

# **Periodic Review Report**

HPS Parcel F NYSDEC BCP #C241225 1-15 57th Avenue Long Island City, New York

June 2, 2022

Prepared for:

GO HPS LLC GO HPS LIHTC LLC 432 Park Ave South, 2nd Floor New York, New York

Prepared by:

Roux Environmental Engineering and Geology, D.P.C. 209 Shafter Street Islandia, New York 11749

## **Certification**

For each institutional control identified for the site, I certify that all of the following statements are true:

- The institutional control employed at this site is unchanged from the date the control was put in place, or last approved by the Department;
- Nothing has occurred that would impair the ability of the control to protect the public health and environment;
- Nothing has occurred that would constitute a violation or failure to comply with any site management plan for this control;
- Access to the site will continue to be provided to the Department to evaluate the remedy, including
  access to evaluate the continued maintenance of this control;
- Use of the site is compliant with the environmental easement;
- The information presented in this report is accurate and complete; and
- No new information has come to my attention, including groundwater monitoring data from wells
  located at the site boundary, if any, to indicate that the assumptions made in the qualitative
  exposure assessment of off-site contamination are no longer valid.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Jessica L. Taylor, of Roux Environmental Engineering and Geology, D.P.C., 209 Shafter Street, Islandia, NY 11749, am certifying as GO HPS LLC's Designated Site Representative and I have been authorized and designated by all Site owners to sign this certification for the Site.

## **Executive Summary**

This document is required as an element of the remedial program at the HPS Parcel F Site located at 1-15 57th Avenue, Long Island City New York (hereinafter referred to as the "Site") under the New York State (NYS) Brownfield Cleanup Program (BCP) administered by New York State Department of Environmental Conservation (NYSDEC). The Site was remediated in accordance with Brownfield Cleanup Agreement (BCA) Index # C241225-11-18, Site Number C241225, which was executed on December 3, 2018. BCA Amendment #1 was executed on July 20, 2020 to transfer the Site ownership from New York City Housing Preservation and Development to GO HPS LLC. BCA Amendment #2 was executed on October 5, 2020 to add GO HPS LIHTC LLC as a requestor on the BCA. BCA Amendment #3 was executed on November 5, 2020 to document that the Volunteer is eligible for tangible property tax credits.

The Site received a Certificate of Completion certifying a Track 2 Restricted Use cleanup of the Site on December 29, 2020. The results of the Remedial Investigation indicated the presence of polycyclic aromatic hydrocarbons (PAHs) and metals in soil above Restricted Residential Use Soil Cleanup Objectives (RRSCOs), several naturally-occurring metals above NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater, and VOCs detected in soil vapor. The RI data did not indicate any off-site impacts related to the Site. Remedial activities consisted of excavation of contaminated soil to a minimum depth of 15 feet below land surface (ft bls) across the Site. At the time the Certificate of Completion (COC) was obtained in December 2020, the building foundation was poured across the entire footprint of the Site and the building construction was ongoing.

The Site Management Plan (SMP), dated November 2020, was approved by NYSDEC on December 11, 2020. In accordance with the SMP, annual Site-wide inspections are being completed during the SMP monitoring phase. The reporting period for this Periodic Review Report (PRR) is December 29, 2020 to April 29, 2022. The components included in this PRR demonstrate that the institutional controls are performing as intended, are effective, and are compliant with specifications described in the SMP. No changes to the monitoring plan are recommended by Roux Environmental Engineering and Geology, D.P.C. (Roux) at this time.

### 1. Introduction

This Periodic Review Report (PRR) documents post-remediation activities performed at the HPS Parcel F Site located at 1-15 57th Avenue, Long Island City, New York Site (Figure 1) from December 29, 2020 to April 29, 2022. GO HPS LLC (Volunteer) entered into Brownfield Cleanup Agreement (BCA) Index # C241225-11-18, Site Number C241225, which was executed on December 3, 2018. BCA Amendment #1 was executed on July 20, 2020 to transfer the Site ownership from New York City Housing Preservation and Development to GO HPS LLC. BCA Amendment #2 was executed on October 5, 2020 to add GO HPS LIHTC LLC as a requestor on the BCA. BCA Amendment #3 was executed on November 5, 2020 to document that the Volunteer is eligible for tangible property tax credits.

The Site Management Plan (SMP), dated November 2020, was approved by NYSDEC on December 11, 2020. A Site-specific Environmental Easement has been recorded with the City Register of the City of New York (CRFN: 2020000283092) that provides an enforceable means to ensure the continued and proper management of residual contamination and protection of public health and the environment.

Site Management activities, reporting, and Institutional Control (IC) certification are scheduled on a certification period basis. This certification is based on the submission of a PRR, submitted to the NYSDEC every year beginning fifteen months after the COC was issued and once per year thereafter for the respective reporting periods. These PRRs will identify and asses all of the ICs required by the remedy for the Site, any environmental monitoring data and/or information generated during the reporting period, and a complete Site evaluation which discusses the overall performance and effectiveness of the previous remedy.

#### 2. Site Overview

#### 2.1 Site Description and History

The Site is located in the County of Queens, New York and is identified as Block 6 and Lot 30 on the New York City Tax Map. The Site is situated on an approximately 32,500 square foot area bounded by Center Boulevard and 56th Avenue to the north, a New York City public school (PS 384) to the south, 56th Avenue to the east, and 57th Avenue to the west (see Figure 1). Historically, the Site was used as sugar refinery (including large warehouses, a boiler house, and conveyors to Newtown Creek) between 1916 and 1962; a newspaper publishing plant between the mid-1970s to 2003, and use as a parking lot until the last user vacated the premises before entering it into the BCP.

The results of the Remedial Investigation indicated the presence of polycyclic aromatic hydrocarbons (PAHs) and metals in soil above Restricted Residential Use Soil Cleanup Objectives (RRSCOs), several naturally-occurring metals above NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater, and VOCs detected in soil vapor. The RI data did not indicate any off-site impacts related to the Site.

#### 2.2 Summary of Remedial Action

The Site was remediated in accordance with the remedy selected by the NYSDEC in the Remedial Action Work Plan (RAWP) dated November 22, 2019 and the Decision Document dated November 26, 2020. All remedial work was done with oversight, understanding, and direction from the NYSDEC.

The following are the components of the completed remedy:

- 1. A remedial design program was implemented to provide details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques were implemented to the extent feasible in the design, implementation, and Site management of the remedy as per DER-31. The major green remediation components are as follows:
  - Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
  - Reducing direct and indirect greenhouse gases and other emissions;
  - Increasing energy efficiency and minimizing use of non-renewable energy;
  - Conserving and efficiently managing resources and materials;
  - Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
  - Maximizing habitat value and creating habitat when possible;
  - Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals; and
  - Integrating the remedy with the end use where possible and encouraging green and sustainable re-development.
  - Additionally, to incorporate green remediation principles and techniques to the extent feasible in the future development at this Site, any future on-Site buildings will include, at a minimum, a 20mil vapor barrier/waterproofing membrane on the foundation to improve energy efficiency as an element of construction.

- Excavation and off-Site disposal of on-Site soil/fill exceeding Track 2 Restricted Residential Soil Cleanup Objectives (RRSCOs) to a minimum depth of 15 feet. A total of approximately 37,051 tons of contaminated soil was removed from the Site.
- 3. Clean fill meeting the requirements of 6 NYCRR Part 375-6.7(d) was brought in to replace the excavated soil and establish the designed grades at the Site.
- 4. Dewatering at the Site was required to enable excavation and subgrade work. Groundwater from dewatering operations was treated as necessary prior to discharge to the municipal sewer system.
- 5. Imposition of an Institutional Control in the form of an Environmental Easement for the controlled property that:
  - Requires the remedial party of Site owner to complete and submit to the Department a periodic certification of institutional end engineering controls in accordance with Part 375-1.8 (h)(3);
  - Allows the use and development of the controlled property for restricted residential use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;
  - Restricts the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the New York State Department of Health (NYSDOH) or New York City Department of Health (NYCDOH); and
  - Requires compliance with a Department-approved Site Management Plan (SMP).
- 6. A SMP, which included an Institutional Control (IC) Plan that identifies all use restrictions for the Site and details the steps and media-specific requirements necessary to ensure the following institutional and/or engineering controls mains in place and effective. The Environmental Easement will govern the ICs for the Site.

This IC Plan includes, but may not be limited to:

- Descriptions of the provisions of the environmental easement including any land use and groundwater restrictions;
- A provision that should a building foundation or building slab be removed in the future, a cover system will be placed in any areas where the upper two feet of exposed surface soil exceed the applicable SCOs;
- Provisions for the management and inspection of the identified ECs;
- Maintaining the Site access controls and Department notification; and
- The steps necessary for the periodic reviews and certification of the ICs.

Remediation was completed between February 2020 and September 2020. Over 180 tons of hazardous soil and 36,000 tons of non-hazardous soil were removed and disposed during remediation.

#### 2.3 Remaining Contamination

The property was remediated to Track 2 Restricted Residential use. Ongoing development activities at the Site are limited exclusively to non-remedial building superstructure work. As described in the NYSDEC-approved SMP, soil exceeding the RRSCOs including metals and PAHs remain onsite.

The remedial elements, including excavation, were expected to improve groundwater and soil vapor quality by reducing or eliminating potential source material. In addition, as part of construction, a waterproofing barrier was installed below the foundation and the along subsurface walls which will also act as a vapor barrier to prevent vapor intrusion.

## 3. SMP Requirements and Compliance Monitoring

This section details the elements of the SMP including the inspection and reporting requirements, ICs, whether the IC requirements were met, and regulatory notification and certification requirements. The subsections below also include an evaluation of the remedy performance, effectiveness, and protectiveness. An IC Certification Form for the controls that are currently in place is included as Appendix A.

#### 3.1 Institutional Controls

As part of the NYSDEC-approved SMP, ICs have been incorporated into the Site remedy to prevent future exposure to remaining contamination and limit the use and development of the Site to restricted residential and commercial uses only.

A Site-specific Environmental Easement has been recorded with the New York City Register that provides an enforceable means to manage the remaining contamination at the Site until the Environmental Easement is extinguished in accordance with ECL Article 71, Title 36. The ICs presented in the SMP consist of the following:

- The property may be used for restricted residential and commercial use;
- The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the New York State Department of Health (NYSDOH) or the New York City Department of Health and Mental Hygiene (NYCDOHMH) to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department;
- Data and information pertinent to site management must be reported at the frequency and in a manner as defined in this SMP;
- All future activities that will disturb remaining contaminated material must be conducted in accordance with this SMP; and
- Access to the site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the Environmental Easement.

#### 3.2 Inspections

All inspections were conducted at the frequency specified in the schedule provided in the SMP. At a minimum, one comprehensive Site-wide inspection will be conducted annually within each respective reporting period. Details of requirements and completed inspections are provided below. The inspections will determine and document the following:

- Compliance with all ICs, including site usage;
- General site conditions at the time of the inspection;
- The site management activities being conducted including, where appropriate, confirmation sampling and a health and safety inspection;
- If these controls continue to be protective of human health and the environment;
- Compliance with requirements of this SMP and the Environmental Easement; and
- If Site records are complete and up to date.

Inspections will also be performed in the event of an emergency. An inspection of the site will be conducted within 5 days of the event to verify the effectiveness of the ICs implemented at the site by a qualified environmental professional, as determined by the NYSDEC.

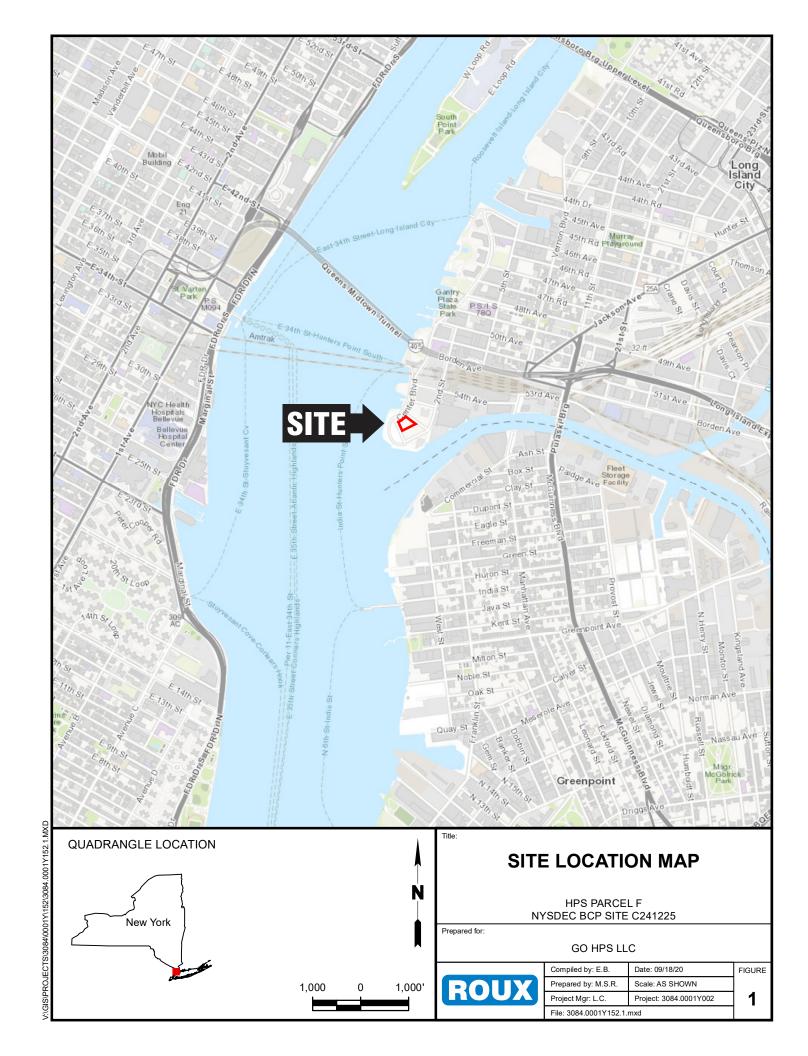

On April 26, 2022, Roux performed a Site-wide inspection. The completed Site Inspection Checklist is provided in Appendix B. This inspection determined that the cellar foundation was observed to be performing as designed during the reporting period of the PRR and the ICs continue to be protective of human health and the environment. The new building covers the entire footprint of the Site and there are no outdoor areas to observe during the inspection. No corrective actions or changes to the monitoring program are recommended. Photographs taken during the Site-wide inspection are provided in the Photo Log included in Appendix C.

# 4. Conclusions and Recommendations

The ICs are performing as designed, are effective, and are compliant with specifications described in the SMP. No changes to the SMP are recommended at this time. Based upon an evaluation of the components of the SMP, the ICs are continuing to achieve the remedial objectives for the Site. Roux does not recommend and changes to the frequency of the submittal of PRRs at this time.

Ground Water Use Restriction

Landuse Restriction Site Management Plan

IC/EC Plan

Soil Management Plan Monitoring Plan

- The property may be used for restricted residential and commercial use;
- The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the NYCDOH to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department;
- Data and information pertinent to site management must be reported at the frequency and in a manner as defined in this SMP;
- All future activities that will disturb remaining contaminated material must be conducted in accordance with this SMP; and
- · Access to the site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the Environmental Easement.
