Re: Data Summary Report for 27-09 40th Avenue, Long Island City, New York
NYSDEC BCP Site C241241

1.0 Introduction

Laurel Environmental Geosciences, DPC. ("***Laurel***") has prepared this Data Summary Report at the request of the New York State Department of Environmental Conservation ("NYSDEC"). NYSDEC Project Manager Ruth Curley submitted a direct request to ***Laurel*** via e-mail on May 25, 2023, to summarize existing soil disposal data associated with regulated wastes and unrestricted use soils generated at 27-09 40th Avenue, Long Island City, New York (the "Site"). The Site is enrolled in the NYSDEC Brownfields Cleanup Program ("BCP") and is currently undergoing remediation and redevelopment. As part of the BCP remediation and redevelopment process, soil was excavated and exported under the oversight of ***Laurel*** and Liberty Environmental, Inc.

2.0 Project Waste Characterization Sampling

Waste characterization was performed at the Site throughout the project as timelines and target disposal facilities changed. For waste characterization purposes, the Site was split into six (6) Quadrants, with each Quadrant having approximate dimensions of 55 feet by 45 feet (Note: at times during this project, the word "Grid" has been used interchangeably with "Quadrant."). The Quadrants are shown on Figure 1.0 of this report. Waste characterization was performed by Quadrant. A summary of the sampling conducted to facilitate characterization and off-site disposal is provided in the following sections. Any exceedances of the NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives ("SCOs") are summarized in Table I.

2.1 Waste Characterization Sampling

Following completion of the Remedial Investigation phase of the project, ***Laurel*** performed waste characterization sampling at the Site between May 26 and May 28, 2021, to facilitate future off-site disposal of soils. Based on the findings of historic sampling conducted at the Site by others and the Supplemental Remedial Investigation ("SRI") performed by ***Laurel***, report dated November 6, 2020, the Site was divided into three (3) areas for waste characterization: Historic Fill Material, Clean Soil, and Tetrachloroethylene ("PCE") Impacted Soils. The volume of each area was calculated, and sufficient composite and grab samples were collected to achieve waste disposal facility approval based on the expected volume of material to be excavated, as described below.

HISTORIC FILL MATERIAL SAMPLING

Based on the findings of ***Laurel's*** SRI report, the historic fill material was determined to be from 0 to 4 feet below ground surface ("bgs") throughout the Site. ***Laurel*** advanced a total of thirty (30) soil borings utilizing a track mounted Geoprobe® drilling rig within the historic fill material. Five (5) continuous soil

borings were advanced in each Quadrant at the Site, with each soil boring being advanced from 0 to 4 feet bgs. The soils from the historic fill interval were screened in 1-foot intervals for impacts by a photoionization detector ("PID"), for detecting VOCs, and visual and olfactory methods for other evidence of contamination. Historic fill material sampling locations are shown on Figure 2.0 of this report.

For each soil boring in the historic fill material, one (1) grab sample was collected from the 1-foot interval of each soil core, where the highest PID reading was recorded. If no VOCs were detected or other evidence of contamination observed, the grab sample was arbitrarily collected from the center of the soil core at 2-feet bgs. The respective grab samples were designated as follows: Quadrant 1: WC-HF-Q1- 1 2', WC-HF-Q1-2 2', WC-HF-Q1-3 2', WC-HF-Q1-4 2', WC-HF-Q1-5 3', Quadrant 2: WC-HF-Q2-1 1', WC-HF-Q2-2 4', WC-HF-Q2-3 4', WC-HF-Q2-4 2', WC-HF-Q2-5 2', Quadrant 3: WC-HF-Q3-1, WC-HF-Q3-2, WC-HF-Q3-3, WC-HF-Q3-4, WC-HF-Q3-5, Quadrant 4: WC-HF-Q4-1, WC-HF-Q4-2, WC-HF-Q4-3, WC-HF-Q4-4, WC-HF-Q4-5, Quadrant 5: WC-HF-Q5-1 3', WC-HF-Q5-2 2', WC-HF-Q5-3 4', WC-HF-Q5-4 2', WC-HF-Q5-5 3', and Quadrant 6: WC-HF-Q6-1 4', WC-HF-Q6-2 2', WC-HF-Q6-3 2', WC-HF-Q6-4 2', and WC-HF-Q6-5 2'. After the grab samples were collected, the historic fill material from the respective Quadrant was composited, and a representative composite sample was collected. The composite samples were designated as follows: Quadrant 1: WC-HF-Q1, Quadrant 2: WC-HF-Q2, Quadrant 3: WC-HF-Q3, Quadrant 4: WC-HF-Q4, Quadrant 5: WC-HF-Q5, and Quadrant 6: WC-HF-Q6.

All samples were transferred into laboratory supplied containers, stored on ice, and transported via courier to York Analytical Laboratories, Inc. ("York"). York is a New York State Department of Health ("NYSDOH") Environmental Laboratory Accreditation Program ("ELAP") certified environmental laboratory. The grab samples were analyzed utilizing the United States Environmental Protection Agency ("USEPA") Method 8260 for VOCs. The six (6) composite samples were analyzed utilizing the USEPA Method 8260 for Toxicity Characteristic Leaching Procedure ("TCLP") VOCs, USEPA Method 8270 for TCLP SVOCs, USEPA Method 6010/6020 for TCLP Resource Conservation and Recovery Act ("RCRA") metals and Target Analyte List ("TAL") metals, USEPA Method 8082 for Polychlorinated Biphenyls ("PCBs"), USEPA Method 8151 for Herbicides, USEPA Method 8081 for Pesticides, and USEPA Method 8015 for Extractable Petroleum Hydrocarbons ("EPH"). The laboratory analytical results for historic fill material are shown in Table II of this report. The waste characterization laboratory data packages are included in Appendix A of this report.

CLEAN SOIL SAMPLING

Based on the findings of ***Laurel's*** SRI report, the clean soil was determined to begin at roughly 4 feet bgs throughout the Site, except in the PCE hotspots as described in the following section of this report. ***Laurel*** advanced six (6) continuous soil borings utilizing a track mounted Geoprobe® drilling rig to a terminal depth of 25 feet bgs. The soils from the clean soil interval were screened in 1-foot intervals for impacts by a PID, for detecting VOCs, and visual and olfactory methods for other evidence of contamination. Clean soil sampling locations are shown on Figure 3.0 of this report.

For waste characterization purposes, the clean soils were divided into intervals from 4 to 10 feet bgs, 10 to 15 feet bgs, 15 to 20 feet bgs, and 20 to 25 feet bgs. At each soil boring location, one (1) grab sample was collected from each of the specified intervals, for a total of four (4) grab samples per soil boring location, and a grand total of twenty-four (24) grab samples collected from the clean soils. The grab samples were

collected from the 1-foot interval with the highest PID reading or other evidence of contamination within the specified intervals. If no VOCs were detected or other evidence of contamination observed, the grab sample was arbitrarily collected from the center of the specified interval. The respective grab samples were designated as follows: Quadrant 1: WC-CS-Q1 7', WC-CS-Q1 13', WC-CS-Q1 18', WC-CS-Q1 23', Quadrant 2: WC-CS-Q2 7-9', WC-CS-Q2 12-14', WC-CS-Q2 19', WC-CS-Q2 23', Quadrant 3: WC-CS-Q3-7',WC-CS-Q3-13', WC-CS-Q3-18', WC-CS-Q3-23', Quadrant 4: WC-CS-Q4-7', WC-CS-Q4-12', WC-CS-Q4-17', WC-CS-Q4-22', Quadrant 5: WC-CS-Q5 9', WC-CS-Q5 12', WC-CS-Q5 17',WC-CS-Q5 23', WC-CS-Q5 20', and Quadrant 6: WC-CS-Q6 9', WC-CS-Q6 13', WC-CS-Q6 19', and WC-CS-Q6 21'. After the grab samples were collected, the clean soils were composited within the specified intervals, with the soils from the 15 to 20 and 20 to 25 feet intervals being further combined, and a representative composite sample was collected from each interval. The composite samples were designated as follows: WC-CS-Q1-6 4-10', WC-CS-Q1-6 10-15', and WC-CS-Q1-6 15-25' were taken, respectively.

All samples were transferred into laboratory supplied containers, stored on ice, and transported via courier to York. York is a NYSDOH ELAP certified environmental laboratory. The grab samples were analyzed utilizing the USEPA Method 8260 for VOCs. The composite samples were analyzed utilizing the USEPA Method 8260 for TCLP VOCs, USEPA Method 8270 for TCLP SVOCs, USEPA Method 6010/6020 for TCLP RCRA metals and TAL metals, USEPA Method 8082 for PCBs, USEPA Method 8151 for Herbicides, USEPA Method 8081 for Pesticides, and USEPA Method 8015 for EPH. The laboratory analytical results for clean soil are shown in Table III of this report. The waste characterization laboratory data packages are included in Appendix A of this report.

PCE IMPACTED SOIL SAMPLING

Based on the findings of from ***Laurel's*** SRI report, the PCE impacted soil depths and levels of contamination were found to vary based on their proximity to the different on-site areas of concern ("AOCs"). A total of five (5) continuous soil borings were advanced by a track mounted GeoProbe® drilling rig in Quadrants 2 through 6, where PCE impacted soils were previously detected. PCE was not detected above the NYSDEC Part 375 Unrestricted Use SCOs value of 1.3 milligrams per kilogram ("mg/kg") in Quadrant 1 during any sampling conducted at the Site by ***Laurel*** or others. The soil borings located in Quadrants 2 and 4 terminated at 15 feet bgs, the soil boring located in Quadrant 3 was terminated at 30 feet bgs, and the soil borings from Quadrants 5 and 6 terminated at 5-feet bgs. The PCE impacted soils were screened in 1-foot intervals for impacts by a PID, for detecting VOCs, and visual and olfactory methods for other evidence of contamination. PCE impacted soil sampling locations are shown on Figure 4.0 of this report.

For the soil borings in Quadrants 2, 3, and 4, three (3) grab samples were collected from each of the quadrants, for a total of nine (9) grab samples. The samples were collected within the intervals described above. One (1) grab sample was collected from the soil borings in Quadrants 5 and 6. The grab samples were collected from the 1-foot interval with the highest PID reading or other evidence of contamination within the specified intervals. If no VOCs were detected or other evidence of contamination observed, the grab sample was arbitrarily collected from the center of the specified interval. The respective grab samples were designated as follows: Quadrant 2: WC-PCE-Q2 2', WC-PCE-Q2 6', WC-PCE-Q2 14', Quadrant 3: WC-PCE-Q3-4', WC-PCE-Q3-11-12', WC-PCE-Q3-26', Quadrant 4: WC-PCE-Q4-3', WC-PCE-Q4-7', WC-PCE-Q4-12', Quadrant 5: WC-PCE-Q5 1', and Quadrant 6: WC-PCE-Q6 2'. Following collection of

the grab samples, soils from each soil boring's 0 to 5-foot interval were composited, and composite sample WC-PCE-Q2-6 0-5' was collected. The soil borings from both Quadrants 2 and 4 had their soils from the 5 to 10 and 10 to 15-foot intervals separately composited, and composite samples WC-PCE-Q2&4 5-10' and WC-PCE-Q2&4 10-15' were collected. The soil boring from Quadrant 3 had its soils from the 15 to 30-foot interval combined, and composite sample WC-PCE-Q3 15-30' was collected.

All samples were transferred into laboratory supplied containers, stored on ice, and transported via courier to York. York is a NYSDOH ELAP certified environmental laboratory. The grab samples were analyzed utilizing the USEPA Method 8260 for VOCs. The four (4) composite samples were analyzed utilizing the USEPA Method 8260 for TCLP VOCs, USEPA Method 8270 for TCLP SVOCs, USEPA Method 6010/6020 for TCLP eight (8) RCRA metals and TAL metals, USEPA Method 8082 for PCBs, USEPA Method 8151 for Herbicides, USEPA Method 8081 for Pesticides, and USEPA Method 8015 for EPH. The laboratory analytical results for clean soil are shown in Table IV of this report. The waste characterization laboratory data packages are included in Appendix A of this report.

2.2 PCE Delineation Sampling (Contained-in Determination Request)

Prior to the start of the remedial action, ***Laurel*** requested a contained-in determination be made by the NYSDEC for PCE wastes identified at the Site. Previous investigations had documented no exceedances of the Technical and Administrative Guidance Memorandum ("TAGM") 3028 criteria of 12 mg/kg for PCE in Quadrants 1, 4, or 6 at the Site. Quadrant 3 contained an irregularly shaped area of approximately 20'x35', extending from 0 to 5' and 15 to 17' bgs, with soils impacted with PCE above the TAGM criteria of 12 mg/kg [centered around SB-102]. Quadrant 5 contained a 10'x10' area, extending from 0 to 1' bgs, with soils impacted with PCE above the TAGM 3028 criteria of 12 mg/kg [centered around WC-PCE-Q5]. Quadrant 2 contained PCE exceeding the TAGM 3028 criteria in an area that remained to be delineated. These hazardous waste areas are shown on Figure 5.0 of this report.

Laurel performed further delineation of PCE wastes in Quadrant 2 on October 25, 2022, to satisfy the requirements of the NYSDEC and the respective soil disposal facilities, as documented in the Additional Contained-in Delineation Investigation report, dated November 16, 2022. Soils in the area of sample WC-HF-Q2 (4) collected at 2 to 3 feet bgs, contained PCE at 35 mg/kg, and in the area of WC-PCE-Q2 contained PCE at 68 mg/kg in the 2 to 3-foot interval, and PCE at 50 mg/kg in the 6 to 7-foot interval. The soils in the vicinity of WC-HF-Q2 (4) and WC-PCE-Q2 were further delineated through a series of step-out continuous soil borings located in cardinal directions (i.e., north, east, south, and west) at 10-foot intervals surrounding the historic sampling locations.

At the location of WC-HF-Q2 (4), four (4) additional continuous soil borings were conducted, with ten (10) additional grab samples collected and analyzed for volatile organic compounds ("VOCs"); the highest reported value of PCE was 4.2 mg/kg at the sample collected from HF-Q2 (4) E [10 feet east of WC-HF-Q2 (4)] at 3 feet bgs. The resulting hazardous waste bounds were a 20-foot by 20-foot square, centered on WC-HF-Q2 (4) extending to 6 feet bgs, bounded by sample locations HF-Q2 (4) N, HF-Q2 (4) E, HF-Q2 (4) S, and HF-Q2 (4) W. These delineation soil boring locations are shown on Figure 6.0 of this report. The laboratory analytical results are summarized in Table V of this report, and the laboratory data packages are included in Appendix B of this report.

At the location of WC-PCE-Q2, six (6) additional continuous soil borings were conducted, with nine (9) additional grab samples collected and analyzed for VOCs; the highest readings were as follows: 33 mg/kg of PCE at PCE-Q2 WW [20 feet west of WC-PCE-Q2], 11 mg/kg of PCE at PCE-Q2 WS [10 feet west and 10 feet south of WC-PCE-Q2], and 2.9 mg/kg (with an E-flag) at PCE-Q2 W [10 feet west of WC-PCE-Q2]. The resulting hazardous waste bounds were a 35-foot by approximately 20-foot irregularly shaped area extending to 8 feet bgs, bounded by sample locations WC-HF-Q2 (1), PCE-Q2 WN, PCE-Q2 N, PCE-Q2 E, PCE-Q2 S, WC-HF-Q5 (5), SB-101B, and. WC-HF-Q2 (5). Note: approximately 100 square feet of this hazardous waste area extended south into Quadrant 5. These delineation soil boring locations are shown on Figure 6.0 of this report. The laboratory analytical results are summarized in Table V of this report, and the laboratory data packages are included in Appendix B of this report.

2.3 Additional Waste Characterization Sampling

Following the start of remedial action, data gaps were identified in the available laboratory analytical data due to changing disposal facility requirements. Specifically, elevated SVOCs identified in the historic fill material now dictated further sampling to determine the extent and magnitude of SVOC contamination.

In Quadrant 1, one (1) 5-point composite sample, designated Grid 1 5-point Composite, 0-5', was collected via excavator on November 11, 2022, from the 0 to 5-foot interval and analyzed for NYSDEC Part 375 SVOCs and target compound list ("TCL") SVOCs. The composite locations are shown on Figure 7.0 of this report. The laboratory analytical results are summarized in Table VI of this report, and the laboratory data packages are included in Appendix C of this report.

In Quadrant 2 and 5, following the completion of hotspot remedial excavation in these Quadrants (described in the following section of this report), remaining SVOC impacted soils were sampled via excavator on December 6, 2022. Supplemental samples were collected from the previously reported locations of B-1, B-3, B-4, B-B, and SB-106. At these locations, grab samples were collected from a 1-foot interval beneath the historic sample depth, and at 5-foot distances to the north, east, west, and south of the historic sample location, where possible, at similar depths to the historic sample. The samples were designated B-1 EP, B-1 NE 5, B-1 S 5, B-1 W 5, B-3 EP, B-3 NE 5, B-3 S 5, B-3 W 5, B-4 EP, B-4 NE 5, B-4 S 5, B-4 W 5, B-B EP, B-B NE 5, B-B S 5, B-B W 5, SB-106 EP (5'), SB-106 EP (7'), SB-106 NE 5, SB-106 W 5, and SB-106 S 10. The samples were analyzed for contaminant of concern SVOCs, and some samples were also analyzed for total lead, as required by the intended disposal facility. The results of this sampling confirmed the presence and magnitude of SVOC impacts in the historic fill material of these Quadrants. The sample locations are shown on Figure 8.0 of this report. The laboratory analytical results are summarized in Table VII of this report, and the laboratory data packages are included in Appendix C of this report.

The remaining SVOC impacted soils from Quadrant 2 and Quadrant 5 were then excavated from the 0 to 4-foot interval and temporarily stockpiled on poly sheeting in Quadrant 3. Two (2) 5-point composite samples were collected from the stockpiles on December 12, 2022, designated Stockpile 1 and Stockpile 2, and analyzed for EPH, ignitability, corrosivity, total PCBs, reactive sulfide, reactive cyanide, and TCLP VOCs, TCLP SVOCs, and TCLP heavy metals, as required by the intended disposal facility. At the same time, one (1) grab sample was collected from Quadrant 5 at 10 feet bgs, and one (1) sample was collected from the boundary sidewall between Quadrant 4 and 5 at 3 feet bgs for informational purposes; the samples were designated Grid 5 10' bgs and Grid 4/5 3' bgs, respectively. The grab samples were analyzed for

VOCs by USEPA Method 8260. The sample locations are shown on Figure 9.0 of this report. The laboratory analytical results are summarized in Table VIII of this report, and the laboratory data packages are included in Appendix C of this report.

2.4 Hotspot Excavation Endpoint Sampling

As part of the remedial action, previously identified hazardous wastes were excavated from Quadrant 2, Quadrant 3, Quadrant 4, and Quadrant 5. All hotspots were documented as remediated through the collection of appropriate sidewall and bottom of excavation samples in accordance with DER-10 requirements.

QUADRANT 2 HOTSPOT EXCAVATION

Quadrant 2 contained the HF-Q2 and PCE-Q2 hotspot areas. The HF-Q2 hotspot was remediated by removal of 192.82 tons of hazardous waste from an irregularly shaped area approximately 25 feet by 25 feet, to a depth of 10 feet bgs (Note: some of the HF-Q2 hazardous waste was mistakenly manifested as originating from 'Grid 3' on January 4, 2023; the tonnage stated above incorporates this additional material). The PCE-Q2 hotspot area was remediated by removal of 306.09 tons of hazardous waste from an irregularly shaped area approximately 25 feet by 40 feet, including some excavated area within the bounds of Quadrant 5.

To document the successful remediation, five (5) endpoint grab samples were collected from the HF-Q2 hotspot area on December 13, 2022, and six (6) endpoint grab samples were collected from the PCE-Q2 hotspot area on December 23, 2022. The samples were designated HF Q2 North EP, HF Q2 East EP, HF Q2 South EP, HF Q2 West EP, HF Q2 Bottom EP, PCE-Q2 EP SW-W, PCE-Q2 EP B2, PCE-Q2 EP B1, PCE-Q2 EP SW-N1, PCE-Q2 EP SW- N2, and PCE-Q2 EP SW-S. The grab samples were analyzed for VOCs by USEPA Method 8260. The sample locations are shown on Figure 10.0 of this report. The laboratory analytical results are summarized in Table IX of this report, and the laboratory data packages are included in Appendix D of this report.

QUADRANT 3 HOTSPOT EXCAVATION

Quadrant 3 contained the SB-102 hotspot area. The SB-102 hotspot was remediated by removal of 377.64 tons of hazardous waste from an irregularly shaped area approximately 25 feet by 30 feet, to a depth of 17 feet bgs. The excavation included some area within the bounds of Quadrant 4.

To document the successful remediation, nine (9) endpoint grab samples were collected from the SB-102 hotspot area. The sidewall samples were collected on December 23, 2022, and the bottom of excavation samples were collected on March 6, 2023. The samples were designated SB-102 EP SW N 1, SB-102 EP SW N 2, SB-102 EP SW E 1, SB-102 EP SW E 2, SB-102 EP SW S, SB-102 EP SW W, SB-102-EP-B1, Q3-EP 2, and Q3-EP 3. The grab samples were analyzed for VOCs by USEPA Method 8260. The sample locations are shown on Figure 11.0 of this report. The laboratory analytical results are summarized in Table X of this report, and the laboratory data packages are included in Appendix D of this report.

QUADRANT 5 HOTSPOT EXCAVATION

Quadrant 5 contained the PCE-Q5 hotspot area. The PCE-Q5 hotspot was remediated by removal of 77.19 tons of hazardous waste from an irregularly shaped area approximately 30 feet by 20 feet, in the interval of 2 to 9 feet bgs.

To document the successful remediation, five (5) endpoint grab samples were collected from the PCE-Q5 hotspot area on November 29, 2022. The samples were designated PCE-Q5 EP North, PCE-Q5 EP East, PCE-Q5 EP West, PCE-Q5 EP South, and PCE-Q5 EP Bottom. The grab samples were analyzed for VOCs by USEPA Method 8260. The sample locations are shown on Figure 12.0 of this report. The laboratory analytical results are summarized in Table XI of this report, and the laboratory data packages are included in Appendix D of this report.

It should be noted that the PCE-Q5 EP North sample was collected on the boundary between Quadrant 2 and Quadrant 5 and contained 46 mg/kg of PCE. The PCE-Q5 hotspot excavation was conducted chronologically before the Quadrant 2 hotspot excavations; this remaining exceedance was remediated as part of the PCE-Q2 hotspot excavation later conducted in Quadrant 2 and Quadrant 5.

2.5 Verification Sampling

During the remedial action phase of the project, verification samples were collected when the Quadrant was expected to contain only soils meeting NYSDEC Part 375 Unrestricted Use SCOs as determined by previous sampling data. Representative soils were collected via excavator and contained soils from throughout the respective Quadrant in an interval approximately 0 to 10-feet beneath the existing grade. The required number of grab and composite samples were collected to characterize remaining soils for off-site disposal based on anticipated volume, in accordance with DER-10 requirements.

QUADRANT 1 VERIFICATION SAMPLES

Two (2) 5-point composites and six (6) grab samples were collected from Quadrant 1 for laboratory analysis on December 19, 2022. The grab samples were designated CS-1, CS-2, CS-3, CS-4, CS-5, and CS-6, and were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260. The composite samples were designated SP5-3 and SP5-4 and were analyzed for NYSDEC Part 375 SVOCs by USEPA Method 8270, NYSDEC Part 375 heavy metals, hexavalent chromium, and mercury by USEPA Methods 6010/6020/7473, NYSDEC Part 375 pesticides by USEPA Method 8081, NYSDEC Part 375 PCBs by USEPA Method 8082, and total cyanide. One (1) supplemental 5-point composite sample was collected from Quadrant 1 for laboratory analysis on January 4, 2023. The composite sample was designated Grid 1 CS-1 and was analyzed for per and poly-fluoroalkyl substances ("PFAS") by USEPA Method 1633. The sample locations are shown on Figure 13.0 of this report. The laboratory analytical results are summarized in Table XII of this report, and the laboratory data packages are included in Appendix E of this report.

Laboratory analysis of the Quadrant 1 soils found no compounds exceeding the NYSDEC Part 375 Unrestricted Use SCOs. As such, the Quadrant 1 soil was permitted for export to The Mulch Depot (a.k.a. Dan Como and Sons Landscape Supply), an unregulated facility located at 3 Como Court, Towaco, New Jersey.

QUADRANT 2 VERIFICATION SAMPLES

Two (2) 5-point composites and six (6) grab samples were collected from Quadrant 2 for laboratory analysis on January 4, 2023. The grab samples were designated Grid 2 CS-1, Grid 2 CS-2, Grid 2 CS-3, Grid 2 CS-4, Grid 2 CS-5, and Grid 2 CS-6 and were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260. The composite samples were designated Grid 2 CS-1 and Grid 2 CS-2 and were analyzed for NYSDEC Part 375 SVOCs by USEPA Method 8270, NYSDEC Part 375 heavy metals, hexavalent chromium, and mercury by USEPA Methods 6010/6020/7473, NYSDEC Part 375 pesticides by USEPA Method 8081, NYSDEC Part 375 PCBs by USEPA Method 8082, PFAS by USEPA Method 1633, and total cyanide. The sample locations are shown on Figure 13.0 of this report. The laboratory analytical results are summarized in Table XIII of this report, and the laboratory data packages are included in Appendix E of this report.

Laboratory analysis of the Quadrant 2 soils found the VOC acetone at concentrations above the NYSDEC Part 375 Unrestricted Use SCOs in four (4) of the six (6) grab samples. As such, the Quadrant 2 soil continued to be exported to regulated non-hazardous waste facilities managed by Impact Environmental.

QUADRANT 3 VERIFICATION SAMPLES

No verification samples were collected from Quadrant 3. All wastes were transported to appropriate regulated facilities as pre-determined in the previously discussed Contained-in Determination.

QUADRANT 4 VERIFICATION SAMPLES

Two (2) 5-point composites and six (6) grab samples were collected from Quadrant 4 for laboratory analysis January 10, 2023. The grab samples were designated Q4-CS-Grab 1, Q4-CS-Grab 2, Q4-CS-Grab 3, Q4-CS-Grab 4, Q4-CS-Grab 5, and Q4-CS-Grab 6, and were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260. The composite samples were designated Q4-CS-Composite 1 and Q4-CS-Composite 2 and were analyzed for NYSDEC Part 375 SVOCs by USEPA Method 8270, NYSDEC Part 375 heavy metals, hexavalent chromium, and mercury by USEPA Methods 6010/6020/7473, NYSDEC Part 375 pesticides by USEPA Method 8081, NYSDEC Part 375 PCBs by USEPA Method 8082, PFAS by USEPA Method 1633, and total cyanide. The sample locations are shown on Figure 13.0 of this report. The laboratory analytical results are summarized in Table XIV of this report, and the laboratory data packages are included in Appendix E of this report.

Laboratory analysis of the Quadrant 4 soils found the VOC PCE at concentrations above the NYSDEC Part 375 Unrestricted Use SCOs in one (1) of the six (6) grab samples. As such, the Quadrant 4 soil continued to be exported to regulated non-hazardous waste facilities managed by Impact Environmental.

Following removal of an additional 3,164.95 tons of soil from Quadrant 4, an additional one (1) 5-point composite and four (4) grab samples were collected from the remaining soil for laboratory analysis on March 9, 2023. The grab samples were designated Soil Pile G1, Soil Pile G2, Soil Pile G3, and Soil Pile G4, and were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260. The composite sample was designated Soil Pile Composite and was analyzed for NYSDEC Part 375 SVOCs by USEPA Method 8270, NYSDEC Part 375 heavy metals, hexavalent chromium, and mercury by USEPA Methods 6010/6020/7473, NYSDEC Part 375 pesticides by USEPA Method 8081, NYSDEC Part 375 PCBs by USEPA Method 8082, PFAS by USEPA Method 1633, and total cyanide. The sample locations are shown

on Figure 13.0 of this report. The laboratory analytical results are summarized in Table XV of this report, and the laboratory data packages are included in Appendix E of this report.

The additional laboratory analysis of the remaining Quadrant 4 soils found the heavy metals copper and zinc at concentrations above the NYSDEC Part 375 Unrestricted Use SCOs in the composite sample. As such, the Quadrant 4 soil continued to be exported to regulated non-hazardous waste facilities managed by Impact Environmental.

QUADRANT 5 VERIFICATION SAMPLES

Two (2) 5-point composites and five (5) grab samples were collected from Quadrant 5 for laboratory analysis on January 4, 2023. The grab samples were designated Grid 5 CS-1, Grid 5 CS-2, Grid 5 CS-3, Grid 5 CS-4, and Grid 5 CS-5, and were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260. The composite samples were designated Grid 5 CS-1 and Grid 5 CS-2 and were analyzed for NYSDEC Part 375 SVOCs by USEPA Method 8270, NYSDEC Part 375 heavy metals, hexavalent chromium, and mercury by USEPA Methods 6010/6020/7473, NYSDEC Part 375 pesticides by USEPA Method 8081, NYSDEC Part 375 PCBs by USEPA Method 8082, PFAS by USEPA Method 1633, and total cyanide. The sample locations are shown on Figure 13.0 of this report. The laboratory analytical results are summarized in Table XVI of this report, and the laboratory data packages are included in Appendix E of this report.

Laboratory analysis of the Quadrant 5 soils found no compounds exceeding the NYSDEC Part 375 Unrestricted Use SCOs. As such, the Quadrant 5 soil was permitted for export to The Mulch Depot (a.k.a. Dan Como and Sons Landscape Supply), an unregulated facility located at 3 Como Court, Towaco, New Jersey.

QUADRANT 6 VERIFICATION SAMPLES

Two (2) 5-point composites and five (5) grab samples were collected from Quadrant 6 for laboratory analysis on December 19, 2023. The grab samples were designated CS-7, CS-8, CS-9, CS-10, and CS-11, and were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260. The composite samples were designated SP5-1 and SP5-2 and were analyzed for NYSDEC Part 375 SVOCs by USEPA Method 8270, NYSDEC Part 375 heavy metals, hexavalent chromium, and mercury by USEPA Methods 6010/6020/7473, NYSDEC Part 375 pesticides by USEPA Method 8081, NYSDEC Part 375 PCBs by USEPA Method 8082, and total cyanide. One (1) supplemental 5-point composite sample was collected from Quadrant 6 for laboratory analysis on January 4, 2023. The composite sample was designated Grid 6 CS-1 and was analyzed for PFAS by USEPA Method 1633. The sample locations are shown on Figure 13.0 of this report. The laboratory analytical results are summarized in Table XVII of this report, and the laboratory data packages are included in Appendix E of this report.

Laboratory analysis of the Quadrant 6 soils found the pesticide Dieldrin at concentrations above the NYSDEC Part 375 Unrestricted Use SCOs in one (1) of two (2) composite samples. As such, the Quadrant 6 soil continued to be exported to regulated non-hazardous waste facilities managed by Impact Environmental.

Following removal of an additional 1,282.81 tons of soil from the Quadrant 6 stockpile, an additional four (4) grab samples were collected from the remaining soil for laboratory analysis on February 14, 2023. The grab samples were designated Q6 NE, Q6 NW, Q6 SE, Q6 SW, and were analyzed for NYSDEC Part 375

pesticides by USEPA Method 8081. The sample locations are shown on Figure 13.0 of this report. The laboratory analytical results are summarized in Table XVIII of this report, and the laboratory data packages are included in Appendix E of this report.

Laboratory analysis of the Quadrant 6 soils found no compounds exceeding the NYSDEC Part 375 Unrestricted Use SCOs. As such, the Quadrant 6 soil was permitted for export to The Mulch Depot (a.k.a. Dan Como and Sons Landscape Supply), an unregulated facility located at 3 Como Court, Towaco, New Jersey.

2.6 Excavation Endpoint Sampling

Following completion of the planned excavation, nineteen (19) endpoint grab samples were collected from throughout the Site on March 6, 2023; three (3) samples were collected from Quadrant 1 (designated Q1-EP 1, Q1-EP 2, and Q1-EP 3), four (4) samples were collected from Quadrant 2 (Q2-EP 1, Q2-EP 2, Q2-EP 3, Q2-EP 4), three (3) samples were collected from Quadrant 3 (Q3-EP 1, Q3-EP 2, Q3-EP 3), two (2) samples were collected from Quadrant 4 (Q4-EP 1, Q4-EP 2), four (4) samples were collected from Quadrant 5 (Q5-EP 1, Q5-EP 2, Q5-EP 3, and Q5-EP 4), and three (3) samples were collected from Quadrant 6 (Q6-EP 1, Q6-EP 2, and Q6-EP 3). The grab samples were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260, NYSDEC Part 375 SVOCs by USEPA Method 8270, NYSDEC Part 375 heavy metals, hexavalent chromium, and mercury by USEPA Methods 6010/6020/7473, NYSDEC Part 375 pesticides by USEPA Method 8081, NYSDEC Part 375 PCBs by USEPA Method 8082, NYSDEC Part 375 herbicides by USEPA Method 8151, and total cyanide. In addition, the samples located within the footprint of the previously excavated hotspots (Q2-EP 3, Q2-EP 4, Q3-EP 2, Q3-EP3, and Q5-EP 2) were further analyzed for PFAS by USEPA Method 1633. The sample locations are shown on Figure 14.0 of this report. The laboratory analytical results are summarized in Table XIX of this report, and the laboratory data packages are included in Appendix F of this report.

Laboratory analysis of the excavation endpoint samples found all analytes below the NYSDEC Part 375 Unrestricted Use SCOs, except at the location of Q5-EP 1, where acetone was found in the sample at a concentration above the NYSDEC Part 375 Unrestricted Use SCOs.

To remedy the acetone exceedance at Q5-EP 1, an additional 5 foot by 5-foot excavation was conducted to a depth of 7 feet below the previous grade. Approximately 9 tons of the acetone impacted soil was excavated and added to the remaining Quadrant 4 stockpile, which was later exported to a non-hazardous waste facility managed by Impact Environmental. Five (5) grab samples were collected from the hotspot excavation on March 16, 2023, in accordance with DER-10 sampling frequency requirements. The grab samples were designated Q5-EP1 HS Exc Bottom, Q5-EP1 HS Exc East Sidewall, Q5-EP1 HS Exc West Sidewall, Q5-EP1 HS Exc North Sidewall, and Q5-EP1 HS Exc South Sidewall. The grab samples were analyzed for NYSDEC Part 375 VOCs by USEPA Method 8260. The sample locations are shown on Figure 15.0 of this report. The laboratory analytical results are summarized in Table XX of this report, and the laboratory data packages are included in Appendix F of this report.

Laboratory analysis of the Q5-EP 1 hotspot excavation endpoint samples found no compounds exceeding the NYSDEC Part 375 Unrestricted Use SCOs, and the remedial excavation for the project was determined to be successfully completed.

3.0 Post Excavation Activities

An internal audit of excavated materials was completed by ***Laurel*** following completion of the excavation. The audit identified completed manifests associated with forty-three (43) soil shipments of regulated non-hazardous wastes and one-hundred and ninety-four (194) unrestricted use soil shipments that were not returned from the intended disposal facilities to the generator. ***Laurel*** previously notified the NYSDEC of this discrepancy in a letter dated May 1, 2023, which further detailed the efforts undertaken to resolve the discrepancy. The discrepancy involves soil and non-hazardous wastes generated from Quadrants 1, 2, 4, and 6 at the Site between the dates of December 20, 2022, and March 3, 2023. All recorded information regarding the trucks associated with transporting the soil shipments referenced above is provided in Table XXI.

3.1 Excavation Calculations and Comparisons

Manifests were reviewed and total weights were calculated for materials removed from the Site and received by the disposal facility. Given the varying stratigraphy and density of soils present at the Site, the per-truck weight was reported to range from 17.05 tons to 34.68 tons (excluding an outlier reported at 14.87 tons). A summary of the tonnage of soil disposed by Quadrant is shown in Table XXII. It should be noted that weights had to be estimated for the one-hundred and ninety-four (194) unrestricted use soil shipments originating from Quadrants 1 and 5 that had no associated scale tickets returned for review.

Hazardous waste manifests were further reviewed and compared against the anticipated calculated values as stated in the approved contained-in determination request. A comparison of the actual hazardous waste generation versus calculated values is shown in Table XXIII.

Respectfully submitted,
Laurel Environmental Geosciences, DPC.

Professional Engineer Certification
Data Summary Report for 27-09 40th Avenue, Long Island City, New York

I, James P. Cinelli, certify that I am currently a New York State registered professional engineer. Based on my inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete and represents is an accurate reporting of the removal of the contaminated material from the referenced site. I am aware that there are significant penalties for submitting false information.

Date: 6/21/2023

NOTES:

Any Regulatory Exceedances are highlighted in **yellow** and Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution, J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated, U=analyte not detected at or above the level indicated, E=result is estimated and cannot be accurately reported due to levels encountered or interferences, ~=this indicates that no regulatory limit has been established for this analyte

NOTES:

Any Regulatory Exceedances are highlighted in **yellow** and Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution, J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated, U=analyte not detected at or above the level indicated, B=analyte found in the analysis batch blank, E=result is estimated and cannot be accurately reported due to levels encountered or interferences, ~=this indicates that no regulatory limit has been established for this analyte

Notes: Exceedances highlighted **yellow**, Qualifiers:

U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.

J - The value is estimated. This flag is used a) on form 1 when the compound is reported above the MDL, but below the PQL, and b) on the Tentatively Identified Compounds (TIC) form for all compounds identified.

N - The concentration is based on the response to the nearest internal. This flag is used on the TIC form for all compounds identified.

S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level

D - The reported concentration is the result of a diluted analysis

Q - For TICS, this compound was quantitated using a calibration curve.

NOTES:

Any Regulatory Exceedances are highlighted in **yellow** and Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution, J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated, U=analyte not detected at or above the level indicated, B=analyte found in the analysis batch blank, E=result is estimated and cannot be accurately reported due to levels encountered or interferences, ~=this indicates that no regulatory limit has been established for this analyte

NOTES:

Any Regulatory Exceedances are highlighted in **yellow** and Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution, J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated, U=analyte not detected at or above the level indicated, B=analyte found in the analysis batch blank, E=result is estimated and cannot be accurately reported due to levels encountered or interferences, ~=this indicates that no regulatory limit has been established for this analyte

NOTES:

Any Regulatory Exceedances are highlighted in **yellow** and Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution, J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated, U=analyte not detected at or above the level indicated, B=analyte found in the analysis batch blank, E=result is estimated and cannot be accurately reported due to levels encountered or interferences, ~=this indicates that no regulatory limit has been established for this analyte

NOTES:

Any Regulatory Exceedances are highlighted in **yellow** and Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution, J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated, U=analyte not detected at or above the level indicated, B=analyte found in the analysis batch blank, E=result is estimated and cannot be accurately reported due to levels encountered or interferences, ~=this indicates that no regulatory limit has been established for this analyte

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 27, 2021 and listed below. The project was identified as your project: **27-09 40th Avenue, LIC, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 21E1205

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: 

Date: 06/04/2021

Sample and Data Qualifiers Relating to This Work Order

M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CCV-H	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
EXT-COMP	Completed
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
EXT-Temp	Extraction temperture slightly exceeded acceptance range.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) exceeded 110% of the expected value. Positive detections may be biased high.
M-CRL	The RL check for this element recovered outside of control limits.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
S-08	The recovery of this surrogate was outside of QC limits.
ICV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: The lab received 2-MEOH vials, 1-Stir Bar vial, and 1-Screen vial fro sample -33. Sample cancelled by client.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 01, 2021 and listed below. The project was identified as your project: **27-09 40th Avenue, LIC, Queens, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 21F0043

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-CRL	The RL check for this element recovered outside of control limits.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) exceeded 110% of the expected value. Positive detections may be biased high.
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
EXT-COMP	Completed
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 28, 2021 and listed below. The project was identified as your project: **27-09 40th Ave, LIC, Queens, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 21E1255

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

YORK
ANALYTICAL LABORATORIES INC

Sample and Data Qualifiers Relating to This Work Order

M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
Cal-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CCV-H	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
EXT-COMP	Completed
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
EXT-Temp	Extraction temperture slightly exceeded acceptance range.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
S-08	The recovery of this surrogate was outside of QC limits.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) exceeded 110% of the expected value. Positive detections may be biased high.
M-CRL	The RL check for this element recovered outside of control limits.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
ICV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported

RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on October 26, 2022 and listed below. The project was identified as your project: **27-09 40th Avenue, LIC, NY 19-401.9**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22J1305

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:  **Date:** 11/03/2022

Sample and Data Qualifiers Relating to This Work Order

VOA-E	The concentration reported for this analyte is an estimated value above the linear range of the instrument for EPA SW846-5035/8260 (>200ppb). Re-analysis using 5035/8260 medium level prep. resulted in a detection below the reporting limit (<500ppb).
QR-04	The RPD exceeded control limits for the LCS/LCSD QC.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Lab did not receive a methanol vial for samples 13 and 15.

Re: 27-09 40th Ave LIC

Dear Scott Yanuck,

Enclosed please find the laboratory Analysis Report(s) for sample(s) received on December 12, 2022. Long Island Analytical laboratories analyzed the samples on December 15, 2022 for the following:

SAMPLE ID	ANALYSIS
Stockpile 1	EPA 8082 A, EPH 8015 D, RIC, TCLP (8) Metals, TCLP Beryllium, TCLP Herbicide, TCLP Pesticides, TCLP Semi-Volatile, TCLP Volatiles
Stockpile 2	EPA 8082 A, EPH 8015 D, RIC, TCLP (8) Metals, TCLP Beryllium, TCLP Herbicide, TCLP Pesticides, TCLP Semi-Volatile, TCLP Volatiles
Grid 5 10' Bgs	EPA 8260 D
Grid 4/5 3' Bgs	EPA 8260 D

Samples received at 1.9 ° C

1.C Holding time exceeded, analyze immediate parameter.

If you have any questions or require further information, please call at your convenience. Long Island Analytical Laboratories Inc. is a NELAP accredited laboratory. All reported results meet the requirements of the NELAP standards unless noted. Report shall not be reproduced except in full without the written approval of the laboratory. Results related only to items tested. Long Island Analytical Laboratories would like to thank you for the opportunity to be of service to you.

Best Regards,

Long Island Analytical Laboratories, Inc.

Michael Veraldi - Laboratory Director
