Mr. Eric Roberts
AA Truck Renting, Inc.
2890 Review Avenue
Long Island City, New York 11101

Re: 2890 Review Avenue, Long Island City, New York

Dear Mr. Roberts:

This letter has been prepared to document the remedial activities completed with regards to the exterior above ground diesel storage tank (AST), the exterior waste oil AST and several catch basins maintained at the above referenced property, herein referred to as the Site. These issues were revealed following an inspection by a New York State Department of Environmental Conservation (NYSDEC) representative (Mr. Brian Falvey). During said inspection, the NYSDEC administered a Notice of Violation (addressed to AA Truck Renting, Inc.) with regards to several required maintenance activities which had not been performed. Specifically, the NYSDEC required: 1) removing the liquids from a secondary containment area associated with the exterior diesel AST; 2) removing surface staining in the area around an exterior waste oil AST; and 3) removing sediments and/or petroleum liquids from several catch basins maintained on the Site. The locations of the remediated areas can be referenced in the attached Site Map.

On December 28, 2011, Impact Environmental conducted the remedial activities required by the NYSDEC, with respect to the diesel AST. Specifically, the liquid within the secondary containment area was removed utilizing a pump-truck. Thereafter, the secondary containment structure and surrounding area was thoroughly cleaned utilizing a pressure washer, with the liquids generated by the cleaning also being removed utilizing the pump-truck (see attached pictures).

Additionally on December 28, 2011, Impact Environmental conducted the remedial activities required by the NYSDEC, with respect to the waste oil AST. Specifically, the readily accessible areas (interior and exterior) of the waste oil AST were cleaned utilizing a pressure washer, with the liquids generated by the cleaning process removed utilizing the pump-truck. In addition, the concrete pavement area in the

vicinity of the waste oil AST was cleaned utilizing a pressure washer in an attempt to remove the surface staining. Several attempts were made to remove all of the surface staining from the waste oil AST, secondary containment structure and surrounding area. However, a minor amount of staining could not be completed removed during the aforementioned methods.

On December 28, 2011, Impact Environmental conducted the remedial activities required by the NYSDEC, with respect to the on-site catch basins. Specifically, sediments and liquid materials were removed from a total of four catch basins, two of which were located directly in front of the garage bay doors maintained on the southwest portion of the property, and two were located in the vicinity of the diesel AST. The sediments and liquids within each catch basin were removed utilizing a vactor-truck. Thereafter, the inside of the catch basins and surrounding areas were cleaned utilizing a pressure washer, with the liquids generated by the pressure washing activities properly handled and removed utilizing a vactor-truck.

A total of 2,232-gallons of petroleum impacted liquids were removed from the aforementioned structures during the remedial activities conducted on December 28, 2011 by Impact Environmental. In addition, 2.5 cubic yards of non-hazardous solids and one 55-gallon drum of solids were removed. All of the petroleum impacted materials removed were properly handled, transported and disposed in accordance with applicable rules and regulation. The accompanying waste manifests have been attached to this report.

It should be noted that the Notice of Violation included tank tightness testing. This activity was not performed by Impact Environmental and was reportedly scheduled to be performed by others.

Based on the activities outlined in this report, no further work is currently recommended with regards to the remedial activities required by the NYSDEC as outlined in the November 4, 2011 Notice of Violation.

If you have any questions or comments regarding this matter, please feel free to contact me.

Sincerely,
IMPACT ENVIRONMENTAL

James Cressy
Project Manager

Mr. Jeff Reid, *Vice President*
State Bank of Long Island
2 Jericho Plaza
Jericho, New York

Re: *28-90 Review Avenue*
Long Island City, New York

Dear Mr. Reid:

As per your request, I have reviewed the forwarded evaluation sections of the Phase I Environmental Site Assessment report prepared by Tyree Brothers Environmental Services (Tyree) dated September 5, 2001 concerning the above referenced property. The evaluation identifies six issues that could prompt Phase II Environmental Site Assessment activities. As per your request, I review these issues and have prepared the following comments with respect to the environmental quality of the subject property.

Issue 1 pertains to two former floor drains within a truck repair shop. The report text theorizes that these drains function as underground injection wells (UIWs) that recharge wastewater to the water table. As such, the report recommends a limited subsurface investigation be performed to identify if the operation of these tentatively identified wells has impacted the environmental quality of the subject property.

The recommended investigation is superfluous as the subject property is located immediately adjacent to Newtown Creek, and thus the water table is very shallow. An underground injection well could not function under such conditions. It would be typical that the capped structures were drains that led to the New York City New Town Creek District combined sewer system that has been available since the early 1900s.

A telephone conversation this afternoon with Mr. Eric Roberts confirmed my conclusion stating that, "the drains were capped at the request of the New York City Department of Environmental Protection in 1996." He also noted that he advised Tyree of this fact during the Phase I Environmental Site Assessment inspection.

To conclude, I do not recommend that you require a limited subsurface investigation with respect to these former floor drains. Their operation could not have impacted the environmental quality of the subject property as they drained to the public sewer.

Issue 2 pertains to two former underground five hundred and fifty-gallon storage tanks. The Tyree report erroneously states that the tanks were abandoned in-place in absence of proper regulatory authority. Consequently, the report recommends a limited subsurface investigation to determine what impact their use has had upon the environmental quality of the subject property. To the contrary of this statement, there are no agencies available to witness tank removals in New York City.

Tank installers and removers that operate in New York City are required to be licensed (as opposed to Nassau, Suffolk and Westchester Counties). Failure to report a leaking tank is grounds for license revocation. If the tanks had been leaking, oil and water would have been found in the tanks due to the elevated water table (as opposed to the abandonment water encountered), and a spill report would have been filed by the contractor. Since no report was filed it is obvious that there were no indications that the tank had structurally failed.

To conclude, I do not recommend that you require a limited subsurface investigation with respect to these former storage tanks. Their operation and abandonment were performed in strict accordance with all Local, State and Federal codes, and there has been no indication that these tanks have leaked.

Issue 3 pertains to previously observed vent pipes on the subject property. The Tyree report recommends that these former vents be investigated. Again, following my conversation with the subject property owner and upon receipt of the enclosed letter, I disagree with the Tyree recommendation.

Issue 4 pertains to on-site storm water catch basins. Tyree did identify that they did not function as underground injection wells (hard bottoms), but was not able to ascertain the outfall locations by inspection. Again, common knowledge of the area and its hydrology dictates that these features discharge to the Newtown Creek District combined sewer system. These drainage structures could not discharge on-site due to the elevated water table.

If these drains are being impacted by on-site activities then it is a regulatory compliance issue that has no bearing upon the environmental quality of the subject property. Accordingly, I do not recommend that any Phase II Environmental Site Assessment activities be performed to trace the obvious outfall location of these features.

Issue 5 pertains to contamination noted adjacent to underground diesel oil tanks in 1990. The report states that the subsurface investigations recommended in issues 1, 2, 3 and 4 are further supported by the presence of this contamination. Since I do not recommend any of the investigations sited in these issues, I cannot agree with this statement. Further, I note with surprise that the referenced contamination noted in 1990 was mitigated by Tyree to the satisfaction of the New York State Department of Environmental Conservation (NYSDEC) in 1991. I do not see any credibility to issue 5 as stated.

Issue 6 pertains to off-site properties within the industrialized area of Long Island City. The report states that the subsurface investigations recommended in issues 1, 2, 3 and 4 are further supported by the off-site storage, handling and disposal of hazardous wastes and petroleum. I do not agree with this statement for aforementioned reasons.

Finally, the report identifies matters concerning lead-based paint and the mitigation of superficial petroleum releases to the paved surfaces of the subject property. Without an inspection of the site, I cannot comment as to the necessity to mitigate these concerns.

I am pleased to have had the opportunity to provide my service to your firm. Please do not hesitate to contact me if you have any questions regarding the contents of this letter.

Sincerely,
IMPACT ENVIRONMENTAL CONSULTING, INC.

Richard Parrish, P.G.
Senior Geologist

1. INTRODUCTION

1.1 Purpose

This assessment is intended to satisfy the requirements of the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments, as published in ASTM E 1527. Banks, insurance companies, and prospective property purchasers require an understanding of existing and past property conditions and uses in order to assess the potential liabilities associated with a property. This assessment has been completed by a qualified environmental professional as defined in ASTM Standards. The objectives of this Environmental Site Assessment are stated as follows:

- Establish a basis of understanding of the past and present land uses of the subject property in order to identify potential environmental and/or public health risks.

- Establish a basis of understanding of the past and present surrounding land uses and environmental resources in order to determine their impact on the environmental quality of the subject property.

- Identify any known or potential items in noncompliance with applicable Local, State, or Federal laws and regulations, and subsequently specify how these items can be brought into compliance.

- Identify, to the extent feasible, *recognized environmental conditions* in connection with the subject and surrounding properties. *Recognized environmental conditions* are defined by ASTM as follows:

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimus conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Special Terms and Conditions

It is the responsibility of the *user* of this report (the party seeking to use this Environmental Site Assessment; i.e., the purchaser, lender, owner, potential tenant, or property manager) to provide certain information utilized in the report. This would include reporting of any *environmental liens* (for example, consideration against the property for response action, cleanup, or remediation of hazardous substances or petroleum products) encumbering the property or specialized knowledge or experience that would assist in identifying *recognized environmental conditions*.

The level of inquiry is uniform in each Phase I Environmental Site Assessment (ESA); however, the availability of information, relevance, and quality of information can vary. As per ASTM Standards, the "environmental professional is not required to verify independently the information provided, but may rely on information provided unless he or she has actual knowledge that certain information is incorrect or unless it is obvious that certain information is incorrect based on other information obtained in the Phase I ESA or otherwise actually known to the environmental professional." Personnel involved in report preparation will make judgments on the accuracy of *user* provided information and conduct additional research as necessary in order to meet the requirement of identifying *recognized environmental conditions* on the subject property.

ASTM provides a number of standard sources of historic information. Tyree Brothers Environmental Services, Inc. will seek to research as many sources of historic information as may be available as a means of cross confirmation. However, according to ASTM's Standard Practice for Environmental Site Assessments (E 1527), the "environmental professional is required to review only record information that is *reasonably ascertainable*," whereby *reasonably ascertainable* is defined as "(1) information that is publicly available, (2) information that is obtainable from its source within *reasonable time* and cost constraints, and (3) information that is *practically reviewable*." ASTM defines *reasonable time constraints* as information being provided by the source within twenty days of receiving a written request. *Practically reviewable* means that "the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data."

Based on ASTM Standards, the Phase I ESA is not intended to include any sampling and analysis of materials associated with the subject property (i.e., soil, water, air, or building materials). However, as it has been noted by Tyree Brothers Environmental Services, Inc. that certain non-scope issues are of concern to the *user*, a limited sampling and analysis program was performed (lead surface paints and friable asbestos). In addition, radon test results conducted by the USEPA Office of Radiation and Indoor Air in conjunction with the USGS were reviewed.

1.3 Limitations and Exceptions

This assessment is dated, and is only valid for activities which occurred prior to the date of the site visit. Activities, liabilities, and alterations to the subject property subsequent to the date of the site visit are not included in the assessment.

This assessment is intended to assess the potential for public health or environmental liabilities based upon examination of the subject property in accordance with ASTM Standards. The ASTM Standards provide specific guidance with regard to radon, asbestos, lead in drinking water, lead based paint, and polychlorinated biphenyls (PCBs). This report conforms to ASTM standards with the exception of not satisfying the requirements for documentation of historical use for the past fifty years.

Analysis of the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) implications with regard to the innocent landowner defense under Superfund finds that naturally occurring radon is not subject to CERCLA liability and is appropriately considered as a non-scope issue. Accordingly, this assessment will only provide general guidance on this issue, and will not involve or recommend air monitoring for radon gas.

Similarly, the ASTM Standards do not recognize liability with regard to asbestos that is part of the building materials of a structure, in accordance with CERCLA innocent landowner defense under Superfund. If asbestos containing material is disposed of on a property, however, such practice would be subject to Superfund response actions and should be identified. In the interest of serving the client and addressing the needs of the *user*, this assessment will identify observed asbestos containing materials (ACMs) which may pose a health threat. This assessment is not a full asbestos survey as would be required for building demolition, or identification of all possible sources of ACM, regardless of health danger.

Lead in drinking water and lead based paint are also issues which are considered to be non-scope under CERCLA innocent landowner defense under Superfund. Lead based paint was in use for many years, and it is likely that many older buildings will have surfaces coated with lead based paint. As a general rule, painted surfaces should be maintained and ingestion of paint products should be avoided. If disposal of these materials is involved, disclosure of this practice would be subject to the scope of this environmental assessment. In the interest of serving the user, this report may include limited field testing of surface paints and the observations on the condition of the painted surfaces. Lead in drinking water generally occurs as a result of past use of high lead content solder. Water left stagnant in pipes overnight or longer may leach lead from these joints and affect drinking water quality. As a general rule, water should be run for several minutes in the morning where such plumbing may be present.

This assessment will not identify all potential sources of PCB containing oils. Common sources of these materials include transformers and fluorescent lamp ballasts. Electric service transformers may include ground level or pole mounted units. These transformers are owned and maintained by regional public utilities. Transformers are inventoried and periodically inspected. Public utility company representatives have reported that transformers were not manufactured to contain PCB contaminated oils. Aggressive and destructive testing, which would be required for

definitive identification of PCB containing oils, is beyond the scope of this study. It must be noted that the accuracy of any assessment is limited to the information available during the time of the site visit; the records, files, and drawings provided by the owner and released by governmental agencies; and the accuracy and completeness of the information provided during interviews.

1.4 Project Specifications

The date of inspection and the key personnel involved in the preparation of the report are provided below in order to provide further insight into methodology:

Inspection Date:	August 25, 2001
Report Date:	September 5, 2001
Project Manager:	Fred Barilla, Environmental Scientist I
Inspector/Preparer:	Jonathan Hark, C.E.I.

This assessment was performed in accordance with good commercial and customary practice as defined by the ASTM Standard Practice for Environmental Site Assessments (Designation: E 1527). Presented herein are the results of the Phase I ESA conducted by Tyree Brothers Environmental Services, Inc. on the property located at 28-90 Review Avenue, Long Island City, New York, New York City Tax Map Designation 294 - 106, herein identified as the subject property [see Plate #1: Project Location Map, Long Island City, New York]. Said assessment was intended to constitute an all appropriate inquiry suitable for establishing innocent landowner status, pursuant to 42 U.S.C. § 9601 (35) (B). This site assessment was prepared by Tyree Brothers Environmental Services, Inc. under contract to State Bank of Long Island in order to satisfy requirements as stipulated by the *user* (ASTM 1527 3.3.39), State Bank of Long Island.

2. SITE VISIT

2.1 Subject Property

[See Plate #2: Inspection Map, Long Island City, New York]

The aerial extent of the subject property was approximately 185,000 square feet. The subject property contained one two-story, masonry building with an approximate footprint of 1,000 square feet (herein identified as building A); one two-story, masonry building with an approximate footprint of 3,000 square feet (herein identified as building B); one single-story, masonry building with an approximate footprint of 23,000 square feet (herein identified as building C); and one single-story, masonry building with an approximate footprint of 2,000 square feet (herein identified as building D). The surface area of the subject property consisted of asphalt parking areas, concrete pads, and natural scrub vegetation. The subject property exhibited low topographic relief (less than three percent slopes), except for slightly steeper slopes along the western border of the subject property where the property dips down to the Dutch Kills Creek and along the southwestern border where the property slopes up to the LIRR. The subject property lies within New York City manufacturing zoning district M3-1.

2.1.1 Interior Inspection

AA Truck Renting Corporation utilized the interior of each building as office and operational space. The buildings were inspected on August 24, 2001 by staff Certified Environmental Inspector Jonathan Hark. Available for a portion of the inspection was subject property representative Mr. Paul Lanciotti, Controller. The inspection revealed the following information relevant to the environmental quality of the subject property:

Building A:

The first floor of building A was utilized for the storage of a truck washing machine and chemicals. The second floor of this building was reportedly abandoned, and was inaccessible (sealed). The southwestern portion of the building reportedly facilitated electrical service apparatus, and was also inaccessible.

1. Building A facilitated a truck washing machine on the first floor (washing activities were performed south of the building) that utilized diesel for fueling. Petrochemical staining was noted in the building. The floor of the building was sloped towards the doorway on the south side of the building.

2. Building A had formerly been heated via suspended oil fired heaters (fueled by an UST with a remote fill outside the building), but it was reported that this heating system is currently inactive. The building was observed to be fire damaged. It was reported that the power washing machine had to be replaced on several occasions due to fires caused by the operation of the former machines.

Building B:

The first floor of building B was utilized for the storage of truck parts. The second floor was utilized for file storage.

1. Former trench-style drains in building B that appeared to run the length of the first floor of the building have been filled in with cement. The former outfall locations of these drains are not known. The concrete floor of this building contained a significant quantity of petroleum contaminated sludge and petrochemical surficial staining.

2. This building had formerly been heated via wall-mounted radiators, but it was reported that this system is no longer active. The vent for the former burner was located along the north wall of the building, but the fuel source for this former heating system could not be determined. In addition, Tyree Brothers observed empty truck saddle tanks.

3. A suspected sanitary main and a sump pump were located in the eastern portion of the building. It is anticipated that this pump was utilized to discharge the property's sanitary wastes to the NYC sewer main suspected to be located under Review Avenue.

Building C:

Building C facilitated office space, truck repair space, truck engine rebuilding space, and truck parts storage space.

1. Tyree Brothers observed evidence of one (1) underground storage tank (UST) in building C west of the office space. This potential UST was identified by the presence of a suspected fill pipe. The pipe cap could not be removed for inspection. Mr. Lanciotti was not familiar with the presence of any USTs in the buildings.

2. Two (2) former UIWs (Class V, well code 5X28, automobile service station disposal wells as defined under the USEPA Underground Injection Control Program) identified in the truck repair space in building C have been filled in with cement. These drains reportedly formerly discharged directly to on-site soils. A third suspected drain was identified below a 2' by 2' metal plate, but inspection revealed this pit to be filled with soil. Floor drains were also identified in the locker room in building C. The drains were connected to a sump pump, which reportedly discharged to the NYC sewer system. It should be noted that due to the amount of storage in the buildings, the entire floor areas could not be inspected.

3. The eastern portion of building C facilitated office space. This portion of the building had reportedly undergone significant renovations when the property was purchased from Texaco in 1971. Fiberglass insulation was noted on the HVAC system ductwork in the plenum above the drop ceiling in this portion of the building. This portion of the building was heated via oil fired HVAC units.

4. The central portion of the building was utilized for parts storage and engine rebuilding, and the western portion was utilized for truck repairs. These portions of the building were heated via suspended oil fired heaters. The floor in the repair space was noted to be impacted by surficial petrochemical staining.

Building D:

Building D facilitated chemical storage, utilities, and a former truck body repair shop (reportedly no longer in operation).

1. Tyree Brothers observed an active vaulted 4,000 gallon #2 fuel oil AST utilized for on-site heating applications (for building C) in building D, and two (2) active, manifolded 275 gallon motor oil ASTs.

2. Building D facilitated utilities for building C. These included a vaulted fuel oil AST, two manifolded motor oil ASTs, and air compressors. This building was heated via suspended oil fired burners. The concrete floor of this building contained a significant quantity of petroleum contaminated sludge and petrochemical surficial staining. The southern portion of the building had formerly been utilized for the repair of truck bodies (including painting operations), but these practices ceased approximately seven years ago. This portion of the building was empty and reportedly not utilized.

Additional information relevant to the environmental quality of the subject property was as follows:

1. Several bathrooms were observed in each of the buildings, and a kitchenette was observed in building C. The surfaces of the associated plumbing fixtures were inspected for observable indications of chemical staining that would be indicative of the disposition of chemical substances via the buildings' plumbing. The fixture surfaces in the locker room bathroom in building C exhibited surficial petrochemical staining. The other fixture surfaces in the buildings did not exhibit any signs of chemical staining.

2. Storage of portable chemical containers was noted in the buildings. Said storage included the following:

Building	Containers	Contents
A	Five (5) 55 gallon drums	Truck washing soap
A	Truck power washer reservoir (<100 gal.)	Diesel fuel
A	Two (2) gal. Containers	Kerosene, motor oil
B	Three (3) 55 gallon drums	Wall paint residue (collected from the building floor)
B	Three (3) 55 gallon drums	Partially filled with unknown material
C	Twenty-five 55 gallon drums	Motor oil, anti-freeze, waste oil, waste anti-freeze, windshield washing fluid, isopropyl alcohol

C	Ten (10) 15 gallon drums	Hydraulic oil, transmission fluid
C	Four parts washers	Solvents
C	Automobile batteries	Battery acid
D	One (1) 55 gallon drum, one drum of a slightly smaller capacity	Unknown petroleum product
D	Containers of 5 gal. or less	Paints, lacquer thinner, acrylic sealer
Loading rack area (outside)	Two (2) 55 gallon drums	Anti-freeze

3. No electrical transformers suspected of containing polychlorinated biphenyl (PCB) bearing dielectric fluid were observed in the buildings.

4. No urea-formaldehyde foam insulation was observed (limited non-destructive inspection) in the buildings.

5. Tyree Brothers conducted a visual survey for suspect asbestos-containing materials (ACM) on the subject property. Friable suspect ACM observed included acoustic ceiling tile in building C. Nonfriable suspect ACM observed included 9 x 9 floor tile in buildings B and C.

6. Samples of paint were taken from various wall surfaces and tested for lead content. Results of this testing can be found in section 7.0 of this report. The painted surfaces in buildings A, B, and D were in very poor condition, and the paint was noted to have significantly peeled such that a large quantity of paint was noted on the floors in these buildings. The painted surfaces in building C appeared in fair condition.

2.1.2 Exterior Inspection

The exterior of the subject property was inspected on August 24, 2001 by staff Certified Environmental Inspector Jonathan Hark. No subject property representative was available for this portion of the inspection. The inspection of the subject property revealed the following information relevant to the environmental quality of the subject property:

1. Tyree Brothers observed evidence of several underground storage tanks (USTs) identified outside the existing buildings. Three (3) former 4,000 gallon steel diesel fuel USTs were reportedly abandoned in place on the southeastern portion of the subject property in April of 1999. In addition, a suspected fuel oil UST was identified by the presence of fill and vent pipes south of building A. Furthermore, two vent pipes were noted on the southern portion of a former terminal loading rack on the eastern portion of the subject property. It is not known which USTs are associated with these vent pipes.

2. There was one (1) above ground storage tank (AST) observed outside the existing buildings. Said AST was a 4,000 gallon diesel fuel AST that had reportedly been installed in December of 1998 when the above-mentioned diesel fuel USTs were taken out of service. The AST appeared to have secondary containment and an alarm system. The tank was manufactured by AeroPower. In addition, petroleum staining was evident on the tank's concrete pad, probably due to overfill spillage from filling operations.

3. Portable chemical containers were noted to be stored west of building C. These included many empty 55 gallon drums located west of building C. Significant surficial petrochemical staining was noted in the vicinity of the drum storage.

4. No electrical transformers suspected of containing PCB bearing dielectric fluid were observed on the subject property.

5. There was no visible evidence of the illegal storage or dumping of formaldehyde foam insulation materials on the subject property.

6. Six (6) catch basins were identified throughout the subject property. It was not known if these catch basins discharged to the Dutch Kills Creek or functioned as drywells (Class V, well code 5D2, storm water drainage wells as defined under the USEPA Underground Injection Control Program). Said basins were inspected for visual indications of contamination. Some petrochemical staining was noted on soils in many of these basins. One of the basins by building A was noted to receive wastewater from truck washing activities performed in the vicinity. Roof drainage appeared to be directed both to and below grade.

7. All building sanitary discharge was reportedly directed to the NYC sewer system. Sanitary vents were noted by several of the buildings.

8. Six (6) groundwater monitoring wells were identified on the subject property. These wells had reportedly been installed as part of a subsurface investigation conducted in 1990 (see section 3.1 for further information).

9. A former loading rack was identified on the eastern portion of the subject property. This area had formerly been utilized for the filling of fleet vehicles, but the system was reportedly dismantled in 1998.

10. Several pipes were noted to run along the northern border of the subject property. The functions of these pipes were not known, but one appeared to run into (or discharge to) Dutch Kills Creek.

11. Storage of truck engines and parts was noted in the vicinity of building B. Surficial petrochemical staining was noted in this area.

12. All vegetation on the subject property appeared in good condition relative to seasonal parameters.

2.2 Surrounding Properties

[See Plate #2: Inspection Map, Long Island City, New York]

Land uses occurring on the surrounding properties may have an effect on the environmental quality of the subject property. Accordingly, a visual inspection was performed on the properties immediately adjacent to the subject property. The following information was noted.

2.2.1 North of the Subject Property

1. Spring Scaffolding
   This property facilitated a contracting company. At the time of inspection, there was no visible evidence of any storage, handling, or discharge of hazardous substances.

2.2.2 South of the Subject Property

1. Long Island Rail Road
   This property facilitated a railroad spur. There was no visible evidence of any storage, handling, or discharge of hazardous substances.

2. Access Self Storage
   This property appeared to facilitate a storage facility. At the time of inspection, there was no visible evidence of any storage, handling, or discharge of hazardous substances.

2.2.3 East of the Subject Property

1. Multi-tenant building
   This property appeared to facilitate an industrial building with tenants including Gee Dee Auto Repair, Anchor Auto Electric, and Roxy Rehearsal Studios. At the time of inspection, there was no visible evidence of any storage, handling, or discharge of hazardous substances.

2. Multi-tenant building
   This property appeared to facilitate an industrial building with tenants including J&DS Corp. and Hai Wah USA Inc. At the time of inspection, there was no visible evidence of any storage, handling, or discharge of hazardous substances.

2.2.4 West of the Subject Property

1. Dutch Kills Creek

   This property was a creek that extended off of Newton Creek. There was no visible evidence of any discharge, handling, or storage of hazardous substances.

3. REVIEW OF CORPORATE RECORDS AND PERSONAL INTERVIEWS

Review of corporate records and personal interviews can provide useful information regarding the processes occurring on the site. Interviews with subject property representatives and review of available corporate documentation has revealed the following information regarding the environmental quality of the subject property.

3.1 Personal Interviews

An interview with the subject property *key site manager* (ASTM 1527 3.3.17) has revealed the following information.

Key site manager - Mr. Paul Lanciotti, Controller of AA Truck Renting Corporation

1. According to Mr. Lanciotti, the subject property is serviced by oil heat and the NYC sewer system.

2. According to Mr. Lanciotti, AA Truck Renting Corporation purchased the subject property from Texaco in 1971.

3. According to Mr. Lanciotti, three (3) 4,000 gallon diesel fuel USTs were abandoned in place on the southeastern portion of the subject property in April of 1999. The existing diesel fuel AST was installed in December of 1998 when the USTs were taken out of service. The loading rack located east of the AST was dismantled at that time.

4. According to Mr. Lanciotti, a subsurface investigation was performed in 1990. Said investigation involved the installation of four (4) soil borings and six (6) groundwater monitoring wells. Said investigation identified significant contamination on the subject property, including the presence of floating product on groundwater. A system of groundwater monitoring, sampling and manual product recovery was initiated in July 1990. According to NYSDEC paperwork, all free phase petroleum product was recovered, and September 30, 1990 sampling revealed very low dissolved levels of BTEX contamination. Therefore, on November 8, 1991, the closure of spill number 9010146 was granted by the NYSDEC.

3.2 Waste Management Audit

Legislation enacted under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) establishes hazardous material generators forever legally liable for their byproducts and/or wastes produced. This encompasses the transport and destination of these materials. The following is a summation of the available corporate data relating to the transport and disposal of all hazardous materials utilized at the subject property.

Key site manager - Mr. Paul Lanciotti, Controller of AA Truck Renting Corporation

1. According to Mr. Lanciotti, all regulated wastes generated on the subject property (waste oil, waste anti-freeze, and waste solvents) are serviced by Safety-Kleen Corp. No confirming documentation was made available for review.

3.3 Previous Investigations

A previous Phase I site assessment was performed on the subject property by TBES in June of 1999 which identified a number of recognized environmental conditions. On September 3, 1999, Tyree Brothers Environmental Services, Inc. (TBES) reviewed the documentation supplied by AA Truck Renting Corporation on the subsequent work performed at the above-referenced property to address the environmental issues discussed in the Phase I Environmental Site Assessment. The review revealed the following environmental issues were addressed:

- Impact Environmental performed a remote sensing survey at the site on July 21, 1999. As per Kevin Kleaka of Impact Environmental, two (2) specific locations were addressed in this report. The first location was an area south of building A (two-story masonry building, 1,000 s.f.) where TBES observed evidence of a fill port and vent line. At this location, Impact interpreted through the ground penetrating imagery that one significant anomaly was present that is typical of an underground storage tank. The second location was in building C (one-story masonry building, 23,000 s.f.) where TBES observed evidence of a fill pipe. At this location, Impact interpreted through ground penetrating imagery that no anomalies were present.

- An affidavit was supplied by Alvin Petroleum Systems, Inc. detailing the abandonment of two (2) 550 gallon underground storage tanks on August 4, 1999. The tanks were situated in front of the truck washing building (building A). As per Alvin Petroleum, the tanks were deadlined by removing an unknown amount of water by a licensed hauler, were cut and cleaned of tank bottom sludge and then filled with concrete and sealed.

- A & L Cesspool Service Corporation inspected the two (2) catch basins (otherwise known as Underground Injection Wells (UIWs)) on July 10, 1999. As per A & L Cesspool Service, the catch basins were completely dry and devoid of all liquids. The drains were then cemented shut. The other catch basins on the property were reportedly cleaned out by A & L Cesspool Service.

- Eddie Interior Contracting inspected a trench drain identified in building B (two-story masonry building, 3,000 s.f.) on August 2, 1999. As per EIC, the drain was devoid of any liquid or any hazardous substances, but was reportedly filled with soil. They also indicated that the drain flows to a sump pump. EIC subsequently cleaned out the soil from the trench drain and filled it with cement.

- Pipes elevated slightly above grade and pipes cut at grade were noted throughout the eastern portion of the subject property. As per the property owner, all pipes have been removed.

The following environmental issues discussed in the Phase I Environmental Site Assessment were not addressed in the documentation provided by AA Truck Renting:

- Suspect friable asbestos containing materials were identified on the subject property. Laboratory analysis results indicated that the material contained >1% asbestos. The owner has provided TBES with copies of two estimates, and is in the process of contracting with a company to remove the asbestos. This material was subsequently removed in November of 1999 (see Final Project Report prepared by New York Environmental & Analytical Laboratories, Inc.).

- Painted surfaces in buildings A, B, and D were identified to contain lead-based paint. Most of these paints were in very poor condition (severely peeling). It is recommended that the paint in these areas should be properly abated by scraping and repainting. Additionally, it is recommended that an Operations and Maintenance (O&M) Plan be implemented to manage any remaining lead containing paints on the subject property.

4. GOVERNMENT RECORD INVENTORY

The Freedom of Information Act/Law (Public Officers Law, Sections 84-90) provides rights of access to all government documents not exempt from disclosure. Accessible records include paper documents and items such as video/audio tape recordings, microfilm, and computer disks. Impact Environmental examined relevant government documentation so as to define implicit parameters effecting the environmental quality of the subject property. All appropriate Freedom of Information requests were submitted and are included in the appendix of this document.

4.1 Federal Government

Environmental Protection Agency (EPA) [See Appendix]

The EPA maintains the "National Priority List" (NPL), that defines known hazardous material waste sites that are described by the Federal Government as needing immediate clean-up action. Such sites usually will affect the environmental quality of a large area. All hazardous material waste sites being considered for addition to the NPL are listed in the "Comprehensive Environmental Response Compensation and Liability Information System" [CERCLIS]. The EPA's "Emergency Response Notification System" (ERNS) List consists of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. The EPA's Resource Conservation and Recovery Act (RCRA) TSD Facilities List contains those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA. The RCRA Generators List consists of those persons or entities that generate hazardous wastes as defined and regulated by RCRA. Review of the NPL, the CERCLIS List, the ERNS List, the RCRA TSD Facilities List, and the RCRA Generators List has revealed the following information relevant to the subject property's environmental quality.

1. The subject property did not appear on the NPL.
2. The subject property did not appear on the CERCLIS List.
3. The subject property did not appear on the ERNS List.
4. The subject property did not appear on the RCRA TSD Facilities List.
5. The subject property appeared on the RCRA Generators List.

   A. AA Truck Renting Corporation (NYD012473583, Small Quantity Generator)
   Location: *28-90 Review Avenue, Long Island City, New York, No Violations listed.*

6. There were no sites within a one mile radius of the subject property that appeared on the NPL.

7. There was one (1) site within a one-half mile radius of the subject property that appeared on the CERCLIS List.

   A. Newtown Creek Solvent Drums (NYD982181018)
      Location: *Newtown Creek, Queens, New York - 1/5 mile south of the subject property.*

8. There were no sites within a one mile radius of the subject property that appeared on the RCRA TSD Facilities List.

9. There was one (1) site within the immediate vicinity of the subject property that appeared on the RCRA Generators List. Twelve (12) additional sites were listed within a ¼ mile radius.

   A. Access Self Storage aka Big Key Self Storage (NYD056410178)
      Location: *29-00 Review Avenue, Queens, New York - adjacent to the east of the subject property, No violations listed.*

4.2 State Government

New York State Department of Environmental Conservation (NYSDEC) [See Appendix]

4.2.1 Inactive Hazardous Waste Disposal Sites and Hazardous Substance Waste Disposal Sites

The NYSDEC currently maintains the publications, Inactive Hazardous Waste Disposal Sites in New York State and Hazardous Substance Waste Disposal Site Study. These publications give the location, type of contamination, and remediation status of each listed site in New York State that were determined to have had hazardous wastes or hazardous substances disposed of at the sites and are in need of remedial activities. A review of these publications revealed the following information relevant to the environmental quality of the subject property:

1. The subject property was not listed in the NYSDEC publications, Inactive Hazardous Waste Disposal Sites in New York State or Hazardous Substance Waste Disposal Site Study.

2. There were three (3) sites that appeared in the NYSDEC publication, Inactive Hazardous Waste Disposal Sites in New York State, located in proximity (~1 mile radius) to the subject property.

   A. Amtrak Sunnyside Yard - *Site Code # 241006*
   Status: *Class 2 - Significant threat to the public health or environment - action required.*
   Location: *39-29 Honeywell Street, Long Island City, New York - 4/5 mile NNE of the subject property.*

   B. Quanta Resources - *Site Code # 241005*
   Status: *Class 2 - Significant threat to the public health or environment - action required.*
   Location: *37-80 Review Avenue, Maspeth, New York - 3/5 mile SSE of the subject property.*

   C. Roehr Chemicals - *Site Code # 241014*
   Status: *Class 2 - Significant threat to the public health or environment - action required.*
   Location: *52-20 37th Street, Long Island City, New York - 2/5 mile SE of the subject property.*

3. There were no sites that appeared in the NYSDEC publication, Hazardous Substance Waste Disposal Site Study, located in proximity (~1/2 mile radius) to the subject property.

4.2.2 Solid Waste Management Facilities

The NYSDEC maintains a listing of all registered and permitted landfills, transfer stations, and solid waste disposal sites within New York State. A review of this listing has revealed the following information relevant to the environmental quality of the subject property:

1. There was one (1) site within a one-half mile radius of the subject property that appeared on the listing.

   A. NYCDOS MTS @ Greenpoint - *Site Code # 24T02*
   Status: *Active Municipal Putrescible.*
   Location: *North Henry Street, Brooklyn, New York - 1/2 mile SSW of the subject property*

4.2.3 State Pollutant Discharge Elimination System Permits (SPDES)

In 1973, New York passed the State Pollutant Discharge Elimination System Act (SPDES) which provides for state permits for point source discharges to surface and ground waters. The NYSDEC was delegated authority by the USEPA to regulate the issuance of all SPDES permits as stipulated under sections 307, 318, 402, and 405 of the Clean Water Act. A review of SPDES permit listings in New York City revealed the following information relevant to the environmental quality of the subject property:

1. No significant SPDES permits were listed for the subject property.

2. No significant SPDES permits were listed for the properties adjacent to the subject property.

4.2.4 Regulated Materials Storage Facilities

The NYSDEC maintains a listing of all facilities storing regulated materials in bulk within New York State. The Chemical Bulk Storage (CBS) listing contains all facilities that store regulated hazardous substances in above ground storage tanks with capacities of one hundred eighty five (185) gallons or greater, and/or in underground tanks of any size, as per 6 NYCRR Part 596. The Petroleum Bulk Storage (PBS) listing contains all facilities that have petroleum storage capacities in excess of eleven hundred (1,100) gallons and less than four hundred thousand (400,000) gallons, as per 6 NYCRR Part 612. The Major Oil Storage Facilities (MOSF) listing contains all onshore facilities or vessels with petroleum storage capacities of four hundred thousand (400,000) gallons or greater, as per Article 12 of the Navigation Law, 6 NYCRR Part 610, and 17 NYCRR Part 30. A review of these listings has revealed the following information relevant to the environmental quality of the subject property:

1. The subject property did not appear on the CBS listing.

2. The subject property did appear on the PBS listing.

   A. AA Truck Renting Corporation (PBS Registry # 2-238643)
   Address: *28-90 Review Avenue, Long Island City*

Tank #	Capacity	Location	Product	Status	Date Installed
001	4000	Underground	Diesel	In Service	09/71
002	4000	Underground	Diesel	In Service	09/71
003	4000	Underground	Diesel	In Service	09/71

4.2.5 NYSDEC Spill Logs

The New York State Department of Environmental Conservation routinely responds to petroleum product spill/discharge incidents so as to perform and/or supervise in their remediation. The agency currently maintains a log (Spill Log) of all reported incidents which have occurred within specific regions of the State of New York. Typical events which would be listed on the log include motor vehicle accidents involving the release of petroleum products; discharges of petroleum products from underground storage tanks; discharges of PCB contaminated oils from electrical transformers; and events involving the abandonment of petroleum products. A review of the NYSDEC Region 1 Spill Log revealed the following information relevant to the environmental quality of the subject property.

1. There were three (3) spill events listed in the NYSDEC Spill Log as having occurred on the subject property.

   A. Spill incident 9010146 involved the release of approximately 40 gallons of #2 fuel oil to local soils and to a storm sewer from an overfill due to a faulty gauge. Said incident occurred on 12-18-90, and the case was closed on 11-08-91.

   B. Spill incident 9311731 involved the release of #2 fuel oil due to an unknown cause. The release was contained to pavement, and an absorbent was applied. Said incident occurred on 01-03-94, and the case was closed on the same date.

   C. Spill incident 9600032 involved the release of approximately 100 gallons of #2 fuel oil as a result of the filling of a wrong tank. The spill was noted to have impacted the sewer system. Said incident occurred on 04-01-96, and the case was closed on 05-08-96.

Based on the fact that these incidents were all closed by the NYSDEC, they have been remediated to the satisfaction of the Department.

2. There were numerous spill incidents listed in the NYSDEC Spill Log as having occurred in the vicinity of the subject property (Appendix). Review of these incidents has revealed that many active spills were listed as having occurred in the vicinity of the subject property (see 9313234, 9412567, 9607116, 9613304, and 9802647). Freedom of Information requests have been submitted to the NYSDEC for further information regarding these incidents, but no responses have been received to date.

4.3 City Government

New York City Department of Environmental Protection; New York City Fire Department; New York City Building Department [See Appendix]

4.3.1 New York City Department of Environmental Protection

The Bureau of Water Pollution Control and the Bureau of Sewers of the New York City Department of Environmental Protection has put forth the document, Rules and Regulations Relating to the Use of the Public Sewers, Including Sewer Surcharges, pursuant to Section 1403 of the New York City Charter and by Sections 683a4-1.0 through 683a4-19.0, 687-1.0 and 689-1.0 of the Administrative Code of the City of New York and in compliance with Section 1105 of the New York City Charter. This document covers such topics as the disposal of wastewater, stormwater, and groundwater, the materials and substances excluded from public sewers, the toxic substances accepted conditionally, the terms and conditions for the issuance of a permit, the removal, transportation, and disposition of scavenger wastes, and the imposition and computation of sewer surcharge. The New York City DEP was contacted regarding the subject property. The following information was made available:

1. The New York City DEP Asbestos / Lead Control Program has no information on file regarding the subject property.

4.3.2 New York City Fire Department

The New York City Fire Department oftentimes maintains records of underground storage tanks and the storage of hazardous materials. The New York City Fire Department was contacted about the subject property and provided the following information:

1. A Freedom of Information request was submitted for the subject property, but no response has been received to date.

4.3.3 New York City Building Department

The New York City Building Department (NYCBD) maintains records regarding permits issued for the construction of a building, renovations of the building, boiler specifications, and violations. The New York City Building Department was contacted about the subject property and provided the following information:

1. Review of the NYCBD records revealed that a permit was issued for the demolition of a building in 1909, and permits were issued in 1909, 1915, and 1918 for the construction of new buildings. Permit (#400881621) was issued on 09-15-98 for the installation of a 4,000 gallon diesel fuel AST. No complaints or ECB (Environmental Conservation Board) violations were issued against the property.

5. REVIEW OF AVAILABLE PRIVATE DATABASE DOCUMENTATION

5.1 Cole Directory

The Cole Directory is a reverse telephone directory which includes listings by address and telephone number. As such, it can be a valuable instrument in determining potential pollution sources and/or sensitive receptors in an area of study. Information contained on the directory includes the name, telephone number, land use, geographic location, wealth rating, street construction date and date of telephone service connection. This data can be interpreted so as to yield relevant information regarding past land uses which might have affected the environmental quality of the subject and/or the surrounding properties. Listings for the streets in the vicinity of the subject property revealed the following information relevant to the environmental quality of the subject property:

Address	Listing	Date Listed
28-90 Review Avenue, Long Island City, NY	No listing	1971
	AA Truck Renting	1973 - 1999

5.2 Sanborn Maps

The Sanborn Maps were created to inform fire fighters of potential dangers based on land use and building construction. Said maps are also used for fire insurance purposes. These maps are updated on a rotating basis. The maps were inspected to determine past uses of the subject property and surrounding properties. The Sanborn Maps for the subject property revealed the following information:

1. The Sanborn Maps dated 1996, 1995, 1994, 1993, 1992, 1991, 1990, 1989, and 1988 showed the subject property being utilized as a trucking terminal. The building configurations were similar to that noted during the site inspection, except for three structures located along the creek. Two 20,000 gallon ASTs were also depicted between what is referred to as building "D" and one of the aforementioned structures. Surrounding properties include a paper bag manufacturer to the north, a warehouse to the east, the LIRR to the south and the creek to the west.

2. The Sanborn Maps dated 1986, 1985, 1980, 1979 and 1977 were similar to that depicted above except that the adjacent property to the east was noted as Horowitz Brothers & Margareten (Noodle Manufacturer).

3. The Sanborn Maps dated 1970, 1950, 1947 and 1936 showed the subject property as the location of The Texas Company, an oil depot. What is now Building "A" was listed as an office; Building "B" was listed for storage of pumps and tanks; Building "C" was listed as a garage / shop; Building "D" was listed as a pump house. A pipe gallery was shown running from the pump house to a former loading area (vicinity of present diesel AST) where four 15,000 USTs were listed as being located. Six 275,000 gallon ASTs were located east of and along the pipe gallery. Contents of same were listed as gasoline, gasoline, naphtha, kerosene, fuel oil, and crude oil. A gasoline UST was depicted off of the southeastern corner of Building "B". The previously depicted 20,000 gallon tanks were also shown. Surrounding properties were as previously depicted except that the paper bag manufacturer was shown as a metal manufacturer in 1950 and 1947 and vacant in 1936. The property to the east was shown as the Bentwood Chair Company in 1936.

4. The Sanborn Map dated 1915 show the subject property area as vacant with a vacant shed located on the property and a portion of a basin extending onto the property. The property to the north was occupied by an iron works.

5. The Sanborn Map dated 1898 showed the subject property as vacant with a basin extending onto the property. The property to the north depicted a vacant building. The property to the east was commercially developed (poor quality map).

6. GEOLOGICAL BACKGROUND STUDY

6.1 Subsurface Geology

The geology of Long Island consists of thick deposits of unconsolidated, water bearing sediments resting upon a relatively impermeable, crystalline bedrock surface. The sequence of events that shaped Long Island's geology is not known with certainty, but it probably began with the formation of the original basement rocks in early Paleozoic to Precambrian time more than 400 million years ago. These basement rocks were heated and compressed (metamorphosed) by folding and faulting, producing a rugged, mountainous topography. During the subsequent period ending with the late Cretaceous Epoch 100 million years ago, erosion reduced the land to a nearly planer surface that gently tilted to the southeast.

During the late Cretaceous Epoch (60-100 million years ago), streams brought sediments from the north and the west to the Long Island area on the continental margin, forming a permeable sand layer (Lloyd Sand Member of the Raritan Formation) and overlying clay member (clay member of the Raritan Formation) upon the bedrock surface. After a short period of erosion or non-deposition, thick, permeable beds of river delta clay, sand, and gravel were deposited on the Raritan Formation; these deposits comprise the Magothy Aquifer. Toward the close of the Late Cretaceous period (approximately 60 million years ago), a sand and clay unit (Monmouth Group) of low permeability was deposited in shallow marine waters in the area that now constitutes Long Island's south shore.

A long period of non-deposition, or possibly deposition followed by erosion, occurred after the Cretaceous era. Geologic activities during this time left few sedimentary traces, but streams flowing across Long Island cut deep valleys into the Magothy. It was not until late Pleistocene (Wisconsinian) glaciation- some 20 to 200 thousand years ago- that there were any significant additions to Long Island's geologic record. Valleys were filled and the other deposits were almost completely buried by glacial deposits. Prior to the southward movement of the Pleistocene ice sheets to Long Island, an extensive clay unit (Gardiners Clay) was deposited in shallow marine and brackish waters along the shores of what is now Suffolk County. This unit rested upon the Magothy and Monmouth Group, and acted as a confining layer. The northern portions of the Gardiners were subsequently eroded by advancing ice and glacial meltwaters, and Gardiners Clay beds are now found only in the south shore area.

6.1.1 Topography

The Pleistocene glaciation created the hilly Ronkonkoma moraine along Long Island's "spine" and south fork, and the Harbor Hill Moraine along the North shore and the North fork. Erosion of these morainal deposits (as the glacier melted away from Long Island) created extensive outwash plains of sand and gravel in the intermorainal area and south to the Atlantic Ocean. These highly permeable deposits comprise the upper glacial aquifer and represent the majority of Long Island's surficial sediments. Some local confining clay units were also formed from glacial materials in intermorainal lakes and tidal lagoons. Since the end of glaciation, about 12,000 years ago, Holocene beach and marsh deposits have been formed along the marine edge, and within stream corridors and ponds.

The elevation of the subject property, as presented on the United States Geologic Survey (USGS), Brooklyn Quadrangle Map, approximates twenty (20) feet above sea level. The USGS Map, which was base dated 1954, field checked in 1967, and photorevised in 1979, depicted several structures on the subject property.

6.1.2 Soil Component Identification

The subject property lies within an area classified as Urban Land. This soil type consists of urbanized areas where the majority of the surface is covered with buildings, roads, driveways, parking lots, and other manmade structures. Further classification of the soils in these areas is impractical.

6.2 Hydrology

The groundwater flow in the area of the subject property is anticipated to be convoluted due to tidal influence from local waterways. The depth to groundwater in the area is anticipated to be within fifteen (15) feet below existing grade.

7. LIMITED SCOPE IDENTIFICATION OF POSSIBLE LEAD CONTAINING SURFACE PAINTS

The element of lead has no function in the body. It can have poisonous effects on human organs and the nervous system, causing a variety of toxic reactions. Since lead accumulates in the body more rapidly than it can be removed, repeated exposures, even to small amounts, may produce lead poisoning. In addition, deteriorating lead components may allow lead to become airborne [CAS# 7439-92-1]. Threshold limit values have been established at 0.15 mg/m^3 (of air) by the American Conference of Governmental Industrial Hygienists. A non-destructive survey was performed. Said survey was not intended to constitute a full lead paint survey, which is beyond the scope of this report. Samples of selected painted surfaces were tested from the interior of the existing building.

1. Samples of paint were previously taken from various wall surfaces in each building and tested for lead content. Results of this testing revealed that a majority of the painted surfaces in building A, B, and D contained elevated levels of lead. The painted surfaces in buildings A, B, and D were observed in very poor condition. The paint was noted to have significantly peeled such that a large quantity of paint was noted on the floors in these buildings. The painted surfaces in building C appeared in fair condition.

2. Based on the age of building C, it is possible that lead containing paints exist below the surface layer in portions of the building.

8. LIMITED SCOPE IDENTIFICATION OF POSSIBLE FRIABLE ASBESTOS CONTAINING MATERIALS

Asbestos has been linked to various types of lung diseases. Various regulatory agencies have tolerance limits of 1% by weight for asbestos in materials. Any material which contains asbestos levels above this limit may be considered hazardous and may have to be abated. A non-destructive survey was performed. Said survey was not intended to constitute a full asbestos survey, which is beyond the scope of this report. The results of the survey are listed below:

1. Tyree Brothers conducted a visual survey for suspect asbestos-containing materials (ACM) on the subject property. Friable suspect ACM observed included acoustic ceiling tile (building C). Non friable suspect ACM observed included 9 x 9 floor tile in buildings B and C.

2. Due to the good condition of the acoustic ceiling tile no samples were collected. In addition, due to the non-friable nature of the 9 x 9 floor tile no samples were acquired.

9. RADON INVESTIGATION

Radon is a colorless, odorless, inert gas which has become an air contaminant in certain geographic areas. Radon is a natural isotope which is most commonly present in association with crystalline bedrock and occasionally other geologic deposits. Naturally occurring isotope decay can emit radiation which causes health concerns from inhalation. Radon levels generally increase in areas where bedrock is close to the land surface, and generally only creates a health related problem where underground basements are constructed. A basement can allow radon gas to accumulate in a manner which could cause exposure. Geographically, radon may be of concern in certain parts of Queens and points further west. Absent these conditions, radon gas presents less of a concern. The only way to determine concretely if radon gas is present is to perform air monitoring. Said monitoring is beyond the scope of this report.

The EPA issued a publication entitled Map of Radon Zones dated September 1993. Said document was prepared by the USEPA Office of Radiation and Indoor Air in conjunction with the USGS. According to said publication, 356 sites were tested for indoor radon concentrations in the five boroughs of New York City between the years 1985 and 1993. The following information was revealed (based on an action level for radon of 4 pCi/L).

Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
1.4 pCi/L	95%	5%	0%

10. EVALUATION OF DATA OBTAINED DURING THE ASSESSMENT

10.1 Recommendations

The following recommendations should be considered to further define the environmental quality of the subject property. These recommendations will define data which falls outside the scope of this investigation.

10.1.1 Recommended Phase I ESA Activities

Additional activities may be required as a result of the Phase I investigation. Generally, these apply to surrounding uses observed during the site inspection.

1. Responses to the Freedom of Information requests submitted to the New York State Department of Environmental Conservation and the New York City Fire Department have not been received to date. ASTM establishes that a diligent Phase I Environmental Site Assessment must consider all information obtained from a public agency within twenty days of receipt of a Freedom of Information request. Accordingly, information obtained from the above-mentioned agencies before the twenty day period has passed will be addressed in an addendum to this assessment.

10.1.2 Recommended Phase II ESA Activities

Additional activities may be required as a result of the Phase I investigation. These include the performance of sampling and analysis plans.

1. Two former (2) UIWs, which had been cemented shut, were identified in the truck repair space in building C. Based on the use of this building, the potential for petroleum release into these UIWs represents a recognized environmental condition. Although these UIWs have been reportedly cleaned and closed, no documentation regarding the proper closure of said wells has been provided (i.e., end- point samples). Consequently, it is recommended that a limited subsurface investigation be performed to determine if the former UIWs had received any discharges that may have affected the environmental quality of the subject property.

2. Tyree Brothers had previously observed evidence of an UST, by the presence of a fill port and vent line adjacent /south of building A. Subsequent work indicated the presence of an anomaly indicative of a UST. An affidavit was supplied by Alvin Petroleum detailing the abandonment of (2) 550 gallon USTs. However, no documentation was provided regarding the witnessing of the tank abandonment by appropriate government agency nor was any sampling protocol performed. Accordingly, it is recommended that a limited subsurface investigation be performed to determine if the former USTs actuated a release of product to the subsurface soils and / or groundwater of the subject property.

3. Previously observed pipes elevated slightly above grade and pipes cut at grade were noted throughout the eastern portion of the subject property have been removed. However, based on available information obtained during the performance of this Phase I (Sanborn Maps) it appears that these pipes were associated with the former bulk storage of petroleum products in ASTs and additional USTs. This former use of the site represents a recognized environmental condition. Accordingly, it is recommended that a limited subsurface investigation be performed to determine if the former operation of the ASTs / USTs actuated a release of product to the subsurface soils and / or groundwater of the subject property.

4. Several on-site catch basins were observed to be impacted by petroleum releases. (This item was previously identified and reportedly cleaned out A & L Cesspool, however, the situation is evident again and no endpoint sampling was provided from the clean-out). The outfall locations of these basins could not be confirmed under the scope of this assessment. These petroleum impacted basins represent a recognized environmental condition. Accordingly, it is recommended that a remote sensing survey be performed to determine the outfall locations of the basins. If the basins discharge to an on-site outfall, it is recommended that a limited subsurface investigation be performed to determine if this outfall has received any discharges that may have affected the environmental quality of the subject property.

5. A subsurface investigation performed in 1990 identified the presence of floating product on groundwater underlying the subject property. In addition, Tyree Brothers observed several areas throughout the subject property that exhibit substantial surficial petroleum staining. This investigation and on-site observations confirms the need for the above-referenced Phase II activities.

6. Several off-site confirmed or potential contamination sources were identified to exist within the ASTM search radius. The need for the above-recommended on-site investigative activities is further supported by the presence of these sources.

10.1.3 Recommended Phase III ESA Activities

Additional activities may be required as a result of the Phase I investigation. These include the performance of remediation activities. It should be noted that the scope of these activities may be modified based on a Phase II investigation.

1. Painted surfaces in buildings A, B, and D were identified to contain lead-based paint. Most of these paints were in very poor condition (severely peeling). It is recommended that the paint in these areas be properly abated.

2. All petroleum contaminated releases observed on the subject property should be properly remediated.

10.1.4 Recommended Compliance Activities

Compliance activities may be required based on the Phase I investigation. These include the performance of compliance activities that currently do not directly affect the environmental quality of the subject property.

1. Should the buildings be renovated or demolished in the future, full lead and asbestos surveys should be conducted prior to the initiation of any work. It is recommended that an Operations and Maintenance (O&M) Plan be implemented to manage any remaining suspect asbestos containing materials or lead containing paints on the subject property.

2. Documentation regarding the proper disposal of regulated wastes should be maintained on-site for periodic review.

3. Better housekeeping practices should be implemented to prevent any future releases of petroleum products to the surface of the subject property.

4. All unutilized and/or waste drums should be properly tested and disposed of in accordance with all applicable regulations.

10.2 Conclusions

Tyree Brothers Environmental Services, Inc. has performed a Phase I environmental site assessment of the property in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry (ASTM Standard Practice for Environmental Site Assessments, Designation: E 1527). The assessment included a thorough visual inspection of the property, the examination of publicly and privately available records concerning the current and prior uses of the subject property, and interviews with the current owners and/or operators of the subject property.

Based upon this assessment, dated September 5, 2001, Tyree Brothers Environmental Services, Inc. concludes that activities occurring on the subject property have potentially acted to degrade the environmental quality of the subject and/or surrounding properties. Accordingly, Phase II Environmental Site Assessment activities are required to define and/or enhance the environmental quality of the subject property.

The findings presented in this site assessment are based on data obtained under the scope of this investigation. The conclusions represent the professional judgment of qualified Tyree Brothers Environmental Services, Inc. staff members using available information.

Tyree Brothers Environmental Services, Inc.

Jonathan Hark, CEI

Fred Barilla, Environmental Scientist I

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

FEDERAL ASTM STANDARD

NPL	National Priority List
Proposed NPL	Proposed National Priority List Sites
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System
CERC-NFRAP	CERCLIS No Further Remedial Action Planned
ERNS	Emergency Response Notification System

STATE ASTM STANDARD

CBS UST	Chemical Bulk Storage Database

FEDERAL ASTM SUPPLEMENTAL

CONSENT	Superfund (CERCLA) Consent Decrees
ROD	Records Of Decision
Delisted NPL	National Priority List Deletions
HMIRS	Hazardous Materials Information Reporting System
MLTS	Material Licensing Tracking System
MINES	Mines Master Index File
NPL Liens	Federal Superfund Liens
PADS	PCB Activity Database System
RAATS	RCRA Administrative Action Tracking System
TRIS	Toxic Chemical Release Inventory System
TSCA	Toxic Substances Control Act
FTTS	FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

STATE OR LOCAL ASTM SUPPLEMENTAL

HSWDS	Hazardous Substance Waste Disposal Site Inventory
CBS AST	Chemical Bulk Storage Database
VCP	Voluntary Cleanup Agreements

EDR PROPRIETARY DATABASES

Coal Gas	Former Manufactured Gas (Coal Gas) Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/27/2001 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

STATE ASTM STANDARD

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, has revealed that there are 2 SHWS sites within approximately 1 mile of the target property.

QUANTA RESOURCES	37-80 REVIEW AVENUE	1/4 - 1/2 SSE	L54	114

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
NYCDOS MTS @ GREENPOINT	NORTH HENRY ST NEWTOW	1/4 - 1/2 SSW	60	120

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 04/01/2001 has revealed that there are 18 LTANKS sites within approximately 0.5 miles of the target property.

MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the MOSF UST list, as provided by EDR, and dated 04/01/2001 has revealed that there are 3 MOSF UST sites within approximately 0.5 miles of the target property.

1.0 Purpose & Scope

This quarterly monitoring report was prepared to summarize the corrective action procedures performed at the property located 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The activities consist of the groundwater well gauging and quarterly sampling.

The protocols used for this report were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

2.0 Site Description

2.1 Topography

The areal extent of the Site is approximately 192,792 square feet. The Site contains four one-story masonry buildings with a combined footprint of 37,462 square feet. The surface area of the Site consists of asphalt pavement, exposed soils, and vegetative landscaping. The Site exhibits low topographic relief (less than three percent slopes).

2.2 Site Background

The Site lies within New York City zoning district M3-1. The interior space of the existing building was divided into office space and operational space by the AA Truck Renting. The office spaces were utilized for general administrative purposes. The operational space was utilized for truck repair and parts storage. The exterior space was utilized for truck parking.

2.3 Previous Investigation

On September 2, 2008, six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site by Impact Environmental. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2]

Measurable free phase product was detected at each monitoring well. It was noted that the thickness of the free phase product have been exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[3]. The laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds below applicable guidance criteria.

From March 31 to April 23, 2009, Impact Environmental conducted a spill investigation on the Site. The investigation consisted of sampling and analysis of subsurface soil and groundwater, the installation of large diameter groundwater monitoring wells, a groundwater elevation survey and a hydraulic conductivity investigation.

A total of 6 soil probes, identified as MW-SP-1 through MW-SP-6, were installed on the Site as part of this investigation. Subsurface soil samples were secured from grade to 20 feet below existing grade (BEG) or until significant clay layer was encountered. Six 4-inch diameter groundwater monitoring wells, identified as MW-1 through MW-6, were installed on the Site as part of this investigation. The locations of the installed groundwater monitoring wells were consistent with the approved Investigation Work Plan. The wells were gauged and sampled two weeks after the installation. No measurable free-phase product was observed in any of the wells. A second gauging event confirmed the absence of measurable free-phase product in all the wells. A third gauging event incorporated all the existing wells on the Site. Approximately 0.01 ft of free-phase product was observed in MW-7H, which is an old well probably associated with previous spill investigation. No measurable free-phase product was observed in any other wells.

The laboratory analysis performed on the interface soil sample MW-SP-6 (7') detected concentration of one target volatile organic analyte (n-butyl benzene). However, the detected concentration was below the applicable guidance criteria.[4]

---

[2] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

[3] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

[4] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

The laboratory analysis performed on the interface soil sample MW-SP-2 (5') detected concentration of one target semi-volatile organic analyte (chrysene) above the applicable guidance criteria.[5]

The laboratory analysis performed on the saturated samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-6 (12') detected concentrations of several target volatile organic analytes. The detected concentrations of isopropylbenzene and n-propylbenzene of MW-SP-4 (10') were above the applicable guidance criteria.[6]

The laboratory analysis performed on the saturated soil samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-5 (12') detected concentrations of several target semi-volatile organic analytes. The detected concentrations of chrysene, benzo-a-anthracene and benzo-a-pyrene were above the applicable guidance criteria.[7]

The laboratory analysis performed on the groundwater samples MW-2, MW-3 and MW-4 detected concentrations of several target volatile organic analytes. Several detected concentrations, mainly gasoline related compounds, were above the applicable guidance criteria.[8]

The laboratory analysis performed on all the groundwater samples failed to detect any concentration of target semi-volatile organic analytes.

The fingerprint analysis was performed on the groundwater samples MW-1 through MW-6. The chromatograms of the groundwater samples MW-1 through MW-6 were most consistent with a combination of gasoline and #6 fuel oil. This observation is consistent with the previous land use of the Site as an oil terminal, with bulk storage of gasoline and heavy fuel oil (#5 or #6 fuel oil).

The previous sampling locations can be referenced with **Plate 2**.

3.0 Groundwater Monitoring Plan

A Quarterly Monitoring Program was developed to execute the sampling and analysis requirements of the NYSDEC. All sampling locations can be referenced with **Plate 3**.

On March 4, 2010, Groundwater samples were collected from MW-1 through MW-6.

3.1 Monitoring Well Installation

The Quarterly Monitoring Program consists of the gauging and sampling of seven groundwater monitoring wells, identified as MW-1 through MW-6 (installed by Impact) and MW-7H (old well installed by Tyree). Six 4-inch diameter monitoring wells (MW-1 through MW-6) were installed to a depth of approximately 15 to 20 feet BEG on the Site (with the exception of MW-2). The wells were installed using a hollow stem auger drilling technique with Geoprobe® 6600 unit. Each well was constructed of fifteen feet of screened interval (0.020 slot size, schedule 40, PVC), 5 ft above the groundwater interface and 10 ft below soil-groundwater interface. The annular space between the boring and the screened casing was filled with a filtration media which extended 2 ft above the top of the screen. The annular space 1 ft above the filtration media was sealed with bentonite. The remainder of the bore hole was filled with grout. The monitoring well was finished with a locking monitoring well cover. The construction details of MW-7H are unknown.

On March 4, 2010, Impact Environmental gauged all the seven 4-inch wells (MW-1 through MW-6 and MW-7H) with oil-water interface meter and disposable bailers. Approximately 0.01 ft of free phase product was observed in MW-7H. No measurable free phase product was observed in any other wells. Note that MW-7H is a pre-existing well, probably associated with previous spill investigation on the Site. MW-7H was not developed prior to gauging.

The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 1**. The monitoring wells (MW-1 through MW-6) were developed and sampled as part of this investigation. One groundwater sample was secured from each of these monitoring wells for laboratory analysis.

3.2 Quarterly Monitoring Well Sampling and Analysis

5.2.1 Monitoring Well Sampling Procedure

Field measurements were secured from each monitoring well during the development process to provide data regarding physical groundwater characteristics. The development water was field analyzed for dissolved oxygen (DO), pH, specific conductivity and temperature. Results of the field measurements were utilized to establish steady state conditions within the groundwater aquifer. Following development, one water sample was acquired from each of the monitoring wells utilizing a dedicated disposable bailer to prevent cross-contamination.

Each well was developed by pumping out a minimum of three (3) static well volumes utilizing a peristaltic pump. A static well volume is defined as:

Static well volume = height of water column x (well radius)^2 x pi x 7.48
where 7.48 is the conversion factor for cubic feet to gallons.

Following development, one groundwater sample was acquired from each of the monitoring wells on the Site. All of the samples were preserved in the appropriate vessels, preserved at 4°C in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

3.3 Groundwater Elevation Survey

A groundwater elevation survey was performed on the Site to determine groundwater flow direction. The elevation of groundwater was gauged at each monitoring well and recorded. The elevations were used to graphically define the planimetric surface of the water table. The elevations of the top of the casings were represented with respect to each other and based on a benchmark elevation or approximate elevation above mean sea level. The groundwater elevations were based as a function of the depth to water and these elevations.

Groundwater survey was performed on March 4, 2010. The groundwater elevation survey results are represented in **Table 1** and **Plate 2**. Based on the survey results, the groundwater flow direction at the Site is to the northeast.

3.4 Laboratory Sample Location and Frequency

The groundwater samples secured from monitoring wells on the Site were labeled for identification purposes as MW-1 through MW-6, respectively.

4.0 Laboratory Analysis

4.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; and the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the groundwater sample MW-1 through MW-6 consisted of USEPA Test Method 8260 for target volatile organic analytes; and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

4.2 Laboratory Analytical Results

A summary of the laboratory analysis and of past analytical results is presented in **Table 2**. Additionally, the table provides a comparison of the detected concentrations versus the relevant ambient water quality standards that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Services, Inc. is presented in **Appendix B** of this document.

5.0 Evaluation of Results

The laboratory analysis performed on the groundwater samples MW-2, MW-3, MW-5 and MW-6 failed to detect any target VOCs or SVOCs. The laboratory analysis performed on the groundwater sample MW-1 and MW-4 detected concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. The detected total VOC concentration was less than 0.2 ppm.

Approximately 0.01 ft free-phase product was observed in the MW-7H (old well installed by Tyree). No free-phase product was observed in any of the newly installed wells (MW-1 through MW-6). Due to the limited amount of free-phase product observed, it is recommended that product in MW-7H be bailed out manually. The necessity of enhance fluid recovery (EFR) will be evaluated next quarter.

Quarterly sampling will be continued in the second quarter of 2010.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the Site with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the Site.

Long Island City, New York

MW ID	MW Case Elevation	Depth to Product (3/4/2010)	Depth to Water (3/4/2010)	Free Phase Product (ft)	WT Elevation (3/4/2010)
MW-1	6.00	NA	3.15	0	2.85
MW-2	6.12	NA	3.19	0	2.93
MW-3	6.52	NA	3.99	0	2.53
MW-4	7.66	NA	5.25	0	2.41
MW-5	9.64	NA	6.61	0	3.03
MW-6	9.26	NA	6.15	0	3.11
MW-7H	NA	4.87	4.88	0.01	NA

Note:
1. An arbitrary case elevation of 6.00 above mean sea level was assigned for MW-1. Said number was obtained from the USGS Topographic Map.
2. MW-1 through MW-6 are 4-inch wells installed by Impact Environmental.
3. MW-7H is 4-inch well installed by Tyree.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with

Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets

and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

1.0 Purpose & Scope

This quarterly monitoring report was prepared to summarize the corrective action procedures performed at the property located 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The activities consist of the groundwater well gauging and quarterly sampling.

The protocols used for this report were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

2.0 Site Description

2.1 Topography

The areal extent of the Site is approximately 192,792 square feet. The Site contains four one-story masonry buildings with a combined footprint of 37,462 square feet. The surface area of the Site consists of asphalt pavement, exposed soils, and vegetative landscaping. The Site exhibits low topographic relief (less than three percent slopes).

2.2 Site Background

The Site lies within New York City zoning district M3-1. The interior space of the existing building was divided into office space and operational space by the AA Truck Renting. The office spaces were utilized for general administrative purposes. The operational space was utilized for truck repair and parts storage. The exterior space was utilized for truck parking.

2.3 Previous Investigation

On September 2, 2008, six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site by Impact Environmental. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2]

Measurable free phase product was detected at each monitoring well. It was noted that the thickness of the free phase product have been exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[3]. The laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds below applicable guidance criteria.

From March 31 to April 23, 2009, Impact Environmental conducted a spill investigation on the Site. The investigation consisted of sampling and analysis of subsurface soil and groundwater, the installation of large diameter groundwater monitoring wells, a groundwater elevation survey and a hydraulic conductivity investigation.

A total of 6 soil probes, identified as MW-SP-1 through MW-SP-6, were installed on the Site as part of this investigation. Subsurface soil samples were secured from grade to 20 feet below existing grade (BEG) or until significant clay layer was encountered. Six 4-inch diameter groundwater monitoring wells, identified as MW-1 through MW-6, were installed on the Site as part of this investigation. The locations of the installed groundwater monitoring wells were consistent with the approved Investigation Work Plan. The wells were gauged and sampled two weeks after the installation. No measurable free-phase product was observed in any of the wells. A second gauging event confirmed the absence of measurable free-phase product in all the wells. A third gauging event incorporated all the existing wells on the Site. Approximately 0.01 ft of free-phase product was observed in MW-7H, which is an old well probably associated with previous spill investigation. No measurable free-phase product was observed in any other wells.

The laboratory analysis performed on the interface soil sample MW-SP-6 (7') detected concentration of one target volatile organic analyte (n-butyl benzene). However, the detected concentration was below the applicable guidance criteria.[4]

---

[2] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

[3] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

[4] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

The laboratory analysis performed on the interface soil sample MW-SP-2 (5') detected concentration of one target semi-volatile organic analyte (chrysene) above the applicable guidance criteria.[5]

The laboratory analysis performed on the saturated samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-6 (12') detected concentrations of several target volatile organic analytes. The detected concentrations of isopropylbenzene and n-propylbenzene of MW-SP-4 (10') were above the applicable guidance criteria.[6]

The laboratory analysis performed on the saturated soil samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-5 (12') detected concentrations of several target semi-volatile organic analytes. The detected concentrations of chrysene, benzo-a-anthracene and benzo-a-pyrene were above the applicable guidance criteria.[7]

The laboratory analysis performed on the groundwater samples MW-2, MW-3 and MW-4 detected concentrations of several target volatile organic analytes. Several detected concentrations, mainly gasoline related compounds, were above the applicable guidance criteria.[8]

The laboratory analysis performed on all the groundwater samples failed to detect any concentration of target semi-volatile organic analytes.

The fingerprint analysis was performed on the groundwater samples MW-1 through MW-6. The chromatograms of the groundwater samples MW-1 through MW-6 were most consistent with a combination of gasoline and #6 fuel oil. This observation is consistent with the previous land use of the Site as an oil terminal, with bulk storage of gasoline and heavy fuel oil (#5 or #6 fuel oil).

The previous sampling locations can be referenced with **Plate 2**.

3.0 Groundwater Monitoring Plan

A Quarterly Monitoring Program was developed to execute the sampling and analysis requirements of the NYSDEC. All sampling locations can be referenced with **Plate 3**.

3.1 Monitoring Well Sampling

The Quarterly Monitoring Program consists of the gauging and sampling of seven groundwater monitoring wells, identified as MW-1 through MW-6 (installed by Impact) and MW-7H (old well installed by Tyree). Six 4-inch diameter monitoring wells (MW-1 through MW-6) were installed to a depth of approximately 15 to 20 feet BEG on the Site (with the exception of MW-2). The wells were installed using a hollow stem auger drilling technique with Geoprobe® 6600 unit. Each well was constructed of fifteen feet of screened interval (0.020 slot size, schedule 40, PVC), 5 ft above the groundwater interface and 10 ft below soil-groundwater interface. The annular space between the boring and the screened casing was filled with a filtration media which extended 2 ft above the top of the screen. The annular space 1 ft above the filtration media was sealed with bentonite. The remainder of the bore hole was filled with grout. The monitoring well was finished with a locking monitoring well cover. The construction details of MW-7H are unknown.

On May 27, 2010, Impact Environmental gauged all the seven 4-inch wells (MW-1 through MW-6 and MW-7H) with oil-water interface meter and disposable bailers. Approximately 0.01 ft of free phase product was observed in MW-7H. No measurable free phase product was observed in any other wells. Note that MW-7H is a pre-existing well, probably associated with previous spill investigation on the Site. MW-7H was not developed prior to gauging.

A sump skimmer was installed in MW-7H to recover the free-phase product. The sump skimmer will be replaced on monthly basis.

The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 1**. The monitoring wells (MW-1 through MW-6) were developed and sampled as part of this investigation. One groundwater sample was secured from each of these monitoring wells for laboratory analysis.

3.2 Quarterly Monitoring Well Sampling and Analysis

5.2.1 Monitoring Well Sampling Procedure

Field measurements were secured from each monitoring well during the development process to provide data regarding physical groundwater characteristics. The development water was field analyzed for dissolved oxygen (DO), pH, specific conductivity and temperature. Results of the field measurements were utilized to establish steady state conditions within the groundwater aquifer. Following development, one water sample was acquired from each of the monitoring wells utilizing a dedicated disposable bailer to prevent cross-contamination.

Each well was developed by pumping out a minimum of three (3) static well volumes utilizing a peristaltic pump. A static well volume is defined as:

Static well volume = height of water column x (well radius)^2 x pi x 7.48
where 7.48 is the conversion factor for cubic feet to gallons.

Following development, one groundwater sample was acquired from each of the monitoring wells on the Site. All of the samples were preserved in the appropriate vessels, preserved at 4°C in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

3.3 Groundwater Elevation Survey

A groundwater elevation survey was performed on the Site to determine groundwater flow direction. The elevation of groundwater was gauged at each monitoring well and recorded. The elevations were used to graphically define the planimetric surface of the water table. The elevations of the top of the casings were represented with respect to each other and based on a benchmark elevation or approximate elevation above mean sea level. The groundwater elevations were based as a function of the depth to water and these elevations.

Groundwater survey was performed on May 27, 2010. The groundwater elevation survey results are represented in **Table 1** and **Plate 2**. Based on the survey results, the groundwater flow direction at the Site is to the northwest.

3.4 Laboratory Sample Location and Frequency

The groundwater samples secured from monitoring wells on the Site were labeled for identification purposes as MW-1 through MW-6, respectively.

4.0 Laboratory Analysis

4.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; and the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the groundwater sample MW-1 through MW-6 consisted of USEPA Test Method 8260 for target volatile organic analytes; and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

4.2 Laboratory Analytical Results

A summary of the laboratory analysis and of past analytical results is presented in **Table 2**. Additionally, the table provides a comparison of the detected concentrations versus the relevant ambient water quality standards that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Services, Inc. is presented in **Appendix B** of this document.

5.0 Evaluation of Results

The laboratory analysis performed on the groundwater samples MW-1, MW-2, MW-3, MW-4 and MW-6 failed to detect any target VOCs or SVOCs. The laboratory analysis performed on the groundwater sample MW-5 detected concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. The detected total VOC concentration was less than 0.3 ppm.

Approximately 0.01 ft free-phase product was observed in the MW-7H (old well installed by Tyree). No free-phase product was observed in any of the newly installed wells (MW-1 through MW-6). A sump skimmer was installed in MW-7H for the free-phase product recovery. The sump skimmer will be replaced on monthly basis.

Quarterly sampling will be continued in the third quarter of 2010.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the Site with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the Site.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with

Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets

and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

1.0 Purpose & Scope

This quarterly monitoring report was prepared to summarize the corrective action procedures performed at the property located 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The activities consist of the groundwater well gauging and quarterly sampling.

The protocols used for this report were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

2.0 Site Description

2.1 Topography

The areal extent of the Site is approximately 192,792 square feet. The Site contains four one-story masonry buildings with a combined footprint of 37,462 square feet. The surface area of the Site consists of asphalt pavement, exposed soils, and vegetative landscaping. The Site exhibits low topographic relief (less than three percent slopes).

2.2 Site Background

The Site lies within New York City zoning district M3-1. The interior space of the existing building was divided into office space and operational space by the AA Truck Renting. The office spaces were utilized for general administrative purposes. The operational space was utilized for truck repair and parts storage. The exterior space was utilized for truck parking.

2.3 Previous Investigation

On September 2, 2008, six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site by Impact Environmental. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2]

Measurable free phase product was detected at each monitoring well. It was noted that the thickness of the free phase product have been exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[3]. The laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds below applicable guidance criteria.

From March 31 to April 23, 2009, Impact Environmental conducted a spill investigation on the Site. The investigation consisted of sampling and analysis of subsurface soil and groundwater, the installation of large diameter groundwater monitoring wells, a groundwater elevation survey and a hydraulic conductivity investigation.

A total of 6 soil probes, identified as MW-SP-1 through MW-SP-6, were installed on the Site as part of this investigation. Subsurface soil samples were secured from grade to 20 feet below existing grade (BEG) or until significant clay layer was encountered. Six 4-inch diameter groundwater monitoring wells, identified as MW-1 through MW-6, were installed on the Site as part of this investigation. The locations of the installed groundwater monitoring wells were consistent with the approved Investigation Work Plan. The wells were gauged and sampled two weeks after the installation. No measurable free-phase product was observed in any of the wells. A second gauging event confirmed the absence of measurable free-phase product in all the wells. A third gauging event incorporated all the existing wells on the Site. Approximately 0.01 ft of free-phase product was observed in MW-7H, which is an old well probably associated with previous spill investigation. No measurable free-phase product was observed in any other wells.

The laboratory analysis performed on the interface soil sample MW-SP-6 (7') detected concentration of one target volatile organic analyte (n-butyl benzene). However, the detected concentration was below the applicable guidance criteria.[4]

---

[2] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

[3] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

[4] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

The laboratory analysis performed on the interface soil sample MW-SP-2 (5') detected concentration of one target semi-volatile organic analyte (chrysene) above the applicable guidance criteria.[5]

The laboratory analysis performed on the saturated samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-6 (12') detected concentrations of several target volatile organic analytes. The detected concentrations of isopropylbenzene and n-propylbenzene of MW-SP-4 (10') were above the applicable guidance criteria.[6]

The laboratory analysis performed on the saturated soil samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-5 (12') detected concentrations of several target semi-volatile organic analytes. The detected concentrations of chrysene, benzo-a-anthracene and benzo-a-pyrene were above the applicable guidance criteria.[7]

The laboratory analysis performed on the groundwater samples MW-2, MW-3 and MW-4 detected concentrations of several target volatile organic analytes. Several detected concentrations, mainly gasoline related compounds, were above the applicable guidance criteria.[8]

The laboratory analysis performed on all the groundwater samples failed to detect any concentration of target semi-volatile organic analytes.

The fingerprint analysis was performed on the groundwater samples MW-1 through MW-6. The chromatograms of the groundwater samples MW-1 through MW-6 were most consistent with a combination of gasoline and #6 fuel oil. This observation is consistent with the previous land use of the Site as an oil terminal, with bulk storage of gasoline and heavy fuel oil (#5 or #6 fuel oil).

The previous sampling locations can be referenced with **Plate 2**.

3.0 Groundwater Monitoring Plan

A Quarterly Monitoring Program was developed to execute the sampling and analysis requirements of the NYSDEC. All sampling locations can be referenced with **Plate 3**.

3.1 Monitoring Well Sampling

The Quarterly Monitoring Program consists of the gauging and sampling of seven groundwater monitoring wells, identified as MW-1 through MW-6 (installed by Impact) and MW-7H (old well installed by Tyree). Six 4-inch diameter monitoring wells (MW-1 through MW-6) were installed to a depth of approximately 15 to 20 feet BEG on the Site (with the exception of MW-2). The wells were installed using a hollow stem auger drilling technique with Geoprobe® 6600 unit. Each well was constructed of fifteen feet of screened interval (0.020 slot size, schedule 40, PVC), 5 ft above the groundwater interface and 10 ft below soil-groundwater interface. The annular space between the boring and the screened casing was filled with a filtration media which extended 2 ft above the top of the screen. The annular space 1 ft above the filtration media was sealed with bentonite. The remainder of the bore hole was filled with grout. The monitoring well was finished with a locking monitoring well cover. The construction details of MW-7H are unknown.

On August 20, 2010, Impact Environmental gauged all the seven 4-inch wells (MW-1 through MW-6 and MW-7H) with oil-water interface meter and disposable bailers. No measurable free phase product was observed in any of the wells.

Note that MW-7H is a pre-existing well. A sump skimmer was installed in MW-7H to recover the free-phase product. The sump skimmer will be replaced on monthly basis. Due to the absence of free-phase product, MW-7H was properly developed and sampled.

The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 1**. The monitoring wells were developed and sampled as part of this investigation. One groundwater sample was secured from each of these monitoring wells for laboratory analysis.

3.2 Quarterly Monitoring Well Sampling and Analysis

5.2.1 Monitoring Well Sampling Procedure

Field measurements were secured from each monitoring well during the development process to provide data regarding physical groundwater characteristics. The development water was field analyzed for dissolved oxygen (DO), pH, specific conductivity and temperature. Results of the field measurements were utilized to establish steady state conditions within the groundwater aquifer. Following development, one water sample was acquired from each of the monitoring wells utilizing a dedicated disposable bailer to prevent cross-contamination.

Each well was developed by pumping out a minimum of three (3) static well volumes utilizing a peristaltic pump. A static well volume is defined as:

Static well volume = height of water column x (well radius)^2 x pi x 7.48
where 7.48 is the conversion factor for cubic feet to gallons.

Following development, one groundwater sample was acquired from each of the monitoring wells on the Site. All of the samples were preserved in the appropriate vessels, preserved at 4°C in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

3.3 Groundwater Elevation Survey

A groundwater elevation survey was performed on the Site to determine groundwater flow direction. The elevation of groundwater was gauged at each monitoring well and recorded. The elevations were used to graphically define the planimetric surface of the water table. The elevations of the top of the casings were represented with respect to each other and based on a benchmark elevation or approximate elevation above mean sea level. The groundwater elevations were based as a function of the depth to water and these elevations.

Groundwater survey was performed on August 20, 2010. The groundwater elevation survey results are represented in **Table 1** and **Plate 2**. Based on the survey results, the groundwater flow direction at the Site is to the northwest.

3.4 Laboratory Sample Location and Frequency

The groundwater samples secured from monitoring wells on the Site were labeled for identification purposes as MW-1 through MW-7H, respectively.

4.0 Laboratory Analysis

4.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the groundwater sample MW-1 through MW-6 and MW-7H consisted of USEPA Test Method 8260 for target volatile organic analytes; and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

4.2 Laboratory Analytical Results

A summary of the laboratory analysis and of past analytical results is presented in **Table 2**. Additionally, the table provides a comparison of the detected concentrations versus the relevant ambient water quality standards that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Services, Inc. is presented in **Appendix B** of this document.

5.0 Evaluation of Results

The laboratory analysis performed on the groundwater samples MW-1 and MW-5 failed to detect any target VOCs or SVOCs. The laboratory analysis performed on the groundwater sample MW-2, MW-3, MW-4, MW-6 and MW-7H detected concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. The detected total VOC concentration was less than 0.1 ppm.

A sump skimmer was installed in MW-7H for the free-phase product recovery. No free-phase product was observed in any of the wells (MW-1 through MW-6, and MW-7H). The sump skimmer will be replaced on a monthly basis.

Quarterly sampling will be continued in the fourth quarter of 2010.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the Site with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the Site.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

1 Purpose & Scope

This Subsurface Investigation was conducted to define what, if any, organic contaminants have impacted the environmental quality of the property located at 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The Site is currently operated by AA Truck Renting Corp. for office purposes, truck repair, fueling and parking.

The investigative protocols proposed for this assessment were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002.

2 Sampling and Analysis Plan

A sampling and analysis plan was developed for the Site and included the installation of six soil probes and six groundwater monitoring wells. The sampling locations can be referenced with **Plate 2:** Sample Acquisition Plan.

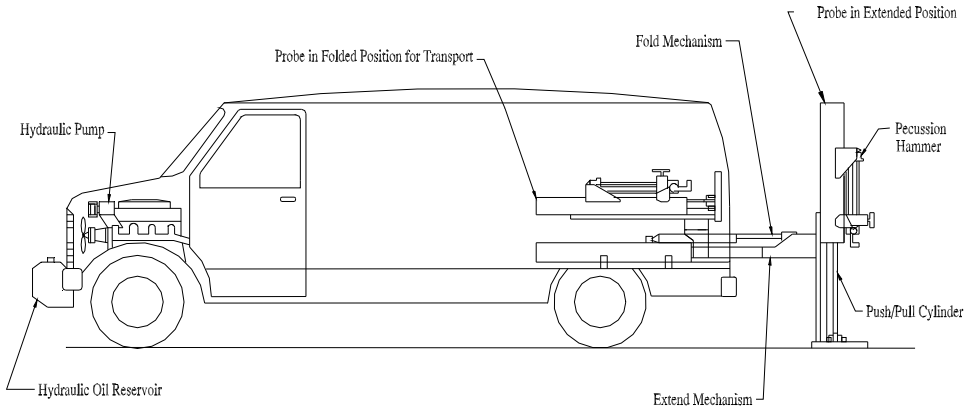
2.1 Subsurface Soil Sampling

On September 2, 2008 Impact Environmental installed six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 on the Site as part of this investigation. Soil probes SP-1 through SP-6 were installed across the Site. Subsurface soil samples were secured from said probes at depth intervals ranging from grade to approximately 16 feet below existing grade (BEG).

2.1.1 Subsurface Probe Installation

Subsurface probes were sited using a Geoprobe hydraulically powered probing tool (see Figure 1: Geoprobe Operating System). Mechanized, vehicle mounted probe systems apply both static force and hydraulically powered percussion hammers for tool placement (static down forces up to 18,000 pounds combined with percussion hammers of eight horsepower continuous output). Recovery of large sample volumes was facilitated with a probe-driven sampler. The probe-driven sampler consisted of a hollow probe that opened via a remote control mechanism at the selected sampling depth in the soil profile to allow soil to enter as it was advanced. Discrete media samples were secured at the desired depths and were contained within a non-reactive transparent plastic sleeve that lined the hollow probe. The plastic sleeves were removed for subsequent inspection and sample aliquot acquisition.

Figure 1: Geoprobe Operating System

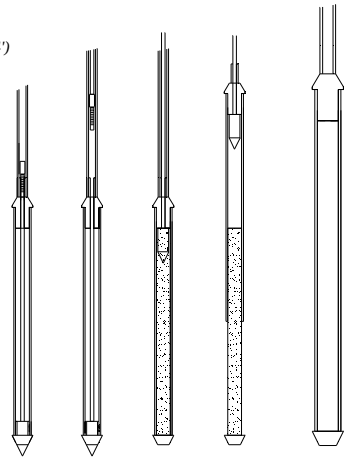


Basics

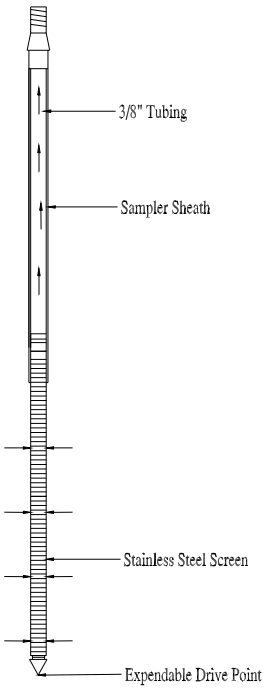
- Hydraulic powered probe unit isoperated from a engine driven pump.
- Remote vehicle ignition allows operator to start engine from probe unit.
- Belt driven hydraulic pump supplies 10 gpm @ 2000 rpm, 3000 psi operating pressure
- Probe unit folds for transport
- Unit utilizes static weight of vehicle and pecussion hammer to advance probing tools.
- Hydraulic hammer delivers pecussion rate of 30 Hz.
- Probes have greater than 18,000 lbs of down force and 25,000 lbs of retraction force.
- Drives multiple diameter probes (1", 1.25" and 2.25") to depths over 100 feet.

Soil Probing Tool
The tools are advanced and a sample is acquired in a non-reactive plastic sheathing. The system offers two sizes of sample retrieval:

Large bore - 1.5" x 2'
Macro - 2.25" x (2', 3' & 4')



Groundwater SP-15 Sampler
The tool allows a stainless steel, 4' screen to be delivered to the underlying groundwater. At the desired depth, the screen is retracted and samples are obtained via a check valve assembly.



2.2 Field Headspace Analysis

Headspace analysis was performed on each unsaturated subsurface soil sample acquired from probes SP-1 through SP-6 to provide precursory data regarding contamination. The headspace analysis from SP-1 through SP-6 detected concentrations of hydrocarbons above ambient levels. Results of the analysis were used to adjust the sample and analysis program to yield the most accurate and representative results. The results of the field analysis are presented in **Table 1**: Field Headspace Analysis Results.

Table 1: Field Headspace Analysis Results

Sample ID	**SP-1**	**SP-2**	**SP-3**	**SP-4**	**SP-5**	**SP-6**
Unit	*ppm*	*ppm*	*ppm*	*ppm*	*ppm*	*ppm*
Depth BEG						
0'-2'	NA	NA	NA	NA	NA	NA
2'-4'	1.6	1.6	0.2	0.3	1.3	231.0
4'-6'	551.0	1.7	0.3	3.2	1.5	209.0
6'-8'	592.0	6.1	4.3	3.9	4.2	130.0
8'-10'	1,292.0	5.1	225.0	56.0	74.0	80.0

2.2.1 Headspace Analysis Procedure

Headspace analysis was performed on each of the acquired samples utilizing a portable photo ionization detection meter to measure what, if any, hydrocarbon concentrations were present in isolated portions of the secured samples. Headspace analysis was conducted by partially filling a wide-mouth glass container with sample aliquot and sealing the top with aluminum foil, thereby creating a void. This void is referred to as the sample headspace.

To facilitate the detection of any hydrocarbons contained within the head space, the container was agitated for a period of thirty (30) seconds. The probe of the vapor analyzer was then injected through the foil into the headspace to measure the hydrocarbon concentrations present. A Photovac Micro-Tip, photo ionization detection meter (PID) was the organic vapor analyzer selected for the head space analysis. A PID utilizes the principle of photo ionization for detection and measurement of hydrocarbon compounds. A PID does not respond to all compounds similarly; rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to isobutylene. Hydrocarbon relative response factors for a PID calibrated to isobutylene are published by the manufacturer.

2.3 Sample Characterization

A visual inspection of all samples recovered during the installation of each of the soil probes was conducted to identify any gross signs of chemical contamination and to classify the sample media. In general, the samples obtained from soil probes SP-1 through SP-6 were found to consist of urban fill materials mixed with brown medium sand and silt. Olfactory evidence of petroleum contamination was observed in the soil samples obtained from the Site.

2.4 Groundwater Well Installation

On September 3, 2008 Impact Environmental installed six groundwater monitoring wells, identified as GW-1 through GW-6, on the Site as part of this investigation. The wells were installed at the location of the corresponding soil borings on the Site. Groundwater was encountered at approximately 5-8 feet BEG.

2.4.1 Monitoring Well Installation Procedures

The monitoring wells installed on the Site were constructed of 1" diameter slotted (0.020 inch) schedule 40 PVC screen and riser. The outside of the well from its base to a point 1' above the highest screen section was packed with clean filtration media (Morie sand). A 2' bentonite seal was packed around the casing above the filtration media. Drill cutting media were placed above the bentonite seal to a point six inches below existing grade. Concrete was used to fill the remaining six inches of open well casing.

2.4.2 Monitoring Well Gauging

The monitoring wells were gauged for the presence and thickness of free phase product and depth to water with an oil-water interface meter. Measurable free phase product was detected at each monitoring well. The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 2**: Field Measurements.

Table 2: Field Measurements

Monitoring Well	Date	Depth to Product	Depth to Water	Product Thickness
		ft BEG	ft BEG	ft
GW-1	9/4/2008	6.33	7.73	1.40
GW-2	9/4/2008	7.11	7.91	0.80
GW-3	9/4/2008	6.89	8.29	1.40
GW-4	9/4/2008	5.65	6.45	0.80
GW-5	9/4/2008	6.01	7.11	1.10
GW-6	9/4/2008	7.00	7.90	0.90

3 Laboratory Analysis

One soil sample from each soil probe was selected for ELAP-certified laboratory analysis. In addition, one groundwater sample that was collected from beneath the free phase product at each monitoring well was submitted for laboratory analysis.

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives and the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 consisted of United States Environmental Protection Agency (USEPA) Test Method 8260 for target volatile organic analytes and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

The laboratory analysis performed on the sample secured from groundwater probe GW-1 through GWP-6 consisted of USEPA Test Method 8260 for target volatile organic analytes.

3.1 Analytical Results

Table 3: Laboratory Analysis Results [Soil] and **Table 4:** Laboratory Analysis Results [Groundwater] present a summary of the detected concentrations versus the relevant guidance values that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Laboratories, Inc. is presented in **Appendix B** of this document.

4 Evaluation of Results

Six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2] While most of the semi-volatile organic analytes detected from SP-1, SP-3, SP-4, and SP-6 were below the applicable guidance criteria, no more than two of the concentrations of semi-volatile organic analytes detected in each sample were above the applicable guidance criteria.[3] These semi-volatile analytes consist of 2-Nitroaniline, 4-Chloroaniline, Benzo-a-Anthracene, Chrysene and Nitrobenzene.

The monitoring wells were gauged for the presence and thickness of free phase product and depth to water with an oil-water interface meter. Measurable free phase product was detected at each monitoring well with a range of thicknesses from 0.80 to 1.4 feet. It should be noted that the thickness of the free phase product may be exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[4]. These volatile analytes are primarily composed of gasoline related compounds; including 1,2,4 Trimethylbenzene, Isopropylbenzene, n-Butylbenzene, n-Propylbenzene, 2-Chlorotoluene and sec-Butylbenzene.

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives
[2] Ibid.
[3] Ibid.
[4] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

Based on the data obtained under the scope of this investigation, it appears that the soil at the Site is composed of typical urban fill material marginally contaminated with semi-volatile organic analytes. The soil at the Site exhibits olfactory evidence of petroleum contamination. However, the laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds, which were below applicable guidance criteria. The speciation of the analytes indicates that the petroleum related compounds detected are aged and degraded. No significant sources of petroleum contamination were identified in the unsaturated soils at the Site that would appear to be the result of the underlying free phase product detected on the groundwater. The uniform distribution of the free phase product on the Site suggests that its source may be derived from a regional issue; rather than a point source from the Site. Further, the groundwater quality beneath the layer of free phase product does not appear to be significantly impacted, which suggests that the free product is consistent with a fuel oil or diesel range product; rather than gasoline product. A potential source of this product may be from the adjacent Newtown Creek, having tidal characteristics and which was adversely impacted by the Greenpoint Oil Spill.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

Impact Environmental did not perform testing or analyses to determine the presence or concentration of asbestos at the Site or in the environment of the Site under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the Site.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

A. Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

B. Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

B.1 Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

B.2 Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

B.3 Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with

Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

C. Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

C.1 Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

C.2 Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

C. 3 Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the

appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

I, STUART LEVY, doing business as ALVIN PETROLEUM SYSTEMS, INC., do hereby certify that we located, in front of building, (2) buried 550 gallon tanks that were filled with water. We removed all water via licensed hauler. We then excavated over the (2) tanks, cut open same, cleaned out tank bottoms and put bottoms into DOT drum. We disposed of drum via licensed hauler. We then filled the (2) 550 gallon tanks with concrete. All work was completed following NY DEC regulations and no further actions required.

Attn: Mr. Richard W. Merzbacher
Executive Vice President

Dear Mr. Merzbacher:

As an outgrowth of our conversation and a request from Eric Roberts to furnish to you all of our reports, I am enclosing them herein and also providing the background of our relationship with Eric Roberts.

During May 1990, Tyree Brothers Environmental Services was retained by AA Truck Renting Corporation to perform a subsurface investigation at the referenced location in order to prepare an environmental analysis for mortgage purposes. The scope of the investigation included the drilling of four soil borings to groundwater and laboratory analysis of collected soil samples from each boring. The analysis indicated the presence of petroleum hydrocarbons and aromatic hydrocarbons at all of the boring locations.

Two monitoring wells were subsequently installed to investigate groundwater impact. While one well was clean, the other well was found to contain approximately three inches of floating petroleum product. Laboratory analysis of a sample of the floating product identified the product as being either a number 2 fuel oil or a diesel fuel. The well containing the floating product is in the vicinity of a former terminal loading rack, three operating underground diesel tanks, and a diesel fuel dispenser.

On Saturday, June 2, 1990 the three underground storage tank systems were petro-tite tested. All three tanks were determined to be tight, initially one of the pumps was leaking. The leak was repaired prior to the testing.

Four additional monitoring wells were installed during June 1990. The monitoring wells are checked weekly for the

presence of floating petroleum product. Two of the six wells were found to contain a measurable amount of floating product. Since that time one well shows thickness of floating product in the three to six inch range. The second well initially showed less than one inch of product, it now shows zero to a trace.

The presence of floating product is limited solely to the small immediate area of the existing underground storage tanks. The probable causes of the identified release are as follows:

1. Past spillage resulting from the transfer of product at the former terminal loading rack area.

2. Spillage occurring from normal operation of the existing underground storage tank systems or

3. Release from the noted suction pump leak at the dispenser pump which was repaired during the June 2, 1990 test.

On June 6, 1990 the New York State Department of Environmental Conservation was notified and has been kept informed. They are satisfied with our remediation program of monitoring and bailing.

Given the nature of the groundwater conditions in this area, and the fact that the aquifer is not used for public water supply, I do not anticipate any additional work being required by the regulatory agencies. Our firm has had several similar situations in the New York City area and simple periodic monitoring and bailing is all that has been required.

The approximate cost to complete the above remediation program is in the range of $50,000 to $75,000.

Sincerely,

William M. Tyree Jr.

Long Island City, New York

Re: AA Truck Renting Corp
28-90 Review Avenue
Long Island City, New York

Dear Mr. Roberts:

Enclosed please find our Subsurface Investigation Report for the above-referenced property. The assessment was conducted pursuant to your request to Tyree Bros. Environmental Services.

The presence of diesel fuel was observed floating on the groundwater in the immediate area of the existing underground storage tanks. This is indicative of a release from the storage tank system. Pursuant to Article 12 of the NYS Navigation Law, all petroleum spills are to be reported to the NYS Department of Environmental Conservation.

If you have any questions regarding the contents of the report, please contact me.

Sincerely,

Michael F. Gremillion

Michael F. Gremillion

Background

Per the request of Mr. Eric Roberts of AA Truck Renting Corp., Tyree Brothers Environmental Services (TBES) performed a subsurface investigation at the subject location. The assessment was conducted to investigate subsurface impacts associated with previously existing aboveground, and presently existing underground petroleum storage tanks located at the site.

The five (5) acre parcel was previously the site of a Texaco building and terminal. It was owned by Texaco from 1918 to 1972, but only operated as a terminal until 1967. All above-ground petroleum storage tanks were removed in 1972 subsequent to the transfer of the property to AA Truck Renting Corp.

Three (3) 4,000 gallon steel underground petroleum storage tanks are located on the site in the area of the former terminal loading rack. The tanks are currently utilized for the storage of diesel fuel. According to the owner, these tanks were previously used for the storage of gasoline. Approximately five (5) years ago, the storage of gasoline was discontinued.

TBES installed four (4) soil borings at potential contamination source areas on the site: three borings were drilled in the area of the old terminal's aboveground storage tanks; the other boring was drilled in the vicinity of the existing underground storage tanks. Soil borings were drilled to the depth of the water table and split spoon samples were then taken. The split spoon samples represent soil from a depth just below the water table. Sediment samples obtained during drilling were brought to a New York State certified laboratory and analyzed for the presence of volatile organics and petroleum products.

Field Investigation and Findings

On May 2, 1990, Tyree Brothers Environmental Services, Inc. drilled four (4) soil borings at the subject site (see Site Map for boring locations). Borings 1, 2, and 3 were drilled to the water table which ranged from five (5) to seven (7) feet and split spoon samples were then taken. Boring 4 was terminated at a depth of four (4) feet after several unsuccessful attempts were made to surpass this depth. Additional attempts were made to drill a fifth boring but, due to the presence of cement and debris, the drilling of a fifth boring was aborted.

Soil conditions encountered during drilling included fine silty sand and clay with debris (refer to the boring logs in the Appendix). Petroleum odors were noted in the drilling soils from borings 1 and 2. Groundwater was encountered in borings 1, 2, and 3 at depths between five (5) and seven (7) feet.

Split-spoon samples were taken just below the water table in borings 1, 2, and 3. A grab sample was taken off the auger flytes in boring 4. Soil samples were then placed in appropriate sampling containers for further field and laboratory analysis. Sediment samples obtained during drilling were screened with an HNU photoionization meter using headspace analysis. This meter measures the concentrations of organic vapors in air as they evolve from the sediment samples. The numerical readouts are not exact determinations of true volatile content of the samples, but instead provide qualitative indications of the degree of volatile organic contamination.

The highest meter reading observed was 170 ppm at the seven (7) foot depth in boring 2. The sample with the highest meter reading from each borehole was brought to a state certified laboratory for analysis of volatile organics. Meter readings for individual soil samples are provided with the boring logs.

Soil samples obtained during drilling were analyzed for Total Aromatic Hydrocarbons by EPA method 602, Volatile Halocarbons by EPA method 601, and Total Recoverable Petroleum Hydrocarbons by EPA method 418.1.

The analysis by EPA method 602 detected the highest concentration of aromatic hydrocarbons in the sample from B-1 at a concentration of 70,530 ppb. The lowest concentration found was 414 ppb in B-2. Concentrations detected in B-3 and B-4 were 708 ppb and 823 ppb, respectively.

The analysis by EPA method 601 found all concentrations of volatile halocarbons in B-1, B-3 and B-4 to be less than 5 ppb or non-detectable. B-2 contained 17 ppb chloroform and 146 ppb methylene chloride; all other constituents were less than 5 ppb or non-detectable.

The results of the analysis for Total Recoverable Petroleum Hydrocarbons by EPA method 418.1 revealed concentrations of 56,432 ppm, 624.3 ppm, 176.7 ppm and 626.9 ppm in soil samples from B-1 through B-4, respectively. The laboratory results for all of the soil samples are summarized in Table 1 included in the Appendix. The analytical reports from Environmental Testing Laboratories are also included in the Appendix.

On May 9, 1990, the drilling division of TBES returned to the subject site and installed monitoring wells in the areas of B-1 and B-2. An attempt was made to install a third well in the area of B-3; however, construction debris prevented drilling beyond the surface of the water table.

A well technician visited the site on May 12, 1990, and monitored the two wells. Well 1 was found to contain 2-7/8" of floating product and one-half gallon of product was bailed from the well. Well 2 did not contain any floating product.

On May 17, 1990, a well technician again visited the site to monitor the wells. Well 1 was found to contain 2-1/2" of floating product. No floating product was observed in well 2. A sample of floating product from well 1 was brought to Environmental Testing Laboratories and analyzed for petroleum product identification. The result of the analysis identified the floating product as being number #2 fuel oil/diesel fuel. The laboratory report is are included in the Appendix.

Conclusions and Recommendations

Analysis of the soil samples revealed very high concentrations of aromatic hydrocarbons and recoverable petroleum hydrocarbons in the soil from boring B-1. In addition, floating product is present in the well that was installed in this boring. Analysis of the floating product identified it to be #2 fuel oil/diesel fuel. The boring/well location is located immediately adjacent to the underground diesel storage tanks and appears to indicate a release in that vicinity.

It is recommended that a system tightness test be immediately performed on all underground storage tanks at the site. In addition, separate line tests should also be performed on all transfer lines. This is necessary to determine if any part of the system is presently leaking.

In addition, it is recommended that the site be continuously monitored and bailed on a weekly basis to remove any floating product appearing in the wells.

Additional monitoring wells will also be necessary to define the extent of the floating product plume.

DISCLAIMER

This site assessment and report was prepared for the use of Mr. Eric Roberts. The conclusions provided by Tyree Bros. Environmental Services (TBES) in this assessment are based solely on the information reported in this document. Future investigative site information which was not available to TBES at the time of this assessment may result in a modification of the conclusions. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur. This report has been prepared in accordance with generally accepted hydrogeologic practices. No other warranty, expressed or implied, is made.

Mr. Raphael Ketani
New York State Department of Environmental Conservation
Division of Environmental Remediation, Region 2
One Hunters point Plaza
47-40-21st Street, Long Island City, NY 11101

Re: Groundwater Monitoring Well Decommissioning for
2890 Review Avenue, Long Island City, New York

Dear Mr. Ketani:

This letter serves as a document for the decommissioning of the groundwater monitoring wells at the abovementioned Site.

On July 14, 2011, Impact Environmental performed the groundwater monitoring well decommissioning at the Site. All decommissioning activities were performed in accordance with the New York State Department of Environmental Conservation (NYSDEC) CP-43 Groundwater Monitoring Well Decommissioning Policy. A total of seven (7) 4-inch wells and two (2) one-inch wells were decommissioned. The grouting in-place method was utilized. The locations of the wells decommissioned can be referenced with **Plate 1**.

Grouting in-place is the simplest and most frequently used well decommissioning method and grouting itself is the essential component of all the decommissioning methods. The grout seals the borehole and any portion of the monitoring well that may be left in the ground.

Please feel free to contact us with any questions or comments.

Sincerely,

Impact Environmental

Wenqing Fang
Project Manager

CC: AA Truck Renting, Eric Robert

Dear Mr. Frahauf:

Re: 28-90 Review Avenue, Queens

We hereby acknowledge receipt of your **Freedom of Information Law** request dated April 7, 2014.

Your request is important to us and will be handled as expeditiously as possible. You are advised, however, that because of the large increase in the volume of such requests, your response may be delayed.

If you have any questions, please call Brenda Farren, Records Access Officer, at (718) 595-3448. Please refer to the ***FOIL log number(s)*** listed below when calling.

Sincerely,

Brenda Farren

Dear Mr. Frahauf:

In response to your Freedom of Information Law information request of 4/7/2014, the Division of Air/Noise Enforcement and Policy has searched its files for records pertaining to 28-90 Review Avenue and:

☐ Has located and enclosed the requested documents.

☐ A total of _____ pages of materials have been located, for which we are required to charge a fee of $.25 per page. Please send your check, in the amount of $_____, to:

Records Access Officer
NYC Department of Environmental Protection
59-17 Junction Boulevard, 19th Floor
Flushing, NY 11373

The check should be made payable to **The City of New York** and include the Log # noted below.

☐ Upon receipt of the check, copies of these records will be sent to you.

☒ Does not have the requested documents.

Sincerely,

Geraldine Kelpin
Director, Air/Noise Enforcement & Policy

RE: FOIL REQUEST

Mr. Abdelsadek:

I am writing to request information on DEC files addressing environmental quality for the property at the below address. Information to assist in identifying the site is also noted:

Site Address: **28-90 Review Ave. Long Island City, NY**
Known spill numbers: *9600032, 9010146, 0803348, 9311731, 0807459, 0504537,*

Current Owner: **28-90 REVIEW AVENUE ASSOCIATES L L**
Facility Description: **WAREHSE MISCELLANEOUS**

Our request is to identify any pertinent files held within the following Departments:

- **Solid & Hazardous Materials – Storage of Materials, Inspections/Violations**
- **Division of Environmental Remediation - Permits, Inspections/Violations**
- **Oil Spills Unit – Spill Details, Monitoring/Remediation**

Your consideration in this matter is greatly appreciated. We will follow up by phone, to Ascertain whether we might further assist you with any questions regarding this request.

Sincerely,
IMPACT ENVIRONMENTAL

Qualifications of the Environmental Professional/
Qualifications of the Project Manager

28-90 Review Avenue, Long Island City, New York

Kevin Kleaka

VICE PRESIDENT/SENIOR ENVIRONMENTAL SCIENTIST

EDUCATION:

Bachelor of Science, Environmental Science
State University of New York at Plattsburg (1995)
Applied Environmental Science Program

PROFESSIONAL EXPERIENCE:

❖ 1997-Present **IMPACT ENVIRONMENTAL CLOSURES** Vice President

- Principally responsible for managing environmental assessment, investigation, construction and remediation projects in commercial and industrial markets for lenders, real estate investment/development firms, construction firms and government agencies.
- Manage Phase I and II Environmental Site Assessments, State Spill Investigation and Remediation, County and Federal Underground Injection Control Programs, State & City Voluntary/Brownfield Cleanup Programs, State & Federal Superfund Sites, Brownfield Environmental Restoration Programs, Federal RCRA Closure, City E-Designation Projects.
- Responsible for environmental compliance of construction projects for waste management.
- Quality control of work products and deliverables.
- Supervise staff of geologists, hydrogeologists, engineers, environmental scientists, and environmental technicians to develop and implement sampling and analysis plans, quality assurance programs, remedial action plans.
- Provide expert witness testimony/fact statements and support in litigation cases involving soil, air and/or groundwater pollution.

❖ 1995-1997 **WYETH AYERST LABORATORIES** Chemist

- Worked in chromatographic separations division performing quality assurance analysis.
- Performed laboratory procedures and analyses in accordance with USFDA analytical test methods by liquid, gas, and thin layer chromatography.

KEY PROJECTS:

- East Side Access MTA LIRR
- Melody Cleaners
- Bill Wolf Petroleum
- Spartan Petroleum
- JFK 1020, Runway 13R-31L
- Rheingold Brewery Redevelopment Project
- WTC Greenwich Street Corridor Reconstruction
- Yankee Stadium Macomb's Park
- ExxonMobil Spill Valley Stream, NY

ORGANIZATIONS:

- New York City Brownfield Partnership, Member 2012
- New Partners for Community Revitalization, Member 2011
- ASTM Committee, Member 2012
- National Groundwater Association
- Environmental Bankers Association
- Vapor Intrusion Network
- Long Island Geologist Association
- Environmental Consulting Professionals
- Environmental Insurance Professionals

CERTIFICATIONS/ACHIEVEMENTS:

- New York City Office of Environmental Remediation – Certified Brownfield Professional (Gold Certification) 2012
- Advanced Tools for In-Situ Remediation Workshop, Long Island Groundwater Institute, July 2008
- Brownfield Cleanup Program Conference by Certilman Balin July 23, 2008
- ASTM Technical & Professional Training for Assessment of Vapor Intrusion into Structures of Property Involved in Real Estate Transactions, March 26, 2008

Dan Fruhauf

Environmental Scientist

EDUCATION:

Bachelor of Arts, Ecosystems & Human Impact
Stony Brook University (2012)

PROFESSIONAL EXPERIENCE:

- 2014-Present **IMPACT ENVIRONMENTAL CLOSURES INC.** Environmental Scientist

  - Responsible for management and development of Impact's engineering practice and New Jersey environmental consulting division

- 2013-2014 **SOVEREIGN CONSULTING INC.** Environmental Scientist

  - Gather field data on NYDEC spill sites
  - Building and installing remediation systems
  - Contamination concentration, plume direction reports related to petroleum spills
  - Groundwater, soil & vapor sampling
  - Contractor oversight for all spill site work
  - Working with a building relationships with NYDEC, EPA & DEP

- 2012-2013 **LEITES GROUP INC.** Environmental Impacts Director

  - Developed company structure & services
  - Audited clients on sustainability, green practices

CERTIFICATIONS/ACHIEVEMENTS:

- OSHA HAZWOPER 40-Hour Training/8-Hour Refresher
- Transport Workers Identification Credentials
- OSHA 10-Hour Construction Site Training

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

Program Number: 9313946

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL ---------- National Priority List Deletions

Federal CERCLIS list

FEDERAL FACILITY ---------- Federal Facility Site Information listing
CERCLIS ---------- Comprehensive Environmental Response, Compensation, and Liability Information System

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROL ---------- Sites with Institutional Controls

Federal ERNS list

ERNS ---------- Emergency Response Notification System

State and tribal leaking storage tank lists

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land
NY HIST LTANKS ---------- Listing of Leaking Storage Tanks

State and tribal registered storage tank lists

FEMA UST ---------- Underground Storage Tank Listing
INDIAN UST ---------- Underground Storage Tanks on Indian Land

State and tribal institutional control / engineering control registries

NY RES DECL ---------- Restrictive Declarations Listing

State and tribal voluntary cleanup sites

NY VCP ---- Voluntary Cleanup Agreements
INDIAN VCP ---- Voluntary Cleanup Priority Listing

State and tribal Brownfields sites

NY ERP ---- Environmental Restoration Program Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

NY SWTIRE ---- Registered Waste Tire Storage & Facility List
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
ODI ---- Open Dump Inventory
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL ---- National Clandestine Laboratory Register
NY DEL SHWS ---- Delisted Registry Sites
US CDL ---- Clandestine Drug Labs

Local Land Records

NY LIENS ---- Spill Liens Information
LIENS 2 ---- CERCLA Lien Information

Records of Emergency Release Reports

HMIRS ---- Hazardous Materials Information Reporting System
NY Hist Spills ---- SPILLS Database
NY SPILLS 90 ---- SPILLS 90 data from FirstSearch
NY SPILLS 80 ---- SPILLS 80 data from FirstSearch

Other Ascertainable Records

FUDS ---- Formerly Used Defense Sites
DOD ---- Department of Defense Sites
SCRD DRYCLEANERS ---- State Coalition for Remediation of Drycleaners Listing
US FIN ASSUR ---- Financial Assurance Information
EPA WATCH LIST ---- EPA WATCH LIST
TSCA ---- Toxic Substances Control Act
TRIS ---- Toxic Chemical Release Inventory System
SSTS ---- Section 7 Tracking Systems
ROD ---- Records Of Decision
RMP ---- Risk Management Plans
RAATS ---- RCRA Administrative Action Tracking System

EXECUTIVE SUMMARY

PRP ---- Potentially Responsible Parties
PADS ---- PCB Activity Database System
ICIS ---- Integrated Compliance Information System
FTTS ---- FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
MLTS ---- Material Licensing Tracking System
COAL ASH DOE ---- Steam-Electric Plant Operation Data
COAL ASH EPA ---- Coal Combustion Residues Surface Impoundments List
PCB TRANSFORMER ---- PCB Transformer Registration Database
RADINFO ---- Radiation Information Database
HIST FTTS ---- FIFRA/TSCA Tracking System Administrative Case Listing
DOT OPS ---- Incident and Accident Data
CONSENT ---- Superfund (CERCLA) Consent Decrees
INDIAN RESERV ---- Indian Reservations
UMTRA ---- Uranium Mill Tailings Sites
LEAD SMELTERS ---- Lead Smelter Sites
US MINES ---- Mines Master Index File
NY COAL ASH ---- Coal Ash Disposal Site Listing
NY DRYCLEANERS ---- Registered Drycleaners
NY E DESIGNATION ---- E DESIGNATION SITE LISTING
NY Financial Assurance ---- Financial Assurance Information Listing
NY UIC ---- Underground Injection Control Wells

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP ---- EDR Proprietary Manufactured Gas Plants
EDR US Hist Cleaners ---- EDR Exclusive Historic Dry Cleaners

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA HWS ---- Recovered Government Archive State Hazardous Waste Facilities List
NY RGA LF ---- Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 06/26/2015 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 11/01/2014 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 06/24/2015 has revealed that there are 14 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/21/2015 has revealed that there are

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 6 EDR US

EXECUTIVE SUMMARY

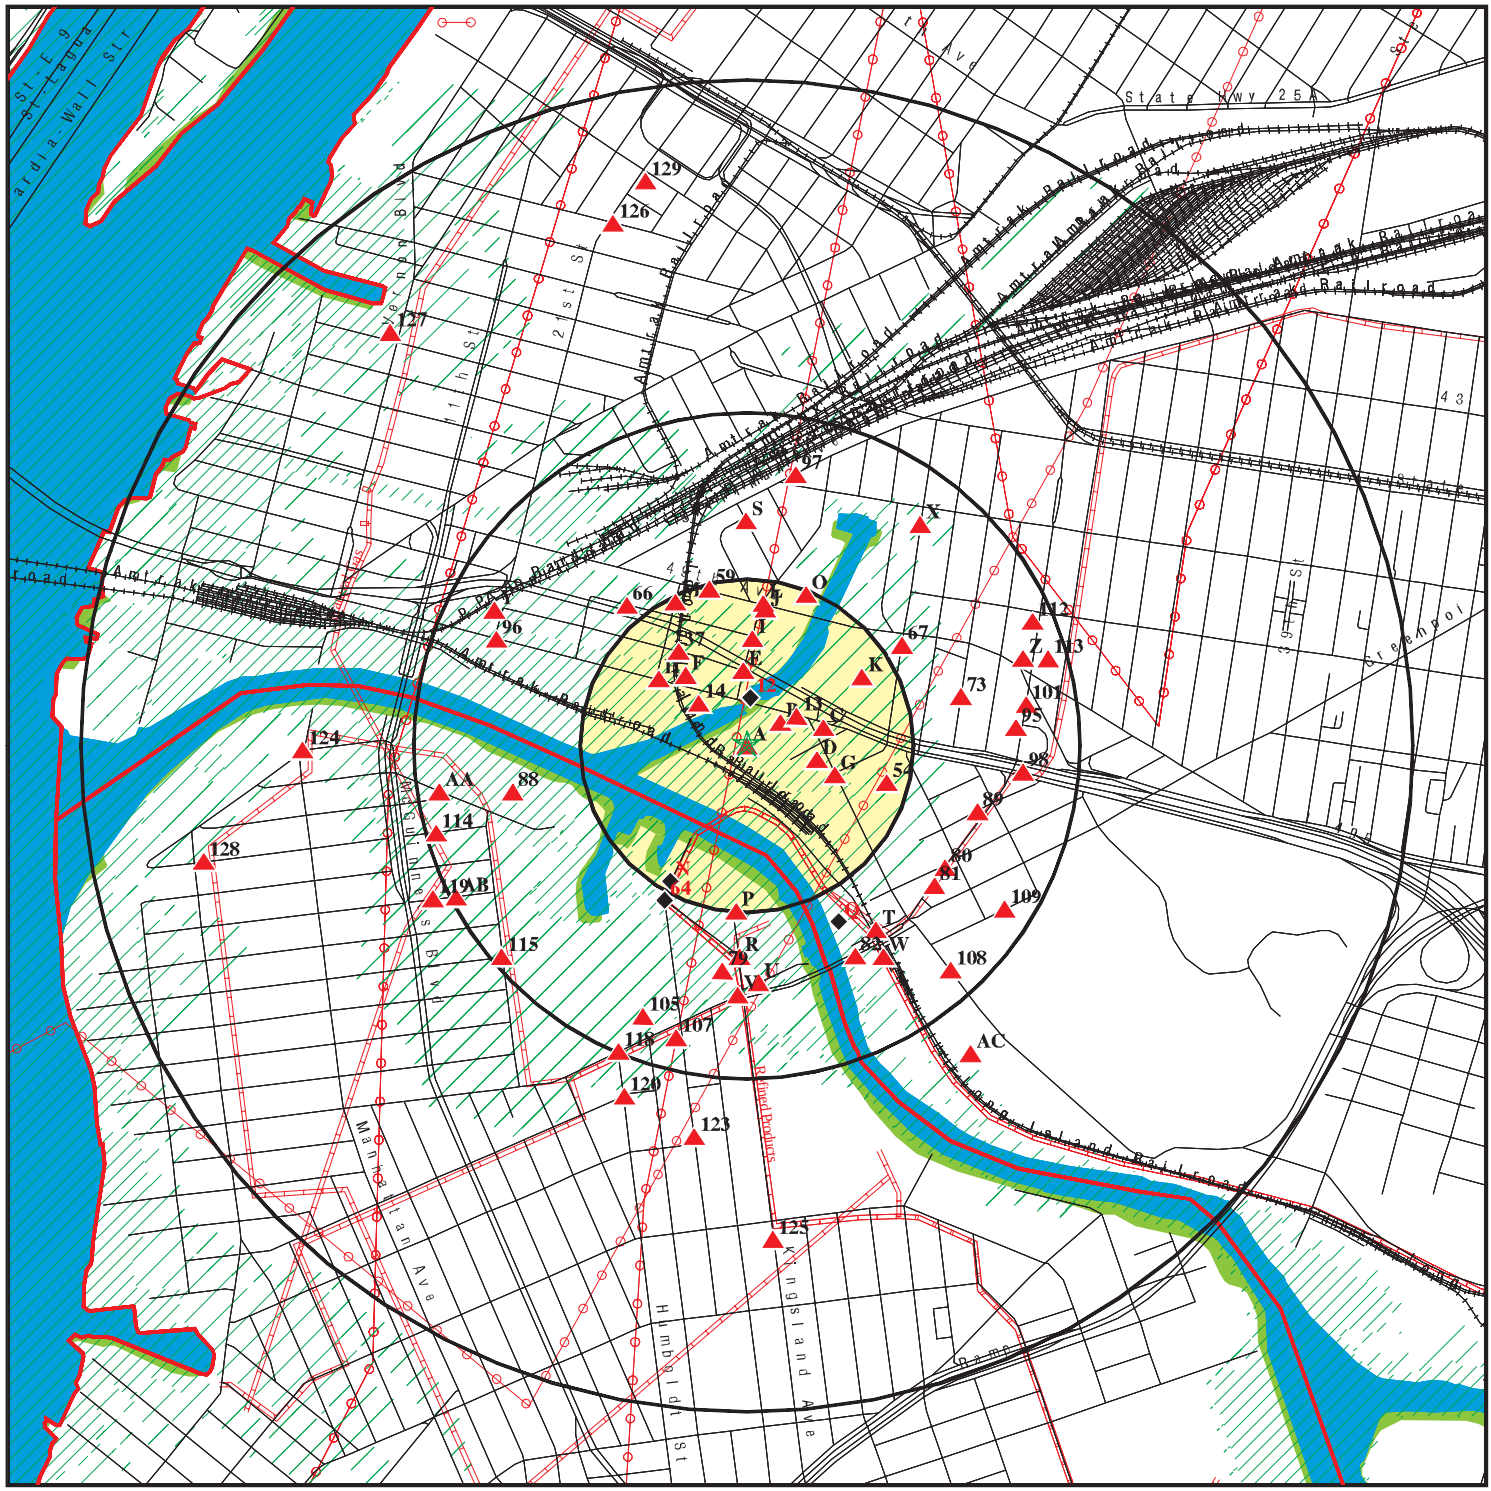
Due to poor or inadequate address information, the following sites were not mapped. Count: 22 records.

Site Name	Database(s)
WASTE MANAGEMENT OF NY - REVIEW AV	US AIRS
QUEENS WEST (HUNTER'S POINT) PARCE	NY ENG CONTROLS, NY INST CONTROL, NY VCP
ACCURATE ASSOCIATES	CORRACTS, RCRA-LQG, RAATS, ICIS, NY MANIFEST
DAVIDSON PIPE SUPPLY COMPANY	NY SHWS
MEEKER AVENUE PLUME TRACKDOWN	NY SHWS
MORGAN OIL TERMINAL	NY SHWS
34TH AVE. & 62ND ST. PLUME	NY SHWS
WHITE SUN CLEANERS	NY SHWS
ROEHR CHEMICALS, INC.	NY SHWS
QUEENS MEDALLION LEASING	NY SHWS, NY BROWNFIELDS
CREATIONS AROMATIQUE	NY SHWS
QUEENS WEST - SOUTH	NY SHWS
OUTLET CITY	NY SHWS
QUEENS BLVD AND 52ND ST PLUME TRAC	NY SHWS
ANGEL BRIGHT CLEANERS	NY DRYCLEANERS
FABRICLEAN	NY DRYCLEANERS
LORI CONTRACTING PROCESSING FACILI	NY SWF/LF
HUNTERS POINT RECYCLING INC	NY SWF/LF
CON ED ASTORIA	NY LTANKS
UNK	NY LTANKS, NY Spills
NEW YORK PAVING/REVIEW AVE	FINDS
ARCH STREET YARDS (LIRR)	NY VCP

OVERVIEW MAP - 4401946.2S



- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- County Boundary
- Power transmission lines
- Pipelines
- 100-year flood zone
- 500-year flood zone
- National Wetland Inventory
- State Wetlands

H00 - Tank Leak Detection - None
I00 - Overfill - None

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 09/01/1971
Capacity Gallons: 275
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 04/28/1999
Register: True
Modified By: TRANSLAT
Last Modified: 03/04/2004
Material Name: other

Tank Number: 009
Tank Id: 63845
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

F00 - Pipe External Protection - None
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
B00 - Tank External Protection - None
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
D02 - Pipe Type - Galvanized Steel
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 05/17/1999
Capacity Gallons: 4000
Tightness Test Method: NN

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	10/7/08 - Raphael Ketani. The spill was called in on 10/2/08. It comprised the discovery of oil contaminated soil. The contact is Kevin Kleaka of Impact Environmental (631) 269-8800, ext 304. According to Property Shark, the site is block and lot 294 and 106. The main address is 5302 Review Avenue. The alternate address is 2890

AA TRUCK RENTING CORP (Continued) **S104073336**

Review Avenue. Property Shark contains pictures of a one story garage for trucks. According to ACRIS, the seller was Eric W. Roberts, 145 E. 81 Street, Apt. PH-A, Manhattan, 10028. The buyer is 2890 Review Avenue Associates, LLC, 2890 Review Avenue, LIC, 11101.I sent a CSL.Mr. Kleaka called me back. He said that they did some borings and found urban fill. He also found groundwater with floating product on it. However, he does not believe that the contamination in the fill is the same contamination as the floating product on the water. The site is on Newtown Creek and he suspects that oil made its way from the creek to the site. The site was an oil terminal and there was a spill in 1990, which was closed. He will send me a report soon.There are five other spill cases for the site. All of them are closed. The cases are: 9010146; 9311731; 9313946; 9600032; 0803348.10/10/08 - Raphael Ketani. I received the hard copy of the October 7, 2008 Subsurface Investigation Report on 10/8/08. I began my review today. There was an aerial photograph with an overlay showing where six large fuel tanks had been and some railroad tracks. Head space analyses were high to very high for SP-1 and SP-6 from almost at grade to 10 feet below grade. The other borings, SP-3 to SP-5, had high head space hits only at the 8 foot to 10 foot interval. An approximately one foot thick layer of oil was found on top of the water table in all of the wells. Six wells were installed. All six soil samples were almost completely non-detect for VOCs and SVOCs. There were some VOC hits and SVOC hits, but they were either well below TAGM or slightly above TAGM. The groundwater samples for all six wells were almost completely non-detect for VOCs. There were a few very low exceedences and one hit of 310 ppb of sec-butylbenzene. No SVOC analyses were performed. I contacted Mr. Kleaka and told him that he will need to do a round of groundwater sampling for SVOCs and that he will need to install more and larger diameter wells for oil recovery. I told him that it was strange that the groundwater was so contaminant free when a thick layer of oil was sitting on top. He said that he thought it was strange, too, and had no explanation for the lack of contaminants. He said that he will send DEC a plan for installing more wells and for an oil recovery approach. 10/20/08 - Raphael Ketani. I received a letter dated 10/17/08 from E. Gail Suchman (attorney) of Stroock (attorneys at law; (212) 806-6656). The letter stated that they were "developing an investigation work plan that will more clearly define the product layer and identify appropriate strategies for addressing it." "As soon as the work plan is completed, we will forward it to you for review." 11/21/08 - Raphael Ketani. I tried to contact Ms. Suchman, but could only leave a message.Ms. Suchman called me back. She said that the client reviewed the draft workplan. The plan will be finished on monday and sent to DEC next week. The money to do the work is coming from the client’s insurance. Impact Environmental will be submitting the plan.12/2/08 - Raphael Ketani. I reviewed the partial work plan submitted by e-mail last week by Impact Environmental. Only 3 soil borings were planned. The most contaminated sample will be sent to the laboratory for analysis, or a sample from the groundwater-soil interface. Six groundwater wells are planned and more may be installed as needed. My only comment was that they should sample the soil at each well location, besides installing the wells. I called up Ms. Suchman, but could only leave a message that soil samples must be taken from each well location, also. I tried to contact Mr. Kleaka (631) 269-8800, ext 304, but could only leave a message with his assistant, Wenqing (wen-ching) Fang, stating that soil samples will

AA TRUCK RENTING CORP (Continued) **S104073336**

have to be taken at each well location.I received the hard copy today. It was the same document as the one that I had received via the e-mail.12/23/08 - Raphael Ketani. I tried to reach Ms. Suchman (212)806-6656 and Mr. Kleaka, but could only leave messages regarding progress for installing the borings and wells.Later, Mr. Fang called back and said that Impact Environmental had not moved forward with the installation of the additional wells as they were waiting for comments from DEC. I told him that DEC had already commented on the work plan back on 12/2/08. He requested that I send a letter to show the client. I told him that I will send the letter. I sent the letter by e-mail to Randall Austin, Chief of the Spills Unit, and I had Jeff Vought, acting Chief review the letter. The letter was sent out today. 12/30/08 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, but could only leave a message.1/12/09 - Raphael Ketani. Today I received the following e-mail: Impact has received your approval letter for the proposed work planregarding 2890 Review Avenue, LIC (NYSDEC Spill #0807459). Impact would liketo propose that the Investigation Summary Report be completed within 90 daysfrom the date of your approval letter (dated December 23, 2008). Let me knowif you have any questions. Thanks!Wenqing FangEnvironmental EngineerImpact Environmental170 Keyland CtBohemia, NY 11716Tel: (631) 269-8800I responded back that this would be fine. The deadline for submission of the SIR is 3/23/09.3/13/09 - Raphael Ketani. I received the following e-mail from Mr. Fang:I tried to call you this morning regarding 2890 Review Avenue Site.Basically, our client had some financial issue with the insurance company,which led to the delay of the project. Now the issue is resolved and we hadschedule the field work for the site from March 30 to April 1, which is theearliest date available for us. Subsequent to the field work, laboratoryanalysis and report generation will take approximately 3 weeks. We expect tosubmit the investigation summary report by April 23. Please let me know ifthis change is acceptable for the department. I e-mailed him back that this schedule was acceptable.4/3/09 - Raphael Ketani. Mr. Fang sent me the following e-mail:This email is sent as an update for 2890 Review Avenue project. It hastaken longer than expected to install the 4-inch wells at the Review AveSite. This is mainly due to the presence of fill material on the site.We were basically doing one well per day. We expect to finish all thewells by next Tuesday, followed by well development. Groundwatersampling will be performed two weeks after the well development.Low-flow technique will be utilized as per your request. However, pleasebe advised that significant clay and silt was encountered during thewell installation. Therefore, low-flow might turn out to be impracticalfor this site. If so, traditional purging and sampling method will beutilized.4/23/09 - Raphael Ketani. I tried to contact Mr. Fang (cell (631) 790-3338 regarding whether the groundwater samples were taken, but could only leave a message.4/24/09 - Raphael Ketani. Mr. Fang sent me the following e-mail response:On April 23, Impact conducted groundwater sampling, well survey and slugtest at Review Avenue Site (two weeks after well development). It willtake approximately two week for the laboratory analysis. After that, Iwill need approximately 10 days to prepare the report and have ourclient review it before I can send it to the DEC.5/20/09 - Raphael Ketani. I received the following e-mail from Mr. Fang:This email is an update for the 2890 Review Ave project. A total of 64-inch wells are installed on the Site by 4/6/09. Well development wasfinished on 4/10/09. On 4/23/2009, two weeks after the development asrequired by

AA TRUCK RENTING CORP (Continued) **S104073336**

the DEC, wells were gauged and sampled. No free-phaseproduct was observed in any of the wells. This contradicts with theprevious observations via 1-inch wells. Therefore, Impact propose tore-gauge the wells next week (4 weeks after sampling). Upon finishing ofthe second gauging, Impact will release the Investigation Summary Reportfor the Site.6/25/09 - Raphael Ketani. I received the June 24, 2009 Investigation Summary Report. I reviewed the report. The site is on the east side of Dutch Kills and a little south of Borden Avenue. Groundwater is at 5 to 7 feet below the surface and flow is to the northwest. Measureable product was originally detected in the 1 inch wells from 0.8 to 1.4 feet. The product is a mix of gasoline and #6 oil. PID hits for MW-1 and MW-2 were the highest at about 15 feet below the surface. MW-3 had PID hits of 665 ppm and 645 ppm at from 2 to 5 feet with low readings below this. Groundwater was collected below the product. Analyte speciation indicates that this is weathered oil. No source of petroleum was identified in the soil. After development, the 4 inch wells were gauged on 4/23/09 and 6/5/09. No measureable product was found in any of the wells. On 6/12/09, all of the 1 inch wells, all of the 4 inch wells, and a pre-existing 4 inch well (MW-7H) were gauged. MW-7H had 0.01 feet of oil. All of the other wells didn't have oil. Soil analytical results for the 1 inch wells were almost completely non-detect. Soil analytical results for the 4 inch wells were almost completely non-detect with two hits just over TAGM limits. Groundwater analytical results for the 4 inch wells were almost entirely non-detect with MW-4 having 10 VOC hits, with two of the hits slightly above TAGM limits. 6/30/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800 in order to discuss the report, but could only leave a voice mail. I stated in the voice mail that soil removal wasn't necessary, but that groundwater should be evacuated from MW-4 in order to bring the analytical levels down, and that another round of groundwater sampling should take place during the next quarter.I sent Mr. Fang an e-mail (wfang@impactenvironmental.com) requesting the following:1) a copy of any historical documents regarding the site2) a copy of any documents describing past remediation effortsI also asked him the following:1) is the site to be sold in the near future2) what will be the future use of the site 8/5/09 - Raphael Ketani. I tried to contact Mr. Fang via his cell (631) 664-6115 regarding groundwater monitoring and remediation, but could only leave a message. 8/6/09 - Raphael Ketani. I made a very quick unannounced site visit. The site was loaded with trucks of all kinds and there was some type of construction material storage facility along the Borden Avenue side (see pictures in E-docs). A tanker truck fuel loading structure was still situated a little ways inside the property. Otherwise, there was nothing to note.8/10/09 - Raphael Ketani. I tried to contact Mr. Fang by his cell and by his desk phone, but could only leave a message with the receptionist.Mr. Fang called me back. He said that he had been away for two weeks and that is why DEC hasn't heard anything regarding progress at the site. He also said that he is working with the attorney for the owners of the site on a response document to DEC's latest comments. He said that DEC should receive the document soon. 9/22/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800/cell (631) 664-6115, but I could only leave a voice mail asking him why the DEC hadn't received any documentation regarding the continued monitoring and remediation of the site.10/1/09 - Raphael Ketani. I reached Mr. Fang on his cell. I asked him where the

AA TRUCK RENTING CORP (Continued) **S104073336**

response letter was addressing DEC's comments regarding the June 2009 report. Mr. Fang said that he remembered that he owes DEC a letter. He said that he has to get back to his boss and the client's lawyer regarding the June report and a response for DEC. I told Mr. Fang that the DEC still considers the spill to be unresolved and the site to be in violation. He said that he is aware of this. He asked for some time to send a response to DEC's comments. I asked him whether October 16 would be a reasonable deadline. He said it is and that he will get me a letter.10/30/09 - Raphael Ketani. Mr. Fang sent me an e-mail with 6 attachments. These attachments were: a collection of Sanborn maps for the site; a tank affidavit; a Septmeber 2001 Tyree Brothers Phase I Report; an e-mail containing the May 1990 Tyree SIR and an October 1990 Tyree site status report; a collection of correspondences and reports ("spill closure reports") up to November 2001 between Mr. Sullivan of DEC and Tyree Brothers Environmental; and a response letter dated October 30, 2009 from Mr. Fang.11/2/09 - Raphael Ketani. I reviewed the 6 e-mails. The only one requiring a response was the 10/30/09 letter from Mr. Fang. Large above ground oil storage tanks were present on the site from 1936 to 1970. During this time, the site was operated as a storage terminal by Texaco. The current owner bought the site about 1971 and found the tanks to be clean. The tanks were removed. In the mean time, the owner will continue to use the site as a trucking company. The future use of the site is industrial. Mr. Fang responded that the wells were screened within the tidal range. The groundwater will be sampled at the next quarterly round. However, Mr. Fang stated that Impact Environmental will not excavate the contaminated soil at SP-1, SP-3, and SP-6. His reasoning was that this contamination represents an old spill with degraded oil and that the contamination is below the guidance values. He went on to state that no source area had been identified and that natural attentuation will take care of the matter. He referred to DEC's request to do excavation at these locations as "random excavation", and added that they would be unlikely to find the source area.I drafted a response letter for Mr. Austin's approval. The response letter stated that the DEC is requiring that the oil at MW-7H be collected, and that Impact Environmental resample all of the 4 inch wells.The letter was approved by Mr. Austin and went out today.12/23/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800/cell (631) 664-6115, but could only leave a message regarding oil collection at MW-7H and resampling the 4 inch wells.1/8/10 - Raphael Ketani. I tried to contact Mr. Fang at his office phone and at his cell, but could only leave messages that the DEC needed to receive updated information regarding the site, and that the oil must be collected from MW-7H. I tried to contact Mr. Kleaka (631) 269-8800, ext 304 (Mr. Fang's boss), but could only leave a message stating that the oil needed to be collected and that groundwater sampling needs to take place.I contacted Mr. Fang. He said that he is waiting for the owners of the property to sign the new contract with Impact Environmental. He said that he expects the contract to be signed no later than the end of January. I told him to do the groundwater sampling and oil collection as soon as Impact can. He said that he will.2/10/10 - Raphael Ketani. I tried to contact Mr. Fang, but could only leave a message that the DEC wanted the oil collected and the groundwater sampled.2/18/10 - Raphael Ketani. I tried to contact Mr. Fang, but could only leave a message that the DEC wanted the oil collected and the groundwater sampled.2/22/10 - Raphael Ketani. I tried to contact Mr. Kleaka (631) 269-8800, ext

AA TRUCK RENTING CORP (Continued) **S104073336**

304, but could only leave a message requesting oil collection and groundwater sampling.3/2/10 - Raphael Ketani. I tried to contact Mr. Kleaka, but he was in a meeting. So I left a voice mail that if the DEC doesn't receive a response by phone, or e-mail, or by letter regarding progress on the project, then we will take legal action. I could not contact Mr. Fang as he was not in the office. I tried contacting him by cell (631) 664-6115, but could only leave a message.Mr. Fang returned my call. He said that work at the site is scheduled for the week of 3/1/10.3/4/10 - Raphael Ketani. Mr. Fang sent me the following e-mail today:Groundwater wells at Review Avenue were gauged and sampled today. Nofree-phase product was detected in any of the six 4-inch wells installedby Impact (MW-1 through MW-6). Approximately 0.1 inch of free-phaseproduct was detected in one old well (MW-7H) installed by Tyree.Groundwater samples from MW-1 through MW-6 will be analyzed from 8260and 8270. I will send you a letter report when I have the results.3/29/10 - Raphael Ketani. Today I received the First Quarter Monitoring Report from Impact Environmental dated 3/12/10. I reviewed the report. The groundwater analytical results were almost entirely non-detect. There were several hits, but they were just above the TAGM limits, with the exception of one 54 ppb hit. Well MW-7H showed 0.01 feet of oil. I e-mailed Mr. Fang that he should do an EFR event for MW-7H and then sample all of the wells for the second quarterly round.5/24/10 - Raphael Ketani. I contacted Mr. Fang (631) 269-8800/cell (631) 664-6115. He said that the groundwater sampling will take place this week. The oil at MW-7H will be collected using a sump skimmer. He said that he should be able to get DEC this round's analytical results in about 3 weeks.6/22/10 - Raphael Ketani. Today I received the Second Quarter 2010 Groundwater Monitoring Report from Impact Environmental. I reviewed the report. All of the analytical results were non-detect, except those for MW-4 and MW-5. The samples from these wells had gasoline range VOCs that were up to 119 ppb of n-propylbenzene. I wrote back in response that the contaminated groundwater may be removed by pumping. I added that the report did not mention how successful Impact Environmental was in collecting oil from MW-7H. I also wrote that, as a result of the elevated VOC hits, another round of sampling will be needed in the third quarter of 2010.7/14/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, ext 325/cell (631) 664-6115 regarding progress at the site, but could only leave a message.7/26/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, ext 325/cell (631) 664-6115 regarding progress at the site, but could only leave a message.I contacted Ms. Suchman (212) 806-6656 and explained that I haven't heard anything from Mr. Fang in a month regarding the groundwater and oil pumping. She said that she thought this would take place during the next sampling round (third sampling quarter). I told her that these were tasks that the DEC expected to be performed very soon after the 6/22/10 letter was sent. She said that she will call Mr. Kleaka and Mr. Fang and have them get on top of the situation.7/26/10 - Raphael Ketani. Mr. Fang sent me the following e-mail today:Absorbing well sock was installed in MW-7Habout a month ago. Last time we checked, the well has no free-phaseproduct in it. We recently changed the sock and will wait for anothermonth to go back to see if there is any additional product. If not, wewill properly develop and sample that well.7/28/10 - Raphael Ketani. Mr. Fang (631) 269-8800 called me today. He said that they recently took out the sock from MW-7H. It was slightly dark, but not saturated with oil. He

AA TRUCK RENTING CORP (Continued) **S104073336**

put another sock in. He will wait for a month and then check the new sock. If the sock has little or no oil, and if there is no visible sheen, then he will develop the well for sampling. I commented that MW-4 and MW-5 had slightly elevated analytes. He said that he will evacuate about 55 to 100 gals. of water from these wells and then sample them. Mr. Fang asked that, in the future, if I need to contact him, I should send an e-mail or contact his supervisor, Mr. Kleaka.9/23/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, but I could only leave a message.9/27/10 - Raphael Ketani. I received the Third Quarter Monitoring Report dated 9/9/10 from Impact Environmental. I reviewed the report and found that the results for the third quarter were almost entirely non-detect. The few hits that were present were not far above the TAGM limits. The report also mentioned that there was no product in the wells.Based upon the data in the Third Quarter Monitoring Report, I have determined that any residual contamination that is present will not be a threat to the public or the environment. Therefore, I am closing the spill case.8/10/11 - Raphael Ketani. Today I received a letter from Mr. Fang indicating that the wells at the site had been plugged and abandoned.

Remarks: Results of an analytical test revealed historic contamination at above site.

DEC Memo:	09/05/06 -ZielinskiThis spill case reassigned from CO to Region 2.Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL C"4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.Spill transferred to Greco as part of Spills Closure Initiative in July, 2005.Contacted original callers company and determined the spill name and address was originally put into system incorrectly as 20-90 Review Ave. (also incorrectly listed as 20090 Review Ave.). Neither of the above addresses is an actual address in Queens County, however, 28-90 is, and 28-90 has two tanks similar to the ones referenced in the spill report. 28-90 is also a the home of a company that is a client of the tank test company which called in the tank test failures. Spill name and address were changed to 28-90 Review Ave. The company at that addres is AA Truck Rental. JDG 8/3/05Contacted Mr. PJ McDermott 718- 937-8611 at AA Trucking. Mr. McDermott is checking records and will get back to me. JDG 8/3/0511/21/05 Tried to recontact Mr. McDermott, but he was unavailable. JDG12/30/05 Tried to recontact Mr. McDermott, but he was unavailable. Left message. JDG01/04/06 Insufficient documentation was received following several attempts. Have documentation that the tanks passed tightness tests in 1998, and were later closed in place in 1999, however, there is no record of a cleanup. Project needs further work, as release was characterized as requiring a "major excavation." Should be returned to region 2 for further investigation at end of Spill Closure Initiative.9/8/06 - Jon Greco of Central Office sent an email stating:"Most recently, the owner's representative (Mr. Michael Paskoff, who has been performing tank tests at the site for many years, and it was his firm that called in the release 13 years ago) has asked that I close the spill, as it was called in solely due to an "inconclusive" tank test. He has copied me on a letter to the owner (Mr. Eric Roberts) and the letter reports that while the original tests were inconclusive, the tanks were retested later that day and were found to be tight. He goes on to say that no repairs were made and no excavations were performed by his firm. Finally, he claims the tests were observed by Inspector Geldman, of the NYC Fire Department." Reviewed PBS records, confirmed tank tested tight. Spills Closed. _ KST

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MARTINKAT"REFER TO DEP HAZMAT.
Remarks:	3000 SQ FEET OF MATERIAL CONTAINMATED THE SOIL AT ABOVE SITEDUE TO REMOVING A ROOF - AREA WAS CLEANED UP AND SOIL WAS REMOVED

Material:

Site ID:	138620
Operable Unit ID:	1048468
Operable Unit:	01
Material ID:	335417
Material Code:	0026A
Material Name:	asbestos
Case No.:	01332214
Material FA:	Hazardous Material
Quantity:	3000
Units:	Gallons
Recovered:	No
Resource Affected:	Not reported
Oxygenate:	False

Tank Test:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	Sangesland spoke to Jill Guerra at GCI. Her firm did a Phase 2 for a sale and found old contaminated soil. She is going to check the current status on the case and call Sangesland back with details.07/05/11 As per Langan, the source of the spill is a UST. Underground piping was traced from a petrometer inside the site building.Approx 2,000 cubic yards of soil was affected as a result of the spill of which 450 cubic yards contain hazardous concentration of lead. GW was not significantly impacted. Seven soil borings were advanced in the UST locations.Soil borings log were provided.VOCs were not detected in any of the soil samples.Twenty two metals were detected in soil samples.Copper, Lead, nickel concentration exceeded DEC Part 375 RSCOs. Based on high concentration of lead, approx. 450 cubic yards of soil will be considered as RCRA hazardouse waste.Site remediation tasks include: closure of the UST via removal, removal of petroleum contaminated soil, collection of end point samples, placement of clean fill to restore the Site conditions, air

COMMERCIAL (Continued) **S110750742**

monitoring during the remediation.(sr)7/10/12 - Austin - Received phone call from Ms. Armstrong of Langan. They wished to proceed with the excavation plan as outlined by the RAP and approval issued last year. DEC Rahman was out of the office for an extended period, so I sent Ms. Armstrong via e-mail the RAP approval letter and the original schedule for implementation submitted by Langan on 7/14/12. I requested that a new schedule be submitted to us for implementation, before Langan could proceed. - end 09/18/12 Closure report in edocs. As per the report, Area A: USTs and associated piping were not detected. The source of spill 1009365 was not identified and is likely related to historic site use or poor housekeeping. About 213 tons of petroleum contaminated soil was removed.Ground water was not impacted. End point soil sample result indicate that petroleum impacted soil has been removed.Source of spill 1204192 was a historic 1,250 gallon UST.The UST was removed in accordance with regulations.Approx 99 tons of petroleum impacted soil was removed and disposed.Ground water was not impacted. End point soil samples result indicate that residual contamination within acceptable limit.Case closed.(sr)

Remarks: Historical Spill- Odor in soil. Phase 2.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

ACCESS SELF STORAGE (Continued) **1000872149**

corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: 001
Tank Id: 208836
Material Code: 9999
Common Name of Substance: Other

Equipment Records:

C01 - Pipe Location - Aboveground
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
E00 - Piping Secondary Containment - None
B01 - Tank External Protection - Painted/Asphalt Coating
F04 - Pipe External Protection - Fiberglass
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I04 - Overfill - Product Level Gauge (A/G)
K01 - Spill Prevention - Catch Basin
A01 - Tank Internal Protection - Epoxy Liner
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: C
Install Date: 06/01/2004
Capacity Gallons: 1000
Tightness Test Method: NN
Date Test: Not reported

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

IKG INDUSTRIES-50-09 27TH STREET (Continued) **1000119430**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LLC60 East 56th STreet7th FloorLong Island City, NYPh. (718) 786-0300Tried number on PBS record and operator gave me Mr. Scotty's number, who may know about owner/manager of property. Left message for Mr. Scotty (516-699-4000).05/02/06-Hiralkumar Patel. Received message from Keith Khouri. Spoke to Mr. Khouri, GM of property. he is also working for property at Union, NJ. as per Mr. Khouri, the company named Midcounty Mechanical is working to find out leak in UST system. and he will give me contact name and number of this company. Department can send letter to following address to Mr. KhouriKeith Khouri400 Clermoont TerraceUnion, NJ 07083Cell: (908) 230-0819Off.: (718) 316-9261FAX : (908) 353-8423TTF sent out to Mr. Khouri. FAxed to Mr. Khouri.Received call from Mr. Khouri's office. contact at Midcount Mechanical is KennyPH. (718) 847-1800 (O) (347) 386-2891 (C)05/10/06-Hiralkumar Patel. Left message for Kenny.05/11/06-Hiralkumar Patel. Spoke to operator at Midcounty. she gave message to Kenny, but Kenny is out in field and will call back tomorrow morning. Received message from Kenny. they are going to do tank test again on Saturday May 13, 2006.05/15/06-Hiralkumar Patel. Received call from Mr. Khouri. as per him, they found problem with fill line and after repair they did test again and system passed the test. asked him to send me letter report stating cause of problem and observations. Mr. Kasper from Midcounty Mechanical came to office to drop off tank test results and letter. as per letter, they have escavated the top of the tank and performed a test and found a leak on the vent line where it passes through the foundation wall to the outside of the building. replaced vent line and tested again and system passed the test.based on tank test results, case is closed. NFA sent out to Mr. Khouri.

Owner/operator country: US
Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006

Registry ID: 110004402361

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID:	164013
DEC Memo:	6/18/08. J. Krimgold reviewed the letter-report submitted by ROUX Associate inc. dated June 2, 2008 with request to close the spill case. The letter-report contains no new info besides what the Department has already in its files. The 12 pages attached to the letter is nothing but printouts from our website or copies of documents (application, failed test reports, etc.) that was already submitted to the Department. Nothing in the letter-report points to the investigation of the cause of the test failure or removal of the release. Request for the spill case closure was denied. JMK.12-27-2011 This spill was assigned to Leszek Zielinski on 06/28/10. Then this spill was reassigned from V. Brevdo to Alex Zhitomirsky on 12-27-2011, as per V. Brevdo instructions. Emailed LiRo and received the following response by S. Frank: "We will pull together whatever information we have and forward it to you." AZ2-7-2012 Site demolition and construction completed at site by May 2011. On 7/22/11 LiRo met with the site personnel and gathered additional information relevant to spill 0012519. LiRo prepared a letter to address DEC concerns from the July 2008 spill closure denial and submitted to DEC on January 23, 2012. Received and filed e-copies from LiRo. AZ4-19-2012 Received on January 26, 2012, and reviewed Tank Closure Sample Results and Spill Closure Request dated January 23, 2012. The report stated that in August 2005, EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM Levels in all five samples. The SVOCs reported were mainly polycyclic aromatic

DEPT OF SANITATION (Continued) **S104950988**

hydrocarbons (PAH)typically indicative of urban fill material. The site layout has changed significantly due to demolition and construction activities. Because of this, the former tank location is unknown.Based on this information, LiRo requested closure of spill#0012519. This spill was closed and a letter was sent to S. Frank/F. Ashkan/V. brevod:"Dear Steve,I have reviewed tank closure sample results and spill closure request for the above spill number submitted to DEC on January 26, 2012. A tank test failure of the tank#1 was recorded at this site. As a result, a spill #0012519 was issued. EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001 in August 2005. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH) typically indicative of urban fill material. Based on this information, this spill number is closed. All wells associated with this spill should be properly abandoned. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:I. The off-site migration of petroleum contaminants that was not addressed by this evaluation.II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation.Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely.Sincerely,Alex Zhitomirsky

GREENPOINT INCINERATOR (Continued) **1000554725**

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"Sent tank test failure letter to Varderame. 11/15/2002 ARS11/14/2003-Vought-Reviewed report dated 6/26/03 from Verderame Realty (Bruce Bauer 718-786-1100). Site will no longer be using oil and will be converting to gas. Closure of a 2000-gallon #2 fuel oil UST and collection of post excavatin endpoint samples by Bluestone Environmental (Andrew Cozzi 732-469-5188). "The UST excavation base was at approximately 8 to 8.5 feet below the concrete floor". "The soil in the excavation was a fill that consisted of dark brown sand with construction debris such as bricks and pieces of concrete". Five soil samples were submitted for analyses for 8260/8270. Soil analyticals show two 1,3,5-trimethylbenzene exceedances up to 9110ppb, benzo(a)anthracene up to 1010ppb, benzo(a)pyrene up to 631ppb, benzo(b)fluoranthene up to 1110ppb, benzo(k)fluoranthene up to 579ppb, and chrysene up to 1210ppb. These exceedances are attributable to fill material. Spill closed by Vought after conference with DEC Rommel.
Remarks:	tank test failure - it will be cleaned and retested next week

DEC Memo:	9/14/06 - ZielinskiVisited the site. The tank was closed in place on April 1, 2000. Received from Joe Epifane of ABCO Supply a copy of a manifest that 7 cubic yards of oil-soaked soil, blacktop, and concrete had been removed from the site in September 1998. The tank was repaired and subsequetly passed the tightness test performed by Fenley and Nicol Environmental on September 19, 1998(eDocs). The case is closed. 9/11/06 - ZielinskiThe spill transferred from CO. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO"10/24/00 originally assigned to tomasello. reassigned to zhao.12/29/05 Transferred to E. Hampston via Spill Initative. PBS indicates tank closed in place. Need to contact possible owner George Moncher (#718-937-9000) to determine investigation and cleanup status. Not reported
Remarks:	09/05/06 -ZielinskiThis spill case reassigned from Central Office to Region 2.CONTRACTOR BEING CALLED IN TO LOCATE PROBLEM WITH TANK-SOIL TO BE STOCKPILED FOR CLEAN UP. HOWARD KATZ 2ND CONTACT PERSON 718-937-9000.

FINDS:

Registry ID: 110008024011

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110000323178

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is

CIADA SERVICE (Continued) **1000211480**

used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Contact Phone:	(201) 739-9687
DEC Memo:	3/5/07 - Raphael Ketani. I called up Fred Cornell of Sims Hugoneu (cell (201) 739-9687). He said that the barge had been sitting overnight when it sunk. He suspects there is a hole in the hull, but he doesn't know for sure. He said that, sometimes, when the tug boat operator pushes a barge, he hits or bumps into something.The barge didn't contain oil or oil holding tanks. It is a non-motorized barge. It just had scrap metal and this was unloaded. There is no sheen from the barge. The Coast Guard has been notified. The barge will be refloated and repaired.I asked him why this was called into the Spill Response Hotline when there was no oil in or on the barge. He said that he was just being cautious about the incident.Based upon my conversation with Mr. Cornell and the information above, I am closing the spill case.
Remarks:	BARGE SUNK AND NO SHEEN AT THIS TIME AND UNLOADI9NG SCRAP METAL FROM BARGE AT THIS TIME;

DEC Memo:	Spoke with Bill.Underground line failed test.Investigation required.(sr)06/25/12 Rec'd Work Plan to investigate the horizontal and vertical extent of subsurface petroleum impacts.(sr)08/07/12 LNAPL delineation work completed, summary report will be sent to DEC shortly.(sr)02/06/13 Remedial Investigation Report in edocs.The site is an active scrap metal recyling facility located at the confluence of Dutch Kills and Newtown Creek.The Dutch Kills is located to the west of the site.Newtown Creek is located to the south of the site, property to the north is rail road track operated by LIRR.The adjoining properties to the east of the site are utilized by others for commercial and or industrial operations.Spill was identified when the pressure test of the underground line failed(AST 150,000 gallon).Leak was identified.Franklin Company disconnected the feed and return line.Integral Engineering performed remedial investigation.Twenty five soil borings and twenty one monitoring wells were installed through out the site.Monitoring wells were installed in soil borings with significant impacts and visible LNAPL at the groundwater interface.Five permanent monitoring wells were installed in phase I.Petroleum impacted soil/fill was observed in SB-6/MW-2 at 7-10 ft bgs in the northern corner of the Site, adjacent to the rip-rap bulkhead along the Dutch Kills Basin.Three separate plumes of LNAPL are present at the site.Plume A consists of weathered and biodegraded diesel fuel, located to the northwest of AST and west of the underground pipeline trench in the vicinity of MW-1(3.81ft), MW-2(2.28ft), MW-9(0.11 ft), MW-10(0.37 ft), MW-11(0.38ft) and MW-13(2.62ft). Plume A is believed to be downgradient of the source of the diesel fuel release.Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench, in the vicinity of MW-19(0.12 ft) and MW-20(0.28 ft).Plume B is also appears to be result of an additional segments of corroded and impaired pipings.There are no active sources for Plume A and Plume B as the underground pipelines were removed.Plume C consists of a more viscous and highly weathered unidentified LNAPL in the vicinity of MW-15(0.50 ft) and MW-16(0.43 ft).The following wells are identified with no LNAPL and are being used to illustrate the outer limits of Plume A, B and C:MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-14, MW-17, MW-18, MW-21.Ground water was encountered at depth of 5 ft bgs throughout the site.Recovery effort was performed on Plume A to remove product and monitor for product recharge to evaluate the optimal locations for long term recovery efforts. Plume area A appears to be the greatest available volume of recoverable LNAPL.The proposed IRM includes installation of recovery wells and electric belt skimmers. Three recovery wells(RW-1, RW-2 and RW-3)were installed in Plume A. Additional recovery wells/belt skimmers setups are anticipated for plume B and C as part of the IRM.03/01/13 Rec'd email from Kevin Mccarthy(212-962-439x314) regarding Offsite investigation on LIRR proerty.They are checking the issue with their

LINE TEST FAILURE (Continued) **S111836487**

attorney.(sr)3/12/14-Vought-DEC Rahman received email from DEC Ian Beilby dated 3/11/14 that "Hi Sharif,Any new progress on this investigation? I checked edocs but it looks like there has been no activity in the past year." DEC Rahman forwarded email to Vought and Vought spoke to DEC Demeo and spill to be assigned to DEC Mahat.4/2/14-Vought-Sent email to DEC Beilby with cc to DEC Mahat that "Ian, The case has been reassigned to Santosh Mahat (cc'd above) and you may also reach him at 718-482-4038. Thanks." Spill reassigned from Rahman to Mahat.9/3/14: Mahat DEC Mahat contacted Mr. Kevin McCarty @ 212-962-4303 inquiring more information about the current status of the remediation actions. Mr. McCarty mentioned that the remediation is still going on and he is recovering free products from couple of recovery wells. He is using belt skimmer to collect free products.A report is due from November 2012-present day.9/25/14 TJDSpill #1405728 associated with housekeeping was identified during inspection of facility as part of Newtown Creek/Dutch Kills sheen trackdown investigation on 8/26/14. Spill of waste oil was observed following the acceptance and dumping of debris reported to have been brought to the facility by NYC Housing Authority. The spill was cleaned immediately by facility personnel. Above spill note is for reference only as surface spill is not directly related to reported AST tightness test failure and subsequent removal of AST and installation of monitoring well network and recovery system.DEC REQUIRE : 1. Need all laboratory data from monitoring well even with no product well.2. Measure Groundflow dirrection 3. Dissolved GW sampling at plume edge wells4. Monitoring recovery wells by dispenser line - Deleniation.5/20/15: Mahat DEC Mahat received an email uopdate from James L'Esperance (Integral). "Santosh,Sims has just informed me that they plan on commencing work on the stormwater basin at their Queens facility tomorrow. This work will involve excavating soil from the area of Spill #12-00318, as discussed during our site meeting and in the Remedial Action Letter submitted in April.Sims intends on starting the work tomorrow. I'm anticipating that the work will last 2-4 weeks. Integral will have a geologist on-site during all excavation activities.Please feel free to give me a call to discuss if you have any questions.Thanks,JamesJames L'Esperance Integral Consulting Inc. | www.integral-corp.com61 Broadway, Suite 1601 | New York, NY 10007Tel: 212.440.6708 | Cell: 646.285.4808 | Fax: 212.962.4302"

DEC Memo:	10/05/09-HRAHMED-Spoke to Rickey Fernandez of Getty Petroleum (718 361-9806). As per him, 5 gal spilled due to mistake of a driver during refueling of his truck. Spilled on concrete and then went to a drain which leads to a containment bucket. They put some speedy dry on the concrete and a contractor will come to vac the containment bucket.This case is closed.
Remarks:	gas went into a containment drain; clean has taken place

Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Con Ed e2mis #147212:17-FEB-2003 1955 HRS BELLEW O/S REPORTS WAS CALLED TO LOCATION FOUND 8 GALLONS DIELECTRIC FLUID LEAKED FROM RUPTURED VS4545. FIRE DEPT CALLED IN TO CONTROL CENTER THAT A WIRE WAS BURNING. WHEN T BELLEW ARRIVED ON LOCATION HE SAW FIRE AND SMOKE. NO SEWERS OR WATERWAYS APPEAR TO BE AFFECTED . IT IS ON PRIVATE PROPERTY. 5 FOOT ABOVE GROUND IN A INTERNAL VAULT (THE GETTY OIL REFINERY.) NO SUMP PUMP IN STRUCTURE. IT APPEARS TO BE CONTAINED TO AREA. THE HISTORICAL COUNT FOR VS 4545 IS 23PPM FROM 1994 . IT IS ON FEEDER 1Q17. THE FIRE IS OUT AT THIS TIME . FIRE DEPT PUT IT OUT WITH CO2 TO BRING THE TEMPERTURE DOWN THEN WITH DRY CHEMICALS EXTINGUISHERS. FIRE IS NOW OUT . FIRE DEPT WAS ON LOCATION WITH RESPIRATORY PROTECTION ON. NO ONE ENTER THE ROOM EXCEPT FOR HAZMAT DIVISION OFFICER AND 3 FIRE FIGHTERS FROM FROM THE HAZ MAT TEAM. FIRE DEPT WILL BAG THEIR GEAR UNTIL ARRCURATE COUNT COMES BACK. HAZ MAT UNIT WOULD LIKE A FAXED COPY OF RESULTS SENT TO THEM AT HAZ MAT # 1 IN CARE OF NAPOLI. FAX # 212-860-9485 PHONE # IS 212-860-9230. EMAIL ADDRESS IS DAVOLIO2@AOL.COM . CIG MORRIS NOTIFIED @ 2014HRS. BECAUSE OF FIRE WILL TREAT AS OVER 500. PPM. EPA # IS NYP-004-107389. TANKER ORDERED. G JACOBI ENVIROMENTAL O/S NOTIFIED AND WILL SEND SPILL VAN AND ENVIROMENTAL OPS CREW TO LOCATION. CALLED GAGLIO ENVIROMENTAL SENIOR SPECIALIST. WAITING FOR CALL BACK. NOTIFIED ENVIROMENTAL MANAGER K BAROUCH @ 2045HRS. WILL CONTINUE UPDATING AS INFOMATION IS REPORTED. ENVIROMENTAL STOP TAG # 14843. FIRE DEPT LEFT LOCATION.UPDATE 17-FEB-2003 2120HRST BELLEW REPORTS FIRE DID START TO BURN AGAIN AND HE SPRAYED DRY CHEM ON IT TO PUT IT BACK OUT. FIRE IS NOW OUT.UPDATE:17-FEB-2003 2310HRS. JAMES D'AVOLIO HAZ MAT REPORTS A NEW FAX NUMBER TO GIVE TO CIG. 718-446-8261.

NEW YORK PAVING INC. (Continued) **U000412007**

NOTIFIED MORRIS CIGOF THIS NEW #. HIS OFFICE # IS 718-476-6288. HE WOULD LIKE A COPY OF THE HISTORICAL AND THE NEW SAMPLE RESULTS WHEN THEY COME IN.Update : 0130 Hrs. Env. Ops crews set up Zones, cordoned off area around Internal Vault, Drummed any snow that may have beensplashed with oil when the Vault door blew off, Placed Vault door next to Vault in Hot Zone and will determine cleanup standard for door after sample results are known. #9 Entered the Vault with an Air line respirator because the Transformer was still smoking. No oil was left inside the transformer to get a sample from, so one oil sample was taken from the floor next to the burnt transformer. This sample was turned into a split sample one for Con Ed, and the other was given to the DEP. The capacity of the transformer when full is about 50 gallons but only about 8 gallons was observed next to the unit on the floor inside the Vault. A Commissioner's order was given to remove the transformer and complete the cleanup within 24 hours. Will be following up with FOD and the Transformer group to expedite removal of all three units on feeder 1Q17 in this internal Vault.
Crew on location to hold Zones and secure area until the AM when Units are removed and the cleanup can be completed.UPDATE 2-18-03 0549 HRS CHEM LAB # 03-01374-00 - 14 PPM.UPDATE 2-18-03 0850 HOURS, R. COSENTINO REPORTS, AS REQUESTED BY THE FDNYC - MR. BERNAD PIERRE - ERT, WILL FAX NEW CHEM LABRESEULTS #03-01374-001 14 PPM, TO MR. NAPOLI OF THE FDNYC HAZ MAT #1. FAX NUMBER 212 860-9485.UPDATE: 2/18/03 - 1300A. STUBBS - ENV. OPS., REPORTS STRUCTURE DOUBLE WASHED WITH BIO GEN 760. 1 DRUM NON HAZ OIL DEBRIS WAS GENERATED. REST OFDEBRIS WAS REMOVED BY VACTOR 60724. TAG REMAINS PENDING TRANSF REMOVAL.Update - 2/19/03 1915hrsJ. Gaglio env. ops mgr reports at 1730hrs the last of the three single phase transformers was removed from the vault. AT 1912hrs the floor and the remainder of the area inside the vault was completely cleaned by env. ops. All the items listed on the commissioners order issued on 2/17/03 have been completed. J. Gagliowill call ERT to confirm this with them to pass info onto DEP.Update - 1930hrs - 2/19/03R. Hutchinson OS env. ops reports after all 3 units were removed double washed all affected areas. Removed all sediment and oil absorbant floor with vactor and all oily solid debris was put into a drum and brought back to college point under 1 trip rule. Removed env. stop tag # 14843. As per FER J. Ciciliato the new units to be installed are not being installed in this cubicle. Job closed.Update - Cleanup was completed by double washing all structures involved with safety wash. Event involved material and event involved persons list updated.

Remarks: fire and smoke involved. on private property no sewer or waterways

DEC Memo:	9/17/14: Mahat DEC DeMeo was on the site. Spill is assigned to DEC DeMeo for follow up. Point of Contact : Anthony Veloso718.72.09909/25/14 TJDWaste oil spill observed through chain link fence at above location. DeMeo entered location and met onsite with site manager Mr. Veloso. Spill of less than 5 gallons of mixed automotive waste fluids was associated with maintenance of heavy equipment on asphalt/concrete surfaces and was associated with poor housekeeping. Facility representatives, upon notification, immediately contained product with absorbents and were completing cleanup while DEC was onsite. Site manager has forwarded photos of area of concern following cleanup. Staining noted on asphalt/concrete however gross contamination has been removed. No further action is required at this time. Spill closed. Site personnel have been notified of their obligation to perform maintenance activities without unlawful discharges of petroleum to the environment and further educated on spill reporting requirements.

Updated By:	SRHEIGEL

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the Site.The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses.After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery.The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

460 KINGSLAND AVENUE (Continued) **U003074537**

Env Problem:	Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present.Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747.10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL.03/29/04Related to Mobil Greenpoint spillTransferred from Miller to Rommel.10/12/04Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking).I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ6/13/2006 I left

460 KINGSLAND AVENUE (Continued) **U003074537**

a message for John Urda (DEC Legal)requesting his assistance with this case. AZ6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC:1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that "we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly." AZ4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of

460 KINGSLAND AVENUE (Continued) **U003074537**

SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a "clean fill" recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill

460 KINGSLAND AVENUE (Continued) **U003074537**

	Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"3/1/2002-VOUGHT-Initial tank test performed by ProTest Laboratories. Second and third tank test performed by Federal Electrical Supply Corporation (718-729-5700). The reason for spill report was initial tank test failure. As a result of failure vent line, fill line, suction line and return line were replaced by Petroleum Tank Cleaners. Tank was tested again on 2-6-2002 and failed again because testers failed to close off return line to day tank. Tank and system was tested for third time and passed on 2-14-2002. Isaac Mungra and Anthony (PTC) confirmed that there was no soil or groundwater contamination. Tank tests and repair invoices were provided. Spill closed by Vought.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"AUSTIN - SPILL ORIG. ASSIGNED TO BATTISTA11/04/93: MID COUNTY MECH. PERMANENTLY TOOK TANK OUT OF SERVICE 12/88 AND INSTALLED A NEW TANK 6/89. 12/19/2001 Sangesland spoke with Stephine Davis from FPM Group (631-737-6200 ext228). She called asking what can be done to close out this spill report. Apparently FPM Group started working on the site in 1993. At that time the "Free Product" plume (from a buried heating oil tank) was defined. Property is approx 1 acre and is a picture framing company in a 5 story buildingTwo belt skimmer wells were installed in 1993 and have been operating ever since. Product was skimmed off, separated, water has been drummed and removed from the site and product piped back into the heating oil tank to be used in the building burner.The building owner has been operating the system and now says there is very little product in the skimmers.Sangesland told Ms. Davis to submit a report (with as much DEC correspondance as possible in the appendix). The report should include a write up (1-2 page) of what the original problem was, what investigation/delineation was done and how the system has operated for the last 8 years. Sangesland said the area needs to once again be delineated to confirm the plume is gone. Suggested geo-probe in the area of the plume. Finally the environmental consultant will need to define how the dissolved product will be addressed from now on. 11/19/2003 Sangesland reviewed a report by Gregory Scott of Roux Associates (631-232-2600) The report outlines the work done on the site between 1988 and 2002. Belt skimmers were installed in 2 wells and pulled out 150 gallons of oil over a period of years. These skimmers were shut down in 2002 and this letter was requesting formal approval to shut them down. Since the floating product was removed, Roux would like the DEC to close out the case..... NO.DEC is requesting GW samples from each of the existing wells tested to method 8270 and 8021. Depending on the concentration levels, additional remedial work may be required.2/10/2004 Roux Associates Inc submitted a report dated 1/29/04. This report stated that "slight traces of measurable floating product is present in the onsite wells". This statement requires the DEC to maintain this as an open case.3/4/2004 Roux Associates stated that they will do another round of sampling of the wells and submit the results "soon".3/23/2004 Roux submitted a letter dated 3/22/2004 which states "no measurable floating product is present in the onsite wells. Though monitoring well MW-4 contained an absorbent sock with minimal product staining" No testing of these groundwater samples was done.June 2004 - Sangesland and Austin made a site visit and concluded the spill should be closed out. DEC requested a final report with certain information documented.7/19/2004 - Sangesland reviewed a report from Roux associates. All of the requested information was included. Based on this report, the former problem at the site has been remediated and now the site has very minor trace "hits" which may or may not be related to the original problem or from off site locations. Based on the industrial nature of the site and the fact that there are no impacts to human contact the DEC has closed out this case.

DEC Memo:	Need to send a CSL02/07/06. Feroze talked Mr.Alex 718-786-7438. He informed that they repaired the system and tested the tank. Test result passed. They will submit DEC the result soon.TTF is sent to:Alex JavichLIC Service Station49-01 Vandam Street Long Island City. NY 11101.02/14/06.Feroze, Mr.Bob Laga 718-762-5200 , Called & told me taht they replaced the vent line and tested the tank. The test is passed. He will submit the documents soon.02/28/06 Feroze, received documents from The Franklin Company, NY (718-672-5200) that they removed and replaced the vent lines and tested the tanks again on 01/20/06. The tanks and sysyem passed the test. They also certified that the leak was in vent pipe and there was no siol contamenation. The spill is closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL C"4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel.3/28/05 - also see 8804104. KST12/29/05 Transferred to E. Hampston via Spills Initative. Wrote letter to owner requesting update/information.11/02/06 Reassigned to Sun.(MS)12/18/06 Sun sent letter certified mail to Jean Satoski (LIC Service Station), 49-01 Van Dam Street, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07:1. Tank closure assessment report.2. Locations of tank and/or line test failure.3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan.If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted:1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS)2/27/07: Based on TCR results Sun/Sellberg sent a letter to Alex Javic of LIC Service Station requiring additional investigation be performed, and a report sent to the DEC by 4/13/2007. Letter is as follows:"The investigation at a minimum must include the installation of soil borings/wells: around the area of the the former nine (9) 550-gallon underground storage tanks. Groundwater monitoring wells should be installed to the south (former location of S6), east (former location of S1) and west (former location of S4) of this area and groundwater flow direction will be determined. During drilling, the soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. Following well installation, a water sample must be obtained and submitted for EPA Method 8260/8270 analyses. Note that MTBE must be included on all soil and groundwater analyses. Prior to drilling activities, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, soil and groundwater sample analyses, site plan, and conclusions and recommendations must be submitted to the Department by April 13, 2007." (JS/MS)4/5/07: MS spoke to Jill Haimson of Preferred Environmental (516)647-4211. She will submit a SIWP by 4/16/07. (JS/MS) 4/24/07: DEC received and approved the SIWP. SIR to be submitted by 7/16/07. Sent letter certified mail to RP and faxed same to consultant (Jill Haimson). (JS/MS)6/6/07: MS called J. Haimson to check status of site investigation. Due to difficulties in obtaining on-site access, work had been delayed. SIR will be submitted later than original timeline.(JS/MS)6/27/07: Preliminary results (field observations) were discussed by the DEC and the consultant via telephone on June 11th, and again on June 21st, 2007. RP is claiming an upgradient source to be the problem. (JS/MS)9/21/07: An additional visit was done by the consultant in mid

MOBILE GAS (Continued) **S106703575**

September to better assess surrounding properties as additional investigation is warranted. This investigation will include the evaluation of a suspected up-gradient source which may/may not be contributing to on-site groundwater contamination. (JS/MS)10/18/07: Upon threat of legal action, Preferred finally submitted SIR (apparently RP had not given consent to submit?). DEC is currently reviewing. Onsite contamination exists in both soil and mainly groundwater across the site. Additional delineation will be necessary as well as possible ORC injection/treatment. (JS/MS)11/14/07: Alex Javick met with JS and MS today to sign STIP and discuss remedial options. Plan is to start with ORC (iSOCS) - 6months, if not effective use chemical injection. Monitoring will take place quarterly. Submit signed stip to regional director on 11/15/07. (JS/MS)11/26/07: STIP executed on 11/16/07 and returned on 11/21/07. Sent copy to owner via mail and consultant via email today. MS to discus remediation details with Jill Haimson of Preferred. (JS/MS)11/28/07: MS spoke to Jill. She will submit a RAP by 12/7/07 detailing use and placement of iSOCS as well as injection of regen-ox to boost remediation. (JS/MS)12/17/07: DEC approved RAP as follows:"...The RAP proposes the application of Regen-Ox (manufactured by Regenesis) to address petroleum related soil and groundwater contamination at the site. In addition, Preferred proposed the installation of In-Situ submerged Oxygen Curtain (inFusionTM/iSOC) probes within four (4) onsite well locations. Pursuant to the Stipulation Agreement signed and dated effective November 16, 2007, the Department requires that within 45 days of the Department's approval of the RAP, Respondent shall implement the work outlined in the RAP. The Department approves the RAP with the following condition: Please specify the number, location and spacing between all proposed Regen-Ox injection points."RP has 45 days from RAP approval to perform the work outlined in the RAP. MS sent letter today to RP and will email Preferred tomorrow regarding injection points follow-up. (JS/MS)1/17/08: Alex Javick in to meet about remedial systems. Will send STIP to Ms. Jean Satoski once received address from Mr. Javick. (JS/MS)1/22/08: Stip #2 sent today to Ms Jean Satoski at 84 Gun Club Road, Northport, NY 11768. Signed stip is due by 2/5/08. Added following to original letter to include operator's cooperation and Ms. Satoski's roles as RP:"Presently, the operator of your station has initiated the required actions to address the above and has been fully cooperating with the Department. However, according to Department records, you are the certified property owner of 49-01 Van Dam Street, LIC, NY 11101 and therefore, also a responsible party."Signed STIP is due by 2/5/08. (JS/MS) 2/27/08: Received signed Stip from Satoski. Signed by Regional Director, Region 2 (JS/MM)3/4/08: Sent photocopy of executed Stip to Satoski. Informed J. Hamison from Preferred about executed stip signed by both parties. (JS/MM)4/17/08: RAP not executed yet. Satoski and Javic have not agreed on payment. Sent out violation of stip letters. Waiting for responses. (JS/MM)4/22/08: Called Javic, not in office. Expecting phone call today. (JS/MM)5/18/08: Received already approved RAP from Preferred. (JS/MM)6/23/08: No info received from Preferred. (JS/MM)08/11/08: Transferred to Kolleeny/Mandac (JK/MM)12/12/08: Received Quarterly Groundwater Sampling/Baseline Sample Report from Bill Schlageter of Preffered Environmental dated 11-19-08. Under review. Next sampling event in December 2008. (JK/KG)12/16/08: RAP implemented.May 28 and 29, 2008 - 14 wells were installed (4 groundwater monitoring wells, 4 solinst emitter wells, 6

MOBILE GAS (Continued) **S106703575**

chemical injection wells)July 24 and 25, 2008 - Regen-Ox injected into 6 injection wellsAugust 21, 2008 - Solinst Waterloo Oxygen Emmitter Probes were installed in 4 wellsSeptember 8, 2008 - Groundwater samples were collected at MW-1, 2, 3, 4 and IW-1.Total VOCS:MW-1 2,192 ug/L, MW-2 11,950 ug/L, MW-3 19,898 ug/L, MW-4 7,963 ug/L, IW-1 3,070 ug/LIW-6 and E-2 were found to have product, 1.47 ft and 0.04 ft respectively. Wells are checked biweekly for product. If product is encountered it is hand balied. Dissolved oxygen concentrations have increased since oxygen emmitters were installed. Next sampling event is scheduled for December 2008. (JK/KG)12/18/08: Spoke with Bill Schalageter (Prefferred Env.). I asked him about the well with 1.47 ft of product. He said Alex Javic is still checking the well twice a week. He is bailing the product and disposing of it into the waste oil tank on site. Bill said the product is about an inch to a couple of inches. He will send someone out within the next week to verify how many inches of product are in the well and will send me an email with the details. Based on the amount of product they will need to be more aggressive in removing the product. I suggested a vac truck. I also asked Bill to have the wells surveyed and include GW flow direction, gradient, and scale on the map. (JK/KG)12/30/08: Spoke with Jill Haimson (Preferred Env.) about product in well. She will talk to Bill and find out if someone went to the site to gauge the product. She will email me the details. If no one went to the site she will have someone go this week. (JK/KG) 01/29/09: Have not received details about product in well or product recovery. Emailed Jill and Bill requesting an update. (JK/KG) 02/02/09: Rec'd following email from Schalageter on 1/29/08."Since we spoke, Preferred was out the site twice including a quarterly sampling event conducted January 23, 2009. During the first visit (January 5, 2009) , approximately eight inches of product was present in well (IW-6), none was detected in any other of the wells. The product was bailed from IW-6 and disposed of, subsequent to bailing, Preferred gauged the wells for twenty minutes and no product recharge was observed. During the January 23, 2009 sampling event, approximately 4 inches of product was detected in IW-6, again no recharge of product was observed subsequent to removal. No product was detected in any of the other wells on January 23, 2009. A complete description of monitoring and sampling events will be provided in the Quarterly sampling report to be submitted upon receipt of sampling data. Please feel free to contact me with any questions or concerns. Regards, Bill" (JK/KG)02/03/09: Responded to Bill, "After talking with Jon, please continue with product recovery on a regular basis. If the amount of product increases or doesn't appear to be decreasing, a more aggressive remedial measure will be necessary. Based on the VOC concentrations in MW-2 and MW-3, further delineation or more injections may be necessary. First, I will need to review the results of the latest sampling event (when they are ready). (JK/KG)04/14/09: Rec'd pdf of Quarterly Groundwater Sampling Report on 4/13/09; under review. (JK/KG)04/15/09: Rec'd hardcopy of QMR. Wells were surveyed; groundwater flow direction is to the southwest. Weekly product recovery will continue and the next quarterly event is scheduled for April 2009.Groundwater on 1/23/09:MW-1: BTEX - 1,422 ug/L, Total VOCs - 2,533 ug/L, MTBE - 170 ug/LMW-2: BTEX - 3,590 ug/L, Total VOCs - 4,909 ug/L, MTBE - 180 ug/LMW-3: BTEX - 15,150 ug/L, Total VOCs - 21,338 ug/L, MTBE - 2,700 ug/LMW-4: BTEX - 11,174 ug/L, Total VOCs - 21,425 ug/L, MTBE - 1,600 ug/LIW-1: BTEX - 1,715 ug/L, Total VOCs - 2,739 ug/L, MTBE - 280

MOBILE GAS (Continued) **S106703575**

ug/LIW-4: BTEX - 1,652 ug/L, Total VOCs - 2,501 ug/L, MTBE - 200 ug/L E-4: BTEX - 4,664 ug/L, Total VOCs - 8,201 ug/L, MTBE - 1,700 ug/L (JK/KG)04/20/09: Spoke to Schlageter on 4/16/09. I asked him to include historical analytical data in future reports. We discussed the product in IW-6; he said it appears to be old gasoline and the station manager is still hand bailing it. The product is being disposed of in the on-site waste oil tank. I told Schlageter that the product can not be disposed of in the waste oil tank. Preferred has gauged the wells since the January sampling event. I asked him to send me the gauging data by Monday (4/20). (JK/KG) 04/28/09: Rec'd March gauging data (in eDocs). On 3/6 product in IW-6 was about 6 inches and on 3/27 it was about 0.25 inches. (JK/KG)05/04/09: Letters sent to J. Satoski and A. Javik on 4/30/09. A more aggressive approach to product recovery should be implemented by using mobile vacuum extraction. A RAP should also be prepared and submitted. It should propose additional remedial actions, such as another round of RegenOx injections. The next QMR is due 6/19/09. (JK/KG)05/07/09: Spoke to Mr. Javick, he said he doesn't have the money to pay for the cleanup. He was reminded that he signed the Stipulation Agreement and that a report is due in June. (JK/KG)06/22/09: Rec'd call from Bill Schlageter. He said quarterly monitoring has not been performed and Mr. Javick is not willing to pay for the cleanup. I called Mr. Javick and he said Ms. Satoski will pay 100%. I then spoke to Ms. Satoski and she confirmed that she has agreed to pay for remediation of the site. She will advise Preferred to proceed with site work once some checks clear in her bank account. Preffered is prepared to submit a supplemental RAP. (JK/KG)06/23/09: Rec'd Supplemental Remedial Action Work Plan dated 6/23/09 and submitted by Preferred Environmental. Under review. (JK/KG)06/25/09: Rec'd revised SRAWP dated 6/24/09. SRAWP proposes proposes additional injections of RegenOx into the existing on-site injection wells, monitoring of groundwater field parameters, continued groundwater treatment via in-situ emitter probes, continued quarterly groundwater monitoring, and submission of monitoring reports to NYSDEC. A round of groundwater samples will be collected from monitoring wells MW-1, MW-2, MW-3, and MW-4 prior to the RegenOx injections. If free-phase product is detected in well IW-6, the product will be removed using vacuum-enhanced fluid recovery prior to the injections.The SRAWP was approved and letters were sent to Satoski and Javick. The deadline for submission of a groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, is August 7, 2009. The deadline for submission of a report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results is September 25, 2009. Email for Satoski is williamtaggard@mac.com (JK/KG)07/20/09: Rec'd the following email from Schlageter:"We will be conducting the injection this week (Monday-Wednesday) at 49-01 Van Dam Street, LIC. Prior to the injection, the required pre-injection sampling will be conducted from monitoring wells. Bryan from our office will be on-site and as always, you can contact me orJill with any questions. Thank You, Bill" (JK/KG)08/31/09: Spoke to Haimson. She didn't realize a report with the results of the baseline sampling was due 8/7/09. The report will be prepared and submitted next week. (JK/KG)09/30/09: Follow-up with Preferred as the groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, and the report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results have not been

MOBILE GAS (Continued) **S106703575**

submitted. (JK/KG)11/03/2009: This spill case was transferred to A. Doronova. - AD03/23/2010: Received a pdf copy of Quarterly Monitoring Report for October 2009. DL to eDocs. Will review. AD07/27/2010: Received an e-mail from Mr. Schlageter:"Ainura: As we discussed, attached is the supplemental RAP for the above-referencedproject. Please review and contact me to discuss. Thank you BillWilliam J. Schlageter Operations Manager/Senior Hydrogeologist"Will review. AD08/24/2010: Reviewed the supplemental work plan. It proposes to conduct EFR on a weekly basis for two months period on the site wells exhibiting a free product (wells IW-6 and E-4); to continue employment of 3 out of 4 oxygen emmiters; to conduct monthly monitoring activities; to perform air sparging of aquifer; and once free product has been addressed, to rehabilitate and re-install emmiter probe into E-4 and reconnect oxygen supply to this well. Discussed this work plan with J. Kolleeny of DEC. As it was noted, air sparging method usually combained with SVE to control vapors in unsatutated zone. Since SVE is not proposed here, implementation of air sparging alone is questionable. AD08/26/2010: Called and spoke with B. Schlageter of Prefferred. Requested to revise the work plan. AD08/11/2010: Received a pdf copy of the 1st quarter 2010 GW monitoring report. DL the report to eDocs. AD09/16/2010: Received an e-mail from Bill:"Ms. Doronova: As we discussed, attached is the revised Supplement to the Remedial Action for the above-referenced property. The Supplemental action has been revised to omit the mobile air-spare treatment upon your request. Please review and contact me with any comments. Upon your approval, we will implement the proposed action within one week. Thank you, BillWilliam J. SchlageterOperations Manager/Senior HydrogeologistPREFERRED ENVIRONMENTAL SERVICESCertified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick AvenueNorth Merrick, New York 11566Tel: (516) 546-1100 ext. 22Fax: (516) 213-8213Cell: (917) 715-0752www.preferredenv.com"DL the work plan to eDocs. Will review. AD09/17/2010: Reviewed the revised work plan. It proposes to conduct weekly VEFR on two site wells (IW-6 and E-4) which exhibit free product, for a period of two months. Operation and maintenance of three oxygen emitters at the site will continue on a monthly basis. Preferred also recommends to suspend quarterly GW monitoring for a six months. AD09/20/2010: Discussed this WP with J. Kolleeny of DEC. AD09/21/2010: Issued and sent an approval letter to Ms. Joan Satowski with the following comments:" Although Preferred requests that quarterly groundwater monitoring at the site be suspended for six months, the Department requires that quarterly groundwater monitoring continue;Following completion of the VEFR events, quarterly groundwater monitoring data should be evaluated. If the results do not indicate significant improvement of groundwater quality at the site, and/or if free product continues to appear in the two affected wells, then an alternative remedial measure should be proposed to DEC."Dl pdf copy of the letter to eDocs. AD04/11/2011: Received an e-mail from Bill:"Ainura: Attached is the quarterly sampling report for February 2011 for the above-referenced property. The report summarizes activities conducted from November 2010 through February 2011. Results of the quarterly sampling are favorable - significant reduction of dissolved phase VOCs, however some residual free product remains present within IW-6. The next quarterly sampling is scheduled for May 2011. Please feel free to contact me with any questions. Thank you BillWilliam J. Schlageter"DL the report to eDocs. Will

MOBILE GAS (Continued) **S106703575**

review. AD06/30/2011: Reviewed the report. It states that on February 2011 sampling, thirteen of the fourteen on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.49 ft). Floating product was also observed during the prior monitoring events in October 2010(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). An absorbent pad was installed within IW-6 to address free product. Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product.Depth to GW water ranged from 6.48 ft. (E-2) to 8.37 ft. (MW-4) bgs. Groundwater flow has historically been determined to have a westerly influence within both northwesterly and south westerly flows historically observed.A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for on-site sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest TVOCs was detected in MW-3 (7,625ug/L), which is located crossgradient of the tank farm and downgradient of the Luk Oil Station to the southeast. Concentrations of BTEX detected in groundwater samples ranged from 5,110 ug/L in the MW-3 to 61.5 ug/L in the MW-1 at an upgradient location, MTBE concentrations ranged from 17 ug/L in the IW-1 (crossgradient) location to 1,100 ug/L in the MW-3 location.Preferred states that TVOCs have dropped across the site by up to 94% and by more than 50% since the implementation of the supplemental remedial action. They report that MTBE concentrations have also significantly decreased across the site and conclude that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts.The next quarterly sampling suppose to be conducted in May of 2011. AD11/2011: Did not received ane reports. AD01/12/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit all missing reports for 2011. Later received an e-mail from him saying:"Ms. Doronova: As we discussed attached is the report from October. Please note that due to construction at the station property, we were forced to delay the next sampling event sampling until January 2012. Further, although concentrations continue to decrease, we have identified that there is an off-site contribution to the groundwater impacts - believed to be the Luk Oil property across Gale Avenue (currently AmeriGas ??) - Owner is Leelimits Petroleum. We are petitioning to drop the sampling to a bi-annual schedule. Thank you, Bill"DL the report to eDocs. Will review. AD03/09/2012: Reviewed the report. It states that quarterly sampling activities resumed on August 2011 subsequent to the supplemental remedial efforts, which including VEFR activities and continued oxygen injection. The August 2011 quarterly sampling event included the following: Measurement for floating product; Measurement of water table elevation, temperature, and dissolved oxygen; Purging and sampling of four monitoring wells, two injection wells and one emitter well; Laboratory analysis of seven groundwater samples; and Preparation of summary report including data summary and a groundwater flow map.Groundwater flow in August of 2011 was determined to be to the northwesttowards Newtown Creek.During the August 2011 sampling, thirteen (13) of the fourteen (14) on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.50 ft). Floating product was also observed during the prior monitoring events in February 2011 (.49 ft.), October 2010

MOBILE GAS (Continued) **S106703575**

(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product.A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. Concentrations of BTEX detected in groundwater samples ranged from 2,129 ug/L in the MW-4 to 54.1 ug/L in the MW-1. MTBE concentrations ranged from 220 ug/L in the MW-2 to 7.1 ug/L in the IW-1 location.The consultant states that August 2011 groundwater quality data was compared to the historic groundwater data developed for the property. To date since the initiation of remedial activities at the Subject Property, TVOCs have dropped by more than 61% since the last quarterly sampling event in February 2011. BTEX and MTBE concentrations have also significantly decreased across the site. This indicates that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. AD09/19/2012: Sent an e-mail to B. Schlageter requiring submission of all missing reports. AD12/2012: Did not receive the reports. Called and left a message. AD02/2013: Spoke with B. Schlageter regarding reports submission. The property owner is very sick and Preferred did not visited the site for several months. He will get back with the site status update. AD06/04/2013: Called and spoke with Bill of Preferred regarding this site. The site owner contacted them recently, so they are planning to start groundwater monitoring soon. Bill will look for unsubmitted reports and will give an update. AD01/17/2014: Called and spoke with B. Schlageter of Preferred Env. No GW monitoring was done at the site since we spoke last time. Site owner was uncooperative. Requested to submit the most recent owner's contact information. Suggested to visit the site, sample all site wells and submit a summary report with conclusions and recommendations for further actions. AD

BROWNFIELDS:
Program: BCP
Site Code: 348625
Acres: 3.000
HW Code: C241089
SWIS: 4101
Town: New York City
Update By: JAMORAS
Site Description: Location:The Review Avenue Development I (RAD I) property located at 37-30 Review Avenue, Long Island City, Queens County. This site is 3 acres in size and is northwest and adjacent to the Review Avenue Development II (aka Former Quanta Resources C241005) Site, seperated only by Preston Alley which is a access alley/paper street. The Long Island Railroad tracks boarder the property along the southwest. Site Features:The entire site is paved. There are two brick buildings on site. The larger building, refered to as Building #1 is located toward the back of the property near the Long Island Railroad tracks. It has large overhead doors and is a commercial/industrail building. The smaller building, refered to as building # 2, is loacted at the front of the property, on Review Avenue, and is a two story commercial office building.Current Zoning/Uses:The site is currently zoned for commercial and industrial uses. The site is currently being leased by a truck repair shop and movie set construction company. An IRM UST removal was conducted on site in May 2006. Historic Uses:The site was used for various industrial purposes dating back to the 19th century. In recent years it has been used truck repair, office space, truck and contracting storage. Site Geology and Hydrogeology:The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to course sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the watertable over much of the site.
Env Problem: Nature and Extent of Contamination:Known or suspected contaminants include: petroleum, Chlorinated solvents, Other VOCs, metal and PCBs and are impacting the soil and groundwater. A light nonaqueous phase liquid (LNAPL) is present above the watertable under most of the site. The LNAPL is a weathered petroleum.Significant Threat:The site is not a significant threat site due to the fact that free product LNAPL orignated predominately from the adjacent RAD II site.
Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with a building and pavement. Contaminated groundwater

NANCO CONCRETE CORP. (REVIEW SUPPLIES) (Continued) **U003200549**

at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not a concern for the on-site building based on its current use.

ENG CONTROLS:

Site Code:	55924
HW Code:	241014
Control Code:	35
Control Type:	ENG
Date Record Added:	07/17/2008
Date Rec Updated:	08/22/2013
Updated By:	SRHEIGEL
Site Description:	Location:The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28.Current Zoning and Land Use:The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features:The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil.

ROEHR CHEMICALS INC (Continued) **1000243997**

Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology:Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamintion:Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb.Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	02/07/13 - IzReviewed Sovereign Consulting Inc.'s January 18, 2013 Tank Excavation Assessment Report (eDocs). The Report summarizes activities related to the permanent closure of 42 underground storage tank systems. Some of these tanks were removed; other were left in place, since their removal could jeopardize the integrity of nearby structures. About 397 tons of petroleum-contaminated sand were removed from the tanks, and 931 tons of contaminated soil and concrete were disposed of at a registered facility. Excavated

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

uncontaminated soil was used to restore the site. The Department has received Sovereign Consulting Inc.'s January 16, 2013 LNAPL Recovery Report to address residual petroleum contamination at the aboveground storage tank area. The LNAPL Recovery Report will be reviewed in relation to Stip executed February 24, 1998, linked to spill case number 8709990, et seq. No further action is required concerning the removal of the tanks and the pertinent site assessment. The Department has closed spill case number 9002114. Stip number R2-20120626-406 has been terminated. 09/15/11 - LZThe June 30, 2011 annual report (eDocs) indicates that product is present in a number of MWs. the highest thickness was 2.4 feet in MW-40.12/15/09 - LZA meeting with Motiva consultants Douglas Weiner and Douglas Byers focused on options to speed up remedial process. By March 31, they submit a risk assessment and evaluate remedial options than can be used at Motiva. 08/14/09 - LZThe June 19, 2009, report, prepared by Science Applications International Corporation, shows that monthly hand bailing was performed at 30 wells during the period July 2008-June 2009. Six wells exhibited free-phase product. The maximum thickness was 0.52 foot in MW-31. The total amount of recovered product was 1,177 gallons since the remediation started in 1998. the report shows that BTEX and MBTE concentrations in groundwater have decreased over time. The next report is due June 30th, 2010. 01/03/08 - ZielinskiThe Department has reviewed a request by Science Applications International Corporation to discontinue the use of the pumping system, supported by information contained in the 2005 Annual Report and the 1998 Corrective Action Plan for Motiva Enterprises, Brooklyn Terminal. The Department approves the continuation of product recovery at all wells by monthly hand bailing. 9/13/07 - ZielinskiReceived the 2007 annual Sampling Report,dated August 9, 2007, prepared by Science Applications International Corporation. Thirty wells were gauged and bailed monthly and one-time sampling was conducted. Total 1,136 gallons of free product were removed. A review of submitted data from 01/06/99 to 07/06/07 indicate that the largest thickness of free product was discovered(in feet of product) in MW-2(1.50), MW-4(o.41), MW-15 (0.11), MW-26(0.52), MW-31(1.15), MW-36(1.38), MW-37(1.50), MW-40(2.40), MW-41(0.54), RW-34 0.17),TW-2(0.14), TW-5(1.08), and TW-6(0.25). Few other wells show free product up to 0.1 feet in thickness. VOCS sampled on 06/26/07 were detected in: MW-1; (nd), MW-2: (nd), MW-29: ethylbenzene (303 ppb), total xylenes (26.8 ppb), MW-5: tetriary butyl alcohol (27.5 ppb), MW-22: total xylenes (23.7 ppb), MW-24: MTBE 95.64 ppb), MW-16: benzene (99.8 ppb), tertiary butyl alcohol (87.3 ppb), MW-20: MTBE (188 ppb), tertiary butyl alcohol (2,370 ppb), total xylnes (1,420 ppb, MW-15: MTBE (54.7 ppb), MW-33: MTBE (89.9 ppb). SVOCs, according to the report, between June 2000 and June 2007, only MW-5 contained detectable concentrations over the past three years. Applications International Corporation requests in its letter NYSDEC approval to discontinue the active pumping and to practice hand bailing. The new Motiva environmental contact for this site is Anna Tillman, phone 404-417-1974. 01/22/07 - ZielinskiThe 2006 annual report for Motiva Enterprises LLC, Brooklyn Terminal, prepared by Science Applications International Corporation, shows that BTEX and MTBE concentrations in the groundwater has decreased over the time.Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO"This spill site cleanup has been conslidated under Spill No. 9002114.Shell Brooklyn, N.Y. Distribution Plant, 25 Paidge Avenue, Brooklyn, N.Y.- Spill Investigation & Corrective Action Plan DEC Spill Nos. 8709990,

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

9002114 & 9413568.On February 25, 1998, DEC Executed stipulation for the cleanup of the groundwater at the Shell N.Y. Distribution Plant, 25 Paidge Avenue, Brooklyn. The stipulation was issued toShell Oil Products CompanyTwo Shell PlazaP.O. Box 2099Houston, Texas 77252-2099Mr. Erik E. Hansen, Environmental Engineer4/12/04-Vought-Spill transferred from Sigona to Rommel as per Rommel.4/26/04 - Re-assigned to Zhao.

Remarks: Free Product found in Groundwater Monitoring wells. Well Nos. 2 had .13 feet, WELL #4 .004 feet, WELL #9 FILM, WELL #5, WELL #17, WELL #19 .09 Feet, WELL #20 FILM.

DEC Memo:	2/27/15 TJDTeleconference with James at ARC Terminals. Leaking seal on pipe caused estimated 6 gallons to leak onto concrete. All product contained - granular absorbents used for recovery of product. Residual product entered onsite drainage which is connected to oil/water seperator. Equipment is out of service pending repair.2/28/15 TJDReceived update from James at ARC Terminals. Leak has been repaired. Spill is cleaned. Based upon nature of reported spill and information received from terminal represenative no further action is required. Spill closed.
Remarks:	caller reporting leak coming from a seal on the pipe.clean up is on going.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"9/17/02The 5,000 gallon tank (approximately 20 feet west and perpendicular to the sheeting line in Whale Creek Canal) appears to have been damaged by the installation of sheeting. The Contractor has pumped out the contents of the tank, and is in the process of removing it. The contents of the tank appear to waste oil. A sample of the oil has been collecteed and test results should be back soon, including Full RCRA characterization. This is within the excavation area for Contract 32, and as such impacted soils will be excavated and disposed along with all the other contaminated soils at the site. We already have data that demonstrates that the surrounding soils are non-hazardous contaminated. 12/1/03Analysis confirmed materlead not haz waste, oil and water mixture from excavation disposed at New York Oil Recovery, Inc.Tank removed and two soil endpoint samples and one groundwater (bottom) collected. Soil and water OK. spill closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"8/13/2004 Sangesland spoke with Ernest Livingston. He said as a pile was being hammered into place, they may have ruptured an old buried tank. Unknown what the material is, but it is green. Several years ago they had a similar "Green" Spill which turned out to be Hazardous. They shut down the work site and called a Haz Mat company to figure things out. No product is entering the creek. It is all contained in the excavation.Krimgold responded to the site.8/18/04 - AUSTIN - RECD CALL FROM WINNIE LANHAM OF DEP HEALTH AND SAFETY FOR SITE(718-609-8715). SHE INDICATED THAT DEP HAD TAKEN SAMPLE OF NON-AQUEOUS GREEN LIQUID (ABOUT 50 GALS OF TOTAL 1000 GALS FLUID RECOVERD BY CLEAN VENTURES (THEIR CONTRACTOR)), AND WAS AWAITING PRIORITY POLLUTANT RESULTS. SHE WILL FAX LOCATION MAP SO THAT WE CAN FORWARD TO JENN ROMMEL FOR POSSIBLE DETERMINATION AS TO WHAT THIS MATERIAL MAY BE AS PART OF MOBIL GREENPOINT PLUME PROJECT. - END9/7/04. J.Krimgold left message for Winnie Lanham.9/8/04. J.Krimgold spoke to Ms. W. Lanham (DEP). They completed removal of contaminated soil in construction area. The material spilled appeared to be an antifreeze. Contaminated soil was disposed of as petroleum contaminated. Ms. Lonham will submit a report in a week. They will also perform soil delineation to assure no contamination left behind.4/20/05. J.Krimgold revied the letter report submitted by DEP on April 20, 2005. No contaminants was found above TAGMs levels. NFA letter.

Site Description: Location:The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site.Site Features:The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site.Current Zoning/Uses:The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment.- 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories- 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses:In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

ceased in 2003.Site Geology and Hydrogeology:Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeastMiscellaneous:There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem: The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab.The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds.Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110004334872

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use:The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing.Site Features:The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site.Past Uses of the Site:The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway.A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC's Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil lying above the groundwater table. See Site Code C241005 for post ROD updates.

Env Problem:	The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents,heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089
Health Problem:	Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminates. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Update By: JAMORAS
Site Description: Location:The Former Quanta Resources Site, a.k.a. Review Avenue Development II Site (RAD II) is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. This site is adjacent to the Review Avenue Development I (RAD I) (seperated only by Preston Alley which is a access alley/paper street). The Long Island Railroad tracks boarder the property along the southwest. Site Features:The site is a fenced, open gravel parking lot. All above ground and below ground tanks, structures, and buildings were removed as part of an interim remedial measure in 2008.Current Zoning/Uses:The RAD II site is currently being used as a parking lot. It is zoned for commercial and industrial uses. Historical Uses:The RAD II property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in November 1981. Site Geology and Hydrogeology:The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to course sand with some

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the watertable under the site.

Env Problem: Nature and Extent of Contamination:A viscous light non-aqueous phase liquid (LNAPL)is present at the watertable over the entire site. The LNAPL is a weathered petroleum. Groundwater flow is toward the south-southwest toward the Newtown Creek. The extent of the LNAPL has been delineated and it has not migrated beyond the Long Island Railway tracks downgradient.Known or suspected contaminants include: Petroleum, Chlorinated Solvents, other VOCs, and metals, impacting the soil and groundwater. Significant Threat:The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.

Health Problem: Exposure to contaminated groundwater or soil is unlikely because the area is served by public water and access to the site is restricted by fencing. The potential for exposure via soil vapor intrusion off-site will be evaluated during the remedial design and will also be evaluated if new construction is planned on-site in the future.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: MJKOMORO
Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

Site Description: Location:The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features:The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plan is ~1/2 mile north of the site. Current Zoning/Use(s):The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s):The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. This investigation was conducted in several phases, and was completed in the Summer of 2009.Site Geology and Hydrogeology:The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (~138.5' below ground surface).Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.
Env Problem: Nature and Extent of Contamination:- GroundwaterThe primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 730,000 ppm (73%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each).- SoilPCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm).-Soil Vapor and Indoor AirConcentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3.Significant Threat:The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.
Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area anddata evaluated as they become available.

DEC Memo:	6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington)6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him.6/16/2014: URS personel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10’ in length. Tank was approximately 14" below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4" thick, and approximately 4’ in diameter. There appears to be ~6" of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington)6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington)11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington)12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington)1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington)3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington)5/18/2015: The Department sent a "WA Issuance/Notice to Proceed" letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington)
Remarks:	Unknown UST (4’x10’) discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground.

Environmental Interest/Information System

KOSAN INDUSTRIAL CORP (Continued) **1000150474**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: JHOCONNE
Site Description: Location:The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The approximately 1 acre site is described on the county tax map as Block No. 2487, Lots No. 1, 10, 12, 72 and 78. Site Features:The dimensions of the site are approximately 240 feet by 200 feet. The building consists of a number of smaller buildings that have been joined together. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage.Current Zoning/Use:The Site zoned M1-2/R6 which designates the site as manufacturing with a residential overlay. It is currently owned by 49 Dupont Realty Corporation and is used for storage of plastic wrapping and resin pellets.Historic Use:The site has been in existence since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart removed all of their equipment and offices. There are 12 underground storage tanks (USTs) located on the Site. According to records, these tanks were emptied and closed as part of an Interim Remedial Measure (IRM). There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) number is 2-608875, and the Chemical Bulk Storage (CBS) number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate.Site Geology and Hydrogeology:Measurements of the groundwater elevation indicated groundwater flow is generally to west towards the East River.
Env Problem: Nature and Extent of Contamination:The plasticizers bis(2-ethylhexyl)phthalate, Di-n-Octyl phthalate, as well as high boiling, paraffinic, petroleum oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in

FORMER NUHART PLASTIC MANUFACTURING (Continued) **1009232006**

soil. TCE was also detected in soil vapor, shallow soil and groundwater in central portion of the site. From 1983 to 2004 NuHart and Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000 ppm of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. According to the Interim Investigation Report dated April 2010, a large plume of plasticizer NAPL mixture consisting of phthalates and paraffinic petroleum was identified under the western end of the factory where the plasticizer USTs were located. A small plume of NAPL consisting primarily of phthalate was identified beneath Lot 12 near one of the plasticizer tanks. The large plume has migrated off-site in a northwesterly direction under the sidewalk. Previous interim remedial measures (IRMs) implemented under the spill program involved cleaning the floors of the factory, cleaning out the USTs, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and recovery equipment. NAPL recovery has been ongoing since 2007. The IRM activitiy includes the use of a automated recovery unit at one recovery well and manual bailing from other wells. Typically about 70 to 80 gallon of product/water mixture are recovered each month.

Health Problem:	It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil since it is under the ground surface, however, if the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. Also, the potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby structures via soil vapor intrusion needs to be evaluated.

Site Description: The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The building consists of a number of smaller buildings that have been joined together. The dimensions of the footprint of the one large building are approximately 400 feet by 200 feet. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage.The site has been in existence since 1887. It has been used for manufacturing, as an office, as storage, and for shipping and receiving. Prior to 1950, the site was used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. From 1983 to 2004, NuHart & Company made vinyl siding and sheeting at the site. After 2004, NuHart & Company removed all of their equipment and offices. The site is now used for the storage of plastic wrapping and many large (36 cu. ft.) fabric bags containing pellets of resin. There are 17 underground storage tanks located on the site and two large silos above ground at the west end of the building. The Petroleum Bulk Storage (PBS)number is 2-608875 (for 13

FORMER NUHART PLASTIC MANUFACTURING (Continued) **1009232006**

registered tanks). The site is a former Chemical Bulk Storage (CBS) facility #2-000444 with 5 plasticizer tanks. Liquid plasticizers stored included bis(2-ethylhexyl)tertphthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate.The requestor withdrew the application, and the site was listed on the Registry of Inactive Hazardous Waste disposal site as of June 2010 (see site no. 224136).

Env Problem: The plasticizers bis(2-ethylhexyl)phthalate anddi-n-octylphthalate, as well as #4 fuel oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. From 1983 to 2004 NuHart & Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000,000 ppb of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. A large plume of plasticizer NAPL was identified under the western end of the factory where the plasticizer USTs were located. This plume had migrated off-site in a northwesterly direction. A small plume of mostly #4 oil NAPL was identified under the northeast corner of the factory and had migrated a shorty distance off site. The environmental remediation which followed involved cleaning the floors of the factory, cleaning out the underground storage tanks, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and equipment. The NAPL plumes have now been reduced in size and consist of three separate plumes. All of the plumes are contained under the sidewalks bounding the factory and under the footprint of the building. The smallest plume is under the northeast corner of the site. The former large plume under the western end of the factory is now two separate plumes (according to the November 26, 2008 gauging event) and consist solely of plasticizers. The thickness of the NAPL ranges from 0.16 feet to 1.38 feet. Product collection from these two plumes is continuing and, as of December 2008, has recovered a total of 8,356 gallons of NAPL.

Health Problem: Not reported

Site Description:	Location:The site is located at 43-01 21st Street in Long Island City, Queens, NY.Site Features:The site primarily consists of the building located at 43-01 21st Street, which is currently used to house many small businesses, including dental labs, furniture makers, uniform sales and upholstery shops, among others.Current Zoning/Uses:The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately

THE WILLS BUILDING (Continued) **S113916801**

flve hundred feet south of the site, along 44th Road.Historical Uses:Prior uses of the building include manufacturing of X-ray equipment in the 1930's, as well as several smaller industries. Light to medium grade manufacturing has been conducted immediately to the south and east of the site for over fifty years. A New York City high school is located approximately four hundred fifty feet to the south of the site. Site Geology and Hydrogeology:Soil at the site consists of historic fill mixed with silty sands to a depth of approximately fifteen feet, with bedrock below this depth. Groundwater is encountered at approximately ten feet below ground surface, and the flow is generally to the south.

Env Problem:	Nature and Extent of Contamination: Data collected during the investigation of the 21-03 44th Avenue site RI, located immediately south of the Wills Bbuilding, indicated the Wills building to potentially be a contributing source of VOC contamination to that site.Wells were placed upgradient of the Wills building, and data from those wells was assessed relative to wells immediately down gradient of the Wills building, but upgradient of the 21-03 44th Avenue site. Results indicate that contamination at the downgradient location is over an order of magnitude greater than the upgradient locations, with PCE contaminant levels as high as 2700 ug/l in the overburden wells (vs. an overburden upgradient value of 190 ug/l), and 23,000 ug/l in the bedrock wells (vs. an upgradient value of 760 ug/l). Sub-slab and indoor air data was also collected at the Wills building and results are substantially above guidance. Sub-slab PCE levels are as high as 3,700,000 ug/cubic meter; and indoor air showed levels above the NYSDOH matrix values.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

BROWNFIELDS:
Program: BCP
Site Code: 490427
Acres: 1.110
HW Code: C241143
SWIS: 4101
Town: New York City
Update By: JEBROWN
Site Description: Location: The Site is located in an urban area in Long Island City at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building. Current Zoning and Land Use: The site is currently occupied by a 3-story building that is fully tenanted by mixed-use commercial and light manufacturing entities. The site is zoned M1-4 and the surrounding area consists mostly of commercial and industrial sites.Past Use of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies.Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the West. The East River is located approximately 1/2 mile northwest of the site.Overburden materials are composed of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs.
Env Problem: Nature and Extent of Contamination: Data collected during the investigation of the 21-03 44th Avenue site RI, located immediately south of the Wills Building, indicated the Wills building to potentially be a contributing source of VOC contamination to that site.Wells were placed up gradient of the Wills building, and data from those wells was assessed relative to well locations on-site and immediately down gradient of the Wills building. Results a significant contamination source is present beneath the building, with PCE contaminant levels as high as 90,000 ug/l in one on-site well. A down gradient well showed significant contamination as well, with values as high as 7,300 ug/l in one overburden well. Up gradient wells showed a high of 840 ug/l, indicating the site is the primary source for observed PCE contamination. Historically, sub-slab and indoor air data was also collected at the Wills building and results were initially substantially above guidance. Sub-slab PCE levels approached as much as four million ug/cubic meter, and indoor air showed levels above the NYSDOH matrix values, though these have been brought into guidelines with the installation of a sub-slab

THE WILLS BUILDING (Continued) **S113916801**

depressurization system.Soil samples collected from beneath the building have not yet revealed a source. Samples from beneath the alley just beyond the building footprint found no VOC source material, but did reveal SVOCs at levels exceeding the Restricted Residential Soil Cleanup Objective (RRSCO) including Benzo(a)pyrene at 9.5 PPM vs. an RRSCO of 1 PPM.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (systems that remove the air beneath the building) have been installed in the on-site building to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. However, the potential for soil vapor intrusion to impact off-site buildings needs to be assessed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015
Date Data Arrived at EDR: 03/10/2015
Date Made Active in Reports: 03/25/2015
