EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

A Phase I Environmental Assessment of the building located at 4211-4221 9th Street, Long Island City, New York was performed by Environmental Planning & Management. The site reconnaissance occurred May 28 and June 6, 1997. The property is approximately 49,000 square feet in area modified by a factory/warehouse building and a metals forge building. The buildings on the property were first constructed in 1939. The forge and half of the warehouse/factory building have been occupied by Aerolloy, a machine shop. The other half of the building was occupied by Gallant and Wein, an electrical supply warehouse.

The subject property is serviced by municipal water and sewers provided by the City of New York. There was no apparent evidence during the site reconnaissance of any leaching pools, cesspools, or private water wells. A Consolidated Edison natural gas line runs into the building by the 9th Street entrance for heat and hot water. The site is currently heated by natural gas. A concrete encased storage tank is located in the basement below Aerolloy that was formerly used to store fuel oil. In addition, regulatory agency records indicate the presence of two inactive underground storage tanks in the yard area of Aerolloy with a capacity of 3,000 and 4,000 gallons. The Aerolloy representative confirmed the presence of the inactive tanks and indicated that these tanks were scheduled for removal in June of 1997.

There was no apparent physical evidence which may indicate that current site operations involve on-site hazardous and/or solid waste disposal. Based upon the known current uses of the site, there is no apparent generation of hazardous waste.

The floors at the Aerolloy facility contained trenches and pits. The subsurface trenches in the concrete floor were used by Aerolloy for electrical wiring. Metal shavings were observed in these trenches and in small rectangular pits in the concrete floor. The floor in the building was stained and had wet spots on it that appeared to be a substance other than water. Chemical containers were observed scattered throughout the Aerolloy production floor. Sixteen drums were observed in storage on pallets against the north wall. Aerolloy used oils and kerosene in their operations.

Discolored soil was observed in the forge yard off 9th Street. A drum was located in the corner by the forge next to the neighboring property. The soil around this drum was stained. Rusty metal flakes could be seen on the soil surface in the areas around the forge building.

A search of standard regulatory agency records was conducted in accordance with ASTM standards. Records indicate that there were no sites identified on abutting or nearby properties which are anticipated to adversely impact the subject property. Historic Sanborn maps were also reviewed. According to the historic Sanborn maps, the property immediately south of the subject property was a chemical factory in the 1947 and 1950. Historic directory searches indicate that a can manufacturer was listed at the subject property in 1981. A company known as Klandestine Research was also listed at the subject property in 1981. No further information was available regarding Klandestine Research's operations at this address.

The south portion of the building, used by Aerolloy, contained office space in the southwestern corner. The floor tiles in the office space were observed to be in poor condition. Old light ballasts were observed in the office space and in the other parts of the building. Peeling paint was observed in various locations throughout the warehouse/factory building.

Asbestos containing materials were observed at the subject property. In the space occupied by Aerolloy, there are approximately 120 linear feet of pipe insulation and 150 square feet of boiler insulation in the basement area, and approximately 7,000 square feet of reported asbestos transite board roofing.

Section 1

1.0 INTRODUCTION

Environmental Planning and Management, Inc. (EPM), performed a Phase I Environmental Site Assessment of the property located at 4211-4221 9th Street, Long Island City, New York (site). A site reconnaissance by Environmental Planning & Management personnel, Wendy LaMountain and A. Stacey Gogos, occurred on May 28 and June 6, 1997.

The purpose of this environmental assessment was to evaluate the property's compliance with applicable federal, state and local environmental regulations, and identify any environmental issues that may require further investigation and/or mitigation. The scope of the environmental audit consisted of the following activities:

- A historical site review;
- An on-site survey;
- A request for and review of New York State Department of Environmental Conservation (NYSDEC), New York City Department of Environmental Protection (NYCDEP), and New York City Fire Department (NYCFD) records and related documentation;
- An assessment of possible adverse environmental conditions associated with prior and current uses of the subject property;
- A review of available aerial photographs;
- A survey of the nearby properties;
- An assessment of possible adverse environmental conditions associated with the neighboring properties;
- A limited survey for visible, friable asbestos containing materials;
- A limited survey for lead containing paint.

Section 2

2.0 SITE ASSESSMENT

2.1 Site Description

2.1.1 General Site Description

The subject property is located at 4211-4221 9th Street Long Island City in the borough of Queens, New York (refer to Figure-1, Site Location Map). The Tax Map designation of the subject property is Block 461, Lot 16. The site occupies a parcel located on the south side of Queens Plaza South between 9th and 10th Streets. The property is approximately 49,000 square feet in size modified by two buildings. The buildings on the property were first constructed in 1939.

One of the buildings is a one-story factory/warehouse building that has a partial second floor. This building is located on the north end of the property and borders on Queens Plaza. The factory/ warehouse walls are of structural brick construction. The exterior masonry is supported by a concrete ring wall foundation. The roof deck is reinforced concrete with concrete encased steel supports. The foundation is concrete slab with a small basement located in the southwest corner of the building. The basement contains an abandoned boiler and gas fired, hot water heaters.

Public water and sewer is provided to the property by the City of New York. A Consolidated Edison natural gas line runs into the building by the 9th Street entrance. Natural gas heaters are hung near the ceiling though out the factory/warehouse building.

The building is divided into two spaces on the first floor. The northern most space is occupied by Gallant & Wein, a wire and electrical supply distributor. This northern side is approximately 19,000 square feet of first floor space. Historically, this side of the building contained a machine shop when the building was first built. Past tenants have included Bedford Can Manufacturing and Klandestine Research. No further information was available regarding past tenants use of the property. The second floor over the warehouse reportedly contains office space which is currently being used as residential space. The second floor is approximately 3,600 square feet in size. The second floor area was not available for access during the site visit.

The portion of the building located to the south has been occupied by Aerolloy, a machine shop. Aerolloy had been in the business of manufacturing shafts and pulleys. The southern part of the building is approximately 20,000 square feet in size and has reportedly been a machine shop since 1939. The southern side of the building was no longer being used at the time of the site visit. Aerolloy was in the process of removing their equipment at this time. Piles of brick were lying on the southern side of the production floor as a result of the removal of brick pads that had been used to support machines on the production floor. Chain hoist systems were located at work stations throughout the Aerolloy facility. Metal racks containing stock metal were located on the east side of the production floor.

The floors at the Aerolloy facility contained trenches and pits. Subsurface trenches in the concrete floor were used by Aerolloy for electrical wiring. Large metal panels covered these trenches, making them unavailable for full examination. Metal shavings were observed in these trenches. Metal shavings were also observed in small rectangular pits in the concrete floor.

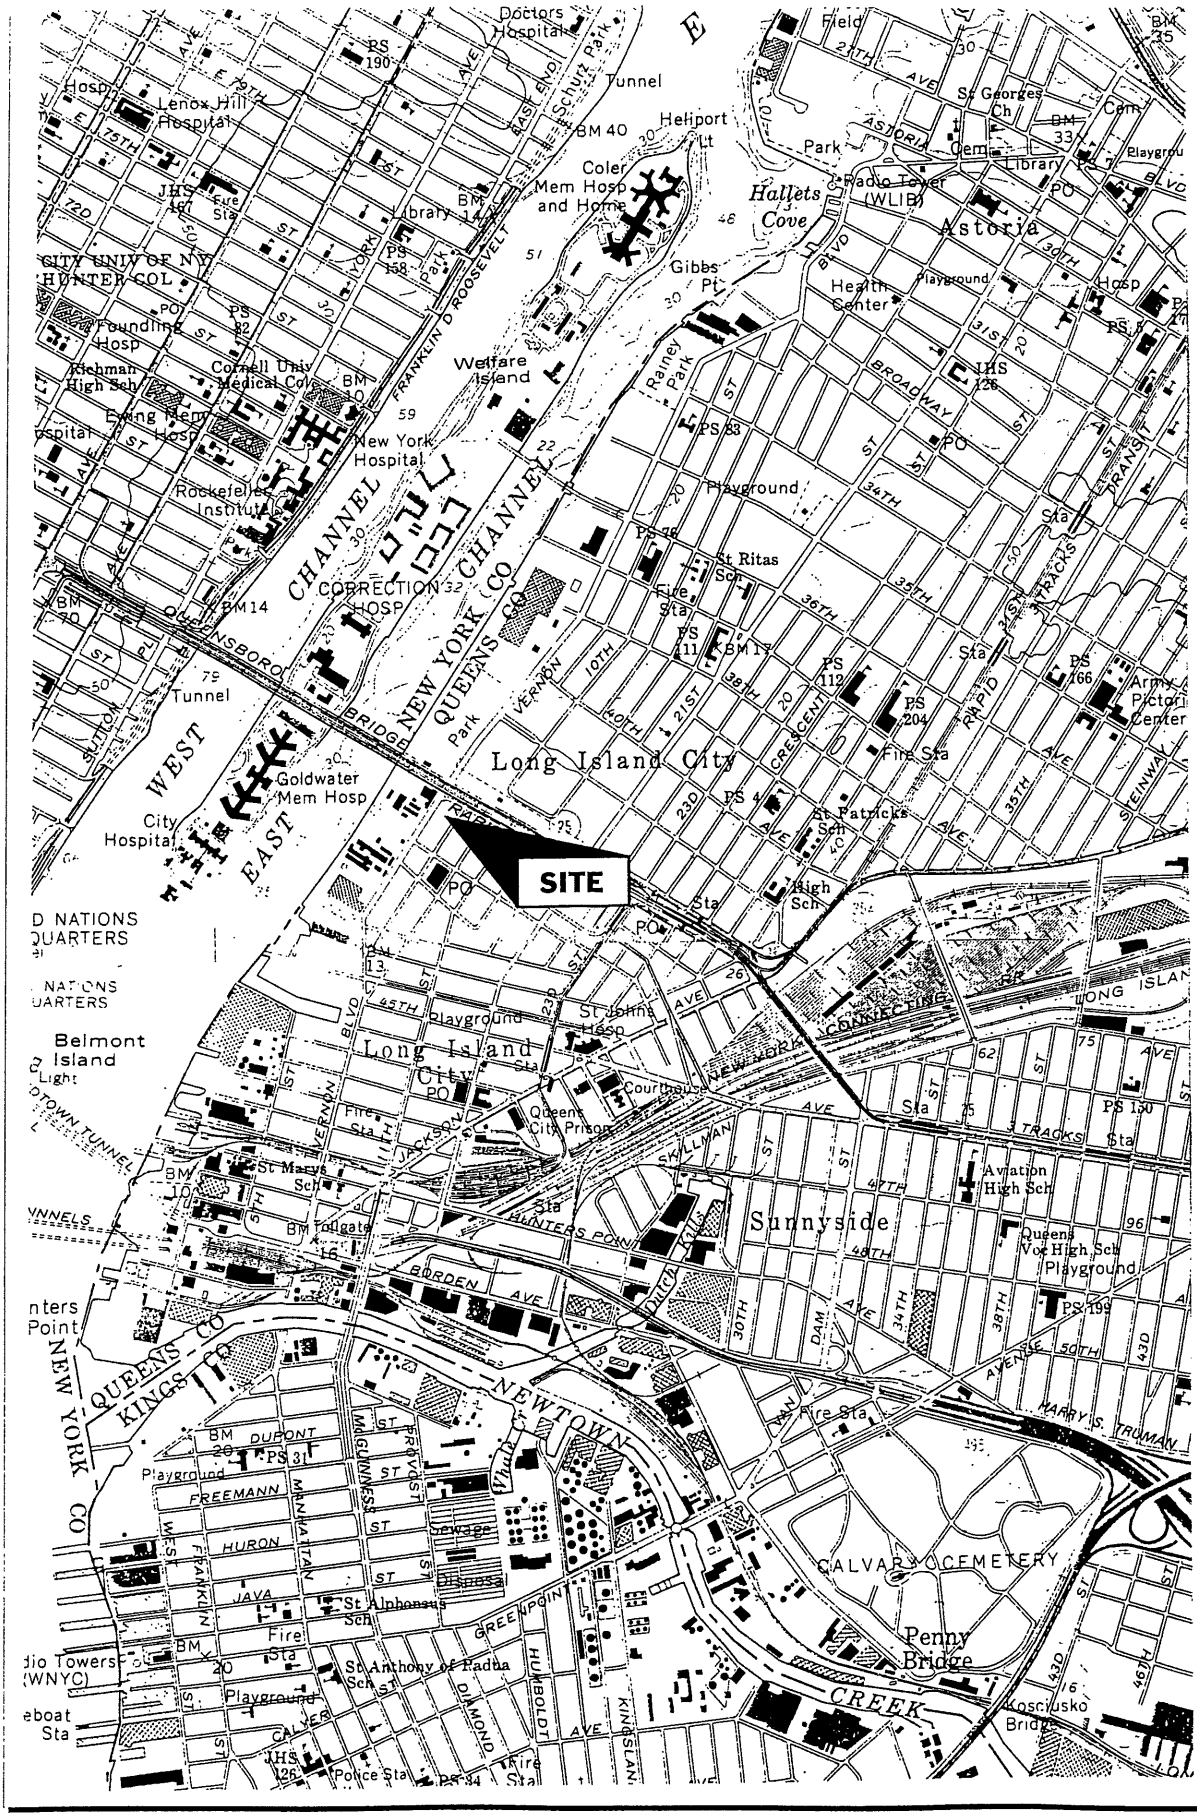

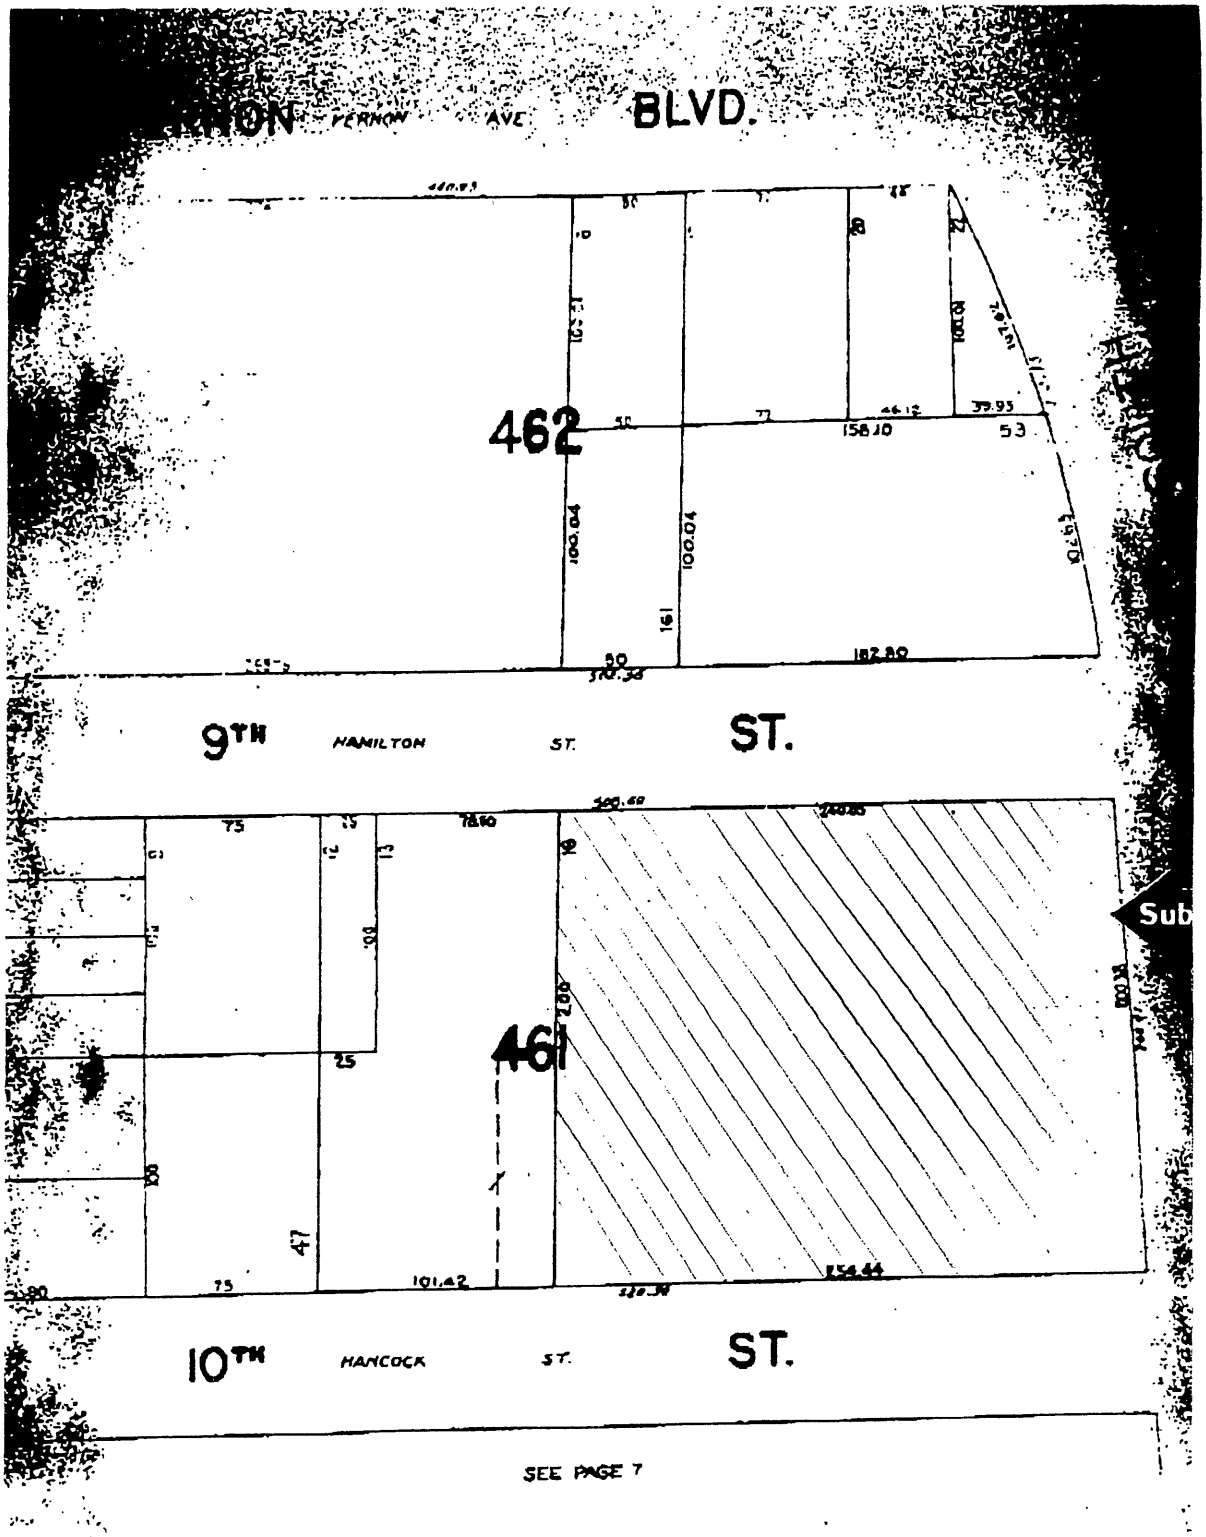

FIGURE 1 - SITE LOCATION MAP

Site is denoted by:

FIGURE 2 - TAX MAP

The floor in the building was stained and had wet spots on it that appeared to be a substance other than water. Oil and absorbent material was observed on the floor next to machines.

Chemical containers were observed scattered throughout the Aerolloy production floor. Sixteen drums were observed in storage on pallets against the north wall. Two of the drums were labeled spindle oil, two were labeled hydraulic oil, one was labeled motor oil, two were labeled kerosene, eight appeared to be cutting oil, one drum was labeled waste. A four pump dispensing station for chemicals was also observed. There were no labels on this piece of equipment. Oily material was observed in small containers on the floor by the trenches. Three 5-gallon flammable materials containers were observed on the floor. These containers were unlabeled. A small carbon dioxide cylinder was also observed on the floor. Trash was observed in cans and piles throughout the factory floor space. A gallon container of turpentine was observed on a workbench. Two small propane tanks were located by the 9th Street door.

The south portion of the building contained office space in the southwest corner. The floor tiles in the office space were observed to be in poor condition. The floor tiles cover a hardwood subfloor. Old light ballasts were observed in the office space and in the other parts of the building. A mezzanine is located above the office space in the south portion of the building. A chain hoist is located above the stairs to the mezzanine. A tank used for compressor cooling water is located in the mezzanine.

There are several routes of egress from the Aerolloy facility. Two roll up doors exit from the Aerolloy facility to 10th street. One roll up door exits to 9th Street. A steel door also exits to 9th Street. Two sliding doors exit the south side of the building into the forge. A vent duct was observed that exited a window on 10th Street, although the equipment that was formerly vented could not be determined. Two doors enter from the factory/warehouse building from the forge yard on 9th Street. Peeling green paint was observed on these doors. Exterior paint on the factory/warehouse building was in poor condition in the 9th Street yard area. Windows are located on the walls on either side of the building.

The basement of the building is entered from a stairwell in the 9th Street yard. A concrete encased storage tank is located in the basement that was formerly used to store fuel oil. A large boiler is located in the basement. The boiler formerly heated the entire building. The boiler was abandoned in 1991. Oil fired hot water heaters are located in the basement. The boiler was covered with white masonry material. A smaller above ground tank that was not connected to any lines was also located in the basement. Peeling paint was also observed in the basement.

The second building on the property is a steel framed building that was previously used as a forge building. The forge building is approximated 7000 square feet in size with yards located on either side of the building. The forge building is constructed of masonry encased steel framing supported by a concrete ring wall foundation. The exterior closure walls are structural brick. The floor in the forge is dirt. The roof is a sloped steel truss framework covered with transite (asbestos cement) panels. Yards are located east and west of the forge building that are surrounded by walls. The walls are approximately 8 feet high.

The yard on 9th Street is approximately 4500 square feet in area. The yards are surrounded by brick walls with steel gates. Discolored soil was observed in the forge yard off 9th Street. A drum was located in the corner by the forge next to the neighboring property. The soil around this drum was stained.

The yard on 10th Street is approximately 1500 square feet in area. The 10th Street yard next to the forge contains a cooling tower used by Aerolloy. Black staining from an old equipment vent could be observed on the south side of the factory building on the 10th Street side.

Remnants of the forge building's past operation were observed. Rusty metal flakes could be seen on the soil surface in the areas around the forge building. Two chain hoists were located in the forge building, two chain hoists were located in the 9th Street yard and one more was located in the yard on 10th Street. Soil in the forge building appeared disturbed by the moving process. A roll off for clean up was located inside the forge building. The remains of an old stanchion that has been removed were located in the 9th street yard.

The Gallant & Wein warehouse facility is located on the north end of the warehouse/factory building. The warehouse operation has a pit style, drive-in, truck ramp with a pump hole in one corner. Wrapped pipe is located across the ceiling of the warehouse. The warehouse is heated by gas heaters suspended near the ceiling. Peeling paint was observed in the warehouse area. A roll up door with a ramp down into the main floor is located on the 10th Street side of the warehouse. An entrance door that leads to the offices at Gallant & Wein is located on the Queens Plaza side of the building. Broken floor tiles were observed in this entrance. Acoustic ceiling tiles were located in the Gallant & Wein office space. A machine shop was located on this side of the building in 1947. Historic Cole's Directories indicate that a can manufacturer and a company known as Klandestine Research were located in this side of the building in 1981.

2.1.2 Adjacent and Nearby Properties

The neighboring properties include the a New York City Transit System building under the Queensboro Bridge to the north across Queens Plaza, a limousine company to the east across 10th Street, a clothing manufacturer and the office of Henrick Lane, Inc., an engineering firm, across 9th Street to the west. A three-story building with a sign on it that reads New York & Queens Electric Light and Power Co. Substation No. 4 is located on the site south of the subject property. The southern neighbor appears to be a manufacturing building at this time. Particulate cyclone collectors were observed in the yard at this building on 10th Street. The area zoning for the subject property is M1-4 , light manufacturing.

2.2 Site Inspection

2.2.1 Water Supply and Wastewater Disposal

Water is supplied to the building by the New York City municipal water system. Sanitary wastewater is discharged to the municipal sewer system. There are no reports of any on-site wells or wastewater disposal systems.

2.2.2 Hazardous Substance and or Petroleum Product Use

Petroleum products related to the operation of the Aerolloy machine shop were observed in drums. Smaller containers and a chemical dispensing station were observed around the production floor. Unlabeled and damaged drums were also observed on the ground near the forge building. Mr. Tony Arlis of Aerolloy indicated that kerosene was used for tool cleaning.

2.3 Site History

2.3.1 Interviews

A telephone interview was conducted on June 4, 1997 with Mr. Tony Arlis of Aerolloy. Mr. Arlis knowledge of the subject property goes back to the mid to late 1970s. Mr. Arlis indicated that the Aerolloy company had descended from the original building owners' company, R. Steel & Sons. He reported that, historically, the other side of the building was also occupied by a machine shop.

According to Mr. Arlis, all metals processed were carbon steels. These materials were either machined or heated and formed in the forge building. Mr. Arlis indicated the only liquid chemicals used in Aerolloy's processes were oils and kerosene. The oils were disposed of by the oil vendors who supplied the virgin oils to the facility. Kerosene was used for cleaning tools. Reportedly, the kerosene evaporated after use and did not need to be disposed of. Mr. Arlis reported that no hazardous waste was generated by Aerolloy. Mr. Arlis indicated solid waste was removed by Carraros, a private carter.

Mr. Arlis was questioned about the presence of underground storage tanks at the property. He reported that two underground storage tanks are located in the 9th Street yard. Mr. Arlis indicated that these tanks were emptied and abandoned in place in the late 1970s when the facility was switched to gas heat. He indicated that theses tanks were to be removed in June, 1997.

Mr. Arlis reported that an asbestos survey had been conducted at the property and that an asbestos abatement was planned prior to the removal of the old boiler from the basement. Mr. Arlis reported that the boiler is the only friable asbestos material on site.

When questioned about the stained soil and drums located in the 9th Street yard, Mr. Arlis indicated that a soil survey had been completed on site and that a soil removal was planned.

2.3.2 Sanborn Fire Insurance Maps

Past use of the subject property was ascertained through the review of available Sanborn Survey Maps. Sanborn Survey Maps (see Appendix A) for the area of the subject site were available for the years 1898, 1915, 1936, 1947,1950, 1980, 1991, 1992, 1993, 1994, 1995, and 1996.

1898 - The area the subject property is located in is undeveloped at this time.

1915 - The New York & Queens Electric Light & Power Company substation is located on the property next to the subject property. The Queensborough Bridge is present at this time. The subject property and other neighboring properties are undeveloped at this time.

1936 - The subject property is undeveloped at this time. The surrounding area is becoming more developed.

1947 - The subject property is labeled as being occupied by two machine shops. The forge building is located on the property at this time. The main building is labeled as a

fireproof, steel frame building with concrete floors. The map indicates the building was constructed in 1939. The forge shop is labeled as having a corrugated asbestos roof with steel trusses. The main building is listed as having the mezzanine and walled second floor at this time. The surrounding area is being developed at this time. The former substation is labeled as being Lithalogs Mfg. Co. (Chemicals) at this time.

1950 - The subject property is the same on the 1950 map. The surrounding area is the same. The former substation is now Dole Laboratories, Inc. Mfg., Chemists.

1980 - The subject property is the same on the 1950 map but the north half of the building is no longer labeled regarding the occupant.

1991 - 1996 - The subject property and surrounding area is the same.

2.3.3 Historic Directory Search

A search of historic Cole Directories revealed the following business listings for the subject property.

1996 - G&W Wire &Cable Co. at 42-11
Gallant & Wein & Spls at 42-11
Aerolloy Inc. at 42-21

1990 - G&W Wire &Cable Co. at 42-11
M Wein Elec. Sup. at 42-11
Gallant & Wein & Spls at 42-11
Aerolloy Inc. at 42-21

1986 - G&W Wire &Cable Co. at 42-11
M Wein Elec. Sup. at 42-11
Gallant & Wein & Spls at 42-11
Aerolloy Inc. at 42-21

1981 - Bedford Can Mfg. at 42-11
Klandestine Rsrch.at 42-11
NY Restrnt Supl. at 42-11
R. Steel & Sons at 42-21

1976 - R. Steel & Sons at 42-21

2.3.4 Previous Environmental Investigations or Reports

Mr. Arlis provided EPM with a copy of the analytical results from the soil survey. These results consisted of two samples taken April 15, 1997 from unidentified locations at a depth of thirty inches. The samples were analyzed for base neutral extractables by method 8270. The results of these samples were no detectable level for all compounds except phenanthrene at 8500ug/Kg.

Mr. Arlis had indicated that an asbestos survey had been performed in the past. Although he verbally indicated that the thermal system insulation was found to be asbestos containing, a copy of the survey report was not made available to EPM.

2.4 Characteristics of the Site Area

2.4.1 Geology and Hydrogeology of Queens County

The Geology of Queens County, as that of Long Island, is comprised of unconsolidated sediments deposited upon southeasterly dipping consolidated bedrock. The bedrock is crystalline and of Precambrian age. The overlying sediments range from Upper Cretaceous to Pleistocene age. The bedrock is exposed in northern Queens County and dips gently to the southeast to a depth of 2,000 feet below grade on eastern Long Island. The overlying Upper Cretaceous sediments generally follow the dip of the bedrock, and the Pleistocene is lain horizontally.

The oldest deposits, the Upper Cretaceous, lie directly above the bedrock. The Upper Cretaceous deposits are made up of the Raritan Formation and Magothy-Matawan Group. The Raritan Formation is broken down into the Lloyd Sand Member and the Raritan Clay. The Lloyd Sand Member is comprised of medium to coarse sand and fine to medium gravel with some clay in areas. The Raritan Clay is described as a silty clay. Above the Raritan Formation is the Magothy-Matawan Group Undifferentiated. This group is a fine clayey sand.

Lying above the Upper Cretaceous deposits are the younger Pleistocene deposits made up of the Jameco gravel, Gardiners Clay and Glacial outwash of the Upper Pleistocene. The Jameco Gravel is coarse sand and gravel. The Gardiners Clay is a thin bed clay and silt. The Upper Pleistocene deposits is glacial till and outwash from the last two glacial advances. The glacial till forms the Harbor Hill and Ronkonkoma terminal moraines and is made up of unsorted sand, clay, gravel and boulders. The outwash deposits are products of erosion of the moraine and are made up of coarse sand and gravel.

2.4.2 Site Specific Geology and Hydrogeology

The Murray Hill section of Flushing marks the border of wide spread glacial outwash and moraine deposits of Upper Pleistocene age that characterize the near-surface geology of Queens County and Long Island. These deposits consist of fine to course sand and well rounded fine to medium gravel which is light brown to clear in color. The elevation of the subject property is approximately 30 feet above mean sea level.

Based upon USGS ground water contour maps reviewed, groundwater is anticipated to be approximately 30 feet below grade. Ground water flow is anticipated to be towards the East River, west of the subject property.

2.4.3 Proximity to Ecologically Sensitive Areas

The site is not situated in close proximity to any known ecologically sensitive areas. According to flood insurance maps reviewed, the site is not situated within the 100 or 500 year flood plains. Areas within the 100 year flood plain are located west of the subject property, along the banks of the East River.

2.4.4 Radon

The New York State Department of Health provides data on average basement radon readings for individual townships and counties. The survey indicates the average reading (in picocuries

per liter, pCi/l) for Queens County is 1.2 pCi/l. This level is below the recommended action limit of 4.0 pCi/l. Although the survey data can not be extrapolated to a specific locality or parcel of land, the site is not situated within a high risk radon zone, and therefore, radon testing is not deemed necessary.

Section 3

3.0 REGULATORY INFORMATION REVIEW

3.1 Freedom of Information Act Response Summary

During this environmental investigation, the New York State Department of Environmental Conservation (NYSDEC), New York City Department of Environmental Protection (NYCDEP), and New York City Fire Department (NYCFD) were contacted and/or files and official documents were reviewed.

These agencies have not responded to the Freedom of Information Requests filed for the subject property as of the issuance date of this report. Upon receipt of responses from the above agencies, addendum letters to this report will be issued should it be deemed necessary.

3.2 Regulatory Database Review

The following information was obtained from an analysis report prepared by Toxics Targeting, Inc. (see Appendix C). The information was reviewed by Environmental Planning & Management, and in some cases, abbreviated and/or summarized.

An assessment of the potential for these sites to adversely impact the subject property was prepared by Environmental Planning & Management utilizing the following criteria:

- The location of the subject property with respect to the spill source, keeping in mind anticipated groundwater flow patterns, as determined from review of USGS groundwater contour maps;
- The resource impacted (i.e. land or groundwater);
- The type of materials spilled (i.e. solvent or #6 fuel oil), and the potential for the material to migrate towards the subject property, based upon the relative distance of the spill source from the subject property.

National Priority List

There are no sites included on the National Priority List located within a one-mile radius of the subject property.

Comprehensive Environmental Response, Compensation, and Liability System

There are no sites included on the CERCLIS List located within a one-mile radius of the subject property.

NYSDEC List of Inactive Hazardous Waste Sites

One New York State Inactive Hazardous Waste Disposal Sites is located within a one-mile radius of the subject property.

The Amtrak Sunnyside Yard is located at 39-29 Honeywell Street, Sunnyside. The Amtrak maintenance yard is a 100 acre site that has been used as a railroad facility since before 1910. As a result of transformer maintenance and malfunctions, PCB oil has contaminated soils on

the site. A preliminary subsurface investigation was completed in 1986. The investigation confirmed PCB soil contamination and a plume of separate-phase petroleum. The Feasibility Study is in progress. Amtrak has also installed a sump system as an Interim Remedial Measure(IRM) to collect contaminated oil. The Amtrak site is located 3832 feet south-southeast of the subject property. Due to the distance from the subject property, the Amtrak site is not anticipated to impact the subject property.

Hazardous Substance Waste Disposal Sites

There are no hazardous substance waste disposal sites located within a one-mile radius of the subject property.

Solid Waste Facilities

Five Solid Waste Facilities were identified within one mile of the subject property. Impact Haulage Corp. and Swift sanitation SVC T.S. are located 1383 feet to the south-southeast of the subject property. The Con Ed Ravenswood Sta. is located 2137 feet to the north-northeast of the subject property. Patano Demo T. S. is located 2348 feet to the northeast of the subject property. Evans Container T.S. #3 is located 2375 feet to the east-southeast of the subject property. All of these companies are large transfer stations that process greater than 50,000 cubic yards per year.

Oil Storage Facilities Larger than 400,000 Gallons

Four major oil storage facilities are located 1 mile of the subject property. The Royal Petroleum Corp. located at 42-20 Vernon Blvd. is 505 feet west-southwest of the subject property. The Ravenwood Tank Generating Station Tank Farm located at 38-54 Vernon Boulevard is listed twice at 1762 feet north of the subject property and 2125 feet north-northeast of the subject property. Ditmas Oil-Long Island City located at 53-02 11th Street is located 5061 feet to the south of the subject property.

Federal RCRA TSD Facilities

One TSD facilities were identified within one mile of the subject property. Kosan Industrial Corp., located at 5-49 49th Avenue, is 4158 feet south-southwest of the subject property. No TSD hazardous waste activty was reported to New York State from Jnauary, 1989 to June 1996 at this site.

Identified Hazardous Material Spills

There are 189 documented hazardous material spills within a ½ -mile radius of the subject property on the NYSDEC Hazardous Material Spills database. None of the listed spills occurred at the subject property.

Seventy-seven of the hazardous material spills listed within a ½ -mile radius of the subject property have status of "Active" on the NYSDEC hazardous material spills database. Nine active spills have occurred within 1,000 foot radius of the subject property. These spills are listed in Table I.

TABLE I - Active Hazardous Material Spills Within 1,000 Feet							
Location	**Spill Number**	**Date**	**Cause**	**Material**	**Qty**	**Dist.(f) Dir.**	**Res. Affected**
4230 11th Street	9509473	10/31/95	Tank Failure	#2 Fuel Oil	Unk	50/SE	Land
4220 Vernon Blvd	9309139	10/19/93	Tank Failure	Gasoline	Unk	501/WSW	Land
10th St/43rd Ave	9304630	7/12/93	Tank Test Failure	#2 Fuel Oil	Unk	583/S	Land
59th St. Bridge	9409823	10/22/94	Unknown	Dielectric Fluid Unk. Petroleum	Unk Unk	553/NW	SW
Lower Roadway Column 39	9508618	10/13/95	Equipment Failure	Transformer Oil	Unk	552/NW	SW
59th St. Bridge	9504881	7/21/95	Equipment Failure	Dielectric Fluid Non PCB Oil	Unk Unk	552/NW	SW
59th St. Bridge	9409825	10/22/94	Equipment Failure	Diesel	Unk	553/NW	SW
59th St. Bridge	9404647	7/5/94	Equipment Failure	Non PCB Oil	3	553/NW	Land
Bet. Vernon Blvd / Queensboro Bridge	9307497	9/21/93	Equipment Failure	Non PCB Oil	600	553/NW	Land

The spill number assigned to 4220 Vernon Boulevard, 501 feet west -southwest of the subject property is the result of the NYSDEC examining contamination from an historic petroleum bulk storage facility located along the East River. Due to its close proximity to the river, groundwater from this site is anticipated to flow west toward the river. The Vernon Boulevard site is; therefore, not anticipated to result in adverse impacts or pose an environmental concern to the subject property, if groundwater contamination is found. The other spills listed in Table I which impact land or surface water are not likely to have the potential to result in any adverse impacts to the subject property and do not pose reasonable environmental concern for the subject property.

Registered Petroleum Bulk Storage Facilities (<400,000 Gallons)

A search of the NYSDEC database of registered petroleum bulk storage tanks indicated that there are fourteen registered petroleum storage facilities within 1/4th mile radius of the subject property. Aerolloy Inc., located at the subject property, had 3 registered underground storage tanks that were vaulted with access. Two of the tanks were closed in place. The third tank is listed as closed before 4/1/91. All of the tanks contained #1, #2 or #4 fuel oil. Tank number 001 and 002 are 3000 gallons in size. Tank number 003 is 4000 gallons in size. In accordance with ASTM standards, the adjoining properties were examined for petroleum storage tanks. None of the properties which abut the subject property, are listed as having registered petroleum bulk storage tanks.

Federal and State RCRA Hazardous Waste Generators

Twenty RCRA hazardous waste generators were identified within a 1/4-mile radius of the subject property. The subject property is not listed in the database as being the location of any hazardous waste generators.

Chemical Storage Facilities

One chemical storage facility was identified within a 1/4-mile radius of the subject property. Agate Lacquer Mfg. Co. Inc. located at 11-13 43rd Road had underground storage tanks for toluene and xylene which were closed in place in 1993.

Toxic Air, Land and Water Releases

No releases were reported within a 1/4-mile radius of the subject property pursuant to Section 313 of the Emergency Planning and Community Right-To-Know Act.

Historic New York City Utility Sites (1890's to 1940's)

The neighboring New York and Queens Electric Light and Power Substation south of the property was identified by the database search. This facility was historically at this location since 1910.

Wastewater Discharges

No facilities with permit compliance system toxic wastewater discharges were identified within an 1/4-mile radius of the subject property.

Air Discharge Facilities

Thirteen air discharge facilities were identified within a 1/4-mile radius of the subject property.

USEPA Civil Enforcement Docket

No USEPA Civil Enforcement Docket facilities were identified within an 1/8-mile radius of the subject property.

Emergency Response Notification System

The subject property does not appear on the federal ERNS list.

Section 4

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon known operations at the subject property, Sanborn Insurance Maps, review of the published records of the regulatory agencies, and the field site investigation, the following areas environmental concern were identified at the subject property.

Underground Storage Tanks

No information was available at the time of this report regarding the underground storage tanks that have been closed in place other than the regulatory agency data base. The owner of Aerolloy indicated that these tanks located in the yard will be removed in June, 1997. There is no available documentation (i.e. tightness test results) attesting to the integrity of the tanks. In an effort to establish whether these tanks have adversely impacted site soils and/or groundwater, it is recommended that either a subsurface investigation be conducted by the installation of several soil borings in the area surrounding the tanks, or the collection of post-excavation sampling following the tank removal. The samples should be analyzed by the Toxicity Characteristic Leaching Procedure (TCLP) for volatile organic compounds and polyaromatic hydrocarbons.

Aboveground Storage Tank

Since this tank is currently not in use and the facility heating system has been converted to natural gas, the tank should be decommissioned in accordance with the New York State Petroleum Bulk Storage Regulations. The tank must be emptied of all product, rendered free of all vapors, the fill port must be rendered unusable and the date of closure must be stenciled on the tank, or the tank may be removed off-site for disposal. A substantial modification notification must be filed with the New York State Department of Environmental Conservation.

Surficial Staining and Past Activities

Surficial staining and damaged drums were observed in the yard at the subject property. Historic Sanborn maps indicate that a chemical manufacturing plant was located at the abutting property to the south of the subject property. No further information was available regarding the activities that took place in this abutting factory. The subject property has a 58 year history of being used as a machine shop and a forge. Although waste disposal practices involved recycling of oils used at the facility in the past twenty years, prior methods fo disposal could not be determined. EPM recommends that several soil borings be conducted throughout the shop and forge area. Soil samples should be collected and analyzed for TCLP metals, VOCs and PAHs to determine if contamination is present from historical site use at the subject property or the neighboring property.

Asbestos

A summary of the asbestos containing materials is presented below:

Location	Material	% Asbestos	Quantity	Condition
Aerolloy	Boiler Insulation	10%	150 SF	Fair w/ damage
	Pipe Insulation	Reported by owner	100 LF	Fair w/ damage
	Transite Roof Panels	Previously documented	7,000 SF	NA

The boiler and pipe insulation in the basement of Aerolloy should be abated by removal; If the transite asbestos roof panels are to be disturbed by any future renovation, they must be abated by removal prior to construction activities. The floor tiles and mastic at Aerolloy should be analyzed by the TEM method. Should asbestos be detected, they must be abated by removal. All abatement must be conducted in accordance with all applicable federal, state and local rules and regulations.

Section 5

5.0 LIMITATIONS

The purpose of this environmental assessment was to provide environmental information necessary to make prudent property financial action decisions. The work reported was done in accordance with professional standards applicable to the industry today. The results of this audit and the contents of this report are subject to revision based on future events and/or investigations.

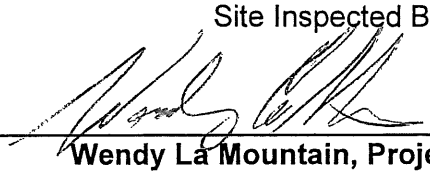

Environmental Planning & Management, Inc. assumes no responsibility for the property owner's actions related to the following:

- Violation of any federal, state or local statute or ordinance relating to identification or disposal of hazardous substance or its constituents;
- Undertaking of, or arrangement for the handling, removal, treatment, storage, transportation, or disposal of hazardous substances or constituents found or identified, and;
- Changed conditions or hazardous substances or constituents introduced at the properties by Client or third persons to this contract during or after the completion of services provided by this report.

ANALYST: George Kouvaras

LAB DIRECTOR: George Kouvaras

- Analysis of samples is performed by Polarized Light Microscopy (PLM) - Point Counting Method (EPA 600/M4-82-020)
- Analytical equipments: Stereobinocular microscope (MEIJI EMT-Serial # 25930), Polarized Light Microscope (MEIJI ML-POL-Serial # 88034)
- PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing
- Collection procedures, protocols and sample locations are based on information provided by the client submitting the samples; and as such, KAM Consultants disclaims any knowledge of and liability for the accuracy and completeness of this information
- Samples will be stored for ninety (90) days and then returned to the client upon request

APPENDIX C
Historic Directory Search

OVERVIEW OF
THE ERIIS CITY DIRECTORY SEARCH

City Directories have been published for many cities and towns across the United States since the 18th Century. Originally a list of town residents, the City Directory became a tool for locating individuals and businesses in a particular urban or suburban area. For each address within an area, City Directories list the name of each resident or, if a business operates from that address, the name and type of business. This historic overview of occupants of a given property is a valuable tool for companies involved in assessing the historic prior use of any residential or commercial property.

While the geographic coverage of City Directories is comprehensive for most major cities, many rural areas and small towns may not be covered. ASTM E1527-94 specifies that a "review of City Directories at less than approximately five year intervals is not required by this practice." (ASTM E1527-94, Section 7.3.2.1, page 11.) In accordance with the above ASTM guidelines, the ERIIS City Directories Search provides information for the area of interest at five year intervals.

ERIIS City Directory Searches include the subject property address and the addresses of surrounding properties. In rural areas, these adjacent properties may be undeveloped. In such cases, where no address has been assigned to the adjacent properties, only the subject property address will be searched. In all ERIIS City Directory Searches, the subject property will be highlighted for easy reference through the years of research.

The ERIIS City Directory Search includes the following:

- Title page (identifying the subject property searched)
- Overview of the ERIIS City Directory Search
- Copies of City Directory pages for your subject property and adjacent properties

The ERIIS City Directory Search reviews the following resources:

- Polk City Directory
- Cole City Directory
- Haines Criss Cross Directory
- Bressers City Directory
- Wrights City Directory
- Luedders City Directory
- Johnson City Directory
- Prince & Lee City Directory
- Fritzgeralds City Directory
- Robinsons City Directory
- Various County Specific Directories

APPENDIX D
Toxics Targeting Report

4211–4221 9th St

Queens, NY 11101

May 27, 1997

Table of Contents

Introduction 1

- *The Three Sections of Your Report*
- *How to Use Your Report*
- *Toxic Site Databases Analyzed In Your Report*
- *Limitations Of the Information In Your Report*

Section One: Your Report Summary 5

- *Table One:* *Number of Identified Toxic Sites By Distance Interval*
- *Table Two:* *Identified Toxic Sites Ranked by Proximity*
- *Table Three:* *Identified Toxic Sites By Category*
- *Map One:* *One-Mile Radius Analysis*
- *Map Two:* *Half-Mile Radius Analysis*
- *Map Three:* *Quarter-Mile Radius Analysis*
- *Map Four:* *Quarter-Mile Petroleum Bulk Storage Site Analysis*
- *Map Five:* *Quarter-Mile Radius Close-up Analysis*

Section Two: Toxic Site Profiles

Section Three: Appendices

- *USEPA ERNS Check*
- *Unmappable Sites*
- *Hazardous Waste Codes*
- *How Toxic Sites Are Mapped*
- *Information Source Guide*

© Toxics Targeting, Inc. 1997

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Computerized Environmental Report.* It checks for the presence of 17 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.

2. ***Estimates*** the distance and direction between the target address and each identified toxic site.

3. ***Reports*** air and water permit non-compliance and other regulatory violations.

4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.

5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** proximity to the target address and **c)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. Finally, a close-up map illustrates the locations of all identified toxic sites, except Petroleum Bulk Storage sites, at the shortest radius search distance used in your report.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information, some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.

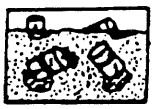

- Check Table Two to see identified sites ranked by proximity to the target address.

- Check Table Three to see identified sites sorted by site categories.

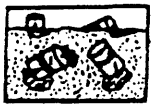

- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

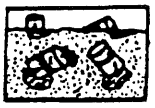

Search Radius

One-Mile 

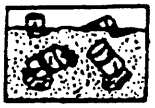

1) ***New York Inactive Hazardous Waste Disposal Site Registry:*** a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile 

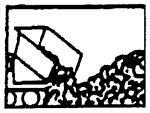

2) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile 

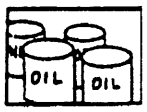

3) ***National Priority List for Federal Superfund Cleanup:*** a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

One-Mile 

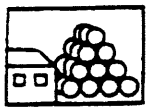

4) ***New York Hazardous Substance Disposal Site Draft Study:*** a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites are not eligible for state clean up funding programs.

One-Mile 

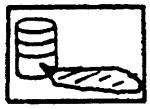

5) ***New York Solid Waste Facilities Registry, including New York City 1934 Sites:*** active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

One-Mile 

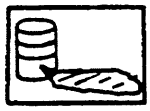

6) ***New York State Major Oil Storage Facilities:*** sites with more than a 400,000 gallon capacity for storing petroleum products.

One-Mile 

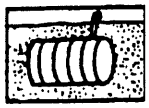

7) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System.

Half-Mile 

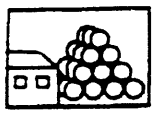

8) ***Toxic Spills: active*** (unremediated) stationary source spills reported to state environmental authorities, including unremediated leaking underground storage tanks.

Half-Mile 

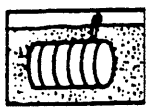

8) ***Toxic Spills: closed*** (remediated) stationary and non-stationary source spills reported to state authorities, including remediated leaking underground storage tanks.

Quarter-Mile 

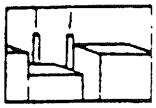

9) ***New York and Local Petroleum Bulk Storage Facilities:*** sites with more than an 1,100 gallon capacity for storing petroleum products.

Quarter-Mile 

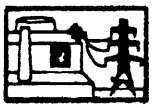

10) ***New York and Federal Hazardous Waste Generators and Transporters:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System.

Quarter-Mile 

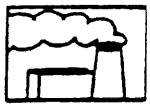

11) ***New York Chemical Bulk Storage Facilities:*** Sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Quarter-Mile 

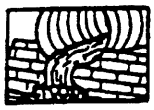

12) ***New York Toxic Release Inventory Facilities:*** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Quarter-Mile 

13) ***Historic New York City Utility Sites (1890's to 1940's):*** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Quarter-Mile 

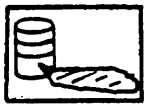

14) ***Air Discharges:*** Air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Quarter-Mile 

15) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Quarter-Mile 

16) ***Federal Civil Enforcement Docket:*** civil judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

Property only 

17) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Computerized Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The computerized map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;

- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 17 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;

- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.*

- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.

- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

Section One:

Report Summary

- *Table One:* *Number of Identified Toxic Sites By Distance Interval*
- *Table Two:* *Identified Toxic Sites Ranked By Proximity*
- *Table Three:* *Identified Toxic Sites By Category*
- *Map One:* *One-Mile Radius Analysis*
- *Map Two:* *Half-Mile Radius Analysis*
- *Map Three:* *Quarter-Mile Radius Analysis*
- *Map Four:* *Quarter-Mile Petroleum Bulk Storage Radius Analysis*
- *Map Five:* *Quarter-Mile Radius Close up Analysis*

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code (This information does not appear in the headings for Inactive Hazardous Waste Disposal Sites).
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers;
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites (A complete description of the codes follows the profiles section).

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity**: Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity**: The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity**: The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive toxicity**: May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced)

IRRIT TOX: **Primary Irritant**: The chemical can cause eye or skin irritation

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications: 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;

2 -- Significant threat to the public health or environment -- action required;

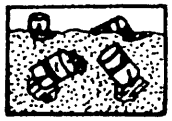

3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;

4 -- Site properly closed --requires continued management;

5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;

2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law.

D1, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed)

**** NPL/CERCLIS/INACTIVE HAZARDOUS WASTE DISPOSAL SITES IDENTIFIED WITHIN 1 MILE SEARCH RADIUS ****

OPERATOR(S) DURING USE:
NAME.....: Amtrak Sunnyside Yard
ADDRESS..: 39-29 Honeywell St., Long Island City, NY 11101
CONTACT..: Joseph P. Devito

PERIOD ASSOCIATED WITH HAZARDOUS WASTE: from 1910 to Present

SITE DESCRIPTION:
The Amtrak maintenance yard is a 100 acre site located in the Sunnyside section of Queens. The property is bound on the north by Northern Boulevard and on the south by Skillman Avenue, between Thomson Avenue and 43rd Street. This location was originally a wetlands area, but was filled in sometime prior to 1910, when it was occupied by the Pennsylvania Railroad. The facility has been used as a maintenance facility for railroad passenger equipment since the early part of the century by the Pennsylvania Tunnel and Terminal Railroad Company, a subsidary of the Pennsylvania Railroad and its corporate successor, the Penn Central Transportation Company. Amtrak acquired the ownership of the property in 1976. As a result of transformer maintenance and malfunctions, PCB oil has contaminated soils surrounding the engine house, and other areas of the site. A preliminary subsurface investigation was completed in 1986 and confirmed PCB soil contamination and a plume of separate-phase petroluem. A Consent Order (CO) was executed and a Remedial Investigation was completed, and is in review. The Feasibility Study is in progress. Amtrak has also installed a sump system as an Interim Remedial Measure (IRM) to collect contaminated oil.

HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY (units)
PCB-contaminated oil	approx. 200,000 gallons

ANALYTICAL DATA AVAILABLE:	Air-	Surface Water-	Groundwater-X	Soil-X	Sediment-
CONTRAVENTION OF STANDARDS:	Groundwater-X	Drinking Water-	Surface Water-	Air-	
LEGAL ACTION:	Type: Consent Order RI-FS		State-X	Federal-	
STATUS:	Negotiation in Progress-		Order Signed-X		
REMEDIAL ACTION:	Proposed-	Under Design-	In Progress-X	Completed-	
NATURE OF ACTION:	IRM-oil collection and RI-FS				
GEOTECHNICAL INFORMATION:					
SOIL TYPE:	Fill				
GROUNDWATER DEPTH:	3 feet				

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Soil and groundwater contamination by PCBs has been confirmed.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B005 PCB Articles containing 500 ppm or greater of PCBs, excluding small capacitors.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.

D005 Barium

D006 Cadmium

D007 Chromium

D008 Lead

D009 Mercury

F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1–trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1–trichloroethane, chlorobenzene, 1,1,2–trichloro–1,2,2–trifluoroethane, ortho–dichlorobenzene, trichlorofluoromethane, and 1,1,2–trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non–halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n–butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non–halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non–halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F005 The following spent non–halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2–ethoxyethanol, and 2–nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non–halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc–

aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum. (T)

F027 Discarded unused formulations containing tri–, tetra–, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing Hexachlorophene sythesized from prepurified 2,4,5–trichlorophenol as the sole component.) (H)

U044 Chloroform

U044 Methane, trichloro–

U122 Formaldehyde

U240 Acetic acid, (2,4–dichlorophenoxy)–, salts & esters

U240 2,4–D, salts & esters

X726

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a computerized version of the U. S. Census map using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each *Toxic Site Profile,* along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a computerized version of the U. S. Census map. These site locations are identified "address-matched."

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/operators or governnent agencies. These site locations are identified "map coordinate." Map coordinates for Toxics Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect .

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Computerized Environmental Reports contain government and other information compiled on 17 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **Inactive Hazardous Waste Disposal Site Registry**: New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. ASTM required.* Fannie Mae required.**
Source: New York State Department of Environmental Conservation.[2]
Data updated through: 4/96. Data obtained by Toxics Targeting: 9/96.

2) **CERCLIS**: Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. NPL sites are also included in CERCLIS. ASTM required.* Fannie Mae required.**
Source: U. S. Environmental Protection Agency.[1]
Data updated through: 9/30/96. Data obtained by Toxics Targeting: 11/12/96.

3) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. ASTM required.* Fannie Mae required.**
Source: U. S. Environmental Protection Agency.[1]
Profile data updated through: 2/18/97. Data obtained by Toxics Targeting: 3/10/97.
Facility data updated through: 9/30/96. Data obtained by Toxics Targeting: 11/12/96.

4) **Hazardous Substance Waste Disposal Site Study:** NYS database of waste disposal sites that may pose threats to public health or the environment, but cannot be remediated using monies from the Hazardous Waste Remedial Fund.
Source: New York State Department of Environmental Conservation.[2]
Data update schedule: Final Report released 6/13/95. Data obtained by Toxics Targeting: 12/4/95.

5) **Solid Waste Facilities:** NYS database of solid waste facilities, including, but not limited to, landfills, incinerators, transfer stations, recycling centers. ASTM required.* Fannie Mae required.**
Source: New York State Department of Environmental Conservation.[2]
Data update schedule: Biannually, approximately every March and September
Data updated through: 9/30/95. Data obtained by Toxics Targeting: 11/95.

Also includes a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.
Source: City of New York Department of Sanitation (1984). The Waste Disposal Problem in New York City: A Proposal For Action.

6) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. Fannie Mae required.**
Source: New York State Department of Environmental Conservation.[2] Data update schedule: rolling basis.
Data updated through 2/6/97. Data obtained by Toxics Targeting: 2/8/97.

7) (a) **RCRA Hazardous Waste Treatment, Storage or Disposal Facilities Manifest Information:** New York State database of hazardous waste treatment, storage and disposal facilities regulated by the DEC's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law and the Resource Conservation and Recovery Act.
ASTM required.* Fannie Mae required.**
Source: New York State Department of Environmental Conservation.[2]
Manifest transactions data updated through: 6/30/96. Manifest transactions data obtained by Toxics Targeting: 11/96.
Facility data updated through: 12/31/95. Facility data obtained by Toxics Targeting: 6/3/96.

7 (b) **RCRA Hazardous Waste Treatment, Storage or Disposal Facilities Notifier Information:** U. S. Environmental Protection Agency database of hazardous waste treatment, storage and disposal facilities regulated pursuant to the Resource Conservation and Recovery Act. ASTM required.* Fannie Mae required.**
Source: U. S. Environmental Protection Agency[1]
Data update schedule: rolling basis. Data obtained by Toxics Targeting: 5/96.

7 (c) **RCRA Hazardous Waste Treatment, Storage or Disposal Facilities Violations Information:**
U. S. Environmental Protection Agency database of violations data compiled for hazardous waste treatment, storage and disposal facilities regulated pursuant to the Resource Conservation and Recovery Act.
Source: U. S. Environmental Protection Agency[1]
Data update schedule: rolling basis. Data updated through: 3/1/96. Data obtained by Toxics Targeting: 3/7/96..

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). The database includes *active* and *closed* spills reported between April 1, 1986 and January 9, 1997.
ASTM required.* Fannie Mae.** Leaking underground Storage Tanks, property only.
Source: NYS Department of Environmental Conservation.[2]
Data update schedule: quarterly. Data updated through: 1/9/97. Data obtained by Toxics Targeting: 2/8/97.

Active spills: paperwork not completed.
Closed spills: paperwork completed.
Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Petroleum Bulk Storage Facilities:** Local and State databases of aboveground and underground petroleum storage facilities with a combined storage capacity over 1,100 gallons. ASTM required.* Fannie Mae required.**

New York City (all 5 Boroughs), Westchester, Putnam, Dutchess, Ulster, and Orange Counties:
Source: NYS Department of Environmental Conservation.[2]
Update schedule: rolling basis, with summary compilations made available approximately every three months
Facility data updated through: 1/9/97. Facility data obtained by Toxics Targeting: 2/8/97.
Tank data updated through: 1/9/97. Tank data obtained by Toxics Targeting: 2/8/97.

Nassau County:
Heat producing products and other products with less than 1,000 gallons storage capacity:
Source: Nassau County Department of Health.[3] Data update schedule: rolling basis
Data updated through: 6/27/96. Data obtained by Toxics Targeting: 8/2/96.

Generally non-heat producing products with more than 1,000 gallons storage capacity:
Source: Nassau County Fire Marshall. [4] Data update schedule: rolling basis with annual update
Data updated through: 9/27/96. Data obtained by Toxics Targeting: 11/20/96.

Data updated through: 2/21/97. Data obtained by Toxics Targeting: 4/7/97.

10 (a) **RCRA Hazardous Waste Generators and Transporters:** New York State database of hazardous waste generators and transporters regulated by the New York State Department of Environmental Conservation's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law. ASTM required.* Fannie Mae required.**
Source: New York State Department of Environmental Conservation.[2]
Manifest transactions data updated through: 6/30/96. Manifest transactions data obtained by Toxics Targeting: 11/96.
Facility data updated through: 6/30/96. Facility data obtained by Toxics Targeting: 11/96.

10 (b) **RCRA Hazardous Waste Generators and Transporters Notifier Information:** U. S. Environmental Protection Agency database of hazardous waste treatment, storage and disposal facilities regulated pursuant to the Resource Conservation and Recovery Act. Source: U. S. Environmental Protection Agency[1]
Data update schedule: rolling basis. Data obtained by Toxics Targeting: 5/96.

10 (c) **RCRA Hazardous Waste Generators and Transporters Violations Information:** U. S. Environmental Protection Agency database of violations data compiled for hazardous waste treatment, storage and disposal facilities regulated pursuant to the Resource Conservation and Recovery Act. Source: U. S. Environmental Protection Agency[1]
Data update schedule: rolling basis. Data updated through: 3/1/96. Data obtained by Toxics Targeting: 3/7/96.

11) **Chemical Bulk Storage Facilities**: New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. ASTM required.* Fannie Mae required.**
Source: New York State Department of Environmental Conservation.[2]
Update schedule: quarterly. Data obtained by Toxics Targeting: 8/96.

12) **Toxic Release Inventory**: New York State and Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement** below.
Source: NYS Department of Environmental Conservation[2]/U. S. Environmental Protection Agency.[1]
Data update schedule: rolling basis, with annual information summary for previous year's activities available from NYSDEC each July 1, with corrections and additional information available approximately mid-August.
Data updated through: 5/9/96. Data obtained by Toxics Targeting: 5/14/96

13) **Historic New York City Utility Facilities (1898 to 1950)**: An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Air Discharge Facilities**: EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.
See Fannie Mae requirement** below.
Source: U. S. Environmental Protection Agency[1] Data obtained by Toxics Targeting: 6/14/96.

15) **Toxic Wastewater Discharges (Permit Compliance System)**: Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement** below.
Source: U. S. Environmental Protection Agency.[1]
Data updated through: 9/23/96. Data obtained by Toxics Targeting: 9/30/96

16) **U. S. Environmental Protection Agency Civil Enforcement Docket**: This database is the U. S. EPA's system for tracking civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.**
Source: U. S. Environmental Protection Agency.[1]
Data update schedule: quarterly. Date updated: 4/96. Date information obtained by Toxics Targeting: 8/96

17) **Emergency Response Notification System (ERNS)**: Federal database of spills compiled by the Emergency Response Notification System. ASTM required.* See Fannie Mae requirement** below.
Source: U. S. Environmental Protection Agency.[1]
Data updated through: 4/3/97. Data obtained by Toxics Targeting: 4/8/97

** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).
