Environmental Professional Statement:
We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 part of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Collene Groneman
Site Assessor

Beth A. Correira, Senior Project Manager
Senior Review, National Client Manager

1.2 Findings and Conclusions Summary

ATC Group Services LLC (ATC) has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. The property is developed with seven (7) building. This assessment has revealed no evidence of current *recognized environmental conditions* in connection with the property. Further assessment is not recommended at this time.

FINDINGS AND CONCLUSIONS SUMMARY							
Report Section		**Further Action?**	**De minimis Condition**	**REC and/or CREC**	**Historical REC**	**ASTM Non-Scope Condition**	**Description**
4.0	**User Provided Information**	No					
5.1.1	**Federal Database Findings**	No					
5.1.2	**State and Tribal Database Findings**	No			X		The property was identified on the SPILLS and UST databases. See Notes 1 & 2
5.1.3	**Local Environmental Record Sources**	No					
5.2	**Physical Records Sources**	No				X	The property is located within a 100-year floodplain. See Note 3 below.
5.3	**Historical Records Sources**	No			X		See Note 1
6.2	**Hazardous Substance Use, Storage and Disposal**	No					See Note 4
6.3	**Underground Storage Tanks**	YES					See Note 2
6.4	**Aboveground Storage Tanks**	No					
6.5	**Other Petroleum Products**	No	X				De minimis staining was observed near gas cans. See Note 4 below.
6.6	**Polychlorinated Biphenyls (PCBs)**	No					
6.7	**Unidentified Substance Containers**	No					
6.8	**Nonhazardous Solid Waste**	No					
6.9	**Wastewater**	No					
6.10	**Waste Pits, Ponds and Lagoons**	No					
6.11	**Sumps**	No					
6.12	**Septic Systems**	No					

FINDINGS AND CONCLUSIONS SUMMARY							
Report Section		Further Action?	De minimis Condition	REC and/or CREC	Historical REC	ASTM Non-Scope Condition	Description
6.13	**Stormwater Management System**	No					
6.14	**Wells**	No					
7.0	**Subsurface Vapor Migration**	No					
8.0	**Interviews**	No					
9.1	**Asbestos-Containing Material (ACM)**	No				X	Suspect ACM identified. See note 5 below.
9.2	**Radon**	No					
9.3	**Lead in Drinking Water**	No					
9.4	**Lead-Based Paint (LBP)**	No				X	Based on the construction date of the building, LBP likely exists. See note 6 below.
9.5	**Mold Screening**	No				X	Suspect mold growth identified. See note 7 below.
9.6	**Additional User Requested Services**	No					

1) The historic use of the property was first identified as multiple vacant lots and a water body (basin) connected to the Dutch Kills. In the 1920s the property was developed as a bulk petroleum storage facility. The southern portion of the property along Long Island Railroad had one (1) 275,000-gallon crude oil tank, one (1) 275,000 gallon fuel oil tank, one (1) 275,000 gallon kerosene tank, one (1) 275,000 gallon naptha tank, and two (2) 275,000 gallon gasoline tanks. The current use of the property as a trucking, auto repair shop, and storage area was first seen in the 1970s. The trucking facility occupied the same buildings as Texaco with the addition of Building D and E.

The property is listed on the NY SPILLS database under spill numbers: 0807459, 9600032, 9311731, 9010146, and 0803348. Spill number 9010146 occurred on December 18, 1990 when a faulty gauge caused overfill of approximately 40 gallons of No. 2 fuel oil on the ground and affected the storm sewer. The spill was closed on November 8, 1991. Spill Number 9311731 occurred on January 3, 1994 when approximately No. 2 fuel oil was spilled on pavement. No soil or waterways were impacted. The spill was cleaned and closed on January 3, 1994. Spill number 9600032 occurred on April 1, 1996 when approximately 100 gallons of No. 2 fuel oil was spilled on the property and entered the sewer system. The spill occurred because the driver was filling the wrong tank. The spill was closed on March 8, 1996.

Spill number 0807459 was opened on October 2, 2008 when historic fill and floating petroleum product was found in groundwater during an environmental investigation. Floating product had also previously been found in 1990 by Tyree Brothers Environmental in the immediate area of the 4000-gallon underground tank field located south of the pump and loading area on the eastern part of the site and had been recovered through manual bailing. (These tanks have since been closed in place, with one removed). The 1990 report recommended a tightness test of the tanks and continued monitoring of the area on a weekly basis to remove any floating product. Two (2)

subsurface investigations were completed by Impact Environmental in 2008 and 2009 were on the property. The investigation installed and sampled six geoprobe wells and six monitoring throughout the property and sampled a monitoring well installed by Tyree Brothers located on the northeast corner of the property. The investigations recommended quarterly sampling of wells based on the analytical results. The third quarter sampling results failed to detect any volatile organic compounds (VOCs) or Semi-Volatile Organic Compounds (SVOCs) in monitoring wells 1 and 5 located on the western part of the site. Monitoring wells 2, 3, 4, and 6 on the central and eastern part of the site detected concentrations of gasoline related VOCs above NYSDEC ambient water quality standards. Impact concluded that "the observed subsurface petroleum product is aged and degraded. It probably has accumulated during the decades of historical petroleum product storage on the Site. Gasoline and fuel oil have been mixed (potentially due to tidal influence) and created a commingled plume. Over time, the plume has been degraded due to natural attenuation. The majority of the volatile organic and semi-volatile organic compounds have been removed from the subsurface system, either by physical advection or biochemical reaction. The residual petroleum product is mainly degraded. It still has a strong petroleum odor; however, it does not exhibit high levels of VOCs and SVOCs. Currently, relatively low concentrations of target VOCs and SVOC are present in subsurface soil and groundwater at levels marginally above NYSDEC guidance criteria. However, based on the land use, the geology and the hydrology of the Site, it is unlikely for the residual degraded petroleum product to impose a significant risk to human health and the environment. Since no significant source was found, it is unlikely that any soil excavation will be necessary."

Based on the 2010 third quarter monitoring results, the NYSDEC did not consider the residual contamination on the property to represent a harm to human health or the environment. NYSDEC issued No Further Action correspondence on October 1, 2010. The monitoring wells were decommissioned in accordance to NYSDEC standards. Due to the closure of the spill cases and sampling information, ATC considers the former groundwater contamination and spills to represent a *historical recognized environmental condition.* Further assessment is not recommended at this time.

2) The property is listed on the NY UST database with two (2) closed-in place 4,000-gallon diesel USTs, one (1) closed - removed 4,000-gallon diesel UST (see below discussion), and one (1) in-service 5,000-gallon No. 2 fuel oil UST (see below). Subsurface investigations were completed at the property in 2008 and 2009 and included an assessment of the areas containing the two closed-in place 4,000 gallon USTs and the removed 4,000 gallon UST. Following these investigations, NYSDEC issued an NFA for the property in October 2010. Therefore, the former USTs are considered to represent a *historical recognized environmental condition.*

Tyree Brothers Environmental Services, Inc. (Tyree) completed a Phase I ESA of the property on September 5, 2001. According to this report, Tyree observed a vaulted 4,000-gallon No. 2 fuel oil AST in Building D (some prior reports called this building C). Subsequent consultants also noted a vaulted 4,000 gallon AST in the same building and the prior ESA by Impact dated April 8, 2014, states that a decommissioned 5,000 gallon heating oil tank was observed on the property, but the exact location was not provided. ATC believes this AST is the 5,000 gallon UST referenced in the database and city records. In NYS a vaulted AST with no weep holes or ways to inspection the condition of the tank are registered as USTs. Based on this information ATC does not consider the "in-service" "UST" to represent a recognized environmental condition.

According to a tank removal letter prepared by Alvin Petroleum Systems, three (3) 4,000 gallon USTs were closed in place on the property. This information contradicts the NYSDEC UST database information which states that two (2) 4,000 gallon USTs were closed in place and one

(1) 4,000 gallon UST was closed and removed. This discrepancy does not represent a *recognized environmental condition* to the property but should be fixed with the NYSDEC.

According to a tank removal letter prepared by Alvin Petroleum Systems, two (1) 550 gallon USTs were closed in place on the northern part of the property. ATC reviewed the NYSDEC petroleum bulk storage database and determined that these USTs do not appear to have been registered. All USTs over 110 gallons must be registered with the NYSDEC. This discrepancy does not represent a *recognized environmental condition* to the property but should be fixed with the NYSDEC.

3) A review of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), Community/Panel Number 3604970202F, dated September 5, 2007, revealed that the entire property is located within a Zone AE, which is classified by FEMA as area located inside the limits of the 100-year flood zone. The base flood elevation is 10 feet.

4) ATC observed various 5-gallon gasoline cans poorly stored in a caged area. The cans appeared to be empty. ATC considers the gasoline cans to represent a *de minimis condition* based on the poor housekeeping.

ATC observed various petroleum products throughout Building D and F due to the current use of property as an auto repair shop. Surface oil staining was observed throughout the property floor (Building D and F) and throughout the parking lot. The surface oil staining represents a *de minimis condition*.

Two (2) aboveground lifts with hydraulic fluid reservoirs were observed in Building F auto repair shop. The lifts appeared to be in good condition with no active leaks and/or staining in the immediate area. ATC does not consider the aboveground lifts to represent a *recognized environmental condition.*

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, and offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

Building F is utilized as an auto repair, and painting operations were observed during the site reconnaissance. The building was equipped with multiple retail and commercial paints. The paints and other maintenance materials appeared to be in good condition with no observed staining and/or active leaks.

Building D is utilized as an auto repair shop with storage of multiple solvents and other hazardous materials. ATC was unable to determine if the products contained chlorinated solvents. All materials appeared to be in fair condition. Building C is used for storage and offices. ATC observed general cleaning and maintenance supplies associated with the adjoining auto repair stations.

ATC does not consider the storage of hazardous materials to represent a *recognized environmental condition* to the property based on the observed condition.

5) Based on the scope of work for this ESA, sampling and analyses for ACM was not conducted. All suspect ACM should be properly assessed prior to disturbance from construction or maintenance activities. ATC observed sheetrock, acoustic ceiling tiles, floor tiles and associated mastic, carpet and associated mastic, and roofing materials in Building C, D, E, and F. Observed building materials and finishes were noted to be in fair condition in Building C, D, and F at the time of the site reconnaissance. The suspect ACM finishes in vacant Building E were observed to be in poor

condition. ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings.

An Asbestos-Containing Material Operations & Maintenance Plan (O&M Plan) was completed by Partner Assessment Corporation (Partner) in 2015. The O&M Plan "minimizes the potential for facility/maintenance personnel, tenants, contractors/vendors, and the general public to be exposed to ACM and/or airborne asbestos fibers." The following assumed ACM was observed by Partner: plaster and spray-applied acoustical texture or fireproofing; vinyl composite floor tiles, sheet flooring, and associated mastic, drywall and drywall joint compound, thermal system/transite pipe insulation, and black roof seal/mastic and roofing materials.

6) Based on the construction date of the building (circa 1931), ATC concludes that lead-based paint (LBP) may be present at the property. During the course of ATC's inspection, painted surfaces within accessible areas were observed to be in poor condition with large amounts of chipping throughout the Buildings C, D, E, and F. LBP is outside of the Scope of ASTM Practice E 1527-13 and, therefore, the potential presence of LBP is not considered a recognized environmental condition.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

7) During the site reconnaissance, ATC conducted a physical observation of representative building areas as described in Section 2.2. Suspect mold growth on a sheetrock wall and acoustic ceiling tiles was observed in Building E. No mold growth was observed on Building C, D, E, and F. Water damage was observed in Building C, D, E, and F.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

As in all cases of water intrusion, the sources of water leaks (or drips in the case of air conditioning condensation) should be repaired or remedied to prevent further damage to building materials. ATC recommends removing the mold impacted sheetrock. No additional investigations are recommended at this time.

1.3 Significant Data Gap Summary

The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
3.5	**Current Uses of Adjoining Properties**	No *significant data gap* identified.
4.2	**Environmental Liens**	No *significant data gap* identified.
5.1	**Standard Environmental Records**	No *significant data gap* identified.
5.2	**Physical Setting Sources**	No *significant data gap* identified.
5.3	**Historical Records Sources**	No *significant data gap* identified.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
6.1	**Methodology and Limiting Conditions**	ATC was unable to gain access to building one and two (A & B) as they are currently unoccupied dilapidated buildings. Prior to decommissioning, the buildings was used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*
8.0	**Interviews**	No *significant data gap* identified.

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC offers the following recommendations:

- The 5,000-gallon No. 2 fuel oil aboveground storage tank that is no longer in use and registered as an underground storage tank (UST) should have it registrations properly closed with the NYSDEC.

- The two (2) 550-gallon USTs should be properly documented with the NYSDEC as “closed-in place”.

- The 4,000-gallon “closed-removed” UST should be properly documented as a “closed in-place” UST based on the affidavit from the Alvin Petroleum Systems.

- The 5-gallon gasoline tanks should be properly stored.

- Prior to redevelopment of the property, if soils are to be excavated and removed from the site, soil waste characterization sampling should be performed to pre-classify the soil for disposal. A Soil Management Plan (SMP) should be developed to determine the proper excavation, handling, transportation and disposal method of soil.

- If redevelopment requires the removal of the previously “closed in-place” USTs at the property, the appropriate New York State Department of Environmental Conservation (NYSDEC) regional office must be notified within 30 days prior to removal by submitting the form entitled, "Petroleum Bulk Storage (PBS) Notification for Tank Installation, Closing, Repair or Reconditioning”.

- If any unidentified petroleum storage tanks are encountered during redevelopment of the property, the owner will be required to register the tanks with the NYSDEC and then the tanks must be properly removed by a registered New York State registered tank removal company.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.

- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- Mold Screening to report the findings of a baseline survey of readily observable mold and conditions conducive to mold on the property identified by limited interview, document review and physical observation and to provide an opinion on whether an identified condition warrants further action. The scope of work for the Mold Screening was intended to be consistent with ASTM Standard Practice E 2418-06: S*tandard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process*. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to one knowledgeable person from property management or engineering staff. The document review was limited to only those relevant documents made readily available to ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein, ATC observed the HVAC equipment room(s) and readily accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted

otherwise, ATC observed readily accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor (if applicable). The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the property.

- Visual observation of suspect asbestos-containing materials (ACM), consisting of providing an opinion on the condition of suspect ACM on the property based upon visual observation during the site reconnaissance. No sampling of suspect ACM was conducted.

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property.

- Lead in drinking water data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets or exceeds drinking water standards for lead.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.

2.3 Significant Assumption

Any assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.

- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.

- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the

standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six-month period. If the report is older than six-months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice E1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, TA Realty LLC, and any of their affiliates, and third parties authorized in writing by TA Realty LLC and ATC, including the lender(s) in connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either expressed or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a total maximum amount of $100,000.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property address is 28-90 Review Avenue, Long Island City, Queens County, New York (herein after referred to as the "property"). A Site Vicinity Map is located in Appendix A, a Site Plan is included in Appendix B, and Site Photographs are provided in Appendix C. According to information obtained from the New York City GIS website, the property is identified as Block 294, Lot 106 and is currently owned by 28-90 Review Avenue Associates. The property consists of one 4.4-acre lot improved with seven (7) buildings. The property buildings were constructed in 1917.

The legal description of the property is identified in the deed provided in the EDR Environmental Lien Search Report. A copy of the EDR Environmental Lien Search Report is provided in Appendix L.

3.2 Surrounding Area General Characteristics

The land use in the property vicinity consists of commercial/industrial buildings to the north, south and east of the property. The Dutch Kill, a tributary of the Newtown Creek, adjoins the property to the west. The Long Island Railroad adjoins the property to the south.

3.3 Current Use of the Property

The property encompasses 4.4 acres of land developed with seven (7) buildings. The buildings on the property are referred to Buildings A through F, which coincide with prior investigation completed on the property by Partner in 2015. See Appendix B for building locations.
Following is a table summarizing tenant use of the property.

USE OF THE PROPERTY		
Location	**Type of Use**	**Comments**
Building A	Vacant	Previously used for auto repair, mechanical equipment storage, and offices.
Building B	Vacant	
Building C	Storage	Referred to as Building D in prior investigation completed in 2001
Building D	Auto Repair	Referred to as Building C in prior investigation completed in 2001
Building E	Vacant	Referred to as Building C in prior investigation completed in 2001
Building F	Auto Repair and Paint shop	Referred to as Building C in prior investigation completed in 2001
Building G	Offices	(not identified in 2001 report)

Office trailers were observed adjoining to the east of Building G. The trailers were occupied by various commercial offices.

The property was identified in Section 5.1.1 and 5.1.2 as AA trucking company. ATC was unable to determine which buildings are directly associated with the listings.

ATC was unable to gain access to Building A and B due to the dilapidated state. The buildings were previously used for auto repair, mechanical equipment storage, and offices. The lack of observation of these two (2) buildings represents a *significant data gap.*

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

PROPERTY IMPROVEMENTS	
Size of Property (approximate)	4.4 acres
General Topography of Property	Generally flat with a slope to the west
Adjoining and/or Access/Egress Roads	Review Avenue to the north
Paved or Concrete Areas (including parking)	None
Unimproved Areas	Gravel / dirt parking surrounding property buildings
Landscaped Areas	None
Surface Water	None
Potable Water Source	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer Utility	NYCDEP
Storm Sewer Utility	NYCDEP
Electrical Utility	Consolidated Edison (Con Ed)
Natural Gas Utility	Con Ed
Current Occupancy Status	50%
Unoccupied Buildings/Spaces/Structures	Two (2) unoccupied buildings Half of the southern building is unoccupied
Number of Occupied Buildings	Seven
General Building Description	Building A – Vacant dilapidated building Building B - Vacant dilapidated building Building C - Storage Building D – Auto Repair shop Building E – Vacant office building Building F – former fuel port Building G – Auto repair and painting
Number of Floors	Building A – two Building B – two Building C - two Building D – two Building E – one Building F – none canopy Building G - two
Total Square Feet of Space (approximate)	37,500 square feet
Construction Completion Date (year)	1917
Construction Type	Concrete on slab
Interior Finishes Description	Brick walls, concrete floors
Exterior Finishes Description	Building A - Brick Building B - Brick Building C - Brick Building D - Brick Building E - Concrete Building F - None Building G – Concrete
Cooling System Type	None
Heating System Type	Electric mounted units
Emergency Power	None

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining sites were observed to be as follows:

Direction from Site	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
North	28-90 Borden Avenue	Unknown	Parking Lot	See Section 5.1.1 and 5.1.2.
Northeast, beyond the intersection of Review Avenue and Borden Avenue	28-44 Borden Avenue	Vacant	Commercial / Industrial	See Section 5.1.2.
	29-05 Review Avenue	Self-Storage	Commercial / Industrial	See Section 5.1.2.
East, Beyond Review Avenue	29-00 Review Avenue	Self-Storage	Storage	See Section 5.1.1 and 5.1.2.
South	Not Applicable	Long Island Rail Road	Railroad tracks	None identified.
West	Not Applicable	Dutch Kill	Creek	See Section 5.1.1.

Review of regulatory database information did not indicate releases or violations at the adjacent facilities with the exception of those noted above and discussed in Section 5.1.1 and Section 5.1.2 of this report. None of the adjacent facilities are considered *recognized environmental conditions* to the property.

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by TA Realty LLC ("User") with regard to the ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

ATC contracted Environmental Data Resources, Inc. (EDR) to obtain an environmental lien search for the property parcel. According to the EDR Environmental Lien Search Report, there are no Environmental Liens or Activity and Use Limitations associated with the property. A copy of the report for the property is included in Appendix L.

4.3 Specialized Knowledge

User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

User did not state that there was a reduction in the property valuation due to environmental issues at the property.

4.5 Owner, Property Manager and Occupant Information

User did not identify the current owner, but did identify the property manager.

4.6 Reason for Performing Phase I ESA

User indicated that the reason for performing this Phase I ESA is due to a property transaction.

4.7 Other User Provided Documents

Per the ASTM Standard Practice E1527-13 ATC obtained the documents listed below from User. Further discussion may be found in Section 5.3.9 and other relevant sections of this report.

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
Phase I Environmental Site Assessment - 28-90 Review Avenue, Long Island City, New York 11101	April 22, 2014 (Updated June 25, 2014)	Impact Environmental
Phase I Environmental Site Assessment - 28-90 Review Avenue, Long Island City, New York 11101	September 23, 2015	Partner
Phase I Environmental Site Assessment - 28-90 Review Avenue, Long Island City, New York 11101	June 8, 2016	Partner

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Property Listed?**	**# Other Sites Listed**
Federal National Priority (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	2
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	4
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal RCRA Generators	Property & Adjoining	**YES**	1
Federal RCRA NonGen / NLR	Property & Adjoining	No	1
Federal Institutional Control/Engineering Control Registry	Property	No	0
Federal Emergency Response Notification System (ERNS) list	Property	No	0
Federal US Brownfields	½ mile	No	0
Federal Facility Index System/Facility Registry System (FINDS)	Property	No	0
State Hazardous Waste Site (SHWS)	1 mile	No	0
SPILLS	Property	**YES**	1
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	0
NY Registered Underground Storage Tanks (UST)	Property & Adjoining	**YES**	2
NY Registered Aboveground Storage Tanks (AST)	Property & Adjoining	**YES**	2
NY Leaking Tanks (LTANKS)`	Property & Adjoining	**YES**	1
State and Tribal Institutional Control/Engineering Control Registry	Property	No	0
State and Tribal Voluntary Cleanup Site (VCP)	½ mile	No	0
State and Tribal Brownfield Sites	½ mile	No	0
NY Drycleaners Database	¼ mile	No	0

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Property Listed?**	**# Other Sites Listed**
State Tier 2	Property	No	0
EDR Historical Auto Stations	1/8th mile	No	3
EDR Historical Cleaners	1/8th mile	No	0
EDR Manufacturing Gas Plant	1.0 mile	No	0

5.1.1 Federal Agency Database Findings

The property was identified on the following federal agency database.

AA Truck Renting Co (Former Tenant)
28-90 Review Street
Long Island City, New York
Databases: FINDS, ECHO, Resource Conservation Recovery Act (RCRA) Small Quantity Generator (SQG)
Approximate Distance from the Property: Target Property (TP)
Assumed Groundwater Gradient: TP
Regulatory Data Summary: The property is listed on the RCRA SQG database for the years 1986, 2006 and 2007. No information regarding the type of waste produced in 2007 was provided. In 2006 and 1986, waste generated were reported to be ignitable wastes. No violations are associated with the RCRA listings. The property is listed on the FINDS database under registry ID: 110007999764 due to the RCRA listing associated with the property.
Discussion: ATC does not consider the federal databases associated with the property to represent a *recognized environmental condition* based on the lack of violations. Spills reported at AA are discussed below.

One NPL and two (2) RCRA-NonGen/NLR listings were identified on the federal databases within the ASTM-specified search distances from the property. The listings with a known or potential for release and impact to the property are summarized below:

Newtown Creek NPL Site
Long Island City, New York
Database: National Priority Listings (NPL)
Approximate Distance from the Property: 0.12 miles to the south
Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: Newtown Creek is located approximately 0.12 miles south of the property. Dutch Kills adjacent to the site is a tributary to Newtown Creek. Various sediment and surface water samples have been taken along the creek by NYSDEC and EPA. Hazardous substances, including pesticides, metals, PCBs, and volatile organic compounds (VOCs), have been detected at the creek. The variety and distribution of the detected contaminants suggests that they originated from a variety of sources. Field work for the Remedial Investigation/Feasibility Study (RI/FS) in the creek began in November 2011. The RI/FS process will characterize environmental conditions at Newtown Creek and connecting tributaries, determine the nature of the waste, assess risk to human health and the environment, and evaluate potential cleanup alternatives. At present, EPA has identified six Potentially Responsible Parties (PRPs) for the Newtown Creek site: BP America, Inc. The Brooklyn Union Gas Company d/b/a National Grid NY, ExxonMobil Oil Corporation, Phelps Dodge Refining Corporation, Texaco, Inc. known as the Newtown Creek Group and the City of New York. (Texaco is a PRP because of the former Texaco Terminal located along the southern bank of Newtown Creek between Meeker Avenue and Apollo Street, and not because of the subject site. These parties are believed by EPA to have contributed hazardous substances into Newtown Creek through operations conducted along the creek. EPA has completed the negotiations with these parties to perform the RI/FS under EPA oversight. The Administrative Order on Consent was signed on July 7, 2011. Because

the subject site has not been named as a PRP we do not consider this to be an REC for the subject site.
Discussion: Based on the assumed groundwater gradient, distance from the property, and known responsible parties of the contamination located in the Newtown Creek; ATC does not consider this NPL listing to represent a *recognized environmental condition.*

Access Self Storage
29-00 Review Ave
Long Island City, New York
Database: RCRA Non-Gen
Approximate Distance from the Property: Adjoining to the east
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: The adjoining site to the east was identified on the RCRA Non-Gen database for the years 2006 and 2007. The adjoining site was identified on the RCRA-NonGen databased on July 31, 1997 and identified as a SQG on May 27, 1997. Wastes generated in May 1997 included ignitable waste and benzene.
Discussion: ATC does not consider the adjoining site to the east to represent a *recognized environmental condition* based on the lack of violations or releases associated with the RCRA listing.

GWL Borden LLC – 28-20 Borden Avenue
28-20 Borden Avenue
Long Island City, New York
Database: RCRA Non-Gen
Approximate Distance from the Property: Adjoining to the north
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: The adjoining site to the north was identified on RCRA Non-Gen database for the year 1994, 2004, 2007 and after August 24th, 2012. Wastes generated during that time appeared to be ignitable wastes and non-halogenated solvents. Historically, the site was a Large Quantity Generator (LQG) in 2003 and July 9th, 2012 for the generation of lead, ignitable waste, and non-halogenated solvents. The site received written informal violations on May 25, 2004. No description of the violation was provided in EDR. The written informal received compliance on June 28, 2004.
Discussion: The manufacturing building is no longer present on the adjoining site and is currently used as a parking lot. ATC does not consider the adjoining site to the north to represent a *recognized environmental condition* based on the current regulatory status, lack of any open violations associated with the RCRA listing, and the current use as a parking lot.

Based on distance, topography, presumed groundwater gradient, current regulatory status, absence of reported releases, none of the remaining properties listed in the federal databases are considered to represent a likely past, present or material threat of release on the property.

5.1.2 State and Tribal Database Findings

The property was identified on the following state agency databases.

AA Truck Renting Co (Former Tenant)
28-90 Review Avenue
Long Island City, New York
Databases: New York Underground Storage Tank (NY UST), New York SPILLS, New York Leaking Tanks (NY LTANKS), New York Aboveground Storage Tank (NY AST)
Approximate Distance from Property: TP
Assumed Groundwater Gradient: TP
Regulatory Data Summary: The property is listed on the NY UST database with two (2) closed-in place 4,000-gallon diesel UST, one (1) closed/removed 4,000-gallon diesel UST, and one (1) in-service 5,000-gallon No. 2 fuel oil UST. The UST closures were completed in 1999. The in-service 5,000 gallon UST was reportedly installed in 1971. The property is also identified on the NY AST database with one (1) in-service 275-gallon lube oil AST, one (1) in-service 500-gallon waste oil/used oil AST, one (1) in-service 275-gallon lube oil, and one (1) closed/removed 275-gallon tank (contents no listed) and one (1) 4,000 gallon diesel AST.

The property was identified on the NY SPILLS database under spill number: 0807459, 9600032, 9311731, 9010146, and 0803348. Spill number 9010146 occurred on December 18, 1990 when faulty gauge caused an overfill of approximately 40 gallons of No. 2 fuel oil on to the ground and affected the storm sewer. The spill was closed on November 8, 1991. Spill Number 9311731 occurred on January 3, 1994 when approximately No. 2 fuel oil was spilled on the pavement. No soil or waterways were impacted.. The spill was cleaned and closed on January 3, 1994. Spill number 9600032 occurred on April 1, 1996 when approximately 100 gallons of No. 2 fuel oil was spilled on the property and entered the sewer system. The spill occurred when the driver filled the wrong tank. The spill was closed on March 8, 1996. Spill number 0803348 occurred on June 20, 2008 when approximately four (4) gallons of waste oil was found during a site inspection. No water ways were affected during the spill. The spill was cleaned and closed by the NYSDEC on July 28, 2008.

Spill number 0807459 was opened on October 2, 2008 when historic fill and floating petroleum product was found in groundwater during an environmental investigation. Floating product had also previously been found in 1990 by Tyree Brothers Environmental in the immediate area of the 4000-gallon underground tank field located south of the pump and loading area on the eastern part of the site and had been recovered through manual bailing. (These tanks have since been closed in place, with one removed). The 1990 report recommended a tightness test of the tanks and continued monitoring of the area on a weekly basis to remove any floating product. Two (2) subsurface investigations were completed by Impact Environmental in 2008 and 2009 were on the property. The investigation installed and sampled six geoprobe wells and six monitoring throughout the property and sampled a monitoring well installed by Tyree Brothers located on the northeast corner of the property. The investigations recommended quarterly sampling of wells based on the analytical results. The third quarter sampling results failed to detect any volatile organic compounds (VOCs) or Semi-Volatile Organic Compounds (SVOCs) in monitoring wells 1 and 5 located on the western part of the site. Monitoring wells 2, 3, 4, and 6 on the central and eastern part of the site detected concentrations of gasoline related VOCs above NYSDEC ambient water quality standards. Impact concluded that “the observed subsurface petroleum product is aged and degraded. It probably has accumulated during the decades of historical petroleum product storage on the Site. Gasoline and fuel oil have been mixed (potentially due to tidal influence) and created a commingled plume. Over time, the plume has been degraded due to natural attenuation. The majority of the volatile organic and semi-volatile organic compounds

have been removed from the subsurface system, either by physical advection or biochemical reaction. The residual petroleum product is mainly degraded. It still has a strong petroleum odor; however, it does not exhibit high levels of VOCs and SVOCs. Currently, relatively low concentrations of target VOCs and SVOC are present in subsurface soil and groundwater at levels marginally above NYSDEC guidance criteria. However, based on the land use, the geology and the hydrology of the Site, it is unlikely for the residual degraded petroleum product to impose a significant risk to human health and the environment. Since no significant source was found, it is unlikely that any soil excavation will be necessary."

Based on the 2010 third quarter monitoring results, the NYSDEC did not consider the residual contamination on the property to represent a harm to human health or the environment. NYSDEC issued No Further Action correspondence on October 1, 2010. The monitoring wells were decommissioned in accordance to NYSDEC standards. Due to the closure of the spill cases and sampling information, ATC considers the former groundwater contamination and spills to represent a *historical recognized environmental condition.* Further assessment is not recommended at this time.

Discussion: ATC considers the NY SPILL listings for the property to represent a *historical recognized environmental condition* based on the closure status with NYSDEC. According to the prior reports, summarized in Section 5.3.9, subsurface investigations completed at the property in 2008 and 2009 included an assessment of the areas containing the two closed-in place 4,000 gallon USTs and the removed 4,000 gallon UST. The NYSDEC issued an NFA for the property in October 2010 and therefore, the former USTs are considered to represent a *historical recognized environmental condition.*

According to a tank removal letter prepared by Alvin Petroleum Systems, three (3) 4,000 gallon USTs were closed in place on the property. This information contradicts the NYSDEC UST database information which states that two (2) 4,000 gallon USTs were closed in place and one (1) 4,000 gallon UST was closed and removed. This discrepancy does not represent a *recognized environmental condition* to the property but should be fixed with the NYSDEC.

Tyree Brothers Environmental Services, Inc. (Tyree) completed a Phase I ESA of the property on September 5, 2001. According to this report, Tyree observed a vaulted 4,000-gallon No. 2 fuel oil AST in Building D. Subsequent consultants also noted a vaulted 4,000 gallon AST in the same building and the prior ESA by Impact dated April 8, 2014, states that a decommissioned 5,000-gallon heating oil tank was observed on the property, but the exact location was not provided. ATC believes this AST is the 5,000 gallon UST referenced in the database and city records. In NYS a vaulted AST with no weep holes or ways to inspection the condition of the tank are registered as USTs. Based on this information ATC does not consider the in-service "UST" to represent a *recognized environmental condition.*

A total of one (1) UST listing, one (1) AST listing, two (2) NY SPILLS listings, one (1) historical auto station listing, and one (1) NY Manifest listing were identified on the state and tribal agency databases within the ASTM-specified search distances from the property. The listings with a known or potential for release and impact to the property are summarized below:

Street Spill
28-90 Review Avenue
Long Island City, New York
Database: NY SPILLS
Approximate Distance from the Property: Adjoining intersection to the northeast
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: The adjoining intersection to the northeast was identified on the NY SPILLS database under spill number 0504537 on July 15, 2005. The spill case was open due to

a caller stating oil was observed on the road. The spill continued down the road and into a yard and the AA Truck rental area. No cleanup information was provided in the EDR summary. The spill was closed on July 18, 2005.
Discussion: ATC does not consider the spill located in the adjoining intersection to represent a *recognized environmental condition.*

Commercial (Borden)
28-20 Borden Avenue
Queens, New York
Database: NY SPILLS
Approximate Distance from the Property: Adjoining to the north
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: The adjoining parking lot to the north was identified on the NY SPILLS database under spill number: 9702480, and 1009365, and 1204192. Spill number 9702480 was open on May 23, 1997 when approximately 3,000 square feet of asbestos material contaminated the soil due to roof removal. Area was cleaned up and soil was removed. The case was closed on May 28, 1997.

The spill 1009365 was open on November 30, 2010 when contaminated soil was observed during a Phase II Investigation completed on the site. Seven soil borings were advanced within the area of an assumed UST. Analytics from the soil samples detected no volatile organic compounds (VOCs); however, 22 metals were detected with exceedances of the New York State Department of Environmental Conservation Part 375 RSCOs including copper, lead, and nickel. During remediation, no UST or associated piping were detected. The contaminated soil is most likely due to a historic site uses and/or poor housekeeping. During remediation, approximately 213 tons of petroleum contaminated soil was removed. Groundwater was not impacted. End point sample results indicate that petroleum impacted soil has been removed. The spill was closed on September 18, 2012. Spill number 1204192 was open on July 27, 2012 when a 1,250 gallon UST was discovered during an open spill, 1009365. Approximately 99 tons of petroleum impacted soil was removed and disposed of. End point samples results indicate that residual contamination within acceptable limits. The spill was closed on September 18, 2012.
Discussion: ATC does not consider the adjoining parking lot to the north to represent a *recognized environmental condition* based on the closed spill case and removal of contaminated soil.

28-39 Review Avenue
Long Island City, New York
Database: EDR Historical Auto Station
Approximate Distance to the Property: Adjoining to the northeast
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: The adjoining site to the northeast was identified on the EDR historical auto station database as Gee Dee General Auto Repair Company in 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, and 2008 and as King Royal Auto Repair in 2009, 2010, 2011, and 2012.
Discussion: ATC does not consider the adjoining site to represent a *recongize4d environmental condition* based on the lack of spills and/or releases associated with the site.

EEA / Access Self Storage
29-00 Review Avenue
Long Island City, New York
Database: NY UST, NY AST, NY Manifest
Approximate Distance to the Property: Adjoining to the east
Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: The adjoining site to the east was identified on the NY UST database with one (1) "closed-removed" 550-gallon gasoline tank and one (1) "closed-removed" 550 gasoline tank. The site was also identified on the NY AST database with one (1) 10,000 "in-service" No. 2 fuel oil tank and one (1) 10,000 "closed-removed" No. 2 fuel oil tank. The site tenant, EEA, was identified on the NY Manifest in 1997 with waste code U226, 1,1,1-trichloroethane and in 1993 with waste code, D001, non-ignitable wastes.
Discussion: ATC does not consider the adjoining site to represent a *recognized environmental condition* based on the lack of violations associated with the NY Manifest listings and the lack of spills associated with the tanks.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the remaining properties listed in the state and/or tribal databases are considered to represent a likely past, present or material threat of release on the property.

5.1.3 Local Environmental Records Sources

New York State Department of Environmental Conservation (NYSDEC)

The NYSDEC maintains files of incidents involving environmentally regulated materials. The records maintained by the NYSDEC include reports of spills of hazardous chemicals and citizen complaints on environmental issues. NYSDEC information concerning the property was requested under the Freedom of Information Law (FOIL). ATC has not yet received a response from the NYSDEC as of the time this report was issued. ATC will issue an addendum to this report if additional information received warrants modifications to the conclusions included herein.

New York City Department of Environmental Protection (NYCDEP)

The NYCDEP maintains files of incidents involving environmentally regulated materials. The records maintained by the NYCDEP include reports of hazardous chemical spills and citizen complaints on environmental issues. NYCDEP information concerning the property was requested under the FOIL. ATC has not received a response from the NYCDEP as of the time this report was issued. ATC will issue an addendum to this report if additional information received warrants modifications to the conclusions included herein.

New York City Fire Department (FDNY)

As required by the agency, ATC requested in writing from the FDNY, any environmentally significant information related to the property. As of the date of this report, this information remained outstanding. Upon receipt and review, any pertinent information will be forwarded to the Client.

Water & Sewer Departments

Within the City of New York, potable water is supplied to Queens primarily from upstate New York reservoirs. ATC reviewed New York City's most recent Drinking Water Supply and Quality Report made available through the NYCDEP website for the year 2016. Review of the analytical data provided in the report confirmed that the municipally supplied water meets all drinking water standards established by the EPA Safe Water Drinking Act, including those for lead. No drinking water supply wells exist at the property.

The NYCDEP is responsible for the municipal combined sanitary and stormwater sewer system. This system is operational in all five boroughs of New York City, with the exception of certain remote areas of

the City, namely Queens and Staten Island, which have separate operating systems for sewage and stormwater.

A copy of the New York City Drinking Water Supply and Quality Report is included in Appendix L.

New York City Department of Health and Mental Hygiene (NYCDOHMH)

The NYCDOHMH maintains files of health-related environmental incidents in the City of New York. These incidents may include spills of hazardous chemicals, citizen complaints regarding asbestos issues, lead-based paint violations, or reports of chemical odors or fumes. NYCDOHMH information concerning the property was requested under the FOIL. ATC has not yet received a response from the NYCDOHMH as of the time this report was issued. Upon receipt of this information, ATC will review the response and, if conclusions and recommendations contained within this report are affected, we will submit an addendum to the Client.

Electrical Utility Company

The local utility, Con Edison (Con Ed), provides electric and natural gas service to the property.

5.2 Physical Setting Sources

5.2.1 Topography

According to the United States Geologic Survey (USGS) 7.5-Minute Series *Franklin, Massachusetts* Topographic Quadrangle, dated 1987, the elevation at the property is approximately 339 feet above mean sea level (MSL) and topography at the property slopes to the north-northeast towards Mine Brook, located approximately 1,800 feet north and east of the property. A Site Vicinity/Topographic Map is provided in Appendix A.

5.2.2 Geology

According to the New York Department of Environmental Conservation, Water Power and Control Commission report titled Ground Water in Bronx, New York, and Richmond Counties, with Summary Data on Kings and Queens Counties, New York City, New York, the Property area's geology is expected to consist of Pleistocene age glacial till and moraine deposits and glaciofluvial sediments derived from melt-water of the retreating glaciers. The depth to bedrock was not included on the documents reviewed as part of this assessment.

5.2.3 Soils

Prior subsurface investigations by Impact indicate that on the eastern portion of the Site, subsurface soil was found to consist of brown coarse to medium sand from grade to approximately 12 feet BEG. A clay layer, at least 3 ft in thickness, was encountered starting at approximately 12 ft BEG. On the western portion of the Site, subsurface soil was found to consist of dark brown coarse to fine sand mixed with urban fill material, including concrete, rock, slag and cinderblock debris. No clay layer was encountered within 20 ft BEG.

According to EDR, soils beneath the Property are classified as Urban Land, with variable soil textures. Urban Land refers to soils that have been altered by urban development such as buildings and streets, where at least 85 percent of the surface is covered with asphalt, concrete or other impervious building material. Typically, these soils have been mixed with other materials, such as brick and concrete, and characteristics can only be determined by on-site investigation.

5.2.4 Hydrology

Under natural, undisturbed conditions, shallow groundwater flow generally follows the topography of the land surface and on this basis, the topography suggests that surficial groundwater flows across the property in a westerly direction towards Dutch Kills, which a tributary of the Newtown Creek, which is adjoining to the west of the property. Based on a prior groundwater survey completed on the property by Impact Environmental in 2010, determined the depth to groundwater to range between three to ten feet and flow to the northeast.

Localized conditions can alter flow direction and thus the presumed flow may not coincide with the actual flow direction in the Property area. Estimated groundwater levels and/or flow direction may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.
Stormwater runoff originating from the Property is discharged to stormwater drains and the combined municipal sanitary/stormwater system located in the streets surrounding the property.

5.2.5 Other Physical Setting Sources

Flood Plain Map

A review of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), Community/Panel Number 3604970202F, dated September 5, 2007, revealed that the entire property is located within a Zone AE, which is classified by FEMA as area located inside the limits of the 100-year flood zone. The base flood elevation is 10 feet. A copy of the flood plain map that includes the property is included in Appendix L.

Wetlands Map

According to a review of the US Department of Interior, Fish & Wildlife Services (USFWS) National Wetland Inventory (NWI) Map, no designated wetlands exist on the property. A copy of the wetland map that depicts the property is included in Appendix L. Please note that this investigation did not include a formal determination relating to the presence of possible wetlands areas

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Property	**Surrounding Area**		
Prior to 1940	Industrial	Industrial	Aerial Photograph Sanborn Maps Topographic Maps	The property was first identified on the 1897 topographic map. Data gaps identified from 1900-1915; 1915-1924; and 1928-1934
1940-1960	Industrial	Industrial and Manufacturing	Aerial Photographs Sanborn Maps Topographic Maps	Data gaps identified from 1956-1961
1961-1980	Industrial	Industrial and Manufacturing	Aerial Photographs City Directory Sanborn Maps Topographic Maps	No data gaps identified.
1981-2000	Industrial	Industrial and Manufacturing	Aerial Photographs City Directory Prior Report Sanborn Maps Topographic Maps	No data gaps identified.
2001-current	Industrial	Industrial and Manufacturing	Aerial Photographs City Directory Prior Report Sanborn Maps Topographic Map	No data gaps identified.

The historic use of the property was first identified as multiple vacant lots and a basin connected to the Dutch Kills. In the 1920s the property was developed as a bulk petroleum storage facility. The current use of the property as a trucking, auto repair shop, and storage area was first seen in the 1970s. The

historic and current use of the property involve petroleum products, solvents, and other hazardous materials which can contaminate the subsurface of the property. Based on the information provided in the prior reports, ATC considers the historical use of the property as to represent a *historic recognized environment condition.* For more information on prior reports see Section 5.3.9.

Based on the information provided in the prior reports, ATC considers the historical use of the property as to represent a *historic recognized environment condition.*

Since data gaps occur at greater than five year intervals, data failure occurs relative to the ASTM 1527-13 standard requirements. However, based on the relatively unchanged nature of the Property during the gaps, the gaps are not considered significant.

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs researched by EDR. Available photographs ranged from 1938 to 2012. Interval gaps (greater than five years) were encountered during the research of historical use information for the property and surrounding area. However, based on the review of available historical sources, these data gaps did not have an impact on the *recognized environmental condition* determinations of this assessment and are not significant data gaps.

The following are descriptions and interpretations from the aerial photograph review.

Year	Scale	Comments
1924 1941 1944 1951 1954 1961	1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet	**Property**: The property is depicted with approximately 5 structures and parking areas. **Surrounding Area**: The adjoining site to the north and east was developed with multiple structures. The adjoining site to the west is depicted as a creek and the adjoining site to the south is depicted was railroad tracks.
1974 1980 1984 1991 1994	1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet	**Property**: The property appears to be depicted with seven structures similar in shape and size to the current building. Surrounding the buildings are parking areas with multiple parked vehicles and storage. **Surrounding Area**: The surrounding areas appear unchanged from the 1961 Sanborn map.
2006 2009 2011	1 inch = 500 feet 1 inch = 500 feet 1 inch = 500 feet	**Property**: The property appears unchanged from the 1994 aerial photograph. **Surrounding Area**: The adjoining site is depicted as a parking area. The surrounding area to the east, south, and west appear unchanged from the 1994 aerial photograph.

The property and surrounding areas to the north and east appear to be depicted with multiple structures from 1924 to 2011. ATC was unable to determine the exact use and/or tenants of the property or surrounding areas. ATC does not consider the property and/or surrounding area to the north and east to represent a *recognized environmental condition.*

The surrounding area to the west is depicted as the Dutch Kills which is tributary of the Newtown Creek. The Newtown Creek is an EPA identified Superfund Site as of 2010. A Remedial Investigation is currently being completed on the Newtown Creek with EPA oversight. Based on this information ATC, does not consider the Newtown Creek to represent a *recognized environmental condition.*

The adjoining site to the south is depicted as a railroad track associated with the New York Long Island Railroad (LIRR) from 1924 to present day. No spills and/or releases were identified on the NY SPILLS database for the adjoining address. ATC does not consider the adjoining site to represent a *recognized environmental condition.*

The historic and current use of the property involve petroleum products, solvents, and other hazardous materials which can contaminate the subsurface of the property. Based on the information provided in the prior reports, ATC considers the historical use of the property as to represent a *historic recognized environment condition.* For more information on prior reports see Section 5.3.9. Copies of reproducible aerial photographs are included in Appendix F.

5.3.2 Fire Insurance Maps

A search for fire insurance maps for the property and surrounding area was conducted by EDR. The property was identified in the 1898, 1915, 1928, 1936, 1947, 1950, 1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1900, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, and 2006. The following are description and interpretations from the fire insurance maps review. Documentation is included in Appendix G.

Year	Comments
1898	**Property**: The property is depicted as multiple vacant lots, a basin, and a vacant shed. **Surrounding Area**: The adjoining site to the wet is depicted as a creek, to the south a railroad track, and to the east vacant lots. The adjoining site to the north is depicted as an iron foundry. The foundry is labeled as "Richey, Browne, and Donald – Architecture Iron Works.
1928	**Property**: The property is depicted as "The Texas Co." The property has seven buildings and six (6) oil tanks. **Surrounding Area**: The adjoining site to the north is depicted as a commercial building "Howells, Fields, & Goddard". The adjoining site to the south is depicted as railroads tracks. The adjoining site to the east is depicted as a loft. The adjoining site to the west is not depicted.
1936 1947	**Property**: The property is depicted as "The Texas Company". The property has an office building on the northeast corner, a garage in the middle of the property, and a covered patio on the western portion. On the southern portion of the property there is one (1) 275,000-gallon crude oil tank, one (1) 275,000 gallon fuel oil tank, one (1) 275,000-gallon kerosene tank, one (1) 275,000 gallon naptha tank, and two (2) 275,000-gallon gasoline tank. The building located on the northern portion of the property is depicted as a stage for pumps with four (4) tanks. The types of tanks are not described in the Sanborn map. **Surrounding Area**: The adjoining site to the south is depicted as a train and to the west is a Kills Creek. The adjoining site to the north is depicted as a commercial building, Porcelain Metals Inc. The adjoining site to the east, beyond 29th Street, is depicted as a commercial building, parking lot, and a garage.
1950 1970	**Property**: The property appears to be unchanged from the 1936 Sanborn map. **Surrounding Area**: The adjoining site to the north is depicted as a commercial building depicted "Seaporcel Metals Inc.". The adjoining site to the south, west, and east appear unchanged from the 1936 Sanborn map.
1977	**Property:** The property is depicted as four (4) commercial buildings. A covered patio and storage area appears are depicted on the western portion of the property. Two (2) 10,000-gallon oil tanks located on concrete pads are depicted in the southwest corner. **Surrounding Area:** The surrounding area appear to be unchanged from the 1970 Sanborn map.

Year	Comments
1979 1985 1986 1988 1989 1990 1991 1992 1993 1994 1995 1996 1999 2001 2002 2003 2004 2005 2006	**Property:** The property building appears unchanged from the 1977 Sanborn map. The property is labeled "Trucking Terminal". **Surrounding Area:** The adjoining sites to the northeast beyond the intersection between Review Avenue and 29th Street was depicted as an Auto Repair. The adjoining sites appear unchanged from the 1977 Sanborn map.

The property is first seen depicted as multiple vacant parcels, a vacant shed in the center of the property, and a basin connected to the Dutch Kills on the northwest corner. There are no observations of a basin or body of water on the property after the 1898 Sanborn. The property was most likely filled in with historic fill between 1898 and 1928. Based on a prior repot, multiple soil borings were completed on the property and determined the soil is historic fill.
The property was depicted as a petroleum bulk storage labeled "The Texas Co." from 1898 to 1970. The southern portion of the property is equipped with one (1) 275,000-gallon crude oil tank, one (1) 275,000 gallon fuel oil tank, one (1) 275,000-gallon kerosene tank, one (1) 275,000 gallon naptha tank, and two (2) 275,000-gallon gasoline tank. In 1977, the property is then depicted with multiple commercial structures, and two (2) 10,000-gallon oil tanks on the western portion. The current use of the property as a trucking facility is first depicted in the 1979 Sanborn map. The trucking facility occupied the same buildings as Texaco with the addition of building D and E.

The historic and current use of the property involves petroleum products, solvents, and other hazardous materials which can contaminate the subsurface of the property. Based on the information provided in the prior reports, ATC considers the historical use of the property as to represent a *historic recognized environment condition.* For more information on prior reports see Section 5.3.9.

5.3.3 Property Tax Files

ATC reviewed reasonably ascertainable tax files available on the New York City Department of Finance Office of City Register for historical ownership information pertaining to the property. According to the tax records, the current property owner (28-90 Review Equity LLC) acquired the property on August 23, 2016. Prior to 2016, the property owner was owned by 28-90 Review Avenue Associates, LLC from 2007 to 2016, by Eric W. Roberts from 1985 to 2007, by 1685-91 Atlantic Ave Corp from 1971 to 1985, and by Texaco Inc prior to 1971.

The historic and current use of the property involve petroleum products, solvents, and other hazardous materials which can contaminate the subsurface of the property. Based on the information provided in the prior reports, ATC considers the historical use of the property as to represent a *historic recognized environment condition.* For more information on prior reports see Section 5.3.9.

The review of tax files did not identify past uses indicating *recognized environmental conditions* at the property. A copy of the tax records is included in Appendix L.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Quadrangles

ATC reviewed available historical USGS Topographic Quadrangles for information regarding past uses of the property. The review of the historical USGS Topographic Quadrangle dated 1897, 1898, and 1900 show a creek on the western portion of the property. The 1947, 1956, 1967, 1979, 1995, and 2013 topographic map display the property as developed in a high urban area.

During the site visit no basin and/or standing water was observed on the property which indicates the property was filled in for developed between 1898 and 1924 (first seen developed on aerial photographs). Prior soil sampling located on site indicated that historic fill is currently present on the property. For more information on prior reports see Section 5.3.9.

The presence of historic fill represent a business environmental concern and if excavated and disposed off-site, should be excavated, handled, transported, and disposed of based on NYSDEC standards.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR. The property was identified on the 1976, 1983, 1991, 2005, 2010, and 2014 city directory. Documentation is included in Appendix G. Note: Only properties of potential environmental concern will be listed in the "Surrounding Area" comments.

CITY DIRECTORY SUMMARY	
Year	**Comments**
1939	**Property**: Not listed **Surrounding Area**: Repair Shop (53-02 29th Street)
1939	**Property**: Not listed **Surrounding Area**: Slater Robbins Co Inc Chemicals (28-44 Borden Avenue/28-39 Review Avenue)
1945	**Property**: Not listed **Surrounding Area**: Repair Shop (53-02 29th Street); Slater Robbins Co Inc Chemicals (28-44 Borden Avenue)
1962	**Property**: Not listed **Surrounding Area**: Texaco Inc Petroleum Products (53-02 29th Street)
1976	**Property**: AA Truck Renting Corp **Surrounding Area**: Various Commercial listings
1983	**Property**: AA Truck Renting Corp **Surrounding Area**: Various Commercial listings
1991	**Property**: AA Truck Renting Corp **Surrounding Area**: Various Commercial listings
2005	**Property**: AA Truck Renting Corp; Joseph Eletto Transfers **Surrounding Area**: Various Commercial listings
2010	**Property**: AA Truck Renting Corp; Joseph Eletto Transfers **Surrounding Area**: King Royal Auto Repair Inc (28-39 Review Avenue)
2014	**Property**: AA Truck Renting Corp; Greenpoint Truck Center Inc; Metro Express Services Inc; RNC Action Doors **Surrounding Area**: King Royal Auto Repair Inc (28-39 Review Avenue)

No property listings or surrounding area facilities appear to represent an environmental concern to the property other than those discussed in Section 5.1.1 and/or 5.1.2. City directory documentation is included in Appendix G.

5.3.7 Building Department Records

ATC reviewed files available on the New York Department of Buildings (NYCDOB) website. The property has no open DOB violations or Environmental Control Board (ECB) violations associated with the address. Review of the NYCDOB files did not represent a *recognized environmental condition*.

5.3.8 Zoning/Land Use Records

ATC reviewed available historical zoning/land use records at the New York City Department of Planning (NYCDOP) website for information regarding past uses of the property and surrounding area. The property is currently zoned as Manufacturing, M3-1. No historic zoning maps were available for review.

The review of historical zoning/land use records did not identify past uses indicating *recognized environmental conditions* in, on, or at the property and/or surrounding area. Documentation is included in Appendix G.

5.3.9 Prior Reports

ATC was provided with several Phase I ESAs completed for the property by Impact Environmental (2014) and Partner (2015 & 2016). Included within these reports were several prior investigations. These documents are summarized chronologically below:

Subsurface Investigation of AA Truck Renting Corp. 29-90 Review Avenue, Long Island City, New York, dated May 1990, prepared by Tyree Brothers Environmental Services, Inc.

A summary of the findings follows:

- On May 2, Tyree Brothers Environmental Services, Inc. drilled four (4) soil borings at the subject site. Boring 1, 2, and 3 were drilled to the water table which ranged from five (5) to seven (7) feet and split spoon samples were then taken. Boring 4 was terminated at a depth of four feet after several unsuccessful attempts were made to surpass this depth.
- Boring 1 (B-1) was drilled on the northeast corner of the property near an underground tank field and pumps, boring 2 (B-2) was drilled southeast of Building E, boring 3 (B-3) was sampled south of Building E, boring 4 (B-4) was drilled south Building D.
- Petroleum odors were noted in B-1 and B-2 on the eastern part of the site.
- Soil samples were taken just below the water table in B-1, B-2, and B-3 and a grab samples was collected around 4 feet at B-4.
- Analysis of samples identified high concentrations of Total Recoverable Petroleum Hydrocarbons in the area of 56,432 ppm (B1), 624.3 ppm, 176.7 ppm, and 626.9 ppm in soil sample from B-1 through B-4.
- On May 9, two (2) monitoring wells were installed in the area of B-1 and B-2. Well 1 was found to contain 2 7/8 inches of floating product and one-half gallon of product was bailed form the well. Well 2 did not contain any product. On May 17, well 1 contained 2 1/2 inches of floating product and no floating product was observed in well 2. Analysis of the floating product identified it to be

No. 2 fuel oil or diesel fuel. B-1 is located in the immediate area of an underground diesel storage tank which indicates a release in the area. (Note: the tanks by B-1 have since been closed in place as discussed below)

- The report recommended a tightness test of the tanks and continue monitoring of the area on a weekly basis to remove any floating product.

A letter was prepared on October 1, 1990 discussing further sampling and environmental testing conducted on the property. On June 2, 1990 three (3) underground storage tanks (USTs) were petro-tite tested. All three (3) tanks were determined to be tight. Prior to testing a pump was determined to be leaking and was repaired. Four (4) additional monitoring wells were installed during June 1990. A total of six (6) wells were sampled on a weekly basis. Two (2) wells showed measurable amount of floating product ranging from three to six inches well 1 and less than one inch in well 3. Weekly sampling occurred for 7-8 months. The last three months no-free product was observed in well 3 and none or low levels were observed in well 1.

Affidavit, Tank Closure Letter prepared by The Franklin Company dated May 11, 1999

- Three (3) 4,000-gallon diesel tanks were filled to capacity with inert material and closed in place. No information was provided on the location of the tanks in the affidavit but they are believed to be the three USTs by the tank field near building G.

Draft Remote Sensing Survey, Ground Penetrating Radar Investigation, prepared by Impact Environmental and dated July 28, 1999

A summary of the findings follows:

- A Ground Penetrating Radar (GPR) report was completed on two (2) portions of the property, an area within Building C (currently labeled Building E) and on the southwest corner of Building A. Both buildings were chosen due to observed fill ports and vents in a prior Phase I ESA.

- Results showed a possible underground storage tank (UST) located to the southwest of Building A. The anomaly showed the tank is approximately 1,000 to 3,000 gallons and runs north to south. (note: this is the area though to be where two 550-gallon USTs are closed in place as discussed below)

- No UST anomalies were observed near the fuel port and vent located within Building C (currently building E).

Affidavit, Tank Closure Letters prepared by Alvin Petroleum Systems, Inc. dated August 5, 1999

- Two (2) 550-gallon tanks were washed, cleaned, and filled with concrete. The product removed from the tanks were placed in drums wand disposed of by a licensed hauler. No site plan was provided but it is possible these tanks were the anomaly observed south of Building A in the GPR report Dated July 28, 1999.

Phase I – Site Assessment of AA Truck Renting Corp., 28-90 Review Avenue, Long Island City, New York, dated September 2001 and prepared by Tyree Brothers Environmental Services, Inc

The Phase I ESA identified four (4) buildings on site labeled A, B, C, and D.

Building A was utilized as storage of a truck washing machine and chemicals. The washing machine utilized diesel for fuel. The building was heated by an oil -fired heater, fueled by a UST, but it was reported to be inactive.

Building B was utilized for the storage of truck parts. The building was formerly heated by wall-mounted radiators but were no longer in use. A vent for a former burner was located along the north wall of the building but the fuel source for this former heating system could not be determined.

Building C (currently labeled as Building D, G, and E) was used as an office space, truck repair space, truck engine building space, and truck parts storage space. Evidence of one (1) underground storage tank (UST) west of the office space. The potential UST was identified by the presence of a suspected fill pipe. Site contact was unaware of any UST in the building.

Building C (currently labeled as Building D) was used as a chemical storage and utilities. An active vaulted 4,000-gallon No. 2 fuel oil aboveground storage tank (AST) utilized for on-site heating and two (2) active 275-gallon motor oil ASTs.

One (1) AST was observed outside the existing building.

A summary of the findings follows:

- Six (6) environmental issues were identified in the report. The issues are described below.

- Two (2) former potential underground injection wells (UIW's) were identified in the truck repair in Building C (currently labeled Building E). Based on the use of this building the potential for petroleum releases to these UIW's represented a *recognized environmental condition.* (note subsequent letter was provided indicating these were not IUWs and were connected to piping.

- Evidence of an UST in the form of a fill port and vent line adjacent/south of Building A. Review of prior affidavit supplied by Alvin Petroleum detailed the abandonment of two (2) 550 gallon USTs. However no documentation was provided regarding the witnessing of the tank abandonment by appropriate government agency nor any sampling performed. Accordingly, a limited subsurface investigation to perform to determine if the former USTs actuated a release of product to the subsurface and/or groundwater was recommended.

- The historic use of the site as a bulk petroleum storage facility with multiple AST and USTs on site represented a *recognized environmental condition* based on the possibility of subsurface soil and groundwater impact.

- Multiple catch basins were observed on site. The outfall of suspect catch basins could not be determined. Based on this information, Tyree recommended a remote sensing survey be performed to determine the outfall locations of the basins. (Not the 2014 Impact report subsequently identified six drainage structures of solid construction, which appeared to outfall to the Newtown Creek District Sewer System.

- A prior report reviewed in 1990 identified floating product on groundwater underlying the property. (B-1) Tyree observed several areas throughout the subject property with petroleum staining. This observation warranted a subsurface investigation be completed on site.

- Several off-site confirmed and potential contamination sources were identified to exist within the ASTM search radius. These potential contaminant sources further support the need for a subsurface investigation on the property.

Subsurface Investigation, dated October 2, 2008 and prepared by Impact Environmental

A summary of the findings follows:

- The investigation was conducted to define what, if any, organic contaminants have impacted the environmental quality of the property.

- Six (6) soil probes, SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6, were installed for collection of subsurface soil. Analysis of soil samples collected at SP-2, SP-3, SP-5, and SP-6 failed to detect volatile organic compounds (VOCs) above minimum detection limits. Analysis of soil samples collected at SP-1 and SP-4 detected low concentrations of target volatile organic analytes, however the concentration were below guidance criteria for NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives.

- Groundwater monitoring wells, GW-1, GW-2, GW-3, GW-4, GW-5, and GW-6 were gauged for the presence of free product. Measureable free phase product was detected at each monitoring well with a range from 0.80 to 1.4 feet. Groundwater samples were collected from each monitoring well beneath the free phase product. Analysis performed on the groundwater samples identified target volatile analytes slightly above guidance levels for NYSDEC Technical Operational Guidance Services (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

- In conclusion, soil on the property appeared to be composed of typical urban fill materials and it appeared the petroleum related compounds detected are aged and degraded.

DRAFT Investigation Summary Report, Subsurface Investigation, dated June 24, 2009 and prepared by Impact Environmental

A summary of the findings follows:

- This investigation summary report was prepared to document the investigative activities conducted to define the extent of contaminant that have impacted the environmental quality of the property. The scope of this investigation is based off the subsurface investigation completed in 2008.

- From March 31 to April 2, 2009, Impact Environmental installed 6 soil borings identified as MW-SP-1 through MS-SP-6 on site and 6 groundwater monitoring wells identified as MW-1 through MW-6. Results from groundwater interface soil samples detected volatile organic compounds (VOCs), n-butyl benzene, in MW-SP-6 (7'), and semi-volatile organic compounds (SVOCs), chrysene, was depicted at MW-SP-2 (5'). Saturated soil samples at MW-SP-3 (5'), MW-SP-4(10'), and MW-SP-6 (12') detected concentrations of several target VOCs. Samples collected at MW-SP-3(5'), MW-SP-4 (10'), and MW-SP-5(12') detected concentration of several target SVOCs. Groundwater sample results identified VOCs at MW-2. MW-3, and MW-4 no SVOCs were detected. A fingerprint analysis was conducted on groundwater samples taken from MW-1 through MW-6 and were most consistent with a combination of gasoline and No.6 fuel oil.

- Based on these results, Impact Environmental concluded the observed subsurface petroleum product is ages and degraded due to decades of accumulated historical petroleum product. Recommendations include a groundwater Monitored Natural Attention (MNA) plan should be designed and submitted for review by the NYSDEC. Incase future quarterly sampling events encounter free phase product; enhanced fluid recovery activities should be performed via 4-inch diameter wells. If the quarterly monitoring programs shows steady and/or diminishing levels of target contaminants, then at the conclusion of the MNA program, an exposure assessment based on current, potential site uses, should be conducted, in support of spill closure, to quantitatively evaluate the human exposure risk associated with the degraded residual contamination of the site.

Quarterly Monitoring Report, Groundwater Sampling Event, dated March 12, 2010 and prepared by Impact Environmental

A summary of the findings follows:

- The quarterly monitoring report was prepared to summarize the correction action procedures performed at the property. Activities consist of the groundwater well gauging and quarterly sampling.

- Quarter 1 – Laboratory analysis performed on groundwater samples MW-2, MW-3, MW-5, and MW-6 failed to detect any target volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCs). Gasoline related target volatile organic analysts were observed in groundwater samples collected from MW-1 and MW-4 which were slightly above the NYSDEC ambient water quality standards. Total VOC concentration was less than 0.1 parts per million (PPM). A prior monitoring well (MW-7H) installed by Tyree Environmental observed approximately 0.01 ft of free phase product. No free-phase product was observe din the other well. Based on these results, Impact recommends the free product be bailed out manually and sampling will continue into the second quarter.

- Quarter 2 – Laboratory analysis performed on groundwater samples MW-1, MW-2, MW-3, MW-4, and MW-6 failed to detect any target VOCS or SVOCs. Samples collected from MW-5 showed concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. The detected VOC concentration was less the 0.3 ppm. Approximately 0.01 ft of free phase product was observed in MW-7H. No free-phase product was observe din the other well. Based on these results, Impact recommends a sump skimmer be installed in MW-7H and will be replaced on a monthly basis, and sampling will continue into the second quarter.

- Quarter 3 – Laboratory analysis performed on the groundwater samples MW-1 and MW-5 failed to detect any target VOCs or SVOCs. Samples collected from MW-2, MW-3, MW-4, MW-6 and MW-7H detected concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. Monitoring wells 2, 3, 4, and 6 detected concentrations of gasoline related VOCs above NYSDEC ambient water quality standards. The table below summarizes the exceedances observed.

  MW-2: 9.4 ug/L n-butylbenzene, 37 ug/l n-propylbenzene, and 7.2 sec-butylbenzene (ug/L)

  MW-3: 7.9 ug/L Hexachlorocyclopentadiene

MW-4: 30 ug/L Hexachlorocyclopentadiene

MW-6: 7.4 ug/L 4-Chloroaniline

Total VOC concentration was less than 0.1 ppm. No free product was observed in any of the wells. Based on the third quarter monitoring results, the NYSDEC does not consider the residual contamination on the property to represent a harm to human health or the environment.

Remedial Action Letter prepared by Impact Environmental regarding ASTs located on site, dated January 16, 2012

A summary of the findings follows:

- An inspection was completed by a New York State Department of Environmental Conservation (NYSDEC) representative on the property, 28-90 Review Avenue, and administered a Notice of Violation with regards to several required maintenance activities associated with the exterior diesel aboveground storage tank (AST), the exterior waste oil AST, and several catch basins.
- On December 28, 2011, Impact Environmental conducted the remedial activities.
- Liquid within the secondary containment of the diesel AST was removed by a vactor-truck and cleaned.
- Sediment and liquid materials were removed from four (4) catch basins. The interior of the catch basins and surrounding area were cleaned utilizing a pressure washer and then removed using a pump-truck.
- Readily accessible areas (interiors and exterior of the waste oil AST were cleaned using a pressure waste and the liquid generated was removed using a pimp truck.
- A total of 2,232 gallons of petroleum impacted liquids, 2.5 cubic yards of nonhazardous waste and one (1) 55-gallon drum of solids were removed from the property.

Phase I Environmental Site Assessment of 28-90 Review Avenue, Long Island City, New York, dated June 25, 2014, prepared by Impact Environmental

A summary of the findings follows:

- Impact Environmental did not reveal evidence of any *recognized environmental condition* associated with the property.
- Six (6) spills are associated with the property. The spill cases and/or files have been closed or remediated to satisfaction of the NYSDEC. The remediation of the historic spills was performed to the extent practical. Residual levels of contamination that may be present in the subsurface will continue to naturally attenuate, and do not represent a significant threat to human health or the environment. No active remediation is required by NYSDEC at this time. Therefore, no additional activities are recommended with respect to the *historical recognized environmental conditions.*

- Impact environmental considers the possible presence of urban fill, abandoned underground storage tanks, and residual contamination from *historical recognized environmental conditions* and/or off-site sources identified above to represent a business environmental risk to the property. If urban fill and/or impacted soil is encountered on the property it must be excavated, handled, transported and disposed of in accordance with NYS waste regulations.

Draft Phase I Environmental Site Assessment of 28-90 Review Avenue, Long Island City, New York 11101, dated September 23, 2015, prepared by Partner.

A summary of the findings follows:

- Partner did not identify any *recognized environmental conditions* associated with the property.

- Partner identified the former use of the property as a bulk petroleum storage facility occupied by The Texas Company from 1917 to 1971 and was equipped with multiple bulk storage tank, and operated as a truck and vehicle storage facility with auto repairing and refueling activities represent a *historical recognized environmental condition.*

- Partner stated that the observed ASTs on site do not correlate with the NYSDEC registered tanks associated with the property. The presence of these ASTs do not represent a *recognized environmental condition* based on the tanks being aboveground, absence of observed spills, leaks or releases in the vicinity.

- Partner observed localized areas of staining throughout the subject property. Based on the surficial nature of staining, with no conduit (i.e. cracks, drains, etc.) to the subsurface identified in the areas of the staining, the staining is not expected to represent a significant environmental concern to the subject property at the time.

Based on the information provided in the former Phase I ESAs, ATC considers the historical use of the property as a bulk petroleum storage facility and a trucking site to represent a *historic recognized environment condition.*

Floating product had also previously been found in 1990 by Tyree Brothers Environmental in the immediate area of the 4000-gallon underground tank field located south of the pump and loading area on the eastern part of the site and had been recovered through manual bailing. (These tanks have since been closed in place, with one removed). The 1990 report recommended a tightness test of the tanks and continued monitoring of the area on a weekly basis to remove any floating product. Two (2) subsurface investigations were completed by Impact Environmental in 2008 and 2009 were on the property. The investigation installed and sampled six geoprobe wells and six monitoring throughout the property and sampled a monitoring well installed by Tyree Brothers located on the northeast corner of the property. The investigations recommended quarterly sampling of wells based on the analytical results. The third quarter sampling results failed to detect any volatile organic compounds (VOCs) or Semi-Volatile Organic Compounds (SVOCs) in monitoring wells 1 and 5 located on the western part of the site. Monitoring wells 2, 3, 4, and 6 on the central and eastern part of the site detected concentrations of gasoline related VOCs above NYSDEC ambient water quality standards. Impact concluded that “the observed subsurface petroleum product is aged and degraded. It probably has accumulated during the decades of historical petroleum product storage on the Site. Gasoline and fuel oil have been mixed (potentially due to tidal influence) and created a commingled plume. Over time, the plume has been degraded due to natural attenuation. The majority of the volatile organic and semi-volatile organic compounds have been removed

from the subsurface system, either by physical advection or biochemical reaction. The residual petroleum product is mainly degraded. It still has a strong petroleum odor; however, it does not exhibit high levels of VOCs and SVOCs. Currently, relatively low concentrations of target VOCs and SVOC are present in subsurface soil and groundwater at levels marginally above NYSDEC guidance criteria. However, based on the land use, the geology and the hydrology of the Site, it is unlikely for the residual degraded petroleum product to impose a significant risk to human health and the environment. Since no significant source was found, it is unlikely that any soil excavation will be necessary."

Based on the 2010 third quarter monitoring results, the NYSDEC did not consider the residual contamination on the property to represent a harm to human health or the environment. NYSDEC issued No Further Action correspondence on October 1, 2010. The monitoring wells were decommissioned in accordance to NYSDEC standards. Due to the closure of the spill cases and sampling information, ATC considers the former groundwater contamination and spills to represent a *historical recognized environmental condition.* Further assessment is not recommended at this time.

According to a tank removal letter prepared by Alvin Petroleum Systems, three (3) 4,000 gallon USTs were closed in place on the property. This information contradicts the NYSDEC UST database information which states that two (2) 4,000 gallon USTs were closed in place and one (1) 4,000 gallon UST was closed and removed. This discrepancy does not represent a *recognized environmental condition* to the property but should be fixed with the NYSDEC.

According to a tank removal letter prepared by Alvin Petroleum Systems, two (1) 550 gallon USTs were closed in place on the property. ATC reviewed the NYSDEC petroleum bulk storage database and determined that these USTs do not appear to be registered to the property. All USTs over 110 gallons must be registered with the NYSDEC. This discrepancy does not represent a *recognized environmental condition* to the property but should be fixed with the NYSDEC.

The property was identified on the NY UST database with one (1) "in-service" 5,000-gallon No. 2 fuel oil UST. ATC reviewed a prior Phase I ESA prepared by Tyree Brothers Environmental Services, Inc. dated September 5, 2001, states that a vaulted 4,000-gallon No. 2 fuel oil AST was located in Building C. In NYS a vaulted AST with no weep holes or ways to inspection the condition of the tank are registered as USTs. It is possible the identified UST on the database is actually this identified 4,000 gallon AST. In a Phase I ESA prepared by Impact Environmental Closures, Inc. dated April 8, 2014 states that a decommissioned 5,000-gallon heating oil tank was observed in on the property. The prior report does not state where the tank is located. ATC believes the decommission tank located on the property is the 4,000-gallon vaulted AST identified in the 2001 Phase I ESA. The decommissioned tank was not observed on the property. The discrepancy in the documentation does not represent a *recognized environmental condition* but ATC recommends the tank be closed per NYSDEC standards.

ATC makes no warranty, guaranty or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

5.3.10 Other Historical Sources

Additional reports and/or other documents (if any) obtained from the User are listed in Section 4.7 of this report. Further discussion may be found in relevant sections of this report.

6.0 SITE RECONNAISSANCE

The property reconnaissance was conducted on April 28, 2017 by Ms. Collene Groneman, Staff Scientist of ATC. ATC was accompanied by Mr. Andrew Skydell, of Innovo Property Group (the real estate investment). Weather at the time of the site visit was clear and approximately 70 degrees Fahrenheit. The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

The property reconnaissance consisted of visual and/or physical observations of: the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property were observed along the perimeter and in safely accessible areas. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise. ATC was able to gain access to the interior portions of the property site buildings deemed critical for the purposes of this assessment.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC observed the following chemical products that were properly stored in their original containers:

Building F is utilized as an auto repair, and painting operations were observed during the site reconnaissance. The building was equipped with multiple retail and commercial paints. The paints and other maintenance materials appeared to be in good condition with no observed staining and/or active leaks.

Building D is utilized as an auto repair shop with storage of multiple solvents and other hazardous materials. ATC was unable to determine if the products contained chlorinated solvents. All materials appeared to be in fair condition. Building C are used for storage and offices. ATC observed general cleaning and maintenance supplies associated with the adjoining auto repair stations.

ATC does not consider the storage of hazardous materials to represent a *recognized environmental condition* to the property based on the observed condition.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property.

The property was identified on the NY UST database with one (1) “in-service” 5,000-gallon No. 2 fuel oil UST. ATC reviewed a prior Phase I ESA prepared by Tyree Brothers Environmental Services, Inc. dated September 5, 2001, states that a vaulted 4,000-gallon No. 2 fuel oil AST was located in Building C. In NYS a vaulted AST with no weep holes or ways to inspection the condition of the tank are registered as USTs. It is possible the identified UST on the database is actually this identified 4,000 gallon AST. In a Phase I ESA prepared by Impact Environmental Closures, Inc. dated April 8, 2014 states that a decommissioned 5,000-gallon heating oil tank was observed in on the property. The prior report does not state where the tank is located. ATC believes the decommission tank located on the property is the 4,000-gallon vaulted AST identified in the 2001 Phase I ESA. The decommissioned tank was not observed on the property. The discrepancy in the documentation does not represent a *recognized environmental condition* but ATC recommends the tank be closed per NYSDEC standards.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

6.4 Aboveground Storage Tanks (ASTs)

ATC observed two (2) "in-service" 275 gallon ASTs located to the east of Building F. The tanks were unlabeled with no markers to determine the size and/or content. The tanks appeared to be in good condition with no observed marks and/or staining in the immediate area. The property is identified on the NY AST database with two (2) "in-service" 275-gallon lube oil tank, one (1) "in-service" 500-gallon waste oil tank, and one (1) "in-service" 4,000-gallon diesel tank. The two tanks adjoining to the east of Building G are most likely the two (2) 275 gallon "in-service" lube oil tanks.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. . Previously, the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

6.5 Other Petroleum Products

ATC observed various 5-gallon gasoline cans poorly stored in a caged area. The cans appeared to be empty. ATC considers the gasoline cans to represent a *de minimis condition* based on the poor housekeeping.

ATC observed various petroleum products throughout Building D and F due to the current use of property as an auto repair shop. Surface oil staining was observed throughout the property floor (Building D and F) and throughout the parking lot. The surface oil staining represent a *de minimis condition*.

Two (2) aboveground lifts with hydraulic fluid reservoirs were observed in the auto repair shop, Building F. The lifts appeared to be in good condition with no active leaks and/or staining in the immediate area. ATC does not consider the aboveground lifts to represent a *recognized environmental condition.*

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

6.6 Polychlorinated Biphenyls (PCBs)

PCBs are toxic coolants or lubricating oils used in some electrical transformers, light ballasts, electrical panels, or other similar equipment. Polychlorinated biphenyl content in electrical transformers has been grouped into three categories by the United States Environmental Protection Agency (USEPA):

< 50 ppm	NON-PCB
50 to 499 ppm	PCB-contaminated
500 ppm and greater	PCB transformer

Utility companies often own transformer equipment and typically assume the responsibility for repair or replacement of damaged or leaking units and for required cleanup or remediation activities. Indications of damage or leakage should be immediately reported to the responsible utility company.

No other suspect PCB containing equipment was observed at the property.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the property.

6.8 Non-hazardous Solid Waste

ATC observed evidence of the generation, storage or disposal of nonhazardous solid waste on the property in the form of cars, construction debris, and municipal trash. ATC does not consider the non-hazardous solid waste to represent a *recognized environmental condition*.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

6.9 Wastewater

ATC observed evidence of wastewater generated, treated and/or discharged on the property as summarized below.

WASTEWATER SUMMARY TABLE			
Type of Wastewater	**Generation Process**	**Treatment System?**	**Discharged To?**
Sewage	Restrooms	None	Sanitary sewer system
Stormwater	Paved parking areas and drives	None	Municipal storm sewer system

According to the maintenance supervisor, no oil/water separators (OWS) or clarifiers exist on the property. No evidence of oil/water separators (OWS) or clarifiers were observed by ATC during the property reconnaissance.

The property has been connected to the municipal sewer system since its development. No violations were observed or reported.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe the presence of waste pits, ponds or lagoons on the property.

6.11 Sumps

A prior Phase I ESAs state that Building B and Building E are equipped with sump pumps which are connected to the New York City Municipal Sewer. ATC was unable to gain access to Building B due to the current dilapidated state. ATC did not observe a sump pump inside of Building E at the time of the site reconnaissance.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

6.12 Septic Systems

ATC did not observe evidence of a septic system on the property.

6.13 Stormwater Management System

Stormwater at the property flows over building rooftops, paved parking lots, roadways and travels towards the stormwater drains located throughout the parking lot. The property is a mix of vegetation, unpaved areas, and developed land with covered areas consisting of building footprints and parking. . The parking/driveway areas are asphalt paved and in good condition with areas of oil staining from parked cars and maintenance, No strong odors or stressed vegetation was observed.

6.14 Wells

ATC did not observe drinking water wells or groundwater monitoring wells on the property during this assessment.

7.0 SUBSURFACE VAPOR MIGRATION

ATC conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the property and also utilized the aforementioned regulatory agency database report provided by EDR and an EDR Vapor Encroachment Screen (VES) Report to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, ATC utilized the approximate minimum search distance defined by ASTM E 2600-15 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, ATC utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or down gradient radius distances can be significantly reduced. The EDR VES report calculates the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the down gradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the down gradient direction (LNAPL suspected); and 30 feet in the down gradient position (LNAPL not suspected).

The screening was further refined by evaluating the Critical Distance (CD) factor. The CD is the upper distance a vapor may migrate through soil in the vadose zone assuming the path of least resistance is directly from the closest boundary of the contaminated media (i.e. groundwater or soil) to the nearest property boundary. For non-petroleum hydrocarbon COCs, the CD is 100 feet. For LNAPL petroleum hydrocarbon COCs, the CD is also 100 feet. For dissolved petroleum hydrocarbon COCs, the CD is 30 feet.

A review of the most recent groundwater sampling performed on the property, dated September 9, 2010, by Impact Environmental, in response to NY SPILL case number 0807459 states that levels above the NYSDEC ambient water quality standards for volatile organic compounds (VOCs) are were observed in groundwater samples collected at MW-2, MW-3, and MW-4. The detected of total VOC concentration was less than 0.1 ppm. All samples were non-detect for semi-volatile organic compounds (SVOCs). Based on the results, the NYSDEC determined that any residual contamination present on site is not a threat to the public or the environment. Based on this information ATC does not consider any residual VOCs to represent a VEC to the property.

Based on the review of the regulatory status, topographical gradient, and distance, it does not appear that a VEC is an environmental concern at the property. The EDR Vapor Encroachment Screen Report is provided in Appendix L.

8.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

INTERVIEW SUMMARY				
Role	**Name**	**Title/Company**	**Years Assoc. With Site**	**Interview Type**
Site Contact	Andrew Skydell	Innovo Property Group	<1 year	In-person
Local Government Official	Representative	New York State Department of Environmental Conservation (NYSDEC)	NA	E-mail
Local Government Official	Representative	New York City Department of Environmental Protection (NYCDEP)	NA	E-mail
Local Government Official	Representative	New York City Department of Health and Mental Hygiene (NYCDOHMH)	NA	E-mail
Local Government Official	Representative	New York City Fire Department (FDNY)	NA	E-mail

Pertinent information from the interviews is discussed in applicable sections of this report.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Material (ACM)

Based on the scope of work for this ESA, sampling and analyses for ACM was not conducted. All suspect ACM should be properly assessed prior to disturbance from construction or maintenance activities. ATC observed sheetrock, acoustic ceiling tiles, floor tiles and associated mastic, carpet and associated mastic, and roofing materials in Building C, D, E, and F. Observed building materials and finishes were noted to be in fair condition in Building 4C, D, and F at the time of the site reconnaissance. The suspect ACM finishes in vacant Building E were observed to be in poor condition. ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings.

An Asbestos-Containing Material Operations & Maintenance Plan (O&M Plan) was completed by Partner Assessment Corporation (Partner) in 2015. The O&M Plan "minimizes the potential for facility/maintenance personnel, tenants, contractors/vendors, and the general public to be exposed to ACM and/or airborne asbestos fibers." The following assumed ACM was observed by Partner: plaster and spray-applied acoustical texture or fireproofing; vinyl composite floor tiles, sheet flooring, and associated mastic, drywall and drywall joint compound, thermal system/transite pipe insulation, and black roof seal/mastic and roofing materials.
`

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the property is located in EPA Radon Zone 3 (Low Potential) where the average indoor concentration of radon is less than 2 pCi/L, which is less than the United States Environmental Protection Agency (USEPA) Action Level of 4.0 pCi/L. Additionally, the New York State Department of Health (NYSDOH) maintains a database of radon test results on a local and county level. According to the NYSDOH, a total of 536 radon tests have been conducted in Queens County. The average radon level was found to be 1.23 pCi/L which is below the USEPA action level of 4.0 pCi/L. Based on the commercial usage of the property, radon is not considered an environmental concern.

9.3 Lead in Drinking Water

ATC reviewed New York City's most recent Drinking Water Supply and Quality Report made available through the NYCDEP website for the year 2016. Review of the analytical data provided in the report confirmed that the municipally supplied water meets all drinking water standards established by the EPA Safe Water Drinking Act, including those for lead. No drinking water supply wells exist at the Property. Lead in drinking water testing was not conducted for this Phase I ESA. A copy of the water quality report is included in Appendix L.

9.4 Lead-Based Paint (LBP)

Based on the construction date of the building (circa 1931), ATC concludes that lead-based paint (LBP) may be present at the property. During the course of ATC's inspection, painted surfaces within accessible areas were observed to be in poor condition with large amounts of chipping throughout the Buildings C, D, E, and F. LBP is outside of the Scope of ASTM Practice E 1527-13 and, therefore, the potential presence of LBP is not considered a recognized environmental condition.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

9.5 Mold Screening

According to Section 931 of the New York State Labor Law Article 32, New York State requires that mold assessments be conducted by an individual who holds a valid mold assessment license with the New York State Department of Labor. It should be noted that the property inspection was completed for due diligence purposes and was not conducted with the intent to be a mold assessment. Our assessment services included a limited visual review of readily observable conditions in the areas made accessible by property representatives, and the accounts presented by Client/property representatives. As a matter of courtesy, if we observed a condition that may be associated with water damage or apparent microbial impact, we have noted such observations; however, our assessment is not intended to be, and should not be construed as, a Mold Assessment, as defined under Article 32. A formal mold assessment can only be performed by a New York State Department of Labor licensed Mold Assessor. ATC may provide this service, if desired, at the request of the Client.

During the site reconnaissance, ATC conducted a physical observation of representative building areas as described in Section 2.2. Suspect mold growth on a sheetrock wall and acoustic ceiling tiles was observed in Building E. No mold growth was observed on Building C, D, E, and F. Water damage was observed in Building C, D, E, and F.

ATC was unable to gain access to Building A and B due to the current dilapidated state of the buildings. Previously the buildings were used for auto repair, mechanical equipment storage, offices. ATC suspects that there may be municipal trash, debris, petroleum products, or tanks located in the buildings based on the prior usage. The lack of observation of these two (2) buildings represents a *significant data gap.*

As in all cases of water intrusion, the sources of water leaks (or drips in the case of air conditioning condensation) should be repaired or remedied to prevent further damage to building materials. ATC recommends removing the mold impacted sheetrock. No additional investigations are recommended at this time.

9.6 Additional User Requested Conditions

No additional User requested services were included in the scope of work for this ESA.

United States Fish and Wildlife Service, National Wetland Inventory Mapper, (http://www.fws.gov/nwi/).

USGS Topographic Map, Brooklyn, NY-NJ, 7.5-minute series map, dated 1995.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/10/2016 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 15 NY SHWS sites within approximately 1 mile of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 06/01/2016 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/04/2017 has revealed that there are 14 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 32 NY LTANKS sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/06/2017 has revealed that there are 9 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1

NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"10/7/08 - Raphael Ketani. The spill was called in on 10/2/08. It comprised the discovery of oil contaminated soil. The contact is Kevin Kleaka of Impact Environmental (631) 269-8800, ext 304. According to Property Shark, the site is block and lot 294 and 106. The main address is 5302 Review Avenue. The alternate address is 2890 Review Avenue. Property Shark contains pictures of a one story garage for trucks. According to ACRIS, the seller was Eric W. Roberts, 145 E. 81 Street, Apt. PH-A, Manhattan, 10028. The buyer is 2890 Review Avenue Associates, LLC, 2890 Review Avenue, LIC, 11101. I sent a CSL. Mr. Kleaka called me back. He said that they did some borings and

AA TRUCK RENTING CORP (Continued) **S104073336**

found urban fill. He also found groundwater with floating product on it. However, he does not believe that the contamination in the fill is the same contamination as the floating product on the water. The site is on Newtown Creek and he suspects that oil made its way from the creek to the site. The site was an oil terminal and there was a spill in 1990, which was closed. He will send me a report soon. There are five other spill cases for the site. All of them are closed. The cases are: 9010146; 9311731; 9313946; 9600032; 0803348. 10/10/08 - Raphael Ketani. I received the hard copy of the October 7, 2008 Subsurface Investigation Report on 10/8/08. I began my review today. There was an aerial photograph with an overlay showing where six large fuel tanks had been and some railroad tracks. Head space analyses were high to very high for SP-1 and SP-6 from almost at grade to 10 feet below grade. The other borings, SP-3 to SP-5, had high head space hits only at the 8 foot to 10 foot interval. An approximately one foot thick layer of oil was found on top of the water table in all of the wells. Six wells were installed. All six soil samples were almost completely non-detect for VOCs and SVOCs. There were some VOC hits and SVOC hits, but they were either well below TAGM or slightly above TAGM. The groundwater samples for all six wells were almost completely non-detect for VOCs. There were a few very low exceedences and one hit of 310 ppb of sec-butylbenzene. No SVOC analyses were performed. I contacted Mr. Kleaka and told him that he will need to do a round of groundwater sampling for SVOCs and that he will need to install more and larger diameter wells for oil recovery. I told him that it was strange that the groundwater was so contaminant free when a thick layer of oil was sitting on top. He said that he thought it was strange, too, and had no explanation for the lack of contaminants. He said that he will send DEC a plan for installing more wells and for an oil recovery approach. 10/20/08 - Raphael Ketani. I received a letter dated 10/17/08 from E. Gail Suchman (attorney) of Stroock (attorneys at law; (212) 806-6656). The letter stated that they were developing an investigation work plan that will more clearly define the product layer and identify appropriate strategies for addressing it. As soon as the work plan is completed, we will forward it to you for review. 11/21/08 - Raphael Ketani. I tried to contact Ms. Suchman, but could only leave a message. Ms. Suchman called me back. She said that the client reviewed the draft workplan. The plan will be finished on monday and sent to DEC next week. The money to do the work is coming from the client's insurance. Impact Environmental will be submitting the plan. 12/2/08 - Raphael Ketani. I reviewed the partial work plan submitted by e-mail last week by Impact Environmental. Only 3 soil borings were planned. The most contaminated sample will be sent to the laboratory for analysis, or a sample from the groundwater-soil interface. Six groundwater wells are planned and more may be installed as needed. My only comment was that they should sample the soil at each well location, besides installing the wells. I called up Ms. Suchman, but could only leave a message that soil samples must be taken from each well location, also. I tried to contact Mr. Kleaka (631) 269-8800, ext 304, but could only leave a message with his assistant, Wenqing (wen-ching) Fang, stating that soil samples will have to be taken at each well location. I received the hard copy today. It was the same document as the one that I had received via the e-mail. 12/23/08 - Raphael Ketani. I tried to reach Ms. Suchman (212)806-6656 and Mr. Kleaka, but could only leave messages regarding progress for installing the borings and wells. Later, Mr. Fang called back and

AA TRUCK RENTING CORP (Continued) **S104073336**

said that Impact Environmental had not moved forward with the installation of the additional wells as they were waiting for comments from DEC. I told him that DEC had already commented on the work plan back on 12/2/08. He requested that I send a letter to show the client. I told him that I will send the letter. I sent the letter by e-mail to Randall Austin, Chief of the Spills Unit, and I had Jeff Vought, acting Chief review the letter. The letter was sent out today. 12/30/08 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, but could only leave a message. 1/12/09 - Raphael Ketani. Today I received the following e-mail: Impact has received your approval letter for the proposed work plan regarding 2890 Review Avenue, LIC (NYSDEC Spill #0807459). Impact would like to propose that the Investigation Summary Report be completed within 90 days from the date of your approval letter (dated December 23, 2008). Let me know if you have any questions. Thanks! Wenqing Fang Environmental Engineer Impact Environmental 170 Keyland Ct Bohemia, NY 11716 Tel: (631) 269-8800 I responded back that this would be fine. The deadline for submission of the SIR is 3/23/09. 3/13/09 - Raphael Ketani. I received the following e-mail from Mr. Fang: I tried to call you this morning regarding 2890 Review Avenue Site. Basically, our client had some financial issue with the insurance company, which led to the delay of the project. Now the issue is resolved and we had schedule the field work for the site from March 30 to April 1, which is the earliest date available for us. Subsequent to the field work, laboratory analysis and report generation will take approximately 3 weeks. We expect to submit the investigation summary report by April 23. Please let me know if this change is acceptable for the department. I e-mailed him back that this schedule was acceptable. 4/3/09 - Raphael Ketani. Mr. Fang sent me the following e-mail: This email is sent as an update for 2890 Review Avenue project. It has taken longer than expected to install the 4-inch wells at the Review Ave Site. This is mainly due to the presence of fill material on the site. We were basically doing one well per day. We expect to finish all the wells by next Tuesday, followed by well development. Groundwater sampling will be performed two weeks after the well development. Low-flow technique will be utilized as per your request. However, please be advised that significant clay and silt was encountered during the well installation. Therefore, low-flow might turn out to be impractical for this site. If so, traditional purging and sampling method will be utilized. 4/23/09 - Raphael Ketani. I tried to contact Mr. Fang (cell (631) 790-3338 regarding whether the groundwater samples were taken, but could only leave a message. 4/24/09 - Raphael Ketani. Mr. Fang sent me the following e-mail response: On April 23, Impact conducted groundwater sampling, well survey and slug test at Review Avenue Site (two weeks after well development). It will take approximately two week for the laboratory analysis. After that, I will need approximately 10 days to prepare the report and have our client review it before I can send it to the DEC. 5/20/09 - Raphael Ketani. I received the following e-mail from Mr. Fang: This email is an update for the 2890 Review Ave project. A total of 6 4-inch wells are installed on the Site by 4/6/09. Well development was finished on 4/10/09. On 4/23/2009, two weeks after the development as required by the DEC, wells were gauged and sampled. No free-phase product was observed in any of the wells. This contradicts with the previous observations via 1-inch wells. Therefore, Impact propose to re-gauge the wells next week (4 weeks after sampling). Upon finishing of the second gauging, Impact will

AA TRUCK RENTING CORP (Continued) **S104073336**

release the Investigation Summary Report for the Site. 6/25/09 - Raphael Ketani. I received the June 24, 2009 Investigation Summary Report. I reviewed the report. The site is on the east side of Dutch Kills and a little south of Borden Avenue. Groundwater is at 5 to 7 feet below the surface and flow is to the northwest. Measureable product was originally detected in the 1 inch wells from 0.8 to 1.4 feet. The product is a mix of gasoline and #6 oil. PID hits for MW-1 and MW-2 were the highest at about 15 feet below the surface. MW-3 had PID hits of 665 ppm and 645 ppm at from 2 to 5 feet with low readings below this. Groundwater was collected below the product. Analyte speciation indicates that this is weathered oil. No source of petroleum was identified in the soil. After development, the 4 inch wells were gauged on 4/23/09 and 6/5/09. No measureable product was found in any of the wells. On 6/12/09, all of the 1 inch wells, all of the 4 inch wells, and a pre-existing 4 inch well (MW-7H) were gauged. MW-7H had 0.01 feet of oil. All of the other wells didn't have oil. Soil analytical results for the 1 inch wells were almost completely non-detect. Soil analytical results for the 4 inch wells were almost completely non-detect with two hits just over TAGM limits. Groundwater analytical results for the 4 inch wells were almost entirely non-detect with MW-4 having 10 VOC hits, with two of the hits slightly above TAGM limits. 6/30/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800 in order to discuss the report, but could only leave a voice mail. I stated in the voice mail that soil removal wasn't necessary, but that groundwater should be evacuated from MW-4 in order to bring the analytical levels down, and that another round of groundwater sampling should take place during the next quarter. I sent Mr. Fang an e-mail (wfang@impactenvironmental.com) requesting the following: 1) a copy of any historical documents regarding the site 2) a copy of any documents describing past remediation efforts I also asked him the following: 1) is the site to be sold in the near future 2) what will be the future use of the site 8/5/09 - Raphael Ketani. I tried to contact Mr. Fang via his cell (631) 664-6115 regarding groundwater monitoring and remediation, but could only leave a message. 8/6/09 - Raphael Ketani. I made a very quick unannounced site visit. The site was loaded with trucks of all kinds and there was some type of construction material storage facility along the Borden Avenue side (see pictures in E-docs). A tanker truck fuel loading structure was still situated a little ways inside the property. Otherwise, there was nothing to note. 8/10/09 - Raphael Ketani. I tried to contact Mr. Fang by his cell and by his desk phone, but could only leave a message with the receptionist. Mr. Fang called me back. He said that he had been away for two weeks and that is why DEC hasn't heard anything regarding progress at the site. He also said that he is working with the attorney for the owners of the site on a response document to DEC's latest comments. He said that DEC should receive the document soon. 9/22/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800/cell (631) 664-6115, but I could only leave a voice mail asking him why the DEC hadn't received any documentation regarding the continued monitoring and remediation of the site. 10/1/09 - Raphael Ketani. I reached Mr. Fang on his cell. I asked him where the response letter was addressing DEC's comments regarding the June 2009 report. Mr. Fang said that he remembered that he owes DEC a letter. He said that he has to get back to his boss and the client's lawyer regarding the June report and a response for DEC. I told Mr. Fang that the DEC still considers the spill to be unresolved and the

AA TRUCK RENTING CORP (Continued) **S104073336**

site to be in violation. He said that he is aware of this. He asked for some time to send a response to DEC's comments. I asked him whether October 16 would be a reasonable deadline. He said it is and that he will get me a letter. 10/30/09 - Raphael Ketani. Mr. Fang sent me an e-mail with 6 attachments. These attachments were: a collection of Sanborn maps for the site; a tank affidavit; a Septmeber 2001 Tyree Brothers Phase I Report; an e-mail containing the May 1990 Tyree SIR and an October 1990 Tyree site status report; a collection of correspondences and reports (spill closure reports) up to November 2001 between Mr. Sullivan of DEC and Tyree Brothers Environmental; and a response letter dated October 30, 2009 from Mr. Fang. 11/2/09 - Raphael Ketani. I reviewed the 6 e-mails. The only one requiring a response was the 10/30/09 letter from Mr. Fang. Large above ground oil storage tanks were present on the site from 1936 to 1970. During this time, the site was operated as a storage terminal by Texaco. The current owner bought the site about 1971 and found the tanks to be clean. The tanks were removed. In the mean time, the owner will continue to use the site as a trucking company. The future use of the site is industrial. Mr. Fang responded that the wells were screened within the tidal range. The groundwater will be sampled at the next quarterly round. However, Mr. Fang stated that Impact Environmental will not excavate the contaminated soil at SP-1, SP-3, and SP-6. His reasoning was that this contamination represents an old spill with degraded oil and that the contamination is below the guidance values. He went on to state that no source area had been identified and that natural attentuation will take care of the matter. He referred to DEC's request to do excavation at these locations as random excavation , and added that they would be unlikely to find the source area. I drafted a response letter for Mr. Austin's approval. The response letter stated that the DEC is requiring that the oil at MW-7H be collected, and that Impact Environmental resample all of the 4 inch wells. The letter was approved by Mr. Austin and went out today. 12/23/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800/cell (631) 664-6115, but could only leave a message regarding oil collection at MW-7H and resampling the 4 inch wells. 1/8/10 - Raphael Ketani. I tried to contact Mr. Fang at his office phone and at his cell, but could only leave messages that the DEC needed to receive updated information regarding the site, and that the oil must be collected from MW-7H. I tried to contact Mr. Kleaka (631) 269-8800, ext 304 (Mr. Fang's boss), but could only leave a message stating that the oil needed to be collected and that groundwater sampling needs to take place. I contacted Mr. Fang. He said that he is waiting for the owners of the property to sign the new contract with Impact Environmental. He said that he expects the contract to be signed no later than the end of January. I told him to do the groundwater sampling and oil collection as soon as Impact can. He said that he will. 2/10/10 - Raphael Ketani. I tried to contact Mr. Fang, but could only leave a message that the DEC wanted the oil collected and the groundwater sampled. 2/18/10 - Raphael Ketani. I tried to contact Mr. Fang, but could only leave a message that the DEC wanted the oil collected and the groundwater sampled. 2/22/10 - Raphael Ketani. I tried to contact Mr. Kleaka (631) 269-8800, ext 304, but could only leave a message requesting oil collection and groundwater sampling. 3/2/10 - Raphael Ketani. I tried to contact Mr. Kleaka, but he was in a meeting. So I left a voice mail that if the DEC doesn't receive a response by phone, or e-mail, or by letter regarding progress on the project,

AA TRUCK RENTING CORP (Continued) **S104073336**

then we will take legal action. I could not contact Mr. Fang as he was not in the office. I tried contacting him by cell (631) 664-6115, but could only leave a message. Mr. Fang returned my call. He said that work at the site is scheduled for the week of 3/1/10. 3/4/10 - Raphael Ketani. Mr. Fang sent me the following e-mail today: Groundwater wells at Review Avenue were gauged and sampled today. No free-phase product was detected in any of the six 4-inch wells installed by Impact (MW-1 through MW-6). Approximately 0.1 inch of free-phase product was detected in one old well (MW-7H) installed by Tyree. Groundwater samples from MW-1 through MW-6 will be analyzed from 8260 and 8270. I will send you a letter report when I have the results. 3/29/10 - Raphael Ketani. Today I received the First Quarter Monitoring Report from Impact Environmental dated 3/12/10. I reviewed the report. The groundwater analytical results were almost entirely non-detect. There were several hits, but they were just above the TAGM limits, with the exception of one 54 ppb hit. Well MW-7H showed 0.01 feet of oil. I e-mailed Mr. Fang that he should do an EFR event for MW-7H and then sample all of the wells for the second quarterly round. 5/24/10 - Raphael Ketani. I contacted Mr. Fang (631) 269-8800/cell (631) 664-6115. He said that the groundwater sampling will take place this week. The oil at MW-7H will be collected using a sump skimmer. He said that he should be able to get DEC this round's analytical results in about 3 weeks. 6/22/10 - Raphael Ketani. Today I received the Second Quarter 2010 Groundwater Monitoring Report from Impact Environmental. I reviewed the report. All of the analytical results were non-detect, except those for MW-4 and MW-5. The samples from these wells had gasoline range VOCs that were up to 119 ppb of n-propylbenzene. I wrote back in response that the contaminated groundwater may be removed by pumping. I added that the report did not mention how successful Impact Environmental was in collecting oil from MW-7H. I also wrote that, as a result of the elevated VOC hits, another round of sampling will be needed in the third quarter of 2010. 7/14/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, ext 325/cell (631) 664-6115 regarding progress at the site, but could only leave a message. 7/26/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, ext 325/cell (631) 664-6115 regarding progress at the site, but could only leave a message. I contacted Ms. Suchman (212) 806-6656 and explained that I haven't heard anything from Mr. Fang in a month regarding the groundwater and oil pumping. She said that she thought this would take place during the next sampling round (third sampling quarter). I told her that these were tasks that the DEC expected to be performed very soon after the 6/22/10 letter was sent. She said that she will call Mr. Kleaka and Mr. Fang and have them get on top of the situation. 7/26/10 - Raphael Ketani. Mr. Fang sent me the following e-mail today: Absorbing well sock was installed in MW-7H about a month ago. Last time we checked, the well has no free-phase product in it. We recently changed the sock and will wait for another month to go back to see if there is any additional product. If not, we will properly develop and sample that well. 7/28/10 - Raphael Ketani. Mr. Fang (631) 269-8800 called me today. He said that they recently took out the sock from MW-7H. It was slightly dark, but not saturated with oil. He put another sock in. He will wait for a month and then check the new sock. If the sock has little or no oil, and if there is no visible sheen, then he will develop the well for sampling. I commented that MW-4 and MW-5 had slightly elevated analytes. He said that he will evacuate about 55 to 100 gals. of water from these wells

AA TRUCK RENTING CORP (Continued) **S104073336**

and then sample them. Mr. Fang asked that, in the future, if I need to contact him, I should send an e-mail or contact his supervisor, Mr. Kleaka. 9/23/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, but I could only leave a message. 9/27/10 - Raphael Ketani. I received the Third Quarter Monitoring Report dated 9/9/10 from Impact Environmental. I reviewed the report and found that the results for the third quarter were almost entirely non-detect. The few hits that were present were not far above the TAGM limits. The report also mentioned that there was no product in the wells. Based upon the data in the Third Quarter Monitoring Report, I have determined that any residual contamination that is present will not be a threat to the public or the environment. Therefore, I am closing the spill case. 8/10/11 - Raphael Ketani. Today I received a letter from Mr. Fang indicating that the wells at the site had been plugged and abandoned. "

Remarks: "Results of an analytical test revealed historic contamination at above site."

DEC Memo: "09/05/06 -Zielinski This spill case reassigned from CO to Region 2. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. Spill transferred to Greco as part of Spills Closure Initiative in July, 2005. Contacted original callers company and determined the spill name and address was originally put into system incorrectly as 20-90 Review Ave. (also incorrectly listed as 20090 Review Ave.). Neither of the above addresses is an actual address in Queens County, however, 28-90 is, and 28-90 has two tanks similar to the ones referenced in the spill report. 28-90 is also a the home of

28-90 REVIEW AVENUE (Continued) **S100879318**

a company that is a client of the tank test company which called in the tank test failures. Spill name and address were changed to 28-90 Review Ave. The company at that addres is AA Truck Rental. JDG 8/3/05 Contacted Mr. PJ McDermott 718- 937-8611 at AA Trucking. Mr. McDermott is checking records and will get back to me. JDG 8/3/05 11/21/05 Tried to recontact Mr. McDermott, but he was unavailable. JDG 12/30/05 Tried to recontact Mr. McDermott, but he was unavailable. Left message. JDG 01/04/06 Insufficient documentation was received following several attempts. Have documentation that the tanks passed tightness tests in 1998, and were later closed in place in 1999, however, there is no record of a cleanup. Project needs further work, as release was characterized as requiring a major excavation. Should be returned to region 2 for further investigation at end of Spill Closure Initiative. 9/8/06 - Jon Greco of Central Office sent an email stating: Most recently, the owner's representative (Mr. Michael Paskoff, who has been performing tank tests at the site for many years, and it was his firm that called in the release 13 years ago) has asked that I close the spill, as it was called in solely due to an inconclusive tank test. He has copied me on a letter to the owner (Mr. Eric Roberts) and the letter reports that while the original tests were inconclusive, the tanks were retested later that day and were found to be tight. He goes on to say that no repairs were made and no excavations were performed by his firm. Finally, he claims the tests were observed by Inspector Geldman, of the NYC Fire Department. Reviewed PBS records, confirmed tank tested tight. Spills Closed. _ KST "

Remarks: "INCONCLUSIVE TEST RESULT TO REPAIR & RETEST - CALLED AGAIN AT 1300 OTHER 4000 GAL TANK ALSO FAILED MAJOR EXCAVATION."

DEC Memo:	"Sangesland spoke to Jill Guerra at GCI. Her firm did a Phase 2 for a sale and found old contaminated soil. She is going to check the current status on the case and call Sangesland back with details. 07/05/11 As per Langan, the source of the spill is a UST. Underground piping was traced from a petrometer inside the site building.Approx 2,000 cubic yards of soil was affected as a result of the spill of which 450 cubic yards contain hazardous concentration of lead. GW was not significantly impacted. Seven soil borings were advanced in the UST locations.Soil borings log were provided.VOCs were not detected in any of the soil samples.Twenty two metals were detected in soil samples.Copper, Lead, nickel concentration exceeded DEC Part 375 RSCOs. Based on high concentration of lead, approx. 450 cubic yards

COMMERCIAL (Continued) **S110750742**

of soil will be considered as RCRA hazardouse waste.Site remediation tasks include: closure of the UST via removal, removal of petroleum contaminated soil, collection of end point samples, placement of clean fill to restore the Site conditions, air monitoring during the remediation.(sr) 7/10/12 - Austin - Received phone call from Ms. Armstrong of Langan. They wished to proceed with the excavation plan as outlined by the RAP and approval issued last year. DEC Rahman was out of the office for an extended period, so I sent Ms. Armstrong via e-mail the RAP approval letter and the original schedule for implementation submitted by Langan on 7/14/12. I requested that a new schedule be submitted to us for implementation, before Langan could proceed. - end 09/18/12 Closure report in edocs. As per the report, Area A: USTs and associated piping were not detected. The source of spill 1009365 was not identified and is likely related to historic site use or poor housekeeping. About 213 tons of petroleum contaminated soil was removed.Ground water was not impacted. End point soil sample result indicate that petroleum impacted soil has been removed.Source of spill 1204192 was a historic 1,250 gallon UST.The UST was removed in accordance with regulations.Approx 99 tons of petroleum impacted soil was removed and disposed.Ground water was not impacted. End point soil samples result indicate that residual contamination within acceptable limit.Case closed.(sr)"

Remarks: "Historical Spill- Odor in soil. Phase 2."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number:	001
Tank Id:	58624
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
I00 - Overfill - None
L09 - Piping Leak Detection - Exempt Suction Piping
C00 - Pipe Location - No Piping
G04 - Tank Secondary Containment - Double-Walled (Underground)
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
D00 - Pipe Type - No Piping
J02 - Dispenser - Suction Dispenser

Tank Location: 1

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking

UNITED PARCEL SERVICE INC (Continued) **1000398418**

environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110009464098

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"04/28/06-Hiralkumar Patel. Left message for David (Cell: 516-695-6303). PBS#: 2-311774 Owner's information on PBS record: 29-10 Hunters Point Avenue Co. LLC 60 East 56th STreet 7th Floor Long Island City, NY Ph. (718) 786-0300 Tried number on PBS record and operator gave me Mr. Scotty's number, who may know about owner/manager of property. Left message for Mr. Scotty (516-699-4000). 05/02/06-Hiralkumar Patel. Received message from Keith Khouri. Spoke to Mr. Khouri, GM of property. he is also working for property at Union, NJ. as per Mr. Khouri, the company named Midcounty Mechanical is working to find out leak in UST system. and he will give me contact name and number of this company. Department can send letter to following address to Mr. Khouri Keith Khouri 400 Clermoont Terrace Union, NJ 07083 Cell: (908) 230-0819 Off.: (718) 316-9261 FAX : (908) 353-8423 TTF sent out to Mr. Khouri. FAxed to Mr. Khouri. Received call from Mr. Khouri's office. contact at

COMMERCIA PROPERTY (Continued) **S107789272**

Midcount Mechanical is Kenny PH. (718) 847-1800 (O) (347) 386-2891 (C) 05/10/06-Hiralkumar Patel. Left message for Kenny. 05/11/06-Hiralkumar Patel. Spoke to operator at Midcounty. she gave message to Kenny, but Kenny is out in field and will call back tomorrow morning. Received message from Kenny. they are going to do tank test again on Saturday May 13, 2006. 05/15/06-Hiralkumar Patel. Received call from Mr. Khouri. as per him, they found problem with fill line and after repair they did test again and system passed the test. asked him to send me letter report stating cause of problem and observations. Mr. Kasper from Midcounty Mechanical came to office to drop off tank test results and letter. as per letter, they have escavated the top of the tank and performed a test and found a leak on the vent line where it passes through the foundation wall to the outside of the building. replaced vent line and tested again and system passed the test. based on tank test results, case is closed. NFA sent out to Mr. Khouri."

Remarks: "PBS No: 2-31174 -PBS No. not found in UIS, may be invalid. REMOVING LINES AND DOING PRESSURE TEST"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT Sent tank test failure letter to Varderame. 11/15/2002 ARS 11/14/2003-Vought-Reviewed report dated 6/26/03 from Verderame Realty (Bruce Bauer 718-786-1100). Site will no longer be using oil and will be converting to gas. Closure of a 2000-gallon #2 fuel oil UST and collection of post excavatin endpoint samples by Bluestone Environmental (Andrew Cozzi 732-469-5188). The UST excavation base was at approximately 8 to 8.5 feet below the concrete floor . The soil in the excavation was a fill that consisted of dark brown sand with construction debris such as bricks and pieces of concrete . Five soil samples were submitted for analyses for 8260/8270. Soil analyticals show two 1,3,5-trimethylbenzene exceedances up to 9110ppb, benzo(a)anthracene up to 1010ppb, benzo(a)pyrene up to 631ppb, benzo(b)fluoranthene up to 1110ppb, benzo(k)fluoranthene up to 579ppb, and chrysene up to 1210ppb. These exceedances are attributable to fill material. Spill closed by Vought after conference with DEC Rommel."
Remarks:	"tank test failure - it will be cleaned and retested next week "

DER Facility ID:	164013
DEC Memo:	"6/18/08. J. Krimgold reviewed the letter-report submitted by ROUX Associate inc. dated June 2, 2008 with request to close the spill case. The letter-report contains no new info besides what the Department has already in its files. The 12 pages attached to the letter is nothing but printouts from our website or copies of documents (application, failed test reports, etc.) that was already submitted to the Department. Nothing in the letter-report points to the investigation of the cause of the test failure or removal of the release. Request for the spill case closure was denied. JMK. 12-27-2011 This spill was assigned to Leszek Zielinski on 06/28/10. Then this spill was reassigned from V. Brevdo to Alex Zhitomirsky on 12-27-2011, as per V. Brevdo instructions. Emailed LiRo and received the following response by S. Frank: We will pull together whatever information we have and forward it to you. AZ 2-7-2012 Site demolition and construction completed at site by May 2011. On 7/22/11 LiRo met with the site personnel and gathered additional information relevant to spill 0012519. LiRo prepared a letter to address DEC concerns from the July 2008 spill closure denial and submitted to DEC on January 23, 2012. Received and filed e-copies from LiRo. AZ 4-19-2012 Received on January 26, 2012, and reviewed Tank Closure Sample Results and Spill Closure Request dated January 23, 2012. The report stated that in August 2005, EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM Levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH)typically indicative of urban fill material. The site layout has changed significantly due to demolition and construction activities. Because of this, the former tank location is unknown. Based on this information, LiRo requested closure of spill#0012519. This spill was closed and a letter was sent to S. Frank/F. Ashkan/V. brevod: Dear Steve, I have reviewed tank closure sample results and spill closure request for the above spill number submitted to DEC on January 26, 2012. A tank test failure of the tank#1 was recorded at this site. As a result, a spill #0012519

DEPT OF SANITATION (Continued) **S104950988**

was issued. EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001 in August 2005. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH) typically indicative of urban fill material. Based on this information, this spill number is closed. All wells associated with this spill should be properly abandoned. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. Sincerely, Alex Zhitomirsky "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN SOIL BORING AND WELL INSTALLATION JUST INSIDE BAY DOOR ALONG PROVOST STREET CAME UP WITH PETROLEUM CONTAMINATED SOILS AND POSSIBLY GROUNDWATER. SITE IS ADJACENT TO FORMER EXXON TERMINAL. 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 10/13/10 - Austin - Spill being transfered from Tang to Region 2 Spills staff - end 10/19/10-Hiralkumar Patel. no alternate addresses. other spill #: 9210719. spill was reported on 12/16/1992 by coast guard. possibly spill in water. case closed. PBS #: 2-600039. as per the PBS record, site has following tanks: - one 550 gal diesel AST on saddles, installed in Mar. 1990 - one 1,080 gal diesel AST on saddles, installed in Mar. 1990 - one 10,000 gal #2 oil AST in contact with imprevious barrier, installed in Sep. 2002 1:06

PEREZ INTERBORO ASPHALT C (Continued) **S102401855**

PM:-spoke with Mr. Sokolow, controller of Perez Interboro Asphalt. Mr. Sokolow mentioned that they did further investigation and some remediation. lateron they filed claim against ExxonMobil as part of greenpoint plume. Mr. Sokolow mentioned that reports were submitted to DEC and an attorney who is handling claim of Newtown Creek residents against ExxonMobil. Perez Interboro Asphalt Co., Inc. **property owner** 99 Paidge Avenue Brooklyn, NY 11222 Attn.: Joshua Sokolow Controller Ph. (718) 383-4198 Fax (718) 383-9164 Lyssa Roberts **attorney representing Newtown Creek residents** Girardi & Keese 1126 Wilshire Boulevard Los Angeles, CA 90017 Ph. (213) 977-0211 Fax (213) 481-1554 email: lroberts@girardikeese.com 1:40 PM:- spoke with DEC Edward Hampston in Albany office. Ed mentioned that area around 99 Paidge Ave was part of ExxonMobil's terminal and not any refining process in the area. Ed asked to check Exxon's files on E-docs. reviewed one of the report and found that Exxon's Marketing Terminal No. 3020 was located immediately south and east side of Perez Asphalt (see map on e-doc). 2:02 PM:- spoke with Ms. Roberts at Girardi and Keese and asked her to send copy of reports for property 91-99 Paidge Ave. 2:11 PM:- sent email to Ms. Roberts requesting copy of available documents/reports for the subject site. 02/07/11-Hiralkumar Patel. 4:07 PM:- received email from DEC Hampston. Hampston is handling ExxonMobil remediation and was contacted by a potential buyer looking for spill closure based on recent Phase I investigation results. 4:19 PM:- sent email to Hampston. asked him to inform the buyer to submit any phase I and phase II for review. 02/09/11-Hiralkumar Patel. 9:06 AM:- received email from Hampston. he mentioned that buyer will submit Phase I shortly. 9:07 AM:- sent email to Hampston requesting buyer's contact info. 9:30 AM:- received email from Hampston including buyer's contact info. Kevin Lumpe Steel Equities 700 Hicksville Road Bethpage, NY 11714 Ph. (516) 576-3165 email: klumpe@steelequities.com 12:52 PM:- left message for Mr. Lumpe to submit available environmental investigation reports. 03/21/11-Hiralkumar Patel. received letter from ERM. ERM conducted a Phase I investigation for the subject site. based on following information, ERM claims that the subject spill is not associated with 99 Paidge Ave: - original spill was reported for Williamsburg Steel, but as per 1995 and 1996 Sanborn Maps, Williamsburg Steel was located at 59 Paidge Ave - in 1996, 99 Paidge Ave was owned by Diamond Asphalt Co. - as per initial notes from DEC Mulqueen: soil boring and well installation just inside bay door along Provost Street came up with petroleum contaminated soils and possibly groundwater ; as per ERM, 99 Paidge Ave has no frontage on Provost Street - as per 1995 and 1996 Sanborn Maps, Williamsburg Steel was located at 59 Paidge Ave and on a triangular shape parcel across the street from 59 and 99 Paidge Ave; this triangular shape parcel fronts Provost Street - exact address of the triangular shpae parcel is unknown - triangular shape parcel now owned by NYC DEP and is part of sewage treatment plant discussed with DEC Austin. he asked to contact BBL, DEP consultant who reported the spill to confirm the address and to get any reports available. BBL is now owned by Arcadis. Arcadis U.S., Inc. 655 Third Avenue, 12th Floor New York, NY 10017-9118 Ph. (212) 682-9271 Fax (212) 682-9275 Website http://www.arcadis-us.com 4:07 PM:- left message for Janet at Arcadis. 03/22/11-Hiralkumar Patel. 8:52 AM:- received call from Janet. Janet doesn't know anything about this site. she asked to contact Vatche Minassian, a person working since 2001 and handling NYC DEP projects. Vatche Minassian Ph. (212) 682-9271 Ext. 17 email:

PEREZ INTERBORO ASPHALT C (Continued) **S102401855**

vatche.minassian@arcadis-us.com 9:04 AM:- sent email to Mr. Minassian and asked him to call to discuss further. 03/24/11-Hiralkumar Patel. 12:53 PM:- left message for Mr. Minassain. 04/27/11-Hiralkumar Patel. received message from Christopher (at 1:54 PM on 04/26/11) from ERM Christopher O'Leary Environmental Resources Management Ph. (631) 756-8903 2:53 PM:- spoke with Chris at ERM and informed him that the case is still open as the department is waiting for response from Arcadis. 2:57 PM:- spoke with Mr. Minassian. he wasn't with company in 1996 and they only keep records for 10 years. so they don't have any records. 04/28/11-Hiralkumar Patel. after discussing with DEC Austin, case closed as no information (lab data or report) available to confirm the spill at 99 Paidge Ave."

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Registry ID: 110000616432

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

DEC Memo:	"08/18/08 - LZ The June 16, 2008, quarterly monitoring report covering March- May of 2008 shows no LNAPL in any of six monitoring wells. Total BTEX were found from 0.00 to 26 ppb; MTBE up to 2 ppb; total SVOCS up to 747 ppb. As requested by the Department to complete its files, Tyree Brothers Environmental Services, Inc., sent a report, dated April 27, 2005, containing results of removal of contaminated soil and water from vicinity of the 2,000-gallon tank. About 24.22 tons of soil were removed and six borings conducted to install monitoring wells. Soil analyzes indicate elevated contamination at some locations: for example, at MW-2, total xylenes (2,390 ppb); at MW-6, acetone (247 ppb); at MW-1, chrysene (509 ppb); and contaminated groundwater that has shown improved quality over years (data in subsequent reports). The spill case is closed. 03/25/08 - LZ Prepared by Tyree Organization, the quarterly monitoring report for the period December 2007-February 2008 does not reveal LNAPL in any of seven gauged monitoring wells; no MTBE was detected; total SVOCs concentrations varied from non-detected to 509 ppb; total BTEX was from non-detected to 34 ppb. 12/30/07 - Zielinski The December 18, 2007, quarterly monitoring report for

GETTY - MOSF FACILITY (Continued) **S104953029**

September-November 2007 shows that no LNAPL was detected in any of six monitoring wells. Total BTEX was in the range from non-detect to 51.68 ppb, MTBE in the range from non-detect to 2.56 ppb, total SVOCs from o.00 ppb to 257.84 ppb. Gauging was performed monthly, and absorbent material was placed in all monitoring wells. 09-19-07 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period June-August 2007 does not reveal LNAPL in any of seven gauged monitoring wells. Also, no MTBE was detected. Total BTEX: 56.19 ppb(MW-6) the results show that since August 2005, concentrations of benzene, toulene, and total xylenes have been diminshed. 03/09/07 - Zielinski The March 9, 2007, quarterly monitoring report for December 2006-February 2007 shows that LNAPL was detected in Well 3(7 wells present). Total BTEX was in the range from nondetect to 48.37 ppb, MTBE in the range from nondetect to 5.94 ppb(eDocs). 12/15/06 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period September-November 2006 shows that Well 3 contained LNAPL. Also, total BTEX ranged from nondetect to 141.51 ppb, MTBE ranged from nondetect to 3.96 ppb, and total semivolatiles from 12.83 to 57.54 ppb.Thus, these numbers indicate that concentration of contaminants has been decreased since summer of 2006. 10/18/06 - Zielinski A quarterly monitoring report for the period July-September 2006, prepared by Tyree Organization, 208 Route 109, Farmingdale, NY 11735, indicates that: - free product was detected in well #3. Six other wells do not indicate any presence of LNAPL - total BTEX was in range of non-detect to 257.56 ppb - total SVOC was in range of 1.43 to 392.44 ppb The facility continues remediation by employing a passive bailer in well #3. 1/31/05-Vought-Spoke to Ed Waldron (Tyree) and spill amount is 800-1000 gallons for a 1000 gallon fuel oil UST. Tank was removed and is in soil. Soil excavation is continuing. Waldron wanted to know when to stop digging. Vought instructed to dig to groundwater and arranged site visit for 2/3/05 at 10am. 11/8/2005 - Investigation plan was approved. Six GW monitoring wells were installed. Two wells have free product. Weekly pump out is performed by Tyree. Stipulation Agreement will be issued."

DEC Memo:	"3/5/07 - Raphael Ketani. I called up Fred Cornell of Sims Hugoneu (cell (201) 739-9687). He said that the barge had been sitting overnight when it sunk. He suspects there is a hole in the hull, but he doesn't know for sure. He said that, sometimes, when the tug boat operator pushes a barge, he hits or bumps into something. The barge didn't contain oil or oil holding tanks. It is a non-motorized barge. It just had scrap metal and this was unloaded. There is no sheen from the barge. The Coast Guard has been notified. The barge will be refloated and repaired. I asked him why this was called into the Spill Response Hotline when there was no oil in or on the barge. He said that he was just being cautious about the incident. Based upon my conversation with Mr. Cornell and the information above, I am closing the spill case."
Remarks:	"BARGE SUNK AND NO SHEEN AT THIS TIME AND UNLOADI9NG SCRAP METAL FROM BARGE AT THIS TIME;"

DER Facility ID:	87815
DEC Memo:	"Spoke with Bill.Underground line failed test.Investigation required.(sr) 06/25/12 Rec'd Work Plan to investigate the horizontal and vertical extent of subsurface petroleum impacts.(sr) 08/07/12 LNAPL delineation work completed, summary report will be sent to DEC shortly.(sr) 02/06/13 Remedial Investigation Report in edocs.The site is an active scrap metal recyling facility located at the confluence of Dutch Kills and Newtown Creek.The Dutch Kills is located to the west of the site.Newtown Creek is located to the south of the site, property to the north is rail road track operated by LIRR.The adjoining properties to the east of the site are utilized by others for commercial and or industrial operations.Spill was identified when the pressure test of the underground line failed(AST 150,000 gallon).Leak was identified.Franklin Company disconnected the feed and return line.Integral Engineering performed remedial investigation.Twenty five soil borings and twenty one monitoring wells were installed through out the site.Monitoring wells were installed in soil borings with significant impacts and visible LNAPL at the groundwater interface.Five permanent monitoring wells were installed in phase I.Petroleum impacted soil/fill was observed in SB-6/MW-2 at 7-10 ft bgs in the northern corner of the Site, adjacent to the rip-rap bulkhead along the Dutch Kills Basin. Three separate plumes of LNAPL are present at the site.Plume A consists of weathered and biodegraded diesel fuel, located to the northwest of AST and west of the underground pipeline trench in the vicinity of MW-1(3.81ft), MW-2(2.28ft), MW-9(0.11 ft), MW-10(0.37 ft), MW-11(0.38ft) and MW-13(2.62ft). Plume A is believed to be downgradient of the source of the diesel fuel release. Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench, in the vicinity of MW-19(0.12 ft) and MW-20(0.28 ft).Plume B is also appears to be result of an additional segments of corroded and impaired pipings.There are no active sources for Plume A and Plume B as the underground pipelines were removed. Plume C consists of a more viscous and highly weathered unidentified LNAPL in the vicinity of MW-15(0.50 ft) and MW-16(0.43 ft). The following wells are identified with no LNAPL and are being used to illustrate the outer limits of Plume A, B and C:MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-14, MW-17, MW-18, MW-21. Ground water was encountered at depth of 5 ft bgs throughout the site. Recovery effort was performed on Plume A to remove product and monitor for product recharge to evaluate the optimal locations for long term recovery efforts. Plume area A appears to be the greatest available volume of recoverable LNAPL. The

SIMS METAL MANAGEMENT (Continued) **S111836487**

proposed IRM includes installation of recovery wells and electric belt skimmers. Three recovery wells(RW-1, RW-2 and RW-3)were installed in Plume A. Additional recovery wells/belt skimmers setups are anticipated for plume B and C as part of the IRM. 03/01/13 Rec'd email from Kevin Mccarthy(212-962-439x314) regarding Offsite investigation on LIRR proerty.They are checking the issue with their attorney.(sr) 3/12/14-Vought-DEC Rahman received email from DEC Ian Beilby dated 3/11/14 that Hi Sharif, Any new progress on this investigation? I checked edocs but it looks like there has been no activity in the past year. DEC Rahman forwarded email to Vought and Vought spoke to DEC Demeo and spill to be assigned to DEC Mahat. 4/2/14-Vought-Sent email to DEC Beilby with cc to DEC Mahat that Ian, The case has been reassigned to Santosh Mahat (cc'd above) and you may also reach him at 718-482-4038. Thanks. Spill reassigned from Rahman to Mahat. 9/3/14: Mahat DEC Mahat contacted Mr. Kevin McCarty @ 212-962-4303 inquiring more information about the current status of the remediation actions. Mr. McCarty mentioned that the remediation is still going on and he is recovering free products from couple of recovery wells. He is using belt skimmer to collect free products. A report is due from November 2012-present day. 9/25/14 TJD Spill #1405728 associated with housekeeping was identified during inspection of facility as part of Newtown Creek/Dutch Kills sheen trackdown investigation on 8/26/14. Spill of waste oil was observed following the acceptance and dumping of debris reported to have been brought to the facility by NYC Housing Authority. The spill was cleaned immediately by facility personnel. Above spill note is for reference only as surface spill is not directly related to reported AST tightness test failure and subsequent removal of AST and installation of monitoring well network and recovery system. DEC REQUIRE : 1. Need all laboratory data from monitoring well even with no product well. 2. Measure Groundflow dirrection 3. Dissolved GW sampling at plume edge wells 4. Monitoring recovery wells by dispenser line - Deleniation. 5/20/15: Mahat DEC Mahat received an email uopdate from James L'Esperance (Integral). Santosh, Sims has just informed me that they plan on commencing work on the stormwater basin at their Queens facility tomorrow. This work will involve excavating soil from the area of Spill #12-00318, as discussed during our site meeting and in the Remedial Action Letter submitted in April. Sims intends on starting the work tomorrow. I m anticipating that the work will last 2-4 weeks. Integral will have a geologist on-site during all excavation activities. Please feel free to give me a call to discuss if you have any questions. Thanks, James James L'Esperance Integral Consulting Inc. - www.integral-corp.com 61 Broadway, Suite 1601 - New York, NY 10007 Tel: 212.440.6708 - Cell: 646.285.4808 - Fax: 212.962.4302 8/6/15: Mahat DEC Mahat received an email from the contractor regarding the backfill material: Email: Santosh, Here s the information on the imported recycled concrete fill that we discussed. Allocco Recycling is a NYSDEC registered C&D facility. This material will be used as backfill beneath pavement. Let me know if there s anything else you need. Thanks! James L'Esperance The backfill documents has been uploaded on D2 for reference. 8/13/15: Mahat Site Visit: DEC Mahat and DEC Omar visited the site during the side wall sample collection. All collected sampled will be analyzed for the EPA 8260 and EPA 8270. A complete report will be forwarded to the Department one the results is published. 8/18/15: Mahat DEC Mahat request Mr. L'Esperance to provide a weekly report on the site: Here an update: Weekly Progress

SIMS METAL MANAGEMENT (Continued) **S111836487**

Report for SIMS Metal Management (Queens) August 18, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 In May 2015, SIMS Metal Management (SMM) began excavating the area of open spill #12-00318 down to approximately 5 ft bgs as part of their plans to install a storm water retention basin. Due to space restrictions on-site, the excavation is being performed in several stages. Two soil stockpiles (COMP-1 and COMP-2) were generated and separated based on the degree of contamination from visual and olfactory inspection, as well as measuring volatiles with a PID. Soil from COMP-2 was significantly more impacted than soil from COMP-1. Waste characterization samples were collected in mid-June, and the soil was removed from the Site upon approval from Clean Earth New Jersey (CENJ). Material from COMP-1 (approximately 30 cubic yards) was transported to CENJ of Carteret in mid July. Material from COMP-2 (approximately 240 cubic yards) was transported to the same facility from July 29-31. On August 5, SMM s contractor (NOVA) began installing supports and sheathing within the excavation. On August 13, Integral (James L Esperance and Stacey Ng) collected a total of ten sidewall endpoint samples outside of the sheathing, representing the material to be left in place. All soil samples will be analyzed for CP-51 list VOCs (via USEPA Method 8260C) and SVOCs (via USEPA Method 8270D), in accordance with the Remedial Action Letter, dated April 16, 2015. A groundwater bottom sample will be collected once all of the sheathing is installed and all material is removed from the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). Please let me know if you have any questions. Thanks, James 8/24/15: Mahat Weekly Update: Weekly Progress Report for SIMS Metal Management (Queens) August 24, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 Last week, the contractor (NOVA) completed the installation of sheathing around the extents of the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). The water bottom sample is tentatively scheduled for Monday, August 31. Please let me know if you have any questions. Thanks, James 8/28/15: Mahat DEC Mahat received an email informing the water bottom sample will be taken on August 31, 2015. Result of the samples will be forwarded to the Department for review. 9/1/15: Mahat DEC Mahat received another update on the case: Update: Last week, SMM s contractor (NOVA), began excavating the remaining material left in the footprint of the future retention basin. From Aug. 24-27, NOVA removed approximately 1,000-1,300 cubic yards of material and stockpiled the soil to the southwest of the excavation. Large wood debris and impacted boulders/concrete were taken to an approved facility for proper disposal. On Friday, Aug. 28, NOVA completed removing all required material, at which point, Integral collected waste characterization samples according to the sampling protocol for Clean Earth of New Jersey (CENJ). This stockpile is referred to as COMP-3 and will remain covered on-site until approval from CENJ. Upon receipt of the results from the lab analysis, CENJ will provide trucks to begin hauling material off-site to its facility in Carteret, NJ. This is expected to begin sometime during the week of September 7, 2015. Yesterday, Aug. 31, Integral returned to site to collect the bottom endpoint groundwater sample. We anticipate receiving analytical results next week. 9/4/15: Mahat DEC Mahat received endpoint sample those were collected from the side walls and bottom of the excavation. All laboratory result has been uploaded on D2 for

SIMS METAL MANAGEMENT (Continued) **S111836487**

reference. All collected wall samples are Below CP 51 guidance value. GW water sample was below TOGS standards with exception of Naphthalene, Benzo(b)fluranthene, Cherysene and Indeno are slightly above TOGS Standard.Based on the laboratory result, no further remedial action is warranted on the excavated area. However, there are 6 1'' monitoring well that needed GW samples. James will collect water sample from those MW and analyzed for EPA 8260 and EPA 8270 for the confirmation. More remediation plan will be drafted once the result is out. DEC is waiting for sample report. 9/15/15: Mahat DEC Mahat sent an email to Mr. L'Esperance: Email: James, I have reviewed the site map and soil samples submitted on 9/4/15. Almost all soil samples are below CP 51 guidance values. There is nothing to discuss on this portion of the site for further remediation unless GW sample is opposite. The Department is also interested to know the current status of the former underground pipeline that runs behind the building. Feel free to contact me if you have any questions or concerns. Ps. we can conduct a conference call once GW result is out. 10/07/15: Mahat DEC Mahat received an email from Mr. L'Esperance: Email: Santosh, I ve just received the groundwater results for the trench wells at the site (see attached). MW-19 was not sampled because its cap and casing are damaged beyond repair. MW-21 was not sampled because it was dry at the time of sampling. Please let me know when you d like to discuss the results. Thanks, James 10/8/15: Mahat DEC Mahat sent an email to Mr. L'Espernace confirming further remediation on the site is not warranted by the Department. Email: James, Thank you for the info and update. The Department is satisfied with all the lab results. Please prepare a standard report for the closure of the spill case. Let me know if you have any questions or concerns. Santosh Mahat - Environmental Engineer DEC Mahat is waiting for a complete closure report for review. 2/9/16: Mahat DEC Mahat contacted Mr. L'Espernace inquiring about the status of the closure report. The report has been submitted to SIMS for a review. Once the report is done reviewing by SIMS rep. it will be forwarded to the Department. 4/12/16: Mahat DEC Mahat uploaded the closure report submitted to the Department. Based on the report, the Department does not warrant any further action on the site. Spill case is closed on NYSDEC Spill database. 4/25/16: Mahat e/c: A spill closure letter has been sent and uploaded on D2 for reference. 8/10/16: Mahat e/c: DEC Mahat received an email update from the consultant via email. He notified the Department that the free product has been detected MW-16. Email: Hi Jeff and Santosh,As discussed on Friday, 0.17 feet (about 2 inches) of separate-phase product was discovered in MW-16, which is a 1 well located in the former pipeline trench northeast of where the excavation occurred. The product was bailed out and the well re-gauged; no product was immediately detected. As discussed, Sims and Integral will bail the well every two days, and also gauge the well on a regular basis for the next two months. I ll keep both of you updated with the results of this exercise. Thanks, James Based on the email, the spill case has been re-opened and further investigation/action is required. As per the email, the consultant will be gauging the MW for another two months and bail MW every two days. 10/21/16 - Austin - Transferred from Santosh Mahat (transferred out of Spills unit)to Jeff Vought for continuance of the work - end 1/17/17-Vought-Received email from DEC Ian Bielby that Jeff, Sorry to bother you on this spill but I see this spill is reopened due to some reappearance of NAPL. I m trying to determine if there are potential impacts to newtown creek as a result of this information. Can you

SIMS METAL MANAGEMENT (Continued) **S111836487**

tell me whether there are any wells close to Newtown creek that have NAPL? Vought performed full D2 file review and produced Non-FOIL summary site plans. Vought noted that reports describe three LNAPL plumes (Plumes A, B, C) and Plume A was addressed via excavation of the entire plum to 5' below the water table. Plume B and C were addressed reportedly via hand bailing. Vought noted however that Plumes B and C were never delineated and also documentation does not specify how these plumes were remediated. 1/18/17-Vought-Sent letter to Simsmetal East LLC, approving of email proposal dated 8/10/16 and requiring submission of a RIWP including: 1)Product recovery data for well MW16 as per 8/10/16 Email from Integral 2)Delineation of soil and groundwater contamination of Plume C at MW-16 3)Submission of Historical IRM data for Plume C 4)quarterly sampling of wells surrounding Plume C. CC'd on letter were Intergral(L'Esperance), OGC Urda and DEC Bielby. Vought also added letter to D2. Vought sent email reply to DEC Bielby that Ian, You never need to apologize as you are never a bother lol. In response to your email query below, and as I recently took over this project from Santosh (who has departed Spills), I have reviewed all available files in D2 and drafted up my usual technicolor Non-FOIL summary site plans which are attached above. To answer your question on potential impacts to Newtown Creek there were historical impacts to the Creek with a documented sheen in 2012 from what the reports call LNAPL Plume A . Furthermore data from this time also showed up to .5 of LNAPL in well MW-2 which was immediately adjacent to the Creek. In 2016, Plume A was entirely excavated to 5 feet below the water table as part of the installation of a new storm water retention basin. Endpoint samples from the Plume A excavation only showed minor detections of VOCs above Unrestricted SCOs and a bottom groundwater sample from the excavation only showed 85ppb benzene and 30ppb naphthalene. There were also two additional LNAPL plumes at the site (Plumes B and C) which were remediated via bailing of wells. Note that Plumes B and C are separated from the Creek by the remedial excavation of Plume A so it is unlikely that these plumes are currently impacting the Creek. Due to the disappearance of LNAPL from the site as well as minimal dissolved groundwater concentrations, the spill was closed on 4/25/16. On 8/10/16, we received an email from the consultant that .17 of LNAPL was observed in MW-16 which was identified as part of Plume C. In this email the consultant proposed manual bailing of the well and submission of a report. At that point the Department re-opened the Spill. As I have just reviewed the entire file, I am sending out a letter (attached above) to the consultant via separate email today (with a copy to you) requiring submission of a RIWP including: 1) Product recovery data for well MW16 (Plume C) 2) Delineation of soil and groundwater contamination of Plume C 3) Submission of Historical IRM LNAPL recovery data for Plume C 4) Quarterly sampling of wells surrounding Plume C. Hope this this helps and as always let me know if you need anything else, Thanks! 1/18/17-Vought-Sent email to Integral (L'Esperance) with cc to OGC Urda and DEC Beilby that James, I have taken over the above referenced spill from Santosh Mahat as he is no longer with the Spills Unit and as such I have reviewed all available reports for the site that are in our document system. I have attached the Department s spill reopening and requirement letter above and look forward to the submission of an RIWP that includes the requirements on the letter. An original of the letter is in the US mail to SIMS Metal East. Thanks. 1/19/17-Vought-Received email from Integral (Keith

SIMS METAL MANAGEMENT (Continued) **S111836487**

Brodock) with cc to OGC Urda, DEC Bielby, Integral (Corso/McCarty) that Hi Jeff, Katie Corso has taken over the SIMS project on our end, with support from Kevin McCarty (both copied here). (James L Esperance left Integral for a job at Northrup Grumman in California.) I will forward your email to Katie and Kevin, and one of them will be in touch. Please give me a ring if you need anything in the interim. Contact for Integral is: Kathryn Corso email: kcorso@integral-corp.com Ph: (212)440-6702 Cell:646-895-3325 Vought sent reply to Brodock with cc to all that Keith, Thanks for the quick reply and the new contact information for Integral. If Katie and Kevin have any questions and/or would like to discuss the Department s requirements, they can certainly call me. DEC Requires as per Consent Order, Resubmission of RIWP including: 1)Approval of proposal for IRM Product recovery from Plume B as per 8/10/16 email from Integral pending inclusion of 2)Delineation of Plumes B 3)Submission of IRM Reports showing recovery for Plume C. Installation of 4 recovery well at location. 4)Quarterly groundwater monitoring of surrounding wells 5)cc to Integral (Brodock/ Katie Corso), DEC Bielby, OGC Urda"

Remarks: "Line test failure."

Site Description:	The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/1/2002-VOUGHT-Initial tank test performed by ProTest Laboratories. Second and third tank test performed by Federal Electrical Supply Corporation (718-729-5700). The reason for spill report was initial tank test failure. As a result of failure vent line, fill line, suction line and return line were replaced by Petroleum Tank Cleaners. Tank was tested again on 2-6-2002 and failed again because testers failed to close off return line to day tank. Tank and system was tested for third time and passed on 2-14-2002. Isaac Mungra and Anthony (PTC) confirmed that there was no soil or groundwater contamination. Tank tests and repair invoices were provided. Spill closed by Vought. "

Updated By:	SRHEIGEL

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the

YELLOW FREIGHT SYSTEM, INC (Continued) **U003074537**

Site.The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses.After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery.The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

Env Problem:	Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present.Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747. 10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL. 03/29/04 Related to Mobil Greenpoint spill Transferred from Miller to Rommel. 10/12/04 Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget &

YELLOW FREIGHT SYSTEM, INC (Continued) **U003074537**

Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the

YELLOW FREIGHT SYSTEM, INC (Continued) **U003074537**

north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a clean fill recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ 3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ "

Ops crews set up Zones, cordoned off area around Internal Vault, Drummed any snow that may have been splashed with oil when the Vault door blew off, Placed Vault door next to Vault in Hot Zone and will determine cleanup

NEW YORK PAVING INC (Continued) **U000412007**

standard for door after sample results are known. #9 Entered the Vault with an Air line respirator because the Transformer was still smoking. No oil was left inside the transformer to get a sample from, so one oil sample was taken from the floor next to the burnt transformer. This sample was turned into a split sample one for Con Ed, and the other was given to the DEP. The capacity of the transformer when full is about 50 gallons but only about 8 gallons was observed next to the unit on the floor inside the Vault. A Commissioner's order was given to remove the transformer and complete the cleanup within 24 hours. Will be following up with FOD and the Transformer group to expedite removal of all three units on feeder 1Q17 in this internal Vault. Crew on location to hold Zones and secure area until the AM when Units are removed and the cleanup can be completed. UPDATE 2-18-03 0549 HRS CHEM LAB # 03-01374-00 - 14 PPM. UPDATE 2-18-03 0850 HOURS, R. COSENTINO REPORTS, AS REQUESTED BY THE FDNYC - MR. BERNAD PIERRE - ERT, WILL FAX NEW CHEM LAB RESEULTS #03-01374-001 14 PPM, TO MR. NAPOLI OF THE FDNYC HAZ MAT #1. FAX NUMBER 212 860-9485. UPDATE: 2/18/03 - 1300 A. STUBBS - ENV. OPS., REPORTS STRUCTURE DOUBLE WASHED WITH BIO GEN 760. 1 DRUM NON HAZ OIL DEBRIS WAS GENERATED. REST OF DEBRIS WAS REMOVED BY VACTOR 60724. TAG REMAINS PENDING TRANSF REMOVAL. Update - 2/19/03 1915hrs J. Gaglio env. ops mgr reports at 1730hrs the last of the three single phase transformers was removed from the vault. AT 1912hrs the floor and the remainder of the area inside the vault was completely cleaned by env. ops. All the items listed on the commissioners order issued on 2/17/03 have been completed. J. Gaglio will call ERT to confirm this with them to pass info onto DEP. Update - 1930hrs - 2/19/03 R. Hutchinson OS env. ops reports after all 3 units were removed double washed all affected areas. Removed all sediment and oil absorbant floor with vactor and all oily solid debris was put into a drum and brought back to college point under 1 trip rule. Removed env. stop tag # 14843. As per FER J. Ciciliato the new units to be installed are not being installed in this cubicle. Job closed. Update - Cleanup was completed by double washing all structures involved with safety wash. Event involved material and event involved persons list updated."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 10/10/95: This is additional information about material spilled from the translation of the old spill file: 14(550) TANKS C/SOIL. 12/10/96 MMM: TYREE PULLED TANKS, UPGRADED STATION AND DID INVESTIGATION. NO FREE PRODUCT LEFT ON GW. HIGH DISSOLVED BEING ADDRESSED WITH SVES SYSTEM. STIP RETURNED SIGNED.3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/17/2003-Vought-See closed diesel spill #0106824 at same location. 3/19/04-Vought-File review by vought: Summary of Underground Tank Removals (Tyree Org)-April 1994. Tanks removed as part of station rebuild activities . A total of eighteen underground storage tanks were cleaned and removed from the site. Twelve were gasoline USTs, two were diesel USTs, one was waste oil and the remaining three are of unknown contents. Groundwater at ten feet below grade. A total of 625 tons of soil was removed from the excavation. Five endpoint soil samples were collected. Method 8021 was inadvertently ommitted from the analysis request . A soil vapor extraction trench was constructed along Van Dam street, two feet from the sidewalk so that the venting system would create a barrier for

GETTY #219 (Continued) **S105142547**

the potential migration of soi vapoprs based on the reported regional westerly groundwater flow . Four monitoring wells were installed as per DEC. One fuel oil tank remains to be removed and upon remova, one additional monitoring well will be installed. Soil analyticals from well installation show 7200ppb benzene(MW2), 72400ppb napthalene(MW-2), 1435000ppb xylene(W-2), 2490ppb benzene(MW-4), 10770ppb xylene(MW-4). Groundwater Monitoring Report (Tyree Org)-1-16/95. A one thousand(1000) gallon fuel oil tank was removed in June 1995. A monitoring well, MW-5, was installed at this location in August . No free product was encountered. The groundwater flow direction comes onto the site from the north and travels southerly. Once on site, the water flow turns a little to the south-southeasterly direction . Groundwater analyticals show 105ppb benzene(MW-1), 3260ppb benzene(MW-2) and 86400ppb MTBE(MW-2). Report recommends installation of upgradient well and performance of a soil vapor extraction test. Letter from DEC(Mulqueen) to Getty(Ochotorena)-6/26/95. Stipulation Agreement sent to Getty. Stipulation Agreement from Getty-6/30/95. Stipulation signed by Getty. Corrective Action Plan from Tyree-10/5/95. Summary of Underground Fuel Oil tank Removal Activities-January 1996. Removal of one (1000-gallon) fuel oil UST. Five endpoint soil samples were collected for analysis. A groundwater sample will have to be collected to determine if the groundwater is protected . The background soil sampling will be performed once the location is reviewed by the DEC and sidewalk opening permits are obtained . Three Geoprobe borings will be performed. This location is reported to be located in a former refinery . Soil analyticals show minor SVOC exceedences (646ppb benzo(a)anthracene, 595ppb benzo(a)pyrene). Quarterly Monitoring Reports from Tyree (October 1995 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the south. Groundwater analyticals show 145ppb benzene(W-1), 4150ppb benzene(W-2), 5.19ppb xylene(W-3), 437ppb toluene(W-5). Remedial Action Plan (Tyree Org)-July 1996. The soil is intermixed with occasional charred material up to 6 inch in diameter and ashy soil located at the north end of the site . Soil venting pilot test performed on 4/18/96. The results of monitoring and the well survey indicate that groundwater on site flows predominantley west . The groundwater flow was previously incorrectly shown to flow southerly . Surrounding area is commercial. Pilot test results indicate that an approximate radius of infulence between 16 and 22 feet can be achieved with an applied cacuum of 34 to 53 inches . Since the contamination is minimal and localized no groundwater remediation is proposed at this time . Quarterly Monitoring Reports from Tyree (April 1996 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the east-southeast. Groundwater analyticals show 146ppb benzene(W-1), 793ppb benzene(W-2) and 437ppb toluene(W-5). Quarterly Monitoring Reports from Tyree (March 1996 thru December 2000). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 17ppb benzene(W-1) and 4ppb benzene(W-2). Remedial activities described as none . Letter from Tyree to DEC(Rommmel)-6/15/01. Letter sent requesting removal of wells 3 and 4 from the monitoring/sampling regimen leaving wells 1,2 and 5. These changes will be effected as of July 1, 2001. If there are any objections to these changes, please notify us in writing . Quarterly Monitoring Reports from Tyree (March 2001 thru June 2001). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows

GETTY #219 (Continued) **S105142547**

to the west. Groundwater analyticals show 30ppb benzene(W-1) and 24ppb benzene(W-2). Remedial activities described as none . Quarterly Monitoring Reports from Tyree (July 2001 thru September 2001). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 31ppb benzene(W-2). Remedial activities described as none . Historical Data Compilation (Tyree Org)-December 2001. Compilation including request for no further action. Quarterly Monitoring Reports from Tyree (January 2002 thru December 2003). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 43.3ppb benzene(W-1) and 63ppb MTBE(W-2). Remedial activities described as none . 3/23/04-Vought-DEC requires: 1)groundwater samples from downgradient locations of W-1 and W-2 2)submission of a soil and groundwater remediation plan. Vought sent letter with requirements on 3/23/04. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/20/2005 - Feng - Geoprobe Investigation Report by Tyree, dated November 29, 2004. on 11/10/2004 Tyree did two (2) groundwater sampling, B-1 and B-2, downgradient to W-1 and W-2, and four (4) soil samples, B-3 to B-6, in the vicinity of the former gasoline tankfield as per DEC Vought's letter on 3/23/2004. Groundwater analyticals show that some VOCs and SVOCs were slightly high and exceeded TAGM 4046. and soil samples collected from B-3 to B-6 show slightly high VOCs in B-3. Based on this report, Tyree recommended further remediation at this site is not necessary. groundwater monitoring wells be sampled on a quarterly basis and be monitored for natural attenuation . 10/18/2005 - Feng - Quarterly Monitoring Report, by Tyree, 4/2005 - 6/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. 90ppb BTEX and 20ppb MTBE in W-1. keep monitoring. 11/2/2005 - Feng - Quarterly Monitoring Report, by Tyree, 7/2005 - 9/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, increasing, 143ppb BTEX and 21ppb MTBE. W-2, 1 BTEX and 5 MTBE. W-3, 6 MTBE. 12/19/2005 - Feng - Quarterly Monitoring Report, by Tyree, 9/2005 - 11/2005. Active Lukoil gasoline retail/service station. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, decreased and 68 ppb BTEX and 11 ppb MTBE. W-2, non-detected BTEX and 3 ppb MTBE. W-3, non-detected BTEX, 4 ppb MTBE. EFR on W-1, 0.01 gallon of gasoline has been removed. 05/25/06-Sun-Based on the Quarterly Monitoring Report, prepared by Tyree,dated April 6, 2006, Total BTEX ranged from Non-detect to 29 ppb, and MTBE concentrations ranged from 3 ppb to 9 ppb. No free product was detected in any monitoring wells. Based on these low concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel. 3/28/05 - also see 8804104. KST 12/29/05 Transferred to E. Hampston via Spills Initative. Wrote letter to owner requesting update/information. 11/02/06 Reassigned to Sun.(MS) 12/18/06 Sun sent letter certified mail to Jean Satoski (LIC Service Station), 49-01 Van Dam Street, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 2/27/07: Based on TCR results Sun/Sellberg sent a

GREEN SERVICE STA (Continued) **S106703575**

letter to Alex Javic of LIC Service Station requiring additional investigation be performed, and a report sent to the DEC by 4/13/2007. Letter is as follows: The investigation at a minimum must include the installation of soil borings/wells: around the area of the the former nine (9) 550-gallon underground storage tanks. Groundwater monitoring wells should be installed to the south (former location of S6), east (former location of S1) and west (former location of S4) of this area and groundwater flow direction will be determined. During drilling, the soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. Following well installation, a water sample must be obtained and submitted for EPA Method 8260/8270 analyses. Note that MTBE must be included on all soil and groundwater analyses. Prior to drilling activities, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, soil and groundwater sample analyses, site plan, and conclusions and recommendations must be submitted to the Department by April 13, 2007. (JS/MS) 4/5/07: MS spoke to Jill Haimson of Preferred Environmental (516)647-4211. She will submit a SIWP by 4/16/07. (JS/MS) 4/24/07: DEC received and approved the SIWP. SIR to be submitted by 7/16/07. Sent letter certified mail to RP and faxed same to consultant (Jill Haimson). (JS/MS) 6/6/07: MS called J. Haimson to check status of site investigation. Due to difficulties in obtaining on-site access, work had been delayed. SIR will be submitted later than original timeline.(JS/MS) 6/27/07: Preliminary results (field observations) were discussed by the DEC and the consultant via telephone on June 11th, and again on June 21st, 2007. RP is claiming an upgradient source to be the problem. (JS/MS) 9/21/07: An additional visit was done by the consultant in mid September to better assess surrounding properties as additional investigation is warranted. This investigation will include the evaluation of a suspected up-gradient source which may/may not be contributing to on-site groundwater contamination. (JS/MS) 10/18/07: Upon threat of legal action, Preferred finally submitted SIR (apparently RP had not given consent to submit?). DEC is currently reviewing. Onsite contamination exists in both soil and mainly groundwater across the site. Additional delineation will be necessary as well as possible ORC injection/treatment. (JS/MS) 11/14/07: Alex Javick met with JS and MS today to sign STIP and discuss remedial options. Plan is to start with ORC (iSOCS) - 6months, if not effective use chemical injection. Monitoring will take place quarterly. Submit signed stip to regional director on 11/15/07. (JS/MS) 11/26/07: STIP executed on 11/16/07 and returned on 11/21/07. Sent copy to owner via mail and consultant via email today. MS to discus remediation details with Jill Haimson of Preferred. (JS/MS) 11/28/07: MS spoke to Jill. She will submit a RAP by 12/7/07 detailing use and placement of iSOCS as well as injection of regen-ox to boost remediation. (JS/MS) 12/17/07: DEC approved RAP as follows: ...The RAP proposes the application of Regen-Ox (manufactured by Regenesis) to address petroleum related soil and groundwater contamination at the site. In addition, Preferred proposed the installation of In-Situ submerged Oxygen Curtain (inFusionTM/iSOC) probes within four (4) onsite well locations. Pursuant to the Stipulation Agreement signed and dated effective November 16, 2007, the Department requires that within 45 days of the Department s

GREEN SERVICE STA (Continued) **S106703575**

approval of the RAP, Respondent shall implement the work outlined in the RAP. The Department approves the RAP with the following condition: Please specify the number, location and spacing between all proposed Regen-Ox injection points. RP has 45 days from RAP approval to perform the work outlined in the RAP. MS sent letter today to RP and will email Preferred tomorrow regarding injection points follow-up. (JS/MS) 1/17/08: Alex Javick in to meet about remedial systems. Will send STIP to Ms. Jean Satoski once received address from Mr. Javick. (JS/MS) 1/22/08: Stip #2 sent today to Ms Jean Satoski at 84 Gun Club Road, Northport, NY 11768. Signed stip is due by 2/5/08. Added following to original letter to include operator's cooperation and Ms. Satoski's roles as RP: Presently, the operator of your station has initiated the required actions to address the above and has been fully cooperating with the Department. However, according to Department records, you are the certified property owner of 49-01 Van Dam Street, LIC, NY 11101 and therefore, also a responsible party. Signed STIP is due by 2/5/08. (JS/MS) 2/27/08: Received signed Stip from Satoski. Signed by Regional Director, Region 2 (JS/MM) 3/4/08: Sent photocopy of executed Stip to Satoski. Informed J. Hamison from Preferred about executed stip signed by both parties. (JS/MM) 4/17/08: RAP not executed yet. Satoski and Javic have not agreed on payment. Sent out violation of stip letters. Waiting for responses. (JS/MM) 4/22/08: Called Javic, not in office. Expecting phone call today. (JS/MM) 5/18/08: Received already approved RAP from Preferred. (JS/MM) 6/23/08: No info received from Preferred. (JS/MM) 08/11/08: Transferred to Kolleeny/Mandac (JK/MM) 12/12/08: Received Quarterly Groundwater Sampling/Baseline Sample Report from Bill Schlageter of Preffered Environmental dated 11-19-08. Under review. Next sampling event in December 2008. (JK/KG) 12/16/08: RAP implemented. May 28 and 29, 2008 - 14 wells were installed (4 groundwater monitoring wells, 4 solinst emitter wells, 6 chemical injection wells) July 24 and 25, 2008 - Regen-Ox injected into 6 injection wells August 21, 2008 - Solinst Waterloo Oxygen Emmitter Probes were installed in 4 wells September 8, 2008 - Groundwater samples were collected at MW-1, 2, 3, 4 and IW-1. Total VOCS: MW-1 2,192 ug/L, MW-2 11,950 ug/L, MW-3 19,898 ug/L, MW-4 7,963 ug/L, IW-1 3,070 ug/L IW-6 and E-2 were found to have product, 1.47 ft and 0.04 ft respectively. Wells are checked biweekly for product. If product is encountered it is hand balied. Dissolved oxygen concentrations have increased since oxygen emmitters were installed. Next sampling event is scheduled for December 2008. (JK/KG) 12/18/08: Spoke with Bill Schalageter (Prefferred Env.). I asked him about the well with 1.47 ft of product. He said Alex Javic is still checking the well twice a week. He is bailing the product and disposing of it into the waste oil tank on site. Bill said the product is about an inch to a couple of inches. He will send someone out within the next week to verify how many inches of product are in the well and will send me an email with the details. Based on the amount of product they will need to be more aggressive in removing the product. I suggested a vac truck. I also asked Bill to have the wells surveyed and include GW flow direction, gradient, and scale on the map. (JK/KG) 12/30/08: Spoke with Jill Haimson (Preferred Env.) about product in well. She will talk to Bill and find out if someone went to the site to gauge the product. She will email me the details. If no one went to the site she will have someone go this week. (JK/KG) 01/29/09: Have not received details about product in well or product recovery. Emailed Jill and Bill requesting an update. (JK/KG)

GREEN SERVICE STA (Continued) **S106703575**

02/02/09: Rec'd following email from Schalageter on 1/29/08. Since we spoke, Preferred was out the site twice including a quarterly sampling event conducted January 23, 2009. During the first visit (January 5, 2009) , approximately eight inches of product was present in well (IW-6), none was detected in any other of the wells. The product was bailed from IW-6 and disposed of, subsequent to bailing, Preferred gauged the wells for twenty minutes and no product recharge was observed. During the January 23, 2009 sampling event, approximately 4 inches of product was detected in IW-6, again no recharge of product was observed subsequent to removal. No product was detected in any of the other wells on January 23, 2009. A complete description of monitoring and sampling events will be provided in the Quarterly sampling report to be submitted upon receipt of sampling data. Please feel free to contact me with any questions or concerns. Regards, Bill (JK/KG) 02/03/09: Responded to Bill, After talking with Jon, please continue with product recovery on a regular basis. If the amount of product increases or doesn't appear to be decreasing, a more aggressive remedial measure will be necessary. Based on the VOC concentrations in MW-2 and MW-3, further delineation or more injections may be necessary. First, I will need to review the results of the latest sampling event (when they are ready). (JK/KG) 04/14/09: Rec'd pdf of Quarterly Groundwater Sampling Report on 4/13/09; under review. (JK/KG) 04/15/09: Rec'd hardcopy of QMR. Wells were surveyed; groundwater flow direction is to the southwest. Weekly product recovery will continue and the next quarterly event is scheduled for April 2009. Groundwater on 1/23/09: MW-1: BTEX - 1,422 ug/L, Total VOCs - 2,533 ug/L, MTBE - 170 ug/L MW-2: BTEX - 3,590 ug/L, Total VOCs - 4,909 ug/L, MTBE - 180 ug/L MW-3: BTEX - 15,150 ug/L, Total VOCs - 21,338 ug/L, MTBE - 2,700 ug/L MW-4: BTEX - 11,174 ug/L, Total VOCs - 21,425 ug/L, MTBE - 1,600 ug/L IW-1: BTEX - 1,715 ug/L, Total VOCs - 2,739 ug/L, MTBE - 280 ug/L IW-4: BTEX - 1,652 ug/L, Total VOCs - 2,501 ug/L, MTBE - 200 ug/L E-4: BTEX - 4,664 ug/L, Total VOCs - 8,201 ug/L, MTBE - 1,700 ug/L (JK/KG) 04/20/09: Spoke to Schlageter on 4/16/09. I asked him to include historical analytical data in future reports. We discussed the product in IW-6; he said it appears to be old gasoline and the station manager is still hand bailing it. The product is being disposed of in the on-site waste oil tank. I told Schlageter that the product can not be disposed of in the waste oil tank. Preferred has gauged the wells since the January sampling event. I asked him to send me the gauging data by Monday (4/20). (JK/KG) 04/28/09: Rec'd March gauging data (in eDocs). On 3/6 product in IW-6 was about 6 inches and on 3/27 it was about 0.25 inches. (JK/KG) 05/04/09: Letters sent to J. Satoski and A. Javik on 4/30/09. A more aggressive approach to product recovery should be implemented by using mobile vacuum extraction. A RAP should also be prepared and submitted. It should propose additional remedial actions, such as another round of RegenOx injections. The next QMR is due 6/19/09. (JK/KG) 05/07/09: Spoke to Mr. Javick, he said he doesn't have the money to pay for the cleanup. He was reminded that he signed the Stipulation Agreement and that a report is due in June. (JK/KG) 06/22/09: Rec'd call from Bill Schlageter. He said quarterly monitoring has not been performed and Mr. Javick is not willing to pay for the cleanup. I called Mr. Javick and he said Ms. Satoski will pay 100%. I then spoke to Ms. Satoski and she confirmed that she has agreed to pay for remediation of the site. She will advise Preferred to proceed with site work once some checks clear in her bank account. Preffered is prepared to submit a

GREEN SERVICE STA (Continued) **S106703575**

supplemental RAP. (JK/KG) 06/23/09: Rec'd Supplemental Remedial Action Work Plan dated 6/23/09 and submitted by Preferred Environmental. Under review. (JK/KG) 06/25/09: Rec'd revised SRAWP dated 6/24/09. SRAWP proposes proposes additional injections of RegenOx into the existing on-site injection wells, monitoring of groundwater field parameters, continued groundwater treatment via in-situ emitter probes, continued quarterly groundwater monitoring, and submission of monitoring reports to NYSDEC. A round of groundwater samples will be collected from monitoring wells MW-1, MW-2, MW-3, and MW-4 prior to the RegenOx injections. If free-phase product is detected in well IW-6, the product will be removed using vacuum-enhanced fluid recovery prior to the injections. The SRAWP was approved and letters were sent to Satoski and Javick. The deadline for submission of a groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, is August 7, 2009. The deadline for submission of a report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results is September 25, 2009. Email for Satoski is williamtaggard@mac.com (JK/KG) 07/20/09: Rec'd the following email from Schlageter: We will be conducting the injection this week (Monday-Wednesday) at 49-01 Van Dam Street, LIC. Prior to the injection, the required pre-injection sampling will be conducted from monitoring wells. Bryan from our office will be on-site and as always, you can contact me or Jill with any questions. Thank You, Bill (JK/KG) 08/31/09: Spoke to Haimson. She didn't realize a report with the results of the baseline sampling was due 8/7/09. The report will be prepared and submitted next week. (JK/KG) 09/30/09: Follow-up with Preferred as the groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, and the report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results have not been submitted. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 03/23/2010: Received a pdf copy of Quarterly Monitoring Report for October 2009. DL to eDocs. Will review. AD 07/27/2010: Received an e-mail from Mr. Schlageter: Ainura: As we discussed, attached is the supplemental RAP for the above-referenced project. Please review and contact me to discuss. Thank you Bill William J. Schlageter Operations Manager/Senior Hydrogeologist Will review. AD 08/24/2010: Reviewed the supplemental work plan. It proposes to conduct EFR on a weekly basis for two months period on the site wells exhibiting a free product (wells IW-6 and E-4); to continue employment of 3 out of 4 oxygen emmiters; to conduct monthly monitoring activities; to perform air sparging of aquifer; and once free product has been addressed, to rehabilitate and re-install emmiter probe into E-4 and reconnect oxygen supply to this well. Discussed this work plan with J. Kolleeny of DEC. As it was noted, air sparging method usually combained with SVE to control vapors in unsatutated zone. Since SVE is not proposed here, implementation of air sparging alone is questionable. AD 08/26/2010: Called and spoke with B. Schlageter of Prefferred. Requested to revise the work plan. AD 08/11/2010: Received a pdf copy of the 1st quarter 2010 GW monitoring report. DL the report to eDocs. AD 09/16/2010: Received an e-mail from Bill: Ms. Doronova: As we discussed, attached is the revised Supplement to the Remedial Action for the above-referenced property. The Supplemental action has been revised to omit the mobile air-spare treatment upon your request. Please review and contact me with any comments. Upon your approval, we will implement the proposed

GREEN SERVICE STA (Continued) **S106703575**

action within one week. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 www.preferredenv.com DL the work plan to eDocs. Will review. AD 09/17/2010: Reviewed the revised work plan. It proposes to conduct weekly VEFR on two site wells (IW-6 and E-4) which exhibit free product, for a period of two months. Operation and maintenance of three oxygen emitters at the site will continue on a monthly basis. Preferred also recommends to suspend quarterly GW monitoring for a six months. AD 09/20/2010: Discussed this WP with J. Kolleeny of DEC. AD 09/21/2010: Issued and sent an approval letter to Ms. Joan Satowski with the following comments: " Although Preferred requests that quarterly groundwater monitoring at the site be suspended for six months, the Department requires that quarterly groundwater monitoring continue; " Following completion of the VEFR events, quarterly groundwater monitoring data should be evaluated. If the results do not indicate significant improvement of groundwater quality at the site, and/or if free product continues to appear in the two affected wells, then an alternative remedial measure should be proposed to DEC. Dl pdf copy of the letter to eDocs. AD 04/11/2011: Received an e-mail from Bill: Ainura: Attached is the quarterly sampling report for February 2011 for the above-referenced property. The report summarizes activities conducted from November 2010 through February 2011. Results of the quarterly sampling are favorable significant reduction of dissolved phase VOCs, however some residual free product remains present within IW-6. The next quarterly sampling is scheduled for May 2011. Please feel free to contact me with any questions. Thank you Bill William J. Schlageter DL the report to eDocs. Will review. AD 06/30/2011: Reviewed the report. It states that on February 2011 sampling, thirteen of the fourteen on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.49 ft). Floating product was also observed during the prior monitoring events in October 2010(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). An absorbent pad was installed within IW-6 to address free product. Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. Depth to GW water ranged from 6.48 ft. (E-2) to 8.37 ft. (MW-4) bgs. Groundwater flow has historically been determined to have a westerly influence within both northwesterly and south westerly flows historically observed. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for on-site sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest TVOCs was detected in MW-3 (7,625ug/L), which is located crossgradient of the tank farm and downgradient of the Luk Oil Station to the southeast. Concentrations of BTEX detected in groundwater samples ranged from 5,110 ug/L in the MW-3 to 61.5 ug/L in the MW-1 at an upgradient location, MTBE concentrations ranged from 17 ug/L in the IW-1 (crossgradient) location to 1,100 ug/L in the MW-3 location. Preferred states that TVOCs have dropped across the site by up to 94% and by more than 50% since the implementation of the supplemental remedial action. They report that MTBE concentrations have also significantly decreased across the site and

GREEN SERVICE STA (Continued) **S106703575**

conclude that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. The next quarterly sampling suppose to be conducted in May of 2011. AD 11/2011: Did not received ane reports. AD 01/12/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit all missing reports for 2011. Later received an e-mail from him saying: Ms. Doronova: As we discussed attached is the report from October. Please note that due to construction at the station property, we were forced to delay the next sampling event sampling until January 2012. Further, although concentrations continue to decrease, we have identified that there is an off-site contribution to the groundwater impacts believed to be the Luk Oil property across Gale Avenue (currently AmeriGas ??) Owner is Leelimits Petroleum. We are petitioning to drop the sampling to a bi-annual schedule. Thank you, Bill DL the report to eDocs. Will review. AD 03/09/2012: Reviewed the report. It states that quarterly sampling activities resumed on August 2011 subsequent to the supplemental remedial efforts, which including VEFR activities and continued oxygen injection. The August 2011 quarterly sampling event included the following: " Measurement for floating product; " Measurement of water table elevation, temperature, and dissolved oxygen; " Purging and sampling of four monitoring wells, two injection wells and one emitter well; " Laboratory analysis of seven groundwater samples; and " Preparation of summary report including data summary and a groundwater flow map. Groundwater flow in August of 2011 was determined to be to the northwest towards Newtown Creek. During the August 2011 sampling, thirteen (13) of the fourteen (14) on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.50 ft). Floating product was also observed during the prior monitoring events in February 2011 (.49 ft.), October 2010 (.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. Concentrations of BTEX detected in groundwater samples ranged from 2,129 ug/L in the MW-4 to 54.1 ug/L in the MW-1. MTBE concentrations ranged from 220 ug/L in the MW-2 to 7.1 ug/L in the IW-1 location. The consultant states that August 2011 groundwater quality data was compared to the historic groundwater data developed for the property. To date since the initiation of remedial activities at the Subject Property, TVOCs have dropped by more than 61% since the last quarterly sampling event in February 2011. BTEX and MTBE concentrations have also significantly decreased across the site. This indicates that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. AD 09/19/2012: Sent an e-mail to B. Schlageter requiring submission of all missing reports. AD 12/2012: Did not receive the reports. Called and left a message. AD 02/2013: Spoke with B. Schlageter regarding reports submission. The property owner is very sick and Preferred did not visited the site for several months. He will get back with the site status update. AD 06/04/2013: Called and spoke with Bill of Preferred regarding this site. The site owner contacted them recently, so they are planning to start groundwater monitoring soon. Bill will look for unsubmitted reports and will give an update. AD

GREEN SERVICE STA (Continued) **S106703575**

01/17/2014: Called and spoke with B. Schlageter of Preferred Env. No GW monitoring was done at the site since we spoke last time. Site owner was uncooperative. Requested to submit the most recent owner's contact information. Suggested to visit the site, sample all site wells and submit a summary report with conclusions and recommendations for further actions. AD 04/12/2016: Called and left a message to Mr.Joseph Macchia - who is listed as an authorized representative in PBS file. AD 04/13/2016: Called and spoke with Mr. William Tagert, (631-757-8829). He is a site owner's son. Because of his mather's health and old age, Mr. Tagert is looking after her business. Explained to him that the spill case is still open, and that he needs to contact environmental consultants to do a site current situation assessment. AD 04/14/2016: Received a call from Mr. Tagert. He said that he contacted Bill Schlageter from Preferred Environmental and scheduled site visit with sampling of wells. A report with conclusions and recommendations for further actions will be submitted to DEC. AD 04/26/2016: called and spoke with mark of Preferred. He confirmed that his company gave a proposal to Mr. Tagert and is now waiting for his response. AD"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND AUSTIN - SPILL ORIG. ASSIGNED TO BATTISTA 11/04/93: MID COUNTY MECH. PERMANENTLY TOOK TANK OUT OF SERVICE 12/88 AND INSTALLED A NEW TANK 6/89. 12/19/2001 Sangesland spoke with Stephine Davis from FPM Group (631-737-6200 ext228). She called asking what can be done to close out this spill report. Apparently FPM Group started working on the site in 1993. At that time the Free Product plume (from a buried heating oil tank) was defined. Property is approx 1 acre and is a picture framing company in a 5 story building Two belt skimmer wells were installed in 1993 and have been operating ever since. Product was skimmed off, separated, water has been drummed and

51-02 21ST ST (Continued) **S106703282**

removed from the site and product piped back into the heating oil tank to be used in the building burner. The building owner has been operating the system and now says there is very little product in the skimmers. Sangesland told Ms. Davis to submit a report (with as much DEC correspondance as possible in the appendix). The report should include a write up (1-2 page) of what the original problem was, what investigation/delineation was done and how the system has operated for the last 8 years. Sangesland said the area needs to once again be delineated to confirm the plume is gone. Suggested geo-probe in the area of the plume. Finally the environmental consultant will need to define how the dissolved product will be addressed from now on. 11/19/2003 Sangesland reviewed a report by Gregory Scott of Roux Associates (631-232-2600) The report outlines the work done on the site between 1988 and 2002. Belt skimmers were installed in 2 wells and pulled out 150 gallons of oil over a period of years. These skimmers were shut down in 2002 and this letter was requesting formal approval to shut them down. Since the floating product was removed, Roux would like the DEC to close out the case..... NO. DEC is requesting GW samples from each of the existing wells tested to method 8270 and 8021. Depending on the concentration levels, additional remedial work may be required. 2/10/2004 Roux Associates Inc submitted a report dated 1/29/04. This report stated that slight traces of measurable floating product is present in the onsite wells . This statement requires the DEC to maintain this as an open case. 3/4/2004 Roux Associates stated that they will do another round of sampling of the wells and submit the results soon . 3/23/2004 Roux submitted a letter dated 3/22/2004 which states no measurable floating product is present in the onsite wells. Though monitoring well MW-4 contained an absorbent sock with minimal product staining No testing of these groundwater samples was done. June 2004 - Sangesland and Austin made a site visit and concluded the spill should be closed out. DEC requested a final report with certain information documented. 7/19/2004 - Sangesland reviewed a report from Roux associates. All of the requested information was included. Based on this report, the former problem at the site has been remediated and now the site has very minor trace hits which may or may not be related to the original problem or from off site locations. Based on the industrial nature of the site and the fact that there are no impacts to human contact the DEC has closed out this case. "

Remarks: "10K TK SYS FAILED PETRO, WOULDN'T MAINTAIN LEVEL IN STAND PIPE."

Site Description: Location:The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28.Current Zoning and Land Use:The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features:The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology:Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamintion:Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater

ROEHR CHEMICALS, INC. (Continued) **S113492645**

contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb.Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.

Health Problem:	People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Site Description: Location:The former Roehr Chemicals facility is located in an urban

ROEHR CHEMICALS INC (Continued) **1000243997**

area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28.Current Zoning and Land Use:The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features:The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology:Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamintion:Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb.Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates

ROEHR CHEMICALS INC (Continued) **1000243997**

	that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.

ROEHR CHEMICALS INC (Continued) **1000243997**

Health Problem:	People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Site Code: 55924
Site Description: Location:The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28.Current Zoning and Land Use:The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features:The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology:Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.
Env Problem: Nature and Extent of Contamintion:Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb.Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the

ROEHR CHEMICALS INC (Continued) **1000243997**

operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Spiller Company:	999
Contact Name:	JAMES GERACI
Contact Phone:	(718) 383-4066 112
DEC Memo:	"9/16/15 - Obligado - Desk Duty - I spoke to James Geraci. 718 383 4066 During gasoline loading, approximately 200 gallons of gasoline spilled onto the rack and down into the containment area. The spill did not go into sewer or creek. At this time the spill has been cleaned up. Additional water was sprayed on to it for clean up and to control vapors. The contaminated water also flowed into the containment. According to James, there is no rainbow, no sheen on the ground surface at this time. According to James, no sewers or surface water has been impacted. A truck is on route to vac out gasoline/water. Spill assigned to Veronica. As per Randy, Veronica should respond. 9/16/15-Zhune responded to this spill. Met James Geraci. He walked me to the area where the spill occurred. As per Mr. James they wash out the area of the spill with water and placed everything into the secondary containment. American Petroleum is on the way to pump out the containment. The containment is an underground containment with capacity of 400-gallons. Approximately 200 gallons of gasoline spilled onto the rack. As per Mr. James no sewer, no soil and no subsurface water has been impacted. James will email the closure report and the waste manifest to the DEC. 9/18/15-James Geraci from Arc Terminals sent the following email: At about 10: 15 AM ITC driver Alvar Richardson, while loading under ARC rack # 3overloaded truck compartment # 5 resulting in spill of approximately 200 gallons. All spilled product flowed into the racks secondary containment tank. No product entered into storm water drains or oil/water separator system. Another driver saw the spill taking place and he activated the emergency shut off system and stopped all product pumps. All terminal operations were suspended, all trucks remained at loading racks and no one was allowed to start engines until vapor levels were deemed safe. In order to minimize vapors and to ensure that all spilled product entered the spill containment tank, I asked terminal operator Julio Martinez to activated and let run for a few minutes the rack fog sprinkler system. Once we established vapor levels were safe we allowed all truck to start up and leave the loading racks. Rack # 3 remained out of service. I called Ferrara Electrical to inspect loading rack #3. At 2:20 PM Ferrara Electric arrived and proceeded to perform a complete inspection of rack #3. All electric components, flow control valves and all loading arms were inspected. After a complete investigation it was determined that rack loading arm # 3 had an

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

equipment malfunction and caused the spill. Arm # 3 has been disabled and will not be used until repaired.At 12:05 PM I called NYSDEC spill hotline and reported the spill, received spill number 1506388, from Ms. Clark. At 12:15 PM I called NRC reported spill, received spill number 1128639 from Petty Officer O Brian. I called American Petroleum and asked that they dispatch a vacuum truck in order that the rack containment tank be pump out. Truck arrived and began to pump out tank at 5:10 PM manifest enclosed. At 2:10 PM NYSDEC Environmental Engineer Veronica Zhune arrived, surveyed the terminal and inspected the area of the spill. We reviewed the containment system under the loading rack canopy and the drainage leading to the containment tank. I explained to her the procedures used in vacuuming out the tank. Ms. Zhune asked that I forward her a spill report statement and a copy of the waste manifest for the containment tank pump out."

Remarks: "contained to holding tank, unknown if driver error or equip failure."

DEC Memo:	"02/07/13 - lz Reviewed Sovereign Consulting Inc. s January 18, 2013 Tank Excavation Assessment Report (eDocs). The Report summarizes activities related to the permanent closure of 42 underground storage tank systems. Some of these tanks were removed; other were left in place, since their removal could jeopardize the integrity of nearby structures. About 397 tons of petroleum-contaminated sand were removed from the tanks, and 931 tons of contaminated soil and concrete were disposed of at a registered facility. Excavated uncontaminated soil was used to restore the site. The Department has received Sovereign Consulting Inc. s January 16, 2013 LNAPL Recovery Report to address residual petroleum contamination at the aboveground storage tank area. The LNAPL Recovery Report will be reviewed in relation to Stip executed February 24, 1998, linked to spill case number 8709990, et seq. No further action is required concerning the removal of the tanks and the pertinent site assessment. The Department has closed spill case number 9002114. Stip number R2-20120626-406 has been terminated. 09/15/11 - LZ The June 30, 2011 annual report (eDocs) indicates that product is present in a number of MWs. the highest thickness was 2.4 feet in MW-40. 12/15/09 - LZ A meeting with Motiva consultants Douglas Weiner and Douglas Byers focused on options to speed up remedial process. By March 31, they submit a risk assessment and evaluate remedial options than can be used at Motiva. 08/14/09 - LZ The June 19, 2009, report, prepared by Science Applications International Corporation, shows that monthly hand bailing was performed at 30 wells during the period July 2008-June 2009. Six wells exhibited free-phase product. The maximum

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

thickness was 0.52 foot in MW-31. The total amount of recovered product was 1,177 gallons since the remediation started in 1998. the report shows that BTEX and MBTE concentrations in groundwater have decreased over time. The next report is due June 30th, 2010. 01/03/08 - Zielinski The Department has reviewed a request by Science Applications International Corporation to discontinue the use of the pumping system, supported by information contained in the 2005 Annual Report and the 1998 Corrective Action Plan for Motiva Enterprises, Brooklyn Terminal. The Department approves the continuation of product recovery at all wells by monthly hand bailing. 9/13/07 - Zielinski Received the 2007 annual Sampling Report,dated August 9, 2007, prepared by Science Applications International Corporation. Thirty wells were gauged and bailed monthly and one-time sampling was conducted. Total 1,136 gallons of free product were removed. A review of submitted data from 01/06/99 to 07/06/07 indicate that the largest thickness of free product was discovered(in feet of product) in MW-2(1.50), MW-4(o.41), MW-15 (0.11), MW-26(0.52), MW-31(1.15), MW-36(1.38), MW-37(1.50), MW-40(2.40), MW-41(0.54), RW-34 0.17),TW-2(0.14), TW-5(1.08), and TW-6(0.25). Few other wells show free product up to 0.1 feet in thickness. VOCS sampled on 06/26/07 were detected in: MW-1; (nd), MW-2: (nd), MW-29: ethylbenzene (303 ppb), total xylenes (26.8 ppb), MW-5: tetriary butyl alcohol (27.5 ppb), MW-22: total xylenes (23.7 ppb), MW-24: MTBE 95.64 ppb), MW-16: benzene (99.8 ppb), tertiary butyl alcohol (87.3 ppb), MW-20: MTBE (188 ppb), tertiary butyl alcohol (2,370 ppb), total xylnes (1,420 ppb, MW-15: MTBE (54.7 ppb), MW-33: MTBE (89.9 ppb). SVOCs, according to the report, between June 2000 and June 2007, only MW-5 contained detectable concentrations over the past three years. Applications International Corporation requests in its letter NYSDEC approval to discontinue the active pumping and to practice hand bailing. The new Motiva environmental contact for this site is Anna Tillman, phone 404-417-1974. 01/22/07 - Zielinski The 2006 annual report for Motiva Enterprises LLC, Brooklyn Terminal, prepared by Science Applications International Corporation, shows that BTEX and MTBE concentrations in the groundwater has decreased over the time. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO This spill site cleanup has been conslidated under Spill No. 9002114. Shell Brooklyn, N.Y. DEC Memo:	"02/07/13 - lz The Department has received Sovereign Consulting Inc. s January 16, 2013 LNAPL Recovery Report (eDocs) to address residual petroleum contamination at the aboveground storage tank area. The LNAPL Recovery Report will be reviewed in relation to Stip executed February 24, 1998, linked to spill case number 8709990, et seq (eDocs). 10/12/11 - LZ This spill case, closed in 2003, has been reopened as related to the plume existing under ASTs and to Stip effective 02/24/1998. All reports and correspondence can be found in the spill # 9002114 documents. 04/19/12 - lz As Vadim Brevdo approved, this spill case has been transferred to Section B. 06/27/2013 - V. Brevdo Sovereign Consultants (Albert Tonn - 631-753-8380) submitted 2013 Annual Monitoring Report on behalf of Arc Terminals. Report was sent as attachment via e-mail. Requested one hard copy of the report. V. Brevdo 07/01/2013 - V. Brevdo E-mail to Albert Tonn of Sovereighn Consulting: Dear Mr. Tonn: The Department has completed review of the 2013 Annual Monitoring Report dated June 21, 2013. Attached is the Department's concurrence letter

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

with the recommendations of the report. Please contact me if you have questions. Sincerely, Vadim Brevdo 08/20/13 - V. Brevdo E-mail from Albert Tonn of Sovereign Consultants: Vadim: As we discussed earlier, during the gauge and bail event on Friday, August 16th, 3.37 of LNAPL was observed in RW-40. The absorbent socks were fully saturated. Approximately 4 gallons of LNAPL was manually bailed and new absorbent socks were deployed. The large LNAPL thicknesses have appeared periodically in the past, but then return to lesser thicknesses. The well with the next greatest LNAPL thickness was RW-34 with 0.07 . RW-36 contained 0.06 of LNAPL and the absorbent socks were removed from this well and new absorbents deployed. Attached is a site plan for reference. The plan is to gauge that well and a nearby well (RW-36) next week. The absorbent socks will be inspected and replaced if needed and additional manual bailing will also be performed if necessary. Depending upon the amount of LNAPL measured, additional gauge and bail events for RW-40 may be performed. Let me know if you require additional information. Thank you, Al Albert M. Tonn Senior Project Manager - email: atonn@sovcon.com phone: 631-753-8380 - fax: 631-753-8385 Sovereign Consulting Inc. 1855 New Highway Suite C Farmingdale, NY 11735 www.sovcon.com 08/20/13 - V. Brevdo E-mail from V. Brevdo to Albert Tonn of Sovereign Consultants: Dear Mr. Tonn: Thank you for the update. The course of action outlined in your 8/20/2013 1:24 PM e-mail to address 3.37 feet of LNAPL in well RW-40 is acceptable to the Department. Please keep me informed on the outcome of gauging wells RW-40 and RW-36 next week. If larger LNAPL thickness become permanent Arc Terminals and Sovereign may need to re-evaluate situation and come up with alternative course of action. Thank you, Vadim 10/15/13 - V. Brevdo E-mail from Al Tonn of Sovereign Consultaning Vadim: Sovereign gauged RW-36 and RW-40 on Thursday, October 10th. RW-36 did not contain LNAPL and RW-40 only contained 0.05 of LNAPL. The absorbent socks in RW-36 were approximately 60% saturated and the absorbent socks in RW-40 were fully saturated. Approximately 4 gallons of a LNAPL-water mixture was bailed from RW-40 and placed into the on-site holding tanks. The absorbents were replaced and the spent absorbents placed into the on-site drum. The routine monthly gauge and bail event is scheduled for October 24th. If there are only minor LNAPL accumulations in RW-40 again, then the plan is go back to the routine monthly gauge and bail schedule. Let me know if you have any questions. Thanks, Al Albert M. Tonn Senior Project Manager - email: atonn@sovcon.com phone: 631-753-8380 - fax: 631-753-8385 02/11/2014 E-mail from Sovereign Consultants Vadim: Sovereign conducted the routine monthly gauge and bail event on Friday, February 7, 2014. Please note that due to severe icy conditions, not all of the wells were accessible and an attempt to gauge the remaining wells will be performed later in the month. TW-2 contained 1.04 of LNAPL. This well has not contained LNAPL since 2008. TW-2 is located close to the vapor recovery unit, which had a reported release on February 4th (NYSDEC Spill No. 13-10574 and NRC No. 1072927). See attached site plan for reference. Approximately 7 gallons of LNAPL was recovered from TW-2 using a combination of hand bailing and absorbent socks until no LNAPL was present. After about one hour, TW-2 was gauged again and no LNAPL was detected. A new absorbent sock was placed in TW-2 as a precaution. Sovereign is scheduled to go back to the terminal on Friday, February 14th to re-gauge the well and attempt to gauge the rest of the wells. If you have any questions, please feel free to call me. Thanks, Al VB

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

07/17/2014 - V. Brevdo Sovereign Consulting, Inc. submitted 2014 Annual Monitoring Report (July 2013-June 2014), Arc Terminals. Broklyn Terminal, 25 Paidge Avenue, Brooklyn. VB 07/18/2014 - V. Brevdo Current Project Status and Synopsis: Arc Terminals (a.k.a. Motiva Enterprises), Brooklyn Terminal, 25 Paidge Avenue, Brooklyn (Spill No. 8709990) The site is currently an active petroleum bulk storage facility, receiving product via barge and pipeline and distributing product via tanker truck. Ownership of the property was transferred in February 2013 from Motiva Enterprises LLC (Motiva) to Arc Terminals. In preparation for the property transfer, 42 Underground Storage Tanks (USTs) that were previously closed in-place, were removed and/or abandoned in-place. The work was performed under a Stipulation Agreement entered into by Motiva with the Department in June 2012 that incorporated a Remedial Action Plan (RAP) to address Light Non-Aqueous Phase Liquids (LNAPL) in the area of the Above Ground Storage Tanks (ASTs). The tank removal and LNAPL remediation work were summarized in two separate reports submitted by Motiva to the NYSDEC in January 2013. In February 2013, the Department issued a letter to Motiva, indicating: 1) no further actions were required relative to the tank removal work, 2) termination of the June 2012 Stipulation Agreement, and 3) closure of Spill Case Number 90-02114 associated with the June 2012 Stipulation Agreement. Further actions relative to LNAPL remediation were deferred to a new Case Manager and prior Stipulation Agreement executed in February 1998, associated with Spill Case Number 87-09990. In March 2013, the Major Oil Storage Facility (MOSF) Operating License (Number 2-1540) was transferred from Motiva to Arc Terminals. Monitoring activities conducted in accordance with the MOSF License requirements during the current reporting period (July 2013 through June 2014) consisted of monthly well gauging and annual groundwater sampling. Manual LNAPL recovery via hand bailing is conducted monthly in conjunction with the well gauging according to the remedial requirements of the 1998 Stipulation Agreement and associated Spill Case Number 87-09990. On July 17, 2014, Sovereign Consulting Inc., submitted an Annual Monitoring Report to the Department on behalf of Arc Terminals. Department is reviewing Annual Monitoring Report. Monitoring wells situated around the perimeter of the facility remain clear of LNAPL detections. Intermittent LNAPL accumulations in monitoring wells near the center of AST area continue to be observed. Concentrations of BTEX and MTBE in groundwater generally remained stable or decreased over time. One well showed increase in concentrations due to February 4, 2014 release from the vapor recovery unit. With the removal of free product from that well it is anticipated that concentrations will begin to decrease. Arc Terminals addressed the February 2014 release from the vapor recovery unit and recovered about 3,000 gals of free product mixed with snow and ice. Manual recovery of LNPAL and groundwater monitoring will continue. Absorbent socks will be deployed in wells demonstrating the highest or most consistent accumulation of LNAPL greater than 0.25 feet. VB 01/30/2015 - V. Brevdo e-mail from Sovereign Consultants: Vadim: The routine monthly gauging event at the Arc Brooklyn Terminal was originally scheduled for this past Tuesday, January 27th, but was postponed due to the snow. Sovereign conducted the routine monthly gauging event today. However, please be advised that due to snow piles and iced over areas, many wells were inaccessible. Hopefully, the weather will cooperate more in February. Thank you, Al 07-23-2015 - V. Brevdo

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

Sovereign Consultants submitted annual monitoring report for Spills Cases 8709990 and 1310574. Report provides rationale for and requests closure of the Spill Case 1310574 for which Ryan Piper is a project manager. Project manager for Spill Case 8709990 is Vadim Brevdo. Vadim Brevdo discussed submission of the monitoring report and spill closure request for No. 1310574 with Ryan Piper today, agreed that project manager for spill case 1310574 shall be changed from Piper to Brevdo, so that the site has one project manager and not two, and V. Brevdo will review the annual monitoring report and make a decision regarding spill case closure request for Spill Case 1310574. V. Brevdo 07-24-2015 - V. Brevdo Current Project Synopsis: Arc Terminals, Brooklyn Terminal (formerly owned by Motiva Enterprises LLC) 25 Paidge Avenue, Brooklyn (Spill Nos. 8709990 and 1310574) The site is currently an active petroleum bulk storage facility, receiving product via barge and pipeline and distributing product via tanker truck. Ownership of the property was transferred in February 2013 from Motiva Enterprises LLC (Motiva) to Arc Terminals. In preparation for the property transfer, 42 Underground Storage Tanks (USTs) that were previously closed in-place, were removed and/or abandoned in-place. The work was performed under a Stipulation Agreement entered into by Motiva with the Department in June 2012 that incorporated a Remedial Action Plan (RAP) to address Light Non-Aqueous Phase Liquids (LNAPL) in the area of the Above Ground Storage Tanks (ASTs). The tank removal and LNAPL remediation work were summarized in two separate reports submitted by Motiva to the NYSDEC in January 2013. In February 2013, the Department issued a letter to Motiva, indicating: 1) no further actions were required relative to the tank removal work, 2) termination of the June 2012 Stipulation Agreement, and 3) closure of Spill Case Number 90-02114 associated with the June 2012 Stipulation Agreement. Further actions relative to LNAPL remediation were deferred to a new Case Manager and prior Stipulation Agreement executed in February 1998, associated with Spill Case Number 87-09990. In March 2013, the Major Oil Storage Facility (MOSF) Operating License (Number 2-1540) was transferred from Motiva to Arc Terminals. Monitoring activities conducted in accordance with the MOSF License requirements during the current reporting period (July 2014 through June 2015) consisted of monthly well gauging and annual groundwater sampling. Manual LNAPL recovery via hand bailing is conducted monthly in conjunction with the well gauging according to the remedial requirements of the 1998 Stipulation Agreement and associated Spill Case Number 87-09990. On July23, 2015, Sovereign Consulting Inc., submitted an Annual Monitoring Report to the Department on behalf of Arc Terminals. Department is reviewing Annual Monitoring Report. Monitoring wells situated around the perimeter of the facility remain clear of LNAPL detections. Intermittent LNAPL accumulations in monitoring wells near the center of AST area continue to be observed. Concentrations of BTEX and MTBE in groundwater generally remained stable or decreased over time. Last year, one well showed increase in concentrations due to February 4, 2014 release from the vapor recovery unit. Arc Terminals addressed the February 2014 release from the vapor recovery unit and recovered about 3,000 gals of free product mixed with snow and ice. As was expected with the removal of free product from that well, concentrations have since decreased. Therefore, Sovereign recommended that the Spill Case No. 1310574, associated with 2/4/14 release event, be closed. The Department concurred with Sovereign s recommendation and closed Spill Case No. 1310574 on July 24, 2015.

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

Manual recovery of LNPAL and groundwater monitoring will continue. Absorbent socks will be deployed in wells demonstrating the highest or most consistent accumulation of LNAPL greater than 0.25 feet. The BTEX and MTBE concentrations in the wells located adjacent to Newtown Creek remain low. BTEX concentrations in these wells range from below the laboratory reporting limits in three wells to a maximum concentration of 434 ?g/L (MW-22R). MTBE concentrations range from below the laboratory reporting limit to 32 ?g/L (MW-21R). These low concentrations would not result in an impact to Newtown Creek. As was expected with the removal of free product from that well, concentrations have since decreased. Therefore, Sovereign recommended that the Spill Case No. 1310574, associated with 2/4/14 release event, be closed. The Department concurred with Sovereign s recommendation and closed Spill Case No. 1310574 on July 24, 2015. Spill Case 8709990 remains open. VB July 18, 2016 - V. Brevdo Arc Terminals, Brooklyn Terminal (formerly owned by Motiva Enterprises LLC) 25 Paidge Avenue, Brooklyn (Spill Nos. 8709990 and 1310574) The site is currently an active petroleum bulk storage facility, receiving product via barge and pipeline and distributing product via tanker truck. Ownership of the property was transferred in February 2013 from Motiva Enterprises LLC (Motiva) to Arc Terminals. In preparation for the property transfer, 42 Underground Storage Tanks (USTs) that were previously closed in-place, were removed and/or abandoned in-place. The work was performed under a Stipulation Agreement entered into by Motiva with the Department in June 2012 that incorporated a Remedial Action Plan (RAP) to address Light Non-Aqueous Phase Liquids (LNAPL) in the area of the Above Ground Storage Tanks (ASTs). The tank removal and LNAPL remediation work were summarized in two separate reports submitted by Motiva to the NYSDEC in January 2013. In February 2013, the Department issued a letter to Motiva, indicating: 1) no further actions were required relative to the tank removal work, 2) termination of the June 2012 Stipulation Agreement, and 3) closure of Spill Case Number 90-02114 associated with the June 2012 Stipulation Agreement. Further actions relative to LNAPL remediation were deferred to a new Case Manager and prior Stipulation Agreement executed in February 1998, associated with Spill Case Number 87-09990. In March 2013, the Major Oil Storage Facility (MOSF) Operating License (Number 2-1540) was transferred from Motiva to Arc Terminals. Monitoring activities conducted in accordance with the MOSF License requirements during the current reporting period (July 2015 through June 2016) consisted of monthly well gauging and annual groundwater sampling. Manual LNAPL recovery via hand bailing is conducted monthly in conjunction with the well gauging according to the remedial requirements of the 1998 Stipulation Agreement and associated Spill Case Number 87-09990. On July18, 2015, Sovereign Consulting Inc., submitted an Annual Monitoring Report to the Department on behalf of Arc Terminals. Department is reviewing Annual Monitoring Report. Monitoring wells situated around the perimeter of the facility, including wells located immediately along Newtown Creek, remain clear of LNAPL detections. Intermittent LNAPL accumulations in monitoring wells near the center of AST area continue to be observed and are consistent with historical observation both before and after the EFR events performed by Motiva in 2012 during the abandoned UST removals. However, the LNAPL accumulations are generally at reduced thickness than in the past and detected less frequently. Concentrations of BTEX and MTBE in groundwater generally remained stable or decreased over

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

time. The benzene concentrations in MW-15, located adjacent to the loading rack, decreased significantly from 150 micrograms per liter (?g/l) from the April 21, 2015 sample to 14 ?g/l from the April 21, 2016 sample. The BTEX and MTBE concentrations in the wells located adjacent to Newtown Creek remain low. BTEX concentrations in these wells range from below the laboratory reporting limits in three wells to a maximum concentration of 660 ?g/L (MW-22R). MTBE concentrations range from below the laboratory reporting limit to 18 ?g/L (MW-8). These low concentrations would not result in an impact to Newtown Creek. Monthly well gauging and annual groundwater sampling will continue in compliance with the MOSF License. Manual recovery of LNAPL via hand bailing will continue during the monthly gauging events on an as needed basis. Deployment of absorbent socks will continue in wells demonstrating the highest or most consistent accumulations of LNAPL. VB 08-15-2016 - V. Brevdo On August 12, 2016, Sovereign Consultants submitted Site Evaluation Report the purpose of which is to present data in preparation for closure of the spill case No. 8709990. Based upon the historic analytical data and the more recent data from April 2013 to date, Sovereign, on behalf of Arc Terminals, recommends that monthly well gauging, monthly LNAPL recovery (bailing and deployment of absorbent socks), and annual groundwater sampling continue. If LNAPL accumulations and dissolved hydrocarbon concentrations are similar or show a reduction, then a formal closure request will be presented to NYSDEC after the current monitoring period ends in June 2017. However, monthly well gauging, monthly LNAPL recovery, and annual sampling would continue as part of the MOSF monitoring program. If LNAPL accumulations or dissolved hydrocarbon concentrations increase, then the site will be re-evaluated. Having completed review of the Site Evaluation Report, the Department concurred with Sovereign s recommendations on August 15, 2016. VB "

Town: New York City
Record Added Date: 07/01/2005
Record Updated Date: 12/03/2015
Update By: JAMORAS
Site Description: Location:The Review Avenue Development I (RAD I) property is located at 37-30 Review Avenue, Long Island City, Queens County. This site is 3 acres in size and is northwest and adjacent to the Review Avenue Development II (aka Former Quanta Resources C241005) Site, separated only by Preston Alley which is an access alley/paper street that is part of the RAD I property. The Long Island Railroad tracks border the property along the southwest, Review Avenue and Calvary Cemetery border the property to the northeast and and industrial property borders the property to the northwest.Site Features:The majority of the site is paved with only a very small portion of the property along the Long Island Railroad tracks being unpaved. There are two brick buildings currently in use on site. The larger building, referred to as Building #1 is located toward the back of the property near the Long Island Railroad tracks. It has large overhead doors and is a commercial/industrial building. The smaller building, referred to as Building # 2, is located at the front of the property, on Review Avenue, and is a two story commercial office building.Current Zoning/Uses:The site is currently zoned for commercial and industrial uses. Building #1 is currently being leased by a truck repair shop and other commercial business. Building #2 is being used primarily as commercial office space with the lowest level of the building being used for warehousing and maintenance. Warehousing and maintenance has included the construction of movie sets, with paints, polyurethane, and lacquers being used on a regular basis. The open parking areas are being used as a commercial bus parking area and for utility contractor parking as well as for parking for the tenant of the buildings. All of the surrounding properties are in commercial or industrial use. Historic Uses:The earliest Sanborn map (1898) shows the parcel as part of the Eastern Distilling Company. No further development records are provided on the Sanborn maps until 1950 when the Site was shown as being occupied by the Van Iderstine Company poultry feed building. The Sanborn maps indicate that between 1979 and 1993, various operations, including Bekins Trucking and Nanco Contracting, leased the site from the Van Iderstine Company. Since approximately 1993 the site has been used for other purposes, mostly similar to the current uses described above (truck repair, bus parking area, commercial office space, warehouse space).Site Geology and Hydrogeology:The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to coarse sand with some laterally discontinuous

REVIEW AVENUE DEVELOPMENT I (Continued) **U003200549**

layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek.

Env Problem:

Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs) and metals. The analytical data collected on this site includes data for:Groundwater The Remedial Investigation completed in June 2005, as well as prior investigations included groundwater monitoring wells on both the RAD I and RAD II property. Shallow groundwater monitoring wells MW-1, MW-2 and MW-4R were installed on the RAD I property. These wells were used to help determine the extent/distribution of petroleum products in the form of a light non-aqueous phase liquid (LNAPL) which is present on the water table over much of the site. Additional monitoring wells were installed to isolate the monitoring zones for LNAPL and groundwater. Groundwater wells GAGW-07 and GAGW-08 were double cased through the LNAPL zone to obtain representative samples of groundwater not impacted by the LNAPL. LNAPL wells were installed with screens in the LNAPL zone so LNAPL samples could be obtained. Below is a summary of the groundwater and LNAPL data that was collected. Groundwater samples were collected from groundwater monitoring wells GAGW-07 and GAGW-08 as part of the RAD II remedial investigation. Samples were analyzed for VOCs, SVOCs, PCBs, metals and natural attenuation parameters. Groundwater sampling results indicated the presence of 1,2 dichloroethene at 12 parts per billion (ppb) and trichloroethene at 14 ppb exceeding the groundwater standard of 5 ppb for each VOC. No other site related contaminants appear to be impacting groundwater above standards. LNAPL LNAPL samples were collected from LNAPL monitoring wells MW-10, GAL-10, GAL-11, GAL-12, GAL-13, GAL-18, GAL-21, GAL-22, GAL-23, and GAL-24. LNAPL samples were analyzed for VOCs, SVOCs, PCBs, and metals. Results of VOC LNAPL analysis indicated the presence of benzene at .025 parts per million (ppm) toluene at 1.8 ppm, xylene at 1.4 ppm, trichlorethene at .054 ppm, and tetrachloroethene at .056 ppm,. In addition, PCB-aroclor 1242 was detected at 19 ppm and PCB-aroclor 1260 was detected at 15 ppm.Soil - The majority of RAD I property is currently paved. Soil sampling was conducted in connection with UST, concrete trench and sump removals (IRM) from the property. The post excavation samples collected as part of this work indicated that residual soil contaminant concentrations were well below commercial use soil cleanup objectives (CSCOs). This included VOCs and SVOCs associated with the former UST and fuel system that was removed. Toluene was detected at 4.8 ppm and total xylene was detected at 12.1 ppm well below the CSCO for these compounds of 500 ppm. Benzo(a)anthracene was detected at 1.4 ppm below the CSCO of 5.6 ppm and chrysene was detected at 1.5 ppm below the CSCO of 56 ppm.. Some contaminated subsurface soils are likely to remain within the residual LNAPL impacted area after the implementation of the area-wide LNAPL recovery remedy presented in the ROD for former Quanta Resources (a.k.a. RAD II) property. Data does not indicate any off-site impacts in soil related to this site.Soil Vapor - The Record of Decision for the Quanta Resources (RAD II) Site required a soil vapor intrusion study (Data Gap Investigation) on the RAD I property. This Data Gap Investigation was performed by Geosyntec in October 2010 to investigate baseline soil vapor conditions on the RAD I property and assess the potential for soil vapor intrusion concerns within buildings existing on the RAD I property.The soil vapor survey collected baseline soil vapor

REVIEW AVENUE DEVELOPMENT I (Continued) **U003200549**

	conditions beneath the RAD I parcel at 10 paved locations outside of the existing building perimeters. The results indicated the presence of vinyl chloride (ND to 2,300 ug/m3) and TCE (ND to 860 ug/m3) at various depths in the soil vapor and within close proximity to the onsite buildings. Sub-slab soil vapor sampling was then conducted in building #2 following building inspections performed at both buildings on the property. Building #1 was (and continues) to be used as open warehouse and a diesel truck mechanics shop, so no further sampling was conducted there. Building #2 is primarily office space with lower level storage and maintenance. The results of the sub-slab sampling conducted in building #2 indicate the presence of several compounds above guidance thresholds. This includes cis-1,2 dichloroethene (ND to 1,700 ug/m3), tetrachloroethene (ND to 21ug/m3), trichloroethene (680 to 1,700 ug/m3) and vinyl chloride (ND to 790 ug/m3). However, further actions were not required at the time due to the use of solvents within the building by the occupants.
Health Problem:	Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling has indicated that soil vapor intrusion does not represent a current exposure pathway given the use of the site. However, an additional soil vapor intrusion evaluation is recommended if the building use changes and solvents are no longer being used. Sampling has indicated that soil vapor intrusion is not an off-site concern.

Site Description: Location:The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site.Site Features:The original Site encompassed

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site.Current Zoning/Uses:The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment.- 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories- 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses:In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003.Site Geology and Hydrogeology:Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeastMiscellaneous:There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem:	The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab.The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds.Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Event date: 02/07/1995
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time, because it appears to be technically infeasible or inappropriate.

Event date: 08/11/2004
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

Event date: 02/09/2007
Event: Date For Remedy Selection (CM Imposed)

Event date: 09/29/2015
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 03/31/2016
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use:The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing.Site Features:The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site.Past Uses of the Site:The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway.A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC’s Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil lying above the groundwater table. See Site Code C241005 for post ROD updates.

Env Problem: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

	contaminants of concern include petroleum hydrocarbons, chlorinated solvents,heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089
Health Problem:	Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminates. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Update By:	JAMORAS
Site Description:	Location:The Former Quanta Resources Site, a.k.a. Review Avenue Development II Site (RAD II) is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. This site is adjacent to the Review Avenue Development I (RAD I) (seperated only by Preston Alley which is a access alley/paper street). The Long Island Railroad tracks boarder the property along the southwest. Site Features:The site is a fenced, open gravel parking lot. All above ground and below ground tanks, structures, and buildings were removed as part of an interim remedial measure in 2008.Current Zoning/Uses:The RAD II site is currently being used as a parking lot. It is zoned for commercial and industrial uses. Historical Uses:The RAD II property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in November 1981. Site Geology and Hydrogeology:The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to course sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the watertable under the site.
Env Problem:	Nature and Extent of Contamination:A viscous light non-aqueous phase liquid (LNAPL)is present at the watertable over the entire site. The LNAPL is a weathered petroleum. Groundwater flow is toward the south-southwest toward the Newtown Creek. The extent of the LNAPL has been delineated and it has not migrated beyond the Long Island Railway tracks downgradient.Known or suspected contaminants include: Petroleum, Chlorinated Solvents, other VOCs, and metals, impacting the soil and groundwater.An LNAPL collection and treatment system has been completed and is operating on-site. Significant Threat:The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

Health Problem:	Exposure to contaminated groundwater or soil is unlikely because the area is served by public water and access to the site is restricted by fencing. The potential for exposure via soil vapor intrusion off-site will be evaluated during the remedial design and will also be evaluated if new construction is planned on-site in the future.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013752313

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110004334872

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

Environmental Interest/Information System

KOSAN INDUSTRIAL CORP (Continued) **1000150474**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location:The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features:The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plan is ~1/2 mile north of the site. Current Zoning/Use(s):The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s):The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. This investigation was conducted in several phases, and was completed in the Summer of 2009.Site Geology and Hydrogeology:The

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (~138.5' below ground surface).Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem: Nature and Extent of Contamination:- GroundwaterThe primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each).- SoilPCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm).-Soil Vapor and Indoor AirConcentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3.Significant Threat:The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area anddata evaluated as they become available.

DEC Memo: "6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personel have uncovered a portion of the UST located inside the

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4' in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260 Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington) 8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal from the site building. IPT to confirm the permits needed before initiating work. URS will be providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

Remarks: appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)" "Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground."

Site Description: Location:The site is located immediately south of, and adjacent to, the building located at 21-03 44th Avenue in Long Island City, Queens, NY.Site Features:The site includes the sidewalk/street area immediately above and in the vicinity of a broken sewer line near the location of three groundwater monitoring points placed on the sidewalk in front of the building at 21-03, along 44th Avenue.Current Zoning and Land Use:The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately

QUEENS MEDALLION LEASING (Continued) **S109826178**

four hundred feet south of the site, along 44th Road.Past Use of the Site:Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Contamination appears to have entered the environment from a broken sewer pipe that connects the building at 21-03 44th Avenue and the main sewer line in the street. Site Geology and Hydrogeology:Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater.Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree.Significant Threat:Contamination presents a significant threat to the environment as demonstrated by the magnitude and aerial extent of groundwater impacts.

Health Problem: On- and off-site groundwater is contaminated with lead, chromium, hexavalent chromium and volatile organic compounds, primarily tetrachloroethene (PCE) and its breakdown products. The area is served by public water, thus exposure via ingestion of contaminated groundwater is not expected. Insufficient data exists for complete evaluation of potential exposures to other site-related contamination.

Town:	New York City
Record Added Date:	10/15/2013
Record Updated Date:	07/01/2016
Update By:	JEBROWN
Site Description:	Site Location: The proposed BCP site is located approximately a half mile east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly-shaped single parcel consisting of one tax parcel approximately 0.42 acres in size. The property is developed with a single, two-story commercial building built in 1929 which is constructed of masonry and stucco. Current Zoning and Land Use: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site. The nearest residential area is approximately four hundred feet south of the site, along 44th Avenue.Past Use of the Site: Prior uses of the building include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.
Env Problem:	Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (CVOCs), primarily tetrachloroethene (PCE), extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Hexavalent chromium is also present in site groundwater. Additionally, since painting of radium dials was performed at the site in the past, radium was also analyzed for, but not detected in site media.Soil:Recent studies did not detect VOCs above groundwater protection SCOs in site soils, though some early studies did show soil contamination with hexavalent chromium well above the groundwater protection SCO of 19 parts per million (ppm). Much of that soil was apparently removed during a self-directed removal action by a previous site owner. The most recent investigation showed the presence of PCE at 6.9 ppm in one boring at the site; however, that boring was sampled beneath the groundwater table and the contamination detected may be attributed to the high levels of groundwater contamination known to be present in the vicinity of the building. Several PAHs, including benzo(a)anthracene and benzo(a)pyrene, were found in a limited number of samples. While these compounds were found in excess of the restricted residential SCO, they were not at levels above those generally associated with historic fill. Since painting of radium dials was performed at the site in the past, radium was also analyzed for, but not detected in site soils. Data does not indicate any off-site impacts in soil related to this site.Groundwater:Contaminants exceeding groundwater standards include PCE at 36,000 parts per billion (ppb) vs. a standard of 5 ppb and hexavalent chromium as high as 1,500 ppb vs. a

QUEENS MEDALLION LEASING (Continued) **S109826178**

standard of 50 ppb. Trichloroethylene, cis- 1,2-dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree.Off-site groundwater appears to be contaminated by hexavalent chromium related to the previous site use as a metal plating facility; however, a removal action undertaken by a previous site owner appears to have addressed the source, and contamination is expected to diminish with time. Off-site groundwater is contaminated with chlorinated solvents, but this appears to be from an up-gradient BCP site (C241143), where a significant source of chlorinated solvents was found. Soil Vapor:The most frequently detected CVOCs in sub-slab samples were PCE, TCE, and 1,1,1-trichloroethane (1,1,1-TCA). At least one of these compounds was detected in five of the six sub-slab samples at concentrations indicating the mitigation may be required. Collocated indoor air samples indicated that soil vapor intrusion may be occurring, though the results did not indicate an immediate action was necessary. The highest sub-slab concentration of PCE was 18,000 micrograms per cubic meter [ug/m3]), and this was collocated with the highest indoor air concentration of 57 ug/m3. TCE was found as high as 5,700 ug/m3 in sub-slab soil vapors, and at a level of 2.4 ug/m3 in indoor air, though this sample was not located in the vicinity of the highest sub-slab sample. 1,1,1-TCA was found at a high of 3,100 ug/m3, and the collocated indoor air sample contained 18 ug/m3. All of the indoor air concentrations were at their highest in the first round of sampling, and concentrations of PCE and other CVOCs in subsequent sampling were either less than 1 ug/m3 or below detection limits. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: People may come in contact with contaminated soils if they dig below the foundation. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling has identified impacts associated with soil vapor intrusion at the on-site building and actions are recommended to address exposure. Environmental sampling indicates that site-related contamination does not pose a soil vapor concern for off-site buildings.

Record Upd:	01/15/2013
Updated By:	JXGRECO
Site Description:	Location:The site is located at 43-01 21st Street in Long Island City, Queens, NY.Site Features:The site primarily consists of the building located at 43-01 21st Street, which is currently used to house many small businesses, including dental labs, furniture makers, uniform sales and upholstery shops, among others.Current Zoning/Uses:The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately flve hundred feet south of the site, along 44th Road.Historical Uses:Prior uses of the building include manufacturing of X-ray equipment in the 1930's, as well as several smaller industries. Light to medium grade manufacturing has been conducted immediately to the south and east of the site for over fifty years. A New York City high school is located approximately four hundred fifty feet to the south of the site. Site Geology and Hydrogeology:Soil at the site consists of historic fill mixed with silty sands to a depth of approximately fifteen feet, with bedrock below this depth. Groundwater is encountered at approximately ten feet below ground surface, and the flow is generally to the south.
Env Problem:	Nature and Extent of Contamination: Data collected during the investigation of the 21-03 44th Avenue site RI, located immediately south of the Wills Bbuilding, indicated the Wills building to potentially be a contributing source of VOC contamination to that site.Wells were placed upgradient of the Wills building, and data from those wells was assessed relative to wells immediately down

THE WILLS BUILDING (Continued) **S113916801**

gradient of the Wills building, but upgradient of the 21-03 44th Avenue site. Results indicate that contamination at the downgradient location is over an order of magnitude greater than the upgradient locations, with PCE contaminant levels as high as 2700 ug/l in the overburden wells (vs. an overburden upgradient value of 190 ug/l), and 23,000 ug/l in the bedrock wells (vs. an upgradient value of 760 ug/l). Sub-slab and indoor air data was also collected at the Wills building and results are substantially above guidance. Sub-slab PCE levels are as high as 3,700,000 ug/cubic meter; and indoor air showed levels above the NYSDOH matrix values.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Control Type:	INST
Dt record added:	09/14/2015
Dt rec updated:	12/15/2015
Updated By:	RXSCHICK
Site Code:	490427
Site Description:	Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site.Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies.Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site.Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

THE WILLS BUILDING (Continued) **S113916801**

Plan.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 490427
Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building

THE WILLS BUILDING (Continued) **S113916801**

is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site.Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies.Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site.Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site.Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies.Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site.Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil,

THE WILLS BUILDING (Continued) **S113916801**

groundwater, and soil vapor is being managed under a Site Management Plan.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description:	Location:The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The approximately 1 acre site is described on the county tax map as Block No. 2487, Lots No. 1, 10, 12, 72 and 78. Site Features:The dimensions of the site are approximately 240 feet by 200 feet. The building consists of a number of smaller buildings that have been joined together. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To

49 DUPONT STREET (Continued) **1009232006**

the west is a park and to the northwest is a paved lot which is used for truck storage.Current Zoning/Use:The Site zoned M1-2/R6 which designates the site as manufacturing with a residential overlay. The site is currently vacant. Historic Use:The site has been in existence since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart removed all of their equipment and offices. There are 12 underground storage tanks (USTs) located on the Site. According to records, these tanks were emptied and closed as part of an Interim Remedial Measure (IRM). There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) number is 2-608875, and the Chemical Bulk Storage (CBS) number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate.Site Geology and Hydrogeology:Measurements of the groundwater elevation indicated groundwater flow is generally to west towards the East River.

Env Problem: Nature and Extent of Contamination:The plasticizers bis(2-ethylhexyl)phthalate, Di-n-Octyl phthalate, as well as high boiling, paraffinic, petroleum oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. TCE was also detected in soil vapor, shallow soil and groundwater in central portion of the site. From 1983 to 2004 NuHart and Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000 ppm of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. According to the Interim Investigation Report dated April 2010, a large plume of plasticizer NAPL mixture consisting of phthalates and paraffinic petroleum was identified under the western end of the factory where the plasticizer USTs were located. A small plume of NAPL consisting primarily of phthalate was identified beneath Lot 12 near one of the plasticizer tanks. The large plume has migrated off-site in a northwesterly direction under the sidewalk. Previous interim remedial measures (IRMs) implemented under the spill program involved cleaning the floors of the factory, cleaning out the USTs, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and recovery equipment. NAPL recovery has been ongoing since 2007. The IRM activitiy includes the use of a automated recovery unit at one recovery well and manual bailing from other wells. Typically about 70 to 80 gallons of product/water mixture are recovered each month.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil since it is under the ground surface, however, if the site is redeveloped, construction workers or future site occupants may come in contact

49 DUPONT STREET (Continued) **1009232006**

with site related contamination in soil if it is not handled properly. Also, the potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby structures via soil vapor intrusion needs to be evaluated.

Site Description: The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The building consists of a number of smaller buildings that have been joined together. The dimensions of the footprint of the one large building are approximately 400 feet by 200 feet. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage.The site has been in existence since 1887. It has been used for manufacturing, as an office, as storage, and for shipping and receiving. Prior to 1950, the site was used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. From 1983 to 2004, NuHart & Company made vinyl siding and sheeting at the site. After 2004, NuHart & Company removed all of their equipment and offices. The site is now used for the storage of plastic wrapping and many large (36 cu. ft.) fabric bags containing pellets of resin. There are 17 underground storage tanks located on the site and two large silos above ground at the west end of the building. The Petroleum Bulk Storage (PBS)number is 2-608875 (for 13 registered tanks). The site is a former Chemical Bulk Storage (CBS) facility #2-000444 with 5 plasticizer tanks. Liquid plasticizers stored included bis(2-ethylhexyl)tertphthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate.The requestor withdrew the application, and the site was listed on the Registry of Inactive Hazardous Waste disposal site as of June 2010 (see site no. 224136).
Env Problem: The plasticizers bis(2-ethylhexyl)phthalate anddi-n-octylphthalate, as well as #4 fuel oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. From 1983 to 2004 NuHart & Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000,000 ppb of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. A large plume of plasticizer NAPL was identified under the western end of the factory where the plasticizer USTs were located. This plume had migrated off-site in a northwesterly direction. A small plume of mostly #4 oil NAPL was identified under

49 DUPONT STREET (Continued) **1009232006**

the northeast corner of the factory and had migrated a shorty distance off site. The environmental remediation which followed involved cleaning the floors of the factory, cleaning out the underground storage tanks, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and equipment. The NAPL plumes have now been reduced in size and consist of three separate plumes. All of the plumes are contained under the sidewalks bounding the factory and under the footprint of the building. The smallest plume is under the northeast corner of the site. The former large plume under the western end of the factory is now two separate plumes (according to the November 26, 2008 gauging event) and consist solely of plasticizers. The thickness of the NAPL ranges from 0.16 feet to 1.38 feet. Product collection from these two plumes is continuing and, as of December 2008, has recovered a total of 8,356 gallons of NAPL.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/05/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013
Number of Days to Update: 45

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

North Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

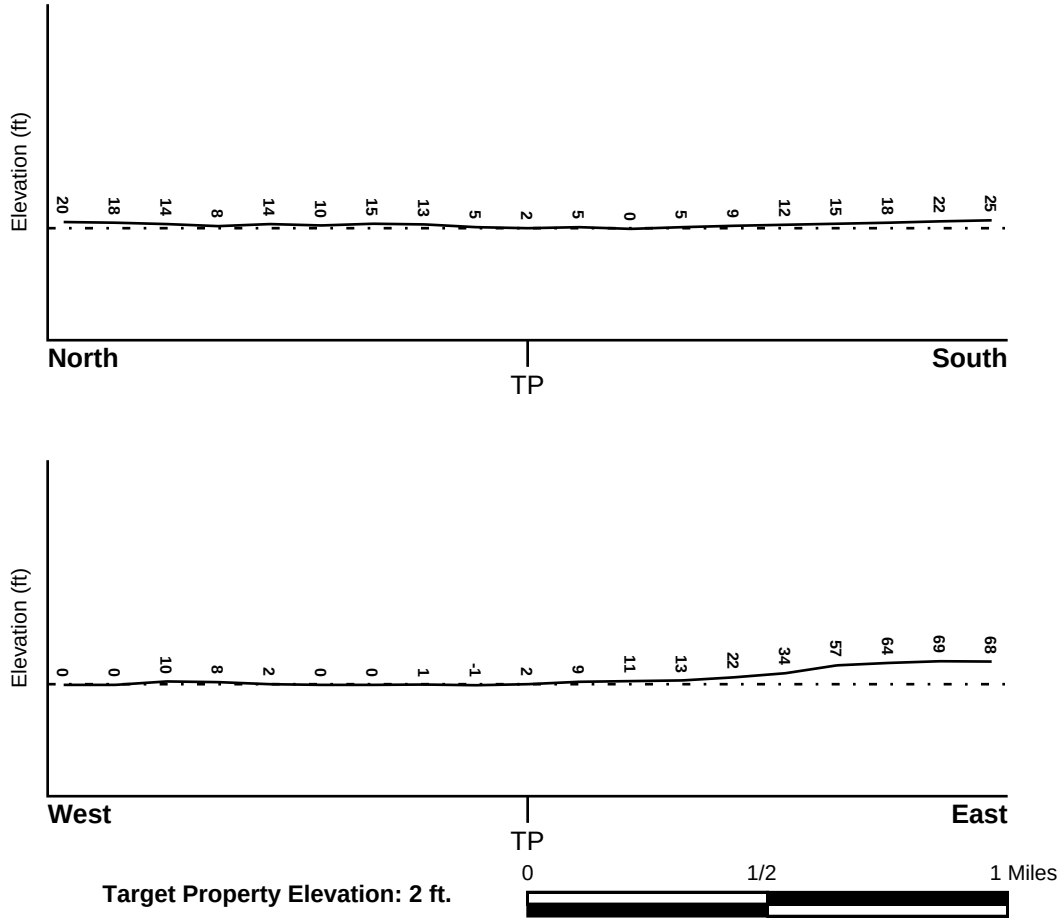
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 2 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970202F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970089F	FEMA FIRM Flood data

3604970206F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ATC Group Services LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

APPENDIX H PRIOR REPORTS

PARTNER

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

28-90 Review Avenue

Long Island City, New York 11101

Report Date: June 8, 2016
Partner Project No. 16-163158.1

Prepared for:

Pine River Capital Management L.P.
590 Madison Avenue, 36th Floor
New York, New York 10022

PARTNER

June 8, 2016

Mr. Kevin Wachter
Pine River Capital Management L.P.
590 Madison Avenue, 36th Floor
New York, New York 10022

Subject: Phase I Environmental Site Assessment
28-90 Review Avenue
Long Island City, New York 11101
Partner Project No. 16-163158.1

Dear Mr. Wachter:

Partner Assessment Corporation (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the above mentioned address (the "subject property"). This assessment was performed in general conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (201) 984-3651 or via email at mdahl@partneresi.com.

Sincerely,

Melissa Dahl

Melissa Dahl
Relationship Manager

EXECUTIVE SUMMARY

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and as set forth by Pine River Capital Management L.P. for the property located at 28-90 Review Avenue in the City of Long Island City, Queens County, New York (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Pine River Capital Management L.P. with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the west side of Review Avenue and to the south of Borden Avenue within an industrial area of Queens County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	28-90 Review Avenue, Queens, New York
Additional Address:	53-02 Review Avenue
Property Use:	Industrial
Land Acreage (Ac):	4.43
Number of Buildings:	7 (Buildings A-G)
Number of Floors:	1 to 2
Gross Building Area (SF):	37,642
Date of Construction:	*Circa* 1917, with additions in 1970 and 2010
Assessor's Parcel Number (APN):	Block 294, Lot 106
Type of Construction:	Concrete slab-on-grade foundation / steel / brick
Current Tenants:	Big Bus Ltd.; Triangle Services, Inc.; NuRide; Unlimited; Abax Services Corp.; Limited Interior Group; Advanced; Acon Construction; Always Trucking; Salco; Grand Central; Eye Productions; R&C; Bear Steel; Rickel; and 7,000 square feet of vacant space
Site Assessment Performed By:	Sara Hedtler of Partner
Site Assessment Conducted On:	June 2, 2016

The subject property is currently developed with seven buildings consisting of the following: a vacant two-story structure (Building A); a second vacant two-story structure (Building B); a single-story warehouse structure with double-height ceilings for woodworking (Building C); a single-story warehouse structure for automotive repair (Building D); a vacant single-story office building (Building E); a former fueling station canopy (Building F); a single-story warehouse structure for automotive repair (Building G); and several office trailers. The remainder of the subject property is comprised of asphalt-paved parking areas utilized by month-to-month tenants for vehicle storage. Vehicles range from passenger cars to tractor trailers. Onsite operations consist of vehicle storage, parking, repair and refueling activities.

According to available historical sources, the subject property was formerly occupied by two vacant sheds as early as 1898, was developed with "The Texas Company" (Texaco) oil terminal from at least 1917 to 1970, and was redeveloped with the current configuration for vehicle storage, repair and refueling by 1971. Tenants on the subject property include AA Trucking Renting Corp. (1976-2013); Joseph Eletto Transfer Inc. (2005-2013); Review Maintenance Corp. (2008); and Metro Express Services Inc. (2013).

The immediately surrounding properties consist of a parking lot to the north along Borden Avenue and Review Avenue; Long Island Rail Road tracks and Access Self Storage to the south along Review Avenue; an industrial building and a construction site for future commercial use to the east across Review Avenue; and Dutch Kills Creek to the west.

According to a previous subsurface investigation conducted on the subject property (2010), the depth and direction of groundwater in the vicinity of the subject property is inferred to be approximately 5 to 10 feet below ground surface (bgs) and to flow toward the northwest.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- Partner did not identify any RECs during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- The subject property was formerly utilized as a bulk petroleum storage facility occupied by The Texas Company from 1917 to 1971 and was equipped with multiple bulk storage tanks. The subject property was reportedly vacant and out-of-use from 1961 until 1971 when it was redeveloped into the current configuration. Since 1971, the subject property has operated as a truck and vehicle storage facility, with auto repair and refueling activities. Six spill cases were reported to the New York State Department of Environmental Conservation (NYSDEC) in association with the subject property between 1990 and 2008 (further discussed in Section 4.2.2), all of which have been closed by the NYSDEC. According to prior Phase I Environmental Site Assessments (ESAs) prepared by Partner in September 2015 and Impact Environmental Closures,

Inc. (IEC) in April 2014 (further discussed in Section 5.2.6), the most recent spill case dated 2008, was addressed via a Monitored Natural Attenuation Plan, for which case closure was issued in 2010. Based on the regulatory closure of the former releases obtained from the NYSDEC, the historical operations and bulk storage of petroleum onsite are considered an HREC for which no additional investigation appears to be warranted at this time.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following were identified during the course of this assessment:

- Partner observed six aboveground storage tanks (ASTs) for the storage of diesel, heating oil, motor oil and used oil on the subject property. Partner notes that our onsite observations of these ASTs do not directly correlate with the tank records on file with the NYSDEC. However, based on the aboveground location of the tanks and the absence of observed spills, leaks or releases in their vicinity, the presence of these ASTs is not expected to represent a significant environmental concern at this time.
- Partner observed localized areas of staining throughout the subject property. Specifically, Partner noted staining in the repair garage identified as Building D and on the exterior asphalt-paved parking areas. Based on the surficial nature of the staining, with no conduits (i.e. cracks, drains, etc.) to the subsurface identified in the vicinity of the staining, the staining is not expected to represent a significant environmental concern at this time.
- Due to the age of the subject property buildings, there is a potential that asbestos-containing materials (ACMs) are present on site. Overall, suspect ACMs were observed to be in good condition and do not pose a health and safety concern to the occupants of the subject property at this time. The overall interior condition of the subject was observed to be in fair to good condition, with the exception of widespread damage to the drywall systems in Buildings A, B and E.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 28-90 Review Avenue in Long Island City, Queens County, New York (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of an HREC and environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Should future redevelopment require the excavation of soils, additional subsurface investigation, including a ground-penetrating radar (GPR) survey, may be warranted to address former onsite operations and the possible presence of closed-in place USTs and monitoring wells.
- According to Mr. Aaron Milazzo of Pine River Capital Management L.P., future plans for the subject property will include the complete demolition of Buildings A, B, C, E and F. Only Buildings

D and G will remain onsite for automobile repair use. After demolition is complete, an open-walled steel canopy will be constructed over the northern section of the lot for vehicle storage and parking. All ASTs located in buildings that are slated for demolition should be properly decommissioned and removed in accordance with applicable State regulations.

- Best management practices, including improved housekeeping and secondary containment for tanks, drums and/or containers of hazardous substances, should be considered in order to mitigate potential future subsurface impacts.
- Continue to follow the existing Operations and Maintenance (O&M) Program in order to safely manage the suspect ACMs located at the subject property. A comprehensive survey for ACMs should be conducted prior to any planned renovation or demolition activities. A licensed asbestos abatement contractor and/or a Certified Asbestos Consultant should perform removal of identified ACMs in accordance with applicable regulations, including the preparation of specifications.

1.0 INTRODUCTION

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 28-90 Review Avenue in the City of Long Island City, Queens County, New York (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential

exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

In connection with a proposed extension of credit represented by, or investment in, a proposed loan, debt issuance, or other financing to be secured, in whole or in part, directly or indirectly by the property or by pledges of direct or indirect ownership interests, or representing preferred equity ownership interests, in

the property owner (in any such case, the "Financing") or the proposed issuance of any securities secured or otherwise backed, in whole or in part, directly or indirectly by the properties or the Financing (the "Securities"), this report by Partner (the "Preparer"), and any update thereof and the information therein, may be used and relied upon by Two Harbors Investment Corp., its affiliates, successors and assigns and (a) any actual or prospective purchaser of, or investor in, the Financing (or any portion thereof or interest therein by way of participation, syndication or otherwise), (b) any actual or prospective financing source for any such purchaser or investor, (c) any servicer for the Financing or the Securities, (d) any trustee for the Financing or the Securities, (e) any rating agency actually or prospectively rating the Financing or the Securities, (f) any underwriter or placement agent for the Financing or the Securities, (g) any institutional provider of any liquidity facility or credit support for the Financing or the Securities, and (h) the respective affiliates of each person or entity referenced in clauses (a)-(g) above, and (i) the respective officers, directors, employees, agents, advisors, counsel, successors and assignees of each person or entity referenced in clauses (a)-(h) above. In addition, this report or a reference to this report and its Preparer may be referred to and included in whole or in part, summarized or quoted (provided any such partial inclusion, summary, or quote is not misleading) in any term sheet, offering circular, private placement memorandum, registration statement, prospectus or prospectus supplement relating to the Financing or the Securities (or any portion thereof) and the Preparer agrees to cooperate reasonably in answering questions by any of the persons or entities referenced in clauses (a)-(i) above.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.

- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.

- Partner was not able to document the historical use of the subject property prior to 1898. The following sources were reviewed during the course of this assessment and were found to be limited: aerial photographs were not available prior to 1954; city directories were not available prior to 1976; topographic maps prior to 1947 were not reasonably ascertainable from local agencies; and fire insurance maps were not available prior to 1898. This data failure is not considered critical and does not change the conclusions of this report, as the 1898 fire insurance map revealed the subject property to be mostly undeveloped and with a vacant shed onsite. In

addition, the adjacent and surrounding areas are also shown mostly as undeveloped, with an iron works facility to the north and a dwelling to the east.

- Partner was unable to determine the property use at five-year intervals, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.

- Partner submitted Freedom of Information Act (FOIA) requests to the New York State Department of Environmental Conservation (NYSDEC), New York City Fire Department (FDNY) and New York City Department of Environmental Protection (NYCDEP) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, these agencies have not responded to Partner's requests. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.
- Partner's view of the ground during the site assessment was obstructed due to parked cars. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 28-90 Review Avenue in Long Island City, New York is located on the west side of Review Avenue and to the south of Borden Avenue. According to the New York City Department of Finance (NYCDOF), the subject property is identified as Block 294, Lot 106, and ownership has been vested in 28-90 Review Avenue Associates, L.L.C. since 2007.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently developed with seven buildings consisting of the following: a vacant two-story structure (Building A); a second vacant two-story structure (Building B); a single-story warehouse structure with double-height ceilings for woodworking (Building C); a single-story warehouse structure for automotive repair (Building D); a vacant single-story office building (Building E); a former fueling station canopy (Building F); a single-story warehouse structure for automotive repair (Building G); and several office trailers. The remainder of the subject property is comprised of asphalt-paved parking areas utilized by month-to-month tenants for vehicle storage. Vehicles range from passenger cars to tractor trailers. Onsite operations consist of vehicle storage, parking, repair and refueling activities.

The subject property is designated for industrial development by the City of New York.

The subject property is identified as a New York Underground Storage Tank (NY UST), NY Aboveground Storage Tank (AST), NY Leaking Storage Tank (LTANKS), NY Spills, Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), NY Manifest, New Jersey (NJ) Manifest, Facility Index System (FINDS) and Enforcement Compliance History Online (ECHO) site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within an industrial area of Queens County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

North: Parking lot (28-20 – 28-26 Borden Avenue)

South: Long Island Rail Road tracks (30-29 Greenpoint Avenue) and Access Self Storage (29-00 – 29-08 Review Avenue)

East: Review Avenue beyond which is an industrial building (28-44 – 28-50 Borden Avenue, 28-39 – 28-45 Review Avenue) and a construction site for future commercial use (29-01 – 29-05 Review Avenue, 52-09 – 52-19 29th Street)

West: Dutch Kills Creek

The adjacent property to the north was identified as a NY Spills, RCRA Non Generator/No Longer Regulated (NonGen/NLR), NY Manifest, FINDS and ECHO site; the adjacent property to the south was

identified as a NY UST, NY AST, NY Historical UST, NY Historical AST, RCRA NonGen/NLR, NY Manifest, FINDS and ECHO site; the adjacent properties to the east were identified as NY Spills, EDR US Historical Auto Station, NY AST and NY Historical AST sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Brooklyn, New York* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 4 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the northwest. The subject property is depicted on the 1995 map as developed with seven structures similar to the present industrial use structures.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow toward the northwest. The nearest surface water in the vicinity of the subject property is the Dutch Kills located immediately adjacent to the west of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the New York City Department of Environmental Protection (NYCDEP) serves the subject property vicinity. According to a representative of the NYCDEP, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of New York are surface water from a network of 19 reservoirs and three controlled lakes in a nearly 2,000-square-mile watershed that extends 125 miles north and west of New York City. Sources include: the Catskill/Delaware supply located in Delaware, Greene, Schoharie, Sullivan and Ulster counties; the Croton supply which is composed of 12 reservoir basins in Putnam, Westchester and Dutchess counties, and a groundwater supply in southeastern Queens.

According to a previous subsurface investigation conducted on the subject property (2010), the depth of groundwater in the vicinity of the subject property is inferred to be approximately 5 to 10 feet below ground surface (bgs).

2.4.3 Geology/Soils

The subject property is situated within the Atlantic Coastal Plains physiographic province of the State of New York. The uppermost geologic formation underlying the soils at the subject property is the Late Pleistocene Age Wisconsin glacial deposits. The area consists of moraine deposits, glacial drift and outwash materials. The topography slopes southward and is characterized by large glacial erratic and scattered deposits of glacial till, consisting of a mix of silt, sand, gravel, and large boulders.

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land, tidal marsh substratum. Urban Land complex are those soils in which the soil's original structure and content have been so altered by human activities it has lost its original characteristics and is thus unidentifiable. Urban soils consist of nearly level to moderately steep areas where the soils have been altered or obscured by urban works and structures. Included in this unit in mapping are many small areas where the original soil material has been disturbed by construction and areas where fill has been added. Also included are small areas of undisturbed soils. The soil properties and characteristics of this unit vary. Slopes range from 0 to 3 percent.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 3604970202F, dated September 5, 2007, the subject property appears to be located in Zone AE, areas subject to inundation by the 1% annual chance flood event determined by detailed methods.

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1898	Previous Report, Sanborn Map	Mostly undeveloped with vacant sheds on site
1915	Sanborn Map	Developed with draw bridge and a structure in the center of the property
1917 –1970	Aerial Photographs, Building Records, Previous Report, Sanborn Maps, Topographic Maps	Bulk Petroleum Storage
1971 – Present	Aerial Photographs, Building Records, City Directories, Interviews, Onsite Observations, Sanborn Maps, Topographic Maps	Vehicle Storage/Auto Repair

Tenants on the subject property include AA Trucking Renting Corp. (1976-2013); Joseph Eletto Transfer Inc. (2005-2013); Review Maintenance Corp. (2008); and Metro Express Services Inc. (2013). Potential environmental concerns were identified in association with the current or former use of the subject property, as further discussed in Section 4.2.2 and 5.2.6.

3.1 Aerial Photograph Review

Partner reviewed available aerial photographs of the subject property and surrounding area from NETR Online on June 3, 2016. The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1954, 1966	***Scale: 1"=100'***
Subject Property:	Appears to be developed with six structures located throughout the subject property, likely for industrial use
North:	Appears to be developed with a multi-story industrial structure along Borden Avenue and Review Avenue
South:	Appears to be developed with railroad tracks and several multi-story industrial structures along Review Avenue
East:	Appears to be developed with multiple multi-story industrial structures across Review Avenue
West:	Appears to be the Dutch Kills Creek

Date: 1974, 1980, 1994	***Scale: 1"=100'***
Subject Property:	Appears to be developed with several industrial structures and utilized for parking and vehicle storage throughout the lot; a former large structure along the southern portion of the lot is no longer visible
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Date: 2004, 2006, 2008, 2009, 2011, 2012, 2013	*Scale: 1"=100'*
Subject Property:	No significant changes visible
North:	Appears to be razed of the former industrial structure and utilized for vehicle parking along Borden Avenue and Review Avenue
South:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Due to copyright restrictions, copies of reviewed aerial photographs are not included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from Environmental Data Resources, Inc. (EDR) on May 27, 2016. The following observations were noted to be depicted on the subject property and adjacent properties during the fire insurance map review:

Date: 1898	
Subject Property:	Depicted as developed with two vacant sheds; the majority of the subject property is depicted as undeveloped; the western portion of the subject property is depicted with a canal basin
North:	Depicted as developed with a one- to two-story foundry, a four-story fitting shop, a two-story office building, and a four-story storage facility
South:	Depicted as developed with railroad tracks, developed with a dwelling on Marsh Street and undeveloped across Marsh Street
East:	Insufficient map coverage
West:	Depicted as undeveloped land followed by a railroad and a canal basin

Date: 1915	
Subject Property:	Depicted as razed of the former sheds along the eastern portion of the subject property; depicted as developed with a draw bridge and a structure in the center of the subject property and a portion of a store in the western portion of the subject property
North:	Former foundry depicted as vacant; depicted as developed with a one-story building labeled as Ed Buhler's Cement Storage, and a two-story structure occupied by Indian Refinery Co. for the storage of oils and gasoline
South:	Depicted as developed with two two-story storage structures and a four-story industrial structure utilized for varnishing and painting operations across Marsh Street
East:	Insufficient map coverage
West:	No significant changes depicted

Date: 1928	
Subject Property:	Depicted as developed with a bulk oil storage terminal consisting of six ASTs, associated piping, and eight structures for use by The Texas Company
North:	Structures identified as occupied by Howells, Field & Goddard; no other significant changes depicted
South:	No significant changes depicted

Date: 1928	
East:	No significant changes depicted
West:	No significant changes depicted

Date: 1936	
Subject Property:	Additional bulk storage is depicted, consisting of two 20,000-gallon ASTs in the western portion of the property, a gas tank in the northern portion of the property, and four 15,000-gallon USTs and a gasoline truck loading structure in the eastern portion of the subject property; six existing ASTs along the southern portion are depicted as 275,000-gallon crude oil, fuel oil, kerosene, naphtha, and gasoline tanks. The subject property appears to be addressed at 5302 Review Avenue. No other significant changes depicted
North:	Structures now depicted as warehouses; no other significant changes depicted
South:	Four-story and eastern two-story structure depicted as combined into one building for manufacturing use; no other significant changes depicted
East:	Insufficient map coverage
West:	Depicted as Dutch Kills Creek

Date: 1947	
Subject Property:	No significant changes depicted
North:	Structures now depicted as occupied by Porcelain Metals Inc. for enamel baking and spraying, and metal works use; no other significant changes depicted
South:	No significant changes depicted
East:	Insufficient map coverage
West:	No significant changes depicted

Date: 1950	
Subject Property:	No significant changes depicted
North:	Structure now depicted as occupied by Seaporcel Metals Inc.; no other significant changes depicted
South:	No significant changes depicted
East:	Insufficient map coverage
West:	No significant changes depicted

Date: 1970	
Subject Property:	Structures depicted as vacant; however, the USTs and ASTs remain depicted onsite; no other significant changes depicted
North:	Structure now depicted as utilized for paper bag manufacturing; no other significant changes depicted
South:	No significant changes depicted
East:	Insufficient map coverage
West:	No significant changes depicted

Date: 1977	
Subject Property:	The subject property appears to have been redeveloped and the 275,000-gallon bulk storage ASTs, 15,000-gallon USTs and gas tank are no longer depicted on the property; however, the 20,000-gallon ASTs in the western portion of the property, remain depicted. The property is depicted as commercial use.
North:	No significant changes depicted
South:	No significant changes depicted
East:	Insufficient map coverage
West:	No significant changes depicted

Date: 1979, 1980, 1985, 1986	
Subject Property:	Subject property depicted as a trucking terminal with the current structures depicted; no other significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
East:	Insufficient map coverage
West:	No significant changes depicted

Date: 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996	
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	Four-story structure depicted as a warehouse; no other significant changes depicted
East:	Insufficient map coverage
West:	No significant changes depicted

Date: 1999, 2001, 2002, 2003, 2004, 2005, 2006	
Subject Property:	No significant changes depicted
North:	Structure depicted as a loft; no other significant changes depicted
South:	No significant changes depicted
East:	Insufficient map coverage
West:	No significant changes depicted

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on May 27, 2016 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 28-90 and 53-02 Review Avenue (Subject Property)	
Year(s)	**Occupant Listed**
1922	No listings
1934	No listings
1939	No listings
1945	No listings
1950	No listings
1962	No listings

City Directory Search for 28-90 and 53-02 Review Avenue (Subject Property)

Year(s)	Occupant Listed
1967	No listings
1970	No listings
1976	AA Truck Renting Corp. (28-90 Review Avenue)
1983	AA Truck Renting Corp. (28-90 Review Avenue)
1991	AA Truck Renting Corp. (28-90 Review Avenue)
1996	No listings
2000	No listings
2005	AA Truck Renting Corp., Joseph Eletto Transfer Inc. (28-90 Review Avenue)
2008	AA Truck Renting Corp., Joseph Eletto Transfer Inc., Review Maintenance Corp. (28-90 Review Avenue)
2013	AA Truck Renting Corp., Joseph Eletto Transfer Inc., Metro Express Services Inc. (28-90 Review Avenue)

According to the city directory review, the subject property was occupied by AA Truck Renting Corp. from at least 1976 through 2013. Environmental concerns associated with the current and historical usage of the subject property are further discussed on Sections 4.2.2 and 5.2.6.

According to the city directory review, the adjacent properties have been occupied by various commercial and industrial tenants since at least 1934, as further discussed in Section 4.2.3.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from NETR Online on June 3, 2016. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date: 1947	
Subject Property:	Depicted as developed with two likely industrial structures
North:	Depicted as developed with a likely industrial structure along Borden Avenue
South:	Depicted as developed with railroad tracks and two likely industrial structures
East:	Depicted as developed with two likely industrial structures across Review Avenue
West:	Depicted as the Dutch Kills Creek

Date: 1958	
Subject Property:	Depicted as developed with six likely industrial structures
North:	Depicted as developed with a likely industrial structure along Borden Avenue
South:	No significant changes depicted
East:	Depicted as shaded, indicating dense urban development; no individual structures depicted
West:	No significant changes depicted

Date: 1967, 1970, 1975, 1979, 1999	
Subject Property:	Depicted as developed with an additional industrial structure along the eastern portion of the lot; no other significant changes depicted
North:	No significant changes depicted
South:	Depicted as shaded along the eastern lot along Review Avenue, indicating dense urban development; one structure is depicted along Review Avenue
East:	No significant changes depicted
West:	No significant changes depicted

Due to copyright restrictions, copies of reviewed topographic maps are not included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data	
Name of Agency:	New York State Department of Environmental Conservation (NYSDEC)
Point of Contact:	FOIL Officer/Online Database
Agency Address:	625 Broadway, Albany, New York 12233
Agency Phone Number:	(718) 482-4507
Date of Contact:	May 31, 2016
Method of Communication:	Email/Online
Summary of Communication:	As of the date of this report, Partner has not received a response from the NYSDEC for inclusion in this report. Partner reviewed available online databases through the NYSDEC. Nine petroleum bulk storage (PBS) tanks (Facility ID 2-238643) and six closed spills (Spill Numbers 9010146, 9311731, 9313946, 9600032, 0803348 and 0807459) were identified on the subject property, as further discussed in Section 4.2.2.

4.1.2 Health Department

Regulatory Agency Data	
Name of Agency:	New York City Health Department (NYCDOH)
Point of Contact:	Records Access Officer
Agency Address:	42-09 28th Street, Long Island City, New York 11101
Agency Phone Number:	(347) 396-6078
Date of Contact:	May 31, 2016
Method of Communication:	Emailed Request
Summary of Communication:	No records regarding hazardous substance use, storage or releases, asbestos or lead paint violations, or the presence of USTs and AULs on the subject property were on file with the NYCDOH.

4.1.3 Fire Department

Regulatory Agency Data	
Name of Agency:	New York City Fire Department (FDNY)
Point of Contact:	Public Records Unit/Tanks Section
Agency Address:	9 MetroTech Center, Brooklyn, New York 11201
Agency Phone Number:	(718) 999-2441
Date of Contact:	May 31, 2016
Method of Communication:	Mailed Request
Summary of Communication:	As of the date of this report, Partner has not received a response from the FDNY for inclusion in this report.

4.1.4 Building Department

Regulatory Agency Data	
Name of Agency:	New York City Department of Buildings (NYCDOB)
Point of Contact:	Online Database
Agency Address:	280 Broadway, 7th Floor, New York, New York 10007
Agency Phone Number:	(212) 566-5000
Date of Contact:	June 3, 2016
Method of Communication:	Online
Summary of Communication:	Records were available for review, as further discussed in the following table:

Building Records Reviewed for 28-90 and 53-02 Review Avenue (Subject Property)		
Year(s)	**Owner/Applicant**	**Description**
1998-2002	N/A	Alteration Permits Job No. 400881621: Installation of 2-hour fire-rated 4,000-gallon aboveground diesel storage tank. Issued December 22, 1998. Job No. 401537574: Obtain certificate of approval for fuel oil installation installed under permit from Department of Ports & Terminals. Issued October 18, 2002.
0000	N/A	Demolition Permit
1918-1988	N/A	New Building Permits (1908, 1988)
1987	N/A	One Dismissed DOB Violation

4.1.5 Planning Department

Regulatory Agency Data	
Name of Agency:	New York City Department of City Planning (DCP)
Point of Contact:	Online Zoning Map
Agency Address:	22 Reade Street, New York, New York 10007
Agency Phone Number:	(212) 720-3300
Date of Contact:	June 3, 2016
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned "M3-1" for industrial development by the City of New York.

4.1.6 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	New York State Department of Environmental Conservation (NYSDEC)
Point of Contact:	Online Mapping Application
Agency Address:	625 Broadway, Albany, New York 12233
Agency Phone Number:	(718) 482-4507
Date of Contact:	June 3, 2016
Method of Communication:	Online
Summary of Communication:	According to the NYSDEC, no oil or gas wells are located on or adjacent to the subject property.

4.1.7 Assessor's Office

Regulatory Agency Data	
Name of Agency:	New York City Department of Finance (NYCDOF)
Point of Contact:	Open Accessible Space Information System (OASIS)
Agency Address:	1 Centre Street, New York, New York 10007
Agency Phone Number:	(212) 669-4855
Date of Contact:	June 3, 2016
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Block 294, Lot 106 and has been owned by 28-90 Review Avenue Associates, LLC since 2007.

4.1.8 New York City Department of Environmental Protection

Regulatory Agency Data	
Name of Agency:	New York City Department of Environmental Protection (NYCDEP)
Point of Contact:	Records Officer
Agency Address:	59-17 Junction Boulevard, 19th Floor, Flushing, New York 11373
Agency Phone Number:	(718) 595-6543
Date of Contact:	May 31, 2016
Method of Communication:	Faxed Request
Summary of Communication:	As of the date of this report, Partner has not received a response from the NYCDEP for inclusion in this report. Additionally, no boiler application records for the subject property were identified on the NYCDEP's Clean Air Tracking System (CATS) online database.

Copies of pertinent documents from the above agencies are included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N

4.2.2 Subject Property Listings

The subject property is identified as a NY UST, NY AST, NY LTANKS, NY Spills, RCRA-SQG, NY Manifest, NJ Manifest, FINDS and ECHO site in the regulatory database report, as discussed below:

- The subject property, identified as AA Truck Renting Corp. at 28-90 Review Avenue, is listed with the following tanks registered with the NYSDEC under Facility ID 2-238643:
    - *Tank 001:* A 4,000-gallon diesel UST installed in 1971 and closed in place on April 28, 1999.
    - *Tank 002:* A 4,000-gallon diesel UST installed in 1971 and closed in place on April 28, 1999.
    - *Tank 003:* A 4,000-gallon diesel UST installed in 1971 and removed on April 28, 1999.
    - *Tank 004:* A 5,000-gallon #2 fuel oil UST installed in 1971 and listed as currently "In Service." *Partner notes that this tank is physically located aboveground within Building C and has not been used since Hurricane Sandy (October 2012).*
    - *Tank 005:* A 275-gallon lube oil AST, with no soil contact, installed in 1971 and listed as currently "In Service."
    - *Tank 006:* A 500-gallon waste oil AST, with no soil contact, installed in 1971 and listed as currently "In Service."

- *Tank 007:* A 275-gallon lube oil AST, with no soil contact, installed in 1971 and listed as currently "In Service."
- *Tank 008:* A 275-gallon AST with the contents listed as "Other" and with no soil contact, installed in 1971 and removed on April 28, 1999.
- *Tank 009:* A 4,000-gallon diesel AST installed on May 17, 1999 and listed as currently "In Service."

Furthermore, this site reported six spills under the following NYSDEC Spill Numbers:

- *Spill Number 9010146*: This release was reported to the NYSDEC on December 18, 1990. According to the regulatory database report, 40 gallons of #2 fuel oil was released onto the ground as a result of overfill caused by a faulty gauge. Tyree Bros were notified to perform clean up. The spill obtained regulatory closure on November 11, 1991.
- *Spill Number 9311731*: This release was reported to the NYSDEC on January 3, 1994. According to the regulatory database report, less than one gallon of #2 fuel oil was released and contained on pavement. The NYSDEC response took corrective action and sorbent was applied to pick up the spilled contaminants. The spill obtained regulatory closure on January 3, 1994.
- *Spill Number 9313946*: This release was reported to the NYSDEC on February 26, 1994. According to the regulatory database report, less than one pound of diesel fuel was released due to "tank test failure." The tank test was deemed "inconclusive" and was retested the same day and was found to be tight. No repairs were made and no excavations were performed. The spill obtained regulatory closure on September 9, 2006.
- *Spill Number 9600032*: This release was reported to the NYSDEC on April 1, 1996. According to the regulatory database report, the spill was called in as a result of human error, "the driver was told to fill the wrong tank." The spill was classified as a known release with minimal potential for fire hazard. Reportedly, the spill impacted the sewer system, which discharged off-site. Cleanup was reportedly performed by "RP." The spill obtained regulatory closure on May 8, 1996.
- *Spill Number 0803348*: This release was reported to the NYSDEC on June 6, 2008. According to the regulatory database report, four gallons of diesel/waste oil/motor oil was released due to poor housekeeping, which was discovered during an inspection. The spill obtained regulatory closure on July 28, 2008.
- *Spill Number 0807459*: This release was reported to the NYSDEC on October 2, 2008. According to the regulatory database report, there was a concern of contaminated soil. The spiller also reported that floating product was observed on onsite groundwater. Initial soil borings found volatile organic compound (VOC) hits and semivolatile organic compound (SVOC) hits that were well below or slightly above the Technical Administrative Guidance Memorandum (TAGM). Six oil recovery wells were installed on the property. The spill obtained

regulatory closure on September 27, 2010. (Refer to Section 6.1.5 for additional well information.)

Based on the regulatory oversight and closed regulatory status of documented releases, reported clean ups related to the releases and identification of willing responsible parties, these listings are not expected to represent a significant environmental concern.

Additionally, the subject property is identified on the RCRA and Manifest databases under EPA ID NYD012473583. AA Truck Renting Corp. has operated as a RCRA-SQG since 1986. Historical hazardous waste generated at the subject property was identified as EPA Waste Codes: D000 (undefined waste) and D001 (ignitable waste). No violations were reported for the facility. Additionally, this site was identified on the NY and NJ Manifest databases for the removal of hazardous materials from 2007 to 2015. AA Truck Renting Corp. is also listed in the FINDS (Registry ID 110007999764) and ECHO (ENV ID 1016248122) databases due to the facility's RCRA listings. Based on the current regulatory status and lack of open releases or violations, these listings are not expected to represent a significant environmental concern.

4.2.3 Adjacent Property Listings

The adjacent property to the north is identified as a NY Spills, RCRA NonGen/NLR, NY Manifest, FINDS and ECHO site in the regulatory database report, as discussed below:

- 28-20 Borden Avenue is located adjacent to the north and cross- to down-gradient of the subject property. This site reported three releases, as discussed below:
    - *Spill Number 9702480:* This release was reported to the NYSDEC on May 23, 1997. According to the regulatory database report, 3,000 sqaure feet of asbestos-containing material contaminated soils during a roof removal. The site was cleaned up, impacted soils were removed, and the spill was granted regulatory closure on May 28, 1997.
    - *Spill Number 1009365:* This release was reported to the NYSDEC on November 30, 2010. According to the regulatory database report, the source of the release was a 2,000-gallon UST inside a building. Approximately 2,000 cubic yards of soil were impacted; however, groundwater was not significantly impacted. Reportedly, approximately 213 tons of soils were removed from the property and end point samples indicated that the impacted soils were removed. The spill was granted regulatory closure on September 18, 2012.
    - *Spill Number 1204192:* This release was reported to the NYSDEC on July 27, 2012. According to the regulatory database report, this listing is reported for a second tank associated with spill 1009365. The spill obtained regulatory closure on September 18, 2012.

  Based on the closed regulatory status, removal of impacted soils and cross-gradient location, these spill listings are not expected to represent a significant environmental concern for the subject property.

  Additionally, this site is identified on the RCRA and Manifest databases under EPA ID NY0000100735. This site was identified as a verified non-generator in 1999, 2004 and 2007. The facility's historical

hazardous waste listings included a conditionally exempt small quantity generator (CESQG) listing in 2006, a SQG listing in 1994, and large quantity generator (LQG) listings in 2003 and 2012 for ignitable waste, spent non-halogenated solvents, lead, and corrosive waste. This site received a notice of violation in May 2004, for which compliance was achieved in June 2004. Additionally, this site was identified on the NY Manifest database for the removal of hazardous materials from 1994 to 2003. The facility is also listed in the FINDS (Registry ID 110001616635) and ECHO (ENV ID 1007111851) databases related to its RCRA listings. Based on the current non generator status and lack of open releases or violations, these listings are not expected to represent a significant environmental concern for the subject property.

The adjacent property to the south is identified as a NY UST, NY AST, NY Historical UST, NY Historical AST, RCRA NonGen/NLR, NY Manifest, FINDS and ECHO site in the regulatory database report, as discussed below:

- Access Self Storage at 29-00 Review Avenue is located adjacent to the south and cross-gradient of the subject property. This site holds records for four current and former PBS tanks under NYSDEC Facility ID 2-083887:
    - *Tank 001:* One 10,000-gallon #2 fuel oil AST installed in 1946 and listed as currently active.
    - *Tank 1:* One 10,000-gallon #2 fuel oil AST installed at an unreported date and removed on November 1, 1993.
    - *Tank 2 & Tank 3:* Two 550-gallon gasoline USTs installed at an unreported date and removed on November 1, 1993.

    Based on the removal of the USTs, aboveground nature of the active tanks, and lack of reported releases or violations, these listings are not expected to represent a significant environmental concern for the subject property.

    Additionally, this site is identified on the RCRA and Manifest databases under EPA ID NYD056410178. This site was identified as a verified non generator since 1997, with a historical SQG listing in 1997 for ignitable waste and benzene. No violations were reported for the facility. This site was identified on the NY Manifest database for the removal of hazardous materials from 1993 to 2007, and the FINDS (Registry ID 110004360566) and ECHO (ENV ID 1000872149) databases due to its RCRA listings. Based on the current non generator status and lack of reported releases or violations, these listings are not expected to represent a significant environmental concern for the subject property.

The adjacent property to the east is identified as a NY Spills site in the regulatory database report, as discussed below:

- A street spill (Spill No. 0504537) was reported at 28901 Review Avenue on July 15, 2005. The release occurred as a result of a moving vehicle and was reportedly limited to the roadway. According to the regulatory database report, "Minor spill on asphalt from moving vehicle. No recoverable spill and only stain present. No soil or groundwater affected. No sewer or drains affected." Regulatory closure was

obtained on July 18, 2005. Based on the closed regulatory status and lack of impacted media, this listing is not expected to represent a significant environmental concern for the subject property.

The adjacent property to the east is identified as an EDR US Historical Auto Station site in the regulatory database report, as discussed below:

- 2844 Borden Avenue is identified as an EDR US Historical Auto Station for the tenants identified as Anchor Auto Electric Svce Incorporated from 1999 to 2000 and Mondial Automotive Inc. from 2006 and 2008. 2839 Review Avenue is also identified as an EDR US Historical Auto Station for the tenants identified as Gee Dee Genl Auto Repr Company from 1999 to 2008 and King Royal Auto Repair from 2009 and 2012. Although hazardous substances and petroleum products were likely associated with the former auto repair operations conducted on the adjacent property, no improper storage or handling of these materials was reported to the local regulatory agencies. The adjacent property is not listed for any spills or releases in connection with the use or handling of these materials. Based on the lack of reported releases or hazardous materials listings, this listing is not expected to represent a significant environmental concern for the subject property.

The adjacent property to the east is identified as a NY AST and NY Historical AST site in the regulatory database report, as discussed below:

- 29-05 Review Avenue is located adjacent to the east and cross-gradient of the subject property. This site reportedly operated a 2,500-gallon #2 fuel oil AST, which was installed at an unreported date, registered with the NYSDEC under Facility ID 2-082627, and removed in 1995. Based on the removal of the tank and lack of reported releases or violations, this listing is not expected to represent a significant environmental concern for the subject property.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

Based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, no sites of concern are identified in the regulatory database report.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

No orphan sites of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Pine River Capital Management L.P. (User of this report).

User Responsibilities

Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire	**X**			
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports			**X**	
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property since 2007, identified as 28-90 Review Avenue Associates, L.L.C., was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Mr. Aaron Milazzo, of Pine River Capital Management L.P., indicated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

According to Mr. Milazzo, future plans for the subject property will include the complete demolition of Buildings A, B, C, E and F. Only Buildings D and G will remain on site for automobile repair use. After demolition is complete, an open-walled steel canopy of approximately 35,000 square feet in size will be constructed over the northern section of the lot for vehicle storage and parking. Mr. Milazzo provided a copy of the subject property's rent roll, and parcel site plans before and after the proposed demolition.

5.1.3 Interview with Key Site Manager

Mr. James (last name not provided), property manager from 1Stop LIC Property Management, indicated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

According to James, the subject property was developed in the 1970s for the current automobile repair and vehicle storage use. James further stated that no USTs remain on site, and the 5,000-gallon heating oil AST located in Building C has been out of service since Hurricane Sandy occurred in 2012. According to James, the 275-gallon heating oil tank in Building C was also not in use at the time of site reconnaissance.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interviews with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interviews with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase I Environmental Site Assessment Report, Partner Assessment Corporation (September 23, 2015)

Partner Assessment Corporation (Partner) prepared this report on behalf of The Bancorp Bank. The assessment was performed in general accordance with ASTM Standard E1527-13. The assessment consisted of a site reconnaissance, interviews with knowledgeable personnel, review of historical information, a review of federal, state and local regulatory databases and included a limited visual asbestos and lead paint survey. Pertinent information contained in this report is summarized below:

- At the time of the 2015 assessment, the subject property was occupied by the current tenants for vehicle parking, storage and repair operations.
- According to the Partner report, the subject property was formerly occupied by a bulk petroleum storage terminal from at least 1917 to 1971, and was redeveloped with the current configuration by 1971. Reportedly, the subject property was vacant for approximately 10 years prior to purchase of the property in 1971. Since 1972 the subject property has operated as a storage and repair facility for large commercial vehicles.
- Partner identified nine current or former tanks under NYSDEC Facility ID 2-238643 and six closed spill cases (10146, 9311731, 9313946, 9600032, 0803348 and 0807459) associated with the subject property.

- Partner reviewed a previous Phase I Environmental Site Assessment report for the subject property prepared by Impact Environmental Closures, Inc. (IEC) and dated April 22, 2014 and updated June 25, 2014.
    - According to the IEC report, the subject property was formerly undeveloped in 1898 and 1915, and occupied by "The Texas Company" (Texaco) oil terminal from 1936 to 1972, and AA Truck Renting from 1973 to 2014.
    - IEC identified the following ASTs during the site reconnaissance:
        - One 275-gallon waste oil AST in the auto repair facility.
        - One 150-gallon waste oil AST in the auto repair facility.
        - One 500-gallon fuel oil AST in a shed abutting the repair space.
        - One (empty) 5,000-gallon fuel oil AST in the vacant building to the southwest of the repair shop.
        - Two 275-gallon motor oil ASTs in the vacant building southwest of the repair shop.
        - One 3,000-gallon diesel AST on the eastern side of the subject property with an associated fuel dispenser.
    - No USTs were identified on the subject property during the site reconnaissance.
    - IEC identified several 55-gallon drums of motor oil, E synthetic CD-50 Lubricants, Transmission fluid, Hydraulic Oil, antifreeze, and other unidentified automotive fluid.
    - IEC identified one part washer in the repair space, which was reportedly serviced by Safety Kleen.
    - IEC identified two aboveground hydraulic automotive lifts in the repair space.
    - IEC identified six drainage structures of solid construction, which appeared to outfall to the Newtown Creek District Sewer System.
    - IEC identified several monitoring wells located throughout the subject property, which pertained to subsurface investigations.
    - IEC reviewed the following previous reports and correspondence as part of the 2014 Phase I Environmental Site Assessment:
        - Subsurface Investigation by Tyree Brothers Environmental Services Inc. dated May 1990.
        - Correspondence between Tyree Brothers Environmental Services Inc. and Eugene Sullivan of the NYSDEC dated October 17, 1991.
        - Correspondence between Tyree Brothers Environmental Services Inc. and Eugene Sullivan of the NYSDEC dated November 8, 1991.
        - Phase I ESA by Tyree Brothers Environmental Services Inc. dated June 15, 1999.
        - Tank Affidavit prepared by William Klein, The Franklin Company dated May 11, 1999.

- A Remote Sensing Survey: GPR Investigation prepared by Impact Environmental dated July 28, 1999.
- Tank Affidavit, prepared by Stuart Levy, Alvin Petroleum Systems, dated August 5, 1999.
- Subsurface Investigation Report was prepared for NYSDEC Spill # 08-07459 by Impact Environmental dated October 2, 2008.
- Investigation Summary Report was prepared for NYSDEC Spill # 08-07459 by Impact Environmental dated June 24, 2009.
- Quarterly Monitoring Report (1st Qtr 2010) was prepared by Impact Environmental, dated March 12, 2010.
- Quarterly Monitoring Report (2nd Qtr 2010) was prepared by Impact Environmental, dated June 11, 2010.
- Quarterly Monitoring Report (3rd Qtr 2010) was prepared by Impact Environmental, dated September 9, 2010.
- NYSDEC issued No Further Action correspondence on October 1, 2010.
- Well Decommissioning Report was prepared by Impact Environmental, August 9, 2011.
- A letter prepared by Impact Environmental to AA Truck Renting, dated December 20, 2011 was issued in response to a Notice of Violation received on November 4, 2011 from the NYSDEC.

- Details pertinent to the previous reports and correspondence are discussed below:
  - According to the 1990 Tyree Subsurface investigation, soil samples showed high concentration of aromatic hydrocarbons. Floating product was also reported in a well created from a soil boring. Tyree recommended having all USTs and lines tightness tested in order to identify the point of contamination. On October 17, 1991, Tyree provided Eugene Sullivan of the NYSDEC with a report outlining the remedial work conducted on site and analytical results showing that an optimal volume of floating product was recovered and any trace floating product would have minimal or no environmental impact on the surrounding areas. Subsequently, correspondence between Tyree and the NYSDEC indicated that spill case 9010146 was closed.
  - According to the 1999 Tyree Phase I ESA, one UST was identified in the large center building west of the office space, and a potential UST was identified by the presence of a suspected fill pipe. The pipe cap could not be removed at the time of inspection. Additionally, numerous ASTs were reported in the building, including a 4,000-gallon #2 fuel oil AST for on-site heating and two active 275-gallon motor oil ASTs.
  - The May 1999 Tank Affidavit stated three 4,000-gallon diesel USTs were sealed by being filled with inert matter.

- The 1999 Remote Sensing Survey: GPR Investigation concluded that one significant subsurface anomaly adjacent to the southwest corner of the 1,000-square foot building was consistent with the size and shape of a UST. The GPR imaging failed to identify the presence of anomalies consistent with a UST in the interior of the 23,000-square foot building.
- The August 1999 Tank Affidavit stated two 550-gallon USTs located in front of the two-story masonry building on the northern boundary were abandoned in place to proper standards. A no further action letter was received preceding the tank abandonments.
- According to the 2008 IEC Subsurface Investigation Report and 2009 Investigation Summary Report, which were prepared for spill case 08-07459, strong petrochemical odor, oil sheen and high PID reading were detected throughout the subject property. However, the laboratory analysis of the soil and ground water samples reportedly failed to detect any significant target VOC or SVOC levels. These finding are reportedly consistent with other investigations conducted by IEC in 2008. It was concluded that surface petroleum product is aged and degraded and accumulated during decades of historical petroleum storage on the subject property. The remaining residual contamination reportedly has a strong petroleum odor; however it does not exhibit high levels of VOCs and SVOCs. Reportedly, the levels of VOCs and SVOCs onsite were marginally above NYSDEC guidance criteria and based on the land use, geology and hydrology of the subject property, it is unlikely for the residual degraded petroleum product to impose a significant risk to human health and the environmental. Subsequently, the NYSDEC required a MNA plan, which included quarterly sampling and analysis of groundwater from onsite monitoring wells to achieve closure.
- According to Quarterly Monitoring Reports from 2010 prepared by IEC, groundwater samples from monitoring wells MW-2, MW-3, MW-5, and MW-6 failed to detect target VOCs and SVOCs; however, 0.01-feet free-phase product was observed in the MW-7H in the first two quarters of 2010. According to the Quarterly Monitoring Report dated September 9, 2010, laboratory analysis performed of groundwater samples MW-1 and MW-5 failed to detect target VOCs and SVOCs; however, gasoline-related target volatile organic analytes were reported marginally above the NYSDEC ambient water quality standard in MW-2, MW-3, MW-5, MW-6, and MW-7H. The VOC concentration was less than 0.1 ppm. A sump skimmer was reportedly installed in MW-7H for the free-phase product recovery.
- On October 1, 2010, the NYSDEC issued No Further Action correspondence indicating that "According to the data that the Department has received, there is no longer any free product on the water table, nor dissolved contamination. Therefore, the Department is closing the spill case. All of the wells of the site can now be abandoned. Well abandonment must take place in accordance with the environmental regulations and laws of New York State."
- The 2011 Well Decommissioning Report prepared by IEC stated that the monitoring wells associated with the NYSDEC spill case 08-07459 were decommissioned in accordance with NYSDEC CP-43.

- The December 2011 letter prepared by Impact Environmental to AA Truck Renting was issued in response to a Notice of Violation received on November 2011. The violation letter required the removal of liquids from a secondary containment area associated with the exterior diesel AST, removal of surface staining in the area of an exterior waste oil AST, removal of sediments and/or petroleum liquids from several catch basins maintained on the subject property. Waste manifests generated during the cleanup activities by IEC were provided in the appendix of the 2014 IEC report and a tank tightness test was reportedly performed by a tank contractor.

IEC identified no recognized environmental conditions as part of the 2014 report.

IEC identified the six NYSDEC closed spill cases and one Notice of Violation (NOV) on the subject property as HRECs, as they have all received regulatory closure and have been remediated to the satisfaction of the NYSDEC. Reportedly, any current levels of contamination which may be present in the subsurface are being allowed to naturally attenuate as they do not represent significant threats to human health or the environment. According to the IEC report, no active remediation is required by NYSDEC at this time.

Therefore, no additional activities were recommended with respect to the HRECs.

- IEC made the following recommendations pertaining to "Business Environmental Risks":
  - In the case of redevelopment, excavation activities will encounter the presence of urban fill, possibly abandoned USTs, and possible residual contamination from HREC's and/or off-site sources identified above. Urban fill is found throughout the New York metropolitan area and is considered regulated waste in the State of New York, and is therefore required to be managed in accordance with the State Solid Waste Regulations. This would require that any impacted soil be excavated, handled, transported and disposed of in accordance with NYS waste regulations. Onsite buildings may require engineering controls (e.g. vapor barrier, subslab depressurization system). As part of future site redevelopment, increase to the elevation of the site and/or future buildings may be required due to the current NYC DOB and/or proposed FEMA regulations.
  - In the case the site remains in its current use, NYSDEC PBS Registrations (6NYCRR Part 612) need to be properly updated with all six ASTs located on site since there is a combined storage capacity of more than 1,100 gallons. Minor staining was observed throughout the repair space. These areas of staining should be properly cleaned to avoid any possible introduction into the subsurface.
  - Visual indication of mold was observed in the storage portions of the repair facility and the vacant buildings resulting from Hurricane Sandy. If these portions of the site are to be utilized by work inhabitants on a daily basis, the mold should be removed and cleaned to prevent human health problems.
- During the 2015 assessment, Partner identified hazardous substances in the form of motor oil, truck wash, automobile maintenance supplies, diesel and waste oil. Many of the materials were observed to be improperly labeled and stored at the time of assessment with *de minimis* staining in the asphalt

paved parking areas, and in the auto repair garage. Based on the *de minimis* nature of the staining and connection to the municipal sewer system, the hazardous materials were not expected to represent a significant environmental concern.

- Partner observed six ASTs for the storage of diesel, heating oil and propane on the subject property. The tanks consisted of the following: one 4,000-gallon diesel AST (Tank-009 described previously); one, 5,000-gallon heating oil AST (Tank-004 described previously); two, 275-gallon waste oil ASTs in Building D; one 275-gallon waste oil plastic tote in Building D; and one 275-gallon lube oil AST in Building D. Partner noted that their onsite observations of these ASTs did not directly correlate with the tank records on file with the NYSDEC. However, based on the aboveground location of the tanks and the absence of observed spills, leaks or releases in their vicinity, the presence of these ASTs was not expected to represent a significant environmental concern to the subject property at this time.

Partner identified the following HRECs and environmental concerns:

- The historical usage and six closed spill cases were identified as an HREC with no further recommendation.
- The presence of six active ASTs was not considered a significant environmental concern. Partner recommended proper decommissioning of the out of service 5,000-gallon heating oil AST.
- Localized areas of staining were observed throughout the subject property, which was not expected to represent a significant environmental concern due to the lack of subsurface conduits (drains, cracks in concrete, etc.). Partner recommended the implementation of improved housekeeping strategies to eliminate potential future impacts.
- All suspect ACMs and LBP were observed to be in good condition at the time of Partner's site reconnaissance. Partner recommended implementation of an Operations & Maintenance (O&M) Program.

Asbestos-Containing Material Operations & Maintenance Plan, Partner (October 20, 2015)

Partner Assessment Corporation (Partner) prepared this report on behalf of The Bancorp Bank. The program addresses activities that may involve or disturb asbestos-containing materials (ACMs) at 28-90 Review Avenue. The O&M Plan "minimizes the potential for facility/maintenance personnel, tenants, contractors/vendors, and the general public to be exposed to ACM and/or airborne asbestos fibers." Reportedly, the plan's main objectives include to "clean up existing contamination, minimize future fiber release by controlling access to ACM, and maintain ACM until it is eventually removed."

Copies of pertinent pages reviewed are included in Appendix B of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Sara Hedtler
Site Assessment Conducted On:	June 2, 2016

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for 28-90 Review Avenue (Subject Property)			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Aaron Milazzo	Pine River Capital Management L.P.	(212) 364-5536	No
James (Last Name Not Provided)	Property Manager	(718) 786-8400	Yes
Joe Hercenberg	Broker, Deerwood Capital	(301) 787-9193	No

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property.

Environmental concerns were identified during the onsite reconnaissance related to current/former ASTs and/or USTs, the storage, use, and generation of hazardous substances, signs of a release, and indications of former subsurface investigations, as further discussed in Sections 6.1 and 6.2.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located throughout the subject property. Multiple independent solid waste disposal contractors remove solid waste from the subject property. According to property personnel, only non-harardous trash is collected in the on-site solid waste dumpsters. Waste oil from automobile repair activities is stored in aboveground storage tanks (ASTs) in the repair centers and is removed from the subject property by third party contractors. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of New York services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across concrete sidewalks toward storm water drains located in the public right-of-way. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Con Edison. The mechanical system consists of natural gas-fired furnaces located in the automobile repair garages and woodworking shop. Hot water is provided by individual natural gas and electric-fired water heaters.

6.1.5 Wells and Cisterns

Partner observed two decommissioned former groundwater monitoring wells associated with previous subsurface investigations (as previously discussed in Section 5.2.6.) along the eastern section of the lot. No additional aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner identified hazardous substances used, stored, and/or generated on the subject property as noted in the following table:

Hazardous Substances and/or Petroleum Products Noted Onsite

Substance	Container Size	Location	Nature of Use	Disposal Method
Diesel	4,000-gallon AST	Northeast portion of parking lot	Refueling	N/A
Heating Oil	5,000-gallon out of service AST; 275-gallon AST	Building C	Heating	N/A
Motor Oil	2 x 275-gallon ASTs; 55-gallon drums	Building C; Building D maintenance shop	Auto Repair Activities	N/A
Lubricants	Various retail sizes	Building D maintenance shop	Auto Repair Activities	N/A

Hazardous Substances and/or Petroleum Products Noted Onsite				
Substance	**Container Size**	**Location**	**Nature of Use**	**Disposal Method**
Waste Oil	275-gallon AST	Building D maintenance shop	Auto Repair Activities	Safety Kleen
Glass Cleaner	55-gallon drums	Building D maintenance shop and western building exterior	Auto Repair Activities	N/A
Auto Maintenance Supplies & Paints	Various retail sizes	Buildings D and G	Auto Repair Activities	N/A
Transmission Fluid	55-gallon drums	Buildings D and G maintenance shops; southern building exterior	Auto Repair Activities	N/A
Diesel	100-gallon gas caddy	Building G maintenance shop	Refueling	N/A
Hydraulic Oil	55-gallon drums	Building G maintenance shop	Auto Repair Activities	N/A
Used Oil	150-gallon AST	Building G maintenance shop	Auto Repair Activities	Safety Kleen
Unknown Drums	Several 55-gallon drums	Throughout the subject property	Unknown	N/A

Partner observed various hazardous materials associated with automobile repair operations located throughout the subject property. Many of the materials were observed to be improperly labeled and stored at the time of assessment with *de minimis* surficial staining in the asphalt-paved parking areas, and in the auto repair garages in Buildings D and G. Based on the *de minimis* nature of the staining and connection to the municipal sewer system, the hazardous materials onsite are not expected to represent a significant environmental concern at this time.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

Partner observed six ASTs for the storage of diesel, heating oil, motor oil and used oil on the subject property. The tanks consist of the following: one 4,000-gallon diesel AST (previously described *Tank 009*) with secondary containment located in the northeast portion of the subject property, to the south of Building A and west of Building F; one 5,000-gallon heating oil AST (previously described *Tank 004*) staged over a concrete floor located in Building C (reportedly no longer in use); two 275-gallon motor oil ASTs staged over a concrete floor located in Building C; one 275-gallon heating oil AST staged over a concrete floor located in Building C; and one 150-gallon used oil AST staged over a concrete floor located in Building G. Partner notes that our onsite observations of these ASTs do not directly correlate with the tank records on file with the NYSDEC. However, based on the aboveground location of the tanks and the absence of observed spills, leaks or releases in their vicinity, the presence of these ASTs is not expected to represent a significant environmental concern at this time.

6.2.3 Evidence of Releases

Partner observed localized areas of staining throughout the subject property. Specifically, Partner noted staining in the repair garage identified as Building D and in the exterior asphalt-paved parking areas.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The subject property is equipped with two aboveground hydraulic lifts located in the maintenance shop in Building G. The lifts were observed in good condition at the time of site reconnaissance, with no evidence of leaks, stains or spills. No evidence of below-grade lifts was observed. Based on the observed good condition of the equipment, the aboveground hydraulic lifts are not expected to represent a significant environmental concern.

No other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were originally constructed *circa* 1917. Partner has conducted a limited, visual evaluation of accessible areas for the presence of suspect ACMs at the subject property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACMs:

Suspect ACMs

Suspect ACM	Location	Friable Yes/No	Physical Condition
Drywall Systems	Throughout Building Interiors	No	Good-Poor
Acoustical Ceiling Tiles	Building E Interior	Yes	Good
Pipe Insulation	Throughout Building Interiors	Yes	Good
Roofing Materials	Roofs	No	Good

The overall interior of the condition of the subject was observed to be in fair to good condition, with the exception of widespread damage to drywall systems in Buildings A, B and E.

The limited visual survey consisted of noting observable materials (materials that were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

6.3.2 Lead-Based Paint (LBP)

Due to the commercial nature of use of the subject property, LBP was not considered within the scope of this assessment.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the New York City Department of Environmental Protection (NYCDEP) serves the subject property vicinity. According to a representative of the NYCDEP, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of New York are surface water from the Catskill/Delaware System, located in Delaware, Green Schoharie, Sullivan, and Ulster Counties; and the Croton System, located in Putnam, Westchester, and Dutchess Counties. According to the City of New York and the 2015 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be

used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- Partner did not identify any RECs during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify any CRECs during the course of this assessment.
