4.2.5 NYSDEC Spill Logs

The New York State Department of Environmental Conservation routinely responds to petroleum product spill/discharge incidents so as to perform and/or supervise in their remediation. The agency currently maintains a log (Spill Log) of all reported incidents which have occurred within specific regions of the State of New York. Typical events which would be listed on the log include motor vehicle accidents involving the release of petroleum products; discharges of petroleum products from underground storage tanks; discharges of PCB contaminated oils from electrical transformers; and events involving the abandonment of petroleum products. A review of the NYSDEC Region 1 Spill Log revealed the following information relevant to the environmental quality of the subject property.

1. There were three (3) spill events listed in the NYSDEC Spill Log as having occurred on the subject property.

   A. Spill incident 9010146 involved the release of approximately 40 gallons of #2 fuel oil to local soils and to a storm sewer from an overfill due to a faulty gauge. Said incident occurred on 12-18-90, and the case was closed on 11-08-91.

   B. Spill incident 9311731 involved the release of #2 fuel oil due to an unknown cause. The release was contained to pavement, and an absorbent was applied. Said incident occurred on 01-03-94, and the case was closed on the same date.

   C. Spill incident 9600032 involved the release of approximately 100 gallons of #2 fuel oil as a result of the filling of a wrong tank. The spill was noted to have impacted the sewer system. Said incident occurred on 04-01-96, and the case was closed on 05-08-96.

Based on the fact that these incidents were all closed by the NYSDEC, they have been remediated to the satisfaction of the Department.

2. There were numerous spill incidents listed in the NYSDEC Spill Log as having occurred in the vicinity of the subject property (Appendix). Review of these incidents has revealed that many active spills were listed as having occurred in the vicinity of the subject property (see 9313234, 9412567, 9607116, 9613304, and 9802647). Freedom of Information requests have been submitted to the NYSDEC for further information regarding these incidents, but no responses have been received to date.

4.3 City Government

New York City Department of Environmental Protection; New York City Fire Department; New York City Building Department [See Appendix]

4.3.1 New York City Department of Environmental Protection

The Bureau of Water Pollution Control and the Bureau of Sewers of the New York City Department of Environmental Protection has put forth the document, Rules and Regulations Relating to the Use of the Public Sewers, Including Sewer Surcharges, pursuant to Section 1403 of the New York City Charter and by Sections 683a4-1.0 through 683a4-19.0, 687-1.0 and 689-1.0 of the Administrative Code of the City of New York and in compliance with Section 1105 of the New York City Charter. This document covers such topics as the disposal of wastewater, stormwater, and groundwater, the materials and substances excluded from public sewers, the toxic substances accepted conditionally, the terms and conditions for the issuance of a permit, the removal, transportation, and disposition of scavenger wastes, and the imposition and computation of sewer surcharge. The New York City DEP was contacted regarding the subject property. The following information was made available:

1. The New York City DEP Asbestos / Lead Control Program has no information on file regarding the subject property.

4.3.2 New York City Fire Department

The New York City Fire Department oftentimes maintains records of underground storage tanks and the storage of hazardous materials. The New York City Fire Department was contacted about the subject property and provided the following information:

1. A Freedom of Information request was submitted for the subject property, but no response has been received to date.

4.3.3 New York City Building Department

The New York City Building Department (NYCBD) maintains records regarding permits issued for the construction of a building, renovations of the building, boiler specifications, and violations. The New York City Building Department was contacted about the subject property and provided the following information:

1. Review of the NYCBD records revealed that a permit was issued for the demolition of a building in 1909, and permits were issued in 1909, 1915, and 1918 for the construction of new buildings. Permit (#400881621) was issued on 09-15-98 for the installation of a 4,000 gallon diesel fuel AST. No complaints or ECB (Environmental Conservation Board) violations were issued against the property.

5. REVIEW OF AVAILABLE PRIVATE DATABASE DOCUMENTATION

5.1 Cole Directory

The Cole Directory is a reverse telephone directory which includes listings by address and telephone number. As such, it can be a valuable instrument in determining potential pollution sources and/or sensitive receptors in an area of study. Information contained on the directory includes the name, telephone number, land use, geographic location, wealth rating, street construction date and date of telephone service connection. This data can be interpreted so as to yield relevant information regarding past land uses which might have affected the environmental quality of the subject and/or the surrounding properties. Listings for the streets in the vicinity of the subject property revealed the following information relevant to the environmental quality of the subject property:

Address	Listing	Date Listed
28-90 Review Avenue, Long Island City, NY	No listing	1971
	AA Truck Renting	1973 - 1999

5.2 Sanborn Maps

The Sanborn Maps were created to inform fire fighters of potential dangers based on land use and building construction. Said maps are also used for fire insurance purposes. These maps are updated on a rotating basis. The maps were inspected to determine past uses of the subject property and surrounding properties. The Sanborn Maps for the subject property revealed the following information:

1. The Sanborn Maps dated 1996, 1995, 1994, 1993, 1992, 1991, 1990, 1989, and 1988 showed the subject property being utilized as a trucking terminal. The building configurations were similar to that noted during the site inspection, except for three structures located along the creek. Two 20,000 gallon ASTs were also depicted between what is referred to as building "D" and one of the aforementioned structures. Surrounding properties include a paper bag manufacturer to the north, a warehouse to the east, the LIRR to the south and the creek to the west.

2. The Sanborn Maps dated 1986, 1985, 1980, 1979 and 1977 were similar to that depicted above except that the adjacent property to the east was noted as Horowitz Brothers & Margareten (Noodle Manufacturer).

3. The Sanborn Maps dated 1970, 1950, 1947 and 1936 showed the subject property as the location of The Texas Company, an oil depot. What is now Building "A" was listed as an office; Building "B" was listed for storage of pumps and tanks; Building "C" was listed as a garage / shop; Building "D" was listed as a pump house. A pipe gallery was shown running from the pump house to a former loading area (vicinity of present diesel AST) where four 15,000 USTs were listed as being located. Six 275,000 gallon ASTs were located east of and along the pipe gallery. Contents of same were listed as gasoline, gasoline, naphtha, kerosene, fuel oil, and crude oil. A gasoline UST was depicted off of the southeastern corner of Building "B". The previously depicted 20,000 gallon tanks were also shown. Surrounding properties were as previously depicted except that the paper bag manufacturer was shown as a metal manufacturer in 1950 and 1947 and vacant in 1936. The property to the east was shown as the Bentwood Chair Company in 1936.

4. The Sanborn Map dated 1915 show the subject property area as vacant with a vacant shed located on the property and a portion of a basin extending onto the property. The property to the north was occupied by an iron works.

5. The Sanborn Map dated 1898 showed the subject property as vacant with a basin extending onto the property. The property to the north depicted a vacant building. The property to the east was commercially developed (poor quality map).

6. GEOLOGICAL BACKGROUND STUDY

6.1 Subsurface Geology

The geology of Long Island consists of thick deposits of unconsolidated, water bearing sediments resting upon a relatively impermeable, crystalline bedrock surface. The sequence of events that shaped Long Island's geology is not known with certainty, but it probably began with the formation of the original basement rocks in early Paleozoic to Precambrian time more than 400 million years ago. These basement rocks were heated and compressed (metamorphosed) by folding and faulting, producing a rugged, mountainous topography. During the subsequent period ending with the late Cretaceous Epoch 100 million years ago, erosion reduced the land to a nearly planer surface that gently tilted to the southeast.

During the late Cretaceous Epoch (60-100 million years ago), streams brought sediments from the north and the west to the Long Island area on the continental margin, forming a permeable sand layer (Lloyd Sand Member of the Raritan Formation) and overlying clay member (clay member of the Raritan Formation) upon the bedrock surface. After a short period of erosion or non-deposition, thick, permeable beds of river delta clay, sand, and gravel were deposited on the Raritan Formation; these deposits comprise the Magothy Aquifer. Toward the close of the Late Cretaceous period (approximately 60 million years ago), a sand and clay unit (Monmouth Group) of low permeability was deposited in shallow marine waters in the area that now constitutes Long Island's south shore.

A long period of non-deposition, or possibly deposition followed by erosion, occurred after the Cretaceous era. Geologic activities during this time left few sedimentary traces, but streams flowing across Long Island cut deep valleys into the Magothy. It was not until late Pleistocene (Wisconsinian) glaciation- some 20 to 200 thousand years ago- that there were any significant additions to Long Island's geologic record. Valleys were filled and the other deposits were almost completely buried by glacial deposits. Prior to the southward movement of the Pleistocene ice sheets to Long Island, an extensive clay unit (Gardiners Clay) was deposited in shallow marine and brackish waters along the shores of what is now Suffolk County. This unit rested upon the Magothy and Monmouth Group, and acted as a confining layer. The northern portions of the Gardiners were subsequently eroded by advancing ice and glacial meltwaters, and Gardiners Clay beds are now found only in the south shore area.

6.1.1 Topography

The Pleistocene glaciation created the hilly Ronkonkoma moraine along Long Island's "spine" and south fork, and the Harbor Hill Moraine along the North shore and the North fork. Erosion of these morainal deposits (as the glacier melted away from Long Island) created extensive outwash plains of sand and gravel in the intermorainal area and south to the Atlantic Ocean. These highly permeable deposits comprise the upper glacial aquifer and represent the majority of Long Island's surficial sediments. Some local confining clay units were also formed from glacial materials in intermorainal lakes and tidal lagoons. Since the end of glaciation, about 12,000 years ago, Holocene beach and marsh deposits have been formed along the marine edge, and within stream corridors and ponds.

The elevation of the subject property, as presented on the United States Geologic Survey (USGS), Brooklyn Quadrangle Map, approximates twenty (20) feet above sea level. The USGS Map, which was base dated 1954, field checked in 1967, and photorevised in 1979, depicted several structures on the subject property.

6.1.2 Soil Component Identification

The subject property lies within an area classified as Urban Land. This soil type consists of urbanized areas where the majority of the surface is covered with buildings, roads, driveways, parking lots, and other manmade structures. Further classification of the soils in these areas is impractical.

6.2 Hydrology

The groundwater flow in the area of the subject property is anticipated to be convoluted due to tidal influence from local waterways. The depth to groundwater in the area is anticipated to be within fifteen (15) feet below existing grade.

7. LIMITED SCOPE IDENTIFICATION OF POSSIBLE LEAD CONTAINING SURFACE PAINTS

The element of lead has no function in the body. It can have poisonous effects on human organs and the nervous system, causing a variety of toxic reactions. Since lead accumulates in the body more rapidly than it can be removed, repeated exposures, even to small amounts, may produce lead poisoning. In addition, deteriorating lead components may allow lead to become airborne [CAS# 7439-92-1]. Threshold limit values have been established at 0.15 mg/m^3 (of air) by the American Conference of Governmental Industrial Hygienists. A non-destructive survey was performed. Said survey was not intended to constitute a full lead paint survey, which is beyond the scope of this report. Samples of selected painted surfaces were tested from the interior of the existing building.

1. Samples of paint were previously taken from various wall surfaces in each building and tested for lead content. Results of this testing revealed that a majority of the painted surfaces in building A, B, and D contained elevated levels of lead. The painted surfaces in buildings A, B, and D were observed in very poor condition. The paint was noted to have significantly peeled such that a large quantity of paint was noted on the floors in these buildings. The painted surfaces in building C appeared in fair condition.

2. Based on the age of building C, it is possible that lead containing paints exist below the surface layer in portions of the building.

8. LIMITED SCOPE IDENTIFICATION OF POSSIBLE FRIABLE ASBESTOS CONTAINING MATERIALS

Asbestos has been linked to various types of lung diseases. Various regulatory agencies have tolerance limits of 1% by weight for asbestos in materials. Any material which contains asbestos levels above this limit may be considered hazardous and may have to be abated. A non-destructive survey was performed. Said survey was not intended to constitute a full asbestos survey, which is beyond the scope of this report. The results of the survey are listed below:

1. Tyree Brothers conducted a visual survey for suspect asbestos-containing materials (ACM) on the subject property. Friable suspect ACM observed included acoustic ceiling tile (building C). Non friable suspect ACM observed included 9 x 9 floor tile in buildings B and C.

2. Due to the good condition of the acoustic ceiling tile no samples were collected. In addition, due to the non-friable nature of the 9 x 9 floor tile no samples were acquired.

9. RADON INVESTIGATION

Radon is a colorless, odorless, inert gas which has become an air contaminant in certain geographic areas. Radon is a natural isotope which is most commonly present in association with crystalline bedrock and occasionally other geologic deposits. Naturally occurring isotope decay can emit radiation which causes health concerns from inhalation. Radon levels generally increase in areas where bedrock is close to the land surface, and generally only creates a health related problem where underground basements are constructed. A basement can allow radon gas to accumulate in a manner which could cause exposure. Geographically, radon may be of concern in certain parts of Queens and points further west. Absent these conditions, radon gas presents less of a concern. The only way to determine concretely if radon gas is present is to perform air monitoring. Said monitoring is beyond the scope of this report.

The EPA issued a publication entitled Map of Radon Zones dated September 1993. Said document was prepared by the USEPA Office of Radiation and Indoor Air in conjunction with the USGS. According to said publication, 356 sites were tested for indoor radon concentrations in the five boroughs of New York City between the years 1985 and 1993. The following information was revealed (based on an action level for radon of 4 pCi/L).

Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
1.4 pCi/L	95%	5%	0%

10. EVALUATION OF DATA OBTAINED DURING THE ASSESSMENT

10.1 Recommendations

The following recommendations should be considered to further define the environmental quality of the subject property. These recommendations will define data which falls outside the scope of this investigation.

10.1.1 Recommended Phase I ESA Activities

Additional activities may be required as a result of the Phase I investigation. Generally, these apply to surrounding uses observed during the site inspection.

1. Responses to the Freedom of Information requests submitted to the New York State Department of Environmental Conservation and the New York City Fire Department have not been received to date. ASTM establishes that a diligent Phase I Environmental Site Assessment must consider all information obtained from a public agency within twenty days of receipt of a Freedom of Information request. Accordingly, information obtained from the above-mentioned agencies before the twenty day period has passed will be addressed in an addendum to this assessment.

10.1.2 Recommended Phase II ESA Activities

Additional activities may be required as a result of the Phase I investigation. These include the performance of sampling and analysis plans.

1. Two former (2) UIWs, which had been cemented shut, were identified in the truck repair space in building C. Based on the use of this building, the potential for petroleum release into these UIWs represents a recognized environmental condition. Although these UIWs have been reportedly cleaned and closed, no documentation regarding the proper closure of said wells has been provided (i.e., end- point samples). Consequently, it is recommended that a limited subsurface investigation be performed to determine if the former UIWs had received any discharges that may have affected the environmental quality of the subject property.

2. Tyree Brothers had previously observed evidence of an UST, by the presence of a fill port and vent line adjacent /south of building A. Subsequent work indicated the presence of an anomaly indicative of a UST. An affidavit was supplied by Alvin Petroleum detailing the abandonment of (2) 550 gallon USTs. However, no documentation was provided regarding the witnessing of the tank abandonment by appropriate government agency nor was any sampling protocol performed. Accordingly, it is recommended that a limited subsurface investigation be performed to determine if the former USTs actuated a release of product to the subsurface soils and / or groundwater of the subject property.

3. Previously observed pipes elevated slightly above grade and pipes cut at grade were noted throughout the eastern portion of the subject property have been removed. However, based on available information obtained during the performance of this Phase I (Sanborn Maps) it appears that these pipes were associated with the former bulk storage of petroleum products in ASTs and additional USTs. This former use of the site represents a recognized environmental condition. Accordingly, it is recommended that a limited subsurface investigation be performed to determine if the former operation of the ASTs / USTs actuated a release of product to the subsurface soils and / or groundwater of the subject property.

4. Several on-site catch basins were observed to be impacted by petroleum releases. (This item was previously identified and reportedly cleaned out A & L Cesspool, however, the situation is evident again and no endpoint sampling was provided from the clean-out). The outfall locations of these basins could not be confirmed under the scope of this assessment. These petroleum impacted basins represent a recognized environmental condition. Accordingly, it is recommended that a remote sensing survey be performed to determine the outfall locations of the basins. If the basins discharge to an on-site outfall, it is recommended that a limited subsurface investigation be performed to determine if this outfall has received any discharges that may have affected the environmental quality of the subject property.

5. A subsurface investigation performed in 1990 identified the presence of floating product on groundwater underlying the subject property. In addition, Tyree Brothers observed several areas throughout the subject property that exhibit substantial surficial petroleum staining. This investigation and on-site observations confirms the need for the above-referenced Phase II activities.

6. Several off-site confirmed or potential contamination sources were identified to exist within the ASTM search radius. The need for the above-recommended on-site investigative activities is further supported by the presence of these sources.

10.1.3 Recommended Phase III ESA Activities

Additional activities may be required as a result of the Phase I investigation. These include the performance of remediation activities. It should be noted that the scope of these activities may be modified based on a Phase II investigation.

1. Painted surfaces in buildings A, B, and D were identified to contain lead-based paint. Most of these paints were in very poor condition (severely peeling). It is recommended that the paint in these areas be properly abated.

2. All petroleum contaminated releases observed on the subject property should be properly remediated.

10.1.4 Recommended Compliance Activities

Compliance activities may be required based on the Phase I investigation. These include the performance of compliance activities that currently do not directly affect the environmental quality of the subject property.

1. Should the buildings be renovated or demolished in the future, full lead and asbestos surveys should be conducted prior to the initiation of any work. It is recommended that an Operations and Maintenance (O&M) Plan be implemented to manage any remaining suspect asbestos containing materials or lead containing paints on the subject property.

2. Documentation regarding the proper disposal of regulated wastes should be maintained on-site for periodic review.

3. Better housekeeping practices should be implemented to prevent any future releases of petroleum products to the surface of the subject property.

4. All unutilized and/or waste drums should be properly tested and disposed of in accordance with all applicable regulations.

10.2 Conclusions

Tyree Brothers Environmental Services, Inc. has performed a Phase I environmental site assessment of the property in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry (ASTM Standard Practice for Environmental Site Assessments, Designation: E 1527). The assessment included a thorough visual inspection of the property, the examination of publicly and privately available records concerning the current and prior uses of the subject property, and interviews with the current owners and/or operators of the subject property.

Based upon this assessment, dated September 5, 2001, Tyree Brothers Environmental Services, Inc. concludes that activities occurring on the subject property have potentially acted to degrade the environmental quality of the subject and/or surrounding properties. Accordingly, Phase II Environmental Site Assessment activities are required to define and/or enhance the environmental quality of the subject property.

The findings presented in this site assessment are based on data obtained under the scope of this investigation. The conclusions represent the professional judgment of qualified Tyree Brothers Environmental Services, Inc. staff members using available information.

Tyree Brothers Environmental Services, Inc.

Jonathan Hark, CEI

Fred Barilla, Environmental Scientist I

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

FEDERAL ASTM STANDARD

NPL	National Priority List
Proposed NPL	Proposed National Priority List Sites
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System
CERC-NFRAP	CERCLIS No Further Remedial Action Planned
ERNS	Emergency Response Notification System

STATE ASTM STANDARD

CBS UST	Chemical Bulk Storage Database

FEDERAL ASTM SUPPLEMENTAL

CONSENT	Superfund (CERCLA) Consent Decrees
ROD	Records Of Decision
Delisted NPL	National Priority List Deletions
HMIRS	Hazardous Materials Information Reporting System
MLTS	Material Licensing Tracking System
MINES	Mines Master Index File
NPL Liens	Federal Superfund Liens
PADS	PCB Activity Database System
RAATS	RCRA Administrative Action Tracking System
TRIS	Toxic Chemical Release Inventory System
TSCA	Toxic Substances Control Act
FTTS	FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

STATE OR LOCAL ASTM SUPPLEMENTAL

HSWDS	Hazardous Substance Waste Disposal Site Inventory
CBS AST	Chemical Bulk Storage Database
VCP	Voluntary Cleanup Agreements

EDR PROPRIETARY DATABASES

Coal Gas	Former Manufactured Gas (Coal Gas) Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/27/2001 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

STATE ASTM STANDARD

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, has revealed that there are 2 SHWS sites within approximately 1 mile of the target property.

QUANTA RESOURCES	37-80 REVIEW AVENUE	1/4 - 1/2 SSE	L54	114

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
NYCDOS MTS @ GREENPOINT	NORTH HENRY ST NEWTOW	1/4 - 1/2 SSW	60	120

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 04/01/2001 has revealed that there are 18 LTANKS sites within approximately 0.5 miles of the target property.

1.0 Purpose & Scope

This quarterly monitoring report was prepared to summarize the corrective action procedures performed at the property located 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The activities consist of the groundwater well gauging and quarterly sampling.

The protocols used for this report were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

2.0 Site Description

2.1 Topography

The areal extent of the Site is approximately 192,792 square feet. The Site contains four one-story masonry buildings with a combined footprint of 37,462 square feet. The surface area of the Site consists of asphalt pavement, exposed soils, and vegetative landscaping. The Site exhibits low topographic relief (less than three percent slopes).

2.2 Site Background

The Site lies within New York City zoning district M3-1. The interior space of the existing building was divided into office space and operational space by the AA Truck Renting. The office spaces were utilized for general administrative purposes. The operational space was utilized for truck repair and parts storage. The exterior space was utilized for truck parking.

2.3 Previous Investigation

On September 2, 2008, six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site by Impact Environmental. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2]

Measurable free phase product was detected at each monitoring well. It was noted that the thickness of the free phase product have been exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[3]. The laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds below applicable guidance criteria.

From March 31 to April 23, 2009, Impact Environmental conducted a spill investigation on the Site. The investigation consisted of sampling and analysis of subsurface soil and groundwater, the installation of large diameter groundwater monitoring wells, a groundwater elevation survey and a hydraulic conductivity investigation.

A total of 6 soil probes, identified as MW-SP-1 through MW-SP-6, were installed on the Site as part of this investigation. Subsurface soil samples were secured from grade to 20 feet below existing grade (BEG) or until significant clay layer was encountered. Six 4-inch diameter groundwater monitoring wells, identified as MW-1 through MW-6, were installed on the Site as part of this investigation. The locations of the installed groundwater monitoring wells were consistent with the approved Investigation Work Plan. The wells were gauged and sampled two weeks after the installation. No measurable free-phase product was observed in any of the wells. A second gauging event confirmed the absence of measurable free-phase product in all the wells. A third gauging event incorporated all the existing wells on the Site. Approximately 0.01 ft of free-phase product was observed in MW-7H, which is an old well probably associated with previous spill investigation. No measurable free-phase product was observed in any other wells.

The laboratory analysis performed on the interface soil sample MW-SP-6 (7') detected concentration of one target volatile organic analyte (n-butyl benzene). However, the detected concentration was below the applicable guidance criteria.[4]

---

[2] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

[3] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

[4] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

The laboratory analysis performed on the interface soil sample MW-SP-2 (5') detected concentration of one target semi-volatile organic analyte (chrysene) above the applicable guidance criteria.[5]

The laboratory analysis performed on the saturated samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-6 (12') detected concentrations of several target volatile organic analytes. The detected concentrations of isopropylbenzene and n-propylbenzene of MW-SP-4 (10') were above the applicable guidance criteria.[6]

The laboratory analysis performed on the saturated soil samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-5 (12') detected concentrations of several target semi-volatile organic analytes. The detected concentrations of chrysene, benzo-a-anthracene and benzo-a-pyrene were above the applicable guidance criteria.[7]

The laboratory analysis performed on the groundwater samples MW-2, MW-3 and MW-4 detected concentrations of several target volatile organic analytes. Several detected concentrations, mainly gasoline related compounds, were above the applicable guidance criteria.[8]

The laboratory analysis performed on all the groundwater samples failed to detect any concentration of target semi-volatile organic analytes.

The fingerprint analysis was performed on the groundwater samples MW-1 through MW-6. The chromatograms of the groundwater samples MW-1 through MW-6 were most consistent with a combination of gasoline and #6 fuel oil. This observation is consistent with the previous land use of the Site as an oil terminal, with bulk storage of gasoline and heavy fuel oil (#5 or #6 fuel oil).

The previous sampling locations can be referenced with **Plate 2**.

3.0 Groundwater Monitoring Plan

A Quarterly Monitoring Program was developed to execute the sampling and analysis requirements of the NYSDEC. All sampling locations can be referenced with **Plate 3**.

On March 4, 2010, Groundwater samples were collected from MW-1 through MW-6.

3.1 Monitoring Well Installation

The Quarterly Monitoring Program consists of the gauging and sampling of seven groundwater monitoring wells, identified as MW-1 through MW-6 (installed by Impact) and MW-7H (old well installed by Tyree). Six 4-inch diameter monitoring wells (MW-1 through MW-6) were installed to a depth of approximately 15 to 20 feet BEG on the Site (with the exception of MW-2). The wells were installed using a hollow stem auger drilling technique with Geoprobe® 6600 unit. Each well was constructed of fifteen feet of screened interval (0.020 slot size, schedule 40, PVC), 5 ft above the groundwater interface and 10 ft below soil-groundwater interface. The annular space between the boring and the screened casing was filled with a filtration media which extended 2 ft above the top of the screen. The annular space 1 ft above the filtration media was sealed with bentonite. The remainder of the bore hole was filled with grout. The monitoring well was finished with a locking monitoring well cover. The construction details of MW-7H are unknown.

On March 4, 2010, Impact Environmental gauged all the seven 4-inch wells (MW-1 through MW-6 and MW-7H) with oil-water interface meter and disposable bailers. Approximately 0.01 ft of free phase product was observed in MW-7H. No measurable free phase product was observed in any other wells. Note that MW-7H is a pre-existing well, probably associated with previous spill investigation on the Site. MW-7H was not developed prior to gauging.

The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 1**. The monitoring wells (MW-1 through MW-6) were developed and sampled as part of this investigation. One groundwater sample was secured from each of these monitoring wells for laboratory analysis.

3.2 Quarterly Monitoring Well Sampling and Analysis

5.2.1 Monitoring Well Sampling Procedure

Field measurements were secured from each monitoring well during the development process to provide data regarding physical groundwater characteristics. The development water was field analyzed for dissolved oxygen (DO), pH, specific conductivity and temperature. Results of the field measurements were utilized to establish steady state conditions within the groundwater aquifer. Following development, one water sample was acquired from each of the monitoring wells utilizing a dedicated disposable bailer to prevent cross-contamination.

Each well was developed by pumping out a minimum of three (3) static well volumes utilizing a peristaltic pump. A static well volume is defined as:

Static well volume = height of water column x (well radius)^2 x pi x 7.48
where 7.48 is the conversion factor for cubic feet to gallons.

Following development, one groundwater sample was acquired from each of the monitoring wells on the Site. All of the samples were preserved in the appropriate vessels, preserved at 4°C in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

3.3 Groundwater Elevation Survey

A groundwater elevation survey was performed on the Site to determine groundwater flow direction. The elevation of groundwater was gauged at each monitoring well and recorded. The elevations were used to graphically define the planimetric surface of the water table. The elevations of the top of the casings were represented with respect to each other and based on a benchmark elevation or approximate elevation above mean sea level. The groundwater elevations were based as a function of the depth to water and these elevations.

Groundwater survey was performed on March 4, 2010. The groundwater elevation survey results are represented in **Table 1** and **Plate 2**. Based on the survey results, the groundwater flow direction at the Site is to the northeast.

3.4 Laboratory Sample Location and Frequency

The groundwater samples secured from monitoring wells on the Site were labeled for identification purposes as MW-1 through MW-6, respectively.

4.0 Laboratory Analysis

4.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; and the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the groundwater sample MW-1 through MW-6 consisted of USEPA Test Method 8260 for target volatile organic analytes; and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

4.2 Laboratory Analytical Results

A summary of the laboratory analysis and of past analytical results is presented in **Table 2**. Additionally, the table provides a comparison of the detected concentrations versus the relevant ambient water quality standards that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Services, Inc. is presented in **Appendix B** of this document.

5.0 Evaluation of Results

The laboratory analysis performed on the groundwater samples MW-2, MW-3, MW-5 and MW-6 failed to detect any target VOCs or SVOCs. The laboratory analysis performed on the groundwater sample MW-1 and MW-4 detected concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. The detected total VOC concentration was less than 0.2 ppm.

Approximately 0.01 ft free-phase product was observed in the MW-7H (old well installed by Tyree). No free-phase product was observed in any of the newly installed wells (MW-1 through MW-6). Due to the limited amount of free-phase product observed, it is recommended that product in MW-7H be bailed out manually. The necessity of enhance fluid recovery (EFR) will be evaluated next quarter.

Quarterly sampling will be continued in the second quarter of 2010.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the Site with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary “screening” level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the Site.

MW-6	9.26	NA	6.15	0	3.11
MW-7H	NA	4.87	4.88	0.01	NA

Note:
1. An arbitrary case elevation of 6.00 above mean sea level was assigned for MW-1. Said number was obtained from the USGS Topographic Map.
2. MW-1 through MW-6 are 4-inch wells installed by Impact Environmental.
3. MW-7H is 4-inch well installed by Tyree.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with

Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets

and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

1.0 Purpose & Scope

This quarterly monitoring report was prepared to summarize the corrective action procedures performed at the property located 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The activities consist of the groundwater well gauging and quarterly sampling.

The protocols used for this report were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

2.0 Site Description

2.1 Topography

The areal extent of the Site is approximately 192,792 square feet. The Site contains four one-story masonry buildings with a combined footprint of 37,462 square feet. The surface area of the Site consists of asphalt pavement, exposed soils, and vegetative landscaping. The Site exhibits low topographic relief (less than three percent slopes).

2.2 Site Background

The Site lies within New York City zoning district M3-1. The interior space of the existing building was divided into office space and operational space by the AA Truck Renting. The office spaces were utilized for general administrative purposes. The operational space was utilized for truck repair and parts storage. The exterior space was utilized for truck parking.

2.3 Previous Investigation

On September 2, 2008, six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site by Impact Environmental. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2]

Measurable free phase product was detected at each monitoring well. It was noted that the thickness of the free phase product have been exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[3]. The laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds below applicable guidance criteria.

From March 31 to April 23, 2009, Impact Environmental conducted a spill investigation on the Site. The investigation consisted of sampling and analysis of subsurface soil and groundwater, the installation of large diameter groundwater monitoring wells, a groundwater elevation survey and a hydraulic conductivity investigation.

A total of 6 soil probes, identified as MW-SP-1 through MW-SP-6, were installed on the Site as part of this investigation. Subsurface soil samples were secured from grade to 20 feet below existing grade (BEG) or until significant clay layer was encountered. Six 4-inch diameter groundwater monitoring wells, identified as MW-1 through MW-6, were installed on the Site as part of this investigation. The locations of the installed groundwater monitoring wells were consistent with the approved Investigation Work Plan. The wells were gauged and sampled two weeks after the installation. No measurable free-phase product was observed in any of the wells. A second gauging event confirmed the absence of measurable free-phase product in all the wells. A third gauging event incorporated all the existing wells on the Site. Approximately 0.01 ft of free-phase product was observed in MW-7H, which is an old well probably associated with previous spill investigation. No measurable free-phase product was observed in any other wells.

The laboratory analysis performed on the interface soil sample MW-SP-6 (7') detected concentration of one target volatile organic analyte (n-butyl benzene). However, the detected concentration was below the applicable guidance criteria.[4]

---

[2] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

[3] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

[4] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

The laboratory analysis performed on the interface soil sample MW-SP-2 (5') detected concentration of one target semi-volatile organic analyte (chrysene) above the applicable guidance criteria.[5]

The laboratory analysis performed on the saturated samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-6 (12') detected concentrations of several target volatile organic analytes. The detected concentrations of isopropylbenzene and n-propylbenzene of MW-SP-4 (10') were above the applicable guidance criteria.[6]

The laboratory analysis performed on the saturated soil samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-5 (12') detected concentrations of several target semi-volatile organic analytes. The detected concentrations of chrysene, benzo-a-anthracene and benzo-a-pyrene were above the applicable guidance criteria.[7]

The laboratory analysis performed on the groundwater samples MW-2, MW-3 and MW-4 detected concentrations of several target volatile organic analytes. Several detected concentrations, mainly gasoline related compounds, were above the applicable guidance criteria.[8]

The laboratory analysis performed on all the groundwater samples failed to detect any concentration of target semi-volatile organic analytes.

The fingerprint analysis was performed on the groundwater samples MW-1 through MW-6. The chromatograms of the groundwater samples MW-1 through MW-6 were most consistent with a combination of gasoline and #6 fuel oil. This observation is consistent with the previous land use of the Site as an oil terminal, with bulk storage of gasoline and heavy fuel oil (#5 or #6 fuel oil).

The previous sampling locations can be referenced with **Plate 2**.

3.0 Groundwater Monitoring Plan

A Quarterly Monitoring Program was developed to execute the sampling and analysis requirements of the NYSDEC. All sampling locations can be referenced with **Plate 3**.

3.1 Monitoring Well Sampling

The Quarterly Monitoring Program consists of the gauging and sampling of seven groundwater monitoring wells, identified as MW-1 through MW-6 (installed by Impact) and MW-7H (old well installed by Tyree). Six 4-inch diameter monitoring wells (MW-1 through MW-6) were installed to a depth of approximately 15 to 20 feet BEG on the Site (with the exception of MW-2). The wells were installed using a hollow stem auger drilling technique with Geoprobe® 6600 unit. Each well was constructed of fifteen feet of screened interval (0.020 slot size, schedule 40, PVC), 5 ft above the groundwater interface and 10 ft below soil-groundwater interface. The annular space between the boring and the screened casing was filled with a filtration media which extended 2 ft above the top of the screen. The annular space 1 ft above the filtration media was sealed with bentonite. The remainder of the bore hole was filled with grout. The monitoring well was finished with a locking monitoring well cover. The construction details of MW-7H are unknown.

On May 27, 2010, Impact Environmental gauged all the seven 4-inch wells (MW-1 through MW-6 and MW-7H) with oil-water interface meter and disposable bailers. Approximately 0.01 ft of free phase product was observed in MW-7H. No measurable free phase product was observed in any other wells. Note that MW-7H is a pre-existing well, probably associated with previous spill investigation on the Site. MW-7H was not developed prior to gauging.

A sump skimmer was installed in MW-7H to recover the free-phase product. The sump skimmer will be replaced on monthly basis.

The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 1**. The monitoring wells (MW-1 through MW-6) were developed and sampled as part of this investigation. One groundwater sample was secured from each of these monitoring wells for laboratory analysis.

3.2 Quarterly Monitoring Well Sampling and Analysis

5.2.1 Monitoring Well Sampling Procedure

Field measurements were secured from each monitoring well during the development process to provide data regarding physical groundwater characteristics. The development water was field analyzed for dissolved oxygen (DO), pH, specific conductivity and temperature. Results of the field measurements were utilized to establish steady state conditions within the groundwater aquifer. Following development, one water sample was acquired from each of the monitoring wells utilizing a dedicated disposable bailer to prevent cross-contamination.

Each well was developed by pumping out a minimum of three (3) static well volumes utilizing a peristaltic pump. A static well volume is defined as:

Static well volume = height of water column x (well radius)^2 x pi x 7.48
where 7.48 is the conversion factor for cubic feet to gallons.

Following development, one groundwater sample was acquired from each of the monitoring wells on the Site. All of the samples were preserved in the appropriate vessels, preserved at 4°C in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

3.3 Groundwater Elevation Survey

A groundwater elevation survey was performed on the Site to determine groundwater flow direction. The elevation of groundwater was gauged at each monitoring well and recorded. The elevations were used to graphically define the planimetric surface of the water table. The elevations of the top of the casings were represented with respect to each other and based on a benchmark elevation or approximate elevation above mean sea level. The groundwater elevations were based as a function of the depth to water and these elevations.

Groundwater survey was performed on May 27, 2010. The groundwater elevation survey results are represented in **Table 1** and **Plate 2**. Based on the survey results, the groundwater flow direction at the Site is to the northwest.

3.4 Laboratory Sample Location and Frequency

The groundwater samples secured from monitoring wells on the Site were labeled for identification purposes as MW-1 through MW-6, respectively.

4.0 Laboratory Analysis

4.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; and the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the groundwater sample MW-1 through MW-6 consisted of USEPA Test Method 8260 for target volatile organic analytes; and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

4.2 Laboratory Analytical Results

A summary of the laboratory analysis and of past analytical results is presented in **Table 2**. Additionally, the table provides a comparison of the detected concentrations versus the relevant ambient water quality standards that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Services, Inc. is presented in **Appendix B** of this document.

5.0 Evaluation of Results

The laboratory analysis performed on the groundwater samples MW-1, MW-2, MW-3, MW-4 and MW-6 failed to detect any target VOCs or SVOCs. The laboratory analysis performed on the groundwater sample MW-5 detected concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. The detected total VOC concentration was less than 0.3 ppm.

Approximately 0.01 ft free-phase product was observed in the MW-7H (old well installed by Tyree). No free-phase product was observed in any of the newly installed wells (MW-1 through MW-6). A sump skimmer was installed in MW-7H for the free-phase product recovery. The sump skimmer will be replaced on monthly basis.

Quarterly sampling will be continued in the third quarter of 2010.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the Site with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary “screening” level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the Site.

Note:
1. An arbitrary case elevation of 6.00 above mean sea level was assigned for MW-1. Said number was obtained from the USGS Topographic Map.
2. MW-1 through MW-6 are 4-inch wells installed by Impact Environmental.
3. MW-7H is 4-inch well installed by Tyree.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with

Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets

and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

1.0 Purpose & Scope

This quarterly monitoring report was prepared to summarize the corrective action procedures performed at the property located 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The activities consist of the groundwater well gauging and quarterly sampling.

The protocols used for this report were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

2.0 Site Description

2.1 Topography

The areal extent of the Site is approximately 192,792 square feet. The Site contains four one-story masonry buildings with a combined footprint of 37,462 square feet. The surface area of the Site consists of asphalt pavement, exposed soils, and vegetative landscaping. The Site exhibits low topographic relief (less than three percent slopes).

2.2 Site Background

The Site lies within New York City zoning district M3-1. The interior space of the existing building was divided into office space and operational space by the AA Truck Renting. The office spaces were utilized for general administrative purposes. The operational space was utilized for truck repair and parts storage. The exterior space was utilized for truck parking.

2.3 Previous Investigation

On September 2, 2008, six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site by Impact Environmental. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2]

Measurable free phase product was detected at each monitoring well. It was noted that the thickness of the free phase product have been exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[3]. The laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds below applicable guidance criteria.

From March 31 to April 23, 2009, Impact Environmental conducted a spill investigation on the Site. The investigation consisted of sampling and analysis of subsurface soil and groundwater, the installation of large diameter groundwater monitoring wells, a groundwater elevation survey and a hydraulic conductivity investigation.

A total of 6 soil probes, identified as MW-SP-1 through MW-SP-6, were installed on the Site as part of this investigation. Subsurface soil samples were secured from grade to 20 feet below existing grade (BEG) or until significant clay layer was encountered. Six 4-inch diameter groundwater monitoring wells, identified as MW-1 through MW-6, were installed on the Site as part of this investigation. The locations of the installed groundwater monitoring wells were consistent with the approved Investigation Work Plan. The wells were gauged and sampled two weeks after the installation. No measurable free-phase product was observed in any of the wells. A second gauging event confirmed the absence of measurable free-phase product in all the wells. A third gauging event incorporated all the existing wells on the Site. Approximately 0.01 ft of free-phase product was observed in MW-7H, which is an old well probably associated with previous spill investigation. No measurable free-phase product was observed in any other wells.

The laboratory analysis performed on the interface soil sample MW-SP-6 (7') detected concentration of one target volatile organic analyte (n-butyl benzene). However, the detected concentration was below the applicable guidance criteria.[4]

---

[2] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

[3] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

[4] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives

The laboratory analysis performed on the interface soil sample MW-SP-2 (5') detected concentration of one target semi-volatile organic analyte (chrysene) above the applicable guidance criteria.[5]

The laboratory analysis performed on the saturated samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-6 (12') detected concentrations of several target volatile organic analytes. The detected concentrations of isopropylbenzene and n-propylbenzene of MW-SP-4 (10') were above the applicable guidance criteria.[6]

The laboratory analysis performed on the saturated soil samples MW-SP-3 (5'), MW-SP-4 (10') and MW-SP-5 (12') detected concentrations of several target semi-volatile organic analytes. The detected concentrations of chrysene, benzo-a-anthracene and benzo-a-pyrene were above the applicable guidance criteria.[7]

The laboratory analysis performed on the groundwater samples MW-2, MW-3 and MW-4 detected concentrations of several target volatile organic analytes. Several detected concentrations, mainly gasoline related compounds, were above the applicable guidance criteria.[8]

The laboratory analysis performed on all the groundwater samples failed to detect any concentration of target semi-volatile organic analytes.

The fingerprint analysis was performed on the groundwater samples MW-1 through MW-6. The chromatograms of the groundwater samples MW-1 through MW-6 were most consistent with a combination of gasoline and #6 fuel oil. This observation is consistent with the previous land use of the Site as an oil terminal, with bulk storage of gasoline and heavy fuel oil (#5 or #6 fuel oil).

The previous sampling locations can be referenced with **Plate 2**.

3.0 Groundwater Monitoring Plan

A Quarterly Monitoring Program was developed to execute the sampling and analysis requirements of the NYSDEC. All sampling locations can be referenced with **Plate 3**.

3.1 Monitoring Well Sampling

The Quarterly Monitoring Program consists of the gauging and sampling of seven groundwater monitoring wells, identified as MW-1 through MW-6 (installed by Impact) and MW-7H (old well installed by Tyree). Six 4-inch diameter monitoring wells (MW-1 through MW-6) were installed to a depth of approximately 15 to 20 feet BEG on the Site (with the exception of MW-2). The wells were installed using a hollow stem auger drilling technique with Geoprobe® 6600 unit. Each well was constructed of fifteen feet of screened interval (0.020 slot size, schedule 40, PVC), 5 ft above the groundwater interface and 10 ft below soil-groundwater interface. The annular space between the boring and the screened casing was filled with a filtration media which extended 2 ft above the top of the screen. The annular space 1 ft above the filtration media was sealed with bentonite. The remainder of the bore hole was filled with grout. The monitoring well was finished with a locking monitoring well cover. The construction details of MW-7H are unknown.

On August 20, 2010, Impact Environmental gauged all the seven 4-inch wells (MW-1 through MW-6 and MW-7H) with oil-water interface meter and disposable bailers. No measurable free phase product was observed in any of the wells.

Note that MW-7H is a pre-existing well. A sump skimmer was installed in MW-7H to recover the free-phase product. The sump skimmer will be replaced on monthly basis. Due to the absence of free-phase product, MW-7H was properly developed and sampled.

The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 1**. The monitoring wells were developed and sampled as part of this investigation. One groundwater sample was secured from each of these monitoring wells for laboratory analysis.

3.2 Quarterly Monitoring Well Sampling and Analysis

5.2.1 Monitoring Well Sampling Procedure

Field measurements were secured from each monitoring well during the development process to provide data regarding physical groundwater characteristics. The development water was field analyzed for dissolved oxygen (DO), pH, specific conductivity and temperature. Results of the field measurements were utilized to establish steady state conditions within the groundwater aquifer. Following development, one water sample was acquired from each of the monitoring wells utilizing a dedicated disposable bailer to prevent cross-contamination.

Each well was developed by pumping out a minimum of three (3) static well volumes utilizing a peristaltic pump. A static well volume is defined as:

Static well volume = height of water column x (well radius)^2 x pi x 7.48
where 7.48 is the conversion factor for cubic feet to gallons.

Following development, one groundwater sample was acquired from each of the monitoring wells on the Site. All of the samples were preserved in the appropriate vessels, preserved at 4°C in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

3.3 Groundwater Elevation Survey

A groundwater elevation survey was performed on the Site to determine groundwater flow direction. The elevation of groundwater was gauged at each monitoring well and recorded. The elevations were used to graphically define the planimetric surface of the water table. The elevations of the top of the casings were represented with respect to each other and based on a benchmark elevation or approximate elevation above mean sea level. The groundwater elevations were based as a function of the depth to water and these elevations.

Groundwater survey was performed on August 20, 2010. The groundwater elevation survey results are represented in **Table 1** and **Plate 2**. Based on the survey results, the groundwater flow direction at the Site is to the northwest.

3.4 Laboratory Sample Location and Frequency

The groundwater samples secured from monitoring wells on the Site were labeled for identification purposes as MW-1 through MW-7H, respectively.

4.0 Laboratory Analysis

4.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the groundwater sample MW-1 through MW-6 and MW-7H consisted of USEPA Test Method 8260 for target volatile organic analytes; and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

4.2 Laboratory Analytical Results

A summary of the laboratory analysis and of past analytical results is presented in **Table 2**. Additionally, the table provides a comparison of the detected concentrations versus the relevant ambient water quality standards that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Services, Inc. is presented in **Appendix B** of this document.

5.0 Evaluation of Results

The laboratory analysis performed on the groundwater samples MW-1 and MW-5 failed to detect any target VOCs or SVOCs. The laboratory analysis performed on the groundwater sample MW-2, MW-3, MW-4, MW-6 and MW-7H detected concentrations of gasoline related target volatile organic analytes marginally above the NYSDEC ambient water quality standards. The detected total VOC concentration was less than 0.1 ppm.

A sump skimmer was installed in MW-7H for the free-phase product recovery. No free-phase product was observed in any of the wells (MW-1 through MW-6, and MW-7H). The sump skimmer will be replaced on a monthly basis.

Quarterly sampling will be continued in the fourth quarter of 2010.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the Site with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary “screening” level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the Site.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

1 Purpose & Scope

This Subsurface Investigation was conducted to define what, if any, organic contaminants have impacted the environmental quality of the property located at 2890 Review Avenue, Long Island City, New York, herein identified as the Site. The Site is currently operated by AA Truck Renting Corp. for office purposes, truck repair, fueling and parking.

The investigative protocols proposed for this assessment were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) the New York State Department of Environmental Conservation, Division of Environmental Remediation, Draft DER-10 Technical Guidance For Site Investigation and Remediation, dated December 25, 2002.

2 Sampling and Analysis Plan

A sampling and analysis plan was developed for the Site and included the installation of six soil probes and six groundwater monitoring wells. The sampling locations can be referenced with **Plate 2:** Sample Acquisition Plan.

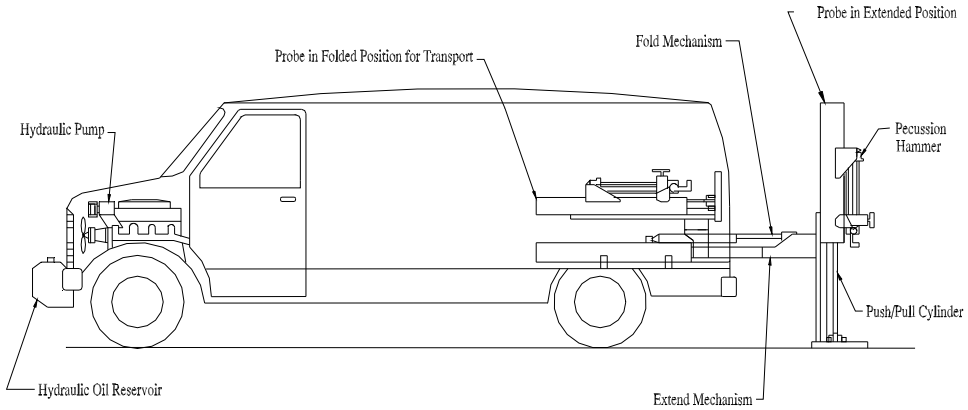
2.1 Subsurface Soil Sampling

On September 2, 2008 Impact Environmental installed six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 on the Site as part of this investigation. Soil probes SP-1 through SP-6 were installed across the Site. Subsurface soil samples were secured from said probes at depth intervals ranging from grade to approximately 16 feet below existing grade (BEG).

2.1.1 Subsurface Probe Installation

Subsurface probes were sited using a Geoprobe hydraulically powered probing tool (see Figure 1: Geoprobe Operating System). Mechanized, vehicle mounted probe systems apply both static force and hydraulically powered percussion hammers for tool placement (static down forces up to 18,000 pounds combined with percussion hammers of eight horsepower continuous output). Recovery of large sample volumes was facilitated with a probe-driven sampler. The probe-driven sampler consisted of a hollow probe that opened via a remote control mechanism at the selected sampling depth in the soil profile to allow soil to enter as it was advanced. Discrete media samples were secured at the desired depths and were contained within a non-reactive transparent plastic sleeve that lined the hollow probe. The plastic sleeves were removed for subsequent inspection and sample aliquot acquisition.

Figure 1: Geoprobe Operating System

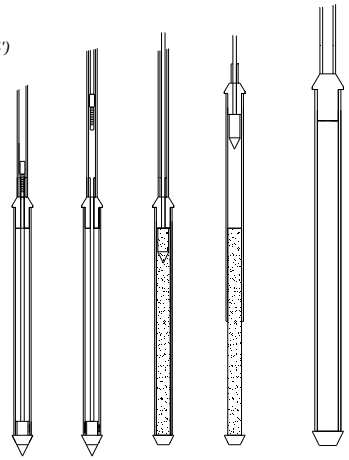


Basics

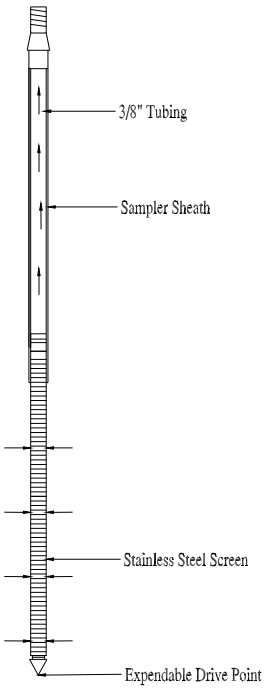
- Hydraulic powered probe unit isoperated from a engine driven pump.
- Remote vehicle ignition allows operator to start engine from probe unit.
- Belt driven hydraulic pump supplies 10 gpm @ 2000 rpm, 3000 psi operating pressure
- Probe unit folds for transport
- Unit utilizes static weight of vehicle and pecussion hammer to advance probing tools.
- Hydraulic hammer delivers pecussion rate of 30 Hz.
- Probes have greater than 18,000 lbs of down force and 25,000 lbs of retraction force.
- Drives multiple diameter probes (1", 1.25" and 2.25") to depths over 100 feet.

Soil Probing Tool
The tools are advanced and a sample is acquired in a non-reactive plastic sheathing. The system offers two sizes of sample retrieval:

Large bore - 1.5" x 2'
Macro - 2.25" x (2', 3' & 4')



Groundwater SP-15 Sampler
The tool allows a stainless steel, 4' screen to be delivered to the underlying groundwater. At the desired depth, the screen is retracted and samples are obtained via a check valve assembly.



2.2 Field Headspace Analysis

Headspace analysis was performed on each unsaturated subsurface soil sample acquired from probes SP-1 through SP-6 to provide precursory data regarding contamination. The headspace analysis from SP-1 through SP-6 detected concentrations of hydrocarbons above ambient levels. Results of the analysis were used to adjust the sample and analysis program to yield the most accurate and representative results. The results of the field analysis are presented in **Table 1**: Field Headspace Analysis Results.

Table 1: Field Headspace Analysis Results

Sample ID	**SP-1**	**SP-2**	**SP-3**	**SP-4**	**SP-5**	**SP-6**
Unit	*ppm*	*ppm*	*ppm*	*ppm*	*ppm*	*ppm*
Depth BEG						
0'-2'	NA	NA	NA	NA	NA	NA
2'-4'	1.6	1.6	0.2	0.3	1.3	231.0
4'-6'	551.0	1.7	0.3	3.2	1.5	209.0
6'-8'	592.0	6.1	4.3	3.9	4.2	130.0
8'-10'	1,292.0	5.1	225.0	56.0	74.0	80.0

2.2.1 Headspace Analysis Procedure

Headspace analysis was performed on each of the acquired samples utilizing a portable photo ionization detection meter to measure what, if any, hydrocarbon concentrations were present in isolated portions of the secured samples. Headspace analysis was conducted by partially filling a wide-mouth glass container with sample aliquot and sealing the top with aluminum foil, thereby creating a void. This void is referred to as the sample headspace.

To facilitate the detection of any hydrocarbons contained within the head space, the container was agitated for a period of thirty (30) seconds. The probe of the vapor analyzer was then injected through the foil into the headspace to measure the hydrocarbon concentrations present. A Photovac Micro-Tip, photo ionization detection meter (PID) was the organic vapor analyzer selected for the head space analysis. A PID utilizes the principle of photo ionization for detection and measurement of hydrocarbon compounds. A PID does not respond to all compounds similarly; rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to isobutylene. Hydrocarbon relative response factors for a PID calibrated to isobutylene are published by the manufacturer.

2.3 Sample Characterization

A visual inspection of all samples recovered during the installation of each of the soil probes was conducted to identify any gross signs of chemical contamination and to classify the sample media. In general, the samples obtained from soil probes SP-1 through SP-6 were found to consist of urban fill materials mixed with brown medium sand and silt. Olfactory evidence of petroleum contamination was observed in the soil samples obtained from the Site.

2.4 Groundwater Well Installation

On September 3, 2008 Impact Environmental installed six groundwater monitoring wells, identified as GW-1 through GW-6, on the Site as part of this investigation. The wells were installed at the location of the corresponding soil borings on the Site. Groundwater was encountered at approximately 5-8 feet BEG.

2.4.1 Monitoring Well Installation Procedures

The monitoring wells installed on the Site were constructed of 1" diameter slotted (0.020 inch) schedule 40 PVC screen and riser. The outside of the well from its base to a point 1' above the highest screen section was packed with clean filtration media (Morie sand). A 2' bentonite seal was packed around the casing above the filtration media. Drill cutting media were placed above the bentonite seal to a point six inches below existing grade. Concrete was used to fill the remaining six inches of open well casing.

2.4.2 Monitoring Well Gauging

The monitoring wells were gauged for the presence and thickness of free phase product and depth to water with an oil-water interface meter. Measurable free phase product was detected at each monitoring well. The results of the field measurements gauging and surveying the monitoring wells are presented in **Table 2**: Field Measurements.

Table 2: Field Measurements

Monitoring Well	Date	Depth to Product	Depth to Water	Product Thickness
		ft BEG	ft BEG	ft
GW-1	9/4/2008	6.33	7.73	1.40
GW-2	9/4/2008	7.11	7.91	0.80
GW-3	9/4/2008	6.89	8.29	1.40
GW-4	9/4/2008	5.65	6.45	0.80
GW-5	9/4/2008	6.01	7.11	1.10
GW-6	9/4/2008	7.00	7.90	0.90

3 Laboratory Analysis

One soil sample from each soil probe was selected for ELAP-certified laboratory analysis. In addition, one groundwater sample that was collected from beneath the free phase product at each monitoring well was submitted for laboratory analysis.

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives and the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 consisted of United States Environmental Protection Agency (USEPA) Test Method 8260 for target volatile organic analytes and USEPA Test Method 8270 for target base-neutral semi-volatile organic analytes.

The laboratory analysis performed on the sample secured from groundwater probe GW-1 through GWP-6 consisted of USEPA Test Method 8260 for target volatile organic analytes.

3.1 Analytical Results

Table 3: Laboratory Analysis Results [Soil] and **Table 4:** Laboratory Analysis Results [Groundwater] present a summary of the detected concentrations versus the relevant guidance values that apply in New York State. The original laboratory analysis report as prepared by JMS Environmental Laboratories, Inc. is presented in **Appendix B** of this document.

4 Evaluation of Results

Six soil probes, identified as SP-1, SP-2, SP-3, SP-4, SP-5, and SP-6 were installed on the Site. The headspace analysis of the samples secured from the soil samples collected from these probes detected concentrations of hydrocarbons above ambient levels. Sample characterization identified evidence of petroleum constituents in samples from the Site near and/or beneath the soil-groundwater interface.

The laboratory analysis of the samples selected from soil probes SP-2, SP-3, SP-5 and SP-6 failed to detect any concentrations of target volatile organic analytes above minimum detection limits. The laboratory analysis of the samples selected from soil probes SP-1 and SP-4 detected concentrations of target volatile organic analytes; however, the concentrations were significantly below the applicable guidance criteria.[1]

The laboratory analysis performed on the subsurface soil samples secured from probes SP-1, SP-2, SP-3, SP-4, SP-5 and SP-6 detected concentrations of semi-volatile organic analytes. The concentrations of semi-volatile organic analytes detected from the samples SP-2 and SP-5 were below the applicable guidance criteria.[2] While most of the semi-volatile organic analytes detected from SP-1, SP-3, SP-4, and SP-6 were below the applicable guidance criteria, no more than two of the concentrations of semi-volatile organic analytes detected in each sample were above the applicable guidance criteria.[3] These semi-volatile analytes consist of 2-Nitroaniline, 4-Chloroaniline, Benzo-a-Anthracene, Chrysene and Nitrobenzene.

The monitoring wells were gauged for the presence and thickness of free phase product and depth to water with an oil-water interface meter. Measurable free phase product was detected at each monitoring well with a range of thicknesses from 0.80 to 1.4 feet. It should be noted that the thickness of the free phase product may be exaggerated due to the small diameter of the wells.

Groundwater samples were collected from each monitoring well beneath the free phase product using a dedicated bailer. The laboratory analysis performed on the groundwater samples at groundwater monitoring wells GW-1, GW-4 and GW-6 detected concentrations of target volatile analytes marginally above applicable guidance criteria[4]. These volatile analytes are primarily composed of gasoline related compounds; including 1,2,4 Trimethylbenzene, Isopropylbenzene, n-Butylbenzene, n-Propylbenzene, 2-Chlorotoluene and sec-Butylbenzene.

---

[1] NYSDEC TAGM #4046, Recommended Soil Cleanup Objectives
[2] Ibid.
[3] Ibid.
[4] NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations

Based on the data obtained under the scope of this investigation, it appears that the soil at the Site is composed of typical urban fill material marginally contaminated with semi-volatile organic analytes. The soil at the Site exhibits olfactory evidence of petroleum contamination. However, the laboratory analysis of the soil samples indicated non-detectable and/or low level concentrations of volatile organic compounds, which were below applicable guidance criteria. The speciation of the analytes indicates that the petroleum related compounds detected are aged and degraded. No significant sources of petroleum contamination were identified in the unsaturated soils at the Site that would appear to be the result of the underlying free phase product detected on the groundwater. The uniform distribution of the free phase product on the Site suggests that its source may be derived from a regional issue; rather than a point source from the Site. Further, the groundwater quality beneath the layer of free phase product does not appear to be significantly impacted, which suggests that the free product is consistent with a fuel oil or diesel range product; rather than gasoline product. A potential source of this product may be from the adjacent Newtown Creek, having tidal characteristics and which was adversely impacted by the Greenpoint Oil Spill.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

Impact Environmental did not perform testing or analyses to determine the presence or concentration of asbestos at the Site or in the environment of the Site under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary “screening” level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the Site.

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

A. Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

B. Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

B.1 Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

B.2 Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

B.3 Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with

Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

C. Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

C.1 Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

C.2 Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

C. 3 Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the

appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

I, STUART LEVY, doing business as ALVIN PETROLEUM SYSTEMS, INC., do hereby certify that we located, in front of building, (2) buried 550 gallon tanks that were filled with water. We removed all water via licensed hauler. We then excavated over the (2) tanks, cut open same, cleaned out tank bottoms and put bottoms into DOT drum. We disposed of drum via licensed hauler. We then filled the (2) 550 gallon tanks with concrete. All work was completed following NY DEC regulations and no further actions required.

Attn: Mr. Richard W. Merzbacher
Executive Vice President

Dear Mr. Merzbacher:

As an outgrowth of our conversation and a request from Eric Roberts to furnish to you all of our reports, I am enclosing them herein and also providing the background of our relationship with Eric Roberts.

During May 1990, Tyree Brothers Environmental Services was retained by AA Truck Renting Corporation to perform a subsurface investigation at the referenced location in order to prepare an environmental analysis for mortgage purposes. The scope of the investigation included the drilling of four soil borings to groundwater and laboratory analysis of collected soil samples from each boring. The analysis indicated the presence of petroleum hydrocarbons and aromatic hydrocarbons at all of the boring locations.

Two monitoring wells were subsequently installed to investigate groundwater impact. While one well was clean, the other well was found to contain approximately three inches of floating petroleum product. Laboratory analysis of a sample of the floating product identified the product as being either a number 2 fuel oil or a diesel fuel. The well containing the floating product is in the vicinity of a former terminal loading rack, three operating underground diesel tanks, and a diesel fuel dispenser.

On Saturday, June 2, 1990 the three underground storage tank systems were petro-tite tested. All three tanks were determined to be tight, initially one of the pumps was leaking. The leak was repaired prior to the testing.

Four additional monitoring wells were installed during June 1990. The monitoring wells are checked weekly for the

presence of floating petroleum product. Two of the six wells were found to contain a measurable amount of floating product. Since that time one well shows thickness of floating product in the three to six inch range. The second well initially showed less than one inch of product, it now shows zero to a trace.

The presence of floating product is limited solely to the small immediate area of the existing underground storage tanks. The probable causes of the identified release are as follows:

1. Past spillage resulting from the transfer of product at the former terminal loading rack area.

2. Spillage occurring from normal operation of the existing underground storage tank systems or

3. Release from the noted suction pump leak at the dispenser pump which was repaired during the June 2, 1990 test.

On June 6, 1990 the New York State Department of Environmental Conservation was notified and has been kept informed. They are satisfied with our remediation program of monitoring and bailing.

Given the nature of the groundwater conditions in this area, and the fact that the aquifer is not used for public water supply, I do not anticipate any additional work being required by the regulatory agencies. Our firm has had several similar situations in the New York City area and simple periodic monitoring and bailing is all that has been required.

The approximate cost to complete the above remediation program is in the range of $50,000 to $75,000.

Sincerely,

William M. Tyree Jr.

Long Island City, New York

Re: AA Truck Renting Corp
28-90 Review Avenue
Long Island City, New York

Dear Mr. Roberts:

Enclosed please find our Subsurface Investigation Report for the above-referenced property. The assessment was conducted pursuant to your request to Tyree Bros. Environmental Services.

The presence of diesel fuel was observed floating on the groundwater in the immediate area of the existing underground storage tanks. This is indicative of a release from the storage tank system. Pursuant to Article 12 of the NYS Navigation Law, all petroleum spills are to be reported to the NYS Department of Environmental Conservation.

If you have any questions regarding the contents of the report, please contact me.

Sincerely,

Michael F. Gremillion

Michael F. Gremillion

Background

Per the request of Mr. Eric Roberts of AA Truck Renting Corp., Tyree Brothers Environmental Services (TBES) performed a subsurface investigation at the subject location. The assessment was conducted to investigate subsurface impacts associated with previously existing aboveground, and presently existing underground petroleum storage tanks located at the site.

The five (5) acre parcel was previously the site of a Texaco building and terminal. It was owned by Texaco from 1918 to 1972, but only operated as a terminal until 1967. All above-ground petroleum storage tanks were removed in 1972 subsequent to the transfer of the property to AA Truck Renting Corp.

Three (3) 4,000 gallon steel underground petroleum storage tanks are located on the site in the area of the former terminal loading rack. The tanks are currently utilized for the storage of diesel fuel. According to the owner, these tanks were previously used for the storage of gasoline. Approximately five (5) years ago, the storage of gasoline was discontinued.

TBES installed four (4) soil borings at potential contamination source areas on the site: three borings were drilled in the area of the old terminal's aboveground storage tanks; the other boring was drilled in the vicinity of the existing underground storage tanks. Soil borings were drilled to the depth of the water table and split spoon samples were then taken. The split spoon samples represent soil from a depth just below the water table. Sediment samples obtained during drilling were brought to a New York State certified laboratory and analyzed for the presence of volatile organics and petroleum products.

Field Investigation and Findings

On May 2, 1990, Tyree Brothers Environmental Services, Inc. drilled four (4) soil borings at the subject site (see Site Map for boring locations). Borings 1, 2, and 3 were drilled to the water table which ranged from five (5) to seven (7) feet and split spoon samples were then taken. Boring 4 was terminated at a depth of four (4) feet after several unsuccessful attempts were made to surpass this depth. Additional attempts were made to drill a fifth boring but, due to the presence of cement and debris, the drilling of a fifth boring was aborted.

Soil conditions encountered during drilling included fine silty sand and clay with debris (refer to the boring logs in the Appendix). Petroleum odors were noted in the drilling soils from borings 1 and 2. Groundwater was encountered in borings 1, 2, and 3 at depths between five (5) and seven (7) feet.

Split-spoon samples were taken just below the water table in borings 1, 2, and 3. A grab sample was taken off the auger flytes in boring 4. Soil samples were then placed in appropriate sampling containers for further field and laboratory analysis. Sediment samples obtained during drilling were screened with an HNU photoionization meter using headspace analysis. This meter measures the concentrations of organic vapors in air as they evolve from the sediment samples. The numerical readouts are not exact determinations of true volatile content of the samples, but instead provide qualitative indications of the degree of volatile organic contamination.

The highest meter reading observed was 170 ppm at the seven (7) foot depth in boring 2. The sample with the highest meter reading from each borehole was brought to a state certified laboratory for analysis of volatile organics. Meter readings for individual soil samples are provided with the boring logs.

Soil samples obtained during drilling were analyzed for Total Aromatic Hydrocarbons by EPA method 602, Volatile Halocarbons by EPA method 601, and Total Recoverable Petroleum Hydrocarbons by EPA method 418.1.

The analysis by EPA method 602 detected the highest concentration of aromatic hydrocarbons in the sample from B-1 at a concentration of 70,530 ppb. The lowest concentration found was 414 ppb in B-2. Concentrations detected in B-3 and B-4 were 708 ppb and 823 ppb, respectively.

The analysis by EPA method 601 found all concentrations of volatile halocarbons in B-1, B-3 and B-4 to be less than 5 ppb or non-detectable. B-2 contained 17 ppb chloroform and 146 ppb methylene chloride; all other constituents were less than 5 ppb or non-detectable.

The results of the analysis for Total Recoverable Petroleum Hydrocarbons by EPA method 418.1 revealed concentrations of 56,432 ppm, 624.3 ppm, 176.7 ppm and 626.9 ppm in soil samples from B-1 through B-4, respectively. The laboratory results for all of the soil samples are summarized in Table 1 included in the Appendix. The analytical reports from Environmental Testing Laboratories are also included in the Appendix.

On May 9, 1990, the drilling division of TBES returned to the subject site and installed monitoring wells in the areas of B-1 and B-2. An attempt was made to install a third well in the area of B-3; however, construction debris prevented drilling beyond the surface of the water table.

A well technician visited the site on May 12, 1990, and monitored the two wells. Well 1 was found to contain 2-7/8" of floating product and one-half gallon of product was bailed from the well. Well 2 did not contain any floating product.

On May 17, 1990, a well technician again visited the site to monitor the wells. Well 1 was found to contain 2-1/2" of floating product. No floating product was observed in well 2. A sample of floating product from well 1 was brought to Environmental Testing Laboratories and analyzed for petroleum product identification. The result of the analysis identified the floating product as being number #2 fuel oil/diesel fuel. The laboratory report is are included in the Appendix.

Conclusions and Recommendations

Analysis of the soil samples revealed very high concentrations of aromatic hydrocarbons and recoverable petroleum hydrocarbons in the soil from boring B-1. In addition, floating product is present in the well that was installed in this boring. Analysis of the floating product identified it to be #2 fuel oil/diesel fuel. The boring/well location is located immediately adjacent to the underground diesel storage tanks and appears to indicate a release in that vicinity.

It is recommended that a system tightness test be immediately performed on all underground storage tanks at the site. In addition, separate line tests should also be performed on all transfer lines. This is necessary to determine if any part of the system is presently leaking.

In addition, it is recommended that the site be continuously monitored and bailed on a weekly basis to remove any floating product appearing in the wells.

Additional monitoring wells will also be necessary to define the extent of the floating product plume.

DISCLAIMER

This site assessment and report was prepared for the use of Mr. Eric Roberts. The conclusions provided by Tyree Bros. Environmental Services (TBES) in this assessment are based solely on the information reported in this document. Future investigative site information which was not available to TBES at the time of this assessment may result in a modification of the conclusions. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur. This report has been prepared in accordance with generally accepted hydrogeologic practices. No other warranty, expressed or implied, is made.

Mr. Raphael Ketani
New York State Department of Environmental Conservation
Division of Environmental Remediation, Region 2
One Hunters point Plaza
47-40-21st Street, Long Island City, NY 11101

Re: Groundwater Monitoring Well Decommissioning for
2890 Review Avenue, Long Island City, New York

Dear Mr. Ketani:

This letter serves as a document for the decommissioning of the groundwater monitoring wells at the abovementioned Site.

On July 14, 2011, Impact Environmental performed the groundwater monitoring well decommissioning at the Site. All decommissioning activities were performed in accordance with the New York State Department of Environmental Conservation (NYSDEC) CP-43 Groundwater Monitoring Well Decommissioning Policy. A total of seven (7) 4-inch wells and two (2) one-inch wells were decommissioned. The grouting in-place method was utilized. The locations of the wells decommissioned can be referenced with **Plate 1**.

Grouting in-place is the simplest and most frequently used well decommissioning method and grouting itself is the essential component of all the decommissioning methods. The grout seals the borehole and any portion of the monitoring well that may be left in the ground.

Please feel free to contact us with any questions or comments.

Sincerely,

Impact Environmental

Wenqing Fang
Project Manager

CC: AA Truck Renting, Eric Robert

Dear Mr. Frahauf:

Re: 28-90 Review Avenue, Queens

We hereby acknowledge receipt of your **Freedom of Information Law** request dated April 7, 2014.

Your request is important to us and will be handled as expeditiously as possible. You are advised, however, that because of the large increase in the volume of such requests, your response may be delayed.

If you have any questions, please call Brenda Farren, Records Access Officer, at (718) 595-3448. Please refer to the ***FOIL log number(s)*** listed below when calling.

Sincerely,

Brenda Farren

Dear Mr. Frahauf:

In response to your Freedom of Information Law information request of 4/7/2014, the Division of Air/Noise Enforcement and Policy has searched its files for records pertaining to 28-90 Review Avenue and:

☐ Has located and enclosed the requested documents.

☐ A total of _____ pages of materials have been located, for which we are required to charge a fee of $.25 per page. Please send your check, in the amount of $_____, to:

Records Access Officer
NYC Department of Environmental Protection
59-17 Junction Boulevard, 19th Floor
Flushing, NY 11373

The check should be made payable to **The City of New York** and include the Log # noted below.

☐ Upon receipt of the check, copies of these records will be sent to you.

☒ Does not have the requested documents.

Sincerely,

Geraldine Kelpin
Director, Air/Noise Enforcement & Policy

RE: FOIL REQUEST

Mr. Abdelsadek:

I am writing to request information on DEC files addressing environmental quality for the property at the below address. Information to assist in identifying the site is also noted:

Site Address:	**28-90 Review Ave. Long Island City, NY**
Known spill numbers:	*9600032, 9010146, 0803348, 9311731, 0807459, 0504537,*
Current Owner:	**28-90 REVIEW AVENUE ASSOCIATES L L**
Facility Description:	**WAREHSE MISCELLANEOUS**

Our request is to identify any pertinent files held within the following Departments:

- **Solid & Hazardous Materials – Storage of Materials, Inspections/Violations**
- **Division of Environmental Remediation - Permits, Inspections/Violations**
- **Oil Spills Unit – Spill Details, Monitoring/Remediation**

Your consideration in this matter is greatly appreciated. We will follow up by phone, to Ascertain whether we might further assist you with any questions regarding this request.

Sincerely,
IMPACT ENVIRONMENTAL

Qualifications of the Environmental Professional/
Qualifications of the Project Manager

28-90 Review Avenue, Long Island City, New York

Kevin Kleaka

VICE PRESIDENT/SENIOR ENVIRONMENTAL SCIENTIST

EDUCATION:

Bachelor of Science, Environmental Science
State University of New York at Plattsburg (1995)
Applied Environmental Science Program

PROFESSIONAL EXPERIENCE:

❖ 1997-Present **IMPACT ENVIRONMENTAL CLOSURES** Vice President

- Principally responsible for managing environmental assessment, investigation, construction and remediation projects in commercial and industrial markets for lenders, real estate investment/development firms, construction firms and government agencies.
- Manage Phase I and II Environmental Site Assessments, State Spill Investigation and Remediation, County and Federal Underground Injection Control Programs, State & City Voluntary/Brownfield Cleanup Programs, State & Federal Superfund Sites, Brownfield Environmental Restoration Programs, Federal RCRA Closure, City E-Designation Projects.
- Responsible for environmental compliance of construction projects for waste management.
- Quality control of work products and deliverables.
- Supervise staff of geologists, hydrogeologists, engineers, environmental scientists, and environmental technicians to develop and implement sampling and analysis plans, quality assurance programs, remedial action plans.
- Provide expert witness testimony/fact statements and support in litigation cases involving soil, air and/or groundwater pollution.

❖ 1995-1997 **WYETH AYERST LABORATORIES** Chemist

- Worked in chromatographic separations division performing quality assurance analysis.
- Performed laboratory procedures and analyses in accordance with USFDA analytical test methods by liquid, gas, and thin layer chromatography.

KEY PROJECTS:

- East Side Access MTA LIRR
- Melody Cleaners
- Bill Wolf Petroleum
- Spartan Petroleum
- JFK 1020, Runway 13R-31L
- Rheingold Brewery Redevelopment Project
- WTC Greenwich Street Corridor Reconstruction
- Yankee Stadium Macomb's Park
- ExxonMobil Spill Valley Stream, NY

ORGANIZATIONS:

- New York City Brownfield Partnership, Member 2012
- New Partners for Community Revitalization, Member 2011
- ASTM Committee, Member 2012
- National Groundwater Association
- Environmental Bankers Association
- Vapor Intrusion Network
- Long Island Geologist Association
- Environmental Consulting Professionals
- Environmental Insurance Professionals

CERTIFICATIONS/ACHIEVEMENTS:

- New York City Office of Environmental Remediation – Certified Brownfield Professional (Gold Certification) 2012

Dear Ms. Geldbach:

Partner Assessment Corporation (Partner) is pleased to provide the results of the *Asbestos-Containing Materials Operations & Maintenance Plan* (O&M Plan) report of the 28-90 Review Ave at the abovementioned address (the "subject property").

We appreciate the opportunity to provide our services to The Bancorp Bank. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at 201-984-3651 or mdahl@partneresi.com.

Sincerely,

Partner Assessment Corporation

Appendix G – Previous Surveys

1.0 INTRODUCTION

This Operations and Maintenance (O&M) Plan addresses activities that may involve or disturb asbestos-containing materials (ACM) at 28-90 Review Ave, located in Long Island City, New York. An O&M Plan minimizes the potential for facility/maintenance personnel, tenants, contractors/vendors, and the general public to be exposed to ACM and/or airborne asbestos fibers. Asbestos is a naturally occurring mineral silicate whose fiber-like particles are known to cause mesothelioma, asbestosis, and lung cancer. Through the development and implementation of a procedural manual for company associates outlining the necessary procedures for emergency situations, associate training, periodic inspections, testing and record keeping, an O&M Plan can meet the needs of the facility in the management of ACM.

The objectives of the O&M Plan are to clean up existing contamination, minimize future fiber release by controlling access to ACM, and maintain ACM until it is eventually removed. Intentional disruption of ACM should be limited to repair or removal of small areas of significantly damaged ACM, or small areas where removal is necessary to facilitate maintenance/renovation activities. Large abatement projects that require extensive planning and technical expertise are beyond the scope of this O&M Plan.

It is important to note that this O&M Plan is based on the original date of construction and/or provided information indicating the presence or potential presence of ACM. Furthermore, Partner has not performed either a limited or comprehensive asbestos survey of the subject property; therefore, Partner recommends that all previously untested suspect ACM, surface applied materials, and thermal insulation are presumed to contain asbestos until analytical results indicate otherwise.

2.0 OCCUPANT NOTIFICATION

It is the obligation of the property owner to notify appropriate persons as required by law, to take necessary steps to minimize the potential for asbestos exposure.

It is the obligation of the property owner that only trained and qualified individuals are authorized to disturb or remove any ACM.

It is the obligation of the property owner that maintenance/custodial staff receive appropriate O&M training, as deemed necessary by the owner.

Action for Owners

Building owners, in addition to informing building workers as required by the Occupational Safety and Health Administration (OSHA), should also inform occupants and tenants about the location and physical condition of the ACM, and stress the need to avoid disturbing the material.

Building owners should inform occupants about the presence of ACM by distributing written notices, posting signs or labels in a central location where affected occupants can see them, and holding awareness or information sessions. Some states and localities have “right-to-know” laws that may require that all occupants, workers, and visitors in buildings with ACM be informed that asbestos is present. OSHA also requires warning signs to be displayed at each regulated area so that an employee may read the signs and take necessary protective steps before entering the area.

Building owners should inform new employees about the presence of ACM before they begin work. OSHA requires this notification for employees who will perform housekeeping activities where ACM may be disturbed. Additional steps may be needed for illiterate or non-English speaking workers and other occupants who may encounter language difficulties. For example, owners should consider providing information sessions in languages other than English where a significant number of workers, occupants, or visitors do not speak English. Furthermore OSHA regulations require that employers ensure employees can comprehend the warning signs posted. Owners may wish to consider developing a warning label system for illiterate workers showing them pictures about potential hazards of disturbing ACM and showing them where ACM is located. Translations of the warning labels should be provided by the owner for non-English speaking personnel.

O&M workers should receive the training necessary for them to perform their tasks safely.

Information for Occupants (workers, tenants and others)

Occupants should be notified for two reasons: (1) There may be a potential hazard in their vicinity; and (2) informed persons are less likely to disturb the material and cause fibers to be released into the air. All employees and tenants or tenant representatives likely to disturb ACM should be included in the notification program on a continuing basis. The specific information given to types of building occupants will vary. For example, because building maintenance and service workers carry out certain tasks that office workers or tenants do not perform, they should receive additional information. Most important, operations and maintenance workers should receive the training they need to perform their tasks safely. For information on training requirements, see the OSHA regulations at 29 CFR § 1910.1001(j)(7) (PDF) (53 pp, 408K, about PDF).

Whatever its form, the information given to building occupants and workers should address the following points to the extent they reflect building conditions:

- ACM has been found in the building and is located in areas where the material could be disturbed.
- The condition of the ACM, and the response that is appropriate for that condition.
- Asbestos only presents a health risk when fibers become airborne and are inhaled. The mere presence of intact ACM may not represent a health risk.
- The ACM is found in the following locations (e.g., ceilings in Rooms 101 and G-323, walls in the lobby, above suspended ceilings in the first floor corridor, on columns in the main entry, on pipes in the boiler room).
- Do not disturb the ACM [e.g., do not push furniture against the ACM, do not damage thermal system insulation (TSI)].
- Report any evidence of disturbance or damage of ACM to [name, location, and phone number of the O&M Plan Manager (APM)].
- Report any dust or debris that might come from the ACM or suspect ACM, any change in the condition of the ACM, or any improper action (relative to ACM) of building personnel to (name, location, and phone number of the O&M Plan Manager).
- Cleaning and maintenance personnel are taking special precautions during their work to properly clean up any asbestos debris and to avoid disturbing ACM.
- All ACM is inspected periodically and additional measures will be taken if needed to protect the health of building occupants.

3.0 TRAINING

In order to ensure that all ACM are handled properly, this facility has created a collateral position entitled O&M Plan Manager, to be assigned by the Owner. All activities related to the handling of ACM are to be coordinated through this individual or management company.

TRAINING PROGRAM

A key element in initiating and carrying out this Asbestos O&M Plan is a properly trained building maintenance staff. This group is responsible for daily awareness/inspection of ACM as they perform their tasks. The maintenance staff will report any indication of potential problems resulting from changes of ACM condition, area use, or maintenance practices. The maintenance staff will receive the 2-hour General Asbestos Awareness training. The operations staff which will be working in direct contact with asbestos materials for repair operations will receive the 16 hour operations and maintenance training.

The following elements should be presented in the Asbestos training programs:

Building Maintenance Staff Training

Asbestos Awareness Training

a. Introduction - General background on asbestos, common uses of asbestos in building materials, explanation of the Asbestos O&M Plan, and abatement activities to date, etc.

b. Medical/Mechanisms for Exposure - Condensed version of medical review from the 16-hour "Operations and Maintenance" training, along with similar mechanisms for exposure, with emphasis on fiber entrainment mechanisms.

c. Use of High-Efficiency Particulate Air (HEPA) Technology – Discussion and use of HEPA filtration, vacuums, and filter changes, etc.

d. Cleaning Techniques – Implementation of specialized cleaning methods, dusting techniques, wet cleaning methods, and proper disposal, etc.

e. Daily Awareness/Inspection - Training to focus an awareness of the indications of potential problems, chain of command and notification, and general techniques to avoid exposure.

f. Mechanisms to Reduce Exposure

- Proper use of mechanical engineering control systems
- Protection or removal of exposed material in high traffic areas
- Construction of temporary barriers
- Minimization of air circulation
- Use of water during maintenance
- Use of specialized equipment: HEPA - vacuum filtration

- Others

g. Coordination with O&M Plan Manager - Schedules for cleaning, mopping, stripping, buffing, etc.

h. Continued Employee Education - Periodic training sessions, discussion of issues arisen between sessions, required attendance of senior maintenance staff, etc.

O&M PLAN MANAGER RESPONSIBILITIES

The O&M Plan Manager shall be responsible for the following tasks:

* Implement and monitor the asbestos control program.
* Coordinate all activities with asbestos consultants/contractors.
* Review specifications for services or work; retain consultant, and evaluate bids and proposals; and monitor contractor's performance of asbestos-related work.
* Provide access to training and technical assistance to construction and property managers to ensure asbestos control.
* Keep adequate records of asbestos exposure assessments, medical exam records (if required), abatement plans and actions, and ensure regional compliance with 29 CFR 1910.1001(m)(3), 29 CFR 1910.20, and 1926.1101
* Ensure that all personnel tasked to handle asbestos are qualified and certified in accordance with applicable federal, state, and local standards.
* Incorporate, schedule, monitor, and maintain records of the periodic ACM inspection program.
* Review all planned construction and maintenance activities in areas known to have asbestos-containing materials to prevent unnecessary damage to the material, occupant exposure, and contamination of the building.
* Monitor the above work while it is in progress to ensure that it complies with contract specifications.
* Ensure that a record is kept, and that the property owner is informed of all applicable incidents, situations, or accidents involving asbestos-containing material.

* **OWNER DESIGNATED O&M PLAN MANAGER:**

O&M Plan Manager:	
Address:	
Telephone:	

The Management Company (if no management company is assigned, the following duties shall remain the responsibility of the O&M Plan Manager) shall be responsible for the following tasks:

* Ensure that only authorized persons repair, replace, or handle ACM.
* Maintain an on-site record of O&M Plan inspection reports as received.
* Report all damaged suspect or known ACM immediately to the O&M Plan Manager.
* Direct all unauthorized personnel to remain clear of asbestos-containing materials.
* Review all planned construction and maintenance activities in areas known to have ACM to prevent unnecessary damage to the material, occupant exposure and contamination of the building.
* Monitor the above work while it is in progress to ensure that it complies with contract specifications.
* Report and coordinate all asbestos-related issues through the O&M Plan Manager.
* Coordinate the response to all inquiries relative to asbestos through the O&M Plan Manager.

Ensure that a record is kept and that the property owner is informed of all applicable incidents, situations or accidents involving asbestos-containing materials.

OWNER DESIGNATED MANAGEMENT COMPANY:

SUGGESTED TRAINING COURSES FOR EMPLOYEES INVOLVED IN THE O&M PLAN

Custodial & Maintenance	General Awareness	2 hours
Maintenance Supervisor /Installation Head	O & M (includes hands on train)	16 hours
Maintenance Supervisor /Installation Head	Inspector	3 days
Asbestos O&M Plan Manager	Project Designer	3 days

CLASSIFICATION OF ASBESTOS WORK PRACTICES BY OSHA AND ASSOCIATED TRAINING

The following work practice classifications are appropriate for maintenance personnel under this O&M Plan.

Class III Repair and Maintenance activities where ACM or Presumed ACM (PACM) is disturbed, does not include activities designed to remove ACM.

a. Requires an EPA 16 hour Operations and Maintenance course, which is inclusive of the 2 hour General Awareness course.
b. May require participation in a Respiratory Protection Program
c. May require participation in a Medical Surveillance Program

Class IV Maintenance and Custodial work where employees contact, but do not disturb ACM and PACM, including activities which include clean up of ACM and PACM waste and debris.

a. Requires 2 hour General Awareness training
b. May require participation in a Respiratory Protection program
c. May require participation in a Medical Surveillance program

4.0 APPROPRIATE WORK PRACTICES

The following work practices are included for general information, as these materials may or may not be present in the facility. An EPA General Safety brochure is provided in Appendix A. Additional ACM may be located in your facility which is not outlined below. An ACM Inspection Form has been provided in Appendix B. All building materials must be tested prior to disturbance. As a general rule, maintenance personnel working on Class III Repair and Maintenance activities under the O&M Plan are limited up to three square feet or three square linear feet (the contents of one glove bag) of ACM. Larger quantities of ACM should be addressed by a certified abatement contractor.

Routine Maintenance or Repair Activities in Asbestos-Containing Environments

Maintenance or repair activities in the local of asbestos-containing resilient floor tiles or sheet flooring should not disturb ACM. Where maintenance activities cannot be avoided, special procedures must be introduced to limit the potential for damage and contamination of the surrounding areas. Work practices include, but are not limited, to the following:

- Use of wet methods;
- Use of HEPA vacuums;
- Prompt action to clean up ACM/PACM debris;
- Following OSHA respirator requirements; and
- Assume waste and debris in areas with accessible (friable) TSI and surfacing materials contains asbestos. A Waste Tracking Form has been provided in Appendix C.

Preparation Prior to Renovation or Maintenance Activities & Emergency Response to Damaged Asbestos Containing Acoustical Ceiling Materials

- Notify supervisor and cordon off area using appropriate signage (per 29 CFR 1910.1001(j)(3)).
- O&M Plan Manager will contract an asbestos abatement contractor to remove ACM.
- O&M Plan Manager will contract a third-party asbestos consultant to perform ambient air sampling upon completion of response action.
- Waste material should be properly manifested and disposed.

ASSUMED ASBESTOS CONTAINING BUILDING MATERIALS

The following asbestos containing building materials (ACMs) are suggested materials that are typically encountered in buildings. The list should not be construed as being representative of all materials that may be present in a building or property. Therefore, if a prior or subsequent survey is performed, the identified ACMs should be incorporated for the purposes of this Operations & Maintenance Plan.

Plaster and Spray-applied Acoustical Texture or Fireproofing

- Asbestos-containing plaster is generally considered to be friable if it is damaged or disturbed. Plaster is often applied to interior ceilings and walls and over irregularities, such as nail penetrations, to provide a textured, acoustically absorbent finish to the ceiling. It can be rough or smooth to the touch. It is not possible by sight or by touch to determine if plaster is asbestos-containing.
- Spray-applied acoustical ceiling texture is generally considered to be friable and could present a potential health hazard if disturbed. Acoustical ceiling plaster usually has a rough (popcorn like) finish and can be soft or hard to the touch. It is usually spray-applied, however, trowel-applied material is also observed.
- Asbestos-containing spray-applied fireproofing is generally considered to be friable and present a potential health hazard if it is disturbed. Fireproofing is often applied to steel structural members, and to the interior of elevator shafts. Spray-applied fireproofing is generally rough in appearance, and can be "cottage-cheese" like or firm and somewhat cement like in texture.

These materials are susceptible to water damage and are evident via discoloration. If water damage continues, delaminating will occur, resulting in an increased potential for asbestos fiber exposure. All potential sources of water leakage should be immediately addressed to prevent further water damage to the ACM.

Vinyl Composite Floor Tiles (VFT), Sheet Flooring (VSF), and Mastics

Vinyl floor tiles, sheet flooring, and associated mastics are generally considered to be non-friable materials, provided that they remain undisturbed on floor surfaces. It is not possible by sight or touch to determine if floor coverings are asbestos containing. Sheet flooring is typically composed of two layers, a top protective layer and a bottom paper-like insulating layer. A mastic material, often asbestos-containing, adheres the floor tile or sheet flooring to the substrate.

Drywall and Drywall Joint Compound (DWJC)

Drywall and drywall joint compound are generally considered to be friable materials if damaged or disturbed. DWJC is applied to interior drywall seams and over irregularities, such as nail penetrations, to provide a smooth finish to the wall system prior to painting. Because of the absence of rough edges and the typically painted surfaces, this material generally has a low propensity for disturbance under normal use and wear. It is usually hard to the touch. It is not possible by sight or by touch to determine if DWJC is asbestos-containing.

Thermal System / Transite Pipe Insulation

Asbestos-containing transite vent pipes are commonly used as exhaust flues for heaters, water heaters, and boilers. These materials are unlikely to pose a health threat if left undisturbed and should be monitored for damage.

Asbestos-containing thermal and transite pipe insulation is commonly applied to heating vessels such as boilers, hot water tanks, and the associated piping. Thermal insulation is generally considered to be friable, although it is commonly enclosed in a canvas jacket. It is very important the jacket material remain free from tears or rips that can expose the underlying ACM. Other types of thermal insulation in use include a paper-type insulation. These materials are unlikely to pose a health threat if left undisturbed and should be monitored for damage. Often, the hard, mudded elbows and hanger supports used with fiberglass pipe insulation contains asbestos. Thermal insulation is particularly susceptible to water damage. Plumbing and roof leaks should be immediately repaired when determined to have caused water damage to ACM.

"Stucco"

Asbestos-containing "stucco" is commonly used as an exterior finish. "Stucco" is generally considered to be friable. These materials are unlikely to pose a health threat if left undisturbed and should be monitored for damage.

Black Roof Seal/Mastic and Roofing Materials (Shingles, Asphaltic Roofing)

Asbestos-containing roof seal/mastics are still in use today. The material is considered to be non-friable and the fibers are unlikely to be released from the asphaltic matrix. These materials are unlikely to pose a health threat if left undisturbed and should be monitored for damage.

Under normal conditions of use, asbestos fibers are bound into the matrix of the previously discussed materials as well as roof shingles and asphaltic roofing, and may pose a hazard to building occupants should the material become friable (pulverized or airborne). Mechanical disturbance of these materials should be avoided as activities such as cutting, drilling, grinding, sanding, or hammering may cause significant damage and lead to airborne fiber release.

The following forms have been appended to this O&M Plan:

- A Job Request Form is provided in Appendix D.
- A Maintenance Work Authorization Form is provided in Appendix E.
- An Evaluation of Work Affecting ACM is provided in Appendix F.
- A hyperlink for asbestos regulations covering various work practices is included in Section 10.0 References.

5.0 INSPECTION PROGRAM

Responsibilities

In order to maintain that the facility is in the best possible condition, the following tasks must be performed:

Semiannual Inspection

The O&M Plan Manager will coordinate the inspection process, analyze and consolidate results, and report any problems or necessary corrective recommendations to the proper authority. Each facility containing friable asbestos must have a semiannual physical "walkthrough" by a qualified inspector (using the original survey report and subsequent re-inspection reports as a guideline) to confirm that all ACM in the facility is intact and manageable. If new damage is identified, it must be noted so that remedial action can be arranged.

Posting of warning signs and labels in areas with known ACM should be performed upon confirmation of the presence of ACM in the building (29 CFR 1926.58). Labeling is intended to prevent damage or disturbance of ACM by unprotected individuals and to prevent such persons from entering areas where there is potential exposure from ACM.

Air Monitoring

Upon disturbance of confirmed or suspected ACM and/ or if required by law, air sampling must be conducted by qualified professionals to determine the airborne fiber concentration in the area.

Training

The reverse side of the inspection form is to document the initial training and annual re-training of all personnel who are exposed to ACM as part of their job tasks. If applicable this group would typically include persons specifically trained in emergency clean-up techniques; building maintenance/engineering/trades personnel, etc.

Other persons (including contractor personnel) who may work in or around ACM environments (but not handle or maintain ACM) should receive the appropriate training under the guidelines delineated in the applicable regulations.

All training programs must inform employees about the following:

- Methods of recognizing asbestos;
- Health hazards of asbestos exposure;
- Relationship between asbestos and smoking in producing lung cancer;
- Operations that could result in asbestos exposure;
- Importance of necessary protective controls to minimize exposure including, as applicable, engineering controls, work practices, respirators, housekeeping procedures, emergency procedures, and waste disposal procedures;
- Purpose , proper use and limitations of respirators; and

- The medical surveillance program;
- A complete review of the OSHA standard(s) including appendices.

6.0 EMPLOYEE PROTECTION

It is the express policy of the property owner that ACM present in this facility shall be maintained in such a way as to preclude the necessity of using personal protection equipment (PPE). No employees or tenants of the subject site or outside contractor employee shall disturb any ACM without proper training. Any one working in the vicinity of identified ACM shall receive the proper training consisting of the 2-Hour Asbestos Awareness Class.

Any asbestos-related abatement/removal conducted at the subject site will be performed by a licensed contractor.

At a minimum, the following elements should be included in the employer's worker protection program:

- Hazard determination, including exposure assessment;
- Engineering and work practice controls;
- Respiratory protection;
- Protective clothing and equipment;
- Housekeeping;
- Hygiene facilities and practices;
- Medical surveillance and provisions for medical removal;
- Training;
- Signs; and
- Recordkeeping.

To implement the worker protection program properly, the employer needs to designate a competent person (i.e., one who is capable of identifying existing and predictable hazards or working conditions which are hazardous or dangerous to employees) in accordance with the general safety and health provisions of OSHA standards. The competent person must have the authorization to take prompt corrective measures to eliminate such problems. Qualified medical personnel must be available to advise the employer and employees on the health effects of employee asbestos exposure and supervise the medical surveillance program.

7.0 RECORDKEEPING

All the building asbestos management documents should be stored in permanent files, including:

- Inspection and assessment reports
- The O&M Plan
- Work practices and procedures
- Respirator use procedures
- Fiber release reports
- Application for maintenance work and work approval forms
- Evaluations of work affecting ACM
- Reinspections/surveillance of ACM

EPA recommends that building owners make available all written elements of the O&M Plan to the building's O&M staff as well as to tenants and other building occupants, if applicable. Building owners are also encouraged to consult with their legal counsel concerning appropriate recordkeeping strategies as a standard part of their O&M programs.

Occupational Safety and Health Administration (OSHA) standards require that employers with employees engaged in asbestos-related work retain the following records:

- Personal air sampling records, for at least 30 years; personal air samples are those collected in the worker's breathing zone during performance of work involving asbestos exposures.
- The data used to qualify for exemptions from OSHA's initial monitoring requirements for the duration of the exemption.
- Medical records for each employee subject to the medical surveillance program for the duration of their employment plus 30 years.
- All employee training records for one year beyond the last date of each worker's employment.

Additional OSHA recordkeeping requirements are listed below for reference:

- Access to employee exposure and medical records (29 CFR 1910.1020)
- Hazard Communication (29 CFR 1910.1200).
- Also see the OSHA Construction Rule (29 CFR 1926.1101) or the EPA Worker Protection Rule (40 CFR 763 Subpart G) which incorporates the OSHA regulations by reference for certain state and local employees) for more details of recordkeeping requirements.

8.0 RESPIRATOR PROGRAM

No site employees, occupants, or outside contractors shall be authorized to disturb ACM with the exception of maintenance and custodial workers. Custodial and maintenance workers will receive the appropriate training according to daily activities. Any asbestos-related abatement/removal conducted at the subject site will be performed by a licensed contractor.

An employer must provide respirators and ensure they are used during all Class III and IV work within a regulated area where other employees are required to wear respirators, during all work where exposures exceed OSHA permissible exposure limits, and in emergencies. Medical clearance is required to wear a respirator.

Respirators must be selected according to the provisions of Title 42, CFR Part 84.

9.0 DEFINITIONS

Accessible Material - any material access to which can be gained by any means other than significant destruction of building components, or, for the purposes of describing building occupant activities, a material subject to disturbance by routine use or maintenance activities

Asbestos - the general name given to a number of naturally occurring hydrated mineral silicates each of which possesses a specific crystalline structure, is incombustible in air, and is separable into fibers; asbestos includes the asbestiform varieties of Chrysotile (serpentine), Crocidolite (riebeckite), Amosite (cummingtonite-grunerite), Anthophyllite, and Actinolite.

Asbestos Containing Material (ACM) - may be defined, as by the EPA, as any friable material or product containing greater than one percent asbestos or, by convention, as any material or product which contains >1% asbestos

Asbestos Debris - pieces of material that can reasonably be identified by color, texture or composition as being traceable to a known asbestos containing application; may mean dust, if the dust is determined by analysis to be ACM

Bulk Samples - samples of bulk material; in the case of asbestos, suspect asbestos containing material; Chain-of-Custody (COC) - formal procedures for tracking samples and ensuring their integrity

Encapsulation - treatment of ACM with a material that surrounds or embeds asbestos fibers in an adhesive or cementitious matrix to inhibit the release of fibers; the encapsulant creates a membrane over the surface of the material (bridging encapsulant) or penetrates the material or binds its components together (penetrating encapsulant).

Enclosure - an airtight, impermeable, permanent barrier around ACM to prevent the release of asbestos fibers into the air

EPA - United States Environmental Protection Agency

Fair - as used to describe material condition, damage is more prevalent or severe than on materials rated as good

Fiber Release Episode - any uncontrolled or unintentional disturbance of ACM resulting in airborne asbestos fiber emission

Friability - the physical characteristic of any solid that describes its ability to be broken down to a powder or dust; a highly friable material is one that can be easily crumbled by hand pressure; a moderately friable material is one that can be crumbled with some difficulty by hand pressure or by mechanical means; a low friability material is one that may require mechanical means to crumble; while the condition of a material does not constitute a measure of its friability, weathering and deterioration can increase the friability of a material

Glovebag - a plastic enclosure with built-in gloves which is placed with an airtight seal around asbestos containing pipe lagging or other materials such that they may be removed or repaired without generating airborne fibers

Good - as used in the context of material condition, integrity of the material is generally complete, with possible small areas of delamination or indications of limited contact or water damage; the mechanism to retain the insulation in its original position (e.g. cloth wrapping over pipe insulation) is still present

Heating Ventilation and Air Conditioning (HVAC) system - the system of pipes, ducts, and equipment, (air conditioners, chillers, heaters, boilers, pumps, fans) used to heat, cool and filter air and move it through a building; the HVAC system is one of several mechanical systems found in most buildings

High Efficiency Particulate Air (HEPA) Filter - a filtering system capable of trapping and retaining at least 99.97 percent of all particles 0.3 micrometers in diameter or larger

Homogeneous Application - an application of surfacing material, thermal system insulation material, or miscellaneous material that is uniform in color, texture, and vintage of application

Lock-down - application of a sealing material to ensure that any residual microscopic fibers remaining following asbestos removal are prevented from becoming airborne

Mechanical System - a building component system: can include the plumbing system, elevator system, and others (see Heating Ventilation and Air Conditioning system (HVAC)

NIOSH - United States National Institute of Occupational Safety and Health

Operations and Maintenance (O&M) Plan - a program of work practices and training and management procedures designed to maintain ACM in good condition; an O&M Plan ensures clean-up of asbestos fibers previously released and prevention of further release by minimizing and controlling ACM disturbance or damage; an O&M Plan should be implemented at all buildings with ACM

Optical Microscope - a microscope that uses the transmission of light through lenses to magnify a specimen for examination; capable of resolution of fibers or other materials down to approximately 0.25 micrometers in diameter

OSHA - United States Occupational Safety and Health Administration

Permissible Exposure Limits (PELs)

(1) Time-weighted average limit (TWA). The employer shall ensure that no employee is exposed to an airborne concentration of asbestos in excess of 0.1 fiber per cubic centimeter of air as an eight (8) hour time-weighted average (TWA), as determined by PCM, or by an equivalent method.

(2) Excursion limit. The employer shall ensure that no employee is exposed to an airborne concentration of asbestos in excess of 1.0 fiber per cubic centimeter of air (1 f/cc) as averaged over a sampling period of thirty (30) minutes, as determined by PCM, or by an equivalent method.

Phase Contrast Microscopy (PCM) - an optical microscopic technique used for counting fibers in air samples; PCM does not distinguish between asbestos and non-asbestos fiber types; the PCM method currently recognized is referred to as NIOSH 7400

Physical Assessment - evaluating asbestos containing material to determine its current condition and potential for future disturbance

Plenum - a space in a building, other than a duct or shaft, designed to transport air; plenums are commonly the space between a suspended ceiling and the floor above

Polarized Light Microscopy (PLM) - an optical microscopic method for the identification of asbestos in bulk samples in which the sample is illuminated with polarized light

Poor - as used in the context of material condition, material is obviously damaged with evidence of delamination or inadequate adhesion of the material to its substrate

Presumed Asbestos Containing Material (PACM) - Presumed Asbestos Containing Material means thermal system insulation and surfacing material found in buildings constructed no later than 1980; the designation of a material as "PACM" may be rebutted pursuant to paragraph (k)(5) of 29 CFR 1926.1101

Quality Assurance (QA) - a process designed to provide confidence that the quality control program is being applied effectively; the process includes an auditing procedure designed to evaluate all known policies and procedures that affect the quality of results

Quality Control (QC) - a program comprised of the operational procedures to ensure that data are of known and acceptable precision and accuracy

Regulated Area – an area established by the employer to demarcate areas where airborne concentrations of asbestos exceed (or there is a reasonable possibility they may exceed) the permissible exposure limits.

Response Action - any method, including removal, encapsulation, enclosure, repair, or Operations and Maintenance Program that minimizes harm to human health and the environment from the hazards and effects of ACM

Specifications - a written set of standards, procedures, and materials for the abatement of asbestos; includes contract documents detailing the Scope of Work of the project and defining Contractor, Building Owner and Consultant responsibilities

Transite - a trade name for asbestos cement wallboard or pipe

Transmission Electron Microscopy (TEM) - State-of-the-art analytical method for air and bulk sample analysis; uses high magnification (typically 15,000x) to identify asbestos fibers; may utilize Energy Dispersive Spectroscopy (EDS) and/or Selected Area Electron Diffraction (SAED) to confirm asbestos and to identify the type of asbestos present; recommended for final clearance air samples and for bulk analysis of samples with difficult-to-analyze matrices (e.g., plaster, vinyl tile); provides the most definitive analysis of asbestos currently available.

APPENDIX A: GENERAL SAFETY CONSIDERATIONS

PARTNER

General Safety Considerations

(This section is reprinted from Appendix D of the EPA's White Book for use by personnel performing O & M activities, and is supplied for informational purposes only)

Ronald L. Stanevich

NIOSH Division of Safety Research

This guide was primarily developed to provide recommendations concerning worker respiratory protection within the asbestos abatement industry. However, employers must not lose sight of the safety hazards their employees are exposed to in performance of their work. Asbestos abatement operations can take place in a variety of industrial, commercial and public settings. Each has unique potential safety hazards that the employer must control. However, nearly all abatement operations have some common safety hazards. With proper job planning and supervision, the employer can control both the health hazards and the safety hazards faced by their workers. The more common safety hazards associated with abatement operations and general recommendations to control them are discussed below. Sources for more specific safety information are listed to supplement and support the applicable OSHA regulatory standards.

I. ELEVATED WORK SURFACES

The nature of asbestos abatement tasks usually requires workers to work from ladders, scaffolds, lifts, or other elevated surfaces, which creates the potential for fall injuries. Slips and falls from ladders, scaffolds, and other elevated surfaces result in a major portion of the construction industry injuries. Many of these can be prevented by implementing a few control measures:

A. General

1. Avoid use of makeshift work platforms by providing portable ladders and scaffolds.
2. Ensure that job built elevated work surfaces are inspected by a competent person other than the individual who erects it.
3. Avoid working from elevated surfaces where possible. Consider use of wands for spraying amended water or scrapers with extended handles.

B. Ladders

Eighty percent of ladder related accidents result from improper use or application:

1. Workers should face the ladder when climbing up, down, or working from it.
2. Workers should not carry objects in their hands while ascending or descending ladders. While working from a ladder they should hold on with at least one hand.
3. Ladders should not be used as a substitute for planks, runways, or walkboards.
4. Ladders should be maintained in good condition. Defective ladders should be destroyed so that no one uses them by mistake.
5. Ladders should have safety feet in good condition to keep the ladder from slipping and cutting through floor covers.
6. Ladder rungs/steps should be kept free of contaminates such as amended water and buildup of asbestos waste.
7. Employees should work no higher than the fourth step/rung from the top of the ladder.
8. Employees should not attempt to "reach" distant objects from a ladder; other platforms should be used.
9. Wood or fiberglass ladders should be provided to help control exposure to electrical hazards.
10. Employees should not straddle the space between a ladder and another object.
11. Employees should make a visual inspection of ladders before each shift.

Portable Ladders -- Industrial Safety Data Sheet #665, National Safety Council, 444 North Michigan Avenue, Chicago Illinois 60611

C. Scaffolds

Falls from scaffolds result in about 2,000 injuries per month in the United States. These can be reduced by:

1. providing guardrails around the perimeter of the work surface regardless of scaffold height
2. securing scaffold decks against slippage
3. keeping scaffold uprights vertical and pinned together when stacked
4. ensuring vertical members are braced to keep the scaffold plumb and level
5. decking the entire top portion of the work surface in lieu of using minimum planking dimensions
6. extending planks at least 6" (150 mm) over their support and securing them from movement
7. ensuring that manufacturer built in ladders are in good condition
8. maintaining mobile scaffold casters in good condition with position locking devices secured when employees are working from the scaffold
9. keeping mobile scaffolding height less than four times the minimum base dimension and with adequate cross bracing
10. never interchanging scaffolding pans from different units
11. never using defective scaffolding
12. designating only "competent" persons to perform scaffolding repairs.

Additional information sources:

Manually Propelled Mobile Ladder Stands and Scaffolds"--ANSI A92.1 - 1977

Manually Propelled Elevating Work Platforms -- ANSI A92.3 - 1980

Self-propelled Elevating Work Platforms -- ANSI A92.6, American National Standards Institute, Inc., 1430 Broadway, New York, NY 10018

II. ELECTRICAL HAZARDS

Asbestos abatement is often related to renovation or remodeling activities. Normally the equipment, machinery, overhead lighting fixtures, and auxiliary furnishings are removed to facilitate the abatement work. However, it is becoming more common that industrial and commercial buildings remain partially occupied while abatement operations are performed. In either situation, the abatement operator must take positive actions to protect employees from accidentally coming into contact with energized electrical circuits.

A. General

1. Perform am initial walk-through of the abatement area to look for pre-existing electrical hazards involved with the work
2. De-energize as many circuits as possible
3. Verify that the circuits have been de-energized with a "Field Current Sensing Device" circuit tester. Either lock out/tag out all de-energized circuits to prevent them from accidentally being energized.
4. Use non-conductive tools such as scrapers and vacuum attachments made of wood, plastic, or rubber.
5. Provide workers with non-conductive rubber boots and/or gloves when work must be done around energized wiring or equipment.
6. Prohibit accumulation of puddles of water on the floor. Workers should be trained in the intelligent use of amended water. No water should be used around energized circuits.

B. Permanent Building Circuitry

1. Ensure that all permanent circuits are provided with a grounding system. This can be determined with a portable ground tester.
2. Ensure that electrical outlets are tightly sealed and taped to avoid water spray.
3. Determine what equipment must remain energized during the abatement process.
4. Insulate or guard energized equipment and wiring from employee contact and other conductive objects.
5. Avoid damaging permanent building wiring during the work.
6. Consider dry removal methods in the vicinity of electrical equipment which must remain energized.

C. Temporary Power

1. All temporary circuits provided by the abatement operator must be provided with a grounding system and protected by ground fault circuit interrupters.
2. Avoid stringing temporary wiring across floors
3. Elevated wiring should not be fastened with staples, nails, or wire.
4. Use care, not to damage the wiring insulation during Installation or abatement work.

D. Electrical Cords and Tools

1. Provide extension cords which have a ground conductor.

2. Ensure that cords are not damaged, contain no splices, and that the grounding lug on the male plug is intact.
3. Position extension cords to eliminate stumbling/tripping hazards and to protect them from damage by moving scaffolds.
4. Provide electrical tools which are either grounded or of the double insulated type
5. Use shatterproof, guarded bulbs and heavy duty wiring for temporary lighting.
6. Where plugs enter receptacles, ensure that the connection is protected by use of duct tape or by other means.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2015 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2

RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 5 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/17/2016 has revealed that there are 15

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 08/01/2015 has revealed that

there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/17/2016 has revealed that there are 47 NY LTANKS sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/17/2016 has revealed that there are 18 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 26 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Phone:	(631) 269-8800
DEC Memo:	"10/7/08 - Raphael Ketani. The spill was called in on 10/2/08. It comprised the discovery of oil contaminated soil. The contact is Kevin Kleaka of Impact Environmental (631) 269-8800, ext 304. According to Property Shark, the site is block and lot 294 and 106. The main address is 5302 Review Avenue. The alternate address is 2890 Review Avenue. Property Shark contains pictures of a one story garage for trucks. According to ACRIS, the seller was Eric W. Roberts, 145 E. 81 Street, Apt. PH-A, Manhattan, 10028. The buyer is 2890 Review Avenue Associates, LLC, 2890 Review Avenue, LIC, 11101. I sent a CSL. Mr. Kleaka called me back. He said that they did some borings and found urban fill. He also found groundwater with floating product on it. However, he does not believe that the contamination in the fill is the same contamination as the floating product on the water. The site is on Newtown Creek and he suspects that oil made its way from the creek to the site. The site was an oil terminal and there was a spill in 1990, which was closed. He will send me a report soon. There are five other spill cases for the site. All of them are closed. The cases are: 9010146; 9311731; 9313946; 9600032; 0803348. 10/10/08 - Raphael Ketani. I received the hard copy of the October 7, 2008 Subsurface Investigation Report on 10/8/08. I began my review today. There was an aerial photograph with an overlay showing where six large fuel tanks had been and some railroad tracks. Head space analyses were high to very high for SP-1 and SP-6 from almost at grade to 10 feet below grade. The other borings, SP-3 to SP-5, had high head space hits only at the 8 foot to 10 foot interval. An approximately one foot thick layer of oil was found on top of the water table in all of the wells. Six wells were installed. All six soil samples were almost completely non-detect for VOCs and SVOCs. There were some VOC hits and SVOC hits, but they were either well below TAGM or slightly above TAGM. The groundwater samples for all six wells were almost completely non-detect for VOCs. There were a few very low exceedences and one hit of 310 ppb of sec-butylbenzene. No SVOC analyses were performed. I contacted Mr. Kleaka and told him that he will need to do a round of groundwater sampling for SVOCs and that he will need to install more and larger diameter wells for oil recovery. I told him that it was strange that the groundwater was so contaminant free when a thick layer of oil was sitting on top. He said that he thought it was strange, too, and had no explanation for the lack of contaminants. He said that he will send DEC a plan for installing more wells and for an oil recovery approach. 10/20/08 -

AA TRUCK RENTING CORP (Continued) **S104073336**

Raphael Ketani. I received a letter dated 10/17/08 from E. Gail Suchman (attorney) of Stroock (attorneys at law; (212) 806-6656). The letter stated that they were developing an investigation work plan that will more clearly define the product layer and identify appropriate strategies for addressing it. As soon as the work plan is completed, we will forward it to you for review. 11/21/08 - Raphael Ketani. I tried to contact Ms. Suchman, but could only leave a message. Ms. Suchman called me back. She said that the client reviewed the draft workplan. The plan will be finished on monday and sent to DEC next week. The money to do the work is coming from the client's insurance. Impact Environmental will be submitting the plan. 12/2/08 - Raphael Ketani. I reviewed the partial work plan submitted by e-mail last week by Impact Environmental. Only 3 soil borings were planned. The most contaminated sample will be sent to the laboratory for analysis, or a sample from the groundwater-soil interface. Six groundwater wells are planned and more may be installed as needed. My only comment was that they should sample the soil at each well location, besides installing the wells. I called up Ms. Suchman, but could only leave a message that soil samples must be taken from each well location, also. I tried to contact Mr. Kleaka (631) 269-8800, ext 304, but could only leave a message with his assistant, Wenqing (wen-ching) Fang, stating that soil samples will have to be taken at each well location. I received the hard copy today. It was the same document as the one that I had received via the e-mail. 12/23/08 - Raphael Ketani. I tried to reach Ms. Suchman (212)806-6656 and Mr. Kleaka, but could only leave messages regarding progress for installing the borings and wells. Later, Mr. Fang called back and said that Impact Environmental had not moved forward with the installation of the additional wells as they were waiting for comments from DEC. I told him that DEC had already commented on the work plan back on 12/2/08. He requested that I send a letter to show the client. I told him that I will send the letter. I sent the letter by e-mail to Randall Austin, Chief of the Spills Unit, and I had Jeff Vought, acting Chief review the letter. The letter was sent out today. 12/30/08 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, but could only leave a message. 1/12/09 - Raphael Ketani. Today I received the following e-mail: Impact has received your approval letter for the proposed work plan regarding 2890 Review Avenue, LIC (NYSDEC Spill #0807459). Impact would like to propose that the Investigation Summary Report be completed within 90 days from the date of your approval letter (dated December 23, 2008). Let me know if you have any questions. Thanks! Wenqing Fang Environmental Engineer Impact Environmental 170 Keyland Ct Bohemia, NY 11716 Tel: (631) 269-8800 I responded back that this would be fine. The deadline for submission of the SIR is 3/23/09. 3/13/09 - Raphael Ketani. I received the following e-mail from Mr. Fang: I tried to call you this morning regarding 2890 Review Avenue Site. Basically, our client had some financial issue with the insurance company, which led to the delay of the project. Now the issue is resolved and we had schedule the field work for the site from March 30 to April 1, which is the earliest date available for us. Subsequent to the field work, laboratory analysis and report generation will take approximately 3 weeks. We expect to submit the investigation summary report by April 23. Please let me know if this change is acceptable for the department. I e-mailed him back that this schedule was acceptable. 4/3/09 - Raphael Ketani. Mr. Fang sent me the following e-mail: This email is sent as an update for 2890 Review Avenue project. It has

AA TRUCK RENTING CORP (Continued) **S104073336**

taken longer than expected to install the 4-inch wells at the Review Ave Site. This is mainly due to the presence of fill material on the site. We were basically doing one well per day. We expect to finish all the wells by next Tuesday, followed by well development. Groundwater sampling will be performed two weeks after the well development. Low-flow technique will be utilized as per your request. However, please be advised that significant clay and silt was encountered during the well installation. Therefore, low-flow might turn out to be impractical for this site. If so, traditional purging and sampling method will be utilized. 4/23/09 - Raphael Ketani. I tried to contact Mr. Fang (cell (631) 790-3338 regarding whether the groundwater samples were taken, but could only leave a message. 4/24/09 - Raphael Ketani. Mr. Fang sent me the following e-mail response: On April 23, Impact conducted groundwater sampling, well survey and slug test at Review Avenue Site (two weeks after well development). It will take approximately two week for the laboratory analysis. After that, I will need approximately 10 days to prepare the report and have our client review it before I can send it to the DEC. 5/20/09 - Raphael Ketani. I received the following e-mail from Mr. Fang: This email is an update for the 2890 Review Ave project. A total of 6 4-inch wells are installed on the Site by 4/6/09. Well development was finished on 4/10/09. On 4/23/2009, two weeks after the development as required by the DEC, wells were gauged and sampled. No free-phase product was observed in any of the wells. This contradicts with the previous observations via 1-inch wells. Therefore, Impact propose to re-gauge the wells next week (4 weeks after sampling). Upon finishing of the second gauging, Impact will release the Investigation Summary Report for the Site. 6/25/09 - Raphael Ketani. I received the June 24, 2009 Investigation Summary Report. I reviewed the report. The site is on the east side of Dutch Kills and a little south of Borden Avenue. Groundwater is at 5 to 7 feet below the surface and flow is to the northwest. Measureable product was originally detected in the 1 inch wells from 0.8 to 1.4 feet. The product is a mix of gasoline and #6 oil. PID hits for MW-1 and MW-2 were the highest at about 15 feet below the surface. MW-3 had PID hits of 665 ppm and 645 ppm at from 2 to 5 feet with low readings below this. Groundwater was collected below the product. Analyte speciation indicates that this is weathered oil. No source of petroleum was identified in the soil. After development, the 4 inch wells were gauged on 4/23/09 and 6/5/09. No measureable product was found in any of the wells. On 6/12/09, all of the 1 inch wells, all of the 4 inch wells, and a pre-existing 4 inch well (MW-7H) were gauged. MW-7H had 0.01 feet of oil. All of the other wells didn't have oil. Soil analytical results for the 1 inch wells were almost completely non-detect. Soil analytical results for the 4 inch wells were almost completely non-detect with two hits just over TAGM limits. Groundwater analytical results for the 4 inch wells were almost entirely non-detect with MW-4 having 10 VOC hits, with two of the hits slightly above TAGM limits. 6/30/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800 in order to discuss the report, but could only leave a voice mail. I stated in the voice mail that soil removal wasn't necessary, but that groundwater should be evacuated from MW-4 in order to bring the analytical levels down, and that another round of groundwater sampling should take place during the next quarter. I sent Mr. Fang an e-mail (wfang@impactenvironmental.com) requesting the following: 1) a copy of any historical documents regarding the site 2) a copy of any

AA TRUCK RENTING CORP (Continued) **S104073336**

documents describing past remediation efforts I also asked him the following: 1) is the site to be sold in the near future 2) what will be the future use of the site 8/5/09 - Raphael Ketani. I tried to contact Mr. Fang via his cell (631) 664-6115 regarding groundwater monitoring and remediation, but could only leave a message. 8/6/09 - Raphael Ketani. I made a very quick unannounced site visit. The site was loaded with trucks of all kinds and there was some type of construction material storage facility along the Borden Avenue side (see pictures in E-docs). A tanker truck fuel loading structure was still situated a little ways inside the property. Otherwise, there was nothing to note. 8/10/09 - Raphael Ketani. I tried to contact Mr. Fang by his cell and by his desk phone, but could only leave a message with the receptionist. Mr. Fang called me back. He said that he had been away for two weeks and that is why DEC hasn't heard anything regarding progress at the site. He also said that he is working with the attorney for the owners of the site on a response document to DEC's latest comments. He said that DEC should receive the document soon. 9/22/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800/cell (631) 664-6115, but I could only leave a voice mail asking him why the DEC hadn't received any documentation regarding the continued monitoring and remediation of the site. 10/1/09 - Raphael Ketani. I reached Mr. Fang on his cell. I asked him where the response letter was addressing DEC's comments regarding the June 2009 report. Mr. Fang said that he remembered that he owes DEC a letter. He said that he has to get back to his boss and the client's lawyer regarding the June report and a response for DEC. I told Mr. Fang that the DEC still considers the spill to be unresolved and the site to be in violation. He said that he is aware of this. He asked for some time to send a response to DEC's comments. I asked him whether October 16 would be a reasonable deadline. He said it is and that he will get me a letter. 10/30/09 - Raphael Ketani. Mr. Fang sent me an e-mail with 6 attachments. These attachments were: a collection of Sanborn maps for the site; a tank affidavit; a Septmeber 2001 Tyree Brothers Phase I Report; an e-mail containing the May 1990 Tyree SIR and an October 1990 Tyree site status report; a collection of correspondences and reports (spill closure reports) up to November 2001 between Mr. Sullivan of DEC and Tyree Brothers Environmental; and a response letter dated October 30, 2009 from Mr. Fang. 11/2/09 - Raphael Ketani. I reviewed the 6 e-mails. The only one requiring a response was the 10/30/09 letter from Mr. Fang. Large above ground oil storage tanks were present on the site from 1936 to 1970. During this time, the site was operated as a storage terminal by Texaco. The current owner bought the site about 1971 and found the tanks to be clean. The tanks were removed. In the mean time, the owner will continue to use the site as a trucking company. The future use of the site is industrial. Mr. Fang responded that the wells were screened within the tidal range. The groundwater will be sampled at the next quarterly round. However, Mr. Fang stated that Impact Environmental will not excavate the contaminated soil at SP-1, SP-3, and SP-6. His reasoning was that this contamination represents an old spill with degraded oil and that the contamination is below the guidance values. He went on to state that no source area had been identified and that natural attentuation will take care of the matter. He referred to DEC's request to do excavation at these locations as random excavation , and added that they would be unlikely to find the source area. I drafted a response letter for Mr. Austin's approval. The response letter stated that the DEC is

AA TRUCK RENTING CORP (Continued) **S104073336**

requiring that the oil at MW-7H be collected, and that Impact Environmental resample all of the 4 inch wells. The letter was approved by Mr. Austin and went out today. 12/23/09 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800/cell (631) 664-6115, but could only leave a message regarding oil collection at MW-7H and resampling the 4 inch wells. 1/8/10 - Raphael Ketani. I tried to contact Mr. Fang at his office phone and at his cell, but could only leave messages that the DEC needed to receive updated information regarding the site, and that the oil must be collected from MW-7H. I tried to contact Mr. Kleaka (631) 269-8800, ext 304 (Mr. Fang's boss), but could only leave a message stating that the oil needed to be collected and that groundwater sampling needs to take place. I contacted Mr. Fang. He said that he is waiting for the owners of the property to sign the new contract with Impact Environmental. He said that he expects the contract to be signed no later than the end of January. I told him to do the groundwater sampling and oil collection as soon as Impact can. He said that he will. 2/10/10 - Raphael Ketani. I tried to contact Mr. Fang, but could only leave a message that the DEC wanted the oil collected and the groundwater sampled. 2/18/10 - Raphael Ketani. I tried to contact Mr. Fang, but could only leave a message that the DEC wanted the oil collected and the groundwater sampled. 2/22/10 - Raphael Ketani. I tried to contact Mr. Kleaka (631) 269-8800, ext 304, but could only leave a message requesting oil collection and groundwater sampling. 3/2/10 - Raphael Ketani. I tried to contact Mr. Kleaka, but he was in a meeting. So I left a voice mail that if the DEC doesn't receive a response by phone, or e-mail, or by letter regarding progress on the project, then we will take legal action. I could not contact Mr. Fang as he was not in the office. I tried contacting him by cell (631) 664-6115, but could only leave a message. Mr. Fang returned my call. He said that work at the site is scheduled for the week of 3/1/10. 3/4/10 - Raphael Ketani. Mr. Fang sent me the following e-mail today: Groundwater wells at Review Avenue were gauged and sampled today. No free-phase product was detected in any of the six 4-inch wells installed by Impact (MW-1 through MW-6). Approximately 0.1 inch of free-phase product was detected in one old well (MW-7H) installed by Tyree. Groundwater samples from MW-1 through MW-6 will be analyzed from 8260 and 8270. I will send you a letter report when I have the results. 3/29/10 - Raphael Ketani. Today I received the First Quarter Monitoring Report from Impact Environmental dated 3/12/10. I reviewed the report. The groundwater analytical results were almost entirely non-detect. There were several hits, but they were just above the TAGM limits, with the exception of one 54 ppb hit. Well MW-7H showed 0.01 feet of oil. I e-mailed Mr. Fang that he should do an EFR event for MW-7H and then sample all of the wells for the second quarterly round. 5/24/10 - Raphael Ketani. I contacted Mr. Fang (631) 269-8800/cell (631) 664-6115. He said that the groundwater sampling will take place this week. The oil at MW-7H will be collected using a sump skimmer. He said that he should be able to get DEC this round's analytical results in about 3 weeks. 6/22/10 - Raphael Ketani. Today I received the Second Quarter 2010 Groundwater Monitoring Report from Impact Environmental. I reviewed the report. All of the analytical results were non-detect, except those for MW-4 and MW-5. The samples from these wells had gasoline range VOCs that were up to 119 ppb of n-propylbenzene. I wrote back in response that the contaminated groundwater may be removed by pumping. I added that the report did not mention how successful Impact Environmental was in collecting oil

AA TRUCK RENTING CORP (Continued) **S104073336**

from MW-7H. I also wrote that, as a result of the elevated VOC hits, another round of sampling will be needed in the third quarter of 2010. 7/14/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, ext 325/cell (631) 664-6115 regarding progress at the site, but could only leave a message. 7/26/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, ext 325/cell (631) 664-6115 regarding progress at the site, but could only leave a message. I contacted Ms. Suchman (212) 806-6656 and explained that I haven't heard anything from Mr. Fang in a month regarding the groundwater and oil pumping. She said that she thought this would take place during the next sampling round (third sampling quarter). I told her that these were tasks that the DEC expected to be performed very soon after the 6/22/10 letter was sent. She said that she will call Mr. Kleaka and Mr. Fang and have them get on top of the situation. 7/26/10 - Raphael Ketani. Mr. Fang sent me the following e-mail today: Absorbing well sock was installed in MW-7H about a month ago. Last time we checked, the well has no free-phase product in it. We recently changed the sock and will wait for another month to go back to see if there is any additional product. If not, we will properly develop and sample that well. 7/28/10 - Raphael Ketani. Mr. Fang (631) 269-8800 called me today. He said that they recently took out the sock from MW-7H. It was slightly dark, but not saturated with oil. He put another sock in. He will wait for a month and then check the new sock. If the sock has little or no oil, and if there is no visible sheen, then he will develop the well for sampling. I commented that MW-4 and MW-5 had slightly elevated analytes. He said that he will evacuate about 55 to 100 gals. of water from these wells and then sample them. Mr. Fang asked that, in the future, if I need to contact him, I should send an e-mail or contact his supervisor, Mr. Kleaka. 9/23/10 - Raphael Ketani. I tried to contact Mr. Fang (631) 269-8800, but I could only leave a message. 9/27/10 - Raphael Ketani. I received the Third Quarter Monitoring Report dated 9/9/10 from Impact Environmental. I reviewed the report and found that the results for the third quarter were almost entirely non-detect. The few hits that were present were not far above the TAGM limits. The report also mentioned that there was no product in the wells. Based upon the data in the Third Quarter Monitoring Report, I have determined that any residual contamination that is present will not be a threat to the public or the environment. Therefore, I am closing the spill case. 8/10/11 - Raphael Ketani. Today I received a letter from Mr. Fang indicating that the wells at the site had been plugged and abandoned. "

Remarks: "Results of an analytical test revealed historic contamination at above site."

DEC Memo:	"09/05/06 -Zielinski This spill case reassigned from CO to Region 2. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. Spill transferred to Greco as part of Spills Closure Initiative in July, 2005. Contacted original callers company and determined the spill name and address was originally put into system incorrectly as 20-90 Review Ave. (also incorrectly listed as 20090 Review Ave.). Neither of the above addresses is an actual address in Queens County, however, 28-90 is, and 28-90 has two tanks similar to the ones referenced in the spill report. 28-90 is also a the home of a company that is a client of the tank test company which called in the tank test failures. Spill name and address were changed to 28-90 Review Ave. The company at that addres is AA Truck Rental. JDG 8/3/05 Contacted Mr. PJ McDermott 718- 937-8611 at AA Trucking. Mr. McDermott is checking records and will get back to me. JDG 8/3/05 11/21/05 Tried to recontact Mr. McDermott, but he was unavailable.

28-90 REVIEW AVENUE (Continued) **S100879318**

JDG 12/30/05 Tried to recontact Mr. McDermott, but he was unavailable. Left message. JDG 01/04/06 Insufficient documentation was received following several attempts. Have documentation that the tanks passed tightness tests in 1998, and were later closed in place in 1999, however, there is no record of a cleanup. Project needs further work, as release was characterized as requiring a major excavation. Should be returned to region 2 for further investigation at end of Spill Closure Initiative. 9/8/06 - Jon Greco of Central Office sent an email stating: Most recently, the owner's representative (Mr. Michael Paskoff, who has been performing tank tests at the site for many years, and it was his firm that called in the release 13 years ago) has asked that I close the spill, as it was called in solely due to an inconclusive tank test. He has copied me on a letter to the owner (Mr. Eric Roberts) and the letter reports that while the original tests were inconclusive, the tanks were retested later that day and were found to be tight. He goes on to say that no repairs were made and no excavations were performed by his firm. Finally, he claims the tests were observed by Inspector Geldman, of the NYC Fire Department. Reviewed PBS records, confirmed tank tested tight. Spills Closed. _ KST "

Remarks: "INCONCLUSIVE TEST RESULT TO REPAIR & RETEST - CALLED AGAIN AT 1300 OTHER 4000 GAL TANK ALSO FAILED MAJOR EXCAVATION."

DEC Memo:	"Sangesland spoke to Jill Guerra at GCI. Her firm did a Phase 2 for a sale and found old contaminated soil. She is going to check the current status on the case and call Sangesland back with details. 07/05/11 As per Langan, the source of the spill is a UST. Underground piping was traced from a petrometer inside the site building.Approx 2,000 cubic yards of soil was affected as a result of the spill of which 450 cubic yards contain hazardous concentration of lead. GW was not significantly impacted. Seven soil borings were advanced in the UST locations.Soil borings log were provided.VOCs were not detected in any of the soil samples.Twenty two metals were detected in soil samples.Copper, Lead, nickel concentration exceeded DEC Part 375 RSCOs. Based on high concentration of lead, approx. 450 cubic yards of soil will be considered as RCRA hazardouse waste.Site remediation tasks include: closure of the UST via removal, removal of petroleum

COMMERCIAL (Continued) **S110750742**

contaminated soil, collection of end point samples, placement of clean fill to restore the Site conditions, air monitoring during the remediation.(sr) 7/10/12 - Austin - Received phone call from Ms. Armstrong of Langan. They wished to proceed with the excavation plan as outlined by the RAP and approval issued last year. DEC Rahman was out of the office for an extended period, so I sent Ms. Armstrong via e-mail the RAP approval letter and the original schedule for implementation submitted by Langan on 7/14/12. I requested that a new schedule be submitted to us for implementation, before Langan could proceed. - end 09/18/12 Closure report in edocs. As per the report, Area A: USTs and associated piping were not detected. The source of spill 1009365 was not identified and is likely related to historic site use or poor housekeeping. About 213 tons of petroleum contaminated soil was removed.Ground water was not impacted. End point soil sample result indicate that petroleum impacted soil has been removed.Source of spill 1204192 was a historic 1,250 gallon UST.The UST was removed in accordance with regulations.Approx 99 tons of petroleum impacted soil was removed and disposed.Ground water was not impacted. End point soil samples result indicate that residual contamination within acceptable limit.Case closed.(sr)"

Remarks: "Historical Spill- Odor in soil. Phase 2."

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the

ACCESS SELF STORAGE (Continued) **1000872149**

estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"04/28/06-Hiralkumar Patel. Left message for David (Cell: 516-695-6303). PBS#: 2-311774 Owner's information on PBS record: 29-10 Hunters Point Avenue Co. LLC 60 East 56th STreet 7th Floor Long Island City, NY Ph. (718) 786-0300 Tried number on PBS record and operator gave me Mr. Scotty's number, who may know about owner/manager of property. Left message for Mr. Scotty (516-699-4000). 05/02/06-Hiralkumar Patel. Received message from Keith Khouri. Spoke to Mr. Khouri, GM of property. he is also working for property at Union, NJ. as per Mr. Khouri, the company named Midcounty Mechanical is working to find out leak in UST system. and he will give me contact name and number of this company. Department can send letter to following address to Mr. Khouri Keith Khouri 400 Clermoont Terrace Union, NJ 07083 Cell: (908) 230-0819 Off.: (718) 316-9261 FAX : (908) 353-8423 TTF sent out to Mr. Khouri. FAxed to Mr. Khouri. Received call from Mr. Khouri's office. contact at Midcount Mechanical is Kenny PH. (718) 847-1800 (O) (347) 386-2891 (C) 05/10/06-Hiralkumar Patel. Left message for Kenny. 05/11/06-Hiralkumar Patel. Spoke to operator at Midcounty. she gave message to Kenny, but Kenny is out in field and will call back tomorrow morning. Received message from Kenny. they are going to do tank test again on Saturday May 13, 2006. 05/15/06-Hiralkumar Patel. Received call from Mr. Khouri. as per him, they found problem with fill line and after repair they did test again and system passed the test. asked him to send me letter report stating cause of problem and observations. Mr. Kasper from Midcounty Mechanical came to office to drop off tank test results and letter. as per letter, they have escavated the top of the tank and performed a test and found a leak on the vent line where it passes through the foundation wall to the outside of the building. replaced vent line and tested again and system passed the test. based on tank test results, case is closed. NFA sent out to Mr. Khouri."

(631) 981-3785 3:51 PM:- a spill report created as wasn't reported by RP yet. 29-01 Borden Realty Co., LLC. **property owner** c/o Parkwill Management Corp. **management company** 60 East 56th Street, 7th Floor New York, NY 10022 Attn.: Robert Corroon **property owner** Ph. (212) 751-4620 Ext. 103 email: rcorroon@ix.netcom.com 03/21/12-Hiralkumar Patel. 12:33 PM:- spoke with Greg at ELM. he mentioned that after yesterday's site visit, work has been stopped as need to clarify some issues. he mentioned that as per approved work plan, they were not planning to excavate too deep below water table and were planning to use on-site soil to backfill the excavation, if not contaminated. asked him to contact DEC Hussein regarding use of on-site soil to backfill the excavation. he mentioned that they were planning to excavation 2-4 ft below the water table. informed him that the Department requires complete delineation of contamination and excavation depth can be determined based on results of soil/groundwater samples. they have put absorbent pads on water in excavation. he asked to contact Mimi Raygorodetsky. 12:42 PM:- spoke with Mimi at ELM. informed her that the Department require complete delineation and remediation of contamination. Mimi mentioned that they were planning to excavate to feasible limit and collect endpoint samples. she also mentioned that they are planning to bring a frac tank on-site to pump contaminated water from excavation. agreed with her plan and informed Mimi that based on endpoint samples, the department may require additional investigation. asked her to send an email with description of the cleanup plan and a work schedule. discussed with DEC Austin. 2:55 PM:- sent letter to Mr. Corroon requiring removal of petroleum product from excavation, soil/gw delineation and endpoint samples. asked him to submit report by 04/30/12. letter emailed to DEC Paul, DEC Austin, DEC Oliva, DEC Hussein, DEC Ross and Mimi. 3:25 PM:- received call from Mimi. she mentioned that vacuum truck will be on-site tomorrow. they will continue excavation of contaminated material. 4:04 PM:- received call from Mimi and requested a site meeting. scheduled a site visit at 10 AM tomorrow. 03/22/12-Hiralkumar Patel. 10:00 AM:- visited site. met with Mimi, Greg and Mr. Corroon. vacuum truck was on-site. due to spill in bronx, left site before contractor begun excavation. Mimi will send update. 12:25 PM:- received email from Mimi. they dewatered teh pit and then excavated contaminated soil under water table. they dug to approx. 16 to 18 feet below grade (about 6 to 8 feet below the water table) and found clay layer with organic matter. it was light brown in color and exhibited no odor or PID readings. collected endpoint samples. 03/26/12-Hiralkumar Patel. received email from Mimi (at 6:21 PM on 03/23/12). she wanted to confirmed that petroleum contamination issue related to spill #: 1008547 and 1114115 will be handled in spills and DEC Ross will manage chlorinated solvent and PCB contamination. also she wanted to confirm that the department's letter dated 03/21/12 orerrule the previous approval for petroleum related issue. 03/28/12-Hiralkumar Patel. 1:17 PM:- left message for Mimi. 04/02/12-Hiralkumar Patel. 3:49 PM:- received message from Mimi. they received lab data and will submit tomorrow. 04/03/12-Hiralkumar Patel. 4:21 PM:- received email from Mimi including results of endpoint samples. she is still waiting for results of E1, endpoint sample collected at 18 ft bg. reviewed sample results. it is missing results of sidewall samples E2, E3 and E4 also. SVOC contamination found in some samples. need to reivew data

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

of other samples. 4:40 PM:- sent email to Mimi and asked to submit missing data prior to any discussion. 04/04/12-Hiralkumar Patel. 11:14 AM:- received email from Greg including a revised map with sampling depths. 04/10/12-Hiralkumar Patel. 4:40 PM:- received email from Mimi including result of sample E1, which was collected at 18 ft bg. reviewed available endpoint sample results. no VOCs found in any samples, but some SVOCs found. SVOC compounds were found below 3,300 ppb in most of the samples, except sample E9 (max 15,000 ppb Chrysene) and E13 (max 11,000 ppb Benzo(b)flouranthene). samples E9 and E13 were the endpoint bottom samples collected at 11 ft bg. another sample E1 was collected at 18 ft bg via test pit through excavation bottom. 04/11/12-Hiralkumar Patel. received call from Mimi and Greg. Mimi mentioned that south sidewall samples E2, E3 and E4 were composited in sample EC1. she also mentioned that after collecting endpoint bottom samples E9 through E13, they did test pit in middle of excavation and collected sample E1 from 18 ft bg. 04/12/12-Hiralkumar Patel. discussed with DEC Austin. based on following, he mentioned that no further investigation is needed: - as there is no Naphthalene found in endpoint samples, other SVOC compounds could be result of backfill material - SVOC compounds were found in other part of property during investigation in Dec. 2010 - oil and water from tank excavation was pumped out 3:28 PM:- sent email to Mimi and asked to submit a final closure report. email copied to Greg and Mr. Corroon. 04/23/12-Hiralkumar Patel. 11:16 AM:- spoke with Mimi. asked her if any product appeared on water after initial pump out. she mentioned that after excavating soil contamination and collecting soil sample at 18 ft depth, they left excavation open for couple of hours to let water recharge. at that point, no product was observed on water and they collected water sample. asked her to submit a final closure report. 05/23/12-Hiralkumar Patel. 10:21 AM:- sent email to Mimi inquiring about tank closure report. email copied to Greg and Mr. Corroon. 10:23 AM:- received email from Mimi. the report is complete and currently being reviewed by their client. will submit report shortly, once reviewed. 06/27/12-Hiralkumar Patel. 2:56 PM:- spoke with Mimi. she mentioned that due to some conflicts between onwer and ELM group, report was not submitted, but she is finalizing the report and will submit in couple of days. 07/13/12-Hiralkumar Patel. received tank removal/spill closure report. based on available information, case closed. 3:29 PM:- sent spill closure letter to Mr. Corroon. letter emailed to Mr. Corroon, Mimi and DEC Hassan. **refer to spill #: 1008547 also.**"

AM:- spoke with Mr. Corroon. he owns the property. currently, site has one story warehouse building. Mr. Corroon is renting this place and new tenant will demolish the existing building and redevelop. Mr. Corroon refuse to provide info about future use. asked Mr. Corroon to provide complete contact info of the future tenant. Mr. Corroon mentioned that they owns property for long time and they abandoned two 5,000 gal tanks about 7 years ago. during recent investigation, oily soil found near the boiler at 5-6 ft depth. Mr. Corroon suspects an old drywell in the area. asked Mr. Corroon to submit available reports for environmental investigation. 11:39 AM:- received email from Mr. Corroon. they are still negotiating the lease agreement and will provide futuer tenant's info, once lease is signed. 01/05/11-Hiralkumar Patel. 10:33 AM:- left message for Mr. Corroon to submit report(s). 01/10/11-Hiralkumar Patel. 12:38 PM:- received message from Mr. Corroon. he will talk to Keith at ELM group and ask to submit documents. 01/20/11-Hiralkumar Patel. 12:52 PM:- received call from Mr. Corroon. he will submit documents by 01/24/11. 01/21/11-Hiralkumar Patel. 3:57 PM:- received call from Mimi. she mentioned that due to confidentiality agreement between the owner and future tenant, they can not release the full langan report, but will include work summary in their report. Mimi mentioned that during field work, they found high PID, staining and product on tip of 1 inch diameter piezometer installed in boring. but no contamination found in soil or groundwater samples. Mimi will submit report on 01/24/11. 01/25/11-Hiralkumar Patel. received email from Mimi (at 5:40 PM on 01/24/11). she mentioned that owner is reviewing the report and she will send report by tomorrow. 4:16 PM:- received call from Mike from Langan. they did Phase I and Phase II investigations. asked him to submit copies of these reports. he will talk to his client and will send copies, if gets approval. 01/26/11-Hiralkumar Patel. 2:12 PM:- received letter report from Mimi including summary of reports prepared by Langan. 3:14 PM:- sent email to Mimi. asked her to submit complete Phase I and Phase II reports, prepared by Langan, for review. 3:27 PM:- received email from Keith from ELM. they got approval to release Langan's reports and will submit tomorrow. 01/31/11-Hiralkumar Patel. 11:00 AM:- received copy of Phase I and Phase II reports. abstract of Phase I: - prepared a Phase I for two properties: 29-01 Borden Ave (Block/Lot: 292/1) and 29-10 Hunters Point Ave (Block/Lot: 292/27) - Dutch Kills to the west of the property - Lot 1 is improved with an approx. 172,000 sq. ft. 1-story manufacturing building and Lot 27 is improved with an approx. 161,480 sq. ft. 1-story manufacturing building - both buildings are vacant - abandoned, generally east-west oriented railroad tracks are located in an overgrown vegetated area between the buildings - proposed development will include the demolition of existing structures and the construction of a FedEx warehouse/distribution facility - proposed design includes a one-story steel frame building with mezzanine level - a new 132,000 sq. ft. building will be located in the eastern section of the site - the first floor will consist of a 10-inch concrete slab that will be used primarily for vehicle parking and a partial mezzanine level will be used primarily as office and mechanical shop - the western section of the site will be paved parking area which extends to the western property line along the Dutch Kills - Lot 1 was occupied by Radio Engineering Laboratories from 1962-1970, by Warner Lambert Co., Inc-American Chiclet Division from 1977-1986, Waldes Truarc Inc. (a retaining ring manufacturer) in 1991 and Acosta Artdeco (concrete precast facility),

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

Mountain Air Mechanical Inc. (cooling and heating sales and servicing) in 2005 - Lot 27 was occupied by the National Envelope corp. from approx. 1981-2006 less than ---------- - black staining was observed in the main interior loading dock of the building at Lot 1 - black staining on the wall of the boiler room in building at Lot 27 - the center of the property (an area between two lots) was excavated to construct a basin with access to the Dutch Kills - the basin was filled in for development purposes between 1900 and 1924 - hazardous waste was generated at the site between 1994-2007 - on RCRA database, the subject property was listed as a large quantity generator in 1994-1996 and a small quantity generator from 2000-2007 in relation to waste generated at National Envelope at 29-10 Hunters Point Ave (Lot 27) less than ---------- - waste types included non-listed ignitable wastes, unknown waste, PCE and silver less than --------- - eight violation related to generation of hazardous waste were issued by US EPA to National Envelope (EPA ID# NYD001344886) between 1998 and 2007 (one on 10/06/1998, three on 05/19/2000 and four on 05/09/2007) less than ---------- - according to USGS maps, the subject property is relatively flat and the surrounding area slopes gently towards the west - groundwater at the site is approx. 8 ft bg and is presumed to flow west towards teh Dutch Kills - the subject site was not listed in the drycleaner database; however, one dry cleaner was identified 900 ft east, northeast of the site and is no longer in operation less than ---------- - 1898 Sanborn Map: the subject property is undeveloped; a proposed slip of the Dutch Kills extends through the center of the property - 1915 Sanborn Map: the subject site unchanged, except that the proposed slip is now labeled a basin - 1970 Sanborn Map: Lot 1 is improved with a one-story buiding constructed between 1956 and 1957 that is occupied by Radio Engineering Laboratories, Inc.; Lot 27 is improved with a one-story building, including a loft, offices and an electrical appliance warehouse, constructed between 1951 and 1952; the basin connected to the Dutch Kills was filled and the center of the property is occupied by railroad tracks that run east-west and then curve southeast along 30th street less than -------- - according to sanborn maps, the basin was apparently filled in the late 1940s for development purposes; however, based on 1924 aerial photograph, the basin was filled some time before 1924 - as per 1962 City Directory, Lot 1 was listed as AmerTran Transformers Division of Radio Engineering Lab less than ---------- - as per 1983 City Directory, Lot 1 was listed as Warner Lambert Company, which is a manufacturer of pharmaceuticals, gum, and candy - as per 1991 City Directory, Lot 1 was listed as Waldes Truarc Inc. (a retaining ring manufacturer) - multiple saw cut markings and steel plates observed in both buildings (indicating old sub-surface pits, drainage pit, hydraulic lifts etc.) - on lot 27, bank of four slop sinks (which is roller wash sink area) is located immediately east of the boiler room at the western extent of the manufacturing floor. sections of piping below the sinks were broken; however, a drain below one of the sinks discharged into a bucket fixed into the concrete floor less than -------- - additional slop sink is located, on lot 27, along the northern wall near the center of the building (this sink in area close to ink storage). slop sink drained through a hose into an area below 2 ft by 3 ft metal plate - the loading dock in Lot 1 contains two approx. 10 ft by 20 ft concrete pads, two 8 inch by 8 inch dry wells, and four steel plates ranging in size from 2 ft by 2 ft to 2 ft by 3 ft in the eastern portion of the loading dock; as per owner's representative, these area may be related to a

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

decommissioned UST - two fill ports and two vent pipes were observed along the southern exterior wall of the building on Lot 1 - a fill port and vent pipe were observed along the center of the western exterior wall in the parking lot adjacent to the boiler room in Lot 27 abstract of Phase II: - groundwater measurements recorded during the Phase II ranged from 6 to 11 ft bg and are likely influenced by tidal fluctuations of the Dutch Kills - conducted geophysical survey; confirmed location of 20,000 gal UST in western portion of the building on Lot 27 and identified two approx. 5,000 gal USTs in the central southernmost portion of the building on Lot 1 - scattered geophysical anomalies, indicative of unconsolidated soil, were identified throughout the site - installed 12 soil borings (SB1 through SB12) to depths ranging from 12 to 16 ft bg - two soil samples were collected per boring, except SB2 where recovery was limited - soil was observed to be historic urban fill material predominately of brown or grey-brown medium to fine sand with some silt, gravel, brick, wood and concrete - fill material extended into groundwater, upto 16 ft bg - petroleum-related odors and staining, residual petroleum in unsaturated soil, and PID readings ranging from 29.1 to 9,999 ppm were identified in boring SB-7 adjacent to the USTs in Lot 1 - heterogeneous fill material included creosote-impacted wood near the center of the subject property (in area of former basin) in borings SB5 and SB6 at depths between 10 and 12 ft bg; PID readings at this interval ranged from 60 to 96.1 ppm in SB5, but no PID readings detected in SB6 - heavy SVOC contamiantion found in sample at 10-12 ft in SB5, at 8-10 ft in SB6, at 6-8 ft in SB7, at 2-4 and 6-8 ft in SB9 and at 2-4 and 8-10 ft in SB10 - each of the 12 borings were converted into 1 inch diameter temporary monitoring wells with 10 ft of screen and groundwater samples were collected - petroleum related sheen was observed on the groundwater at SB7 less than ---------- - temporary well were not surveyed - found 530 ppb Naphthalene in groundwater from TMW-5 - eight sub-slab soil vapor samples were collected by drilling 6 inches beyond the floor slab - ambient air sample was collected in the parking lot of Lot 27 along the Dutch Kills - PCE contamination not found in samples, but TCE found in eight soil samples from seven borings (out of 12 boring) and two groundwater samples - reporting limit of TCE and PCE were 260 ppb for soil sample at 6-8 ft bg in SB7 and were 530 ppb for soil sample at 10-12 ft bg in SB5 less than ------- TCE in soil samples (in ppb): ----------SB2-------SB3-------SB3--------SB4-------SB5-------SB6------ -SB10-------SB11 2-4 ft 2-4 ft 8-10 ft 8-10 ft 2-4 ft 2-4 ft 8-10 ft 2-4 ft
TCE-------3.2--------51-------5.3--------3.6-------3.7-------5. 0-------5.7--------4.4 TCE in groundwater samples (in ppb): ----------TMW2------TMW3 TCE--------4.9-------1.3 soil-vapor analyticals (in ug/m3)

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

place. these USTs were installed in Apr. 1957 and closed in July 2006 and were being used to store #4 oil. as per record, these tanks were tested on 01/28/03. - no other spills found for lot 1. 2. Lot 27: 29-10 Hunters Point Ave - alternate address: none - PBS #: 2-311774. as per PBS record, site has one 20,000 gal #2 oil UST in-service. UST installed in Jun 1952 and tested on 05/13/06. - spills on property: 9604370, 0102148, 0209638 and 0601095 - spill #: 9604370 was reported on 07/01/1996 due to 75 gal #2 oil spill during delivery due to defective gauge. case closed. - spill #: 0102148 was reported on 05/25/2001 due to tank test failure. case was closed based on passing retest result on 06/11/01. - spill #: 0209638 was reported on 12/19/2002 by FDNY due to findings of an unknown amount of ink spilled into Dutch Kills. as per DEC Zhao, a drain discharge found into Kills and dye test was planned (either by NYS DLE, NYC DEP or Coast Guard). spill closed. - spill #: 0601095 was reported on 04/28/2006 due to tank test failure. case was closed based on passing retest result. 3:33 PM:- sent email to Keith at ELM. asked him to send details about violation issued to National Envelope by EPA. email copied to Mike at Langan. 4:10 PM:- received call from Mimi. discussed project with Mimi and Keith. Mimi requested that Langan should not be included on any future correspondence. informed her that Langan was included as they prepared Phase I and Phase II reports, but as Langan works for potential tenant, agreed with Mimi's request. she will contact Langan to get more details aboout EPA violations issued to National Envelope. during discussion, asked Mimi to confirm integrity of the 20,000 gal tank by having tank tightness test (which is due in May 2011). also informed her that the department requires complete delineation of soil and groundwater (if applicable) contamination around the two 5,000 gal USTs in Lot 1, site-specific groundwater flow direction (via installation of minimum of three permanent at least 4 inch wells) and tidal survey. also informed her that if owner choose to remove the previously abandoned 5,000 gal USTs from Lot 1 then the wells may not be needed based on endpoint sample results. asked Mimi to provide following information by 02/11/11: - details about EPA violation on Lot 27 - schedule for tightness test for 20,000 gal UST on Lot 27 - whether soil/gw investigation or tanks removal on Lot 1 4:38 PM:- received email from Mike from Langan. Mike mentioned that EDR report only indicate about number of violations and its categories and doesn't have any further details. EPA violations were issued for the following categories: - pre-transport - preparedness and prevention - state statute or regulation - general - manifest 02/07/11-Hiralkumar Patel. 11:26 AM:- received call from Mimi. she spoke with Mr. Corroon. she mentioned that the 20,000 gal UST will be tested soon to confirm its integrity. she also mentioned that they are planning to do some geoprobes to delineate the contamination and will remediate the area when the exsiting building will be demolished. informed her that if building demolition occurs by end of April 2011 then the Department can wait for remediation at that time, otherwise onwer has to start remediation in May 2011. informed her that the property owner has to submit written document confirming that the remediation will start by May 2011 (whether building demolished or not). informed Mimi that the new building foundation must not be poured in contaminated zone until remediation is completed or a remedial action plan is approved. no CBS record found on any lot. DEC Vought will check haz-waste databases for any record. 2/15/11-Vought-Site also referred to Section A due to concentrations of up to 5880ug/m3 PCE found in soil

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

vapor samples. Site was formerly occupied by National Envelope who left site (and also had documented on-site use of solvents). DEC Spills unit is currently managing investigation and remedation of #6 free product found at on-Site USTs. Owner is currently seeking to sell property to Federal Express so that they may demolish onsite structures and construct new onsite distribution center. A full file review needs to be performed to aid in site classification. 3/9/11-Vought-Meeting with RHWRE to discuss possible transfer of chlorinated solvent issue to another PM in Section A due to heavy workload. 03/21/11-Hiralkumar Patel. 4:33 PM:- sent email to Mimi inquiring update. 03/22/11-Hiralkumar Patel. 4:29 PM:- received email from Mimi. she mentioned that owner is still discussing about either investigation now or tank removal when building demolition occurs. Mimi will call back by next week with confirmed answer. 04/05/11-Hiralkumar Patel. received email from Mimi (at 6:27 PM on 04/01/11). she mentioned that on-site building will be demolished in 8-9 months and at that point, old UST and associated contamination will be removed. discussed with DEC Austin about delineation of soil/gw contamination and high PCE/TCE in soil-vapor samples. Austin asked to send email with brief discription about the project for possible transfer to Section A due to PCE/TCE concentration and historical use of chlorinated solvents on site. 2:49 PM:- sent email to DEC Austin with site description. 04/06/11-Hiralkumar Patel. 9:09 AM:- received response from DEC Jane indicating that as no contamination found in soil or groundwater samples, site would not require any further investigation under the superfund program. she mentioned that the department may require investigation if, during future work (petroleum investigation/remediation), any additional data is generated that identifies chlorinated solvents in soil or groundwater. discussed with DEC Austin. he asked for further investigation regarding chlorinated solvents. he asked to find out location of chlorinated solvent storage, operation, discharge points, drain structures etc. he mentioned that if the property owner doesn't know about storage/use/discharge location of chlorinated solvents, then the department requires soil/groundwater sampling on both lots with multiple borings/wells. 1:49 PM:- left message for Mimi. 1:51 PM:- left message for Mr. Corroon. 2:09 PM:- sent email Mimi and Mr. Corroon informing that the department requires further investigation of petroleum and chlorinated solvent contamination. asked them to call back to discuss further. 3:48 PM:- received call from Mimi. informed her that as building demolition would occur after 9 months, petroleum remediation would not occur for another year and the department does not agree with this time frame. as such the department requires complete delineation of petroleum contamination. also discussed about chlorinated solvent issue. Mimi mentioned that the property's insurance company is covering all issues except petroleum so any investigation under the spill number will be paid by property owner. and owner wants to investigate chlorinated solvent issue under other program so they can get coverage from insurance company. Mimi asked to send copy of regulation which allows spills section to require investigation of non-petroleum substance. discussed with DEC Austin. he mentioned that the department, not the spills section, requires the investigation of chlorinated solvent contamination. he mentioned that if responsible party refuse to do such investigation and inquires about authority of spills section, then case will be referred to legal. 4:18 PM:- left message for Mimi. 4:59 PM:- received message from Mimi. 04/07/11-Hiralkumar Patel.

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

10:46 AM:- received message from Mr. Corroon. 04/08/11-Hiralkumar Patel. 10:35 AM:- left message for Mimi. 04/11/11-Hiralkumar Patel. 11:57 AM:- received call from Mimi and Keith from ELM. Mimi asked about regulation for PCE investigation. informed Mimi that the department (not the spill section) requires PCE investigation and all DEC rules/regulation applies in this matter. informed her that after getting preliminary data, this case may be transferred to other section. Mimi mentioned that after findings of PCE use on property and PCE concentration in soil vapor samples, they did further investigation to locate locations of chemical storage/process/discharge/drains etc. and now instead of collecting soil samples, they wants to use other technique which reads only halogenated compounds in soil and groundwater during delineation work. this way they don't need to wait for lab results. asked Mimi to submit details about this technique so can be discussed with supervisor. Mimi also inquired about delineation of petroleum contamination. as discussed earlier, approved Mimi's request for visual delineation via geoprobe and not requiring soil/groundwater sampling as it is #6 oil and expecting to see stained soil if area is contaminated. 04/13/11-Hiralkumar Patel. 9:56 AM:- received message from Mr. Corroon. 04/14/11-Hiralkumar Patel. 2:05 PM:- spoke with Mr. Corroon. informed him about required investigation for petroleum as well as chlorinated solvent. during conversation Mr. Corroon mentioned that currently they don't have any insurance so there is no issue about covering cost of chlorinated spill investigation. 04/22/11-Hiralkumar Patel. received email from Mimi (at 7:16 PM on 04/21/11) including soil vapor contour map. she mentioned that heavy PCE contamination in soil-vapor samples were found on western side in southern lot (Lot 1), but as per Phase I, chlorinated solvent was used in northern building only (Lot 27). Mimi proposed visual observation of both properties, potential geophysical survey on western portion of the two properties and delineation of chlorinated solvent contamination around potential release points. she proposed to collect soil sample with most significant evidence of impact (PID/staining/odor etc.), if present or else collection of soil sample right above the water table. she also proposed collection of groundwater sample if contamination observed in boring. 04/29/11-Hiralkumar Patel. discussed proposed PCE investigation method with DEC Austin. before approving sampling strategy, Austin asked to inspect the site to find out possible PCE release areas (storage/process/discharge/drains/pit/damanged floor/stains etc.). 2:46 PM:- sent email to Mimi and asked her to schedule a site visit with full access to every rooms on property. email copied to Keith and Mr. Corroon. 05/03/11-Hiralkumar Patel. scheduled a site visit at 11 AM tomorrow. 05/04/11-Hiralkumar Patel. 11:00 AM:- visited site. met with Mr. Corroon, Keith (ELM) and Kenny (Midcounty Mechanical). Kenny mentioned that his company was contracted since 1971 to maintain/service electrical/mechanical parts. Kenny Midcounty Mechanical Ph. (347) 386-2891 email: midcountymechanical@verizon.net Kenny mentioned that the company was primarily making plain envelopes (cutting papers, applying glue and fold it). national envelope was also using three printing machines to print some utility company envelopes. three parallel printing machines were located in central western portion of lot 27 starting with one machine close to western foundation wall and close to 20,000 gal UST. former boring SB1 installed in parking lot, in area on other side of western foundation wall. no contamination found in boring SB1. as per Kenny, the company

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

was storing ink in about 5-6 55 gal drum. inspected drum storage area, which is located close to former boring SB8. found sewage injection pit not far from the ink storage area. as per Kenny, all the drains inside the building is connected to this sewage injection pit and from this pit, sewage pumped out into city sewer system (pump was needed as city sewer is at higher elevation than pit inside the building). Kenny mentioned that about 6-7 years ago, company changed from oil based ink to water based ink. the former boring SB8 was installed in area between the ink storage and sewage injection pit. as no soil/groundwater/soil-vapor contamination found in SB-08, Keith mentioned that no further investigation is needed in former ink storage area. also inspected a machine shop where internal machines were being repaired. no sign of spills (odor or stain on concrete) observed in machine shop area. while discussing about EPA violations, Kenny mentioned that company received EPA violations due to illegal discharge of roller wash waste into city sewer system. inspected roller wash sink area. Kenny mentioned that workers were dumping roller washing waste into sewer system but was stopped after EPA's violation. during inspection, found pit in floor and found paper waste into the pit. Kenny mentioned that there was a paper waste compactor located on this pit. there was no use of any chemical in the pit. this pit was found closer to loading area closer to former boring SB2. inspected area of former 5,000 gal USTs in Lot 1. Kenny mentioned that their company changed from oil to gas heating system. Kenny remembers that both 5,000 gal tanks were cleaned and tested tight prior to abandoning in place. found two concrete pads where old boilers were located. found a dry well pit (0.5 ft by 0.5 ft) adjacent to both boiiler pads. Kenny suspect that oil found in SB7 could be result of oil dumping into two dry well pits. Keith will conduct a geoprobe investigation to delineation petroleum contamination. based on observations during the site visit, asked Keith to investigate in three areas: area around SB3, roller washing sink and area along the drain structure from the roller wash sink. also suggest him to conduct a soil-vapor delineation starting from SB3. Keith will discuss with his supervisor and submit work plan next week. asked Kenny to submit documents regarding testing of 5,000 gal tanks prior to abandoning. 4:49 PM:- sent email to Kenny and asked him to submit documents regarding cleaning/testing/abandoning of two 5,000 gal USTs in Lot 1. email copied to Keith and Mr. Corroon. 05/19/11-Hiralkumar Patel. 2:03 PM:- spoke with Mimi. they are currently reviewing the work plan and once client approves it, she will submit work plan by 05/23/11. 05/20/11-Hiralkumar Patel. 4:08 PM:- received eamil from Mimi. she hasn't got chance to review the work plan. she will send work plan soon after client's review. 05/24/11-Hiralkumar Patel. 11:06 AM:- spoke with Keith and asked him to submit work plan by 05/31/11. 06/01/11-Hiralkumar Patel. received work plan from Keith (at 1:08 PM on 05/31/11). abstract: - two 5,000 gal USTs on Lot 1 were closed-in-place on 07/27/06 - as per tanks closing firm, both tanks were pressure tested prior to closure and both tanks passed the test, but no documentation is available - two drains (or dry wells) were noted within the boiler room slab that appear to connect together with piping - there is an outflow pipe in one of the drains that leads to an unknown discharge point less than -------- - proposes to advance four soil borings to a depth of 12 ft bg, in the boiler room, in the vicinity of fomer boring SB7: one to the east, one to the west, one to the northeast and one to the northwest - soil samples from borings around SB7 will not be analyzed

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

in a lab - highest concentration of TCE detected in soil was 55 ppb at 2-4 ft bg in SB3 and in groundwater was 4.9 ppb in TMW2 - two highest concentrations in soil-vapor samples, are located within the lot 1 building - the vapor concentration gradient increases in the direction of SV3, suggesting that any source for chlorinated solvents might be west of SV3 - even though several potential release points exist on lot 27, the chlorinated solvent contamination investigation focuses on the western loading dock/parking area in lot 1, west of SV3 - proposes installation of three soil borings in the parking lot to the west of SV3 - two soil samples (one with highest PID and one from six-inch interval above groundwater interface) and one groundwater sample will be collected from each boring in area of former SV3 and samples will be analyzed for chlorinated compounds via EPA method 8260B and 8260C the submitted work plan is not acceptable as requires investigation in following areas also: - soil/gw delineation on south side of the former boring SB7 - soil/gw investigation at the discharge point of an outflow pipe from one of the drain (dry well) in boiler room on lot 1 (area near former boring SB7) - soil/gw (soil-vapor, if possible) delineation at the former roller wash sink and along the drainage structure from the sink reviewed Phase II lab results again for TCE/PCE values in soil/groundwater samples. PCE contamination not found in samples, but TCE found in eight soil samples from seven borings (out of 12 boring) and two groundwater samples. TCE in soil samples (in ppb): ----------SB2-------SB3-------SB3--------SB4-------SB5-------SB6------ -SB10-------SB11 2-4 ft 2-4 ft 8-10 ft 8-10 ft 2-4 ft 2-4 ft 8-10 ft 2-4 ft TCE-------3.2--------51-------5.3--------3.6-------3.7-------5. 0-------5.7--------4.4 TCE in groundwater samples (in ppb): ----------TMW2------TMW3 TCE--------4.9-------1.3 06/08/11-Hiralkumar Patel. discussed with DEC Austin requesting case transfer to section A due to former on-site ink (which contains chlorinated solvents) use, former EPA violations, improper discharge of a waste water to on-site drains, shallow soil samples with TCE contamination, sub-slab (6 inches below floor) soil-vapor samples contaminated with TCE and PCE. Austin asked for case summary. 06/14/11-Hiralkumar Patel. 11:36 AM:- sent email to DEC Austin with case summary. DEC Austin discussed case with DEC Paul. as the site was listed as large quantity gnerator of hazardous waste, Austin asked to contact DEC Hussein for further information regarding the site. 06/15/11-Hiralkumar Patel. 1:57 PM:- sent email to DEC Hussein requesting further information regarding RCRA violations and other RCRA issues. 06/21/11-Hiralkumar Patel. 10:37 AM:- spoke with DEC Hussein. he mentioned that there is no open case against National Envelope, but they have large file. he asked to come and check file for any information. 06/27/11 after discussing with DEC Austin, DEC Hassan and DEC Linda Ross, case transferred to DEC Ross. 7/25/2011-Linda Ross Meeting at Region 2 headquarters. Sign up sheet is electronicaly filed. Attendees Linda Ross-DEC Paul John-DEC Keith Brodock, ELM Robert Corroon, Owner, COO Richard Zirinsky Associates Michael Bogin, Esq. for Owner Jordan Barringer, DEC intern Erick Kraemer, DEC intern Lou Oliva, Esq. DEC Hassan Hussein-DEC Planning to demolish the two buldings and remove the slabs. The buildings were built in the 1950s. Federal Express (Fed Ex) is planning a sorting facility for the site. Fed Ex wants the facility to be operational by the holiday season 2012. There will be a new building built for the site, with a new slab and a parking garage. Lot 1-Boiler room-2 4,000 gallon #4 fuel oil tanks which have

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

been closed in place-they passed their last tightness test. Therefore, not sure where the DNAPL in area is from. The DNAPL did not have any analytical exceedances. Might be severely weathered. There are two floor drains in the boiler room. Additional soil sampling is proposed for the boiler room and to delineate the CVOC soil vapor beneath the slab beneath part of the building. The CVOC soil vapor is seperate from the boiler room DNAPL. Lot 27 (former National Envelope)- There is a 2,000 gallon UST, still in place. DEC discussed that a Closure Plan is necessary for the hazardous waste storage area. Clean closure is required and there needs to be a public notice. Sewer testing is also required for the sewer injection pit since there were discharges to the sewer and possible the sewer injection pit. Entire Site - Discussed the possiblity of putting a vapor barrier and sub-slab depressurization system in the new Fed Ex building - LR to contact Health Depart and discuss. Relevant guidance document is CP-51 and for other constituents will use industrial numbers from Part 375. Demolition and asbestos removal are planned for the end of August. Agree for site visit for next day at 1:00 pm on site. 7/26/2011 Site visit 1:00 pm Attendees Hassan Husssein, DEC-phots taken Linda Ross, DEC Bob Corroon, Owner Keith Bradock, ELM Walk through the two buildings, first, 29-01 Bordon Avenue and second National Envelope 29-10 Hunters Point Avenue. First Building (29-01 Bordon Avenue-Lot 1) has a subslab vapor issue that exceeds the NYS Department of Health guidelines. Agreed to collect two soil samples out side of the loading docks near the high vapor reading to determine if there was a relase of VOCs to the soil in this area. The additional requested boring is in the train track area which is heavily treed and it would be difficult to get a rig in for sampling, so a soil sample will be taken below the organic debris with a hand sampling device. This sample will only be analyzed for VOCs to determine the source of the VOC vapor. Looked at the corrosion around the steel beams discussed in Phase I. The cement floor was intact and unstained and so no pathway to soil and groundwater is expected. The boiler room which had the DNAPL with no analytical exceedances was discussed and it was agreed that the two floor drains will be sampled for VOCs and an additional boring will be placed to the north of the floor drains. Second Building (29-10 Hunters Point Avenue-Lot 27, former National Envelope)needs a closure plan for the hazardous waste storage area. Staining in the hazardous waste storage area. Discussed how the sewer injection pit and the sewer needs to have a leak test to see if there was a release to soil and groundwater on th site. If there is a leak in either the sewer or the sewer injection pit, additional delineation may be required. 8/2/2011 Monthly Internal Progress Report for July 2011 prepared by L.Ross:Internal meeting was held on June 27, 2011 with Kumar Patel and Randy Austin to transfer the site to Linda Ross. This is a spill site that will be redeveloped for a Federal Express facility. Fed Ex will be renting the property. There is a petroleum contaminated area and TCE vapor area. The site needs additional study regarding the sewer system pathway and greater delineation of contamination. On July 5, 2011 the Spills unit contacted the Former National Envelope team to inform them that the new project manager is Linda Ross. A meeting was held on Monday, July 25, 2011 to discuss the site. The meeting notes and signup sheet are listed in the DEC notes and Edoc. OGS, DER and the site owner, consultant and attorney attended the meeting. The topics covered were: introductions, overview of the proposed redevelopment, review of the environmental investigations to date and discussion of

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

proposed work plan. On July 26, 2011 Hassan Hussein and Linda Ross performed a site walkthrough to discuss sampling locations and to see the interiors of the buildings. On July 26, 2011 ELM the site consultant submitted an engineering drawing and a brief discussion of the air exchange. On July 28, 2011 ELM asked questions via email regarding the investigation work plan. 03/20/12-Hiralkumar Patel. DEC Paul and DEC Hussein went to the site for inspection and found free product on water in former heating oil tank location on Lot 1. DEC Paul asked for site visit. 2:00 PM:- visited site with DEC Vought. met with Gregory Wyka from ELM Group. inspected excavation of former heating oil tanks on lot 1. found layer of product on water and impacted soils at the groundwater interface. DEC Paul asked Gregory to report a new spill number based on findings of product on water. informed Gregory that the department requires complete delineation and remediation of petroleum contamination. Gregory Wyka The ELM Group Ph. (212) 962-4301 Ext. 304 (646) 895-3320 (C) Fax (212) 962-4302 email: gwyka@elminc.com 3:51 PM:- a spill report (# 1114115) created as wasn't reported by RP yet. 4-27-12 - Hassan Hussein recieved a letter from Dawn Hetrick of NYSDOH regarding vapor intrustion at the Borden Ave site. 5-23-12 - Hassan Hussein received a letter from Michael Burke date 5-23-12 responding to DEC letter of September 16, 2011. 5-23-12 - Hassan Hussein reponded Michael Burke's letter of 5-23-12 in an email correspondence. 6-01-12 - Hassan Hussein received an email from Michael Burke containing another copy of the 5-23-12 letter and additional information on the proposed Stego Wrap vapor barrier. Hassan responded with an email to Mr. Burke explaining that he will review the submitted information and get back to him some time following week. Later the same day, Mr. Burke sent a copy of his email to Dawn Hetrick of NYSDOH. Dawn responded with an email that same day explain the DOH concerns and explained what she will follow up with NYCDEP to get further guidance on the city's review procedure. 6-08-12 - Hassan Hussein completed his review of Michael Burke's 6/1/12 submittal. Hassan also sent Dawn Hetrick email on 6/8/12 asking her if she has an update. She responded with an update regarding her efforts to contact the city and explained that the approach taken by the company is reasonable. 6-08-12 - Hassan Hussein sent Michael Burke an email approving the proposed approach outlined in his 5/23/12 letter. 10/5/12: Issued letter requiring completion of the second round of delineation proposed in the previously approved 11/17/11 workplan. Subsurface Investigation Report due 11/16/12. 12/11/12 - Carlson: Received phone message from Peter Zimmerman, 212-962-4308, 917-952-9068. He is the new project manager. Progress report to be submitted. 1/15/2013 - Carlson: Left voice message for Peter Zimmerman. Investigation report overdue. 2/1/13 - Carlson: Reviewed letter dated 1/24/13 - only one proposed reinstallation of MW1. DEC requires four wells as per 2011 workplan, left voice message for Peter Zimmerman. 2/4/13 - Carlson: Spoke to Peter Zimmerman, a two part workplan will be submitted, they will mobilize twice, first to reinstall MW-1, and then mobilize again to install delineation wells. 5/27/15 - Raphael Ketani. I am the new project manager for the spill case. The site used to be occupied by National Envelope, but is now a FED EX distribution facility. The two buildings which used to occupy the site were torn down several years ago. Michael Burke of Langan Engineering (212) 479-5582 was involved in the spill case. He mentioned that Mimi Raygorodetsky (212) 479-5441 and he were involved in the National Envelope/FED EX project manager for Langan. Mr. Burke added that Langan's involvement was

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

only due diligence. Robert Corroon, Jr., Chief Operating Officer (212) 751-4620, x103, from Richard Zirinsky Associates. RZA is the corporate entity which owns the entire FED EX site. However, the two parcels which comprise the site are owned by the subsidiary companies 2901 Realty Co, LLC and 2910 Realty Co, LLC. There was a later spill opened for the site, #1114115, due to the discovery of contaminated soil and groundwater while removing a UST. It was managed by Kumar Patel of the Region 2 Spills Unit. It was closed on 7/13/12.
According to the above case notes, the second round of contaminant delineation was never performed. 5/28/15 - Raphael Ketani. An orientation meeting took place today as planned. In attendance were Mr. Corroon of RZA, Keith Brodock, PE (212) 440-6702/cell (646) 895-3325, Hassan Hussein and myself. Initially, Mr. Brodock and Mr. Corroon described the site history and the remediation history. The site itself is bounded on the west by the Dutch Kills, on the south by Borden Avenue, on the east by 29th Street and on the north by Hunters Point Boulevard. The site consists of two separate lots. There used to be two buildings on the entire site. The southern building was at 2901 Borden Avenue and was used by Radio Engineering Laboratory as a warehouse. They made personal radios for the public and the military and used dry transformers (no liquids or PCBs). The northern building had been used by National Envelope. Both buildings were completely removed and the present FED EX distribution center building was constructed in the eastern part of the entire site. The building is slab on grade, contains a vapor barrier underneath and has a high capacity ventilation system. Some years ago, two USTs were removed from the boiler room which was located in the southern building near the southwest corner of the entire property. It was found that one 5000 gal. tank had leaked, but the other 5000 gal. tank was intact. A spill was called in (#1114115), the remediation took place, and the case was closed on 7/13/12. To the north, a RCRA site was located along Hunters Point Boulevard near the northwest corner of the entire property. The material was cleaned up and the case was closed. Thus, the subject oil spill case is the only open case for the entire site. However, additional borings were done within the northern half of the site. PCB contaminated groundwater was discovered with the highest concentration at 0.654 ppb at the very southwestern corner of the northern half of the property. The soil samples also had PCBs. The area was resampled and again there were PCB results. The DEC sent a letter dated 1/24/13 requiring further delineation of the contamination. Mr. Brodock stated that he was not aware of any source on site for the PCBs. Mr. Hussein stated that there was an agreement that more data was needed. There was supposed to be new sampling and the installation of 2 new wells. He added that some companies who had occupied the buildings may have used PCBs, but this was uncertain. PCBs have a low affinity to water. He finished by stating that we needed to know where the PCBs had come from. Mr. Brodock said that he believed the PCBs were in the historic fill. He added that the western half of the northern parcel had been a turn around area of open water for the Dutch Kills and was later filled in. Mr. Corroon asked how one can know that the PCBs didn't come from the site. I responded that step out borings could be done from the edge of the Dutch Kills and continued inland to the edge of the FED EX building. This was, one could see the contamination concentration gradient of the PCBs. If the concentrations are highest near the Kills, then the source is the Kills. Mr. Brodock stated that all of the petroleum spills had been remediated. In the end, it was

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

agreed that I would review the work plan that was previously approved by the DEC and the DEC's 1/24/13 letter and provide comments to Mr. Hussein. Then the DEC would let RZA and Integral know how to proceed. After the meeting, I reviewed spill case #0903437, Borden Avenue Bridge. In particular, I reviewed the total diesel range organics (DRO) concentrations and the PCB analytical results for the spill case that were contained in the Test America 6/29/09 analytical report. I did this in order to confirm whether the Dutch Kills could be a source of PCB contamination for the National Envelope/FED EX site. A sample of treatment system intake water from the Dutch Kills was analyzed. Two sediment samples (S-1 and S-2) were also analyzed, one from each coffer dam that had been constructed in the Kills itself. S-1 had 5,100,000 ppb of DRO and S-2 had 7,000,000 ppb of DRO. The PCBs tested for were: PCB-1242, PCB-1254 and PCB-1260. The treatment system intake water sample had 1.6 ppb, 2.3 ppb and 2.2 ppb of PCBs, respectively. S-1 had 590 ppb, 520 ppb and 760 ppb of PCBs, respectively. S-2 had 720 ppb, 1100 ppb and 890 ppb of PCBs, respectively. 5/29/15 - Raphael Ketani. I reviewed the ELM Group 11/15/11 and 11/17/11 Revised Work Plan: NAPL Delineation,CVOC Investigation and PCBs Investigation. Both versions of this latest work plan were the same word for word except for the first paragraph under the PCB Investigation section which described the details of the monitoring well construction. In the work plan, ELM states that they do not believe the sources of the CVOCs and PCBs are the result of on site activity. They add that the contaminants may be in the historical fill. In the ELM Group work plan, it is stated that the Langan Engineering 12/7/10 Phase II Report indicated the detection of PCBs at their well/boring TMW-2/SB2 in the very southwestern corner of the north parcel. The groundwater sample results were 0.654 ug/l for total PCBs. Well over the TOGS 0.09 ug/l limit. In light of this, ELM had planned on installing one boring/well, SB22/MW-1, near SB2. If PCBs would be detected in the groundwater, then borings/wells SB23/MW-2 to SB25/MW-4 would also be installed in the southwestern corner of the north parcel. The work plan also calls for installing borings SB13 to SB19 in the middle of the southern border of the entire property in order to investigate for NAPL and the installation of borings SB20 and SB21 in the southern quarter of the entire property in order to investigate for CVOCs. I also reviewed the DEC letter dated 10/5/12 to Mr. Carroon. The letter stated that as PCBs were detected in the groundwater at TMW-2 and MW-1, the Department required the installation of wells MW-2 to MW-4. Two soil samples were to be taken from each boring. One from the groundwater interface and a sample with the highest contamination. All soil samples and the subsequent groundwater samples were to be tested for PCBs, CVOCs, VOCs and SVOCs. 6/2/15 - Raphael Ketani. I received the Integral Consulting 1/24/13 letter. In the letter, it was stated that they would install SB22/ELM MW-1. They would look at the results from the soil and groundwater samples and see whether they validate the Conceptual Site Model (CSM). The idea behind the CSM is that the PCBs are confined to the Area of Interest (AOI). The installation of additional borings and wells will be evaluated based upon the analytical results. In consideration of my review of the 11/17/11 Revised Work Plan, the DEC 10/5/15 letter and the Integral 1/24/13 letter, I determined that installing borings/wells SB23/ELM MW-2 to SB24/ELM MW-4 was the best way to proceed. I sent Mr. Corroon [(212) 751-4620, x 103] and Mr. Brodock [(212) 440-6702/cell (646) 895-3325] an email today stating that the Department required that they conduct

FORMER NATIONAL ENVELOPE CORPORATION (Continued) **S110612090**

the work that is described in the approved 11/17/11 work plan and the DEC letter dated 10/5/12. I set a deadline of July 10, 2015 for the work to start. 6/3/15 - Raphael Ketani. Mr. Corroon sent an email agreeing with DEC's decision. 7/17/15 - Raphael Ketani. Mr. Brodock sent me an email today: We installed one well on July 10th, and are scheduled to install the other two wells on July 30th. We attempted to install all three wells last week, but were unable to access the two well locations closest to the bulkhead due to the small fence opening. We ve rescheduled with the driller to bring a smaller rig which should fit into the 6.5 opening. I ll send another update after those wells are installed on July 30th. 12/15/15 - Raphael Ketani. As the well installation and results report was never received and as there have been no progress updates, I sent an email to Mr. Corroon and Mr. Brodock requesting the report and an update. A deadline of January 8, 2016 was set for the submission of the report. 1/14/16 - Raphael Ketani. Mr. Brodock (212) 440-6702/cell (646) 895-3325/kbrodock@integral-corp.com called to request an extension of the deadline for submitting the investigation report. He asked that the due date be set to February 29th, 2016. I agreed to the deadline extension. "

Remarks: "Caller reporting a historical spill. Clean up is pending."

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

WARNER LAMBERT CO (Continued) **1000312933**

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006

. Waste code: NONE
. Waste name: None

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 09/14/1995
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

FINDS:

Registry ID: 110004367621

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the

IKG INDUSTRIES-50-09 27TH STREET (Continued) **1000119430**

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

UNITED PARCEL SERVICE INC (Continued) **1000398418**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT Sent tank test failure letter to Varderame. 11/15/2002 ARS 11/14/2003-Vought-Reviewed report dated 6/26/03 from Verderame Realty (Bruce Bauer 718-786-1100). Site will no longer be using oil and will be converting to gas. Closure of a 2000-gallon #2 fuel oil UST and collection of post excavatin endpoint samples by Bluestone Environmental (Andrew Cozzi 732-469-5188). The UST excavation base was at approximately 8 to 8.5 feet below the concrete floor . The soil in the excavation was a fill that consisted of dark brown sand with construction debris such as bricks and pieces of concrete . Five soil samples were submitted for analyses for 8260/8270. Soil analyticals show two 1,3,5-trimethylbenzene exceedances up to 9110ppb, benzo(a)anthracene up to 1010ppb, benzo(a)pyrene up to 631ppb, benzo(b)fluoranthene up to 1110ppb, benzo(k)fluoranthene up to 579ppb, and chrysene up to 1210ppb. These exceedances are attributable to fill material. Spill closed by Vought after conference with DEC Rommel."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"6/18/08. J. Krimgold reviewed the letter-report submitted by ROUX Associate inc. dated June 2, 2008 with request to close the spill case. The letter-report contains no new info besides what the Department has already in its files. The 12 pages attached to the letter is nothing but printouts from our website or copies of documents (application, failed test reports, etc.) that was already submitted to the Department. Nothing in the letter-report points to the investigation of the cause of the test failure or removal of the release. Request for the spill case closure was denied. JMK. 12-27-2011 This spill was assigned to Leszek Zielinski on 06/28/10. Then this spill was reassigned from V. Brevdo to Alex Zhitomirsky on 12-27-2011, as per V. Brevdo instructions. Emailed LiRo and received the following response by S. Frank: We will pull together whatever information we have and forward it to you. AZ 2-7-2012 Site

DEPT OF SANITATION (Continued) **S104950988**

demolition and construction completed at site by May 2011. On 7/22/11 LiRo met with the site personnel and gathered additional information relevant to spill 0012519. LiRo prepared a letter to address DEC concerns from the July 2008 spill closure denial and submitted to DEC on January 23, 2012. Received and filed e-copies from LiRo. AZ 4-19-2012 Received on January 26, 2012, and reviewed Tank Closure Sample Results and Spill Closure Request dated January 23, 2012. The report stated that in August 2005, EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM Levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH)typically indicative of urban fill material. The site layout has changed significantly due to demolition and construction activities. Because of this, the former tank location is unknown. Based on this information, LiRo requested closure of spill#0012519. This spill was closed and a letter was sent to S. Frank/F. Ashkan/V. brevod: Dear Steve, I have reviewed tank closure sample results and spill closure request for the above spill number submitted to DEC on January 26, 2012. A tank test failure of the tank#1 was recorded at this site. As a result, a spill #0012519 was issued. EMTEQUE Corp. oversaw Safeway Environmental perform closure and removal of tank#001 in August 2005. Approximately 15 cubic yards and four 55-gallon drums of soil were removed during excavation of the UST. No visible discoloration within the excavation was noted. No petroleum odors or elevated PID readings were recorded. EMTEQUE collected a total of five soil samples from the excavation pit. No VOCs were reported in any sample. SVOCs were reported above TAGM levels in all five samples. The SVOCs reported were mainly polycyclic aromatic hydrocarbons (PAH) typically indicative of urban fill material. Based on this information, this spill number is closed. All wells associated with this spill should be properly abandoned. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. Sincerely, Alex Zhitomirsky "

Registry ID: 110004481908

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"A search of previous spill at that address turned up spill #

GALASSO TRUCKING (Continued) **1000833391**

9712326. This spill was a report of contaminated soils discovered on 2/4/98 during a phase II site assessment. The spill was assigned to DEC (Sigona) who closed the spill out on 3/28/00 1/18/2006 - Haggerty - Noel Biscone from Bridgedale (718-965-6450), property manager, submitted Subsurface Investigation Report for review. The sampling dates may be sufficent to close this spill # as well Ten 550 gallon deisel USTs (See PBS# 2-233404) and 630 tons of contaminated soil were removed in August 2004. The site is in an industrial area next to the LIE and a large railyard. Spill closed 01/25/06"

Remarks: "DEC (Saccacio) found ten 550 gallon USTs being removed from the ground by a contractor. The soil around the tanks were contaminated with an unkown petroleum."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN SOIL BORING AND WELL INSTALLATION JUST INSIDE BAY DOOR ALONG PROVOST STREET CAME UP WITH PETROLEUM CONTAMINATED SOILS AND POSSIBLY GROUNDWATER. SITE IS ADJACENT TO FORMER EXXON TERMINAL. 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 10/13/10 - Austin - Spill being transfered from Tang to Region 2 Spills staff - end 10/19/10-Hiralkumar Patel. no alternate addresses. other spill #: 9210719. spill was reported on 12/16/1992 by coast guard. possibly spill in water. case closed. PBS #: 2-600039. as per the PBS record, site has following tanks: - one 550 gal diesel AST on saddles, installed in Mar. 1990 - one 1,080 gal diesel AST on saddles, installed in Mar. 1990 - one 10,000 gal #2 oil AST in contact with imprevious barrier, installed in Sep. 2002 1:06 PM:-spoke with Mr. Sokolow, controller of Perez Interboro Asphalt. Mr. Sokolow mentioned that they did further investigation and some remediation. lateron they filed claim against ExxonMobil as part of greenpoint plume. Mr. Sokolow mentioned that reports were submitted to DEC and an attorney who is handling claim of Newtown Creek residents against ExxonMobil. Perez Interboro Asphalt Co., Inc. **property owner** 99 Paidge Avenue Brooklyn, NY 11222 Attn.: Joshua Sokolow Controller Ph. (718) 383-4198 Fax (718) 383-9164 Lyssa Roberts **attorney representing Newtown Creek residents** Girardi & Keese 1126 Wilshire Boulevard Los Angeles, CA 90017 Ph. (213) 977-0211 Fax (213) 481-1554 email: lroberts@girardikeese.com 1:40 PM:- spoke with DEC Edward Hampston in Albany office. Ed mentioned that area around 99 Paidge Ave was part of ExxonMobil's terminal and not any refining process in the area. Ed asked to check Exxon's files on E-docs. reviewed one of the report and found that Exxon's Marketing Terminal No. 3020 was located immediately south and east side of Perez Asphalt (see map on e-doc). 2:02 PM:- spoke with Ms. Roberts at Girardi and Keese and asked her to send copy of reports for property 91-99 Paidge Ave. 2:11 PM:- sent email to Ms. Roberts requesting copy of available documents/reports for the subject site. 02/07/11-Hiralkumar Patel. 4:07 PM:- received email from DEC Hampston. Hampston is handling ExxonMobil remediation and was contacted by a potential buyer looking for spill closure based on recent Phase I investigation results. 4:19 PM:- sent email to Hampston. asked him to inform the buyer to submit any phase I and phase II for review. 02/09/11-Hiralkumar Patel. 9:06 AM:- received email from Hampston. he mentioned that buyer will submit Phase I shortly. 9:07 AM:- sent email to Hampston requesting buyer's contact info. 9:30 AM:- received email from Hampston including buyer's

PEREZ INTERBORO ASPHALT C (Continued) **S102401855**

contact info. Kevin Lumpe Steel Equities 700 Hicksville Road Bethpage, NY 11714 Ph. (516) 576-3165 email: klumpe@steelequities.com 12:52 PM:- left message for Mr. Lumpe to submit available environmental investigation reports. 03/21/11-Hiralkumar Patel. received letter from ERM. ERM conducted a Phase I investigation for the subject site. based on following information, ERM claims that the subject spill is not associated with 99 Paidge Ave: - original spill was reported for Williamsburg Steel, but as per 1995 and 1996 Sanborn Maps, Williamsburg Steel was located at 59 Paidge Ave - in 1996, 99 Paidge Ave was owned by Diamond Asphalt Co. - as per initial notes from DEC Mulqueen: soil boring and well installation just inside bay door along Provost Street came up with petroleum contaminated soils and possibly groundwater ; as per ERM, 99 Paidge Ave has no frontage on Provost Street - as per 1995 and 1996 Sanborn Maps, Williamsburg Steel was located at 59 Paidge Ave and on a triangular shape parcel across the street from 59 and 99 Paidge Ave; this triangular shape parcel fronts Provost Street - exact address of the triangular shpae parcel is unknown - triangular shape parcel now owned by NYC DEP and is part of sewage treatment plant discussed with DEC Austin. he asked to contact BBL, DEP consultant who reported the spill to confirm the address and to get any reports available. BBL is now owned by Arcadis. Arcadis U.S., Inc. 655 Third Avenue, 12th Floor New York, NY 10017-9118 Ph. (212) 682-9271 Fax (212) 682-9275 Website http://www.arcadis-us.com 4:07 PM:- left message for Janet at Arcadis. 03/22/11-Hiralkumar Patel. 8:52 AM:- received call from Janet. Janet doesn't know anything about this site. she asked to contact Vatche Minassian, a person working since 2001 and handling NYC DEP projects. Vatche Minassian Ph. (212) 682-9271 Ext. 17 email: vatche.minassian@arcadis-us.com 9:04 AM:- sent email to Mr. Minassian and asked him to call to discuss further. 03/24/11-Hiralkumar Patel. 12:53 PM:- left message for Mr. Minassain. 04/27/11-Hiralkumar Patel. received message from Christopher (at 1:54 PM on 04/26/11) from ERM Christopher O'Leary Environmental Resources Management Ph. (631) 756-8903 2:53 PM:- spoke with Chris at ERM and informed him that the case is still open as the department is waiting for response from Arcadis. 2:57 PM:- spoke with Mr. Minassian. he wasn't with company in 1996 and they only keep records for 10 years. so they don't have any records. 04/28/11-Hiralkumar Patel. after discussing with DEC Austin, case closed as no information (lab data or report) available to confirm the spill at 99 Paidge Ave."

Remarks: "caller reports company did test bore on jul 17th and found ground contamination of unk petroleum product"

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"08/18/08 - LZ The June 16, 2008, quarterly monitoring report covering March- May of 2008 shows no LNAPL in any of six monitoring wells. Total BTEX were found from 0.00 to 26 ppb; MTBE up to 2 ppb; total SVOCS up to 747 ppb. As requested by the Department to complete its files, Tyree Brothers Environmental Services, Inc., sent a report, dated April 27, 2005, containing results of removal of contaminated soil and water from vicinity of the 2,000-gallon tank. About 24.22 tons of soil were removed and six borings conducted to install monitoring wells. Soil analyzes indicate elevated contamination at some locations: for example, at MW-2, total xylenes (2,390 ppb); at MW-6, acetone (247 ppb); at MW-1, chrysene (509 ppb); and contaminated groundwater that has shown improved quality over years (data in subsequent reports). The spill case is closed. 03/25/08 - LZ Prepared by Tyree Organization, the quarterly monitoring report for the period December 2007-February 2008 does not reveal LNAPL in any of seven gauged monitoring wells; no MTBE was detected; total SVOCs concentrations varied from non-detected to 509 ppb; total BTEX was from non-detected to 34 ppb. 12/30/07 - Zielinski The December 18, 2007, quarterly monitoring report for September-November 2007 shows that no LNAPL was detected in any of six monitoring wells. Total BTEX was in the range from non-detect to 51.68 ppb, MTBE in the range from non-detect to 2.56 ppb, total SVOCs from o.00 ppb to 257.84 ppb. Gauging was performed monthly, and absorbent material was placed in all monitoring wells. 09-19-07 -

GETTY - MOSF FACILITY (Continued) **S104953029**

Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period June-August 2007 does not reveal LNAPL in any of seven gauged monitoring wells. Also, no MTBE was detected. Total BTEX: 56.19 ppb(MW-6) the results show that since August 2005, concentrations of benzene, toulene, and total xylenes have been diminshed. 03/09/07 - Zielinski The March 9, 2007, quarterly monitoring report for December 2006-February 2007 shows that LNAPL was detected in Well 3(7 wells present). Total BTEX was in the range from nondetect to 48.37 ppb, MTBE in the range from nondetect to 5.94 ppb(eDocs). 12/15/06 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period September-November 2006 shows that Well 3 contained LNAPL. Also, total BTEX ranged from nondetect to 141.51 ppb, MTBE ranged from nondetect to 3.96 ppb, and total semivolatiles from 12.83 to 57.54 ppb.Thus, these numbers indicate that concentration of contaminants has been decreased since summer of 2006. 10/18/06 - Zielinski A quarterly monitoring report for the period July-September 2006, prepared by Tyree Organization, 208 Route 109, Farmingdale, NY 11735, indicates that: - free product was detected in well #3. Six other wells do not indicate any presence of LNAPL - total BTEX was in range of non-detect to 257.56 ppb - total SVOC was in range of 1.43 to 392.44 ppb The facility continues remediation by employing a passive bailer in well #3. 1/31/05-Vought-Spoke to Ed Waldron (Tyree) and spill amount is 800-1000 gallons for a 1000 gallon fuel oil UST. Tank was removed and is in soil. Soil excavation is continuing. Waldron wanted to know when to stop digging. Vought instructed to dig to groundwater and arranged site visit for 2/3/05 at 10am. 11/8/2005 - Investigation plan was approved. Six GW monitoring wells were installed. Two wells have free product. Weekly pump out is performed by Tyree. Stipulation Agreement will be issued."

DEC Region: 2
DER Facility ID: 87815
DEC Memo: "Spoke with Bill.Underground line failed test.Investigation required.(sr) 06/25/12 Rec'd Work Plan to investigate the horizontal and vertical extent of subsurface petroleum impacts.(sr) 08/07/12 LNAPL delineation work completed, summary report will be sent to DEC shortly.(sr) 02/06/13 Remedial Investigation Report in edocs.The site is an active scrap metal recyling facility located at the confluence of Dutch Kills and Newtown Creek.The Dutch Kills is located to the west of the site.Newtown Creek is located to the south of the site, property to the north is rail road track operated by LIRR.The adjoining properties to the east of the site are utilized by others for commercial and or industrial operations.Spill was identified when the pressure test of the underground line failed(AST 150,000 gallon).Leak was identified.Franklin Company disconnected the feed and return line.Integral Engineering performed remedial investigation.Twenty five soil borings and twenty one monitoring wells were installed through out the site.Monitoring wells were installed in soil borings with significant impacts and visible LNAPL at the groundwater interface.Five permanent monitoring wells were installed in phase I.Petroleum impacted soil/fill was observed in SB-6/MW-2 at 7-10 ft bgs in the northern corner of the Site, adjacent to the rip-rap bulkhead along the Dutch Kills Basin. Three separate plumes of LNAPL are present at the site.Plume A consists of weathered and biodegraded diesel fuel, located to the northwest of AST and west of the underground pipeline trench in the vicinity of MW-1(3.81ft), MW-2(2.28ft), MW-9(0.11 ft), MW-10(0.37 ft), MW-11(0.38ft) and MW-13(2.62ft). Plume A is believed to be downgradient of the source of the diesel fuel release. Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench, in the vicinity of MW-19(0.12 ft) and MW-20(0.28 ft).Plume B is also appears to be result of an additional segments of corroded and impaired pipings.There are no active sources for Plume A and Plume B as the underground pipelines were removed. Plume C consists of a more viscous and highly weathered unidentified LNAPL in the vicinity of MW-15(0.50 ft) and MW-16(0.43 ft). The following wells are identified with no LNAPL and are being used to illustrate the outer limits of Plume A, B and C:MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-14, MW-17, MW-18, MW-21. Ground water was encountered at depth of 5 ft bgs throughout the site. Recovery effort was performed on Plume A to remove product and monitor for product recharge to evaluate the optimal locations for long term recovery efforts. Plume area A appears to be the greatest available volume of recoverable LNAPL. The proposed IRM includes installation of recovery wells and electric belt skimmers. Three recovery wells(RW-1, RW-2 and RW-3)were installed in Plume A. Additional recovery wells/belt skimmers setups are anticipated for plume B and C as part of the IRM. 03/01/13 Rec'd

LINE TEST FAILURE (Continued) **S111836487**

email from Kevin Mccarthy(212-962-439x314) regarding Offsite investigation on LIRR proerty.They are checking the issue with their attorney.(sr) 3/12/14-Vought-DEC Rahman received email from DEC Ian Beilby dated 3/11/14 that Hi Sharif, Any new progress on this investigation? I checked edocs but it looks like there has been no activity in the past year. DEC Rahman forwarded email to Vought and Vought spoke to DEC Demeo and spill to be assigned to DEC Mahat. 4/2/14-Vought-Sent email to DEC Beilby with cc to DEC Mahat that Ian, The case has been reassigned to Santosh Mahat (cc'd above) and you may also reach him at 718-482-4038. Thanks. Spill reassigned from Rahman to Mahat. 9/3/14: Mahat DEC Mahat contacted Mr. Kevin McCarty @ 212-962-4303 inquiring more information about the current status of the remediation actions. Mr. McCarty mentioned that the remediation is still going on and he is recovering free products from couple of recovery wells. He is using belt skimmer to collect free products. A report is due from November 2012-present day. 9/25/14 TJD Spill #1405728 associated with housekeeping was identified during inspection of facility as part of Newtown Creek/Dutch Kills sheen trackdown investigation on 8/26/14. Spill of waste oil was observed following the acceptance and dumping of debris reported to have been brought to the facility by NYC Housing Authority. The spill was cleaned immediately by facility personnel. Above spill note is for reference only as surface spill is not directly related to reported AST tightness test failure and subsequent removal of AST and installation of monitoring well network and recovery system. DEC REQUIRE : 1. Need all laboratory data from monitoring well even with no product well. 2. Measure Groundflow dirrection 3. Dissolved GW sampling at plume edge wells 4. Monitoring recovery wells by dispenser line - Deleniation. 5/20/15: Mahat DEC Mahat received an email uopdate from James L'Esperance (Integral). Santosh, Sims has just informed me that they plan on commencing work on the stormwater basin at their Queens facility tomorrow. This work will involve excavating soil from the area of Spill #12-00318, as discussed during our site meeting and in the Remedial Action Letter submitted in April. Sims intends on starting the work tomorrow. I m anticipating that the work will last 2-4 weeks. Integral will have a geologist on-site during all excavation activities. Please feel free to give me a call to discuss if you have any questions. Thanks, James James L'Esperance Integral Consulting Inc. - www.integral-corp.com 61 Broadway, Suite 1601 - New York, NY 10007 Tel: 212.440.6708 - Cell: 646.285.4808 - Fax: 212.962.4302 8/6/15: Mahat DEC Mahat received an email from the contractor regarding the backfill material: Email: Santosh, Here s the information on the imported recycled concrete fill that we discussed. Allocco Recycling is a NYSDEC registered C&D facility. This material will be used as backfill beneath pavement. Let me know if there s anything else you need. Thanks! James L'Esperance The backfill documents has been uploaded on D2 for reference. 8/13/15: Mahat Site Visit: DEC Mahat and DEC Omar visited the site during the side wall sample collection. All collected sampled will be analyzed for the EPA 8260 and EPA 8270. A complete report will be forwarded to the Department one the results is published. 8/18/15: Mahat DEC Mahat request Mr. L'Esperance to provide a weekly report on the site: Here an update: Weekly Progress Report for SIMS Metal Management (Queens) August 18, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 In May 2015, SIMS Metal Management (SMM) began excavating the area of open spill #12-00318 down to approximately 5 ft bgs as part of their plans to install a

LINE TEST FAILURE (Continued) **S111836487**

storm water retention basin. Due to space restrictions on-site, the excavation is being performed in several stages. Two soil stockpiles (COMP-1 and COMP-2) were generated and separated based on the degree of contamination from visual and olfactory inspection, as well as measuring volatiles with a PID. Soil from COMP-2 was significantly more impacted than soil from COMP-1. Waste characterization samples were collected in mid-June, and the soil was removed from the Site upon approval from Clean Earth New Jersey (CENJ). Material from COMP-1 (approximately 30 cubic yards) was transported to CENJ of Carteret in mid July. Material from COMP-2 (approximately 240 cubic yards) was transported to the same facility from July 29-31. On August 5, SMM s contractor (NOVA) began installing supports and sheathing within the excavation. On August 13, Integral (James L Esperance and Stacey Ng) collected a total of ten sidewall endpoint samples outside of the sheathing, representing the material to be left in place. All soil samples will be analyzed for CP-51 list VOCs (via USEPA Method 8260C) and SVOCs (via USEPA Method 8270D), in accordance with the Remedial Action Letter, dated April 16, 2015. A groundwater bottom sample will be collected once all of the sheathing is installed and all material is removed from the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). Please let me know if you have any questions. Thanks, James 8/24/15: Mahat Weekly Update: Weekly Progress Report for SIMS Metal Management (Queens) August 24, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 Last week, the contractor (NOVA) completed the installation of sheathing around the extents of the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). The water bottom sample is tentatively scheduled for Monday, August 31. Please let me know if you have any questions. Thanks, James 8/28/15: Mahat DEC Mahat received an email informing the water bottom sample will be taken on August 31, 2015. Result of the samples will be forwarded to the Department for review. 9/1/15: Mahat DEC Mahat received another update on the case: Update: Last week, SMM s contractor (NOVA), began excavating the remaining material left in the footprint of the future retention basin. From Aug. 24-27, NOVA removed approximately 1,000-1,300 cubic yards of material and stockpiled the soil to the southwest of the excavation. Large wood debris and impacted boulders/concrete were taken to an approved facility for proper disposal. On Friday, Aug. 28, NOVA completed removing all required material, at which point, Integral collected waste characterization samples according to the sampling protocol for Clean Earth of New Jersey (CENJ). This stockpile is referred to as COMP-3 and will remain covered on-site until approval from CENJ. Upon receipt of the results from the lab analysis, CENJ will provide trucks to begin hauling material off-site to its facility in Carteret, NJ. This is expected to begin sometime during the week of September 7, 2015. Yesterday, Aug. 31, Integral returned to site to collect the bottom endpoint groundwater sample. We anticipate receiving analytical results next week. 9/4/15: Mahat DEC Mahat received endpoint sample those were collected from the side walls and bottom of the excavation. All laboratory result has been uploaded on D2 for reference. All collected wall samples are Below CP 51 guidance value. GW water sample was below TOGS standards with exception of Naphthalene, Benzo(b)fluranthene, Cherysene and Indeno are slightly above TOGS Standard.Based on the laboratory result, no further

LINE TEST FAILURE (Continued) **S111836487**

remedial action is warranted on the excavated area. However, there are 6 1'' monitoring well that needed GW samples. James will collect water sample from those MW and analyzed for EPA 8260 and EPA 8270 for the confirmation. More remediation plan will be drafted once the result is out. DEC is waiting for sample report. 9/15/15: Mahat DEC Mahat sent an email to Mr. L'Esperance: Email: James, I have reviewed the site map and soil samples submitted on 9/4/15. Almost all soil samples are below CP 51 guidance values. There is nothing to discuss on this portion of the site for further remediation unless GW sample is opposite. The Department is also interested to know the current status of the former underground pipeline that runs behind the building. Feel free to contact me if you have any questions or concerns. Ps. we can conduct a conference call once GW result is out. Santosh Mahat - Environmental Engineer 10/07/15: Mahat DEC Mahat received an email from Mr. L'Esperance: Email: Santosh, I ve just received the groundwater results for the trench wells at the site (see attached). " MW-19 was not sampled because its cap and casing are damaged beyond repair. " MW-21 was not sampled because it was dry at the time of sampling. Please let me know when you d like to discuss the results. Thanks, James 10/8/15: Mahat DEC Mahat sent an email to Mr. L'Espernace confirming further remediation on the site is not warranted by the Department. Email: James, Thank you for the info and update. The Department is satisfied with all the lab results. Please prepare a standard report for the closure of the spill case. Let me know if you have any questions or concerns. Santosh Mahat - Environmental Engineer DEC Mahat is waiting for a complete closure report for review. 2/9/16: Mahat DEC Mahat contacted Mr. L'Espernace inquiring about the status of the closure report. The report has been submitted to SIMS for a review. Once the report is done reviewing by SIMS rep. it will be forwarded to the Department. "

Remarks: "Line test failure."

DEC Memo:	"3/5/07 - Raphael Ketani. I called up Fred Cornell of Sims Hugoneu (cell (201) 739-9687). He said that the barge had been sitting overnight when it sunk. He suspects there is a hole in the hull, but he doesn't know for sure. He said that, sometimes, when the tug boat operator pushes a barge, he hits or bumps into something. The barge didn't contain oil or oil holding tanks. It is a non-motorized barge. It just had scrap metal and this was unloaded. There is no sheen from the barge. The Coast Guard has been notified. The barge will be refloated and repaired. I asked him why this was called into the Spill Response Hotline when there was no oil in or on the barge. He said that he was just being cautious about the incident. Based upon my conversation with Mr. Cornell and the information above, I am closing the spill case."

Updated By:	kstang
Site Description:	The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/1/2002-VOUGHT-Initial tank test performed by ProTest Laboratories. Second and third tank test performed by Federal Electrical Supply Corporation (718-729-5700). The reason for spill report was initial tank test failure. As a result of failure vent line, fill line, suction line and return line were replaced by Petroleum Tank Cleaners. Tank was tested again on 2-6-2002 and failed again because testers failed to close off return line to day tank. Tank and system was tested for third time and passed on 2-14-2002. Isaac Mungra and Anthony (PTC) confirmed that there was no soil or groundwater contamination. Tank tests and repair invoices were provided. Spill closed by Vought. "

Acres:	3.5
HW Code:	224135
Record Add:	06/25/2009
Record Upd:	09/15/2010
Updated By:	SRHEIGEL

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the Site.The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story

YELLOW FREIGHT SYSTEM, INC (Continued) **U003074537**

buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses.After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery.The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

Env Problem: Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present.Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747. 10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL. 03/29/04 Related to Mobil Greenpoint spill Transferred from Miller to Rommel. 10/12/04 Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget &

YELLOW FREIGHT SYSTEM, INC (Continued) **U003074537**

Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the

YELLOW FREIGHT SYSTEM, INC (Continued) **U003074537**

north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a clean fill recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ 3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis #147212: 17-FEB-2003 1955 HRS BELLEW O/S REPORTS WAS CALLED TO LOCATION FOUND 8 GALLONS DIELECTRIC FLUID LEAKED FROM RUPTURED VS4545. FIRE DEPT CALLED IN TO CONTROL CENTER THAT A WIRE WAS BURNING. WHEN T BELLEW ARRIVED ON LOCATION HE SAW FIRE AND SMOKE. NO SEWERS OR WATERWAYS APPEAR TO BE AFFECTED . IT IS ON PRIVATE PROPERTY. 5 FOOT ABOVE GROUND IN A INTERNAL VAULT (THE GETTY OIL REFINERY.) NO SUMP PUMP IN STRUCTURE. IT APPEARS TO BE CONTAINED TO AREA. THE HISTORICAL COUNT FOR VS 4545 IS 23PPM FROM 1994 . IT IS ON FEEDER 1Q17. THE FIRE IS OUT AT THIS TIME . FIRE DEPT PUT IT OUT WITH CO2 TO BRING THE TEMPERTURE DOWN THEN WITH DRY CHEMICALS EXTINGUISHERS. FIRE IS NOW OUT . FIRE DEPT WAS ON LOCATION WITH RESPIRATORY PROTECTION ON. NO ONE ENTER THE ROOM EXCEPT FOR HAZMAT DIVISION OFFICER AND 3 FIRE FIGHTERS FROM FROM THE HAZ MAT TEAM. FIRE DEPT WILL BAG THEIR GEAR UNTIL ARRCURATE COUNT COMES BACK. HAZ MAT UNIT WOULD LIKE A FAXED COPY OF RESULTS SENT TO THEM AT HAZ MAT # 1 IN CARE OF NAPOLI. FAX # 212-860-9485 PHONE # IS 212-860-9230. EMAIL ADDRESS IS DAVOLIO2@AOL.COM . CIG MORRIS NOTIFIED @ 2014HRS. BECAUSE OF FIRE WILL TREAT AS OVER 500. PPM. EPA # IS NYP-004-107389. TANKER ORDERED. G JACOBI ENVIROMENTAL O/S NOTIFIED AND WILL SEND SPILL VAN AND ENVIROMENTAL OPS CREW TO LOCATION. CALLED GAGLIO ENVIROMENTAL SENIOR SPECIALIST. WAITING FOR CALL BACK. NOTIFIED ENVIROMENTAL MANAGER K BAROUCH @ 2045HRS. WILL CONTINUE UPDATING AS INFOMATION IS REPORTED. ENVIROMENTAL STOP TAG # 14843. FIRE DEPT LEFT LOCATION. UPDATE 17-FEB-2003 2120HRS T BELLEW REPORTS FIRE DID START TO BURN AGAIN AND HE SPRAYED DRY CHEM ON IT TO PUT IT BACK OUT. FIRE IS NOW OUT. UPDATE:17-FEB-2003 2310HRS. JAMES D'AVOLIO HAZ MAT REPORTS A NEW FAX NUMBER TO GIVE TO CIG. 718-446-8261. NOTIFIED MORRIS CIG OF THIS NEW #. HIS OFFICE # IS 718-476-6288. HE WOULD LIKE A COPY OF THE HISTORICAL AND THE NEW SAMPLE RESULTS WHEN THEY COME IN. Update : 0130 Hrs. Env. Ops crews set up Zones, cordoned off area around Internal Vault, Drummed any snow that may have been splashed with oil when the Vault door blew off, Placed Vault door next to Vault in Hot Zone and will determine cleanup

NEW YORK PAVING INC (Continued) **U000412007**

standard for door after sample results are known. #9 Entered the Vault with an Air line respirator because the Transformer was still smoking. No oil was left inside the transformer to get a sample from, so one oil sample was taken from the floor next to the burnt transformer. This sample was turned into a split sample one for Con Ed, and the other was given to the DEP. The capacity of the transformer when full is about 50 gallons but only about 8 gallons was observed next to the unit on the floor inside the Vault. A Commissioner's order was given to remove the transformer and complete the cleanup within 24 hours. Will be following up with FOD and the Transformer group to expedite removal of all three units on feeder 1Q17 in this internal Vault. Crew on location to hold Zones and secure area until the AM when Units are removed and the cleanup can be completed. UPDATE 2-18-03 0549 HRS CHEM LAB # 03-01374-00 - 14 PPM. UPDATE 2-18-03 0850 HOURS, R. COSENTINO REPORTS, AS REQUESTED BY THE FDNYC - MR. BERNAD PIERRE - ERT, WILL FAX NEW CHEM LAB RESEULTS #03-01374-001 14 PPM, TO MR. NAPOLI OF THE FDNYC HAZ MAT #1. FAX NUMBER 212 860-9485. UPDATE: 2/18/03 - 1300 A. STUBBS - ENV. OPS., REPORTS STRUCTURE DOUBLE WASHED WITH BIO GEN 760. 1 DRUM NON HAZ OIL DEBRIS WAS GENERATED. REST OF DEBRIS WAS REMOVED BY VACTOR 60724. TAG REMAINS PENDING TRANSF REMOVAL. Update - 2/19/03 1915hrs J. Gaglio env. ops mgr reports at 1730hrs the last of the three single phase transformers was removed from the vault. AT 1912hrs the floor and the remainder of the area inside the vault was completely cleaned by env. ops. All the items listed on the commissioners order issued on 2/17/03 have been completed. J. Gaglio will call ERT to confirm this with them to pass info onto DEP. Update - 1930hrs - 2/19/03 R. Hutchinson OS env. ops reports after all 3 units were removed double washed all affected areas. Removed all sediment and oil absorbant floor with vactor and all oily solid debris was put into a drum and brought back to college point under 1 trip rule. Removed env. stop tag # 14843. As per FER J. Ciciliato the new units to be installed are not being installed in this cubicle. Job closed. Update - Cleanup was completed by double washing all structures involved with safety wash. Event involved material and event involved persons list updated."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel. 3/28/05 - also see 8804104. KST 12/29/05 Transferred to E. Hampston via Spills Initative. Wrote letter to owner requesting update/information. 11/02/06 Reassigned to Sun.(MS) 12/18/06 Sun sent letter certified mail to Jean Satoski (LIC Service Station), 49-01 Van Dam Street, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted

GREEN SERVICE STA (Continued) **S106703575**

to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 2/27/07: Based on TCR results Sun/Sellberg sent a letter to Alex Javic of LIC Service Station requiring additional investigation be performed, and a report sent to the DEC by 4/13/2007. Letter is as follows: The investigation at a minimum must include the installation of soil borings/wells: around the area of the the former nine (9) 550-gallon underground storage tanks. Groundwater monitoring wells should be installed to the south (former location of S6), east (former location of S1) and west (former location of S4) of this area and groundwater flow direction will be determined. During drilling, the soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. Following well installation, a water sample must be obtained and submitted for EPA Method 8260/8270 analyses. Note that MTBE must be included on all soil and groundwater analyses. Prior to drilling activities, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, soil and groundwater sample analyses, site plan, and conclusions and recommendations must be submitted to the Department by April 13, 2007. (JS/MS) 4/5/07: MS spoke to Jill Haimson of Preferred Environmental (516)647-4211. She will submit a SIWP by 4/16/07. (JS/MS) 4/24/07: DEC received and approved the SIWP. SIR to be submitted by 7/16/07. Sent letter certified mail to RP and faxed same to consultant (Jill Haimson). (JS/MS) 6/6/07: MS called J. Haimson to check status of site investigation. Due to difficulties in obtaining on-site access, work had been delayed. SIR will be submitted later than original timeline.(JS/MS) 6/27/07: Preliminary results (field observations) were discussed by the DEC and the consultant via telephone on June 11th, and again on June 21st, 2007. RP is claiming an upgradient source to be the problem. (JS/MS) 9/21/07: An additional visit was done by the consultant in mid September to better assess surrounding properties as additional investigation is warranted. This investigation will include the evaluation of a suspected up-gradient source which may/may not be contributing to on-site groundwater contamination. (JS/MS) 10/18/07: Upon threat of legal action, Preferred finally submitted SIR (apparently RP had not given consent to submit?). DEC is currently reviewing. Onsite contamination exists in both soil and mainly groundwater across the site. Additional delineation will be necessary as well as possible ORC injection/treatment. (JS/MS) 11/14/07: Alex Javick met with JS and MS today to sign STIP and discuss remedial options. Plan is to start with ORC (iSOCS) - 6months, if not effective use chemical injection. Monitoring will take place quarterly. Submit signed stip to regional director on 11/15/07. (JS/MS) 11/26/07: STIP executed on 11/16/07 and returned on 11/21/07. Sent copy to owner via mail and consultant via email today. MS to discus remediation details with Jill Haimson of Preferred. (JS/MS) 11/28/07: MS spoke to Jill. She will submit a RAP by 12/7/07 detailing use and placement of iSOCS as well as injection of regen-ox to boost remediation. (JS/MS) 12/17/07: DEC approved RAP as follows: ...The RAP proposes the application of Regen-Ox (manufactured by

GREEN SERVICE STA (Continued) **S106703575**

Regenesis) to address petroleum related soil and groundwater contamination at the site. In addition, Preferred proposed the installation of In-Situ submerged Oxygen Curtain (inFusionTM/iSOC) probes within four (4) onsite well locations. Pursuant to the Stipulation Agreement signed and dated effective November 16, 2007, the Department requires that within 45 days of the Department s approval of the RAP, Respondent shall implement the work outlined in the RAP. The Department approves the RAP with the following condition: Please specify the number, location and spacing between all proposed Regen-Ox injection points. RP has 45 days from RAP approval to perform the work outlined in the RAP. MS sent letter today to RP and will email Preferred tomorrow regarding injection points follow-up. (JS/MS) 1/17/08: Alex Javick in to meet about remedial systems. Will send STIP to Ms. Jean Satoski once received address from Mr. Javick. (JS/MS) 1/22/08: Stip #2 sent today to Ms Jean Satoski at 84 Gun Club Road, Northport, NY 11768. Signed stip is due by 2/5/08. Added following to original letter to include operator's cooperation and Ms. Satoski's roles as RP: Presently, the operator of your station has initiated the required actions to address the above and has been fully cooperating with the Department. However, according to Department records, you are the certified property owner of 49-01 Van Dam Street, LIC, NY 11101 and therefore, also a responsible party. Signed STIP is due by 2/5/08. (JS/MS) 2/27/08: Received signed Stip from Satoski. Signed by Regional Director, Region 2 (JS/MM) 3/4/08: Sent photocopy of executed Stip to Satoski. Informed J. Hamison from Preferred about executed stip signed by both parties. (JS/MM) 4/17/08: RAP not executed yet. Satoski and Javic have not agreed on payment. Sent out violation of stip letters. Waiting for responses. (JS/MM) 4/22/08: Called Javic, not in office. Expecting phone call today. (JS/MM) 5/18/08: Received already approved RAP from Preferred. (JS/MM) 6/23/08: No info received from Preferred. (JS/MM) 08/11/08: Transferred to Kolleeny/Mandac (JK/MM) 12/12/08: Received Quarterly Groundwater Sampling/Baseline Sample Report from Bill Schlageter of Preffered Environmental dated 11-19-08. Under review. Next sampling event in December 2008. (JK/KG) 12/16/08: RAP implemented. May 28 and 29, 2008 - 14 wells were installed (4 groundwater monitoring wells, 4 solinst emitter wells, 6 chemical injection wells) July 24 and 25, 2008 - Regen-Ox injected into 6 injection wells August 21, 2008 - Solinst Waterloo Oxygen Emmitter Probes were installed in 4 wells September 8, 2008 - Groundwater samples were collected at MW-1, 2, 3, 4 and IW-1. Total VOCS: MW-1 2,192 ug/L, MW-2 11,950 ug/L, MW-3 19,898 ug/L, MW-4 7,963 ug/L, IW-1 3,070 ug/L IW-6 and E-2 were found to have product, 1.47 ft and 0.04 ft respectively. Wells are checked biweekly for product. If product is encountered it is hand balied. Dissolved oxygen concentrations have increased since oxygen emmitters were installed. Next sampling event is scheduled for December 2008. (JK/KG) 12/18/08: Spoke with Bill Schalageter (Prefferred Env.). I asked him about the well with 1.47 ft of product. He said Alex Javic is still checking the well twice a week. He is bailing the product and disposing of it into the waste oil tank on site. Bill said the product is about an inch to a couple of inches. He will send someone out within the next week to verify how many inches of product are in the well and will send me an email with the details. Based on the amount of product they will need to be more aggressive in removing the product. I suggested a vac truck. I also asked Bill to have the wells surveyed and include GW flow direction, gradient, and scale on

GREEN SERVICE STA (Continued) **S106703575**

the map. (JK/KG) 12/30/08: Spoke with Jill Haimson (Preferred Env.) about product in well. She will talk to Bill and find out if someone went to the site to gauge the product. She will email me the details. If no one went to the site she will have someone go this week. (JK/KG) 01/29/09: Have not received details about product in well or product recovery. Emailed Jill and Bill requesting an update. (JK/KG) 02/02/09: Rec'd following email from Schalageter on 1/29/08. Since we spoke, Preferred was out the site twice including a quarterly sampling event conducted January 23, 2009. During the first visit (January 5, 2009) , approximately eight inches of product was present in well (IW-6), none was detected in any other of the wells. The product was bailed from IW-6 and disposed of, subsequent to bailing, Preferred gauged the wells for twenty minutes and no product recharge was observed. During the January 23, 2009 sampling event, approximately 4 inches of product was detected in IW-6, again no recharge of product was observed subsequent to removal. No product was detected in any of the other wells on January 23, 2009. A complete description of monitoring and sampling events will be provided in the Quarterly sampling report to be submitted upon receipt of sampling data. Please feel free to contact me with any questions or concerns. Regards, Bill (JK/KG) 02/03/09: Responded to Bill, After talking with Jon, please continue with product recovery on a regular basis. If the amount of product increases or doesn't appear to be decreasing, a more aggressive remedial measure will be necessary. Based on the VOC concentrations in MW-2 and MW-3, further delineation or more injections may be necessary. First, I will need to review the results of the latest sampling event (when they are ready). (JK/KG) 04/14/09: Rec'd pdf of Quarterly Groundwater Sampling Report on 4/13/09; under review. (JK/KG) 04/15/09: Rec'd hardcopy of QMR. Wells were surveyed; groundwater flow direction is to the southwest. Weekly product recovery will continue and the next quarterly event is scheduled for April 2009. Groundwater on 1/23/09: MW-1: BTEX - 1,422 ug/L, Total VOCs - 2,533 ug/L, MTBE - 170 ug/L MW-2: BTEX - 3,590 ug/L, Total VOCs - 4,909 ug/L, MTBE - 180 ug/L MW-3: BTEX - 15,150 ug/L, Total VOCs - 21,338 ug/L, MTBE - 2,700 ug/L MW-4: BTEX - 11,174 ug/L, Total VOCs - 21,425 ug/L, MTBE - 1,600 ug/L IW-1: BTEX - 1,715 ug/L, Total VOCs - 2,739 ug/L, MTBE - 280 ug/L IW-4: BTEX - 1,652 ug/L, Total VOCs - 2,501 ug/L, MTBE - 200 ug/L E-4: BTEX - 4,664 ug/L, Total VOCs - 8,201 ug/L, MTBE - 1,700 ug/L (JK/KG) 04/20/09: Spoke to Schlageter on 4/16/09. I asked him to include historical analytical data in future reports. We discussed the product in IW-6; he said it appears to be old gasoline and the station manager is still hand bailing it. The product is being disposed of in the on-site waste oil tank. I told Schlageter that the product can not be disposed of in the waste oil tank. Preferred has gauged the wells since the January sampling event. I asked him to send me the gauging data by Monday (4/20). (JK/KG) 04/28/09: Rec'd March gauging data (in eDocs). On 3/6 product in IW-6 was about 6 inches and on 3/27 it was about 0.25 inches. (JK/KG) 05/04/09: Letters sent to J. Satoski and A. Javik on 4/30/09. A more aggressive approach to product recovery should be implemented by using mobile vacuum extraction. A RAP should also be prepared and submitted. It should propose additional remedial actions, such as another round of RegenOx injections. The next QMR is due 6/19/09. (JK/KG) 05/07/09: Spoke to Mr. Javick, he said he doesn't have the money to pay for the cleanup. He was reminded that he signed the Stipulation Agreement and that a report is due in June. (JK/KG) 06/22/09: Rec'd call from Bill

GREEN SERVICE STA (Continued) **S106703575**

Schlageter. He said quarterly monitoring has not been performed and Mr. Javick is not willing to pay for the cleanup. I called Mr. Javick and he said Ms. Satoski will pay 100%. I then spoke to Ms. Satoski and she confirmed that she has agreed to pay for remediation of the site. She will advise Preferred to proceed with site work once some checks clear in her bank account. Preffered is prepared to submit a supplemental RAP. (JK/KG) 06/23/09: Rec'd Supplemental Remedial Action Work Plan dated 6/23/09 and submitted by Preferred Environmental. Under review. (JK/KG) 06/25/09: Rec'd revised SRAWP dated 6/24/09. SRAWP proposes proposes additional injections of RegenOx into the existing on-site injection wells, monitoring of groundwater field parameters, continued groundwater treatment via in-situ emitter probes, continued quarterly groundwater monitoring, and submission of monitoring reports to NYSDEC. A round of groundwater samples will be collected from monitoring wells MW-1, MW-2, MW-3, and MW-4 prior to the RegenOx injections. If free-phase product is detected in well IW-6, the product will be removed using vacuum-enhanced fluid recovery prior to the injections. The SRAWP was approved and letters were sent to Satoski and Javick. The deadline for submission of a groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, is August 7, 2009. The deadline for submission of a report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results is September 25, 2009. Email for Satoski is williamtaggard@mac.com (JK/KG) 07/20/09: Rec'd the following email from Schlageter: We will be conducting the injection this week (Monday-Wednesday) at 49-01 Van Dam Street, LIC. Prior to the injection, the required pre-injection sampling will be conducted from monitoring wells. Bryan from our office will be on-site and as always, you can contact me or Jill with any questions. Thank You, Bill (JK/KG) 08/31/09: Spoke to Haimson. She didn't realize a report with the results of the baseline sampling was due 8/7/09. The report will be prepared and submitted next week. (JK/KG) 09/30/09: Follow-up with Preferred as the groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, and the report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results have not been submitted. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 03/23/2010: Received a pdf copy of Quarterly Monitoring Report for October 2009. DL to eDocs. Will review. AD 07/27/2010: Received an e-mail from Mr. Schlageter: Ainura: As we discussed, attached is the supplemental RAP for the above-referenced project. Please review and contact me to discuss. Thank you Bill William J. Schlageter Operations Manager/Senior Hydrogeologist Will review. AD 08/24/2010: Reviewed the supplemental work plan. It proposes to conduct EFR on a weekly basis for two months period on the site wells exhibiting a free product (wells IW-6 and E-4); to continue employment of 3 out of 4 oxygen emmiters; to conduct monthly monitoring activities; to perform air sparging of aquifer; and once free product has been addressed, to rehabilitate and re-install emmiter probe into E-4 and reconnect oxygen supply to this well. Discussed this work plan with J. Kolleeny of DEC. As it was noted, air sparging method usually combained with SVE to control vapors in unsatutated zone. Since SVE is not proposed here, implementation of air sparging alone is questionable. AD 08/26/2010: Called and spoke with B. Schlageter of Prefferred. Requested to revise the work plan. AD 08/11/2010: Received a pdf copy of the 1st quarter 2010 GW

GREEN SERVICE STA (Continued) **S106703575**

monitoring report. DL the report to eDocs. AD 09/16/2010: Received an e-mail from Bill: Ms. Doronova: As we discussed, attached is the revised Supplement to the Remedial Action for the above-referenced property. The Supplemental action has been revised to omit the mobile air-spare treatment upon your request. Please review and contact me with any comments. Upon your approval, we will implement the proposed action within one week. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 www.preferredenv.com DL the work plan to eDocs. Will review. AD 09/17/2010: Reviewed the revised work plan. It proposes to conduct weekly VEFR on two site wells (IW-6 and E-4) which exhibit free product, for a period of two months. Operation and maintenance of three oxygen emitters at the site will continue on a monthly basis. Preferred also recommends to suspend quarterly GW monitoring for a six months. AD 09/20/2010: Discussed this WP with J. Kolleeny of DEC. AD 09/21/2010: Issued and sent an approval letter to Ms. Joan Satowski with the following comments: " Although Preferred requests that quarterly groundwater monitoring at the site be suspended for six months, the Department requires that quarterly groundwater monitoring continue; " Following completion of the VEFR events, quarterly groundwater monitoring data should be evaluated. If the results do not indicate significant improvement of groundwater quality at the site, and/or if free product continues to appear in the two affected wells, then an alternative remedial measure should be proposed to DEC. Dl pdf copy of the letter to eDocs. AD 04/11/2011: Received an e-mail from Bill: Ainura: Attached is the quarterly sampling report for February 2011 for the above-referenced property. The report summarizes activities conducted from November 2010 through February 2011. Results of the quarterly sampling are favorable significant reduction of dissolved phase VOCs, however some residual free product remains present within IW-6. The next quarterly sampling is scheduled for May 2011. Please feel free to contact me with any questions. Thank you Bill William J. Schlageter DL the report to eDocs. Will review. AD 06/30/2011: Reviewed the report. It states that on February 2011 sampling, thirteen of the fourteen on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.49 ft). Floating product was also observed during the prior monitoring events in October 2010(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). An absorbent pad was installed within IW-6 to address free product. Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. Depth to GW water ranged from 6.48 ft. (E-2) to 8.37 ft. (MW-4) bgs. Groundwater flow has historically been determined to have a westerly influence within both northwesterly and south westerly flows historically observed. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for on-site sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest TVOCs was detected in MW-3 (7,625ug/L), which is located crossgradient of the tank farm and downgradient of the Luk Oil Station to the southeast. Concentrations of BTEX detected in groundwater samples ranged from 5,110 ug/L in the MW-3 to 61.5 ug/L

GREEN SERVICE STA (Continued) **S106703575**

in the MW-1 at an upgradient location, MTBE concentrations ranged from 17 ug/L in the IW-1 (crossgradient) location to 1,100 ug/L in the MW-3 location. Preferred states that TVOCs have dropped across the site by up to 94% and by more than 50% since the implementation of the supplemental remedial action. They report that MTBE concentrations have also significantly decreased across the site and conclude that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. The next quarterly sampling suppose to be conducted in May of 2011. AD 11/2011: Did not received ane reports. AD 01/12/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit all missing reports for 2011. Later received an e-mail from him saying: Ms. Doronova: As we discussed attached is the report from October. Please note that due to construction at the station property, we were forced to delay the next sampling event sampling until January 2012. Further, although concentrations continue to decrease, we have identified that there is an off-site contribution to the groundwater impacts believed to be the Luk Oil property across Gale Avenue (currently AmeriGas ??) Owner is Leelimits Petroleum. We are petitioning to drop the sampling to a bi-annual schedule. Thank you, Bill DL the report to eDocs. Will review. AD 03/09/2012: Reviewed the report. It states that quarterly sampling activities resumed on August 2011 subsequent to the supplemental remedial efforts, which including VEFR activities and continued oxygen injection. The August 2011 quarterly sampling event included the following: " Measurement for floating product; " Measurement of water table elevation, temperature, and dissolved oxygen; " Purging and sampling of four monitoring wells, two injection wells and one emitter well; " Laboratory analysis of seven groundwater samples; and " Preparation of summary report including data summary and a groundwater flow map. Groundwater flow in August of 2011 was determined to be to the northwest towards Newtown Creek. During the August 2011 sampling, thirteen (13) of the fourteen (14) on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.50 ft). Floating product was also observed during the prior monitoring events in February 2011 (.49 ft.), October 2010 (.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. Concentrations of BTEX detected in groundwater samples ranged from 2,129 ug/L in the MW-4 to 54.1 ug/L in the MW-1. MTBE concentrations ranged from 220 ug/L in the MW-2 to 7.1 ug/L in the IW-1 location. The consultant states that August 2011 groundwater quality data was compared to the historic groundwater data developed for the property. To date since the initiation of remedial activities at the Subject Property, TVOCs have dropped by more than 61% since the last quarterly sampling event in February 2011. BTEX and MTBE concentrations have also significantly decreased across the site. This indicates that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. AD 09/19/2012: Sent an e-mail to B. Schlageter requiring submission of all missing reports. AD 12/2012: Did not receive the reports. Called and left a message. AD 02/2013: Spoke with B. Schlageter regarding

GREEN SERVICE STA (Continued) **S106703575**

reports submission. The property owner is very sick and Preferred did not visited the site for several months. He will get back with the site status update. AD 06/04/2013: Called and spoke with Bill of Preferred regarding this site. The site owner contacted them recently, so they are planning to start groundwater monitoring soon. Bill will look for unsubmitted reports and will give an update. AD 01/17/2014: Called and spoke with B. Schlageter of Preferred Env. No GW monitoring was done at the site since we spoke last time. Site owner was uncooperative. Requested to submit the most recent owner's contact information. Suggested to visit the site, sample all site wells and submit a summary report with conclusions and recommendations for further actions. AD"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND AUSTIN - SPILL ORIG. ASSIGNED TO BATTISTA 11/04/93: MID COUNTY MECH. PERMANENTLY TOOK TANK OUT OF SERVICE 12/88 AND INSTALLED A NEW TANK 6/89. 12/19/2001 Sangesland spoke with Stephine Davis from FPM Group (631-737-6200 ext228). She called asking what can be done to close out this spill report. Apparently FPM Group started working on the site in 1993. At that time the Free Product plume (from a buried heating oil tank) was defined. Property is approx 1 acre and is a picture framing company in a 5 story building Two belt skimmer wells were installed in 1993 and have been operating ever since. Product was skimmed off, separated, water has been drummed and removed from the site and product piped back into the heating oil tank to be used in the building burner. The building owner has been operating the system and now says there is very little product in the skimmers. Sangesland told Ms. Davis to submit a report (with as much DEC correspondance as possible in the appendix). The report should include a write up (1-2 page) of what the original problem was, what investigation/delineation was done and how the system has operated for the last 8 years. Sangesland said the area needs to once again be delineated to confirm the plume is gone. Suggested geo-probe in the area of the plume. Finally the environmental consultant will need to define how the dissolved product will be addressed from now on. 11/19/2003 Sangesland reviewed a report by Gregory Scott of Roux Associates (631-232-2600) The report outlines the work done on the site between 1988 and 2002. Belt skimmers were installed in 2 wells and pulled out 150 gallons of oil over a period of years. These skimmers were shut down in 2002 and this letter was requesting formal approval to shut them down. Since the floating product was removed, Roux would like the DEC to close out the case..... NO. DEC is requesting GW samples from each of the existing wells tested to method 8270 and 8021. Depending on the concentration levels, additional remedial work may be required. 2/10/2004 Roux Associates Inc submitted a report dated 1/29/04. This report stated that slight

51-02 21ST ST (Continued) **S106703282**

traces of measurable floating product is present in the onsite wells . This statement requires the DEC to maintain this as an open case. 3/4/2004 Roux Associates stated that they will do another round of sampling of the wells and submit the results soon . 3/23/2004 Roux submitted a letter dated 3/22/2004 which states no measurable floating product is present in the onsite wells. Though monitoring well MW-4 contained an absorbent sock with minimal product staining No testing of these groundwater samples was done. June 2004 - Sangesland and Austin made a site visit and concluded the spill should be closed out. DEC requested a final report with certain information documented. 7/19/2004 - Sangesland reviewed a report from Roux associates. All of the requested information was included. Based on this report, the former problem at the site has been remediated and now the site has very minor trace hits which may or may not be related to the original problem or from off site locations. Based on the industrial nature of the site and the fact that there are no impacts to human contact the DEC has closed out this case. "

Site Description: Location:The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28.Current Zoning and Land Use:The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features:The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology:Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

ROEHR CHEMICALS, INC. (Continued) **S113492645**

Env Problem:	Nature and Extent of Contamintion:Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb.Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.
Health Problem:	People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Control Type:	ENG
Date Record Added:	07/17/2008
Date Rec Updated:	08/22/2013
Updated By:	SRHEIGEL
Site Description:	Location:The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28.Current Zoning and Land Use:The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features:The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology:Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.
Env Problem:	Nature and Extent of Contamintion:Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb.Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.
Health Problem:	People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not

ROEHR CHEMICALS INC (Continued) **1000243997**

affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology:Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is

ROEHR CHEMICALS INC (Continued) **1000243997**

approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamintion:Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb.Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The reduction in xylene concentration is 99.99% based upon a maximum of 105,000 ppb to an average of 940 ppb over the last four quarters.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Site Code: 55924
Control Name: Decision Document
HW Code: 241014

Site Code: 55924
Site Description: Location:The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28.Current Zoning and Land Use:The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features:The site consists of a one story building on a 100 feet x 100 feet property. The building is presently

ROEHR CHEMICALS INC (Continued) **1000243997**

used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking.Past Uses of the Site:On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

ROEHR CHEMICALS INC (Continued) **1000243997**

transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

SWIS:	4101
Town:	New York City
Record Added Date:	07/01/2005
Record Updated Date:	12/03/2015
Update By:	JAMORAS
Site Description:	Location:The Review Avenue Development I (RAD I) property is located at 37-30 Review Avenue, Long Island City, Queens County. This site is 3 acres in size and is northwest and adjacent to the Review Avenue Development II (aka Former Quanta Resources C241005) Site, separated only by Preston Alley which is an access alley/paper street that is part of the RAD I property. The Long Island Railroad tracks border the property along the southwest, Review Avenue and Calvary Cemetery border the property to the northeast and and industrial property borders the property to the northwest.Site Features:The majority of the site is paved with only a very small portion of the property along the Long Island Railroad tracks being unpaved. There are two brick buildings currently in use on site. The larger building, referred to as Building #1 is located toward the back of the property near the Long Island Railroad tracks. It has large overhead doors and is a commercial/industrial building. The smaller building, referred to as Building # 2, is located at the front of the property, on Review Avenue, and is a two story commercial office building.Current Zoning/Uses:The site is currently zoned for commercial and industrial uses. Building #1 is currently being leased by a truck repair shop and other commercial business. Building #2 is being used primarily as commercial office space with the lowest level of the building being used for warehousing and maintenance. Warehousing and maintenance has included the construction of movie sets, with paints, polyurethane, and lacquers being used on a regular basis. The open parking areas are being used as a commercial bus parking area and for utility contractor parking as well as for parking for the tenant of the buildings. All of the surrounding properties are in commercial or industrial use. Historic Uses:The earliest Sanborn map (1898) shows the parcel as part of the Eastern Distilling Company. No further development records are provided on the Sanborn maps until 1950 when the Site was shown as being occupied by the Van Iderstine Company poultry feed building. The Sanborn maps indicate that between 1979 and 1993, various operations, including Bekins Trucking and Nanco Contracting, leased the site from the Van Iderstine Company. Since approximately 1993 the site has been used for other purposes, mostly similar to the current uses described above (truck repair, bus parking area, commercial office space, warehouse space).Site Geology and Hydrogeology:The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to coarse sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek.
Env Problem:	Soil and groundwater samples were analyzed for volatile organic

REVIEW AVENUE DEVELOPMENT I (Continued) **U003200549**

compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs) and metals. The analytical data collected on this site includes data for:Groundwater The Remedial Investigation completed in June 2005, as well as prior investigations included groundwater monitoring wells on both the RAD I and RAD II property. Shallow groundwater monitoring wells MW-1, MW-2 and MW-4R were installed on the RAD I property. These wells were used to help determine the extent/distribution of petroleum products in the form of a light non-aqueous phase liquid (LNAPL) which is present on the water table over much of the site. Additional monitoring wells were installed to isolate the monitoring zones for LNAPL and groundwater. Groundwater wells GAGW-07 and GAGW-08 were double cased through the LNAPL zone to obtain representative samples of groundwater not impacted by the LNAPL. LNAPL wells were installed with screens in the LNAPL zone so LNAPL samples could be obtained. Below is a summary of the groundwater and LNAPL data that was collected. Groundwater samples were collected from groundwater monitoring wells GAGW-07 and GAGW-08 as part of the RAD II remedial investigation. Samples were analyzed for VOCs, SVOCs, PCBs, metals and natural attenuation parameters. Groundwater sampling results indicated the presence of 1,2 dichloroethene at 12 parts per billion (ppb) and trichloroethene at 14 ppb exceeding the groundwater standard of 5 ppb for each VOC. No other site related contaminants appear to be impacting groundwater above standards. LNAPL LNAPL samples were collected from LNAPL monitoring wells MW-10, GAL-10, GAL-11, GAL-12, GAL-13, GAL-18, GAL-21, GAL-22, GAL-23, and GAL-24. LNAPL samples were analyzed for VOCs, SVOCs, PCBs, and metals. Results of VOC LNAPL analysis indicated the presence of benzene at .025 parts per million (ppm) toluene at 1.8 ppm, xylene at 1.4 ppm, trichlorethene at .054 ppm, and tetrachloroethene at .056 ppm,. In addition, PCB-aroclor 1242 was detected at 19 ppm and PCB-aroclor 1260 was detected at 15 ppm.Soil - The majority of RAD I property is currently paved. Soil sampling was conducted in connection with UST, concrete trench and sump removals (IRM) from the property. The post excavation samples collected as part of this work indicated that residual soil contaminant concentrations were well below commercial use soil cleanup objectives (CSCOs). This included VOCs and SVOCs associated with the former UST and fuel system that was removed. Toluene was detected at 4.8 ppm and total xylene was detected at 12.1 ppm well below the CSCO for these compounds of 500 ppm. Benzo(a)anthracene was detected at 1.4 ppm below the CSCO of 5.6 ppm and chrysene was detected at 1.5 ppm below the CSCO of 56 ppm.. Some contaminated subsurface soils are likely to remain within the residual LNAPL impacted area after the implementation of the area-wide LNAPL recovery remedy presented in the ROD for former Quanta Resources (a.k.a. RAD II) property. Data does not indicate any off-site impacts in soil related to this site.Soil Vapor - The Record of Decision for the Quanta Resources (RAD II) Site required a soil vapor intrusion study (Data Gap Investigation) on the RAD I property. This Data Gap Investigation was performed by Geosyntec in October 2010 to investigate baseline soil vapor conditions on the RAD I property and assess the potential for soil vapor intrusion concerns within buildings existing on the RAD I property.The soil vapor survey collected baseline soil vapor conditions beneath the RAD I parcel at 10 paved locations outside of the existing building perimeters. The results indicated the presence of vinyl chloride (ND to 2,300 ug/m3) and TCE (ND to 860 ug/m3) at various depths in the soil vapor and within close proximity to the

REVIEW AVENUE DEVELOPMENT I (Continued) **U003200549**

onsite buildings. Sub-slab soil vapor sampling was then conducted in building #2 following building inspections performed at both buildings on the property. Building #1 was (and continues) to be used as open warehouse and a diesel truck mechanics shop, so no further sampling was conducted there. Building #2 is primarily office space with lower level storage and maintenance. The results of the sub-slab sampling conducted in building #2 indicate the presence of several compounds above guidance thresholds. This includes cis-1,2 dichloroethene (ND to 1,700 ug/m3), tetrachloroethene (ND to 21ug/m3), trichloroethene (680 to 1,700 ug/m3) and vinyl chloride (ND to 790 ug/m3). However, further actions were not required at the time due to the use of solvents within the building by the occupants.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling has indicated that soil vapor intrusion does not represent a current exposure pathway given the use of the site. However, an additional soil vapor intrusion evaluation is recommended if the building use changes and solvents are no longer being used. Sampling has indicated that soil vapor intrusion is not an off-site concern.

275 gallon waste oil AST on the front yard. Minor spill around the tank indicate poor housekeeping practices.Tank is not registered. I told Jim McMurray to registered the tank,have secondary containment around the tank to capture loose oil incase it spills.I also told him to keep all waste oil disposal receit.Speedy dry was being put down during my visit.Case closed. Facility Contact: Jim McMurray CAC Industries,Inc 54-08 Vernon Blvd, LIC, NY 11101 Ph:(718)729-3600 Cell: 347-728-0220.(sr)"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 03/20/91: JIM SCHULTZ OF EA ENGINEERING CONTACTED. 0.9 FEET OF PRODUCT FOUND AFTER TWO ATTEMPTS TO PUMP WELL. PRODUCT WAS DESCRIBED AS BEING LIGHT, AND DARK IN COLOR. 12/23/2002, MILLER CLOSED OUT SPILL REPORT. THIS IS A REPORT OF SPILLAGE SUBSQUENTLY REMEDIATED BY EXXON AND IS NOW PART OF THE NEWTOWN CREEK WPCP EXPANSION. 06/09/03 Reassigned from Miller to Rommel. Ellen Metzger called. They have completed the sheeting around this property for the WPCP expansion. They have dug down to just above the watertable. The excavation work (Contract 35F) is planned for August. Due to the recent rain, oil is bubbling up through standing water and will be recovered. Rommel. 2/11/10. Reassigned to E. Hampston. Closing spill in conjunction with Miller note above and information below. See also spills 9106287, 9104730, 9101866, 9012950, 9005513. Contact Phone:	(718) 383-4066 112
DEC Memo:	"9/16/15 - Obligado - Desk Duty - I spoke to James Geraci. 718 383 4066 During gasoline loading, approximately 200 gallons of gasoline spilled onto the rack and down into the containment area. The spill did not go into sewer or creek. At this time the spill has been cleaned up. Additional water was sprayed on to it for clean up and to control vapors. The contaminated water also flowed into the containment. According to James, there is no rainbow, no sheen on the ground surface at this time. According to James, no sewers or surface water has been impacted. A truck is on route to vac out gasoline/water. Spill assigned to Veronica. As per Randy, Veronica should respond. 9/16/15-Zhune responded to this spill. Met James Geraci. He walked me to the area where the spill occurred. As per Mr. James they wash out the area of the spill with water and placed everything into the secondary containment. American Petroleum is on the way to pump out the containment. The containment is an underground containment with capacity of 400-gallons. Approximately 200 gallons of gasoline spilled onto the rack. As per Mr. James no sewer, no soil and no subsurface water has been impacted. James will email the closure report and the waste manifest to the DEC. 9/18/15-James Geraci from Arc Terminals sent the following email: At about 10: 15 AM ITC driver Alvar Richardson, while loading under ARC rack # 3overloaded truck compartment # 5 resulting in spill of approximately 200 gallons. All spilled product flowed into the racks secondary containment tank. No product entered into storm water drains or oil/water separator system. Another driver saw the spill taking place and he activated the emergency shut off system and stopped all product pumps. All terminal operations were suspended, all trucks remained at loading racks and no one was allowed to start engines until vapor levels were deemed safe. In order to minimize vapors and to ensure that all spilled product entered the spill

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

containment tank, I asked terminal operator Julio Martinez to activated and let run for a few minutes the rack fog sprinkler system. Once we established vapor levels were safe we allowed all truck to start up and leave the loading racks. Rack # 3 remained out of service. I called Ferrara Electrical to inspect loading rack #3. At 2:20 PM Ferrara Electric arrived and proceeded to perform a complete inspection of rack #3. All electric components, flow control valves and all loading arms were inspected. After a complete investigation it was determined that rack loading arm # 3 had an equipment malfunction and caused the spill. Arm # 3 has been disabled and will not be used until repaired.At 12:05 PM I called NYSDEC spill hotline and reported the spill, received spill number 1506388, from Ms. Clark. At 12:15 PM I called NRC reported spill, received spill number 1128639 from Petty Officer O Brian. I called American Petroleum and asked that they dispatch a vacuum truck in order that the rack containment tank be pump out. Truck arrived and began to pump out tank at 5:10 PM manifest enclosed. At 2:10 PM NYSDEC Environmental Engineer Veronica Zhune arrived, surveyed the terminal and inspected the area of the spill. We reviewed the containment system under the loading rack canopy and the drainage leading to the containment tank. I explained to her the procedures used in vacuuming out the tank. Ms. Zhune asked that I forward her a spill report statement and a copy of the waste manifest for the containment tank pump out."

Remarks: "contained to holding tank, unknown if driver error or equip failure."

DEC Memo: "02/07/13 - lz Reviewed Sovereign Consulting Inc. s January 18, 2013 Tank Excavation Assessment Report (eDocs). The Report summarizes activities related to the permanent closure of 42 underground storage tank systems. Some of these tanks were removed; other were left in place, since their removal could jeopardize the integrity of nearby structures. About 397 tons of petroleum-contaminated sand were removed from the tanks, and 931 tons of contaminated soil and concrete were disposed of at a registered facility. Excavated uncontaminated soil was used to restore the site. The Department has received Sovereign Consulting Inc. s January 16, 2013 LNAPL Recovery Report to address residual petroleum contamination at the aboveground storage tank area. The LNAPL Recovery Report will be reviewed in relation to Stip executed February 24, 1998, linked to spill case number 8709990, et seq. No further action is required concerning the removal of the tanks and the pertinent site assessment. The Department has closed spill case number 9002114. Stip number R2-20120626-406 has been terminated. 09/15/11 - LZ The June 30, 2011 annual report (eDocs) indicates that product is present in a number

MOTIVA ENTERPRISES LLC (Continued) **S103559501**

of MWs. the highest thickness was 2.4 feet in MW-40. 12/15/09 - LZ A meeting with Motiva consultants Douglas Weiner and Douglas Byers focused on options to speed up remedial process. By March 31, they submit a risk assessment and evaluate remedial options than can be used at Motiva. 08/14/09 - LZ The June 19, 2009, report, prepared by Science Applications International Corporation, shows that monthly hand bailing was performed at 30 wells during the period July 2008-June 2009. Six wells exhibited free-phase product. The maximum thickness was 0.52 foot in MW-31. The total amount of recovered product was 1,177 gallons since the remediation started in 1998. the report shows that BTEX and MBTE concentrations in groundwater have decreased over time. The next report is due June 30th, 2010. 01/03/08 - Zielinski The Department has reviewed a request by Science Applications International Corporation to discontinue the use of the pumping system, supported by information contained in the 2005 Annual Report and the 1998 Corrective Action Plan for Motiva Enterprises, Brooklyn Terminal. The Department approves the continuation of product recovery at all wells by monthly hand bailing. 9/13/07 - Zielinski Received the 2007 annual Sampling Report,dated August 9, 2007, prepared by Science Applications International Corporation. Thirty wells were gauged and bailed monthly and one-time sampling was conducted. Total 1,136 gallons of free product were removed. A review of submitted data from 01/06/99 to 07/06/07 indicate that the largest thickness of free product was discovered(in feet of product) in MW-2(1.50), MW-4(o.41), MW-15 (0.11), MW-26(0.52), MW-31(1.15), MW-36(1.38), MW-37(1.50), MW-40(2.40), MW-41(0.54), RW-34 0.17),TW-2(0.14), TW-5(1.08), and TW-6(0.25). Few other wells show free product up to 0.1 feet in thickness. VOCS sampled on 06/26/07 were detected in: MW-1; (nd), MW-2: (nd), MW-29: ethylbenzene (303 ppb), total xylenes (26.8 ppb), MW-5: tetriary butyl alcohol (27.5 ppb), MW-22: total xylenes (23.7 ppb), MW-24: MTBE 95.64 ppb), MW-16: benzene (99.8 ppb), tertiary butyl alcohol (87.3 ppb), MW-20: MTBE (188 ppb), tertiary butyl alcohol (2,370 ppb), total xylnes (1,420 ppb, MW-15: MTBE (54.7 ppb), MW-33: MTBE (89.9 ppb). SVOCs, according to the report, between June 2000 and June 2007, only MW-5 contained detectable concentrations over the past three years. Applications International Corporation requests in its letter NYSDEC approval to discontinue the active pumping and to practice hand bailing. The new Motiva environmental contact for this site is Anna Tillman, phone 404-417-1974. 01/22/07 - Zielinski The 2006 annual report for Motiva Enterprises LLC, Brooklyn Terminal, prepared by Science Applications International Corporation, shows that BTEX and MTBE concentrations in the groundwater has decreased over the time. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO This spill site cleanup has been conslidated under Spill No. 9002114. Shell Brooklyn, N.Y. Distribution Plant, 25 Paidge Avenue, Brooklyn, N.Y.- Spill Investigation & Corrective Action Plan DEC Spill Nos. 8709990, 9002114 & 9413568. On February 25, 1998, DEC Executed stipulation for the cleanup of the groundwater at the Shell N.Y. Distribution Plant, 25 Paidge Avenue, Brooklyn. The stipulation was issued to Shell Oil Products Company Two Shell Plaza P.O. Box 2099 Houston, Texas 77252-2099 Mr. Erik E. Hansen, Environmental Engineer 4/12/04-Vought-Spill transferred from Sigona to Rommel as per Rommel. 4/26/04 - Re-assigned to Zhao."

Remarks: "Free Product found in Groundwater Monitoring wells. Well Nos. 2 had .13 feet, WELL #4 .004 feet, WELL #9 FILM, WELL #5, WELL #17, WELL #19 .09 Feet, WELL #20 FILM."

DEC Memo:	"11/27/07 bf: Spoke to Nancy Galasso. She plans on repairing the tank and is waiting for proposal from Petroleum Tank Cleaners. Confirmed mailing address and sent ttf letter to: Nancy Galasso Wickersham Realty 79 Wheatley Road Old Westbury, NY 11568 1/2/08 On 12/27/07, received 12/11/07 passing tightness test for tank only. Included was a note requesting a response. 1/3/08 Called Nancy Galasso (516)626-3487. She told me tank failure was due to pipes. PTC is handling. Called M. Salamack of PTC. Tank emptied. Running on temp tank. No contamination found so far. Piping is both aboveground and underground. Company leasing building is giving PTC hard time. They were sent away when trying to make repairs. Lessee wants to remove tank and install AST. Owner wants to keep UST. PTC caught in middle and has to call lessee prior to doing work at the site (as per lessee). Mark will call lessee today. bf 5/22/2008 Sangesland sent a TTF 2nd Notice letter to: Nancy Galasso Wickersham Realty 79 Wheatley Road Old Westbury, NY 11568 5/23/08 Received message from N. Galasso Wickershaw (516)626-3487. She said tank was closed, which according to DEC records was closed in 2008. I told her to close the spill case a letter/report is required. bf 5/28/08 Yesterday, M. Salamack left message stating no contamination found. Piping fittings were loose. He will send report to me by the end of the week. bf 7/24/08 received letter from Mark Salamack on 7/16/08. Suction line Cuase of failure was exposed pipe inside the building. Buried prtion of pie examioned and no sign of cantamination. Old tank abandoned and new 1080 gallon AST installed. Passing tightness test for tank included. Review of PBS file shows that tank was closed. NFA. bf"

Contact Name: PATRICK NAREA
Contact Phone: (212) 675-3225
DEC Memo: "Sangesland left a voice message with Patrick Narea at Flemming Lee Shue Environmental asking for more information on the spill and status of the cleanup. 02/05/08-Vought-Received call from Mohammed Ahmed (Fleming Lee Shue 212-675-3225 fax:212-675-3224) who is working for STHAL Realty. Building will be constructed on site and excavation down to 16' below grade. Petroleum contaminated soil was encountered around tank and no groundwater encountered in excavation. Building was constructed. Contractor collected endpoint samples and Closure will be reported to DEC. Onsite contractor decided not involve AKRF and endpoint samples and buildings were constructed. Site is E designated. DEP required installation of vapor barrier which was installed and documentation will also be submitted. DEC will receive report 3/15/08 and PBS regsitration will be submitted. One 5000-gallon #4 fuel UST was removed. 06/05/08-Vought-Received multiple requests from FLS Ahmed to review report. Vought reviewed Spill Closure Report dated 3/11/08 and received on 3/14/08. Vought also inspected PBS #2-600455 and found four closed-removed 550-gallon gasoline USTs and one closed removed 5000-gallon gasoline UST. During soil excavation, two USTs were found consisting of one (550-gallon) near the western boundary of the site and one 5000-gallon gasoline UST on the northeastern portion of the site. During the removal activities of the 5,000-gallon UST, oil sludge was spilled into a rainwater puddle and a petroleum spill was reported to the NYSDEC. Former vehicle repair facility onsite. Site being developed with 11-story residential building with a fully below grade basement along 49th avenue. No VOCS found however SVOCs detected typical of urban fill material (such as that found on the site) which often contains cinders, ash and other combustion by products . Groundwater samples showed no VOCs and VOCs above TOGs 1.1 groundwater standards. A total of 165.45 tons of petroleum-contaminated soil found around the tanks was excavated and removed . ...a vapor barrier was also installed beneath the foundation and along the below grade portion of the foundation walls . Three endpoint samples were collected and showed no VOC detections. A total of 7,500 gallon of petroleum contaminated water and fuel oil were removed from site... . DEC requires site plan with USTs, endpoint sample locations and groundwater sample locations. Vought sent letter with above requirement to: 11-15 50th Ave, LLC c/o Olshan Grundman Frome Rosenzweig & Wolosky Park Avenue Tower 65 East 55th Street New York, NY 10022 and cc to FLS Ahmed. 06/06/08-Vought-Received call from FLS Ahmed and site plan was in back appendix of Spill Closure Report. Site plan shows collection of soil samples from around former 5000-gallon UST and as per Ahmed groundwater samples were collected from tank location as well. Ahmed also indicated that oil sludge spill was also at the tank location where extensive soil excavation was performed as well. Due to removal of soil contamiantion, minor non-VOC contamination of groundwater and installation of vapor barrier, spill closed and no further action letter by Vought and sent to above address."
Remarks: "HOLES FOUND IN TANK DURING UNDER GROUND TANK REMOVAL; TANK HAS BEEN FULLY REMOVED; NOT YET CLEANED;"

Site Description: Location:The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site.Site Features:The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site.Current Zoning/Uses:The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment.- 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories- 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses:In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

ceased in 2003.Site Geology and Hydrogeology:Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeastMiscellaneous:There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem: The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab.The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds.Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 11/14/03 SEAL ON TOP HATCH OF TRUCK LEAKED WHEN TRUCK WAS PRESSURIZED FOR A DELIVERY. COMPRESSOR TURNED, OFF GAS SPRAYED, A MIST OF GAS RELEASED, TRADEWINDS DOING CLEANUP. Transferred to CO - CB Ng. 12/5/05: CBN Called Vito Genova (718) 389-3052 and was told

EXXONMOBIL GREENPOINT REMEDIATION PROJECT (Continued) **S106011408**

that he would call me back once he has the contact of the cleanup company, Tradewinds. 3/30/07 - Austin - Trasferred to Ketani for further review - end 5/18/07 - Raphael Ketani. The spill took place on 11/4/03 and involved a bad seal on a truck. I spoke to Artie Baldwin of Trade Winds (516) 779-7824. I asked him whether he knew how bad the spill was and whether he had any documentation regarding the cleanup. He said that his company had just moved to a new office and so it will take him a while to look for the records. I told him that would be fine. 8/1/07 - Raphael Ketani. I spoke to Mr. Baldwin. I told him that DEC still hasn't received any documentation that the spill was cleaned up. He said he will have his son look for the information when he gets back to the office. There is no paper file for the case. 8/27/07 - Raphael Ketani. Vido from EXXON-MOBIL (718) 389-3052 called to say that he had the paperwork for the cleanup of the spill. He said he will mail me copies of the package of documents. I told him to do so quickly. 9/21/07 - Raphael Ketani. On 8/31/07 I received copies of the manifests for the cleanup of the sprayed oil. Having received the manifests and based on the spill being a spraying of oil and the age of the spill, I am closing the case. "

Remarks: "bad seal on tank. cleanup crew being called."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 7/17/2003-Vought-Initial copy of report sent on 5/8/2003. Second copy sent on 6/13/2003. Underground Storage Tank Closure Report-March 2002-RND Services (Sharima Ryan-845-348-6355). One (4000-gallon) diesel/fuel oil UST removed from 249 Green Street and one (2000-gallon) diesel UST removed from 251 Green Street. Both properties were once occupied by a demolition, carting and transfer station. Groundwater at a depth of 8' below grade and flows to the north. Site underlain by fill material (coal ash, wood, cinders). Excavation of impacted soil around 4000gal UST was performed to 8' below grade. Excavation on impacted soil around 2000-gal UST was also performed to a depth of 8' (disposal manifests for both tanks provided). Excavation around 4000-gal UST limited on south side due to presence of load bearing wall and excavation around 2000-gal UST limited on south and east walls. Four endpoint soil samples obtained from 4000-gal UST excavation (no bottom sample was obtained due to groundwater in excavation). Two endpoint samples obtained from 2000-gal UST excavation (no bottom sample was obtained due to groundwater in excavation). No east or south samples collected due foundation walls and no soil remaining. RND believes that groundwater

FORMER WASTE TRANSFER STATION (Continued) **S105995441**

has been impacted . A total of 178.25 tons of impacted soil were removed from the site. Soil analyticals show up to 6400ppb chrysene(PE21), 7600 benzo(a)anthracene(PE21) and 27000ppb benzo(a)pyrene(PE3) and 98000ppb phenanthrene(PE3). 7/17/2003-Vought-NYSDEC requires 1)groundwater sample. Vought spoke with Sharima Ryan and she requested email of requirement. Vought sent email on 7/17. 1/26/05-Vought-Spoke to Sharima Ryan and she requested NFA and analyticals were already sent. 1/27/05-Vought-New file review by Vought: Letter from RND(Ryan) to DEC Vought-5/20/04. Enclosed please find the groundwater results for the above referenced property . Two groundwater samples were collected from wells installed within the former tank excavations. Samples were analyzed for PAHs. Report is requesting closure. Groundwater shows no TOGs Groundwater exceedences. Spill closed by Vought."

Remarks: "during a tank removal caller found contaminated soil"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This gasoline spill case has been reassigned from DEC (Sigona) to Rommel on January 7, 2004. 7/12/04 This spill site has been consolidated under Spill No. 9812663. See also 9203696 for diesel release. Rommel. Reassigned from Tibbe to Sigona on 11/21/2000 A site investigation work plan was submitted to DEC for review and approval on November 7, 2003, and was approved by DEC Sigona on June 23, 2004. 03/259/05: Transferred from Rommel to Tibbe. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/28/11 - spill re-assigned from O'Connell to Obligado 10-28-13 - Obligado - I sent an email to Mr. George Bassil regarding spill consolidation. For the Queens Midtown Tunnel, I found 3 open spill numbers, 9203696, 9709658, and 9812663. As all 3 spills occurred within close proximity within the same facility, I have administratively closed 9203696 and 9709658, and consolidated them with the remaining open spill number 9812663. "

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110004334872

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: JAMORAS
Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use:The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing.Site Features:The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site.Past Uses of the Site:The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway.A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC’s Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil lying above the groundwater table. See Site Code C241005 for post ROD updates.

Env Problem: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

	contaminants of concern include petroleum hydrocarbons, chlorinated solvents,heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089
Health Problem:	Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminates. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Record Updated Date:	01/22/2016
Update By:	JAMORAS
Site Description:	Location:The Former Quanta Resources Site, a.k.a. Review Avenue Development II Site (RAD II) is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. This site is adjacent to the Review Avenue Development I (RAD I) (seperated only by Preston Alley which is a access alley/paper street). The Long Island Railroad tracks boarder the property along the southwest. Site Features:The site is a fenced, open gravel parking lot. All above ground and below ground tanks, structures, and buildings were removed as part of an interim remedial measure in 2008.Current Zoning/Uses:The RAD II site is currently being used as a parking lot. It is zoned for commercial and industrial uses. Historical Uses:The RAD II property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in November 1981. Site Geology and Hydrogeology:The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to course sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the watertable under the site.
Env Problem:	Nature and Extent of Contamination:A viscous light non-aqueous phase liquid (LNAPL)is present at the watertable over the entire site. The LNAPL is a weathered petroleum. Groundwater flow is toward the south-southwest toward the Newtown Creek. The extent of the LNAPL has been delineated and it has not migrated beyond the Long Island Railway tracks downgradient.Known or suspected contaminants include: Petroleum, Chlorinated Solvents, other VOCs, and metals, impacting the soil and groundwater.An LNAPL collection and treatment system has been completed and is operating on-site. Significant Threat:The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.
Health Problem:	Exposure to contaminated groundwater or soil is unlikely because the area is served by public water and access to the site is restricted by fencing. The potential for exposure via soil vapor intrusion off-site

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

will be evaluated during the remedial design and will also be evaluated if new construction is planned on-site in the future.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited

S & G WOODWORKING INC (Continued) **1008892201**

	groundwater contamination, but did not identify any significant soil contamination.
Env Problem:	NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

Site Description: Location:The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features:The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plan is ~1/2 mile north of the site. Current Zoning/Use(s):The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s):The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

mid-1960's. This investigation was conducted in several phases, and was completed in the Summer of 2009.Site Geology and Hydrogeology:The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (~138.5' below ground surface).Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem: Nature and Extent of Contamination:- GroundwaterThe primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 730,000 ppm (73%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each).- SoilPCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm).-Soil Vapor and Indoor AirConcentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3.Significant Threat:The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area anddata evaluated as they become available.

DEC Memo: "6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

single-walled steel approximately 1/4 thick, and approximately 4' in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260 Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington) 8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal from the site building. IPT to confirm the permits needed before initiating work. URS will be providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington)"

Remarks: "Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Record Upd: 02/11/2014
Updated By: BRWOLOSE
Site Description: Location:The site is located at 21-03 44th Avenue in Long Island City, Queens, NY.Site Features:The site primarily consists of the building located at 21-03 44th Avenue, which is currently used as a taxi dispatch and a taxi medallion brokerage.Current Zoning/Uses:The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road.Historical Uses:Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Site Geology and Hydrogeology:Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.Entered Brownfield Cleanup Program on February 10, 2014 as C241144.
Env Problem: Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater.Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree.Soil vapors beneath the building have been tested and are well above the NYSDOH guidance levels for PCE.
Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Updated By: JEBROWN
Site Description: Location:The site is located immediately south of, and adjacent to, the building located at 21-03 44th Avenue in Long Island City, Queens, NY.Site Features:The site includes the sidewalk/street area immediately above and in the vicinity of a broken sewer line near the location of three groundwater monitoring points placed on the sidewalk in front of the building at 21-03, along 44th Avenue.Current Zoning and Land Use:The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road.Past Use of the Site:Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Contamination appears to have entered the environment from a broken sewer pipe that connects the building at 21-03 44th Avenue and

21-03 44TH AVENUE (Continued) **S109826178**

	the main sewer line in the street. Site Geology and Hydrogeology:Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.
Env Problem:	Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater.Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree.Significant Threat:Contamination presents a significant threat to the environment as demonstrated by the magnitude and aerial extent of groundwater impacts.
Health Problem:	On- and off-site groundwater is contaminated with lead, chromium, hexavalent chromium and volatile organic compounds, primarily tetrachloroethene (PCE) and its breakdown products. The area is served by public water, thus exposure via ingestion of contaminated groundwater is not expected. Insufficient data exists for complete evaluation of potential exposures to other site-related contamination.

Site Code: 487959
Acres: 0.424
HW Code: C241144
SWIS: 4101
Town: New York City
Record Added Date: 10/15/2013
Record Updated Date: 01/04/2016
Update By: JEBROWN
Site Description: Site Location: The proposed BCP site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped parcel consisting of one tax parcel approximately 0.42 acreas in size. The property is developed with a single, two-story commercial building constructed in 1929 and is constructed of masonry and stucco. Current Zoning and Land Use: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site. The nearest residential area is approximately four hundred feet south of the site, along 44th Road.Past Use of the Site: Prior uses of the building include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.
Env Problem: Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater.Soil:Preliminary studies have not detected VOCs above groundwater protection SCOs in site soils. Early work conducted at the site showed soil contamination with chromium, though much of that was apparently removed during a self-directed remedial action by a previous site owner.Groundwater:Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree.Soil Vapor:Soil Vapor - The most frequently detected CVOCs were PCE, TCE, 1,1,1-trichloroethane (1,1,1-TCA),and carbon tetrachloride. At least one of these compounds was detected in five of the six sub-slab samples at concentrations greater than the NYSDOH mitigation guidance

21-03 44TH AVENUE (Continued) **S109826178**

values. These compounds were either not detected in indoor air samples collected from the building, or were detected at levels several orders of magnitude less than was seen in sub-slab samples. The highest sub-slab concentrations of PCE (up to 18,000 ug/m3) were in samples from thenorthern half of the building, and 1,1,1-TCA was present in sub-slab samples at concentrations up to 3,100 ug/m3. The highest indoor air concentration of PCE was in the summer 2011 basement air sample, at 57 ug/m3. Concentrations of PCE and other CVOCs in the 2012 heating season indoor air samples were either less than 1ug/m3 or below detection limits.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description: Location:The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The approximately 1 acre site is described on the county tax map as Block No. 2487, Lots No. 1, 10, 12, 72 and 78. Site Features:The dimensions of the site are approximately 240 feet by 200 feet. The building consists of a number of smaller buildings that have been joined together. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To

49 DUPONT STREET (Continued) **1009232006**

the west is a park and to the northwest is a paved lot which is used for truck storage.Current Zoning/Use:The Site zoned M1-2/R6 which designates the site as manufacturing with a residential overlay. The site is currently vacant. Historic Use:The site has been in existence since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart removed all of their equipment and offices. There are 12 underground storage tanks (USTs) located on the Site. According to records, these tanks were emptied and closed as part of an Interim Remedial Measure (IRM). There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) number is 2-608875, and the Chemical Bulk Storage (CBS) number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate.Site Geology and Hydrogeology:Measurements of the groundwater elevation indicated groundwater flow is generally to west towards the East River.

Env Problem: Nature and Extent of Contamination:The plasticizers bis(2-ethylhexyl)phthalate, Di-n-Octyl phthalate, as well as high boiling, paraffinic, petroleum oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. TCE was also detected in soil vapor, shallow soil and groundwater in central portion of the site. From 1983 to 2004 NuHart and Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000 ppm of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. According to the Interim Investigation Report dated April 2010, a large plume of plasticizer NAPL mixture consisting of phthalates and paraffinic petroleum was identified under the western end of the factory where the plasticizer USTs were located. A small plume of NAPL consisting primarily of phthalate was identified beneath Lot 12 near one of the plasticizer tanks. The large plume has migrated off-site in a northwesterly direction under the sidewalk. Previous interim remedial measures (IRMs) implemented under the spill program involved cleaning the floors of the factory, cleaning out the USTs, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and recovery equipment. NAPL recovery has been ongoing since 2007. The IRM activitiy includes the use of a automated recovery unit at one recovery well and manual bailing from other wells. Typically about 70 to 80 gallon of product/water mixture are recovered each month.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil since it is under the ground surface, however, if the site is redeveloped, construction workers or future site occupants may come in contact

49 DUPONT STREET (Continued) **1009232006**

with site related contamination in soil if it is not handled properly. Also, the potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby structures via soil vapor intrusion needs to be evaluated.

Site Description: The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The building consists of a number of smaller buildings that have been joined together. The dimensions of the footprint of the one large building are approximately 400 feet by 200 feet. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage.The site has been in existence since 1887. It has been used for manufacturing, as an office, as storage, and for shipping and receiving. Prior to 1950, the site was used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. From 1983 to 2004, NuHart & Company made vinyl siding and sheeting at the site. After 2004, NuHart & Company removed all of their equipment and offices. The site is now used for the storage of plastic wrapping and many large (36 cu. ft.) fabric bags containing pellets of resin. There are 17 underground storage tanks located on the site and two large silos above ground at the west end of the building. The Petroleum Bulk Storage (PBS)number is 2-608875 (for 13 registered tanks). The site is a former Chemical Bulk Storage (CBS) facility #2-000444 with 5 plasticizer tanks. Liquid plasticizers stored included bis(2-ethylhexyl)tertphthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate.The requestor withdrew the application, and the site was listed on the Registry of Inactive Hazardous Waste disposal site as of June 2010 (see site no. 224136).
Env Problem: The plasticizers bis(2-ethylhexyl)phthalate anddi-n-octylphthalate, as well as #4 fuel oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. From 1983 to 2004 NuHart & Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid

49 DUPONT STREET (Continued) **1009232006**

plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000,000 ppb of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. A large plume of plasticizer NAPL was identified under the western end of the factory where the plasticizer USTs were located. This plume had migrated off-site in a northwesterly direction. A small plume of mostly #4 oil NAPL was identified under the northeast corner of the factory and had migrated a shorty distance off site. The environmental remediation which followed involved cleaning the floors of the factory, cleaning out the underground storage tanks, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and equipment. The NAPL plumes have now been reduced in size and consist of three separate plumes. All of the plumes are contained under the sidewalks bounding the factory and under the footprint of the building. The smallest plume is under the northeast corner of the site. The former large plume under the western end of the factory is now two separate plumes (according to the November 26, 2008 gauging event) and consist solely of plasticizers. The thickness of the NAPL ranges from 0.16 feet to 1.38 feet. Product collection from these two plumes is continuing and, as of December 2008, has recovered a total of 8,356 gallons of NAPL.

Updated By:	JXGRECO
Site Description:	Location:The site is located at 43-01 21st Street in Long Island City, Queens, NY.Site Features:The site primarily consists of the building located at 43-01 21st Street, which is currently used to house many small businesses, including dental labs, furniture makers,

THE WILLS BUILDING (Continued) **S113916801**

uniform sales and upholstery shops, among others.Current Zoning/Uses:The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately flve hundred feet south of the site, along 44th Road.Historical Uses:Prior uses of the building include manufacturing of X-ray equipment in the 1930's, as well as several smaller industries. Light to medium grade manufacturing has been conducted immediately to the south and east of the site for over fifty years. A New York City high school is located approximately four hundred fifty feet to the south of the site. Site Geology and Hydrogeology:Soil at the site consists of historic fill mixed with silty sands to a depth of approximately fifteen feet, with bedrock below this depth. Groundwater is encountered at approximately ten feet below ground surface, and the flow is generally to the south.

Env Problem:	Nature and Extent of Contamination: Data collected during the investigation of the 21-03 44th Avenue site RI, located immediately south of the Wills Bbuilding, indicated the Wills building to potentially be a contributing source of VOC contamination to that site.Wells were placed upgradient of the Wills building, and data from those wells was assessed relative to wells immediately down gradient of the Wills building, but upgradient of the 21-03 44th Avenue site. Results indicate that contamination at the downgradient location is over an order of magnitude greater than the upgradient locations, with PCE contaminant levels as high as 2700 ug/l in the overburden wells (vs. an overburden upgradient value of 190 ug/l), and 23,000 ug/l in the bedrock wells (vs. an upgradient value of 760 ug/l). Sub-slab and indoor air data was also collected at the Wills building and results are substantially above guidance. Sub-slab PCE levels are as high as 3,700,000 ug/cubic meter; and indoor air showed levels above the NYSDOH matrix values.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Updated By:	RXSCHICK
Site Code:	490427
Site Description:	Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site.Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies.Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site.Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

THE WILLS BUILDING (Continued) **S113916801**

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site.Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies.Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site.Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene, and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas

THE WILLS BUILDING (Continued) **S113916801**

from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

North Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

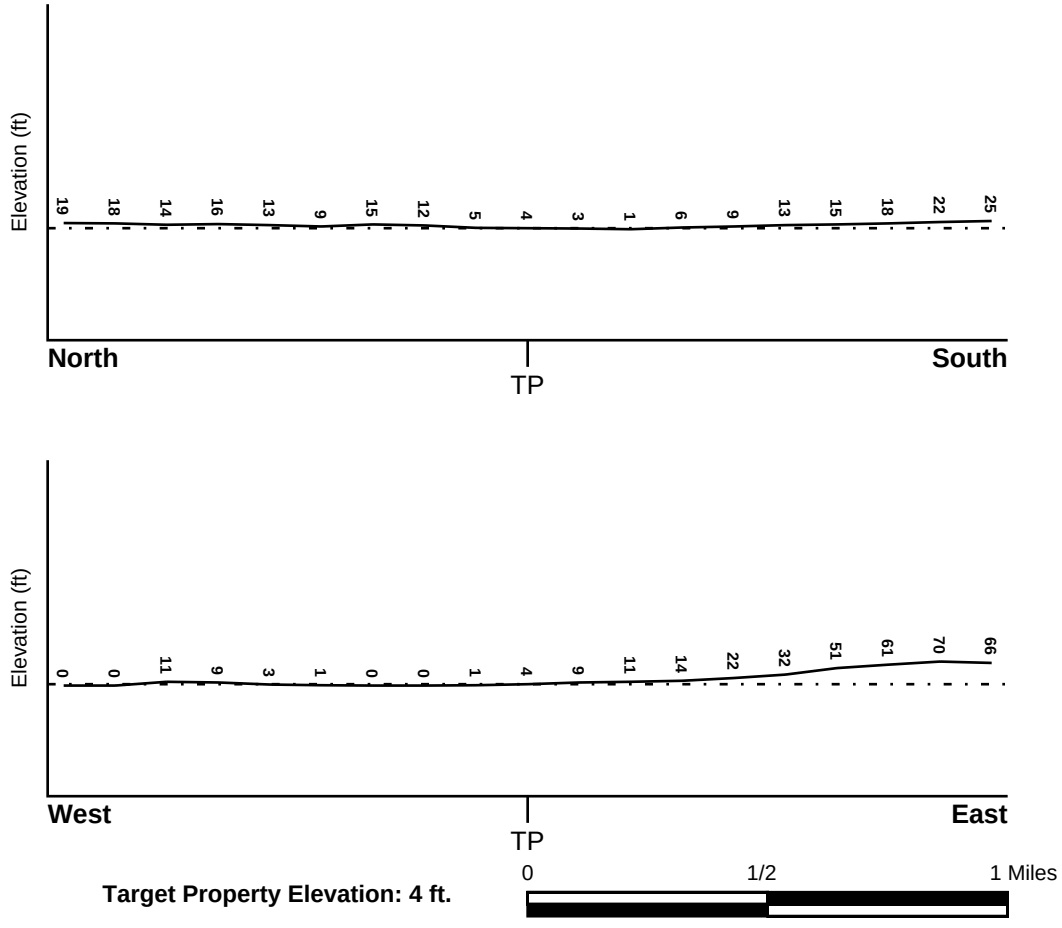
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 4 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
QUEENS, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data

Additional Panels in search area:
- 3604970040B - FEMA Q3 Flood data
- 3604970039B - FEMA Q3 Flood data

- 3604970048B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PARTNER

Sara Hedtler
Staff Scientist

Education

B.S., Biopsychology & Environmental Studies, Tufts University 2014

Highlights

Phase I Environmental Site Assessments
Transaction Screen Assessments
Environmental Desktop Reports

Experience Summary

Ms. Hedtler has experience in due diligence assessments for a variety of property types and the needs and requirements of a varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI) and customized client formats. Ms. Hedtler's responsibilities include completing Phase I Environmental Site Assessments, Transaction Screen Assessments, Environmental Desktop Reports and Peer Reviews for an array of commercial, multi-family, industrial and municipal properties throughout the northeast, with a focus on New York City real estate.

Project Experience

White Plains Self Storage, White Plains, NY. Storage facility historically utilized as an automobile repair shop, painting facility and manufacturing warehouse for over fifty years. An active sub-slab depressurization system to mitigate vapor intrusion serviced the subject building and adjacent properties.

BMW & Mini Cooper, New York, NY. Two contiguous car dealerships with automobile service centers equipped with an oil/water separator, car wash and eighteen hydraulic lifts. Ten USTs were removed from the properties, located in Hell's Kitchen.

UPS Freight, Bay Shore, NY. Twelve acre site with three cross-docking facilities used for export packaging and shipping, automotive maintenance and semi-truck storage historically utilized for sand mining activities. Seven USTs were removed from the Long Island property and two septic systems currently operate on-site.

One Sutton Place North, New York, NY. 300,000 square foot residential high-rise building constructed in 2001 adjacent to the Queensboro Bridge. The property was historically utilized as an auto sales and service center and taxi garage. Seventeen USTs and a series of underground hydraulic lifts were removed from the property along with contaminated soils.

Walgreens, Union City, NJ. Phase I ESA of a Walgreens previously utilized as a gasoline filling station, auto sales and service center and manufacturing facility located in an industrial area of Union City. The assessment included an in-person file review at the New Jersey Department of Environmental Protection.

Former Gas Station, Brooklyn, NY. Sub-grade physical therapy office that previously operated as a filling station with fourteen USTs. Over fifteen monitoring wells have been installed on and adjacent to the property and a vapor barrier was installed in the foundation of the current building in 2005. Groundwater petroleum constituent concentrations have decreased and stabilized but are still present on-site above action levels.

Mansfield Hotel, New York, NY. Phase I ESA of The Mansfield, a 60,000 square foot landmark hotel in Midtown Manhattan.

Industrial Warehouse, Commack, NY. Long Island property utilized for the storage and shipping of electrical parts and flooring materials. Concentrations of semi-volatile organic compounds (SVOCs) and lead were found above action levels in two on-site leaching pools.

One Exchange Plaza, New York, NY. 350,000 square foot commercial office building located in the Financial District and currently under construction for a first floor retail center.

Highlights

9 years of environmental consulting experience
Phase I Environmental Site Assessments
Subsurface drilling for geological and geotechnical characterization
UST and source removals
Site-specific health and safety management

Experience Summary

Mr. Michel serves as a Project Manager for Partner Engineering and Science, Inc. (Partner) performing Phase I ESA reports review and client management as well as field PA staff supervision.

Mr. Michel has nearly 9 years of environmental consulting experience. Throughout his career he has overseen and case managed projects involving environmental assessments at multiple petroleum and non-petroleum sites, emergency responses, subsurface drilling for geological and geotechnical characterization, underground storage tanks (USTs) and source removals, construction, asbestos and mold abatement, waste management and disposal, and site-specific health and safety management, for clients such as ExxonMobil, Florida Department of Environmental Protection (FDEP), Florida Department of Transportation (FDOT), Florida Turnpike Enterprises (FTE) and the New Jersey Department of Environmental Protection (NJDEP). Mr. Michel has a geology and chemistry background which in conjunction with his broad field experience, have been able to resolve technical field issues through quick decision making, allowing the completion of jobs in a timely manner. His skills include, managing, planning and coordination, procurement and oversight of drilling and construction subcontractors, soil and groundwater data interpretation, permitting, field oversight, strong technical writing, and exceptional bilingual communication skills. Mr. Michel has had the opportunity to learn and apply regulations in projects in the State of Florida and the State of New Jersey and to author many site work plans, site assessment reports, remedial investigation, remedial action, and other site characterization reports for regulatory submittal within these two states.

Project Experience

Site Assessment for Property Divestment at ExxonMobil Service Station, Boynton Beach, Florida. Coordinated and conducted site assessment activities for the real estate transaction associated with the site divestment. Provided oversight during installation of shallow permanent monitoring wells, top-of-casing elevation

survey, soil and groundwater sampling, and soil lithological characterization. Field activities were completed in accordance with the FDEP quality-control standards and the client's operation integrity management system procedures.

Rapid Response to Petroleum Spills along the Florida Turnpike. Provided rapid response to several petroleum product spills alongside the Florida Turnpike roadway including initial containment and cleanup activities, site assessment, and subsequent oversight during the remedial phase. Also managed teams of emergency response personnel and cleanup subcontractors, and served as a liaison for the client with various involved regulatory and non-regulatory parties.

Construction/Stormwater Management at the Snapper Creek Service Plaza in Kendall, Florida. As a qualified FDEP stormwater inspector, conducted weekly inspections of the sediment and erosion controls established through the phasing of construction operations, which involved construction of a 1,500 square foot building and the installation of one 10,000-gallon UST, canopy foundations, and pet walk areas. The inspections and reporting assisted in verifying that controls installed were in accordance with the existing Stormwater Pollution Prevention Plan (SWPPP) and sufficient to minimize erosion, retain sediment, and prevent discharging of pollutants to drainage structures and retention pond areas within the vicinity of the construction zone.

Asbestos Abatement for Gas Pipeline Project in Broward County, Florida. Oversaw the removal of approximately 500 feet of a former 24-inch diameter gas pipeline coated with asbestos property of Florida Gas Transmission (FGT) due to the installation of a ground & shoulder mounted noise wall along the Florida Turnpike in Broward County, Florida. The project lasted for a period of 3 months and required detail field logging of daily activities and reporting to ensure expeditious completion of construction; overseeing the removal and disposal of asbestos debris and piping and ensuring backfilled soil was properly compacted and soil compaction tests performed in accordance with the construction specifications.

Construction Oversight and Waste Management for the Florida Department of Transportation in Broward County, Florida. Provided oversight during the installation of several drill shafts for the subsequent installation of traffic mast arms and drainage structures within areas of known historical contamination during major intersections and roadway expansion projects in Broward County, Florida. Conducted soil screening and coordinated and oversaw the disposal and transportation of the generated waste without disrupting the construction schedule, thus expediting project completion.

Construction Oversight and Dewatering for the Florida Department of Transportation in Fort Lauderdale, Florida. Provided oversight during 6 months for two major construction phases in Port Everglades, Fort Lauderdale, Florida. The first phase of work included the installation of two new 16-inch water main pipelines in areas of known arsenic and cadmium contamination during night time due to the heavy traffic in the port area. The second phase included the installation of drainage structures along right-of-ways. Both construction phases required the implementation of dewatering due to the high water table and also as a safety measure to prevent exposure of construction workers to impacted groundwater. Responsibilities during both construction phases included soil characterization during excavation, documenting geologic conditions, overseeing dewatering operations and collection of effluent samples from the dewatering system per the NPDES permit, guidance of construction contractor for the segregation and management of excavated soils and detailed field logging.

UST and Source Removal at Mobil Retail Service Stations in Palm Beach County, Florida. Completed soil and groundwater assessment and provided oversight for dewatering activities during UST system upgrade at numerous Mobil retail facilities. Conducted soil screening and sampling during removal of the USTs and fuel product lines, as per the Florida regulatory tank closure assessment guidance requirements, and provided health and safety oversight of the UST removal process and dewatering activities and during installation of the new UST system. Coordinated waste profiling and waste manifest documentation with a licensed disposal company and oversaw the off-site transportation of hydrocarbon-impacted soil. Prepared the necessary regulatory documentation including the technical Tank Closure Assessment Report (TCAR) for submission to the regulatory agency within the required time frame.

Historic Fill Investigation at Former Exxon Station in Somerset, New Jersey. Case manager for a historic fill investigation which involved the advancement of soil borings to the top of bedrock via direct push at an active service station to further delineate the observed presence of historic fill based on the results from the previous soil investigations which reported contaminant concentrations of semi volatile organic compounds (SVOCs), and metals (other than lead) such as beryllium and selenium and during which historic fill characteristic materials were observed. Responsibilities included, project management support, including client communication; property access coordination, project scheduling, State deliverables deadline tracking, budget Vs. plan evaluation and financial oversight; technical oversight of the project included co-authoring the remedial investigation workplan (RIW), selection of soil borings locations and depths based on the evaluation of the existing soil analytical data and approval of the Licensed Site Remediation Professional (LSRP), technical guidance of drilling and field oversight personnel and ensuring activities were completed in accordance with the NJDEP Site Remediation Program (SRP) regulations.

Injection Points Installation and Soil Delineation at Former Exxon station in Fort Lee, New Jersey. Case manager for a remediation project which involved the installation injection points and the collection of soil samples at a former service station which is currently a used car lot located in Fort Lee, New Jersey. The injection points were installed to a depth of 17 feet below grade in order to execute a pilot test and subsequent chemical oxidation events to address adsorbed-phase hydrocarbon concentrations above the NJDEP Direct Contact Soil Remediation Standards. Responsibilities included, project management support, including client communication, property access coordination, project scheduling, State deliverables deadline tracking, budget Vs. plan evaluation and financial oversight; technical oversight of the project included monitoring contaminant concentrations, fate and transport properties, QA/QC of data collected, review of the permit-by-rule and ensuring implementation of chemical injection events and effectiveness with the engineering department.

Vertical Monitoring Well Installation at Former Exxon Station in Bayonne, New Jersey. Case manager for a groundwater vertical delineation project at an inactive service station located in Bayonne, New Jersey. The scope of work involved the installation of a vertical monitoring well to a total depth of 35 feet via air rotary in complex bedrock geology. The well was installed to the top of the bedrock. Responsibilities included, project management support, including client communication, property access coordination, project scheduling, procurement of drilling subcontractor and cost proposals, State and client deliverables deadline tracking, budget Vs. plan evaluation and financial oversight; technical oversight of the project included the selection of the vertical well location and construction design under the supervision of the LSRP, providing field oversight during the well installation, including soil screening and characterization and the completion of boring log, management of drilling subcontractor, co-authoring the remedial investigation workplan

(RIW) and Remedial Action Report (RAR), and ensuring activities were completed in accordance with the NJDEP SRP regulations.

Orphan UST Investigation, Removal and Abandonment at Former Mobil Station in Boonton, NJ. Case manager of a retail project which involved the investigation, abandonment-in-place and removal of orphan USTs encountered at an active service station in Boonton, New Jersey. The scope of work included the abandonment in-place of one (1) 750-gallon motor oil steel UST and one (1) 2,000-gallon leaded gasoline steel UST as these were found along the southern boundary of the site partially extending beneath the sidewalk (right-of-way) and therefore, physically inaccessible for removal due to potential collapse of the sidewalk and damage to an overlain storm sewer and overhead utilities. In addition the scope of work included the removal of another 2,000-gallon leaded gasoline UST and one (1) 1,500-gallon waste oil UST. Responsibilities included, project management support, including involvement in legal access negotiations meetings and communications, providing technical expertise input, project scheduling, procurement of tank removal subcontractor and cost proposals, bid walks, State and client deliverables deadline tracking, budget Vs. plan evaluation and financial oversight; technical oversight of the project included co-authoring the remedial investigation workplan under the supervision of the LSRP, providing field oversight which included overseeing the USTs removal/abandonment activities, soil screening with a PID and characterization, and collection of post excavation soil samples; ensuring all activities were performed in accordance with NJDEP regulations and, preparation of a remedial investigation report to be submitted to NJDEP and property owners.

Highlights

Over 15 years of experience in the environmental consulting industry
Over 15 years of experience in management, marketing, and regulatory compliance

Experience Summary

Ms. Dahl is a Principal and National Client Manager focusing on due diligence products for commercial real estate transactions. She services private and institutional equity investors, developers, financial institutions, Fannie Mae Lenders, and Freddie Mac Lenders with environmental site assessments, property condition assessments, seismic studies, construction monitoring, and remedial design/implementation. She has managed over 15,000 studies to support pooled collateral property undergoing securitization. She works closely with property managers, legal counsel, regulatory agencies, and special asset groups at banks providing insight into the risks and liabilities associated with properties and assistance in structuring various transactions. Ms. Dahl delivers exceptional service and adds value to businesses by assessing risks and exposures while formulating appropriate solutions. Her knowledge of environmental and engineering policy and ability to clearly convey issues to her clients allows them to accurately measure the risk associated with each deal, enhancing their overall portfolio.

Ms. Dahl formerly performed as a Project Manager for a Fortune 500 real estate firm, where her primary responsibilities were to manage field operations, remain apprised of latest state and federal regulatory mandates, and review Phase I Assessment reports to insure client scope of work was properly executed and deadlines were met. Ms. Dahl's field experience includes the successful completion of over 1,000 Phase I Environmental Site Assessments on various retail, office, industrial, hospitality, and multifamily properties.

Earlier in her career, Ms. Dahl assisted with the design of a contaminated groundwater treatment plant for a highly publicized Superfund site located in New Jersey, which is continually scrutinized and monitored by the media. She assisted with the writing of a feasibility study submitted to the EPA for the Superfund site and coordinated/ran daily public meetings with the citizens of the township providing constant interaction with public relations media.

Project Experience

Shopping Center Portfolio. A $3.5 billion dollar acquisition project consisting of 467 retail shopping centers operating across 38 states. Phase I Environmental Site Assessments and Property Condition Assessments

with special inspections were performed on each of the shopping centers. Multiple inspectors were coordinated and dispatched to each site within a three-week report completion timeline. Report deliverables also included inspection summaries which were incorporated into Environmental and Engineering spreadsheets for client/lender review. The acquisition was successful and highlighted Ms. Dahl's ability to thrive in a challenging fast-paced environment. Her valuable depth of experience, negotiation skills, and coordination of hundreds of engineering professionals as well as her responsiveness and expertise of client/lender's expedited timeline showed her ability to leverage strategic business partnerships and optimize customer experience.

Retail Bank Branch Portfolio. A $1.9 billion dollar acquisition project consisting of 418 retail bank branches operating in 15 states. Environmental studies were performed on each asset including review of city directories, aerial photographs, Federal Regulatory Databases, and historic Fire Insurance Sanborn Maps within a three-week project completion timeframe. Research findings were incorporated into spreadsheets for client/lender review. The acquisition was successful and exemplified Ms. Dahl's ability to capture and meticulously execute high profile projects under a tight timeframe. Her valuable depth of experience, negotiation skills, and her ability to communicate, interpret, and present findings to client/lender in an expedited timeline highlighted her impressive capabilities.

Train Station. A multi-million dollar refinance project consisting of a historic passenger train terminal including over 1 Million SF of retail, office, and rail use. Phase I Environmental Site Assessments, Property Condition Assessments, and Zoning Assessments were performed on this trophy asset. Multiple inspectors were dispatched to each site to complete the reports within a two-week timeline. The transaction was successful and exemplified the professional acumen of Ms. Dahl and Partner's Engineering Team.

Superfund Site. Ms. Dahl assisted with the remediation of a highly publicized 1,350-acre Superfund site located in New Jersey. The facility manufactured dyes, pigments, resins and epoxy and disposed of over 47,055 drums of waste in an unlined landfill on site. Ms. Dahl assisted with the writing of a feasibility study submitted to the EPA, and coordinated and ran daily public meetings with the citizens of the town providing constant interaction with public relations media.

Distinctions

Ms. Dahl has been named one of Tomorrow's Real Estate Leaders in New York Real Estate Form Magazine in February/March 2013 issue for her role in the number of real estate transactions in NY.

APPENDIX I RESUMES

BETH A. CORREIRA
National Account Manager

PROFESSIONAL SUMMARY

Ms. Correira has over 20 years of experience in environmental consulting and project management. As a National Account Manager for ATC Group Services, LLC, she is responsible for managing a multi-disciplinary staff of professionals throughout the country and providing technical oversight and support of environmental and engineering due diligence projects for national real estate sector clients.

Her experience covers a broad range of disciplines and includes performing and managing all aspects of environmental assessment, subsurface investigations, sampling, remediation, reporting, and permitting. She serves as technical lead on a wide variety of brownfield redevelopment projects, Fannie Mae, and Freddie Mac assessments. She is experienced in all phases of the Massachusetts Contingency Plan (MCP), Rhode Island Department of Environmental Management (RIDEM) Remediation Regulations, Underground Storage Tank Regulations, and the preparation and submittal of Activity and Use Limitations / Environmental Land Use Restrictions (AULs/ELURs).

PROJECT EXPERIENCE

- **Environmental Due Diligence / United States and Mexico**. National Account Manager for Phase I Environmental Site Assessments (ESAs), Property Condition Assessments (PCAs), and other due diligence services including asbestos, lead, radon, mold, and lead in drinking water surveys, and Fannie Mae and Freddie Mac compliant assessments for major real estate investment clients and lenders. Managed teams of scientist and engineers for work throughout the US and Mexico, prepared scopes of work and cost estimates, and performed senior technical review of reports to ensure consistency with client standards.

- **Environmental Due Diligence / 72 Warehouse-Distribution Facilities / United States**. National Client Manager for Phase I ESAs and PCAs located throughout the US. Managed ESA and PCA teams and provided technical support for the completion of the work within an expedited time frame.

- **Targeted Brownfields Assessment / State of Rhode Island / Pawtucket, RI**. Senior Project Manager for the redevelopment of a former 1.5-million gallon petroleum distillate storage and distribution facility. Developed sampling plans, EPA Quality Assurance Project Plan (QAPP), and EPA Remedial QAPP. Worked with the EPA, RIDEM and the City of Pawtucket to develop assessment and remedial plans that incorporated the redevelopment design. Managed and implemented the installation of monitoring wells at the property and soil and groundwater sampling and analysis. Evaluated data to determine compliance with the RI Remediation Regulations. Prepared a Targeted Brownfields Assessment and Remedial Evaluation Study, proposing large scale excavation, groundwater treatment, and engineered barriers as part of the redevelopment.

- **Targeted Brownfields Assessment / Town of Burrillville / Burrillville, RI**. Senior Project Manager for the redevelopment of a former textile mill for reuse as a community library. Developed sampling plans, EPA Assessment and Remedial QAPPs. Worked with EPA, RIDEM and the Town of Burrillville to develop assessment and remedial plans. Managed and implemented the installation of monitoring wells, test pit excavations, floor drain tracing, and sampling and analysis. Coordinated hazardous materials assessments including lead and asbestos assessments of the site buildings. Prepared a Targeted Brownfields Assessment and Remedial Evaluation Study, proposing soil excavation and engineered barriers as part of the redevelopment.

- **Environmental Assessment & Remediation / Textile Mill Redevelopment / Tiverton, RI**. Senior Project Manager of a 20-acre textile mill complex slated for redevelopment into residential and commercial space. Prepared a detailed Remedial Action Work Plan that incorporated the proposed redevelopment design plan and a feasibility assessment. Coordinated, managed, and provided technical oversight of the on-site treatment and reuse of impacted soil, removal of aboveground storage tanks up to 25,000-gallons

in size, removal of USTs, extraction and treatment of nearly a million gallons of petroleum impacted water, construction of engineered barriers, and a groundwater monitoring program.

- **Environmental Assessment & Remediation / Gasoline Service Station / Hanover, MA**. Senior project manager of assessment and remedial services at a gasoline service station found to have impacted the Town of Hanover municipal well field. Prepared a Massachusetts Contingency Plan (MCP) Phase II, Immediate Response Action Plans, Phase III Remedial Action Plans, Phase IV Remedial Implementation Plans, Response Action Outcomes, and Notice of Intent (NOI) for wetlands related work. Supervised and coordinated the removal of underground storage tanks and over 1,700 tons of impacted soil. Installed 68 monitoring wells, including multi-level wells to assess the unconfined and confined aquifers and groundwater monitoring. Supervised and coordinated the installation of a groundwater pump and treat system to control groundwater flow into the well field, installation of a soil vapor extraction (SVE) systems system, injection of hydrogen peroxide and ozone and injection of Oxygen Release Compound (ORC).
- **Environmental Assessment & Remediation / Former Corrugated Paper / Westborough, MA**. Project manager of assessment and remedial services on a CERCLIS listed corrugated paper facility. Supervised and managed the assessment of underground injection control (UIC) structures and the removal of a leaking 10,000 gallon UST located beneath an existing mill building. Assessed the No. 6 fuel oil impact and developed remedial plan. Supervised the advancement of shoring, excavation of 2,200 tons of No. 6 impacted soil, on-site asphalt batching and reuse of impacted soil, recovery of 8,000 gallons of No. 6 fuel oil and water, and removal of UICs and the disposal of 250 cubic yards of sludge.
- **Regulatory Compliance and Assessment / Retail Service Stations / MA and RI**. Managed, supervised, and performed environmental assessments, subsurface investigations, remediation, and compliance related reporting for retail gasoline stations located throughout the New England area.

EDUCATION

- B.S. Studies, Resource Development (specialty Soil & Water Resources), University of Rhode Island, Kingston, RI, 1990

TRAINING AND CERTIFICATIONS

- OSHA 29 CFR 1910.120, 40-Hour Hazardous Waste Operations and Emergency Response Certification
- OSHA 10 Hour Supervisor Construction Safety Certificate
- Brownfields Development Conference – Merrimac Economic Development Council
- Due Diligence at Dawn Seminar – Case Studies and Lessons Learned From Phase I Litigation
- Due Diligence at Dawn Seminar – All Appropriate Inquiry (AAI) - Rule for Phase I Assessments
- Update on ASTM Standards for Property Due Diligence, EDR Due Diligence at Dawn Workshop

Collene Groneman
Staff Scientist

PROFESSIONAL SUMMARY

Ms. Groneman is a Staff Scientist for the ATC New York City office. Her experience focuses Phase I Environmental Site Assessment and Phase II Environmental Site Investigations for public and private sector clients including commercial and warehouse, telecommunications, petroleum, state and federal sites. Her project experience includes Phase I and II Environmental Site Assessments, Spill Prevention Control and Countermeasure Plan preparation, Risk Management Plan preparation, soil and groundwater investigation and remediation projects and preparation and review of associated technical documents and client reports. She is well versed in the interpretation of ASTM Standard E1527-13, New York State and City regulations for the application and due diligence reporting activities associated with property transfer, lending activities, property redistribution and property change of use.

PROJECT EXPERIENCE

- **Phase II Site Investigation / Northrup Grumman / New York.** Coordinate all aspects of Phase I and II ESAs for potential purchase and redevelopment. Project activities include management and execution of site activities including asbestos, mold and lead based paint inspections as part of Phase I ESA; background research, including interviews and document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites and final reporting. Conducted all field activities associated with Phase II Site Investigation including borings for soil sampling, geophysical survey and draft reporting.

- **Spill Prevention, Control, and Countermeasure Plan / Level 3 Communications / New York.** Coordinate all aspects of SPCC Plan to fulfil requirements by the New York City Department of Environmental Protection (NYCDEP). Project activities include management and execution of site activities including generator, tank, and piping inspections to determine potential impact of hazardous materials to property and sewer system.

- **Risk Management Plan / Level 3 Communications / New York.** Coordinate all aspects of RMP to fulfil requirements by the New York City Department of Environmental Protection (NYCDEP). Project activities included management and execution of site activities including battery and hazardous material inspection to determine potential impact to property and sewer system.

- **Phase I Environmental Site Assessments and Radon Analysis / Senior Housing Holdings / New York.** Coordinate all aspects of Phase I ESAs for potential purchase and redevelopment. Project activities include management and execution of site activities including, asbestos , mold, and lead based paint inspections as part of Phase I ESA; background research, including interviews and document review, determination as a to the potential impact of hazardous materials on soil and groundwater on site and final reporting. Conducted all field activities associated with radon analysis including sampling, interpretation of results, document review, and draft reporting.

- **Phase I Environmental Site Assessments / Thor Equities / New York.** Coordinate all aspects of Phase I ESAs portfolio for commercial and retail property lending and financing transactions. Project activities include management and execution of site activities including hazardous material inspections as part of Phase I ESA; background research, including interviews and document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites and final reporting.

- **Phase I Environmental Site Assessments (Peer Review) / Monty Two East 86th Street Associates LLC / New York**. Coordinate all aspects of Phase I ESAs for property transactions and financing. Project

activities include management and execution of site activities including hazardous material inspections as part of Phase I ESA; background research, including interviews and document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites and final reporting.

- **Phase I Environmental Site Assessment / Farrel Fritz PC / New York.** Coordinate all aspects of Phase I ESAs and environmental condition summaries. Project activities include management and execution of site activities including hazardous material inspections as part of Phase I ESA; background research, including interviews and document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites and final reporting.

Re: Freedom of Information Law Request
28-90 Review Avenue
Long Island City, New York 11101
Block: 294 Lot: 106

ATC Group Services, LLC is writing pursuant to the New York Freedom of Information Law to request access to certain information available from your agency for the above referenced property. ATC would like to receive information concerning the following:

- Chemical and petroleum storage tanks, spill records, toxic waste dump/wastewater discharge; and
- Monitoring data, regulatory non-compliance notices, documents or studies regarding any health and environmental problems.

Please let me know if there are any costs associated with this request prior to processing. Your response can either be faxed or mailed to us at the fax number and/or location identified above. In addition, I can receive responses via email at collene.groneman@atcassociates.com. If you have any questions, please call me at (212)284-0612.

Thank you for your prompt attention to this matter.

Sincerely,

Collene Groneman

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

DEED

THIS INDENTURE, made as of the 23 day of August, 2016 between 28-90 REVIEW AVENUE ASSOCIATES, L.L.C., a New York limited liability company, having an address at 575 Underhill Blvd, Suite 223, Syosset, New York 11791 ("**Grantor**") and 2890 REVIEW EQUITY LLC, a Delaware limited liability company ("**Equity Grantee**"), as tenant-in-common as to an undivided sixty percent (60%) interest, having an address at c/o JBL Asset Management, LLC, 2028 Harrison Street Suite 202 Hollywood, Florida 33020, Attn: Jacob Khotoveli, and 2890 REVIEW TIC OWNER LLC, a Delaware limited liability company ("**TIC Grantee**", together with Equity Grantee, collectively, "**Grantee**"), as tenant-in-common as to an undivided forty percent (40%) interest, having an address at c/o JBL Asset Management, LLC, 2028 Harrison Street Suite 202 Hollywood, Florida 33020, Attn: Jacob Khotoveli.

W I T N E S S E T H:

That Grantor, in consideration of Ten Dollars ($10.00) and other valuable consideration paid by Grantee, does hereby grant and release unto Grantee, the heirs or successors and assigns of Grantee forever, all that plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the City of Long Island City, County of Queens and State of New York, and known as 28-90 Review Avenue, Long Island City, New York (the "**Premises**"), as more particularly described on **Exhibit A** annexed hereto and made a part hereof. Being and intended to be the same premises as conveyed to the Grantor by deed from Eric W. Roberts dated 1/12/2007 and recorded 2/12/2007 in the Office of the City Register of the City of New York at CRFN 2007000081334.

TOGETHER WITH all right, title and interest, if any, of Grantor in and to any streets and roads abutting the above described Premises to the center lines thereof;

TOGETHER WITH the appurtenances and all the estate and rights of Grantor in and to said Premises.

TO HAVE AND TO HOLD the Premises herein granted unto Grantee, the heirs or successors and assigns of Grantee, forever.

AND Grantor, in compliance with Section 13 of the Lien Law, covenants that Grantor will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvements at the Premises and will apply the same first to the payment of the cost of the improvements before using any part of the total of the same for any other purpose.

IN WITNESS WHEREOF, Grantor has duly executed this deed the day and year first above written.

(Legal Description)

(see attached)

Legal Description

All that certain plot, piece or parcel of land situate, lying and being in the Borough of Queens, County of Queens, State of New York bounded and described as follows:

Parcel I:

All that certain plot, piece or parcel of land, situate, lying and being in the Borough and County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at a point on the southerly bulkhead line of the Dutch Kills Canal as adopted by the topographical bureau of the City of New York adjoining the lands formerly conveyed to the Simonds Manufacturing Company by deed recorded in the office of the clerk of the County of Queens in Reel 766 of conveyances, Page 281, which point is also intersected by a line drawn parallel to Borden Avenue and distant 145 feet 4- ½ inches southerly therefrom, measured on a line drawn at right angles hereto;

RUNNING thence along said parallel line and land formerly of the Simonds Manufacturing Company on a course bearing south 67° 30' east, 648.37 feet (south 67° 30' 06" east, 655.17 feet actual) to the northerly side of Marsh Street, as shown on the Commissioners Map of Long Island City;

THENCE westerly along the northerly side of Marsh Street as on said Commissioners Map on a course bearing south 72° 15' 30" west, 524.90 feet to land formerly conveyed to the Central Felt and Paper Company by deed recorded in the office of the clerk of the County of Queens in Liber 1327 of conveyances, at Page 47;

THENCE along said land on a course bearing north 34° 02' 50" east, 76.03 feet (north 33° 50' 30" east, 76.03 feet actual) to an iron monument;

THENCE still along said land at right angles to the previous course on a course bearing north 55° 57' 10" west, 19 feet (north 56° 09' 30" west, 19 feet actual) to another iron monument;

THENCE still along said land at right angles to the previous course bearing north 34° 02' 50" east,19 feet (north 33° 50' 30" east,19 feet actual);

THENCE still along said land at right angles to the previous course on a course bearing north 55° 57' 10" west, 439.56 feet (north 56° 09' 30" west, 439.90 feet actual) to the bulkhead line adopted by the topographical bureau of the City of New York;

THENCE along said bulkhead line on a course bearing north 72° 18' 54" east, 238.96 feet (north 72° 18' 48" east, 44.49 feet north 70° 52' 06" east,162.46 feet and north 72° 18' 08" east, 27.07 feet actual) to the point or place of BEGINNING.

TOGETHER with an easement over the southerly half of Marsh Street to The Long Island Railroad on the

west, and to Review Street on the east, and also an easement over the northerly half of Marsh Street to the railroad on the west, and to the land now or formerly of the Simonds Manufacturing Company on the east, conveyed to it by Liber 766 Page 281.

Parcel II:

All that certain plot, piece or parcel of land, situate, lying and being in the Borough and County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at an iron monument set in the dividing line between the land described herein and land now or formerly of The Texas Company, formerly of the Long Island Oyster Farms, Inc., at a distance of 11.03 feet northwardly, as measured on a course north 33° 50' 30" east from the northwesterly side of Marsh Street as laid down on a map of The City of New York; and

RUNNING thence along the said dividing line on a course north 33° 50' 30" east, a distance of 65 feet to a point;

THENCE still along the said dividing line on a course north 56° 09' 30" west, a distance of 19 feet to a point;

THENCE still along the said dividing line on a course north 33° 50' 30" east, a distance of 19 feet to a point;

THENCE still along the said dividing line on a course north 56° 09' 30" west, a distance of 388 feet to an iron monument;

THENCE along the dividing line between the land described herein and land now or formerly of The Long Island Railroad Company on a course south 35° 21' 06" east, a distance of 53.49 feet to an iron monument;

THENCE still along the said dividing line between the land described herein and land now or formerly of The Long Island Railroad Company on a course south
37° 30' 32" east, a distance of 84.43 feet to an iron monument,

THENCE still along the said dividing line between the land described herein and land now or formerly of the Long Island Railroad Company on a course south 48° 20' 49" east, a distance of 279.59 feet to the point or place of BEGINNING

Parcel III:
All that certain plot, piece or parcel of land, situate, lying and being in the Borough and County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at the intersection of the westerly side line of the public highway known and designated as Review Avenue with the northerly side line of Marsh Street (not open); and

RUNNING THENCE along the westerly line of Review Avenue south 17° 44' 30" east, a distance of 30

feet to the center line of Marsh Street (not open); and

THENCE westerly along the center line of Marsh Street (not open) south 72°15' 30" west, a distance of 12.21 feet, (11.88 feet actual) more or less, to a point;

THENCE generally northwest to the intersection of the northerly side of Marsh Street (not open) with the northeasterly line of property formerly of The Long Island Oyster Farms, Inc., north 67°30' 06" west, a distance of 46.44 feet;

THENCE easterly along the northerly side line of Marsh Street (not open) north 72°15' 30" east, a distance of 47.67 feet (47.33 feet actual) to the point or place of BEGINNING.

1	Enter amount of consideration for conveyance *(from* Part I, *line 1)*	1.	24,909,787 50
2	Taxable consideration *(multiply line 1 by the percentage of the premises which is residential real property, as shown in* Schedule A*)*	2.	0 00
3	Total additional transfer tax due* *(multiply line 2 by 1% (.01))*	3.	0 00

Part III – Explanation of exemption claimed on Part I, line 1 *(check any boxes that apply)*

The conveyance of real property is exempt from the real estate transfer tax for the following reason:

a. Conveyance is to the United Nations, the United States of America, the state of New York, or any of their instrumentalities, agencies, or political subdivisions (or any public corporation, including a public corporation created pursuant to agreement or compact with another state or Canada) ..... a ☐

b. Conveyance is to secure a debt or other obligation ..... b ☐

c. Conveyance is without additional consideration to confirm, correct, modify, or supplement a prior conveyance ..... c ☐

d. Conveyance of real property is without consideration and not in connection with a sale, including conveyances conveying realty as bona fide gifts ..... d ☐

e. Conveyance is given in connection with a tax sale ..... e ☐

f. Conveyance is a mere change of identity or form of ownership or organization where there is no change in beneficial ownership. (This exemption cannot be claimed for a conveyance to a cooperative housing corporation of real property comprising the cooperative dwelling or dwellings.) Attach Form TP-584.1, Schedule F ..... f ☐

g. Conveyance consists of deed of partition ..... g ☐

h. Conveyance is given pursuant to the federal Bankruptcy Act ..... h ☐

i. Conveyance consists of the execution of a contract to sell real property, without the use or occupancy of such property, or the granting of an option to purchase real property, without the use or occupancy of such property ..... i ☐

j. Conveyance of an option or contract to purchase real property with the use or occupancy of such property where the consideration is less than $200,000 and such property was used solely by the grantor as the grantor's personal residence and consists of a one-, two-, or three-family house, an individual residential condominium unit, or the sale of stock in a cooperative housing corporation in connection with the grant or transfer of a proprietary leasehold covering an individual residential cooperative apartment ..... j ☐

k. Conveyance is not a conveyance within the meaning of Tax Law, Article 31, section 1401(e) *(attach documents supporting such claim)* ..... k ☐

*The total tax (from Part I, line 6 and Part II, line 3 above) is due within 15 days from the date conveyance. Please make check(s) payable to the county clerk where the recording is to take place. If the recording is to take place in the New York City boroughs of Manhattan, Bronx, Brooklyn, or Queens, make check(s) payable to the ***NYC Department of Finance***. If a recording is not required, send this return and your check(s) made payable to the ***NYS Department of Taxation and Finance***, directly to the NYS Tax Department, RETT Return Processing, PO Box 5045, Albany NY 12205-5045.

Schedule C — Credit Line Mortgage Certificate (Tax Law, Article 11)

Complete the following only if the interest being transferred is a fee simple interest.
I (we) certify that: *(check the appropriate box)*

1. ☑ The real property being sold or transferred is not subject to an outstanding credit line mortgage.

2. ☐ The real property being sold or transferred is subject to an outstanding credit line mortgage. However, an exemption from the tax is claimed for the following reason:
   - ☐ The transfer of real property is a transfer of a fee simple interest to a person or persons who held a fee simple interest in the real property (whether as a joint tenant, a tenant in common or otherwise) immediately before the transfer.
   - ☐ The transfer of real property is (A) to a person or persons related by blood, marriage or adoption to the original obligor or to one or more of the original obligors or (B) to a person or entity where 50% or more of the beneficial interest in such real property after the transfer is held by the transferor or such related person or persons (as in the case of a transfer to a trustee for the benefit of a minor or the transfer to a trust for the benefit of the transferor).
   - ☐ The transfer of real property is a transfer to a trustee in bankruptcy, a receiver, assignee, or other officer of a court.
   - ☐ The maximum principal amount secured by the credit line mortgage is $3,000,000 or more, and the real property being sold or transferred is **not** principally improved nor will it be improved by a one- to six-family owner-occupied residence or dwelling.

     Please note: for purposes of determining whether the maximum principal amount secured is $3,000,000 or more as described above, the amounts secured by two or more credit line mortgages may be aggregated under certain circumstances. See TSB-M-96(6)-R for more information regarding these aggregation requirements.
   - ☐ Other *(attach detailed explanation)*.

3. ☐ The real property being transferred is presently subject to an outstanding credit line mortgage. However, no tax is due for the following reason:
   - ☐ A certificate of discharge of the credit line mortgage is being offered at the time of recording the deed.
   - ☐ A check has been drawn payable for transmission to the credit line mortgagee or his agent for the balance due, and a satisfaction of such mortgage will be recorded as soon as it is available.

4. ☐ The real property being transferred is subject to an outstanding credit line mortgage recorded in _____ (insert liber and page or reel or other identification of the mortgage). The maximum principal amount of debt or obligation secured by the mortgage is _____. No exemption from tax is claimed and the tax of _____ is being paid herewith. *(Make check payable to county clerk where deed will be recorded or, if the recording is to take place in New York City but not in Richmond County, make check payable to the **NYC Department of Finance**.)*

Signature (both the grantor(s) and grantee(s) must sign)

The undersigned certify that the above information contained in schedules A, B, and C, including any return, certification, schedule, or attachment, is to the best of his/her knowledge, true and complete, and authorize the person(s) submitting such form on their behalf to receive a copy for purposes of recording the deed or other instrument effecting the conveyance.

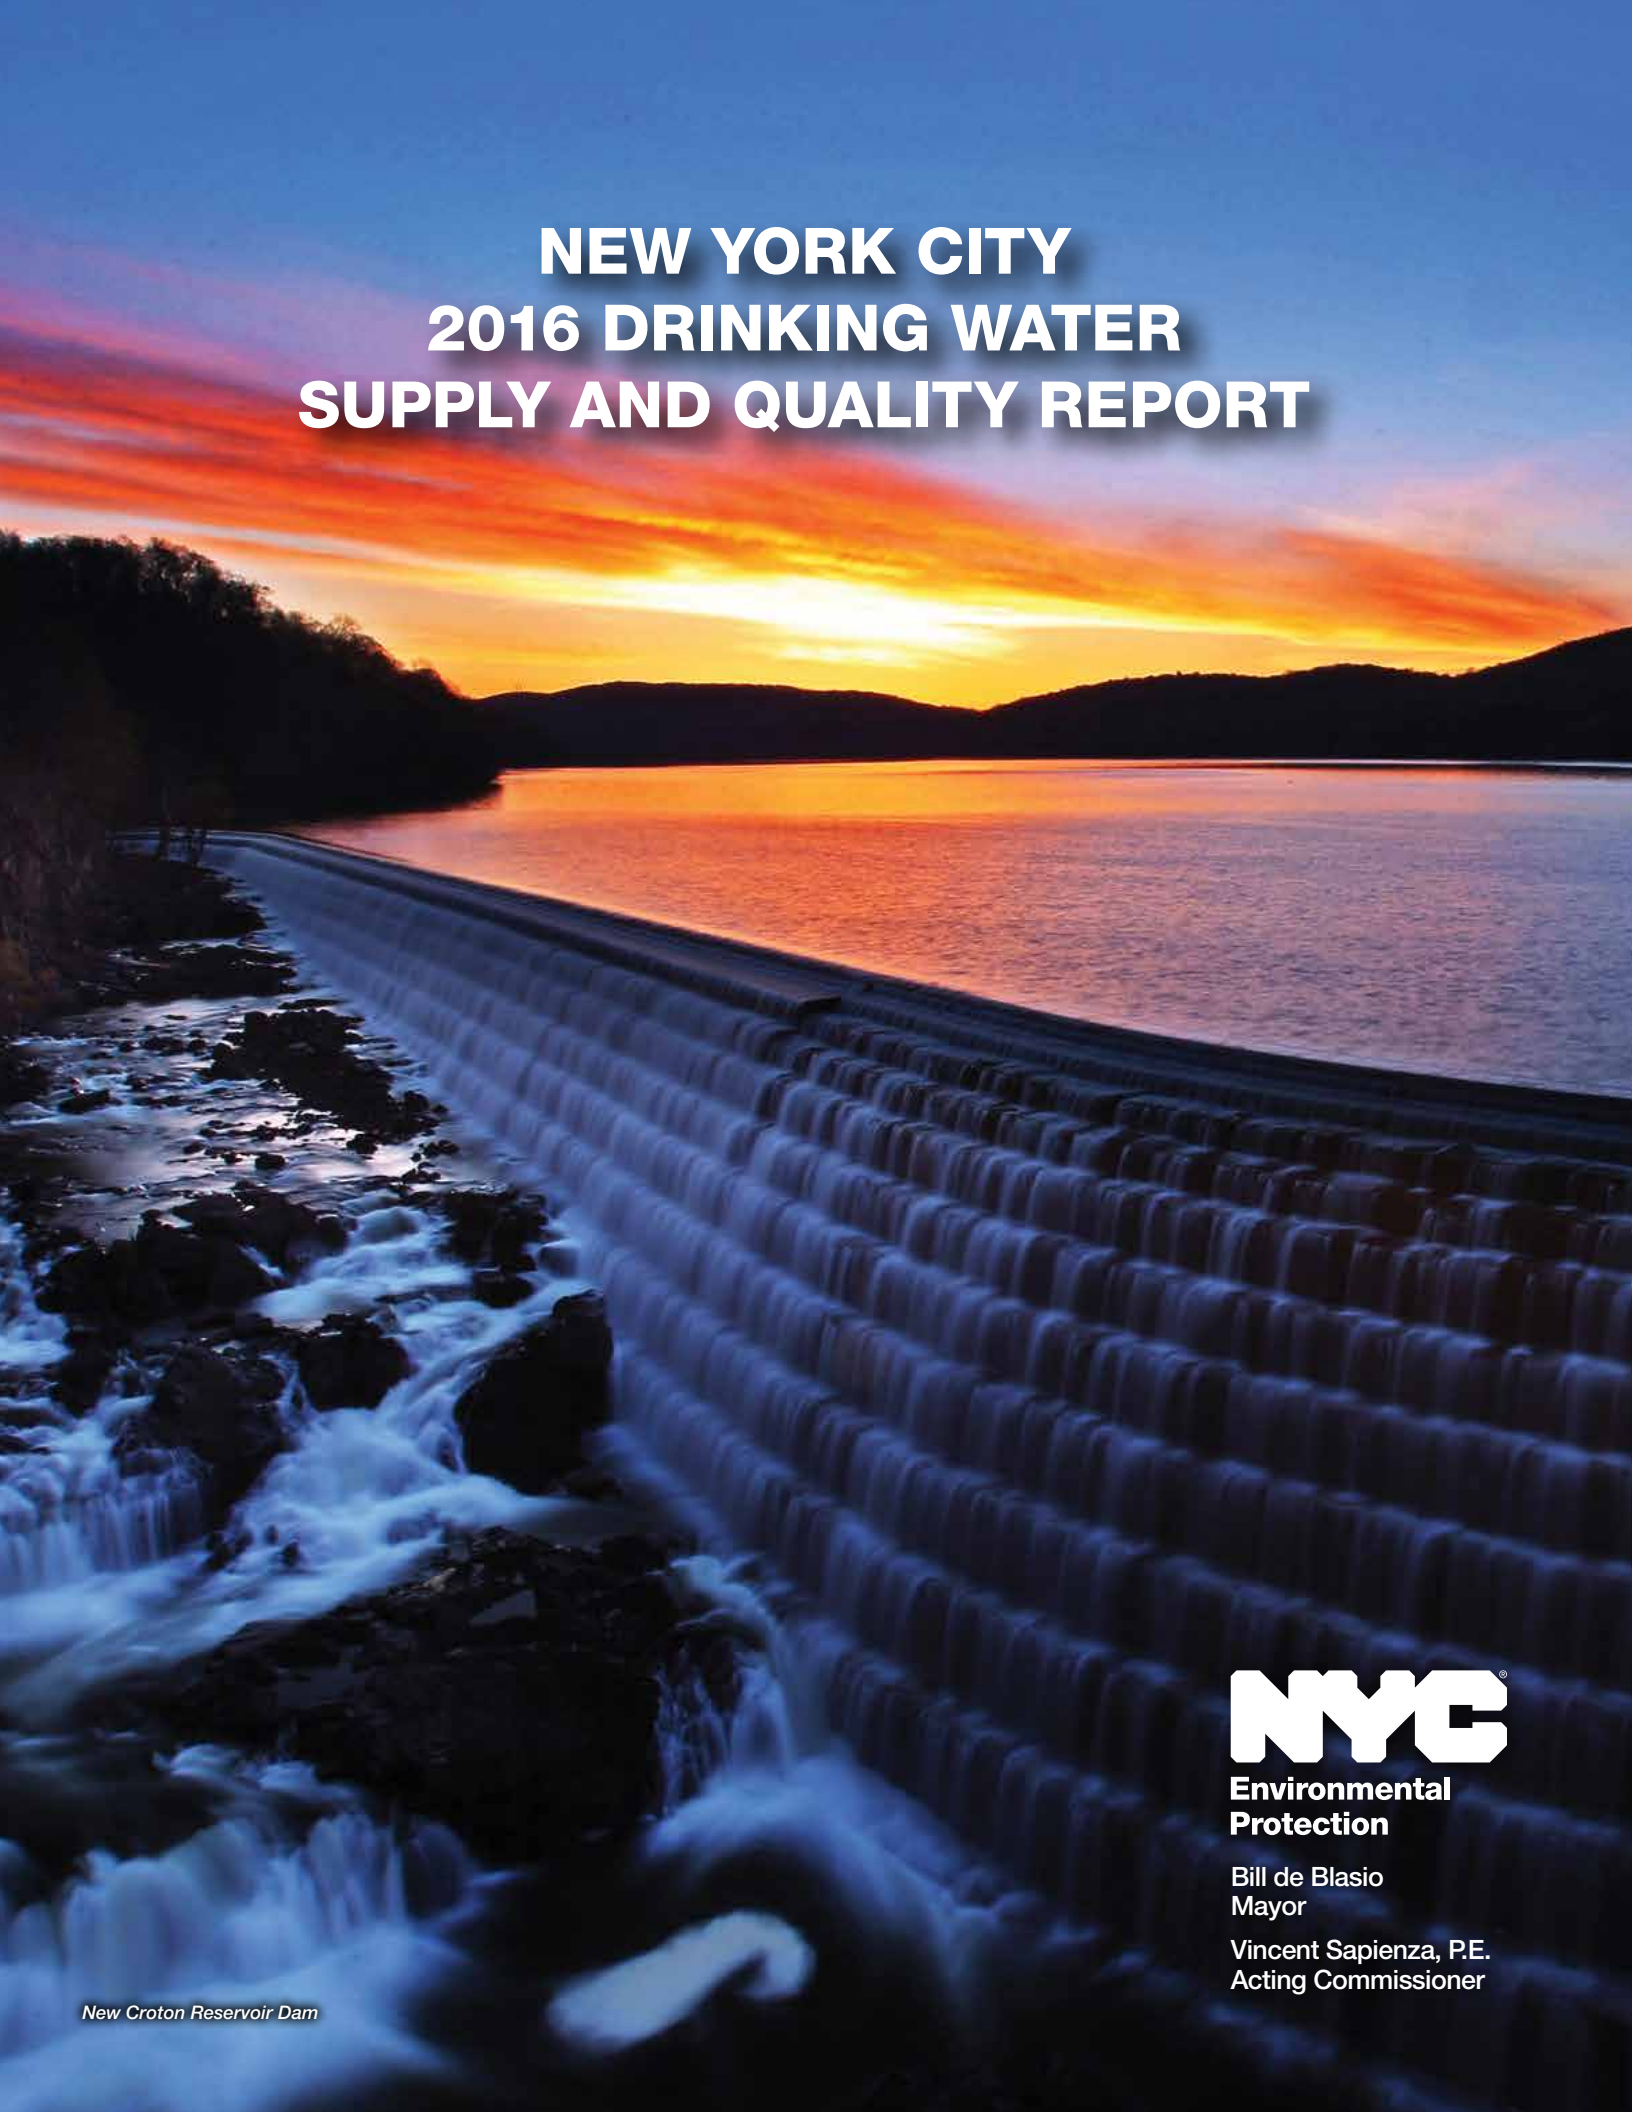
NEW YORK CITY 2016 DRINKING WATER SUPPLY AND QUALITY REPORT



New Croton Reservoir Dam

NYC Environmental Protection

Bill de Blasio
Mayor

Vincent Sapienza, P.E.
Acting Commissioner

For details on infrastructure projects highlighted in this year's report, click on the links (★) in the graphic above.

Environmental Protection

Vincent Sapienza, P.E.
Acting Commissioner

59-17 Junction Boulevard
Flushing, NY 11373
T: (718) 595-6605
F: (718) 595-3525

Dear Friends:

During a year in which awareness of the need to protect drinking water supplies rose to new levels, I am proud that New York City continues to have some of the cleanest and best-tasting drinking water of any city in the world.

New York City consumes approximately 1 billion gallons of water each and every day. This year's report should provide peace of mind to our fellow New Yorkers, especially in light of problems identified in a few drinking water systems across the country over the last several years. New York City is fortunate to have a protected and well-regulated watershed that surrounds our reservoirs in the Hudson Valley and Catskill Mountains. We are also vigilant about properly treating the City's water to prevent the type of incidents that transpired elsewhere. Because we take these extensive and deliberate steps to protect our water supply and distribution system, we are confident that these types of incidents will not happen in New York City.

The City's water meets or exceeds all state and federal safety requirements. Every day of the year, scientists from the New York City Department of Environmental Protection (DEP) collect samples from our expansive reservoir system, the aqueducts that deliver the water to the city, and the roughly 1,000 street-side sampling stations spread across the five boroughs. Those water samples are then delivered to one of DEP's four state-of-the-art laboratories where nearly 630,000 analyses are performed on them each year. Data from these extensive scientific analyses can be found in the pages of this report and the conclusion of this work is simple: New York City has world-class drinking water.

To ensure that our amazing water system remains in a state of good repair, DEP continues to make substantial investments to maintain and improve its infrastructure. This includes the most complex repair in the history of the water supply system, the $1 billion construction of a Delaware Aqueduct bypass tunnel under the Hudson River. That work is on schedule. Two deep shafts have already been completed on either side of the river, and tunneling has begun this year. You will find details about this and several other infrastructure projects in the pages that follow.

On behalf of the 6,000 employees at DEP, I am proud to present this report to the 8.5 million New Yorkers who rely on us to deliver safe, clean, high-quality drinking water every day.

Sincerely,

Vincent Sapienza
Acting Commissioner

NEW YORK CITY'S WATER SUPPLY

The New York City Water Supply System provides approximately 1 billion gallons of safe drinking water daily to more than 8.5 million residents of New York City, and to the millions of tourists and commuters who visit the City throughout the year. The water supply system also provides about 110 million gallons a day to approximately one million people living in the counties of Westchester, Putnam, Orange, and Ulster. In all, the New York City Water Supply System provides nearly half the population of New York State with high-quality drinking water.

WHERE DOES NEW YORK CITY'S DRINKING WATER COME FROM?

New York City gets its drinking water from a surface supply system that comprises 19 reservoirs and three controlled lakes spread across a nearly 2,000-square-mile watershed. The watershed is roughly the size of the State of Delaware, extending 125 miles north and west of New York City. A map of the watershed and reservoirs can be found on the inside cover of this report. The New York City Water Supply System, Public Water System Identification Number (PWSID) NY7003493, consists of three individual water supplies: the Catskill/Delaware supply, located in Delaware, Greene, Schoharie, Sullivan, and Ulster counties; the Croton supply, New York City's original upstate supply, in Putnam, Westchester, and Dutchess counties; and a groundwater supply in southeastern Queens.

In 2016, New York City received a blend of drinking water from the Catskill/Delaware and Croton supplies. The Catskill/Delaware supply provided approximately 91 percent of the water, and approximately 9 percent was supplied by Croton. Water from the groundwater supply was not fed into distribution in 2016.

HOW DOES NEW YORK CITY TREAT ITS WATER SUPPLIES?

CATSKILL/DELAWARE SUPPLY

Due to the very high quality of our Catskill/Delaware supply, New York City is one of only five large cities in the country with a surface drinking water supply that does not require filtration as a form of treatment. Rather, the Catskill/Delaware supply operates under a Filtration Avoidance Determination (FAD), and the water from the supply is treated using two forms of disinfection to reduce microbial risk. First, water is disinfected with chlorine before arriving at the Catskill/Delaware Ultraviolet (UV) Disinfection Facility. Chlorine is a common disinfectant added to kill germs and stop bacteria from growing on pipes. The UV Disinfection Facility, located in the towns of Mount Pleasant and Greenburgh in Westchester County, is the largest of its kind in the world. It consists of 56 UV disinfection units that contain a total of 11,760 large UV light bulbs. The facility is designed to disinfect more than 2 billion gallons of water per day. At the facility, water is again disinfected as it flows under UV light. Exposure to UV light inactivates potentially harmful microorganisms, such as *Cryptosporidium* and

Ashokan Reservoir

Giardia. UV treatment does not change the water chemically, as nothing is added except energy. DEP also adds food grade phosphoric acid, sodium hydroxide, and fluoride to the water before sending it into distribution. Phosphoric acid creates a protective film on pipes that reduces the release of metals, such as lead, from service lines and household plumbing. Sodium hydroxide is added to raise the pH and reduce corrosivity, which also reduces the potential for lead to enter water from household plumbing.

DEP is one of the many water suppliers in the United States that treat drinking water with a controlled, low level of fluoride for the protection of its consumers' dental health. New York City's drinking water has been treated with low levels of fluoride since 1966. According to the United States Department of Health and Human Services, fluoride is effective in preventing cavities when present in drinking water at an optimal level of 0.7 mg/L. To improve dental protection, DEP continuously monitors fluoride levels. During 2016, DEP provided continuous fluoride treatment on the Catskill/Delaware supply, except for two brief outages. In total, only 4.8 percent of the water produced by Catskill/Delaware supply was not fluoridated.

CROTON SUPPLY

The Croton Water Filtration Plant, located underground in the Bronx, filters the Croton supply. It has the capacity to produce up to 290 million gallons of drinking water each day, helps to ensure an adequate supply of water for the City in the event of drought, and increases the resiliency of New York City's supply against the potential effects of climate change. New York City constructed the Croton Water Filtration Plant under a federal consent decree, and the plant has been operational since May 7, 2015. On September 28, 2016, DEP completed the requirements of the consent decree and the decree has been terminated. In 2016, the Croton Water Filtration Plant was off-line for a period of eight weeks from August 25 to October 20; it was running for the rest of the year.

Once water arrives at the filtration plant it undergoes treatment to remove impurities. The treatment process includes coagulation, dissolved air floatation, filtration, and disinfection. During coagulation, chemicals are added to untreated water, causing any particulates to bunch together and become larger particles called floc. Most of the floc floats to the top and is skimmed off; any that remains is removed by filtration. The water is disinfected with chlorine and UV light to protect against potentially harmful microorganisms. The treatment process helps to reduce disinfection by-products, color levels, and the risk of microbiological contamination. In addition, as with the Catskill/Delaware supply, Croton water is also treated with food grade phosphoric acid, sodium hydroxide, and fluoride.

During 2016, DEP provided continuous fluoride treatment to the Croton supply except during one brief outage. In total, only 0.6 percent of the water produced by the Croton Water Filtration Plant was not fluoridated.

Water quality monitoring in the watershed

DRINKING WATER QUALITY

REGULATION OF DRINKING WATER

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activities. Contaminants that may be present in source water include: microbial contaminants, inorganic contaminants, pesticides and herbicides, organic chemical contaminants, and radioactive contaminants.

In order to ensure that tap water is safe to drink, the New York State Department of Health (NYSDOH) and the United States Environmental Protection Agency (EPA) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The NYSDOH and the federal Food and Drug Administration's (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health. The presence of contaminants does not necessarily indicate that water poses a health risk. These regulations also establish the minimum amount of testing and monitoring that each system must undertake to ensure that the tap water is safe to drink.

DEP's water quality monitoring program – far more extensive than required by law – demonstrates that the quality of New York City's drinking water remains high and meets all state and federal drinking water standards. Additional information concerning drinking water can be found at: **www.epa.gov/safewater/** or **www.health.ny.gov.**

DRINKING WATER SAMPLING AND MONITORING

DEP monitors the water in the distribution system, upstate reservoirs and feeder streams, and wells that are sources for New York City's drinking water supply. Certain water quality parameters are monitored continuously throughout the watershed and as the water enters the distribution system, and DEP regularly tests water quality at nearly 1,000 water quality sampling stations throughout New York City. DEP conducts analyses for a broad spectrum of microbiological, chemical, and physical measures of quality. In 2016, DEP performed over 407,500 analyses on more than 36,300 samples from the distribution system, meeting all state and federal monitoring requirements. Additionally, DEP performed over 231,700 analyses on approximately 15,200 samples from the upstate reservoir watersheds, and took close to 1.5 million robotic monitoring measurements to support FAD watershed protection programs and to optimize water quality. The results of the tests conducted in 2016 under DEP's distribution system monitoring program are summarized in the tables starting on page 15 of this report.

UNREGULATED CONTAMINANT MONITORING RULE (UCMR)

Under the 1996 amendments to the federal Safe Drinking Water Act and the Third Unregulated Contaminant Monitoring Rule (UCMR3), EPA is required once every five years to issue a new list of up to 30 unregulated contaminants that public water systems must monitor. The intent of the rule is to provide baseline occurrence data that EPA can combine with toxicological research to make decisions about potential future drinking water regulations. DEP completed the last quarter of this contaminant testing in 2016. The data from this sampling can be found in the tables of this report. For more information on the rule, and to see a list of the unregulated contaminants, go to **water.epa.gov/lawsregs/rulesregs/sdwa/ucmr/ucmr3**.

LEAD IN DRINKING WATER

HOW DOES LEAD GET INTO MY DRINKING WATER?

New York City water is virtually lead-free when it is delivered from New York City's upstate reservoir system, but water can absorb lead from solder, fixtures, and pipes found in the plumbing of some buildings or homes. DEP has an active corrosion control program aimed at reducing lead absorption from service lines and internal plumbing. Under the federal Lead and Copper Rule, mandated at-the-tap lead monitoring is conducted at select households throughout New York City. In 2016, based on the results of this monitoring, the 90th percentile did not exceed 15 µg/L, the established standard or Action Level for lead. The at-the-tap monitoring results are presented in the table on page 18 of this report.

WHAT ARE THE HEALTH EFFECTS OF LEAD?

Lead is a metal that can harm children and adults when it is consumed. Lead is a known neurotoxin, and is particularly harmful to the developing brain and nervous system of children under 6 years old. Lead can harm a young child's growth, behavior, and ability to learn. Lead exposure during pregnancy may contribute to low birth weight and developmental delays in infants and miscarriages. There are many sources of lead in the environment, and it is important to reduce exposure to lead as much as possible. Water testing helps identify and correct possible sources of lead that contribute to exposure from drinking water.

If present at elevated levels, lead can cause serious health problems, especially for pregnant women, infants, and young children.

WHAT CAN I DO?

Lead in drinking water is colorless, odorless, and tasteless. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing. DEP is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. DEP offers free testing to New York City residents. The Free Residential Testing Program is the largest of its kind in the nation: DEP has distributed over 113,000 sample collection kits since the start of the program in 1992, and saw an almost 400 percent increase in demand for testing in 2016 compared to the previous year. To request a free kit to test for lead in your drinking water, call New York City's 24-hour helpline at 311 or visit **www.nyc.gov/apps/311** and search for Lead Test Kit.

Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at **www.epa.gov/safewater/lead**.

DEP's Hawthorne Laboratory

Robotic Water Quality Monitoring Buoy

ROBOTIC MONITORING

In 2012, a Robotic Water Quality Monitoring Network (RoboMon) became part of DEP's routine water quality monitoring program. The water quality data that are generated by this network are critical for providing near real-time measurements for effective operation of the water supply. In 2016, the network generated nearly 1.5 million water quality measurements to support water supply operations.

RoboMon consists of a variety of water quality instruments that are deployed in upstate streams and reservoirs. The stream monitoring stations are structures that house water quality instruments that receive data from sensors deployed in the streams. The reservoir monitoring stations are floating platforms, or buoys, with water quality instrumentation that receive data from sensors deployed in the reservoir. Data are uploaded each day to a database that can be viewed almost in real-time by water managers to then make informed decisions regarding the operation of the City's water supply.

DEP's RoboMon network originally consisted of four reservoir buoys, but has since expanded to include five stream stations and 13 reservoir buoys. DEP plans to expand this critical network in 2017 to further support water supply operations.

CRYPTOSPORIDIUM AND *GIARDIA*

In 1992, New York City started a comprehensive program to monitor its source waters and watersheds for the presence of *Cryptosporidium* and *Giardia*. In 2016, DEP collected weekly samples from three locations: the outflow of the Kensico Reservoir prior to chlorination and UV disinfection; the outflow of Hillview Reservoir prior to secondary disinfection with chlorine; and the outflow of the Jerome Park Reservoir prior to filtration. Samples were analyzed using EPA Method 1623.1. The *Cryptosporidium* and *Giardia* data for Kensico, Hillview and Jerome Park Reservoir outflows are presented in the table on page 18 of this report.

The presence of low levels of *Cryptosporidium* and *Giardia* detected in the source water required no action on the part of DEP. DEP's *Cryptosporidium* and *Giardia* data from 1992 to the present can be viewed on the DEP website at **www.nyc.gov/dep**.

While there is no evidence that any cases of cryptosporidiosis or giardiasis have been attributed to the New York City water supply, federal and state law requires all water suppliers to notify their customers about the potential risks from *Cryptosporidium* and *Giardia*. Cryptosporidiosis and giardiasis are intestinal illnesses caused by microscopic pathogens, which can be waterborne. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Some people may be more vulnerable to disease causing microorganisms, or pathogens, in drinking water than the general population. Immunocompromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly individuals, and infants, can be particularly at risk from infections. These people should seek advice from their health care providers about their drinking water. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium*, *Giardia*, and other microbial contaminants are available from EPA's Safe Drinking Water Hotline at (800) 426-4791.

DEP's Waterborne Disease Risk Assessment Program conducts disease surveillance for cryptosporidiosis and giardiasis to track the disease incidence, and syndromic surveillance for gastrointestinal illness to identify potential citywide gastrointestinal outbreaks. All persons

diagnosed with cryptosporidiosis are interviewed concerning potential exposures, including tap water consumption. Disease and syndromic surveillance indicates that there were no outbreaks of cryptosporidiosis or giardiasis attributed to tap water consumption in New York City in 2016.

WATERSHED PROTECTION AND POLLUTION PREVENTION PROGRAMS

SOURCE WATER ASSESSMENT PROGRAM

Federal regulations require states to develop and implement source water assessment programs to identify the areas that supply public tap water, inventory contaminants and assess water system susceptibility to contamination, and inform the public of the results. The states are given a great deal of flexibility on how to implement source water assessment programs. These assessments are created using available information to help estimate the potential for source water contamination. Higher susceptibility ratings do not mean that source water contamination has occurred, or will occur, in the water supply; rather, they indicate the need for water suppliers to implement additional precautionary measures.

In 1993, New York City secured its first FAD for the Catskill/Delaware supply, and in 1997 the historic New York City Watershed Memorandum of Agreement was signed. Since that time, New York City has been implementing a series of programs to further reduce the susceptibility of its surface water supply to contamination from a variety of sources. These ongoing programs operate under the close scrutiny of both the NYSDOH and EPA. Because of these efforts, which are reported on in the *Watershed Water Quality Annual Report*, NYSDOH does not deem it necessary to perform a source water assessment on the New York City Water Supply. For information on the DEP *Watershed Water Quality Annual Report*, visit **www.nyc.gov/html/dep/html/watershed_protection/fad_2016.shtml**.

MAINTAINING NEW YORK CITY'S WORLD-RENOWNED WATER SUPPLY

10-Year Filtration Avoidance Determination

DEP funds and administers a number of watershed protection and pollution prevention programs to maintain the high quality of our drinking water. These strategies are designed to protect New York City's drinking water at its source by keeping pollution out of our upstate reservoirs and the streams, creeks, and rivers that feed them. DEP is currently implementing a 10-year FAD, issued by EPA in July 2007, and updated by NYSDOH in May 2014. The FAD outlines a number of watershed protection programs that are administered, or funded, by DEP to meet objective and subjective protection criteria, and to maintain the quality of water in our Catskill/Delaware System. Through these programs New York City has acquired sensitive lands around our reservoirs and their headwaters, upgraded dozens of wastewater treatment and collection systems throughout the watershed, replaced more than 5,000 residential septic systems, restored about 40 miles of streambanks and floodplains, installed thousands of best management practices to improve the quality of runoff from local farms, and reviewed thousands of building projects to ensure their plans are compatible with protecting water quality. This work has been done through a number of invaluable partnerships with locally-based organizations that have administered many of the core watershed protection programs over the past 25 years. These include the Catskill Watershed Corporation, the Watershed Agricultural Council, county Soil and Water Conservation Districts, and other partners who bring a local voice and great skill to the implementation of the programs. In December 2016, DEP submitted a new 10-year plan for source water protection to NYSDOH. The City expects to renew its FAD in 2017. More information on DEP's watershed protection programs, can be found at **www.nyc.gov/html/dep/html/watershed_protection/fad.shtml**.

Waterfall near Schoharie Reservoir

Key programs and selected accomplishments include:

- Land Acquisition – New York City acquires real property interests from willing sellers to further protect and buffer its 19 reservoirs and three controlled lakes in the Catskill/Delaware and Croton watersheds. In 2016, New York City, including its land trust partners that receive funding from the City, signed 53 contracts with landowners to purchase more than 4,000 acres of sensitive watershed land. Since 1997, DEP has secured more than 144,000 acres of land and easements, adding to the roughly 42,000 acres surrounding the reservoirs that New York City owned in 1997. The property DEP owns is protected from development, which helps create natural buffers to avoid degradation of the water supply. Other entities such as land trusts, local towns, and the State of New York own and protect more than 240,000 acres of land in the New York City watershed.

Fishing at Pepacton Reservoir

- Land Management – With the acquisition of land over the past 20 years, New York City has become one of the largest landowners in the watershed region. DEP manages these properties to ensure that water quality is protected. DEP believes that protecting the watershed lands does not conflict with providing recreational access to members of the surrounding communities. Since 1997, DEP has increased the acreage of land and water open for recreation every year, and approximately 133,000 acres are now available for fishing, hiking, hunting, cross-country skiing, and other low-impact activities. Four of DEP's west-of-Hudson reservoirs are open for recreational boating, by permit, which includes rowboats, canoes, kayaks, and small sailboats. Electric trolling motors on rowboats are now allowed on the Cannonsville Reservoir. In 2016, DEP rolled out an interactive recreation mapping tool to help outdoor enthusiasts find accessible lands and waters more easily. These recreation areas can be found by visiting **www.nyc.gov/dep/recmap**.

- Partnership Programs – Many of New York City's watershed protection programs west of the Hudson River are administered by the Catskill Watershed Corporation, a nonprofit organization. Together, DEP and the Catskill Watershed Corporation have repaired or replaced more than 5,125 failing septic systems and authorized the construction of more than 70 stormwater control measures on properties in the watershed. New York City has also made available more than $170 million for new community wastewater projects. When these projects are completed, they will be capable of treating nearly 1.6 million gallons of wastewater per day. Another DEP partnership program is the stream management program, which encourages the stewardship of streams and floodplains in the watershed west of the Hudson River. Additionally, the watershed agricultural program and watershed forestry program both represent long-term successful partnerships between DEP and the nonprofit Watershed Agricultural Council. The underlying goal of both programs is to support and maintain well-managed family farms and working forests as beneficial land uses for water quality protection and rural economic viability. Together, these partnerships work with watershed residents to identify and eliminate potential pollution sources.

WATER CONSERVATION

DEP operates the largest combined water supply and wastewater utility in the United States. Employees work hard to ensure that a reliable supply of high-quality water is delivered to about 9.5 million customers each day, and that about 1.1 billion gallons of wastewater from the five boroughs is collected and treated everyday. The operation of New York City's Water Supply System is immense, and DEP continues to implement improvements to deliver the best water possible to New Yorkers. The average single-family household in New York City uses approximately 80,000 gallons of water each year at a cost of $3.89 per 100 cubic feet of water (748 gallons), or about $416 a year. Since nearly all customers receive wastewater collection and treatment services in addition to water service, the combined annual water and sewer charge for the typical New York City household using 80,000 gallons per year is $1,078, consisting of $416 for water service and $662 for wastewater services (based on the Fiscal Year 2017 rates).

Water storage in the City's upstate reservoirs dropped below historic average in 2016 as persistently dry weather gripped much of the Northeast. New York City, however, did not enter a water supply drought in 2016 thanks to the most significant drop in water demand since the 1970s, and the activation of the Croton Water Filtration Plant. However, DEP would like to remind all consumers that water is a precious resource. DEP asks that all New Yorkers do their part to conserve this important resource. All New Yorkers should adopt good water-conservation habits, and obey the City's year-round water use restrictions. These include a prohibition on watering sidewalks and lawns between November 1 and March 31, and from 11 a.m. to 7 p.m. from April 1 to October 31. Remember, it is illegal to open fire hydrants at any time without a permit. However, during the summer you can contact your local firehouse to have a DEP-approved spray cap installed on a hydrant.

WATER CONSUMPTION

For the last several years, DEP has been implementing the Water Demand Management Plan, which aims to reduce citywide water consumption by 2021. To meet this goal, DEP has developed a combination of programs to identify opportunities to conserve water.

- DEP distributed a record-setting 11,111 rain barrels to New York City homeowners in 2016. The 60-gallon rain barrels are easy to install and connect directly to a property owner's downspout to capture and store the stormwater that falls on the roof. The water collected in the rain barrel can then be used to water lawns and gardens, or for other outdoor chores. Rain barrels can help reduce a homeowner's water bill as watering lawns and gardens can account for up to 40 percent of an average household's water use during the summer months.

Pepacton Reservoir

- In 2016, DEP launched the On-Site Water Reuse Grant Program, a cost-sharing program aimed at providing commercial, mixed-use, and multi-family residential property owners with incentives to install water reuse systems. Grants ranging from $250,000 to $500,000 are being awarded to "building-scale" sites that contain 100,000 square feet or more of residential or commercial space, as well as "district-scale" properties that include the sharing of water between two or more parcels. The targeted water savings are 32,000 gallons per day and 94,000 gallons per day, respectively.
- Partnering with NYC Parks, activation buttons are being installed on the spray showers at 400 playgrounds around the city to save 1.5 million gallons of water a day. In addition, more than 40,000 bathroom fixtures in hundreds of public school buildings are also being updated. These retrofits will conserve approximately 4 million gallons of water each school day.
- To encourage water conservation on private properties, DEP began a voucher-based program to replace roughly 100,000 outdated residential toilets. The new toilets, which use 1.28 gallons per flush, replace older ones that used as much as 5 gallons per flush. DEP has also launched an automated Leak Notification Program that sends an alert to property owners if there is an unusual spike in water consumption. More than 72,000 customers have signed up for the program to quickly find and fix leaks on their property, saving more than $60 million in water charges. To sign up, go to: **www.nyc.gov/html/dep/html/water_and_sewer_bills/leak_notification.shtml**

Dry conditions at Cannonsville Reservoir

DELAWARE RIVER BASIN DROUGHT

A basin-wide drought watch for the Delaware River was declared on November 23, 2016. It was the first drought watch for the Delaware River since 2002. The watch was declared after combined storage in New York City's Cannonsville, Pepacton, and Neversink reservoirs dropped below a specified level. Persistently dry weather in the summer and fall last year had reduced runoff coming into the reservoirs to near record lows, causing reservoir storage to drop steadily.

Cannonsville, Pepacton, and Neversink reservoirs were constructed on the headwaters of the Delaware River. DEP regularly releases water from these reservoirs to meet flow targets in the river that were set by court rulings and interstate agreements.

In response to the drought watch, DEP took a number of steps to draw water from other parts of the system and improve the reservoirs' chance of refilling by the start of the next water year on June 1, 2017. For instance, DEP pulled as much as 235 million gallons per day from its Croton System to reduce its reliance on reservoirs in the Catskills, which had been affected most by the dry conditions. Croton water is generally distributed only to the lower elevation areas of the Bronx and Manhattan, but the dry conditions compelled DEP to pump Croton water into the higher service areas where it was blended with water from our Catskill/Delaware supply. This underscored the value of having access to Croton System, which was largely unavailable to DEP before the Croton Water Filtration Plant was activated in 2015.

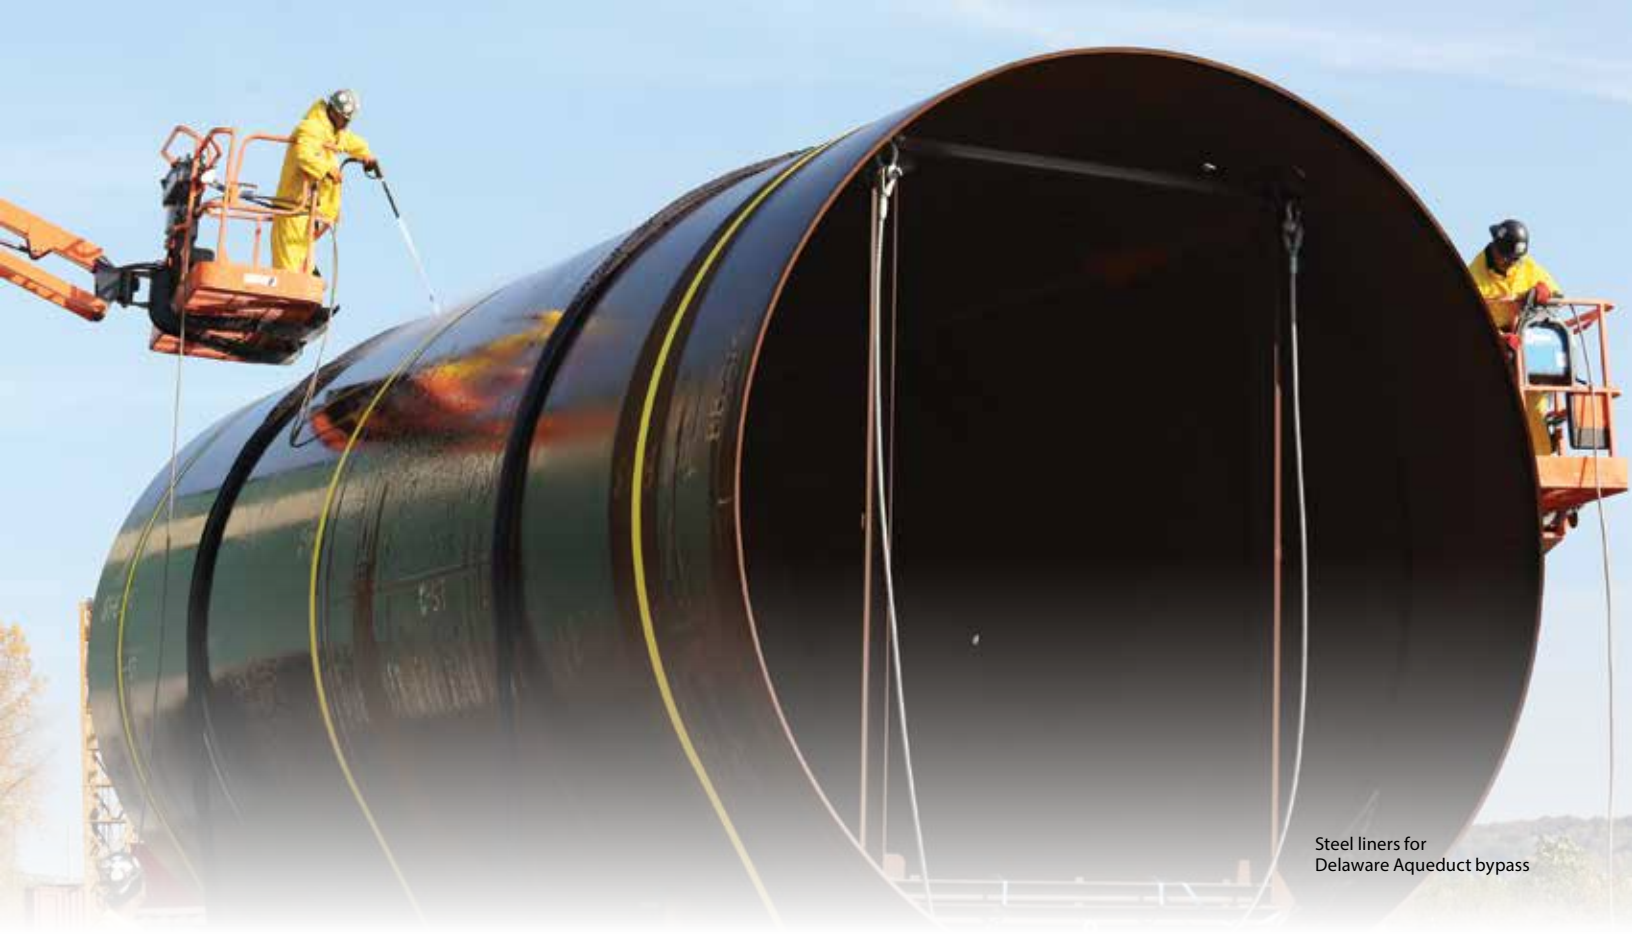
A drought watch for New York City is different than the watch that was declared on the Delaware River. A drought watch in the City is declared when either of its two largest water sources – Catskill or Delaware – has less than a 50 percent chance of refilling by June 1. Modeling and forecasting showed that the Catskill System came close to this threshold when its probability of refilling dipped below 60 percent in October. However, a City drought watch was not declared which is a testament to the redundancy of our water supply, smart investments to maintain access to all our water sources, and informed operational decisions by DEP employees.

Meanwhile, hydrologic conditions improved during late fall and early winter. Our reservoirs have been steadily regaining storage, and the probability of refill in the Catskill and Delaware systems is well above 80 percent. The basin-wide drought watch on the Delaware River was terminated in January 2017.

OPERATIONS SUPPORT TOOL

The Operations Support Tool (OST) is an advanced computer model that can simulate future storage in the City's reservoir system by accounting for variables such as weather forecasts, current demand for water, operating rules, and many near real-time inputs from instruments in the field. Direct input of advanced National Weather Service forecasts, and a variety of data from other sources, has given DEP a better understanding of system risks to better drive operational decisions – including decisions made before storms or droughts. Originally, the OST was identified as a way for DEP to reduce overall impacts of Catskill System turbidity, but it has proven to be much more than just a turbidity control tool.

DEP is currently working with an expert panel from the National Academies of Science to find ways to improve and maximize use of OST. The expert panel consists of scientists from across North America with expertise in modeling, water quality, hydrology, water supply management, and climate change. The panel will meet five times in 2017 to examine the use of OST before issuing a report on its findings.



Steel liners for
Delaware Aqueduct bypass

INFRASTRUCTURE PROJECTS

STATEN ISLAND SIPHON

In October 2016, a new $250 million water tunnel connecting Brooklyn to Staten Island was activated to provide a critical back-up feed to Staten Island. The new, deeper tunnel – called a siphon – was constructed under the New York Harbor. It can deliver up to 150 million gallons of drinking water per day from Brooklyn to Staten Island. The new 72-inch siphon was excavated at a depth of 100 feet, replacing the two old water connections that ran from Brooklyn to Staten Island at a shallower depth.

In addition to building the tunnel, the project includes the installation of water control equipment and other related infrastructure improvements to connect the siphon to the existing water distribution networks in both boroughs. This work included 6,545 feet of new water mains in Staten Island and 1,710 feet of new water mains in Brooklyn.

WATER FOR THE FUTURE

DELAWARE BYPASS TUNNEL

DEP has implemented the Water for the Future program to upgrade and repair the two aqueducts that deliver water from the Catskills to the City. The primary focus of the program is to address two known leaks in the Delaware Aqueduct, which conveys about 50 percent of New York City's drinking water each day. The 85-mile aqueduct is the longest continuous tunnel in the world. The central component of the repair involves building a 2.5-mile-long bypass tunnel to convey water around the largest leak, which is located in Newburgh, N.Y. This new tunnel will be constructed 600 feet below the Hudson River, and it will be connected to structurally sound portions of the existing tunnel to carry water around the leaking section. A much smaller area of leakage to the north, in Ulster County, will be repaired by grouting from inside the tunnel.

The Delaware Aqueduct will be shut down for approximately 6 months starting in October 2022 so that workers can connect the bypass tunnel to the existing aqueduct. Ahead of that planned shutdown, DEP has taken a number of steps to ensure the City has a sufficient and reliable supply of drinking water. Demand management plans have aimed to reduce the City's water demand by up to 5 percent. A rehabilitation project will begin within the Catskill Aqueduct starting in 2018 to clean the tunnel lining and restore some of its historic capacity. The Catskill Aqueduct generally conveys about 40 percent of New York City's drinking water on a typical day, but it will supply upwards of 60 percent while the Delaware Aqueduct is temporarily out of service. The City will also rely on additional water from the Croton System during that time now that its filtration plant in the Bronx has been completed.

The $1.5 billion Water for the Future program comprises the largest, most complex repair in the history of New York City's water supply.

CATSKILL-DELAWARE INTERCONNECTION

In 2015, DEP placed the Catskill-Delaware Interconnection into service and continued using it in 2016. The roughly $22 million interconnection was constructed in Ulster County at a location where the two aqueducts cross, with the deep-rock Delaware Aqueduct crossing under the Catskill Aqueduct at the surface. The project allows DEP to move as much as 365 million gallons per day from the Delaware Aqueduct into the Catskill Aqueduct. (Water cannot move the other way because the Delaware Aqueduct is a deep bedrock tunnel under pressure, and the Catskill is an open-channel tunnel built at the surface.)

The interconnection, which was utilized for several months in response to dry weather conditions in 2016, provides DEP with a new tool to access additional water from its Delaware System, and reduce turbidity in the water supply system after large storms. Turbidity after large rainfall or snow-melt events can be problematic in the Catskill System. The streams and creeks that feed its reservoirs run through steep valleys comprised of loose silt and clay that were deposited by the glaciers that formed the region. These fine particles can be picked up by the fast-moving water and carried into the Ashokan and Schoharie reservoirs. The new interconnection gives DEP the flexibility to reduce its reliance on water from the Catskill System during episodes of high turbidity by moving additional Delaware System water through the Catskill Aqueduct. Because Delaware System water is not generally prone to high turbidity, the interconnection effectively reduces turbidity and reduces DEP's reliance on additional treatment chemicals.

Catskill-Delaware Interconnection Chamber

Engineers envisioned a connection between the two aqueducts when they built the Delaware System in the 1940s. In fact, the east wall of the valve chamber at Delaware Aqueduct Shaft 4 was constructed with four arched openings – each temporarily closed by brick walls – that could one day allow pipes to be installed to move Delaware water into the Catskill Aqueduct. The new interconnection is one of several facilities that provide DEP with the flexibility to convey the best drinking water from different parts of its upstate reservoir system each day.

CITY WATER TUNNEL NO. 3

New York City has been constructing City Water Tunnel No. 3 in stages since the early 1970s. The project is one of the largest capital projects in the history of the City. When completed, City Water Tunnel No. 3 will improve New York City's water delivery system by creating redundancy that will allow DEP to take the other two large distribution tunnels out of service for periodic inspections or repairs. City Water Tunnels No. 1 and 2 were put into service in 1917 and 1936, respectively.

- The 13-mile Stage 1 section of City Water Tunnel No. 3 went into service in August 1998. It runs from Hillview Reservoir in Yonkers, through the Bronx, into Manhattan, across Central Park, and into Astoria, Queens.
- Stage 2 of City Water Tunnel No. 3 consists of the Queens/Brooklyn leg and the Manhattan leg.
  - Tunneling on the 9-mile Manhattan leg of Stage 2 began in 2003 and was completed in 2008. Between 2008 and 2013, 10 new supply shafts were constructed to integrate the new tunnel section with the existing distribution system. The Manhattan leg was activated on October 16, 2013.
  - The Queens/Brooklyn leg is a 5-mile length of tunnel in Queens that connects to a 5.5-mile section in Brooklyn. Six of the eight shafts have been completed and Mayor de Blasio has allocated $685 million to complete the remaining two. This funding will also help to ensure that the tunnel is activation-ready by the end of 2017, and able to provide water to Queens and Brooklyn in the event of an emergency.

Gilboa Dam

SCHOHARIE RESERVOIR GILBOA DAM

In 2014, DEP completed a $138 million project to fully rehabilitate Gilboa Dam. The dam impounds the waters of Schoharie Reservoir and is the northernmost piece of infrastructure in the City's water supply system. Work on the 90-year-old dam included the addition of approximately 234 million pounds of concrete, molded and dyed to resemble the original bluestone face of the dam, along with more than 500 massive spillway slabs and upgrades to the abutment walls that support the dam. The project was finished two years ahead of schedule. The rehabilitation of Gilboa Dam was recognized in 2016 with a national award for engineering excellence from the American Council of Engineering Companies (ACEC). Since 1967, ACEC has given awards to projects that exemplify the year's most outstanding engineering accomplishments. Projects are judged by a panel of more than two dozen experts drawn from a cross section of industry. The ACEC award was the third such recognition for the Gilboa Dam project since it was completed. The project had previously been honored with top awards from the American Council of Engineering Companies of New York, and the Association of State Dam Safety Officials.

Work on the dam was part of a $400 million program to build and improve infrastructure at Schoharie Reservoir. Workers are currently building release works that will allow DEP to release water from the reservoir into the Schoharie Creek below the dam. The $142 million project – which is expected to be completed in the year 2020 – includes construction of an intake structure at the bottom of Schoharie Reservoir, more than 2,000 feet of subsurface tunnels, and a valve chamber along Schoharie Creek. The finished tunnel and valves will provide DEP with the ability to release water from the reservoir to facilitate dam maintenance, respond to potential emergencies, and mitigate flood risk for downstream communities.

Schoharie Reservoir stores up to 19.6 billion gallons of water and it accounts for roughly 15 percent of the drinking water delivered to New York City each day.

ADMINISTRATIVE ORDERS

Hillview Reservoir is the final stop for drinking water from the Catskill/Delaware System before it enters the City's distribution system. On May 24, 2010, New York City and EPA entered into an Administrative Order on Consent that set forth a milestone schedule to install a cover over the Hillview Reservoir by mid-2028. The milestones of a previous Administrative Order on Consent from 2008, between New York City and NYSDOH, were incorporated into the 2010 Administrative Order on Consent. Additionally, in August of 2011, EPA released a report titled *Improving Our Regulations: Final Plan for Periodic Reviews of Existing Regulations*, in which EPA indicated that it would evaluate the reservoir cover requirement of the Long Term 2 Enhanced Surface Water Treatment (LT2) Rule. DEP was actively involved in EPA's review process. On January 11, 2017, EPA published in the Federal Register its determination not to alter the reservoir cover requirement of the LT2.

The Catskill/Delaware Ultraviolet Disinfection Facility, which began treating Catskill/Delaware water in October 2012, was constructed and is operating, formerly pursuant to an Administrative Order with EPA. DEP remained in compliance with the Administrative Order for its full duration. The Administrative Order was terminated on July 7, 2016.

THE NEW YORK CITY 2016 DRINKING WATER QUALITY TESTING RESULTS

HOW TO READ THE NEW YORK CITY DRINKING WATER QUALITY TESTING RESULTS

The following section of the Drinking Water Supply and Quality Report compares the quality of your tap water to federal and state standards for each parameter (if applicable). Table 1 reflects the compliance monitoring results for all regulated and non-regulated parameters, the number of samples collected, the range of values detected, the average of the values detected, and the possible sources of the parameters, unless otherwise footnoted. The monitoring frequency of each parameter varies and is parameter specific. Data presented are for the Catskill/Delaware and Croton systems, which were the only sources of water in 2016. Table 2 represents those parameters monitored for, but not detected in any sample. The monitoring results show that New York City's drinking water met all drinking water standards in 2016.

Most of our data are representative of 2016 testing; concentrations of parameters or contaminants do not change frequently. For previous years' results you can view our reports at: **www.nyc.gov/dep**.

DEFINITIONS

ACTION LEVEL (AL):
The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow. An exceedance occurs if more than 10 percent of the samples exceed the Action Level.

MAXIMUM CONTAMINANT LEVEL (MCL):
The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible, using the best available treatment technology.

MAXIMUM CONTAMINANT LEVEL GOAL (MCLG):
The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

MAXIMUM RESIDUAL DISINFECTANT LEVEL (MRDL):
The highest level of a disinfectant allowed in drinking water. The addition of a disinfectant is necessary for control of microbial contaminants.

MAXIMUM RESIDUAL DISINFECTANT LEVEL GOAL (MRDLG):
The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contamination.

TREATMENT TECHNIQUE (TT):
A required process intended to reduce the level of a contaminant in drinking water.

90TH PERCENTILE VALUE:
The values reported for lead and copper represent the 90th percentile. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below the value. The 90th percentile is equal to or greater than 90 percent of the lead and copper values detected at your water system.

UNITS & ABBREVIATIONS

$CaCO_3$ = calcium carbonate
CFU/mL = colony forming units per milliliter
/cm = per centimeter
°F = degrees Fahrenheit
µg/L = micrograms per liter (10^{-6} grams per liter)
µS/cm = microsiemens per centimeter
mg/L = milligrams per liter (10^{-3} grams per liter)
MPN/100mL = most probable number per 100 milliliters
ND = lab analysis indicates parameter is not detected
NDL = no designated limit
NTU = nephelometric turbidity units
/50L = per 50 liters

TABLE 1: DETECTED PARAMETERS

THIS TABLE SUMMARIZES MONITORING RESULTS FOR ALL DETECTED PARAMETERS IN 2016

CONVENTIONAL PHYSICAL AND CHEMICAL PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	AVERAGE	MCL VIOLATION	SOURCES IN DRINKING WATER
Alkalinity (mg/L $CaCO_3$)	-		304	13 - 74.1	23.5	No	Erosion of natural deposits
Aluminum (µg/L)	50 - 200 (1)		306	6 - 57	20	No	Erosion of natural deposits
Barium (mg/L)	2	2	306	0.01 - 0.04	0.02	No	Erosion of natural deposits
Calcium (mg/L)	-		304	5.5 - 30.4	9.2	No	Erosion of natural deposits
Chlorate (mg/L)	- (2)		2	0.2	0.2	No	By-product of drinking water chlorination using sodium hypochlorite
Chloride (mg/L)	250		304	11 - 101	24	No	Naturally occurring; road salt
Chlorine Residual, Free (mg/L)	4 (3)		15,816	0.0 - 2.2	0.6 (3)	No	Water additive for disinfection
Chromium (µg/L)	100		307	ND - 31	ND	No	Erosion of natural deposits
Chromium VI (µg/L)	- (2)		2	0.044 - 0.046	0.045	No	Erosion of natural deposits
Color - distribution system (color units - apparent)	-		14,105	3 - 45	6	No	Presence of iron, manganese, and organics in water
Color - entry points (color units - apparent)	15 (4)		1,711	3 - 8	6	No	Presence of iron, manganese, and organics in water
Copper (mg/L)	1.3 (5)	1.3	308	ND - 0.081	0.007	No	Corrosion of household plumbing systems; erosion of natural deposits
Corrosivity (Langelier index)	0 (1) (6)		303	-2.78 to -1.07	-2.13	No	
Fluoride (mg/L)	2.2 (4)	4	2,076	ND - 0.9	0.7	No	Water additive which promotes strong teeth; erosion of natural deposits
Hardness (mg/L $CaCO_3$)	-		304	19 - 119	33	No	Erosion of natural deposits
Hardness (grains/gallon[US]$CaCO_3$) (7)	-		304	1.1 - 7	1.8	No	Erosion of natural deposits
Iron (µg/L)	300 (4) (8)		305	ND - 154	30	No	Naturally occurring
Lead (µg/L)	15 (5)	0	308	ND - 15	ND	No	Corrosion of household plumbing systems; erosion of natural deposits
Magnesium (mg/L)	-		304	1.1 - 11	2.5	No	Erosion of natural deposits

ORGANIC PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	AVERAGE	MCL VIOLATION	SOURCES IN DRINKING WATER
Bromochloroacetic Acid (µg/L)	50		304	ND - 4.5	1.6	No	By-product of drinking water chlorination
Caffeine (µg/L)	50		80	ND - 0.061[15]	ND	No	Wastewater plant effluent, leaching from septic tanks
Chloropicrin (µg/L)	50		24	ND - 0.65	0.39	No	By-product of drinking water chlorination
Chloral Hydrate (µg/L)	50		24	0.95 - 10.49	5.16	No	By-product of drinking water chlorination
Chlorothalonil (µg/L)	50		80	ND - 0.1 [15]	ND	No	Fungicide used on crops and lawns
Dalapon (µg/L)	50		304	ND - 1.0 [15]	ND	No	By-product of drinking water chlorination
Di(2-ethylhexyl)phthalate (µg/L)	6		80	ND - 0.69	ND	No	Probable source is sample contamination from plastic gloves or air particulates.
Haloacetic Acid 5 (HAA5) (µg/L)	60 [16]		304	11 - 57	50 [16]	No	By-product of drinking water chlorination
Haloacetonitriles (HANs) (µg/L)	50		24	0.92 - 3.75	2.62	No	By-product of drinking water chlorination
Halogenated Ketones (HKs) (µg/L)	50		24	1.07 - 3.42	2.47	No	By-product of drinking water chlorination
Methyl Acetate (µg/L)	50		305	ND - 0.58 [15]	ND	No	Solvent in glues, paints, and nail polish removers
Methyl Tertiary Butyl Ether (MTBE) (µg/L)	10		305	ND - 1.1 [15]	ND	No	Releases from gasoline storage tanks. Octane enhancer in unleaded gasoline. Atmospheric deposition.
Total Organic Halogen (µg/L)	-		245	96 - 318	153	No	By-product of drinking water chlorination
Total Trihalomethanes (TTHM) (µg/L)	80 [16]		304	8.2 - 76	52 [16]	No	By-product of drinking water chlorination

MICROBIAL PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	# SAMPLES POSITIVE	AVERAGE	HIGHEST MONTH % POSITIVE	MCL VIOLATION	SOURCES IN DRINKING WATER
Total Coliform Bacteria (% of samples positive/month)	5% [17]	0	9,756	-	27	-	2%	No	Naturally present in the environment
E. coli (MPN/100mL)	- [17]	0	9,756	-	0	-	0%	No	Human and animal fecal waste
Heterotrophic Plate Count (CFU/mL)	TT	-	12,591	ND - 5,700	209	1	-	No	Naturally present in the environment

TABLE 1: DETECTED PARAMETERS (CONTINUED)

THIS TABLE SUMMARIZES MONITORING RESULTS FOR ALL DETECTED PARAMETERS IN 2016

LEAD AND COPPER RULE SAMPLING AT RESIDENTIAL WATER TAPS: JANUARY TO DECEMBER 2016

PARAMETER	NYSDOH AL	EPA MCLG (Ideal Goal)	90% OF YOUR LEVELS WERE LESS THAN	RANGE	# SAMPLES EXCEEDING AL	EXCEEDANCE	SOURCES IN DRINKING WATER
Copper (mg/L)	90% of homes less than 1.3	1.3	0.185	0.003 - 2.037	1 out of 498	No	Corrosion of household plumbing systems
Lead (µg/L)	90% of homes less than 15	0	11	ND - 4,726 [18]	34 out of 498	No	Corrosion of household plumbing systems

CRYPTOSPORIDIUM AND *GIARDIA* SAMPLING FROM SOURCE WATER OUTFLOWS 2016

PARAMETER	RESERVOIR OUTFLOW	# SAMPLES	# SAMPLES POSITIVE	RANGE	SOURCES IN DRINKING WATER
Cryptosporidium (oocysts/50L)	Kensico	52	4	0 - 2	Human and animal fecal waste
	Hillview	53 [19]	4	0 - 2	
	Jerome Park	45	9	0 - 241 [19]	
Giardia (cysts/50L)	Kensico	52	19	0 - 5	Human and animal fecal waste
	Hillview	53 [19]	7	0 - 3	
	Jerome Park	45	22	0 - 11	

TASTE TEST WIN

In July 2016, the City's tap water was awarded the top prize in New York State's Regional Metro Tap Water Taste Test competition. The contest was held at the American Museum of Natural History in Manhattan and pitted New York City's tap water against drinking water suppliers from Westchester, Nassau, Suffolk, and Orange counties. Museum visitors sampled tap water from the five suppliers and ranked them by taste. New York City's tap water was judged to be the best tasting, followed by water from Elmsford in Westchester County.

TABLE 2: NOT-DETECTED PARAMETERS

THE FOLLOWING PARAMETERS WERE MONITORED FOR, BUT NOT DETECTED IN ANY SAMPLE IN 2016

CONVENTIONAL PHYSICAL AND CHEMICAL PARAMETERS

Antimony, Arsenic, Asbestos, Beryllium, Bismuth-212, Bismuth-214, Cadmium, Cesium-134, Cesium-137, Cyanide, Gross Alpha, Gross Beta, Lead-212, Lead-214, Lithium, Mercury, Potassium-40, Radium-226, Radium-228, Selenium, Silver, Thallium, Thallium-208, Thorium-234, Uranium, Uranium-235

ORGANIC PARAMETERS

Principal Organic Contaminants:

Benzene, Bromobenzene, Bromochloromethane, Bromomethane, n-Butylbenzene, sec-Butylbenzene, tert-Butylbenzene, Carbon tetrachloride, Chlorobenzene, Chloroethane, Chloromethane, 2-Chlorotoluene, 4-Chlorotoluene, Dibromomethane, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, Dichlorodifluoromethane, 1,1-Dichloroethane, 1,2-Dichloroethane, 1,1-Dichloroethene, cis-1,2-Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane, 1,3-Dichloropropane, 2,2-Dichloropropane, 1,1-Dichloropropene, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, Ethylbenzene, Hexachlorobutadiene, Isopropylbenzene, p-Isopropyltoluene, Methylene chloride, n-Propylbenzene, Styrene, 1,1,1,2-Tetrachloroethane, 1,1,2,2-Tetrachloroethane, Tetrachloroethylene, Toluene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, Trichloroethene, Trichlorofluoromethane, 1,2,3-Trichloropropane, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, m-Xylene, o-Xylene, p-Xylene

Specified Organic Contaminants:

Alachlor, Aldicarb (Temik), Aldicarb sulfone, Aldicarb sulfoxide, Aldrin, Atrazine, Benzo(a)pyrene, Butachlor, Carbaryl, Carbofuran (Furadan), Chlordane, 2,4-D, 1,2-Dibromo-3-chloropropane, Dicamba, Dieldrin, Di(2-ethylhexyl)adipate, Dinoseb, Diquat, Endothall, Endrin, Ethylene dibromide (EDB), Glyphosate, Heptachlor, Heptachlor epoxide, Hexachlorobenzene, Hexachlorocyclopentadiene, 3-Hydroxycarbofuran, Lindane, Methomyl, Methoxychlor, Metolachlor, Metribuzin, Oxamyl (Vydate), Pentachlorophenol, Picloram, Polychlorinated biphenyls (PCBs), Propachlor, Simazine, Toxaphene, 2,4,5-TP (Silvex), 2,3,7,8-TCDD (Dioxin), Vinyl chloride

Unspecified Organic Contaminants:

Acenaphthene, Acenaphthylene, Acetochlor, Acetone, Acifluorfen, Allyl chloride, Ametryn, tert-Amyl ethyl ether, tert-Amyl methyl ether, Anthracene, Bentazon, Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene, Benzo[k]fluoranthene, Benzo[g,h,i]perylene, alpha-BHC, beta-BHC, delta-BHC, Bromacil, 2-Butanone (MEK), tert-Butyl alcohol, Butylate, Butylbenzylphthalate, tert-Butyl ethyl ether, Carbon disulfide, Carboxin, Chloramben, alpha-Chlordane, gama-Chlordane, Chlorobenzilate, 2-Chlorobiphenyl, 1-Chlorobutane, Chloroneb, Chlorpropham, Chlorpyrifos (Dursban), Chrysene, Cycloate, 2,4-DB, DCPA(Dacthal), DCPA (total mono & diacid degradate), 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, DEF(Merphos), Diazinon, Dibenz[a,h]anthracene, Di-n-Butylphthalate, 3,5-Dichlorobenzoic acid, 2,3-Dichlorobiphenyl, Dichlorprop, Dichlorvos (DDVP), Diethyl ether, Diethylphthalate, Di-isopropyl ether, Dimethoate, Dimethylphthalate, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Di-N-octylphthalate, Diphenamid, Disulfoton, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin aldehyde, EPTC, Ethoprop, Ethyl methacrylate, Etridiazole, Fenamiphos, Fenarimol, Fluoranthene, Fluorene, Fluridone, alpha-HCH, beta-HCH, delta-HCH, 2,2',3,3',4,4',6-Heptachlorobiphenyl, Heptachlor epoxide (isomer B), 2,2',4,4',5,6'-Hexachlorbiphenyl, Hexachloroethane, Hexazinone, Indeno[1,2,3-cd]pyrene, Isophorone, Malathion, Methiocarb, Methyl iodide, Methyl paraoxon, 4-Methyl-2-pentanone (MIBK), Mevinphos, MGK264-isomer a, MGK264-isomer b, Molinate, Naphthalene, Napropamide, 4-Nitrophenol, cis-Nonachlor, trans-Nonachlor, Norflurzon, 2,2',3,3',4,5',6,6'-Octachlorobiphenyl, Paraquat, Parathion, Pebulate, Pendimethalin, 2,2',3',4,6-Pentachlorobiphenyl, Pentachloroethane, Permethrin (cis- & trans-), Phenanthrene, Prometryn, Pronamide, Propazine, Propoxur (Baygon), Pyrene, 2,4,5-T, Simetryn, Stirofos, Tebuthiuron, Terbacil, Terbufos, Terbuthylazine, Terbutryn, 2,2',4,4'-Tetrachlorobiphenyl, Tetrahydrofuran, Thiobencarb, Triademefon, 2,4,5-Trichlorobiphenyl, Trichlorotrifluoroethane (Freon 113), Tricyclazole, Trifluralin, Vernolate

Unregulated Contaminant Monitoring Rule (UCMR3) Parameters:

Androstenedione, Bromochloromethane, Bromomethane, 1,3-Butadiene, Chlorodifluoromethane, Chloromethane, Cobalt, 1,1-Dichloroethane, 1,4-Dioxane [20], Equilin, Estradiol, Estriol, Estrone, Ethynylestradiol, Molybdenum, Perfluorobutanesulfonic acid (PFBS), Perfluoroheptanoic acid (PFHpA), Perfluorohexanesulfonic acid (PFHxS), Perfluorononanoic acid (PFNA), Perfluorooctanesulfonic acid (PFOS), Perfluorooctanoic acid (PFOA), Testosterone, 1,2,3-Trichloropropane, Vanadium

FOOTNOTES

(1) EPA Secondary MCL: NYSDOH has not set an MCL for this parameter.

(2) Chlorate and chromium (VI), also known as hexavalent chromium, were monitored for in March 2016, in addition to prior sampling in 2013 to 2015, under the requirements of the Unregulated Contaminant Monitoring Rule (UCMR). No MCL has been established for chlorate, and the NYSDOH chromium MCL is for chromium (total). Data presented are for 2016 only, prior years can be found in the applicable years' reports.

(3) Value represents MRDL, which is the level of disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects. The MRDL is enforceable in the same manner as an MCL and is the calculated running annual average. Data presented are the range of individual sampling results and the highest of the four quarterly running annual averages.

(4) Determination of MCL violation: If a sample exceeds the MCL, a second sample must be collected from the same location within two weeks, or as soon as practical. If the average of the two results exceeds the MCL, then an MCL violation has occurred.

(5) Action Level (not an MCL) measured at-the-tap. The data presented in this table were collected from sampling stations at the street curb. For at-the-tap monitoring, see the Lead and Copper Rule Sampling at Residential Water Taps table on page 18.

(6) A Langelier Index of less than zero indicates corrosive tendencies.

(7) Hardness of up to 3 grains per gallon is considered soft water; between 3 and 9 is moderately hard water.

(8) If iron and manganese are present, the total concentration of both should not exceed 500 µg/L.

(9) NYSDOH established Optimal Water Quality Parameters (OWQP) under the Lead and Copper Rule that include ranges for pH and ortho-phosphate which are presented here. The reported average value for pH is the median value. The pH was elevated in one sample collected at site 39550 (Carnegie Hill, 10128) on 7/18/16 with a pH of 9.1. This was attributed to a shut value creating a stagnant condition which then was resolved. All other samples collected in 2016 reflected pH in the expected ranges.

(10) Water containing more than 20 mg/L of sodium should not be used for drinking by people on severely restricted sodium diets. Water containing more than 270 mg/L of sodium should not be used for drinking by people on moderately restricted sodium diets.

(11) Turbidity is a measure of cloudiness of the water. Turbidity is monitored because it is a good indicator of water quality, because high turbidity can hinder the effectiveness of disinfection, and because it is a good indicator of the effectiveness of our filtration system.

(12) This MCL for turbidity is the monthly average rounded off to the nearest whole number. Data presented are the range of individual sampling results and the highest monthly average from distribution sites.

(13) This MCL for turbidity is on individual readings taken every four hours at the unfiltered Catskill/Delaware source water entry point. Value presented is the highest individual sampling result.

(14) This is a Treatment Technique performance standard for the Croton Water Filtration Plant. The value presented is the highest single combined filter effluent turbidity measurement which occurred on 10/21/2016. In addition, 100% of the measurements were < 0.3 NTU, surpassing the state regulations which require that turbidity at the combined filter effluent must always be < 1.0 NTU and that 95% of the measurements be < 0.3 NTU.

(15) Only detected in one sample: caffeine was detected in only one sample collected from site 1SCL1 (Kingsbridge Heights, 10468) on 3/26/16; chlorothalonil was detected in only one sample collected from site 1SCL1 (Kingsbridge Heights, 10468) on 2/29/16; dalapon was detected in only one sample collected from site 37950 (East Village, 10009) on 11/1/16; methyl acetate was qualitatively detected in only one sample collected from site 36950 (Roosevelt Island, 10044) on 12/6/16; and MTBE was detected in only one sample collected from site 1SCH4 (Kingsbridge Heights, 10468) on 3/1/16. In all other samples the parameters were not detected.

(16) The MCLs for HAA5 and TTHMs are calculated locational running annual averages. The data in the Range column are the minimum and maximum values of all sample sites monitored in the distribution system whether for compliance purposes or not. The values in the Average column are the highest locational running annual averages under the Stage 2 Disinfectant and Disinfection By-Products Rule.

(17) If a sample and its repeat sample are both positive for coliform bacteria and one of the two samples is positive for *E. coli*, then an *E. coli* MCL violation has occurred. On April 1, 2016, requirements under the Revised Total Coliform Rule took effect, eliminating the previous 5 percent of samples positive per month MCL for total coliforms. Coliform data are presented for the entire year, even though the total coliform MCL was only applicable through March 31, 2016. The highest month percent positive of 2 percent occurred in July 2016.

(18) The maximum value, 4,726 µg/L, was from one (1) sample that was not collected as directed, from a kitchen or bathroom tap, but rather from an unused bath tub. The value, therefore, was not representative of normal conditions. The next highest value was 150 µg/L.

(19) Supplementary samples were collected to follow up on previous results. One was collected on May 4, 2016, from Hillview Reservoir due to a laboratory control issue, and a second from the Jerome Park Reservoir outflow was collected in response to the detection of 241 *Cryptosporidium* oocysts on December 19, 2016. The resample from the Jerome outflow, collected on December 21, 2016, was negative for *Cryptosporidium* oocysts, and had two *Giardia* cysts.

(20) 1,4-dioxane was monitored for in March 2016, in addition to prior sampling in 2013 to 2015, under the requirements of the UCMR. It was detected in only one sample collected on 12/8/15 from site 1SCL1 (Van Cortlandt Village, 10463) at 0.082 µg/L far below the MCL of 50 µg/L.

The DOs & DON'Ts of Water Conservation

BATHROOM

✔ Do take shorter showers and fill the tub halfway.

✖ Don't run water while washing your hands & brushing your teeth.

KITCHEN & LAUNDRY

✔ Do run the dishwasher & washing machine only when full.

✖ Don't let the water run while washing dishes. Kitchen faucets use 2 to 3 gallons a minute. Filling a basin only takes 10 gallons to wash and rinse.

EVERYWHERE

✔ Do install water-saving fixtures.

✖ Don't ignore water leaks. Turn taps off tightly.

OUTDOORS

✔ Do use a self-closing nozzle on your hose.

✖ Don't open fire hydrants.

REPORT LEAKS & WATER WASTE
Call 311

In or out of a drought, every New Yorker can save hundreds of gallons of water each week by following these simple water-saving tips.

www.nyc.gov/dep

FREQUENTLY ASKED QUESTIONS

MY WATER IS A RUSTY BROWN COLOR. WHAT CAUSES THIS?

Brown or discolored water is commonly associated with plumbing corrosion problems inside buildings and from rusting hot water heaters. If you have an ongoing problem with brown water, it may be due to rusty pipes. It is recommended that you run your cold water for 2-3 minutes if it has not been used for an extended period of time. This will flush the line.

A sudden appearance of discoloration might result from a disturbance to nearby water mains, including breaks or repairs. This can also occur if there is construction near your building. Additionally, the use of fire hydrants for firefighting can temporarily cause brown water. Because the water mains are pressurized, a disturbance may stir up or resuspend sediments, thereby causing the water to be discolored. Discoloration is a temporary condition most often caused by particles of iron and manganese that have settled to the bottom of the water pipes buried under the roadways. Any sudden change in the flow of water within the pipes can cause them to vibrate, which, in turn, may loosen or resuspend the brownish/red/orange particles of iron into the water. This temporary problem is generally resolved or reduced when DEP flushes water from nearby hydrants.

SOMETIMES I THINK MY WATER HAS A TASTE OR ODOR?

You may, at times, find your water tastes or smells like chlorine. DEP is required to maintain a chlorine residual in the distribution system to prevent the growth of microorganisms. Chlorine is a very effective disinfectant, and is not considered hazardous or harmful in the amounts used to treat the water supply. New York City water meets all federal and state standards and is safe to drink. Chlorine odors may be more noticeable when the weather is warmer. The most effective way to eliminate or reduce the taste is by leaving a glass or pitcher of your tap water in the refrigerator overnight before drinking. You can also pour water from one container to another about 10 times to reduce the chlorine.

IS NEW YORK CITY'S WATER "HARD?"

DEP gets many questions about hardness from people who are installing dishwashers. Hardness is a measure of dissolved calcium and magnesium in drinking water. Water with less calcium or magnesium is considered "soft" which makes it easier to create a lather and suds. New York City's Catskill/Delaware water supply is "soft." Citywide average hardness is about 1.8 grain/gallon ($CaCO_3$). In areas of the City where Catskill/Delaware and Croton water supplies are blended, the hardness can reach 7 grain/gallon ($CaCO_3$), which is considered "moderately hard."

WHY DOES MY DRINKING WATER LOOK CLOUDY SOMETIMES?

Air becomes trapped in the water as it makes its long trip from the upstate reservoirs to the City. As a result, bubbles of air can sometimes cause water to appear cloudy or milky. This condition is not a public health concern. The cloudiness is temporary and clears quickly after water is drawn from the tap and the excess air is released.

WHERE TO GO FOR ADDITIONAL INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling EPA's Safe Drinking Water Hotline at (800) 426-4791.

For additional copies of this report, to report unusual water characteristics, or to request a free kit to test for lead in your drinking water, call 311 or from outside New York City call (212) New-York or visit 311 online at www.nyc.gov/apps/311. TTY services are available by calling (212) 504-4115.

For more information about *Cryptosporidium* and *Giardia*, contact the Bureau of Communicable Diseases of the New York City Department of Health and Mental Hygiene at (347) 396-2600 or call 311 or visit www.nyc.gov/apps/311.

To contact the New York City Department of Health and Mental Hygiene about other water supply health-related questions, call 311 or visit 311 online at www.nyc.gov/apps/311. To contact the New York State Department of Health, Bureau of Water Supply Protection, call (518) 402-7650 or visit www.health.ny.gov.

To report pollution, crime or terrorism activity occurring in the watershed, call (888) H2O-SHED (426-7433).
