compounds via EPA method 8260B and 8260C the submitted work plan is not acceptable as requires investigation in following areas also: - soil/gw delineation on south side of the former boring SB7 - soil/gw investigation at the discharge point of an outflow pipe from one of the drain (dry well) in boiler room on lot 1 (area near former boring SB7) - soil/gw (soil-vapor, if possible) delineation at the former roller wash sink and along the drainage structure from the sink reviewed Phase II lab results again for TCE/PCE values in soil/groundwater samples. PCE contamination not found in samples, but TCE found in eight soil samples from seven borings (out of 12 boring) and two groundwater samples. TCE in soil samples (in ppb): ----------SB2-------SB3-------SB3--------SB4-------SB5-------SB6------ -SB10-------SB11 2-4 ft 2-4 ft 8-10 ft 8-10 ft 2-4 ft 2-4 ft 8-10 ft 2-4 ft
TCE-------3.2--------51-------5.3--------3.6-------3.7-------5. 0-------5.7--------4.4 TCE in groundwater samples (in ppb): ----------TMW2------TMW3 TCE--------4.9-------1.3 06/08/11-Hiralkumar Patel. discussed with DEC Austin requesting case transfer to section A due to former on-site ink (which contains chlorinated solvents) use, former EPA violations, improper discharge of a waste water to on-site drains, shallow soil samples with TCE contamination, sub-slab (6 inches below floor) soil-vapor samples contaminated with TCE and PCE. Austin asked for case summary. 06/14/11-Hiralkumar Patel. 11:36 AM:- sent email to DEC Austin with case summary. DEC Austin discussed case with DEC Paul. as the site was listed as large quantity gnerator of hazardous waste, Austin asked to contact DEC Hussein for further information regarding the site. 06/15/11-Hiralkumar Patel. 1:57 PM:- sent email to DEC Hussein requesting further information regarding RCRA violations and other RCRA issues. 06/21/11-Hiralkumar Patel. 10:37 AM:- spoke with DEC Hussein. he mentioned that there is no open case against National Envelope, but they have large file. he asked to come and check file for any information. 06/27/11 after discussing with DEC Austin, DEC Hassan and DEC Linda Ross, case transferred to DEC Ross. 7/25/2011-Linda Ross Meeting at Region 2 headquarters. Sign up sheet is electronicaly filed. Attendees Linda Ross-DEC Paul John-DEC Keith Brodock, ELM Robert Corroon, Owner, COO Richard Zirinsky Associates Michael Bogin, Esq. for Owner Jordan Barringer, DEC intern Erick Kraemer, DEC intern Lou Oliva, Esq. DEC Hassan Hussein-DEC Planning to demolish the two buldings and remove the slabs. The buildings were built in the 1950s. Federal Express (Fed Ex) is planning a sorting facility for the site. Fed Ex wants the facility to be operational by the holiday season 2012. There will be a new building built for the site, with a new slab and a parking garage. Lot 1-Boiler room-2 4,000 gallon #4 fuel oil tanks which have been closed in place-they passed their last tightness test. Therefore, not sure where the DNAPL in area is from. The DNAPL did not have any analytical exceedances. Might be severely weathered. There are two floor drains in the boiler room. Additional soil sampling is proposed for the boiler room and to delineate the CVOC

FEDEX (Continued) **S110612090**

soil vapor beneath the slab beneath part of the building. The CVOC soil vapor is seperate from the boiler room DNAPL. Lot 27 (former National Envelope)- There is a 2,000 gallon UST, still in place. DEC discussed that a Closure Plan is necessary for the hazardous waste storage area. Clean closure is required and there needs to be a public notice. Sewer testing is also required for the sewer injection pit since there were discharges to the sewer and possible the sewer injection pit. Entire Site - Discussed the possiblity of putting a vapor barrier and sub-slab depressurization system in the new Fed Ex building - LR to contact Health Depart and discuss. Relevant guidance document is CP-51 and for other constituents will use industrial numbers from Part 375. Demolition and asbestos removal are planned for the end of August. Agree for site visit for next day at 1:00 pm on site. 7/26/2011 Site visit 1:00 pm Attendees Hassan Husssein, DEC-phots taken Linda Ross, DEC Bob Corroon, Owner Keith Bradock, ELM Walk through the two buildings, first, 29-01 Bordon Avenue and second National Envelope 29-10 Hunters Point Avenue. First Building (29-01 Bordon Avenue-Lot 1) has a subslab vapor issue that exceeds the NYS Department of Health guidelines. Agreed to collect two soil samples out side of the loading docks near the high vapor reading to determine if there was a relase of VOCs to the soil in this area. The additional requested boring is in the train track area which is heavily treed and it would be difficult to get a rig in for sampling, so a soil sample will be taken below the organic debris with a hand sampling device. This sample will only be analyzed for VOCs to determine the source of the VOC vapor. Looked at the corrosion around the steel beams discussed in Phase I. The cement floor was intact and unstained and so no pathway to soil and groundwater is expected. The boiler room which had the DNAPL with no analytical exceedances was discussed and it was agreed that the two floor drains will be sampled for VOCs and an additional boring will be placed to the north of the floor drains. Second Building (29-10 Hunters Point Avenue-Lot 27, former National Envelope)needs a closure plan for the hazardous waste storage area. Staining in the hazardous waste storage area. Discussed how the sewer injection pit and the sewer needs to have a leak test to see if there was a release to soil and groundwater on th site. If there is a leak in either the sewer or the sewer injection pit, additional delineation may be required. 8/2/2011 Monthly Internal Progress Report for July 2011 prepared by L.Ross:Internal meeting was held on June 27, 2011 with Kumar Patel and Randy Austin to transfer the site to Linda Ross. This is a spill site that will be redeveloped for a Federal Express facility. Fed Ex will be renting the property. There is a petroleum contaminated area and TCE vapor area. The site needs additional study regarding the sewer system pathway and greater delineation of contamination. On July 5, 2011 the Spills unit contacted the Former National Envelope team to inform them that the new project manager is Linda Ross. A meeting was held on Monday, July 25, 2011 to discuss the site. The meeting notes and signup sheet are listed in the DEC notes and Edoc. OGS, DER and the site owner, consultant and attorney attended the meeting. The topics covered were: introductions, overview of the proposed redevelopment, review of the environmental investigations to date and discussion of proposed work plan. On July 26, 2011 Hassan Hussein and Linda Ross performed a site walkthrough to discuss sampling locations and to see the interiors of the buildings. On July 26, 2011 ELM the site consultant submitted an engineering drawing and a brief discussion of the air exchange. On July 28, 2011 ELM asked questions via email

FEDEX (Continued) **S110612090**

regarding the investigation work plan. 03/20/12-Hiralkumar Patel. DEC Paul and DEC Hussein went to the site for inspection and found free product on water in former heating oil tank location on Lot 1. DEC Paul asked for site visit. 2:00 PM:- visited site with DEC Vought. met with Gregory Wyka from ELM Group. inspected excavation of former heating oil tanks on lot 1. found layer of product on water and impacted soils at the groundwater interface. DEC Paul asked Gregory to report a new spill number based on findings of product on water. informed Gregory that the department requires complete delineation and remediation of petroleum contamination. Gregory Wyka The ELM Group Ph. (212) 962-4301 Ext. 304 (646) 895-3320 (C) Fax (212) 962-4302 email: gwyka@elminc.com 3:51 PM:- a spill report (# 1114115) created as wasn't reported by RP yet. 4-27-12 - Hassan Hussein recieved a letter from Dawn Hetrick of NYSDOH regarding vapor intrustion at the Borden Ave site. 5-23-12 - Hassan Hussein received a letter from Michael Burke date 5-23-12 responding to DEC letter of September 16, 2011. 5-23-12 - Hassan Hussein reponded Michael Burke's letter of 5-23-12 in an email correspondence. 6-01-12 - Hassan Hussein received an email from Michael Burke containing another copy of the 5-23-12 letter and additional information on the proposed Stego Wrap vapor barrier. Hassan responded with an email to Mr. Burke explaining that he will review the submitted information and get back to him some time following week. Later the same day, Mr. Burke sent a copy of his email to Dawn Hetrick of NYSDOH. Dawn responded with an email that same day explain the DOH concerns and explained what she will follow up with NYCDEP to get further guidance on the city's review procedure. 6-08-12 - Hassan Hussein completed his review of Michael Burke's 6/1/12 submittal. Hassan also sent Dawn Hetrick email on 6/8/12 asking her if she has an update. She responded with an update regarding her efforts to contact the city and explained that the approach taken by the company is reasonable. 6-08-12 - Hassan Hussein sent Michael Burke an email approving the proposed approach outlined in his 5/23/12 letter. 10/5/12: Issued letter requiring completion of the second round of delineation proposed in the previously approved 11/17/11 workplan. Subsurface Investigation Report due 11/16/12. 12/11/12 - Carlson: Received phone message from Peter Zimmerman, 212-962-4308, 917-952-9068. He is the new project manager. Progress report to be submitted. 1/15/2013 - Carlson: Left voice message for Peter Zimmerman. Investigation report overdue. 2/1/13 - Carlson: Reviewed letter dated 1/24/13 - only one proposed reinstallation of MW1. DEC requires four wells as per 2011 workplan, left voice message for Peter Zimmerman. 2/4/13 - Carlson: Spoke to Peter Zimmerman, a two part workplan will be submitted, they will mobilize twice, first to reinstall MW-1, and then mobilize again to install delineation wells. 5/27/15 - Raphael Ketani. I am the new project manager for the spill case. The site used to be occupied by National Envelope, but is now a FED EX distribution facility. The two buildings which used to occupy the site were torn down several years ago. Michael Burke of Langan Engineering (212) 479-5582 was involved in the spill case. He mentioned that Mimi Raygorodetsky (212) 479-5441 and he were involved in the National Envelope/FED EX project manager for Langan. Mr. Burke added that Langan's involvement was only due diligence. Robert Corroon, Jr., Chief Operating Officer (212) 751-4620, x103, from Richard Zirinsky Associates. RZA is the corporate entity which owns the entire FED EX site. However, the two parcels which comprise the site are owned by the subsidiary companies 2901 Realty Co, LLC and 2910 Realty Co, LLC. There was a later spill

FEDEX (Continued) **S110612090**

opened for the site, #1114115, due to the discovery of contaminated soil and groundwater while removing a UST. It was managed by Kumar Patel of the Region 2 Spills Unit. It was closed on 7/13/12.
According to the above case notes, the second round of contaminant delineation was never performed. 5/28/15 - Raphael Ketani. An orientation meeting took place today as planned. In attendance were Mr. Corroon of RZA, Keith Brodock, PE (212) 440-6702/cell (646) 895-3325, Hassan Hussein and myself. Initially, Mr. Brodock and Mr. Corroon described the site history and the remediation history. The site itself is bounded on the west by the Dutch Kills, on the south by Borden Avenue, on the east by 29th Street and on the north by Hunters Point Boulevard. The site consists of two separate lots. There used to be two buildings on the entire site. The southern building was at 2901 Borden Avenue and was used by Radio Engineering Laboratory as a warehouse. They made personal radios for the public and the military and used dry transformers (no liquids or PCBs). The northern building had been used by National Envelope. Both buildings were completely removed and the present FED EX distribution center building was constructed in the eastern part of the entire site. The building is slab on grade, contains a vapor barrier underneath and has a high capacity ventilation system. Some years ago, two USTs were removed from the boiler room which was located in the southern building near the southwest corner of the entire property. It was found that one 5000 gal. tank had leaked, but the other 5000 gal. tank was intact. A spill was called in (#1114115), the remediation took place, and the case was closed on 7/13/12. To the north, a RCRA site was located along Hunters Point Boulevard near the northwest corner of the entire property. The material was cleaned up and the case was closed. Thus, the subject oil spill case is the only open case for the entire site. However, additional borings were done within the northern half of the site. PCB contaminated groundwater was discovered with the highest concentration at 0.654 ppb at the very southwestern corner of the northern half of the property. The soil samples also had PCBs. The area was resampled and again there were PCB results. The DEC sent a letter dated 1/24/13 requiring further delineation of the contamination. Mr. Brodock stated that he was not aware of any source on site for the PCBs. Mr. Hussein stated that there was an agreement that more data was needed. There was supposed to be new sampling and the installation of 2 new wells. He added that some companies who had occupied the buildings may have used PCBs, but this was uncertain. PCBs have a low affinity to water. He finished by stating that we needed to know where the PCBs had come from. Mr. Brodock said that he believed the PCBs were in the historic fill. He added that the western half of the northern parcel had been a turn around area of open water for the Dutch Kills and was later filled in. Mr. Corroon asked how one can know that the PCBs didn't come from the site. I responded that step out borings could be done from the edge of the Dutch Kills and continued inland to the edge of the FED EX building. This was, one could see the contamination concentration gradient of the PCBs. If the concentrations are highest near the Kills, then the source is the Kills. Mr. Brodock stated that all of the petroleum spills had been remediated. In the end, it was agreed that I would review the work plan that was previously approved by the DEC and the DEC's 1/24/13 letter and provide comments to Mr. Hussein. Then the DEC would let RZA and Integral know how to proceed. After the meeting, I reviewed spill case #0903437, Borden Avenue Bridge. In particular, I reviewed the total diesel range organics

FEDEX (Continued) **S110612090**

(DRO) concentrations and the PCB analytical results for the spill case that were contained in the Test America 6/29/09 analytical report. I did this in order to confirm whether the Dutch Kills could be a source of PCB contamination for the National Envelope/FED EX site. A sample of treatment system intake water from the Dutch Kills was analyzed. Two sediment samples (S-1 and S-2) were also analyzed, one from each coffer dam that had been constructed in the Kills itself. S-1 had 5,100,000 ppb of DRO and S-2 had 7,000,000 ppb of DRO. The PCBs tested for were: PCB-1242, PCB-1254 and PCB-1260. The treatment system intake water sample had 1.6 ppb, 2.3 ppb and 2.2 ppb of PCBs, respectively. S-1 had 590 ppb, 520 ppb and 760 ppb of PCBs, respectively. S-2 had 720 ppb, 1100 ppb and 890 ppb of PCBs, respectively. 5/29/15 - Raphael Ketani. I reviewed the ELM Group 11/15/11 and 11/17/11 Revised Work Plan: NAPL Delineation,CVOC Investigation and PCBs Investigation. Both versions of this latest work plan were the same word for word except for the first paragraph under the PCB Investigation section which described the details of the monitoring well construction. In the work plan, ELM states that they do not believe the sources of the CVOCs and PCBs are the result of on site activity. They add that the contaminants may be in the historical fill. In the ELM Group work plan, it is stated that the Langan Engineering 12/7/10 Phase II Report indicated the detection of PCBs at their well/boring TMW-2/SB2 in the very southwestern corner of the north parcel. The groundwater sample results were 0.654 ug/l for total PCBs. Well over the TOGS 0.09 ug/l limit. In light of this, ELM had planned on installing one boring/well, SB22/MW-1, near SB2. If PCBs would be detected in the groundwater, then borings/wells SB23/MW-2 to SB25/MW-4 would also be installed in the southwestern corner of the north parcel. The work plan also calls for installing borings SB13 to SB19 in the middle of the southern border of the entire property in order to investigate for NAPL and the installation of borings SB20 and SB21 in the southern quarter of the entire property in order to investigate for CVOCs. I also reviewed the DEC letter dated 10/5/12 to Mr. Carroon. The letter stated that as PCBs were detected in the groundwater at TMW-2 and MW-1, the Department required the installation of wells MW-2 to MW-4. Two soil samples were to be taken from each boring. One from the groundwater interface and a sample with the highest contamination. All soil samples and the subsequent groundwater samples were to be tested for PCBs, CVOCs, VOCs and SVOCs. 6/2/15 - Raphael Ketani. I received the Integral Consulting 1/24/13 letter. In the letter, it was stated that they would install SB22/ELM MW-1. They would look at the results from the soil and groundwater samples and see whether they validate the Conceptual Site Model (CSM). The idea behind the CSM is that the PCBs are confined to the Area of Interest (AOI). The installation of additional borings and wells will be evaluated based upon the analytical results. In consideration of my review of the 11/17/11 Revised Work Plan, the DEC 10/5/12 letter and the Integral 1/24/13 letter, I determined that installing borings/wells SB23/ELM MW-2 to SB24/ELM MW-4 was the best way to proceed. I sent Mr. Corroon [(212) 751-4620, x 103] and Mr. Brodock [(212) 440-6702/cell (646) 895-3325] an email today stating that the Department required that they conduct the work that is described in the approved 11/17/11 work plan and the DEC letter dated 10/5/12. I set a deadline of July 10, 2015 for the work to start. 6/3/15 - Raphael Ketani. Mr. Corroon sent an email agreeing with DEC's decision. 7/17/15 - Raphael Ketani. Mr. Brodock sent me an email today: We installed one well on July 10th, and are

FEDEX (Continued) **S110612090**

scheduled to install the other two wells on July 30th. We attempted to install all three wells last week, but were unable to access the two well locations closest to the bulkhead due to the small fence opening. We ve rescheduled with the driller to bring a smaller rig which should fit into the 6.5 opening. I ll send another update after those wells are installed on July 30th. 12/15/15 - Raphael Ketani. As the well installation and results report was never received and as there have been no progress updates, I sent an email to Mr. Corroon and Mr. Brodock requesting the report and an update. A deadline of January 8, 2016 was set for the submission of the report. 1/14/16 - Raphael Ketani. Mr. Brodock (212) 440-6702/cell (646) 895-3325/kbrodock@integral-corp.com called to request an extension of the deadline for submitting the investigation report. He asked that the due date be set to February 29th, 2016. I agreed to the deadline extension. 2/29/16 - Raphael Ketani. Mr. Brodock sent me an email requesting an extension of the report submission deadline to April 15. The reasons for his request were that the financial concerns regarding the project were resolved only last week on Wednesday (2/24/16). Now that they have been paid, they are now able to prepare the report. Mr. Brodock stated that they can now meet the April 15th deadline. I granted the extension of the deadline. 4/19/16 - Raphael Ketani. As the 4/15/16 deadline has come and gone without the submission of the investigation report, I sent an email to Mr. Brodock requesting the report and a progress update. 4/22/16 - Raphael Ketani. Mr. Brodock (kbrodock@integral-corp.com) responded to my 4/19/16 email. He stated that his client (FED EX) had authorized the generation of the report on 4/13/16. So he needs more time to prepare it and send it to the DEC. He suggested a submission date of no later than 4/27/16. I responded by email and stated that this was acceptable. 4/28/16 - Raphael Ketani. I reviewed the Integral Engineering 2015 PCB Investigation and Historic Fill Evaluation Report dated 4/27/16. Boring SB-25 was installed on 7/10/15 by AARCO Environmental Services Corp to 15 feet below grade. MW-1 was paved over and couldn't be found. SB-23 and SB-24 were installed to 15' and 13' below grade, respectively, on 7/30/15. One soil sample containing fill was taken from above the water table at SB-23. Two soil samples containing fill were taken from above the water table at 5.5'-6.5' and 8'-10' below grade at SB-24. The soils observed were sand, silt, clay and fill. There were no native soils. Groundwater was encountered at 7' and 11' below grade. Each location was turned into a well: SB-23 became MW-2; SB-24 became MW-3; SB-25 became MW-4. The soil samples were submitted to the lab for CVOC and PCB analyses. All of the results were well below the CP-51 standards for commercial and industrial sites. Groundwater was sampled on 8/12/15. Groundwater was determined to be 7.5' and 10.4' below the top of the casing. The results for PCE for samples taken from wells that were at or near the Dutch Kills were from non-detect to 0.88 ppb. The results for TCE from these same samples were from non-detect to 10 ppb. Cis-1,2-dichloroethene was from non-detect to 12 ppb. While there were exceedences of the TOGS 1.1.1 standards of 5 ppb for these analytes, the results were still very low. The PCB results were from non-detect to 2.57 ppb (Aroclor 1260) for the samples. Samples taken from wells at or near the Dutch Kills had hits of CVOCs and PCBs. While samples taken from wells inland to the east were entirely non-detect for CVOCs and PCBs. From the data in the report and the data in the other documents in the case file, I determined that the source of the CVOC and PCB contamination was the Dutch Kills and not

FEDEX (Continued) **S110612090**

the site. As the oil spill in the southern part of the site had been remediated and as the Dutch Kills appears to be the source of the CVOCs and PCBs in the fill and the groundwater, and as there are no sensitive receptors near the site and since the site is surrounded by commercial and industrial facilities, I determined that there was little or no risk to the public or the environment from any residual contamination in the fill under the site. Therefore, I closed the spill case effective today. A spill closure letter was sent to Robert F. Corroon, Jr., 29-01 Borden Realty Co., LLC, 60 East 56th Street, FL 9, NY, 10022-3342 (rc@parkwill.net). Mr. Brodock, Mr. Jordan Junion of Integral and Robert Zirinsky (partner at 29-01 Borden Realty; robertz50@aol.com) were copied. [More specifically, Robert Zirinsky works for Ralph Zirinsky Realty Co., which is a partial owner of 29-01 Borden Realty Co., LLC. Bob Corroon works for Richard Zirinsky Associates, which is a partial owner of 29-01 Borden Realty Co., LLC. Both Robert and Bob have the title of Authorized Signatory for 29-01 Borden Realty Co., LLC, the company that owns the property.] 7/6/16 - Raphael Ketani. Mr. Brodock sent me an email today stating that the wells were abandoned on 6/21/16."

Remarks: "Caller reporting a historical spill. Clean up is pending."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking

J MANHEIMER (Continued) **1000152546**

environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number:	001
Tank Id:	26648
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
I01 - Overfill - Float Vent Valve
K00 - Spill Prevention - None
G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None

Tank Location:	3
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/02/1924
Capacity Gallons:	5000
Tightness Test Method:	NN

DEC Memo:	"09/05/06 -Zielinski This spill case reassigned from CO to Region 2. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. Spill transferred to Greco as part of Spills Closure Initiative in July, 2005. Contacted original callers company and determined the spill name and address was originally put into system incorrectly as 20-90 Review Ave. (also incorrectly listed as 20090 Review Ave.). Neither of the above addresses is an actual address in Queens County, however, 28-90 is, and 28-90 has two tanks similar to the ones referenced in the spill report. 28-90 is also a the home of a company that is a client of the tank test company which called in the tank test failures. Spill name and address were changed to 28-90 Review Ave. The company at that addres is AA Truck Rental. JDG 8/3/05 Contacted Mr. PJ McDermott 718- 937-8611 at AA Trucking. Mr. McDermott is checking records and will get back to me. JDG 8/3/05 11/21/05 Tried to recontact Mr. McDermott, but he was unavailable. JDG 12/30/05 Tried to recontact Mr. McDermott, but he was unavailable. Left message. JDG 01/04/06 Insufficient documentation was received following several attempts. Have documentation that the tanks passed tightness tests in 1998, and were later closed in place

28-90 REVIEW AVENUE (Continued) **S100879318**

in 1999, however, there is no record of a cleanup. Project needs further work, as release was characterized as requiring a major excavation. Should be returned to region 2 for further investigation at end of Spill Closure Initiative. 9/8/06 - Jon Greco of Central Office sent an email stating: Most recently, the owner's representative (Mr. Michael Paskoff, who has been performing tank tests at the site for many years, and it was his firm that called in the release 13 years ago) has asked that I close the spill, as it was called in solely due to an inconclusive tank test. He has copied me on a letter to the owner (Mr. Eric Roberts) and the letter reports that while the original tests were inconclusive, the tanks were retested later that day and were found to be tight. He goes on to say that no repairs were made and no excavations were performed by his firm. Finally, he claims the tests were observed by Inspector Geldman, of the NYC Fire Department. Reviewed PBS records, confirmed tank tested tight. Spills Closed. _ KST "

Remarks: "INCONCLUSIVE TEST RESULT TO REPAIR & RETEST - CALLED AGAIN AT 1300 OTHER 4000 GAL TANK ALSO FAILED MAJOR EXCAVATION."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID: 130179
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/1/2002-VOUGHT-Initial tank test performed by ProTest Laboratories. Second and third tank test performed by Federal Electrical Supply Corporation (718-729-5700). The reason for spill report was initial tank test failure. As a result of failure vent line, fill line, suction line and return line were replaced by Petroleum Tank Cleaners. Tank was tested again on 2-6-2002 and failed again because testers failed to close off return line to day tank. Tank and system was tested for third time and passed on 2-14-2002. Isaac Mungra and Anthony (PTC) confirmed that there was no soil or groundwater contamination. Tank tests and repair invoices were provided. Spill closed by Vought. "

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site will no longer be using oil and will be converting to gas. Closure of a 2000-gallon #2 fuel oil UST and collection of post excavatin endpoint samples by Bluestone Environmental (Andrew Cozzi 732-469-5188). The UST excavation base was at approximately 8 to 8.5 feet below the concrete floor . The soil in the excavation was a fill that consisted of dark brown sand with construction debris such as bricks and pieces of concrete . Five soil samples were submitted for analyses for 8260/8270. Soil analyticals show two 1,3,5-trimethylbenzene exceedances up to 9110ppb, benzo(a)anthracene up to 1010ppb, benzo(a)pyrene up to 631ppb, benzo(b)fluoranthene up to 1110ppb, benzo(k)fluoranthene up to 579ppb, and chrysene up to 1210ppb. These exceedances are attributable to fill material. Spill closed by Vought after conference with DEC Rommel."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"A search of previous spill at that address turned up spill # 9712326. This spill was a report of contaminated soils discovered on 2/4/98 during a phase II site assessment. The spill was assigned to DEC (Sigona) who closed the spill out on 3/28/00 1/18/2006 - Haggerty - Noel Biscone from Bridgedale (718-965-6450), property manager, submitted Subsurface Investigation Report for review. The sampling dates may be sufficent to close this spill # as well Ten 550 gallon deisel USTs (See PBS# 2-233404) and 630 tons of contaminated soil were removed in August 2004. The site is in an industrial area next to the LIE and a large railyard. Spill closed 01/25/06"
Remarks:	"DEC (Saccacio) found ten 550 gallon USTs being removed from the ground by a contractor. The soil around the tanks were contaminated with an unkown petroleum."

FINDS:

Registry ID: 110004565015

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

SUBACCHI FURNITURE (Continued) **1000144031**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel. 3/28/05 - also see 8804104. KST 12/29/05 Transferred to E. Hampston via Spills Initative. Wrote letter to owner requesting update/information. 11/02/06 Reassigned to Sun.(MS) 12/18/06 Sun sent letter certified mail to Jean Satoski (LIC Service Station), 49-01 Van Dam Street, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 2/27/07: Based on TCR results Sun/Sellberg sent a letter to Alex Javic of LIC Service Station requiring additional investigation be performed, and a report sent to the DEC by 4/13/2007. Letter is as follows: The investigation at a minimum must include the installation of soil borings/wells: around the area of the the former nine (9) 550-gallon underground storage tanks. Groundwater monitoring wells should be installed to the south (former location of S6), east (former location of S1) and west (former location of S4) of this area and groundwater flow direction will be determined. During drilling, the soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. Following well installation, a water sample must be obtained and submitted for EPA Method 8260/8270 analyses. Note that MTBE must be included on all soil and groundwater analyses. Prior to drilling activities, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, soil and groundwater sample analyses, site plan, and conclusions and recommendations must be submitted to the Department by April 13, 2007. (JS/MS) 4/5/07: MS spoke to Jill Haimson of Preferred Environmental (516)647-4211. She will submit a SIWP by 4/16/07. (JS/MS) 4/24/07: DEC received and approved the SIWP. SIR to be submitted by 7/16/07. Sent letter certified mail to RP and faxed same to consultant (Jill Haimson). (JS/MS) 6/6/07: MS called J. Haimson to check status of site investigation. Due to difficulties in obtaining on-site access, work had been delayed. SIR will be submitted later than original timeline.(JS/MS) 6/27/07: Preliminary results (field observations) were discussed by the DEC and the consultant via telephone on June 11th, and again on June 21st, 2007. RP is claiming an upgradient source to be the problem. (JS/MS) 9/21/07: An additional visit was done by the consultant in mid

GREEN SERVICE STA (Continued) **S106703575**

September to better assess surrounding properties as additional investigation is warranted. This investigation will include the evaluation of a suspected up-gradient source which may/may not be contributing to on-site groundwater contamination. (JS/MS) 10/18/07: Upon threat of legal action, Preferred finally submitted SIR (apparently RP had not given consent to submit?). DEC is currently reviewing. Onsite contamination exists in both soil and mainly groundwater across the site. Additional delineation will be necessary as well as possible ORC injection/treatment. (JS/MS) 11/14/07: Alex Javick met with JS and MS today to sign STIP and discuss remedial options. Plan is to start with ORC (iSOCS) - 6months, if not effective use chemical injection. Monitoring will take place quarterly. Submit signed stip to regional director on 11/15/07. (JS/MS) 11/26/07: STIP executed on 11/16/07 and returned on 11/21/07. Sent copy to owner via mail and consultant via email today. MS to discus remediation details with Jill Haimson of Preferred. (JS/MS) 11/28/07: MS spoke to Jill. She will submit a RAP by 12/7/07 detailing use and placement of iSOCS as well as injection of regen-ox to boost remediation. (JS/MS) 12/17/07: DEC approved RAP as follows: ...The RAP proposes the application of Regen-Ox (manufactured by Regenesis) to address petroleum related soil and groundwater contamination at the site. In addition, Preferred proposed the installation of In-Situ submerged Oxygen Curtain (inFusionTM/iSOC) probes within four (4) onsite well locations. Pursuant to the Stipulation Agreement signed and dated effective November 16, 2007, the Department requires that within 45 days of the Department s approval of the RAP, Respondent shall implement the work outlined in the RAP. The Department approves the RAP with the following condition: Please specify the number, location and spacing between all proposed Regen-Ox injection points. RP has 45 days from RAP approval to perform the work outlined in the RAP. MS sent letter today to RP and will email Preferred tomorrow regarding injection points follow-up. (JS/MS) 1/17/08: Alex Javick in to meet about remedial systems. Will send STIP to Ms. Jean Satoski once received address from Mr. Javick. (JS/MS) 1/22/08: Stip #2 sent today to Ms Jean Satoski at 84 Gun Club Road, Northport, NY 11768. Signed stip is due by 2/5/08. Added following to original letter to include operator’s cooperation and Ms. Satoski’s roles as RP: Presently, the operator of your station has initiated the required actions to address the above and has been fully cooperating with the Department. However, according to Department records, you are the certified property owner of 49-01 Van Dam Street, LIC, NY 11101 and therefore, also a responsible party. Signed STIP is due by 2/5/08. (JS/MS) 2/27/08: Received signed Stip from Satoski. Signed by Regional Director, Region 2 (JS/MM) 3/4/08: Sent photocopy of executed Stip to Satoski. Informed J. Hamison from Preferred about executed stip signed by both parties. (JS/MM) 4/17/08: RAP not executed yet. Satoski and Javic have not agreed on payment. Sent out violation of stip letters. Waiting for responses. (JS/MM) 4/22/08: Called Javic, not in office. Expecting phone call today. (JS/MM) 5/18/08: Received already approved RAP from Preferred. (JS/MM) 6/23/08: No info received from Preferred. (JS/MM) 08/11/08: Transferred to Kolleeny/Mandac (JK/MM) 12/12/08: Received Quarterly Groundwater Sampling/Baseline Sample Report from Bill Schlageter of Preffered Environmental dated 11-19-08. Under review. Next sampling event in December 2008. (JK/KG) 12/16/08: RAP implemented. May 28 and 29, 2008 - 14 wells were installed (4 groundwater monitoring wells, 4 solinst

GREEN SERVICE STA (Continued) **S106703575**

emitter wells, 6 chemical injection wells) July 24 and 25, 2008 - Regen-Ox injected into 6 injection wells August 21, 2008 - Solinst Waterloo Oxygen Emmitter Probes were installed in 4 wells September 8, 2008 - Groundwater samples were collected at MW-1, 2, 3, 4 and IW-1. Total VOCS: MW-1 2,192 ug/L, MW-2 11,950 ug/L, MW-3 19,898 ug/L, MW-4 7,963 ug/L, IW-1 3,070 ug/L IW-6 and E-2 were found to have product, 1.47 ft and 0.04 ft respectively. Wells are checked biweekly for product. If product is encountered it is hand balied. Dissolved oxygen concentrations have increased since oxygen emmitters were installed. Next sampling event is scheduled for December 2008. (JK/KG) 12/18/08: Spoke with Bill Schalageter (Prefferred Env.). I asked him about the well with 1.47 ft of product. He said Alex Javic is still checking the well twice a week. He is bailing the product and disposing of it into the waste oil tank on site. Bill said the product is about an inch to a couple of inches. He will send someone out within the next week to verify how many inches of product are in the well and will send me an email with the details. Based on the amount of product they will need to be more aggressive in removing the product. I suggested a vac truck. I also asked Bill to have the wells surveyed and include GW flow direction, gradient, and scale on the map. (JK/KG) 12/30/08: Spoke with Jill Haimson (Preferred Env.) about product in well. She will talk to Bill and find out if someone went to the site to gauge the product. She will email me the details. If no one went to the site she will have someone go this week. (JK/KG) 01/29/09: Have not received details about product in well or product recovery. Emailed Jill and Bill requesting an update. (JK/KG) 02/02/09: Rec'd following email from Schalageter on 1/29/08. Since we spoke, Preferred was out the site twice including a quarterly sampling event conducted January 23, 2009. During the first visit (January 5, 2009) , approximately eight inches of product was present in well (IW-6), none was detected in any other of the wells. The product was bailed from IW-6 and disposed of, subsequent to bailing, Preferred gauged the wells for twenty minutes and no product recharge was observed. During the January 23, 2009 sampling event, approximately 4 inches of product was detected in IW-6, again no recharge of product was observed subsequent to removal. No product was detected in any of the other wells on January 23, 2009. A complete description of monitoring and sampling events will be provided in the Quarterly sampling report to be submitted upon receipt of sampling data. Please feel free to contact me with any questions or concerns. Regards, Bill (JK/KG) 02/03/09: Responded to Bill, After talking with Jon, please continue with product recovery on a regular basis. If the amount of product increases or doesn't appear to be decreasing, a more aggressive remedial measure will be necessary. Based on the VOC concentrations in MW-2 and MW-3, further delineation or more injections may be necessary. First, I will need to review the results of the latest sampling event (when they are ready). (JK/KG) 04/14/09: Rec'd pdf of Quarterly Groundwater Sampling Report on 4/13/09; under review. (JK/KG) 04/15/09: Rec'd hardcopy of QMR. Wells were surveyed; groundwater flow direction is to the southwest. Weekly product recovery will continue and the next quarterly event is scheduled for April 2009. Groundwater on 1/23/09: MW-1: BTEX - 1,422 ug/L, Total VOCs - 2,533 ug/L, MTBE - 170 ug/L MW-2: BTEX - 3,590 ug/L, Total VOCs - 4,909 ug/L, MTBE - 180 ug/L MW-3: BTEX - 15,150 ug/L, Total VOCs - 21,338 ug/L, MTBE - 2,700 ug/L MW-4: BTEX - 11,174 ug/L, Total VOCs - 21,425 ug/L, MTBE - 1,600 ug/L IW-1: BTEX - 1,715 ug/L, Total VOCs - 2,739 ug/L, MTBE - 280 ug/L

GREEN SERVICE STA (Continued) **S106703575**

IW-4: BTEX - 1,652 ug/L, Total VOCs - 2,501 ug/L, MTBE - 200 ug/L
E-4: BTEX - 4,664 ug/L, Total VOCs - 8,201 ug/L, MTBE - 1,700 ug/L
(JK/KG) 04/20/09: Spoke to Schlageter on 4/16/09. I asked him to include historical analytical data in future reports. We discussed the product in IW-6; he said it appears to be old gasoline and the station manager is still hand bailing it. The product is being disposed of in the on-site waste oil tank. I told Schlageter that the product can not be disposed of in the waste oil tank. Preferred has gauged the wells since the January sampling event. I asked him to send me the gauging data by Monday (4/20). (JK/KG) 04/28/09: Rec'd March gauging data (in eDocs). On 3/6 product in IW-6 was about 6 inches and on 3/27 it was about 0.25 inches. (JK/KG) 05/04/09: Letters sent to J. Satoski and A. Javik on 4/30/09. A more aggressive approach to product recovery should be implemented by using mobile vacuum extraction. A RAP should also be prepared and submitted. It should propose additional remedial actions, such as another round of RegenOx injections. The next QMR is due 6/19/09. (JK/KG) 05/07/09: Spoke to Mr. Javick, he said he doesn't have the money to pay for the cleanup. He was reminded that he signed the Stipulation Agreement and that a report is due in June. (JK/KG) 06/22/09: Rec'd call from Bill Schlageter. He said quarterly monitoring has not been performed and Mr. Javick is not willing to pay for the cleanup. I called Mr. Javick and he said Ms. Satoski will pay 100%. I then spoke to Ms. Satoski and she confirmed that she has agreed to pay for remediation of the site. She will advise Preferred to proceed with site work once some checks clear in her bank account. Preffered is prepared to submit a supplemental RAP. (JK/KG) 06/23/09: Rec'd Supplemental Remedial Action Work Plan dated 6/23/09 and submitted by Preferred Environmental. Under review. (JK/KG) 06/25/09: Rec'd revised SRAWP dated 6/24/09. SRAWP proposes proposes additional injections of RegenOx into the existing on-site injection wells, monitoring of groundwater field parameters, continued groundwater treatment via in-situ emitter probes, continued quarterly groundwater monitoring, and submission of monitoring reports to NYSDEC. A round of groundwater samples will be collected from monitoring wells MW-1, MW-2, MW-3, and MW-4 prior to the RegenOx injections. If free-phase product is detected in well IW-6, the product will be removed using vacuum-enhanced fluid recovery prior to the injections. The SRAWP was approved and letters were sent to Satoski and Javick. The deadline for submission of a groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, is August 7, 2009. The deadline for submission of a report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results is September 25, 2009. Email for Satoski is williamtaggard@mac.com (JK/KG) 07/20/09: Rec'd the following email from Schlageter: We will be conducting the injection this week (Monday-Wednesday) at 49-01 Van Dam Street, LIC. Prior to the injection, the required pre-injection sampling will be conducted from monitoring wells. Bryan from our office will be on-site and as always, you can contact me or Jill with any questions. Thank You, Bill (JK/KG) 08/31/09: Spoke to Haimson. She didn't realize a report with the results of the baseline sampling was due 8/7/09. The report will be prepared and submitted next week. (JK/KG) 09/30/09: Follow-up with Preferred as the groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, and the report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results have not been

GREEN SERVICE STA (Continued) **S106703575**

submitted. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 03/23/2010: Received a pdf copy of Quarterly Monitoring Report for October 2009. DL to eDocs. Will review. AD 07/27/2010: Received an e-mail from Mr. Schlageter: Ainura: As we discussed, attached is the supplemental RAP for the above-referenced project. Please review and contact me to discuss. Thank you Bill William J. Schlageter Operations Manager/Senior Hydrogeologist Will review. AD 08/24/2010: Reviewed the supplemental work plan. It proposes to conduct EFR on a weekly basis for two months period on the site wells exhibiting a free product (wells IW-6 and E-4); to continue employment of 3 out of 4 oxygen emmiters; to conduct monthly monitoring activities; to perform air sparging of aquifer; and once free product has been addressed, to rehabilitate and re-install emmiter probe into E-4 and reconnect oxygen supply to this well. Discussed this work plan with J. Kolleeny of DEC. As it was noted, air sparging method usually combained with SVE to control vapors in unsatutated zone. Since SVE is not proposed here, implementation of air sparging alone is questionable. AD 08/26/2010: Called and spoke with B. Schlageter of Prefferred. Requested to revise the work plan. AD 08/11/2010: Received a pdf copy of the 1st quarter 2010 GW monitoring report. DL the report to eDocs. AD 09/16/2010: Received an e-mail from Bill: Ms. Doronova: As we discussed, attached is the revised Supplement to the Remedial Action for the above-referenced property. The Supplemental action has been revised to omit the mobile air-spare treatment upon your request. Please review and contact me with any comments. Upon your approval, we will implement the proposed action within one week. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 www.preferredenv.com DL the work plan to eDocs. Will review. AD 09/17/2010: Reviewed the revised work plan. It proposes to conduct weekly VEFR on two site wells (IW-6 and E-4) which exhibit free product, for a period of two months. Operation and maintenance of three oxygen emitters at the site will continue on a monthly basis. Preferred also recommends to suspend quarterly GW monitoring for a six months. AD 09/20/2010: Discussed this WP with J. Kolleeny of DEC. AD 09/21/2010: Issued and sent an approval letter to Ms. Joan Satowski with the following comments: " Although Preferred requests that quarterly groundwater monitoring at the site be suspended for six months, the Department requires that quarterly groundwater monitoring continue; " Following completion of the VEFR events, quarterly groundwater monitoring data should be evaluated. If the results do not indicate significant improvement of groundwater quality at the site, and/or if free product continues to appear in the two affected wells, then an alternative remedial measure should be proposed to DEC. Dl pdf copy of the letter to eDocs. AD 04/11/2011: Received an e-mail from Bill: Ainura: Attached is the quarterly sampling report for February 2011 for the above-referenced property. The report summarizes activities conducted from November 2010 through February 2011. Results of the quarterly sampling are favorable significant reduction of dissolved phase VOCs, however some residual free product remains present within IW-6. The next quarterly sampling is scheduled for May 2011. Please feel free to contact me with any questions. Thank you Bill William J. Schlageter DL the report to eDocs. Will review. AD 06/30/2011:

GREEN SERVICE STA (Continued) **S106703575**

Reviewed the report. It states that on February 2011 sampling, thirteen of the fourteen on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.49 ft). Floating product was also observed during the prior monitoring events in October 2010(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). An absorbent pad was installed within IW-6 to address free product. Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. Depth to GW water ranged from 6.48 ft. (E-2) to 8.37 ft. (MW-4) bgs. Groundwater flow has historically been determined to have a westerly influence within both northwesterly and south westerly flows historically observed. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for on-site sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest TVOCs was detected in MW-3 (7,625ug/L), which is located crossgradient of the tank farm and downgradient of the Luk Oil Station to the southeast. Concentrations of BTEX detected in groundwater samples ranged from 5,110 ug/L in the MW-3 to 61.5 ug/L in the MW-1 at an upgradient location, MTBE concentrations ranged from 17 ug/L in the IW-1 (crossgradient) location to 1,100 ug/L in the MW-3 location. Preferred states that TVOCs have dropped across the site by up to 94% and by more than 50% since the implementation of the supplemental remedial action. They report that MTBE concentrations have also significantly decreased across the site and conclude that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. The next quarterly sampling suppose to be conducted in May of 2011. AD 11/2011: Did not received ane reports. AD 01/12/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit all missing reports for 2011. Later received an e-mail from him saying: Ms. Doronova: As we discussed attached is the report from October. Please note that due to construction at the station property, we were forced to delay the next sampling event sampling until January 2012. Further, although concentrations continue to decrease, we have identified that there is an off-site contribution to the groundwater impacts believed to be the Luk Oil property across Gale Avenue (currently AmeriGas ??) Owner is Leelimits Petroleum. We are petitioning to drop the sampling to a bi-annual schedule. Thank you, Bill DL the report to eDocs. Will review. AD 03/09/2012: Reviewed the report. It states that quarterly sampling activities resumed on August 2011 subsequent to the supplemental remedial efforts, which including VEFR activities and continued oxygen injection. The August 2011 quarterly sampling event included the following: " Measurement for floating product; " Measurement of water table elevation, temperature, and dissolved oxygen; " Purging and sampling of four monitoring wells, two injection wells and one emitter well; " Laboratory analysis of seven groundwater samples; and " Preparation of summary report including data summary and a groundwater flow map. Groundwater flow in August of 2011 was determined to be to the northwest towards Newtown Creek. During the August 2011 sampling, thirteen (13) of the fourteen (14) on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.50 ft). Floating product was also observed during the prior monitoring events in February 2011 (.49 ft.), October 2010 (.06 ft), November 2010 (.02

GREEN SERVICE STA (Continued) **S106703575**

ft), and December 2010 (.21 ft). Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. Concentrations of BTEX detected in groundwater samples ranged from 2,129 ug/L in the MW-4 to 54.1 ug/L in the MW-1. MTBE concentrations ranged from 220 ug/L in the MW-2 to 7.1 ug/L in the IW-1 location. The consultant states that August 2011 groundwater quality data was compared to the historic groundwater data developed for the property. To date since the initiation of remedial activities at the Subject Property, TVOCs have dropped by more than 61% since the last quarterly sampling event in February 2011. BTEX and MTBE concentrations have also significantly decreased across the site. This indicates that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. AD 09/19/2012: Sent an e-mail to B. Schlageter requiring submission of all missing reports. AD 12/2012: Did not receive the reports. Called and left a message. AD 02/2013: Spoke with B. Schlageter regarding reports submission. The property owner is very sick and Preferred did not visited the site for several months. He will get back with the site status update. AD 06/04/2013: Called and spoke with Bill of Preferred regarding this site. The site owner contacted them recently, so they are planning to start groundwater monitoring soon. Bill will look for unsubmitted reports and will give an update. AD 01/17/2014: Called and spoke with B. Schlageter of Preferred Env. No GW monitoring was done at the site since we spoke last time. Site owner was uncooperative. Requested to submit the most recent owner's contact information. Suggested to visit the site, sample all site wells and submit a summary report with conclusions and recommendations for further actions. AD 04/12/2016: Called and left a message to Mr.Joseph Macchia - who is listed as an authorized representative in PBS file. AD 04/13/2016: Called and spoke with Mr. William Tagert, (631-757-8829). He is a site owner's son. Because of his mather's health and old age, Mr. Tagert is looking after her business. Explained to him that the spill case is still open, and that he needs to contact environmental consultants to do a site current situation assessment. AD 04/14/2016: Received a call from Mr. Tagert. He said that he contacted Bill Schlageter from Preferred Environmental and scheduled site visit with sampling of wells. A report with conclusions and recommendations for further actions will be submitted to DEC. AD 04/26/2016: called and spoke with Mark of Preferred. He confirmed that his company gave a proposal to Mr. Tagert and is now waiting for his response. AD 02/08/2017: called and spoke with Mr. Tagert. He told me that he hired Preffered Env. again and they are planning to sample site wells. Called and left a message for Bill Schlageter. AD"

Corrective Action Summary:

Event date: 09/08/1993
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 09/19/1995
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 09/28/1995
Event: RFA Determination Of Need For An RFI, RFI is Not Necessary;

Event date: 09/28/1995
Event: RFA Completed

Event date: 01/13/2004
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

FINDS:

Registry ID: 110000616432

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 10/10/95: This is additional information about material spilled from the translation of the old spill file: 14(550) TANKS C/SOIL. 12/10/96 MMM: TYREE PULLED TANKS, UPGRADED STATION AND DID INVESTIGATION. NO FREE PRODUCT LEFT ON GW. HIGH DISSOLVED BEING ADDRESSED WITH SVES SYSTEM. STIP RETURNED SIGNED.3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/17/2003-Vought-See closed diesel spill #0106824 at same location. 3/19/04-Vought-File review by vought: Summary of Underground Tank Removals (Tyree Org)-April 1994. Tanks removed as part of station rebuild activities . A total of eighteen underground storage tanks were cleaned and removed from the site. Twelve were gasoline USTs, two were diesel USTs, one was waste oil and the remaining three are of unknown contents. Groundwater at ten feet below grade. A total of 625 tons of soil was removed from the excavation. Five endpoint soil samples were collected. Method 8021 was inadvertently ommitted from the analysis request . A soil vapor extraction trench was constructed along Van Dam street, two feet from the sidewalk so that the venting system would create a barrier for the potential migration of soi vapoprs based on the reported regional westerly groundwater flow . Four monitoring wells were installed as per DEC. One fuel oil tank remains to be removed and upon remova, one additional monitoring well will be installed. Soil analyticals from well installation show 7200ppb benzene(MW2), 72400ppb napthalene(MW-2), 1435000ppb xylene(W-2), 2490ppb benzene(MW-4), 10770ppb xylene(MW-4). Groundwater Monitoring Report (Tyree Org)-1-16/95. A one thousand(1000) gallon fuel oil tank was removed in June 1995. A monitoring well, MW-5, was installed at this location in August . No free product was encountered. The groundwater flow direction comes onto the site from the north and travels southerly. Once on site, the water flow turns a little to the south-southeasterly direction . Groundwater analyticals show 105ppb benzene(MW-1), 3260ppb benzene(MW-2) and 86400ppb MTBE(MW-2). Report recommends installation of upgradient well and performance of a soil vapor extraction test. Letter from DEC(Mulqueen) to Getty(Ochotorena)-6/26/95. Stipulation Agreement sent to Getty. Stipulation Agreement from Getty-6/30/95. Stipulation signed by Getty. Corrective Action Plan from Tyree-10/5/95. Summary of Underground Fuel Oil tank Removal Activities-January 1996. Removal of one (1000-gallon) fuel oil UST. Five endpoint soil samples were collected for analysis. A groundwater sample will have to be collected to determine if the groundwater is protected . The background soil sampling will be performed once the location is reviewed by the DEC and sidewalk opening permits are obtained . Three Geoprobe borings will be performed. This location is reported to be located in a former refinery . Soil analyticals show minor SVOC exceedences (646ppb benzo(a)anthracene, 595ppb benzo(a)pyrene). Quarterly Monitoring Reports from Tyree (October 1995 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the south. Groundwater analyticals show 145ppb

GETTY #00219 (Continued) **S105142547**

benzene(W-1), 4150ppb benzene(W-2), 5.19ppb xylene(W-3), 437ppb toluene(W-5). Remedial Action Plan (Tyree Org)-July 1996. The soil is intermixed with occasional charred material up to 6 inch in diameter and ashy soil located at the north end of the site . Soil venting pilot test performed on 4/18/96. The results of monitoring and the well survey indicate that groundwater on site flows predominantley west . The groundwater flow was previously incorrectly shown to flow southerly . Surrounding area is commercial. Pilot test results indicate that an approximate radius of infulence between 16 and 22 feet can be achieved with an applied cacuum of 34 to 53 inches . Since the contamination is minimal and localized no groundwater remediation is proposed at this time . Quarterly Monitoring Reports from Tyree (April 1996 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the east-southeast. Groundwater analyticals show 146ppb benzene(W-1), 793ppb benzene(W-2) and 437ppb toluene(W-5). Quarterly Monitoring Reports from Tyree (March 1996 thru December 2000). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 17ppb benzene(W-1) and 4ppb benzene(W-2). Remedial activities described as none . Letter from Tyree to DEC(Rommmel)-6/15/01. Letter sent requesting removal of wells 3 and 4 from the monitoring/sampling regimen leaving wells 1,2 and 5. These changes will be effected as of July 1, 2001. If there are any objections to these changes, please notify us in writing . Quarterly Monitoring Reports from Tyree (March 2001 thru June 2001). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 30ppb benzene(W-1) and 24ppb benzene(W-2). Remedial activities described as none . Quarterly Monitoring Reports from Tyree (July 2001 thru September 2001). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 31ppb benzene(W-2). Remedial activities described as none . Historical Data Compilation (Tyree Org)-December 2001. Compilation including request for no further action. Quarterly Monitoring Reports from Tyree (January 2002 thru December 2003). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 43.3ppb benzene(W-1) and 63ppb MTBE(W-2). Remedial activities described as none . 3/23/04-Vought-DEC requires: 1)groundwater samples from downgradient locations of W-1 and W-2 2)submission of a soil and groundwater remediation plan. Vought sent letter with requirements on 3/23/04. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/20/2005 - Feng - Geoprobe Investigation Report by Tyree, dated November 29, 2004. on 11/10/2004 Tyree did two (2) groundwater sampling, B-1 and B-2, downgradient to W-1 and W-2, and four (4) soil samples, B-3 to B-6, in the vicinity of the former gasoline tankfield as per DEC Vought's letter on 3/23/2004. Groundwater analyticals show that some VOCs and SVOCs were slightly high and exceeded TAGM 4046. and soil samples collected from B-3 to B-6 show slightly high VOCs in B-3. Based on this report, Tyree recommended further remediation at this site is not necessary. groundwater monitoring wells be sampled on a quarterly basis and be monitored for natural attenuation . 10/18/2005 - Feng - Quarterly Monitoring Report, by Tyree, 4/2005 - 6/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. 90ppb BTEX and 20ppb MTBE in W-1. keep monitoring. 11/2/2005 - Feng - Quarterly Monitoring Report, by Tyree, 7/2005 - 9/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, increasing, 143ppb BTEX and

GETTY #00219 (Continued) **S105142547**

21ppb MTBE. W-2, 1 BTEX and 5 MTBE. W-3, 6 MTBE. 12/19/2005 - Feng - Quarterly Monitoring Report, by Tyree, 9/2005 - 11/2005. Active Lukoil gasoline retail/service station. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, decreased and 68 ppb BTEX and 11 ppb MTBE. W-2, non-detected BTEX and 3 ppb MTBE. W-3, non-detected BTEX, 4 ppb MTBE. EFR on W-1, 0.01 gallon of gasoline has been removed. 05/25/06-Sun-Based on the Quarterly Monitoring Report, prepared by Tyree,dated April 6, 2006, Total BTEX ranged from Non-detect to 29 ppb, and MTBE concentrations ranged from 3 ppb to 9 ppb. No free product was detected in any monitoring wells. Based on these low concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

Remarks: "REBUILDING STATION-SOIL WILL BE REMOVED & TRANSPORTED."

Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26,

44-30 PURVES STREET (Continued) **S118372411**

25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared

44-30 PURVES STREET (Continued) **S118372411**

	to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil -

44-30 PURVES STREET (Continued) **S118372411**

	Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code:	492842
Site Description:	Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Site Code: 492842
Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade.

44-30 PURVES STREET (Continued) **S116550037**

The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is

44-30 PURVES STREET (Continued) **S116550037**

consistent with the quality of regional groundwater.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 492842
Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern

44-30 PURVES STREET (Continued) **S116550037**

were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Update By: JHOCONNE
Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26,

44-30 PURVES STREET (Continued) **S116550037**

25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem:

Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared

44-30 PURVES STREET (Continued) **S116550037**

	to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Update By:	JHOCONNE
Site Description:	Location: The site is comprised of an entire city block in Long Island City, Queens County, and is bounded by Jackson Avenue to the north, Davis Street to the east, Crane Street to the west and the Sunnyside Railroad tracks to the south. It is now identified on the local Tax Maps as Block 86, Lot 1 formerly Block 86 Lots 1, 6, 7, 8, 22 and Block 72, Lot 80. Site Features: The site is 2.92 acres in size. The site was previously occupied by twelve one- to five-story buildings and a parking lot. The buildings were demolished prior to the remediation which involved extensive excavation across the site to depths below 20 ft-bgs. The site is currently an active construction site where two towers totaling 48 stories are being erected. Current Zone and Land Use: The site is located in the Special Long Island City Mixed Use District, Queens Plaza Subdistrict, Area C, which is zoned special purpose M1-5/R7-3. This category of district promotes the development and expansion of the long standing mix of residential, commercial and industrial uses as found in its subdistricts. The general use at the site prior to demolition included manufacturing, clothing distribution, residential, artist studios, warehouse storage for street vendor carts, and other commercial uses. Past Use of the Site: The site was developed in the late 1800 s and primarily provided manufacturing, warehousing, and other commercial uses with some residential space at the north end of the block. Occupants included a brass foundry, in the northeast portion of the block from around 1915; water meter manufacturing, located on the west side of the block from approximately 1898 up to 1970 with a machine shop and independent power plant; utility warehousing, food warehouse, and plumbing warehouse. Site Geology and Hydrogeology: Soil at the site consists of a layer of fill material from the surface to approximately 11 to 18 feet below grade which has now been removed as part of the remedial excavation. The fill material consisted of fine to coarse grained sands with silt, gravel, cinders, brick, ash and debris. Below the fill material, there is a peat layer at depths ranging from 11 to 18 feet below grade most of which has now been excavated. This two to three foot thick confining layer consisted of peat overlying organic clay. Prior to dewatering operations which will continue until construction of the redevelopment reaches the sixth story, groundwater ranged from approximately four to eight feet below grade surface and flowed toward the east-northeast.
Env Problem:	Prior to Remediation: Based on investigations conducted to date at the site, known contaminants including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals are present in the subsurface soil and groundwater. Soil and groundwater

FORMER NEPTUNE METER SITE (Continued) **S120706170**

were also evaluated for PCBs and pesticides, though these contaminants were not present at concentrations that identified them as contaminants of concern. Soil - Soil sample results showed VOCs were detected in 27 of 111 soil samples above Unrestricted Use SCOs (UUSCOs). The highest concentrations detected were trichloroethylene (TCE) and cis-1,2-dichloroethylene (DCE) at 6,900 and 760 parts per million (ppm) respectively. Tetrachloroethylene (PCE) was detected at a maximum concentration of 2.5 ppm exceeding the UUSCOs. Vinyl chloride was detected at a maximum concentration of 4.8 ppm, which exceeds the UUSCO. SVOCs were also detected above UUSCOs in seven of 111 soil samples. Benzo(a)anthracene was the predominant contaminant ranging in concentration from 1.4 to 14 ppm. Benzo(a)pyrene was detected at 10 ppm, benzo(b)fluoranthene was detected at 12 ppm, chrysene was detected at 13 ppm, and ideno(1,2,3-cd)pyrene at 3.4 ppm (all above UUSCOs). Metals were detected in soil samples with concentrations exceeding UUSCOs in 36 of 114 samples including copper, lead, mercury, and zinc. Concentration of total lead detected ranged from 69 ppm to 2090 ppm; mercury ranged from 1.81 to 44 ppm well above their respective commercial use SCOs. Site-related soil contamination does not extend off-site based on data collected during the RI. Groundwater - VOCs detected above groundwater standards in 8 of 16 samples included benzene (6 parts per billion [ppb]), isopropylbenzene (100 ppb), TCE (45 ppb), cis-1,2-DCE (220 ppb), and vinyl chloride (130 ppb); the SCG level for these compounds is 5 ppb or lower. The SVOCs reported detections above groundwater standards in 4 of 8 monitoring wells included; benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene. The metals detected above class GA standards included the naturally-occurring aluminum, iron, magnesium, manganese and sodium. None of the site-related metals were detected in groundwater. Site-related groundwater contamination does not extend off-site based on data collected during the RI. Soil Vapor - Results of the soil vapor sampling reported concentrations of PCE at a maximum concentration of 233 micrograms per cubic meter (g/m3) and TCE at a maximum concentration of 3,590 g/m3 in a sub-slab sample. Indoor air samples had maximum reported concentrations of PCE at 9.76 g/m3 and TCE at 0.43 g/m3. Site-related soil vapor contamination does not extend off-site based on data collected during the RI. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were chlorinated VOCs namely TCE, and petroleum related VOCs in both soil and groundwater and metals such as lead in soil. Remedial action has successfully achieved a Track 1 unrestricted use cleanup through excavation and removal of soil to a depth of 18 ft-bgs and below or 95,000 cubic yards along with extraction and treatment, prior to disposal, of some 66 million gallons of contaminated groundwater.

Health Problem: Remedial actions are complete and have eliminated the potential for contact with site-related contaminants.

DEC Memo:	"04/13/10-Hiralkumar Patel. as oil was found on water in subway tunnel underneath the subject building, asked building manager to do tank test on a 2,000 gal #2 oil tank. 2:00 PM:- visited site. met Mr. Sokol, property manager. Eastmond did fill line test and it failed. asked Mr. Sokol, to seal fill port to prevent further release. fill port at the site is about 15 ft away from the area where oil found seeping into subway tunnel. asked Mr. Sokol to do tank only test also to confirm no leak from tank. Court Square LLC. **property owner** c/o Fisher Associates **management office** Carnegie Hall Tower 152 West 57th Street, 12th Floor New York, NY 10019 Attn.: Benny Sokol **property manager** Ph. (212) 315-3390 Ext. 214 (O) (347) 273-0998 (C) Fax (212) 937-8814 email: bsokol@fisherassoc.net 04/15/10-Hiralkumar Patel. received email from Mr. Sokol (at 6:53 PM on 04/13/10) with their insurance company info. Hub International **insurance broker** contact: Cynthia Chin PH. (212) 338-2858 10:09 AM:- spoke with Mr. Sokol. Eastmond is at the site to do tank only test and then will expose the fill line. asked Mr. Sokol to wait for excavation along fill line as may need approval from MTA. 10:14 AM:- spoke with Haroon in System Safety at MTA. Haroon mentioned that contractor doesn't need any approval from MTA for sidewalk breaking or fill line repair. asked Haroon to send someone to the site to guide contractor if deeper excavation is required (due to proximity to the subway structure). Haroon Aslam **spill case manager in MTA** PH. (646) 252-3607 (646) 252-5777 email: haroon.aslam@nyct.com 10:18 AM:- spoke with Mr. Sokol. asked him to finish tank only test first and expose fill line. informed Mr. Sokol that no deeper excavation should be performed until MTA approves the work. 11:45 AM:- visited site. met Mr. Sokol and Haroon. eastmond crew was working to test tank. spoke with Rene at Eastmond. they have applied for DOT permit

COURT PLAZA (Continued) **S110309405**

and expect to start work on 04/19/10. inspected track area with Mr. Sokol and Haroon. area was in same condition with little more oil than previous site visit. some odors at the end of platform in leak area. Haroon asked to contact Rajen Udeshi at MTA about approval for excavation near subway structure. 04/16/10-Hiralkumar Patel. 9:38 AM:- sent email to Mr. Sokol with Mr. Udeshi's contact info. Rajen Udeshi Capital Program Management 2 Broadway, 7th Floor New York, NY 10004 Ph. (646) 252-3673 email: rajen.udeshi@nyct.com 04/16/10-Hiralkumar Patel. 11:01 AM:- received email from Mr. Sokol. after installing new fill and vent line and repairing manhole on tank, Eastmond tested tank system and it passed the test. Mr. Sokol will submit test result, once available. 04/19/10-Hiralkumar Patel. 11:55 AM:- spoke with Jen at MTA. they haven't got fingerprint sample results back yet. 12:47 PM:- received email from Mr. Sokol. they spoke with MTA who approved to excavated up to four feet without any engineer report. so Eastmond will expose old fill line tomorrow. Mr. Sokol also mentioned that their insurance company has hired Tetra Tech. 2:51 PM:- received message from Sandra from Tetra Tech. Sandra Gaurin Tetra Tech EM Inc. Ph. (973) 384-9799 (O) (973) 659-9996 Ext. 245 (201) 572-0835 (C) Fax (973) 659-1287 email: sandra.gaurin@tetratech.com 3:20 PM:- left message for Ms. Gaurin. 04/20/10-Hiralkumar Patel. 2:15 PM:- visited site. met Ms. Gaurin, Mr. Sokol and Rene. Eastmond crew exposed old fill line. when contractor tried to pull out fill line from ground, fill line separated in two pieces from coupling. no broken threads observed on pipe and looks like fill line was not properly installed. found that piece of fill line towards building was anchored in ground at coupling joint. piece of fill line towards building was corroded but no holes found. corrosion holes found in piece of fill line towards sidewalk. fresh oil found under fill line. asked Ms. Gaurin to get DOT and MTA permits before further work. Eastmond will cover excavation with plastic and then backfill with clean sand as need permit for further work. Eastmond collected two soil samples (from same area) for fingerprint and age analysis. inspected subwary track area with Ms. Gaurin. found oil on tracks. asked Ms. Gaurin to submit claim number and insurance claim handler's information. asked Mr. Sokol to submit tank test result. 04/23/10-Hiralkumar Patel. received email from Ms. Gaurin (at 5:24 PM on 04/21/10) with contact info for project manager at insurance company. Ms. Gaurin is preparing work plan for further work and asked whether groundwater sample from temporary geoprobe is sufficient for initial groundwater quality check or permanent well is required. Dawn Krigstin Ironshore Environmental **insurance carrier** Ph. (646) 826-6785 email: Dawn.Krigstin@Ironshore.com spoke with Ms. Gaurin and informed her that permanent well is not required right now, but will be required if finds groundwater contamination in groundwater sample via temporary geoprobe. 04/23/10-Hiralkumar Patel. received email from Mr. Sokol (at 7:51 PM on 04/22/10) with tank test result. 12:34 PM:- received email from Jen from MTA including result of fingerpint analysis. sample collected from subway track area was found #2 oil. 04/26/10-Hiralkumar Patel. 10:18 AM:- received call from Mr. Daniels, environmental person at Chartis insurance which is second insurance company for the site. Mr. Daniels mentioned that both insurance companies are involved in project. asked Mr. Daniels to submit insurance claim project manager's info and clear information about who is going to handle entire cleanup project. Larry Daniels Chartis Insurance AIG Ph. (201) 631-7233 (O) (917) 783-6035 (C) Fax (201)

COURT PLAZA (Continued) **S110309405**

631-5053 email: larry.daniels@chartisinsurance.com 11:03 AM:- received email from Tanya Crawford, analyst working on insurance claim at Chartis. Tanya Crawford **analyst** Chartis 101 Hudson Street 29th Floor Jersey City, NJ 07302 Ph. (201) 631-7158 Fax (866) 467-3498 email: tanya.crawford@chartisinsurance.com Chartis Claim Number: 182-111535 1:11 PM:- received email from Mr. Sokol with copy of delivery record from 01/07/08 to 04/01/10. 3:43 PM:- received email from Mr. Sokol with sample results. fingerprint analysis indicates #2 oil and found heavy VOC contamination in soil sample. 04/27/10-Hiralkumar Patel. 4:01 PM:- after discussion with DEC Austin, as fingerprint analysis results match (#2 oil) and proximity of the subject site to the impacted subway area, spill #: 1000435 will be closed and investigated under spill #: 1000528. 3:03 PM:- received email from Mr. Daniels and Ms. Gaurin requesting copy of MTA's fingerprint analysis result. 04/28/10-Hiralkumar Patel. 11:05 AM:- sent email to Mr. Daniels and Ms. Gaurin with copy of MTA's fingerprint analysis result. 11:08 AM:- sent letter to Mr. Sokol requiring soil delineation along remote fill line, endpoint samples and at least one groundwater sample near source area. letter emailed to Mr. Sokol, Ms. Aslam, Mr. Udeshi, Ms. Gaurin, Mr. Krigstin, Mr. Daniels and Ms. Crawford. 05/21/10-Hiralkumar Patel. 1:29 PM:- left message for Ms. Gaurin inquiring updates. 3:59 PM:- received email from Ms. Gaurin. she got drawings from MTA and now will prepare work plan for soil investigation. will submit work plan to DEC and MTA for approval next week. will apply for NYC DOT permit on 05/24/10. 06/01/10-Hiralkumar Patel. received email from Ms. Gaurin (at 9:13 AM on 05/28/10) requesting deadline extension. 11:00 AM:- received call from Ms. Gaurin. she mentioned that currently they are preparing work plan and will submit by end of 06/04/10. she requested 45 days extension as work plan needs to be reviewed/approved by DEC and MTA and also they need permit from DOT. based on available information, approved her request. 06/08/10-Hiralkumar Patel. 10:31 AM:- received work plan from Ms. Gaurin. proposes to install 12 soil borings to a depth of 10-15 ft bg. will collect two soil samples (highest PID and deepest dry) from each boring. will install one temporary well point to collect groundwater water in area where old fill line was located. will collect one more soil sample from the deepest visually impacted material for a forensic fingerprint analysis to find date of the release. work plan is not acceptable as doesn't include work schedule and also site map included in work plan doesn't include the site address and location of old fill line. 06/10/10-Hiralkumar Patel. 1:03 PM:- received email from Jen from MTA. she confirmed that no more oil leak found on tracks. she asked for updates. 1:32 PM:- sent email to Jen informing that the department is currently reviewing the work plan for subsurface investigation. 1:36 PM:- spoke with Ms. Gaurin. asked her to submit revised work plan including timeline for report submission and general site map showing the subject site, old fill line and proposed boring locations. 06/16/10-Hiralkumar Patel. 4:34 PM:- received email from Ms. Gaurin with revised work plan. she proposes to submit report by end of 08/16/10. 06/17/10-Hiralkumar Patel. 2:21 PM:- sent work plan approval letter to Mr. Sokol requiring to submit report by end of 08/16/10. letter emailed to Mr. Udeshi, Mr. Aslam, Ms. Gaurin, Mr. Krigstin and Ms. Crawford. 07/27/10-Hiralkumar Patel. 11:38 AM:- received email from Ms. Gaurin. she mentioned that they have got required NYCDOT permits, but still waiting for approval from MTA. they are revising engineered drawings for MTA this week and hopefully will be in the field on August 9th.

COURT PLAZA (Continued) **S110309405**

due to delay in getting approval from MTA, Ms. Gaurin requested deadline extension, for report submission, till 09/16/10. 07/28/10-Hiralkumar Patel. 11:25 AM:- sent email to Ms. Gaurin approving her request to submit report by 09/16/10. email copied to Mr. Sokol. 08/04/10-Hiralkumar Patel. 11:18 AM:- received email from Ms. Gaurin. she confirmed that work will start on 08/09/10. Francis Ronquillo (cell # 619-602-1745) from tetratech will supervise the field activities. 09/07/10-Hiralkumar Patel. 2:20 PM:- left message for Ms. Gaurin. 4:16 PM:- received message from Ms. Gaurin. she is preparing report and will submit by 09/16/10. she mentioned that contamination found in soil samples and free product found on water. 09/16/10-Hiralkumar Patel. 4:24 PM:- received investigation report from Ms. Gaurin. abstract: - GPR survey indicated another line along the previously excavated remote fill line, which was later found as cable line - installed 12 soil borings to depth of 10-15 ft bg - soil under the sidewalk was poorly graded sandy soil with very little gravel - soil samples were collected either at highest PID reading or deepest dry - one temporary well installed in proximity of the source area - found free product on water sample from temporary well - groundwater was encountered at approx. 15 ft bg - one soil sample was collected at 11 ft depth from boring TTB-1 (closer to source area) forensic fingerprint analysis (results will be submitted once available) - no contamination found in borings installed near the building foundation wall (south side), but contamination found towards the street curb (towards subway) (north side) - recommends further delineation in east and west direction soil analyticals:

Naphthalene----------16,300----------5,790
09/20/10-Hiralkumar Patel. after discussing with DEC Austin, case transferred to DEC Vadim due to groundwater contamination and impact to the MTA tunnel. **refer to spill # 1000435 also.** 11/8/10 - reassigned from Tibbe to JMOCONNE - sent email to TetraTech (Gaurin) asking for reports/work plans submitted but not reviewed (JOC) 01/14/11 - spoke with Sandra Gaurin, Tetratech. She will prepare and provide two separate documents: work plan for installing permanent well at location of former temp to allow removal of free product in the short term; separate work plan for delineation of contam soil and gw - to be written as dynamic work plan - will include some means to evaluate whether oil migrated down along outside front (north side) of building where fill line enters building; same along inside of wall (basement has soil floor); will include sensitive receptor survey; recognized that MTA approval is needed for all work due to proximity of subway (JOC) 11/28/11 - Raphael Ketani. I reviewed the Tetra Tech Inc. 11/23/11 response letter to the DEC 10/11/11 letter commenting on the additional Site Investigation Work Plan and the Interim Remedial Measure Work Plan dated April 2010. The letter

COURT PLAZA (Continued) **S110309405**

described the tentative work schedule. During this week, the NYCDOT permit applications are supposed to be processed. I spoke to Sandra Gaurin (gor-in) of Tetra Tech (973) 630-8040 about this. She said that some changes were required. So the applications were resubmitted. She is hopeful that the applications will finally be accepted so that December 12 field activities can commence. I also asked her why Tetra Tech was going to use the Membrane Inter Phase screening. She said that this was Mr. O'Connell's suggestion so that Tetra Tech doesn't have to go back and forth with doing many rounds of soil sampling and taking many soil samples that need to be sent off for analysis. She said that the vapor analysis from the penetration points will tell them where the worst contamination is. I told her that the DEC will still require that soil end points be taken after all of the soil that can be excavated has been removed. She said that she expected to do in-situ treatment due to the close location to the subway. I asked her what type of building was being serviced by the fuel system. She said that it's a residential/commercial building near the court house. The letter also dealt with vertical delineation of the contamination and soil and groundwater sampling. I approved the 11/23/11 Tetra Tech letter in an e-mail to Ms. Gaurin. 12/5/11 - Raphael Ketani. Ms. Gaurin (973) 630-8040 sent me an e-mail. The MIP investigation will take place between 12/19 and 12/22, and the recovery well installation will take place on 1/3/12. 3/7/12 - Raphael Ketani. Today I received the TetraTech March 2012 Remedial Investigation Report. The soil and groundwater were sampled on 12/21/11. Four MIPS and two soil borings (SB-1 and SB-2) were installed. MIP-1 was installed next to the old fuel line. MIP-2 was 15 feet southwest of MIP-1 and MIP-4 was 6 feet to the northeast. The soil results for MIP-2 did not have any VOC exceedences and no BNA (bases-neutral-acid) hits. The soil results for MIP-4 at 9 feet bgs were: 3360 ppb ethylbenzene, 5310 ppb toulene, and 59,300 ppb total xylenes. The deeper soil results for MIP-4 had only one exceedence, 945 ppb of total xylenes. The great majority of the soil contamination at MIP-1 was in the 10.5 foot to 12 foot interval. These results were up to: 10,800 ppb ethylbenzene, 6240 ppb toluene, 67,100 ppb total xylenes, 23,700 ppb naphthalene, and 284 ppb benzene. There were no significant detections for the BNA analytes. The other MIP results and the results from the regular soil borings were either without exceedences or non-detect. A groundwater sample was taken at MIP-3, which is about 35 away from the old fuel line. The results were entirely non-detect. The RIR also included the figures from the 2010 soil testing and sampling. The testing and sampling locations defined the limits of the investigation area. The results indicated that there were significant exceedences at TTB-1, 2, 5, 6, 8 and 10. I spoke to Ms. Gaurin (973) 630-8040 about the RIR. I told her that soil removal or remediation should take place at the locations of MIP-1, MIP-4, and TTB-1, 2, 5, 6, 8 and 10. I also told her that the groundwater sample which was taken at MIP-3 didn't reflect the groundwater conditions near the spill site as it was too far away (about 35 feet distance). Ms. Gaurin said that there had been a few inches of product on the water table, but it had disappeared. I asked her why the MIP-3 sampling didn't find the product. She responded that the MTA had been collecting the product that had seeped into the subway. So she assumed it had all gone there. I told her that the DEC didn't believe that this was true and that there should be some product near the old fuel pipe. I asked Ms. Gaurin to submit a work plan for excavating the contaminated soil in

COURT PLAZA (Continued) **S110309405**

the affected areas. She said that excavation couldn't be done as there were too many utilities. I then told her to try treatment solutions. She said that she wasn't sure they would work. Lastly, I told Ms. Gaurin to submit a site plan showing where the utilities are in relationship to the MIP locations and the TTB locations. She said that she will. In the end, I determined that soil treatment and the installation of a well right next to MIP-1 would be necessary. I sent an e-mail to Ms. Gaurin (973) 630-8040 stating that the second investigation had been inadequate regarding the delineation of the soil contamination. I mentioned in the e-mail that high soil contamination was found at TTB-1, 2, 5, 6, 8 and 10, and at MIP-1 and MIP-4. I also stated that borings should have been performed extending away from these locations until the limit of the soil contamination had been found. Lastly, I asked for a scaled drawing showing where all of the utilities were. Ms. Gaurin responded by e-mail that the TTB series of borings were meant for only internal TetraTech use in order to evaluate the MIP responses. That is why they were in the appendices. She also stated that they were performed in 2010 and don't reflect current conditions. 12/11/12 - Raphael Ketani. Ms. Gaurin (973) 630-8040 called to say that she just recently realized that the DEC hadn't been sent the information that was requested some time ago. She said that the project manager had left and so things came to a standstill regarding the project. She will send the DEC the information very soon. 12/24/12 - Raphael Ketani. I reviewed the Addendum to the Remedial Investigation Report dated April 2012 and revised December 2012. The information in the revised Addendum confirmed the results of the earlier March 2012 Remedial Investigation Report and contained additional data. The additional information and data consisted of the fact that only 4 Membrane Interface Probe MIP locations could be installed due to the presence and density of the utilities. In the Addendum, it is stated that there is universal refusal at 20 feet bgs. However, it is not mentioned whether this is due to the presence of the subway tunnel. Also, the silt content of the soil markedly increased from about 14 to 15 feet bgs. Again, this may be due to the method of subway tunnel construction - the silt acting as a protective layer from ground vibration from the street above. Groundwater recovery was limited to 11 to 14 feet bgs. MIP-1 had a strong Flame Ionization Detection (FID) response at 12 feet, but less below 12.5 feet. MIP-2 near the former TTB-5 location had an FID response starting at 5 feet with the strongest response at 10 to 12 feet bgs. The response declined below this horizon. MIP-3, which is 35 feet to the west of the former fill pipe location, had lower FID responses than MIP-2 at 12 and 16 feet below grade. MIP-4 near the former location of TTB-10 had FID responses starting at 6.5 feet bgs. There was no FID response at 12 feet bgs. Soil impacts appear to diminish to the west. A soil sample taken where the fill line had entered the building did not indicate contamination. There were no reports of product in the subway since the line was replaced during April 2010. There were significant VOC exceedences at TTB-1, 2 and 5 to 10 (but not at TTB-4 and 11 to 13). There were also significant VOC exceedences at the locations of MIP-1, MIP-4. This implies that there is still high soil contamination along the west and north sides of the 15 foot by 15 foot main impact area. The highest soil contamination was found between 3 feet and 8 feet bgs. VOC groundwater results were high at TTGW-1 (15 feet bgs). The groundwater sample which was taken at MIP-3 didn't reflect the groundwater conditions near the spill site as it

COURT PLAZA (Continued) **S110309405**

was too far away (about 35 feet distance). TetraTech recommended allowing Monitored Natural Attenuation to remediate the remaining contamination. They would also conduct groundwater monitoring. 12/26/12 - Raphael Ketani. A letter was drafted and submitted to Hassan Hussein, EE III and supervisor of Unit C in Region 2, for his review. In the letter, the DEC requested that a method be determined for remediating the soil contamination at TTB-1, 2 and 5 to 10, and at MIP-1 and MIP-4. It was also requested that they find a way to reduce the VOC contamination in the groundwater. Court Square LLC was given until January 18, 2013 to submit a remedial action work plan. The latest ownership information for 5 Court Square (block and lot 81 and 9) is: Court Square LLC, c/o Fisher Associates Real Estate, 152 West 57th Street, 12th Floor, NY, 10019. 12/27/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 1/18/2013 - Raphael Ketani. I received the January 2013 Remedial Action Work Plan and began my review. 1/23/13 - Raphael Ketani. I finished my review of the RAWP. TetraTech will use RegenoOx to reduce or remove the soil contamination at TTB-1, 2, 5 and 10 and MIP-1 and MIP-4. Seven temporary injection points will be installed 10 feet apart. About 1440 lbs. of solution will be injected between 3 to 8 feet below grade. ORC Advanced will be used to remediate the groundwater at TT-GW1. They will inject 120 lbs. of solution at 4 temporary points. The solution will be injected between 15 and 20 feet below grade. Two sampling events will be performed on a quarterly basis after the injections are completed. Soil and groundwater samples will be taken from 4 temporary points within the injection area. The soil and groundwater samples will be tested for VOCs and SVOCs. The work schedule will be submitted after they get approvals from the NYC DOT and the MTA. The Remedial Action Report will be submitted after the treatments and sampling are completed. CP-51 standards will be used to compare the soil results. TOGS 1.1.1 standards will be used to compare the groundwater results. I found the RAWP to be deficient for the following reasons: (1) they intend to address the soil contamination at TTB-1, 2, 5 and 10. However, the DEC's letter approving the revised April 2012 Remedial Investigation Report Addendum (Revised December 2012) dated 12/27/12 instructed Court Square LLC to remediate the soil contamination at TTB-1, 2 and 5 TO 10, not 5 and 10. (2) there is no discussion regarding the siltyness of the soil and its impact on the movement of the solution (3) the site is near the subway tunnel, will the MTA only give approval to the injections if the solution is in a weak form? if so, then the solution may not be effective (4) Figure 2 - Treatment Area Map = the actual solution injection locations are not shown Additionally, Court Square LLC must consider the following before the injections take place: (1) they need to comply with the Federal underground injection control (UIC) regulations. Also, they should review the DEC guidance (IGP-22); (2) information is needed regarding the dosing of the solutions (i.e. mass of chemical per mass of VOCs and SVOCs); (3) how will the conditions in the subsurface be kept oxic? (4) it is recommended that groundwater be extracted from the proposed injecton area to minimize displacement of the dissolved plume. The pre-extracted water could be used to prepare the treatment solutions; (5) how will the treatment solutions be prevented from migrating off site? are there downgradient control wells? A response letter was drafted for the review of Mr. Hussein. The letter stated the above deficiencies and listed the 5 above pre-injection items. The submission of a revised Remedial Action Work Plan was requested with

COURT PLAZA (Continued) **S110309405**

a due date for the work plan of March 1, 2013. Mr. Hussein approved the letter and it was sent out. 3/1/13 - Raphael Ketani. Ms. Gaurin (973) 630-8040 sent an e-mail requesting an extension of the submission deadline for the work plan to March 15, 2013. She said that they needed to get additional contractor quotes. I granted the extension. 3/21/13 - Raphael Ketani. I received and reviewed the revised Remedial Action Work Plan dated March 2013. Tetra Tech plans to inject the treatment solutions at the 10 locations indicated in the DEC 1/25/13 letter. These are TTB-1, TTB-2, TTB-5 to TTB-10 and MIP-1 and MIP-4. About 1440 lbs. of RegenOx will be injected at a depth of 3 to 8 feet bgs. A 5% solution will be used. There will be two rounds of injections two weeks apart. About 120 lbs. of ORC Advanced will be injected into the saturated zone at 15 to 20 feet bgs at the locations TTGW-1, TTB-5 to TTB-7 and TTB-9. The treatment solutions will be allowed to work for 9 to 12 months. After this period of time, there will be two rounds of confirmatory soil and groundwater sampling on a quarterly basis. The samples will be tested for VOCs and SVOCs. If the MTA doesn't approve the plan, then excavation will take place in order to remove the contamination. A USEPA form 40 CFR Part 144 will be submitted to the EPA. I approved the revised work plan in an e-mail to Ms. Gaurin and indicated that the DEC would like the work to proceed as soon as possible. 5/15/13 - Raphael Ketani. I tried to contact Ms. Gaurin (973) 630-8040 regarding progress at the site, but could only leave a voice message and send an e-mail. Later, Ms. Gaurin sent me an e-mail stating: We submitted draft engineering drawings to the MTA just after receiving your approval and we only heard back from them last week. We need to pick up the marked up copies of our drawings and address their comments. Then we will resubmit the drawings for review/approval which may take MTA several weeks. We will contact you as soon as we receive MTA approval and are ready to schedule the injection. 8/23/13 - Raphael Ketani. I hadn't received any correspondences from Ms. Gaurin regarding progress at the site. Therefore, I sent her an e-mail requesting an update. 8/24/13 - Raphael Ketani. Ms. Gaurin sent me an e-mail today stating that Tetra Tech received the comments on the drawings from the MTA. Tetra Tech intends to resubmit the drawings with the responses to the comments sometime during September 2013. Until the drawings are finalized, a drilling contractor will not be retained or scheduled. It is expected that no work will take place until October or later. 10/18/13 - Raphael Ketani. I tried to contact Ms. Gaurin (973) 630-8040 by phone in order to receive a progress update. However, I could only leave a phone message. Therefore, I sent her an e-mail requesting information. Ms. Gaurin responded back with the following e-mail: We have sent back the revised drawings and received a voice mail requesting the marked up copies being sent back to them. It is our understanding that these copies were submitted to them with the revised drawings, we don t have these anymore in the office and we left several voice mails to MTA to that effect. No responses to date from them, we asked them to review the revised drawings without the marked up and provide approval to proceed. I don t know what else to state, I will call again to try to make things progress at some point. 10/30/13 - Raphael Ketani. Ms. Gaurin sent me an e-mail stating that she had called the MTA and they told her they will re-start their review of the plans again. 11/1/13 - Raphael Ketani. Ms. Gaurin sent me an e-mail stating that she had just received a phone call from the MTA approving their remediation plan. She will contact the drilling

COURT PLAZA (Continued) **S110309405**

company very soon. 2/13/14 - Raphael Ketani. As there has been no contact from Ms. Gaurin (973) 630-8040 in some months, I sent her an e-mail wherein I requested a progress update. Later, Ms. Gaurin sent me the following e-mail: I thought I had send you the proposed dates for the two rounds of injection at the site. They were both completed in December and we have scheduled the first performance sampling event for March 11, 2014. The next sampling event will be scheduled in June 2014 after which we will submit the results of both rounds of sampling and any conclusion on the performance of the injection. 5/20/14 - Raphael Ketani. I sent Ms. Gaurin (973) 630-8040 an e-mail requesting the March 11, 2014 sampling results. Later, Ms. Gaurin sent me the April 2014 analytical results report. I reviewed the report. The post injections soil VOC results were such that the samples from TTB-14 and MIP-2 were completely non-detect. The sample for TTB-5 had 9 non-detects and 6 low hits. MILP-4 had 6 non-detects, 8 low hits and 1 low exceedence. TTB-12 had 3 non-detects, 10 low hits and 3 low to moderate exceedences. TTB-1 and TTB-6 had 5 and 4 low to moderate exceedences, respectively, and many low hits. The exceedences with the highest concentrations were 1,2,4-trimethylbenzene to 24.5 ppm, naphthalene to 17.6 ppm and total xylenes to 21.5 ppm. Soil BNA analyses were non-detect for the great majority of analytes. However, MIP-2MS and MIP-2MSD had 1.1 ppm exceedences for the benzo series of analytes and their combustion products. There was only 1 groundwater sample analyzed. The majority of the groundwater VOC results were non-detect, except for 2-methylnaphthalene at 2200 ppb, fluorene at 320 ppb, naphthalene at 180 ppb and some low hits. The next round of groundwater sampling will take place during June 17 and 18, 2014. 8/20/14 - Raphael Ketani. As there has been no contact from Ms. Gaurin (973) 630-8040 regarding progress at the site, I sent her an e-mail requesting an update. 8/27/14 - Raphael Ketani. Today I talked to Paul Stewart of Advanced Cleanup Technologies (516) 441-5800, ext 103. He said that the property was going to be sold. He did not state whether he represented the prospective buyer. However, he wanted to know the present environmental conditions beneath the site. I read the case notes to him regarding the April 2014 soil and groundwater sampling results. I told him that I wasn't sure what more could be done to lower the soil analytical concentrations as there were many utilities in the area and the subway tunnel was very nearby. He thanked me for the information and the conversation ended. 9/9/14 - Raphael Ketani. I reviewed the TetraTech 7/2/14 soil and groundwater analytical report. The samples had been taken during 6/17/14. Soil VOCs were either non-detect or very low hits for the samples from MIP-2, TTB-5 and MIP-4. The sample from TTB-1 (next to the source - the fill line) had 7 low to high exceedences. The sample from TTB-6 had 1 moderate and 1 high exceedence. TTB-12 had 3 low to high exceedences. For the soil SVOCs, the results were almost entirely non-detect. The groundwater VOCs consisted of 4 exceedences, but only the total xylenes was deemed significant at 212 ppb. The groundwater SVOCs were 74.2 ppb naphthalene, 2 low exceedences and several low hits. There were high iron and manganese hits for the groundwater. 9/12/14 - Raphael Ketani. I had a phone conversation with Ms. Gaurin (973) 630-8040 regarding the latest soil and groundwater analytical results. I commented to her that the results for the soil were still high at TTB-1. She said that this boring was performed right at the old fill line. She said that there was a quarter size hole in the old pipe and this is why the oil leaked out and why the contamination is

COURT PLAZA (Continued) **S110309405**

much higher here than elsewhere on site. However, she also said that there is no oil on the water table. I asked her which treatment chemical was used. She said that it was ORC as the subway tunnel is too close for persulfate and the MTA wouldn't approve its use. I asked her whether she felt the ORC had done its job and whether another treatment round would help. She said that the last time they did the injections, some of the ORC flowed quickly through the soil and into the basement of the building. The basement is in bad shape with many cracks. I asked her whether digging could take place. Ms.Gaurin commented that there were many utilities in the affected area. So the workers would have to use shovels to dig around the electrical and gas utilities. I told her this sounded dangerous and that the Department would not ask Tetra Tech to do such work. Also, I commented, I didn't believe that Con Ed would like the idea of people getting so close to their utilities. Next, I stated that I would present the spill case to my supervisor, Mr. Hussein, for closure. However, I needed an analytical summary table for the soil and groundwater results. Ms. Gaurin stated that she will send me one with everything. With that, the conversation ended. 9/15/14 - Raphael Ketani. Mr. Gaurin ((973) 630-8040/sandra.gaurin@tetratech.com) sent me the Excel data tables for the soil and groundwater data for the various locations from August 2010 to June 2014. The soil VOC tables show high (PPM) exceedences of the CP-51 unrestricted residential (UR)soil standards for samples taken during 2010 and 2011. A comparison of the March 2014 and June 2014 results show a mixed response to the ORC treatment application which took place during December 2013. In other words, some analyte concentrations fell while others increased. The soil SVOC tables show very few analyte exceedences of the CP-51 UR standards accompanied by some low hits for most locations. The results for March 2014 and June 2014 were almost entirely non-detect, but the MIP-2MS and MIP-2MSD results were strangely higher even though the MIP-2 results were all non-detect. The groundwater VOC tables show a few very high exceedences of the TOGS 1.1.1 standards for the 2010 results and all non-detects for the 2011 results. However, the March and June 2014 results 5 low to high exceedences with the June results being generally slightly lower. The groundwater SVOC tables show low to high results for the sample taken in 2010, but no hits for the 2011 results. March 2014 post injection results had one high exceedence and a number of low hits. The June 2014 results had two low exceedences and a small number of low hits. The reasons for the variation in the soil and groundwater results were not clear. It may be that another round of ORC injections is necessary in order to bring down the soil results. 9/17/14 - Raphael Ketani. A closure meeting took place today. Staff attending the meeting requested additional information from the consultant, Ms. Gaurin, regarding the excavation of the contaminated soil below the old fill pipe. So, I sent Ms. Gaurin ((973) 630-8040/sandra.gaurin@tetratech.com) an email requesting this information. 9/18/14 - Raphael Ketani. Ms. Gaurin responded and sent me pictures of the fill line dig out and other activities, a work proposal from A.L. Eastmond, a map with VOC and SVOC exceedences and a Tetra Tech letter consisting of a 2010 field report. One of the pictures showed a seep of oil and water which had entered the MTA G Line subway tunnel at the passenger platform. White absorbent pads were visible under the third rail.In her 4/20/10 letter to IronShore Environmental, she stated that 200 gals. of oil and water were removed on the same day. I contacted A.L. Eastmond (718)378-3000 and

COURT PLAZA (Continued) **S110309405**

spoke to Neal Tomasetti, project manager. He said that he didn't remember the job, but that he will look into the files back to 2010 and send me any information he has regarding the dig out of the contamination. 9/22/14 - Raphael Ketani. A closure meeting took place amongst Region 2 DER staff. The outcome of the meeting was that staff denied the request to close the spill case. Instead, they asked to see the MTA inspection reports for the oil spill location in the tunnel and a map showing where the seep was in relationship to 5 Court Square. 9/23/14 - Raphael Ketani. As of today, I have not heard back from Mr. Tomasetti. I tried calling him again, but could only leave a voice message. Next, I contacted Francine Maibauer (646) 252-5768/francine.maibauer@nyct.com and asked her for the MTA inspection reports for the part of the G Line tunnel that was next to 5 Court Square. I also asked her for a map showing the location of the seep in relationship to 5 Court Square. She said that she will send an inspector out to check and see whether there is any more seepage of oil and she will also send the map. 9/29/14 - Raphael Ketani. Mr. Tomasetti called me back. He said that the only document he had in the site file was the original spill report form. 9/30/14 - Raphael Ketani. During a meeting with staff from the NYCT, Ms. Maibauer informed me that the subway station inspection had not yet taken place. She said that she will send her inspector, Daniel Yu, into the station platform area to look for any oil seeps this week. 10/9/14 - Raphael Ketani. Mr. Yu (646) 252-5763 called me to inquire regarding what type of information the DEC wanted as a result of the station inspection. I told Mr. Yu to send the DEC a picture of the seep, determine whether oil is still coming in, measure the seep distance from the station entrance and to submit a map to scale showing the location of the in relationship to 5 Court Square. Mr. Yu said that he will go to the station tomorrow and conduct his inspection. 10/17/14 - Raphael Ketani. I spoke to Mr. Yu today regarding his inspection of the G subway line Court Square platform area and its walls. He said that he made his inspection on 10/10/14, but he didn't see anything that looked like oil on the wall nearest 5 Court Square or at the base of the wall. However, he did he see a large rust stain at the tunnel (northeast) end of the wall. His PID meter registered 0.50 ppm to 0.80 ppm VOCs in the platform area ambient air. However, he said that this was normal. He will send the DEC a report concerning his inspection. Subsequent to his inspection, I made my own site inspection at 9:30AM. I located the store at 5 Court Square and found the new fill port, which was next to the neighboring store with the red border. I measured the distance from the grating in front of the red bordered store to the fill port. This distance was 11 feet. I then went down to the platform to look at the wall nearest to 5 Court Square. I took 8 pictures of the site and the platform area. I could see the large rust stain on the wall, but this stain was under the greatest that was furthest from the fill port. The wall under the grating nearest the fill port had some light staining. The wall under the fill port was clean and there was no sign that oil was sitting at the base of the wall (see pictures). The rest of the wall looked clean. There were no oil odors in the ambient platform air. After this, I left the site. 10/28/14 - Raphael Ketani. Staff at the DEC met to discuss the information in the case file as it regards the remediation of the spill. The results of the inspection by Mr. Yu and myself were also discussed. Based upon all of the information together, Mr. Hussein agreed that with closing the spill case. The spill case was officially closed today, 10/28/14. The

Site Code: 493090
Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162). Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern

PURVES STREET DEVELOPMENT (Continued) **S116550039**

are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation,

PURVES STREET DEVELOPMENT (Continued) **S116550039**

	SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Updated By: MXMAGLOI
Site Code: 493090
Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162). Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the

Site Code: 493090
Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162). Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site

PURVES STREET DEVELOPMENT (Continued) **S116550039**

ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

BROWNFIELDS:

Program:	BCP
Site Code:	493090
Acres:	0.265
HW Code:	C241164
SWIS:	4101
Town:	New York City
Record Added Date:	03/27/2014
Record Updated Date:	05/09/2017
Update By:	JHOCONNE
Site Description:	Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162). Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic

PURVES STREET DEVELOPMENT (Continued) **S116550039**

compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination

PURVES STREET DEVELOPMENT (Continued) **S118372412**

	is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND AUSTIN - SPILL ORIG. ASSIGNED TO BATTISTA 11/04/93: MID COUNTY MECH. PERMANENTLY TOOK TANK OUT OF SERVICE 12/88 AND INSTALLED A NEW TANK 6/89. 12/19/2001 Sangesland spoke with Stephine Davis from FPM Group (631-737-6200 ext228). She called asking what can be done to close out this spill report. Apparently FPM Group started working on the site in 1993. At that time the Free Product plume (from a buried heating oil tank) was defined. Property is approx 1 acre and is a picture framing company in a 5 story building Two belt skimmer wells were installed in 1993 and have been operating ever since. Product was skimmed off, separated, water has been drummed and removed from the site and product piped back into the heating oil tank to be used in the building burner. The building owner has been operating the system and now says there is very little product in the skimmers. Sangesland told Ms. Davis to submit a report (with as much

51-02 21ST ST (Continued) **S106703282**

DEC correspondance as possible in the appendix). The report should include a write up (1-2 page) of what the original problem was, what investigation/delineation was done and how the system has operated for the last 8 years. Sangesland said the area needs to once again be delineated to confirm the plume is gone. Suggested geo-probe in the area of the plume. Finally the environmental consultant will need to define how the dissolved product will be addressed from now on. 11/19/2003 Sangesland reviewed a report by Gregory Scott of Roux Associates (631-232-2600) The report outlines the work done on the site between 1988 and 2002. Belt skimmers were installed in 2 wells and pulled out 150 gallons of oil over a period of years. These skimmers were shut down in 2002 and this letter was requesting formal approval to shut them down. Since the floating product was removed, Roux would like the DEC to close out the case..... NO. DEC is requesting GW samples from each of the existing wells tested to method 8270 and 8021. Depending on the concentration levels, additional remedial work may be required. 2/10/2004 Roux Associates Inc submitted a report dated 1/29/04. This report stated that slight traces of measurable floating product is present in the onsite wells . This statement requires the DEC to maintain this as an open case. 3/4/2004 Roux Associates stated that they will do another round of sampling of the wells and submit the results soon . 3/23/2004 Roux submitted a letter dated 3/22/2004 which states no measurable floating product is present in the onsite wells. Though monitoring well MW-4 contained an absorbent sock with minimal product staining No testing of these groundwater samples was done. June 2004 - Sangesland and Austin made a site visit and concluded the spill should be closed out. DEC requested a final report with certain information documented. 7/19/2004 - Sangesland reviewed a report from Roux associates. All of the requested information was included. Based on this report, the former problem at the site has been remediated and now the site has very minor trace hits which may or may not be related to the original problem or from off site locations. Based on the industrial nature of the site and the fact that there are no impacts to human contact the DEC has closed out this case. "

Town:	New York City
Acres:	8
Date Record Added:	09/28/2011
Date Record Updated:	05/23/2016
Updated By:	JHOCONNE
Site Description:	Location: The Arch Street Yard Site is located in an urban area of Long Island City, Queens County, NY. The site is part of an approximately eight acres in size property. This property is owned by the Long Island Rail Road (LIRR). The site is located north of 49th Avenue, under the 21st St. bridge. Jackson Ave. borders the site to the west and the Arch St. to the east. Site Features: The Site currently houses a train repair facility. In addition, several sets of train tracks traverse the site. Current Zoning/Use(s): The site is zoned for industrial use. The surrounding parcels are currently used for a combination of residential, commercial, light industrial and utility right-of-ways. Historical Use(s): The site has historically been used as a rail road yard. In December 2003, an LIRR contractor discovered contaminated soil while excavating a utility trench under the 21st Street Bridge at the site and spill no. 0310802 was opened. Site Geology and Hydrogeology: Soil boring logs from the 2005 investigation identified urban fill consisting of fine sand and silt with some gravel, wood and railroad ties in the upper 5 to 8 feet below grade (bg). Beneath that, to a depth of approximately 12 feet bg, the borings identified wet organic silt with plant fibers. Borings were terminated at 12 feet bg. Groundwater occurs at approximately 8 feet bg.
Env Problem:	Nature and Extent of Contamination: a) Contaminants of concern at the site include tetrachloroethene (PCE), various semi-volatile organic compounds (SVOCs) and metals in soil, and benzene, PCE and trichloroethene (TCE) in groundwater. b) Areal/depth extent: Part of the soil contamination was excavated to a depth of 8 feet along the utility line. The groundwater occurs at 8 feet below grade. c) Concentrations: The maximum soil concentration of TCE is 6 ppm, and PCE is 89 ppm. The maximum groundwater concentration of TCE is 1,600 ppb, and PCE is 14,000 ppb. The horizontal and vertical extent of the contamination will be delineated under an Investigation Work Plan.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN SOIL BORING AND WELL INSTALLATION JUST INSIDE BAY DOOR ALONG PROVOST STREET CAME UP WITH PETROLEUM CONTAMINATED SOILS AND POSSIBLY GROUNDWATER. SITE IS ADJACENT TO FORMER EXXON TERMINAL. 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 10/13/10 - Austin - Spill being transfered from Tang to Region 2 Spills staff - end 10/19/10-Hiralkumar Patel. no alternate addresses. other spill #: 9210719. spill was reported on 12/16/1992 by coast guard. possibly spill in water. case closed. PBS #: 2-600039. as per the PBS record, site has following tanks: - one 550 gal diesel AST on saddles, installed in Mar. 1990 - one 1,080 gal diesel AST on saddles, installed in Mar. 1990 - one 10,000 gal #2 oil AST in contact with imprevious barrier, installed in Sep. 2002 1:06 PM:-spoke with Mr. Sokolow, controller of Perez Interboro Asphalt. Mr. Sokolow mentioned that they did further investigation and some remediation. lateron they filed claim against ExxonMobil as part of greenpoint plume. Mr. Sokolow mentioned that reports were submitted to DEC and an attorney who is handling claim of Newtown Creek residents against ExxonMobil. Perez Interboro Asphalt Co., Inc. **property owner** 99 Paidge Avenue Brooklyn, NY 11222 Attn.: Joshua Sokolow Controller Ph. (718) 383-4198 Fax (718) 383-9164 Lyssa Roberts **attorney representing Newtown Creek residents** Girardi & Keese 1126 Wilshire Boulevard Los Angeles, CA 90017 Ph. (213) 977-0211 Fax (213) 481-1554 email: lroberts@girardikeese.com 1:40 PM:- spoke with DEC Edward Hampston in Albany office. Ed mentioned that area around 99 Paidge Ave was part of ExxonMobil's terminal and not any refining process in the area. Ed asked to check Exxon's files on E-docs. reviewed one of the report and found that Exxon's Marketing Terminal No. 3020 was located immediately south and east side of Perez Asphalt (see map on e-doc). 2:02 PM:- spoke with Ms. Roberts at Girardi and Keese and asked her to send copy of reports for property 91-99 Paidge Ave. 2:11 PM:- sent email to Ms. Roberts requesting copy of available documents/reports for the subject site. 02/07/11-Hiralkumar Patel. 4:07 PM:- received email from DEC Hampston. Hampston is handling ExxonMobil remediation and was contacted by a potential buyer looking for spill closure based on recent Phase I investigation results. 4:19 PM:- sent email to Hampston. asked him to inform the buyer to submit any phase I and phase II for review. 02/09/11-Hiralkumar Patel. 9:06 AM:- received email from Hampston. he mentioned that buyer will submit Phase I shortly. 9:07 AM:- sent email to Hampston requesting buyer's contact info. 9:30 AM:- received email from Hampston including buyer's contact info. Kevin Lumpe Steel Equities 700 Hicksville Road Bethpage, NY 11714 Ph. (516) 576-3165 email: klumpe@steelequities.com 12:52 PM:- left message for Mr. Lumpe to submit available environmental investigation reports. 03/21/11-Hiralkumar Patel. received letter from ERM. ERM conducted a Phase I investigation for

PEREZ INTERBORO ASPHALT C (Continued) **S102401855**

the subject site. based on following information, ERM claims that the subject spill is not associated with 99 Paidge Ave: - original spill was reported for Williamsburg Steel, but as per 1995 and 1996 Sanborn Maps, Williamsburg Steel was located at 59 Paidge Ave - in 1996, 99 Paidge Ave was owned by Diamond Asphalt Co. - as per initial notes from DEC Mulqueen: soil boring and well installation just inside bay door along Provost Street came up with petroleum contaminated soils and possibly groundwater ; as per ERM, 99 Paidge Ave has no frontage on Provost Street - as per 1995 and 1996 Sanborn Maps, Williamsburg Steel was located at 59 Paidge Ave and on a triangular shape parcel across the street from 59 and 99 Paidge Ave; this triangular shape parcel fronts Provost Street - exact address of the triangular shpae parcel is unknown - triangular shape parcel now owned by NYC DEP and is part of sewage treatment plant discussed with DEC Austin. he asked to contact BBL, DEP consultant who reported the spill to confirm the address and to get any reports available. BBL is now owned by Arcadis. Arcadis U.S., Inc. 655 Third Avenue, 12th Floor New York, NY 10017-9118 Ph. (212) 682-9271 Fax (212) 682-9275 Website http://www.arcadis-us.com 4:07 PM:- left message for Janet at Arcadis. 03/22/11-Hiralkumar Patel. 8:52 AM:- received call from Janet. Janet doesn't know anything about this site. she asked to contact Vatche Minassian, a person working since 2001 and handling NYC DEP projects. Vatche Minassian Ph. (212) 682-9271 Ext. 17 email: vatche.minassian@arcadis-us.com 9:04 AM:- sent email to Mr. Minassian and asked him to call to discuss further. 03/24/11-Hiralkumar Patel. 12:53 PM:- left message for Mr. Minassain. 04/27/11-Hiralkumar Patel. received message from Christopher (at 1:54 PM on 04/26/11) from ERM Christopher O'Leary Environmental Resources Management Ph. (631) 756-8903 2:53 PM:- spoke with Chris at ERM and informed him that the case is still open as the department is waiting for response from Arcadis. 2:57 PM:- spoke with Mr. Minassian. he wasn't with company in 1996 and they only keep records for 10 years. so they don't have any records. 04/28/11-Hiralkumar Patel. after discussing with DEC Austin, case closed as no information (lab data or report) available to confirm the spill at 99 Paidge Ave."

DEC Region:	2
DER Facility ID:	164013
DEC Memo:	"6/18/08. J. Krimgold reviewed the letter-report submitted by ROUX Associate inc. dated June 2, 2008 with request to close the spill case. The letter-report contains no new info besides what the Department has already in its files. The 12 pages attached to the letter is nothing but printouts from our website or copies of documents (application, failed test reports, etc.) that was already submitted to the Department. Nothing in the letter-report points to the investigation of the cause of the test failure or removal of the release. Request for the spill case closure was denied. JMK. 12-27-2011 This spill was assigned to Leszek Zielinski on 06/28/10. Then this spill was reassigned from V. Brevdo to Alex Zhitomirsky on 12-27-2011, as per V. Brevdo instructions. Emailed LiRo and received the following response by S. Frank: We will pull together whatever information we have and forward it to you. AZ 2-7-2012 Site demolition and construction completed at site by May 2011. On 7/22/11 LiRo met with the site personnel and gathered additional information relevant to spill 0012519. LiRo prepared a letter to address DEC concerns from the July 2008 spill closure denial and submitted to DEC on January 23, 2012. Received and filed e-copies from LiRo. AZ 4-19-2012 Received on January 26, 2012, and reviewed Tank Closure Sample Results and Spill Closure Request dated January 23, 2012. The report stated that in August 2005, EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM Levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH)typically indicative of urban fill material. The site layout has changed significantly due to demolition and construction activities. Because of this, the former tank location is unknown. Based on this information, LiRo requested closure of spill#0012519. This spill was closed and a letter was sent to S. Frank/F. Ashkan/V. brevod: Dear Steve, I have reviewed tank closure sample results and spill closure request for the above spill

DEPT OF SANITATION (Continued) **S104950988**

number submitted to DEC on January 26, 2012. A tank test failure of the tank#1 was recorded at this site. As a result, a spill #0012519 was issued. EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001 in August 2005. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH) typically indicative of urban fill material. Based on this information, this spill number is closed. All wells associated with this spill should be properly abandoned. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. Sincerely, Alex Zhitomirsky "

Contact Phone:	(212) 675-3225
DEC Memo:	"Sangesland left a voice message with Patrick Narea at Flemming Lee Shue Environmental asking for more information on the spill and status of the cleanup. 02/05/08-Vought-Received call from Mohammed Ahmed (Fleming Lee Shue 212-675-3225 fax:212-675-3224) who is working for STHAL Realty. Building will be constructed on site and excavation down to 16' below grade. Petroleum contaminated soil was encountered around tank and no groundwater encountered in excavation. Building was constructed. Contractor collected endpoint samples and Closure will be reported to DEC. Onsite contractor decided not involve AKRF and endpoint samples and buildings were constructed. Site is E designated. DEP required installation of vapor barrier which was installed and documentation will also be submitted. DEC will receive report 3/15/08 and PBS regsitration will be submitted. One 5000-gallon #4 fuel UST was removed. 06/05/08-Vought-Received multiple requests from FLS Ahmed to review report. Vought reviewed Spill Closure Report dated 3/11/08 and received on 3/14/08. Vought also inspected PBS #2-600455 and found four closed-removed 550-gallon gasoline USTs and one closed removed 5000-gallon gasoline UST. During soil excavation, two USTs were found consisting of one (550-gallon) near the western boundary of the site and one 5000-gallon gasoline UST on the northeastern portion of the site. During the removal activities of the 5,000-gallon UST, oil sludge was spilled into a rainwater puddle and a petroleum spill was reported to the NYSDEC. Former vehicle repair facility onsite. Site being developed with 11-story residential building with a fully below grade basement along 49th avenue. No VOCS found however SVOCs detected typical of urban fill material (such as that found on the site) which often contains cinders, ash and other combustion by products . Groundwater samples showed no VOCs and VOCs above TOGs 1.1 groundwater standards. A total of 165.45 tons of petroleum-contaminated soil found around the tanks was excavated and removed . ...a vapor barrier was also installed beneath the foundation and along the below grade portion of the foundation walls . Three endpoint samples were collected and showed no VOC detections. A total of 7,500 gallon of petroleum contaminated water and fuel oil were removed from site... . DEC requires site plan with USTs, endpoint sample locations and groundwater sample locations. Vought sent letter with above requirement to: 11-15 50th Ave, LLC c/o Olshan Grundman Frome Rosenzweig & Wolosky Park Avenue Tower 65 East 55th Street New York, NY 10022 and cc to FLS Ahmed. 06/06/08-Vought-Received call from FLS Ahmed and site plan was in back appendix of Spill Closure Report. Site plan shows collection of soil samples from around former 5000-gallon UST and as per Ahmed groundwater samples were collected from tank location as well. Ahmed also indicated that oil sludge spill was also at the tank location where extensive soil excavation was performed as well. Due to removal of soil contamiantion, minor non-VOC contamination of groundwater and installation of vapor barrier, spill closed and no further action letter by Vought and sent to above address."

DEC Memo:	"08/18/08 - LZ The June 16, 2008, quarterly monitoring report covering March- May of 2008 shows no LNAPL in any of six monitoring wells. Total BTEX were found from 0.00 to 26 ppb; MTBE up to 2 ppb; total SVOCS up to 747 ppb. As requested by the Department to complete its files, Tyree Brothers Environmental Services, Inc., sent a report, dated April 27, 2005, containing results of removal of contaminated soil and water from vicinity of the 2,000-gallon tank. About 24.22 tons of soil were removed and six borings conducted to install monitoring wells. Soil analyzes indicate elevated contamination at some locations: for example, at MW-2, total xylenes (2,390 ppb); at MW-6, acetone (247 ppb); at MW-1, chrysene (509 ppb); and contaminated groundwater that has shown improved quality over years (data in subsequent reports). The spill case is closed. 03/25/08 - LZ Prepared by Tyree Organization, the quarterly monitoring report for the period December 2007-February 2008 does not reveal LNAPL in any of seven gauged monitoring wells; no MTBE was detected; total SVOCs concentrations varied from non-detected to 509 ppb; total BTEX was from non-detected to 34 ppb. 12/30/07 - Zielinski The December 18, 2007, quarterly monitoring report for September-November 2007 shows that no LNAPL was detected in any of six monitoring wells. Total BTEX was in the range from non-detect to 51.68 ppb, MTBE in the range from non-detect to 2.56 ppb, total SVOCs from o.00 ppb to 257.84 ppb. Gauging was performed monthly, and absorbent material was placed in all monitoring wells. 09-19-07 -

GETTY - MOSF FACILITY (Continued) **S104953029**

Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period June-August 2007 does not reveal LNAPL in any of seven gauged monitoring wells. Also, no MTBE was detected. Total BTEX: 56.19 ppb(MW-6) the results show that since August 2005, concentrations of benzene, toulene, and total xylenes have been diminshed. 03/09/07 - Zielinski The March 9, 2007, quarterly monitoring report for December 2006-February 2007 shows that LNAPL was detected in Well 3(7 wells present). Total BTEX was in the range from nondetect to 48.37 ppb, MTBE in the range from nondetect to 5.94 ppb(eDocs). 12/15/06 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period September-November 2006 shows that Well 3 contained LNAPL. Also, total BTEX ranged from nondetect to 141.51 ppb, MTBE ranged from nondetect to 3.96 ppb, and total semivolatiles from 12.83 to 57.54 ppb.Thus, these numbers indicate that concentration of contaminants has been decreased since summer of 2006. 10/18/06 - Zielinski A quarterly monitoring report for the period July-September 2006, prepared by Tyree Organization, 208 Route 109, Farmingdale, NY 11735, indicates that: - free product was detected in well #3. Six other wells do not indicate any presence of LNAPL - total BTEX was in range of non-detect to 257.56 ppb - total SVOC was in range of 1.43 to 392.44 ppb The facility continues remediation by employing a passive bailer in well #3. 1/31/05-Vought-Spoke to Ed Waldron (Tyree) and spill amount is 800-1000 gallons for a 1000 gallon fuel oil UST. Tank was removed and is in soil. Soil excavation is continuing. Waldron wanted to know when to stop digging. Vought instructed to dig to groundwater and arranged site visit for 2/3/05 at 10am. 11/8/2005 - Investigation plan was approved. Six GW monitoring wells were installed. Two wells have free product. Weekly pump out is performed by Tyree. Stipulation Agreement will be issued."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DER Facility ID:	87815
DEC Memo:	"Spoke with Bill.Underground line failed test.Investigation required.(sr) 06/25/12 Rec'd Work Plan to investigate the horizontal and vertical extent of subsurface petroleum impacts.(sr) 08/07/12 LNAPL delineation work completed, summary report will be sent to DEC shortly.(sr) 02/06/13 Remedial Investigation Report in edocs.The site is an active scrap metal recyling facility located at the confluence of Dutch Kills and Newtown Creek.The Dutch Kills is located to the west of the site.Newtown Creek is located to the south of the site, property to the north is rail road track operated by LIRR.The adjoining properties to the east of the site are utilized by others for commercial and or industrial operations.Spill was identified when the pressure test of the underground line failed(AST 150,000 gallon).Leak was identified.Franklin Company disconnected the feed and return line.Integral Engineering performed remedial investigation.Twenty five soil borings and twenty one monitoring wells were installed through out the site.Monitoring wells were installed in soil borings with significant impacts and visible LNAPL at the groundwater interface.Five permanent monitoring wells were installed in phase I.Petroleum impacted soil/fill was observed in SB-6/MW-2 at 7-10 ft bgs in the northern corner of the Site, adjacent to the rip-rap bulkhead along the Dutch Kills Basin. Three separate plumes of LNAPL are present at the site.Plume A consists of weathered and biodegraded diesel fuel, located to the northwest of AST and west of the underground pipeline trench in the vicinity of MW-1(3.81ft), MW-2(2.28ft), MW-9(0.11 ft), MW-10(0.37 ft), MW-11(0.38ft) and MW-13(2.62ft). Plume A is believed to be downgradient of the source of the diesel fuel release. Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench, in the vicinity of MW-19(0.12 ft) and MW-20(0.28 ft).Plume B is also appears to be result of an additional segments of corroded and impaired pipings.There are no active sources for Plume A and Plume B as the underground pipelines were removed. Plume C consists of a more viscous and highly weathered unidentified LNAPL in the vicinity of MW-15(0.50 ft) and MW-16(0.43 ft). The following wells are identified with no LNAPL and are being used to illustrate the outer limits of Plume A, B and C:MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-14, MW-17, MW-18, MW-21. Ground water was encountered at depth of 5 ft bgs throughout the site. Recovery effort was performed on Plume A to remove product and monitor for product recharge to evaluate the optimal locations for long term recovery efforts. Plume area A appears to be the greatest available volume of recoverable LNAPL. The proposed IRM includes installation of recovery wells and electric belt skimmers. Three recovery wells(RW-1, RW-2 and RW-3)were installed in Plume A. Additional recovery wells/belt skimmers setups are anticipated for plume B and C as part of the IRM. 03/01/13 Rec'd email from Kevin Mccarthy(212-962-439x314) regarding Offsite

SIMS METAL MANAGEMENT (Continued) **S111836487**

investigation on LIRR proerty.They are checking the issue with their attorney.(sr) 3/12/14-Vought-DEC Rahman received email from DEC Ian Beilby dated 3/11/14 that Hi Sharif, Any new progress on this investigation? I checked edocs but it looks like there has been no activity in the past year. DEC Rahman forwarded email to Vought and Vought spoke to DEC Demeo and spill to be assigned to DEC Mahat. 4/2/14-Vought-Sent email to DEC Beilby with cc to DEC Mahat that Ian, The case has been reassigned to Santosh Mahat (cc'd above) and you may also reach him at 718-482-4038. Thanks. Spill reassigned from Rahman to Mahat. 9/3/14: Mahat DEC Mahat contacted Mr. Kevin McCarty @ 212-962-4303 inquiring more information about the current status of the remediation actions. Mr. McCarty mentioned that the remediation is still going on and he is recovering free products from couple of recovery wells. He is using belt skimmer to collect free products. A report is due from November 2012-present day. 9/25/14 TJD Spill #1405728 associated with housekeeping was identified during inspection of facility as part of Newtown Creek/Dutch Kills sheen trackdown investigation on 8/26/14. Spill of waste oil was observed following the acceptance and dumping of debris reported to have been brought to the facility by NYC Housing Authority. The spill was cleaned immediately by facility personnel. Above spill note is for reference only as surface spill is not directly related to reported AST tightness test failure and subsequent removal of AST and installation of monitoring well network and recovery system. DEC REQUIRE : 1. Need all laboratory data from monitoring well even with no product well. 2. Measure Groundflow dirrection 3. Dissolved GW sampling at plume edge wells 4. Monitoring recovery wells by dispenser line - Deleniation. 5/20/15: Mahat DEC Mahat received an email uopdate from James L'Esperance (Integral). Santosh, Sims has just informed me that they plan on commencing work on the stormwater basin at their Queens facility tomorrow. This work will involve excavating soil from the area of Spill #12-00318, as discussed during our site meeting and in the Remedial Action Letter submitted in April. Sims intends on starting the work tomorrow. I m anticipating that the work will last 2-4 weeks. Integral will have a geologist on-site during all excavation activities. Please feel free to give me a call to discuss if you have any questions. Thanks, James James L'Esperance Integral Consulting Inc. - www.integral-corp.com 61 Broadway, Suite 1601 - New York, NY 10007 Tel: 212.440.6708 - Cell: 646.285.4808 - Fax: 212.962.4302 8/6/15: Mahat DEC Mahat received an email from the contractor regarding the backfill material: Email: Santosh, Here s the information on the imported recycled concrete fill that we discussed. Allocco Recycling is a NYSDEC registered C&D facility. This material will be used as backfill beneath pavement. Let me know if there s anything else you need. Thanks! James L'Esperance The backfill documents has been uploaded on D2 for reference. 8/13/15: Mahat Site Visit: DEC Mahat and DEC Omar visited the site during the side wall sample collection. All collected sampled will be analyzed for the EPA 8260 and EPA 8270. A complete report will be forwarded to the Department one the results is published. 8/18/15: Mahat DEC Mahat request Mr. L'Esperance to provide a weekly report on the site: Here an update: Weekly Progress Report for SIMS Metal Management (Queens) August 18, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 In May 2015, SIMS Metal Management (SMM) began excavating the area of open spill #12-00318 down to approximately 5 ft bgs as part of their plans to install a storm water retention basin. Due to space restrictions on-site, the

SIMS METAL MANAGEMENT (Continued) **S111836487**

excavation is being performed in several stages. Two soil stockpiles (COMP-1 and COMP-2) were generated and separated based on the degree of contamination from visual and olfactory inspection, as well as measuring volatiles with a PID. Soil from COMP-2 was significantly more impacted than soil from COMP-1. Waste characterization samples were collected in mid-June, and the soil was removed from the Site upon approval from Clean Earth New Jersey (CENJ). Material from COMP-1 (approximately 30 cubic yards) was transported to CENJ of Carteret in mid July. Material from COMP-2 (approximately 240 cubic yards) was transported to the same facility from July 29-31. On August 5, SMM s contractor (NOVA) began installing supports and sheathing within the excavation. On August 13, Integral (James L Esperance and Stacey Ng) collected a total of ten sidewall endpoint samples outside of the sheathing, representing the material to be left in place. All soil samples will be analyzed for CP-51 list VOCs (via USEPA Method 8260C) and SVOCs (via USEPA Method 8270D), in accordance with the Remedial Action Letter, dated April 16, 2015. A groundwater bottom sample will be collected once all of the sheathing is installed and all material is removed from the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). Please let me know if you have any questions. Thanks, James 8/24/15: Mahat Weekly Update: Weekly Progress Report for SIMS Metal Management (Queens) August 24, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 Last week, the contractor (NOVA) completed the installation of sheathing around the extents of the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). The water bottom sample is tentatively scheduled for Monday, August 31. Please let me know if you have any questions. Thanks, James 8/28/15: Mahat DEC Mahat received an email informing the water bottom sample will be taken on August 31, 2015. Result of the samples will be forwarded to the Department for review. 9/1/15: Mahat DEC Mahat received another update on the case: Update: Last week, SMM s contractor (NOVA), began excavating the remaining material left in the footprint of the future retention basin. From Aug. 24-27, NOVA removed approximately 1,000-1,300 cubic yards of material and stockpiled the soil to the southwest of the excavation. Large wood debris and impacted boulders/concrete were taken to an approved facility for proper disposal. On Friday, Aug. 28, NOVA completed removing all required material, at which point, Integral collected waste characterization samples according to the sampling protocol for Clean Earth of New Jersey (CENJ). This stockpile is referred to as COMP-3 and will remain covered on-site until approval from CENJ. Upon receipt of the results from the lab analysis, CENJ will provide trucks to begin hauling material off-site to its facility in Carteret, NJ. This is expected to begin sometime during the week of September 7, 2015. Yesterday, Aug. 31, Integral returned to site to collect the bottom endpoint groundwater sample. We anticipate receiving analytical results next week. 9/4/15: Mahat DEC Mahat received endpoint sample those were collected from the side walls and bottom of the excavation. All laboratory result has been uploaded on D2 for reference. All collected wall samples are Below CP 51 guidance value. GW water sample was below TOGS standards with exception of Naphthalene, Benzo(b)fluranthene, Cherysene and Indeno are slightly above TOGS Standard.Based on the laboratory result, no further remedial action is warranted on the excavated area. However, there

SIMS METAL MANAGEMENT (Continued) **S111836487**

are 6 1'' monitoring well that needed GW samples. James will collect water sample from those MW and analyzed for EPA 8260 and EPA 8270 for the confirmation. More remediation plan will be drafted once the result is out. DEC is waiting for sample report. 9/15/15: Mahat DEC Mahat sent an email to Mr. L'Esperance: Email: James, I have reviewed the site map and soil samples submitted on 9/4/15. Almost all soil samples are below CP 51 guidance values. There is nothing to discuss on this portion of the site for further remediation unless GW sample is opposite. The Department is also interested to know the current status of the former underground pipeline that runs behind the building. Feel free to contact me if you have any questions or concerns. Ps. we can conduct a conference call once GW result is out. 10/07/15: Mahat DEC Mahat received an email from Mr. L'Esperance: Email: Santosh, I ve just received the groundwater results for the trench wells at the site (see attached). MW-19 was not sampled because its cap and casing are damaged beyond repair. MW-21 was not sampled because it was dry at the time of sampling. Please let me know when you d like to discuss the results. Thanks, James 10/8/15: Mahat DEC Mahat sent an email to Mr. L'Espernace confirming further remediation on the site is not warranted by the Department. Email: James, Thank you for the info and update. The Department is satisfied with all the lab results. Please prepare a standard report for the closure of the spill case. Let me know if you have any questions or concerns. Santosh Mahat - Environmental Engineer DEC Mahat is waiting for a complete closure report for review. 2/9/16: Mahat DEC Mahat contacted Mr. L'Espernace inquiring about the status of the closure report. The report has been submitted to SIMS for a review. Once the report is done reviewing by SIMS rep. it will be forwarded to the Department. 4/12/16: Mahat DEC Mahat uploaded the closure report submitted to the Department. Based on the report, the Department does not warrant any further action on the site. Spill case is closed on NYSDEC Spill database. 4/25/16: Mahat e/c: A spill closure letter has been sent and uploaded on D2 for reference. 8/10/16: Mahat e/c: DEC Mahat received an email update from the consultant via email. He notified the Department that the free product has been detected MW-16. Email: Hi Jeff and Santosh,As discussed on Friday, 0.17 feet (about 2 inches) of separate-phase product was discovered in MW-16, which is a 1 well located in the former pipeline trench northeast of where the excavation occurred. The product was bailed out and the well re-gauged; no product was immediately detected. As discussed, Sims and Integral will bail the well every two days, and also gauge the well on a regular basis for the next two months. I ll keep both of you updated with the results of this exercise. Thanks, James Based on the email, the spill case has been re-opened and further investigation/action is required. As per the email, the consultant will be gauging the MW for another two months and bail MW every two days. 10/21/16 - Austin - Transferred from Santosh Mahat (transferred out of Spills unit)to Jeff Vought for continuance of the work - end 1/17/17-Vought-Received email from DEC Ian Bielby that Jeff, Sorry to bother you on this spill but I see this spill is reopened due to some reappearance of NAPL. I m trying to determine if there are potential impacts to newtown creek as a result of this information. Can you tell me whether there are any wells close to Newtown creek that have NAPL? Vought performed full D2 file review and produced Non-FOIL summary site plans. Vought noted that reports describe three LNAPL plumes (Plumes A, B, C) and Plume A was addressed via excavation of the entire plum to 5' below the water table. Plume B and C were

SIMS METAL MANAGEMENT (Continued) **S111836487**

addressed reportedly via hand bailing. Vought noted however that Plumes B and C were never delineated and also documentation does not specify how these plumes were remediated. 1/18/17-Vought-Sent letter to Simsmetal East LLC, approving of email proposal dated 8/10/16 and requiring submission of a RIWP including: 1)Product recovery data for well MW16 as per 8/10/16 Email from Integral 2)Delineation of soil and groundwater contamination of Plume C at MW-16 3)Submission of Historical IRM data for Plume C 4)quarterly sampling of wells surrounding Plume C. CC'd on letter were Intergral(L'Esperance), OGC Urda and DEC Bielby. Vought also added letter to D2. Vought sent email reply to DEC Bielby that Ian, You never need to apologize as you are never a bother lol. In response to your email query below, and as I recently took over this project from Santosh (who has departed Spills), I have reviewed all available files in D2 and drafted up my usual technicolor Non-FOIL summary site plans which are attached above. To answer your question on potential impacts to Newtown Creek there were historical impacts to the Creek with a documented sheen in 2012 from what the reports call LNAPL Plume A . Furthermore data from this time also showed up to .5 of LNAPL in well MW-2 which was immediately adjacent to the Creek. In 2016, Plume A was entirely excavated to 5 feet below the water table as part of the installation of a new storm water retention basin. Endpoint samples from the Plume A excavation only showed minor detections of VOCs above Unrestricted SCOs and a bottom groundwater sample from the excavation only showed 85ppb benzene and 30ppb naphthalene. There were also two additional LNAPL plumes at the site (Plumes B and C) which were remediated via bailing of wells. Note that Plumes B and C are separated from the Creek by the remedial excavation of Plume A so it is unlikely that these plumes are currently impacting the Creek. Due to the disappearance of LNAPL from the site as well as minimal dissolved groundwater concentrations, the spill was closed on 4/25/16. On 8/10/16, we received an email from the consultant that .17 of LNAPL was observed in MW-16 which was identified as part of Plume C. In this email the consultant proposed manual bailing of the well and submission of a report. At that point the Department re-opened the Spill. As I have just reviewed the entire file, I am sending out a letter (attached above) to the consultant via separate email today (with a copy to you) requiring submission of a RIWP including: 1) Product recovery data for well MW16 (Plume C) 2) Delineation of soil and groundwater contamination of Plume C 3) Submission of Historical IRM LNAPL recovery data for Plume C 4) Quarterly sampling of wells surrounding Plume C. Hope this this helps and as always let me know if you need anything else, Thanks! 1/18/17-Vought-Sent email to Integral (L'Esperance) with cc to OGC Urda and DEC Beilby that James, I have taken over the above referenced spill from Santosh Mahat as he is no longer with the Spills Unit and as such I have reviewed all available reports for the site that are in our document system. I have attached the Department s spill reopening and requirement letter above and look forward to the submission of an RIWP that includes the requirements on the letter. An original of the letter is in the US mail to SIMS Metal East. Thanks. 1/19/17-Vought-Received email from Integral (Keith Brodock) with cc to OGC Urda, DEC Bielby, Integral (Corso/McCarty) that Hi Jeff, Katie Corso has taken over the SIMS project on our end, with support from Kevin McCarty (both copied here). (James L Esperance left Integral for a job at Northrup Grumman in California.) I will forward your email to Katie and Kevin, and one of them will be

SIMS METAL MANAGEMENT (Continued) **S111836487**

in touch. Please give me a ring if you need anything in the interim. Contact for Integral is: Kathryn Corso email: kcorso@integral-corp.com Ph: (212)440-6702 Cell:646-895-3325 Vought sent reply to Brodock with cc to all that Keith, Thanks for the quick reply and the new contact information for Integral. If Katie and Kevin have any questions and/or would like to discuss the Department s requirements, they can certainly call me. DEC Requires as per Consent Order, Resubmission of RIWP including: 1)Approval of proposal for IRM Product recovery from Plume B as per 8/10/16 email from Integral pending inclusion of 2)Delineation of Plumes B 3)Submission of IRM Reports showing recovery for Plume C. Installation of 4 recovery well at location. 4)Quarterly groundwater monitoring of surrounding wells 5)cc to Integral (Brodock/ Katie Corso), DEC Bielby, OGC Urda"

Remarks: "Line test failure."

DEC Memo:	"3/5/07 - Raphael Ketani. I called up Fred Cornell of Sims Hugoneu (cell (201) 739-9687). He said that the barge had been sitting overnight when it sunk. He suspects there is a hole in the hull, but he doesn't know for sure. He said that, sometimes, when the tug boat operator pushes a barge, he hits or bumps into something. The barge didn't contain oil or oil holding tanks. It is a non-motorized barge. It just had scrap metal and this was unloaded. There is no sheen from the barge. The Coast Guard has been notified. The barge will be refloated and repaired. I asked him why this was called into the Spill Response Hotline when there was no oil in or on the barge. He said that he was just being cautious about the incident. Based upon

SIMSMETAL EAST LLC - QUEENS PLANT (Continued) **S106534464**

my conversation with Mr. Cornell and the information above, I am closing the spill case."

DEC Memo:	"3/94: MW-4 had a sheen of product. MW-1 had 7500 ppb, MW-2 had 9600 ppb and MW-3 had 350 ppb of benzene. 8/94: Installed MW-5,6 & 7. MW-4 had 0.19 ft of LPH. Depth to water 13 ft. The SVE system is operable and manifolded to MW-2,3 & 4. MW-1 had 3000 ppb, MW-2 had 5200 ppb,

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

MW-3 had 360 ppb, MW-5 had 1400 ppb, MW-6 had 590 ppb and MW-7 had 24 ppb benzene. Sunoco will investigate and submit current tank test results. 12/10/2003 Reassigned from Tipple to Sun. 02/03/2004-Sun-File Update by Sun: Quarterly Monitoring and Sampling Report (October through December 2003), by EnviroTrac (Anthony Fiorentine, 631-471-1500): On 11/08/2003, liquid phase hydrocarbons (LPH) were detected in MW-4 at a thickness of 0.20 feet (ft.). The depth to water ranged from 22.78 ft. (MW-6) to 26.00 ft. (MW-4) below the surface on 11/8/2003. Six (6) wells (MW-1,2, 3, 5, 6 & 7) were sampled on 11/8/2003. BTEX concentrations ranged from not detected (ND) in 3 of the 7 wells to 58,000 micrograms per liter (ug/l) (MW-2).MTBE concentrations ranged from ND (MW-3) to 3,800 ug/l (MW-7). On 11/8/2003 and 12/21/2003, a three percent Biosolve surfactant and water solution was injected into MW-4. MW-4 was then han surged with a surge block and groundwater was removed from a down-gradient well (MW-7) with a submersible pump. LPH was not detected during the December 2003 short term remediation event (STRE). 03/11/2004-Sun-File Update by Sun: On 03/10/2004, Sun sent a letter and Stipulation Agreement to Russell Hammond of Sunoco requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of March 31, 2004 for signing the Stipulation Agreement by the Respondent. 10/31/05: Project reassigned from Sun to Andersen. Enhanced fluid recovery and Biosolve application are being utilized in two hotspots, MW2 and MW4. 12/8/05: December 8 meeting between Sunoco, DEC, and EnviroTrac. Biosolve remediation is not very successful. EnviroTrac and Sunoco think that source may be present and plan to do soil borings to identify source. Soil is likely very heterogenous. Site is now a pay commuter parking lot, so work can only be done on weekends. 1/4/06: Reviewed the quarterly report dated January 2006. Six wells sampled on November 20, 2005. Trace amounts of LPH in MW-4. Max BTEX 28,300 (MW-2) and 560 ppb (MW-2). Biosolve last used in August 2005. 5/3/06: Reviewed the first quarterly 2006 report. Wells sampled on 1/21/06. LPH is present in MW 4 at a depth of 0.25 ft. Max BTEX 22,900 in MW2. Max MTBE 91 ppb in MW7. Sent RAP required letter, due 7/3/06. 8/18/06: Meeting on 8/17/06 with Sunoco, EAR, and NYSDEC. RAP submitted. Regenox will be used. Three monthly Regenox installations will be completed. Regenox will be injected into twelve temporary borings, with injection span the vertical interval 15 to 35 feet below grade. Monitoring wells will be gauged and sampled monthly during Regenox application. RAP approved. 10/20/06: First mobilization to drill borings for Regenox application will occur on 10/21/06 8am-4pm. 11/9/06: Second mobilization for Regenox application will occur on 11/11/06. 12/18/06: Sent email to Jamie Brown of EAR to followup on status of next quarterly report. Received email from Jamie Brown: The next report will be completed and submitted to you mid - January 2007. Please let me know if you have any other questions. 2/13/07: Emailed Jamie Brown to followup on the status of the next quarterly report. 2/20/07: Reviewed update report. Regenox in use. Wells sampled on 12/23/06. Max BTEX 58,900 ppb (MW4), max MTBE 220 ppb (MW7). LPH in MW2 at depth of 0.48 ppb. 3/23/07: Meeting on 3/22/07 with Sunoco, NYSDEC, and EnviroTrac. LPH appeared last quarter because the Regenox mobilized contaminants. The second phase of Regenox application may be scheduled for April 2007. 4/13/07: Regenox application scheduled for 4/14/07. 6/11/07: Received update report. Wells sampled on 3/24/07. Max BTEX 37,400 ppb (MW4),

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

max MTBE 120 ppb (MW7). LPH in MW2 at a depth of 0.29 ft. Product recovered from MW2 and an absorbent sock put in well. Overall decrease in contaminant concentration. 10/12/07: Emailed Russell Hammond regarding overdue report. 10/16/07: Received email from Russell Hammond. Report will be submitted by the end of this week. 3/18/08: Reviewed October 2007 - December 2007 Project Status Report. Max BTEX 47,100 ppb (MW4). Max MTBE 140 ppb (MW2). When will the next phase of Regenox application occur? 3/19/08: Received email from Karen Waryas (Waryas@ENVIRO-ASMNT.COM): Phase 2 of the Regenox application at SUN-LIC32-32 occurred in April and May of 2007. It was mentioned in the June 2007 PSR, but regretfully was not put into the site history section of the September or December 2007 PSRs. I apologize for this oversight, and it will be remedied for future submissions. I put in an inquiry with my supervisor today as to when the third phase is expected to occur and will let you know as soon as I hear any information. 5/15/08 - Carlson: Reviewed January - March 2008 Project Status Report. Wells sampled on 3/22/08. Maximum BTEX concentration 23,600 ppb (MW2). Maximum MTBE concentration 74 ppb (MW2). Geochemical parameters are being monitored to evaluate progress of Regenox. When will third phase of Regenox occur? 9/4/08 - Carlson: Reviewed April - June 2008 Project Status Report. Wells sampled on 6/28/08. Maximum BTEX concentration 31,800 ppb (MW2). Maximum MTBE concentration 110 ppb (MW7). General increase in contaminant concentrations. When will third phase on Regenox application occur? 10/8/08 - Carlson: Meeting with Russell Hammond of Sunoco and Karen Waryas of EAR. Regenox won't be used again. Workplan for soil borings due by 10/30/08. A new RAP will be required afterwards. 11/5/08 - Carlson: Received email with Subsurface Summary letter. Email stated that a workplan will be submitted in two weeks. 12/22/08 - Carlson: Reviewed July 2008 - September 2008 Project Status Report. Wells sampled on 9/20/08. Maximum BTEX concentration 29,700 ppb (MW2). No mention of overdue workplan in report. Emailed Karen to followup on workplan submittal. 12/29/08 - Carlson: Received email from Karen. Workplan will be submitted when Russell Hammond gets back from vacation. 1/8/09 - Carlson: Approved investigation workplan for installation of three soil borings. 1/28/09 - Carlson: Reviewed September 2008 - December 2008 Update Report. Wells sampled on 12/20/08. Maximum BTEX concentration 37,620 ppb (MW4). On-site borings will be completed. 1/29/09 - Carlson: Meeting with Sunoco and Envirotrac. 4/5/09 - Carlson: Received investigation letter-report dated April 8, 2009. Three soil borings installed. High soil impact in all borings. A workplan for additional soil delineation will be submitted by may 8th. 5/22/09 - Carlson: Reviewed update report. Wells sampled on 3/28/09. Maximum BTEX concentration 37,700 ppb (MW4). Maximum MTBE concentration 64 ppb (MW2). Workplan for additional delineation overdue. 6/1/09 - Carlson: Meeting held with Sunoco and EAR. 6/5/09 - Carlson: Reviewed work plan dated 5/29/09. Five soil borings proposed. Sent email requiring revision workplan with 1) deeper minimum boring depth to account for smear zone and 2) continuous sampling of entire boring for all on-site borings except SB1. Revised work plan due in 30 days. 8/6/09 - Carlson: Approved revised work plan. Investigation Report due in 90 days. 10/6/09 - Carlson: Reviewed update report. Wells sampled on June 27, 2009. High dissolved concentrations in MW2 and MW4. No update on work plan implementation provided. 12/3/09 - Carlson: Reviewed update report. Wells sampled on 9/19/09. Trace LNAPL in MW1. Maximum BTEX concentration 27,800 ppb (MW2). Investigation report overdue.

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

12/8/2009 - Carlson: Meeting with Sunoco. Upgradient source?, access issue on upgradient property. 3/18/2010 - Carlson: Received notification. Field work scheduled for 3/20/2010. 3/19/2010 - Carlson: Reviewed October 2009 - December 2009 Quarterly Update Report. LNAPL sheen in MW1 in October 2009. However, low dissolved concentrations in MW1 in December 2009. Field work cancelled, will probably be rescheduled for next Saturday. 4/7/2010 - Carlson: Received notification - field work scheduled for 4/7 and 4/10. 7/2/2010 - Carlson: Reviewed January - March 2010 update report and RIR. SB4 - SB 6 installed. Soil and gw impact in SB4. Three more borings will be installed, as per 7/17/09 work plan. 9/9/2010 - Carlson: Reviewed April - June 2010 Quarterly Report. SB- 7 - 9 installed. Soil impact in SB- 4, 7, 8, 9. Issued letter requiring work plan for installation of three monitoring wells at SB-4, SB-7, and to the south of SB-9, and one soil boring adjacent to MW1. Due 10/11/2010. 1/31/11 - Obligado - I reviewed an investigation workplan. The workplan didn't propose a well at SB7. I emailed a letter to Jaime Brown and Russel hammond requiring revised work plan with well at SB7. Due within 15 days. 3/30/11 - Obligado - I reviewed a revised work plan which incorporated the changes I requested. Sent approval letter. 11/28/11 - Carlson: Reviewed 2nd and 3rd Quarter 2011 Update Reports. MW8-10 installed. Groundwater impact in all three new monitoring wells. 11/30/11 - Carlson: Issued letter requiring an off-site delineation work plan and a remedial action plan by 1/13/2012. 2/10/2012 - Carlson: Reviewed December 2011 update report. Delineation workplan and RAWP to be submitted. 1/10/2013 - Reviewed 1Q2012 dated 4/2012, 2Q2012 dated 7/2012 and 3Q2012 dated 10/2012. DTW 22.57 (MW-7) to 28.44 (MW-8) on 9/15/2012. MW-6, 30 BTEX, 1.2 MTBE. MW-2, 25,100 BTEX, less than 140 MTBE. MW-9, 34,030 BTEX, less than 400 MTBE. MW-4, 18,399 BTEX, less than 250 MTBE. MW-8, 798 BTEX, less than 76 MTBE. MW-7, 2,790 BTEX, less than 100 MTBE. MW-1, 18.1 BTEX, less than 13 MTBE. MW-3, 10.3 BTEX, less than 21 MTBE. MW-10, 15,740 BTEX, less than 93 MTBE. 4/5/2013 - 4Q2012, 1/9/2013, by CGE. Groundwater sampled on 12/15/2012. DTW 22.87 (MW-7) to 28.62 (MW-8). NO LNAPL. MW-6, 96 BTEX. MW-9, 27,650 BTEX, less than 190 MTBE. MW-4, 23,210 BTEX, less than 280 MTBE. MW-8, 1,851 BTEX, less than 160 MTBE. MW-2, 24,220 BTEX, less than 62 MTBE. MW-7, 2,040 BTEX, 31 MTBE. MW-1, 22.4 BTEX, less than 9.0 MTBE. MW-10, 15,960 BTEX,, less than 150 MTBE. 7/26/2013 - 1Q2013, 4/2013, by CGE. The monitoring was done on 3/23/2013. DTW 22.81 (MW-7) to 28.77 (MW-8). NO LNAPL. MW-6, 170 BTEX, 6.1 MTBE. MW-2, 21,780 BTEX, less than 76 MTBE. MW-9, 35,130 BTEX, less than 290 MTBE. MW-4, 22,684 BTEX, less than 270 MTBE. MW-7, 1,870 BTEX, less than 42 MTBE. MW-10, 10,440 BTEX, less than 110 MTBE. 06/27/2014: This spill case was transferred to A. Doronova. - AD 08/05/2014: Sent the following e-mail to Sunoco contact - Russell Hammond (e-mail: rhammond@sunocoinc.com) and copied to Anthony Fiorentine (afiorentine@cg-env.com): Dear Mr. Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for the following spill cases, which were recently transferred to me: 1. Spill No. 1011266, 550 Humbolt Street, Brooklyn; 2. Spill No. 0913725, 1626 Steelwell Avenue, Brooklyn; 3. Spill No. 0809869, 42-02 21st Streeet, Queens; 4. Spill No. 0708451, 972 Remsen Avenue, Brooklyn; 5. Spill No. 0502868, 1781 Bay Ridge Parkway, Brooklyn; 6. Spill No. 0407558, 5 Flatbush Avenue, Brooklyn; 7. Spill No. 0304033, 805 65th Street, Brooklyn; 8. Spill No. 9909665, 175-33, Horace Harding Expressway, Queens; 9. Spill No. 9900619, 1650 Forest Avenue, Staten Island; 10.

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Spill No. 9808686, 188-06 Hillside Avenue, Queens; 11. Spill No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781 Arthur Kill Rd., Staten Island; 13. Spill No. 9501327, 2701 Knapp Stret, Brooklyn; 14. Spill No. 8905358, 32-32 Queens Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard, Queens; 16. Spill No. 8904151, 161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay Boulevard, Queens; 18. Spill No. 8706272. 2052 Victory Boulevard, Staten Island. From now on, please submit all your future documentation (letters, reports, work plans, RAPs) related to these spill cases to my attention. Please note, that you should submit one hard copy of the document (report/work plan) and e-copy on a CD by regular mail. Please, do not submit large size documents via e-mail, since we have limited storage capacity, so it should be used only for correspondence. Feel free to contact me if you have any questions. Thank you. Sincerely, Ainura Doronova Environmental Engineer 1 Division of Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD 02/2015: Contacted Mr. Fiorentine regarding general sites meeting. Requested list of the Sunoco sites managed by Clean Globe Env. AD 03/20/2015: Received the following response from Mr. Fiorentine: Hello Ms. Doronova, Clean Globe Environmental is currently responsible for the following 11 Sunoco spill sites: " 2319 Tillotson Avenue, Bronx " 32 Highland Boulevard, Brooklyn " 805 65th Street, Brooklyn " 1781 Bay Ridge Parkway, Brooklyn " 161-15 46th Avenue, Flushing " 38-15 Queens Boulevard, Long Island City " 32-32 Queens Boulevard, Long Island City " 135-45 Cross Bay Boulevard, Ozone Park " 1650 Forest Avenue, Staten Island " 1781 Arthur Kill Road, Staten Island " 2052 Victory Boulevard, Staten Island Let me know if you have any dates that are free so that we may set up a meeting to review the status of these sites. Thank you , Tony Fiorentine Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com 03/24/2015: The meeting is scheduled for April 23, 2015. AD 04/23/2015: DEC met with a Sunoco representative - Russel Hummond and Sunoco s consultants: Tony Fiorentino of Clean Globe Env. (CGE), and Todd Painter of Environmental Assessment and Remediation (EAR) to discuss the current status of each site, go over historical monitoring and recovery data, and discuss further actions to help expedite closure of the spills. DEC received updated remedial progress and monitoring reports. High-priority sites and potential spill closure candidates were discussed. Sunoco s consultants reported overall progress in reducing BTEX levels in soil and groundwater at the sites. It was agreed that reports recommending spill closure will be prepared for several sites. - A Site Status Report for a period from October through December 2014 was submitted to DEC on this meeting. Will review AD 06/10/2015: Reviewed the report. It states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The average depth to water was 24.97 feet and ranged from 22.65 feet (MW-7) to 28.72 (MW-8) ft. below top of casing on December 27, 2014. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on December 27, 2014. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the December 27th sampling event, BTEX concentrations ranged from 3.1 (MW-3) to 28,200

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit in all wells sampled. The quarterly GW sampling will continue at the site. If GW quality in well MW-4 will not show improvement in the next sampling round, some actions need to be taken to expedite the cleanup. AD 08/04/2015: Received a first quarter 2015 report. Will review. AD 09/01/2015: Reviewed the 1st quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The average depth to water was 25.16 feet and ranged from 22.65 feet (MW-7) to 28.52 (MW-8) ft. below top of casing on March 28, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on March 28, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the March 28th sampling event, BTEX concentrations ranged from 17.0 (MW-3) to 30,100 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit in all wells sampled. GW data from well MW-4 indicated increase in BTEX levels from 28,200 in December 2014 to 30,000 ug/L in March 2015. Will contact Clean Globe Env. AD 09/03/2015: Received a second quarter 2015 report. Will review. AD 10/13/2015: Reviewed the second quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during the June 13, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 22.60 feet (MW-7) to 28.42 (MW-8) ft. below top of casing on June 13, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on June 13, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the June 13th sampling event, BTEX concentrations ranged from 3.0 (MW-1 and MW-3) to 25,992 ug/L in MW-4 which is a decrease from March 2015 sampling data at 30,100 micrograms ug/L in this well. MTBE concentrations were below the detection limit in wells (MW-1, 2, 3, 4, 5, and 9) to 1,109 ug/L in MW-8. Area of groundwater contamination located in the central northern part of the site along the Queens Boulevard. TBTEX concentrations in this area are: 1. MW-2 - 20,100 ug/L; 2. MW-4 - 25,992 ug/L; 3. MW-9 - 16,010 ug/L. Some additional actions should be proposed for this part of the site to expedite the spill cleanup. Will call the consultant. Quarterly groundwater sampling will continue at the site. AD 03/10/2016: Received third and fourth quarters 2015 reports. Will review. AD 04/05/2016: Reviewed the third quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during September 26, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 23.09 feet (MW-6) to 28.69 (MW-8) ft. below top of casing on September 26, 2015. GW sampling: Ten (10) groundwater samples were collected (MW-1 through MW-10) on September 26, 2015. Samples were analyzed for volatile organic compounds on the CP-51 List via EPA Method 8260C. GW data: During the September 26th sampling event, BTEX concentrations ranged from ND (MW-3) to 22,277

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit for all the wells sampled (MW-1 through MW-10). Area of groundwater contamination located in the central northern part of the site along the Queens Boulevard. TBTEX concentrations in this area are: Well September June 2015 1. MW-2 - 13,850 ug/L 20,100 ug/L; 2. MW-4 - 22,277 ug/L 25,992 ug/L; 3. MW-9 - 13,412 ug/L 16,010 ug/L. 4. MW-10 6,830 ug/L NS Plans for the site include continuation of quarterly monitoring and sampling. The next sampling round is scheduled for December 2015. AD 04/28/2016: Reviewed the fourth quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during December 19, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 23.38 feet (MW-6) to 28.81 (MW-8) ft. below top of casing on December 19, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on December 19, 2015. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the December 19th sampling event, BTEX concentrations ranged from ND (MW-3) to 22,277 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit for all the wells sampled (MW-1 through MW-10). Well December September June 2015 1. MW-2 - 21,030 ug/L 13,850 ug/L 20,100 ug/L; 2. MW-4 - 24,348 ug/L 22,277 ug/L 25,992 ug/L; 3. MW-9 - 18,600 ug/L 13,412 ug/L 16,010 ug/L. 4. MW-10 NS 6,830 ug/L NS The BTEX levels indicate fluctuating trend. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. The next sampling round is scheduled for March 2016. Future analysis will include volatiles on the CP-51 list by EPA Method 8260C. AD 01/2017: Called and spoke with Mr. Fiorentine regarding submission of all missing reports for Sunoco sites and scheduling an annual meeting to discuss the priority sites and further actions. AD 03/03/2017: Received a cluster of reports for the Sunoco sites for 2016. Will review. AD 03/20/2017: Reviewed the 1st quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during March 19, 2016 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 25.32 feet (MW-6) to 29.89 (MW-8) ft. below top of casing on March 19, 2016. GW sampling: Ten (10) groundwater samples were collected (MW-1 through MW-10) on March 19, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the March 19th sampling event, BTEX concentrations ranged from ND (MW-7) to 35,600 micrograms per liter (ug/L) (MW-2). MTBE concentrations were below the detection limit for all the wells sampled, except for well MW-7 with 160ug/L. Well December 2015 March 2016 (BTEX in ug/L) 1. MW-1 - 51 916 2. MW-2 - 21,030 35,600 3. MW-3 - 32 912 4. MW-4 - 24,348 29,128 5. MW-5 - 252 38 6. MW-6 - 1,229 223 7. MW-7 - 1,400 ND 8. MW-8 - 1,598 1,228 4. MW-9 - 18,600 28,610 5. MW-10 NS 8,110 The BTEX levels indicate in general an increasing trend. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens

above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. Weekly site visits will be conducted to monitor and remove free product. AD 04/04/2017: Reviewed the 4th quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. Free product was detected in monitoring wells: MW-4, MW-9 and MW-10 during September 30, 2016 sampling event. As a result, weekly free product recovery events were conducted at the site since that time. Absorbent socks were used in the wells. LPH recovered during this period - 0.11 gallon. The depth to water ranged from 28.19 feet (MW-6) to 32.69 (MW-8) ft. below top of casing on December 3, 2016. GW sampling: Seven (7) groundwater samples were collected (MW-1 through MW-7) on December 30, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the December 3rd sampling event, BTEX concentrations ranged from ND (MW-7) to 28,800 micrograms per liter (ug/L). MTBE concentrations were below the detection limit for all the wells sampled. MW-2 had the highest TVOCs with 32,100 ug/L. Well December 2015 March 2016 July 2016 September December 2016(BTEX ppb) 1. MW-1 - 51 916 447 519 348 2. MW-2 - 21,030 35,600 33,100 60,800 28,800 3. MW-3 - 32 912 643 1,266 1,266 4. MW-4 - 24,348 29,128 36,724 FP FP 5. MW-5 - 252 38 10 2,889 3,083 6. MW-6 - 1,229 223 3,524 7,540 10,640 7. MW-7 - 1,400 ND ND ND ND 8. MW-8 - 1,598 1,228 1,542 895 917 4. MW-9 - 18,600 28,610 31,741 FP FP 5. MW-10 NS 8,110 NS FP FP The BTEX levels indicate an increasing trend in wells: MW-5, MW-6 and MW-8. Wells: MW-4, MW-9 and MW-10 had LNAPL. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. LNAPL recovery site visits will continue on a bi-weekly basis for the 1st quarter 2017. This will include well gauging of the 4 wells: MW-2, MW-4, MW-9 and MW-10. AD"

DEC Memo:	"11/27/07 bf: Spoke to Nancy Galasso. She plans on repairing the tank and is waiting for proposal from Petroleum Tank Cleaners. Confirmed mailing address and sent ttf letter to: Nancy Galasso Wickersham Realty 79 Wheatley Road Old Westbury, NY 11568 1/2/08 On 12/27/07, received 12/11/07 passing tightness test for tank only. Included was a note requesting a response. 1/3/08 Called Nancy Galasso (516)626-3487. She told me tank failure was due to pipes. PTC is handling. Called M. Salamack of PTC. Tank emptied. Running on temp tank. No contamination found so far. Piping is both aboveground and underground. Company leasing building is giving PTC hard time. They were sent away when trying to make repairs. Lessee wants to remove tank and install AST. Owner wants to keep UST. PTC caught in middle and has to call lessee prior to doing work at the site (as per lessee). Mark will call lessee today. bf 5/22/2008 Sangesland sent a TTF 2nd Notice letter to: Nancy Galasso Wickersham Realty 79 Wheatley Road Old Westbury, NY 11568 5/23/08 Received message from N. Galasso Wickershaw (516)626-3487. She said tank was closed, which according to DEC records was closed in 2008. I told her to close the spill case a letter/report is required. bf 5/28/08 Yesterday, M. Salamack left message stating no contamination found. Piping fittings were loose. He will send report to me by the end of the week. bf 7/24/08 received letter from Mark Salamack on 7/16/08. Suction line Cuase of failure was exposed pipe inside the building. Buried prtion of pie examioned and no sign of cantamination. Old tank abandoned and new 1080 gallon AST installed. Passing tightness test for tank included. Review of PBS file shows that tank was closed. NFA. bf"

ROEHR CHEMICALS, INC. (Continued) **S113492645**

Updated By: JHOCONNE
Site Description: Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.
Env Problem: Nature and Extent of Contamintion: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.
Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of

ROEHR CHEMICALS, INC. (Continued) **S113492645**

radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

- Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the Site. The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the

460 KINGSLAND AVENUE (Continued) **U003074537**

staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses. After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery. The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

Env Problem:	Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

460 KINGSLAND AVENUE (Continued) **U003074537**

Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new

460 KINGSLAND AVENUE (Continued) **U003074537**

fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a clean fill recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have received an e-mail from Ed Hampston who forwarded a

460 KINGSLAND AVENUE (Continued) **U003074537**

request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ 3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ "

Acres: 1.2
HW Code: 224144
Record Add: 09/08/2010
Record Upd: 10/31/2013
Updated By: MJKOMORO
Site Description: Location: The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site. Site Features: The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site. Current Zoning/Uses: The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment. - 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories - 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses: In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003. Site Geology and Hydrogeology: Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeast Miscellaneous: There are no PBS, CBS records for the multiple addresses of the Site.
Env Problem: The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab. The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

TCLP analyses were all below hazardous waste thresholds. Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Site Description: Location: The site is located at 21-03 44th Avenue in Long Island City, Queens, NY. Site Features: The site primarily consists of the building located at 21-03 44th Avenue, which is currently used as a

21-03 44TH AVENUE (Continued) **S109826178**

taxi dispatch and a taxi medallion brokerage. Current Zoning/Uses: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Historical Uses: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south. Entered Brownfield Cleanup Program on February 10, 2014 as C241144.

Env Problem:	Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater. Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. Soil vapors beneath the building have been tested and are well above the NYSDOH guidance levels for PCE.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The site is located immediately south of the building located at 21-03 44th Avenue in Long Island City, Queens, NY. Site Features: The site includes the sidewalk/street area immediately above and in the vicinity of a reported broken sewer line near the location of three groundwater monitoring points placed on the sidewalk in front of the building at 21-03 44th Avenue. Current Zoning and Land Use: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Contamination was thought to have entered the environment from a broken sewer pipe that connects the building at 21-03 44th Avenue and the main sewer line in the street. This hypothesis has since been shown to be incorrect. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

21-03 44TH AVENUE (Continued) **S109826178**

Env Problem:	Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in groundwater. Contravention of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. This contamination was thought to be emanating from a broken sewer line; however, this was disproven during the remedial investigation that was conducted in 2011. Significant Threat: While this site was initially determined to present a significant threat, that determination is no-longer valid, as the source(es) of contamination are located north of this site. Moreover, two sites immediately to the north have since entered the Brownfield Cleanup Program and remedies are underway to address them. Contamination at this site's location and to the south will be further assessed under the off-site portion of the Wills Building site (site ID No. C241143).
Health Problem:	Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Update By:	JEBROWN
Site Description:	Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.42 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Prior uses of the building include metal plating and the painting of radium dials. One area in the northern portion of the site contained a disposal structure that appeared to have received plating wastes. That area was reportedly remedied outside of any regulatory program by the previous site owner in 2005, when approximately 100 cubic yards of soil was excavated in two successive efforts to achieve a soil cleanup goal of 10 parts per million (ppm) for hexavalent chromium. Final endpoint sampling showed that the cleanup was successful, with the highest remaining hexavalent chromium concentration at 6.17 PPM. Because of the previous use of radium paint at the building, select soil and groundwater samples were analyzed for radium and it was not detected above naturally-occurring levels. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south. A site location map is attached as Figure 1.
Env Problem:	Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (CVOCs), primarily tetrachloroethene (PCE), extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south. Hexavalent chromium is also present in site groundwater. As a result of that study s findings, two additional investigations were performed in an effort to characterize the site. In those investigations, soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated

21-03 44TH AVENUE (Continued) **S109826178**

biphenyls (PCBs), and pesticides. Because of the previous use of radium paint at the building, select soil and groundwater samples were analyzed for radium and it was not detected above naturally-occurring levels. Soil: Studies have not detected VOCs above Unrestricted Use soil cleanup objectives (SCOs) in unsaturated site soils. The most recent investigation showed the presence of PCE at 6.9 ppm in one boring at the site; however, that boring was sampled beneath the groundwater table and it appears that the contamination detected may be attributed to the high levels of groundwater contamination known to be present in the vicinity of the building. Early studies showed soil contamination with hexavalent chromium in excess of 19,000 ppm (exceeding all use based SCOs) beneath a disposal structure in the northern portion of the building, that soil was removed during a self-directed remedial action by a previous site owner in 2005. Following the 2005 cleanup, the highest level of hexavalent chromium contamination detected was 6.17 PPM. This cleanup up was further verified in the most recent investigation, with a maximum detected concentration of hexavalent chromium of 6.4 ppm detected at a boring conducted at the area of the former disposal structure. While both levels exceed the Unrestricted Use SCO of 1 PPM, they are well below the Groundwater Protection SCO of 19 and the Restricted Residential SCO of 110 ppm. Several PAHs, including benzo(a)anthracene and benzo(a)pyrene, were found in a limited number of samples. While these compounds were found in excess of the Restricted Residential SCO, they were not at levels beyond those generally associated with historic fill. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Contaminants exceeding standards, criteria, and guidance in groundwater include PCE at 36,000 parts per billion (ppb) vs. a standard of 5 ppb and hexavalent chromium as high as 1,500 ppb vs. a standard of 50 ppb. Trichloroethylene, cis- 1,2-dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. Off-site groundwater appears to be contaminated by hexavalent chromium related to the previous site use as a metal plating facility; however, a removal action undertaken by a previous site owner appears to have addressed the source, and contamination is expected to diminish with time. Groundwater monitoring will be undertaken in the Site Management phase to confirm the anticipated downward trend. Off-site groundwater is also contaminated with chlorinated solvents, but this appears to be from an up-gradient source, as up-gradient well concentrations generally exceed down gradient well concentrations, and no VOC source has ever been found on the site. Soil Vapor: The most frequently detected CVOCs in sub-slab samples were PCE, TCE, and 1,1,1-trichloroethane (1,1,1-TCA). At least one of these compounds was detected in five of the six sub-slab samples at elevated concentrations. Indoor air samples also detected similar CVOCs and actions were recommended to address soil vapor intrusion. The highest sub-slab concentration of PCE was 18,000 micrograms per cubic meter (ug/m3), and this was collocated with the highest indoor air concentration of 57 ug/m3 vs. the air guideline for PCE of 30 ug/m3. TCE was found as high as 5,700 ug/m3 in sub-slab soil vapors, and at a level of 2.4 ug/m3 in indoor air vs. the air guideline for TCE of 2 ug/m3, though this sample was not located in the vicinity of the highest sub-slab sample. 1,1,1-TCA was found at a high of 3,100 ug/m3 in sub-slab samples, and the collocated indoor air sample contained 18 ug/m3. All of the indoor air concentrations were at their highest in the first round of

21-03 44TH AVENUE (Continued) **S109826178**

	sampling, and concentrations of PCE and other CVOCs in subsequent sampling were either less than 1 ug/m3 or below detection limits. Data does not indicate any off-site impacts in soil vapor related to this site.
Health Problem:	If people dig below the surface they may come into direct contact with contaminants in the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling has indicated that measures are needed to address exposures associated with soil vapor intrusion and mitigation measures are recommended to prevent soil vapor intrusion into the on-site building. Off-site contamination in soil vapor does not appear to be related to this site and will be addressed as part of the remedial activities for the Wills Building, Site #C241143, which is just north of the site.

FINDS:

Registry ID: 110000616539

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The site is located at 43-01 21st Street in Long Island City, Queens, NY. Site Features: The site primarily consists of the building located at 43-01 21st Street, which is currently used to house many small businesses, including dental labs, furniture makers,

THE WILLS BUILDING (Continued) **S113916801**

uniform sales and upholstery shops, among others. Current Zoning/Uses: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately flve hundred feet south of the site, along 44th Road. Historical Uses: Prior uses of the building include manufacturing of X-ray equipment in the 1930's, as well as several smaller industries. Light to medium grade manufacturing has been conducted immediately to the south and east of the site for over fifty years. A New York City high school is located approximately four hundred fifty feet to the south of the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately fifteen feet, with bedrock below this depth. Groundwater is encountered at approximately ten feet below ground surface, and the flow is generally to the south.

Env Problem: Nature and Extent of Contamination: Data collected during the investigation of the 21-03 44th Avenue site RI, located immediately south of the Wills Bbuilding, indicated the Wills building to potentially be a contributing source of VOC contamination to that site. Wells were placed upgradient of the Wills building, and data from those wells was assessed relative to wells immediately down gradient of the Wills building, but upgradient of the 21-03 44th Avenue site. Results indicate that contamination at the downgradient location is over an order of magnitude greater than the upgradient locations, with PCE contaminant levels as high as 2700 ug/l in the overburden wells (vs. an overburden upgradient value of 190 ug/l), and 23,000 ug/l in the bedrock wells (vs. an upgradient value of 760 ug/l). Sub-slab and indoor air data was also collected at the Wills building and results are substantially above guidance. Sub-slab PCE levels are as high as 3,700,000 ug/cubic meter; and indoor air showed levels above the NYSDOH matrix values.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

HW Code:	C241143
Control Code:	08
Control Type:	INST
Dt record added:	09/14/2015
Dt rec updated:	12/12/2016
Updated By:	LSZINOMA
Site Code:	490427
Site Description:	Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

THE WILLS BUILDING (Continued) **S113916801**

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 490427
Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with

THE WILLS BUILDING (Continued) **S113916801**

activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 490427
Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building

THE WILLS BUILDING (Continued) **S113916801**

is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Corrective Action Summary:

Event date: 09/08/1993
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 09/20/1994
Event: RFA Completed

Event date: 09/20/1994
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 02/07/1995
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time, because it appears to be technically infeasible or inappropriate.

Event date: 08/11/2004
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

Event date: 02/09/2007
Event: Date For Remedy Selection (CM Imposed)

Event date: 09/29/2015
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 03/31/2016
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/08/2016

Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use: The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing. Site Features: The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site. Past Uses of the Site: The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway. A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC's Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil lying above the groundwater table. See Site Code C241005 for post ROD updates.

Env Problem: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

	contaminants of concern include petroleum hydrocarbons, chlorinated solvents,heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089
Health Problem:	Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminates. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Record Updated Date:	03/08/2017
Update By:	JXGRECO
Site Description:	Location: The Former Quanta Resources Site, a.k.a. Review Avenue Development II Site (RAD II) is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. This site is adjacent to the Review Avenue Development I (RAD I) (seperated only by Preston Alley which is a access alley/paper street). The Long Island Railroad tracks boarder the property along the southwest. Site Features: The site is a fenced, open gravel parking lot. All above ground and below ground tanks, structures, and buildings were removed as part of an interim remedial measure in 2008. Current Zoning/Uses: The RAD II site is currently being used as a parking lot. It is zoned for commercial and industrial uses. Historical Uses: The RAD II property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in November 1981. Site Geology and Hydrogeology: The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to course sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the water table under the site.
Env Problem:	Nature and Extent of Contamination: A viscous light non-aqueous phase liquid (LNAPL)is present at the watertable over the entire site. The LNAPL is a weathered petroleum. Groundwater flow is toward the south-southwest toward the Newtown Creek. The extent of the LNAPL has been delineated and it has not migrated beyond the Long Island Railway tracks downgradient. Known or suspected contaminants include: Petroleum, Chlorinated Solvents, other VOCs, and metals, impacting the soil and groundwater. An LNAPL collection and treatment system has been completed and is operating on-site. Significant Threat: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

Health Problem:	Exposure to contaminated groundwater or soil is unlikely because the area is served by public water and access to the site is restricted by fencing. The potential for exposure via soil vapor intrusion off-site will be evaluated during the remedial design and will also be evaluated if new construction is planned on-site in the future.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: MJKOMORO
Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."
Health Problem: Not reported

FINDS:

Registry ID: 110004334872

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013752313

CARBONA PRODUCTS CO (Continued) **1000164221**

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL Contaminated soil letter. This spill was reassigned from Sigona to Rommel on 4/7/2004. Transfer to E. Hampston as part of Greenpoint Petroleum Remediation Project work on 6/17/09. R-2 to review spill files to determine if any records exist. Follow up with ExxonMobil staff on Greenpoint Project for other details. (EH 6/09). Consolidate under 8800244. Exxon has provided draft characterization report for former MOSF property and former refinery property still under ownership of Exxon. Spill to be addressed under MOSF/refinery characterization and remediation steps. (EH 9/09)."
Remarks:	"Contaminated soil in an excavated project in the monitor st yard ongoing remediation"

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE).
Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Description:	LOCATION: This is an off-site investigation of the area downgradient of the Bridge Cleaners site, Site Number C241127, which located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings.Recent construction in the area includes a self-storage facility and hotels. HISTORICAL USES: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, and distribution points for a variety of products. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL, which is about 20 feet below land surface in the vicinity of the site. Soils in the area are expected to be primarily sand and silty sand.
Env Problem:	NATURE AND EXTENT OF CONTAMINATION: In October 2010, a property location in this block was identified as a potential site (P-site) due to soil vapor and groundwater results collected by an adjacent property owner. After unsuccessfully attempting to obtain access for a more thorough investigation, NYSDEC conducted a limited offsite investigation in February 2012. Groundwater and soil samples were taken. Based on this investigation, the Bridge Cleaners Site (C241127) was determined to be causing a significant threat to public health and the environment. The site cleanup is being managed in the NYS Brownfield Cleanup Program. Groundwater: Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of tetrachloroethylene (PCE) and trichloroethylene (TCE) upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. The groundwater standard for both PCE and TCE is 5 ppb. Soil: One of 14 soil samples, at a side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. This 2016 Remedial Investigation will define the nature and extent of contamination emanating from the Bridge Cleaners Site in groundwater, soil vapor and any other parts of the environment that may be affected. Shallow and deep groundwater wells will be installed upgradient and downgradient of the Bridge Cleaners site (C241127). After well installation, two sets of samples will be collected. Based on the initial sampling, groundwater samples will be collected for Compound Specific Isotope Analysis (CSIA). This analysis will be used to determine whether the source of the Tetrachloroethene (PCE) and

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

	Trichloroethene (TCE) groundwater contamination is exclusively from the Bridge Cleaners site or from other sources in the immediate area. Eleven soil vapor samples will also be collected initially. After the results are obtained, the Department may request access from owners of eight structures along 29th Street for sub-slab and indoor air sampling.
Health Problem:	Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Furthermore, environmental sampling indicates that soil vapor intrusion represents a concern for on and off-site structures and additional evaluation is necessary to determine the extent of exposure to contamination in this media.

Site Description:	Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade.
Env Problem:	NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building,and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade, and below the water table at 25.5 feet. In the first quarter of 2014, after entering the Brownfield Program, additional groundwater, soil and soil vapor samples were obtained from within the building. Five groundwater samples ranged from 165 to 340 ppb for PCE, and TCE concentrations from 2-7 ppb. Soil samples obtained from the same 5

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

	locations did not exceed unrestricted soil cleanup objectives. Sub-slab soil vapor, however, ranged from approximately 20,000 ug/m3 to 668,000 ug/m3 below the slab (PCE) and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Based on the soil vapor results, there is a need to mitigate the building. In Nov 2014, a new consultant was hired by the BCP applicant. Soil in the NW corner of the building was found at 1.8-9.6 ppm (exceeding the protection of groundwater SCOs) for PCE (1.3ppm). An IRM design has been developed to address the source area.
Health Problem:	People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Description: Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

west, and Skillman Avenue located to the south. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility Historic Use: The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA) project. An extensive cleanup program was completed in 1996 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with recurring PCB contaminated sediment impacts. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem: Nature and Extent of Contamination: Prior to Remediation: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater from soils impacted by the COC's. Continued migration of contaminated

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs (18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

locations. There were no exceedances of the SSSCLs for the COCs. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010.

Health Problem:	Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

DEC Memo:	"3/31/15: Mahat t/c: DEC Mahat contancted Mr. Benson ans asked him to send some picture and closure report as clean up is done by retained contractor. DEC is waiting for a closure report. 4/3/15: Mahat E/C: DEC Mahat received an narrative clean up report from Mr. Benson. Absorbents were applied to the effected concrete to. Affected soils were excavated to a depth of 9 , and concrete was scrubbed with a degreasing agent to remove any remaining product. The area was returned to service, 2x drums of oily solids were generated. V/R, Chris Benson Senior Environmental & Safety Analyst New York - Operations AMTRAK 39-29 Honeywell St. Long Island City, NY, 11101 Cell 917-538-2982 ATS 521-6084 Office 212-630-6084 christian.benson@amtrak.com Based on the report and the facility and initial picture. The Department does not warranr any further investigation. Spill case will be closed in DEC Spill Database. "

DEC Memo:	"02/14/12- Christian Benson from Amtrack sent the following email: Around appx 1500hrs, 13FEB12, while replacing fuel in a portable heating unit, an Amtrak employee noticed fuel leaking from the underside of the fuel tank. The employee notified their supervisor, who instructed them to bring it to the motor pool area, away from the track area. The employee tilted the unit upwards to move product away from the hole. Upon reaching the motor pool, the employee had to tilt the unit back down, allowing product to begin leaking again. It is now estimated that only 1.2 gallons were released as employees were able to remove remaining product from the tank and place into a separate drum. The spilled material was contained with absorbent boom, pads, and sand. Clean-up was completed the morning of 14FEB12, and all wastes were placed into a drum for disposal. S-200 product will be used to further ensure full remediation of the area. Product was only released on impermeable surface, no waterways or soil was affected. Spill Closed. "
Remarks:	"Caller reporting a spill of 5 gallons of #1 fuel oil (kerosene) to concrete. Clean up is in progress."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 7/9/07: Reassigned to Kartik Chanda (Chanda) 9/10/07: Kartik Chanda of DEC has reviewed this spill case and sent a letter to National Railroad Passenger, 400 West 31st St., 4th Floor, NY, NY 10001, Attn: Emma Cattafi requiring that the following information be submitted to DEC for review by 10/25/07: 1. An explanation of the cause of the tank/equipment failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

(decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/17/07: Chanda received a letter from Emma Cattafi, Senior Environmental Coordinator, Amtrak with enclosed: 1. Invoices from Eadtmond describing work performed. 2.Invoices and scope of work from CHES. 3. Soil sample analysis report. 4.Tightness test tesults. 5.Shipping paper for soil disposal. 11/19/07: Chanda reviewed soil sample analytical results and UST tightness test results for this spill and has the following comments: 1. On May 14, 2004, the oil was found during the soil excavation phase of a project to upgrade/ retrofit an existing 20,000-gallon UST. 2. Amtrak estimated a release of approximately 10 gallon of #2 fuel oil. 3. Clean Harbors Environmental Services(CHES) excavated the contaminated soil surrounding the tank. VOCs and SVOCs were not detected in soil analytical results. Kartik Chanda discussed with Joe Sun (NYSDEC) regarding the findings of the soil analytical results and based on the information presented to the Department, DEC closed this spill, dated 11/20/07. 11/21/07: Chanda sent an NFA letter to Ms.Emma Cattafi, Senior Environmental Coordinator, AMTRAK, by regular mail. "

Site Description: Location: The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The approximately 1 acre site is described on the county tax map as Block No. 2487, Lots No. 1, 10, 12, 72 and 78. Site Features: The dimensions of the site are approximately 240 feet by 200 feet. The building consists of a number of smaller buildings that have been joined together. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage. Current Zoning/Use: The Site zoned M1-2/R6 which designates the site as manufacturing with a residential overlay. The site is currently vacant. Historic Use: The site has been in existence since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler

49 DUPONT STREET (Continued) **1009232006**

shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart removed all of their equipment and offices. There are 12 underground storage tanks (USTs) located on the Site. According to records, these tanks were emptied and closed as part of an Interim Remedial Measure (IRM). There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) number is 2-608875, and the Chemical Bulk Storage (CBS) number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. Site Geology and Hydrogeology: Measurements of the groundwater elevation indicated groundwater flow is generally to west towards the East River.

Env Problem: Nature and Extent of Contamination: The plasticizers bis(2-ethylhexyl)phthalate, Di-n-Octyl phthalate, as well as high boiling, paraffinic, petroleum oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. TCE was also detected in soil vapor, shallow soil and groundwater in central portion of the site. From 1983 to 2004 NuHart and Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000 ppm of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. According to the Interim Investigation Report dated April 2010, a large plume of plasticizer NAPL mixture consisting of phthalates and paraffinic petroleum was identified under the western end of the factory where the plasticizer USTs were located. A small plume of NAPL consisting primarily of phthalate was identified beneath Lot 12 near one of the plasticizer tanks. The large plume has migrated off-site in a northwesterly direction under the sidewalk. Previous interim remedial measures (IRMs) implemented under the spill program involved cleaning the floors of the factory, cleaning out the USTs, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and recovery equipment. NAPL recovery has been ongoing since 2007. The IRM activitiy includes the use of a automated recovery unit at one recovery well and manual bailing from other wells. Typically about 70 to 80 gallons of product/water mixture are recovered each month.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil since it is under the ground surface, however, if the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. Also, the potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby structures via soil vapor intrusion needs to be evaluated.

Site Description:	The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The building consists of a number of smaller buildings that have been joined together. The dimensions of the footprint of the one large building are approximately 400 feet by 200 feet. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage. The site has been in existence since 1887. It has been used for manufacturing, as an office, as storage, and for shipping and receiving. Prior to 1950, the site was used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. From 1983 to 2004, NuHart & Company made vinyl siding and sheeting at the site. After 2004, NuHart & Company removed all of their equipment and offices. The site is now used for the storage of plastic wrapping and many large (36 cu. ft.) fabric bags containing pellets of resin. There are 17 underground storage tanks located on the site and two large silos above ground at the west end of the building. The Petroleum Bulk Storage (PBS)number is 2-608875 (for 13 registered tanks). The site is a former Chemical Bulk Storage (CBS) facility #2-000444 with 5 plasticizer tanks. Liquid plasticizers stored included bis(2-ethylhexyl)tertphthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. The requestor withdrew the application, and the site was listed on the Registry of Inactive Hazardous Waste disposal site as of June 2010 (see site no. 224136).
Env Problem:	The plasticizers bis(2-ethylhexyl)phthalate anddi-n-octylphthalate, as well as #4 fuel oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. From 1983 to 2004 NuHart & Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000,000 ppb of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. A large plume of plasticizer NAPL was identified under the western end of the factory where the plasticizer USTs were located. This plume had migrated off-site in a northwesterly direction. A small plume of mostly #4 oil NAPL was identified under the northeast corner of the factory and had migrated a shorty distance off site. The environmental remediation which followed involved cleaning the floors of the factory, cleaning out the underground storage tanks, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and equipment. The NAPL plumes have now been reduced in size and consist of three separate plumes. All of the plumes are contained under the

49 DUPONT STREET (Continued) **1009232006**

sidewalks bounding the factory and under the footprint of the building. The smallest plume is under the northeast corner of the site. The former large plume under the western end of the factory is now two separate plumes (according to the November 26, 2008 gauging event) and consist solely of plasticizers. The thickness of the NAPL ranges from 0.16 feet to 1.38 feet. Product collection from these two plumes is continuing and, as of December 2008, has recovered a total of 8,356 gallons of NAPL.

Site Description: Location: The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is located approximately 1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Meeker Avenue Plume Trackdown Site Characterization in the area of this site was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

(0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (approximately 138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem:	Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). -Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

DEC Memo: "6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personel have uncovered a portion of the UST located inside the

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4' in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260 Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington) 8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal from the site building. IPT to confirm the permits needed before initiating work. URS will be providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)"

Remarks: "Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

North Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

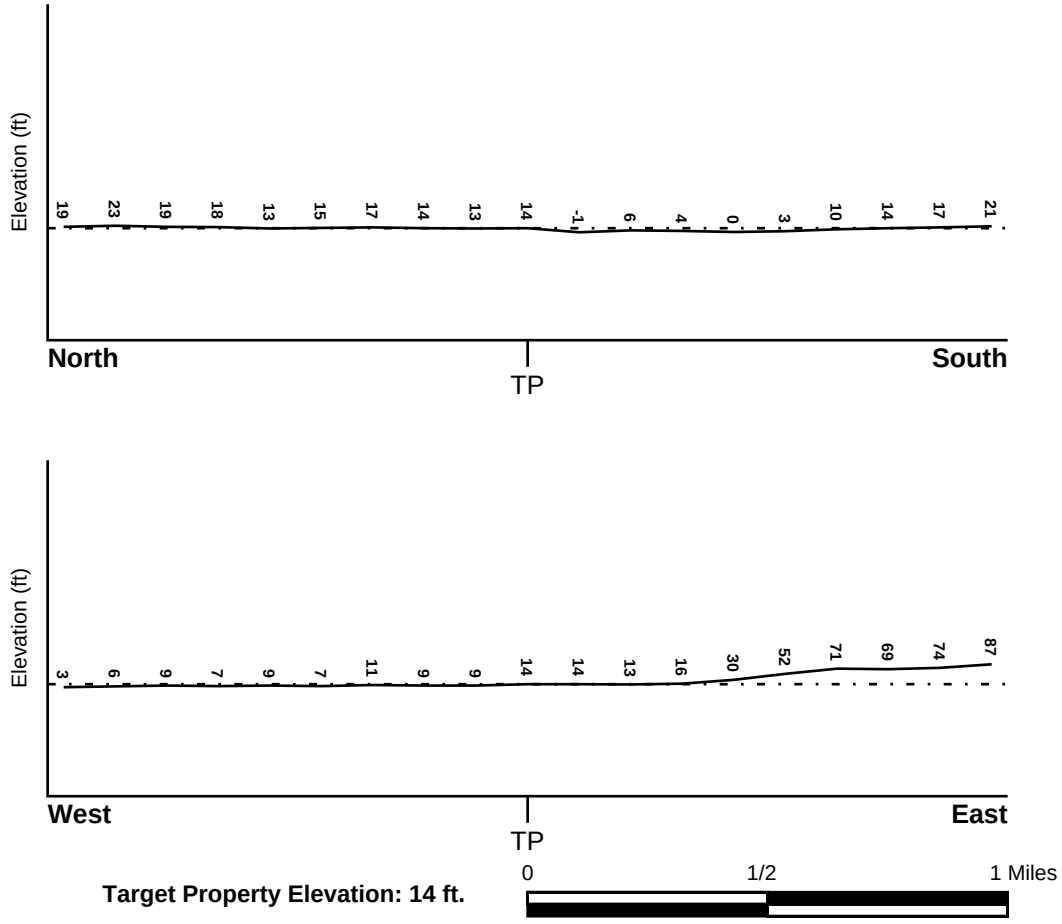
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970202F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970206F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS
RADON

AREA RADON INFORMATION

Federal EPA Radon Zone for QUEENS County: 3

Note: Zone 1 indoor average level > 4 pCi/L.
: Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.
: Zone 3 indoor average level < 2 pCi/L.

Federal Area Radon Information for QUEENS COUNTY, NY

Number of sites tested: 81

Area	Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
Living Area	0.620 pCi/L	97%	0%	3%
Basement	0.970 pCi/L	93%	6%	1%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Date/Time: 11/29/17 6:00
Weather: Temp. 35°F, clear

Well Permit #:

Well#:	**MW-1**	**MW-2**	**MW-3**
Key #:			
Pre-Purge Data:			
PID / **OVM** Reading (mu):	0	0	0
Product Thickness (ft):	0	0	0
Depth to Water (ft):	10.52	10.95	10.14
Total Depth of Well (ft):	20.15	20.09	20.1
Well diameter (in):	2	2	2
Volume of water in well (gallons):	1.54	1.49	1.62
Volume of water to purge (x3)(gallons):	4.71	4.47	4.87
pH:	6.57	6.79	6.85
Oxygen Reduction Potential (mV):	24.9	12.0	8.8
Specific conductivity (uS):	5.92	5.27	14.8
Turbidity (ntu):	406	306	213
Dissolved oxygen (mg/L):	0.36	0.29	0.44
Temperature (°C):	18.20	17.70	16.60
Post-Purge Data:			
Purge Start Time:	7:08	7:34	7:53
Purge Stop Time:	7:30	7:50	8:01
Purge Method:	pump	pump	pump
Purge Rate (gpm):	0.23	0.15	0.25
Total Volume Purged (gallons):	4	3.5	2
Depth to Water After Purge (ft):	18.50	18.40	18.50
pH:	6.69	6.86	6.89
Oxygen Reduction Potential (mV):	17.7	6.8	8.7
Specific conductivity (uS):	6.01	5.91	14.8
Turbidity (ntu):	190	143	0.44
Dissolved oxygen (mg/L):	0.15	0.19	0.00
Temperature (°C):	19.40	18.50	18.06
Before Sampling Data:			
Depth to Water Before Sampling (ft):	10.66	11.06	14.94
Sampling Start Time:	8:09	8:38	9:59
After Sampling Data:			
Sampling End Time:	8:24	8:54	10:30
Depth to Water After Sampling (ft):	11.29	13.85	19.66
pH:	6.68	6.89	7.35
Oxygen Reduction Potential (mV):	18.4	10.8	-19.4
Specific conductivity (uS):	6.27	5.37	14.7
Turbidity (ntu):	80	90	227
Dissolved oxygen (mg/L):	0.27	0.20	0.55
Temperature (°C):	18.90	18.50	16.60
Sample Method:	bailer	bailer	bailer
Field Observations			
Recharge Rate (gpm)	0.15	0.01	0.01
Sheen	no	no	no
Odor	no	no	no
Turbidity	yes	yes	no

Notes:

Pump = The purge device used was a peristaltic pump w/ dedicated tubing
Bailer = The sampling device used was a disposable, dedicated bailer.
mu - meter units, uS - micro Siemens, mS - milli Siemens, ntu - nephlometric turbidity units
mg/l - milligrams per liter, gpm - gallons per minute, °C - degrees Celsius, °F - degrees Fahrenheit
ft - feet below top of PVC casing
Ground water sampled for VOCs, SVOCs, PCBs for NY TOGS

This report shall not be reproduced, except in its entirety, without the written consent of Integrated Analytical Laboratories, LLC. The test results included in this report relate only to the samples analyzed. The results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of data contained in this hardcopy data package and in the computer-readable data submitted on CD/diskette and by electronic mail has been authorized by the laboratory manager or his designee, as verified by the following signature.

Michael H. Leftin, Ph.D.
Laboratory Director

Laboratory Acronyms

The following is a list of laboratory acronyms commonly used in EPA Method TO-15 testing:

Acronym	Definition
BLK	Blank/Method Blank
BFB	4-Bromofluorobenzene (Tuning Standard)
CAS Number	Chemical Abstract Service Registry Number
cc	cubic centimeters
CCCVS	Closing Calibration Check Verification Standard
COC	Chain of Custody
DCVS	Daily Calibration Verification Standard
DF	Dilution Factor
EPA	U. S. Environmental Protection Agency (aka USEPA)
"Hg	Inches of Mercury
IA	Indoor Air
IASL	Indoor Air Screening Level
ICAL	Initial Calibration
ICVSS	Initial Calibration Verification Standard
ISTD	Internal Standard
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LCS	Laboratory Control Sample/Spike
LLTO-15	Low Level TO-15
MDL	Method Detection Limit
MDLV	Method Detection Limit Verification
ml	milliliters
ND	Not Detected (at or above RL)
NJDEP	New Jersey Department of Environmental Protection
PM	Project Manager
ppbv	parts per billion, volume-to-volume ratio
PQL	Practical Quantitation Limit - MDLx3
QA	Quality Assurance
QC	Quality Control
RAL	Rapid Action Limit
RL	Reporting Limit
RLLCS	Reporting Limit Laboratory Control Sample
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SGSL	Soil Gas Screening Levels
SS	Sub Slab
TAT	Turnaround Time
TIC	Tentatively Identified Compound
µg/m3	micrograms per cubic meter

E18-00010-04	4853	-29	0	A0194191-9	3.28	3.34	1.81

*Pre-sampling and Post-sampling Flow Controller calibration check RPD ≤ 20%

Flow Controller Note: none

Sample Receipt: Samples were received in good condition. Documentation was in order. Samples were received at IAL by: Padraic Jenkins

Sample Preparation: None required.

Sample Analysis:

Hold Time: All within recommended hold times.

Instrument Calibration: Meets method criteria.

Analysis performed by: Jeff Schmitt

SDG Non-Conformances: none

Tentatively Identified Compounds: Tentatively Identified Compounds (TICs) are determined using a NIST library search. TICs are reported at 10% of the applicable internal standard. Dilution factors are calculated into the final reported result. Since the compounds found are tentatively identified, the conversion from ppbv to ug/m3 may not be made.

Canister-to-Canister dilutions: none

CASE NARRATIVE

ANALYTICAL DATA PACKAGE FOR THE
NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
ALBANY NEW YORK 12233

Integrated Analytical Laboratories, LLC — **Randolph, NJ 07869**
Project #: 27-10 49th Ave — **NY ELAP Certification #: 11402**
SDG #: E18-00010 — **NJDEP (Primary AB) Certification#: 14751**
Date of first sample receipt: 1/15/2018 — **Date of last sample receipt: 1/15/2018**

Client: Atlantic Environmental Solutions Inc.
Project/Site: 27-10 49th Ave / NY

Dilutions: Dilutions, if necessary, will be conducted directly on the instrument up to a 500x dilution. When dilutions of 1000x or higher are necessary, the laboratory must inject a volume of sample into another certified clean canister and add humidified Z-1 zero air to the remainder of the canister volume. Tedlar bags are not used for dilutions.

If a sample is received with historically high levels of analytes, a 100x can-to-can dilution my be used from the start. A 100x canister-to-canister dilution may be also be used at the analyst's discretion.

On-instrument dilutions are conducted as follows:

Dilution Factor	Sample Volume Injected (cc)
1	500
2.5	200
5	100
10	50
20	25
25	20
50	10
100	5
200	2.5
250	2
500	1

Canister-to-canister dilutions are conducted as follows:

A certified clean canister is obtained and evacuated to approximately -30"Hg. Both the clean/dilution canister and sample canister are fitted with a ¼" Swagelok® nut fitting equipped with septa. Depending on dilution factor necessary, a sample aliquot is removed from the canister and injected into the clean canister using 30cc Multifit gas-tight syringe. Once the correct sample aliquot has been transferred, the dilution canister should be connected to the humidified Z-1 zero air supply and filled to ambient pressure (0"Hg).

Dilution Factor	Sample Aliquot	Z-1 Make-up Added
100	60ml	5940ml
1000	6ml	5994ml

If further dilutions need to be made from the dilution canister, they may be made on-instrument. Using a 100x dilution canister, the following on-instrument dilutions can be produced:

CASE NARRATIVE

ANALYTICAL DATA PACKAGE FOR THE
NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
ALBANY NEW YORK 12233

Integrated Analytical Laboratories, LLC — **Randolph, NJ 07869**
Project #: 27-10 49th Ave — **NY ELAP Certification #: 11402**
SDG #: E18-00010 — **NJDEP (Primary AB) Certification#: 14751**
Date of first sample receipt: 1/15/2018 — **Date of last sample receipt: 1/15/2018**

Client: Atlantic Environmental Solutions Inc.
Project/Site: 27-10 49th Ave / NY

Dilution Factor	Sample Volume Injected
100	500ml
250	200ml
500	100ml
1000	50ml
2000	25ml
2500	20ml
5000	10ml

Using a 1000x dilution canister, the following on-instrument dilutions can be produced:

Dilution Factor	Sample Volume Injected
1000	500ml
2500	200ml
5000	100ml
10,000	50ml
20,000	25ml
25,000	20ml
50,000	10ml

If further dilutions need to be made from the dilution canister, beyond 50,000x, a subsequent canister-to-canister dilution must be made using the above prescribed protocol.

GC Column and ID: RTX-1 SN 1119138 or equivalent

Calibration Standards: Only gas phase standards were used. Primary and second-source standards provided by Scott Specialty Gases or Airgas Specialty Gases/ Air Liquide

Working Standards: Primary source standards* are created from:
- Scott Gas Cylinder #AAL071156, valid 3/9/15 through 2/25/17
- Airgas Specialty Gases Cylinder #CC483586, valid 3/6/17 through 3/6/18

@ 100ppb per compound, with exception of m&p-xylenes @ 200ppb. Standard is directly introduced into the instrument for all calibration standard concentrations. Dilutions are made accordingly, on instrument, with humidified clean air. The 10ppbv standard is also used for the Daily Calibration Verification Standard (DCVS) and Closing Calibration Verification Standard (CCCVS).

The second source standard*, used as the Initial Calibration Verification Standard (ICVSS) and Laboratory Control Sample (LCS), is introduced into the instrument in the same manner as the primary source standard, using:
- Scott Gas Cylinder #AAL07303, valid 6/11/15 through 5/14/17
- Airgas Specialty Gases Cylinder #CC483422, valid 5/4/17 through 5/4/18

METHOD DETECTION LIMIT (MDL) REPORT

Integrated Analytical Laboratories - Randolph, NJ

Matrix: Air
Column ID: Restek Rtx-1, 60 meter, 0.32mm ID, 1 um
Instrument ID: GC - Agilent 7890A / MS - Agilent 5975C (IAL ID: *Instrument AA*)
Report Prepared by: Jeff Schmitt
Preparation Date: 6/27/17

MDL Effective Date: 6/27/2017
MDL Expiration Date: 6/27/2018
MDL Analysis Date: 6/27/2017
Analyst: Jeff Schmitt

RPD must be <25% for all laboratory duplicate samples. Laboratory duplicate samples are run once daily.

NC = The RPD could not be calculated since the compound was only detected in either the parent or duplicate sample.

Qualifir:
E=Concentration exceeds upper level of calibration range for instrument.
D=Extra dilution required for this compound. J=Duplicate samples do not met RPD criteria.
U=Compound ND or under reporting limit.

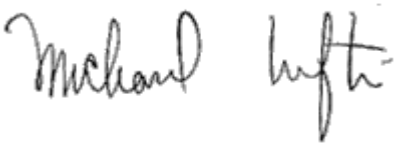
CERTIFICATE OF ANALYSIS

ANALYTICAL DATA PACKAGE FOR THE
NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
ALBANY NEW YORK 12233

Integrated Analytical Laboratories, LLC — **Randolph, NJ 07869**
Project#: 27-10 49th Ave — **NY ELAP Certification#: 11402**
SDG #: E18-00010 — **NJDEP (Primary AB) Certification#: 14751**
Date of first sample receipt: 1/15/2018 — **Date of last sample receipt: 1/15/2018**

Client: Atlantic Environmental Solutions Inc.
5 Marine View Plaza
Hoboken, NJ 07030
Attention: Attention: Sal Delucia



Project/Site: 27-10 49th Ave/NY

Analysis conducted at: Integrated Analytical Laboratories, LLC
273 Franklin Road
Randolph, NJ 07869
Contact: Michael H. Leftin, Ph.D.

Sample(s):
E18-00010-01
E18-00010-02
E18-00010-03
E18-00010-04

Samples for this analysis were received in good condition with a chain of custody.

All work recorded herein has been done in accordance with normal professional standards using accepted testing methodologies, quality assurance and quality control procedures except where otherwise agreed to by the client and testing company in writing. Once analysis has been performed on canisters that meets regulatory criteria, samples are recycled for future use, unless other provisions have been made by the client.

Michael H. Leftin, Ph.D.
Laboratory Director

Date: January 18, 2018

ANALYTICAL DATA REPORT

Atlantic Environmental Solutions, Inc.
5 Marine View Plaza
Suite 303
Hoboken, NJ 07030

Project Name: **27-10 49TH AVE**
IAL Case Number: **E17-09161**

These data have been reviewed and accepted by:

Michael H. Leftin, Ph.D.
Laboratory Director

This report shall not be reproduced, except in its entirety, without the written consent of Integrated Analytical Laboratories, LLC. The test results included in this report relate only to the samples analyzed. The results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

273 Franklin Road
Randolph, NJ 07869
Phone: 973 361 4252
Fax: 973 989 5288

IAL is a NELAP accredited lab (TNI01284) and maintains certification in Connecticut (PH-0699), New Jersey (14751), New York (11402), and Pennsylvania (68-00773).

INTEGRATED ANALYTICAL LABORATORIES, LLC.

DATA QUALIFIERS AND FLAGS

B Indicates the analyte found in the associated method blank and in the sample due to potential lab contamination.
C Indicates analyte is a common laboratory contaminant.
D Indicates analyte was reported from diluted analysis.
E Identifies a compound concentration that exceeds the upper level of the calibration range of the instrument
J Indicates an estimated value either when the concentration in the sample is less than the RL or for qualification of TICs
M Indicates matrix interference
N Presumptive evidence of a compound from the use of GC/MS library search.
X Indicates samples analyzed for total and dissolved metals differ at ≤20% RPD.
Y Indicates DO depletion in the BOD blank is >0.20ppm
Z Indicates internal standard failure. Sample results are either biased high or biased low.
$ Value outside NJDEP DKQP Limits
***** Result outside of QC limits

PROJECT NOTES

- All results for soils, solids, and sludges are reported on a dry-weight basis except where noted
- All test results and QC are compliant with TNI or other applicable state agency requirements/guidance unless otherwise notated in the case narrative
- The case narrative for this SDG should be consulted to determine any non-conformances
- Any samples with 15-minute or "analyze immediately" holding times (e.g. pH, Dissolved Oxygen, Sulfite, etc.) which are analyzed in the laboratory are considered out of holding time
- IAL is a NELAP/TNI certified laboratory (TNI ID# TNI01284). IAL retains certification in Connecticut (PH-0699), New Jersey (14751), New York (11402), and Pennsylvania (68-00773).
- Certification is not required to perform analyses in the following states: AL, CO, DE, GA, HI, ID, IN, KY, MD, MI, MS, MO, MT, NE, NM, SD and TN. IAL can perform all analyses, except Drinking Water, within its scope of capabilities in these states.

ACRONYMS AND ABBREVIATIONS

CFU	Colony Forming Unit	**ND**	Indicates analyte was analyzed for but not detected at MDL or RL (only if MDL is not used)
CCB	Continuing Calibration Blank		
CCV	Continuing Calibration Verification	**NTU**	Nephelometric Turbidity Units
DF	Dilution Factor	**ppb**	Parts per billion. Reported as µg/L or µg/kg
DL	Attached as a suffix to a diluted sample	**ppm**	Parts per million. Reported as mg/L, µg/mL or mg/kg
DUP	Duplicate	**QC**	Quality Control
ICB	Initial Calibration Blank	**% Rec**	Percent Recovery
ICC	Initial Calibration Curve	**RL**	Reporting Limit. The RL is typically determined by the concentration of the lowest standard in the calibration curve
ICV	Initial Calibration Verification		
kg	kilogram		
L	Liter	**RPD**	Relative Percent Difference
LCS	Laboratory Control Sample	**RSD**	Relative Standard Deviation
LCSD	Laboratory Control Sample Duplicate	**RT**	Retention Time
MDL	Method Detection Limit as determined according to 40 CFR Part 136 Appendix B	**SU**	Standard Units
		TIC	Tentatively Identified Compound AKA Library Search Compounds
MF	Membrane Filter		
mg	milligram (1000mg = 1g)	**TNI**	The NELAC (National Environmental Laboratory Accreditation Council) Institute
µg	microgram (1000µg = 1mg)		
ml	milliliter (1000ml = 1L)	**TNTC**	Too numerous to count
µl	microliter (1000µl = 1ml)	*****	When attached to a compound name, indicates this analyte was analyzed by Method SW-846 8270 SIM
µmhos	Conductivity units - resistance expressed in ohms		
MPN	Most Probable Number	**^**	When attached to a compound name, indicates this analyte was analyzed by Method SW-846 8011 or EPA 504.1
MS	Matrix Spike		
MSD	Matrix Spike Duplicate		
NA	Not applicable	**<**	Less than; In conjunction with a numerical value, indicates a concentration less than the RL or MDL
NC	Not calculated		

SAMPLE DELIVERY GROUP CASE NARRATIVE
(Conformance / Non-Conformance Summary)

INTEGRATED ANALYTICAL LABORATORIES, LLC

SAMPLE DELIVERY GROUP CASE NARRATIVE

SDG#: E17-09161

Integrated Analytical Laboratories, LLC. received eight (8) samples** from Atlantic Environmental Solutions, Inc. (IAL SDG# **E17-09161**, Project: 27-10 49TH AVE) on October 24, 2017 for the analysis of :

(8) TCL VO + 15
(7) TCL BN + 15
(1) TCL BN + SIM + 15
(2) TCL PCB

**Number of samples listed above may be greater than what is listed on the chain of custody. Any samples that require in-house filtration or splitting will be counted as separate samples.

Samples were received in good condition with documentation in order.
Cooler temperature was acceptable at 4 ± 2°C

Volatiles By 8260C **Batch: F171024-02** **Matrix: Soil**

QC
- Calibration curve met QC criteria.
- Internal standards recovery met QC criteria.
- Surrogate percent recovery met QC criteria.
- Method blank met QC criteria.
- LCS/LCSD Percent Recovery met QC criteria.
- MS/MSD were not analyzed due to insufficient sample volume. LCS/LCSD were analyzed in their absence to meet method specific QC requirements.

E17-09161
- All samples were analyzed within holding time.

Dilution Summary:

Sample ID	DF(s)	Dilution For
E17-09161-002	1	NA

Volatiles By 8260C **Batch: F171026-02** **Matrix: Soil**

QC
- Calibration curve met QC criteria.
- Internal standards recovery met QC criteria.
- Surrogate percent recovery met QC criteria.
- Method blank met QC criteria.
- LCS percent recovery met QC criteria.
- MS/MSD RPD met QC criteria.
- MS/MSD percent recovery met QC criteria. NJDEP DKQP criteria not met.

E17-09161
- All samples were analyzed within holding time.

Dilution Summary:

Sample ID	DF(s)	Dilution For
E17-09161-003	1	NA
E17-09161-005	1	NA
E17-09161-006	1	NA

Volatiles By 8260C | **Batch: F171031-02** | **Matrix: Soil**

QC
- Calibration curve met QC criteria.
- Internal standards recovery met QC criteria.
- Surrogate percent recovery met QC criteria.
- Method blank met QC criteria.
- LCS/LCSD Percent Recovery met QC criteria.
- MS/MSD were not analyzed due to insufficient sample volume. LCS/LCSD were analyzed in their absence to meet method specific QC requirements.

E17-09161
- All samples were analyzed within holding time.

Dilution Summary:

Sample ID	DF(s)	Dilution For
E17-09161-004	1	NA

Volatiles By 8260C | **Batch: J171027-02** | **Matrix: MEOH**

QC
- Calibration curve met QC criteria.
- Internal standards recovery met QC criteria.
- Surrogate percent recovery met QC criteria.
- Method blank met QC criteria.
- LCS percent recovery met QC criteria.
- MS/MSD RPD met QC criteria.
- MS/MSD percent recovery met QC criteria.

E17-09161
- All samples were analyzed within holding time.
- Samples listed below were run using methanol preserved sample, as applicable. This sample preservation technique elevates RLs and MDLs 100x versus water preservation. If subsequent dilutions are performed, the RLs and MDLs will increase by that factor (e.g. a methanol sample run at a 5x dilution would elevate RLs and MDLs by 500x). Initial runs using methanol are considered "straight" runs and have a dilution factor of 1.

Dilution Summary:

Sample ID	DF(s)	Dilution For
E17-09161-001	1	NA
E17-09161-007	1	NA

INTEGRATED ANALYTICAL LABORATORIES, LLC

Semivolatiles By 8270D SIM | **Batch: 171024-04** | **Matrix: Aqueous**

QC
- Calibration curve met QC criteria.
- Internal standard recovery met QC criteria.
- Surrogate recovery met QC criteria.
- Method blank met QC criteria.
- LCS percent recovery met QC criteria. NJDEP DKQP criteria not met.
- MS/MSD RPD met QC criteria.
- MS/MSD percent recovery met QC criteria. NJDEP DKQP criteria not met.

E17-09161
- Extraction holding time met requirement for each sample.
- Analysis holding time met requirement for each sample.
- Sample(s) used for aqueous Semivolatiles analyses contained varying levels of sediment. Precautions were taken to take an aliquot representative of the sample. However, due to the nature of aqueous samples containing sediment, reproduction of results may prove difficult. The rough amount of sediment present in the samples is as follows: 09161-008:20%.

Dilution Summary:

Sample ID	DF(s)	Dilution For
E17-09161-008	1	NA

The result reported for 1,2-Diphenylhydrazine is also representative of Azobenzene. 1,2-Diphenylhydrazine rapidly decomposes to Azobenzene when exposed to water or heat. Analytical results from analysis of 1,2-Diphenylhydrazine will be directly compared to the applicable criteria for Azobenzene and/or 1,2-Diphenylhydrazine.

Note: Per EPA & TNI, the compound name for CAS# 108-60-1 has been changed from "Bis(2-chloroisopropyl) Ether" to "2,2'-Oxybis(1-Chloropropane)"

Semivolatiles By 8270D | **Batch: 171025-01** | **Matrix: Soil**

QC
- Calibration curve met QC criteria.
- Internal standard recovery met QC criteria.
- Surrogate recovery met QC criteria.
- Method blank met QC criteria.
- LCS percent recovery met QC criteria. NJDEP DKQP criteria not met.
- MS/MSD RPD did not meet QC criteria due to HIGH TARGET. NJDEP DKQP criteria not met.
- MS/MSD percent recovery did not meet QC criteria due to HIGH TARGET. NJDEP DKQP criteria not met.

E17-09161
- Extraction holding time met requirement for each sample.
- Analysis holding time met requirement for each sample.

Dilution Summary:

Sample ID	DF(s)	Dilution For
E17-09161-001	1	NA
E17-09161-002	1	NA
E17-09161-003	1	NA
E17-09161-004	1	NA
E17-09161-005	1	NA
E17-09161-006	1	NA
E17-09161-007	2	Target compound(s).

The result reported for 1,2-Diphenylhydrazine is also representative of Azobenzene. 1,2-Diphenylhydrazine rapidly decomposes to Azobenzene when exposed to water or heat. Analytical results from analysis of 1,2-Diphenylhydrazine will be directly compared to the applicable criteria for Azobenzene and/or 1,2-Diphenylhydrazine.

Note: Per EPA & TNI, the compound name for CAS# 108-60-1 has been changed from "Bis(2-chloroisopropyl) Ether" to "2,2'-Oxybis(1-Chloropropane)"

SUMMARY REPORT
Client: Atlantic Environmental Solutions, Inc.
Project: 27-10 49TH AVE
Lab Case No.: E17-09161

Lab ID:	**09161-008**		
Client ID:	**SB-2**		
Matrix:	**Aqueous**		
Sampled Date	**10/23/17**		
PARAMETER(Units)	Conc	Q	MDL
Volatiles (Units)	*(ug/L)*		
Tetrachloroethene	2.48		0.451
TOTAL VO's:	2.48		
TOTAL TIC's:	ND		
TOTAL VO's & TIC's:	2.48		
Semivolatiles - BN (Units)	*(ug/L)*		
Acenaphthylene	0.602	J	0.141
Acenaphthene	0.967	J	0.129
Diethyl phthalate	6.18		0.166
Fluorene	0.506	J	0.182
Phenanthrene	4.88		0.175
Anthracene	1.28		0.211
Carbazole	0.713	J	0.221
Fluoranthene	9.30		0.204
Pyrene	10.7		0.339
Benzo[a]anthracene	2.98		0.100
Chrysene	9.28		0.245
Benzo[b]fluoranthene	2.54		0.100
Benzo[k]fluoranthene	1.13		0.100
Benzo[a]pyrene	1.97		0.100
Indeno[1,2,3-cd]pyrene	1.77		0.100
Dibenz[a,h]anthracene	1.45		0.100
Benzo[g,h,i]perylene	3.89		0.672
TOTAL BN'S:	60.1	J	
TOTAL TIC's:	ND		
TOTAL BN'S & TIC's:	60.1	J	

~ = Sample not analyzed for
ND = Analyzed for but Not Detected at the MDL
J = Concentration detected at a value below the RL and above the MDL for target compounds. For non-target compounds (i.e. TICs), qualifier indicates estimated concentrations.

All qualifiers on individual Volatiles & Semivolatiles are carried down through summation.
N = Presumptive evidence of a compound from the use of GC/MS library search.

☐ DW	☐ CP-51 Table 2 or 3 (selection required)
☐ SPLP	OTHER Reg. Req. (specify)

Petroleum Hydrocarbons - Selection is REQUIRED

☐ NJ EPH-DRO - Category 1
☐ NJ EPH-C40 - Category 2
☐ NJ EPH-Fractionated - Cat 2
☐ DRO-8015

TAT for PHC (If other than 2 weeks):

Sample Matrix

DW - Drinking Water
WW - Waste Water
GW - Groundwater
SW - Surface Water
LIQ - Liquid (Specify)
OI - Oil
S - Soil
SOL - Solid
SL - Sludge
W - Wipe
B - Biphasic

SAMPLE INFORMATION

ANALYTICAL PARAMETERS (please note if contingent)

Client ID	Depth (ft only)	Sampling Date	Sampling Time	Matrix	# containers	IAL #	VOCs	BN's	PCBs						Sample Specific Notes:
SB-1	7.5-8	10/23/17	957	S	2	1	X	X							
SB-2	15.5-16		1036	S	2	2	X	X							
SB-3	14.0-15.5		1145	S	2	3	X	X							
SB-4	15.5-16.0		1240	S	1	4	X	X							
SB-5	13.0-13.5		1257	S	5	5	X	X	X						
SB-6	11.0-11.5		1345	S	5	6	X	X	X						
SB-7			1410	S	5	7	X	X							
SB-2			1330	GW	4	8	X	X							
Preservative (use code)							4/2+1		1						
Container Type (use code)							E	P/A	D						

Known Hazard: YES / NO
Describe:

Preservative Code:
1 = None
2 = HCl
3 = HNO3
4 = MeOH
5 = NaOH
6 = H2SO4
7 = Other

Container Code:
A = Amber Glass
B = Plastic
C = Vial
D = Glass
E = EnCore
T = Terracore

Special Instructions/QC Requirements & Comments:

Please print legibly and fill out completely. Samples cannot be processed and the turnaround time (TAT) will not start until any ambiguities have been resolved. TAT starts the following day if samples rec'd at lab > 5PM. BY EXECUTING THIS COC, THE CLIENT HAS READ AND AGREES TO BE BOUND BY IAL'S TERMS & CONDITIONS (found on rear of pink copy).
