CERTIFICATION

I, Kenneth P. Wenz Jr., PG, LEP, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 29-05 38th Avenue Site. I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Kenneth P. Wenz Jr., PG, LEP 7/29/2020

Qualified Environmental Professional

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 29-05 38th Avenue in the Long Island City section in Queens, New York and is identified as Block 371 and Lot 18 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 10,600-square feet and is bounded by a vacant lot that formerly maintained an industrial building to the north, 30th Street to the east, 38th Avenue to the south, and Old Ridge Road to the west. A map of the site boundary is shown in Figure 2. Currently, the Site maintains a 1.5-story warehouse building with a partial basement that is occupied by a biofuel generator rental company, a single-story vacant commercial building, a 2-story residential building with a basement, a single-story residential building with a basement, and two, non-contiguous paved parking areas.

Summary of Proposed Redevelopment Plan

The proposed redevelopment of the Site will consist of demolition of the existing structures and construction of a 7-story mixed-use (commercial and residential) building, with a full basement that will maintain utility, laundry, and storage spaces, as well as 24 subsurface parking spaces. The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

Based upon the review of the Phase I Environmental Site Assessment (Phase I ESA) Report prepared by Middleton Environmental Inc. (Middleton) dated March 8, 2020, the following Site history was established. According to Middleton's Phase I ESA, the four subject buildings at the Site (1.5-story warehouse, single-story vacant building, two-story residential building, and single-story residential building) were all constructed between 1898 and 1936. According to the Sanborn Fire Insurance maps, the 1.5-story warehouse is listed as a carpet cleaning facility from 1936 until 2006. Additionally, the vacant single-story building located on the eastern portion of the Site is

shown to have been an automotive service facility and gasoline station from 1947 until at least 1950. The single-story and two-story residential buildings located on the western portion of the Site were constructed circa 1898 and 1936, respectively. They have reportedly maintained residential occupancy since construction.

The AOCs identified for this site include:

1. Zero to up to approximately 7 feet below ground surface across the Site due to the potential presence of historic fill material, and
2. The past usage of the Site by a former gasoline station and automobile repair facility, as well as a carpet cleaning company.

In addition, the adjacent property to the north (37-24 to 37-28 30th Street) has been investigated and will be remediated under the New York State Brownfield Cleanup Program (BCP), as BCP Site Number C241214. This parcel and the adjacent parcel to the north were historically used as commercial dry cleaning and laundry facilities, and previous investigations identified elevated levels of the dry cleaning solvent tetrachloroethene and its daughter product trichloroethene in soil vapor (maximum concentrations of 28,000 and 1,140 micrograms per cubic meter, respectively).

The Phase 1 ESA Report is presented in Appendix A. A map showing area of concerns is presented in Figure 3.

Summary of the Work Performed under the Remedial Investigation

Athenica performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Advanced seven (7) soil borings across the entire project Site, and collected fifteen (15) soil samples (including one blind duplicate sample) for chemical analysis of VOCs, SVOCs, PCBs, and Target Analyte List (TAL) metals, to evaluate soil quality;
3. Installed four (4) temporary groundwater monitoring wells throughout the Site to establish groundwater flow direction and collected five (5) groundwater samples (including one blind duplicate sample) for chemical analysis of VOC, SVOCs,

- pesticides, PCBs, and TAL metals (total and dissolved), to evaluate groundwater quality;
4. Submitted one (1) additional soil sample and one (1) additional groundwater sample for chemical analysis of PFOAs/PFAS, and 1,4-dioxane; and,
 5. Installed six (6) soil vapor probes at locations across the Site and collected six (6) soil vapor samples for chemical analysis of VOCs. As the existing Site buildings are planned to be demolished, indoor and outdoor air samples were not collected.

Summary of Environmental Findings

1. Elevation of the property ranges from 95.05 to 92.41 feet. All Site elevation values reference a common random datum.
2. Depth to groundwater at the Site ranges from 23.83 to 28.13 feet.
3. Groundwater flow beneath the Site is generally from east to west.
4. Bedrock was not encountered at the Site.
5. The stratigraphy of the site, from the surface down, consists of approximately 10 feet of coarse-to-fine grained sand with silt and clay underlain by 10 feet of poorly-graded sand and clay. Historic fill material was identified at sample locations SB-2 and SB-3 to a depth up to approximately 2 feet, and at sample location SB-6 to a depth up to approximately 7 feet.
6. Soil/fill samples collected during the RI were compared to the New York State Department of Environmental Conservation (NYSDEC) 6NYCRR Part 375 Section 6.8 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential Use SCOs.
 - No Volatile Organic Compounds (VOCs), pesticides, or Polychlorinated Biphenyls (PCBs) were detected at concentrations above Unrestricted Use SCOs in any soil sample.
 - Seven Semi-Volatile Organic Compounds (SVOCs), including benzo(a)anthracene (at 2.14 milligrams per kilogram (mg/Kg)), benzo(a)pyrene (at 2.17 mg/Kg), benzo(b)fluoranthene (at 1.9 mg/Kg), benzo(k)fluoranthene (at 1.51 mg/Kg), chrysene (at 2.01 mg/Kg), dibenzo(a,h)anthracene (at 0.457

mg/Kg), and indeno(1,2,3-cd)pyrene (at 1.21 mg/Kg), were detected at concentrations exceeding their Unrestricted Use SCOs in soil boring SB-3 (0'-2'). Of these SVOCs, the concentrations of benzo(k)fluoranthene and chrysene also exceeded their Restricted Residential Use SCOs. Indeno(1,2,3-cd)pyrene (at 0.523 mg/Kg) was also detected at a concentration exceeding its Restricted Residential SCO in soil boring SB-1 (0'-2').

- Six metals, including copper (at 109 mg/Kg in soil boring SB-3 (0'-2')), lead (maximum of 339 mg/Kg in soil boring SB-3 (0'-2')), magnesium (at 1,740 mg/Kg in soil boring SB-6 (0'-2')), Nickel (at 30.8 mg/Kg in soil boring SB-6 (12'-14')), selenium (maximum of 4.77 mg/Kg in soil boring SB-4 (12'-14')), zinc (maximum of 468 mg/Kg in soil boring SB-2 (0'-2')), and mercury (maximum of 0.748 mg/Kg in soil boring SB-4 (0'-2')), were detected at concentrations exceeding their Unrestricted Use SCOs.
- PFOAs/PFAS and 1,4-dioxane were not detected in soil sample SB-6 (0'-2').

7. Groundwater samples collected during the RI were compared to the New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Results indicated:

- No pesticides or PCBs were detected at concentrations exceeding their GQS.
- Two VOCs, including chloroform (maximum of 13 micrograms per liter ($\mu\text{g/L}$) in the sample from MW-1) and tetrachloroethene (maximum of 120 $\mu\text{g/L}$ in the sample from MW-3), were detected at concentrations exceeding their GQS.
- Three SVOCs, including benzo(a)anthracene (at 0.615 $\mu\text{g/L}$ in the duplicate sample collected from MW-4), benzo(a)pyrene (at 0.0615 $\mu\text{g/L}$ in the duplicate sample from MW-4), and benzo(b)fluoranthene (at 0.513 $\mu\text{g/L}$ in the duplicate sample from MW-4) were detected at concentrations exceeding their GQS in the duplicate sample labelled MW-DUP.
- Four dissolved metals, including magnesium (maximum of 41,000 $\mu\text{g/L}$ in the sample from MW-3), manganese (maximum of 654 $\mu\text{g/L}$ in the sample from MW-3), selenium (maximum 81 $\mu\text{g/L}$ in the sample from MW-3), and sodium (maximum of 101,000 $\mu\text{g/L}$ in the sample from MW-4) were detected at concentrations exceeding their GQS.

- Eight totals metals including chromium (maximum of 563 µg/L in the sample from MW-1), copper (at 362 µg/L in the sample from MW-1), lead (maximum of 64 µg/L in the sample from MW-DUP), magnesium (maximum of 152,000 µg/L in the sample from MW-1), manganese (maximum of 7,120 µg/L in the sample from MW-1), nickel (at 153 µg/L in the sample from MW-1), selenium (maximum of 136 µg/L in the sample from MW-3), and sodium (maximum of 118,000 µg/L in the sample from MW-DUP) were detected at concentrations exceeding their GQS.
 - PFOA/PFAS compounds including PFBS (at 0.00772 µg/L), PFHpA (at 0.0101 µg/L), PFHxS (at 0.00348 µg/L), and PFHxA (at 0.200 µg/L) were detected in the sample from MW-4. 1,4-dioxane was not detected in this sample.
 - Due to a laboratory error, groundwater sample MW-4, MW-DUP, and Groundwater Field Blank were not analyzed for 1,4-dioxane. OER was informed on July 7, 2020, and elimination of these analysis were authorized.
8. Soil vapor samples collected during the RI were analyzed for VOCs via USEPA Method TO-15. Results include the following:
- 1,1,1-Trichloroethane was detected at 13 micrograms per cubic meter (µg/m³) in sample SV-3;
 - 1,2,4-Trimethylbenzene was detected at 16 µg/m³ in SV-1, 14 µg/m³ in SV-2, 10 µg/m³ in SV-3, 16 µg/m³ in SV-4, 14 µg/m³ in SV-5, and 12 µg/m³ in sample SV-6;
 - 2-Butanone was detected at 220 µg/m³ in sample SV-1, 75 µg/m³ in sample SV-2, 50 µg/m³ in sample SV-3, 140 µg/m³ in sample SV-4, 36 µg/m³ in sample SV-5, and 47 µg/m³ in sample SV-6;
 - 2-Hexanone was detected at 86 µg/m³ in sample SV-1, 30 µg/m³ in sample SV-2, 17 µg/m³ in sample SV-3, 49 µg/m³ in sample SV-4, 18 µg/m³ in sample SV-5, and 15 µg/m³ in sample SV-6;
 - Acetone, a laboratory contaminant, was detected at 1,400 µg/m³ in sample SV-1, 1,300 µg/m³ in sample SV-2, 700 µg/m³ in sample SV-3, 2,500 µg/m³ in sample SV-4, 540 µg/m³ in sample SV-5, and 830 µg/m³ in sample SV-6;

- Benzene was detected at 8.5 $\mu\text{g}/\text{m}^3$ in sample SV-1, 5.6 $\mu\text{g}/\text{m}^3$ in sample SV-2, 5 $\mu\text{g}/\text{m}^3$ in sample SV-3, 6 $\mu\text{g}/\text{m}^3$ in sample SV-4, and 5.3 $\mu\text{g}/\text{m}^3$ in sample SV-5;
- Carbon disulfide was detected at 6.8 $\mu\text{g}/\text{m}^3$ in sample SV-3;
- Chloroform was detected at 19 $\mu\text{g}/\text{m}^3$ in sample SV-1, 38 $\mu\text{g}/\text{m}^3$ in sample SV-2, 480 $\mu\text{g}/\text{m}^3$ in sample SV-3, 56 $\mu\text{g}/\text{m}^3$ in sample SV-4, 56 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 37 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- cis-1,2-Dichloroethene was detected at 16 $\mu\text{g}/\text{m}^3$ in sample SV-1, and 4.6 $\mu\text{g}/\text{m}^3$ in sample SV-5;
- Cyclohexane was detected at 30 $\mu\text{g}/\text{m}^3$ in sample SV-3, 18 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 37 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Ethylbenzene was detected at 15 $\mu\text{g}/\text{m}^3$ in sample SV-1, 12 $\mu\text{g}/\text{m}^3$ in sample SV-2, 12 $\mu\text{g}/\text{m}^3$ in sample SV-3, 14 $\mu\text{g}/\text{m}^3$ in sample SV-4, 12 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 9.2 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Isopropanol was detected at 14 $\mu\text{g}/\text{m}^3$ in sample SV-1;
- n-Heptane was detected at 35 $\mu\text{g}/\text{m}^3$ in sample SV-1, 20 $\mu\text{g}/\text{m}^3$ in sample SV-2, 76 $\mu\text{g}/\text{m}^3$ in sample SV-3, 19 $\mu\text{g}/\text{m}^3$ in sample SV-4, 55 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 97 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- n-Hexane was detected at 34 $\mu\text{g}/\text{m}^3$ in sample SV-1, 21 $\mu\text{g}/\text{m}^3$ in sample SV-2, 310 $\mu\text{g}/\text{m}^3$ in sample SV-3, 21 $\mu\text{g}/\text{m}^3$ in sample SV-4, 180 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 390 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- o-Xylene was detected at 17 $\mu\text{g}/\text{m}^3$ in sample SV-1, 15 $\mu\text{g}/\text{m}^3$ in sample SV-2, 16 $\mu\text{g}/\text{m}^3$ in sample SV-3, 17 $\mu\text{g}/\text{m}^3$ in sample SV-4, 16 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 12 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- p- & m- Xylenes were detected at 50 $\mu\text{g}/\text{m}^3$ in sample SV-1, 41 $\mu\text{g}/\text{m}^3$ in sample SV-2, 42 $\mu\text{g}/\text{m}^3$ in sample SV-3, 49 $\mu\text{g}/\text{m}^3$ in sample SV-4, 45 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 33 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- p-Ethyltoluene was detected at 20 $\mu\text{g}/\text{m}^3$ in sample SV-1, 16 $\mu\text{g}/\text{m}^3$ in sample SV-2, 12 $\mu\text{g}/\text{m}^3$ in sample SV-3, 15 $\mu\text{g}/\text{m}^3$ in sample SV-4, 15 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 14 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Propylene was detected at 7.7 $\mu\text{g}/\text{m}^3$ in sample SV-2, 14 $\mu\text{g}/\text{m}^3$ in sample SV-4, and 6.8 $\mu\text{g}/\text{m}^3$ in sample SV-6;

- Tetrachloroethene was detected at 8,800 $\mu\text{g}/\text{m}^3$ in sample SV-1, 6,000 $\mu\text{g}/\text{m}^3$ in sample SV-2, 4,800 $\mu\text{g}/\text{m}^3$ in sample SV-3, 7,200 $\mu\text{g}/\text{m}^3$ in sample SV-4, 5,100 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 7,100 $\mu\text{g}/\text{m}^3$ in sample SV-6;
 - Toluene was detected at 47 $\mu\text{g}/\text{m}^3$ in sample SV-1, 44 $\mu\text{g}/\text{m}^3$ in sample SV-2, 34 $\mu\text{g}/\text{m}^3$ in sample SV-3, 43 $\mu\text{g}/\text{m}^3$ in sample SV-4, 47 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 26 $\mu\text{g}/\text{m}^3$ in sample SV-6;
 - Trichloroethene was detected at 1,700 $\mu\text{g}/\text{m}^3$ in sample SV-1, 350 $\mu\text{g}/\text{m}^3$ in sample SV-2, 160 $\mu\text{g}/\text{m}^3$ in sample SV-3, 160 $\mu\text{g}/\text{m}^3$ in sample SV-4, 120 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 130 $\mu\text{g}/\text{m}^3$ in sample SV-6.
9. As the soil samples collected during the RI contained only trace concentrations of tetrachloroethene (maximum of 0.021 mg/Kg) and no trichloroethene, it is concluded that the source of these compounds in the groundwater and soil vapor samples is the adjacent BCP site.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

FH 2BRO Building Corporation is planning to enroll in the New York City Voluntary Cleanup Program (NYC VCP) upon final acquisition of the property, to investigate a 0.243-acre site located at 29-05 38th Avenue in Long Island City section of Queens, New York for possible future remediation. Mixed commercial and residential use, including affordable housing, is anticipated for the property. The RI work was performed between June 29, 2020 and June 30, 2020. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 29-05 38th Avenue in the Long Island City section in Queens, New York and is identified as Block 371 and Lot 18 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 10,600-square feet and is bounded by a vacant lot that formerly maintained an industrial building to the north, 30th Street to the east, 38th Avenue to the south, and Old Ridge Road to the west. A map of the site boundary is shown in Figure 2. Currently, the Site maintains a 1.5-story warehouse building with a partial basement that is occupied by a biofuel generator rental company, a single-story vacant commercial building, a 2-story residential building with a basement, a single-single story residential building with a basement, and two, non-contiguous paved parking areas.

1.2 Proposed Redevelopment Plan

The proposed redevelopment of the Site will consist of demolition of the existing structures and construction of a 7-story mixed-use (commercial and residential) building, with a full basement that will maintain utility, laundry, and storage spaces, as well as 24 subsurface parking spaces. The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The Site is located in a primarily industrial area with some mixed-use (commercial and residential) buildings in the Long Island city area of Queens, New York. The Site is bounded by a vacant lot that formerly maintained an industrial building to the north, 30th Street to the east, 38th Avenue to the south, and Old Ridge Road to the west.

According to the OER Searchable Property Environmental E-Database (SPEED), there is one sensitive receptor (such as schools, hospitals, and day-care facilities) within a 500-foot radius of the Site; Oliver Wendell Holmes Intermediate School 204 is located approximately 490 feet to the northwest of the Site at 36-41 28th Street, Astoria, NY 11106.

In addition, the adjacent property to the north (37-24 to 37-28 30th Street) has been investigated and will be remediated under the New York State Brownfield Cleanup Program (BCP), as BCP Site Number C241214. This parcel and the adjacent parcel to the north were historically used as commercial dry cleaning and laundry facilities, and previous investigations identified elevated levels of the dry cleaning solvent tetrachloroethene and its daughter product trichloroethene in soil vapor (maximum concentrations of 28,000 and 1,140 micrograms per cubic meter, respectively).

Figure 2 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Based upon the review of the Phase I Environmental Site Assessment (Phase I ESA) Report prepared by Middleton Environmental Inc. (Middleton) dated March 8, 2020, the following Site history was established. According to Middleton's Phase I ESA, the four subject buildings at the Site (1.5-story warehouse, single-story vacant building, two-story residential building, and single-story residential building) were all constructed between 1898 and 1936. According to the Sanborn Fire Insurance maps, the 1.5-story warehouse is listed as a carpet cleaning facility from 1936 until 2006. Additionally, the vacant single-story building located on the eastern portion of the Site is shown to have been an automotive service facility and gasoline station from 1947 until at least 1950. The single-story and two-story residential buildings located on the western portion of the Site were constructed circa 1898 and 1936, respectively. They have reportedly maintained residential occupancy since construction.

2.2 Previous Investigations

No previous investigations at the Site were identified.

2.3 Site Inspection

Mr. Evan Greenberg and Mr. Justin Gugger of Athenica conducted a Site inspection on June 29, 2020, under the direction of Kenneth P. Wenz, Jr., PG, LEP (QEP). The Site reconnaissance consisted of observing conditions throughout the accessible areas of the Site and around the perimeter of the Site. At the date of the inspection, the Site consisted of the current configuration of a 1.5-story warehouse building with a partial basement that is occupied by a biofuel generator rental company, an single-story vacant commercial building, a 2-story residential building with a basement, a single-story residential building with a basement, and two, non-contiguous paved parking areas.

2.4 Areas of Concern

The AOCs identified for this site include:

1. Zero to up to approximately 7 feet below ground surface across the Site due to the potential presence of historic fill material, and

2. The past usage of the Site by a former gasoline station and automobile repair facility, as well as a carpet cleaning company.

The Phase 1 ESA Report is presented in Appendix A. A map showing these areas of concern is presented in Figure 3.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kenneth P. Wenz, Jr., PG, LEP.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Athenica performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Advanced seven (7) soil borings across the entire project Site, and collected fifteen (15) soil samples (including one blind duplicate sample) for chemical analysis of VOCs, SVOCs, PCBs, and Target Analyte List (TAL) metals, to evaluate soil quality;
3. Installed four (4) temporary groundwater monitoring wells throughout the Site to establish groundwater flow direction and collected five (5) groundwater samples (including one blind duplicate sample) for chemical analysis of VOC, SVOCs, pesticides, PCBs, and TAL metals (total and dissolved), to evaluate groundwater quality;
4. Submitted one (1) additional soil sample and one (1) additional groundwater sample for chemical analysis of PFOAs/PFAS, and 1,4-dioxane; and,
5. Installed six (6) soil vapor probes at locations across the Site and collected six (6) soil vapor samples for chemical analysis of VOCs. As the existing Site buildings are planned to be demolished, indoor and outdoor air samples were not collected.

4.1 Geophysical Investigation

On June 29, 2020, PG Environmental Services, Inc. (PGES) conducted a geophysical survey in all accessible portions of the Site, to clear proposed sample locations and evaluate the locations of the USTs historically shown at the Site. The geophysical survey used ground-penetrating radar (GPR) to identify potential subsurface utilities and structures. The findings of the geophysical survey were marked in the field using paint, and are shown on Figure 4.

One anomaly was identified within the warehouse near the entrance from the street, beneath the two-story portion of the building. This anomaly is approximately 5 feet by 6 feet in size, with a metallic signature. A remnant of a fill port was visually observed in this area, suggesting that the anomaly may be associated with the UST historically reported to be located in this area. A second anomaly was identified in the southeastern corner of the Site, within the eastern parking area at a location consistent with the historic USTs depicted for the former gasoline station. No piping was

observed, and this anomaly did not show a magnetic signature, suggesting that it represents an area of disturbed soil associated with removed USTs.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

Athenica contracted PGES to advance a total of seven (7) soil borings across the Site on June 29, 2020 and June 30, 2020. All seven (7) borings were advanced to a depth of fifteen (15) feet below ground surface (bgs), corresponding to an elevation range of 92.41 feet to 95.05 feet. The soil borings were advanced using a direct-push Geoprobe® 7822DT unit.

During advancement of the soil borings, continuous soil sampling was conducted using steel macro-core samplers fitted with dedicated acetate liners, and the samples were examined for evidence of potential contamination using field observations (odor and/or staining), were geologically characterized, and were screened for VOCs using a handheld photoionization detector (PID). No staining or elevated PID readings were observed in any of the soil samples collected during the RI. A slight unidentifiable odor was noted in soil sample SB-2 (12'-14'). No odors were observed in any of the remaining soil samples collected during the RI.

All soil borings were advanced to fifteen (15) feet bgs with soil samples collected from each boring for laboratory analysis at intervals 0 to 2 feet bgs and 12 to 14 feet bgs.

Boring logs are included in Appendix B. The locations of the soil borings are shown on Figure 4.

Groundwater Monitoring Well Construction

A total of four (4) temporary groundwater monitoring wells, designated MW-1, MW-2, MW-3, and MW-4, were installed at locations across the Site, to determine the Site-specific groundwater flow direction and to assess groundwater quality beneath the Site. The monitoring wells were installed using a direct-push rig. Groundwater was measured in the temporary wells at an elevation of approximately 66.96 to 68.68 feet. Monitoring wells MW-1, MW-2, and MW-3 were constructed using 25 feet of 1-inch PVC casing and 10 feet of 1-inch diameter PVC screen, with top of casing elevations of 57.51, 57.56, and 60.09 feet respectively. The fourth monitoring well, MW-4, was installed using 25 feet of 1-inch PVC casing and 15 feet of 1-inch diameter PVC screen, with a top of casing elevation of 55.05 feet.

Monitoring well locations are shown on Figure 4.

Survey

The locations of all soil borings, groundwater monitoring wells, and soil vapor sample locations were field measured to a minimum of two (2) Site features. In addition, each soil boring, groundwater monitoring well, and soil vapor sample location was surveyed relative to a common, random datum (benchmark), to allow for the calculation of the relative elevation of each sampling point.

Water Level Measurement

Groundwater head measurements were collected using an oil/water interface probe. The interface probe can measure depths to the 0.01 foot.

Groundwater was measured at an elevation of 68.68 feet in MW-1, 68.51 feet in MW-2, 66.96 feet in MW-3, and 67.53 feet in MW-4.

The top of casing elevations, depth to water measurements, and corresponding groundwater elevations for each will be summarized in Table 1.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater, and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

A total of fifteen (15) soil samples (including one blind duplicate sample, labelled SB-DUP, which was collected from SB-6 (0'-2')) were collected for chemical analysis from the seven (7) borings advanced during this RI, including a shallow sample (0'-2') and a deep sample (12'-14')

at each location. Figure 4 shows the soil boring locations. The laboratory and analytical methods are described below.

Soil samples to be analyzed were collected in pre-cleaned, laboratory supplied glassware, which were labeled and placed into an iced cooler for subsequent delivery by laboratory courier under Chain of Custody procedures to the laboratory for analysis. Soil samples were analyzed by York Analytical Laboratories, Inc. (York), which is approved under the New York State Department of Health Environmental Laboratory Approval Program (ELAP). All soil samples were analyzed for Target Compound List (TCL) VOCs by USEPA Method 8260 (and were collected using USEPA Method 5035), TCL SVOCs by USEPA Method 8270, TCL pesticides/PCBs by USEPA Methods 8081/8082, and TAL metals by USEPA Methods 6010/7473. Sample SB-6 (0'-2') was also analyzed for emerging contaminants PFAS (NYSDEC list of compounds) by USEPA Method 537m and 1,4-dioxane by USEPA Method 8270 SIM; this sample was collected following the special sampling protocols required for samples to be analyzed for PFAS.

Each soil sample was collected using dedicated acetate sleeves, glassware, scoop, and gloves. Decontamination was not required, as no sampling implement was reused. After completion of soil sampling, each boring was abandoned in accordance with NYSDEC requirements.

Groundwater Sampling

A total of five (5) groundwater samples were collected for chemical analysis during this RI (including one blind duplicate sample, labeled MW-DUP, which was collected from monitoring well MW-4). Figure 4 shows the locations of temporary monitoring wells/groundwater samples. Laboratory and analytical methods are presented below.

Prior to sample collection, each well was purged of a minimum of three casing volumes using a new dedicated high-density polyethylene bailer. Groundwater samples were collected using the same bailers utilized for purging, into pre-cleaned, laboratory-supplied glassware. Filled sample containers were labeled and placed into an iced cooler for subsequent delivery by laboratory courier under Chain of Custody procedures to York for analysis. All groundwater samples were analyzed for TCL VOCs by USEPA Method 8260, TCL SVOCs by USEPA Method 8270, TCL pesticides/PCBs by USEPA Methods 8081/8082, and TAL metals (total and dissolved) by USEPA Methods 6010/7473. The sample collected from MW-4 was also analyzed for emerging contaminants PFAS (NYSDEC list of compounds) by USEPA Method 537.1M and 1,4-dioxane

by USEPA Method 8270 SIM. This sample was collected following the special sampling protocols required for samples to be analyzed for PFAS. Due to a laboratory error, the 1,4-dioxane analysis could not be completed within the holding time, so this analysis was subsequently eliminated, with NYCOER approval.

Each groundwater sample was collected using dedicated bailers, string, glassware, and gloves. The interface probe used to measure the depth to groundwater was decontaminated before and after each measurement by thoroughly cleaning with solution of non-phosphate detergent and potable water. No other sampling implement was reused, so additional decontamination was not required. After completion of groundwater sampling, each temporary well was removed and the well borings were abandoned in accordance with NYSDEC requirements.

Soil Vapor Sampling

A total of six (6) temporary soil vapor probes (designated SV-1, SV-2, SV-3, SV-4, SV-5, and SV-6) were installed with six (6) soil vapor samples collected for laboratory analysis during this RI. The vapor probes were each installed to a depth of 14 feet below ground surface, the final excavation depth of the proposed redevelopment, which corresponds to elevations ranging from 78.59 to 81.05 feet. Each soil vapor probe was constructed using a 6-inch stainless steel screen and ¼-inch outer diameter Teflon-lined polyethylene tubing, and was installed using a direct-push rig. The space around each screen was backfilled with glass beads, which were topped with environmental grade silica sand and a cement layer to seal the probe at the ground surface.

Helium gas was used to verify the integrity of the seal at each soil vapor probe. A shroud served to keep the tracer gas in contact with the probes during the leak-check testing, and a portable helium detector was used to analyze soil vapor from each soil vapor probe for helium prior to any sampling. All sampling points were confirmed to be adequately sealed prior to, and after, sampling. Following the leak-check testing, a minimum of three tubing volumes were purged from each vapor probe, and a representative vapor sample was collected for laboratory analysis. Each sample was collected over an approximately two-hour period into a laboratory-supplied 6-liter Summa canister.

Soil vapor probe locations are shown in Figure 4. Soil vapor sampling logs are included in Appendix C.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Sarah Widomski, of York Analytical Laboratories, Inc.
Chemical Analytical Laboratory	Chemical analytical laboratory used in the RI is NYSDOH ELAP certified and is York Analytical Laboratories, Inc.
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by USEPA Method 6010D; • VOCs by USEPA Method 8260C; • SVOCs by USEPA Method 8270D; • Pesticides by USEPA Method 8081B; • PCBs by USEPA Method 8082A; • PFAS by USEPA Method 537m; • 1,4-dioxane by USEPA Method 8270 SIM. <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by USEPA Method 6010D; • VOCs by USEPA Method 8260C; • SVOCs by USEPA Method 8270D; • Pesticides by USEPA Method 8081B; • PCBs by USEPA Method 8082A; • PFAS by USEPA Method 537m; • 1,4-dioxane by USEPA Method 8270 SIM. <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by USEPA Method TO-15.

Results of Chemical Analyses

Laboratory data for the soil, groundwater, and soil vapor samples are summarized in Tables 2, 3, and 4, respectively. Laboratory data deliverables for all samples collected during this RI are provided in Appendix D.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the site, from the surface down, consists of approximately 10 feet of coarse-to-fine grained sand with silt and clay underlain by 10 feet of poorly-graded sand and clay. Historic fill material, as determined predominantly by the presence of brick pieces, was identified at sample locations SB-2 and SB-3 to a depth up to approximately 2 feet, and at sample location SB-6 to a depth up to approximately 7 feet.

Hydrogeology

A table of water level elevation data for all monitoring wells is included in Table 1. The average depth to groundwater is 25.88 feet below ground surface and the range in depth is 23.83 to 28.13 feet below ground surface; these depths correspond to groundwater elevations ranging from 66.96 feet to 68.68 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 5. Groundwater flow beneath the Site is from east to west.

5.2 Soil Chemistry

Soil/fill samples collected during this RI were compared to 6NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential SCOs. Results indicated:

- No VOCs, pesticides, or PCBs were detected at concentrations above Unrestricted Use SCOs in any soil sample.
- Seven SVOCs, including benzo(a)anthracene (at 2.14 milligrams per kilogram (mg/Kg)), benzo(a)pyrene (at 2.17 mg/Kg), benzo(b)fluoranthene (at 1.9 mg/Kg), benzo(k)fluoranthene (at 1.51 mg/Kg), chrysene (at 2.01 mg/Kg), dibenzo(a,h)anthracene (at 0.457 mg/Kg), and indeno(1,2,3-cd)pyrene (at 1.21 mg/Kg), were detected at concentrations exceeding their Unrestricted Use SCOs in soil boring SB-3 (0'-2'). Of these SVOCs, the concentrations of benzo(k)fluoranthene and chrysene also exceeded their Restricted Residential Use SCOs. Indeno(1,2,3-cd)pyrene (at 0.523 mg/Kg) was also detected at a concentration exceeding its Restricted Residential SCO in soil boring SB-1 (0'-2').
- Six metals, including copper (at 109 mg/Kg in soil boring SB-3 (0'-2')), lead (maximum of 339 mg/Kg in soil boring SB-3 (0'-2')), magnesium (at 1,740 mg/Kg in

soil boring SB-6 (0'-2')), Nickel (at 30.8 mg/Kg in soil boring SB-6 (12'-14')), selenium (maximum of 4.77 mg/Kg in soil boring SB-4 (12'-14')), zinc (maximum of 468 mg/Kg in soil boring SB-2 (0'-2')), and mercury (maximum of 0.748 mg/Kg in soil boring SB-4 (0'-2')), were detected at concentrations exceeding their Unrestricted Use SCOs.

- Neither PFAS nor 1,4-dioxane were detected in soil sample SB-6 (0'-2').

Data collected during the RI are sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 2. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use and Restricted Residential SCOs.

5.3 Groundwater Chemistry

Groundwater samples collected during the RI were compared to 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Results indicated:

- No pesticides or PCBs were detected at concentrations exceeding their GQS.
- Two VOCs, including chloroform (maximum of 13 micrograms per liter ($\mu\text{g/L}$) in the sample from MW-1) and tetrachloroethene (maximum of 120 $\mu\text{g/L}$ in the sample from MW-3), were detected at concentrations exceeding their GQS.
- Eight total metals, including chromium (maximum of 563 $\mu\text{g/L}$ in the sample from MW-1), copper (at 362 $\mu\text{g/L}$ in the sample from MW-1), lead (maximum of 64 $\mu\text{g/L}$ in the sample from MW-DUP), magnesium (maximum of 152,000 $\mu\text{g/L}$ in the sample from MW-1), manganese (maximum of 7,120 $\mu\text{g/L}$ in the sample from MW-1), nickel (at 153 $\mu\text{g/L}$ in the sample from MW-1), selenium (maximum of 136 $\mu\text{g/L}$ in the sample from MW-3), and sodium (maximum of 118,000 $\mu\text{g/L}$ in the sample from MW-DUP), were detected at concentrations exceeding their GQS.
- Four dissolved metals, including magnesium (maximum of 41,000 $\mu\text{g/L}$ in the sample from MW-3), manganese (maximum of 654 $\mu\text{g/L}$ in the sample from MW-3), selenium (maximum 81 $\mu\text{g/L}$ in the sample from MW-3), and sodium (maximum of 101,000 $\mu\text{g/L}$ in the sample from MW-4) were detected at concentrations exceeding their GQS.

- PFOA/PFAS compounds including PFBS (at 0.00772 µg/L), PFHpA (at 0.0101 µg/L), PFHxS (at 0.00348 µg/L), and PFHxA (at 0.200 µg/L) were detected in the sample from MW-4. 1,4-dioxane was not detected in this sample.
- Due to a laboratory error, the analysis of groundwater sample MW-4, groundwater sample MW-DUP, and the field blank samples (Soil Field Blank and Groundwater Field Blank) for 1,4-dioxane could not be completed within the holding time. NYCOER was informed on July 7, 2020, and elimination of these analysis was authorized.
- As the soil samples collected during the RI contained only trace concentrations of tetrachloroethene (maximum of 0.021 mg/Kg) and no trichloroethene, it is concluded that the source of these compounds in the groundwater samples is the adjacent BCP site.

Data collected during the RI are sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 3. Exceedences of applicable groundwater standards are shown.

Figure 7 shows the location and posts the values for groundwater that exceed the New York State Class GA groundwater standards.

5.4 Soil Vapor Chemistry

Soil vapor samples collected during the RI were analyzed for VOCs via USEPA Method TO-15. Results include the following:

- Twenty-one (21) individual VOCs were detected in the soil vapor samples.
 - 1,1,1-Trichloroethane was detected at 13 micrograms per cubic meter (µg/m³) in sample SV-3;
 - 1,2,4-Trimethylbenzene was detected at 16 µg/m³ in SV-1, 14 µg/m³ in SV-2, 10 µg/m³ in SV-3, 16 µg/m³ in SV-4, 14 µg/m³ in SV-5, and 12 µg/m³ in sample SV-6;
 - 2-Butanone was detected at 220 µg/m³ in sample SV-1, 75 µg/m³ in sample SV-2, 50 µg/m³ in sample SV-3, 140 µg/m³ in sample SV-4, 36 µg/m³ in sample SV-5, and 47 µg/m³ in sample SV-6;

- 2-Hexanone was detected at 86 $\mu\text{g}/\text{m}^3$ in sample SV-1, 30 $\mu\text{g}/\text{m}^3$ in sample SV-2, 17 $\mu\text{g}/\text{m}^3$ in sample SV-3, 49 $\mu\text{g}/\text{m}^3$ in sample SV-4, 18 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 15 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Acetone, a laboratory contaminant, was detected at 1,400 $\mu\text{g}/\text{m}^3$ in sample SV-1, 1,300 $\mu\text{g}/\text{m}^3$ in sample SV-2, 700 $\mu\text{g}/\text{m}^3$ in sample SV-3, 2,500 $\mu\text{g}/\text{m}^3$ in sample SV-4, 540 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 830 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Benzene was detected at 8.5 $\mu\text{g}/\text{m}^3$ in sample SV-1, 5.6 $\mu\text{g}/\text{m}^3$ in sample SV-2, 5 $\mu\text{g}/\text{m}^3$ in sample SV-3, 6 $\mu\text{g}/\text{m}^3$ in sample SV-4, and 5.3 $\mu\text{g}/\text{m}^3$ in sample SV-5;
- Carbon disulfide was detected at 6.8 $\mu\text{g}/\text{m}^3$ in sample SV-3;
- Chloroform was detected at 19 $\mu\text{g}/\text{m}^3$ in sample SV-1, 38 $\mu\text{g}/\text{m}^3$ in sample SV-2, 480 $\mu\text{g}/\text{m}^3$ in sample SV-3, 56 $\mu\text{g}/\text{m}^3$ in sample SV-4, 56 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 37 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- cis-1,2-Dichloroethene was detected at 16 $\mu\text{g}/\text{m}^3$ in sample SV-1, and 4.6 $\mu\text{g}/\text{m}^3$ in sample SV-5;
- Cyclohexane was detected at 30 $\mu\text{g}/\text{m}^3$ in sample SV-3, 18 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 37 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Ethylbenzene was detected at 15 $\mu\text{g}/\text{m}^3$ in sample SV-1, 12 $\mu\text{g}/\text{m}^3$ in sample SV-2, 12 $\mu\text{g}/\text{m}^3$ in sample SV-3, 14 $\mu\text{g}/\text{m}^3$ in sample SV-4, 12 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 9.2 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Isopropanol was detected at 14 $\mu\text{g}/\text{m}^3$ in sample SV-1;
- n-Heptane was detected at 35 $\mu\text{g}/\text{m}^3$ in sample SV-1, 20 $\mu\text{g}/\text{m}^3$ in sample SV-2, 76 $\mu\text{g}/\text{m}^3$ in sample SV-3, 19 $\mu\text{g}/\text{m}^3$ in sample SV-4, 55 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 97 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- n-Hexane was detected at 34 $\mu\text{g}/\text{m}^3$ in sample SV-1, 21 $\mu\text{g}/\text{m}^3$ in sample SV-2, 310 $\mu\text{g}/\text{m}^3$ in sample SV-3, 21 $\mu\text{g}/\text{m}^3$ in sample SV-4, 180 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 390 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- o-Xylene was detected at 17 $\mu\text{g}/\text{m}^3$ in sample SV-1, 15 $\mu\text{g}/\text{m}^3$ in sample SV-2, 16 $\mu\text{g}/\text{m}^3$ in sample SV-3, 17 $\mu\text{g}/\text{m}^3$ in sample SV-4, 16 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 12 $\mu\text{g}/\text{m}^3$ in sample SV-6;

- p- & m- Xylenes were detected at 50 $\mu\text{g}/\text{m}^3$ in sample SV-1, 41 $\mu\text{g}/\text{m}^3$ in sample SV-2, 42 $\mu\text{g}/\text{m}^3$ in sample SV-3, 49 $\mu\text{g}/\text{m}^3$ in sample SV-4, 45 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 33 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- p-Ethyltoluene was detected at 20 $\mu\text{g}/\text{m}^3$ in sample SV-1, 16 $\mu\text{g}/\text{m}^3$ in sample SV-2, 12 $\mu\text{g}/\text{m}^3$ in sample SV-3, 15 $\mu\text{g}/\text{m}^3$ in sample SV-4, 15 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 14 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Propylene was detected at 7.7 $\mu\text{g}/\text{m}^3$ in sample SV-2, 14 $\mu\text{g}/\text{m}^3$ in sample SV-4, and 6.8 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Tetrachloroethene was detected at 8,800 $\mu\text{g}/\text{m}^3$ in sample SV-1, 6,000 $\mu\text{g}/\text{m}^3$ in sample SV-2, 4,800 $\mu\text{g}/\text{m}^3$ in sample SV-3, 7,200 $\mu\text{g}/\text{m}^3$ in sample SV-4, 5,100 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 7,100 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Toluene was detected at 47 $\mu\text{g}/\text{m}^3$ in sample SV-1, 44 $\mu\text{g}/\text{m}^3$ in sample SV-2, 34 $\mu\text{g}/\text{m}^3$ in sample SV-3, 43 $\mu\text{g}/\text{m}^3$ in sample SV-4, 47 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 26 $\mu\text{g}/\text{m}^3$ in sample SV-6;
- Trichloroethene was detected at 1,700 $\mu\text{g}/\text{m}^3$ in sample SV-1, 350 $\mu\text{g}/\text{m}^3$ in sample SV-2, 160 $\mu\text{g}/\text{m}^3$ in sample SV-3, 160 $\mu\text{g}/\text{m}^3$ in sample SV-4, 120 $\mu\text{g}/\text{m}^3$ in sample SV-5, and 130 $\mu\text{g}/\text{m}^3$ in sample SV-6.
- As the soil samples collected during the RI contained only trace concentrations of tetrachloroethene (maximum of 0.021 mg/Kg) and no trichloroethene, it is concluded that the source of these compounds in the soil vapor samples is the adjacent BCP site.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 4.

Figure 8 shows the location and posts the values for soil vapor samples with detected concentrations.

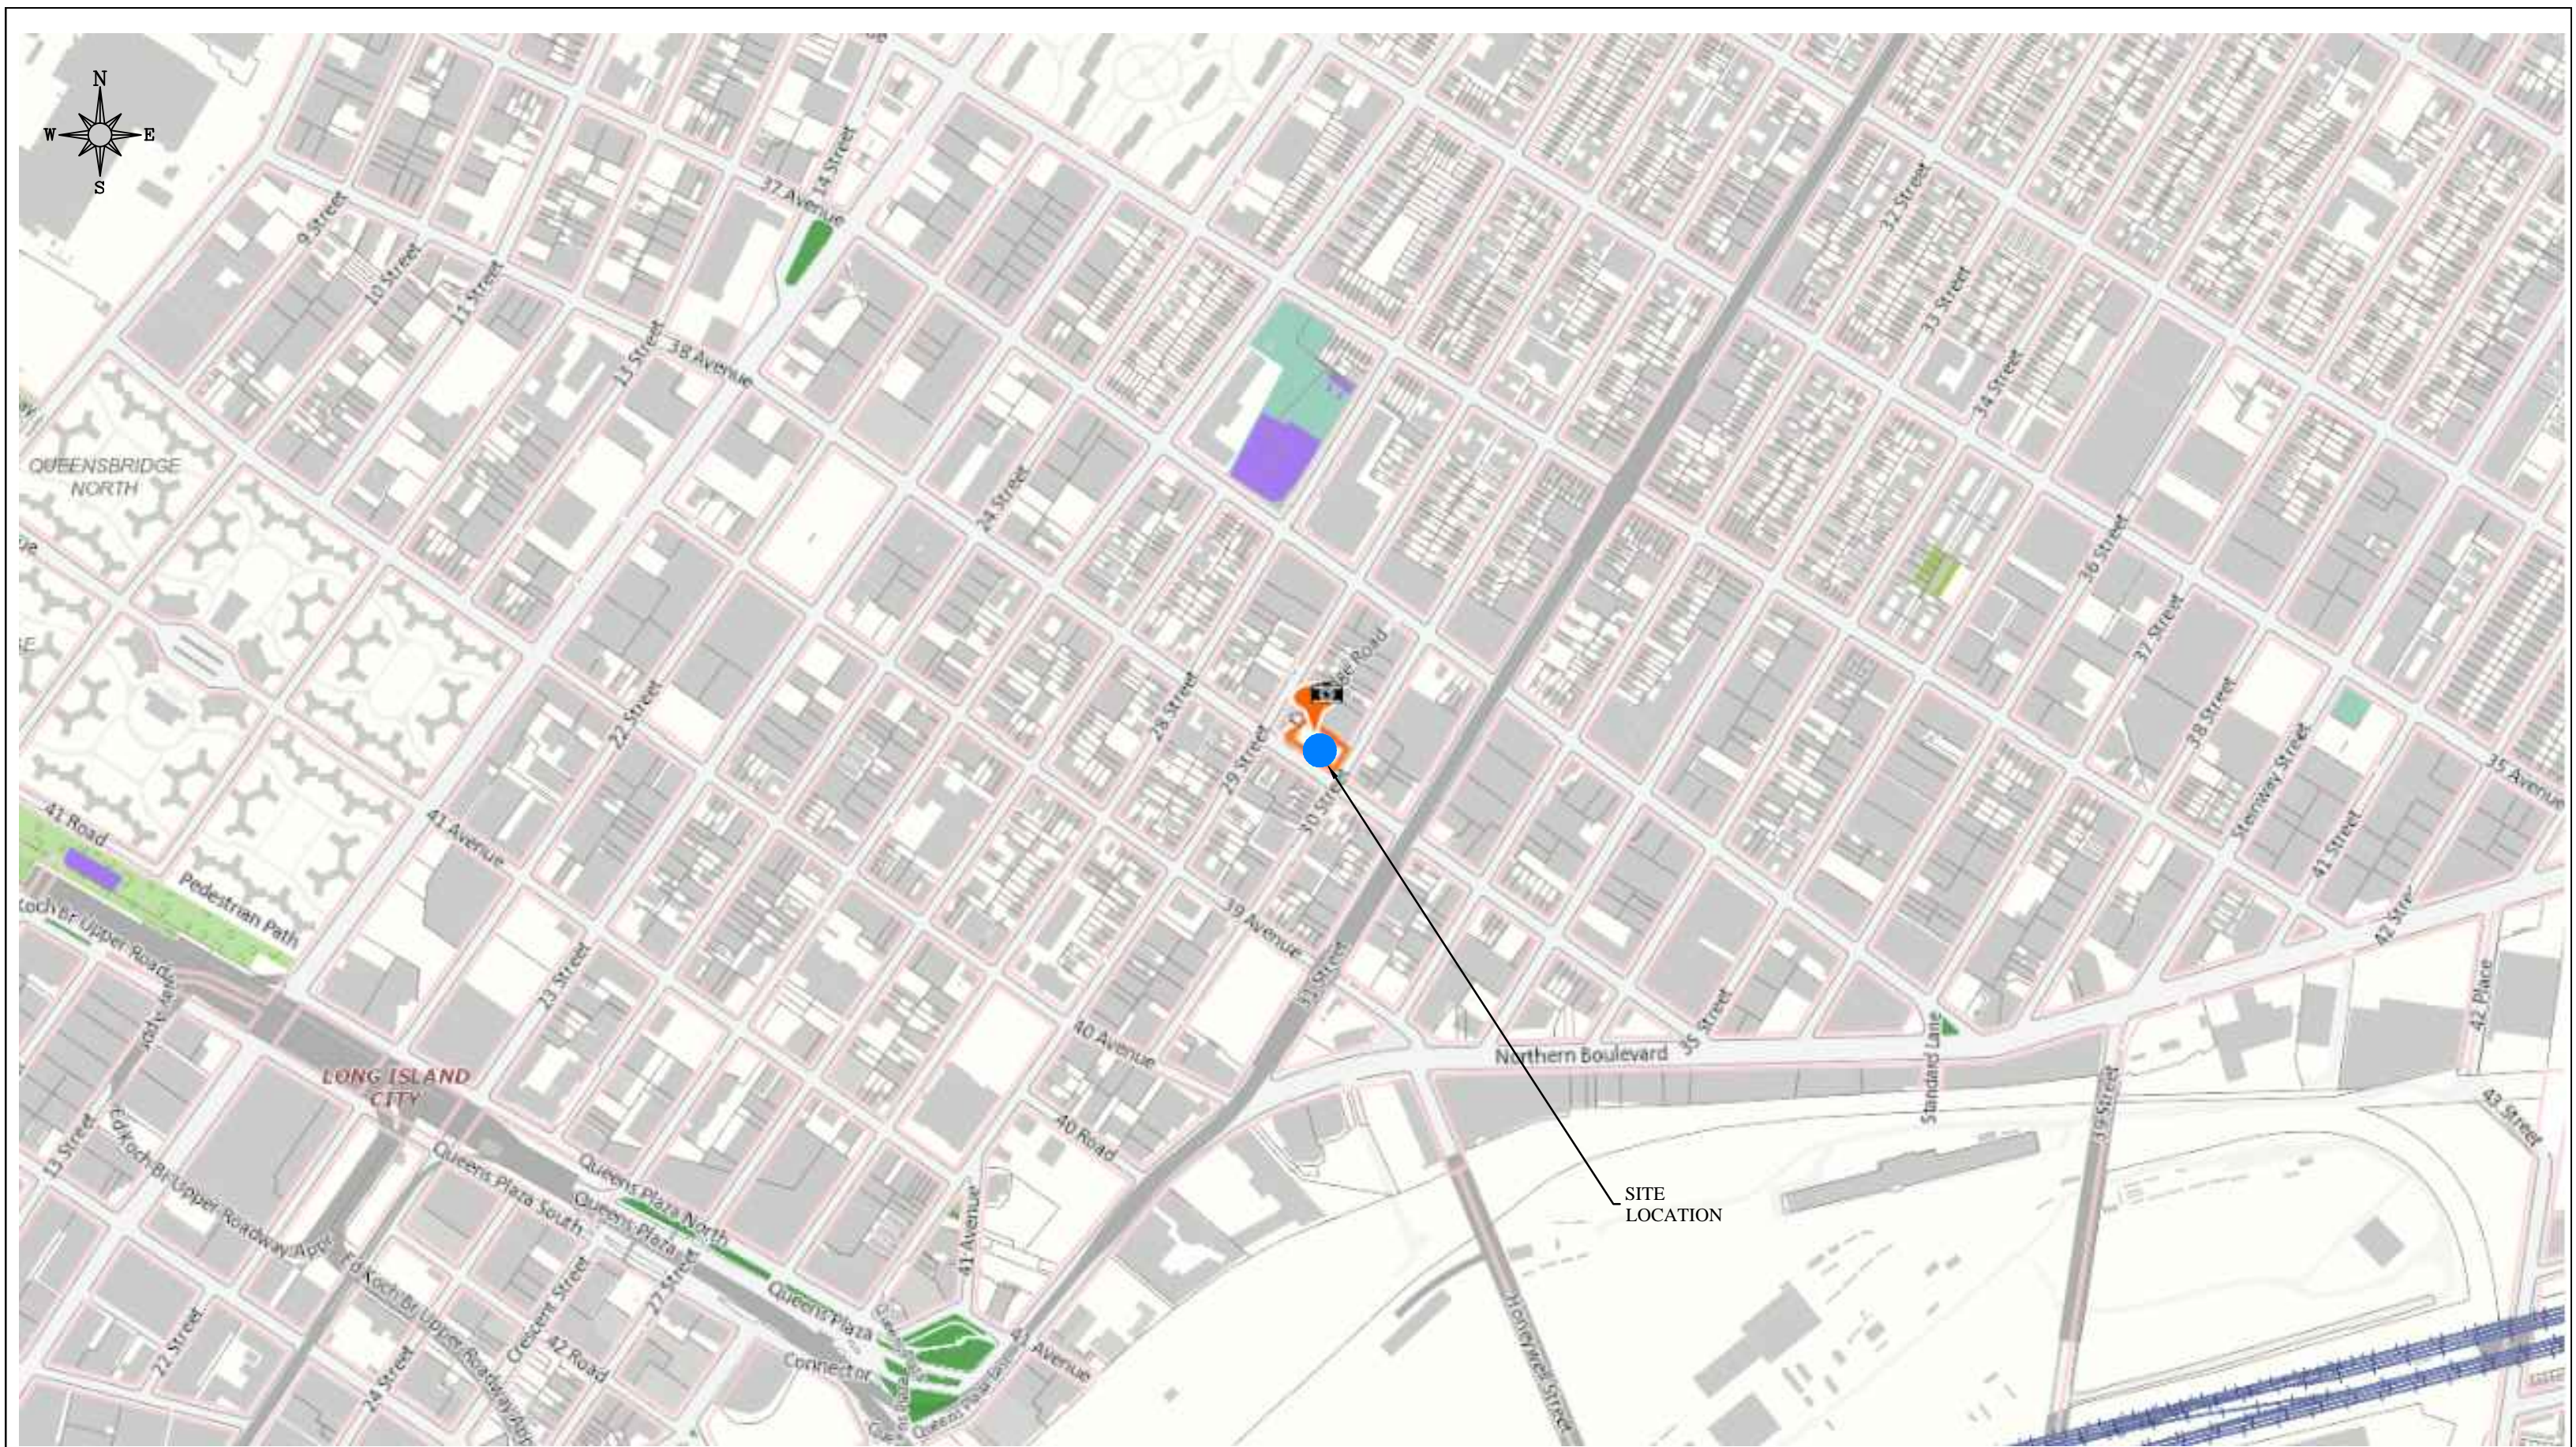

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

NOTES:
 Exceeds Unrestricted Use SCDs
 Exceeds Restricted Residential SCDs
 Q is the Qualifier Column with definitions as follows:
 D= result is from an analysis that required a dilution
 I= analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
 U= analyte not detected at or above the level indicated
 B= analyte found in the analysis batch blank
 E= result is estimated and cannot be accurately reported due to levels encountered or interferences
 P= this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
 NT= this indicates the analyte was not a target for this sample
 ~= this indicates that no regulatory limit has been established for this analyte

Perfluorotetradecanoic acid (PFTA)	<0.000531	U	<0.000531	U	<0.000531	U
Perfluorotridecanoic acid (PFTTrDA)	<0.00137	U	<0.00137	U	<0.00137	U
Perfluoroundecanoic acid (PFUnA)	<0.000657	U	<0.000657	U	<0.000657	U
Total PFOAs	0.13116		0.13216		0.00645	

NOTES:

Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~=this indicates that no regulatory limit has been established for this analyte

Re: Phase I Environmental Site Assessment Report

29-05 38th Avenue in Long Island City, New York 11101

MEI Project #: 20-0186

In accordance with our agreement, Middleton Environmental Incorporated (MEI), has performed a Phase I Environmental Assessment of the above referenced property in accordance with ASTM E 1527-13 Scope of Work. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for choosing MEI as your consultant for this project. If you have any questions, or if we can be of additional service, please contact us at (631) 321 4300.

Respectfully submitted,

Middleton Environmental Incorporated

1.0 EXECUTIVE SUMMARY

At the request of Preferred Bank, Middleton Environmental Incorporated (MEI) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 29-05 38th Avenue in Long Island City, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify **Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs)** in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13. This assessment has identified no evidence of CRECs or HRECs in connection with the Subject Property. However, this assessment has identified RECs regarding the possible presence of underground gasoline storage tanks and the former usage by a former gasoline station and automobile repair facility and carpet cleaning company was identified pertaining to the Subject Property.

The Subject Property consists of an irregularly-shaped parcel totaling approximately 0.24 acre in size. The Subject Property is improved with a total of three subject buildings: a 1½ story warehouse primarily constructed on-grade, with a front partial basement area; a 2-story dwelling with a basement and a 1-story dwelling with a basement. Each building was constructed between 1898 and 1936. Additional site improvements are limited to two, non-contiguous, asphalt-paved parking areas at the eastern and western portions of the Property, respectively, and concrete-paved public sidewalks at the 38th Avenue and 30th Street frontages.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. MEI's Findings and Opinions and Recommendations for further action or investigation (if any), are presented in Section 10.0.

ASSESSMENT SUMMARY TABLE			
Assessment Component	Section(s)	Recommended Actions	Estimated Cost
Historical Review	5.3, 5.4 & 5.5	Phase II Environmental Site Assessment	\$ 9,000 - \$ 13,000
Current Occupants / Operations	3.3	No Further Action	
Hazardous Substances / Petroleum Products	7.2	Phase II Environmental Site Assessment	
Drains, Sumps & Storm Water Drywells	7.2	No Further Action	
Storage Tanks	7.2	Phase II Environmental Site Assessment	
PCBs	7.2	No Further Action	
Regulatory Agency / Database Review	5.1	No Further Action	
Asbestos Containing Materials	9.1	No Further Action	
Lead Based Paint	9.2	No Further Action	
Lead in Drinking Water	9.3	No Further Action	
Radon	9.4	No Further Action	
Mold	9.5	No Further Action	
Wetlands	9.6	No Further Action	

2.0 INTRODUCTION

2.1 Purpose

MEI has performed a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 29-05 38th Avenue in Long Island City, New York (Subject Property). The purpose of this Phase I Environmental Site Assessment (Phase I ESA) is to investigate and identify Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs) associated with the Subject Property and/or surrounding property. Recognized Environmental Conditions, as defined in the ASTM Standard Practice E 1527-13, including the following:

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

For the purpose of this Phase I ESA, *recognized environmental conditions (REC's)*, may also include the presence or likely presence of other conditions as noted in the Scope of Services.

2.2 Scope of Services

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review. The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, radon, mold, and wetlands.

2.3 Assumptions and Limitations

There is a possibility that even with the proper application of these methodologies there may exist on the Subject Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. The information and conclusions contained in this report are based upon work undertaken by trained professional in accordance with generally accepted engineering and scientific practices current at the time the work was performed. MEI believes that the information obtained from the record review and the interviews concerning the Subject Property is reliable. However, MEI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all-inclusive or comprehensive results, but rather to provide the User with information relating to the Subject Property. Due to the nature of this investigation and data available, MEI cannot warrant against undiscovered environmental liabilities. Should any additional information become available which differs significantly from our understanding of conditions or findings represented in this report, we request that this information be supplied to MEI so that MEI may reassess the conclusions provided in this report (if necessary).

The findings, opinions and conclusions of this report contain the limitations inherent in these methodologies that are referred to in ASTM E 1527-13. Specific limitations and exceptions to this ESA are set forth below:

Historical and environmental information pertaining to the Subject Property has been included in this report to the extent that such information is "reasonably ascertainable" as defined in the above-referenced standard practice and in accordance with the project specific timeframes.

MEI reviewed an environmental database search report. MEI's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, MEI's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the Subject Property.

With respect to conditions outside the scope of the ASTM Standard, MEI's observations are limited to physical observations and a review of published data. Unless otherwise stated, no sampling for Asbestos Containing Materials, Lead Based Paint, Drinking Water, Radon, Mold, or Wetlands was conducted.

2.4 Special Terms and Conditions

This Phase I Environmental Site Assessment (“the report”) has been prepared to assist Preferred Bank in its underwriting of a proposed mortgage loan or financing on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. MEI’s liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to MEI’s limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and MEI’s contract and report extends Preferred Bank only, in accordance with MEI Terms and Condition and the MEI Scope of Work.

2.5 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

2.6 Deviations

No deviations from the recommended scope of ASTM Standard E 1527-13 were performed as part of this Phase I ESA with the exception of any additional services noted in Section 2.2 Scope of Services.

2.7 User Reliance

This Phase I Environmental Site Assessment Report is for the benefit of Preferred Bank and this report may not be relied upon by any other person or entity without the written consent of MEI.

Only if written agreement has been executed granting the right to utilize this report, no third party which obtains all or portion of this report shall have any rights of recourse or recovery under any course of action against MEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with MEI's Standard Phase I Environmental Site Assessment Contract and this report is for the benefit of Preferred Bank and its successors and assigns. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of MEI.

3.0 SITE DESCRIPTION

3.1 Ownership and Location

According to the Automated City Register Information System (ACRIS) operated by the New York City Department of Finance, the Subject Property is identified as Block 371, Lot 38, and the Property is currently owned by Pemas, LLC.

The Property is located in a built-up, urban, mixed-use residential/commercial/industrial area within the borough of Queens, within the postal code of Long Island City, Queens County, and within the City and State of New York. MEI did not identify any prior owners or occupants of potential environmental concern in the property records obtained from the NYC Department of Finance.

3.2 Improvements

The Subject Property consists of an irregularly-shaped parcel totaling approximately 0.24 acre in size. The Subject Property is improved with a total of three subject buildings: a 1½ story warehouse primarily constructed on-grade, with a small, front partial basement area; a 2-story dwelling with a basement; and a 1-story dwelling with a basement, each of which were constructed between 1898 and 1936. Additional site improvements are limited to two, non-contiguous, asphalt-paved parking areas at the eastern and western portions of the Property, respectively, and concrete-paved public sidewalks at the 38th Avenue and 30th Street frontages.

3.3 Current Use of the Subject Property

The Subject Property is improved with two dwellings, and a 1½ story warehouse primarily constructed on-grade, with a small, front partial basement area. The warehouse is currently occupied by Green Now, a biofuel generator rental company. The 1-story dwelling basement contains residential and mechanical areas. The commercial building basement contains mechanical areas. The commercial building first floor is utilized for warehouse/storage, parking, and office purposes. The commercial building partial second floor/mezzanine contains office areas.

3.4 Services, Utilities and Roadways

Street Address(es): 29-05 – 29-17 38th Avenue / 37-51 Old Ridge Road / 37-44 30th Street

City and State: Postal zone of Long Island City, within the Borough of Queens, and within the City and State of New York

County: Queens County

Owner: Pemas, LLC

Property Size: 0.24 acre

Access Roadway to site: 38th Avenue, adjacent to the southwest of the Property

Site Use: Warehouse/office, dwellings, and parking

Occupants: Green Now and residential tenants

Electricity Provider: Consolidated Edison of New York (ConEd)

Natural Gas Provider: National Grid

Fuel Oil Provider: Not applicable

Potable Water: Municipal Water Supply System

Sewer Services: Municipal Sewer System

Heating System: Central, natural gas-fired low-pressure boilers (dwellings); and natural gas-/electric-fired split system HVAC units and natural gas-fired, ceiling-mounted unit heaters (commercial building)

3.5 Adjoining Property Usage

The current usage of the adjoining properties is residential and commercial/industrial in nature. The Subject Property borders are as follows:

North - The Subject Property is bordered to the north by an unlabeled 2-story commercial building and a development site.

South - The Subject Property is bordered to the south by 38th Avenue, beyond which are multi-story residential buildings, a 1-story restaurant, and an auto repair facility.

East - The Subject Property is bordered to the east by 30th Street, beyond which is a 2-story commercial office/retail building.

West - The Subject Property is bordered to the west by Old Bridge Road, beyond which is an unlabeled 1½-story warehouse.

4.0 USER PROVIDED INFORMATION

4.1 Environmental Pre-Survey Questionnaire

Pursuant to ASTM E 1527-13, MEI requested the following site information from the User of this report and from the site contact. The following section summarizes information provided Preferred Bank with regard to this Phase I Environmental Site Assessment.

ITEM	PROVIDED BY USER	NOT PROVIDED BY USER	DISCUSSED BELOW	DOES NOT APPLY
4.1 Environmental Pre-survey Questionnaire		X		
4.2 Title Records		X		
4.3 Environmental Liens or Activity and Use Limitation		X		
4.4 Specialized Knowledge		X		
4.5 Commonly Known or Reasonably Ascertainable Information		X		
4.6 Valuation Reduction for Environmental Issues		X		
4.7 Identification of Key Site Manager	X			
4.8 Reason for Performing Phase 1 ESA	X			
4.9 Prior Environmental Reports		X		

4.2 Title Records

Title record information associated with the Subject Property has not been provided to MEI by Preferred Bank. Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3 Environmental Liens or Activity and Use Limitation

The property owner/user/key site personnel did not report any Environmental Liens or Activity/Use Limitations on the site. An environmental lien search was not included in the scope of work of this assessment and therefore was not performed. However, if the findings of a lien search performed by any other party does reveal the presence of an environmental related lien on the subject property, this information should be forwarded to MEI for review, and any significant findings will be added to this assessment as an addendum to this report.

4.4 Specialized Knowledge

Preferred Bank provided no specialized knowledge that is material to Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs). MEI was not provided with or made aware of previous environmental assessments or other documentation that is material to RECs, CRECs or HRECs in connection with the Subject Property, except as presented in Section 4.3 of this report.

4.5 Commonly Known or Reasonably Ascertainable Information

Preferred Bank has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

4.6 Valuation Reduction for Environmental Issues

Preferred Bank has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

4.7 Identification of Key Site Manager

Preferred Bank did not provide contact information for the Subject Property owner, manager, and/or occupant. The Contact person for site access was Mr. George Abdoulos, owner of the Property, of Pemas, LLC.

4.8 Reason for Performing Phase I ESA Report

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-13) in connection with the Subject Property. This ESA was also performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E-1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

4.9 Prior Environmental Reports

Although requested, no previous environmental reports were provided to MEI for review.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappable section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Subject Property. Pertinent regulatory files / records associated with the Subject Property and/or any adjoining site will be requested for review in the event the listing is associated with a facility at which a suspected or confirmed release has occurred that has not yet been closed to the satisfaction of the regulatory agency and/or if the facility represents a REC in connection with the Subject Property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Subject Property, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Subject Property from the listed facilities (see appendix 12.5 for Environmental Database Report).

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	Approximate Minimum Search Distance	Subject Property Listed	Off-site Listing Within Search Distance
Federal NPL Sites	1.0 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
Federal SEMS Sites (formerly CERCLIS Sites)	0.5 mile	No	0
Federal SEMS Archive Sites (formerly CERCLIS NFRAP)	0.5 mile	No	0
Federal RCRA CORRACTS Sites	1.0 mile	No	1
Federal RCRA Generators Sites	Property & Adjoining	No	1
Federal RCRA Non-CORRACTS TSD Sites	0.5 mile	No	0
Federal Engineering / Institutional Control Sites	0.5 mile	No	0
Federal ERNS Sites	Subject Property	No	NA
State and Tribal equivalent NPL Sites	1.0 mile	No	16
State and Tribal equivalent CERCLIS Sites	0.5 mile	No	0
State and Tribal Leaking Storage Tank Sites	0.5 mile	No	51
State and Tribal Spills Sites	Subject Property	No	NA
State and Tribal Landfill or Solid Waste Disposal Sites	0.5 mile	No	1
State and Tribal Registered Storage Tank Sites	Property & Adjoining	No	0
State and Tribal Engineering / Institutional Control Sites	0.5 mile	No	2 / 4
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	4
State and Tribal Brownfield Sites	0.5 mile	No	13

- **Federal National Priority List (NPL) Sites**

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. The Subject Property is not listed as a Federal NPL site. No NPL sites were identified within one mile of the Property.

- **Federal Delisted National Priority List (NPL) Sites**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. The Subject Property is not listed as a Federal Delisted NPL site. No Federal Delisted NPL sites were identified within one mile of the Property.

- **Federal SEMS Sites (formerly CERCLIS Sites)**

The SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the SEMS List and the sites which are in the screening and assessment phase for possible inclusion on the SEMS. The Property is not identified as a Federal SEMS facility. No SEMS sites are located within a half-mile of the Subject Property.

- **Federal SEMS-ARCHIVE List**

The SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the SEMS List. The Property is not identified as a SEMS-ARCHIVE facility. No SEMS ARCHIVE sites are located within a half-mile of the Subject Property.

- **Federal RCRA CORRACTS Sites**

RCRA Corrective Action Tracking System (CORRACTS) is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies Transportation, Storage or Disposal (TSD), facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The Subject Property was not identified on the RCRA CORRACTS site list. However, one RCRA CORRACTS site is located within one mile of the Subject Property. This site is located 0.67 mile to the west-northwest, and cross-gradient relative to the Property. Therefore, based on its distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with this RCRA CORRACTS site would represent an environmental concern to the Subject Property.

- **Federal RCRA Hazardous Waste Generators Sites**

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). A RCRA-LQG is a facility that generates over 1,000 kilograms (Kg) of hazardous waste. A RCRA-SQG is a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month while a RCRA-CESQG generates less than 100 Kg of hazardous waste per month. The Subject Property is not listed as Resource Conservation and Recovery Act (RCRA) Generator site. However, one adjoining RCRA SQG site was identified. This site is known as Enterprise Cleaners, and is located at 37-26 30th Street, adjacent to the northeast of, and up-gradient relative to, the Property. This site is also listed on the NY DRYCLEANERS, NY MANIFEST, and RI MANIFEST databases. This facility formerly consisted of a commercial dry cleaning plant, and numerous violations and enforcement actions were identified for this facility on the RCRA SQG database. Of note, this facility appeared to no longer be in operation during MEI's site inspection.

- **Federal RCRA non-CORRACTS TSD Sites**

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) sites are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD site. No Federal RCRA non-CORRACTS TSD sites are located within a half-mile radius of the Subject Property.

- **Federal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property is not listed as a Federal Engineering Controls or Institutional Control site. No Federal Engineering Controls / Institutional Control sites are located within a half-mile of the Subject Property.

- **Federal Emergency Response Notification System (ERNS) Sites**

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a Federal ERNS site.

- **State and Tribal Equivalent NPL Sites**

State and Tribal equivalent NPL databases were searched for sites located within a mile of the Subject Property. The Subject Property is not listed as a State and Tribal Equivalent NPL site. However, 16 State and Tribal equivalent NPL sites are located within one mile of the Subject Property. These sites are each located in excess of 0.30 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 16 State and Tribal Equivalent NPL sites would represent an environmental concern to the Subject Property.

- **State and Tribal equivalent CERCLIS Sites**

State and Tribal equivalent CERCLIS databases were searched for sites located within a half mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent CERCLIS Site. No State and Tribal equivalent CERCLIS sites are located within a half-mile radius of the Subject Property.

- **State and Tribal Leaking Storage Tank Sites**

Leaking Storage Tank sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property is not listed as a State and Tribal Leaking Storage Tank site. However, 51 sites located within a half-mile of the Subject Property were identified as State and Tribal Leaking Storage Tank sites. Each of the Leaking Storage Tank sites are located in excess of 0.05 mile of the Subject Property, and are located either cross- or down-gradient relative to the Property, or have been Closed by the NYSDEC, or both. Therefore, based on their distance, gradient, and/or regulatory status, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 51 Leaking Storage Tank sites would represent an environmental concern to the Subject Property.

- **State and Tribal Spills Sites**

A review of the State and Tribal Spills database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a State and Tribal Spills site.

- **State and Tribal Landfill Sites and Solid Waste Disposal Sites**

The State and Tribal Landfill and Solid Waste Disposal site database identifies active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property is not listed as a State and Tribal Landfill and Solid Waste Disposal site. However, one State and Tribal Landfill and Solid Waste Disposal site is located within a half-mile of the Subject Property. This site is located 0.34 mile to the northwest, and cross-gradient relative to the Property. Therefore, based on its distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with this State and Tribal Landfill and Solid Waste Disposal site would represent an environmental concern to the Subject Property.

- **State and Tribal Registered Storage Tank Sites**

The Property and adjoining properties are not listed on the AST or UST registration databases.

- **State and Tribal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property was not listed as a State Engineering Controls or Institutional Control site. However, two State Engineering Controls sites and four Institutional Control sites are located within a half-mile of the Subject Property. These sites are each located in excess of 0.14 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these State Engineering Controls / Institutional Control sites would represent an environmental concern to the Subject Property.

- **State and Tribal Voluntary Cleanup Sites**

The Subject Property is not listed as a State and Tribal Voluntary Cleanup site. However, four State and Tribal Voluntary Cleanup site is located within a half-mile of the Subject Property. These sites are each located in excess of 0.30 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these four State and Tribal Voluntary Cleanup sites would represent an environmental concern to the Subject Property.

- **State and Tribal Brownfield Sites**

The Subject Property is not listed as a State and Tribal Brownfield site. However, 13 State and Tribal Brownfield sites are located within a half-mile of the Subject Property. These sites are each located in excess of 0.10 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 13 State and Tribal Brownfield sites would represent an environmental concern to the Subject Property.

5.2 Sanborn Fire Insurance Maps

Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of available fire insurance maps are presented in Appendix 12.6.

FIRE INSURANCE MAP SUMMARY		
Year	Issues Noted	Observations
1898	No	Subject Property: Two small dwellings and undeveloped land are depicted on-site (with the rear dwelling appearing to be the rear dwelling identified on-site during MEI's site inspection).
		Surrounding Area: Dwellings, undeveloped land, and a 1½-story commercial building are depicted on the surrounding properties.
1915	No	Subject Property: Two small dwellings and undeveloped land are depicted on-site (with the rear dwelling appearing to be the rear dwelling identified on-site during MEI's site inspection).
		Surrounding Area: Dwellings, multi-story residential buildings, undeveloped land, and a 1½-story commercial building are depicted on the surrounding properties.
1936	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Kashan Carpet Cleaning" with a gasoline UST at the building frontage; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively), with two gasoline USTs depicted at the eastern parking area (assumed to be the development depicted on-site during MEI's site inspection).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, and commercial/industrial properties, including a dry cleaning plant to the south, beyond 38 th Avenue at 29-10 – 29-14 38 th Avenue.
1947 – 1950	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively), with the eastern parking area labeled "Filling Station" (assumed to be the development depicted on-site during MEI's site inspection). Of note, no USTs are depicted on-site.
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, and commercial/industrial properties, including a dry cleaning plant to the south, beyond 38 th Avenue at 29-10 – 29-14 38 th Avenue.
1970 - 1980	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including a gasoline station to the east, beyond 30 th Street, at 30-01 – 30-05 38 th Avenue.
1986	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including an auto repair facility to the east, beyond 30 th Street, at 30-01 – 30-05 38 th Avenue.
1988 - 2006	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including a plastics manufacturing facility to the north at 37-28 30 th Street.

The 1936 Sanborn map reviewed depicts three gasoline USTs on-site, including a one gasoline UST at the commercial building frontage, and two gasoline USTs depicted at the eastern parking area. In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950. Moreover, the Sanborn maps depict over 75 years of historical industrial and automotive usage on the adjacent properties. The historical presence of gasoline USTs and a gasoline station on-site, as well as the historical industrial and automotive usage of the adjacent properties, the subsequent potential for sub-surface contamination at the Property, is considered to be an REC.

5.3 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by researching available historical aerial photographs from www.historicaerials.com and other available resources. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table:

AERIAL PHOTOGRAPH SUMMARY		
Year	Issues Noted	Observations
1954 - 2015	No	Subject Property: A commercial building, two small dwellings, and two non-contiguous parking areas appear to be depicted on-site.
		Surrounding Area: The surrounding area is densely developed, and the adjoining properties appear to be developed with dwellings, multi-story residential buildings, and commercial/industrial facilities.

5.4 City Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by MEI and EDR. Historical street directories were reviewed and are summarized in the following table.

CITY DIRECTORY SUMMARY		
Year	Issues Noted	Occupants
1934	Yes	Carpet Cleaning firms
1939	Yes	Carpet Cleaning firms
1945	Yes	Carpet Cleaning firms
1962	Yes	Carpet Cleaning firms
1967	No	Carpet Cleaning firms and individual tenants/owners
1970	Yes	Carpet Cleaning firms
1976	Yes	Carpet Cleaning firms
1983	Yes	Carpet Cleaning firms and individual tenants/owners
1991	No	Individual tenants/owners
2000	Yes	Individual tenants/owners and an auto repair facility
2005	Yes	Daytona Auto Body
2010	Yes	Millennium Auto Care, Daytona Auto Repair, a taxi company
2014	Yes	Daytona Auto Repair, Millennium Auto Care, Greenow Productions

The historical usage of the Property as an auto repair facility and by a carpet cleaning company is considered to be an REC.

5.5 Vapor Encroachment Conditions

All readily ascertainable information including all applicable Federal, State, Tribal and local database information, historical usage information, soil and groundwater sources and information from the site reconnaissance were reviewed in order to determine if there is a possibility of a Vapor Encroachment Condition regarding the Subject Property. Based upon the results of the site reconnaissance and review of readily ascertainable information, the Vapor Encroachment Condition survey is described below:

POTENTIAL AREA OF CONCERN	RESULT
Does the Subject Property have a current or past contamination concern?	None identified
Does the Subject Property have a suspected contamination concern?	See below
Does an adjacent property have a current or past contamination concern?	None identified
Does a nearby property have a have a current or past contamination concern which may impact the Subject Property?	None identified
Does a regional groundwater contamination concern exist beneath the Subject Property?	None identified
Does there exist the possibility for vapor intrusion on the Subject Property?	See below

The historical presence of gasoline USTs, a gasoline service station, and an auto repair facility on-site, as well as the historical presence of adjoining industrial and automotive facilities and a carpet cleaning company is considered to be an REC and a Phase II ESA is recommended in order to determine if any contamination from past improper chemical disposal or past tank leakage has impacted the subsurface (or could caused a vapor intrusion concern).

5.6 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the New York City Department of Buildings, the New York City Department of Finance, and the New York City Fire Department. Information was reviewed in order to determine the possibility of documented adverse environmental conditions, violations or complaints associated with the Subject Property.

New York City Building Department (NYC DOB) and New York City Department of Finance

MEI reviewed information listed in the online NYC Building Information System (BIS) provided by the New York City Building Department's website, as well as information from the New York City Department of Finance website, the Automated City Register Information System (ACRIS)(<http://a836-acris.nyc.gov/CP>). Specific information provided by these websites includes lot sizes and dimensions, building zoning, and usage. These websites also include information pertaining to interior renovations, building improvements, and approximate date of construction. Various permits/actions for the Property were identified on the NYC DOB website only, dated 1923 through the present, including New Building Applications dated 1923 and 1926; a 2003 permit for auto sales; a 1993 permit for auto repair; and the following historical Certificates of Occupancy (COs): 1927 for a dwelling; 1945 for a carpet cleaner; and 1989 for a dwelling and an auto sales facility; and 1994 for a dwelling, an auto repair facility, and parking. No additional data of historical or environmental concern was identified on the NYC DOB or New York City Department of Finance websites.

New York City Fire Department (FDNY)

Records from the New York City Fire Department (FDNY) are available by written request and fee only, and results are typically not provided to the user for approximately 30 days (or greater) from the date of receipt of the request by the FDNY, and therefore would not be considered to be "reasonably ascertainable", as defined by ASTM. As such, other sources were reviewed for information regarding current and historic petroleum storage tanks at the Property. These records include state regulatory agency databases, Sanborn Fire Insurance maps, building department records, and historical city directories, which are addressed within the respective sections of this report.

6.0 PHYSICAL SETTING

6.1 Topography

The Subject Property and vicinity characteristics listed below were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the Subject Property. The Subject Property is located at an elevation of approximately 38 feet above mean sea level (msl). The Property has been graded, and is relatively flat. The surrounding area slopes gently downward to the southwest.

6.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Near-surface geology in heavily developed areas such as the Subject Property and vicinity is considered "urban land" and is characterized by a non-homogeneous distribution of soil and fill types. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

6.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow in the vicinity of the Subject Property is expected to flow to the west, towards the East River. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three (3) groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

7.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Jeremy Mushlin, EP, senior project manager, on February 21, 2020. Mr. Mushlin was accompanied by Mr. George Abdoulos, owner of the Property, of Pemas, LLC.

7.1 Methodology and Limited Conditions

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. MEI accessed all Property exteriors, as well as the commercial building interior (with the exception of the rear, attached one-car garage area), and the 1-story dwelling basement only.

MEI was not provided access to either of the dwellings, with the exception of the 1-story dwelling basement only, or the rear, attached one-car garage area, as the Property owner does not have keys to these areas, and tenants were not available to provide access during MEI's site inspection. Therefore, MEI was unable to make a determination of environmental conditions within these areas.

7.2 Physical Observations

- **Underground Storage Tanks**

No petroleum underground storage tanks (USTs), or evidence thereof, were identified. The building is heated via a combination of central, natural gas-fired, low-pressure boilers (dwellings); and natural gas-/electric-fired split system HVAC units and natural gas-fired, ceiling-mounted unit heaters (commercial building). A review of the 1936 Sanborn map depicts the presence of three gasoline USTs on-site (one gasoline UST at the commercial building frontage and two gasoline USTs at the eastern parking area). In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950. The historical presence of gasoline USTs and a gasoline station on-site, and the subsequent potential for sub-surface contamination, is considered to be an REC.

- **Aboveground Storage Tanks**

No petroleum aboveground storage tanks (ASTs) were observed. However, three cut steel pipes were observed at the walls within in the commercial building partial basement. It is possible that these cut pipes represent former fuel lines associated with a former heating oil AST (or ASTs) that were historically removed from the basement. However, given the assumed aboveground location of these ASTs, as well as that no ASTs, or additional evidence thereof, were observed on-site, these cut lines are not considered to represent an issue of concern.

- **Hazardous Substances and Petroleum Products**

Five 55-gallon drums of 15W-40 motor oil were observed within the commercial building first floor warehouse area. According to Property ownership, the motor oil is utilized for lubrication of the tenant's generator equipment. The drums were stored neatly, and no evidence of leaks or issues of concern were noted. MEI did not observe any additional hazardous substances or petroleum products at the Subject Property.

- **Non-Hazardous Substances and Non-Petroleum Products**

MEI did not observe any non-hazardous substances or petroleum products at the Subject Property.

- **Unidentified Substances Containers**

MEI did not observe any unidentified substance containers at the Subject Property.

- **Drains or Storm Water Drywells**

MEI did not observe any storm water drywells. No stained storm drains were observed.

- **Polychlorinated Biphenyls (PCB's)**

No potential PCB-containing equipment was observed.

- **Stains or Corrosion**

MEI did not observe any evidence of staining or corrosion at the Subject Property.

- **Odors**

MEI did not observe any strong, pungent, or noxious odors at the Subject Property.

- **Pools of Liquid**

MEI did not observe any pools of liquid at the Subject Property.

- **Stressed Vegetation**

MEI did not observe any stressed vegetation at the Subject Property.

- **Stained Soil or Pavement**

MEI did not observe any stained soil at the Subject Property. Pavement displayed normal minor staining due to regular usage, which is not considered to be an issue of concern.

- **Wells**

MEI did not observe any irrigation wells or groundwater monitoring wells at the Subject Property.

- **Sumps, Pits, Ponds, or Lagoons**

MEI did not observe any sumps, pits, ponds, or lagoons in accessible areas of the Subject Property.

- **Waste Water**

MEI did not observe any improper disposal of waste water into drains, ditches, or streams at the Subject Property.

- **Solid Wastes Disposal**

Solid waste generated by the residential and commercial tenants is picked up for disposal by the New York City Department of Sanitation and a private commercial waste hauler, respectively. No improper solid waste storage or disposal was identified.

8.0 INTERVIEWS

8.1 Interview with Property Owner and/or Property Manager

MEI interviewed Mr. George Abdoulos, owner of the Property, of Pemas, LLC. Ms. Abdoulos did not indicate the presence of any environmental liens, and was unaware of any contamination concerns regarding the Subject Property.

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

9.1 Asbestos Containing Material (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable ACM are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the building would have been thoroughly surveyed and sampled. MEI did not observe any ACM on the heating system in accessible areas of the building. MEI did not observe any spray-on fire proofing in accessible areas of the building. MEI did not observe any ACM pipe-wrap in accessible areas of the building.

9.2 Lead Based Paint (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

MEI observed that the painted surfaces inside the accessible, occupied areas of the Property were in fair condition, and free from obvious chipping, flaking or peeling.

9.3 Lead in Drinking Water

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, the USEPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing such as lead solder, brass, bronze, and other lead containing alloys. The USEPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L). MEI did not observe any brass or lead fixtures at the Subject Property.

9.4 Radon

Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into building through cracks and openings in the foundation. The USEPA has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in New York State. The U.S. Environmental Protection Agency's Map of Radon Zones identified the Subject Property as a radon zone Level 3. Level 3 signifies that the average predicted radon level indoors is less than 2 pico-Curies per liter and this is the lowest level in the state. This level compares favorably with the EPA action level of 4.0 pico-Curies per liter as the guideline (it should be noted that current radon information and EPA Action Levels are designated for residential spaces only and commercial and industrial facilities are not subject to EPA's Action Level of 4 pico-Curies per liter as the guideline and definitive information concerning radon gas in an individual building can only be obtained through long term testing).

9.5 Mold

Molds are a class of fungi, and have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

As part of this assessment, MEI performed a limited visual inspection for the conspicuous presence of mold. MEI observed the accessible interior areas of the Subject Property structure(s), including interior walls and ceilings of the accessible apartment units, the corridors of the building and the basement of the building for the presence of conspicuous mold or observed water intrusion or accumulation. This evaluation did not include a review of pipe chases or areas behind enclosed walls and ceilings. MEI did not observe conspicuous visual or olfactory indications of the presence of mold, nor did MEI observe obvious indications of significant water damage inside the accessible areas of the Subject Property.

9.6 Wetlands

MEI reviewed available information regarding wetlands on the Subject Property, including National Wetlands Inventory online GIS mapping. MEI additionally made general site observations for readily observable potential wetland characteristics. MEI did not observe surface water bodies or any evidence of potential wetlands on or adjacent to the Subject Property.

10.0 FINDINGS, OPINIONS AND RECOMMENDATIONS

MEI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. This assessment has identified no evidence of CRECs or HRECs in connection with the Subject Property. RECs regarding the possible presence of underground gasoline storage tanks and the former usage by a former gasoline station and automobile repair facility and carpet cleaning company was identified pertaining to the Subject Property.

The site reconnaissance, interviews and review of records have found the presence or possible presence of hazardous substances or petroleum related products in, on, or at the Subject Property due to any release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

The 1936 Sanborn map reviewed depicts three gasoline USTs on-site, including a one gasoline UST at the commercial building frontage, and two gasoline USTs depicted at the eastern parking area. In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950 and the commercial building in the middle of the Subject Property was utilized by a carpet cleaning company. The historical presence of gasoline USTs and a gasoline station on-site, as well as the historical industrial usage of the Subject Property by a carpet cleaning company is considered to be an REC. MEI recommends that a Phase II Environmental Site Assessment be conducted on the Subject Property in order to determine if any contamination from past tank leakage and improper chemical disposal has impacted the subsurface.

There were no conditions outside of ASTM E 1527-13 were identified in connection with the Subject Property.

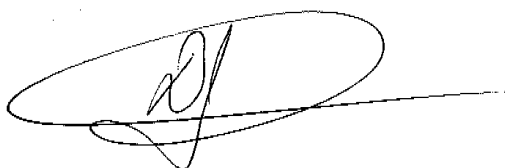

11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

This Phase I Environmental Site Assessment (ESA) Report documents the research methodology used by qualified environmental professionals of MEI to identify recognized environmental conditions using the scope and limitations of ASTM Standard E 1527-13.

4. Building Management & Officers (HPD)

Buildings with three or more dwelling units must be registered with the NYC Department of Housing Preservation and Development (HPD) no more than 30 days from the date of transfer of title or change in managing agent. 1 and 2 family dwellings do not need to be registered unless the owner lives outside of NYC, in which case, the building must be managed by a NYC agent and registered with HPD.

1. Mortgage Summary

Mortgage data is aggregated from public and governmental sources like deeds of trusts and assignments. Our team has researched over 900,000 properties with more being added daily.

Active debt **Previous debt**

No active mortgages for this property.

[Upgrade your subscription](#) to unlock the property's mortgage balance, maturity date, interest rate and much more.

2. Income and Expenses

Owners of income-producing properties that have an actual assessed value of more than \$40,000 are required to file annual Real Property Income and Expense (RPIE) statements with the Department of Finance(DOF). The DOF uses the information from these statements, or data from comparables, to estimate the market value of a property for tax purposes.

Taxes

1. Tax Bill

Property tax bill for 7/1/2019 to 6/30/2020	\$43,996
Estimated property tax bill for 7/1/2020 to 6/30/2021	\$45,760

The tax bill is calculated based on the transitional assessed value of the property. If no changes are made to the way NYC computes property taxes, we estimate that the current assessed value will increase by approximately 20% per year until it reaches the maximum assessed value of **\$444,600**.

2. Key Values in Calculating the Bill

Tax class	4
Market value	\$988,000
Assessed value	\$444,600
Transitional assessed value	\$417,540
Exemption value	\$0
Tax abatements	\$0

3. Assessment Reductions & Open Petitions

New York City's Tax Commission is responsible for reviewing and determining the annual applications for corrections of assessments. Owners and other parties with legal interest can claim that they are incorrectly assessed or improperly denied an exemption from real property tax. There are four types of assessment claims subject to review and corrective action: excessive assessment, misclassification, unequal assessment and unlawful assessment. More information can be found on New York City [Tax Commission](#) website.

Open Petitions

If relief from tax commission is not obtained, the owner or other party with legal interest can file a petition with the New York State Supreme Court to keep the appeal open for further review. The information shown here represents only open petitions. The ones that are invalid or abandoned are closed.

Petition year	Petition Index	Petitioner	Attorney
2018	801445	Pemas LLC	Samantha J Golkin, Esq

4. Property Tax Calculation

Market Value

The first step is for the City Assessor to determine the *market value* of the property. While the term *market value* would seemingly refer to how much the property would sell for on the open market, in reality the *market value* established by the City Assessor is almost always substantially lower.

For this property the City Assessor has assigned this market value:

	2019/2020	2020/2021
Land market value	\$318,000	\$318,000
Building market value	+ \$670,000	+ \$705,000
Market value	= \$988,000	= \$1,023,000

Assessed Value

Next, the market value is used to compute the assessed value, which is a percentage of the market value. The exact percentage is determined by the tax class of the property. Tax class 1 is assessed at 6% of the market value, and tax classes 2,3 and 4 are assessed at 45%.

	2019/2020	2020/2021
Market value	\$988,000	\$1,023,000
Assessment ratio	x 45%	x 45%
Maximum assessed value	= \$444,600	= \$460,350

Transitional Value

To protect property owners from sudden large increases in property tax, the state limits how quickly the city can increase the assessed value. Typically these limits are applied when the City Assessor makes a big increase to the market value. Without the limits the assessed value would increase by a similar percentage. Instead, the change to the assessed value is phased in over a number of years.

	2019/2020	2020/2021
Transitional value	\$417,540	\$434,280
Transitional exemption value	- \$0	- \$0
Transitional net assessed value	= \$417,540	= \$434,280

Taxable Value

The *taxable value*, for 2019/2020, is the smaller of the city's *maximum assessed value* and the *transitional net assessed value*.

Taxable value	=	\$417,540
---------------	---	-----------

Property Tax

Current tax is calculated by multiplying the taxable value (the assessed value minus any exemptions) by the [tax rate](#).

The city also grants some properties incentives called tax abatements, which are subtracted directly from the current tax. This results in the property tax, the amount the current owner pays.

Tax description	Billable value 19/20	Tax rate 19/20	Tax bill 19/20
Current tax	\$417,540	x 10.5370%	= \$43,996
Total abatements			- \$0
Property tax			= \$43,996

Tax description	Billable value 20/21	Tax rate 20/21	Tax bill 20/21
Current tax	\$434,280	x 10.5370%	= \$45,760
Total abatements			- \$0
Property tax			= \$45,760

For more information, you can view this property's assessment, tax bill, and account statements by clicking [here](#) and entering the Borough, Block, & Lot.

5. Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and nonprofit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the [J-51 Program](#), [421a Program](#) and the [Cooperative and Condominium program](#).

We believe that no exemptions or abatements currently apply to this property.

6. Tentative Values

Every year in January, the NYC Department of Finance Commissioner publishes the tentative property assessment roll for the current fiscal year. All properties are valued by law according to their condition on the taxable status date of January 5th. Owners who believe that the Department of Finance has used incorrect information to determine their market value may file [forms](#) providing corrections. After Finance verifies the complaints, the agency will make any corrections before the final assessment roll is published on May 25. The final roll will also include changes, based on the decisions made by the New York City Tax Commission, an independent City agency, as well as new information Finance gathers about abatements, exemptions and other adjustments. In June, Finance will use the final roll and new tax rates adopted by the City Council to generate property tax bills for the fiscal year beginning July 1st.

Development

1. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

The maximum usable floor area is calculated by multiplying the size of the lot by the larger of the residential or commercial FAR.

Area of lot in square feet		10,600
FAR	x	3
Maximum usable floor area of building	=	31,800

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Maximum usable floor area		31,800
Usable floor area	-	7,950
Unused buildable square feet ("air rights")	=	23,850

Opportunity by parcel		Very little opportunity	
	Above 250,000 sqft		30,000 - 60,000 sqft
	100,000 - 250,000 sqft		10,000 - 30,000 sqft
	60,000 - 100,000 sqft		Below 10,000 sqft

Residential FAR	3
Commercial FAR	2
Facility FAR	3
FAR as built	0.75 i

2. Zoning

New York City is divided into three basic zoning districts: residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

R Residential district	Rezoning project area (Prop)
C Commercial district	Rezoning project area (Curr)
M Manufacturing district	Rezoning project area (Rece)
	Rezoning project area (Earli)

This map was created from the NYC Department of City Planning's online zoning map files. It includes updates found in those files through 2/8/2017.

Zoning Designation

Manufacturing **M1-2/R6A**
 Special districts **LIC**

Parcel Vicinity

Frontage(s) **Old Ridge Rd (narrow)**
30 St (narrow)
 Nearest wide street **38 Av**
 Distance to wide street **24.8 ft**

Rezoning Projects

Since	Project	Status
2014	Western Queens Transportation	Active
2008	Dutch Kills	Adopted

For more information about zoning district regulations, click [here](#).

Manufacturing

M1-2/R6A

M1 districts range from the Garment District in Manhattan and Port Morris in the Bronx with multistory lofts, to parts of Red Hook or College Point with one- or two-story warehouses characterized by loading bays. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M1-1, M1-2 and M1-3 districts are subject to parking requirements based on the type of use and size of an establishment. [More info](#)

R6A is a contextual district where the Quality Housing bulk regulations are mandatory. These regulations produce high lot coverage, six- or seven-story apartment buildings set at or near the street line. Designed to be compatible with older buildings found in medium-density neighborhoods, R6A districts are mapped in the Bronx, Brooklyn and Queens. Parts of Kingsbridge in the Bronx and Williamsburg in Brooklyn are typical R6A areas. [More info](#)

Special District

LIC

The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Paired districts combine a manufacturing and a residential district, as in the Special Mixed Use District, and are mapped in the Queens Plaza, Hunters Point and Dutch Kills Subdistricts. [More info](#)

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution. All zoning descriptions have been taken from the [NYC Planning](#) official source.

3. Planimetric Map

This planimetric map shows features such as retaining walls, sidewalks, medians, curbs, and roadbeds that have been digitized from aerial photography. These features must be taken into consideration when determining how a new building, or extensions to an existing building, are situated within the lot. They can also affect the maximum height that can be built.

Status	Expired		

Violations

1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

We do not have any record of violations in our database. Status can be verified [here](#).

2. 311 Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
4/18/2015	NYPD	Noise - commercial	Loud music/party	The Police Department responded to the complaint but officers were unable to gain entry into the premises.	4/18/2015

Complaint status can be verified [here](#).

3. DOB Complaints

Date entered	Complaint	Complaint category	Disposition	Inspection
7/21/2010	4451896	Curb cut/driveway/carport - illegal	ECB violation served	9/22/2010
5/25/2006	4265883	Curb cut/driveway/carport - illegal	No violation warranted for complaint at time of inspection	7/5/2006

Complaint status can be verified [here](#).

4. ECB Violations

There are eleven city agencies that administer the City's quality-of-life laws and issue Notices of Violation (NOVs) for alleged violations. The ECB is a separate and independent agency that hears challenges to those NOVs. The agencies that issue the most violations for real estate are:

- Department of Buildings (DOB)
- Department of Environmental Protection (DEP)
- Fire Department (FDNY)
- Landmarks Preservation Commission (LPC)
- Department of Sanitation (DSNY)

Violation ID	Issue date	Type	Severity	Status	Link to violation

34016579X	12/28/1988	Construction	Non-hazardous	Resolve	Link
Occupancy contrary to that allowed by bldg. Dept. Records from: street to: used car lot. Remedy: discontinue illegal use.					

Please note: the NYC Department of Buildings is the only authoritative source for information on ECB violations. Verify the status of the violation on [DOB website](#).

PropertyShark obtains its records from ECB and updates them weekly.

Neighborhood

1. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found [here](#).

* Building class: All Parking Garages (G1)

3. HPD Alternative Enforcement Program

The HPD Alternative Enforcement Program map is based on the current month's HPD violations in a building divided by the number of units in the building. It takes in consideration the open hazardous and immediately hazardous violations (I/B/C class) in the last 5 years.

For more information, visit the [HPD website](#).

4. Neighborhood Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
10/2/2017	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	10/2/2017
9/26/2017	NYPD	Illegal parking	Blocked sidewalk	The Police Department reviewed your complaint and provided additional information below.	9/27/2017
11/26/2016	DOT	Street light condition	Street light out	Service Request status for this request is available on the Department of Transportations website. Please click the Learn More link below.	12/2/2016
12/10/2013	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	12/10/2013
4/12/2012	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	4/12/2012
1/26/2012	NYPD	Blocked driveway	No access	The Police Department issued a summons in response to the complaint.	1/26/2012
7/21/2010	DOT	Sidewalk condition	Unsafe worksite		7/21/2010
5/19/2010	NYPD	Blocked driveway	No access		5/19/2010
5/18/2010	NYPD	Blocked driveway	No access		5/18/2010

5. Distance to Schools

Elementary School Proximity

This map shows zoned Elementary School and other public and private schools available in the area, with exact distances from the subject property to the school of interest.

School district **30**

Attendance Elementary School(s)

Nearest Public Elementary School (not zoned)

School	NYC School Construction Authority - Q
School code	30Q998
Distance (miles)	0.765
Principal	Richard Lee
Phone number	(718) 487-9857

Find more info at [NYC Department of Education](#)

Nearest Private Elementary School

School	Growing Up Green Charter School
Distance (miles)	0.174
Principal	Matthew Greenberg
Phone number	(347) 642-4306

Middle School Proximity

This map shows zoned Middle School and other public and private schools available in the area, with exact distances from the subject property to the school of interest.

School district **30**

Attendance Middle School(s)

Nearest Public Middle School (not zoned)

School	Baccalaureate Scl For Global Ed-Q
School code	30Q580
Distance (miles)	0.317
Principal	Kelly Johnson
Phone number	(718) 361-5275
Quality score	Good

Find more info at [NYC Department of Education](#)

Nearest Private Middle School

School	Growing Up Green Charter School
Distance (miles)	0.174
Principal	Matthew Greenberg
Phone number	(347) 642-4306

High School Proximity

This map shows zoned High School and other public and private schools available in the area, with exact distances from the subject property to the school of interest.

School district **30**

Attendance High School(s)

Nearest Public High School (not zoned)

School	Energy Tech High School
School code	30Q258
Distance (miles)	0.141
Principal	Nassir Aliakber
Phone number	(718) 297-6520
Quality score	Good

Find more info at [NYC Department of Education](#)

Nearest Private High School

School	Growing Up Green Charter School
Distance (miles)	0.174
Principal	Matthew Greenberg
Phone number	(347) 642-4306

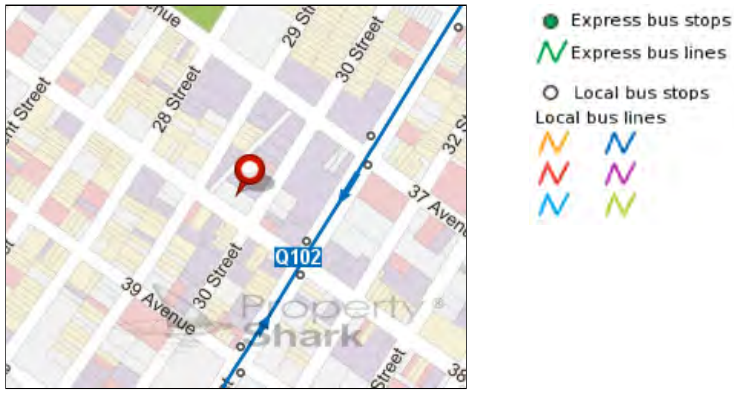

6. Transportation

On this color-coded map, view the nearest subway station for each building.

Closest station	31st St & 39th Ave at NW Corner
Station lines	N-Q
Distance (miles)	0.112

On this map, view the closest local or express bus routes and stations.

Name **31 ST/38 Av**
 Distance (miles) **0.063**

7. Traffic Map

Estimated average daily traffic volume on a route segment at a particular count location.

8. Demographics By Zip Code

Demographic data shown in this section was gathered from the 2014 American Community Survey and refers to zip code **11101**.

Population Demographics

Total population	30,043
Female population	49.1%
Male population	50.9%
Median age	34.1
Male median age	34.1
Female median age	34.1

Education

No highschool	6.1%
Some highschool or college	42.5%
Bachelors degree	17.6%

Other

Citizens	82.1%
Citizens born in US	61.6%
English speakers	90.0%

Journey to Work

Work in a metropolitan area	99.8%
Work in a micropolitan area	0.2%
Work at home	3.4%
Go to work by car	12.5%
Go to work after 10 am	15.2%

Economic/Employment

Average household income	\$103,022
White collar	89.2%
Blue collar	10.8%

Housing

Family households	51.4%
Households with kids	23.5%
Housing units	16,814
Occupied housing units	13,169
Owner occupied units	16.9%
Average number of people per household	2.24
Median year structure built	1948
Houses with mortgages	69.3%

Wealth

Median value for units with a mortgage	\$945,800
Median value for units without a mortgage	\$859,600
Median gross rent	\$1,608
Median housing costs per month	\$1,762
Population in poverty	18.7%

Risk

1. Toxic Sites

Get a Phase I environmental report Site Assessment or a Home Environmental Database Report for this property directly from [Toxics Targeting](#).

This screening map, provided to PropertyShark by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

Call [800-2-TOXICS](#) (800-286-9427 NYS only) or [607-273-3391](#) for more info.

**Toxic Sites on the Property**

Selected NYC environmental quality review 'E' designation	1
Petroleum bulk storage	1
Total toxic sites on the property	2

Toxic Sites near the Property

Hazardous waste violation	1
Selected NYC environmental quality review 'E' designation	1
Haz waste generator or transporter	1
Brownfield site	1
Total neighboring toxic sites	4

Leaking Tanks and Spills:

- MTBE Spill
- ★ Tank Failure
- ★ Tank Test Failure
- ★ Spill greater than 25 gal/lbs
- ★ Gasoline Spill
- ★ Spill

Superfund, Brownfields and Solid Waste:

- + US Superfund Priority Site
- + NY Superfund Site
- + US Superfund /CERCLIS Site
- Brownfield Site
- Hazardous Substance Study
- ⊗ Solid Waste Facility

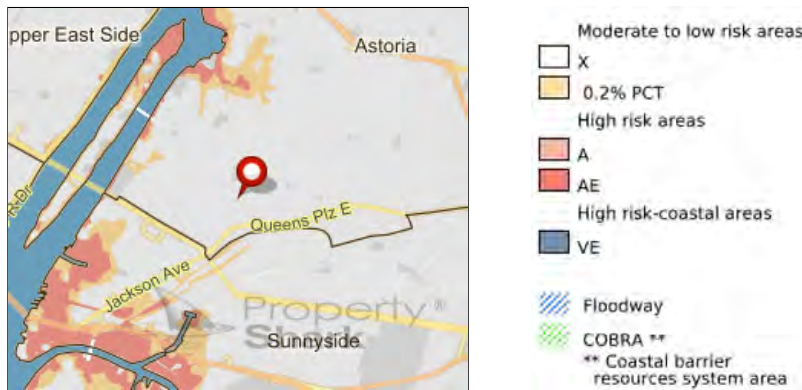

Other Toxic Sites:

- ⊗ NY Superfund Qualifying Site
- ◇ Major Oil Storage Facility
- Haz Waste Corrective Action
- ⊕ Has Waste Treatment/Storage/Disposal
- ✕ Toxic Release Inventory Site
- ⊕ Legal Civil /Admin Docket
- ⊕ Hazardous Waste Violation
- △ Air Discharge Facility
- ★ Historic Utility Site
- ▽ Wastewater Discharge Site
- △ Chemical Bulk Storage
- ◇ Petroleum Bulk Storage
- ⊗ Haz Waste Generator or Transporter
- E Selected NYC Environmental Quality Review 'E' Designation

Map Disclaimer: Mapped locations are approximate; sites are identified based on current and/or historic information. Regulatory status of sites may have changed. Site symbols can refer to large properties, additional toxic sites are not mapped. Contamination problems can impact properties far from toxic sources. Sites include known and potential hazards.

2. FEMA Flood Zones

Use this map to determine if the property is in a flood zone.

Link to the map for this property at [FEMA's Map Service Center](#) (may not be available in all locations).

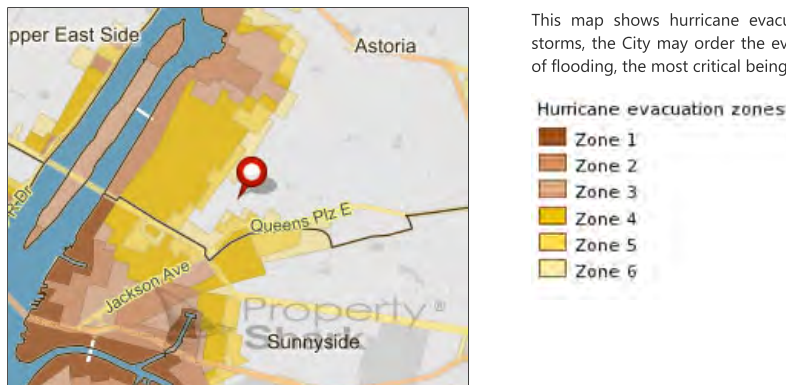

FEMA Flood Zoning

FEMA flood zone(s)	X
Coastal barrier resources system area (COBRA)	Out
Floodway	Out
FEMA special flood hazard area	Out
Map panel ID	3604970093F
Map quaderant ID	40073-G8

Distance to...

Nearest distance to coastline (miles)	0.806
Compass direction to coastline	144
Nearest distance to 100 year flood zone area (ft)	11
Angle100	306

3. Hurricane Evacuation Zones

This map shows hurricane evacuation zones. In the case of coastal storms, the City may order the evacuation of neighborhoods in danger of flooding, the most critical being Zone 1.

Hurricane evacuation zones

- Zone 1
- Zone 2
- Zone 3
- Zone 4
- Zone 5
- Zone 6

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 8 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 6 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/11/2019 has revealed that there are 16 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 10/09/2019 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/11/2019 has revealed that there are 51 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 32 NY UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/11/2019 has revealed that there are 12 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 51 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 11/12/2019 has revealed that there are 2 FUDS sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ARMY PICTURAL CEN		ENE 1/4 - 1/2 (0.450 mi.)	AZ417	922
<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NAVAL SHIPYARD QUEEN		WNW 1/2 - 1 (0.649 mi.)	431	969

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 07/12/2019 has revealed that there are 8 NY DRYCLEANERS sites within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 79 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Tank Info:

Tank Number: 001
Tank Id: 179091
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

A01 - Tank Internal Protection - Epoxy Liner
K01 - Spill Prevention - Catch Basin
I01 - Overfill - Float Vent Valve
C00 - Pipe Location - No Piping
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 100
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 06/10/2009
Register: True

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND F & N was hired to conduct a phase 1 & phase 2 on a vacant lot. Part of this lot had been used as a gas station in the past. Several tanks were identified. During excavations to install footings for a new building, a waste oil tank was found and the top was damaged. During the heavy rains on 7/22/2003, water displaced the waste oil in the tank and the oil poured out into the trench area. F&N is going back to pump out the remaining oil and to Guzzel out the contaminated soil in the trench. F&N put in a proposal to the

Hazardous Waste Summary:

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F008
. Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

. Waste code: F009
. Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Tank Info:

Tank Number: 001
Tank Id: 61623
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
I04 - Overfill - Product Level Gauge (A/G)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K00 - Spill Prevention - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/15/1994
Capacity Gallons: 10000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

DEC Region: 2
 DER Facility ID: 173083
 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 8/18/2004 Sangesland spoke to Manny Caruana, Building Supervisor at See Factor Industry Inc. to discuss the specifics of what the DEC needs to close out this spill 9/13/2004 Sangesland spoke again with Manny Caruana and asked him to send in the soil borings he has along with the tank closure documents. 9/15/2004 Mr. Caruana hand delivered a package of documents to the DEC office. Included was a summary letter outlining the testing and closure of the tank. After the tank failed the tank test in 1998, it was not retested, however Mr. Caruana says he inspected the interior of the tank and said it was still secure. He states that the initial test was faulty because of a dry leak on the vent line. In 2000 the tank was abandoned by USA tanks and an abandonment certification was forwarded to the NYC Fire Dept. The building now operates on natural gas. In Feb 2000 several soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. Three of these borings were approx. 10 ft from the abandoned tank and went down to 20 ft depth. There was no evidence of any soil contamination. Based on this information, the DEC believes that there was no actual petroleum spill at this site and this case has been closed out effective 9/15/2004. "

Site Description:

03/07/2018
09/26/2018
JHOCONNE

Location: The site is located in an urban area at 37-11 30th Street and 30-14 37th Avenue in the Long Island City neighborhood of Queens, New York, and is identified on the Queens Borough Tax Map as Block 372, Lot 21 and part of Lot 8. The 26,978-square-foot (0.61 acres) site is situated on the northwest corner of the block bound by 37th Avenue to the north, 31st Street to the east, 38th Avenue to the south, and 30th Street to the west. The elevated N and Q subway tracks run north-south above 31st Street, which are about 100 feet east of the proposed BCP property. Site Features: The 26,978-square-foot (0.61 acres) site is developed with a two-story residential building in Lot 21 (30-14 37th Avenue) and a one-story and partial three-story warehouse building with multiple partial cellar levels and a stockyard/ storage area in the northern portion of Lot 8 (37-11 30th Street). The warehouse building on Lot 8 is vacant and was most recently occupied by a lighting, audio, and production rental and warehousing company. Lot 21 is vacant and was most recently used as a single-family residence. During the 2014 Limited Subsurface Investigation, one 550-gallon abandoned heating oil UST was encountered in the sidewalk along 30th Street, adjacent and to the west of the proposed BCP site. Historical Sanborn fire insurance maps suggest that another UST is present in Lot 8 within the proposed BCP site. In addition, a 5,000-gallon AST and 2,000-gallon UST were encountered in the east-central portion of Lot 8, adjoining the proposed BCP site to the east. These tanks within Lot 8 and adjoining the proposed BCP site were reportedly closed in place on July 7, 2000. An abandoned former water supply well is located near the northeast corner of the proposed BCP property in the stockyard/ storage area of Lot 8. Current Zoning and Land Use: According to the New York City Planning Commission Zoning Map 9a, the site is located within the Long Island City Special Mixed Use Paired District (M1-2/R6A). This paired district promotes development and expansion of the longstanding mix of residential, commercial, industrial, and cultural use throughout the area. M1 districts typically include retail and light industrial uses such as woodworking shops, repair shops, and wholesale service and storage facilities, and R6A districts promote residential development. Zoning is consistent with the proposed mixed-use development. The surrounding area is primarily commercial and industrial, but also includes residential buildings, public facilities, day care centers, and schools. As a result of the CEQR process, the Block 372, Lot 21 was assigned an E-Designation (E-218) on October 7, 2008 by the NYCDP as part of the Dutch Kills Rezoning (CEQR No. 08DCP021Q). The E-Designation requires coordination with the NYC OER to obtain a NTP or a NNO prior to obtaining building permits. The E-Designation addresses environmental requirements for Hazmat and noise (window wall attenuation and alternative means of ventilation) during development. Past Use of the Site: The site was an undeveloped vacant lot until at least 1915. The existing warehouse building at Lot 8 was constructed around 1920 and historically operated as a plastics manufacturer (The Marblette Corp. Mfg. of Plastic Materials) from at least 1930 to about 1980. Following 1980, the site operated as a warehouse for audio and lighting equipment. Lot 21 was developed with a two-story residential dwelling as early as 1898. From the 1930s through the 1980s, Marblette Corp. manufactured plastics, which

S121933807

primarily included production of synthetic resins. During this time period, plastic was typically made using a mixture of synthetic chemicals, solvents, and petroleum products. The confirmed presence of PCE in soil vapor at concentrations as high as 12,000 µg/m³ indicate that accidental releases of solvents during the proposed BCP site's industrial past have impacted subsurface conditions. Although not previously analyzed, groundwater may be impacted with Perfluoralkyl Substances (PFAS) as a result of plastics manufacturing operations on site. In addition, mercury and lead in soil at concentrations that exceed the Part 375 Commercial Use SCOs indicate that soil quality was impacted during the 50 years of historical manufacturing. In addition, an abandoned water supply well was observed in the northwest portion of the site during the June/July 2014 Limited Subsurface Investigation by Merritt Environmental Consulting Corp. (Merritt). The water supply well was reportedly abandoned prior to 1980 when the site transitioned use from plastics manufacturing to warehousing. The water supply well may have drawn contaminants from adjoining industrial uses to the proposed BCP site. Site Geology and Hydrogeology: Based on findings from the June 2014 Limited Subsurface Investigation by Merritt, the site is underlain by fill material predominantly consisting of sand with varying amounts concrete, brick, and debris. The fill was limited to the upper five feet in each of the six borings advanced at the property. Native deposits that predominantly consisted of fine- to coarse-grained sand with varying amounts silt and silty clay were observed below the fill. Bedrock was not encountered during the June 2014 Limited Subsurface Investigation; however, competent bedrock was encountered at depths ranging from about 40 to 50 feet bgs during a 2017 geotechnical investigation performed by Langan in the vicinity of the site. Groundwater was observed at a depth of about 27 feet below grade surface (bgs) across the site footprint during the June 2014 Limited Subsurface Investigation. The inferred regional groundwater flow direction for the area surrounding the site is to the west-northwest towards the East River.

Env Problem:

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem:

People are not expected to come into contact with site-related soil or groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the onsite building is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Sampling identified impacts in indoor air quality of the vacant on-site building and the potential exists for the inhalation of site contaminants due to soil vapor intrusion if the building is re-occupied. Additional investigation is needed to evaluate whether actions are needed to address soil vapor intrusion in off-site structures.

Name: 31/32 LIC LLC - OFF-SITE
 Address: 37-29 31ST STREET
 City,State,Zip: QUEENS, NY 11101
 Program: BCP
 Site Code: 534977
 Acres: Not reported
 HW Code: C241182A
 SWIS: 4101
 Town: New York City
 Record Added Date: 10/26/2016
 Record Updated Date: 09/25/2019
 Update By: RKCORCOR
 Site Description:

The area of concern subject to this work is considered off-site from BCP site C241182 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C241182 for further information regarding the status of the site in the Brownfield Cleanup program. Location- The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY, 11101 (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features- Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully covered the tax lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site is currently vacant. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953); welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection.

31/32 LIC LLC - OFF-SITE (Continued)

S121933768

Env Problem:	Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C241182, the primary contaminants of concern are expected to be trichloroethene (TCE) which was found in the BCP site soil vapor. The BCP site soils also contained semi-volatile organic compounds (SVOCs) and metals, such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, indenp(1,2,3-CD)pyrene, dibenz[a,h]anthracene, lead, copper, chromium, and zinc. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available. Significant Threat: It is not yet known whether there is a significant off-site environmental threat due to contamination at the BCP site. This section will be updated as data become available.
Health Problem:	People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion at off-site structures.

Location - The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features - Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully cover the lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site is currently vacant. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953); welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - The property is underlain by glacial and alluvial deposits with Harrison Gneiss underlying. Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection.

Env Problem:

Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, and metals during the remedial investigation. Soil vapor, slab vapor, indoor and outdoor air were also analyzed for VOCs during the remedial investigation. Based on

31/32 LIC LLC (Continued)

S118457875

the investigations performed to date the primary contaminants of concern are trichloroethene (TCE) in soil vapor and SVOCs and various metals consistent with historic fill identified in the top 5 feet of soil. Soil Lead, copper, chromium, and zinc were identified in the top 3-5 feet of soil across the site at levels above unrestricted and restricted residential SCOs. It was also found that metals exceed residential SCOs at 18 20 feet below ground surface (bgs). SVOCs benzo(a)anthracene, benzo(b)flouranthene, benzo(a)pyrene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene, were also identified in the northwestern and southeastern areas of the site above restricted residential SCOs. The highest level of SVOCs was in the northwestern area of the site with benzo(a)anthracene at 6.9 parts per million (ppm). The pesticide 4,4 -DDD was detected above unrestricted SCOs between 0-2 feet in the northern portion of the site, detections ranged between 0.0042 and 0.013 ppm. No VOCs or PCBs were detected above unrestricted SCOs during the investigation. No off-site sampling was conducted as part of this investigation.

Groundwater The dissolved metals magnesium, sodium, and nickel, were found in groundwater across the site above groundwater standards. In the western portion of the site, chloroform was found between 19 24 parts per billion (ppb), exceeding groundwater standards. No PCBs, pesticides, or SVOCs were detected above NYSDEC TOGS class GA standards in any of the monitoring wells sampled. No off-site samples were collected as part of this investigation. Soil Vapor, Sub-slab Vapor, and Indoor Air TCE soil vapor levels were identified at high concentrations across the site. The highest concentrations are noted in the western-most portion of the site at 12,500 micrograms per cubic meter (ug/m3) and gradually decline to the eastern portion of the site. An occupied 6-story residential building is located to the north. Soil vapor samples collected along the northern-most boundary of the site range from 924-945 ug/m3. TCE was detected in indoor and outdoor air samples at 0.86 ug/m3 and 1.07 ug/m3, respectively. The indoor air sample was collected from a cellar on-site due to the building being demolished prior to investigation activities. No off-site samples were collected as part of this investigation.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with a building slab. People may contact site-related contaminants if they dig below the surface. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. There is no on-site building, therefore inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a current concern. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Further evaluation is needed to determine whether soil vapor intrusion is a concern for off-site structures.

 DEC Memo: "6-13-16 - Obligado - Desk Duty - I spoke with Steve Giannotis of Project Builders Construction Corp. They are doing excavation for development. So far they have found 4 to 5 tanks as part of this project. This is the only tank which had oil in it and apparent contamination around the tank. The oil type is unknown. ABC tank is en route to pump out the tank. Soil is going to Bayshore Soil. It is in OER but not a Brownfield project. Project Builders Construction corp is the general contractor. Athenica Environmental is the environmental company overseeing the environmental issues. So far they have found 4 to 5 tanks. This is the only tank which had oil in it and apparent contamination around the tank. The site will be redeveloped into a 7 story apartment building. 31st Street Property LLC 28-10 38th Avenue Queens NY 11101 Bessie Giannopoulos bessie212@mac.com sgiannotis@pbconstructioncorp.com This site is in the OER program. Project ID# 15CVCP079Q. There is an RIR and RAWP in

the document repository. CSL sent 6/13/2016: Rashad Received email from Ezgi: Hope you had a nice weekend. I heard you were assigned to Spill 1602528. We will keep you posted once we have the waste characterization data collected, regarding where the soil will be disposed of at. And then submit a closure letter with all the endpoint data and soil disposal manifests, etc. I am not sure if Steve, the contractor who called in the spill, mentioned but the Site is also enrolled in the Voluntary Cleanup Program through OER. Review of RIR is as follows: Site is (or was) two 2-story warehouses with interconnected basements, one building is used as a Marshall Arts Center and the other one is currently vacant. The proposed future use of the Site will consist of a 6-story mixed commercial and residential building with a full cellar. Construction of the cellar will require minor excavation of the existing basement floor to approximately 4 feet to allow for additional footings to be installed. Depth of groundwater ranges from 11-11.4 feet below ground surface, groundwater flow is generally from north east to south west. Former uses of property include pressing finishing , a dry cleaner, machinery and assembling , and others. Soil boring results are as follows: SB-1 0-2ft: tetrachloroethylene-29ppb SB-1 9-11ft: tetrachloroethylene-73ppb SB-2 0-2ft: Tetrachloroethylene-25ppb, trichloroethylene-2.9ppb, naphthalene 44.4ppb SB-2 9-11ft: Tetrachloroethylene-210ppb, trichloroethylene-5.5ppb SB-4 0-2ft: tetrachloroethylene-44ppb SB-4 6-8ft: tetrachloroethylene-13ppb SB-5 0-2ft: Benzo(a)anthracene-9110ppb, benzo(a)pyrene-6640ppb, benzo(b)fluoranthene-5340ppb, benzo(k)fluoranthene-6260ppb, chrysene-8460ppb, dobenzo(a,h)anthracene-2000ppb SB-5 8-10ft: Tetrachloroethylene-43ppb, trichloroethylene-36ppb MW-1: Tetrachloroethylene-15ppb, Trichloroethylene-0.37ppb MW-2: Tetrachloroethylene-33ppb, Trichloroethylene-1.3ppb Soil Vapor sample SS-1: tetrachloroethylene-2500ug/m3, trichloroethylene-28ug/m3, toluene-16ug/m3, xylene-10ug/m3. SS-2: Trichloroethylene-1.1ug/m3, toluene-16ug/m3, xylene-11ug/m3, tetrachloroethylene-20ug/m3 SS-3: Toluene-11ug/m3, tetrachloroethylene-24ug/m3, xylene-10ug/m3, benzene-2.6ppb SS-4: xyelene-14ug/m3, Carbon Disulfide-81ug/m3, Carbon Tetrachloride-17ug/m3 Review of RAWP is as follows: Site will be excavated to approximately 4 feetbgs, removal of USTs, collection of 5 end point samples, implementation of storm-water pollution prevention measures, installation of vapor barrier beneath buildings new slab, construction and maintenance of an engineered composite cover consisting of a 5 concrete building slab, installation and operation of a an active SSDS. 6/14/2016: Rashad Received message from Steve saying a minor spill occurred on sidewalk during tank removal activities, he wanted to know whether this constitutes as an additional spill. I emailed Steve: Thank you for your message yesterday. You can include that minor spill that occurred on the sidewalk to the already existing spill. Thanks. I also emailed Ezgi back to thank her for following up with me. Reports and CSL have been uploaded to D2. Received email from Shaminder: We issued NTP and approved RAWP in June 2015. Construction started in December 2015 and a spill is reported yesterday for this Site. The proposed future use of the Site will consist of a 7-story mixed commercial and residential use building with a full cellar. The cellar will be utilized for storage, mechanical rooms and parking. Description of Selected Remedy 1.Establishment of Track 4 Site-Specific Soil Cleanup Objectives (SCOs). 2.Excavation and removal of soils. Portions of the Site will be excavated to approximately 4 feet bgs to allow for the

OER - JOB SITE (Continued)

S118705522

construction of additional buildings footings. Approximately 325 cubic yards of soil will be excavated and removed from the Site. 3. Removal of underground storage tanks and closure of petroleum spills (if evidence of a spill/leak is encountered during Site excavation) in compliance with applicable local, State and Federal laws and regulations. 4. Collection and analysis of five end-point samples to determine the performance of the remedy with respect to attainment of Track 4 Site-Specific SCOs. 5. Installation of a vapor barrier system consisting of Preprufe 300R, manufactured by W.R. Grace & Co beneath the building's new slab as well as beneath the new footings. 6. Construction and maintenance of an engineered composite cover consisting of a 5 concrete building slab to prevent human exposure to residual soil/fill remaining under the Site. 7. An active sub-slab depressurization system will be installed beneath the building basement slab in two separate sections. One portion of the SSDS will consist of a loop system beneath the areas of the basement not being utilized as a parking garage. The second portion will consist of two straight pipes along running parallel to the southern and eastern boundaries of the Site. 8. Submission of an approved Site Management Plan (SMP) in the RAR. 9. The property will continue to be registered with an E-Designation by the NYC Buildings Department. 7/7/2016: Rashad Received voice mail from Steve stating that he is encountering difficulty removing tank, he also sent email yesterday: I left you a voicemail regarding our spill at 38-11 31st Street in Long Island City, spill #1602528. We are having difficulty removing the tank since it is located in between our support of excavation whalers & rakers. We are trying to convince ABC Tanks to cut and remove in place along with having our demo contractor work simultaneously with them hand digging around the tank. I am anticipating this process to take another week and then we can have Athenica take some end point samples. The results of the samples should take a week. I believe our date to close out the spill with DEC is July 13th. Is there any way we can have an extension to close this spill out? Please call me on my cell to discuss if you should have any questions at 347-680-6879. Called Steve back and let him know that an extension is not an issue and that he should proceed safely. Replied to his email: I apologize for missing your call, I was out of the office for a few days. An extension will not be an issue, please proceed safely and provide me with an update when one is available. Thank you. 7/19/2016: Rashad Email Steve asking for update on site work. 7/20/2016: Rashad Steve emailed: Sorry I did not get back to you yesterday. We are scheduled to remove the soil that has been disturbed by the oil in the tank tomorrow. That should be all of the soil. Athenica will as always be overseeing the removals. We will from there start to close out the paperwork end of the spill. Please do not hesitate to contact me at 347-680-6879 if you should have any questions 11/3/2016: Rashad Emailed Steve seeking update. Steve responded: We are still missing manifests and receipts from the drum disposal. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 02/21/17 - Lakhani DEC Lakhani sent the following email to OER PM Alysha Alfieri: I hope you re doing well. I am the new project manager for the above spill, as Rashad Omar is no longer with the DEC. I am emailing to obtain an update on the progress at the site. I understand that there is an active SSD system to be installed at the site. Have you received commentary from NYCDOH regarding this SSDS? Has the SSDS already been installed? Furthermore, has a Remedial

Action Report been compiled for the site? Rashad s last email with Steve Gainnotis of Project Builders Construction Crop. revealed that soil removal, supervised by Athenica, was scheduled to take place on July 21, 2016. I would appreciate it if you could provide with any other information regarding the site. I look forward to working with you! DEC Lakhani sent the following email to Steve: I hope this email finds you in good health. I am the new project manager for the above spill, as Rashad Omar is no longer with the DEC. I understand you last communicated with Rashad in July 2016 about soil and tank removal at the above spill. Has this work been completed? Could you please send me any more information regarding the site as I would like to be up to date on all remediation activities? If you have any questions, please contact me at (718) 482-4038. 02/24/17 - Lakhani Sent the following email to Athenica Ezgi: I hope this email finds you in good health. I am the new project manager for the above spill, as Rashad Omar is no longer with the DEC. I understand you last communicated with Rashad in June 2016 about soil removal and endpoint sampling at the above spill. Has this work been completed? Could you please send me any more information regarding the site as I would like to be up to date on all remediation activities? If you have any questions, please contact me at (718) 482-4038. Ezgi is no longer employed at Athenica Environmental Services. The new director of HAZMAT Services at Athenica is Paul Lindell (plindell@athenica.com). Above email was forwarded to him. 02/27/17 - Lakhani Athenica Paul responded and informed that remediation was conducted and they are currently waiting to receive some disposal documentation so that they can submit the closure request. Paul is hopeful that he will receive it soon. Responded asking for update regarding the active SSDS. Included a reminder for an SMP as part of the RAR. Paul responded informing that the SSDS has not yet been completed, as the structure is in the early stages of construction (still moving soil, laying footings). The OER Project Manager is Alysha Alfieri. Her e-mail is aalfieri@dep.nyc.gov and her phone number is (212) 676-0459. 04/06/17 - Lakhani Sent email to Paul asking for update regarding site and whether they have had their SSDS design commented on by NYCDOH. DEC Lakhani sent the following email to NYSDOH Nathan Walz asking for his review of the proposed SSDS: I hope all is well. I wanted to run the above site past you with the hopes that your commentary could provide me with the proper guidance to close the spill. The site is located at 38-11 31st Street in Long Island City. The site is 9,100 square feet bounded by a 1-story commercial warehouse, a 2-story residential building, two 2-story residential buildings and one 5-story residential buildings. It contains two 2-story warehouses with interconnected basements which is already 6 to 10 feet below street level. The depth to groundwater ranges from 11 to 11.4 feet bgs. The proposed future use of the site will consist of 7-story mixed used building with a full cellar. The building will contain commercial/retail space and residential apartments. The cellar will be utilized for storage, mechanical rooms and parking. The first floor will be used for wholesale retail and a residential lobby. Construction of the cellar will require minor excavation of the existing basement floor to allow for additional footings to be installed. Six (6) soil borings were installed from which thirteen (13) soil samples were collected and analyzed. Soil sampling showed that there were no VOCs above standards. Two (2) groundwater monitoring wells were installed and two (2) groundwater samples were collected. The only VOC detected above limits in the groundwater

OER - JOB SITE (Continued)

S118705522

samples was PCE with a maximum concentration of 33 ug/L in both samples. Four (4) sub-slab vapor probes the site perimeter were installed and four (4) samples were collected to be analyzed. Chlorinated compounds were detected in all vapor samples with maximum concentrations of 17 ug/m3 for methylene chloride, 3,700 ug/m3 for PCE, 28 ug/m3 for TCE, along with a few BTEX. These concentrations call for mitigation according to the DOB matrix. From these results, Athenica Environmental, the consultant, determined that an active SSDS along with a vapor barrier would be sufficient to prevent vapor intrusion into the building. I have attached the RAWP to this email for you to review. I would appreciate any commentary you can provide regarding the SSDS. 04/07/17 - Lakhani NYSDOH Nathan Walz replied to inform that an active SSDS is indeed necessary due to the highly elevated PCE concentrations. Soil vapor results are as follows: TCE 28 ug/m3(SS1), PCE 2500 ug/m3(SS1), m/p-xylene 10 ug/m3(SS1), methylene chloride 34 ug/m3(SS1), TCE 1.1 ug/m3(SS2), PCE 20 ug/m3(SS2), m/p-xylene 11 ug/m3(SS2), TCE 9.5 ug/m3(SS4), PCE 3700 ug/m3(SS4), m/p-xylene 14 ug/m3(SS4). The 1936 Sanborn Map shows the site as developed with one 2-story commercial structure at 38-11 31st St, noted for Press Finishing and two 2-story dwellings were also listed on a 1939 City Directory as Cosmopolitan Cleaners and Dryers Inc., however this use is not identified in any Sanborn Maps. The 1950 Sanborn Map shows no changes but designated the site commercial structure as Machinery and Assembling. This property is listed on city directories from 1945 to 1970 as Metropolitan Welding Supply Company and Metroweld Distributors. The 1979 Sanborn Map designated the commercial structure designated for manufacturing. The site has remained unchanged to present. From 2005 to 2008 38-11 31st St is listed on city directories as Van Gogh Painting Corp and as All State Banners. This property was listed as R Wholesale Corp in 2013. 38-27 31st St was listed on city directories as occupied by private residents between 1934 and 1970 and 38-19 31st St for private residents between 1934 and 1976. Paul responded informing that the site is still in the early stages of construction as they encountered numerous delays, so they are still far away from completing the RAR. They have had some vapor barrier installed and the PE has been inspecting it per the RAWP. Regarding the SSDS design, they typically work with OER and their PE to come to a final design for an SSDS. Paul informed that he did speak with Ms. Dawn Hettrick of the NYSDOH - Bureau of Environmental Exposure Investigation. 04/10/17 - Lakhani OER Chawla emailed informing that an SSDS has been installed beneath the building basement slab in two (2) separate sections. One portion of the SSDS will consist of a loop system beneath the areas of the basement not being utilized as a parking garage. The second consists of two (2) straight pipes along running parallel to the southern and eastern boundaries of the site. They are in the process of installing vapor barrier. Once construction is completed, pressure testing will be conducted. A VBS inspection was performed by Athenica and AMC Engineering(the PE). During the inspection, four (4) SSDS sampling port locations were determined by the PE. All sub-grade portions of the active SSDS piping are complete; however, the entire system will not be completed for some time. Approx. only 30% of the VBS has been installed to date. 10/24/17 - Lakhani OER Alysha emailed to provide an update for the site. The basement elevation that was constructed is approx. 10' below street level, which is give or take the same elevation of the previous slab. Localized excavations were proposed for additional footings and the SSDS trenches; however, those

OER - JOB SITE (Continued)

S118705522

excavations were enlarged in many locations during tank removals. The SSDS piping is completed beneath the slab, however the riser pipes and fans have not been installed yet. Pressure testing has not been performed yet. 11/30/17 - Lakhani According to the 11/07/17 Monthly Status Report, regular construction activities and installation of vapor barrier and concrete slab near the cellar entrance ramp in Grid B will continue. Construction of SSDS riser roof will continue. Sub-slab pressure testing will be conducted once SSDS fan is installed (02/2017). 04/02/18 - Lakhani As per the 01/24/18 Daily Report, construction is on-going at the site. The vapor barrier is to be installed and inspected over the gravel section (all other vapor barrier sections previously inspected and approved by PE). Continue regular construction activities and installation of vapor barrier and concrete slab near the cellar entrance ramp in Grid B is planned to be completed by May 2018. In that time the construction of SSDS riser to the roof will be continued and the sub-slab pressure testing will be conducted once the SSDS fan is installed. 04/25/18 - Lakhani As per the 02/26/18 Monthly Status Report, construction is on-going at the site. Gravel was leveled in the vicinity to the cellar entrance ramp. The vapor barrier is to be installed and inspected over the gravel section (all other vapor barrier section were previously inspected and approved by a PE). Planned activities for the next three (3) months from 02/26/18 include installation of the vapor barrier and concrete slab near the cellar entrance ramp and continued construction of the SSDS riser to the roof. SSDS pressure testing will be conducted once the SSDS fan is installed. 04/27/18 - Lakhani OER Alysha Alfieri spoke with the consultant for the project and she was informed that there has been no change to site since February. The pressure testing for the SSDS has not been done yet. There is still a portion of the slab that requires the installation of the vapor barrier and subsequently poured. The risers have also not been extended above the roof, nor have the fans been installed. 02/04/19 - Lakhani DEC Lakhani spoke to Athenica who informed that the two loops of the SSDS have been installed. The system will be pressure tested in the coming week. Athenica project manager is: Adib Rahman ARahman@athenica.com 718-784-7490 07/24/19 - Lakhani Athenica pressure tested the SSDS and submitted the data. DEC Lakhani forwarded it to NYSDOH for review. 07/25/19 - Lakhani NYSDOH Nathan Walz reviewed the RAR and the SSDS commissioning and pressure differential test results. There are no comments as the system meets standards. Spill is closed. DEC Requires: 1) Pressure testing required to close spill"

Tank Info:

Tank Number: 001
Tank Id: 14959
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F00 - Pipe External Protection - None
A01 - Tank Internal Protection - Epoxy Liner
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 12/01/1957
Capacity Gallons: 4000
Tightness Test Method: NN
Date Test: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

DEC Memo: "12/28/11- Zhune visited the site. RR Plumbing Sevice Corp. was going to replace the sewer line at this site. While digging they noiced oil smell. They stopped digging with the machine and started doing hand digging when they found soil contamination coming from a leaking return line. The line was shut down. AB Environmental is going to do the clean up. Violeta Leano 718-784-3530 -- Owner tleano@yahoo.com 02/24/12- On 02/15/12 AB Environmental emailed the report dated 02/9/12. The soil contaminated in the impacted area was removed. The excavation was completed as best that could be accomplished with out compromising the foundation. One endpoint sample was collected at the bottom of the excavation(7feet). The endpoint sample analytical result indicated that all detected constituents are within acceptable limit. Spill Closed. Report eDocs. "

Remarks: "Found line broken. Been leaking for years"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Program: HW
 Site Code: 532999
 Classification: P
 Region: 2
 Acres: 0.47099999999999997
 HW Code: 241191
 Record Add: 09/27/2016
 Record Upd: 07/08/2019
 Updated By: GWBURKE

Site Description: The site is a vacant lot that extends from 31st Street to 32nd Street and is located between 37th Avenue and 38th Avenue near Sunnyside Yards in the western portion of Queens (Long Island City). The property is in a predominantly Commercial Use and Industrial/Manufacturing area with some Mixed Residential & Commercial use. Site Features: The site is fenced (wooden construction), somewhat flat and vacant with no structures. The surface is a mixture of soil, construction debris and concrete rubble. Historical Use(s): As of 1898, the subject property contained a two-story bottling and laboratory facility occupied by Hiscox & Company Patent Medicines. By 1915, the building was occupied by Mercury Motor Works and two two-story dwellings were constructed in the western portion. By 1936, the main building expanded, occupying more of the property and was occupied by Renner-Maras Inc. Ornamental Iron Works. In addition, one of the dwellings was identified as an office. By 1947, the building was identified as a loft and electro-plating facility. By 1970, the western building was built-out to the property and was identified as Bliss Display Corp, a manufacturer. The eastern portion was used for painting and the southern was used for woodworking. By 1995, the property was occupied by one manufacturer. By 1996, a small portion was used for parking. The property remained substantially unchanged through 2006. Site Geology and Hydrogeology: The topography of the site is generally level and is approximately 36 feet above mean sea level. The site is located approximately 0.87 miles northeast of Dutch Kills and 1.1 miles east of the East River. There is no groundwater data but according to the USGS, the depth to groundwater is expected between 21 and 30 feet bgs in the vicinity of the site. Groundwater was not

MOTOR AND IRON WORKS (Continued)

S118705940

encountered to the maximum depth of exploration of 27 feet bgs. The groundwater gradient is expected to slope generally to the southwest towards Dutch Kills. The major aquifer systems beneath the subject property are the Upper Glacial and Lloyd aquifers. The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 50 feet below ground surface where the Raritan confining unit is encountered. Bedrock beneath the subject property is located approximately 200 feet below ground surface. The lithology generally consisted of up to five feet of fill material underlain by a silt or clay lens extending to a maximum observed depth of seven feet followed by fine-grained poorly graded sand to the terminal depth of investigation at 23 feet bgs. The historic fill encountered was evidenced by brick and concrete, which predominantly was embedded in a silty sand matrix.

Env Problem: Work at this site was performed through New York City Office of Environmental Remediation.

Contact Name: MARK GELBAND
DEC Memo: "6/27/2016: Rashad 37-21 32 Street has an alternate address of 37-13 - 37-23 32 Street and 37-12 - 37-18 33 Street. No additional spills or PBS registrations found for this site. Called Mark, this site is an OER site and they found contamination during RIR field work. Shaminder contacted us this morning with regards to this site: I am reviewing an RIR which indicated VOCs in soils at 20 feet depths. Groundwater was not sampled due to refusal at 27 feet depths. Soil/fill samples results were compared to New York State Department of Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples collected during the RI showed that no PCBs were detected in any of the soil samples. VOCs including 1,2,4-Trimethylbenzene (42,000 ug/kg), 1,3,5-Trimethylbenzene (13,000 ug/kg), Ethyl Benzene (3,800 ug/kg), n-Propylbenzene (6,700 ug/kg) and total Xylenes (19,000 ug/kg) were detected above Unrestricted Use SCO in one deep soil sample SB-9 (21-23). The email had two documents attached. First document has site maps with soil concentrations as well as soil vapor results. Soil vapor results are as follows: SV-1: Tetrachloroethene-150ug/m3, SV-2: tetrachloroethene-230ug/m3, SV-3: Tetrachloroethene-170ug/m3, SV-4 Tetrachloroethene-160ug/m3, trichloroethene-400ug/m3, SV-5: tetrachloroethene-260ug/m3, trichloroethene-170ug/m3, SV-6 tetrachloroethene-220ug/m3, trichloroethene-200ug/m3, SV-7 tetrachloroethene-96ug/m3, trichloroethene-420ug/m3. Soil analyticals found contamination at SB-9 21-23 feet: 1,2,4 Trimethylbenzene-42,000ppb, 1,3,5 Trimethylbenzene-13,000ppb, Ethyl Benzene-3,800ppb, n-propylbenzene-6,700ppb, and total xylene-19,000ppb. 7/7/2016: Rashad Sent contaminated soil letter to NYCOER for site, it has been uploaded to D2 and mailed to owner. 9/6/2016: Rashad Received call from Paul Stewart of Advanced Cleanup Technologies. He said that he is working with OER on site and that the RAWP is in the final stages

MOTOR AND IRON WORKS (Continued)

S118705940

of approval. Received email from Shaminder: Above spill was recently called in during Site investigations. Since then, RIR and RAWP have been prepared. A copy of RAWP is attached for your review. Development includes excavations of full footprint of property to more than 22 feet deep for cellar and sub-cellar (to be used as parking garage) and a seven story residential building. Remedy includes: 1. Excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. 2. Performance of a remedial action for the petroleum spill #16-03003 under New York State Department of Environmental Conservation (NYSDEC) Spill program. 3. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. End point samples for spill closure will be performed per DER-10 requirements. 4. Construction of an engineered composite cover 5. Installation of a vapor barrier system 6. Installation of a passive sub-slab depressurization system (SSDS) 7. parking garage with high volume air exchange in conformance with NYC Building Code. Attached to email was RIR and summary. It has been uploaded to D2. Review of RAWP is as follows: Site is in VCP. The proposed future use of site will be a seven story mixed use building with retail stores on first floor, and residential apartments on the upper six floors. The cellar will be built to a max depth of 10 feet bgs, the subcellar will be built to a depth of 20 feet bgs. The majority of the property will be excavated to a depth of 22 ftbgs. Elevator pits will be excavated to depth of 26 ft bgs, the excavation is not expected to reach the groundwater table. The sub-cellar will contain 45 parking spots. The cellar will contain 25 parking spots. Groundwater was not encountered, refusal was reached at 27 ft bgs. The proposed remedial action will consist of: community air monitoring, excavation and removal of soil for the majority of the site to a depth of 22 feet below grade except for two recessed area to the northwest and northeast, which will be excavated to 2 feet bgs. A small portion will be excavated to 27 ft bgs. Removal of all USTs that are encountered during soil removal actions and registrations of all found tanks. Performance of remedial actions for the open spill case on property which include installation and monitoring of off site groundwater wells as required and approved by NYSDEC, and may include the removal of LNAPL present beneath the site, treatment of groundwater plume via injections of biorem and chem ox if required by NYSDEC, excavation and removal of petroleum impacted soil, where feasible to 2 feet below groundwater and the implementation of a groundwater monitoring program. A separate RAWP Addendum may be required by NYSDEC. Construction of an engineered composite cover of a min of 6 inch thick reinforced concrete building slab. Installation of a vapor barrier system consisting of vapor barrier beneath the building slab and outside of sub-grade foundation sidewalls. Vapor barrier will be 20 mill in thickness. Installation of passive SSDS. Property is also E-designated. 9/7/2016: Rashad Spoke to DEC Vought and sent report review letter approving RAWP to NYCOER pending proposed monitoring well locations. 10/5/2016: Rashad Shaminder submitted addendum to myself and John Durnin, John is DEC project manager for hazardous waste remediation project on this site. Sent email to John seeking if I should administratively close this spill and refer it to his hazardous waste project. 10/6/2016: Rashad Review of the addendum is as follows; they are proposing installation of two down gradient groundwater monitoring wells along the western boundary of the site. Also five additional soil vapor samples have been proposed along the northern and southern boundaries of the site.

MOTOR AND IRON WORKS (Continued)

S118705940

Discussions with John continue on possible case transfer (Remediation ID number 241191). 10/13/2016: Rashad On 10/12 DEC Durnin sent comments to Shaminder for the RAWP Addendum which include: Revised RAWP Addendum (see figure below) Site investigation decisions for this P site are based on the entire property being excavated to the depth of at least 22 feet. The north corner of the site along 32nd Street (recessed area) and the east corner of the site along 33rd Street (recessed area) both are only going to be excavated to a depth of 2 feet. Should the developer not implement this excavation plan, the soil investigation would require additional sampling from 2 feet to 22 feet across to entire property. Soil Vapor According to the June 22, 2016 draft RIR (page 20), nine soil vapor samples (SV-1 through SV-9) were collected but only 7 are documented (SV-1 to SV-7). This should be corrected in the final RIR. Relocate proposed SV-11 away from the former basement area to ensure the soil vapor sample (6 -7 probe depth) is representative of the soil conditions without any influence of the former basement. Add soil vapor sample points SV-13 and SV-14 at each end of the site near 32nd Street and 33rd Street to evaluate the potential for off-site migration. Soil There is only one soil sample, SB-9 (21 -23) below the two foot depth. All the other soil samples are from the 0 to 2 depth. The off-site soil borings for MW-1 and MW-2 must be logged continuously and screened with a PID. Any visual evidence of contamination or elevated PID readings will require soil sample collection and laboratory analysis for VOCs, SVOCs and Metals. Groundwater Based on groundwater data from other OER Brownfield Sites in the area, the groundwater flow direction is most likely in the westerly direction and approximately 20 feet deep. Indicate the diameter of the proposed wells and the type of well drilling rig to be used. Since refusal was encountered at 27 feet during a previous attempt, a larger drill rig is needed to install the four proposed monitoring wells. Provide well construction details for all new wells. MW-1 and MW-2 must be greater than 20 feet apart to be representative of a broader area of groundwater, to not influence one another and to enhance the verification of the groundwater flow direction. MW-2 needs to be far enough along 32nd Street to reasonably be downgradient of the site. MW-3 should be located near SB-9 where elevated levels of Trimethylbenzenes, Ethyl Benzene, n-Propylbenzene and total Xylenes were encountered in the soil at 21 to 23 feet. MW-4 will show if there is off-site groundwater impacting the site (assuming a westerly groundwater flow). As per DEC Vought, no further comments are needed for petroleum remediation as DEC Durnin has taken the lead and addressed the Departments comments/concerns. 10/31/2016: Rashad On 10/28 DEC Durnin asked for update to revised addendum. Alysha from OER sent revised addendum report. It has been uploaded to D2. 11/9/2016: Rashad John Durnin sent email: There has been a question raised regarding the revision of the RAWP Addendum for 37-21 32nd Street, Spill #16-03003. The consultant, Advanced Cleanup Technologies, Inc. (ACT) prepared the revised addendum to the Remedial Action Work Plan (RAWP) and RAWPs required a P.E. to do the work. However, the work I ve been reviewing and commented on involves investigative work necessary to evaluate if this project (NYSDEC P Site) will be in the NYCOER BF program or the NYSDEC BF program, typically investigative work not requiring a P.E. Is it possible that this is actually an addendum to an existing RIWP prepared by ACT in early 2016? Alysha replied: The addendum is for the existing RIWP and will be also included as an appendix in the Stipulation List.

1/5/2017: Rashad Emailed DEC Durnin about possible case transfer due to my resignation at DEC, received no response. 1/6/2017: Rashad After meeting with RSE Austin spill will be assigned to DEC Durnin. There is a DEC approved RI Work Plan addendum for additional wells and SVI sampling. Waiting for this to be done. DEC sent a sidewalk opening permit request letter on February 23, 2017. (3/31/2017) The additional well samples and SVI sampling were completed in May 2017. Site remediation/construction began in January 2018. Daily reports are available on the NYCOER EPIC website (16TMP0372M). Once the site remediation is completed, DEC will evaluate the open spill and determine if it can be closed. The DEC Project Manager, John Durnin, will retire in April 2018. The new Project Manager will be Kyle Forster. (3/29/2018), "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/29/2002 - Sangesland spoke to property owner (Mr. Ron Levy). Mr. Levy did not feel comfortable with ProTest and requested information on how to close out this spill. Isolate and retest just the tank and just the piping. Once the spill is closed out, owner will abandon the tank and switch to gas. 6/10/2002 Man hole on top of tank was left open. Gasket was replaced and the tank passed the retest. 7/3/2002 Mr. Levy called. He will send a copy of the tank test which shows that the tank passed the second test. He also said that he will be pulling the tank out and wanted to know the proper procedures. Sangesland provided Mr. Levy with a contact at PBS. 6/16/05 Heitzman: See PBS 2-607788. Tank was removed July 2002. Closed."

Hazardous Waste Summary:

. Waste code: B004
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Facility Has Received Notices of Violations:

Regulation violated: Not reported
Area of violation: Universal Waste - Small Quantity Handlers
Date violation determined: 2015-01-08 00:00:00.0
Date achieved compliance: 2015-02-19 00:00:00.0
Violation lead agency: State
Enforcement action: COMPLIANCE EVALUATION INSPECTION ON-SITE

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 21321
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
E04 - Piping Secondary Containment - Double walled UG
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 12/01/1948
Capacity Gallons: 6000

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SHWS:

Name: BRIDGE CLEANERS
Address: 39-26 30TH STREET
City,State,Zip: LONG ISLAND CITY, NY 11101
Program: HW
Site Code: 440982
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.17299999999999999
HW Code: 241127
Record Add: 10/15/2010
Record Upd: 02/14/2019
Updated By: MJKOMORO

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to

9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported

The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Code: 440982
Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011,

and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

FRESH CLEANERS & LAUNDRY INC (Continued)

1001125032

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016

resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Env Problem:

District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings. Recent construction in the area includes a self-storage facility and hotels. HISTORICAL USES: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, and distribution points for a variety of products. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL, which is about 20 feet below land surface in the vicinity of the site. Soils in the area are expected to be primarily sand and silty sand. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2.

NATURE AND EXTENT OF CONTAMINATION: In October 2010, a property location in this block was identified as a potential site (P-site) due to soil vapor and groundwater results collected by an adjacent property owner. After unsuccessfully attempting to obtain access for a more thorough investigation, NYSDEC conducted a limited offsite investigation in February 2012. Groundwater and soil samples were taken. Based on this investigation, the Bridge Cleaners Site (C241127) was determined to be causing a significant threat to public health and the environment. The site entered the NYS Brownfield Cleanup Program and remained in the Program until December 2016. Groundwater: Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of tetrachloroethylene (PCE) and trichloroethylene (TCE) upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. The groundwater standard for both PCE and TCE is 5 ppb. Soil: One of 14 soil samples, at a side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Scope of Off-Site Investigation 2016: This 2016 Remedial Investigation will define the nature and extent of contamination emanating from the Bridge Cleaners Site in groundwater, soil vapor and any other parts of the environment that may be affected. Shallow and deep groundwater wells will be installed upgradient and downgradient of the Bridge Cleaners site (C241127). After well installation, two sets of samples will be collected. Based on the initial sampling, groundwater samples will be collected for Compound Specific Isotope Analysis (CSIA). This analysis will be used to determine whether the source of the Tetrachloroethene (PCE) and Trichloroethene (TCE) groundwater contamination is exclusively from the Bridge Cleaners site or from other sources in the immediate area. Eleven soil vapor samples will also be collected initially. After the results are obtained, the Department may request access from owners of eight structures along 29th Street for sub-slab and indoor air sampling. OU2 Off-Site Investigation Results Soil: Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 389 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. PCE and TCE were not observed in the 4 deep wells installed. Soil Vapor: Eleven soil vapor points were

1001125032

Health Problem: installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as mitigate. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2.

People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building, and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil

samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade, and below the water table at 25.5 feet. In the first quarter of 2014, after entering the Brownfield Program, additional groundwater, soil and soil vapor samples were obtained from within the building. Five groundwater samples ranged from 165 to 340 ppb for PCE, and TCE concentrations from 2-7 ppb. Soil samples obtained from the same 5 locations did not exceed unrestricted soil cleanup objectives. Sub-slab soil vapor, however, ranged from approximately 20,000 ug/m3 to 668,000 ug/m3 below the slab (PCE) and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Based on the soil vapor results, there is a need to mitigate the building. In Nov 2014, a new consultant was hired by the BCP applicant. Soil in the NW corner of the building was found at 1.8-9.6 ppm (exceeding the protection of groundwater SCOs) for PCE (1.3ppm). An IRM design has been developed to address the source area.

Health Problem:

People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 9907
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
I04 - Overfill - Product Level Gauge (A/G)
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 09/01/1930
Capacity Gallons: 5000
Tightness Test Method: NN

Hazardous Waste Summary:

. Waste code: B004
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE 7/15/05 - Mike H left message at Board of Education - also spoke with Albert Cardino (718-784-5250), School Fireman and in charge of fuel oil tanks. On 9/2 - Bob C - spoke with Al Cardino, who said to call the school custodian (Tom Logan) at 718-937-8214, who would have the records and could fax them. Called Tom on 9/7 & left message. 11/15/2005: Lead transfered to Joe White as part of the Spill Initiaative Project. 12/08/2005: Mr. James Merlo contacted Joe White and is checking to see if a new tank test has been performed on this tank. He will provide documentation so spill can be closed. 1/5/2006: Tha associated PBS# 2-478741 indicates that the tanks 001 and 002 have ben closed in place as of 6/1/2001. The remaining tank 003 is an above ground tank that does not require a tank test. Given that the spill was a tank failure and the underground tanks are no longer in service I am closing out this spill ----- joe white "

Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported

 Control Code: 15
 Control Type: ENG
 Date Record Added: 05/10/2017
 Date Rec Updated: 05/02/2019
 Updated By: RECURLEY

Site Description: Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: There is a 2-story building on-site. The first floor is primarily storage and the second floor is used as office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is currently occupied by a wireless communications distributor. Future use is anticipated to be a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: There is a 2-story building on-site. The first floor is primarily storage and the second floor is used as office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is currently occupied by a wireless communications distributor. Future use is anticipated to be a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination

Site Code: 492945

Site Description: Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: There is a 2-story building on-site. The first floor is primarily storage and the second floor is used as office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is currently occupied by a wireless communications distributor. Future use is anticipated to be a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 517267
Acres: Not reported
HW Code: C241163A
SWIS: 4101
Town: New York City
Record Added Date: 11/23/2015
Record Updated Date: 06/28/2017
Update By: MJKOMORO
Site Description:

Location: This is an off-site investigation of the area downgradient of the Former Union Wire Site, Site Number C241163, which located at the corner of 30th Street and 40th Ave, in Long Island City, an urban area. Site Features: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. Current Zoning and Land Use: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including several three-story apt buildings along 29th Street. The downgradient block also contains a limited number of residential buildings, parking, self-storage, hotel and auto repair businesses. Past Use of the Site: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, warehouse operations, and churches occupied the site. Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by intermixed layers of sand and silty-sand. A clay layer was encountered in one location at approximately 32-38 feet. Bedrock was not encountered although reference material indicates bedrock is glacial and alluvial deposits from the Cenozoic age. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast.

Env Problem:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminant is TCE. The off-site investigation focused on groundwater and soil vapor. Soil: Based on soil analysis from nearby off-site wells, off-site soil contamination was not expected. Groundwater: On-site, TCE was identified in groundwater with a maximum concentration of 280 ppb (parts per billion). Perchloroethylene (PCE), a chemical commonly used at drycleaners, is present in groundwater (up to 730 ppb) but is believed to be from an adjacent off-site source. Off-site wells sampled at the downgradient edge of the site indicate low concentrations of TCE (11 ppb in MW6, 3.1 ppb in MW7) and PCE (99 ppb in MW6, 64 ppb in MW7) migrating off-site. In addition, a well, located immediately adjacent to the site and side-gradient, and installed by the Department for an investigation, also contained PCE at 369 ppb and TCE at 272 ppb. Soil Vapor: Eleven soil vapor points were installed as part of the adjacent site's off-site investigation. The highest soil vapor (4400 ug/m³ TCE) was located across 40th Avenue from the site, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the level decreased to 1300 ug/m³ TCE. Sub

Health Problem:

Slab and Indoor Air: Four buildings were sampled for sub-slab and indoor air. One of them was classified as mitigate due to both PCE and TCE in the sub-slab and indoor air. A second structure was classified mitigate or monitor only based on PCE, not TCE. People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater off-site is not used for drinking or other purposes and the area is served by a public water supply that obtains its water from a different source that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling, as part of the off-site investigation at the adjacent Bridge Cleaners site (C241127), indicated soil vapor intrusion is a concern at several off-site structures and actions have been recommended.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
 HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act. FIS (New York - Facility Information System) is New York's Department

Registry ID: 110004494226

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 127449
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 02/28/05: Transferred from Rommel to Tibbe. Site being investigated by NYCT. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 12/15/05: Transferred back to Tibbe from Bureau B. 08-30-06: NYCT attempted to perform a subsurface investigation but continually encountered refusal. A new subway tunnel, ventilation bulding and utilities were constructed in the area of the former tanks and associated contamination. It would appear that the contamination was removed during construction becuase of the large excavation that was required to construct these facilities, but NYCT has no reports or mainfests to indicate how much was removed. Further investigation does not appear to be possible due to the ubdground structures and utilities. "

Remarks: "Free product found in groundwater monitoring well"

DER Facility ID: 405653
DEC Memo: "10/12/2011 - Sangesland reviewed a Request for Closure submittal from Riteway Tank dated Oct 12, 2011. Problem was a Tank Test Failure that was traced to a hole in the sidewalk fill line. The sidewalk was opened and 58 drums of contaminated soil was removed. The line was replaced and 4 end point samples were taken. Clean fill was put back and the sidewalk was repoured. Based on the end point lab results, this spill case has been closed out. Lab results, manifests, photos etc are all in eDocs attachments."

Remarks: "tank test failure. retest pending, believed to be line failure"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110001601829

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 22235
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 09/01/1973
Capacity Gallons: 15000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Hazardous Waste Summary:

. Waste code: X001
. Waste name: WASTE OILS

Violation Status: No violations found

FINDS:

Registry ID: 110004515249

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "4/6/04 TTF letter sent out to Cary Wolf. 9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. BP is doing cleanup under spill #8402855. Provided copy of TTF letter dated 4/6/04. B. Beck to provide response by 10/8/04. 10/20/04 Received repair record for the premium tank line performed by Alvin Petroleum. Alvin excavated over the premium tank on 4/9/04. They found plastic in the check valve over the tank and removed the plastic and insert on valve. Disconnected suction line from tank, tested the line at 50lbs. and

Registry ID: 110067685794

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located

MAP FINDINGS

AMTRAK SUNNYSIDE YARD (Continued)

S103575644

to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility. Historic Use: The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA) project. An extensive cleanup program was completed in 1996 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with recurring PCB contaminated sediment impacts. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem:

Nature and Extent of Contamination: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater

MAP FINDINGS

AMTRAK SUNNYSIDE YARD (Continued)

S103575644

from soils impacted by the COC's. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs (18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface

Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs.
Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010.

Health Problem: Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

Contact Name: CHRIS BENSON
DEC Memo: "3/31/15: Mahat t/c: DEC Mahat contacted Mr. Benson and asked him to send some picture and closure report as clean up is done by retained contractor. DEC is waiting for a closure report. 4/3/15: Mahat E/C: DEC Mahat received a narrative clean up report from Mr. Benson. Absorbents were applied to the effected concrete to. Affected soils were excavated to a depth of 9 , and concrete was scrubbed with a degreasing agent to remove any remaining product. The area was returned to service, 2x drums of oily solids were generated. V/R, Chris Benson Senior Environmental & Safety Analyst New York - Operations AMTRAK 39-29 Honeywell St. Long Island City, NY, 11101 Cell 917-538-2982 ATS 521-6084 Office 212-630-6084 christian.benson@amtrak.com Based on the report and the facility and initial picture. The Department does not warrant any further investigation. Spill case will be closed in DEC Spill Database. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 7/9/07: Reassigned to Kartik Chanda (Chanda) 9/10/07: Kartik Chanda of DEC has reviewed this spill case and sent a letter to National Railroad Passenger, 400 West 31st St., 4th Floor, NY, NY 10001, Attn: Emma Cattafi requiring that the following information be submitted to DEC for review by 10/25/07: 1. An explanation of the cause of the tank/equipment failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/17/07: Chanda received a letter from Emma Cattafi, Senior Environmental Coordinator, Amtrak with enclosed: 1. Invoices from Eadtmond describing work performed. 2. Invoices and scope of work from CHES. 3. Soil sample analysis report. 4. Tightness test results. 5. Shipping paper for soil disposal. 11/19/07: Chanda reviewed soil sample analytical results and UST tightness test results for this spill and has the following comments: 1. On May 14, 2004, the oil was found during the soil excavation phase of a project to upgrade/ retrofit an existing 20,000-gallon UST. 2. Amtrak estimated a release of approximately 10 gallon of #2 fuel oil. 3. Clean Harbors Environmental Services(CHES) excavated the contaminated soil surrounding the tank. VOCs and SVOCs were not detected in soil analytical results. Kartik Chanda discussed with Joe Sun (NYSDEC) regarding the findings of the soil analytical results and based on the information presented to the Department, DEC closed this spill, dated 11/20/07. 11/21/07: Chanda sent an NFA letter to Ms.Emma Cattafi, Senior Environmental Coordinator, AMTRAK, by regular mail. "

DEC Memo: "02/14/12- Christian Benson from Amtrack sent the following email:
Around appx 1500hrs, 13FEB12, while replacing fuel in a portable heating unit, an Amtrak employee noticed fuel leaking from the underside of the fuel tank. The employee notified their supervisor, who instructed them to bring it to the motor pool area, away from the track area. The employee tilted the unit upwards to move product away from the hole. Upon reaching the motor pool, the employee had to tilt the unit back down, allowing product to begin leaking again. It is now estimated that only 1.2 gallons were released as employees were able to remove remaining product from the tank and place into a separate drum. The spilled material was contained with absorbent boom, pads, and sand. Clean-up was completed the morning of 14FEB12, and all wastes were placed into a drum for disposal. S-200 product will be used to further ensure full remediation of the area. Product was only released on impermeable surface, no waterways or soil was affected. Spill Closed. "

Hazardous Waste Summary:

- . Waste code: B001
- . Waste name: PCB oil (concentrated) from transformers, capacitors, etc.

- . Waste code: B002
- . Waste name: Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

- . Waste code: B007
- . Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

 Address: 37-10 24TH STREET
 City,State,Zip: LONG ISLAND CITY, NY 11101-3520
 Program: HW
 Site Code: 374812
 Classification: Significant threat to the public health or environment - action required.
 Region: 2
 Acres: 0.47999999999999998
 HW Code: 241102
 Record Add: 12/13/2006
 Record Upd: 05/10/2019
 Updated By: JCGRATHW

Site Description:

Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th Street and 37th Avenue. Site Features: The site consists of four lots. Current owner owns three lots and the other lot foreclosed by NYC as tax lien property. Recently the other lot (lot 26) was bought by a different owner who demolished the single-story old building that was existed on this lot. The main current site features include a newly built eleven story building on one lot which is being developed, and other two lots will begin excavation under an IRM soon. The whole site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site s property is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility rights-of-way. The nearest residential area is located north (up gradient) of the site, on the other side of 37th Avenue. There is also a residential area approximately 500 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930 s to the late 1980 s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980 s to the mid 1990 s. It appears that site contamination resulted from poor housekeeping and spills associated with the dry-cleaning operation. Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the south-southeast.

Env Problem:

Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During the remedial investigation, PCE, TCE and cis-1,2-DCE were found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The concentration of PCE on-site significantly exceeded the Soil Cleanup Objective (SCO) for unrestricted use as well as for protection of groundwater (1.3 ppm). Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC were detected in on-site shallow groundwater at concentrations up to

S110246984

4,000 parts per billion (ppb), 1200 ppb, 12000 ppb, 130 ppb and 240 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. As per April and June 2012 and March 2014 groundwater data, the PCE plume in groundwater has migrated approximately 400 feet down gradient from the site (off-site) towards southeast. Soil Vapor - PCE and TCE were detected in on-site soil vapor at levels up to 2,800,000 microgram per cubic meter (g/m3) and 130,000 g/m3 respectively and off-site at levels up to 13,000 g/m3 and 420 g/m3, respectively. Soil Vapor Intrusion (SVI) evaluation As part of SVI evaluation, vapor samples were collected from under the basement slab and basement indoor air from 5 surrounding structures. Two structures need mitigation and one structure needs monitoring or mitigation. To mitigate one of the structures located adjacent to the site an SSDS system has installed which currently in operation.

Health Problem: Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None
D10 - Pipe Type - Copper
C01 - Pipe Location - Aboveground
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
J02 - Dispenser - Suction Dispenser
G00 - Tank Secondary Containment - None
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel Tank in Concrete
Tank Status: In Service
Pipe Model: F
Install Date: 01/01/1933
Capacity Gallons: 2000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: ACDANIEL
Last Modified: 05/05/2017

FINDS:

Registry ID: 110019778141

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110004333294

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110069641775

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: JEBROWN

Site Code: 490213

Site Description: Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies,

U000409049

including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to coarse sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Name: SILVER STAR MOTORS SITE
Address: 37-14 36TH STREET
City,State,Zip: LONG ISLAND CITY, NY 11101
Site Code: 490213
Control Name: Environmental Easement
HW Code: C241156
Control Code: J
Control Type: INST
Dt record added: 12/02/2015
Dt rec updated: 03/10/2017
Updated By: JEBROWN
Site Code: 490213

Site Description: Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to coarse sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

 Updated By: JHOCONNE

Site Description: See also Site no. V00600 Location: The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The entire site is occupied by a one story building which covers approximately 21,900 sq.ft. Historical Use: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis.

Env Problem: Nature and Extent of Contamination: Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues. Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994. Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable

levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore, inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion.

Site Description: See also Site no. 241009 Location: The Levco Metals Finishers property is located in an urban area in New York City in an industrial/residential part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The site is undergoing development. Current Zoning and Land Use: The site is under construction. The zoning is commercial. Past Use of the Site: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. The entire site was occupied by a one story building which covered approximately 21,900 sq.ft and was demolished in 2000. The site was used as a parking lot until 2017. Site Geology and Hydrogeology: Site soils removed from the sump area were described as silty, clayey sands and clay in the upper part of the aquifer with coarser sand and gravel deposits to a till layer above the bedrock. The groundwater table is at 15 feet below grade and the bedrock is 30 feet below that. Groundwater flows to the west, and the East River lies 1.5 miles west of the site.

Env Problem: Nature and Extent of Contamination: The remediation of the site is complete. The contaminant of concern in soil and groundwater had been trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: See also Site no. 241009 Location: The Levco Metals Finishers property is located in an urban area in New York City in an industrial/residential part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The site is undergoing development. Current Zoning and Land Use: The site is under construction. The zoning is commercial. Past Use of the Site: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. The entire site was occupied by a one story building which covered approximately 21,900 sq.ft and was demolished in 2000. The site was used as a parking lot until 2017. Site Geology and Hydrogeology: Site soils removed from the sump area were described as silty, clayey sands and clay in the upper part of the aquifer with coarser sand and gravel deposits to a till layer above the bedrock. The groundwater table is at 15 feet below grade and the bedrock is 30 feet below that. Groundwater flows to the west, and the East River lies 1.5 miles west of the site.

Env Problem: Nature and Extent of Contamination: The remediation of the site is complete. The contaminant of concern in soil and groundwater had been trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

 DEC Memo: "11/30/2005 Sangesland spoke to rep at Island tank. She said the site was dug out and endpoints were clean. She said a closure report would be sent ASAP. 1/4/06-Hiralkumar Patel. Here is the summary of the report from Island Environmental Tank, Inc. * According to owner, the tank has previously been used for the purpose of storing #2 heating oil and owner doesn't know when this tank was installed. * UST was installed horizontally in the backfill material, with the top of the tank located approximately 4' below the surface. * A 1080 gal. capacity tank was removed in the presence of Mr. Vinny Lovari of Island Tank Enviromental. After removal from cavity, tank has been cut and washed and removed oil and water mixture with vac/truck. * No groundwater or static surface water was encountered in the tank cavity. * Tank had pits and holes. * Tank cavity was excavated approximately 30 cubic yard of soil in 55 gal. drums and disposed at Jamaica Recycling Inc. Jamaica, NY. * Tank cavity was backfilled and compacted in place. * 6 samples were taken out from cavity and tested at Severn Trent Laboratory, Edison, NJ. * The metal tank and all metal tank system components were removed from teh owner's property and disposed of as scrap metal at John Iron & Metal Co.,Inc. 33 Arthur Kill Road, Staten Island, NY. 1/5/06-Hiralkumar Patel. No Further Action required letter has been sent to Mr. John Domenico. Case closed as per Mr. Jeff Vought. 02/03/06-Hiralkumar Patel. Send out NFA again through fax (212-689-6082) as per John's request."
 Remarks: "tnak removal found oil on the tank. THERE IS 3 OR 4 DRUMS THAT NEEDS TO BE REMOVED. THE TANK HAS BEEN CUT UP."

FINDS:

Registry ID: 110012185349

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/11/2003 Sangesland responded to the site of an ECO/Police action at a junk yard. Site has been an active Auto Parts facility for approx 2 years. Site is an irregular T shaped lot (approx 120' x 200') Cement/asphalt appears to cover majority of the lot, unknown if this ground cover is complete and impervious to surface spills. No obvious floor drains could be seen. Unknown if rainwater, auto fluids run into the ground or directly off site. Central area of the yard appears to be the car dismantling area and contains the majority of the spilled auto fluids (oil, transmission fluid, etc.) There is no controled spill containment area (no curbing, collection tank etc). Perimeter of yard was lined primarily with automobile racks (3 cars high). Ground staining appeared weathered and less severe than in the central area. Along with automotive liquids, the yard contained a large number of engines, transmissions, various engine parts and multiple automobile batteries (several appeared damaged and overturned). DEC Requirements: 1) Surface of the yard must be cleaned down to the cement/asphalt level. An integrity inspection will be made to determine if there are any floor drains or open cracks directly to the ground below. 2) A Site Delineation will be required at the property. A series of soil borings will be taken in a grid pattern over the area of the yard and soil/water samples tested to EPA Method 8260, 8770 & heavy metals. 3) Based on the results of the Site Delineation , a Site Remediation Plan will need to be prepared which will identify the procedure to clean up the contamination identified in the delineation. 4/11/2003 - The owner of the property is believed to be Virginia 516-383-9358. She is somehow associated with Yardley Associates . A call was made to this number in an attempt to get a mailing address, but no response was recieved. Lease holder to the site is: Jussain Zulfiqar and/or Anwar Javed. 5/7/2003 Sangesland spoke with Virginia Lupoli (owner) She inherited the property from her father. Yardley Associates LLC is the corporate name for the owner. Sangesland outlined the work which will be required on this site. 1) Power wash the lot to determine the condition of the black top or cement pavement 2) Geo Probe of site to determine the subsurface condition of the site. 3) A 60 day limit will be put in the letter. 4) A list of state contractors will be forwarded with the letter Contact info: Yardley Associates LLC Attn: Virginia Lupoli P.O. Box 237 Cold Spring Harbor, NY 11724 Fax # 631-385-4477 11/4/2003 Sangesland reviewed an Environmental Site Assessment for this site prepared by Dr. Norman Munroe (917-497-0190) of Astem Labs Inc. Report states that the entire site is capped with a cement pad between 8 and 24 thick. There did not appear to be any open preferential pathways directly to the soil. The report did not outline the path for rain water runoff or recharge. Report outlines soil boring work done on the site along with some ground water sampling. Some minor soil VOC hits (BTEX) in BH-2, BH-4 and BH-9 One minor groundwater hit for Benzene & MTBE in BH-4 SVOC's for soil and water were below regulatory limits Heavy metal concentrations in soil samples exceeded regulatory limits for several metals including: lead arsenic, cadmium, chromium and copper. Based on this information, the case is closed with no further action required."

Remarks:

"DEC SPILLS GROUP CALLED TO SITE OF POLICE ACTION AT A JUNK YARD. SITE HAD SPILLS OF AUTO RELATED LIQUIDS OVER ENTIRE YARD AREA."

DEC Memo: "4/25/07 bf: sent ttf letter to: Eric Levor Queens Plaza Realty Corp. 25-12 41 Avenue Long Island City, NY 11101-3882 5/25/07 received passing tightness test results by fax from Eric Lovor. Tried calling him at number on fax:(718)392-2123. No answer. To close this spill, he needs to submit a response to ttf letter. bf 5/29/07 Called E. Levor again and there was no answer. Called Emergency Contact # from PBS facility info (718)263-2418 and left message to call me back. bf 6/4/07 Called E. Levor at (718)392-2123. The number is no longer in service. I then left a message at (718)263-2418. bf 6/5/07 Received 2 messages from Edith Levor to call back. (718)392-2123. Called her at 3:45 Pm and she said that the tank failed the test because there were two sets of vent pipes. The old vent pipe was never disconnected. She said she will call Advanced Tank after she hangs up with me and have them prepare a response to the ttf letter. bf 11/8/07 Called E. Levor. Left message that i still have not received letter from Advanced Tank and to call me back. Called Vinnie the Tank Doctor (718)727-0666. He said that there was an open line from a hot water heater and he plugged the line. No contaminated soil was found. He faxed paperwork to E. Levor. He was not in his office and requested I call him Monday. He will check to see if he still has the fax. bf 11/26/07 Received message from E. Levor. Called her back and left message on her machine. bf 1/22/10 Inspected site and issued NOV for expired registration, failure to monitor unmetered tank for leaks, and failure to contain/reomve petroleum discharge. Administrative settlement conference is scheduled for 2/17/10 at 10:30 AM. bf 2/17/10 PBS Settlement Conference held today. Attended by Edith and Eric levor. Provided 6/7/07 letter from Tank Doctor Inc. stating that 2 unused lines from top of tank were disconnected in building. Removed lines and tank retested and passed. NFA. bf "

Site Description: Location: The 11,200 square foot (0.26 acre) site is located at 3545 35th Street, Long Island City, NY in an urban area. The site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The site is occupied by a 1 to 2 story commercial dry cleaner. Current Zoning/Use(s): The site is zoned as M1-5, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The Site is an industrial building conducting dry cleaning operations

since 1975. The site is a RCRA large quantity generator (EPA ID # NYD981132459) of spent solvent, waste code F002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site (site no. 241139) generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater in the vicinity of the site was encountered at approximately 17 to 20 feet bgs and flows towards the southwest.

Env Problem: Nature and Extent of Contamination: Information is based on the results of a site characterization investigation performed at the nearby Former Luft Co. Inc. Cosmetics Manufacturer site (241139). That investigation was triggered by the discovery of elevated levels of cVOCs in the indoor air and sub-slab vapor of the school building on that site. The subsequent Supplemental Site Investigation (SSI) indicated that elevated concentrations of cVOCs (namely PCE) existed along the adjacent sidewalk on the western side of 35th Street and the south-eastern section of the school building. The addendum to the SSI ascertained that the Former Luft Cosmetics site was not a source of the contamination. Seven groundwater wells were installed upgradient and cross gradient of the school and samples taken at the groundwater interface. One well was installed adjacent to and another just downgradient of the Teitelbaum site. Groundwater Several cVOCs associated with chlorinated solvents, namely, tetra-chloroethylene (PCE) and its breakdown products tri-chloroethylene (TCE) and cis-1,2-dichloroethylene (cis-DCE), were detected at elevated levels from groundwater samples taken at the groundwater interface at locations along the adjacent sidewalk and downgradient of the Site. PCE, cis-DCE and TCE concentrations were at orders of magnitude of the TOGS SCG of 5 g/l; trans-DCE and 1,1-DCE were also detected at levels above the SCG. Concentrations of cVOCs decreased in the downgradient direction consistent with the inferred contaminant plume. The groundwater flow direction was identified as southwesterly by the Addendum to the Supplemental Site Investigation Report (ASSIR) of the nearby Former Luft Co. Inc. Cosmetics Manufacturer site. Significant Threat: Evaluation of significant threat will be made following completion of the Site Characterization. This Site has entered the Brownfield Cleanup Program (BCP). Executed Brownfield Cleanup Agreement signed on 01/09/2014. See site no. C224149 for further updates.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The 11,200 square foot (0.26 acre) site is located in an urban area in the Astoria section of the Borough of Queens. The Site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The Site is currently improved with one 100 ft by 100 ft (approximately 10,000 square feet) commercial/manufacturing building. The ground floor is currently utilized for dry cleaning operations and a portion of the building contains a second floor for office space and storage. Current Zoning and Land Use: The site is zoned M1-5 (manufacturing and light industrial) and is surrounded by industrial, commercial and residential uses. Past Use of the Site: The site has been a commercial dry cleaner operating under various names and ownership since 1952. Site Geology/Hydrogeology: The Site is generally level

Env Problem:

and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. Groundwater in the vicinity of the site was encountered at 17-20 feet bgs and flows towards the southwest.

Nature and Extent of Contamination: As part of the Remedial Investigation (RI) soil, groundwater and soil vapor were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon the results of the RI, the primary contaminants of concern for the site include tetrachloroethene (PCE) and its breakdown products. Soil - Highly elevated concentrations of CVOCs ranging from 360 to 1100 ppm of PCE were found in soils collected from the northwestern portion of the Site in proximity to an abandoned UST. The UST grave likely created a depression in the subsurface resulting in a preferential pathway for chlorinated solvent contamination to pool. Based upon data collected to date, this area is considered to be the source of chlorinated solvent contamination in groundwater and soil vapor on and off the Site. CVOC impacts in this area extend vertically from approximately 5 to 20 ft-bg and are limited to a radius of approximately 15 to 20 feet, using SB-1/SB-17 (located in the NW section) as the center point. CVOC concentrations drastically decrease in soil outside of this radius and are generally not detected above Unrestricted Use SCOs outside of a 30 foot radius. Groundwater - Groundwater results from the RI indicate that elevated concentrations of chlorinated solvents are present throughout the Site and are migrating offsite. PCE concentration was 120 ppb in the source area mentioned above and 130 ppb just down gradient and off-site sampled a year before. Chlorinated solvent contamination is consistent with current and former Site operations. Concentrations of chlorinated solvents as measured in both on-site and off-site wells have decreased during the performance of this RI [2014 2017]. Soil Vapor - The results of the RI soil vapor investigation indicate that elevated concentrations of chlorinated solvents are present in soil vapor within the Site boundaries (maximum 328,000 g/m³ of PCE) and extend offsite to the west, north and south (maximum 2860 g/m³ of PCE).

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Sent ttf letter to: Dominic Casamento 2403 41st LLC 14-38 31st Drive Long Island City, NY 11106 Mr. Casamento called back later in the day. He said Petroleum Tank Cleaners will be coming back on Monday to make necessary repairs. He said they told him it was a dry leak. I confirmed the above address as his mailing address. He is on vacation and will be returning Monday. bf 4/2/08 received fax from M. Salamack of PTC. Tank was emptied and lines and tank were isolated. vent line was hit by a vehicle as tank is under a driveway area. Vent line was replaced to a different area to prevent future accidents. Tank was retesed 3/10/08 and passed. Test results attached. NFA. bf"

DER Facility ID: 149087
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 6/4/2002 - Sangesland called Dave Fazin at Crown Leak Detection (516-939-2959) to find out if repair work was ever done to this tank. If so, Crown needs to submit a letter stating that: tank was welded, past a tank test, no visible sign of leakage. 4/14/06 - L. Alden - suggested action: Re-establish contact with Crown Leak Detection or site owner. 11/16/06 - Austin - Reassigned to Ketani for followup/review - end 12/1/06 - Raphael Ketani. The original caller was David Fazin of Crown Leak Detector (516) 939-2959. The TTF was on 3/26/02 and was the result of a failed epoxy patch. The patch was supposed to be rewelded and the tank system retested. Gus Tsambas (718) 721-2688 was involved with the site. PBS case #2-607845 with a 1500 gal. tank in service with #2 oil. The owners are Algus Realty Co., 25-26 33 Street, Astoria, NY, 11103, (718) 721-2688. I made contact with Mr. Tsambas. The phone number was his home. He said he has the passing test results and he will send it to me. He said that the tank sits on the concrete floor and the patch is on the top of the tank. He said that no oil was released. 12/12/06 - Raphael Ketani. Mrs. Gallun of the Gallun Agency (718) 728-8120 called to ask what DEC needed to close the spill case. I told her we needed a new tank system test showing that the system is tight. She said she will have the super. call the oil company and arrange such a test, and send me the results. 1/4/07 - Raphael Ketani. I received the passing tank test results from Mr. Tsambos. Based upon these results and Mr. Tsambos' statement to me on 12/1/06 that no oil was released, I am closing the spill case. 1/10/07 - Raphael Ketani. I received a copy of the passing tank test results from the Gallan Agency - Insurance and Real Estate."

SHWS:

Name: STANDARD MOTOR PRODUCTS, INC.
Address: 37-18 NORTHERN BOULEVARD
City,State,Zip: LONG ISLAND CITY, NY 11101
Program: HW
Site Code: 58682
Classification: Significant threat to the public health or environment - action required.

Region: 2
Acres: 1.1000000000000001
HW Code: 241016
Record Add: 11/18/1999
Record Upd: 09/26/2018
Updated By: JHOCONNE
Site Description:

Site Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtrak s Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the building s roof. Past Uses of the Site: The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990. Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to

off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem: Nature and Extent of Contamination: Soils in the area of the rear loading platform contained elevated levels of and. Contaminated soils extended beyond the area excavated near the loading dock. Subsequent groundwater samples taken indicated contamination with TCA and lead. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Soil - Arsenic was detected at 19 ppm, which is above the applicable soil cleanup objectives (SCOs). Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 ppb. Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane 1,1,1-TCA) has been found at concentrations of up to 180 ppb. Soil Vapor- The highest concentrations of chlorinated VOCs were detected at SB-05. Sub-slab samples contained PCE at concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3 and up to 450 ug/m3 respectively. Significant Threat: The site presents a significant environmental threat. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation. An air sparge and soil vapor extraction system was installed to remediate site soils and groundwater and has been operating since September 2013.

Health Problem: The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 12/15/03 Letter addressed to Sigona from Environmental Systems Group. On 10/30/03, Crompco conducted precision test on tanks. One 4000gal diesel UST failed the test. Energy Storage Systems reviewed the test data and suggested the test technician failed to plug the air eliminator on the pumps and therefore the tanks failed. On 12/9/03, Crompco retested the tanks and plugged the air eliminator and the tank passed. 12/19/03 Spoke to Andy at Energy Storage systems. As per Sigona's recommendation, he will submit a report summarizing the first and second testing episodes. Rommel 12/23/03 Received letter from Mort Turoff at Energy Storage systems summarizing first and second tests. Diesel tank passed on 12/9/03 retest. Results on file. (KMF) 1/9/04 Sent NFA. (KMF)"

Env Problem:

construction as a multi-story hotel. A parking area and a multi-story commercial building are located immediately east of the site. Metropolitan Transportation Authority property (the F train) runs directly underneath 41st Avenue along the southern side of the property. New York City (NYC) Housing Authority property (Queensbridge Houses) is located approximately 1.5 blocks west of the property. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently vacant, and is undergoing extensive renovations. The surrounding area is generally used for commercial purposes. Past Use of the Site: The property was formerly occupied by an electroplating facility from 1962 to 2012. Upon inspection by Department personnel in August 2012, the building was found to contain well over 100-55 gallon drums in various states of decay containing numerous chemicals, over a dozen plating baths and rinsate tanks, as well as heavily stained walls and floors. The new property owner has undertaken a limited cleanup pursuant to a NYC Department of Environmental Protection Commissioners order. This work began in April 2013, and included: (a) emptying and removal of all the plating baths and tanks; (b) removal of all the 55-gallon drums; and (c) removal of all grossly-contaminated concrete flooring and walls. This work was completed in June 2013. Site Geology and Hydrogeology: Soils consist of medium to fine-grained sand to about 10 feet below grade, followed by a layer of silty clay of an undetermined thickness. Groundwater was found approximately 13 feet below grade. Groundwater flow direction was not determined locally, but would likely be in a westerly direction towards the East River. Nature and Extent of Contamination: Soil: Sampling data from beneath the basement floor as well as adjacent to the building beneath the future hotel indicated the presence of VOCs and metals at concentrations above restricted residential cleanup objectives (shown in parentheses) prior to excavation conducted from 2013 - 2014. For example, PCE was found up to 10.5 ppm (1.3 ppm), TCE up to 85.6 ppm (0.47 ppm), DCE up to 1.3 ppm (0.25 ppm), cadmium up to 225 ppm (4.3 ppm), chromium up to 10,500 ppm (0.18 ppm), nickel up to 5,560 ppm (0.13 ppm), and cyanide up to 880 ppm (0.027 ppm). Groundwater: Concentrations of tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (DCE), vinyl chloride (VC), cadmium, chromium, and nickel were all found at concentrations above their respective Part 703.5 class GA standards. Specifically, PCE was found up to 20,700 ppb (5 ppb standard), TCE up to 2,600 ppb (5 ppb standard), DCE up to 4,150 ppb (5 ppb standard), VC up to 1,070 ppb (5 ppb standard), dissolved chromium up to 1,890 ppb (50 ppb standard), dissolved hexavalent chromium up to 2,210 ppb (50 ppb standard), and dissolved nickel up to 600 ppb (100 ppb standard). In addition, cyanide was found at concentrations ranging from 26 to 79 ppb (no standard). Soil Vapor: Sub-slab vapor samples were collected in May 2017. Concentrations of PCE, TCE, cis-1,2-DCE and vinyl chloride range from 1 to 200 ug/m³. TCE was detected above the NYSDOH May 2017 Soil Vapor/Indoor Air Matrix guidance for mitigation concentrations of 60 ug/m³ and above. Several BTEX and BTEX-related compounds were also detected in the 1 to 100 ug/m³ range.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil),

1009218042

which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion into the on-site building may be occurring and needs to be evaluated. On-site contamination may be migrating off-site and the potential for soil vapor intrusion in nearby off-site building also needs to be evaluated.

site is located along the north side of 41st Avenue between 22nd and 23rd Streets. Site Features: The on-site area is ~2,500 square feet in size, and is completely covered by a 4-story masonry building with a basement. The lot located immediately west of the site is undergoing construction as a multi-story hotel. A parking area and a multi-story commercial building are located immediately east of the site. MTA property (the F train) runs directly underneath 41st Avenue along the southern side of the property. NYCHA property (Queensbridge Houses) are ~ 1.5 blocks west of the property. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently vacant, and is undergoing extensive renovations. The surrounding area is generally used for commercial purposes. Past Use of the Site: The on-site property was formerly occupied by an electroplating facility which was abandoned by the previous owner. Upon inspection by Department personnel, the on-site building was found to contain well over 100-55 gallon drums in various states of decay containing numerous chemicals, over a dozen plating baths and rinsate tanks, as well as heavily stained walls and floors. The new on-site property owner has undertaken a limited cleanup pursuant to a NYCDEP Commissioners order. This work began in April 2013, was performed on-site and included: (a) emptying and removal of all the plating baths and tanks; (b) removal of all the 55-gallon drums; and (c) removal of all grossly-contaminated concrete flooring and walls. This work was completed in June 2013. Site Geology and Hydrogeology: Limited intrusive sampling has been conducted at the on-site property to date. Soils consist of medium to fine-grained sand to about 10' below grade, followed by a layer of silty clay of an undetermined thickness. Groundwater was found ~13' below grade. Groundwater flow direction was not determined locally, but would likely be in a westerly direction towards the East River.

Env Problem:

Nature and Extent of Contamination for On-site Area: Groundwater: Concentrations of tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (DCE), vinyl chloride (VC), cadmium, chromium, and nickel were all found on-site at concentrations above their respective Part 703.5 class GA standards. Specifically, PCE was found up to 20,700 ppb (5 ppb standard), TCE up to 2,600 ppb (5 ppb standard), DCE up to 4,150 ppb (5 ppb standard), VC up to 1,070 ppb (5 ppb standard), dissolved chromium up to 1,890 ppb (50 ppb standard), dissolved hexavalent chromium up to 2,210 ppb (50 ppb standard), and dissolved nickel up to 600 ppb (100 ppb standard). In addition, cyanide was found at concentrations ranging from 26 to 79 ppb (no standard). Soil: Sampling data from beneath the on-site basement floor as well as adjacent to the on-site building beneath the future hotel indicated the presence of VOCs and metals at concentrations above restricted residential cleanup objectives (shown in parentheses) prior to excavation conducted from 2013 - 2014. For example, PCE was found up to 10.5 ppm (1.3 ppm), TCE up to 85.6 ppm (0.47 ppm), DCE up to 1.3 ppm (0.25 ppm), cadmium up to 225 ppm (4.3 ppm), chromium up to 10,500 ppm (0.18 ppm), nickel up to 5,560 ppm (0.13 ppm), and cyanide up to 880 ppm (0.027 ppm). Soil Vapor: No soil vapor data are currently available.

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

determine owner of property from Property Shark or Acris. Called George Falidas on 7/14/05, left message to call back. On 1/19/05, reattempted to determine owner of property. No success. 3/30/07 - Austin - Trasferred to Ketani for further review - end 5/21/07 - Raphael Ketani. I reactivated the case today. There was very little in the case file. Some printed pages for spill #0305345 (which doesn't pertain to the case, except the memo from Mr. Sigona to Mr. Hassan), an 11/7/05 letter from Joseph Peck of DEC to George Falidas regarding the spill, printouts from Google Earth and Property Shark, and a printout of the spill report for this case. I did a search of ACRIS, the NYC Property Tax database, and Property Shark and determined that 25-15 Queens Plaza North is just one part of the range of properties (25-01 to 25-27 Queens Plaza North) owned by Falidas Associates. It is also known by Bridge Plaza North. The block and lot are: 00415 and 0004. I called up George Falidas (718) 392-0514 of Falidas Associates and was connected to his brother, John Falidas. I made a field visit and met John Falidas. He showed me the basement of one of the properties owned by Falidas Associates and which is near to where the tank failed 2 buildings away. We entered a work room rented by a garment making company. The floor and walls and bathroom were clean. There were no signs of oil and no oil odors. Mr. Falidas said that he had paid lots of money to get the oil cleaned up years ago and the responsible party never paid anything to him. Mr. Falidas had a package of documents from the EPA and the DEC and showed them to me. These were the RCRA Subtitle C Site Identification Form, letters from South Mall Analytical Labs to PTC, and a DEC Spill Report. He gave me copies of these documents. I was particularly interested in the old DEC spill report form as this document wasn't in the case file. Next, I visited the 2 story building between Mr. Falidas' building and the site of origin of the spill. I met Sandro Cestaro of Atlantic Precious Metal Casting, Inc. (718) 937-7100. He showed me his basement. There were some signs of a thin film of mud in one corner of the basement, but no signs or odors of oil, even though this was the building where the oil first entered. Lastly, I went to the site of the oil spill. The auto parts service place had burned completely, according to the old spill report case notes. This site was 41-22 to 41-30 27 Street. The site was sold to developers who later built an apartment building that was finished in early 2007. This building is listed as 41-28 27 Street. I met the super., Leonardo Colon. He took me to the lowest point in the building. This was a parking garage. There were no signs of oil nor any odors. He said he was new here and didn't know much about the building. The building management company is Golden Management and the contact person is Brandon Wechsler (718) 230-2600, ext 111. I took 3 pictures of the apartment building and the neighboring properties. I remember seeing the dig out for the foundation for the building when I passed by the site many months back. They went down below the bottom of the foundation for the neighboring building which contains Atlantic Precious. This is a depth of about 15 feet or so. Based upon my site visits and the fact that the old auto parts area has been dug out, and the lack of evidence of a spill, I am closing the spill case. "

Remarks:

"SPILL AT A COMMERCIAL BLD CALLER IS A TENANT AND REQ A CALL FROM DEC SPILL HAS NOT BEEN CLEANED UP BEEN SMELLING THIS FOR ABOUT 3 WEEKS "

DEC Memo:	"TTF letter sent to PBS address - see eDocs 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 11/07/2013 - V. Brevdo Received call from Chief Operating Officer for Real Estate Company Ms. Duffney Panayiotou - 718-204-1600 Ext. 30. I explained to Ms. Panayiotou that I need infomation and/or documents about what type of tank test failure it was - dry or actual leak. If they have confirmaton it was a dry leak and no oil leaked and no impacts, I would look into available documents and may consider closing spill. If it was not a dry leak and oil was released that we need to negotiate appropriate course of action. Ms. Panayiotou stated she will look into this matter and get back to me by end of the day. I stated that I would like to hear back from her no later than 3 weeks from today. VB 03/24/2014 - V. Brevdo Called Ms. Duffney Panayiotou - left voice mail that we need to discuss this spill case as per our 11/07/2013 telephone conversation. Ms. Duffney Panayiotou returned call stated that she will submit (via e-mail)appropriate documentation confirming this case was a dry leak with no product released. I provided my e-mail address over the phone. V. Brevdo 03/24/2014 - V. Brevdo e-mail from Pistilli Group: Dear Mr. Brevdo, Attached please find the tank tightness tests for 34-20 32nd Street, Astoria, NY and 25-90 35th Street, Astoria, NY. Please note that the tank for 34-20 32nd Street had a dry leak. The building has since converted to Gas and the tank has since been abandoned. I will forward you paper work on it tomorrow as soon as I receive it from the company that did the work. The tank for 25-90 35th Street passed the tank tightness test and there are no known leaks at that location. Thank you, Dafne Panayiotou Pistilli Realty Group 35-01 30th Avenue, Suite 300 Astoria, NY 11103 Dafne@pistilli.com Tel. (718) 204-1600 Fax (718) 204-5889 March 25, 2014 - V. Brevdo e-mail

to Pistilli Group: March 25, 2014 Dear Ms. Panayiotou: This is to acknowledge receipt of your 3/24/2014 5:55 PM e-mail and attached tank tightness tests documents. Could you please confirm that there have been no complaints and/or occurrences of petroleum odor in the subject buildings over the period of time from August 31, 2010 to date? Thank you. Vadim Brevdo 03/25/2014 - V. Brevdo e-mail from Pistilli Group: Dear Mr. Brevdo, This e-mail shall confirm that from August 31, 2010 to present there have been no complaints or occurrences of petroleum odor in the properties 34-20 32nd Street, Astoria, NY nor in 25-90 35th Street, Astoria, NY. Please feel free to call me in the event you have any further questions or need any additional information. Thank you, Dafne Panayiotou 04/02/2014 - V. Brevdo Spill Case Closure Decision 34-20 35nd Street Long Island City Spill Case No. 1006024 No release of product appears to have occurred from this tank test failure on 8/31/2010 which is confirmed by tank test report (dry ullage leak). According to Ms. Panayiotou, Chief Operating Officer at Pistilli Group, there has been no petroleum odor or petroleum odor complaints in the building. The Department determined that it is unlikely that this tank test failure resulted in any impact to soil and/or groundwater. Human Health Threat is unlikely. There is no human health and/or environmental benefit in continuing keeping this spill case open. Spill Case is closed effective 04/02/2014. V. Brevdo "

Updated By: JHOCONNE
Site Description: Location: The 4,000 square feet site is located at 34-14 31st Street in the Borough of Queens, Queens County, NY in an urban area. Site Features: The Site currently consists of a 2-story commercial building which has been utilized as an auto repair shop since around 1936. Current Zoning and Land Use: The site is currently zoned as R5 (lower density residential districts) and is adjacent to an elevated subway track along 31st Street. The site is bounded to the north by a residential building, to the east by 31st Street, to the south by a commercial building, and to the west by residential buildings along 30th Street. Past Use of the Site: The Site is currently occupied by a 2-story structure which operates as an auto repair shop. A Phase I conducted in May 2015 identified the site s current and past use as an auto repair shop as well as the presence of 2 above-ground storage tanks as recognized environmental conditions. Site Geology and Hydrogeology: Boring logs were not provided with the Phase II ESA and a description of site-specific geology and hydrogeology was not included as part of the report.
Env Problem: Nature and Extent of Contamination: Prior to Completion of Remediation Based on preliminary investigations, the primary contaminants of concern were volatile organic compounds (VOCs). Soil The chlorinated solvent tetrachloroethylene (PCE) was identified in one of four soil samples above the Unrestricted Use SCOs (UUSCOs) in parenthesis. PCE was detected at a concentration of 4.8 ppm (1.3 ppm). Several metals were detected above UUSCOs and included lead up to 193 ppm (63 ppm), mercury up to 0.47 ppm (0.18 ppm), and nickel up to 39.6 ppm (30 ppm). No SVOCs, PCBs, or pesticides were detected above the UUSCOs. Groundwater Several attempts were made to collect groundwater samples, but groundwater was not encountered to the maximum depth investigated. Soil Vapor PCE and trichloroethene (TCE) were found in the indoor sub-slab air sample at 918 ug/m3 and 54.6 ug/m3 respectively. A corresponding indoor air sample found PCE at 0.215 ug/m3. Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE in soil and PCE and TCE in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use and applicable guidance values for soil vapor and indoor air samples.
Health Problem: Remedial actions are complete and have eliminated the potential for contact with site-related contaminants.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 4/21/03 TJD UST Closure Report prepared by The Shaw Group Inc reviewed. One 4,000 gallon UST containing #2 Fuel Oil removed. Samples collected, SVOC Exceedances noted. Shaw stated supplemental investigation will be performed to further delineate petroleum impacted soils and groundwater impacts. 8/23/04 TJD Shaw submitted (8/19/04) a work plan for supplemental investigation. Site is being developed for the construction of a new public school. As part of the project a new underground parking garage is to be built, which will involve excavating soils to a depth of 15 feet. Additional soil borings are planned in the area of previously identified contamination. Work plan was verbally approved on this date with requirement that SHAW notify DEC a minimum of 48 hours prior to scheduling sampling event. 8/23/04 TJD Multiple spills on single address. Spill 0104171 closed and cross referenced to 0101345. 11/17/05 - L. Alden - Called Mike Sherwood, Shaw Group, at (845) 492-3182. Left message. 12/19/05 - L.Alden - Called Sherwood back. Shaw is not doing the additional investigation on this site. Called his client, Lee Guterman, at the NYC School Construction Authority, (718) 472-8502. This property will be the site of the Frank Sinatra School. Anna Ciecierska, (718) 752-5028, returned my call. She didn't know the specifics of the project but would look into the file to determine where they were with the investigation/cleanup effort. 12/20/05 - L. Alden - Anna Ciecierska called back today. She had a report from February 2005 where the consultant had delineated the contaminated soil. She indicated that removal of contaminated soil was to commence within a week or two. She would wait to get the report before submitting a request to close the spill. 5/01/06 - L. Alden - Mark Hudok, GZA Geoenvironmental, (973)256-7800, called. He was preparing a remediation plan and called to discuss post-excavation sampling that would be necessary after removal of contaminated soil. Recommended action: Review excavation plan and post-excavation results. 8/15/2006 Sangesland received a call from Jennifer Kahn of SCA requesting guidance on who the DEC case manager was for this site. Apparently in 2005 the project was sent up to DEC Albany for work and was then transferred back to DEC Region 2. Because the site is already into the remediation phase, the case is being transferred to the Region 2 Remediation Group (Koon Tang). 08/15/06: Transferred to Yau. (Yau) 08/16/06: Visited the school site with Joe. Met with the representatives from SCA. Told them additional

groundwater samples will be required at the soil/ groundwater interface. Will send in report as soon as results come back. (Yau) 08/24/06: Received report along with lab analytical results from SCA. Both soil and groundwater results are good except for N-2, N-3, and W-2. 1. The benzo(a)anthracene and benzo(a)pyrene exceeded TAGM slightly for the soil samples. 2. The o-xylene and dibenz(a,h)anthracene exceeded the TOGS standard slightly. DEC will approve the construction of a school building on top the this site. (Yau) 10/16/06 Re-assigned from Yau to Chanda (Chanda) 12/20/06:DEC received a phone call from Mr.Drew Pardus, School construction Authority,Ph:(718)752-5036.He said that last week soil exavated from the construction site and soil samples were sent to lab analysis. He will send in report as soon as possible as result come back. (Chanda) 2/27/07:DEC received Endpoint Soil and Groundwater Sampling Results prepared by Shaw Environmental and Infrastructure, Inc., dated 2/26/07. 3/14/07:DEC reviwed all report and documents regarding this spill. Based on the information presented to the Department DEC closed this spill.(Chanda) 3/15/07: A NFA letter was issued to Ms. Lee Guterman, Manager, IEH Department, SCA, and copy to Mr. Bob Kanaparthi, SCA and Michael R. Sherwood Shaw Environmental & Infrastructure, Inc."

Remarks: "WHILE EXCAVATING A SITE, CONTAMINATED SOIL WAS DISCOVERED. SOIL IS BEING STOCKPILED."

 HW Code: 241126
 Record Add: 09/08/2010
 Record Upd: 09/26/2017
 Updated By: JHOCONNE

Site Description: The Site is located in the Long Island City section of Queens in a zoned manufacturing area with residential zoning approximately 300 feet to the south. The Site had been a residential building with garages beginning in 1898, was vacant from 1947-1950, was used for sheet metal work from 1967-1983 and was converted from sheet metal work to dry cleaning in 1997. The Site is currently an active dry cleaning facility. The one-story building foundation is slab-on-grade and contains dry cleaning machines, garment storage area, storage, boiler room, office, customer service area, bathroom and partial basement. The building covers the entire footprint of the site. The building has three 4th-generation dry cleaning machines on a secondary containment concrete slab, five washers and a dryer, several empty 15-gal waste containers, spill containment material container, a spotting stand, ten press machines, three sets of shirt machines, four air compressors, two refrigerated dryers and a sump. The Site and building are approximately 5000 square feet in size (0.11 acres). A residential building is located immediately to the northwest (0.01 miles), a stonework building is to the northeast, a fine arts furniture building to the southwest and 13th Street to the southeast.

Env Problem: Based upon investigations conducted to date, the primary contaminants of concern at the site include tetrachloroethene (PCE) and dichloroethene (DCE). One round of groundwater sample collection was performed in June 2009 via two Geoprobe borings located in the sidewalk in front of the site building. Groundwater samples were analyzed via EPA Methods 8260/8270. No soil samples were collected for analysis during the investigation. The following maximum concentrations with contaminants were observed in groundwater: 26ppb PCE and 63ppb DCE. These results demonstrate that groundwater standards have been exceeded for PCE and DCE. The nearest surface water body is the East River, which is located approximately 2000 feet (0.3 miles) to the west. Groundwater is approximately 7 to 8 feet below grade and most likely flows west under the Site to the East River, however direction of flow has not been specifically determined to date. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public

Town: New York City
Record Added Date: 11/29/2016
Record Updated Date: 04/11/2019
Update By: KALEWAND
Site Description:

This site's BCP has been voluntarily terminated by the property owner/BCP applicant. Location: The site is located in an urban area and denoted on New York City tax maps as Block 665, Lot 34 (formerly Lots 5, 7, 31, 34, and 38). The site is located on the city block bordered by 38th Street to the north, 36th Avenue to the east, Steinway Street to the south, and Northern Boulevard to the west. Site Features: The site encompasses an area of approximately 49,412 square feet (1.134 acres). There is a two-story commercial use building with three 275-gallon and two 550-gallon fuel oil aboveground storage tanks (ASTs) and one 550-gallon waste oil AST in the southern portion of the lot; the south-central portion has an asphalt-paved parking lot; a one-story parking garage is located in the northern portion; there is a one-story supermarket in the central portion; and the north-central portion features a one-story storage building for the supermarket. Current Zoning and Land Use: The Site is zoned for commercial and manufacturing use. The northernmost portion of the lot is located in a M1-1 manufacturing district. The remainder of the lot is located in a C4-2A commercial district. The surrounding area consists of commercial, industrial, residential, and transportation and utility uses. An underground New York City Transit Authority (NYCTA) structure (M, R, E and F subway lines) adjoins the site to the south. Past Use of the Site: The site has been occupied by manufacturing and industrial facilities since the early 1900s. Historic site uses include gas station, garage, auto repair, auto laundry facility, factory, used car sales, warehouse, machine shop, clothing manufacturer, and glass grinding facility. Historic gasoline tanks are associated with the auto repair on former Lots 5 and 34 and a garage on former Lot 31. Site Geology and Hydrogeology: Bedrock underlying the site consists of gray and gray-weathering, thinly laminated muscovite-biotite-quartz schist with minor garnet. Beneath the Site, surface material was observed to be urban fill predominately comprised of light brown fine to coarse sand, with varying amounts of gravel, clay, coarse stone, ash, coal, burnt wood, brick, and debris. The urban fill layer extends to approximately 2 to 6.5 feet below grade surface (bgs). Beneath the fill is a brown to black fine sand to coarse sand with gravel. The inferred regional groundwater flow direction for the area surrounding the site is to the northwest. Groundwater underlying the site ranges from approximately 20 to 25 feet below grade surface (bgs). Nature and Extent of Contamination Soil Soil samples collected

S120706192

throughout the site depicted minor exceedances of Semi-Volatile Organic Compounds (SVOCs) and metals. All soil samples collected with elevated concentrations above Unrestricted Use SCOs were at or shallower than 2 feet below grade surface except for Acetone exceedances (max of 0.35 ppm) at 15 and 18 feet below grade surface in VTX-02 and VTX-04 respectively. Groundwater Sixteen groundwater locations were sampled on-site. Samples were analyzed and compared to NYSDEC TOGS groundwater guidance. Exceedances of metals existed in every sample. These metals included Iron, Magnesium, Chromium, Sodium, Manganese and Selenium. Exceedances of cis 1,2-Dichloroethene existed both up and down gradient of the center of the site. The maximum concentration of cis 1,2-Dichloroethene was in MW-10 at 20 parts per billion (ppb) (standard is 5 ppb). PCE was detected at elevated concentration in temporary well VTW-12 at a concentration of 5.5 ppb (standard is 5 ppb). Petroleum related compounds were detected in temporary monitoring well TMW02. These compounds included Benzene (at 1.3 ppb with standard at 1 ppb) and Naphthalene (at 28 ppb with standard at 10ppb). Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Soil Vapor Four soil vapor samples and one ambient air sample were collected throughout the site. Tetrachloroethene was found at elevated concentrations in SV04 (250 micrograms per cubic meter (ug/m3)), SV03 (23.5 ug/m3), SV02 (16.5 ug/m3) and AA (1.49 ug/m3). Trichloroethene was found at elevated concentrations in SV02 (6.02 ug/m3) and SV01 (38.2 ug/m3). It has been determined by the Department that the site does NOT pose a significant threat.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with the former building foundations and pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development.

Updated By: JHOCONNE

Site Description: Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor. Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historic Use(s): The Site was a commercial building occupied by various manufacturing and warehousing entities including a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. The source of the contamination noted on-site was determined to be from an upgradient property. See site no. C241149 for further updates. Not reported

Env Problem: Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations. Soil - There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples. Groundwater - On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24 ppb) were detected in groundwater samples at levels exceeding groundwater standards. Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb -50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site. Sub-slab soil vapor - Sixteen

U001831683

petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzene (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air - Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air - PCE was detected in the outdoor air sample at a concentration well below the concentrations found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat: The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDEC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination. CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System was installed and is operating to prevent soil vapor migration into the building.

 Town: New York City
 Record Added Date: 05/02/2018
 Record Updated Date: 09/20/2019
 Update By: SXDEWES
 Site Description: LOCATION The Site is located at 38-21 12th Street, and includes the addresses 38-01 12th Street through 38-33 12th Street, 38-02 13th Street through 38-36 13th Street, and 12-02 38th Avenue through 12-20 38th Avenue. The Site is located in the Long Island City section of Queens, New York. The Site is bound to the northwest by 38th Avenue, followed by a taxi garage; to the northeast by 38th Avenue, followed by a scaffolding manufacturer; to the east by a 13th Street, followed by an auto body and paint shop, car wash and parking lot; to the south by an auto repair shop and church; and to the west by 12th Street, followed by a commercial building, scaffolding company, and a construction site. **SITE FEATURES** The Site consists of one tax lot on an approximately 70,200-sf (1.6 acre) parcel. The Site contains three one-story buildings, constructed around 1936, and two partially covered parking lots. The Site is currently vacant, but was recently occupied by commercial and industrial businesses including: a pipe fitting shop, two leased commercial parking lots, a marble and granite fabricator, a carpentry shop, and a commercial kitchen. **CURRENT ZONING AND LAND USE** The current zoning designation of the Site is M1-3 (manufacturing district). The surrounding area is largely developed with industrial and commercial uses with residential and commercial uses located to the south and east. **PAST USE OF THE SITE** The July 2017 Phase I ESA indicated that Site had

DOT RELOCATION SITE (Continued)

S122449236

numerous historical commercial, industrial, and automotive uses. The Site was a rag shop in 1915, and was developed in 1936 with three one-story buildings that were operated by Chesebro-Whitman Co Inc. as a wood working facility. In 1970, Chesebro-Whitman Co Inc. became a scaffolding manufacturing and repair facility, and on-site uses changed to include a metal workshop, with a garage and gasoline tank. An office and a storage area were also constructed in the former vacant parcel on the southern portion of the Property in 1970. SITE GEOLOGY AND HYDROLOGY Based on the U.S. Geological Survey Central Park, New York 2011 Quadrangle map, the Site is approximately 15 feet above the North American Datum of 1988 (an approximation of mean sea level). Groundwater was encountered at the Site between approximately 8 and 10 feet below sidewalk grade during AKRF s Phase II investigation, and is expected to flow in a southwesterly direction towards the East River, approximately 0.3 miles away. Soil borings, which were advanced between 10 and 15 feet below sidewalk grade across the Site during AKRF s Phase II, encountered historic fill material (coal ash, concrete, brick, plastic, and/or glass) underlain by brown sand or silty-sand and gravel.

DEC Region: 2
DER Facility ID: 307531
DEC Memo: "12/30/05-Hiralkumar Patel. I spoke with Levent Eskicakit at Athenica Enviromental, who is handling environmental investigation of this site. Levent is doing Phase-I and Phase-II investigation of site. During phase II, he found contamination. this is an empty building, previously used as office and in back of building there are 3 tanks of 275 gal capacity above ground, and 1 underground tank capacity of 3000 gal. this building is financed by State Bank of Long Island and owned by Metro B.C. LLC. Levent took samples at points 8 to 9 ft apart and about 15 ft deep. From the samples of whole area, they found contamination in backyard where the tanks are. Levent found contamination in the area of 10ft*10ft*9ft. After investigation, the building will be demolished for further use. At financing bank, the further use of this site is noted as commercial use. Levent: Ph. (718) 784-7490 Fax. (718) 784-4085 Email: leskicakit@athenica.com Contact Person in Metro LLC: Demetrios Demetrios (718) 937-5353 Fax. (718) 937-8743 Cell (347) 203-9923 Address of Metro LLC: 11-20 30th Ave. Long Island City, NY I have sent soil contamination letter today and also faxed it. 1/17/06-Hiralkumar Patel. I got letter back because of wrong address. Letter with corrected address has been sent out. Correct Address: 1120 37th Ave Long Island City, NY 11101 1/20/06-Hiralkumar Patel. Spoke with Levent at Athenica Environmental and as per his knowledge, the Metro LLC is now selling this property. and the new owner will do all the required remediation work. Until now Levent has not heard anything from Metro LLC or the new buyer. as soon as he get some information, he will inform me. I have asked him to send soil investigation report in email. 1/24/06-Hiralkumar Patel. Talked with Levent at Athenica. He will send me report today in email. Received site plan, soil results and groundwater results in an emil from Levent. Reviewing report. { c:\\hiralkumar\\1204 37th ave } - 6 soil samples, 1 groundwater sample close to UST. - found contamination at soil sample no. 1 and 3, which are close to UST and contamination in groundwater close to tank. - from the plan, property has 5 AST of capacity 275 gal. Left message for Mr. Demetrios at Metro LLC. Received call from Demetrios, and he will call me back with latest information regarding cleanup on this case once he reach his office. Received email from Levent at Athenica.

----- Hiralkumar: As I mentioned to you earlier, at the request of Metro LLC, Athenica Environmental Services (AES) conducted a Phase II Focused Subsurface Site Investigation on December 2005 at the above referenced property. The results of this investigation revealed followings: * Field investigation indicated that Site soils (B-1 & B-3) located along the former abandoned 3,000-gallon UST area (or former cesspool area), contained field evidence of petroleum contamination. The field evidence suggests that petroleum contamination soils occur at depths of approximately four (4) feet bgs to the water table, which was encountered between ten

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

COMMERCIAL BUILDING (Continued)

S107523279

(10) and twelve (12) feet bgs. * There was no evidence of any VOC or SVOC contamination observed within the remaining soil samples (B-2, B-4, B-5 and B-6) collected from the Site. * The laboratory analytical results indicated that, with the exception of soil samples B-1 and B-2 collected within the vicinity of the former abandoned UST, none of the remaining soil samples (B-2, B-4, B-5 and B-6) from the Site had concentrations above the NYSDEC STARS Memo Alternative Soil Guidance Values. Soil Samples collected from B-1 and B-2 contained concentration of VOCs and SVOCs above the NYSDEC STARS Memo Alternative Soil Guidance Values. * Laboratory results of groundwater sample GW-1 collected from the soil boring B-1 indicated that concentration of benzene and MTBE were 1.7 ppb and 24 ppb, respectively. These concentrations exceed the NYSDEC TOGS Memo Groundwater Cleanup Criteria of 1 ppb for benzene and 10 ppb for MTBE. Based upon the field evidence and the laboratory data, AES concluded that the Site has been impacted by old petroleum-related VOCs and SVOCs in the former abandoned UST (or cesspool) area. However, based on the fact that this is a historical spill and is located approximately 4 feet below ground surface (bgs) and the fact that the entire area is covered with 6 inches of concrete floor, there are no immediate threat to the environment and the occupants of the Site. Further, the Site is not a residential and the entire area is used solely for parking and storage. My conversation with Mr. Demetrios of Metro LLC (the Site owner) indicated that the Site will go under construction for the development of a new building approximately sometimes in 2007. AES recommended that when the proposed construction activities should take a place, environmental engineering controls including remedial action work plans, and health & safety plan should be prepared in order to protect the workers and environment and submitted to the NYSDEC for review and approval. Regards, Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103

----- 01/25/06-Hiralkumar Patel. Received email from Levent. This UST was abandoned in place sometimes 20 years ago. It's supposed to be filled with sand. As i discussed with Vought, if this tank is empty, we can wait till they start construction in 2007.

05/03/06-Hiralkumar Patel. Received email from Levent.

----- Kumar:

How are you doing? Finally, I have a signed proposal to conduct required remediation activities for this Site. Right now, I am putting the contractors together to excavate the impacted areas at the site. Please do not hesitate to contact me with any questions. Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Specific Health and Safety Plan (HASP) for the above referenced property. We are looking to schedule this project for next week. Eastern Environmental Solutions, Inc., a NYFD certified environmental contractor, will be subcontractor for the excavation of the soils and/or removal of the UST (if discovered). Please confirm. Thanks Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103

abstract of RAP: - result of dye test confirmed that all 10 floor drains located at the site building, the onsite drywell (1) and two trench drains are interconnected and the final destination of these drains is the NYC municipal sewer located on 37th Ave. - geophysical survey didn't identify the presence of any additional USTs or former septic system other than an anomaly that might be the former abandoned UST or former septic system located at the site. - site soils consist of approx. nine ft of fill material containing brick, concrete, fly ash, slag, fine silty sands, clay and fine gravels. native material, consisting of fine to medium sands with some silt, was observed at depths greater than nine ft bg. - field evidence suggests that petroleum impacted soils occur at depths of approx. four ft bg to the water table, which was encountered between ten and twelve ft bg. - based on the field evidence and the laboratory data, AES concludes that the site has been impacted by petroleum related VOCs and SVOCs in the area where the anomaly identified during the former abandoned UST area. - petroleum impacted material identified during the previous investigations will be excavated and removed from the site. based on the results of the Phase-II investigation approx. 30 to 50 cubic yards of material will require excavation and subsequent disposal. - once the required remediation activities completed at the site, AES will collect endpoint samples from the excavation. - three groundwater monitoring wells will be installed at selected locations on the site. - it is anticipated that two of the wells location will be located in downgradient area of the release (along site boundary), one well will be located in a portion of the site upgradient of the former suspect UST or former cesspool area. - wells will be completed to an anticipated depth of 15 ft bg. - based on the outcome of the remediation activities at the site, minimum of two sets of groundwater samples will be collected from the monitoring well network. first set will be collected approx. one week following the completion of monitoring well installation efforts. the remaining set will be collected approx. 12 weeks from the date of initial sampling event. COMMUNITY AIR MONITORING PLAN - during the site excavation procedures, AES will perform monitoring of ambient air for VOCs and airborne particulates. - CAMP requires real time monitoring for VOCs and particulates (i.e. dust) at the downwind perimeter of each designated work area when certain activities are in progress at a contaminated site. - action level specified herein require increased monitoring, corrective actions to abate emissions, and/or work shut down. - real time air monitoring for VOCs and particulate levels will occur at the perimeter of the exclusion zone. continuous monitoring will be implemented for all ground intrusive activities. ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings or monitoring wells. - VOCs will be

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

COMMERCIAL BUILDING (Continued)

S107523279

monitored at the downwind perimeter of the immediate work area. upwind concentrations will be measured at the start of each work day and periodically thereafter to establish background conditions. - if ambient air concentration of total VOCs at the downwind perimeter of the work area or exclusion zone exceeds 5 ppm above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. - if the VOC level is above 25 ppm at the perimeter of the work area, activities will be shut down. - if the downwind PM-10 particulate level is 100 mcg/m3 greater than the background (upwind perimeter) for the 15 minute period if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. - if, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m3 above the upwind level, work will be stopped and a re-evaluation of activities initiated. spoke to Levent (Cell: 347-556-7787). they are planning to remove all contaminated material from site including suspected abandoned UST and any associated area. he will email me figure 2 of RAWP and phase-II investigation report. Received figure 2 in email. 05/08/06-Hiralkumar Patel. Received call from Levent and he was asking about written approval of proposed RAWP. send email with such approval. 06/21/06-Hiralkumar Patel. REceived email from Levent.

Gentlemen: Finally, we have received our groundwater sample results for the above referenced property. As the analytical results indicate, none of the groundwater samples collected from site contained volatile organic compounds above laboratory methods detection limits or NYSDEC TAGM groundwater cleanup criteria. In summary, we have excavated and disposed of a total of approximately 40 tons of petroleum impacted soil from the site. Confirmatory soil samples have already indicated that no compounds were detected above the NYSDEC TAGM Soil Cleanup Criteria. Following up the excavation, we have installed a total of three groundwater monitoring wells, where the results are presented within attached report. Upon completion of Remedial Action Report (RAR) for the site, we will submitted it to Mr. Patel of NYCDEP requesting closure of the case number and No Further Action Required letter be issued for the Site. If you have any questions, please do not hesitate to contact me. LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S118950490

Town: New York City
Record Added Date: 12/18/2014
Record Updated Date: 01/03/2019
Update By: SXDEWES
Site Description: Location: The site is a narrow plot of land perpendicular to Jackson Avenue in Long Island City (Queens County) approximately 150 feet west of Queens Boulevard. The site is bordered by Jackson Avenue to the north and surrounded by Queens Plaza Residential Development - Site B (Site No. C241151) on the east, west and south. Site Features: Prior to excavation under the approved IRM, the site is covered by asphalt and concrete sidewalks. Current Zoning and Land Use: The Site is located in the Special Long Island City Mixed Use District and is zoned M1-6/R-10 (manufacturing and residential). According to the NYC Planning website, the Special Long Island City Mixed Use District "promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills." Past Use of the Site: Prior to November 18 2014, the property was a dedicated NYC street operated by the NYCDOT. Previously known as Barn Street from 1898 to 1936 and West Street from 1947 to 2014. Site Geology and Hydrogeology: The subsurface soils consist of a fill layer approximately 6 to 8 feet in thickness. The fill is a mixture of fine to medium sand, with some silt and gravel and traces of brick, concrete and cobbles. The fill is underlain by silty sand and glacial deposits followed by a layer of fine sand with intermittent seams of silt and clay. Bedrock is present at approximately 33 to 50 ft. bg. Depth to the groundwater table is approximately 8 ft. bg. at the site. Regional groundwater flow to the southwest.
Env Problem: As of April 2016, all soil within the top 15 feet below grade which exceeded restricted-residential Soil Cleanup Objectives (SCOs) was removed and properly disposed of off-site. A Site Management Plan (SMP) will be implemented to managed remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. Prior to remediation, soil and groundwater samples were collected for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), pesticides and metals. Contamination encountered on-site appeared related to historic urban fill: Soil: No VOCs exceeded restricted-residential soil cleanup objectives (RRSCOs) Several SVOCs exceeded RRSCOs in soil. For example, benzo(a)anthracene was detected up to 3 parts per million (ppm) and the benzo(b)fluoranthene was detected up to 3 ppm (the RRSCO for both compounds is 1 ppm). Two metals exceeded RRSCOs. One sample for mercury at 0.84 ppm (the RRSCO is 0.81ppm). One sample for lead at 1,900 ppm (the RRSCO is 400 ppm). PCBs and pesticides were not detected above RRSCOs. Groundwater: One groundwater sample was collected on-site. VOC, SVOC, PCB and pesticide concentrations were below groundwater standards. The metals iron, manganese and sodium exceeded groundwater standards. No soil vapor data was submitted.
Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

 Updated By: GWBURKE

Site Description:

LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge. **SITE FEATURES:** The property extends 335 feet from north-to-south, and 117 feet from west-to-east. The former location of Buildings 2 through 4 were demolished for the construction of a hotel. Building 1 is still standing and has a slab-on-grade masonry building. The site and surrounding areas are generally level. **CURRENT ZONING AND LAND USE:** The site is currently zoned commercial. The site originally consisted of multiple lots but they have recently been merged into one lot (Lot 19). Building 1 along the northern portion of the site is still in place and is currently used as a granite and marble fabrication shop. A developer purchased the entire site and is building a hotel on the former location of buildings 2 through 4. The tenant in Building 1 will operate their business until they find another location to relocate to. **PAST USE OF SITE:** National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. Six additional 500 gallon USTs, which were previously closed in place, were removed in April 2014. During construction of the foundation for the hotel, nine USTs were removed from the site along with all soils above bedrock within the footprint of the hotel. **OPERABLE UNIT(S):** The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigation of soil, groundwater, and soil vapor contamination. Building 1 was sold to the owner of the Marble fabrication business previously located in Building 2. Buildings 2-4 have been demolished, and 9th Street LIC LLC has signed a Consent Order with NYSDEC for remediation of form Lots 14 and 19 (Building 2 through 4), but will ultimately be responsible for Lot 23 (Building 1) as well. **SITE GEOLOGY AND HYDROGEOLOGY:** The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below ground surface and flows in a westerly direction toward the East River. The

NATIONAL RUBBER & BACKING CORP (Continued)

1000259753

depth to bedrock varies across the investigation area from 10 to 15 feet below surface.

Env Problem: Nature and Extent of Contamination: For OU 2: On-Site Areas Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, and polychlorinated biphenyls (PCBs). On-site soil vapor has been analyzed for VOCs. Groundwater - Based on investigations conducted to date, the primary contaminant of concern for OU 2 is toluene. However, BTEX and chlorinated solvents also have been found above standards on-site. Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) (NYSDEC groundwater quality standard is 5 ppb). Latest sampling results (collected August 2018) revealed the highest toluene concentrations at 32,500 ppb, down from 749,000 ppb, detected in March 2015. Additional contaminants are also present in groundwater, including concentrations of benzene up to 24.2 ppb (standard is 1 ppb), ethylbenzene up to 36.5 ppb (standard is 5 ppb), and xylenes up to 59 ppb (standard is 5 ppb) as of August 2018. These additional contaminants were present at concentrations an order of magnitude greater than samples collected in March 2015. August 2018 groundwater sampling detected concentrations of tetrachloroethene (PCE) up to 65 ppb (standard is 5 ppb) in the southeast corner (PCE was detected in the northeast corner of the site at 336 ppb in March 2015; however, this location was inaccessible during the August 2018 sampling effort), trichloroethene (TCE) up to 17 ppb (standard is 5 ppb) in the southeast corner (TCE was detected in the northeast corner at 26 ppb in March 2015), cis-1,2-dichloroethene (cis-1,2-DCE) up to 33 ppb (standard is 5 ppb) in the southeast corner (previously detected at 122 ppb in the northeast portion of the site in March 2015), and vinyl chloride up to 4 ppb (standard is 2 ppb) (previously detected at 77 ppb in northeast corner of the site in March 2015). Soil - Previous investigations have detected toluene at concentrations as high as 1,600 parts per million (ppm) (industrial use soil cleanup objective (IUSCO) is 1,000 ppm) in the vicinity of the 5 closed USTs at depths of 5 - 7 feet below ground surface (bgs). Toluene was also detected in the former location of the six 500 gallon USTs at concentrations as high as 500 ppm at 1.5 feet bgs. Soil Vapor - Benzene and toluene were detected in indoor air and sub-slab soil vapor; however, the indoor air concentrations were higher for both constituents suggesting an indoor source. PCE and TCE have also been detected in indoor air, sub-slab, and deeper soil vapor. The most recent data obtained in 2014 revealed indoor air concentrations of TCE inside building #2 at 10 micrograms per cubic meter (ug/m³), and PCE at 30 ug/m³. November 2014 sub-slab data revealed concentrations of PCE up to 53,000 ug/m³, and TCE at concentrations up to 2,200 ug/m³. Based on the soil vapor intrusion evaluation, the sub-slab and indoor air concentrations warrant mitigation in accordance with NYSDOH guidance on soil vapor intrusion. For OU 1: Off-Site Areas Soil and groundwater have been analyzed for VOCs, SVOCs, and metals. Off-site soil vapor has been analyzed for VOCs. Groundwater - Based on investigations conducted to date, the off-site (OU 1) groundwater plume appears to be migrating to the east, but has not reached the East River. The most recent sampling event from November 2018 revealed toluene at a maximum concentration of 11,000 ppb (standard is 5 ppb) in a down-gradient well across 9th Street. Off-site impacts have been delineated and toluene does not appear to be migrating across Vernon Boulevard, possibly due to regional geology/bedrock formations preventing

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

NATIONAL RUBBER & BACKING CORP (Continued)

1000259753

widespread off-site migration of contaminated groundwater. Additional VOCs have been detected; latest sample results (November 2018) detected concentrations of benzene up to 370 ppb (standard is 1 ppb), cis-1,2-DCE up to 45 ppb (standard is 5 ppb), TCE up to 7.1 ppb (standard is 5 ppb), and vinyl chloride up to 10 ppb (standard is 2 ppb). Soil - No off-site soil impacts have been detected above standards. Soil Vapor - A soil vapor intrusion evaluation in nearby buildings was performed in March 2016. The buildings to the south east of OU2 had detections of site-related VOCs (PCE and TCE) in indoor air and sub-slab vapor samples; however indoor air concentrations do not warrant mitigation provided the on-site source is addressed.

Health Problem: Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by public water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

Site Description: The property is located within an urban industrialized section of Long Island City. The site extends 335 feet from the north to the south and 117 feet from the west to the east. The entire site is occupied by a 30,000 square feet, one story building. There is a small courtyard in the central portion of the building, on its western side. The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028.

N/A

SHWS:

Name: RAVENSWOOD FORMER MGP
 Address: 38-54 VERNON BOULEVARD
 City,State,Zip: LONG ISLAND CITY, NY 11101
 Program: HW
 Site Code: 416958
 Classification: P
 Region: 2
 Acres: Not reported
 HW Code: 241119
 Record Add: 07/23/2009
 Record Upd: 10/31/2013
 Updated By: GWCROSS

Site Description: Location: The Ravenswood former MGP site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough of Queens. The property is noted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County The site is located within the boundary of a complex of active electric and steam generating facilities in a predominantly industrial and commercial area. The site is bordered on the east by light industrial and commercial buildings and on the west by the East River. The site formerly housed a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The precise location of the MGP structures has not been fully established because of the extensive reworking of the property associated with construction of the power plants which now occupy and surround the original MGP site. Remedial History: A portion of the site was remediated under the Voluntary Cleanup Program. See site

V000368. The principal VCP issue was the presence of a No. 6 oil spill from an in-plant pipeline. Petroleum-impacted soil was excavated in 2005. No MGP tar-contaminated soil was identified at that time, but MGP related structures or soil contamination may remain in other portions of the site or at depth.

Env Problem: Extensive soil removal has taken place on the site, both for the construction of the power plants that occupy the site, and for remediation of a No. 6 oil spill. Although it appears that significant portions of the former MGP have been excavated down to bedrock, it is not known to what extent MGP structures and MGP soil contamination may remain in the deep subsurface. A bedrock steam tunnel lies beneath the East River at this location, allowing waste steam from the turbine plants to be provided to the steam-heat distribution system in Manhattan. Tar from the former MGP can be seen dripping from the roof of this tunnel, roughly 150 feet below ground surface. The source of the tar has not been determined. The tunnel can not be accessed by the public, and is only occasionally used by utility workers. Engineering controls are in place to prevent direct contact with the tar by utility workers.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

VCP:

Name: RAVENSWOOD GENERATING STATION
Address: 38-54 VERNON BOULEVARD
City,State,Zip: LONG ISLAND CITY, NY 11101
Program Type: VCP
Site Code: 56967
HW Code: V00368
Site Class: C
SWIS: 4101
Region: 2
Town: New York City
Acres: Not reported
Date Record Added: 11/30/2000
Date Record Updated: 04/05/2007
Updated By: dcwalsh
Site Description: The proposed Ravenswood 250-Megawatt (MW) Combined Cycle Generating Station site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough and County of Queens, New York and denoted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of an active electric and steam generating facility in a predominantly industrial and commercial area. The area addressed by this Voluntary Cleanup Agreement is the footprint of a proposed 250-MW combined cycle electric generating plant. The site is bordered on the east by light industrial and commercial buildings; on the south by the existing Ravenswood Generating Station; on the north by the existing Ravenswood Gas Turbine facility; and on the west by the existing Ravenswood Steam Plant and the East River. The site was formerly a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The site is currently occupied by a paved parking lot for Ravenswood employees. Site investigation has been completed at the site.

Env Problem: The Site investigation conducted at the site revealed the presence of petroleum contamination related to a release from an on-site no. 6 oil pipeline. In addition, the site is underlain by former MGP facilities, including gas holders, piping and drip pots. Investigation has not revealed any areas of discrete coal tar deposits, however, the volunteer has proposed to open all encountered pipes and drip pots, drain them and permanently closed them in place or remove them if they interfere with future construction activities. The area of petroleum contamination will be excavated and removed. The volunteer submitted and the Department approved a Remedial Action Work Plan for the site which consisted of the above remedies. This RAWP has been implemented, and the volunteer has submitted the Remedial Action Summary Report, which is under review by NYSDEC and NYSDOH.

Health Problem: Human exposures to contaminated soil and groundwater are unlikely. Most of the contaminated soil has been removed, the site is fenced and secured, and the site will be covered with buildings and

INST CONTROL:

Name: THE WILLS BUILDING
Address: 43-01 21ST STREET
City,State,Zip: LONG ISLAND CITY, NY 11101
Site Code: 490427
Control Name: Monitoring Plan
HW Code: C241143
Control Code: 31
Control Type: INST
Dt record added: 09/14/2015
Dt rec updated: 11/29/2018
Updated By: LSZINOMA
Site Code: 490427

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas

from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Name: THE WILLS BUILDING
Address: 43-01 21ST STREET
City,State,Zip: LONG ISLAND CITY, NY 11101
Site Code: 490427
Control Name: Environmental Easement
HW Code: C241143
Control Code: J
Control Type: INST
Dt record added: 09/14/2015
Dt rec updated: 11/29/2018
Updated By: LSZINOMA
Site Code: 490427

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 490427

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a

lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

 Updated By: JXGRECO

Site Description: Location: The site is located at 21-03 44th Avenue in Long Island City, Queens, NY. Site Features: The site primarily consists of the building located at 21-03 44th Avenue, which is currently used as a taxi dispatch and a taxi medallion brokerage. Current Zoning/Uses: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Historical Uses: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south. Entered Brownfield Cleanup Program on February 10, 2014 as C241144.

Env Problem: Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater. Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. Soil vapors beneath the building have been tested and are well above the NYSDOH guidance levels for PCE.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

QUEENS MEDALLION LEASING (Continued)

S109826178

Features: The site includes the sidewalk/street area immediately above and in the vicinity of a reported broken sewer line near the location of three groundwater monitoring points placed on the sidewalk in front of the building at 21-03 44th Avenue. Current Zoning and Land Use: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Contamination was thought to have entered the environment from a broken sewer pipe that connects the building at 21-03 44th Avenue and the main sewer line in the street. This hypothesis has since been shown to be incorrect. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in groundwater. Contravention of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. This contamination was thought to be emanating from a broken sewer line; however, this was disproven during the remedial investigation that was conducted in 2011. Significant Threat: While this site was initially determined to present a significant threat, that determination is no-longer valid, as the source(es) of contamination are located north of this site. Moreover, two sites immediately to the north have since entered the Brownfield Cleanup Program and remedies are underway to address them. Contamination at this site's location and to the south will be further assessed under the off-site portion of the Wills Building site (site ID No. C241143).

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Description: Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.424 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing;

printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 487959

Site Description: Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.424 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing; printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and

the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.424 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing; printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to

manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: N/A
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 02/05/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/16/2019	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

20-0186
2905 38TH AVENUE
LONG ISLAND CITY, NY 11101

TARGET PROPERTY COORDINATES

Latitude (North):	40.754528 - 40° 45' 16.30"
Longitude (West):	73.93297 - 73° 55' 58.69"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	590074.1
UTM Y (Meters):	4511844.0
Elevation:	38 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013
South Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 2.5 C. The project was identified as your project: **20-133-0572 29-05 38th Avenue RIR**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 20G0030

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:

Benjamin Gulizia
Laboratory Director

Date: 07/09/2020

Sample and Data Qualifiers Relating to This Work Order

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QC-LCS	LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-L	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased low.
CCV-H	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Long Island City NY, 11104
Attention: Ken Wenz

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 3.3 C. The project was identified as your project: **20-133-0572 29-05 38th Avenue RIR**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 20G0027

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Volatile Organics, 8260 - Comprehensive

Log-in Notes:

Sample Notes:

Sample Prepared by Method: EPA 5030B

Table with 13 columns: CAS No., Parameter, Result, Flag, Units, Reported to LOD/MDL, LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Includes rows for trans-1,4-dichloro-2-butene, Trichloroethylene, Trichlorofluoromethane, Vinyl Chloride, Xylenes, Total, and Surrogate Recoveries.

Semi-Volatiles, 8270 - Comprehensive

Log-in Notes:

Sample Notes: EXT-D

Sample Prepared by Method: EPA 3510C

Table with 13 columns: CAS No., Parameter, Result, Flag, Units, Reported to LOD/MDL, LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Includes rows for 1,1-Biphenyl, 1,2,4,5-Tetrachlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,2-Diphenylhydrazine, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2,3,4,6-Tetrachlorophenol, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, and 2,4-Dichlorophenol.

Semi-Volatiles, 8270 - Comprehensive

Log-in Notes:

Sample Notes: EXT-D

Sample Prepared by Method: EPA 3510C

Table with columns: CAS No., Parameter, Result, Flag, Units, Reported to LOD/MDL, LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Includes rows for Pyrene and Surrogate Recoveries.

Pesticides, 8081 target list

Log-in Notes:

Sample Notes:

Sample Prepared by Method: EPA SW846-3510C Low Level

Table with columns: CAS No., Parameter, Result, Flag, Units, Reported to LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Lists various pesticides like 4,4'-DDD, Aldrin, etc.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
20G0027-01	MW-1	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
20G0027-02	MW-2	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
20G0027-03	MW-3	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
20G0027-04	MW-4	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
20G0027-05	MW-Dup	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
20G0027-06	Trip Blank	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QR-04	The RPD exceeded control limits for the LCS/LCSD QC.
QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QC-LCS	LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
CCV-L	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased low.
CCV-H	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Attention: Evan Greenberg

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of C. The project was identified as your project: **20-133-0572 29-05 38th Ave RIR**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 20G0068

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

TO-VAC	The final vacuum in the canister was less than -2 inches Hg vacuum. The time integrated sampling may be affected and not reflect proper sampling over the time period. The data user should take note.
TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 2.8 C. The project was identified as your project: **20-133-0572**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 20G0046

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:

Benjamin Gulizia
Laboratory Director

Sample and Data Qualifiers Relating to This Work Order

QM-01	The spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-H	The LCS recovery was slightly above acceptable limits for the qualified compound. However, sample results are not biased high because results are corrected for isotope recovery.
PF-CCV-H	The CCV recovery was slightly above acceptable limits for the qualified compound. However, sample results are not biased high because results are corrected for isotope recovery.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 2.8 C. The project was identified as your project: **20-133-0572**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

<u>York Sample ID</u>	<u>Client Sample ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Received</u>

General Notes for York Project (SDG) No.: 20G0049

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

- PFSu-L The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

Definitions and Other Explanations

- * Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
- ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
- RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
- LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
- LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
- MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
- Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
- NR Not reported
- RPD Relative Percent Difference
- Wet The data has been reported on an as-received (wet weight) basis
- Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
