**SHWS:**

Name: STANDARD MOTOR PRODUCTS, INC.  
Address: 37-18 NORTHERN BOULEVARD  
City,State,Zip: LONG ISLAND CITY, NY 11101  
Program: HW  
Site Code: 58682  
Classification: Significant threat to the public health or environment - action required.  
  
Region: 2  
Acres: 1.1000000000000001  
HW Code: 241016  
Record Add: 11/18/1999  
Record Upd: 09/26/2018  
Updated By: JHOCONNE  
Site Description:

Site Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtrak s Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the building s roof. Past Uses of the Site: The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990. Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to

off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem: Nature and Extent of Contamination: Soils in the area of the rear loading platform contained elevated levels of and. Contaminated soils extended beyond the area excavated near the loading dock. Subsequent groundwater samples taken indicated contamination with TCA and lead. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Soil - Arsenic was detected at 19 ppm, which is above the applicable soil cleanup objectives (SCOs). Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 ppb. Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane 1,1,1-TCA) has been found at concentrations of up to 180 ppb. Soil Vapor- The highest concentrations of chlorinated VOCs were detected at SB-05. Sub-slab samples contained PCE at concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3 and up to 450 ug/m3 respectively. Significant Threat: The site presents a significant environmental threat. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation. An air sparge and soil vapor extraction system was installed to remediate site soils and groundwater and has been operating since September 2013.

Health Problem: The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was K FOLEY 12/15/03 Letter addressed to Sigona from Environmental Systems Group. On 10/30/03, Crompco conducted precision test on tanks. One 4000gal diesel UST failed the test. Energy Storage Systems reviewed the test data and suggested the test technician failed to plug the air eliminator on the pumps and therefore the tanks failed. On 12/9/03, Crompco retested the tanks and plugged the air eliminator and the tank passed. 12/19/03 Spoke to Andy at Energy Storage systems. As per Sigona's recommendation, he will submit a report summarizing the first and second testing episodes. Rommel 12/23/03 Received letter from Mort Turoff at Energy Storage systems summarizing first and second tests. Diesel tank passed on 12/9/03 retest. Results on file. (KMF) 1/9/04 Sent NFA. (KMF)"

Remarks: "liquid level failure"

Env Problem:

construction as a multi-story hotel. A parking area and a multi-story commercial building are located immediately east of the site. Metropolitan Transportation Authority property (the F train) runs directly underneath 41st Avenue along the southern side of the property. New York City (NYC) Housing Authority property (Queensbridge Houses) is located approximately 1.5 blocks west of the property. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently vacant, and is undergoing extensive renovations. The surrounding area is generally used for commercial purposes. Past Use of the Site: The property was formerly occupied by an electroplating facility from 1962 to 2012. Upon inspection by Department personnel in August 2012, the building was found to contain well over 100-55 gallon drums in various states of decay containing numerous chemicals, over a dozen plating baths and rinsate tanks, as well as heavily stained walls and floors. The new property owner has undertaken a limited cleanup pursuant to a NYC Department of Environmental Protection Commissioners order. This work began in April 2013, and included: (a) emptying and removal of all the plating baths and tanks; (b) removal of all the 55-gallon drums; and (c) removal of all grossly-contaminated concrete flooring and walls. This work was completed in June 2013. Site Geology and Hydrogeology: Soils consist of medium to fine-grained sand to about 10 feet below grade, followed by a layer of silty clay of an undetermined thickness. Groundwater was found approximately 13 feet below grade. Groundwater flow direction was not determined locally, but would likely be in a westerly direction towards the East River. Nature and Extent of Contamination: Soil: Sampling data from beneath the basement floor as well as adjacent to the building beneath the future hotel indicated the presence of VOCs and metals at concentrations above restricted residential cleanup objectives (shown in parentheses) prior to excavation conducted from 2013 - 2014. For example, PCE was found up to 10.5 ppm (1.3 ppm), TCE up to 85.6 ppm (0.47 ppm), DCE up to 1.3 ppm (0.25 ppm), cadmium up to 225 ppm (4.3 ppm), chromium up to 10,500 ppm (0.18 ppm), nickel up to 5,560 ppm (0.13 ppm), and cyanide up to 880 ppm (0.027 ppm). Groundwater: Concentrations of tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (DCE), vinyl chloride (VC), cadmium, chromium, and nickel were all found at concentrations above their respective Part 703.5 class GA standards. Specifically, PCE was found up to 20,700 ppb (5 ppb standard), TCE up to 2,600 ppb (5 ppb standard), DCE up to 4,150 ppb (5 ppb standard), VC up to 1,070 ppb (5 ppb standard), dissolved chromium up to 1,890 ppb (50 ppb standard), dissolved hexavalent chromium up to 2,210 ppb (50 ppb standard), and dissolved nickel up to 600 ppb (100 ppb standard). In addition, cyanide was found at concentrations ranging from 26 to 79 ppb (no standard). Soil Vapor: Sub-slab vapor samples were collected in May 2017. Concentrations of PCE, TCE, cis-1,2-DCE and vinyl chloride range from 1 to 200 ug/m<sup>3</sup>. TCE was detected above the NYSDOH May 2017 Soil Vapor/Indoor Air Matrix guidance for mitigation concentrations of 60 ug/m<sup>3</sup> and above. Several BTEX and BTEX-related compounds were also detected in the 1 to 100 ug/m<sup>3</sup> range.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil),

which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion into the on-site building may be occurring and needs to be evaluated. On-site contamination may be migrating off-site and the potential for soil vapor intrusion in nearby off-site building also needs to be evaluated.

determine owner of property from Property Shark or Acris. Called George Falidas on 7/14/05, left message to call back. On 1/19/05, reattempted to determine owner of property. No success. 3/30/07 - Austin - Trasferred to Ketani for further review - end 5/21/07 - Raphael Ketani. I reactivated the case today. There was very little in the case file. Some printed pages for spill #0305345 (which doesn't pertain to the case, except the memo from Mr. Sigona to Mr. Hassan), an 11/7/05 letter from Joseph Peck of DEC to George Falidas regarding the spill, printouts from Google Earth and Property Shark, and a printout of the spill report for this case. I did a search of ACRIS, the NYC Property Tax database, and Property Shark and determined that 25-15 Queens Plaza North is just one part of the range of properties (25-01 to 25-27 Queens Plaza North) owned by Falidas Associates. It is also known by Bridge Plaza North. The block and lot are: 00415 and 0004. I called up George Falidas (718) 392-0514 of Falidas Associates and was connected to his brother, John Falidas. I made a field visit and met John Falidas. He showed me the basement of one of the properties owned by Falidas Associates and which is near to where the tank failed 2 buildings away. We entered a work room rented by a garment making company. The floor and walls and bathroom were clean. There were no signs of oil and no oil odors. Mr. Falidas said that he had paid lots of money to get the oil cleaned up years ago and the responsible party never paid anything to him. Mr. Falidas had a package of documents from the EPA and the DEC and showed them to me. These were the RCRA Subtitle C Site Identification Form, letters from South Mall Analytical Labs to PTC, and a DEC Spill Report. He gave me copies of these documents. I was particularly interested in the old DEC spill report form as this document wasn't in the case file. Next, I visited the 2 story building between Mr. Falidas' building and the site of origin of the spill. I met Sandro Cestaro of Atlantic Precious Metal Casting, Inc. (718) 937-7100. He showed me his basement. There were some signs of a thin film of mud in one corner of the basement, but no signs or odors of oil, even though this was the building where the oil first entered. Lastly, I went to the site of the oil spill. The auto parts service place had burned completely, according to the old spill report case notes. This site was 41-22 to 41-30 27 Street. The site was sold to developers who later built an apartment building that was finished in early 2007. This building is listed as 41-28 27 Street. I met the super., Leonardo Colon. He took me to the lowest point in the building. This was a parking garage. There were no signs of oil nor any odors. He said he was new here and didn't know much about the building. The building management company is Golden Management and the contact person is Brandon Wechsler (718) 230-2600, ext 111. I took 3 pictures of the apartment building and the neighboring properties. I remember seeing the dig out for the foundation for the building when I passed by the site many months back. They went down below the bottom of the foundation for the neighboring building which contains Atlantic Precious. This is a depth of about 15 feet or so. Based upon my site visits and the fact that the old auto parts area has been dug out, and the lack of evidence of a spill, I am closing the spill case. "

Remarks:

"SPILL AT A COMMERCIAL BLD CALLER IS A TENANT AND REQ A CALL FROM DEC SPILL HAS NOT BEEN CLEANED UP BEEN SMELLING THIS FOR ABOUT 3 WEEKS "

DEC Memo:	"TTF letter sent to PBS address - see eDocs 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 11/07/2013 - V. Brevdo Received call from Chief Operating Officer for Real Estate Company Ms. Duffney Panayiotou - 718-204-1600 Ext. 30. I explained to Ms. Panayiotou that I need information and/or documents about what type of tank test failure it was - dry or actual leak. If they have confirmation it was a dry leak and no oil leaked and no impacts, I would look into available documents and may consider closing spill. If it was not a dry leak and oil was released that we need to negotiate appropriate course of action. Ms. Panayiotou stated she will look into this matter and get back to me by end of the day. I stated that I would like to hear back from her no later than 3 weeks from today. VB 03/24/2014 - V. Brevdo Called Ms. Duffney Panayiotou - left voice mail that we need to discuss this spill case as per our 11/07/2013 telephone conversation. Ms. Duffney Panayiotou returned call stated that she will submit (via e-mail) appropriate documentation confirming this case was a dry leak with no product released. I provided my e-mail address over the phone. V. Brevdo 03/24/2014 - V. Brevdo e-mail from Pistilli Group: Dear Mr. Brevdo, Attached please find the tank tightness tests for 34-20 32nd Street, Astoria, NY and 25-90 35th Street, Astoria, NY. Please note that the tank for 34-20 32nd Street had a dry leak. The building has since converted to Gas and the tank has since been abandoned. I will forward you paper work on it tomorrow as soon as I receive it from the company that did the work. The tank for 25-90 35th Street passed the tank tightness test and there are no known leaks at that location. Thank you, Dafne Panayiotou Pistilli Realty Group 35-01 30th Avenue, Suite 300 Astoria, NY 11103 Dafne@pistilli.com Tel. (718) 204-1600 Fax (718) 204-5889 March 25, 2014 - V. Brevdo e-mail

to Pistilli Group: March 25, 2014 Dear Ms. Panayiotou: This is to acknowledge receipt of your 3/24/2014 5:55 PM e-mail and attached tank tightness tests documents. Could you please confirm that there have been no complaints and/or occurrences of petroleum odor in the subject buildings over the period of time from August 31, 2010 to date? Thank you. Vadim Brevdo 03/25/2014 - V. Brevdo e-mail from Pistilli Group: Dear Mr. Brevdo, This e-mail shall confirm that from August 31, 2010 to present there have been no complaints or occurrences of petroleum odor in the properties 34-20 32nd Street, Astoria, NY nor in 25-90 35th Street, Astoria, NY. Please feel free to call me in the event you have any further questions or need any additional information. Thank you, Dafne Panayiotou 04/02/2014 - V. Brevdo Spill Case Closure Decision 34-20 35nd Street Long Island City Spill Case No. 1006024 No release of product appears to have occurred from this tank test failure on 8/31/2010 which is confirmed by tank test report (dry ullage leak). According to Ms. Panayiotou, Chief Operating Officer at Pistilli Group, there has been no petroleum odor or petroleum odor complaints in the building. The Department determined that it is unlikely that this tank test failure resulted in any impact to soil and/or groundwater. Human Health Threat is unlikely. There is no human health and/or environmental benefit in continuing keeping this spill case open. Spill Case is closed effective 04/02/2014. V. Brevdo "

Updated By: JHOCONNE  
Site Description: Location: The 4,000 square feet site is located at 34-14 31st Street in the Borough of Queens, Queens County, NY in an urban area. Site Features: The Site currently consists of a 2-story commercial building which has been utilized as an auto repair shop since around 1936. Current Zoning and Land Use: The site is currently zoned as R5 (lower density residential districts) and is adjacent to an elevated subway track along 31st Street. The site is bounded to the north by a residential building, to the east by 31st Street, to the south by a commercial building, and to the west by residential buildings along 30th Street. Past Use of the Site: The Site is currently occupied by a 2-story structure which operates as an auto repair shop. A Phase I conducted in May 2015 identified the site s current and past use as an auto repair shop as well as the presence of 2 above-ground storage tanks as recognized environmental conditions. Site Geology and Hydrogeology: Boring logs were not provided with the Phase II ESA and a description of site-specific geology and hydrogeology was not included as part of the report.  
Env Problem: Nature and Extent of Contamination: Prior to Completion of Remediation Based on preliminary investigations, the primary contaminants of concern were volatile organic compounds (VOCs). Soil The chlorinated solvent tetrachloroethylene (PCE) was identified in one of four soil samples above the Unrestricted Use SCOs (UUSCOs) in parenthesis. PCE was detected at a concentration of 4.8 ppm (1.3 ppm). Several metals were detected above UUSCOs and included lead up to 193 ppm (63 ppm), mercury up to 0.47 ppm (0.18 ppm), and nickel up to 39.6 ppm (30 ppm). No SVOCs, PCBs, or pesticides were detected above the UUSCOs. Groundwater Several attempts were made to collect groundwater samples, but groundwater was not encountered to the maximum depth investigated. Soil Vapor PCE and trichloroethene (TCE) were found in the indoor sub-slab air sample at 918 ug/m3 and 54.6 ug/m3 respectively. A corresponding indoor air sample found PCE at 0.215 ug/m3. Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE in soil and PCE and TCE in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use and applicable guidance values for soil vapor and indoor air samples.  
Health Problem: Remedial actions are complete and have eliminated the potential for contact with site-related contaminants.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was DEMEO 4/21/03 TJD UST Closure Report prepared by The Shaw Group Inc reviewed. One 4,000 gallon UST containing #2 Fuel Oil removed. Samples collected, SVOC Exceedances noted. Shaw stated supplemental investigation will be performed to further delineate petroleum impacted soils and groundwater impacts. 8/23/04 TJD Shaw submitted (8/19/04) a work plan for supplemental investigation. Site is being developed for the construction of a new public school. As part of the project a new underground parking garage is to be built, which will involve excavating soils to a depth of 15 feet. Additional soil borings are planned in the area of previously identified contamination. Work plan was verbally approved on this date with requirement that SHAW notify DEC a minimum of 48 hours prior to scheduling sampling event. 8/23/04 TJD Multiple spills on single address. Spill 0104171 closed and cross referenced to 0101345. 11/17/05 - L. Alden - Called Mike Sherwood, Shaw Group, at (845) 492-3182. Left message. 12/19/05 - L.Alden - Called Sherwood back. Shaw is not doing the additional investigation on this site. Called his client, Lee Guterman, at the NYC School Construction Authority, (718) 472-8502. This property will be the site of the Frank Sinatra School. Anna Ciecierska, (718) 752-5028, returned my call. She didn't know the specifics of the project but would look into the file to determine where they were with the investigation/cleanup effort. 12/20/05 - L. Alden - Anna Ciecierska called back today. She had a report from February 2005 where the consultant had delineated the contaminated soil. She indicated that removal of contaminated soil was to commence within a week or two. She would wait to get the report before submitting a request to close the spill. 5/01/06 - L. Alden - Mark Hudok, GZA Geoenvironmental, (973)256-7800, called. He was preparing a remediation plan and called to discuss post-excavation sampling that would be necessary after removal of contaminated soil. Recommended action: Review excavation plan and post-excavation results. 8/15/2006 Sangesland received a call from Jennifer Kahn of SCA requesting guidance on who the DEC case manager was for this site. Apparently in 2005 the project was sent up to DEC Albany for work and was then transferred back to DEC Region 2. Because the site is already into the remediation phase, the case is being transferred to the Region 2 Remediation Group (Koon Tang). 08/15/06: Transferred to Yau. (Yau) 08/16/06: Visited the school site with Joe. Met with the representatives from SCA. Told them additional

groundwater samples will be required at the soil/ groundwater interface. Will send in report as soon as results come back. (Yau) 08/24/06: Received report along with lab analytical results from SCA. Both soil and groundwater results are good except for N-2, N-3, and W-2. 1. The benzo(a)anthracene and benzo(a)pyrene exceeded TAGM slightly for the soil samples. 2. The o-xylene and dibenz(a,h)anthracene exceeded the TOGS standard slightly. DEC will approve the construction of a school building on top the this site. (Yau) 10/16/06 Re-assigned from Yau to Chanda (Chanda) 12/20/06:DEC received a phone call from Mr.Drew Pardus, School construction Authority,Ph:(718)752-5036.He said that last week soil exavated from the construction site and soil samples were sent to lab analysis. He will send in report as soon as possible as result come back. (Chanda) 2/27/07:DEC received Endpoint Soil and Groundwater Sampling Results prepared by Shaw Environmental and Infrastructure, Inc., dated 2/26/07. 3/14/07:DEC reviwed all report and documents regarding this spill. Based on the information presented to the Department DEC closed this spill.(Chanda) 3/15/07: A NFA letter was issued to Ms. Lee Guterman, Manager, IEH Department, SCA, and copy to Mr. Bob Kanaparthi, SCA and Michael R. Sherwood Shaw Environmental & Infrastructure, Inc."

Remarks: "WHILE EXCAVATING A SITE, CONTAMINATED SOIL WAS DISCOVERED. SOIL IS BEING STOCKPILED."

 Program: HW  
 Site Code: 439625  
 Classification: P  
 Region: 2  
 Acres: 0.11  
 HW Code: 241126  
 Record Add: 09/08/2010  
 Record Upd: 09/26/2017  
 Updated By: JHOCONNE

**Site Description:** The Site is located in the Long Island City section of Queens in a zoned manufacturing area with residential zoning approximately 300 feet to the south. The Site had been a residential building with garages beginning in 1898, was vacant from 1947-1950, was used for sheet metal work from 1967-1983 and was converted from sheet metal work to dry cleaning in 1997. The Site is currently an active dry cleaning facility. The one-story building foundation is slab-on-grade and contains dry cleaning machines, garment storage area, storage, boiler room, office, customer service area, bathroom and partial basement. The building covers the entire footprint of the site. The building has three 4th-generation dry cleaning machines on a secondary containment concrete slab, five washers and a dryer, several empty 15-gal waste containers, spill containment material container, a spotting stand, ten press machines, three sets of shirt machines, four air compressors, two refrigerated dryers and a sump. The Site and building are approximately 5000 square feet in size (0.11 acres). A residential building is located immediately to the northwest (0.01 miles), a stonework building is to the northeast, a fine arts furniture building to the southwest and 13th Street to the southeast.

**Env Problem:** Based upon investigations conducted to date, the primary contaminants of concern at the site include tetrachloroethene (PCE) and dichloroethene (DCE). One round of groundwater sample collection was performed in June 2009 via two Geoprobe borings located in the sidewalk in front of the site building. Groundwater samples were analyzed via EPA Methods 8260/8270. No soil samples were collected for analysis during the investigation. The following maximum concentrations with contaminants were observed in groundwater: 26ppb PCE and 63ppb DCE. These results demonstrate that groundwater standards have been exceeded for PCE and DCE. The nearest surface water body is the East River, which is located approximately 2000 feet (0.3 miles) to the west. Groundwater is approximately 7 to 8 feet below grade and most likely flows west under the Site to the East River, however direction of flow has not been specifically determined to date. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment.

**Health Problem:** As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public

 Record Updated Date: 04/11/2019  
 Update By: KALEWAND  
 Site Description:

This site's BCP has been voluntarily terminated by the property owner/BCP applicant. Location: The site is located in an urban area and denoted on New York City tax maps as Block 665, Lot 34 (formerly Lots 5, 7, 31, 34, and 38). The site is located on the city block bordered by 38th Street to the north, 36th Avenue to the east, Steinway Street to the south, and Northern Boulevard to the west. Site Features: The site encompasses an area of approximately 49,412 square feet (1.134 acres). There is a two-story commercial use building with three 275-gallon and two 550-gallon fuel oil aboveground storage tanks (ASTs) and one 550-gallon waste oil AST in the southern portion of the lot; the south-central portion has an asphalt-paved parking lot; a one-story parking garage is located in the northern portion; there is a one-story supermarket in the central portion; and the north-central portion features a one-story storage building for the supermarket. Current Zoning and Land Use: The Site is zoned for commercial and manufacturing use. The northernmost portion of the lot is located in a M1-1 manufacturing district. The remainder of the lot is located in a C4-2A commercial district. The surrounding area consists of commercial, industrial, residential, and transportation and utility uses. An underground New York City Transit Authority (NYCTA) structure (M, R, E and F subway lines) adjoins the site to the south. Past Use of the Site: The site has been occupied by manufacturing and industrial facilities since the early 1900s. Historic site uses include gas station, garage, auto repair, auto laundry facility, factory, used car sales, warehouse, machine shop, clothing manufacturer, and glass grinding facility. Historic gasoline tanks are associated with the auto repair on former Lots 5 and 34 and a garage on former Lot 31. Site Geology and Hydrogeology: Bedrock underlying the site consists of gray and gray-weathering, thinly laminated muscovite-biotite-quartz schist with minor garnet. Beneath the Site, surface material was observed to be urban fill predominately comprised of light brown fine to coarse sand, with varying amounts of gravel, clay, coarse stone, ash, coal, burnt wood, brick, and debris. The urban fill layer extends to approximately 2 to 6.5 feet below grade surface (bgs). Beneath the fill is a brown to black fine sand to coarse sand with gravel. The inferred regional groundwater flow direction for the area surrounding the site is to the northwest. Groundwater underlying the site ranges from approximately 20 to 25 feet below grade surface (bgs). Nature and Extent of Contamination Soil Soil samples collected

throughout the site depicted minor exceedances of Semi-Volatile Organic Compounds (SVOCs) and metals. All soil samples collected with elevated concentrations above Unrestricted Use SCOs were at or shallower than 2 feet below grade surface except for Acetone exceedances (max of 0.35 ppm) at 15 and 18 feet below grade surface in VTX-02 and VTX-04 respectively. Groundwater Sixteen groundwater locations were sampled on-site. Samples were analyzed and compared to NYSDEC TOGS groundwater guidance. Exceedances of metals existed in every sample. These metals included Iron, Magnesium, Chromium, Sodium, Manganese and Selenium. Exceedances of cis 1,2-Dichloroethene existed both up and down gradient of the center of the site. The maximum concentration of cis 1,2-Dichloroethene was in MW-10 at 20 parts per billion (ppb) (standard is 5 ppb). PCE was detected at elevated concentration in temporary well VTW-12 at a concentration of 5.5 ppb (standard is 5 ppb). Petroleum related compounds were detected in temporary monitoring well TMW02. These compounds included Benzene (at 1.3 ppb with standard at 1 ppb) and Naphthalene (at 28 ppb with standard at 10ppb). Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Soil Vapor Four soil vapor samples and one ambient air sample were collected throughout the site. Tetrachloroethene was found at elevated concentrations in SV04 (250 micrograms per cubic meter (ug/m3)), SV03 (23.5 ug/m3), SV02 (16.5 ug/m3) and AA (1.49 ug/m3). Trichloroethene was found at elevated concentrations in SV02 (6.02 ug/m3) and SV01 (38.2 ug/m3). It has been determined by the Department that the site does NOT pose a significant threat.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with the former building foundations and pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development.

Updated By: JHOCONNE

Site Description: Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor. Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historic Use(s): The Site was a commercial building occupied by various manufacturing and warehousing entities including a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. The source of the contamination noted on-site was determined to be from an upgradient property. See site no. C241149 for further updates. Not reported

Env Problem: Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations. Soil - There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples. Groundwater - On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24 ppb) were detected in groundwater samples at levels exceeding groundwater standards. Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb -50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site. Sub-slab soil vapor - Sixteen

petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzene (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air - Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air - PCE was detected in the outdoor air sample at a concentration well below the concentrations found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat: The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDEC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination. CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System was installed and is operating to prevent soil vapor migration into the building.

 Site Description: LOCATION The Site is located at 38-21 12th Street, and includes the addresses 38-01 12th Street through 38-33 12th Street, 38-02 13th Street through 38-36 13th Street, and 12-02 38th Avenue through 12-20 38th Avenue. The Site is located in the Long Island City section of Queens, New York. The Site is bound to the northwest by 38th Avenue, followed by a taxi garage; to the northeast by 38th Avenue, followed by a scaffolding manufacturer; to the east by a 13th Street, followed by an auto body and paint shop, car wash and parking lot; to the south by an auto repair shop and church; and to the west by 12th Street, followed by a commercial building, scaffolding company, and a construction site. **SITE FEATURES** The Site consists of one tax lot on an approximately 70,200-sf (1.6 acre) parcel. The Site contains three one-story buildings, constructed around 1936, and two partially covered parking lots. The Site is currently vacant, but was recently occupied by commercial and industrial businesses including: a pipe fitting shop, two leased commercial parking lots, a marble and granite fabricator, a carpentry shop, and a commercial kitchen. **CURRENT ZONING AND LAND USE** The current zoning designation of the Site is M1-3 (manufacturing district). The surrounding area is largely developed with industrial and commercial uses with residential and commercial uses located to the south and east. **PAST USE OF THE SITE** The July 2017 Phase I ESA indicated that Site had

numerous historical commercial, industrial, and automotive uses. The Site was a rag shop in 1915, and was developed in 1936 with three one-story buildings that were operated by Chesebro-Whitman Co Inc. as a wood working facility. In 1970, Chesebro-Whitman Co Inc. became a scaffolding manufacturing and repair facility, and on-site uses changed to include a metal workshop, with a garage and gasoline tank. An office and a storage area were also constructed in the former vacant parcel on the southern portion of the Property in 1970. SITE GEOLOGY AND HYDROLOGY Based on the U.S. Geological Survey Central Park, New York 2011 Quadrangle map, the Site is approximately 15 feet above the North American Datum of 1988 (an approximation of mean sea level). Groundwater was encountered at the Site between approximately 8 and 10 feet below sidewalk grade during AKRF s Phase II investigation, and is expected to flow in a southwesterly direction towards the East River, approximately 0.3 miles away. Soil borings, which were advanced between 10 and 15 feet below sidewalk grade across the Site during AKRF s Phase II, encountered historic fill material (coal ash, concrete, brick, plastic, and/or glass) underlain by brown sand or silty-sand and gravel.

DEC Region: 2  
DER Facility ID: 307531  
DEC Memo: "12/30/05-Hiralkumar Patel. I spoke with Levent Eskicakit at Athenica Enviromental, who is handling environmental investigation of this site. Levent is doing Phase-I and Phase-II investigation of site. During phase II, he found contamination. this is an empty building, previously used as office and in back of building there are 3 tanks of 275 gal capacity above ground, and 1 underground tank capacity of 3000 gal. this building is financed by State Bank of Long Island and owned by Metro B.C. LLC. Levent took samples at points 8 to 9 ft apart and about 15 ft deep. From the samples of whole area, they found contamination in backyard where the tanks are. Levent found contamination in the area of 10ft\*10ft\*9ft. After investigation, the building will be demolished for further use. At financing bank, the further use of this site is noted as commercial use. Levent: Ph. (718) 784-7490 Fax. (718) 784-4085 Email: leskicakit@athenica.com Contact Person in Metro LLC: Demetrios Demetrios (718) 937-5353 Fax. (718) 937-8743 Cell (347) 203-9923 Address of Metro LLC: 11-20 30th Ave. Long Island City, NY I have sent soil contamination letter today and also faxed it. 1/17/06-Hiralkumar Patel. I got letter back because of wrong address. Letter with corrected address has been sent out. Correct Address: 1120 37th Ave Long Island City, NY 11101 1/20/06-Hiralkumar Patel. Spoke with Levent at Athenica Environmental and as per his knowledge, the Metro LLC is now selling this property. and the new owner will do all the required remediation work. Until now Levent has not heard anything from Metro LLC or the new buyer. as soon as he get some information, he will inform me. I have asked him to send soil investigation report in email. 1/24/06-Hiralkumar Patel. Talked with Levent at Athenica. He will send me report today in email. Received site plan, soil results and groundwater results in an emil from Levent. Reviewing report. { c:\\hiralkumar\\1204 37th ave } - 6 soil samples, 1 groundwater sample close to UST. - found contamination at soil sample no. 1 and 3, which are close to UST and contamination in groundwater close to tank. - from the plan, property has 5 AST of capacity 275 gal. Left message for Mr. Demetrios at Metro LLC. Received call from Demetrios, and he will call me back with latest information regarding cleanup on this case once he reach his office. Received email from Levent at Athenica.

-----  
----- Hiralkumar: As I mentioned to you earlier, at the request of Metro LLC, Athenica Environmental Services (AES) conducted a Phase II Focused Subsurface Site Investigation on December 2005 at the above referenced property. The results of this investigation revealed followings: \* Field investigation indicated that Site soils (B-1 & B-3) located along the former abandoned 3,000-gallon UST area (or former cesspool area), contained field evidence of petroleum contamination. The field evidence suggests that petroleum contamination soils occur at depths of approximately four (4) feet bgs to the water table, which was encountered between ten

EPA ID Number

COMMERCIAL BUILDING (Continued)

S107523279

(10) and twelve (12) feet bgs. \* There was no evidence of any VOC or SVOC contamination observed within the remaining soil samples (B-2, B-4, B-5 and B-6) collected from the Site. \* The laboratory analytical results indicated that, with the exception of soil samples B-1 and B-2 collected within the vicinity of the former abandoned UST, none of the remaining soil samples (B-2, B-4, B-5 and B-6) from the Site had concentrations above the NYSDEC STARS Memo Alternative Soil Guidance Values. Soil Samples collected from B-1 and B-2 contained concentration of VOCs and SVOCs above the NYSDEC STARS Memo Alternative Soil Guidance Values. \* Laboratory results of groundwater sample GW-1 collected from the soil boring B-1 indicated that concentration of benzene and MTBE were 1.7 ppb and 24 ppb, respectively. These concentrations exceed the NYSDEC TOGS Memo Groundwater Cleanup Criteria of 1 ppb for benzene and 10 ppb for MTBE. Based upon the field evidence and the laboratory data, AES concluded that the Site has been impacted by old petroleum-related VOCs and SVOCs in the former abandoned UST (or cesspool) area. However, based on the fact that this is a historical spill and is located approximately 4 feet below ground surface (bgs) and the fact that the entire area is covered with 6 inches of concrete floor, there are no immediate threat to the environment and the occupants of the Site. Further, the Site is not a residential and the entire area is used solely for parking and storage. My conversation with Mr. Demetrios of Metro LLC (the Site owner) indicated that the Site will go under construction for the development of a new building approximately sometimes in 2007. AES recommended that when the proposed construction activities should take a place, environmental engineering controls including remedial action work plans, and health & safety plan should be prepared in order to protect the workers and environment and submitted to the NYSDEC for review and approval. Regards, Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Specific Health and Safety Plan (HASP) for the above referenced property. We are looking to schedule this project for next week. Eastern Environmental Solutions, Inc., a NYFD certified environmental contractor, will be subcontractor for the excavation of the soils and/or removal of the UST (if discovered). Please confirm. Thanks Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103

-----  
abstract of RAP: - result of dye test confirmed that all 10 floor drains located at the site building, the onsite drywell (1) and two trench drains are interconnected and the final destination of these drains is the NYC municipal sewer located on 37th Ave. - geophysical survey didn't identify the presence of any additional USTs or former septic system other than an anomaly that might be the former abandoned UST or former septic system located at the site. - site soils consist of approx. nine ft of fill material containing brick, concrete, fly ash, slag, fine silty sands, clay and fine gravels. native material, consisting of fine to medium sands with some silt, was observed at depths greater than nine ft bg. - field evidence suggests that petroleum impacted soils occur at depths of approx. four ft bg to the water table, which was encountered between ten and twelve ft bg. - based on the field evidence and the laboratory data, AES concludes that the site has been impacted by petroleum related VOCs and SVOCs in the area where the anomaly identified during the former abandoned UST area. - petroleum impacted material identified during the previous investigations will be excavated and removed from the site. based on the results of the Phase-II investigation approx. 30 to 50 cubic yards of material will require excavation and subsequent disposal. - once the required remediation activities completed at the site, AES will collect endpoint samples from the excavation. - three groundwater monitoring wells will be installed at selected locations on the site. - it is anticipated that two of the wells location will be located in downgradient area of the release (along site boundary), one well will be located in a portion of the site upgradient of the former suspect UST or former cesspool area. - wells will be completed to an anticipated depth of 15 ft bg. - based on the outcome of the remediation activities at the site, minimum of two sets of groundwater samples will be collected from the monitoring well network. first set will be collected approx. one week following the completion of monitoring well installation efforts. the remaining set will be collected approx. 12 weeks from the date of initial sampling event. COMMUNITY AIR MONITORING PLAN - during the site excavation procedures, AES will perform monitoring of ambient air for VOCs and airborne particulates. - CAMP requires real time monitoring for VOCs and particulates (i.e. dust) at the downwind perimeter of each designated work area when certain activities are in progress at a contaminated site. - action level specified herein require increased monitoring, corrective actions to abate emissions, and/or work shut down. - real time air monitoring for VOCs and particulate levels will occur at the perimeter of the exclusion zone. continuous monitoring will be implemented for all ground intrusive activities. ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings or monitoring wells. - VOCs will be

EPA ID Number

COMMERCIAL BUILDING (Continued)

S107523279

monitored at the downwind perimeter of the immediate work area. upwind concentrations will be measured at the start of each work day and periodically thereafter to establish background conditions. - if ambient air concentration of total VOCs at the downwind perimeter of the work area or exclusion zone exceeds 5 ppm above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. - if the VOC level is above 25 ppm at the perimeter of the work area, activities will be shut down. - if the downwind PM-10 particulate level is 100 mcg/m3 greater than the background (upwind perimeter) for the 15 minute period if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. - if, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m3 above the upwind level, work will be stopped and a re-evaluation of activities initiated. spoke to Levent (Cell: 347-556-7787). they are planning to remove all contaminated material from site including suspected abandoned UST and any associated area. he will email me figure 2 of RAWP and phase-II investigation report. Received figure 2 in email. 05/08/06-Hiralkumar Patel. Received call from Levent and he was asking about written approval of proposed RAWP. send email with such approval. 06/21/06-Hiralkumar Patel. REceived email from Levent.

-----  
Gentlemen: Finally, we have received our groundwater sample results for the above referenced property. As the analytical results indicate, none of the groundwater samples collected from site contained volatile organic compounds above laboratory methods detection limits or NYSDEC TAGM groundwater cleanup criteria. In summary, we have excavated and disposed of a total of approximately 40 tons of petroleum impacted soil from the site. Confirmatory soil samples have already indicated that no compounds were detected above the NYSDEC TAGM Soil Cleanup Criteria. Following up the excavation, we have installed a total of three groundwater monitoring wells, where the results are presented within attached report. Upon completion of Remedial Action Report (RAR) for the site, we will submitted it to Mr. Patel of NYCDEP requesting closure of the case number and No Further Action Required letter be issued for the Site. If you have any questions, please do not hesitate to contact me. LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. ----- no  
contamination found in groundwater samples. i haven't received soil test results yet. send email to Levent to send soil data with site plan with sampling locations. 06/28/06-Hiralkumar Patel. Received email from Levent.

----- Kumar:  
Attached is the Remedial Action Report (RAR) which summarizes soil excavation, remediation, groundwater sampling, laboratory analytical results, field logs and waste manifests for the above referenced property. The hard copy of the report with all attachments will follow via US Mail. In summary, as the RAR indicated, all petroleum impacted soils have been excavated and disposed of the Site and confirmatory soil and groundwater samples with no detected compounds above the NYSDEC TAGM or TOGS Soil and Groundwater quality Criteria. Consequently, AES requests that the NYSDEC Case Number 05-11360 be

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Town: New York City  
Record Added Date: 12/18/2014  
Record Updated Date: 01/03/2019  
Update By: SXDEWES  
Site Description:

Location: The site is a narrow plot of land perpendicular to Jackson Avenue in Long Island City (Queens County) approximately 150 feet west of Queens Boulevard. The site is bordered by Jackson Avenue to the north and surrounded by Queens Plaza Residential Development - Site B (Site No. C241151) on the east, west and south. Site Features: Prior to excavation under the approved IRM, the site is covered by asphalt and concrete sidewalks. Current Zoning and Land Use: The Site is located in the Special Long Island City Mixed Use District and is zoned M1-6/R-10 (manufacturing and residential). According to the NYC Planning website, the Special Long Island City Mixed Use District "promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills." Past Use of the Site: Prior to November 18 2014, the property was a dedicated NYC street operated by the NYCDOT. Previously known as Barn Street from 1898 to 1936 and West Street from 1947 to 2014. Site Geology and Hydrogeology: The subsurface soils consist of a fill layer approximately 6 to 8 feet in thickness. The fill is a mixture of fine to medium sand, with some silt and gravel and traces of brick, concrete and cobbles. The fill is underlain by silty sand and glacial deposits followed by a layer of fine sand with intermittent seams of silt and clay. Bedrock is present at approximately 33 to 50 ft. bg. Depth to the groundwater table is approximately 8 ft. bg. at the site. Regional groundwater flow to the southwest.

Env Problem:

As of April 2016, all soil within the top 15 feet below grade which exceeded restricted-residential Soil Cleanup Objectives (SCOs) was removed and properly disposed of off-site. A Site Management Plan (SMP) will be implemented to managed remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. Prior to remediation, soil and groundwater samples were collected for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), pesticides and metals. Contamination encountered on-site appeared related to historic urban fill: Soil: No VOCs exceeded restricted-residential soil cleanup objectives (RRSCOs) Several SVOCs exceeded RRSCOs in soil. For example, benzo(a)anthracene was detected up to 3 parts per million (ppm) and the benzo(b)fluoranthene was detected up to 3 ppm (the RRSCO for both compounds is 1 ppm). Two metals exceeded RRSCOs. One sample for mercury at 0.84 ppm (the RRSCO is 0.81ppm). One sample for lead at 1,900 ppm (the RRSCO is 400 ppm). PCBs and pesticides were not detected above RRSCOs. Groundwater: One groundwater sample was collected on-site. VOC, SVOC, PCB and pesticide concentrations were below groundwater standards. The metals iron, manganese and sodium exceeded groundwater standards. No soil vapor data was submitted.

Health Problem:

Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

 Record Upd: 09/06/2019  
 Updated By: GWBURKE

Site Description: LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge. SITE FEATURES: The property extends 335 feet from north-to-south, and 117 feet from west-to-east. The former location of Buildings 2 through 4 were demolished for the construction of a hotel. Building 1 is still standing and has a slab-on-grade masonry building. The site and surrounding areas are generally level. CURRENT ZONING AND LAND USE: The site is currently zoned commercial. The site originally consisted of multiple lots but they have recently been merged into one lot (Lot 19). Building 1 along the northern portion of the site is still in place and is currently used as a granite and marble fabrication shop. A developer purchased the entire site and is building a hotel on the former location of buildings 2 through 4. The tenant in Building 1 will operate their business until they find another location to relocate to. PAST USE OF SITE: National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. Six additional 500 gallon USTs, which were previously closed in place, were removed in April 2014. During construction of the foundation for the hotel, nine USTs were removed from the site along with all soils above bedrock within the footprint of the hotel. OPERABLE UNIT(S): The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigation of soil, groundwater, and soil vapor contamination. Building 1 was sold to the owner of the Marble fabrication business previously located in Building 2. Buildings 2-4 have been demolished, and 9th Street LIC LLC has signed a Consent Order with NYSDEC for remediation of form Lots 14 and 19 (Building 2 through 4), but will ultimately be responsible for Lot 23 (Building 1) as well. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below ground surface and flows in a westerly direction toward the East River. The

MAP FINDINGS

**NATIONAL RUBBER & BACKING CORP (Continued)**

**1000259753**

depth to bedrock varies across the investigation area from 10 to 15 feet below surface.

Env Problem: Nature and Extent of Contamination: For OU 2: On-Site Areas Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, and polychlorinated biphenyls (PCBs). On-site soil vapor has been analyzed for VOCs. Groundwater - Based on investigations conducted to date, the primary contaminant of concern for OU 2 is toluene. However, BTEX and chlorinated solvents also have been found above standards on-site. Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) (NYSDEC groundwater quality standard is 5 ppb). Latest sampling results (collected August 2018) revealed the highest toluene concentrations at 32,500 ppb, down from 749,000 ppb, detected in March 2015. Additional contaminants are also present in groundwater, including concentrations of benzene up to 24.2 ppb (standard is 1 ppb), ethylbenzene up to 36.5 ppb (standard is 5 ppb), and xylenes up to 59 ppb (standard is 5 ppb) as of August 2018. These additional contaminants were present at concentrations an order of magnitude greater than samples collected in March 2015. August 2018 groundwater sampling detected concentrations of tetrachloroethene (PCE) up to 65 ppb (standard is 5 ppb) in the southeast corner (PCE was detected in the northeast corner of the site at 336 ppb in March 2015; however, this location was inaccessible during the August 2018 sampling effort), trichloroethene (TCE) up to 17 ppb (standard is 5 ppb) in the southeast corner (TCE was detected in the northeast corner at 26 ppb in March 2015), cis-1,2-dichloroethene (cis-1,2-DCE) up to 33 ppb (standard is 5 ppb) in the southeast corner (previously detected at 122 ppb in the northeast portion of the site in March 2015), and vinyl chloride up to 4 ppb (standard is 2 ppb) (previously detected at 77 ppb in northeast corner of the site in March 2015). Soil - Previous investigations have detected toluene at concentrations as high as 1,600 parts per million (ppm) (industrial use soil cleanup objective (IUSCO) is 1,000 ppm) in the vicinity of the 5 closed USTs at depths of 5 - 7 feet below ground surface (bgs). Toluene was also detected in the former location of the six 500 gallon USTs at concentrations as high as 500 ppm at 1.5 feet bgs. Soil Vapor - Benzene and toluene were detected in indoor air and sub-slab soil vapor; however, the indoor air concentrations were higher for both constituents suggesting an indoor source. PCE and TCE have also been detected in indoor air, sub-slab, and deeper soil vapor. The most recent data obtained in 2014 revealed indoor air concentrations of TCE inside building #2 at 10 micrograms per cubic meter (ug/m<sup>3</sup>), and PCE at 30 ug/m<sup>3</sup>. November 2014 sub-slab data revealed concentrations of PCE up to 53,000 ug/m<sup>3</sup>, and TCE at concentrations up to 2,200 ug/m<sup>3</sup>. Based on the soil vapor intrusion evaluation, the sub-slab and indoor air concentrations warrant mitigation in accordance with NYSDOH guidance on soil vapor intrusion. For OU 1: Off-Site Areas Soil and groundwater have been analyzed for VOCs, SVOCs, and metals. Off-site soil vapor has been analyzed for VOCs. Groundwater - Based on investigations conducted to date, the off-site (OU 1) groundwater plume appears to be migrating to the east, but has not reached the East River. The most recent sampling event from November 2018 revealed toluene at a maximum concentration of 11,000 ppb (standard is 5 ppb) in a down-gradient well across 9th Street. Off-site impacts have been delineated and toluene does not appear to be migrating across Vernon Boulevard, possibly due to regional geology/bedrock formations preventing

**NATIONAL RUBBER & BACKING CORP (Continued)**

**1000259753**

widespread off-site migration of contaminated groundwater. Additional VOCs have been detected; latest sample results (November 2018) detected concentrations of benzene up to 370 ppb (standard is 1 ppb), cis-1,2-DCE up to 45 ppb (standard is 5 ppb), TCE up to 7.1 ppb (standard is 5 ppb), and vinyl chloride up to 10 ppb (standard is 2 ppb). Soil - No off-site soil impacts have been detected above standards. Soil Vapor - A soil vapor intrusion evaluation in nearby buildings was performed in March 2016. The buildings to the south east of OU2 had detections of site-related VOCs (PCE and TCE) in indoor air and sub-slab vapor samples; however indoor air concentrations do not warrant mitigation provided the on-site source is addressed.

Health Problem: Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by public water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

Date Record Updated: 02/01/2005  
Updated By: RJCOZZY  
Site Description: The property is located within an urban industrialized section of Long Island City. The site extends 335 feet from the north to the south and 117 feet from the west to the east. The entire site is occupied by a 30,000 square feet, one story building. There is a small courtyard in the central portion of the building, on its western side. The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. See Registry Site # 241028 and Brownfield Cleanup Program Site # C241028.

**Hazardous Waste Summary:**

. Waste code: B002  
. Waste name: Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B004  
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007

SHWS:

Name: RAVENSWOOD FORMER MGP  
 Address: 38-54 VERNON BOULEVARD  
 City,State,Zip: LONG ISLAND CITY, NY 11101  
 Program: HW  
 Site Code: 416958  
 Classification: P  
 Region: 2  
 Acres: Not reported  
 HW Code: 241119  
 Record Add: 07/23/2009  
 Record Upd: 10/31/2013  
 Updated By: GWCROSS

Site Description: Location: The Ravenswood former MGP site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough of Queens. The property is noted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County The site is located within the boundary of a complex of active electric and steam generating facilities in a predominantly industrial and commercial area. The site is bordered on the east by light industrial and commercial buildings and on the west by the East River. The site formerly housed a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The precise location of the MGP structures has not been fully established because of the extensive reworking of the property associated with construction of the power plants which now occupy and surround the original MGP site. Remedial History: A portion of the site was remediated under the Voluntary Cleanup Program. See site

V000368. The principal VCP issue was the presence of a No. 6 oil spill from an in-plant pipeline. Petroleum-impacted soil was excavated in 2005. No MGP tar-contaminated soil was identified at that time, but MGP related structures or soil contamination may remain in other portions of the site or at depth.

Env Problem: Extensive soil removal has taken place on the site, both for the construction of the power plants that occupy the site, and for remediation of a No. 6 oil spill. Although it appears that significant portions of the former MGP have been excavated down to bedrock, it is not known to what extent MGP structures and MGP soil contamination may remain in the deep subsurface. A bedrock steam tunnel lies beneath the East River at this location, allowing waste steam from the turbine plants to be provided to the steam-heat distribution system in Manhattan. Tar from the former MGP can be seen dripping from the roof of this tunnel, roughly 150 feet below ground surface. The source of the tar has not been determined. The tunnel can not be accessed by the public, and is only occasionally used by utility workers. Engineering controls are in place to prevent direct contact with the tar by utility workers.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

VCP:

Name: RAVENSWOOD GENERATING STATION  
Address: 38-54 VERNON BOULEVARD  
City,State,Zip: LONG ISLAND CITY, NY 11101  
Program Type: VCP  
Site Code: 56967  
HW Code: V00368  
Site Class: C  
SWIS: 4101  
Region: 2  
Town: New York City  
Acres: Not reported  
Date Record Added: 11/30/2000  
Date Record Updated: 04/05/2007  
Updated By: dcwalsh  
Site Description: The proposed Ravenswood 250-Megawatt (MW) Combined Cycle Generating Station site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough and County of Queens, New York and denoted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of an active electric and steam generating facility in a predominantly industrial and commercial area. The area addressed by this Voluntary Cleanup Agreement is the footprint of a proposed 250-MW combined cycle electric generating plant. The site is bordered on the east by light industrial and commercial buildings; on the south by the existing Ravenswood Generating Station; on the north by the existing Ravenswood Gas Turbine facility; and on the west by the existing Ravenswood Steam Plant and the East River. The site was formerly a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The site is currently occupied by a paved parking lot for Ravenswood employees. Site investigation has been completed at the site.

Env Problem: The Site investigation conducted at the site revealed the presence of petroleum contamination related to a release from an on-site no. 6 oil pipeline. In addition, the site is underlain by former MGP facilities, including gas holders, piping and drip pots. Investigation has not revealed any areas of discrete coal tar deposits, however, the volunteer has proposed to open all encountered pipes and drip pots, drain them and permanently closed them in place or remove them if they interfere with future construction activities. The area of petroleum contamination will be excavated and removed. The volunteer submitted and the Department approved a Remedial Action Work Plan for the site which consisted of the above remedies. This RAWP has been implemented, and the volunteer has submitted the Remedial Action Summary Report, which is under review by NYSDEC and NYSDOH.

Health Problem: Human exposures to contaminated soil and groundwater are unlikely. Most of the contaminated soil has been removed, the site is fenced and secured, and the site will be covered with buildings and

Dt record added: 09/14/2015  
Dt rec updated: 11/29/2018  
Updated By: LSZINOMA  
Site Code: 490427

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas

from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over

**S113916801**

500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs).

Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

**Site Description:** Location: The site is located at 21-03 44th Avenue in Long Island City, Queens, NY. Site Features: The site primarily consists of the building located at 21-03 44th Avenue, which is currently used as a taxi dispatch and a taxi medallion brokerage. Current Zoning/Uses: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Historical Uses: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south. Entered Brownfield Cleanup Program on February 10, 2014 as C241144.

**Env Problem:** Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater. Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. Soil vapors beneath the building have been tested and are well above the NYSDOH guidance levels for PCE.

**Health Problem:** As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Features: The site includes the sidewalk/street area immediately above and in the vicinity of a reported broken sewer line near the location of three groundwater monitoring points placed on the sidewalk in front of the building at 21-03 44th Avenue. Current Zoning and Land Use: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Contamination was thought to have entered the environment from a broken sewer pipe that connects the building at 21-03 44th Avenue and the main sewer line in the street. This hypothesis has since been shown to be incorrect. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in groundwater. Contravention of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. This contamination was thought to be emanating from a broken sewer line; however, this was disproven during the remedial investigation that was conducted in 2011. Significant Threat: While this site was initially determined to present a significant threat, that determination is no-longer valid, as the source(es) of contamination are located north of this site. Moreover, two sites immediately to the north have since entered the Brownfield Cleanup Program and remedies are underway to address them. Contamination at this site's location and to the south will be further assessed under the off-site portion of the Wills Building site (site ID No. C241143).

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Description: Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.424 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing;

printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.424 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing; printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs)in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering

Health Problem: controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP. Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 487959

Site Description: Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.424 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing; printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Dump: False

Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing; printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to

manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 487959

Site Description: Site Location: The site is located approximately 0.5 miles east of the East River on the corner of 21st Street and 44th Avenue at 21-03 44th Avenue in Long Island City, Queens County. Site Features: The site is an irregularly shaped single tax parcel approximately 0.424 acres in size. The property is developed with a single, two-story commercial building which was constructed in 1929. Current Zoning and Land Use: The site is currently occupied and is used as a taxi dispatching facility. The area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. A New York City high school is located approximately three hundred fifty feet to the south of the site, and the nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Historically (since at least 1900), the site and surrounding properties have been used primarily for industrial and commercial purposes including but not limited to: metal manufacturing; paint/lacquer manufacturing; printing processes; vacuum plating; cosmetics manufacturing; and textile refinishing. The most recent industrial use of the property was for metal plating, which reportedly ceased operations during the early 1980 s, following which no industrial activity has taken place at the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs) in soil and /or groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil cover/cap, sub-slab depressurization system) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: N/A
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 02/05/2020

	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: 800-424-9346

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/16/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/16/2019	Telephone: (212) 637-3660

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

	Data Release Frequency: Varies

### RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

## VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 11/11/2019

## ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

## ADDITIONAL ENVIRONMENTAL RECORDS

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 02/03/2020
Number of Days to Update: 88	Next Scheduled EDR Contact: 05/18/2020
	Data Release Frequency: Quarterly

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

### TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2016	Source: EPA
Date Data Arrived at EDR: 06/21/2017	Telephone: 202-260-5521
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 12/20/2019
Number of Days to Update: 198	Next Scheduled EDR Contact: 03/30/2020
	Data Release Frequency: Every 4 Years

### TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2017	Source: EPA
Date Data Arrived at EDR: 11/16/2018	Telephone: 202-566-0250
Date Made Active in Reports: 11/21/2019	Last EDR Contact: 02/05/2020
Number of Days to Update: 370	Next Scheduled EDR Contact: 03/02/2020
	Data Release Frequency: Annually

### SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 05/01/2019	Source: EPA
Date Data Arrived at EDR: 10/23/2019	Telephone: 202-564-4203

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: 703-416-0223
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 02/05/2020
Number of Days to Update: 13	Next Scheduled EDR Contact: 03/16/2020
	Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 04/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/02/2019	Telephone: 202-564-8600
Date Made Active in Reports: 05/23/2019	Last EDR Contact: 01/21/2020
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/04/2020
	Data Release Frequency: Varies

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: No Update Planned

## PRP: Potentially Responsible Parties

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: 202-564-6023

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/01/2019	Telephone: 202-343-9775
Date Made Active in Reports: 09/23/2019	Last EDR Contact: 12/20/2019
Number of Days to Update: 84	Next Scheduled EDR Contact: 04/13/2020
	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Data Release Frequency: Varies

## HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

## SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019

This information is provided on a best effort basis and Endeavor Business Media does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of Endeavor Business Media.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

## GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM

### TARGET PROPERTY ADDRESS

20-0186  
2905 38TH AVENUE  
LONG ISLAND CITY, NY 11101

### TARGET PROPERTY COORDINATES

Latitude (North):	40.754528 - 40° 45' 16.30"
Longitude (West):	73.93297 - 73° 55' 58.69"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	590074.1
UTM Y (Meters):	4511844.0
Elevation:	38 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013
South Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3604970093F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
3604970089F	FEMA FIRM Flood data
3604970202F	FEMA FIRM Flood data
3604970206F	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK (decoded above as Era, System & Series)

#### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

## OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

# CERTIFICATION

I, Kenneth P. Wenz Jr., PG, LEP, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 29-05 38<sup>th</sup> Avenue Site. I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

# EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

## **Site Location and Current Usage**

The Site is located at 29-05 38<sup>th</sup> Avenue in the Long Island City section in Queens, New York and is identified as Block 371 and Lot 18 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 10,600-square feet and is bounded by a vacant lot that formerly maintained an industrial building to the north, 30<sup>th</sup> Street to the east, 38<sup>th</sup> Avenue to the south, and Old Ridge Road to the west. A map of the site boundary is shown in Figure 2. Currently, the Site maintains a 1.5-story warehouse building with a partial basement that is occupied by a biofuel generator rental company, a single-story vacant commercial building, a 2-story residential building with a basement, a single-story residential building with a basement, and two, non-contiguous paved parking areas.

## **Summary of Proposed Redevelopment Plan**

The proposed redevelopment of the Site will consist of demolition of the existing structures and construction of a 7-story mixed-use (commercial and residential) building, with a full basement that will maintain utility, laundry, and storage spaces, as well as 24 subsurface parking spaces. The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

## **Summary of Past Uses of Site and Areas of Concern**

Based upon the review of the Phase I Environmental Site Assessment (Phase I ESA) Report prepared by Middleton Environmental Inc. (Middleton) dated March 8, 2020, the following Site history was established. According to Middleton's Phase I ESA, the four subject buildings at the Site (1.5-story warehouse, single-story vacant building, two-story residential building, and single-story residential building) were all constructed between 1898 and 1936. According to the Sanborn Fire Insurance maps, the 1.5-story warehouse is listed as a carpet cleaning facility from 1936 until 2006. Additionally, the vacant single-story building located on the eastern portion of the Site is

shown to have been an automotive service facility and gasoline station from 1947 until at least 1950. The single-story and two-story residential buildings located on the western portion of the Site were constructed circa 1898 and 1936, respectively. They have reportedly maintained residential occupancy since construction.

The AOCs identified for this site include:

1. Zero to up to approximately 7 feet below ground surface across the Site due to the potential presence of historic fill material, and
2. The past usage of the Site by a former gasoline station and automobile repair facility, as well as a carpet cleaning company.

In addition, the adjacent property to the north (37-24 to 37-28 30<sup>th</sup> Street) has been investigated and will be remediated under the New York State Brownfield Cleanup Program (BCP), as BCP Site Number C241214. This parcel and the adjacent parcel to the north were historically used as commercial dry cleaning and laundry facilities, and previous investigations identified elevated levels of the dry cleaning solvent tetrachloroethene and its daughter product trichloroethene in soil vapor (maximum concentrations of 28,000 and 1,140 micrograms per cubic meter, respectively).

The Phase 1 ESA Report is presented in Appendix A. A map showing area of concerns is presented in Figure 3.

### **Summary of the Work Performed under the Remedial Investigation**

Athenica performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Advanced seven (7) soil borings across the entire project Site, and collected fifteen (15) soil samples (including one blind duplicate sample) for chemical analysis of VOCs, SVOCs, PCBs, and Target Analyte List (TAL) metals, to evaluate soil quality;
3. Installed four (4) temporary groundwater monitoring wells throughout the Site to establish groundwater flow direction and collected five (5) groundwater samples (including one blind duplicate sample) for chemical analysis of VOC, SVOCs,

- pesticides, PCBs, and TAL metals (total and dissolved), to evaluate groundwater quality;
4. Submitted one (1) additional soil sample and one (1) additional groundwater sample for chemical analysis of PFOAs/PFAS, and 1,4-dioxane; and,
  5. Installed six (6) soil vapor probes at locations across the Site and collected six (6) soil vapor samples for chemical analysis of VOCs. As the existing Site buildings are planned to be demolished, indoor and outdoor air samples were not collected.

### **Summary of Environmental Findings**

1. Elevation of the property ranges from 95.05 to 92.41 feet. All Site elevation values reference a common random datum.
2. Depth to groundwater at the Site ranges from 23.83 to 28.13 feet.
3. Groundwater flow beneath the Site is generally from east to west.
4. Bedrock was not encountered at the Site.
5. The stratigraphy of the site, from the surface down, consists of approximately 10 feet of coarse-to-fine grained sand with silt and clay underlain by 10 feet of poorly-graded sand and clay. Historic fill material was identified at sample locations SB-2 and SB-3 to a depth up to approximately 2 feet, and at sample location SB-6 to a depth up to approximately 7 feet.
6. Soil/fill samples collected during the RI were compared to the New York State Department of Environmental Conservation (NYSDEC) 6NYCRR Part 375 Section 6.8 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential Use SCOs.
  - No Volatile Organic Compounds (VOCs), pesticides, or Polychlorinated Biphenyls (PCBs) were detected at concentrations above Unrestricted Use SCOs in any soil sample.
  - Seven Semi-Volatile Organic Compounds (SVOCs), including benzo(a)anthracene (at 2.14 milligrams per kilogram (mg/Kg)), benzo(a)pyrene (at 2.17 mg/Kg), benzo(b)fluoranthene (at 1.9 mg/Kg), benzo(k)fluoranthene (at 1.51 mg/Kg), chrysene (at 2.01 mg/Kg), dibenzo(a,h)anthracene (at 0.457

mg/Kg), and indeno(1,2,3-cd)pyrene (at 1.21 mg/Kg), were detected at concentrations exceeding their Unrestricted Use SCOs in soil boring SB-3 (0'-2'). Of these SVOCs, the concentrations of benzo(k)fluoranthene and chrysene also exceeded their Restricted Residential Use SCOs. Indeno(1,2,3-cd)pyrene (at 0.523 mg/Kg) was also detected at a concentration exceeding its Restricted Residential SCO in soil boring SB-1 (0'-2').

- Six metals, including copper (at 109 mg/Kg in soil boring SB-3 (0'-2')), lead (maximum of 339 mg/Kg in soil boring SB-3 (0'-2')), magnesium (at 1,740 mg/Kg in soil boring SB-6 (0'-2')), Nickel (at 30.8 mg/Kg in soil boring SB-6 (12'-14')), selenium (maximum of 4.77 mg/Kg in soil boring SB-4 (12'-14')), zinc (maximum of 468 mg/Kg in soil boring SB-2 (0'-2')), and mercury (maximum of 0.748 mg/Kg in soil boring SB-4 (0'-2')), were detected at concentrations exceeding their Unrestricted Use SCOs.
- PFOAs/PFAS and 1,4-dioxane were not detected in soil sample SB-6 (0'-2').

7. Groundwater samples collected during the RI were compared to the New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Results indicated:

- No pesticides or PCBs were detected at concentrations exceeding their GQS.
- Two VOCs, including chloroform (maximum of 13 micrograms per liter ( $\mu\text{g/L}$ ) in the sample from MW-1) and tetrachloroethene (maximum of 120  $\mu\text{g/L}$  in the sample from MW-3), were detected at concentrations exceeding their GQS.
- Three SVOCs, including benzo(a)anthracene (at 0.615  $\mu\text{g/L}$  in the duplicate sample collected from MW-4), benzo(a)pyrene (at 0.0615  $\mu\text{g/L}$  in the duplicate sample from MW-4), and benzo(b)fluoranthene (at 0.513  $\mu\text{g/L}$  in the duplicate sample from MW-4) were detected at concentrations exceeding their GQS in the duplicate sample labelled MW-DUP.
- Four dissolved metals, including magnesium (maximum of 41,000  $\mu\text{g/L}$  in the sample from MW-3), manganese (maximum of 654  $\mu\text{g/L}$  in the sample from MW-3), selenium (maximum 81  $\mu\text{g/L}$  in the sample from MW-3), and sodium (maximum of 101,000  $\mu\text{g/L}$  in the sample from MW-4) were detected at concentrations exceeding their GQS.

- Eight totals metals including chromium (maximum of 563 µg/L in the sample from MW-1), copper (at 362 µg/L in the sample from MW-1), lead (maximum of 64 µg/L in the sample from MW-DUP), magnesium (maximum of 152,000 µg/L in the sample from MW-1), manganese (maximum of 7,120 µg/L in the sample from MW-1), nickel (at 153 µg/L in the sample from MW-1), selenium (maximum of 136 µg/L in the sample from MW-3), and sodium (maximum of 118,000 µg/L in the sample from MW-DUP) were detected at concentrations exceeding their GQS.
  - PFOA/PFAS compounds including PFBS (at 0.00772 µg/L), PFHpA (at 0.0101 µg/L), PFHxS (at 0.00348 µg/L), and PFHxA (at 0.200 µg/L) were detected in the sample from MW-4. 1,4-dioxane was not detected in this sample.
  - Due to a laboratory error, groundwater sample MW-4, MW-DUP, and Groundwater Field Blank were not analyzed for 1,4-dioxane. OER was informed on July 7, 2020, and elimination of these analysis were authorized.
8. Soil vapor samples collected during the RI were analyzed for VOCs via USEPA Method TO-15. Results include the following:
- 1,1,1-Trichloroethane was detected at 13 micrograms per cubic meter (µg/m<sup>3</sup>) in sample SV-3;
  - 1,2,4-Trimethylbenzene was detected at 16 µg/m<sup>3</sup> in SV-1, 14 µg/m<sup>3</sup> in SV-2, 10 µg/m<sup>3</sup> in SV-3, 16 µg/m<sup>3</sup> in SV-4, 14 µg/m<sup>3</sup> in SV-5, and 12 µg/m<sup>3</sup> in sample SV-6;
  - 2-Butanone was detected at 220 µg/m<sup>3</sup> in sample SV-1, 75 µg/m<sup>3</sup> in sample SV-2, 50 µg/m<sup>3</sup> in sample SV-3, 140 µg/m<sup>3</sup> in sample SV-4, 36 µg/m<sup>3</sup> in sample SV-5, and 47 µg/m<sup>3</sup> in sample SV-6;
  - 2-Hexanone was detected at 86 µg/m<sup>3</sup> in sample SV-1, 30 µg/m<sup>3</sup> in sample SV-2, 17 µg/m<sup>3</sup> in sample SV-3, 49 µg/m<sup>3</sup> in sample SV-4, 18 µg/m<sup>3</sup> in sample SV-5, and 15 µg/m<sup>3</sup> in sample SV-6;
  - Acetone, a laboratory contaminant, was detected at 1,400 µg/m<sup>3</sup> in sample SV-1, 1,300 µg/m<sup>3</sup> in sample SV-2, 700 µg/m<sup>3</sup> in sample SV-3, 2,500 µg/m<sup>3</sup> in sample SV-4, 540 µg/m<sup>3</sup> in sample SV-5, and 830 µg/m<sup>3</sup> in sample SV-6;

- Benzene was detected at 8.5  $\mu\text{g}/\text{m}^3$  in sample SV-1, 5.6  $\mu\text{g}/\text{m}^3$  in sample SV-2, 5  $\mu\text{g}/\text{m}^3$  in sample SV-3, 6  $\mu\text{g}/\text{m}^3$  in sample SV-4, and 5.3  $\mu\text{g}/\text{m}^3$  in sample SV-5;
- Carbon disulfide was detected at 6.8  $\mu\text{g}/\text{m}^3$  in sample SV-3;
- Chloroform was detected at 19  $\mu\text{g}/\text{m}^3$  in sample SV-1, 38  $\mu\text{g}/\text{m}^3$  in sample SV-2, 480  $\mu\text{g}/\text{m}^3$  in sample SV-3, 56  $\mu\text{g}/\text{m}^3$  in sample SV-4, 56  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 37  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- cis-1,2-Dichloroethene was detected at 16  $\mu\text{g}/\text{m}^3$  in sample SV-1, and 4.6  $\mu\text{g}/\text{m}^3$  in sample SV-5;
- Cyclohexane was detected at 30  $\mu\text{g}/\text{m}^3$  in sample SV-3, 18  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 37  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Ethylbenzene was detected at 15  $\mu\text{g}/\text{m}^3$  in sample SV-1, 12  $\mu\text{g}/\text{m}^3$  in sample SV-2, 12  $\mu\text{g}/\text{m}^3$  in sample SV-3, 14  $\mu\text{g}/\text{m}^3$  in sample SV-4, 12  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 9.2  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Isopropanol was detected at 14  $\mu\text{g}/\text{m}^3$  in sample SV-1;
- n-Heptane was detected at 35  $\mu\text{g}/\text{m}^3$  in sample SV-1, 20  $\mu\text{g}/\text{m}^3$  in sample SV-2, 76  $\mu\text{g}/\text{m}^3$  in sample SV-3, 19  $\mu\text{g}/\text{m}^3$  in sample SV-4, 55  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 97  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- n-Hexane was detected at 34  $\mu\text{g}/\text{m}^3$  in sample SV-1, 21  $\mu\text{g}/\text{m}^3$  in sample SV-2, 310  $\mu\text{g}/\text{m}^3$  in sample SV-3, 21  $\mu\text{g}/\text{m}^3$  in sample SV-4, 180  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 390  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- o-Xylene was detected at 17  $\mu\text{g}/\text{m}^3$  in sample SV-1, 15  $\mu\text{g}/\text{m}^3$  in sample SV-2, 16  $\mu\text{g}/\text{m}^3$  in sample SV-3, 17  $\mu\text{g}/\text{m}^3$  in sample SV-4, 16  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 12  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- p- & m- Xylenes were detected at 50  $\mu\text{g}/\text{m}^3$  in sample SV-1, 41  $\mu\text{g}/\text{m}^3$  in sample SV-2, 42  $\mu\text{g}/\text{m}^3$  in sample SV-3, 49  $\mu\text{g}/\text{m}^3$  in sample SV-4, 45  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 33  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- p-Ethyltoluene was detected at 20  $\mu\text{g}/\text{m}^3$  in sample SV-1, 16  $\mu\text{g}/\text{m}^3$  in sample SV-2, 12  $\mu\text{g}/\text{m}^3$  in sample SV-3, 15  $\mu\text{g}/\text{m}^3$  in sample SV-4, 15  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 14  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Propylene was detected at 7.7  $\mu\text{g}/\text{m}^3$  in sample SV-2, 14  $\mu\text{g}/\text{m}^3$  in sample SV-4, and 6.8  $\mu\text{g}/\text{m}^3$  in sample SV-6;

- Tetrachloroethene was detected at 8,800  $\mu\text{g}/\text{m}^3$  in sample SV-1, 6,000  $\mu\text{g}/\text{m}^3$  in sample SV-2, 4,800  $\mu\text{g}/\text{m}^3$  in sample SV-3, 7,200  $\mu\text{g}/\text{m}^3$  in sample SV-4, 5,100  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 7,100  $\mu\text{g}/\text{m}^3$  in sample SV-6;
  - Toluene was detected at 47  $\mu\text{g}/\text{m}^3$  in sample SV-1, 44  $\mu\text{g}/\text{m}^3$  in sample SV-2, 34  $\mu\text{g}/\text{m}^3$  in sample SV-3, 43  $\mu\text{g}/\text{m}^3$  in sample SV-4, 47  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 26  $\mu\text{g}/\text{m}^3$  in sample SV-6;
  - Trichloroethene was detected at 1,700  $\mu\text{g}/\text{m}^3$  in sample SV-1, 350  $\mu\text{g}/\text{m}^3$  in sample SV-2, 160  $\mu\text{g}/\text{m}^3$  in sample SV-3, 160  $\mu\text{g}/\text{m}^3$  in sample SV-4, 120  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 130  $\mu\text{g}/\text{m}^3$  in sample SV-6.
9. As the soil samples collected during the RI contained only trace concentrations of tetrachloroethene (maximum of 0.021 mg/Kg) and no trichloroethene, it is concluded that the source of these compounds in the groundwater and soil vapor samples is the adjacent BCP site.

# **REMEDIAL INVESTIGATION REPORT**

## **1.0 SITE BACKGROUND**

FH 2BRO Building Corporation is planning to enroll in the New York City Voluntary Cleanup Program (NYC VCP) upon final acquisition of the property, to investigate a 0.243-acre site located at 29-05 38<sup>th</sup> Avenue in Long Island City section of Queens, New York for possible future remediation. Mixed commercial and residential use, including affordable housing, is anticipated for the property. The RI work was performed between June 29, 2020 and June 30, 2020. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

### **1.1 Site Location and Current Usage**

The Site is located at 29-05 38<sup>th</sup> Avenue in the Long Island City section in Queens, New York and is identified as Block 371 and Lot 18 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 10,600-square feet and is bounded by a vacant lot that formerly maintained an industrial building to the north, 30<sup>th</sup> Street to the east, 38<sup>th</sup> Avenue to the south, and Old Ridge Road to the west. A map of the site boundary is shown in Figure 2. Currently, the Site maintains a 1.5-story warehouse building with a partial basement that is occupied by a biofuel generator rental company, a single-story vacant commercial building, a 2-story residential building with a basement, a single-single story residential building with a basement, and two, non-contiguous paved parking areas.

### **1.2 Proposed Redevelopment Plan**

The proposed redevelopment of the Site will consist of demolition of the existing structures and construction of a 7-story mixed-use (commercial and residential) building, with a full basement that will maintain utility, laundry, and storage spaces, as well as 24 subsurface parking spaces. The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

### **1.3 Description of Surrounding Property**

The Site is located in a primarily industrial area with some mixed-use (commercial and residential) buildings in the Long Island city area of Queens, New York. The Site is bounded by a vacant lot that formerly maintained an industrial building to the north, 30<sup>th</sup> Street to the east, 38<sup>th</sup> Avenue to the south, and Old Ridge Road to the west.

According to the OER Searchable Property Environmental E-Database (SPEED), there is one sensitive receptor (such as schools, hospitals, and day-care facilities) within a 500-foot radius of the Site; Oliver Wendell Holmes Intermediate School 204 is located approximately 490 feet to the northwest of the Site at 36-41 28<sup>th</sup> Street, Astoria, NY 11106.

In addition, the adjacent property to the north (37-24 to 37-28 30<sup>th</sup> Street) has been investigated and will be remediated under the New York State Brownfield Cleanup Program (BCP), as BCP Site Number C241214. This parcel and the adjacent parcel to the north were historically used as commercial dry cleaning and laundry facilities, and previous investigations identified elevated levels of the dry cleaning solvent tetrachloroethene and its daughter product trichloroethene in soil vapor (maximum concentrations of 28,000 and 1,140 micrograms per cubic meter, respectively).

Figure 2 shows the surrounding land usage.

## **2.0 SITE HISTORY**

### **2.1 Past Uses and Ownership**

Based upon the review of the Phase I Environmental Site Assessment (Phase I ESA) Report prepared by Middleton Environmental Inc. (Middleton) dated March 8, 2020, the following Site history was established. According to Middleton's Phase I ESA, the four subject buildings at the Site (1.5-story warehouse, single-story vacant building, two-story residential building, and single-story residential building) were all constructed between 1898 and 1936. According to the Sanborn Fire Insurance maps, the 1.5-story warehouse is listed as a carpet cleaning facility from 1936 until 2006. Additionally, the vacant single-story building located on the eastern portion of the Site is shown to have been an automotive service facility and gasoline station from 1947 until at least 1950. The single-story and two-story residential buildings located on the western portion of the Site were constructed circa 1898 and 1936, respectively. They have reportedly maintained residential occupancy since construction.

### **2.2 Previous Investigations**

No previous investigations at the Site were identified.

### **2.3 Site Inspection**

Mr. Evan Greenberg and Mr. Justin Gugger of Athenica conducted a Site inspection on June 29, 2020, under the direction of Kenneth P. Wenz, Jr., PG, LEP (QEP). The Site reconnaissance consisted of observing conditions throughout the accessible areas of the Site and around the perimeter of the Site. At the date of the inspection, the Site consisted of the current configuration of a 1.5-story warehouse building with a partial basement that is occupied by a biofuel generator rental company, an single-story vacant commercial building, a 2-story residential building with a basement, a single-story residential building with a basement, and two, non-contiguous paved parking areas.

### **2.4 Areas of Concern**

The AOCs identified for this site include:

1. Zero to up to approximately 7 feet below ground surface across the Site due to the potential presence of historic fill material, and

2. The past usage of the Site by a former gasoline station and automobile repair facility, as well as a carpet cleaning company.

The Phase 1 ESA Report is presented in Appendix A. A map showing these areas of concern is presented in Figure 3.

## **3.0 PROJECT MANAGEMENT**

### **3.1 Project Organization**

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kenneth P. Wenz, Jr., PG, LEP.

### **3.2 Health and Safety**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

### **3.3 Materials Management**

All material encountered during the RI was managed in accordance with applicable laws and regulations.

## **4.0 REMEDIAL INVESTIGATION ACTIVITIES**

Athenica performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Advanced seven (7) soil borings across the entire project Site, and collected fifteen (15) soil samples (including one blind duplicate sample) for chemical analysis of VOCs, SVOCs, PCBs, and Target Analyte List (TAL) metals, to evaluate soil quality;
3. Installed four (4) temporary groundwater monitoring wells throughout the Site to establish groundwater flow direction and collected five (5) groundwater samples (including one blind duplicate sample) for chemical analysis of VOC, SVOCs, pesticides, PCBs, and TAL metals (total and dissolved), to evaluate groundwater quality;
4. Submitted one (1) additional soil sample and one (1) additional groundwater sample for chemical analysis of PFOAs/PFAS, and 1,4-dioxane; and,
5. Installed six (6) soil vapor probes at locations across the Site and collected six (6) soil vapor samples for chemical analysis of VOCs. As the existing Site buildings are planned to be demolished, indoor and outdoor air samples were not collected.

### **4.1 Geophysical Investigation**

On June 29, 2020, PG Environmental Services, Inc. (PGES) conducted a geophysical survey in all accessible portions of the Site, to clear proposed sample locations and evaluate the locations of the USTs historically shown at the Site. The geophysical survey used ground-penetrating radar (GPR) to identify potential subsurface utilities and structures. The findings of the geophysical survey were marked in the field using paint, and are shown on Figure 4.

One anomaly was identified within the warehouse near the entrance from the street, beneath the two-story portion of the building. This anomaly is approximately 5 feet by 6 feet in size, with a metallic signature. A remnant of a fill port was visually observed in this area, suggesting that the anomaly may be associated with the UST historically reported to be located in this area. A second anomaly was identified in the southeastern corner of the Site, within the eastern parking area at a location consistent with the historic USTs depicted for the former gasoline station. No piping was

observed, and this anomaly did not show a magnetic signature, suggesting that it represents an area of disturbed soil associated with removed USTs.

## **4.2 Borings and Monitoring Wells**

### **Drilling and Soil Logging**

Athenica contracted PGES to advance a total of seven (7) soil borings across the Site on June 29, 2020 and June 30, 2020. All seven (7) borings were advanced to a depth of fifteen (15) feet below ground surface (bgs), corresponding to an elevation range of 92.41 feet to 95.05 feet. The soil borings were advanced using a direct-push Geoprobe® 7822DT unit.

During advancement of the soil borings, continuous soil sampling was conducted using steel macro-core samplers fitted with dedicated acetate liners, and the samples were examined for evidence of potential contamination using field observations (odor and/or staining), were geologically characterized, and were screened for VOCs using a handheld photoionization detector (PID). No staining or elevated PID readings were observed in any of the soil samples collected during the RI. A slight unidentifiable odor was noted in soil sample SB-2 (12'-14'). No odors were observed in any of the remaining soil samples collected during the RI.

All soil borings were advanced to fifteen (15) feet bgs with soil samples collected from each boring for laboratory analysis at intervals 0 to 2 feet bgs and 12 to 14 feet bgs.

Boring logs are included in Appendix B. The locations of the soil borings are shown on Figure 4.

### **Groundwater Monitoring Well Construction**

A total of four (4) temporary groundwater monitoring wells, designated MW-1, MW-2, MW-3, and MW-4, were installed at locations across the Site, to determine the Site-specific groundwater flow direction and to assess groundwater quality beneath the Site. The monitoring wells were installed using a direct-push rig. Groundwater was measured in the temporary wells at an elevation of approximately 66.96 to 68.68 feet. Monitoring wells MW-1, MW-2, and MW-3 were constructed using 25 feet of 1-inch PVC casing and 10 feet of 1-inch diameter PVC screen, with top of casing elevations of 57.51, 57.56, and 60.09 feet respectively. The fourth monitoring well, MW-4, was installed using 25 feet of 1-inch PVC casing and 15 feet of 1-inch diameter PVC screen, with a top of casing elevation of 55.05 feet.

Monitoring well locations are shown on Figure 4.

## **Survey**

The locations of all soil borings, groundwater monitoring wells, and soil vapor sample locations were field measured to a minimum of two (2) Site features. In addition, each soil boring, groundwater monitoring well, and soil vapor sample location was surveyed relative to a common, random datum (benchmark), to allow for the calculation of the relative elevation of each sampling point.

## **Water Level Measurement**

Groundwater head measurements were collected using an oil/water interface probe. The interface probe can measure depths to the 0.01 foot.

Groundwater was measured at an elevation of 68.68 feet in MW-1, 68.51 feet in MW-2, 66.96 feet in MW-3, and 67.53 feet in MW-4.

The top of casing elevations, depth to water measurements, and corresponding groundwater elevations for each will be summarized in Table 1.

## **4.3 Sample Collection and Chemical Analysis**

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater, and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

## **Soil Sampling**

A total of fifteen (15) soil samples (including one blind duplicate sample, labelled SB-DUP, which was collected from SB-6 (0'-2')) were collected for chemical analysis from the seven (7) borings advanced during this RI, including a shallow sample (0'-2') and a deep sample (12'-14')

at each location. Figure 4 shows the soil boring locations. The laboratory and analytical methods are described below.

Soil samples to be analyzed were collected in pre-cleaned, laboratory supplied glassware, which were labeled and placed into an iced cooler for subsequent delivery by laboratory courier under Chain of Custody procedures to the laboratory for analysis. Soil samples were analyzed by York Analytical Laboratories, Inc. (York), which is approved under the New York State Department of Health Environmental Laboratory Approval Program (ELAP). All soil samples were analyzed for Target Compound List (TCL) VOCs by USEPA Method 8260 (and were collected using USEPA Method 5035), TCL SVOCs by USEPA Method 8270, TCL pesticides/PCBs by USEPA Methods 8081/8082, and TAL metals by USEPA Methods 6010/7473. Sample SB-6 (0'-2') was also analyzed for emerging contaminants PFAS (NYSDEC list of compounds) by USEPA Method 537m and 1,4-dioxane by USEPA Method 8270 SIM; this sample was collected following the special sampling protocols required for samples to be analyzed for PFAS.

Each soil sample was collected using dedicated acetate sleeves, glassware, scoop, and gloves. Decontamination was not required, as no sampling implement was reused. After completion of soil sampling, each boring was abandoned in accordance with NYSDEC requirements.

### **Groundwater Sampling**

A total of five (5) groundwater samples were collected for chemical analysis during this RI (including one blind duplicate sample, labeled MW-DUP, which was collected from monitoring well MW-4). Figure 4 shows the locations of temporary monitoring wells/groundwater samples. Laboratory and analytical methods are presented below.

Prior to sample collection, each well was purged of a minimum of three casing volumes using a new dedicated high-density polyethylene bailer. Groundwater samples were collected using the same bailers utilized for purging, into pre-cleaned, laboratory-supplied glassware. Filled sample containers were labeled and placed into an iced cooler for subsequent delivery by laboratory courier under Chain of Custody procedures to York for analysis. All groundwater samples were analyzed for TCL VOCs by USEPA Method 8260, TCL SVOCs by USEPA Method 8270, TCL pesticides/PCBs by USEPA Methods 8081/8082, and TAL metals (total and dissolved) by USEPA Methods 6010/7473. The sample collected from MW-4 was also analyzed for emerging contaminants PFAS (NYSDEC list of compounds) by USEPA Method 537.1M and 1,4-dioxane

by USEPA Method 8270 SIM. This sample was collected following the special sampling protocols required for samples to be analyzed for PFAS. Due to a laboratory error, the 1,4-dioxane analysis could not be completed within the holding time, so this analysis was subsequently eliminated, with NYCOER approval.

Each groundwater sample was collected using dedicated bailers, string, glassware, and gloves. The interface probe used to measure the depth to groundwater was decontaminated before and after each measurement by thoroughly cleaning with solution of non-phosphate detergent and potable water. No other sampling implement was reused, so additional decontamination was not required. After completion of groundwater sampling, each temporary well was removed and the well borings were abandoned in accordance with NYSDEC requirements.

### **Soil Vapor Sampling**

A total of six (6) temporary soil vapor probes (designated SV-1, SV-2, SV-3, SV-4, SV-5, and SV-6) were installed with six (6) soil vapor samples collected for laboratory analysis during this RI. The vapor probes were each installed to a depth of 14 feet below ground surface, the final excavation depth of the proposed redevelopment, which corresponds to elevations ranging from 78.59 to 81.05 feet. Each soil vapor probe was constructed using a 6-inch stainless steel screen and ¼-inch outer diameter Teflon-lined polyethylene tubing, and was installed using a direct-push rig. The space around each screen was backfilled with glass beads, which were topped with environmental grade silica sand and a cement layer to seal the probe at the ground surface.

Helium gas was used to verify the integrity of the seal at each soil vapor probe. A shroud served to keep the tracer gas in contact with the probes during the leak-check testing, and a portable helium detector was used to analyze soil vapor from each soil vapor probe for helium prior to any sampling. All sampling points were confirmed to be adequately sealed prior to, and after, sampling. Following the leak-check testing, a minimum of three tubing volumes were purged from each vapor probe, and a representative vapor sample was collected for laboratory analysis. Each sample was collected over an approximately two-hour period into a laboratory-supplied 6-liter Summa canister.

Soil vapor probe locations are shown in Figure 4. Soil vapor sampling logs are included in Appendix C.

### **Chemical Analysis**

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Sarah Widomski, of York Analytical Laboratories, Inc.
Chemical Analytical Laboratory	Chemical analytical laboratory used in the RI is NYSDOH ELAP certified and is York Analytical Laboratories, Inc.
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> <li>• TAL Metals by USEPA Method 6010D;</li> <li>• VOCs by USEPA Method 8260C;</li> <li>• SVOCs by USEPA Method 8270D;</li> <li>• Pesticides by USEPA Method 8081B;</li> <li>• PCBs by USEPA Method 8082A;</li> <li>• PFAS by USEPA Method 537m;</li> <li>• 1,4-dioxane by USEPA Method 8270 SIM.</li> </ul> <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> <li>• TAL Metals by USEPA Method 6010D;</li> <li>• VOCs by USEPA Method 8260C;</li> <li>• SVOCs by USEPA Method 8270D;</li> <li>• Pesticides by USEPA Method 8081B;</li> <li>• PCBs by USEPA Method 8082A;</li> <li>• PFAS by USEPA Method 537m;</li> <li>• 1,4-dioxane by USEPA Method 8270 SIM.</li> </ul> <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> <li>• VOCs by USEPA Method TO-15.</li> </ul>

### Results of Chemical Analyses

Laboratory data for the soil, groundwater, and soil vapor samples are summarized in Tables 2, 3, and 4, respectively. Laboratory data deliverables for all samples collected during this RI are provided in Appendix D.

## 5.0 ENVIRONMENTAL EVALUATION

### 5.1 Geological and Hydrogeological Conditions

#### Stratigraphy

The stratigraphy of the site, from the surface down, consists of approximately 10 feet of coarse-to-fine grained sand with silt and clay underlain by 10 feet of poorly-graded sand and clay. Historic fill material, as determined predominantly by the presence of brick pieces, was identified at sample locations SB-2 and SB-3 to a depth up to approximately 2 feet, and at sample location SB-6 to a depth up to approximately 7 feet.

#### Hydrogeology

A table of water level elevation data for all monitoring wells is included in Table 1. The average depth to groundwater is 25.88 feet below ground surface and the range in depth is 23.83 to 28.13 feet below ground surface; these depths correspond to groundwater elevations ranging from 66.96 feet to 68.68 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 5. Groundwater flow beneath the Site is from east to west.

### 5.2 Soil Chemistry

Soil/fill samples collected during this RI were compared to 6NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential SCOs. Results indicated:

- No VOCs, pesticides, or PCBs were detected at concentrations above Unrestricted Use SCOs in any soil sample.
- Seven SVOCs, including benzo(a)anthracene (at 2.14 milligrams per kilogram (mg/Kg)), benzo(a)pyrene (at 2.17 mg/Kg), benzo(b)fluoranthene (at 1.9 mg/Kg), benzo(k)fluoranthene (at 1.51 mg/Kg), chrysene (at 2.01 mg/Kg), dibenzo(a,h)anthracene (at 0.457 mg/Kg), and indeno(1,2,3-cd)pyrene (at 1.21 mg/Kg), were detected at concentrations exceeding their Unrestricted Use SCOs in soil boring SB-3 (0'-2'). Of these SVOCs, the concentrations of benzo(k)fluoranthene and chrysene also exceeded their Restricted Residential Use SCOs. Indeno(1,2,3-cd)pyrene (at 0.523 mg/Kg) was also detected at a concentration exceeding its Restricted Residential SCO in soil boring SB-1 (0'-2').
- Six metals, including copper (at 109 mg/Kg in soil boring SB-3 (0'-2')), lead (maximum of 339 mg/Kg in soil boring SB-3 (0'-2')), magnesium (at 1,740 mg/Kg in

soil boring SB-6 (0'-2')), Nickel (at 30.8 mg/Kg in soil boring SB-6 (12'-14')), selenium (maximum of 4.77 mg/Kg in soil boring SB-4 (12'-14')), zinc (maximum of 468 mg/Kg in soil boring SB-2 (0'-2')), and mercury (maximum of 0.748 mg/Kg in soil boring SB-4 (0'-2')), were detected at concentrations exceeding their Unrestricted Use SCOs.

- Neither PFAS nor 1,4-dioxane were detected in soil sample SB-6 (0'-2').

Data collected during the RI are sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 2. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use and Restricted Residential SCOs.

### **5.3 Groundwater Chemistry**

Groundwater samples collected during the RI were compared to 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Results indicated:

- No pesticides or PCBs were detected at concentrations exceeding their GQS.
- Two VOCs, including chloroform (maximum of 13 micrograms per liter ( $\mu\text{g/L}$ ) in the sample from MW-1) and tetrachloroethene (maximum of 120  $\mu\text{g/L}$  in the sample from MW-3), were detected at concentrations exceeding their GQS.
- Eight total metals, including chromium (maximum of 563  $\mu\text{g/L}$  in the sample from MW-1), copper (at 362  $\mu\text{g/L}$  in the sample from MW-1), lead (maximum of 64  $\mu\text{g/L}$  in the sample from MW-DUP), magnesium (maximum of 152,000  $\mu\text{g/L}$  in the sample from MW-1), manganese (maximum of 7,120  $\mu\text{g/L}$  in the sample from MW-1), nickel (at 153  $\mu\text{g/L}$  in the sample from MW-1), selenium (maximum of 136  $\mu\text{g/L}$  in the sample from MW-3), and sodium (maximum of 118,000  $\mu\text{g/L}$  in the sample from MW-DUP), were detected at concentrations exceeding their GQS.
- Four dissolved metals, including magnesium (maximum of 41,000  $\mu\text{g/L}$  in the sample from MW-3), manganese (maximum of 654  $\mu\text{g/L}$  in the sample from MW-3), selenium (maximum 81  $\mu\text{g/L}$  in the sample from MW-3), and sodium (maximum of 101,000  $\mu\text{g/L}$  in the sample from MW-4) were detected at concentrations exceeding their GQS.

- PFOA/PFAS compounds including PFBS (at 0.00772 µg/L), PFHpA (at 0.0101 µg/L), PFHxS (at 0.00348 µg/L), and PFHxA (at 0.200 µg/L) were detected in the sample from MW-4. 1,4-dioxane was not detected in this sample.
- Due to a laboratory error, the analysis of groundwater sample MW-4, groundwater sample MW-DUP, and the field blank samples (Soil Field Blank and Groundwater Field Blank) for 1,4-dioxane could not be completed within the holding time. NYCOER was informed on July 7, 2020, and elimination of these analysis was authorized.
- As the soil samples collected during the RI contained only trace concentrations of tetrachloroethene (maximum of 0.021 mg/Kg) and no trichloroethene, it is concluded that the source of these compounds in the groundwater samples is the adjacent BCP site.

Data collected during the RI are sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 3. Exceedences of applicable groundwater standards are shown.

Figure 7 shows the location and posts the values for groundwater that exceed the New York State Class GA groundwater standards.

## 5.4 Soil Vapor Chemistry

Soil vapor samples collected during the RI were analyzed for VOCs via USEPA Method TO-15. Results include the following:

- Twenty-one (21) individual VOCs were detected in the soil vapor samples.
  - 1,1,1-Trichloroethane was detected at 13 micrograms per cubic meter (µg/m<sup>3</sup>) in sample SV-3;
  - 1,2,4-Trimethylbenzene was detected at 16 µg/m<sup>3</sup> in SV-1, 14 µg/m<sup>3</sup> in SV-2, 10 µg/m<sup>3</sup> in SV-3, 16 µg/m<sup>3</sup> in SV-4, 14 µg/m<sup>3</sup> in SV-5, and 12 µg/m<sup>3</sup> in sample SV-6;
  - 2-Butanone was detected at 220 µg/m<sup>3</sup> in sample SV-1, 75 µg/m<sup>3</sup> in sample SV-2, 50 µg/m<sup>3</sup> in sample SV-3, 140 µg/m<sup>3</sup> in sample SV-4, 36 µg/m<sup>3</sup> in sample SV-5, and 47 µg/m<sup>3</sup> in sample SV-6;

- 2-Hexanone was detected at 86  $\mu\text{g}/\text{m}^3$  in sample SV-1, 30  $\mu\text{g}/\text{m}^3$  in sample SV-2, 17  $\mu\text{g}/\text{m}^3$  in sample SV-3, 49  $\mu\text{g}/\text{m}^3$  in sample SV-4, 18  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 15  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Acetone, a laboratory contaminant, was detected at 1,400  $\mu\text{g}/\text{m}^3$  in sample SV-1, 1,300  $\mu\text{g}/\text{m}^3$  in sample SV-2, 700  $\mu\text{g}/\text{m}^3$  in sample SV-3, 2,500  $\mu\text{g}/\text{m}^3$  in sample SV-4, 540  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 830  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Benzene was detected at 8.5  $\mu\text{g}/\text{m}^3$  in sample SV-1, 5.6  $\mu\text{g}/\text{m}^3$  in sample SV-2, 5  $\mu\text{g}/\text{m}^3$  in sample SV-3, 6  $\mu\text{g}/\text{m}^3$  in sample SV-4, and 5.3  $\mu\text{g}/\text{m}^3$  in sample SV-5;
- Carbon disulfide was detected at 6.8  $\mu\text{g}/\text{m}^3$  in sample SV-3;
- Chloroform was detected at 19  $\mu\text{g}/\text{m}^3$  in sample SV-1, 38  $\mu\text{g}/\text{m}^3$  in sample SV-2, 480  $\mu\text{g}/\text{m}^3$  in sample SV-3, 56  $\mu\text{g}/\text{m}^3$  in sample SV-4, 56  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 37  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- cis-1,2-Dichloroethene was detected at 16  $\mu\text{g}/\text{m}^3$  in sample SV-1, and 4.6  $\mu\text{g}/\text{m}^3$  in sample SV-5;
- Cyclohexane was detected at 30  $\mu\text{g}/\text{m}^3$  in sample SV-3, 18  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 37  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Ethylbenzene was detected at 15  $\mu\text{g}/\text{m}^3$  in sample SV-1, 12  $\mu\text{g}/\text{m}^3$  in sample SV-2, 12  $\mu\text{g}/\text{m}^3$  in sample SV-3, 14  $\mu\text{g}/\text{m}^3$  in sample SV-4, 12  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 9.2  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Isopropanol was detected at 14  $\mu\text{g}/\text{m}^3$  in sample SV-1;
- n-Heptane was detected at 35  $\mu\text{g}/\text{m}^3$  in sample SV-1, 20  $\mu\text{g}/\text{m}^3$  in sample SV-2, 76  $\mu\text{g}/\text{m}^3$  in sample SV-3, 19  $\mu\text{g}/\text{m}^3$  in sample SV-4, 55  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 97  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- n-Hexane was detected at 34  $\mu\text{g}/\text{m}^3$  in sample SV-1, 21  $\mu\text{g}/\text{m}^3$  in sample SV-2, 310  $\mu\text{g}/\text{m}^3$  in sample SV-3, 21  $\mu\text{g}/\text{m}^3$  in sample SV-4, 180  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 390  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- o-Xylene was detected at 17  $\mu\text{g}/\text{m}^3$  in sample SV-1, 15  $\mu\text{g}/\text{m}^3$  in sample SV-2, 16  $\mu\text{g}/\text{m}^3$  in sample SV-3, 17  $\mu\text{g}/\text{m}^3$  in sample SV-4, 16  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 12  $\mu\text{g}/\text{m}^3$  in sample SV-6;

- p- & m- Xylenes were detected at 50  $\mu\text{g}/\text{m}^3$  in sample SV-1, 41  $\mu\text{g}/\text{m}^3$  in sample SV-2, 42  $\mu\text{g}/\text{m}^3$  in sample SV-3, 49  $\mu\text{g}/\text{m}^3$  in sample SV-4, 45  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 33  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- p-Ethyltoluene was detected at 20  $\mu\text{g}/\text{m}^3$  in sample SV-1, 16  $\mu\text{g}/\text{m}^3$  in sample SV-2, 12  $\mu\text{g}/\text{m}^3$  in sample SV-3, 15  $\mu\text{g}/\text{m}^3$  in sample SV-4, 15  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 14  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Propylene was detected at 7.7  $\mu\text{g}/\text{m}^3$  in sample SV-2, 14  $\mu\text{g}/\text{m}^3$  in sample SV-4, and 6.8  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Tetrachloroethene was detected at 8,800  $\mu\text{g}/\text{m}^3$  in sample SV-1, 6,000  $\mu\text{g}/\text{m}^3$  in sample SV-2, 4,800  $\mu\text{g}/\text{m}^3$  in sample SV-3, 7,200  $\mu\text{g}/\text{m}^3$  in sample SV-4, 5,100  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 7,100  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Toluene was detected at 47  $\mu\text{g}/\text{m}^3$  in sample SV-1, 44  $\mu\text{g}/\text{m}^3$  in sample SV-2, 34  $\mu\text{g}/\text{m}^3$  in sample SV-3, 43  $\mu\text{g}/\text{m}^3$  in sample SV-4, 47  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 26  $\mu\text{g}/\text{m}^3$  in sample SV-6;
- Trichloroethene was detected at 1,700  $\mu\text{g}/\text{m}^3$  in sample SV-1, 350  $\mu\text{g}/\text{m}^3$  in sample SV-2, 160  $\mu\text{g}/\text{m}^3$  in sample SV-3, 160  $\mu\text{g}/\text{m}^3$  in sample SV-4, 120  $\mu\text{g}/\text{m}^3$  in sample SV-5, and 130  $\mu\text{g}/\text{m}^3$  in sample SV-6.
- As the soil samples collected during the RI contained only trace concentrations of tetrachloroethene (maximum of 0.021 mg/Kg) and no trichloroethene, it is concluded that the source of these compounds in the soil vapor samples is the adjacent BCP site.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 4.

Figure 8 shows the location and posts the values for soil vapor samples with detected concentrations.

## 5.5 Prior Activity

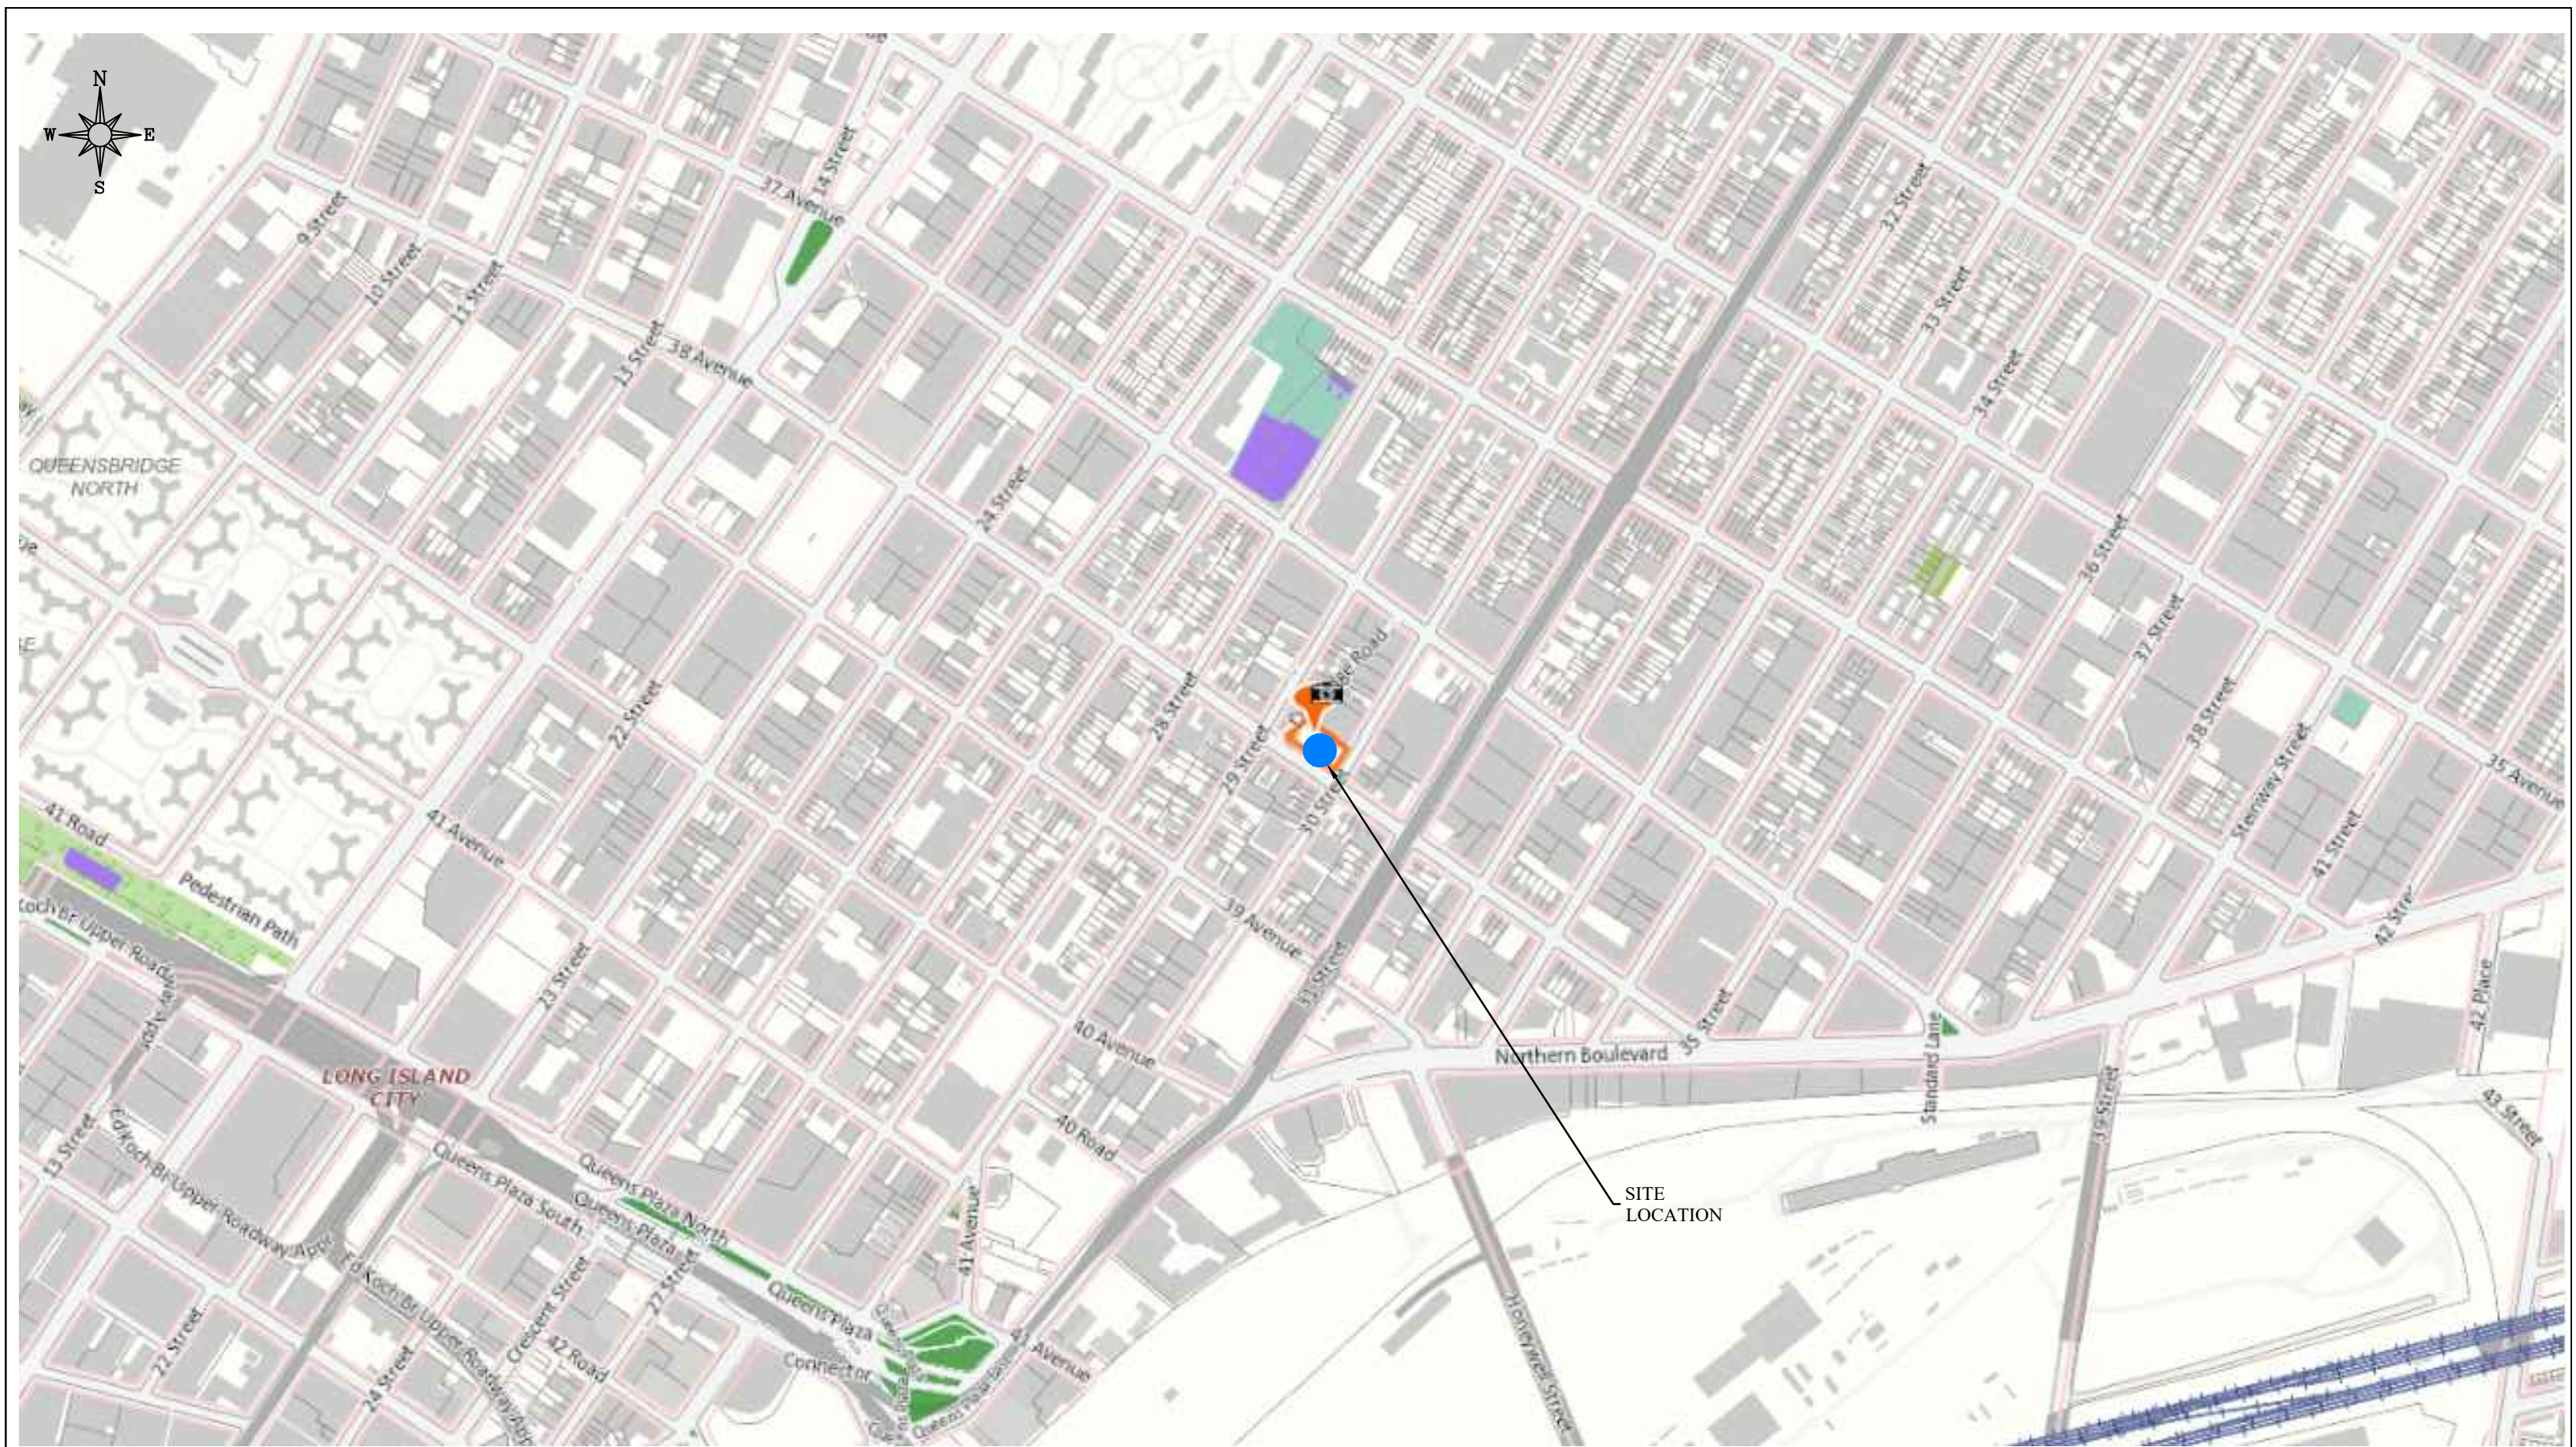

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

## **5.6 Impediments to Remedial Action**

There are no known impediments to remedial action at this property.

NOTES:

Exceeds Unrestricted Use SCDs

Exceeds Restricted Residential SCDs

Q is the Qualifier Column with definitions as follows:

D=Result is from an analysis that required a dilution

I=Analyte detected at or above the MCL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=Analyte not detected at or above the level indicated

B=Analyte found in the analysis batch blank

E=Result is estimated and cannot be accurately reported due to levels encountered or interferences

P=Pin flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=This indicates the analyte was not a target for this sample

~=This indicates that no regulatory limit has been established for this analyte

**NOTES:**  
 Exceeds Unrestricted Use SCDs.  
 Exceeds Restricted Residential SCDs.  
 Q is the Qualifier Column with definitions as follows:  
 D= result is from an analysis that required a dilution  
 F= analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated  
 U= analyte not detected at or above the level indicated  
 B= analyte found in the analysis batch blank  
 E= result is estimated and cannot be accurately reported due to levels encountered or interferences  
 P= this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis  
 NT= this indicates the analyte was not a target for this sample  
 ~= this indicates that no regulatory limit has been established for this analyte

**NOTES:**

Exceeds TOGS Class GA Standards

**Q is the Qualifier Column with definitions as follows:**

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~this indicates that no regulatory limit has been established for this analyte

**Re: Phase I Environmental Site Assessment Report**

29-05 38th Avenue in Long Island City, New York 11101

MEI Project #: 20-0186

In accordance with our agreement, Middleton Environmental Incorporated (MEI), has performed a Phase I Environmental Assessment of the above referenced property in accordance with ASTM E 1527-13 Scope of Work. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for choosing MEI as your consultant for this project. If you have any questions, or if we can be of additional service, please contact us at (631) 321 4300.

Respectfully submitted,

**Middleton Environmental Incorporated**

## 1.0 EXECUTIVE SUMMARY

At the request of Preferred Bank, Middleton Environmental Incorporated (MEI) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 29-05 38th Avenue in Long Island City, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify **Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs)** in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13. This assessment has identified no evidence of CRECs or HRECs in connection with the Subject Property. However, this assessment has identified RECs regarding the possible presence of underground gasoline storage tanks and the former usage by a former gasoline station and automobile repair facility and carpet cleaning company was identified pertaining to the Subject Property.

The Subject Property consists of an irregularly-shaped parcel totaling approximately 0.24 acre in size. The Subject Property is improved with a total of three subject buildings: a 1½ story warehouse primarily constructed on-grade, with a front partial basement area; a 2-story dwelling with a basement and a 1-story dwelling with a basement. Each building was constructed between 1898 and 1936. Additional site improvements are limited to two, non-contiguous, asphalt-paved parking areas at the eastern and western portions of the Property, respectively, and concrete-paved public sidewalks at the 38th Avenue and 30<sup>th</sup> Street frontages.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. MEI's Findings and Opinions and Recommendations for further action or investigation (if any), are presented in Section 10.0.

<b>ASSESSMENT SUMMARY TABLE</b>			
<b>Assessment Component</b>	<b>Section(s)</b>	<b>Recommended Actions</b>	<b>Estimated Cost</b>
Historical Review	5.3, 5.4 & 5.5	Phase II Environmental Site Assessment	\$ 9,000 - \$ 13,000
Current Occupants / Operations	3.3	No Further Action	
Hazardous Substances / Petroleum Products	7.2	Phase II Environmental Site Assessment	
Drains, Sumps & Storm Water Drywells	7.2	No Further Action	
Storage Tanks	7.2	Phase II Environmental Site Assessment	
PCBs	7.2	No Further Action	
Regulatory Agency / Database Review	5.1	No Further Action	
Asbestos Containing Materials	9.1	No Further Action	
Lead Based Paint	9.2	No Further Action	
Lead in Drinking Water	9.3	No Further Action	
Radon	9.4	No Further Action	
Mold	9.5	No Further Action	
Wetlands	9.6	No Further Action	

## **2.0 INTRODUCTION**

### **2.1 Purpose**

MEI has performed a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 29-05 38th Avenue in Long Island City, New York (Subject Property). The purpose of this Phase I Environmental Site Assessment (Phase I ESA) is to investigate and identify Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs) associated with the Subject Property and/or surrounding property. Recognized Environmental Conditions, as defined in the ASTM Standard Practice E 1527-13, including the following:

*The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.*

For the purpose of this Phase I ESA, *recognized environmental conditions (REC's)*, may also include the presence or likely presence of other conditions as noted in the Scope of Services.

### **2.2 Scope of Services**

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review. The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, radon, mold, and wetlands.

## 2.3 Assumptions and Limitations

There is a possibility that even with the proper application of these methodologies there may exist on the Subject Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. The information and conclusions contained in this report are based upon work undertaken by trained professional in accordance with generally accepted engineering and scientific practices current at the time the work was performed. MEI believes that the information obtained from the record review and the interviews concerning the Subject Property is reliable. However, MEI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all-inclusive or comprehensive results, but rather to provide the User with information relating to the Subject Property. Due to the nature of this investigation and data available, MEI cannot warrant against undiscovered environmental liabilities. Should any additional information become available which differs significantly from our understanding of conditions or findings represented in this report, we request that this information be supplied to MEI so that MEI may reassess the conclusions provided in this report (if necessary).

The findings, opinions and conclusions of this report contain the limitations inherent in these methodologies that are referred to in ASTM E 1527-13. Specific limitations and exceptions to this ESA are set forth below:

Historical and environmental information pertaining to the Subject Property has been included in this report to the extent that such information is "reasonably ascertainable" as defined in the above-referenced standard practice and in accordance with the project specific timeframes.

MEI reviewed an environmental database search report. MEI's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, MEI's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the Subject Property.

With respect to conditions outside the scope of the ASTM Standard, MEI's observations are limited to physical observations and a review of published data. Unless otherwise stated, no sampling for Asbestos Containing Materials, Lead Based Paint, Drinking Water, Radon, Mold, or Wetlands was conducted.

## **2.4 Special Terms and Conditions**

This Phase I Environmental Site Assessment (“the report”) has been prepared to assist Preferred Bank in its underwriting of a proposed mortgage loan or financing on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. MEI’s liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to MEI’s limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and MEI’s contract and report extends Preferred Bank only, in accordance with MEI Terms and Condition and the MEI Scope of Work.

## **2.5 Data Gaps**

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

## **2.6 Deviations**

No deviations from the recommended scope of ASTM Standard E 1527-13 were performed as part of this Phase I ESA with the exception of any additional services noted in Section 2.2 Scope of Services.

## **2.7 User Reliance**

This Phase I Environmental Site Assessment Report is for the benefit of Preferred Bank and this report may not be relied upon by any other person or entity without the written consent of MEI.

Only if written agreement has been executed granting the right to utilize this report, no third party which obtains all of portion of this report shall have any rights of recourse or recovery under any course of action against MEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with MEI's Standard Phase I Environmental Site Assessment Contract and this report is for the benefit of Preferred Bank and its successors and assigns. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of MEI.

## **3.0 SITE DESCRIPTION**

### **3.1 Ownership and Location**

According to the Automated City Register Information System (ACRIS) operated by the New York City Department of Finance, the Subject Property is identified as Block 371, Lot 38, and the Property is currently owned by Pemas, LLC.

The Property is located in a built-up, urban, mixed-use residential/commercial/industrial area within the borough of Queens, within the postal code of Long Island City, Queens County, and within the City and State of New York. MEI did not identify any prior owners or occupants of potential environmental concern in the property records obtained from the NYC Department of Finance.

### **3.2 Improvements**

The Subject Property consists of an irregularly-shaped parcel totaling approximately 0.24 acre in size. The Subject Property is improved with a total of three subject buildings: a 1½ story warehouse primarily constructed on-grade, with a small, front partial basement area; a 2-story dwelling with a basement; and a 1-story dwelling with a basement, each of which were constructed between 1898 and 1936. Additional site improvements are limited to two, non-contiguous, asphalt-paved parking areas at the eastern and western portions of the Property, respectively, and concrete-paved public sidewalks at the 38th Avenue and 30<sup>th</sup> Street frontages.

### **3.3 Current Use of the Subject Property**

The Subject Property is improved with two dwellings, and a 1½ story warehouse primarily constructed on-grade, with a small, front partial basement area. The warehouse is currently occupied by Green Now, a biofuel generator rental company. The 1-story dwelling basement contains residential and mechanical areas. The commercial building basement contains mechanical areas. The commercial building first floor is utilized for warehouse/storage, parking, and office purposes. The commercial building partial second floor/mezzanine contains office areas.

### 3.4 Services, Utilities and Roadways

Street Address(es): 29-05 – 29-17 38<sup>th</sup> Avenue / 37-51 Old Ridge Road / 37-44 30<sup>th</sup> Street

City and State: Postal zone of Long Island City, within the Borough of Queens, and within the City and State of New York

County: Queens County

Owner: Pemas, LLC

Property Size: 0.24 acre

Access Roadway to site: 38th Avenue, adjacent to the southwest of the Property

Site Use: Warehouse/office, dwellings, and parking

Occupants: Green Now and residential tenants

Electricity Provider: Consolidated Edison of New York (ConEd)

Natural Gas Provider: National Grid

Fuel Oil Provider: Not applicable

Potable Water: Municipal Water Supply System

Sewer Services: Municipal Sewer System

Heating System: Central, natural gas-fired low-pressure boilers (dwellings); and natural gas-/electric-fired split system HVAC units and natural gas-fired, ceiling-mounted unit heaters (commercial building)

### 3.5 Adjoining Property Usage

The current usage of the adjoining properties is residential and commercial/industrial in nature. The Subject Property borders are as follows:

North - The Subject Property is bordered to the north by an unlabeled 2-story commercial building and a development site.

South - The Subject Property is bordered to the south by 38th Avenue, beyond which are multi-story residential buildings, a 1-story restaurant, and an auto repair facility.

East - The Subject Property is bordered to the east by 30<sup>th</sup> Street, beyond which is a 2-story commercial office/retail building.

West - The Subject Property is bordered to the west by Old Bridge Road, beyond which is an unlabeled 1½-story warehouse.

## **4.0 USER PROVIDED INFORMATION**

### **4.1 Environmental Pre-Survey Questionnaire**

Pursuant to ASTM E 1527-13, MEI requested the following site information from the User of this report and from the site contact. The following section summarizes information provided Preferred Bank with regard to this Phase I Environmental Site Assessment.

<b>ITEM</b>	<b>PROVIDED BY USER</b>	<b>NOT PROVIDED BY USER</b>	<b>DISCUSSED BELOW</b>	<b>DOES NOT APPLY</b>
<b>4.1 Environmental Pre-survey Questionnaire</b>		X		
<b>4.2 Title Records</b>		X		
<b>4.3 Environmental Liens or Activity and Use Limitation</b>		X		
<b>4.4 Specialized Knowledge</b>		X		
<b>4.5 Commonly Known or Reasonably Ascertainable Information</b>		X		
<b>4.6 Valuation Reduction for Environmental Issues</b>		X		
<b>4.7 Identification of Key Site Manager</b>	X			
<b>4.8 Reason for Performing Phase 1 ESA</b>	X			
<b>4.9 Prior Environmental Reports</b>		X		

### **4.2 Title Records**

Title record information associated with the Subject Property has not been provided to MEI by Preferred Bank. Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

### **4.3 Environmental Liens or Activity and Use Limitation**

The property owner/user/key site personnel did not report any Environmental Liens or Activity/Use Limitations on the site. An environmental lien search was not included in the scope of work of this assessment and therefore was not performed. However, if the findings of a lien search performed by any other party does reveal the presence of an environmental related lien on the subject property, this information should be forwarded to MEI for review, and any significant findings will be added to this assessment as an addendum to this report.

#### **4.4 Specialized Knowledge**

Preferred Bank provided no specialized knowledge that is material to Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs). MEI was not provided with or made aware of previous environmental assessments or other documentation that is material to RECs, CRECs or HRECs in connection with the Subject Property, except as presented in Section 4.3 of this report.

#### **4.5 Commonly Known or Reasonably Ascertainable Information**

Preferred Bank has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

#### **4.6 Valuation Reduction for Environmental Issues**

Preferred Bank has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

#### **4.7 Identification of Key Site Manager**

Preferred Bank did not provide contact information for the Subject Property owner, manager, and/or occupant. The Contact person for site access was Mr. George Abdoulos, owner of the Property, of Pemas, LLC.

#### **4.8 Reason for Performing Phase I ESA Report**

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-13) in connection with the Subject Property. This ESA was also performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E-1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

#### **4.9 Prior Environmental Reports**

Although requested, no previous environmental reports were provided to MEI for review.

## 5.0 RECORDS REVIEW

### 5.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappable section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Subject Property. Pertinent regulatory files / records associated with the Subject Property and/or any adjoining site will be requested for review in the event the listing is associated with a facility at which a suspected or confirmed release has occurred that has not yet been closed to the satisfaction of the regulatory agency and/or if the facility represents a REC in connection with the Subject Property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Subject Property, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Subject Property from the listed facilities (see appendix 12.5 for Environmental Database Report).

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

<b>SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS</b>			
<b>Regulatory Database</b>	<b>Approximate Minimum Search Distance</b>	<b>Subject Property Listed</b>	<b>Off-site Listing Within Search Distance</b>
Federal NPL Sites	1.0 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
Federal SEMS Sites (formerly CERCLIS Sites)	0.5 mile	No	0
Federal SEMS Archive Sites (formerly CERCLIS NFRAP)	0.5 mile	No	0
Federal RCRA CORRACTS Sites	1.0 mile	No	1
Federal RCRA Generators Sites	Property & Adjoining	No	1
Federal RCRA Non-CORRACTS TSD Sites	0.5 mile	No	0
Federal Engineering / Institutional Control Sites	0.5 mile	No	0
Federal ERNS Sites	Subject Property	No	NA
State and Tribal equivalent NPL Sites	1.0 mile	No	16
State and Tribal equivalent CERCLIS Sites	0.5 mile	No	0
State and Tribal Leaking Storage Tank Sites	0.5 mile	No	51
State and Tribal Spills Sites	Subject Property	No	NA
State and Tribal Landfill or Solid Waste Disposal Sites	0.5 mile	No	1
State and Tribal Registered Storage Tank Sites	Property & Adjoining	No	0
State and Tribal Engineering / Institutional Control Sites	0.5 mile	No	2 / 4
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	4
State and Tribal Brownfield Sites	0.5 mile	No	13

- **Federal National Priority List (NPL) Sites**

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. The Subject Property is not listed as a Federal NPL site. No NPL sites were identified within one mile of the Property.

- **Federal Delisted National Priority List (NPL) Sites**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. The Subject Property is not listed as a Federal Delisted NPL site. No Federal Delisted NPL sites were identified within one mile of the Property.

- **Federal SEMS Sites (formerly CERCLIS Sites)**

The SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the SEMS List and the sites which are in the screening and assessment phase for possible inclusion on the SEMS. The Property is not identified as a Federal SEMS facility. No SEMS sites are located within a half-mile of the Subject Property.

- **Federal SEMS-ARCHIVE List**

The SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the SEMS List. The Property is not identified as a SEMS-ARCHIVE facility. No SEMS ARCHIVE sites are located within a half-mile of the Subject Property.

- **Federal RCRA CORRACTS Sites**

RCRA Corrective Action Tracking System (CORRACTS) is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies Transportation, Storage or Disposal (TSD), facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The Subject Property was not identified on the RCRA CORRACTS site list. However, one RCRA CORRACTS site is located within one mile of the Subject Property. This site is located 0.67 mile to the west-northwest, and cross-gradient relative to the Property. Therefore, based on its distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with this RCRA CORRACTS site would represent an environmental concern to the Subject Property.

- **Federal RCRA Hazardous Waste Generators Sites**

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). A RCRA-LQG is a facility that generates over 1,000 kilograms (Kg) of hazardous waste. A RCRA-SQG is a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month while a RCRA-CESQG generates less than 100 Kg of hazardous waste per month. The Subject Property is not listed as Resource Conservation and Recovery Act (RCRA) Generator site. However, one adjoining RCRA SQG site was identified. This site is known as Enterprise Cleaners, and is located at 37-26 30<sup>th</sup> Street, adjacent to the northeast of, and up-gradient relative to, the Property. This site is also listed on the NY DRYCLEANERS, NY MANIFEST, and RI MANIFEST databases. This facility formerly consisted of a commercial dry cleaning plant, and numerous violations and enforcement actions were identified for this facility on the RCRA SQG database. Of note, this facility appeared to no longer be in operation during MEI's site inspection.

- **Federal RCRA non-CORRACTS TSD Sites**

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) sites are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD site. No Federal RCRA non-CORRACTS TSD sites are located within a half-mile radius of the Subject Property.

- **Federal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property is not listed as a Federal Engineering Controls or Institutional Control site. No Federal Engineering Controls / Institutional Control sites are located within a half-mile of the Subject Property.

- **Federal Emergency Response Notification System (ERNS) Sites**

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a Federal ERNS site.

- **State and Tribal Equivalent NPL Sites**

State and Tribal equivalent NPL databases were searched for sites located within a mile of the Subject Property. The Subject Property is not listed as a State and Tribal Equivalent NPL site. However, 16 State and Tribal equivalent NPL sites are located within one mile of the Subject Property. These sites are each located in excess of 0.30 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 16 State and Tribal Equivalent NPL sites would represent an environmental concern to the Subject Property.

- **State and Tribal equivalent CERCLIS Sites**

State and Tribal equivalent CERCLIS databases were searched for sites located within a half mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent CERCLIS Site. No State and Tribal equivalent CERCLIS sites are located within a half-mile radius of the Subject Property.

- **State and Tribal Leaking Storage Tank Sites**

Leaking Storage Tank sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property is not listed as a State and Tribal Leaking Storage Tank site. However, 51 sites located within a half-mile of the Subject Property were identified as State and Tribal Leaking Storage Tank sites. Each of the Leaking Storage Tank sites are located in excess of 0.05 mile of the Subject Property, and are located either cross- or down-gradient relative to the Property, or have been Closed by the NYSDEC, or both. Therefore, based on their distance, gradient, and/or regulatory status, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 51 Leaking Storage Tank sites would represent an environmental concern to the Subject Property.

- **State and Tribal Spills Sites**

A review of the State and Tribal Spills database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a State and Tribal Spills site.

- **State and Tribal Landfill Sites and Solid Waste Disposal Sites**

The State and Tribal Landfill and Solid Waste Disposal site database identifies active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property is not listed as a State and Tribal Landfill and Solid Waste Disposal site. However, one State and Tribal Landfill and Solid Waste Disposal site is located within a half-mile of the Subject Property. This site is located 0.34 mile to the northwest, and cross-gradient relative to the Property. Therefore, based on its distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with this State and Tribal Landfill and Solid Waste Disposal site would represent an environmental concern to the Subject Property.

- **State and Tribal Registered Storage Tank Sites**

The Property and adjoining properties are not listed on the AST or UST registration databases.

- **State and Tribal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property was not listed as a State Engineering Controls or Institutional Control site. However, two State Engineering Controls sites and four Institutional Control sites are located within a half-mile of the Subject Property. These sites are each located in excess of 0.14 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these State Engineering Controls / Institutional Control sites would represent an environmental concern to the Subject Property.

- **State and Tribal Voluntary Cleanup Sites**

The Subject Property is not listed as a State and Tribal Voluntary Cleanup site. However, four State and Tribal Voluntary Cleanup site is located within a half-mile of the Subject Property. These sites are each located in excess of 0.30 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these four State and Tribal Voluntary Cleanup sites would represent an environmental concern to the Subject Property.

- **State and Tribal Brownfield Sites**

The Subject Property is not listed as a State and Tribal Brownfield site. However, 13 State and Tribal Brownfield sites are located within a half-mile of the Subject Property. These sites are each located in excess of 0.10 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 13 State and Tribal Brownfield sites would represent an environmental concern to the Subject Property.

## 5.2 Sanborn Fire Insurance Maps

Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of available fire insurance maps are presented in Appendix 12.6.

FIRE INSURANCE MAP SUMMARY		
Year	Issues Noted	Observations
1898	No	Subject Property: Two small dwellings and undeveloped land are depicted on-site (with the rear dwelling appearing to be the rear dwelling identified on-site during MEI's site inspection).
		Surrounding Area: Dwellings, undeveloped land, and a 1½-story commercial building are depicted on the surrounding properties.
1915	No	Subject Property: Two small dwellings and undeveloped land are depicted on-site (with the rear dwelling appearing to be the rear dwelling identified on-site during MEI's site inspection).
		Surrounding Area: Dwellings, multi-story residential buildings, undeveloped land, and a 1½-story commercial building are depicted on the surrounding properties.
1936	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Kashan Carpet Cleaning" with a gasoline UST at the building frontage; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively), with two gasoline USTs depicted at the eastern parking area (assumed to be the development depicted on-site during MEI's site inspection).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, and commercial/industrial properties, including a dry cleaning plant to the south, beyond 38 <sup>th</sup> Avenue at 29-10 – 29-14 38 <sup>th</sup> Avenue.
1947 – 1950	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively), with the eastern parking area labeled "Filling Station" (assumed to be the development depicted on-site during MEI's site inspection). Of note, no USTs are depicted on-site.
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, and commercial/industrial properties, including a dry cleaning plant to the south, beyond 38 <sup>th</sup> Avenue at 29-10 – 29-14 38 <sup>th</sup> Avenue.
1970 - 1980	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including a gasoline station to the east, beyond 30 <sup>th</sup> Street, at 30-01 – 30-05 38 <sup>th</sup> Avenue.
1986	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including an auto repair facility to the east, beyond 30 <sup>th</sup> Street, at 30-01 – 30-05 38 <sup>th</sup> Avenue.
1988 - 2006	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including a plastics manufacturing facility to the north at 37-28 30 <sup>th</sup> Street.

The 1936 Sanborn map reviewed depicts three gasoline USTs on-site, including a one gasoline UST at the commercial building frontage, and two gasoline USTs depicted at the eastern parking area. In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950. Moreover, the Sanborn maps depict over 75 years of historical industrial and automotive usage on the adjacent properties. The historical presence of gasoline USTs and a gasoline station on-site, as well as the historical industrial and automotive usage of the adjacent properties, the subsequent potential for sub-surface contamination at the Property, is considered to be an REC.

### 5.3 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by researching available historical aerial photographs from [www.historicaerials.com](http://www.historicaerials.com) and other available resources. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table:

AERIAL PHOTOGRAPH SUMMARY		
Year	Issues Noted	Observations
1954 - 2015	No	<b>Subject Property: A commercial building, two small dwellings, and two non-contiguous parking areas appear to be depicted on-site.</b>
		<b>Surrounding Area: The surrounding area is densely developed, and the adjoining properties appear to be developed with dwellings, multi-story residential buildings, and commercial/industrial facilities.</b>

## 5.4 City Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by MEI and EDR. Historical street directories were reviewed and are summarized in the following table.

<b>CITY DIRECTORY SUMMARY</b>		
<b>Year</b>	<b>Issues Noted</b>	<b>Occupants</b>
1934	Yes	Carpet Cleaning firms
1939	Yes	Carpet Cleaning firms
1945	Yes	Carpet Cleaning firms
1962	Yes	Carpet Cleaning firms
1967	No	Carpet Cleaning firms and individual tenants/owners
1970	Yes	Carpet Cleaning firms
1976	Yes	Carpet Cleaning firms
1983	Yes	Carpet Cleaning firms and individual tenants/owners
1991	No	Individual tenants/owners
2000	Yes	Individual tenants/owners and an auto repair facility
2005	Yes	Daytona Auto Body
2010	Yes	Millennium Auto Care, Daytona Auto Repair, a taxi company
2014	Yes	Daytona Auto Repair, Millennium Auto Care, Greenow Productions

The historical usage of the Property as an auto repair facility and by a carpet cleaning company is considered to be an REC.

## 5.5 Vapor Encroachment Conditions

All readily ascertainable information including all applicable Federal, State, Tribal and local database information, historical usage information, soil and groundwater sources and information from the site reconnaissance were reviewed in order to determine if there is a possibility of a Vapor Encroachment Condition regarding the Subject Property. Based upon the results of the site reconnaissance and review of readily ascertainable information, the Vapor Encroachment Condition survey is described below:

POTENTIAL AREA OF CONCERN	RESULT
Does the Subject Property have a current or past contamination concern?	None identified
Does the Subject Property have a suspected contamination concern?	See below
Does an adjacent property have a current or past contamination concern?	None identified
Does a nearby property have a have a current or past contamination concern which may impact the Subject Property?	None identified
Does a regional groundwater contamination concern exist beneath the Subject Property?	None identified
Does there exist the possibility for vapor intrusion on the Subject Property?	See below

The historical presence of gasoline USTs, a gasoline service station, and an auto repair facility on-site, as well as the historical presence of adjoining industrial and automotive facilities and a carpet cleaning company is considered to be an REC and a Phase II ESA is recommended in order to determine if any contamination from past improper chemical disposal or past tank leakage has impacted the subsurface (or could caused a vapor intrusion concern).

## 5.6 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the New York City Department of Buildings, the New York City Department of Finance, and the New York City Fire Department. Information was reviewed in order to determine the possibility of documented adverse environmental conditions, violations or complaints associated with the Subject Property.

### New York City Building Department (NYC DOB) and New York City Department of Finance

MEI reviewed information listed in the online NYC Building Information System (BIS) provided by the New York City Building Department's website, as well as information from the New York City Department of Finance website, the Automated City Register Information System (ACRIS)(<http://a836-acris.nyc.gov/CP>). Specific information provided by these websites includes lot sizes and dimensions, building zoning, and usage. These websites also include information pertaining to interior renovations, building improvements, and approximate date of construction. Various permits/actions for the Property were identified on the NYC DOB website only, dated 1923 through the present, including New Building Applications dated 1923 and 1926; a 2003 permit for auto sales; a 1993 permit for auto repair; and the following historical Certificates of Occupancy (COs): 1927 for a dwelling; 1945 for a carpet cleaner; and 1989 for a dwelling and an auto sales facility; and 1994 for a dwelling, an auto repair facility, and parking. No additional data of historical or environmental concern was identified on the NYC DOB or New York City Department of Finance websites.

### New York City Fire Department (FDNY)

Records from the New York City Fire Department (FDNY) are available by written request and fee only, and results are typically not provided to the user for approximately 30 days (or greater) from the date of receipt of the request by the FDNY, and therefore would not be considered to be "reasonably ascertainable", as defined by ASTM. As such, other sources were reviewed for information regarding current and historic petroleum storage tanks at the Property. These records include state regulatory agency databases, Sanborn Fire Insurance maps, building department records, and historical city directories, which are addressed within the respective sections of this report.

## **6.0 PHYSICAL SETTING**

### **6.1 Topography**

The Subject Property and vicinity characteristics listed below were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the Subject Property. The Subject Property is located at an elevation of approximately 38 feet above mean sea level (msl). The Property has been graded, and is relatively flat. The surrounding area slopes gently downward to the southwest.

### **6.2 Geology and Soils**

No bedrock outcroppings were observed at the Subject Property. Near-surface geology in heavily developed areas such as the Subject Property and vicinity is considered "urban land" and is characterized by a non-homogeneous distribution of soil and fill types. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

### **6.3 Hydrogeology and Hydrology**

No natural surface water bodies were identified on or adjacent to the Subject Property. Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow in the vicinity of the Subject Property is expected to flow to the west, towards the East River. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three (3) groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

## **7.0 SUBJECT PROPERTY RECONNAISSANCE**

The Subject Property reconnaissance was conducted by Mr. Jeremy Mushlin, EP, senior project manager, on February 21, 2020. Mr. Mushlin was accompanied by Mr. George Abdoulos, owner of the Property, of Pemas, LLC.

### **7.1 Methodology and Limited Conditions**

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. MEI accessed all Property exteriors, as well as the commercial building interior (with the exception of the rear, attached one-car garage area), and the 1-story dwelling basement only.

MEI was not provided access to either of the dwellings, with the exception of the 1-story dwelling basement only, or the rear, attached one-car garage area, as the Property owner does not have keys to these areas, and tenants were not available to provide access during MEI's site inspection. Therefore, MEI was unable to make a determination of environmental conditions within these areas.

### **7.2 Physical Observations**

- **Underground Storage Tanks**

No petroleum underground storage tanks (USTs), or evidence thereof, were identified. The building is heated via a combination of central, natural gas-fired, low-pressure boilers (dwellings); and natural gas-/electric-fired split system HVAC units and natural gas-fired, ceiling-mounted unit heaters (commercial building). A review of the 1936 Sanborn map depicts the presence of three gasoline USTs on-site (one gasoline UST at the commercial building frontage and two gasoline USTs at the eastern parking area). In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950. The historical presence of gasoline USTs and a gasoline station on-site, and the subsequent potential for sub-surface contamination, is considered to be an REC.

- **Aboveground Storage Tanks**

No petroleum aboveground storage tanks (ASTs) were observed. However, three cut steel pipes were observed at the walls within in the commercial building partial basement. It is possible that these cut pipes represent former fuel lines associated with a former heating oil AST (or ASTs) that were historically removed from the basement. However, given the assumed aboveground location of these ASTs, as well as that no ASTs, or additional evidence thereof, were observed on-site, these cut lines are not considered to represent an issue of concern.

- **Hazardous Substances and Petroleum Products**

Five 55-gallon drums of 15W-40 motor oil were observed within the commercial building first floor warehouse area. According to Property ownership, the motor oil is utilized for lubrication of the tenant's generator equipment. The drums were stored neatly, and no evidence of leaks or issues of concern were noted. MEI did not observe any additional hazardous substances or petroleum products at the Subject Property.

- **Non-Hazardous Substances and Non-Petroleum Products**

MEI did not observe any non-hazardous substances or petroleum products at the Subject Property.

- **Unidentified Substances Containers**

MEI did not observe any unidentified substance containers at the Subject Property.

- **Drains or Storm Water Drywells**

MEI did not observe any storm water drywells. No stained storm drains were observed.

- **Polychlorinated Biphenyls (PCB's)**

No potential PCB-containing equipment was observed.

- **Stains or Corrosion**

MEI did not observe any evidence of staining or corrosion at the Subject Property.

- **Odors**

MEI did not observe any strong, pungent, or noxious odors at the Subject Property.

- **Pools of Liquid**

MEI did not observe any pools of liquid at the Subject Property.

- **Stressed Vegetation**

MEI did not observe any stressed vegetation at the Subject Property.

- **Stained Soil or Pavement**

MEI did not observe any stained soil at the Subject Property. Pavement displayed normal minor staining due to regular usage, which is not considered to be an issue of concern.

- **Wells**

MEI did not observe any irrigation wells or groundwater monitoring wells at the Subject Property.

- **Sumps, Pits, Ponds, or Lagoons**

MEI did not observe any sumps, pits, ponds, or lagoons in accessible areas of the Subject Property.

- **Waste Water**

MEI did not observe any improper disposal of waste water into drains, ditches, or streams at the Subject Property.

- **Solid Wastes Disposal**

Solid waste generated by the residential and commercial tenants is picked up for disposal by the New York City Department of Sanitation and a private commercial waste hauler, respectively. No improper solid waste storage or disposal was identified.

## **8.0 INTERVIEWS**

### **8.1 Interview with Property Owner and/or Property Manager**

MEI interviewed Mr. George Abdoulos, owner of the Property, of Pemas, LLC. Ms. Abdoulos did not indicate the presence of any environmental liens, and was unaware of any contamination concerns regarding the Subject Property.

## **9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13**

### **9.1 Asbestos Containing Material (ACM)**

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable ACM are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the building would have been thoroughly surveyed and sampled. MEI did not observe any ACM on the heating system in accessible areas of the building. MEI did not observe any spray-on fire proofing in accessible areas of the building. MEI did not observe any ACM pipe-wrap in accessible areas of the building.

### **9.2 Lead Based Paint (LBP)**

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm<sup>2</sup>) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

MEI observed that the painted surfaces inside the accessible, occupied areas of the Property were in fair condition, and free from obvious chipping, flaking or peeling.

### **9.3 Lead in Drinking Water**

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, the USEPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing such as lead solder, brass, bronze, and other lead containing alloys. The USEPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L). MEI did not observe any brass or lead fixtures at the Subject Property.

## 9.4 Radon

Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into building through cracks and openings in the foundation. The USEPA has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in New York State. The U.S. Environmental Protection Agency's Map of Radon Zones identified the Subject Property as a radon zone Level 3. Level 3 signifies that the average predicted radon level indoors is less than 2 pico-Curies per liter and this is the lowest level in the state. This level compares favorably with the EPA action level of 4.0 pico-Curies per liter as the guideline (it should be noted that current radon information and EPA Action Levels are designated for residential spaces only and commercial and industrial facilities are not subject to EPA's Action Level of 4 pico-Curies per liter as the guideline and definitive information concerning radon gas in an individual building can only be obtained through long term testing).

## 9.5 Mold

Molds are a class of fungi, and have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

As part of this assessment, MEI performed a limited visual inspection for the conspicuous presence of mold. MEI observed the accessible interior areas of the Subject Property structure(s), including interior walls and ceilings of the accessible apartment units, the corridors of the building and the basement of the building for the presence of conspicuous mold or observed water intrusion or accumulation. This evaluation did not include a review of pipe chases or areas behind enclosed walls and ceilings. MEI did not observe conspicuous visual or olfactory indications of the presence of mold, nor did MEI observe obvious indications of significant water damage inside the accessible areas of the Subject Property.

## 9.6 Wetlands

MEI reviewed available information regarding wetlands on the Subject Property, including National Wetlands Inventory online GIS mapping. MEI additionally made general site observations for readily observable potential wetland characteristics. MEI did not observe surface water bodies or any evidence of potential wetlands on or adjacent to the Subject Property.

## **10.0 FINDINGS, OPINIONS AND RECOMMENDATIONS**

MEI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. This assessment has identified no evidence of CRECs or HRECs in connection with the Subject Property. RECs regarding the possible presence of underground gasoline storage tanks and the former usage by a former gasoline station and automobile repair facility and carpet cleaning company was identified pertaining to the Subject Property.

The site reconnaissance, interviews and review of records have found the presence or possible presence of hazardous substances or petroleum related products in, on, or at the Subject Property due to any release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

The 1936 Sanborn map reviewed depicts three gasoline USTs on-site, including a one gasoline UST at the commercial building frontage, and two gasoline USTs depicted at the eastern parking area. In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950 and the commercial building in the middle of the Subject Property was utilized by a carpet cleaning company. The historical presence of gasoline USTs and a gasoline station on-site, as well as the historical industrial usage of the Subject Property by a carpet cleaning company is considered to be an REC. MEI recommends that a Phase II Environmental Site Assessment be conducted on the Subject Property in order to determine if any contamination from past tank leakage and improper chemical disposal has impacted the subsurface.

There were no conditions outside of ASTM E 1527-13 were identified in connection with the Subject Property.

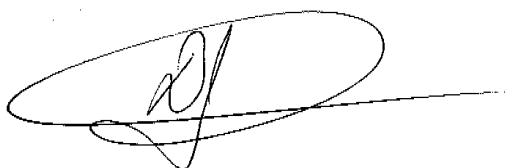

## **11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS**

This Phase I Environmental Site Assessment (ESA) Report documents the research methodology used by qualified environmental professionals of MEI to identify recognized environmental conditions using the scope and limitations of ASTM Standard E 1527-13.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 2.5 C. The project was identified as your project: **20-133-0572 29-05 38th Avenue RIR**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 20G0030**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

**Date:** 07/09/2020

Volatile Organics, 8260 - Comprehensive

Log-in Notes:

Sample Notes:

Sample Prepared by Method: EPA 5035A

Table with 12 columns: CAS No., Parameter, Result, Flag, Units, Reported to LOD/MDL, LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Includes rows for Trichloroethylene, Trichlorofluoromethane, Vinyl Chloride, Xylenes, Total, and Surrogate Recoveries.

Semi-Volatiles, 8270 - Comprehensive

Log-in Notes:

Sample Notes:

Sample Prepared by Method: EPA 3550C

Table with 12 columns: CAS No., Parameter, Result, Flag, Units, Reported to LOD/MDL, LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Includes rows for 1,1-Biphenyl, 1,2,4,5-Tetrachlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,2-Diphenylhydrazine, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2,3,4,6-Tetrachlorophenol, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, and 2,4-Dimethylphenol.

## Sample and Data Qualifiers Relating to This Work Order

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QC-LCS	LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-L	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased low.
CCV-H	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

### Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias ) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 3.3 C. The project was identified as your project: **20-133-0572 29-05 38th Avenue RIR**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 20G0027**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

**Date:** 07/09/2020

Semi-Volatiles, 8270 - Comprehensive

Log-in Notes:

Sample Notes: EXT-D

Sample Prepared by Method: EPA 3510C

Table with 12 columns: CAS No., Parameter, Result, Flag, Units, Reported to LOD/MDL, LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Rows include Surrogate: SURRE: 2-Fluorobiphenyl, Surrogate: SURRE: 2,4,6-Tribromophenol, and Surrogate: SURRE: Terphenyl-d14.

Pesticides, 8081 target list

Log-in Notes:

Sample Notes:

Sample Prepared by Method: EPA SW846-3510C Low Level

Table with 12 columns: CAS No., Parameter, Result, Flag, Units, Reported to LOQ, Dilution, Reference Method, Date/Time Prepared, Date/Time Analyzed, Analyst. Rows list various pesticides like 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, Aldrin, alpha-BHC, alpha-Chlordane, beta-BHC, Chlordane, total, delta-BHC, Dieldrin, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin aldehyde, Endrin ketone, and gamma-BHC (Lindane).

## Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QR-04	The RPD exceeded control limits for the LCS/LCSD QC.
QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QC-LCS	LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
CCV-L	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased low.
CCV-H	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

## Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

**High Bias** High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

**Non-Dir.** Non-dir. flag (Non-Directional Bias ) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of C. The project was identified as your project: **20-133-0572 29-05 38th Ave RIR**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 20G0068**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

## Sample and Data Qualifiers Relating to This Work Order

TO-VAC	The final vacuum in the canister was less than -2 inches Hg vacuum. The time integrated sampling may be affected and not reflect proper sampling over the time period. The data user should take note.
TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).

### Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 2.8 C. The project was identified as your project: **20-133-0572**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 20G0046**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

**Date:** 07/07/2020

## Sample and Data Qualifiers Relating to This Work Order

QM-01	The spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-H	The LCS recovery was slightly above acceptable limits for the qualified compound. However, sample results are not biased high because results are corrected for isotope recovery.
PF-CCV-H	The CCV recovery was slightly above acceptable limits for the qualified compound. However, sample results are not biased high because results are corrected for isotope recovery.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

### Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias ) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2020 with a temperature of 2.8 C. The project was identified as your project: **20-133-0572**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 20G0049**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

**Date:** 07/09/2020

## Sample and Data Qualifiers Relating to This Work Order

- PFSu-L The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

### Definitions and Other Explanations

- \* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
- ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
- RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
- LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
- LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
- MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
- Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
- NR Not reported
- RPD Relative Percent Difference
- Wet The data has been reported on an as-received (wet weight) basis
- Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- Non-Dir. Non-dir. flag (Non-Directional Bias ) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Appendix E  
Photographs

Overview of the western yard and parking area prior to sampling.

View of the geophysical survey being conducted prior to sampling.

View of a subgrade anomaly marked out during the geophysical survey.

View of a soil boring being advanced.

View of a soil sample being collected from a soil boring.

Overview of a soil boring.

View of a monitoring well being gauged prior to sampling.

View of a monitoring well.

View of a monitoring well being purged prior to sampling.

View of a soil vapor sampling point being installed.

View of a soil vapor point being sampled.

View of a monitoring well properly abandoned and covered with concrete.

View of a soil vapor sampling point being leak checked prior to sampling.

View of a soil vapor sampling point being purged prior to sampling.

**APPENDIX B**

**DATA SUMMARY FIGURES AND TABLES FROM  
JULY 2020 REMEDIAL INVESTIGATION REPORT**

SB-2				
Sample Depth	0' - 2'	12' - 14'	RR-SCOS	UU-SCOs

NOTES:  
Exceeds Unrestricted Use SCDs  
Exceeds Restricted Residential SCDs

Q is the Qualifier Column with definitions as follows:  
D=Result is from an analysis that required a dilution  
I=Analyte detected at or above the MCL (method detection limit) but below the RL (Reporting Limit) - data is estimated  
U=Analyte not detected at or above the level indicated  
B=Analyte found in the analysis batch blank  
E=Result is estimated and cannot be accurately reported due to levels encountered or interferences  
P=Pin flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis  
NT=This indicates the analyte was not a target for this sample  
~=This indicates that no regulatory limit has been established for this analyte

NOTES:  
Exceeds Unrestricted Use SCOs  
Exceeds Restricted Residential SCOs

Q is the Qualifier Column with definitions as follows:  
D= result is from an analysis that required a dilution  
J= analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated  
U= analyte not detected at or above the level indicated  
B= analyte found in the analysis batch blank  
E= result is estimated and cannot be accurately reported due to levels encountered or interferences  
P= this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis  
N= this indicates the analyte was not a target for this sample  
~= this indicates that no regulatory limit has been established for this analyte

**NOTES:**

Exceeds TOGS Class GA Standards

**Q is the Qualifier Column with definitions as follows:**

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~=this indicates that no regulatory limit has been established for this analyte

**NOTES:**

Q is the Qualifier Column with definitions as follows:

D=Result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=Result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~this indicates that no regulatory limit has been established for this analyte

**APPENDIX C**

**RESUMES OF KEY ATHENICA STAFF**

**Spiro Dongaris**, founder of Athenica Environmental Services Inc. (Athenica), is a Professional Engineer with over 30 years of extensive experience in Environmental Engineering, Industrial Hygiene, Phase I and Phase II Environmental Site Assessments (ESAs), remediation system design, and remediation and abatement projects. Mr. Dongaris has comprehensive knowledge of environmental regulations as they apply to the various projects that our company undertakes. Mr. Dongaris has designed and overseen a large number of environmental remediation and abatement projects throughout the New York metropolitan area. As the principal of Athenica, he is responsible for the overall quality of work for the firm and acts as the primary client contact for the firm's projects.

His professional experience includes performing Phase I ESAs at various commercial and industrial properties throughout the New York Metropolitan area and New Jersey in accordance with the current ASTM standard practice for Phase I ESAs. He also has received training and performed Phase I ESAs consistent with the United States Environmental Protection Agency (USEPA) "All Appropriate Inquiries Final Rule".

He has performed or managed numerous site assessments to characterize subsurface conditions utilizing conventional drill rig for installation of soil borings and permanent groundwater monitoring wells, direct-push unit for collection of soil, soil gas and groundwater samples and use of a membrane interface probe (MIP) for profiling the vertical extent of solvent-related soil and groundwater contamination, and geophysical surveying techniques for identifying buried utilities and underground storage tanks (USTs). His site assessment experience also includes sub-slab vapor, indoor air, and soil gas sampling to evaluate soil vapor intrusion in accordance with regulatory guidance documents in New York and New Jersey.

Mr. Dongaris has participated or managed comprehensive remedial investigations at inactive hazardous waste or Brownfield properties. He has prepared and overseen the implementation of detailed work plans for the investigation of inactive hazardous waste sites in New York and New Jersey. These remedial investigations included the identification and delineation of soil and/or groundwater impacted by the release of petroleum products, chlorinated solvents, and metals hydroxides, and typically required collection of soil, groundwater, and soil vapor samples in accordance with an approved Quality Assurance Project Plan (QAPP) and site-specific Health and Safety Plan. Based on careful review of remedial investigation findings and results, and proposed development plans for the property, he has prepared and submitted final reports to clients and regulatory agencies. He has managed over twenty projects in the New York City Voluntary Cleanup Program that resulted in the successful future development of these properties.

For both private and public clients, he has evaluated off-site disposal or beneficial use facilities for receipt of excavated materials as well as evaluated off-site sources for prospective imported fill material. Mr. Dongaris has prepared or reviewed detailed excavated material disposal plans for constructions projects of new public schools in New York City.

Mr. Dongaris has prepared and/or reviewed detailed demolition specifications that addressed potential hazardous building materials, including polychlorinated biphenyls (PCBs), lead-based paint (LBP), mercury, and asbestos-containing materials (ACMs). Preparation of the specifications included conducting surveys of buildings to identify and quantify these potential hazardous building materials within structures to be demolished or renovated.

Mr. Dongaris experience also includes the supervision of UST removal/closure and associated reporting; the supervision of the installation, operation and maintenance of various types of remedial systems (groundwater multi-phase extraction, soil-vapor extraction). He has prepared or reviewed final work plans, health & safety plans, and reports based on careful consideration of laboratory results, applicable cleanup standards or guidance values, and proposed plans for the property.

Mr. Dongaris also has extensive experience in cost estimating and bid negotiating, and oversees all aspects of the firm's work in these areas.

---

**Education**

Master of Engineering in Environmental Engineering,  
Stevens Institute of Technology, New Jersey, 1994

Bachelor of Engineering in Electrical Engineering,  
City College of New York, New York, 1986

**Technical Societies and Certifications**

Professional Engineer, Licensed in NY (095954)

American Society of Civil Engineers (M.ASCE)  
Association of Energy Engineers (A.E.E.)  
Subcontractors Trade Association  
American Industrial Hygiene Association (AIHA)  
Environmental & Water Resources Institute (EWRI)  
ASTM Technical and Professional Training,  
Environmental Site Assessments, Norfolk Virginia, 2007  
ASTM Technical and Professional Training,  
Phase II Site Assessment Process, Norfolk Virginia, 2007  
NYSDOL Certified Asbestos Designer, Management Planner,  
Inspector  
NYCDEP Licensed Asbestos Investigator

**Summary of Professional Experience**

1988 – Present  
Athenica Environmental Services, Inc., Queens, NY  
Principal and Founder

1985 - 1987,  
Central Jersey Coatings, Inc., Woodbridge, NJ  
Estimating Engineer/Project Manager

1986 - 1987  
East Coast Fireproofing, Inc., Old Bridge, NJ  
Consulting Engineer

**Relevant Experience**

**NYC, Five Boroughs – New York City School Construction Authority** – Since 1992, as principal in charge, Mr. Dongaris has negotiated and oversaw the successful completion of more than ten contracts with the NYCSCA totaling over thirty Million dollars. As principal in charge he has performed and oversaw the asbestos, lead, PCB and mold inspections, design and air monitoring during the multimillion dollar abatement of thousands of school projects. As a licensed Professional Engineer, he also prepared the Work Safety Plans to ensure compliance with current applicable NYCDEP regulations and the safety of tenants, workers and employees of the schools.

**Brooklyn, NY – Greenpoint Market Fire** – Project manager and principal-in-charge of a hazardous material spill response. For this project, Mr. Dongaris directed the firm's rapid response to a hazardous materials spill caused by a fire. Mr. Dongaris evaluated prior environmental reports to evaluate the potential hazardous materials released by the fire in order to determine the appropriate level of worker protection for the survey team. Mr. Dongaris assembled and managed a hazmat survey team to identify materials and chemicals of concern at the Site, provided daily report project management.

**Brooklyn, NY – North 7<sup>th</sup> Street LLC** – Lead engineering manager and principal-in-charge of a property with an E-Designation due to the potential presence of hazardous materials. In addition, an active petroleum spill case was assigned to the Site by the New York State Department of Environmental Conservation (NYSDEC). For this project, Mr. Dongaris oversaw the preparation of final work products and presented to the client, the NYCDEP, and the NYSDEC. The final work products included a focused site investigation work plan, site investigation report, spill closure report, remediation oversight and remedial action work plan.

**52-01 Queens Boulevard**– Private Developer – As Head of Athenica's Hazardous Materials Group for the investigation and remediation of a property with a "E" zoning designation for hazardous materials. Environmental consulting services were performed under New York City's Voluntary Cleanup Program overseen by the Mayor Office of Environmental Remediation (OER) and included participation in this agency's first clean soil bank program. This entailed completion of a Beneficial Re-use Application for placement of excavated native soil at a New York City public park that resulted in significant savings to both the developer and the City of New York. The project also required a supplemental groundwater investigation to determine the likely source of solvent-related contamination found in soil gas vapor and perched groundwater. The groundwater investigation consisted of installing groundwater monitoring wells to 90 feet below ground surface (bgs) by utilizing a sonic rig. Based on the findings of this supplemental groundwater investigation, OER and the New York State Department of Environmental Conservation (DEC) concluded that solvent-related contamination found at the Site originated from an off-site source and allowed for the future development of the Site and OER's removal of the "E" zoning designation for hazardous materials after the successful installation of the required engineering controls. For this project, Mr. Dongaris responsibilities included meeting with the client and regulatory agencies to establish the scope of required investigation or remediation, and the overall management of field activities, review of project deliverables, and obtaining available grant funding to the client. This project was awarded the 2015 Big Apple Brownfield Award for Sustainable Remediation by the New York City Brownfield Partnership.

**Former Tunnel Diner, Jersey City, New Jersey** – Several Private Developers – As Lead engineering manager, principal-in-charge and head of firm's remediation services Mr. Dongaris oversaw the preparation of a Preliminary Assessment (PA), Site Investigation (SI), and Remedial Investigation (RI) of a ½-acre property in accordance with the New Jersey Technical Requirements for Site Remediation (TRSR) document. Responsibilities included reviewing the final reports for each phase of investigation and overseeing field activities. Based on the findings and results of the final reports, a remedial action work plan (RAWP) was prepared that was reviewed and approved by the New Jersey Department of Environmental Protection (NJDEP). After NJDEP approval of the RAWP, Mr. Dongaris directed pilot tests at the Site to determine the appropriate design parameters for a groundwater remediation system and prepared a remedial action work plan (RAWP) and oversaw its implementation. Work included excavation of grease-contaminated soils, backfilling of the excavated area with clean fill, end-point soil sampling, and post-remediation groundwater sampling. Additional work also consisted of preparing a Groundwater Classification Exception Area (CEA) for the entire Site, and issuing a Remedial Action Outcome (RAO) for one of the AOCs at the Site. Additional remedial work consisted of excavating gasoline-impacted soils at and below the water table at the Site, discharging of an oxygen-releasing compound by Permit-by-Rule and backfilling excavated areas with clean fill or uncontaminated fill. Final deliverables prepared by Athenica included final Remedial Action Report, a Deed Notice, permits for soil and groundwater, and an updated CEA for

entire Site. Based on the documented remediation completed at the Site, the LSRP has committed to issuing a RAO for the entire Site after installation of the final Site covers.

**Brooklyn, New York**– Residential CO-OP – Lead engineering manager and principal-in-charge of the Hazardous Materials Group for investigation and mitigation of vapor intrusion at a residential property. Prior environmental due-diligence by others identified the likely presence of a former on-site dry cleaner. Environmental consulting services included a soil vapor intrusion (VI) study and design and implementation of a sub-slab depressurization system (SSDS). The VI study consisted of collecting representative samples of sub-slab vapor and indoor and outdoor air in accordance with applicable New York State guidance. Findings of the VI indicated that former dry cleaner compounds were present in both the sub-slab vapor and indoor air and that mitigation measures were warranted at the property. Mitigation measures consisted of designing and overseeing the installation of a SSDS system that prevents the migration of vapors into the basement of the building. After successful installation of the SSDS, the CO-OP obtained financing from the prospective lender.

**Various Properties, New York City**– Private Developers – Department Head of Athenica’s Hazardous Materials Group for the investigation and remediation of over 40 properties with a “E” zoning designation for hazardous materials. Environmental consulting services for these properties were provided under the City’s VCP program or “E” designation program and included characterization of subsurface conditions and remediation of soils, soil vapor, or groundwater as required. For these projects, his responsibilities included meeting with OER staff to determine the nature and scope of required work, managing field activities and report preparation, reviewing project deliverables, and maintaining project budgets and schedules.

**Brooklyn, New York** – Arnell Construction– Senior Environmental Project Manager for construction of a public school. The scope of work for the project included implementation of a site-specific Health & Safety Plan and Community Air Monitoring Plan (CAMP) relating to elevated concentrations of lead in soils being excavated for construction of a new school. His responsibilities for the project included the management of the overall project and overseeing the preparation of environmental plans and overseeing construction work for compliance with applicable regulations and NYCSCA specifications.

**Five Boroughs, New York** – Oversaw closure of petroleum USTs at various properties, reported petroleum spills to the NYSDEC, and prepared spill closure reports.

**Manhattan, NY – New Yorker Hotel** - As principal in charge, Mr. Dongaris performed and oversaw the asbestos inspection, design and air monitoring during the multimillion dollar renovation of the Hotel. As the Engineer for the abatement project, he also prepared the Work Safety Plans to ensure compliance with current applicable NYCDEP regulations and the safety of tenants, workers and employees of the Hotel. He also assisted the Hotel Management in negotiating with the Local Union of Hotel employees in the preparation and implementation of standard operating procedures for the disturbance of asbestos, lead and.

Brooklyn, NY – Greenpoint Market Fire – Project manager and principal-in-charge of a hazardous material spill response. For this project, Mr. Dongaris directed the firm’s rapid response to a hazardous materials spill caused by a fire. Mr. Dongaris evaluated prior environmental reports to evaluate the potential hazardous materials released by the fire in order to determine the appropriate level of worker protection for the survey team. Mr. Dongaris assembled and managed a hazmat survey team to identify materials and chemicals of concern at the Site, provided daily report project management.

**USEPA/NYCDEP Ground Zero, New York, NY** - As principal in charge, oversaw the cleanup and decontamination of over 1200 apartments in the vicinity of the World Trade Center after the 9/11 terrorist attacks. In addition, investigated and oversaw the cleanup of the heating, ventilation, air conditioning (HVAC) systems in over 100 buildings.

**Kenneth Wenz, Jr.** is a senior project manager and geologist with more than 34 years of wide-ranging experience in the environmental field, comprising both consulting and regulatory positions. His experience has included designing, implementing, and managing a wide range of environmental investigation and remediation programs for sites in New York, New Jersey, Connecticut, Pennsylvania, Vermont, Illinois, and California. He has conducted and managed all phases of environmental assessment and remediation projects, including due diligence/Phase I site assessments, Phase II/III investigations, and remediation/OM&M projects, ranging from individual residential properties to regional projects encompassing multiple properties. Mr. Wenz has substantial experience with projects involving regulatory involvement and oversight, including state and federal Superfund, Brownfield, and Voluntary Cleanup programs. He is a Licensed Professional Geologist in New York, a Registered Professional Geologist in Pennsylvania, a Licensed Environmental Professional in Connecticut, and a Certified Professional Geologist.

### Education

Bachelor of Arts, Colgate University, Hamilton, NY, 1983  
Master of Science, University of Massachusetts, Amherst, MA  
1988

### Licenses and Certifications

New York State Professional Geologist, License No. 000096  
Connecticut Licensed Environmental Professional, No. 408  
Pennsylvania Registered Professional Geologist, No. PG-  
001273-G  
Certified Professional Geologist (American Institute of  
Professional Geologists), No. C.P.G. 8934  
OSHA HAZWOPER-certified  
OSHA 30-hour Construction Safety and Health-certified

### Summary of Professional Experience

July 2018 to Present  
Senior Project Manager  
Athenica Environmental Services, Inc., Queens, NY

May 2016 to July 2018  
Senior Project Manager  
Laurel Environmental Associates, Ltd., Huntington Station, NY

April 2011 to May 2016  
Senior Project Manager/Senior Geologist  
Genesis Engineering & Redevelopment, Inc., Commack, NY

March 2007 to October 2010  
Senior Project Manager/Senior Geologist  
Holzmacher, McLendon & Murrell PC, Melville, NY

September 1997 to March 2007  
Senior Associate  
Dvirka & Bartilucci Consulting Engineers, Woodbury, NY

July 1989 to July 1997  
Senior Project Hydrogeologist  
ERM-Northeast, Woodbury, NY

April 1987 to July 1989  
Geologist  
U.S. Environmental Protection Agency, New York, NY

### Selected Relevant Experience

#### Phase I Environmental Site Assessments

Prepared and/or served as Project Manager for more than 1,000 Phase I Environmental Site Assessments (ESAs), for numerous private and government clients, at sites ranging from single parcels to regional areas encompassing multiple properties. Phase I ESAs were prepared in accordance with applicable ASTM and AAI standards, for due diligence associated with property transfers and/or to meet regulatory requirements, at properties throughout New York City, Nassau County, Suffolk County, Westchester County, Rockland County, and New Jersey.

#### Community Air Monitoring Program (CAMP) Implementation at Various Sites

Responsibilities include preparation and review of CAMP plans for numerous Sites throughout New York City and the surrounding area, implementation of CAMP plans, management of field staff for CAMP plan implementation, review of CAMP data, and preparation and review of reports documenting CAMP monitoring results, findings, and any

actions taken in response to identified exceedances of specified action levels. In accordance with regulatory requirements, plans were developed for all NYCOER, Superfund, and Brownfield Program Sites described below, as well as for other projects where third-party, independent monitoring was required. Plans are prepared based on New York State and/or local CAMP guidance, as well as Client-specific and Site-specific requirements, and specify monitoring parameters, frequencies, action levels, steps to be implemented if action levels are exceeded, and reporting requirements. Required monitoring typically included levels of volatile organic compounds (VOCs) and/or particulates, with additional parameters (e.g., hydrogen sulfide, methane, etc.) incorporated as needed based on Site conditions or potential contaminants of concern.

#### Private Developer, Long Island City, NY

Project Manager for NYCOER investigation and remediation program at an E-designated property on 29<sup>th</sup> Street, being redeveloped for mixed commercial and residential use. Responsibilities include review of Phase I ESA, scoping of remedial investigation, work plan preparation, coordination of

sampling, management of field staff and subcontractors, review and assessment of investigation sample data, assessment of areas where remediation is warranted, preparation and review of investigation report, development of remediation plan in conjunction with the Site's redevelopment plans, management of field staff and subcontractors during remedial construction, preparation and review of remediation report, and regulatory coordination.

**Private Developer, Long Island City, NY**

Project Manager for NYCOER investigation and remediation program at an E-designated property on 38<sup>th</sup> Avenue, which was subsequently entered into the New York State Brownfield Cleanup Program (BCP). The Site is being redeveloped for mixed commercial and residential (with an affordable housing component) uses. Responsibilities for the initial investigative phase (with NYCOER oversight) include review of previous Phase I ESA, scoping of remedial investigation, work plan preparation, coordination of sampling, management of field staff and subcontractors, review and assessment of investigation sample data, assessment of areas where remediation is warranted, preparation and review of investigation report, and coordination with NYCOER. Following transfer of the Site into the BCP, responsibilities include coordination with NYSDEC technical and legal staff, preparation of BCP application, remedial investigation scoping, preparation of remedial investigation work plan and citizen participation plan, management of field staff and subcontractors, and review and assessment of investigation sample data.

**Disinfection Projects at Various NYCSCA Sites within New York City**

Project Manager and technical lead for NYCSCA projects documenting proper disinfection of newly-installed piping and plumbing fixtures at numerous New York City schools and municipal facilities. Responsibilities include coordination with NYCSCA personnel and contractors, review of disinfection plans from contractors for compliance with project specifications and NYCSCA requirements, pre-disinfection meetings to coordinate project activities and schedules, management of field staff providing oversight of disinfection and verification sampling activities, preparation and review of lead sampling plans (as required), review of sample data, and preparation and review of reports documenting disinfection and lead testing programs.

**Private Developer, Long Island City, NY**

Project Manager for NYCOER investigation and remediation program at an E-designated property on Crescent Street, being redeveloped for mixed commercial and residential (with an affordable housing component) use. Responsibilities include preparation and review of Phase I ESA, scoping of remedial investigation, work plan preparation, coordination of sampling and closure of a previously-unknown underground fuel oil tank, management of field staff and subcontractors, review and assessment of investigation sample data, assessment of areas where remediation is warranted, preparation and review of investigation report, development of remediation plan in conjunction with the Site's redevelopment plan, management of field staff and subcontractors during remedial construction, preparation and review of remediation report, and regulatory coordination.

**Private Developer, Long Island City, NY**

Project Manager for NYCOER remediation program at an E-designated property on 40<sup>th</sup> Avenue, being redeveloped for mixed commercial and residential use. Responsibilities include preparation and review of Phase I ESA, review of historic sample data, scoping of the remedial investigation, work plan preparation, coordination of sampling, management of field staff and subcontractors, review and assessment of investigation sample data, assessment of areas where remediation is warranted, preparation and review of investigation report, development of remediation plan in conjunction with the Site's redevelopment plans, and regulatory coordination.

**Private Developer, Brooklyn, NY**

Project Manager for NYCOER remediation program at an E-designated property on North 5<sup>th</sup> Street, being redeveloped for commercial use. Responsibilities include review of previous Phase I ESA, scoping of the remedial investigation, work plan preparation, coordination of sampling, management of field staff and subcontractors, development and management of follow-up sampling program to delineate identified "hot spot" of contamination and assess potential off-Site impacts, review and assessment of investigation sample data, assessment of areas where remediation is warranted, preparation and review of investigation report, development of remediation plan in conjunction with the Site's redevelopment plans, and regulatory coordination.

**Dry Cleaner, Long Island City, New York**

Project Manager for site investigation at a dry cleaning plant, both before and after a major fire. Responsibilities included development and implementation of pre-fire multi-phase investigation programs, including preparation of work plans, sample collection, data assessment and interpretation, report preparation, development of remediation plans, and coordination with regulatory personnel. Project Manager for post-fire investigation and remediation program, including work plan preparation (with sampling and analysis of soil and groundwater samples for emerging contaminants), coordination of sampling, data assessment, reporting, preparation of remediation documents, and coordination with regulatory personnel.

**Due Diligence Projects at Various NYCSCA Sites within New York City**

Project Manager and technical lead for NYCSCA due diligence projects for numerous potential school Sites throughout New York City. Responsibilities include coordination with NYCSCA personnel and contractors, review of available historic documents and environmental reports, Site inspections, preparation and review of Phase I ESAs and findings memoranda, development of work scopes for sampling programs, management of field staff during sampling activities, review of sample data, and preparation and review of reports documenting sampling programs.

**Private Developer, Long Island City, NY**

Project Manager for NYCOER remediation program at an E-designated property on 29<sup>th</sup> Street, being redeveloped for

mixed commercial and residential use. Responsibilities include scoping of the remedial investigation, work plan preparation, coordination of sampling, management of field staff and subcontractors, review and assessment of investigation sample data, assessment of areas where remediation is warranted, preparation and review of investigation report, development of remediation plan in conjunction with the Site's redevelopment plans, and regulatory coordination.

**Private Developer, Brooklyn, New York**

Project Manager for NYCOER remediation program at a former industrial facility on 6<sup>th</sup> Street, undergoing redevelopment. Responsibilities include review and assessment of historic sample data, scoping and management of follow-up sampling program to fine-tune delineation of hazardous waste areas and provide additional waste characterization data, data assessment, management of field staff and subcontractors, coordination for disposal of hazardous and non-hazardous soil, review of technical reports, and regulatory coordination.

**Private Developer, Long Island City, NY**

Project Manager for NYCOER remediation program at an E-designated property on 31<sup>st</sup> Street, being redeveloped for mixed commercial and residential use. Responsibilities include coordination of remedial action inspections, management of field staff, review and assessment of investigation sample data, preparation and review of technical reports, and regulatory coordination.

**Preparation of Excavated Materials Disposal Plans (EMDPs) and Waste Characterization Submittals, Various NYCSCA Sites within New York City, for Various NYCSCA Contractors**

Prepared and/or served as Project Manager for preparation of EMDPs for NYCSCA projects at schools in Brooklyn, Queens, the Bronx, and Staten Island. Each EMDP includes review of site-specific construction documents, determination of limits and depth of excavation, volume calculations, identification and vetting of waste transporters and disposal facilities, development of a waste characterization sampling plan in conformance with NYCSCA and disposal facility requirements, and quality assurance/quality control procedures for the excavation program. After completion of the field portion of the EMDP, the sample data are reviewed and incorporated into a Waste Characterization submittal, which documents the sample procedures, provides the analytical data, and includes an assessment regarding appropriate disposal for the excavated material.

**Implementation of EMDPs, Various NYCSCA Sites within New York City, for Various NYCSCA Contractors**

Project Manager for implementation of EMDPs for NYCSCA projects at schools in Brooklyn, Queens, the Bronx, and Staten Island. Implementation of each EMDP includes collection and laboratory analysis of waste characterization samples in accordance with the approved EMDP, as well as, in select cases, geophysical surveys of the areas to be excavated and coordination with the waste transporters and disposal facilities during the excavation program.

**Private Developer, Long Island City, NY**

Project Manager for NYCOER soil remediation program at an

E-designated property on 38<sup>th</sup> Avenue that is being redeveloped for residential use. Responsibilities include coordination of remedial action inspections, management of field staff, review and assessment of post-remediation sample data, preparation and review of technical reports, and regulatory coordination.

**Private Developer, Long Island City, NY**

Project Manager for testing program to address a NYC E-designation for noise for a parcel on 31<sup>st</sup> Street. Responsibilities include development of scope of work for noise testing program to confirm adequate attenuation from installed windows and doors, data assessment, review of technical reports, and regulatory coordination.

**Former Automotive Repair Facility, Woodside, NY**

Project Manager for petroleum spill remediation/closure program at a former automotive repair facility. Responsibilities include coordination of quarterly well gauging and semi-annual groundwater sampling events, assessment and interpretation of data, preparation and review of technical reports, identification and evaluation of alternative remediation technologies, and coordination with regulatory personnel and stakeholders.

**Former Gasoline Station and Pine Tar Manufacturer, Jersey City, NJ**

Project Manager for closure of a long-term remediation program. Responsibilities include assessment of historic data, scoping of additional sampling programs to address regulatory concerns and outstanding issues, preparation of documents in support of establishing a groundwater Classification Exception Area, and coordination with Licensed Site Remediation Professional and regulatory personnel.

**Active Military Installation, Upstate New York**

Project Manager for petroleum storage tank testing program, for aboveground fuel oil storage tanks associated with emergency generators. Responsibilities include project scoping in conjunction with NYSDEC tank testing requirements, development of testing protocol/work plan and health and safety plan for testing program, management of subcontractors, data review, and preparation of report documenting the successful testing of each tank for submittal to the NYSDEC.

**Private Dry Cleaner, Englewood, New Jersey**

Project Manager for site investigation at an active dry cleaner. Responsibilities included development and implementation of multi-phase investigation program, including preparation of work plans and receptor evaluation documents, sample collection, data assessment and interpretation, report preparation, development of remediation plans, and coordination with regulatory personnel, legal counsel, and stakeholders.

**Private Developer, Brooklyn, New York**

Project Manager for New York State Brownfield site characterization and remedial design program at a vacant industrial facility. Responsibilities include review and assessment of historic sample data, project scoping, work plan and budget preparation, management of field staff, data

evaluation, assessment of required remediation, preparation and review of technical reports, and regulatory and stakeholder coordination.

**Private Developer, Westhampton, NY**

Project Manager for environmental due diligence program for redevelopment of a 53-acre portion of a military airbase and airport. Responsibilities included project scoping, preparation of Phase I ESA comprising approximately 20 existing buildings, review of historic documents, oversight of investigation and remediation activities conducted by the current property owner, management of field personnel and subcontractors, data evaluation, budget development/management, reporting, and negotiations and coordination with regulatory personnel and stakeholders.

**Liberty Industrial Superfund Site, Farmingdale, NY**

Project Manager for large-scale soil quality investigation in support of planned acquisition of a portion of the property by the Town of Oyster Bay. Responsibilities include project design and scoping, preparation and implementation of work plan, management of field personnel and subcontractors, technical review of reports, regulation and data interpretation, assessment of need for additional remediation based on planned reuse, report preparation, budget development and management, coordination with USEPA personnel and stakeholders, and presentations at meetings.

**Former Fashion Cleaners Superfund Site, Long Beach, NY**

Project Manager for NYSDEC RI/FS program at a former dry cleaner. Responsibilities included project scoping, data interpretation, preparation of technical reports, determination of areas where remediation is required, identification and assessment of potential remediation alternatives, monitoring and reporting for on-going Interim Remedial Measures, scoping and coordination of supplemental sampling for emerging contaminants, data assessment, and coordination with regulatory personnel, legal counsel, and stakeholders.

**Former Parkway Hospital, Forest Hills, NY**

Project Manager for NYCOER investigation/remediation program. Responsibilities included scoping of remedial investigation and UST removal programs, UST removal oversight, management of field personnel and subcontractors, data interpretation, spill closure documentation, report preparation and review, development of remediation plan, preparation of grant applications, and coordination with regulatory personnel.

**Brownfield Site Assessments, Various Sites in New York City, Nassau County, Suffolk County, and Westchester County, NY**

Project Manager for Brownfield site characterization and remedial design programs at approximately 30 Brownfield sites, mostly conducted using state and federal grant funds. For each site, responsibilities included review and assessment of historic sample data (where available), project scoping, work plan and budget preparation, sample collection and/or management of field staff and subcontractors, data evaluation, assessment of areas where remediation would be warranted, development of remediation plans, preparation and review of technical reports, preparation and implementation of remedial action plans (in some cases), and coordination with regulatory personnel, government agencies, legal counsel, and stakeholders.

**Various New York State Superfund Sites throughout New York State**

Assistant Program Manager and Project Manager for New York State Superfund investigation (preliminary site assessment, remedial investigation, supplemental investigation) and remediation (feasibility study, remedial design, remedial construction oversight) projects at more than 160 individual sites located throughout New York State, under a long-term Superfund Standby contract with the NYSDEC. For each site, responsibilities included review and assessment of previous sample data (where available); development of an investigation/remedial scope of work, work plan and budget; sample collection and/or management of field staff and subcontractors; data evaluation; assessment of areas where remediation would be warranted; development and implementation of remediation plans; preparation and review of technical reports; and coordination with regulatory personnel, government agencies, legal counsel, and stakeholders.

**William Silveri's** experience includes Phase I Environmental Site Assessment (Phase I ESAs), Phase II Site Assessments (Phase II ESAs), comprehensive remedial investigations, industrial hygiene related work, and oversight of remediation projects. William Silveri will serve as the Quality Control Officer for this contract. Mr. Silveri has nearly 30 years of experience in the environmental consulting field, and is a Licensed Professional Geologist in New York and a Certified Hazardous Materials Manager. He has managed and conducted numerous environmental investigations and remediation projects in the New York City area, which has included substantial experience in report preparation, data review and assessment, and technical review of project deliverables (reports, specifications, etc.) prepared by others. As Quality Control officer, he will be responsible for detailed technical review and evaluation of laboratory data, as well as providing quality control review of project deliverables, to ensure that all work plans, reports, specifications, etc. meet the quality and technical standards of Athenica and the NYCSCA, and will complete NYCSCA quality control checklists (where applicable). Mr. Silveri will report to the Program Director.

### Education

Bachelor of Science (BS) Geology, Allegheny  
Bachelor of Arts in Writing, University of Colorado at Denver  
Master of Science in Geology, Brooklyn College

March 2008 to January 2016  
Director of Hazardous Materials Group  
Athenica Environmental Services, Inc., Queens, NY

### Technical Societies and Certifications

American Institute of Professional Geologist (CPG-11150)  
Certified Hazardous Materials Manager (CHMM 15637)  
OSHA 29 CFR 1910.120 Hazwoper Training

March 2000 to March 2008  
Senior Project manager  
TRC Environmental Corporation, New York NY

### Summary of Professional Experience

September 2017 – Present  
Quality Assurance/Quality Control  
Athenica Environmental Services, Inc.

January 1993 to March 2000  
Technical Director  
AKRF, Inc. New York, NY

September 2017 – Present  
Principal  
William Silveri, LLC, Manhattan, New York

September 1990 to December 1993  
Field Geologist/Proposal Coordinator  
Testwell Craig, Ossining, New York

January 2016 – September 2017  
Director of New York City Hazardous Materials Group  
WCD Group, Manhattan, New York

September 1998 to September 1990  
Quality Assurance/Quality Control Office  
ATC Environmental, Inc., New York, NY

### Relevant Experience Brooklyn, New York

Arnell Construction – Senior Environmental Project Manager for construction of a public school. The scope of work for the project included implementation of a site-specific Health & Safety Plan and Community Air Monitoring Plan (CAMP) relating to elevated concentrations of lead and soils being excavated for construction of a new school. His responsibilities for the project included preparing environmental plans and overseeing construction work for compliance with applicable regulations and construction specifications.

contamination that exists on and off the Site, evaluate the risk of CFC contamination to potential receptors, and provide sufficient data to evaluate and appropriate remedies for the contamination. The scope of the RI included the installation of shallow and deep groundwater wells in the unconsolidated aquifer, installation of soil gas monitoring probes, and collection and analysis of soil, groundwater, and soil gas samples. His responsibilities for RI included preparing RI work plan reviewed and approved by the New York State Department of Environmental Conservation (NYSDEC), overseeing field activities, and preparing the final report.

### Long Island City, New York

Private Developer – Senior Project Manager for Phase I and Phase II ESAs, in preparation and implementation of remediation for a property with an "E" zoning designation for hazardous materials. Responsibilities include preparing investigation and remediation of work plans reviewed and approved by the New York City Department of Environmental Protection (NYCDEP), overseeing field work, and preparing a final Phase II ESA report documenting subsurface conditions to the satisfaction of the NYCDEP.

### First Avenue Properties, New York

Consolidated Edison of New York (Con-Ed) – Task leader for preparation of a remedial action work plans (RAWPs) for a 9-acre former power plant located in Manhattan. Responsibilities included preparing a detailed remediation work plan for each of the four properties comprising the Site and assisted efforts in evaluating the risk posed by remaining contaminants. The RAWPs were prepared and submitted to the New York State Department of Environmental Conservation (NYSDEC) within the Voluntary Cleanup Program (VCP), which were reviewed and approved by the NYSDEC and New York State Department of Health (NYSDOH). The scope of remediation for the project included excavation and off-site disposal of contaminated soils, groundwater remediation via source removal and application of an oxygen releasing compound, and decommissioning and

### Queens, New York

Long Island Rail Road (LIRR) – Senior Project Manager for a groundwater remedial investigation (RI) of the Morris Park Yards in Queens, New York. The overall objective of the RI was to investigate and delineate the extent of chlorofluorocarbon (CFC)

removal of petroleum USTs.

**Queens West Development Site, New York**

Confidential Client – Task Leader for preparation of investigation and remedial work plans and oversight of field activities, including installation of soil borings and groundwater monitoring wells, sediment sampling, excavation of test pits, advancement of direct-push boings for use of a membrane interface probe in a suspected area of solvent-related soil and groundwater contamination, and well gauging of groundwater monitoring wells over a tidal cycle. For this project, he also prepared an interim remedial measures (IRM) that consisted of removing petroleum USTs and excavating localized areas of petroleum-impacted soils (i.e. “hot spots”).

**Former Tunnel Diner, Jersey City, New Jersey**

Tunnel Realty LLC – Senior Project Manager for a Preliminary Assessment (PA), Site Investigation (SI), and Remedial Investigation (RI) of a ½ -acre property in accordance with the New Jersey Technical Requirements for Site Remediation (TRSR) document. Responsibilities included preparing final reports for each phase of investigation and overseeing field activities. Based on the findings and results of the final reports, Mr. Silveri prepared a remedial action work plan (RAWP) that was reviewed and approved by the New Jersey Department of Environmental Protection (NJDEP). After NJDEP approval of the RAWP, Mr. Silveri directed pilot tests at the Site to determine the appropriate design parameters for a groundwater remediation system.

**Queens, New York**

New York City Economics Development Agency – Senior Project Manager for the remedial investigation of a 30-acre waterfront property. Responsibilities included preparing investigation work plan reviewed and approved by the New York City Department of Environmental Protection (NYCDEP), preparing preliminary and final cost estimates for remediation, overseeing field work, attending meetings, and reviewing of final report. In addition, Mr. Silveri completed a Phase I Environmental Site Assessment of the property.

**APPENDIX D**

**SITE-SPECIFIC HEALTH AND SAFETY PLAN**

# HEALTH AND SAFETY PLAN

<b>Site Name:</b> 29-05 38th Avenue	<b>Site Contact:</b> Kenneth P. Wenz, Jr.	<b>Telephone:</b> 631-742-0638												
<b>Location:</b> 29-05 38th Avenue, Long Island City, NY	<b>Client Contact:</b> FH 2BRO Builder Corp.	<b>Telephone:</b>												
<b>EPA I.D. No.:</b> N/A	<b>Prepared By:</b> Kenneth P. Wenz, Jr., PG	<b>Date:</b> June 21, 2021												
<b>DEC Site No.</b> C241250	<b>Anticipated Date of Proposed Activities:</b> August to October 2021													
<b>Objectives:</b> Establish Health & Safety Procedures for Investigation of subsurface conditions at the Site.	<b>Site Type:</b> <i>Check as many as applicable.</i> <table style="width: 100%; border: none;"> <tr> <td><input type="checkbox"/> Active</td> <td><input type="checkbox"/> Confined space</td> <td><input type="checkbox"/> Well field</td> </tr> <tr> <td><input checked="" type="checkbox"/> Inactive</td> <td><input type="checkbox"/> Landfill</td> <td><input type="checkbox"/> Unknown</td> </tr> <tr> <td><input checked="" type="checkbox"/> Secure</td> <td><input type="checkbox"/> Uncontrolled</td> <td><input type="checkbox"/> Underground storage tank</td> </tr> <tr> <td><input type="checkbox"/> Unsecure</td> <td><input checked="" type="checkbox"/> Industrial</td> <td><input checked="" type="checkbox"/> Other (<i>specify</i>) <u>Residential</u></td> </tr> </table>		<input type="checkbox"/> Active	<input type="checkbox"/> Confined space	<input type="checkbox"/> Well field	<input checked="" type="checkbox"/> Inactive	<input type="checkbox"/> Landfill	<input type="checkbox"/> Unknown	<input checked="" type="checkbox"/> Secure	<input type="checkbox"/> Uncontrolled	<input type="checkbox"/> Underground storage tank	<input type="checkbox"/> Unsecure	<input checked="" type="checkbox"/> Industrial	<input checked="" type="checkbox"/> Other ( <i>specify</i> ) <u>Residential</u>
<input type="checkbox"/> Active	<input type="checkbox"/> Confined space	<input type="checkbox"/> Well field												
<input checked="" type="checkbox"/> Inactive	<input type="checkbox"/> Landfill	<input type="checkbox"/> Unknown												
<input checked="" type="checkbox"/> Secure	<input type="checkbox"/> Uncontrolled	<input type="checkbox"/> Underground storage tank												
<input type="checkbox"/> Unsecure	<input checked="" type="checkbox"/> Industrial	<input checked="" type="checkbox"/> Other ( <i>specify</i> ) <u>Residential</u>												
<b>Site Description and History:</b>  The property is located at 29-05 38th Avenue in Long Island City, Queens, NY, and consists of one lot that is 10,600 square feet in area (Site). The Site currently maintains a 2-story residential building with a basement, a 1-story residential building with a basement, and a paved parking area. A previously-existing 1.5-story warehouse building with a partial basement, a 1-story vacant commercial building (former gasoline station), and paved parking area were demolished in early 2021. The legal description for the Site is Tax Block 371, Lot 38 in the borough of Queens.  A Remedial Investigation will be conducted to evaluate soil, groundwater, and soil vapor conditions at the Site. Based on the findings of the subsurface investigation, appropriate remediation action, if any, will be implemented to allow for the future development of the Site.														

Note: A site map is provided on Page 9 of 12. Definitions and additional information about this form are provided on Page 11 of 11.

# HEALTH AND SAFETY PLAN

**Waste Management Practices:**

No significant amounts of wastes are anticipated to be generated by the subsurface investigation. Any excess soils that cannot be returned to the soil boring will be drummed and disposed at an appropriate off-site facility.

**Waste Types:**       Liquid       Solid       Sludge       Gas       Unknown (none anticipated)

**Waste Characteristics:**

<input type="checkbox"/> Corrosive	<input type="checkbox"/> Flammable	<input type="checkbox"/> Radioactive
<input type="checkbox"/> Toxic	<input type="checkbox"/> Volatile	<input checked="" type="checkbox"/> Unknown
<input type="checkbox"/> Inert	<input type="checkbox"/> Reactive	<input type="checkbox"/> Other ( <i>specify</i> ) _____
<input type="checkbox"/> Ignitable		

**Hazards of Concern:**

<input checked="" type="checkbox"/> Heat stress <input checked="" type="checkbox"/> Cold stress <input type="checkbox"/> Explosion or fire hazard <input type="checkbox"/> Oxygen deficiency <input checked="" type="checkbox"/> Pinch, cut, smash <input checked="" type="checkbox"/> Slips, trips, and falls <input type="checkbox"/> Lifting and material handling	<input checked="" type="checkbox"/> Buried utilities <input type="checkbox"/> Overhead utilities <input type="checkbox"/> Biological hazard <input checked="" type="checkbox"/> Noise <input type="checkbox"/> Inorganic chemicals <input type="checkbox"/> Organic chemicals <input checked="" type="checkbox"/> Heavy equipment <input type="checkbox"/> Other ( <i>specify</i> ) _ _____
---	--

**Explosion or Fire Potential:**       High       Medium       Low       Unknown

## HEALTH AND SAFETY PLAN

<b>Chemical Products to be used or stored On Site:</b> (Attach a Material Safety Data Sheet [MSDS] for each item.)							
<input type="checkbox"/> Alconox® or Liquinox® <input type="checkbox"/> Hydrochloric acid (HCl) <input type="checkbox"/> Nitric Acid (HNO <sub>3</sub> ) <input type="checkbox"/> Other ( <i>specify</i> ) _____ <input type="checkbox"/> Other ( <i>specify</i> ) _____							
<b>Potential Chemical Hazards:</b> No chemical hazards are anticipated, but the following compounds associated with historic fill is likely to be present:							
COMPOUND	CAS #	NIOSH REL	OSHA PEL	ROUTE OF EXPOSURE	SYMPTOMS OF EXPOSURE	TARGET ORGANS	PHYSICAL DATA
Tetrachloroethene	127-18-4	---	678 mg/m <sup>3</sup> (100 ppm)	Inhalation, Skin contact	Irritation to eyes, skin, nose, throat, and respiratory system; nausea; dizziness; drowsiness	Eyes, skin, respiratory, CNS, liver, kidneys	Colorless liquid with mild chloroform-like odor
Trichloroethene	79-01-6	---	537 mg/m <sup>3</sup> (100 ppm)	Inhalation, Skin contact	Irritation to eyes, skin, nose, throat, and respiratory system; nausea; dizziness; drowsiness	Eyes, skin, respiratory, heart, liver, kidneys	Colorless liquid with chloroform-like odor (may be dyed blue)
Polyaromatic Hydrocarbons (PAHs) as Coal-Tar Pitch Volatiles	65996-93-2	0.2 mg/m <sup>3</sup>	0.2 mg/m <sup>3</sup>	Inhalation Skin contact	Irritant to eyes, swelling, acne contact dermatitis, chronic bronchitis	Respiratory, CNS, liver, kidneys, skin, bladder	Colorless/pale green, solid, faint aromatic odor
<b>Abbreviations</b>							
C = ceiling limit, not to be exceeded				LEL = Lower explosive limit			
CNS = Central Nervous System				mm = millimeter			
CVS = Cardiovascular System				ppm = parts per million			
eV = electron volt				Skin = significant route of exposure			
FP = Flash point				STEL = Short-term exposure limit (15 minutes)			
IP = Ionization Potential				TWA = Time-weighted average (8 hours)			
GI = Gastrointestinal				UEL = Upper explosive limit			
				VP = vapor pressure @ approximately 68° F in mm Hg (mercury)			

## HEALTH AND SAFETY PLAN

<b>Activity Hazard Analysis:</b>		
<b>Analysis Approved by:</b> Kenneth P. Wenz, Jr., PG		<b>Date:</b> June 2021
TASKS	POTENTIAL HAZARDS (Task)	PROTECTIVE MEASURES/CONTROLS
1. Mobilization/demobilization 2. Installation of soil borings 3. Installation of temporary wells 4. Installation of temporary soil vapor implants	1. Slips/Trips/Falls (1,2)	1. Maintain work areas safe and orderly; Unloading areas should be on even terrain; Exercise caution when on uneven or slippery ground.
	2. Contact with Utilities (2)	2. For boring, temporary well, and soil vapor implant locations be sure to verify overhead hazards before beginning; maintain a minimum distance of 10 ft. from overhead utilities (consider equipment extensions); Verify One-Call or DigSafe clearance for underground utilities before excavation; Do not excavate within buffer zone (18" as required by state regulations).
	3. Hand Tools (2)	3. Daily inspections will be performed by the user; Remove broken or damaged tools from service; Use the tool for its intended purpose; Use in accordance with manufacturer's instructions.
	4. Material Handling/Lifting (1,2)	4. Use proper lifting techniques; Use team lifting for heavy objects; Avoid twisting with a load
	5. Cold Stress (1,2)	5. SSO will train personnel of signs/symptoms of cold stress and monitor air temperatures when extreme weather conditions are present; Use work/rest regimens when needed.
	6. Inclement Weather (1,2)	6. Monitor weather conditions daily.
	7. Noise (2)	7. Hearing protection will be worn with a noise reduction rating capable of maintaining personal exposure below 85 dBA (ear muffs or plugs); SSC will determine the need for hearing protection; All equipment will be equipped with manufacturer's required mufflers.
	8. Chemical Hazards (2)	8. Wear equipment per PPE Table on page 5; Practice contamination avoidance; Follow good personal hygiene practices; SSC will conduct hazard communication training for decontamination and sample preservation chemicals.

# HEALTH AND SAFETY PLAN

**Personal Protective Equipment:**

The personal protective equipment (PPE) specified here represents the hazard analysis and PPE selection required by 29 CFR 1910.132. The signatures on the approval page of the EHS Plan constitute certification of the hazard assessment. Modifications for the PPE selection may be made by the SSC in consultation with the HSR.

TASK	HEAD	EYE/FACE	FEET	HANDS	BODY	HEARING	RESPIRATOR
Mobilization/Demobilization	HH	SG	STB	LWG as needed	WC	None	None
Installation of borings, temporary wells, soil vapor implants	HH	SG	STB +OB as needed	Sur	WC + Tyvek as needed	EP as needed	None approved, see comments on page 7

BODY PROTECTION

WC = Work clothes  
 Poly = Polyethylene-coated Tyvek® coveralls

EYE/FACE PROTECTION

APR = Full Face Air Purifying Respirator  
 SG = ANSI approved safety glasses with side shields

FOOT PROTECTION

OB = Overboot  
 STB = Leather work boots with steel toe

RESPIRATORY PROTECTION

APR = Full-face air purifying respirator

HAND PROTECTION

LWG = Leather Work Gloves  
 Nit = Nitrile  
 Sur = Surgical

HEAD PROTECTION

HH = Hard Hat

HEARING PROTECTION

EP = Ear plugs  
 EM = Ear muffs

## HEALTH AND SAFETY PLAN

<b>Monitoring Equipment:</b> (Specify instruments needed for each task; attach additional sheets as necessary)				
Instrument	Task	Instrument Reading	Action Guideline	Comments
Combustible gas indicator model:	<input type="checkbox"/> 1	0 to 10% LEL	No explosion hazard	<input checked="" type="checkbox"/> Not needed
	<input type="checkbox"/> 2	10 to 25% LEL	Potential explosion hazard; notify HSR	
		> 25% LEL	Explosion hazard; interrupt task; evacuate site, notify HSR	
O2 meter model:	<input type="checkbox"/> 1	> 23.5% O2	Potential fire hazard; evacuate site	<input checked="" type="checkbox"/> Not needed
	<input type="checkbox"/> 2	23.5 to 19.5% O2	Oxygen level normal	
		< 19.5% O2	Oxygen deficiency; interrupt task; evacuate site; notify HSR	
Radiation survey meter model:	<input type="checkbox"/> 1	Normal background	Proceed with work <b>Note:</b> Initial background reading must be taken in an area known to be free of radiation hazards.	Note: Annual exposure not to exceed 1,250 mrem per quarter <input checked="" type="checkbox"/> Not needed
	<input type="checkbox"/> 2	Two to three times background	Notify HSR	
		> Three times background	Radiological hazard; interrupt task; evacuate site; notify H&S Director	
Photoionization detector model: Mini-Rae or equivalent	<input type="checkbox"/> 1	0 – 5 ppm above background, non-transient	Level D	Note: Action guidelines apply when monitoring for unknowns. <input type="checkbox"/> Not needed
	<input checked="" type="checkbox"/> 2	>5 ppm above background	Stop work, notify HSR	
Flame ionization detector model:	<input type="checkbox"/> 1	No readings above background	Level D	Note: Action guidelines apply when monitoring for unknowns. <input checked="" type="checkbox"/> Not needed
	<input type="checkbox"/> 2	Background to 5 ppm above background	Level C	
		>5 ppm above background	Evacuate site; notify HSR	
Detector tubes models:	<input type="checkbox"/> 1 <input type="checkbox"/> 2	Specify:	Specify: Note: This action level for upgrading the level of protection is one-half of the contaminant's PEL. If the PEL is reached, evacuate the site and notify the HSR.	<input checked="" type="checkbox"/> Not needed
Respirable dust monitor model:	<input type="checkbox"/> 1 <input type="checkbox"/> 2	Specify:	Specify:	<input checked="" type="checkbox"/> Not needed
Other: (specify):	<input type="checkbox"/> 1 <input type="checkbox"/> 2	Specify:	Specify:	<input checked="" type="checkbox"/> Not needed

Notes: eV = Electron volt    LEL = Lower explosive limit    mrem = Millirem    O<sub>2</sub> = Oxygen    PEL = Permissible exposure limit    ppm = Part per million

# HEALTH AND SAFETY PLAN

## DEFINITIONS

**Intrusive** - Work involving excavation to any depth, drilling, opening of monitoring wells, most sampling, and Geoprobe® work

**Nonintrusive** - Generally refers to site walk-throughs or field reconnaissance

### Levels of Protection

**Level D** - Hard hat, safety boots, and safety glasses. **May also include** protective clothing such as gloves, boot covers, and Tyvek® or Saranex® coveralls

**Level C** - Hard hat, safety boots, safety glasses, and air purifying respirators with appropriate cartridges. **May also include** protective clothing such as gloves, boot covers, and Tyvek® or Saranex® coveralls

### Emergency Contacts

**National Response Center** - For issues related to spill containment, cleanup, and damage assessment; this hotline will direct spill information to the appropriate state or region

### Health and Safety Plan Short Form

- Used for field projects of limited duration and with relatively limited activities; may be filled in with handwritten text
- Limitations:
  - No Level C, B, or A work
  - No more than two tasks
  - No confined space entry

**APPENDIX E**

**COMMUNITY AIR MONITORING PLAN (CAMP)**

## Community Air Monitoring Plan

### Overview

A Community Air Monitoring Plan (CAMP) requires real-time monitoring for volatile organic compounds (VOCs) and particulates (i.e., dust) at the downwind perimeter of each designated work area when certain activities are in progress at contaminated sites. The CAMP is not intended for use in establishing action levels for worker respiratory protection. Rather, its intent is to provide a measure of protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the subject work activities) from potential airborne contaminant releases as a direct result of investigative and remedial work activities. The action levels specified herein are based on NYSDEC guidance, and exceedances thereof will necessitate appropriate response actions, such as increased monitoring, corrective actions to abate emissions, and/or work shut-down. Additionally, the CAMP helps to confirm that work activities did not spread contamination to off-Site receptors through the air.

Implementation of this CAMP will not preclude simple, common-sense measures to keep VOCs, dust, and odors at a minimum around all intrusive work areas.

### Community Air Monitoring Plan

Real-time air monitoring for VOCs and particulate levels at locations upwind and downwind of the work area will be conducted during all intrusive sampling activities, as follows:

**Continuous monitoring** will be conducted for all ground intrusive activities. Ground intrusive activities include, but are not limited to, advancing of soil borings, soil/waste excavation and handling, test pitting or trenching, and installation of monitoring wells or soil vapor probes.

**Periodic monitoring** for VOCs will be conducted during non-intrusive activities, such as collection of soil vapor/ambient air samples or sampling of existing monitoring wells. Periodic monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. In some instances, depending upon the proximity of potentially exposed individuals, continuous monitoring may be required during such sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence.

### VOC Monitoring, Response Levels, and Actions

Volatile organic compounds (VOCs) will be monitored at the upwind and downwind perimeter of the immediate work area on a continuous basis. The monitoring work will be performed using equipment appropriate to measure the types of contaminants known or suspected to be present (i.e., photoionization detector (PID)). The instruments will be calibrated at least daily in accordance with manufacturers' instructions. The equipment will be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

---

1. If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.

2. If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.

3. If the VOC level is above 25 ppm at the perimeter of the work area, activities will be halted.

4. All 15-minute readings will be recorded and will be available for review upon request. Instantaneous readings, if any, used for decision purposes will also be recorded.

#### Particulate Monitoring, Response Levels, and Actions

Particulate concentrations will be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations, using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment will be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration will be visually assessed during all work activities.

1. If the downwind PM-10 particulate level is 100 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed  $150 \mu\text{g}/\text{m}^3$  above the upwind level and provided that no visible dust is migrating from the work area.

2. If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than  $150 \mu\text{g}/\text{m}^3$  above the upwind level, work will be stopped and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within  $150 \mu\text{g}/\text{m}^3$  of the upwind level and in preventing visible dust migration.

3. All readings will be recorded and will be available for review upon request.

## **1.0 INTRODUCTION**

### **1.1 Purpose**

This Quality Assurance Project Plan (QAPP) has been prepared by Athenica Environmental Engineering, PLLC (Athenica) to establish the data quality objectives and data collection and analytical procedures for the site characterization activities at the property located at 29-05 38<sup>th</sup> Avenue, Long Island City, Queens, New York (Site), which has been designated by the NYSDEC as Site Number C241250. Investigation and remediation (if warranted) at the Site will be conducted under the New York State Brownfield Cleanup Program (BCP).

### **1.2 Site Description**

As described in the Remedial Investigation Work Plan (RIWP), the Site is currently vacant except for two residential structures located in the western portion of the property. Two other structures at the Site, a 1.5-story warehouse (historically utilized for carpet cleaning) and a 1-story former gasoline station, were demolished in early 2021. The residential structures will be vacated and demolished prior to the start of any investigative activities.

### **1.3 Project Scope of Work**

The overall purpose of the Remedial Investigation (RI) is to further characterize subsurface conditions at Site and support planned development of the Site in accordance with the requirements of the NYSDEC Brownfield Cleanup Program (BCP). The proposed scope of work for the site characterization program is described in detail in Section 3.0 of the RIWP Work Plan and will include collection and laboratory analysis of 10 subsurface soil samples, 11 groundwater samples, 5 soil vapor samples, and 1 outdoor ambient air sample. Additional samples will be collected as warranted. Proposed sample locations are shown on Figure 4 of the RIWP.

### **1.4 Project Organization**

Athenica's Principal-in-Charge and Project Director for this project will be Spiro Dongaris, a New York State-licensed Professional Engineer with more than 30 years of technical and management experience in the environmental engineering and consulting field. Mr. Dongaris has worked extensively with state and local agencies on numerous site investigation and remediation projects throughout New York City and the surrounding area, including Brownfield Sites. He has extensive knowledge and experience in environmental engineering, site assessments and construction management, in cost estimating and negotiating of bids, and oversees all aspects of the firm's work in these areas. As Principal of Athenica, he is responsible for the firm's overall commitment of resources to a project and its successful completion. In addition, he also oversees work in industrial hygiene, public safety and occupational health, and engineering design.

Mr. Dongaris will provide overall project administration and will be responsible for all top management decisions and overall oversight. In addition, as a New York State-licensed

Professional Engineer, he will also serve as the Professional Engineer for this contract, actively participating in designing remediation systems and preparing design documents/drawings. As Professional Engineer, Mr. Dongaris will sign and seal design documents, as required by law.

Kenneth Wenz, Jr., Senior Project Manager at Athenica, will serve as the Project Manager for this project. Mr. Wenz has more than 34 years of experience in the environmental field, including both consulting and regulatory positions, and is a Licensed Professional Geologist in New York, a Registered Professional Geologist in Pennsylvania, a Licensed Environmental Professional in Connecticut, and a Certified Professional Geologist. He has managed and implemented numerous investigation and remediation projects in New York City, New York State, New Jersey, Connecticut, Pennsylvania, Illinois, and Vermont, which have included Brownfield projects, federal and state Superfund investigation and remediation programs, state and local programs (e.g., NJ ISRA, CT RSR, NYCOER, etc.), petroleum spills, and property transfers (Phase I/II/III ESAs), as well as soil, soil vapor, sediment, and water assessment and remediation programs for numerous commercial, industrial, and government clients. His experience includes scoping, conducting, managing, and providing data assessment and technical review of deliverables for hundreds of Phase I ESAs, Phase II ESAs, and remediation projects. As such, he has substantial experience with all phases of environmental investigation/remediation, and with implementing such programs in compliance with all applicable environmental regulations.

As Project Manager, he will be responsible for the overall technical performance, budget management, and schedule execution for the program, and will serve as liaison on behalf of the Volunteer with regulatory personnel and stakeholders, as needed. Mr. Wenz will also provide project evaluation, technical input, and review of project deliverables, to ensure that all work meets all applicable project requirements as well as our exacting quality standards, and will oversee all project staff and validate scopes of work to ensure that all project deliverables are provided on time.

William Silveri will serve as the Quality Control Officer for this contract. Mr. Silveri has over 30 years of experience in the environmental consulting field, and is a Licensed Professional Geologist in New York and a Certified Hazardous Materials Manager. He has managed and conducted numerous environmental investigation and remediation projects in the New York City area, which has included substantial experience in report preparation, data review and assessment, and technical review of project deliverables (reports, specifications, etc.) prepared by others. As Quality Control Officer, he will be responsible for detailed technical review and evaluation of laboratory data, as well as providing quality control review of project deliverables, to ensure that all work plans, reports, specifications, etc. meet the quality and technical standards of Athenica

In addition, Athenica will utilize subcontractors for drilling, laboratory services, and data validation, as described in Section 3.0 of the RIWP. Once determined, the names of the selected subcontractors will be provided to the NYSDEC.

## **2.0 GENERAL QAPP PROCEDURES**

Athenica will follow the sampling, sample handling and storage, and sample equipment decontamination procedures specified by the RIWP: Sampling procedures, field equipment functionality, chain-of-custody, and other relevant information will be recorded in the field. Data validation activities will include the manual check of laboratory data tables and reduced data summary tables. Conclusions and/or recommendations will be reviewed by one or more qualified peers of the professional who developed them to verify their accuracy on the basis of acquired data and conducted analyses.

A detailed description of the procedures to be used during this program for collection of the soil, groundwater and soil vapor samples is provided in RIR Work Plan. As noted, all samples will be collected using new, dedicated sampling equipment. As a result, field decontamination of equipment will not be conducted as part of this site characterization.

The data quality objectives for analysis of soil/historic fill, groundwater, and soil gas are summarized in Tables 1 through 3.

## **3.0 SAMPLE HANDLING**

The following subsections describe the manner in which representative samples will be collected at the Site.

### **3.1 Soil Sample Collection**

Representative soil samples will be collected directly from the acetate sleeve of the direct-push boring. For VOC analysis, a discrete soil sample will be collected from the desired sampling depth utilizing a dedicated Encore™ sampler or Terra Core sampling kit that includes a dedicate sample plunger. For non-VOC analysis, representative sample aliquots of soil sample will be collected from the required sampling depth, and will then be homogenized into a single sample for analysis. The homogenization of the sample will occur in a new, dedicated, disposable container (aluminum pan, plastic zip-top bag, etc.) or in a decontaminated stainless-steel container, utilizing dedicated sampling equipment (wooden tongue depressor, plastic spoon, etc.).

### **3.2 Groundwater Sample Collection**

Representative groundwater samples will be collected from temporary groundwater monitoring wells after well development, as described in the RIWP, utilizing dedicated sampling equipment. The groundwater sampling will follow USEPA's low-flow (minimal draw down) procedures that are summarized below and described in more detail in Appendix A.

The low-flow sampling procedure was designed to facilitate collection of groundwater samples that reflect total mobile organic and inorganic contaminant levels in the groundwater, with minimal physical and chemical alterations caused by the sampling event.

The low-flow groundwater sampling procedure will include the following general steps:

1. An appropriate, dedicated sampling pump and non-PFAS sampling tubing will be selected for use at the Site;
2. The pump intake will be placed at least 2 feet above the bottom of the well screen;
3. Prior to purging, the depth to groundwater will be measured utilizing a groundwater interface meter and recorded on a well purging purge form;
4. Groundwater will be purged at a flow rate that causes the groundwater level to be lowered (i.e., drawdown) by no more than 0.3 feet;
5. During purging, depth to groundwater will be periodically measured to allow adjustment of the groundwater flow rate to minimize any drawdown;
6. After the water level in the monitoring well has stabilized, purged water will be conveyed to a flow-through cell to allow for monitoring of the following indicator field parameters, including turbidity, temperature, specific conductance, pH, Oxidation/Reduction Potential (ORP), and dissolved oxygen (DO);
7. During the well purging, the above indicator parameters will be measured at least every 5 minutes;
8. Purging will cease after stabilization of these indicator parameters. Stabilization is considered to be achieved when three consecutive readings are within the following limits:
  - Turbidity = less than 5 NTUs or 10 percent for values greater than 5 NTUs.
  - DO = less than 0.5 mg/L or 10 percent for values greater than 0.5 mg/L.
  - Specific Conductance = 3 percent of prior reading.
  - Temperature = 3 percent of prior reading.
  - ORP = plus or minus 10 millivolts of prior reading.
9. After stabilization of indicator parameters, the tubing from the pump will be disconnected from the flow-through-cell, and representative groundwater samples will be collected directly from the pump's tubing;
10. After completion of purging, samples will be collected using the same equipment (i.e., pump and tubing) that were utilized for purging. Samples for PFAS and 1,4-dioxane analysis will be collected first (where applicable), followed by the VOC samples, and lastly the SVOC samples.

### **3.3 Sample Identification/Labeling**

Immediately upon collection, each sample will be labeled with an adhesive label. This sample label contains the authoritative information for the sample, including the Site name, date and time of sampling, sampler's initials, tests to be performed, preservative (if applicable), and a unique sample identifier. The unique identifier for each sample will include, at a minimum, the sample location and (where applicable) sample horizon (e.g., S-1 12-14', WC-3S, SV-2). This information

will also be included on the chain of custody forms that will accompany the samples to the laboratory.

### **3.4 Sample Containers and Preservation**

The analytical laboratory will supply appropriate sample containers for the media that will be sampled during this program. The containers will be pre-preserved, where appropriate. Table 3 provides a summary of the sample preservation and containerization requirements.

Soil samples submitted for VOC analysis will be collected by utilizing Encore™ samplers or field-preserved using methanol (i.e., Terra Core sampling kits). Soil samples to be analyzed for non-VOC parameters will be collected in unpreserved 8-ounce glass jars. Groundwater samples submitted for VOC analysis will be preserved to a pH of  $\leq 2$  with hydrochloric acid (HCl), and groundwater samples to be analyzed for SVOCs will be collected into unpreserved, 1-liter amber glass bottles, which will be preserved by cooling the samples to 4° C). The soil and groundwater samples to be analyzed for PFAS will be collected into high-density polyethylene (HDPE) containers, which will be kept separated from the containers for other analyses (i.e., provided and maintained in a separate cooler), and will be handled in accordance with NYSDEC guidance (as discussed below in Section 3.8). The laboratory will provide all required Encore™ samplers or Terra Core sampling kits, -preserved 40-mL VOC vials, amber glass containers, and HDPE bottles for the respective analyses. All soil and groundwater samples will also be preserved by cooling to 4° C.

Soil vapor and ambient air samples will be collected into evacuated 6-liter Summa canisters. The canisters will be provided by the laboratory and will be batch-certified as clean by the laboratory.

### **3.5 Equipment Decontamination**

Non-dedicated sampling equipment will be decontaminated between each use in the following manner:

- Wash and scrub with non-phosphate detergent (e.g., Alconox) and potable water solution, and
- Rinse with potable water.

### **3.6 Field Documentation**

Field team members will maintain bound logbooks to document all field activities. Field logbooks will provide the means for recording field observations and data collection activities conducted during the investigation. Logbooks will be supported by (but not replaced by) standardized forms, including, but not limited to boring logs, groundwater sampling logs, and equipment calibration sheets.

### **3.7 Chain-of-Custody and Shipping**

Chain-of-Custody forms will be utilized to document the path of sample containers from the Site to the laboratory. Sample/bottle tracking sheets or the Chain-of-Custody will be used to document the custody of the samples within the laboratory from sample receipt through completion of analysis. The project manager will notify the laboratory of upcoming field sampling events and the subsequent transfer of samples. This notification will include information concerning the number and type of samples and the anticipated date of arrival. Sample shipping containers (e.g., coolers) will be provided by the laboratory for shipping samples. All sample containers within each shipping will be individually labeled with an adhesive identification label provided by the laboratory.

In the event that collected samples require shipping (as opposed to sample pick-up by the laboratory or delivery to the laboratory by Athenica personnel), each sample shipping container will be sealed with two adhesive custody seals. The custody seals will be initialed by a member of the field sampling team.

### **3.8 Additional Sample Handling Requirement for Emerging Contaminant Analysis**

Collection of samples for analysis for Per- and Polyfluoroalkyl Substances (PFAS) will follow NYSDEC protocol established in the document titled *Sampling, Analysis, and Assessment of Per- And Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs*, dated January 2021. A copy of this document is included in Appendix B of this QAPP.

General sample handling requirements for PFAS will include the following:

- Sampling methods are intended to be consistent with analysis of samples by USEPA method 537.1;
- Preferred material for sample containers is high density polyethylene (HDPE);
- Acceptable materials for sampling equipment include stainless steel, HDPE, PVC, silicone, acetate and polypropylene;
- No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™);
- Personnel performing sampling or drilling should wear nitrate gloves while conducting field work or handling sample containers;
- Personal protection equipment (PPE) will avoid any water or stain resistant materials that potential PFAS containing material (including Gore-Tex®); and

- Use of any potential PFAS containing clothing or personal care product will be allowed only if there is no other suitable alternative and approved by the NYSEC.

As an additional precaution to minimize laboratory artifacts arising from sample collection, Athenica will utilize only sample containers certified by the laboratory to be free of PFAS. Additionally, Athenica will collect PFAS and 1,4-dioxane samples prior to collection of samples for other analysis.

## **4.0 DATA QUALITY REQUIREMENTS**

The following subsections describe the manner in which representative samples will be analyzed at the Site.

### **4.1 Analytical Methods**

This program includes, at a minimum, collection and laboratory analysis of at least 10 soil samples, 11 groundwater samples, five soil vapor samples, and one outdoor ambient air sample. Soil samples will be analyzed for Target Compound List (TCL) VOCs by USEPA Method 8260, TCL SVOCs by USEPA Method 8270D, Target Analyte List (TAL) metals by USEPA Method 610C, TCL pesticides by USEPA Method 8081B, and TCL PCBs by USEPA Method 8082. Samples of soil and groundwater will be analyzed for VOCs by the referenced USEPA Method. Soil vapor and ambient air samples will be analyzed for VOCs by USEPA Method TO-15. In addition, two soil and two groundwater samples will be analyzed for PFAS by modified USEPA Method 537.1 and analyzed for 1,4-dioxane by modified USEPA Method 8270 (with selective ion monitoring (SIM) analysis).

All analyses will be conducted by a laboratory approved under the NYSDOH Environmental Laboratory Approval Program (ELAP). The data quality objectives for the required analysis are summarized in Tables 1 through 3.

### **4.2 Data Quality Assurance Objectives**

Data quality objectives (DQOs) for measurement data in terms of sensitivity precision, accuracy, representativeness, comparability, and completeness are established so that the data collected are sufficient and of adequate quality for their intended use. Data collected and analyzed in conformance with the DQO process described in this QAPP will be used in assessing the uncertainty associated with decisions related to this site.

#### **4.2.1 Precision**

Precision measures the reproducibility of measurements under a given set of conditions. Specifically, it is a quantitative measure of the variability of a group of measurements compared to their average value. The overall precision of measurement data is a mixture of sampling and analytical factors. Analytical precision is easier to control and quantify than sampling precision; there are more historical data related to individual method performance and the “universe” is not limited to the samples received in the laboratory. In contrast, sampling precision is unique to each site or project. Overall system (sampling plus analytical) precision will be determined by analysis of field duplicate samples. Analytical results from laboratory duplicate samples will provide data on measurement (analytical) precision. The laboratory objective for precision is to equal or exceed the precision demonstrated for the applied analytical methods on similar samples. Precision is evaluated by the analyses of laboratory and field duplicates. Field duplicates will be collected at a frequency of one per 10 environmental samples of each type.

Relative Percent Difference (RPD) criteria are used to evaluate precision between duplicates, using the equation below:

$$\text{RPD} = 100 \times [2(X1 - X2) / (X1 + X2)]$$

where:

X1 and X2 are reported concentrations for each duplicate sample and subtracted differences represent absolute values.

Criteria for evaluation of laboratory duplicates are specified in the applicable methods. The objective for field duplicate precision is < 50% RPD for all matrices. Precision is not calculable where the analyte is not detected in one or both of the sample and duplicate. The absolute difference between the results (X1 - X2) may be a more appropriate measure of analytical precision where the reported concentrations are low (i.e., less than five times the RL).

#### **4.2.2 Accuracy**

The laboratory objective for accuracy is to equal or exceed the accuracy demonstrated for the applied analytical method on similar samples. Percent Recovery Criteria, published by the NYSDEC as part of the ASP, and those determined from laboratory performance data are used to evaluate accuracy in matrix (sample) spike and blank spike quality control samples. A matrix spike and blank spike will be performed once for every sample delivery group (SDG) as specified in the ASP-CLP. Other method-specific laboratory QC samples (such as laboratory control samples and continuing calibration standards) may also be used in the assessment of analytical accuracy. Sample (matrix) spike recovery is calculated as:

$$\%R = (\text{SSR} - \text{SR}) / \text{SA} \times 100,$$

where:

SSR = Spiked Sample Result

SR = Sample Result, and

SA = Spike Added

### 4.2.3 Representativeness

The representativeness of data is only as good as the representativeness of the samples collected. Sampling and handling procedures, and laboratory practices are designed to provide a standard set of performance-driven criteria to provide data of the same quality as other analyses of similar matrices using the same methods under similar conditions.

Representativeness is assessed qualitatively (there are no equations or numerical criteria for this data quality indicator).

### 4.2.4 Comparability

Comparability of analytical data among laboratories becomes more accurate and reliable when all labs follow the same procedure and share information for program enhancement. Some of these procedures include:

- Instrument standards traceable to National Institute of Standards and Technology (NIST), USEPA, or the New York State Department of Health or Environmental Conservation;
- Using standard methodologies;
- Reporting results for similar matrices in consistent units;
- Applying appropriate levels of quality control within the context of the laboratory quality assurance program; and,
- Participation in inter-laboratory studies to document laboratory performance.

By using traceable standards and standard methods, the analytical results can be compared to other labs operating similarly. The QA Program documents internal performance. Periodic laboratory proficiency studies are instituted as a means of monitoring intra-laboratory performance. Comparability is assessed qualitatively (there are no equations or numerical criteria for this data quality indicator).

### 4.2.5 Completeness

The goal of completeness is to generate the maximum amount possible of valid data. The highest degree of completeness would be to find all deliverables flawless, valid, and acceptable. The lowest level of completeness is excessive failure to meet established acceptance criteria and consequent rejection of data. The completeness goal is 95 percent useable data. However, it is acknowledged that this goal may not be fully achievable; for example, individual analytes may be rejected within an otherwise acceptable analysis; or some sampling locations may not be accessible. The impact of rejected or unusable data will be determined on a case-by-case basis. If the study can be completed without the missing datum or data, no further action would be necessary. However, loss of critical data may require re-sampling or reanalysis.

#### **4.2.6 Sensitivity**

Sensitivity criteria are established so that reporting limits are adequate to verify the absence of a non-detected analyte at the applicable threshold concentration (e.g., regulatory limits or guidance values). Laboratory reporting limits will be reviewed prior to sample collection to verify that limits are appropriate for the specific analytes and matrices.

#### **4.3 Field Quality Assurance**

Field quality assurance/quality control samples associated with the generation of environmental data typically include field (equipment rinsate) blanks; field duplicates; and trip blanks. The sampling frequency of these field-related QA/QC samples are discussed below and summarized in Table 5.

##### **4.3.1 Equipment (Rinsate) Blanks**

The purpose of an equipment blank is to determine if contaminants have been introduced through contact with sampling equipment. As dedicated sampling equipment will be utilized, no use of equipment blanks is anticipated other than for sample collect for PFAS and 1,4-Dioxane. Equipment blanks will be utilized for every day when samples are collected for PFAS and 1,4-Dioxane analysis and will consist of pouring PFAS-free water provided by the laboratory over the field sampling equipment into an appropriate container.

##### **4.3.2 Field Duplicate Samples**

The purpose of duplicates is to evaluate precision. Duplicates will be collected at a frequency of 1 per 20 samples of soil or groundwater, and will be analyzed for the same parameters as the environmental sample. A field duplicate sample is a co-located sample or a sample that is divided into two from the same sampling location and depth. Homogenizing solid samples, such as soil, is appropriate only for non-VOC analysis.

##### **4.3.3 Trip Blanks**

The purpose of a trip blank is to identify any VOC-related contamination that occurred during transportation of the samples. The trip blank travels along with empty glassware from the lab to the Site and returns from the Site with the collected sampled. A trip blank will be analyzed for every day that groundwater sampling for VOCs occurs, and will be analyzed for VOCs.

## **4.4 Laboratory Quality Assurance**

Method-required laboratory quality assurance includes an instrument performance check; calibration check; and method blank analysis for each group of 20 or fewer samples. In addition, internal standards are added to every sample (environmental samples and laboratory QA/QC samples). Laboratories typically perform additional QC, such as spikes, laboratory duplicates, and laboratory control samples. The frequency of these analyses is specified in the laboratory's analytical SOP for the method, and is discussed below and summarized in Table 5.

### **4.4.1 Instrument Performance Check**

The instrument performance check verifies the operation of the GC/MS and verifies that it meets tuning and mass spectral abundance criteria prior to sample data acquisitions.

### **4.4.2 Calibration Checks**

An initial five-point calibration check must be performed after the instrument performance check but prior to the analysis of blanks and samples. Concentrations of the calibration standards should be selected to span the concentration range of interest. One of the concentrations of the initial calibration must be the same as the daily calibration check.

On a daily basis, a single-point calibration check must be analyzed (with each group of 20 or fewer samples). The percent difference (%D) for each compound in the daily calibration check should be within  $\pm 30$  percent of the response determined in the initial calibration in order to proceed with sample analysis. If the %D criteria are not met, a new five-point calibration should be performed.

### **4.4.3 Method Blanks**

Method blanks are used to assess the background variability of the method and to assess the introduction of contamination to the samples by the method, technique, or instrument as the sample is prepared and analyzed in the laboratory.

The method blank should not contain any target analytic at a concentration greater than its quantitation level (reporting limit; typically, three times the MDL) or its action level, whichever is more stringent. Method blanks are analyzed at a frequency of one for every 20 samples analyzed, or every analytical batch, whichever is more frequent.

### **4.4.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)**

Site-specific MS/MSD samples will be submitted at a rate of one per 20 samples, for soil and groundwater samples collected during this sampling program.

#### **4.4.5 Internal Standards**

Internal standards (IS) are added to every sample analyzed for VOCs (in any matrix) and SVOCs. Sample-specific IS recovery should be 40 percent or less of the mean response in the most recent valid calibration.

## **5.0 QUALITY MANAGEMENT**

A senior Athenica representative will serve as the Quality Assurance and Quality Control Officer (QA/QC) for the project. This individual will not have direct project responsibility but will independently monitor the implementation of the RIWP. The primary duties of the QA/QC officer will be:

- Monitor the project in accordance with the requirement of this QAPP and the RIWP;
- Review the project to ensure that the overall data quality objectives are attained;
- Record any deviations and inform the Project Manager (PM) of any such deviations;
- Meet with the PM, as needed, to discuss compliance with the QAPP;
- Advise the PM of findings and recommend changes on methods to improve quality; and
- Verify that outside services meet the data objectives of the QAPP.

## **6.0 DATA REDUCTION, VALIDATION, AND REPORTING**

Data validation activities will include the manual check of laboratory data tables and reduced data summary tables. A cycle of markup, revision, and trace checking shall be performed and a check by the PM will ensure data quality.

Conclusions and/or recommendations will be reviewed by one or more qualified peers of the professional who developed them to ensure their accuracy on the basis of acquired data and conducted analyses.

The guidance followed to perform quality data validation, and the methods and procedures outlined herein and elsewhere in the field sampling plan and remedial investigation work plan, pertain to initiating and performing data validation, as well as reviewing data validation performed by others (if applicable). An outline of the data validation process is presented here, followed by a description of data validation review summaries.

### **6.1 Laboratory Data Reporting and Reduction**

The laboratory will meet the applicable documentation, data reduction, and reporting protocols as specified in the NYSDEC ASP Category B deliverable requirements.

In addition to the hard copy of the data report, the Electronic Data Deliverable (EDD) will be provided to NYSDEC in format pursuant to DER-10 requirements. The EDD will be generated, to the extent possible, directly from the laboratory's electronic files or information management system, to minimize possible transcription errors resulting from the manual transcription of data.

### **6.2 Data Validation**

A subcontractor to Athenica will review and validate the groundwater, soil, and soil vapor/ambient air data. The data validator will be independent of the laboratory and independent of Athenica. Data validation will be performed by following guidelines established in the specific USEPA Region 2 SOPs.

Where necessary and appropriate, supplemental validation criteria may be derived from the USEPA Functional Guidelines (USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, USEPA 540/R-99/008; October 1999, and National Functional Guidelines for Inorganic Data Review, USEPA 540/R-04-004; October 2004), as appropriate.

Validation reports will consist of text results of the review and marked up copies of Form I (results with qualifiers applied by the validator). Validation will consist of target and non-target compounds with corresponding method blank data, spike and surrogate recoveries, sample data, and a final note of validation decision or qualification, along with any pertinent footnote references. Qualifiers applied to the data will be documented in the report text. The results of the

data validation will be presented in a data Usability Summary Report (DUSR) prepared by the validation subcontractor.

### **6.3 Data Usability**

Subsequent to review of the items evaluated in the subcontractor's DUSRs, Athenica will then prepare a brief summary of the data usability. This summary, which will be provided as part of the RIR, encompassed both quantitative and qualitative aspects of the data usability.

The quantitative aspect is a summary of the data quality as expressed by qualifiers applied to the data; the percent rejected, qualified (i.e., estimated), missing, and fully acceptable data are reported. As appropriate, this quantitative summary is broken down by matrix, laboratory, or analytical fraction or method.

The qualitative element of the data usability summary is the QA officer's translation and summary of the validation reports into a discussion useful to data users. The qualitative aspect will discuss the significance of the qualifications applied to the data, especially in terms of those most relevant to the intended use of the data. The usability report will also indicate whether there is a suspected bias (high or low) in qualified data and will also provide a subjective overall assessment of the data quality.

### **6.4 Field Data**

Field data collected during the field activity will be presented in tabular form with any necessary supporting text. Unless activities resulted in significant unexpected results, field data comments can be added as footnotes to the tables.

## **7.0 DOCUMENT CONTROL**

Project documents will be maintained in a secure area of Athenica's office at 45-09 Greenpoint Avenue in Long Island City, Queens, New York. Access to these files will be limited to the PM, the Principal-in-Charge and those designated by the PM.

A system is established to ensure that only the latest authorized documents are employed to execute the work. This includes marking all previous versions "void" or "superseded" and/or sending communication to team members indicating the document is no longer valid and the new document should be used. The QAO or designee will periodically conduct review the document retention practices to ensure the new documents are being used.

The Principal-in-Charge, Project Manager, and/or QAO will be responsible for reviewing all documents for conformance.

Records of project activities will be maintained at Athenica's Office will be available for review, upon request.

## **8.0 QUALITY RECORDS AND DOCUMENTATION**

Project Quality Records, which provide evidence of conformance to the requirements of this document, will be kept in Athenica's corporate office. Records will be stored electronically in the project file, which will be maintained in a suitable environment to prevent damage, deterioration, or loss. The PM, in consultation with the QA/QC Officer, is responsible for identifying the records to be retained and establishing protection and controlled-retrieval procedures for such documents, including applicable retention times and ultimate disposal method(s).

## **9.0 TRAINING**

Athenica will employ only qualified and experienced personnel to execute any task of the scope of work. Junior staff will have role solely for supporting implementation of a project task. The PM is responsible for verifying that each employee assigned to the project has read and understands the requirements of this document and is familiar with its procedures/instructions. Training will consist of in-house technical and non-technical seminars given by qualified and experienced senior staff members. In addition, specific meetings will be designed and held to review quality of work and address any corrective measures needed to correct any non-conforming activities that are identified. Project staff will be required to attend any meetings that are held.

## **TABLES**

**Table 1**  
**Chemical Parameters and Data Quality Levels**  
**For Soil Samples – 29-05 38<sup>th</sup> Street, Long Island City, Queens, NY**

## USE OF TERMS

Equipment blank: The equipment blank shall include the pump and the pump's tubing. If tubing is dedicated to the well, the equipment blank needs only to include the pump in subsequent sampling rounds. If the pump and tubing are dedicated to the well, the equipment blank is collected prior to its placement in the well. If the pump and tubing will be used to sample multiple wells, the equipment blank is normally collected after sampling from contaminated wells and not after background wells.

Field duplicates: Field duplicates are collected to determine precision of the sampling procedure. For this procedure, collect duplicate for each analyte group in consecutive order (VOC original, VOC duplicate, SVOC original, SVOC duplicate, etc.).

Indicator field parameters: This SOP uses field measurements of turbidity, dissolved oxygen, specific conductance, temperature, pH, and oxidation/reduction potential (ORP) as indicators of when purging operations are sufficient and sample collection may begin.

Matrix Spike/Matrix Spike Duplicates: Used by the laboratory in its quality assurance program. Consult the laboratory for the sample volume to be collected.

Potentiometric Surface: The level to which water rises in a tightly cased well constructed in a confined aquifer. In an unconfined aquifer, the potentiometric surface is the water table.

QAPP: Quality Assurance Project Plan

SAP: Sampling and Analysis Plan

SOP: Standard operating procedure

Stabilization: A condition that is achieved when all indicator field parameter measurements are sufficiently stable (as described in the "Monitoring Indicator Field Parameters" section) to allow sample collection to begin.

Temperature blank: A temperature blank is added to each sample cooler. The blank is measured upon receipt at the laboratory to assess whether the samples were properly cooled during transit.

Trip blank (VOCs): Trip blank is a sample of analyte-free water taken to the sampling site and returned to the laboratory. The trip blanks (one pair) are added to each sample cooler that contains VOC samples.

## SCOPE & APPLICATION

The goal of this groundwater sampling procedure is to collect water samples that reflect the total mobile organic and inorganic loads (dissolved and colloidal sized fractions) transported through the subsurface under ambient flow conditions, with minimal physical and chemical alterations from sampling operations. This standard operating procedure (SOP) for collecting groundwater samples will help ensure that the project's data quality objectives (DQOs) are met under certain low-flow conditions.

The SOP emphasizes the need to minimize hydraulic stress at the well-aquifer interface by maintaining low water-level drawdowns, and by using low pumping rates during purging and sampling operations. Indicator field parameters (e.g., dissolved oxygen, pH, etc.) are monitored during purging in order to determine when sample collection may begin. Samples properly collected using this SOP are suitable for analysis of groundwater contaminants (volatile and semi-volatile organic analytes, dissolved gases, pesticides, PCBs, metals and other inorganics), or naturally occurring analytes. This SOP is based on Puls, and Barcelona (1996).

This procedure is designed for monitoring wells with an inside diameter (1.5-inches or greater) that can accommodate a positive lift pump with a screen length or open interval ten feet or less and with a water level above the top of the screen or open interval (Hereafter, the "screen or open interval" will be referred to only as "screen interval"). This SOP is not applicable to other well-sampling conditions.

While the use of dedicated sampling equipment is not mandatory, dedicated pumps and tubing can reduce sampling costs significantly by streamlining sampling activities and thereby reducing the overall field costs.

The goal of this procedure is to emphasize the need for consistency in deploying and operating equipment while purging and sampling monitoring wells during each sampling event. This will help to minimize sampling variability.

This procedure describes a general framework for groundwater sampling. Other site specific information (hydrogeological context, conceptual site model (CSM), DQOs, etc.) coupled with systematic planning must be added to the procedure in order to develop an appropriate site specific SAP/QAPP. In addition, the site specific SAP/QAPP must identify the specific equipment that will be used to collect the groundwater samples.

This procedure does not address the collection of water or free product samples from wells containing free phase LNAPLs and/or DNAPLs (light or dense non-aqueous phase

liquids). For this type of situation, the reader may wish to check: Cohen, and Mercer (1993) or other pertinent documents.

This SOP is to be used when collecting groundwater samples from monitoring wells at all Superfund, Federal Facility and RCRA sites in Region 1 under the conditions described herein. Request for modification of this SOP, in order to better address specific situations at individual wells, must include adequate technical justification for proposed changes. All changes and modifications must be approved and included in a revised SAP/QAPP before implementation in field.

## **BACKGROUND FOR IMPLEMENTATION**

It is expected that the monitoring well screen has been properly located (both laterally and vertically) to intercept existing contaminant plume(s) or along flow paths of potential contaminant migration. Problems with inappropriate monitoring well placement or faulty/improper well installation cannot be overcome by even the best water sampling procedures. This SOP presumes that the analytes of interest are moving (or will potentially move) primarily through the more permeable zones intercepted by the screen interval.

Proper well construction, development, and operation and maintenance cannot be overemphasized. The use of installation techniques that are appropriate to the hydrogeologic setting of the site often prevent "problem well" situations from occurring. During well development, or redevelopment, tests should be conducted to determine the hydraulic characteristics of the monitoring well. The data can then be used to set the purging/sampling rate, and provide a baseline for evaluating changes in well performance and the potential need for well rehabilitation. Note: if this installation data or well history (construction and sampling) is not available or discoverable, for all wells to be sampled, efforts to build a sampling history should commence with the next sampling event.

The pump intake should be located within the screen interval and at a depth that will remain under water at all times. It is recommended that the intake depth and pumping rate remain the same for all sampling events. The mid-point or the lowest historical midpoint of the saturated screen length is often used as the location of the pump intake. For new wells, or for wells without pump intake depth information, the site's SAP/QAPP must provide clear reasons and instructions on how the pump intake depth(s) will be selected, and reason(s) for the depth(s) selected. If the depths to top and bottom of the well screen are not known, the SAP/QAPP will need to describe how the sampling depth will be determined and how the data can be used.

Stabilization of indicator field parameters is used to indicate that conditions are suitable for sampling to begin. Achievement of turbidity levels of less than 5 NTU, and stable drawdowns of less than 0.3 feet, while desirable, are not mandatory. Sample collection

may still take place provided the indicator field parameter criteria in this procedure are met. If after 2 hours of purging indicator field parameters have not stabilized, one of three optional courses of action may be taken: a) continue purging until stabilization is achieved, b) discontinue purging, do not collect any samples, and record in log book that stabilization could not be achieved (documentation must describe attempts to achieve stabilization), c) discontinue purging, collect samples and provide full explanation of attempts to achieve stabilization (note: there is a risk that the analytical data obtained, especially metals and strongly hydrophobic organic analytes, may reflect a sampling bias and therefore, the data may not meet the data quality objectives of the sampling event).

It is recommended that low-flow sampling be conducted when the air temperature is above 32°F (0°C). If the procedure is used below 32°F, special precautions will need to be taken to prevent the groundwater from freezing in the equipment. Because sampling during freezing temperatures may adversely impact the data quality objectives, the need for water sample collection during months when these conditions are likely to occur should be evaluated during site planning and special sampling measures may need to be developed. Ice formation in the flow-through-cell will cause the monitoring probes to act erratically. A transparent flow-through-cell needs to be used to observe if ice is forming in the cell. If ice starts to form on the other pieces of the sampling equipment, additional problems may occur.

## **HEALTH & SAFETY**

When working on-site, comply with all applicable OSHA requirements and the site's health/safety procedures. All proper personal protection clothing and equipment are to be worn. Some samples may contain biological and chemical hazards. These samples should be handled with suitable protection to skin, eyes, etc.

## **CAUTIONS**

The following cautions need to be considered when planning to collect groundwater samples when the below conditions occur.

If the groundwater degasses during purging of the monitoring well, dissolved gases and VOCs will be lost. When this happens, the groundwater data for dissolved gases (e.g., methane, ethene, ethane, dissolved oxygen, etc.) and VOCs will need to be qualified. Some conditions that can promote degassing are the use of a vacuum pump (e.g., peristaltic pumps), changes in aperture along the sampling tubing, and squeezing/pinching the pump's tubing which results in a pressure change.

When collecting the samples for dissolved gases and VOCs analyses, avoid aerating the groundwater in the pump's tubing. This can cause loss of the dissolved gases and VOCs in

the groundwater. Having the pump's tubing completely filled prior to sampling will avoid this problem when using a centrifugal pump or peristaltic pump.

Direct sun light and hot ambient air temperatures may cause the groundwater in the tubing and flow-through-cell to heat up. This may cause the groundwater to degas which will result in loss of VOCs and dissolved gases. When sampling under these conditions, the sampler will need to shade the equipment from the sunlight (e.g., umbrella, tent, etc.). If possible, sampling on hot days, or during the hottest time of the day, should be avoided. The tubing exiting the monitoring well should be kept as short as possible to avoid the sun light or ambient air from heating up the groundwater.

Thermal currents in the monitoring well may cause vertical mixing of water in the well bore. When the air temperature is colder than the groundwater temperature, it can cool the top of the water column. Colder water which is denser than warm water sinks to the bottom of the well and the warmer water at the bottom of the well rises, setting up a convection cell. "During low-flow sampling, the pumped water may be a mixture of convecting water from within the well casing and aquifer water moving inward through the screen. This mixing of water during low-flow sampling can substantially increase equilibration times, can cause false stabilization of indicator parameters, can give false indication of redox state, and can provide biological data that are not representative of the aquifer conditions" (Vroblesky 2007).

Failure to calibrate or perform proper maintenance on the sampling equipment and measurement instruments (e.g., dissolved oxygen meter, etc.) can result in faulty data being collected.

Interferences may result from using contaminated equipment, cleaning materials, sample containers, or uncontrolled ambient/surrounding air conditions (e.g., truck/vehicle exhaust nearby).

Cross contamination problems can be eliminated or minimized through the use of dedicated sampling equipment and/or proper planning to avoid ambient air interferences. Note that the use of dedicated sampling equipment can also significantly reduce the time needed to complete each sampling event, will promote consistency in the sampling, and may reduce sampling bias by having the pump's intake at a constant depth.

Clean and decontaminate all sampling equipment prior to use. All sampling equipment needs to be routinely checked to be free from contaminants and equipment blanks collected to ensure that the equipment is free of contaminants. Check the previous equipment blank data for the site (if they exist) to determine if the previous cleaning procedure removed the contaminants. If contaminants were detected and they are a concern, then a more vigorous cleaning procedure will be needed.

## **PERSONNEL QUALIFICATIONS**

All field samplers working at sites containing hazardous waste must meet the requirements of the OSHA regulations. OSHA regulations may require the sampler to take the 40 hour OSHA health and safety training course and a refresher course prior to engaging in any field activities, depending upon the site and field conditions.

The field samplers must be trained prior to the use of the sampling equipment, field instruments, and procedures. Training is to be conducted by an experienced sampler before initiating any sampling procedure.

The entire sampling team needs to read, and be familiar with, the site Health and Safety Plan, all relevant SOPs, and SAP/QAPP (and the most recent amendments) before going onsite for the sampling event. It is recommended that the field sampling leader attest to the understanding of these site documents and that it is recorded.

## **EQUIPMENT AND SUPPLIES**

### **A. Informational materials for sampling event**

A copy of the current Health and Safety Plan, SAP/QAPP, monitoring well construction data, location map(s), field data from last sampling event, manuals for sampling, and the monitoring instruments' operation, maintenance, and calibration manuals should be brought to the site.

### **B. Well keys.**

### **C. Extraction device**

Adjustable rate, submersible pumps (e.g., centrifugal, bladder, etc.) which are constructed of stainless steel or Teflon are preferred. Note: if extraction devices constructed of other materials are to be used, adequate information must be provided to show that the substituted materials do not leach contaminants nor cause interferences to the analytical procedures to be used. Acceptance of these materials must be obtained before the sampling event.

If bladder pumps are selected for the collection of VOCs and dissolved gases, the pump setting should be set so that one pulse will deliver a water volume that is sufficient to fill a 40 mL VOC vial. This is not mandatory, but is considered a "best practice". For the proper operation, the bladder pump will need a minimum amount of water above the pump; consult the manufacturer for the recommended submergence. The pump's recommended submergence value should be determined during the planning stage, since it may influence well construction and placement of dedicated pumps where water-level fluctuations are significant.

Adjustable rate, peristaltic pumps (suction) are to be used with caution when collecting samples for VOCs and dissolved gases (e.g., methane, carbon dioxide, etc.) analyses. Additional information on the use of peristaltic pumps can be found in Appendix A. If peristaltic pumps are used, the inside diameter of the rotor head tubing needs to match the inside diameter of the tubing installed in the monitoring well.

Inertial pumping devices (motor driven or manual) are not recommended. These devices frequently cause greater disturbance during purging and sampling, and are less easily controlled than submersible pumps (potentially increasing turbidity and sampling variability, etc.). This can lead to sampling results that are adversely affected by purging and sampling operations, and a higher degree of data variability.

#### **D. Tubing**

Teflon or Teflon-lined polyethylene tubing are preferred when sampling is to include VOCs, SVOCs, pesticides, PCBs and inorganics. Note: if tubing constructed of other materials is to be used, adequate information must be provided to show that the substituted materials do not leach contaminants nor cause interferences to the analytical procedures to be used. Acceptance of these materials must be obtained before the sampling event.

PVC, polypropylene or polyethylene tubing may be used when collecting samples for metal and other inorganics analyses.

The use of 1/4 inch or 3/8 inch (inside diameter) tubing is recommended. This will help ensure that the tubing remains liquid filled when operating at very low pumping rates when using centrifugal and peristaltic pumps.

Silastic tubing should be used for the section around the rotor head of a peristaltic pump. It should be less than a foot in length. The inside diameter of the tubing used at the pump rotor head must be the same as the inside diameter of tubing placed in the well. A tubing connector is used to connect the pump rotor head tubing to the well tubing. Alternatively, the two pieces of tubing can be connected to each other by placing the one end of the tubing inside the end of the other tubing. The tubing must not be reused.

#### **E. The water level measuring device**

Electronic "tape", pressure transducer, water level sounder/level indicator, etc. should be capable of measuring to 0.01 foot accuracy. Recording pressure transducers, mounted above the pump, are especially helpful in tracking water levels during pumping operations, but their use must include check measurements with a water level "tape" at the start and end of each sampling event.

#### **F. Flow measurement supplies**

Graduated cylinder (size according to flow rate) and stopwatch usually will suffice.

Large graduated bucket used to record total water purged from the well.

#### **G. Interface probe**

To be used to check on the presence of free phase liquids (LNAPL, or DNAPL) before purging begins (as needed).

#### **H. Power source (generator, nitrogen tank, battery, etc.)**

When a gasoline generator is used, locate it downwind and at least 30 feet from the well so that the exhaust fumes do not contaminate samples.

#### **I. Indicator field parameter monitoring instruments**

Use of a multi-parameter instrument capable of measuring pH, oxidation/reduction potential (ORP), dissolved oxygen (DO), specific conductance, temperature, and coupled with a flow-through-cell is required when measuring all indicator field parameters, except turbidity. Turbidity is collected using a separate instrument. Record equipment/instrument identification (manufacturer, and model number).

Transparent, small volume flow-through-cells (e.g., 250 mLs or less) are preferred. This allows observation of air bubbles and sediment buildup in the cell, which can interfere with the operation of the monitoring instrument probes, to be easily detected. A small volume cell facilitates rapid turnover of water in the cell between measurements of the indicator field parameters.

It is recommended to use a flow-through-cell and monitoring probes from the same manufacturer and model to avoid incompatibility between the probes and flow-through-cell.

Turbidity samples are collected before the flow-through-cell. A "T" connector coupled with a valve is connected between the pump's tubing and flow-through-cell. When a turbidity measurement is required, the valve is opened to allow the groundwater to flow into a container. The valve is closed and the container sample is then placed in the turbidimeter.

Standards are necessary to perform field calibration of instruments. A minimum of two standards are needed to bracket the instrument measurement range for all parameters except ORP which use a Zobell solution as a standard. For dissolved oxygen, a wet sponge used for the 100% saturation and a zero dissolved oxygen solution are used for the calibration.

Barometer (used in the calibration of the Dissolved Oxygen probe) and the conversion formula to convert the barometric pressure into the units of measure used by the Dissolved Oxygen meter are needed.

#### **J. Decontamination supplies**

Includes (for example) non-phosphate detergent, distilled/deionized water, isopropyl alcohol, etc.

#### **K. Record keeping supplies**

Logbook(s), well purging forms, chain-of-custody forms, field instrument calibration forms, etc.

#### **L. Sample bottles**

#### **M. Sample preservation supplies (as required by the analytical methods)**

#### **N. Sample tags or labels**

#### **O. PID or FID instrument**

If appropriate, to detect VOCs for health and safety purposes, and provide qualitative field evaluations.

## **P. Miscellaneous Equipment**

Equipment to keep the sampling apparatus shaded in the summer (e.g., umbrella) and from freezing in the winter. If the pump's tubing is allowed to heat up in the warm weather, the cold groundwater may degas as it is warmed in the tubing.

## **EQUIPMENT/INSTRUMENT CALIBRATION**

Prior to the sampling event, perform maintenance checks on the equipment and instruments according to the manufacturer's manual and/or applicable SOP. This will ensure that the equipment/instruments are working properly before they are used in the field.

Prior to sampling, the monitoring instruments must be calibrated and the calibration documented. The instruments are calibrated using U.S Environmental Protection Agency Region 1 *Calibration of Field Instruments (temperature, pH, dissolved oxygen, conductivity/specific conductance, oxidation/reduction [ORP], and turbidity)*, January 19, 2010, or latest version or from one of the methods listed in 40CFR136, 40CFR141 and SW-846.

The instruments shall be calibrated at the beginning of each day. If the field measurement falls outside the calibration range, the instrument must be re-calibrated so that all measurements fall within the calibration range. At the end of each day, a calibration check is performed to verify that instruments remained in calibration throughout the day. This check is performed while the instrument is in measurement mode, not calibration mode. If the field instruments are being used to monitor the natural attenuation parameters, then a calibration check at mid-day is highly recommended to ensure that the instruments did not drift out of calibration. Note: during the day if the instrument reads zero or a negative number for dissolved oxygen, pH, specific conductance, or turbidity (negative value only), this indicates that the instrument drifted out of calibration or the instrument is malfunctioning. If this situation occurs the data from this instrument will need to be qualified or rejected.

## **PRELIMINARY SITE ACTIVITIES (as applicable)**

Check the well for security (damage, evidence of tampering, missing lock, etc.) and record pertinent observations (include photograph as warranted).

If needed lay out sheet of clean polyethylene for monitoring and sampling equipment, unless equipment is elevated above the ground (e.g., on a table, etc.).

Remove well cap and if appropriate measure VOCs at the rim of the well with a PID or FID instrument and record reading in field logbook or on the well purge form.

If the well casing does not have an established reference point (usually a V-cut or indelible mark in the well casing), make one. Describe its location and record the date of the mark in the logbook (consider a photographic record as well). All water level measurements must be recorded relative to this reference point (and the altitude of this point should be determined using techniques that are appropriate to site's DQOs).

If water-table or potentiometric surface map(s) are to be constructed for the sampling event, perform synoptic water level measurement round (in the shortest possible time) before any purging and sampling activities begin. If possible, measure water level depth (to 0.01 ft.) and total well depth (to 0.1 ft.) the day before sampling begins, in order to allow for re-settlement of any particulates in the water column. This is especially important for those wells that have not been recently sampled because sediment buildup in the well may require the well to be redeveloped. If measurement of total well depth is not made the day before, it should be measured after sampling of the well is complete. All measurements must be taken from the established referenced point. Care should be taken to minimize water column disturbance.

Check newly constructed wells for the presence of LNAPLs or DNAPLs before the initial sampling round. If none are encountered, subsequent check measurements with an interface probe may not be necessary unless analytical data or field analysis signal a worsening situation. This SOP cannot be used in the presence of LNAPLs or DNAPLs. If NAPLs are present, the project team must decide upon an alternate sampling method. All project modifications must be approved and documented prior to implementation.

If available check intake depth and drawdown information from previous sampling event(s) for each well. Duplicate, to the extent practicable, the intake depth and extraction rate (use final pump dial setting information) from previous event(s). If changes are made in the intake depth or extraction rate(s) used during previous sampling event(s), for either portable or dedicated extraction devices, record new values, and explain reasons for the changes in the field logbook.

## **PURGING AND SAMPLING PROCEDURE**

Purging and sampling wells in order of increasing chemical concentrations (known or anticipated) are preferred.

The use of dedicated pumps is recommended to minimize artificial mobilization and entrainment of particulates each time the well is sampled. Note that the use of dedicated sampling equipment can also significantly reduce the time needed to complete each

sampling event, will promote consistency in the sampling, and may reduce sampling bias by having the pump's intake at a constant depth.

#### **A. Initial Water Level**

Measure the water level in the well before installing the pump if a non-dedicated pump is being used. The initial water level is recorded on the purge form or in the field logbook.

#### **B. Install Pump**

Lower pump, safety cable, tubing and electrical lines slowly (to minimize disturbance) into the well to the appropriate depth (may not be the mid-point of the screen/open interval). The Sampling and Analysis Plan/Quality Assurance Project Plan should specify the sampling depth (used previously), or provide criteria for selection of intake depth for each new well. If possible keep the pump intake at least two feet above the bottom of the well, to minimize mobilization of particulates present in the bottom of the well.

Pump tubing lengths, above the top of well casing should be kept as short as possible to minimize heating the groundwater in the tubing by exposure to sun light and ambient air temperatures. Heating may cause the groundwater to degas, which is unacceptable for the collection of samples for VOC and dissolved gases analyses.

#### **C. Measure Water Level**

Before starting pump, measure water level. Install recording pressure transducer, if used to track drawdowns, to initialize starting condition.

#### **D. Purge Well**

From the time the pump starts purging and until the time the samples are collected, the purged water is discharged into a graduated bucket to determine the total volume of groundwater purged. This information is recorded on the purge form or in the field logbook.

Start the pump at low speed and slowly increase the speed until discharge occurs. Check water level. Check equipment for water leaks and if present fix or replace the affected equipment. Try to match pumping rate used during previous sampling event(s). Otherwise, adjust pump speed until there is little or no water level drawdown. If the minimal drawdown that can be achieved exceeds 0.3 feet, but remains stable, continue purging.

Monitor and record the water level and pumping rate every five minutes (or as appropriate) during purging. Record any pumping rate adjustments (both time and flow rate). Pumping rates should, as needed, be reduced to the minimum capabilities of the pump to ensure stabilization of the water level. Adjustments are best made in the first fifteen minutes of pumping in order to help minimize purging time. During pump start-up, drawdown may exceed the 0.3 feet target and then "recover" somewhat as pump flow adjustments are made. Purge volume calculations should utilize stabilized drawdown value, not the initial drawdown. If the initial water level is above the top of the screen do not allow the water level to fall into the well screen. The final purge volume must be greater than the stabilized drawdown volume plus the pump's tubing volume. If the drawdown has exceeded 0.3 feet and stabilizes, calculate the volume of water between the initial water level and the stabilized water level. Add the volume of the water which occupies the pump's tubing to this calculation. This combined volume of water needs to be purged from the well after the water level has stabilized before samples are collected.

Avoid the use of constriction devices on the tubing to decrease the flow rate because the constrictor will cause a pressure difference in the water column. This will cause the groundwater to degas and result in a loss of VOCs and dissolved gasses in the groundwater samples.

Note: the flow rate used to achieve a stable pumping level should remain constant while monitoring the indicator parameters for stabilization and while collecting the samples.

Wells with low recharge rates may require the use of special pumps capable of attaining very low pumping rates (e.g., bladder, peristaltic), and/or the use of dedicated equipment. For new monitoring wells, or wells where the following situation has not occurred before, if the recovery rate to the well is less than 50 mL/min., or the well is being essentially dewatered during purging, the well should be sampled as soon as the water level has recovered sufficiently to collect the volume needed for all anticipated samples. The project manager or field team leader will need to make the decision when samples should be collected, how the sample is to be collected, and the reasons recorded on the purge form or in the field logbook. A water level measurement needs to be performed and recorded before samples are collected. If the project manager decides to collect the samples using the pump, it is best during this recovery period that the pump intake tubing not be removed, since this will aggravate any turbidity problems. Samples in this specific situation may be collected without stabilization of indicator field parameters. Note that field conditions and efforts to overcome problematic situations must be recorded in order to support field decisions to deviate from normal procedures described in this SOP. If this type of problematic situation persists in a well, then water sample collection should be changed to a passive or no-purge method, if consistent with the site's DQOs, or have a new well installed.

## E. Monitor Indicator Field Parameters

After the water level has stabilized, connect the "T" connector with a valve and the flow-through-cell to monitor the indicator field parameters. If excessive turbidity is anticipated or encountered with the pump startup, the well may be purged for a while without connecting up the flow-through-cell, in order to minimize particulate buildup in the cell (This is a judgment call made by the sampler). Water level drawdown measurements should be made as usual. If possible, the pump may be installed the day before purging to allow particulates that were disturbed during pump insertion to settle.

During well purging, monitor indicator field parameters (turbidity, temperature, specific conductance, pH, ORP, DO) at a frequency of five minute intervals or greater. The pump's flow rate must be able to "turn over" at least one flow-through-cell volume between measurements (for a 250 mL flow-through-cell with a flow rate of 50 mLs/min., the monitoring frequency would be every five minutes; for a 500 mL flow-through-cell it would be every ten minutes). If the cell volume cannot be replaced in the five minute interval, then the time between measurements must be increased accordingly. Note: during the early phase of purging emphasis should be put on minimizing and stabilizing pumping stress, and recording those adjustments followed by stabilization of indicator parameters. Purging is considered complete and sampling may begin when all the above indicator field parameters have stabilized. Stabilization is considered to be achieved when three consecutive readings are within the following limits:

**Turbidity** (10% for values greater than 5 NTU; if three Turbidity values are less than 5 NTU, consider the values as stabilized),

**Dissolved Oxygen** (10% for values greater than 0.5 mg/L, if three Dissolved Oxygen values are less than 0.5 mg/L, consider the values as stabilized),

**Specific Conductance** (3%),

**Temperature** (3%),

**pH** ( $\pm 0.1$  unit),

**Oxidation/Reduction Potential** ( $\pm 10$  millivolts).

All measurements, except turbidity, must be obtained using a flow-through-cell. Samples for turbidity measurements are obtained before water enters the flow-through-cell. Transparent flow-through-cells are preferred, because they allow field personnel to watch for particulate build-up within the cell. This build-up may affect indicator field parameter values measured within the cell. If the cell needs to be cleaned during purging operations, continue pumping and disconnect cell for cleaning, then reconnect after cleaning and continue monitoring activities. Record start and stop times and give a brief description of cleaning activities.

The flow-through-cell must be designed in a way that prevents gas bubble entrapment in the cell. Placing the flow-through-cell at a 45 degree angle with the port facing upward can help remove bubbles from the flow-through-cell (see Appendix B Low-Flow Setup Diagram). All during the measurement process, the flow-through-cell must remain free of any gas bubbles. Otherwise, the monitoring probes may act erratically. When the pump is turned off or cycling on/off (when using a bladder pump), water in the cell must not drain out. Monitoring probes must remain submerged in water at all times.

#### **F. Collect Water Samples**

When samples are collected for laboratory analyses, the pump's tubing is disconnected from the "T" connector with a valve and the flow-through-cell. The samples are collected directly from the pump's tubing. Samples must not be collected from the flow-through-cell or from the "T" connector with a valve.

VOC samples are normally collected first and directly into pre-preserved sample containers. However, this may not be the case for all sampling locations; the SAP/QAPP should list the order in which the samples are to be collected based on the project's objective(s). Fill all sample containers by allowing the pump discharge to flow gently down the inside of the container with minimal turbulence.

If the pump's flow rate is too high to collect the VOC/dissolved gases samples, collect the other samples first. Lower the pump's flow rate to a reasonable rate and collect the VOC/dissolved gases samples and record the new flow rate.

During purging and sampling, the centrifugal/peristaltic pump tubing must remain filled with water to avoid aeration of the groundwater. It is recommended that 1/4 inch or 3/8 inch (inside diameter) tubing be used to help insure that the sample tubing remains water filled. If the pump tubing is not completely filled to the sampling point, use the following procedure to collect samples: collect non-VOC/dissolved gases samples first, then increase flow rate slightly until the water completely fills the tubing, collect the VOC/dissolved gases samples, and record new drawdown depth and flow rate.

For bladder pumps that will be used to collect VOC or dissolved gas samples, it is recommended that the pump be set to deliver long pulses of water so that one pulse will fill a 40 mL VOC vial.

Use pre-preserved sample containers or add preservative, as required by analytical methods, to the samples immediately after they are collected. Check the analytical methods (e.g. EPA SW-846, 40 CFR 136, water supply, etc.) for additional information on preservation.

If determination of filtered metal concentrations is a sampling objective, collect filtered water samples using the same low flow procedures. The use of an in-line filter (transparent housing preferred) is required, and the filter size ( $0.45 \mu\text{m}$  is commonly used) should be based on the sampling objective. Pre-rinse the filter with groundwater prior to sample collection. Make sure the filter is free of air bubbles before samples are collected. Preserve the filtered water sample immediately. Note: filtered water samples are not an acceptable substitute for unfiltered samples when the monitoring objective is to obtain chemical concentrations of total mobile contaminants in groundwater for human health or ecological risk calculations.

Label each sample as collected. Samples requiring cooling will be placed into a cooler with ice or refrigerant for delivery to the laboratory. Metal samples after acidification to a pH less than 2 do not need to be cooled.

#### **G. Post Sampling Activities**

If a recording pressure transducer is used to track drawdown, re-measure water level with tape.

After collection of samples, the pump tubing may be dedicated to the well for re-sampling (by hanging the tubing inside the well), decontaminated, or properly discarded.

Before securing the well, measure and record the well depth (to 0.1 ft.), if not measured the day before purging began. Note: measurement of total well depth annually is usually sufficient after the initial low stress sampling event. However, a greater frequency may be needed if the well has a "silting" problem or if confirmation of well identity is needed.

Secure the well.

#### **DECONTAMINATION**

Decontaminate sampling equipment prior to use in the first well and then following sampling of each well. Pumps should not be removed between purging and sampling operations. The pump, tubing, support cable and electrical wires which were in contact with the well should be decontaminated by one of the procedures listed below.

The use of dedicated pumps and tubing will reduce the amount of time spent on decontamination of the equipment. If dedicated pumps and tubing are used, only the initial sampling event will require decontamination of the pump and tubing.

Note if the previous equipment blank data showed that contaminant(s) were present after using the below procedure or the one described in the SAP/QAPP, a more vigorous procedure may be needed.

#### Procedure 1

Decontaminating solutions can be pumped from either buckets or short PVC casing sections through the pump and tubing. The pump may be disassembled and flushed with the decontaminating solutions. It is recommended that detergent and alcohol be used sparingly in the decontamination process and water flushing steps be extended to ensure that any sediment trapped in the pump is removed. The pump exterior and electrical wires must be rinsed with the decontaminating solutions, as well. The procedure is as follows:

Flush the equipment/pump with potable water.

Flush with non-phosphate detergent solution. If the solution is recycled, the solution must be changed periodically.

Flush with potable or distilled/deionized water to remove all of the detergent solution. If the water is recycled, the water must be changed periodically.

Optional - flush with isopropyl alcohol (pesticide grade; must be free of ketones {e.g., acetone}) or with methanol. This step may be required if the well is highly contaminated or if the equipment blank data from the previous sampling event show that the level of contaminants is significant.

Flush with distilled/deionized water. This step must remove all traces of alcohol (if used) from the equipment. The final water rinse must not be recycled.

#### Procedure 2

Steam clean the outside of the submersible pump.

Pump hot potable water from the steam cleaner through the inside of the pump. This can be accomplished by placing the pump inside a three or four inch diameter PVC pipe with end cap. Hot water from the steam cleaner jet will be directed inside the PVC pipe and the pump exterior will be cleaned. The hot water from the steam cleaner will then be pumped from the PVC pipe through the pump and collected into another container. Note: additives or solutions should not be added to the steam cleaner.

Pump non-phosphate detergent solution through the inside of the pump. If the solution is recycled, the solution must be changed periodically.

Pump potable water through the inside of the pump to remove all of the detergent solution. If the solution is recycled, the solution must be changed periodically.

Pump distilled/deionized water through the pump. The final water rinse must not be recycled.

### **FIELD QUALITY CONTROL**

Quality control samples are required to verify that the sample collection and handling process has not compromised the quality of the groundwater samples. All field quality control samples must be prepared the same as regular investigation samples with regard to sample volume, containers, and preservation. Quality control samples include field duplicates, equipment blanks, matrix spike/matrix spike duplicates, trip blanks (VOCs), and temperature blanks.

### **FIELD LOGBOOK**

A field log shall be kept to document all groundwater field monitoring activities (see Appendix C, example table), and record the following for each well:

Site name, municipality, state.

Well identifier, latitude-longitude or state grid coordinates.

Measuring point description (e.g., north side of PVC pipe).

Well depth, and measurement technique.

Well screen length.

Pump depth.

Static water level depth, date, time and measurement technique.

Presence and thickness of immiscible liquid (NAPL) layers and detection method.

Pumping rate, drawdown, indicator parameters values, calculated or measured total volume pumped, and clock time of each set of measurements.

Type of tubing used and its length.

Type of pump used.

Clock time of start and end of purging and sampling activity.

Types of sample bottles used and sample identification numbers.

Preservatives used.

Parameters requested for analyses.

Field observations during sampling event.

Name of sample collector(s).

Weather conditions, including approximate ambient air temperature.

QA/QC data for field instruments.

Any problems encountered should be highlighted.

Description of all sampling/monitoring equipment used, including trade names, model number, instrument identification number, diameters, material composition, etc.

## **DATA REPORT**

Data reports are to include laboratory analytical results, QA/QC information, field indicator parameters measured during purging, field instrument calibration information, and whatever other field logbook information is needed to allow for a full evaluation of data usability.

Note: the use of trade, product, or firm names in this sampling procedure is for descriptive purposes only and does not constitute endorsement by the U.S. EPA.

## APPENDIX A PERISTALTIC PUMPS

Before selecting a peristaltic pump to collect groundwater samples for VOCs and/or dissolved gases (e.g., methane, carbon dioxide, etc.) consideration should be given to the following:

- The decision of whether or not to use a peristaltic pump is dependent on the intended use of the data.
- If the additional sampling error that may be introduced by this device is NOT of concern for the VOC/dissolved gases data's intended use, then this device may be acceptable.
- If minor differences in the groundwater concentrations could effect the decision, such as to continue or terminate groundwater cleanup or whether the cleanup goals have been reached, then this device should NOT be used for VOC/dissolved gases sampling. In these cases, centrifugal or bladder pumps are a better choice for more accurate results.

EPA and USGS have documented their concerns with the use of the peristaltic pumps to collect water sample in the below documents.

- "Suction Pumps are not recommended because they may cause degassing, pH modification, and loss of volatile compounds" *A Compendium of Superfund Field Operations Methods*, EPA/540/P-87/001, December 1987.
- "The agency does not recommend the use of peristaltic pumps to sample ground water particularly for volatile organic analytes" *RCRA Ground-Water Monitoring Draft Technical Guidance*, EPA Office of Solid Waste, November 1992.
- "The peristaltic pump is limited to shallow applications and can cause degassing resulting in alteration of pH, alkalinity, and volatiles loss", *Low-flow (Minimal drawdown) Ground-Water Sampling Procedures*, by Robert Puls & Michael Barcelona, April 1996, EPA/540/S-95/504.
- "Suction-lift pumps, such as peristaltic pumps, can operate at a very low pumping rate; however, using negative pressure to lift the sample can result in the loss of volatile analytes", USGS Book 9 Techniques of Water-Resources Investigation, Chapter A4. (Version 2.0, 9/2006).

## APPENDIX B

### SUMMARY OF SAMPLING INSTRUCTIONS

These instructions are for using an adjustable rate, submersible pump or a peristaltic pump with the pump's intake placed at the midpoint of a 10 foot or less well screen or an open interval. The water level in the monitoring well is above the top of the well screen or open interval, the ambient temperature is above 32°F, and the equipment is not dedicated. Field instruments are already calibrated. The equipment is setup according to the diagram at the end of these instructions.

1. Review well installation information. Record well depth, length of screen or open interval, and depth to top of the well screen. Determine the pump's intake depth (e.g., mid-point of screen/open interval).
2. On the day of sampling, check security of the well casing, perform any safety checks needed for the site, lay out a sheet of polyethylene around the well (if necessary), and setup the equipment. If necessary a canopy or an equivalent item can be setup to shade the pump's tubing and flow-through-cell from the sun light to prevent the sun light from heating the groundwater.
3. Check well casing for a reference mark. If missing, make a reference mark. Measure the water level (initial) to 0.01 ft. and record this information.
4. Install the pump's intake to the appropriate depth (e.g., midpoint) of the well screen or open interval. Do not turn-on the pump at this time.
5. Measure water level and record this information.
6. Turn-on the pump and discharge the groundwater into a graduated waste bucket. Slowly increase the flow rate until the water level starts to drop. Reduce the flow rate slightly so the water level stabilizes. Record the pump's settings. Calculate the flow rate using a graduated container and a stop watch. Record the flow rate. Do not let the water level drop below the top of the well screen.

If the groundwater is highly turbid or colored, continue to discharge the water into the bucket until the water clears (visual observation); this usually takes a few minutes. The turbid or colored water is usually from the well being disturbed during the pump installation. If the water does not clear, then you need to make a choice whether to continue purging the well (hoping that it will clear after a reasonable time) or continue to

the next step. Note, it is sometimes helpful to install the pump the day before the sampling event so that the disturbed materials in the well can settle out.

If the water level drops to the top of the well screen during the purging of the well, stop purging the well, and do the following:

Wait for the well to recharge to a sufficient volume so samples can be collected. This may take awhile (pump maybe removed from well, if turbidity is not a problem). The project manager will need to make the decision when samples should be collected and the reasons recorded in the site's log book. A water level measurement needs to be performed and recorded before samples are collected. When samples are being collected, the water level must not drop below the top of the screen or open interval. Collect the samples from the pump's tubing. Always collect the VOCs and dissolved gases samples first. Normally, the samples requiring a small volume are collected before the large volume samples are collected just in case there is not sufficient water in the well to fill all the sample containers. All samples must be collected, preserved, and stored according to the analytical method. Remove the pump from the well and decontaminate the sampling equipment.

If the water level has dropped 0.3 feet or less from the initial water level (water level measure before the pump was installed); proceed to Step 7. If the water level has dropped more than 0.3 feet, calculate the volume of water between the initial water level and the stabilized water level. Add the volume of the water which occupies the pump's tubing to this calculation. This combined volume of water needs to be purged from the well after the water level has stabilized before samples are be collected.

7. Attach the pump's tubing to the "T" connector with a valve (or a three-way stop cock). The pump's tubing from the well casing to the "T" connector must be as short as possible to prevent the groundwater in the tubing from heating up from the sun light or from the ambient air. Attach a short piece of tubing to the other end of the end of the "T" connector to serve as a sampling port for the turbidity samples. Attach the remaining end of the "T" connector to a short piece of tubing and connect the tubing to the flow-through-cell bottom port. To the top port, attach a small piece of tubing to direct the water into a calibrated waste bucket. Fill the cell with the groundwater and remove all gas bubbles from the cell. Position the flow-through-cell in such a way that if gas bubbles enter the cell they can easily exit the cell. If the ports are on the same side of the cell and the cell is cylindrical shape, the cell can be placed at a 45-degree angle with the ports facing upwards; this position should keep any gas bubbles entering the cell away from the monitoring probes and allow the gas bubbles to exit the cell easily (see Low-Flow Setup Diagram). Note,

make sure there are no gas bubbles caught in the probes' protective guard; you may need to shake the cell to remove these bubbles.

8. Turn-on the monitoring probes and turbidity meter.

9. Record the temperature, pH, dissolved oxygen, specific conductance, and oxidation/reduction potential measurements. Open the valve on the "T" connector to collect a sample for the turbidity measurement, close the valve, do the measurement, and record this measurement. Calculate the pump's flow rate from the water exiting the flow-through-cell using a graduated container and a stop watch, and record the measurement. Measure and record the water level. Check flow-through-cell for gas bubbles and sediment; if present, remove them.

10. Repeat Step 9 every 5 minutes or as appropriate until monitoring parameters stabilized. Note at least one flow-through-cell volume must be exchanged between readings. If not, the time interval between readings will need to be increased. Stabilization is achieved when three consecutive measurements are within the following limits:

**Turbidity** (10% for values greater than 5 NTUs; if three Turbidity values are less than 5 NTUs, consider the values as stabilized),

**Dissolved Oxygen** (10% for values greater than 0.5 mg/L, if three Dissolved Oxygen values are less than 0.5 mg/L, consider the values as stabilized),

**Specific Conductance** (3%),

**Temperature** (3%),

**pH** ( $\pm 0.1$  unit),

**Oxidation/Reduction Potential** ( $\pm 10$  millivolts).

If these stabilization requirements do not stabilize in a reasonable time, the probes may have been coated from the materials in the groundwater, from a buildup of sediment in the flow-through-cell, or a gas bubble is lodged in the probe. The cell and the probes will need to be cleaned. Turn-off the probes (not the pump), disconnect the cell from the "T" connector and continue to purge the well. Disassemble the cell, remove the sediment, and clean the probes according to the manufacturer's instructions. Reassemble the cell and connect the cell to the "T" connector. Remove all gas bubbles from the cell, turn-on the probes, and continue the measurements. Record that the time the cell was cleaned.

11. When it is time to collect the groundwater samples, turn-off the monitoring probes, and disconnect the pump's tubing from the "T" connector. If you are using a centrifugal or peristaltic pump check the pump's tubing to determine if the tubing is completely filled with water (no air space).

All samples must be collected and preserved according to the analytical method. VOCs and dissolved gases samples are normally collected first and directly into pre-preserved sample containers. However, this may not be the case for all sampling locations; the SAP/QAPP should list the order in which the samples are to be collected based on the project's objective(s). Fill all sample containers by allowing the pump discharge to flow gently down the inside of the container with minimal turbulence.

If the pump's tubing is not completely filled with water and the samples are being collected for VOCs and/or dissolved gases analyses using a centrifugal or peristaltic pump, do the following:

All samples must be collected and preserved according to the analytical method. The VOCs and the dissolved gases (e.g., methane, ethane, ethene, and carbon dioxide) samples are collected last. When it becomes time to collect these samples increase the pump's flow rate until the tubing is completely filled. Collect the samples and record the new flow rate.

12. Store the samples according to the analytical method.

13. Record the total purged volume (graduated waste bucket). Remove the pump from the well and decontaminate the sampling equipment.

# Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs

---

## Objective

New York State Department of Environmental Conservation's Division of Environmental Remediation (DER) performs or oversees sampling of environmental media and subsequent analysis of PFAS as part of remedial programs implemented under 6 NYCRR Part 375. To ensure consistency in sampling, analysis, reporting, and assessment of PFAS, DER has developed this document which summarizes currently accepted procedures and updates previous DER technical guidance pertaining to PFAS.

## Applicability

All work plans submitted to DEC pursuant to one of the remedial programs under Part 375 shall include PFAS sampling and analysis procedures that conform to the guidelines provided herein.

As part of a site investigation or remedial action compliance program, whenever samples of potentially affected media are collected and analyzed for the standard Target Analyte List/Target Compound List (TAL/TCL), PFAS analysis should also be performed. Potentially affected media can include soil, groundwater, surface water, and sediment. Based upon the potential for biota to be affected, biota sampling and analysis for PFAS may also be warranted as determined pursuant to a Fish and Wildlife Impact Analysis. Soil vapor sampling for PFAS is not required.

## Field Sampling Procedures

DER-10 specifies technical guidance applicable to DER's remedial programs. Given the prevalence and use of PFAS, DER has developed "best management practices" specific to sampling for PFAS. As specified in DER-10 Chapter 2, quality assurance procedures are to be submitted with investigation work plans. Typically, these procedures are incorporated into a work plan, or submitted as a stand-alone document (e.g., a Quality Assurance Project Plan). Quality assurance guidelines for PFAS are listed in Appendix A - Quality Assurance Project Plan (QAPP) Guidelines for PFAS.

Field sampling for PFAS performed under DER remedial programs should follow the appropriate procedures outlined for soils, sediments or other solids (Appendix B), non-potable groundwater (Appendix C), surface water (Appendix D), public or private water supply wells (Appendix E), and fish tissue (Appendix F).

QA/QC samples (e.g. duplicates, MS/MSD) should be collected as specified in DER-10, Section 2.3(c). For sampling equipment coming in contact with aqueous samples only, rinsate or equipment blanks should be collected. Equipment blanks should be collected at a minimum frequency of one per day per site or one per twenty samples, whichever is more frequent.

## Analysis and Reporting

As of October 2020, the United States Environmental Protection Agency (EPA) does not have a validated method for analysis of PFAS for media commonly analyzed under DER remedial programs (non-potable waters, solids). DER has developed the following guidelines to ensure consistency in analysis and reporting of PFAS.

The investigation work plan should describe analysis and reporting procedures, including laboratory analytical procedures for the methods discussed below. As specified in DER-10 Section 2.2, laboratories should provide a full Category B deliverable. In addition, a Data Usability Summary Report (DUSR) should be prepared by an independent, third party data validator. Electronic data submissions should meet the requirements provided at: <https://www.dec.ny.gov/chemical/62440.html>.

DER has developed a *PFAS Analyte List* (Appendix F) for remedial programs to understand the nature of contamination at sites. It is expected that reported results for PFAS will include, at a minimum, all the compounds listed. If lab and/or matrix specific issues are encountered for any analytes, the DER project manager, in consultation with the DER chemist, will make case-by-case decisions as to whether certain analytes may be temporarily or permanently discontinued from analysis at each site. As with other contaminants that are analyzed for at a site, the *PFAS Analyte List* may be refined for future sampling events based on investigative findings.

### Routine Analysis

Currently, New York State Department of Health's Environmental Laboratory Approval Program (ELAP) does not offer certification for PFAS in matrices other than finished drinking water. However, laboratories analyzing environmental samples for PFAS (e.g., soil, sediments, and groundwater) under DER's Part 375 remedial programs need to hold ELAP certification for PFOA and PFOS in drinking water by EPA Method 537, 537.1, ISO 25101, or Method 533. Laboratories should adhere to the guidelines and criteria set forth in the DER's laboratory guidelines for PFAS in non-potable water and solids (Appendix H - Laboratory Guidelines for Analysis of PFAS in Non-Potable Water and Solids). Data review guidelines were developed by DER to ensure data comparability and usability (Appendix H - Data Review Guidelines for Analysis of PFAS in Non-Potable Water and Solids).

LC-MS/MS analysis for PFAS using methodologies based on EPA Method 537.1 is the procedure to use for environmental samples. Isotope dilution techniques should be utilized for the analysis of PFAS in all media. Reporting limits for PFOA and PFOS in aqueous samples should not exceed 2 ng/L. Reporting limits for PFOA and PFOS in solid samples should not exceed 0.5 µg/kg. Reporting limits for all other PFAS in aqueous and solid media should be as close to these limits as possible. If laboratories indicate that they are not able to achieve these reporting limits for the entire *PFAS Analyte List*, site-specific decisions regarding acceptance of elevated reporting limits for specific PFAS can be made by the DER project manager in consultation with the DER chemist.

### Additional Analysis

Additional laboratory methods for analysis of PFAS may be warranted at a site, such as the Synthetic Precipitation Leaching Procedure (SPLP) and Total Oxidizable Precursor Assay (TOP Assay).

In cases where site-specific cleanup objectives for PFOA and PFOS are to be assessed, soil parameters, such as Total Organic Carbon (Lloyd Kahn), soil pH (EPA Method 9045), clay content (percent), and cation exchange capacity (EPA Method 9081), should be included in the analysis to help evaluate factors affecting the leachability of PFAS in site soils.

SPLP is a technique used to determine the mobility of chemicals in liquids, soils and wastes, and may be useful in determining the need for addressing PFAS-containing material as part of the remedy. SPLP by EPA Method 1312 should be used unless otherwise specified by the DER project manager in consultation with the DER chemist.

Impacted materials can be made up of PFAS that are not analyzable by routine analytical methodology. A TOP Assay can be utilized to conceptualize the amount and type of oxidizable PFAS which could be liberated in the environment, which approximates the maximum concentration of perfluoroalkyl substances that could be generated

if all polyfluoroalkyl substances were oxidized. For example, some polyfluoroalkyl substances may degrade or transform to form perfluoroalkyl substances (such as PFOA or PFOS), resulting in an increase in perfluoroalkyl substance concentrations as contaminated groundwater moves away from a source. The TOP Assay converts, through oxidation, polyfluoroalkyl substances (precursors) into perfluoroalkyl substances that can be detected by routine analytical methodology.<sup>1</sup>

Commercial laboratories have adopted methods which allow for the quantification of targeted PFAS in air and biota. The EPA's Office of Research and Development (ORD) is currently developing methods which allow for air emissions characterization of PFAS, including both targeted and non-targeted analysis of PFAS. Consult with the DER project manager and the DER chemist for assistance on analyzing biota/tissue and air samples.

## Data Assessment and Application to Site Cleanup

Until such time as Ambient Water Quality Standards (AWQS) and Soil Cleanup Objectives (SCOs) for PFOA and PFOS are published, the extent of contaminated media potentially subject to remediation should be determined on a case-by-case basis using the procedures discussed below and the criteria in DER-10. Preliminary target levels for cleanup of PFOA and PFOS in other media, including biota and sediment, have not yet been established by the DEC.

### Water Sample Results

PFOA and PFOS should be further assessed and considered as potential contaminants of concern in groundwater or surface water if PFOA or PFOS is detected in any water sample at or above 10 ng/L (ppt) and is determined to be attributable to the site, either by a comparison of upgradient and downgradient levels, or the presence of soil source areas, as defined below. In addition, further assessment of water may be warranted if either of the following screening levels are met:

- a. any other individual PFAS (not PFOA or PFOS) is detected in water at or above 100 ng/L; or
- b. total concentration of PFAS (including PFOA and PFOS) is detected in water at or above 500 ng/L

If PFOA and/or PFOS are identified as contaminants of concern for a site, they should be assessed as part of the remedy selection process in accordance with Part 375 and DER-10.

### Soil Sample Results

Soil cleanup objectives for PFOA and PFOS will be proposed in an upcoming revision to 6 NYCRR Part 375-6. Until SCOs are in effect, the following are to be used as guidance values.

<b>Guidance Values for Anticipated Site Use</b>	<b>PFOA (ppb)</b>	<b>PFOS (ppb)</b>
Unrestricted	0.66	0.88
Residential	6.6	8.8
Restricted Residential	33	44
Commercial	500	440
Industrial	600	440
Protection of Groundwater <sup>2</sup>	1.1	3.7

<sup>1</sup> TOP Assay analysis of highly contaminated samples, such as those from an AFFF (aqueous film-forming foam) site, can result in incomplete oxidation of the samples and an underestimation of the total perfluoroalkyl substances.

<sup>2</sup> The movement of PFAS in the environment is being aggressively researched at this time; that research will eventually result in more accurate models for the behaviors of these chemicals. In the meantime, DEC has calculated the guidance value for the protection of groundwater using the same procedure used for all other chemicals, as described in Section 7.7 of the Technical Support Document ([http://www.dec.ny.gov/docs/remediation\\_hudson\\_pdf/techsupdoc.pdf](http://www.dec.ny.gov/docs/remediation_hudson_pdf/techsupdoc.pdf)).

PFOA and PFOS results for soil are to be compared against the guidance values listed above. These guidance values are to be used in determining whether PFOA and PFOS are contaminants of concern for the site and for determining remedial action objectives and cleanup requirements. Site-specific remedial objectives for protection of groundwater can also be presented for evaluation by DEC. Development of site-specific remedial objectives for protection of groundwater will require analysis of additional soil parameters relating to leachability. These additional analyses can include any or all the parameters listed above (soil pH, cation exchange capacity, etc.) and/or use of SPLP.

As the understanding of PFAS transport improves, DEC welcomes proposals for site-specific remedial objectives for protection of groundwater. DEC will expect that those may be dependent on additional factors including soil pH, aqueous pH, % organic carbon, % Sand/Silt/Clay, soil cations: K, Ca, Mg, Na, Fe, Al, cation exchange capacity, and anion exchange capacity. Site-specific remedial objectives should also consider the dilution attenuation factor (DAF). The NJDEP publication on DAF can be used as a reference:

<https://www.nj.gov/dep/srp/guidance/rs/daf.pdf>.

## Testing for Imported Soil

Testing for PFAS should be included any time a full TAL/TCL analyte list is required. Results for PFOA and PFOS should be compared to the applicable guidance values. If PFOA or PFOS is detected in any sample at or above the guidance values then the source of backfill should be rejected, unless a site-specific exemption is provided by DER based on SPLP testing, for example. If the concentrations of PFOA and PFOS in leachate are at or above 10 ppt (the Maximum Contaminant Levels established for drinking water by the New York State Department of Health), then the soil is not acceptable.

PFOA, PFOS and 1,4-dioxane are all considered semi-volatile compounds, so composite samples are appropriate for these compounds when sampling in accordance with DER-10, Table 5.4(e)10. Category B deliverables should be submitted for backfill samples, though a DUSR is not required.

## Appendix A - Quality Assurance Project Plan (QAPP) Guidelines for PFAS

The following guidelines (general and PFAS-specific) can be used to assist with the development of a QAPP for projects within DER involving sampling and analysis of PFAS.

### General Guidelines in Accordance with DER-10

- Document/work plan section title – Quality Assurance Project Plan
- Summarize project scope, goals, and objectives
- Provide project organization including names and resumes of the project manager, Quality Assurance Officer (QAO), field staff, and Data Validator
  - The QAO should not have another position on the project, such as project or task manager, that involves project productivity or profitability as a job performance criterion
- List the ELAP certified lab(s) to be used for analysis of samples
- Include a site map showing sample locations
- Provide detailed sampling procedures for each matrix
- Include Data Quality Usability Objectives
- List equipment decontamination procedures
- Include an “Analytical Methods/Quality Assurance Summary Table” specifying:
  - Matrix type
  - Number or frequency of samples to be collected per matrix
  - Number of field and trip blanks per matrix
  - Analytical parameters to be measured per matrix
  - Analytical methods to be used per matrix with minimum reporting limits
  - Number and type of matrix spike and matrix spike duplicate samples to be collected
  - Number and type of duplicate samples to be collected
  - Sample preservation to be used per analytical method and sample matrix
  - Sample container volume and type to be used per analytical method and sample matrix
  - Sample holding time to be used per analytical method and sample matrix
- Specify Category B laboratory data deliverables and preparation of a DUSR

### Specific Guidelines for PFAS

- Include in the text that sampling for PFAS will take place
- Include in the text that PFAS will be analyzed by LC-MS/MS for PFAS using methodologies based on EPA Method 537.1
- Include the list of PFAS compounds to be analyzed (*PFAS Analyte List*)
- Include the laboratory SOP for PFAS analysis
- List the minimum method-achievable Reporting Limits for PFAS
  - Reporting Limits should be less than or equal to:
    - Aqueous – 2 ng/L (ppt)
    - Solids – 0.5 µg/kg (ppb)
- Include the laboratory Method Detection Limits for the PFAS compounds to be analyzed
- Laboratory should have ELAP certification for PFOA and PFOS in drinking water by EPA Method 537, 537.1, EPA Method 533, or ISO 25101
- Include detailed sampling procedures
  - Precautions to be taken
  - Pump and equipment types
  - Decontamination procedures
  - Approved materials only to be used
- Specify that regular ice only will be used for sample shipment
- Specify that equipment blanks should be collected at a minimum frequency of 1 per day per site for each matrix

## Appendix B - Sampling Protocols for PFAS in Soils, Sediments and Solids

### General

The objective of this protocol is to give general guidelines for the collection of soil, sediment and other solid samples for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 ([http://www.dec.ny.gov/docs/remediation\\_hudson\\_pdf/sgpsect5.pdf](http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf)), with the following limitations.

### Laboratory Analysis and Containers

Samples collected using this protocol are intended to be analyzed for PFAS using methodologies based on EPA Method 537.1.

The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

### Equipment

Acceptable materials for sampling include stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in to contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials including sample bottle cap liners with a PTFE layer.

A list of acceptable equipment is provided below, but other equipment may be considered appropriate based on sampling conditions.

- stainless steel spoon
- stainless steel bowl
- steel hand auger or shovel without any coatings

### Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

### Sampling Techniques

Sampling is often conducted in areas where a vegetative turf has been established. In these cases, a pre-cleaned trowel or shovel should be used to carefully remove the turf so that it may be replaced at the conclusion of sampling. Surface soil samples (e.g. 0 to 6 inches below surface) should then be collected using a pre-cleaned, stainless steel spoon. Shallow subsurface soil samples (e.g. 6 to ~36 inches below surface) may be collected by digging a hole using a pre-cleaned hand auger or shovel. When the desired subsurface depth is reached, a pre-cleaned hand auger or spoon shall be used to obtain the sample.

When the sample is obtained, it should be deposited into a stainless steel bowl for mixing prior to filling the sample containers. The soil should be placed directly into the bowl and mixed thoroughly by rolling the material into the middle until the material is homogenized. At this point the material within the bowl can be placed into the laboratory provided container.

## Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

## Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at  $4 \pm 2^\circ$  Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- Request appropriate data deliverable (Category B) and an electronic data deliverable

## Documentation

A soil log or sample log shall document the location of the sample/borehole, depth of the sample, sampling equipment, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate. Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

## Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

Appropriate rain gear (PVC, polyurethane, or rubber rain gear are acceptable), bug spray, and sunscreen should be used that does not contain PFAS. Well washed cotton coveralls may be used as an alternative to bug spray and/or sunscreen.

PPE that contains PFAS is acceptable when site conditions warrant additional protection for the samplers and no other materials can be used to be protective. Documentation of such use should be provided in the field notes.

## Appendix C - Sampling Protocols for PFAS in Monitoring Wells

### General

The objective of this protocol is to give general guidelines for the collection of groundwater samples for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 ([http://www.dec.ny.gov/docs/remediation\\_hudson\\_pdf/sgpsect5.pdf](http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf)), with the following limitations.

### Laboratory Analysis and Container

Samples collected using this protocol are intended to be analyzed for PFAS using methodologies based on EPA Method 537.1.

The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

### Equipment

Acceptable materials for sampling include: stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials including plumbers tape and sample bottle cap liners with a PTFE layer.

A list of acceptable equipment is provided below, but other equipment may be considered appropriate based on sampling conditions.

- stainless steel inertia pump with HDPE tubing
- peristaltic pump equipped with HDPE tubing and silicone tubing
- stainless steel bailer with stainless steel ball
- bladder pump (identified as PFAS-free) with HDPE tubing

### Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

### Sampling Techniques

Monitoring wells should be purged in accordance with the sampling procedure (standard/volume purge or low flow purge) identified in the site work plan, which will determine the appropriate time to collect the sample. If sampling using standard purge techniques, additional purging may be needed to reduce turbidity levels, so samples contain a limited amount of sediment within the sample containers. Sample containers that contain sediment may cause issues at the laboratory, which may result in elevated reporting limits and other issues during the sample preparation that can compromise data usability. Sampling personnel should don new nitrile gloves prior to sample collection due to the potential to contact PFAS containing items (not related to the sampling equipment) during the purging activities.

## Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

## Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at  $4 \pm 2^\circ$  Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- Collect one equipment blank per day per site and minimum 1 equipment blank per 20 samples. The equipment blank shall test the new and decontaminated sampling equipment utilized to obtain a sample for residual PFAS contamination. This sample is obtained by using laboratory provided PFAS-free water and passing the water over or through the sampling device and into laboratory provided sample containers
- Additional equipment blank samples may be collected to assess other equipment that is utilized at the monitoring well
- Request appropriate data deliverable (Category B) and an electronic data deliverable

## Documentation

A purge log shall document the location of the sample, sampling equipment, groundwater parameters, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate. Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

## Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

Appropriate rain gear (PVC, polyurethane, or rubber rain gear are acceptable), bug spray, and sunscreen should be used that does not contain PFAS. Well washed cotton coveralls may be used as an alternative to bug spray and/or sunscreen.

PPE that contains PFAS is acceptable when site conditions warrant additional protection for the samplers and no other materials can be used to be protective. Documentation of such use should be provided in the field notes.

## Appendix D - Sampling Protocols for PFAS in Surface Water

### General

The objective of this protocol is to give general guidelines for the collection of surface water samples for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 ([http://www.dec.ny.gov/docs/remediation\\_hudson\\_pdf/sgpsect5.pdf](http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf)), with the following limitations.

### Laboratory Analysis and Container

Samples collected using this protocol are intended to be analyzed for PFAS using methodologies based on EPA Method 537.1.

The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

### Equipment

Acceptable materials for sampling include: stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials including sample bottle cap liners with a PTFE layer.

A list of acceptable equipment is provided below, but other equipment may be considered appropriate based on sampling conditions.

- stainless steel cup

### Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

### Sampling Techniques

Where conditions permit, (e.g. creek or pond) sampling devices (e.g. stainless steel cup) should be rinsed with site medium to be sampled prior to collection of the sample. At this point the sample can be collected and poured into the sample container.

If site conditions permit, samples can be collected directly into the laboratory container.

### Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

## Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at  $4 \pm 2^\circ$  Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- Collect one equipment blank per day per site and minimum 1 equipment blank per 20 samples. The equipment blank shall test the new and decontaminated sampling equipment utilized to obtain a sample for residual PFAS contamination. This sample is obtained by using laboratory provided PFAS-free water and passing the water over or through the sampling device and into laboratory provided sample containers
- Request appropriate data deliverable (Category B) and an electronic data deliverable

## Documentation

A sample log shall document the location of the sample, sampling equipment, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate. Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

## Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

Appropriate rain gear (PVC, polyurethane, or rubber rain gear are acceptable), bug spray, and sunscreen should be used that does not contain PFAS. Well washed cotton coveralls may be used as an alternative to bug spray and/or sunscreen.

PPE that contains PFAS is acceptable when site conditions warrant additional protection for the samplers and no other materials can be used to be protective. Documentation of such use should be provided in the field notes.

## Appendix E - Sampling Protocols for PFAS in Private Water Supply Wells

### General

The objective of this protocol is to give general guidelines for the collection of water samples from private water supply wells (with a functioning pump) for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 ([http://www.dec.ny.gov/docs/remediation\\_hudson\\_pdf/sgpsect5.pdf](http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf)), with the following limitations.

### Laboratory Analysis and Container

Drinking water samples collected using this protocol are intended to be analyzed for PFAS by EPA Method 537, 537.1, 533, or ISO Method 25101. The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

### Equipment

Acceptable materials for sampling include stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials (e.g. plumbers tape), including sample bottle cap liners with a PTFE layer.

### Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

### Sampling Techniques

Locate and assess the pressure tank and determine if any filter units are present within the building. Establish the sample location as close to the well pump as possible, which is typically the spigot at the pressure tank. Ensure sampling equipment is kept clean during sampling as access to the pressure tank spigot, which is likely located close to the ground, may be obstructed and may hinder sample collection.

Prior to sampling, a faucet downstream of the pressure tank (e.g., washroom sink) should be run until the well pump comes on and a decrease in water temperature is noted which indicates that the water is coming from the well. If the homeowner is amenable, staff should run the water longer to purge the well (15+ minutes) to provide a sample representative of the water in the formation rather than standing water in the well and piping system including the pressure tank. At this point a new pair of nitrile gloves should be donned and the sample can be collected from the sample point at the pressure tank.

### Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

## Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at  $4 \pm 2^\circ$  Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- If equipment was used, collect one equipment blank per day per site and a minimum 1 equipment blank per 20 samples. The equipment blank shall test the new and decontaminated sampling equipment utilized to obtain a sample for residual PFAS contamination. This sample is obtained by using laboratory provided PFAS-free water and passing the water over or through the sampling device and into laboratory provided sample containers.
- A field reagent blank (FRB) should be collected at a rate of one per 20 samples. The lab will provide a FRB bottle containing PFAS free water and one empty FRB bottle. In the field, pour the water from the one bottle into the empty FRB bottle and label appropriately.
- Request appropriate data deliverable (Category B) and an electronic data deliverable
- For sampling events where multiple private wells (homes or sites) are to be sampled per day, it is acceptable to collect QC samples at a rate of one per 20 across multiple sites or days.

## Documentation

A sample log shall document the location of the private well, sample point location, owner contact information, sampling equipment, purge duration, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate and available (e.g. well construction, pump type and location, yield, installation date). Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

## Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

## Appendix F - Sampling Protocols for PFAS in Fish

This appendix contains a copy of the latest guidelines developed by the Division of Fish and Wildlife (DFW) entitled “General Fish Handling Procedures for Contaminant Analysis” (Ver. 8).

**Procedure Name:** General Fish Handling Procedures for Contaminant Analysis

**Number:** FW-005

**Purpose:** This procedure describes data collection, fish processing and delivery of fish collected for contaminant monitoring. It contains the chain of custody and collection record forms that should be used for the collections.

**Organization:** Environmental Monitoring Section  
Bureau of Ecosystem Health  
Division of Fish and Wildlife (DFW)  
New York State Department of Environmental Conservation (NYSDEC)  
625 Broadway  
Albany, New York 12233-4756

**Version:** 8

**Previous Version Date:** 21 March 2018

**Summary of Changes to this Version:** Updated bureau name to Bureau of Ecosystem Health. Added direction to list the names of all field crew on the collection record. Minor formatting changes on chain of custody and collection records.

**Originator or Revised by:** Wayne Richter, Jesse Becker

**Date:** 26 April 2019

**Quality Assurance Officer and Approval Date:** Jesse Becker, 26 April 2019

**NEW YORK STATE  
DEPARTMENT OF ENVIRONMENTAL CONSERVATION**

**GENERAL FISH HANDLING PROCEDURES FOR CONTAMINANT ANALYSES**

- A. Original copies of all continuity of evidence (i.e., Chain of Custody) and collection record forms must accompany delivery of fish to the lab. A copy shall be directed to the Project Leader or as appropriate, Wayne Richter. All necessary forms will be supplied by the Bureau of Ecosystem Health. Because some samples may be used in legal cases, it is critical that each section is filled out completely. Each Chain of Custody form has three main sections:
1. The top box is to be filled out **and signed** by the person responsible for the fish collection (e.g., crew leader, field biologist, researcher). This person is responsible for delivery of the samples to DEC facilities or personnel (e.g., regional office or biologist).
  2. The second section is to be filled out **and signed** by the person responsible for the collections while being stored at DEC, before delivery to the analytical lab. This may be the same person as in (1), but it is still required that they complete the section. Also important is the **range of identification numbers** (i.e., tag numbers) included in the sample batch.
  3. Finally, the bottom box is to record any transfers between DEC personnel and facilities. Each subsequent transfer should be **identified, signed, and dated**, until laboratory personnel take possession of the fish.
- B. The following data are required on each **Fish Collection Record** form:
1. Project and Site Name.
  2. DEC Region.
  3. All personnel (and affiliation) involved in the collection.
  4. Method of collection (gill net, hook and line, etc.)
  5. Preservation Method.
- C. The following data are to be taken on each fish collected and recorded on the **Fish Collection Record** form:
1. Tag number - Each specimen is to be individually jaw tagged at time of collection with a unique number. Make sure the tag is turned out so that the number can be read without opening the bag. Use tags in sequential order. For small fish or composite samples place the tag inside the bag with the samples. The Bureau of Ecosystem Health can supply the tags.
  2. Species identification (please be explicit enough to enable assigning genus and species). Group fish by species when processing.
  3. Date collected.
  4. Sample location (waterway and nearest prominent identifiable landmark).
  5. Total length (nearest mm or smallest sub-unit on measuring instrument) and weight (nearest g or

smallest sub-unit of weight on weighing instrument). Take all measures as soon as possible with calibrated, protected instruments (e.g. from wind and upsets) and prior to freezing.

6. Sex - fish may be cut enough to allow sexing or other internal investigation, but do not eviscerate. Make any incision on the right side of the belly flap or exactly down the midline so that a left-side fillet can be removed.

D. General data collection recommendations:

1. It is helpful to use an ID or tag number that will be unique. It is best to use metal striped bass or other uniquely numbered metal tags. If uniquely numbered tags are unavailable, values based on the region, water body and year are likely to be unique: for example, R7CAY11001 for Region 7, Cayuga Lake, 2011, fish 1. If the fish are just numbered 1 through 20, we have to give them new numbers for our database, making it more difficult to trace your fish to their analytical results and creating an additional possibility for errors.
  2. Process and record fish of the same species sequentially. Recording mistakes are less likely when all fish from a species are processed together. Starting with the bigger fish species helps avoid missing an individual.
  3. If using Bureau of Ecosystem Health supplied tags or other numbered tags, use tags in sequence so that fish are recorded with sequential Tag Numbers. This makes data entry and login at the lab and use of the data in the future easier and reduces keypunch errors.
  4. Record length and weight as soon as possible after collection and before freezing. Other data are recorded in the field upon collection. An age determination of each fish is optional, but if done, it is recorded in the appropriate "Age" column.
  5. For composite samples of small fish, record the number of fish in the composite in the Remarks column. Record the length and weight of each individual in a composite. All fish in a composite sample should be of the same species and members of a composite should be visually matched for size.
  6. Please submit photocopies of topographic maps or good quality navigation charts indicating sampling locations. GPS coordinates can be entered in the Location column of the collection record form in addition to or instead for providing a map. These records are of immense help to us (and hopefully you) in providing documented location records which are not dependent on memory and/or the same collection crew. In addition, they may be helpful for contaminant source trackdown and remediation/control efforts of the Department.
  7. When recording data on fish measurements, it will help to ensure correct data recording for the data recorder to call back the numbers to the person making the measurements.
- E. Each fish is to be placed in its own individual plastic bag. For small fish to be analyzed as a composite, put all of the fish for one composite in the same bag but use a separate bag for each composite. It is important to individually bag the fish to avoid difficulties or cross contamination when processing the fish for chemical analysis. Be sure to include the fish's tag number inside the bag, preferably attached to the fish with the tag number turned out so it can be read. Tie or otherwise secure the bag closed. **The Bureau of Ecosystem Health will supply the bags.** If necessary, food grade bags may be procured from a suitable vendor (e.g., grocery store). It is preferable to redundantly label each bag with a manila tag tied between the knot and the body of the bag. This tag should be labeled with the project name, collection location, tag number, collection date, and fish species. If scales are collected, the scale envelope should be labeled with

the same information.

- F. Groups of fish, by species, are to be placed in one large plastic bag per sampling location. **The Bureau of Ecosystem Health will supply the larger bags.** Tie or otherwise secure the bag closed. Label the site bag with a manila tag tied between the knot and the body of the bag. The tag should contain: project, collection location, collection date, species and **tag number ranges**. Having this information on the manila tag enables lab staff to know what is in the bag without opening it.
- G. Do not eviscerate, fillet or otherwise dissect the fish unless specifically asked to. If evisceration or dissection is specified, the fish must be cut along the exact midline or on the right side so that the left side fillet can be removed intact at the laboratory. If filleting is specified, the procedure for taking a standard fillet (SOP PREPLAB 4) must be followed, including removing scales.
- H. Special procedures for PFAS: Unlike legacy contaminants such as PCBs, which are rarely found in day to day life, PFAS are widely used and frequently encountered. Practices that avoid sample contamination are therefore necessary. While no standard practices have been established for fish, procedures for water quality sampling can provide guidance. The following practices should be used for collections when fish are to be analyzed for PFAS:
- No materials containing Teflon.
  - No Post-it notes.
  - No ice packs; only water ice or dry ice.
  - Any gloves worn must be powder free nitrile.
  - No Gore-Tex or similar materials (Gore-Tex is a PFC with PFOA used in its manufacture).
  - No stain repellent or waterproof treated clothing; these are likely to contain PFCs.
  - Avoid plastic materials, other than HDPE, including clipboards and waterproof notebooks.
  - Wash hands after handling any food containers or packages as these may contain PFCs.
    - Keep pre-wrapped food containers and wrappers isolated from fish handling.
  - Wear clothing washed at least six times since purchase.
  - Wear clothing washed without fabric softener.
  - Staff should avoid cosmetics, moisturizers, hand creams and similar products on the day of sampling as many of these products contain PFCs (Fujii et al. 2013). Sunscreen or insect repellent should not contain ingredients with “fluor” in their name. Apply any sunscreen or insect repellent well downwind from all materials. Hands must be washed after touching any of these products.
- I. All fish must be kept at a temperature  $<45^{\circ}\text{F}$  ( $<8^{\circ}\text{C}$ ) immediately following data processing. As soon as possible, freeze at  $-20^{\circ}\text{C} \pm 5^{\circ}\text{C}$ . Due to occasional freezer failures, daily freezer temperature logs are required. The freezer should be locked or otherwise secured to maintain chain of custody.
- J. In most cases, samples should be delivered to the Analytical Services Unit at the Hale Creek field station. Coordinate delivery with field station staff and send copies of the collection records, continuity of evidence forms and freezer temperature logs to the field station. For samples to be analyzed elsewhere, non-routine collections or other questions, contact Wayne Richter, Bureau of Ecosystem Health, NYSDEC, 625 Broadway, Albany, New York 12233-4756, 518-402-8974, or the project leader about sample transfer. Samples will then be directed to the analytical facility and personnel noted on specific project descriptions.
- K. A recommended equipment list is at the end of this document.

**NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION  
DIVISION OF FISH AND WILDLIFE  
FISH COLLECTION RECORD**

Project and Site Name \_\_\_\_\_ DEC Region \_\_\_\_\_

**NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION  
CHAIN OF CUSTODY**

I, \_\_\_\_\_, of \_\_\_\_\_ collected the  
(Print Name) (Print Business Address)

following on \_\_\_\_\_, 20\_\_\_\_ from \_\_\_\_\_  
(Date) (Water Body)

in the vicinity of \_\_\_\_\_  
(Landmark, Village, Road, etc.)

Town of \_\_\_\_\_, in \_\_\_\_\_ County.

Item(s) \_\_\_\_\_

\_\_\_\_\_

Said sample(s) were in my possession and handled according to standard procedures provided to me prior to collection. The sample(s) were placed in the custody of a representative of the New York State Department of Environmental Conservation on \_\_\_\_\_, 20\_\_\_\_.

\_\_\_\_\_ Signature \_\_\_\_\_ Date

I, \_\_\_\_\_, received the above mentioned sample(s) on the date specified and assigned identification number(s) \_\_\_\_\_ to the sample(s). I have recorded pertinent data for the sample(s) on the attached collection records. The sample(s) remained in my custody until subsequently transferred, prepared or shipped at times and on dates as attested to below.

\_\_\_\_\_ Signature \_\_\_\_\_ Date

SECOND RECIPIENT (Print Name)	TIME & DATE	PURPOSE OF TRANSFER

## **NOTICE OF WARRANTY**

By signature to the chain of custody (reverse), the signatory warrants that the information provided is truthful and accurate to the best of his/her ability. The signatory affirms that he/she is willing to testify to those facts provided and the circumstances surrounding the same. Nothing in this warranty or chain of custody negates responsibility nor liability of the signatories for the truthfulness and accuracy of the statements provided.

## **HANDLING INSTRUCTIONS**

On day of collection, collector(s) name(s), address(es), date, geographic location of capture (attach a copy of topographic map or navigation chart), species, number kept of each species, and description of capture vicinity (proper noun, if possible) along with name of Town and County must be indicated on reverse.

Retain organisms in manila tagged plastic bags to avoid mixing capture locations. Note appropriate information on each bag tag.

Keep samples as cool as possible. Put on ice if fish cannot be frozen within 12 hours. If fish are held more than 24 hours without freezing, they will not be retained or analyzed.

Initial recipient (either DEC or designated agent) of samples from collector(s) is responsible for obtaining and recording information on the collection record forms which will accompany the chain of custody. This person will seal the container using packing tape and writing his signature, the time and the date across the tape onto the container with indelible marker. Any time a seal is broken, for whatever purpose, the incident must be recorded on the Chain of Custody (reason, time, and date) in the purpose of transfer block. Container then is resealed using new tape and rewriting signature, with time and date.

## EQUIPMENT LIST

Scale or balance of appropriate capacity for the fish to be collected.

Fish measuring board.

Plastic bags of an appropriate size for the fish to be collected and for site bags.

Individually numbered metal tags for fish.

Manila tags to label bags.

Small envelopes, approximately 2" x 3.5", if fish scales are to be collected.

Knife for removing scales.

Chain of custody and fish collection forms.

Clipboard.

Pens or markers.

Paper towels.

Dish soap and brush.

Bucket.

Cooler.

Ice.

Duct tape.

## Appendix G – PFAS Analyte List

<b>Group</b>	<b>Chemical Name</b>	<b>Abbreviation</b>	<b>CAS Number</b>
Perfluoroalkyl sulfonates	Perfluorobutanesulfonic acid	PFBS	375-73-5
	Perfluorohexanesulfonic acid	PFHxS	355-46-4
	Perfluoroheptanesulfonic acid	PFHpS	375-92-8
	Perfluorooctanesulfonic acid	PFOS	1763-23-1
	Perfluorodecanesulfonic acid	PFDS	335-77-3
Perfluoroalkyl carboxylates	Perfluorobutanoic acid	PFBA	375-22-4
	Perfluoropentanoic acid	PFPeA	2706-90-3
	Perfluorohexanoic acid	PFHxA	307-24-4
	Perfluoroheptanoic acid	PFHpA	375-85-9
	Perfluorooctanoic acid	PFOA	335-67-1
	Perfluorononanoic acid	PFNA	375-95-1
	Perfluorodecanoic acid	PFDA	335-76-2
	Perfluoroundecanoic acid	PFUA/PFUdA	2058-94-8
	Perfluorododecanoic acid	PFDoA	307-55-1
	Perfluorotridecanoic acid	PFTriA/PFTTrDA	72629-94-8
	Perfluorotetradecanoic acid	PFTA/PFTeDA	376-06-7
Fluorinated Telomer Sulfonates	6:2 Fluorotelomer sulfonate	6:2 FTS	27619-97-2
	8:2 Fluorotelomer sulfonate	8:2 FTS	39108-34-4
Perfluorooctane-sulfonamides	Perfluorooctanesulfonamide	FOSA	754-91-6
Perfluorooctane-sulfonamidoacetic acids	N-methyl perfluorooctanesulfonamidoacetic acid	N-MeFOSAA	2355-31-9
	N-ethyl perfluorooctanesulfonamidoacetic acid	N-EtFOSAA	2991-50-6

## Appendix H - Laboratory Guidelines for Analysis of PFAS in Non-Potable Water and Solids

### General

New York State Department of Environmental Conservation's Division of Environmental Remediation (DER) developed the following guidelines for laboratories analyzing environmental samples for PFAS under DER programs. If laboratories cannot adhere to the following guidelines, they should contact DER's Quality Assurance Officer, Dana Barbarossa, at [dana.barbarossa@dec.ny.gov](mailto:dana.barbarossa@dec.ny.gov) prior to analysis of samples.

### Isotope Dilution

Isotope dilution techniques should be utilized for the analysis of PFAS in all media.

### Extraction

For water samples, the entire sample bottle should be extracted, and the sample bottle rinsed with appropriate solvent to remove any residual PFAS.

For samples with high particulates, the samples should be handled in one of the following ways:

1. Spike the entire sample bottle with isotope dilution analytes (IDAs) prior to any sample manipulation. The sample can be passed through the SPE and if it clogs, record the volume that passed through.
2. If the sample contains too much sediment to attempt passing it through the SPE cartridge, the sample should be spiked with isotope dilution analytes, centrifuged and decanted.
3. If higher reporting limits are acceptable for the project, the sample can be diluted by taking a representative aliquot of the sample. If isotope dilution analytes will be diluted out of the sample, they can be added after the dilution. The sample should be homogenized prior to taking an aliquot.

If alternate sample extraction procedures are used, please contact the DER remedial program chemist prior to employing. Any deviations in sample preparation procedures should be clearly noted in the case narrative.

### Signal to Noise Ratio

For all target analyte ions used for quantification, signal to noise ratio should be 3:1 or greater.

### Blanks

There should be no detections in the method blanks above the reporting limits.

### Ion Transitions

The ion transitions listed below should be used for the following PFAS:

PFOA	413 > 369
PFOS	499 > 80
PFHxS	399 > 80
PFBS	299 > 80
6:2 FTS	427 > 407
8:2 FTS	527 > 507
N-EtFOSAA	584 > 419
N-MeFOSAA	570 > 419

## Branched and Linear Isomers

Standards containing both branched and linear isomers should be used when standards are commercially available. Currently, quantitative standards are available for PFHxS, PFOS, NMeFOSAA, and NEtFOSAA. As more standards become available, they should be incorporated in to the method. All isomer peaks present in the standard should be integrated and the areas summed. Samples should be integrated in the same manner as the standards.

Since a quantitative standard does not exist for branched isomers of PFOA, the instrument should be calibrated using just the linear isomer and a technical (qualitative) PFOA standard should be used to identify the retention time of the branched PFOA isomers in the sample. The total response of PFOA branched and linear isomers should be integrated in the samples and quantitated using the calibration curve of the linear standard.

## Secondary Ion Transition Monitoring

Quantifier and qualifier ions should be monitored for all target analytes (PFBA and PFPeA are exceptions). The ratio of quantifier ion response to qualifier ion response should be calculated for each target analyte and the ratio compared to standards. Lab derived criteria should be used to determine if the ratios are acceptable.

## Reporting

Detections below the reporting limit should be reported and qualified with a J qualifier.

The acid form of PFAS analytes should be reported. If the salt form of the PFAS was used as a stock standard, the measured mass should be corrected to report the acid form of the analyte.

## Appendix I - Data Review Guidelines for Analysis of PFAS in Non-Potable Water and Solids

### General

These guidelines are intended to be used for the validation of PFAS analytical results for projects within the Division of Environmental Remediation (DER) as well as aid in the preparation of a data usability summary report. Data reviewers should understand the methodology and techniques utilized in the analysis. Consultation with the end user of the data may be necessary to assist in determining data usability based on the data quality objectives in the Quality Assurance Project Plan. A familiarity with the laboratory’s Standard Operating Procedure may also be needed to fully evaluate the data. If you have any questions, please contact DER’s Quality Assurance Officer, Dana Barbarossa, at [dana.barbarossa@dec.ny.gov](mailto:dana.barbarossa@dec.ny.gov).

### Preservation and Holding Time

Samples should be preserved with ice to a temperature of less than 6°C upon arrival at the lab. The holding time is 14 days to extraction for aqueous and solid samples. The time from extraction to analysis for aqueous samples is 28 days and 40 days for solids.

Temperature greatly exceeds 6°C upon arrival at the lab*	Use professional judgement to qualify detects and non-detects as estimated or rejected
Holding time exceeding 28 days to extraction	Use professional judgement to qualify detects and non-detects as estimated or rejected if holding time is grossly exceeded

\*Samples that are delivered to the lab immediately after sampling may not meet the thermal preservation guidelines. Samples are considered acceptable if they arrive on ice or an attempt to chill the samples is observed.

### Initial Calibration

The initial calibration should contain a minimum of five standards for linear fit and six standards for a quadratic fit. The relative standard deviation (RSD) for a quadratic fit calibration should be less than 20%. Linear fit calibration curves should have an R<sup>2</sup> value greater than 0.990.

The low-level calibration standard should be within 50% - 150% of the true value, and the mid-level calibration standard within 70% - 130% of the true value.

%RSD >20%	J flag detects and UJ non detects
R <sup>2</sup> >0.990	J flag detects and UJ non detects
Low-level calibration check <50% or >150%	J flag detects and UJ non detects
Mid-level calibration check <70% or >130%	J flag detects and UJ non detects

### Initial Calibration Verification

An initial calibration verification (ICV) standard should be from a second source (if available). The ICV should be at the same concentration as the mid-level standard of the calibration curve.

ICV recovery <70% or >130%	J flag detects and non-detects
----------------------------	--------------------------------

## Continuing Calibration Verification

Continuing calibration verification (CCV) checks should be analyzed at a frequency of one per ten field samples. If CCV recovery is very low, where detection of the analyte could be in question, ensure a low level CCV was analyzed and use to determine data quality.

CCV recovery <70 or >130%	J flag results
---------------------------	----------------

## Blanks

There should be no detections in the method blanks above the reporting limits. Equipment blanks, field blanks, rinse blanks etc. should be evaluated in the same manner as method blanks. Use the most contaminated blank to evaluate the sample results.

Blank Result	Sample Result	Qualification
Any detection	<Reporting limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting limit	>Reporting limit and <10x blank result	J+ biased high

## Field Duplicates

A blind field duplicate should be collected at rate of one per twenty samples. The relative percent difference (RPD) should be less than 30% for analyte concentrations greater than two times the reporting limit. Use the higher result for final reporting.

RPD >30%	Apply J qualifier to parent sample
----------	------------------------------------

## Lab Control Spike

Lab control spikes should be analyzed with each extraction batch or one for every twenty samples. In the absence of lab derived criteria, use 70% - 130% recovery criteria to evaluate the data.

Recovery <70% or >130% (lab derived criteria can also be used)	Apply J qualifier to detects and UJ qualifier to non detects
--	--

## Matrix Spike/Matrix Spike Duplicate

One matrix spike and matrix spike duplicate should be collected at a rate of one per twenty samples. Use professional judgement to reject results based on out of control MS/MSD recoveries.

Recovery <70% or >130% (lab derived criteria can also be used)	Apply J qualifier to detects and UJ qualifier to non detects of parent sample only
RPD >30%	Apply J qualifier to detects and UJ qualifier to non detects of parent sample only

## Extracted Internal Standards (Isotope Dilution Analytes)

Problematic analytes (e.g. PFBA, PFPeA, fluorotelomer sulfonates) can have wider recoveries without qualification. Qualify corresponding native compounds with a J flag if outside of the range.

Recovery <50% or >150%	Apply J qualifier
Recovery <25% or >150% for poor responding analytes	Apply J qualifier
Isotope Dilution Analyte (IDA) Recovery <10%	Reject results

## Secondary Ion Transition Monitoring

Quantifier and qualifier ions should be monitored for all target analytes (PFBA and PFPeA are exceptions). The ratio of quantifier ion response to qualifier ion response should be calculated from the standards for each target analyte. Lab derived criteria should be used to determine if the ratios are acceptable. If the ratios fall outside of the laboratory criteria, qualify results as an estimated maximum concentration.

## Signal to Noise Ratio

The signal to noise ratio for the quantifier ion should be at least 3:1. If the ratio is less than 3:1, the peak is discernable from the baseline noise and symmetrical, the result can be reported. If the peak appears to be baseline noise and/or the shape is irregular, qualify the result as tentatively identified.

## Branched and Linear Isomers

Observed branched isomers in the sample that do not have a qualitative or quantitative standard should be noted and the analyte should be qualified as biased low in the final data review summary report. Note: The branched isomer peak should also be present in the secondary ion transition.

## Reporting Limits

If project-specific reporting limits were not met, please indicate that in the report along with the reason (e.g. over dilution, dilution for non-target analytes, high sediment in aqueous samples).

## Peak Integrations

Target analyte peaks should be integrated properly and consistently when compared to standards. Ensure branched isomer peaks are included for PFAS where standards are available. Inconsistencies should be brought to the attention of the laboratory or identified in the data review summary report.

**Note:** The information presented in this Citizen Participation Plan was current as of the date of its approval by the New York State Department of Environmental Conservation. Portions of this Citizen Participation Plan may be revised during the site's investigation and cleanup process.

Applicant: **FH 2BRO Builder Corp. (“Applicant”)**  
Site Name: **29-05 38<sup>th</sup> Avenue Site (“Site”)**  
Site Address: **29-05 38<sup>th</sup> Avenue, Long Island City, New York 11101**  
Site County: **Queens**  
Site Number: **C241250**

## **1. What is New York’s Brownfield Cleanup Program?**

New York’s Brownfield Cleanup Program (BCP) works with private developers to encourage the voluntary cleanup of contaminated properties known as “brownfields” so that they can be reused and developed. These uses include recreation, housing, and business.

*A brownfield* is any real property that is difficult to reuse or redevelop because of the presence or potential presence of contamination. A brownfield typically is a former industrial or commercial property where operations may have resulted in environmental contamination. A brownfield can pose environmental, legal, and financial burdens on a community. If a brownfield is not addressed, it can reduce property values in the area and affect economic development of nearby properties.

The BCP is administered by the New York State Department of Environmental Conservation (NYSDEC) which oversees Applicants who conduct brownfield site investigation and cleanup activities. An Applicant is a person who has requested to participate in the BCP and has been accepted by NYSDEC. The BCP contains investigation and cleanup requirements, ensuring that cleanups protect public health and the environment. When NYSDEC certifies that these requirements have been met, the property can be reused or redeveloped for the intended use.

For more information about the BCP, go online at:  
<http://www.dec.ny.gov/chemical/8450.html> .

## **2. Citizen Participation Activities**

### *Why NYSDEC Involves the Public and Why It Is Important*

NYSDEC involves the public to improve the process of investigating and cleaning up contaminated sites, and to enable citizens to participate more fully in decisions that affect their health, environment, and social well-being. NYSDEC provides opportunities for citizen involvement and encourages early two-way communication with citizens before decision-makers form or adopt final positions.

Involving citizens affected and interested in site investigation and cleanup programs is important for many reasons. These include:

- Promoting the development of timely, effective site investigation and cleanup programs that protect public health and the environment
- Improving public access to, and understanding of, issues and information related to a particular site and that site's investigation and cleanup process
- Providing citizens with early and continuing opportunities to participate in NYSDEC's site investigation and cleanup process
- Ensuring that NYSDEC makes site investigation and cleanup decisions that benefit from input that reflects the interests and perspectives found within the affected community
- Encouraging dialogue to promote the exchange of information among the affected/interested public, State agencies, and other interested parties that strengthens trust among the parties, increases understanding of site and community issues and concerns, and improves decision-making.

This Citizen Participation (CP) Plan provides information about how NYSDEC will inform and involve the public during the investigation and cleanup of the site identified above. The public information and involvement program will be carried out with assistance, as appropriate, from the Applicant.

#### *Project Contacts*

Appendix A identifies NYSDEC project contact(s) to whom the public should address questions or request information about the site's investigation and cleanup program. The public's suggestions about this CP Plan and the CP program for the site are always welcome. Interested people are encouraged to share their ideas and suggestions with the project contacts at any time.

#### *Locations of Reports and Information*

The locations of the reports and information related to the site's investigation and cleanup program also are identified in Appendix A. These locations provide convenient access to important project documents for public review and comment. Some documents may be placed on the NYSDEC web-site. If this occurs, NYSDEC will inform the public in fact sheets distributed about the site and by other means, as appropriate.

### *Site Contact List*

Appendix B contains the site contact list. This list has been developed to keep the community informed about, and involved in, the site's investigation and cleanup process. The site contact list will be used periodically to distribute fact sheets that provide updates about the status of the project. These will include notifications of upcoming activities at the site (such as fieldwork), as well as availability of project documents and announcements about public comment periods.

The site contact list includes, at a minimum:

- Chief executive officer and planning board chairperson of each county, city, town, and village in which the site is located;
- Residents, owners, and occupants of the site and properties adjacent to the site;
- The public water supplier which services the area in which the site is located;
- Any person who has requested to be placed on the site contact list;
- The administrator of any school or day care facility located on or near the site for purposes of posting and/or dissemination of information at the facility;
- Location(s) of reports and information.

The site contact list will be reviewed periodically and updated as appropriate. Individuals and organizations will be added to the site contact list upon request. Such requests should be submitted to the NYSDEC project contact(s) identified in Appendix A. Other additions to the site contact list may be made at the discretion of the NYSDEC project manager, in consultation with other NYSDEC staff as appropriate.

**Note:** The first site fact sheet (usually related to the draft Remedial Investigation Work Plan) is distributed both by paper mailing through the postal service and through DEC Delivers, its email listserv service. The fact sheet includes instructions for signing up with the appropriate county listserv to receive future notifications about the site. See <http://www.dec.ny.gov/chemical/61092.html> .

Subsequent fact sheets about the site will be distributed exclusively through the listserv, except for households without internet access that have indicated the need to continue to receive site information in paper form. Please advise the NYSDEC site project manager identified in Appendix A if that is the case. Paper mailings may continue during the investigation and cleanup process for some sites, based on public interest and need.

### *CP Activities*

The table at the end of this section identifies the CP activities, at a minimum, that have been and will be conducted during the site's investigation and cleanup program. The

flowchart in Appendix D shows how these CP activities integrate with the site investigation and cleanup process. The public is informed about these CP activities through fact sheets and notices distributed at significant points during the program. Elements of the investigation and cleanup process that match up with the CP activities are explained briefly in Section 5.

- **Notices and fact sheets** help the interested and affected public to understand contamination issues related to a site, and the nature and progress of efforts to investigate and clean up a site.
- **Public forums, comment periods and contact with project managers** provide opportunities for the public to contribute information, opinions and perspectives that have potential to influence decisions about a site's investigation and cleanup.

The public is encouraged to contact project staff at any time during the site's investigation and cleanup process with questions, comments, or requests for information.

This CP Plan may be revised due to changes in major issues of public concern identified in Section 3 or in the nature and scope of investigation and cleanup activities. Modifications may include additions to the site contact list and changes in planned citizen participation activities.

#### *Technical Assistance Grant*

NYSDEC must determine if the site poses a significant threat to public health or the environment. This determination generally is made using information developed during the investigation of the site, as described in Section 5.

If the site is determined to be a significant threat, a qualifying community group may apply for a Technical Assistance Grant (TAG). The purpose of a TAG is to provide funds to the qualifying group to obtain independent technical assistance. This assistance helps the TAG recipient to interpret and understand existing environmental information about the nature and extent of contamination related to the site and the development/implementation of a remedy.

An eligible community group must certify that its membership represents the interests of the community affected by the site, and that its members' health, economic well-being or enjoyment of the environment may be affected by a release or threatened release of contamination at the site.

As of the date the declaration (page 2) was signed by the NYSDEC project manager, the significant threat determination for the site had not yet been made.

To verify the significant threat status of the site, the interested public may contact the NYSDEC project manager identified in Appendix A.

For more information about TAGs, go online at <http://www.dec.ny.gov/regulations/2590.html>

Note: The table identifying the citizen participation activities related to the site's investigation and cleanup program follows on the next page:

Citizen Participation Activities	Timing of CP Activity(ies)
<b>Application Process:</b>	
<ul style="list-style-type: none"> <li>• Prepare site contact list</li> <li>• Establish document repository(ies)</li> </ul>	At time of preparation of application to participate in the BCP.
<ul style="list-style-type: none"> <li>• Publish notice in Environmental Notice Bulletin (ENB) announcing receipt of application and 30-day public comment period</li> <li>• Publish above ENB content in local newspaper</li> <li>• Mail above ENB content to site contact list</li> <li>• Conduct 30-day public comment period</li> </ul>	When NYSDEC determines that BCP application is complete. The 30-day public comment period begins on date of publication of notice in ENB. End date of public comment period is as stated in ENB notice. Therefore, ENB notice, newspaper notice, and notice to the site contact list should be provided to the public at the same time.
<b>After Execution of Brownfield Site Cleanup Agreement (BCA):</b>	
<ul style="list-style-type: none"> <li>• Prepare Citizen Participation (CP) Plan</li> </ul>	Before start of Remedial Investigation <b>Note:</b> Applicant must submit CP Plan to NYSDEC for review and approval within 20 days of the effective date of the BCA.
<b>Before NYSDEC Approves Remedial Investigation (RI) Work Plan:</b>	
<ul style="list-style-type: none"> <li>• Distribute fact sheet to site contact list about proposed RI activities and announcing 30-day public comment period about draft RI Work Plan</li> <li>• Conduct 30-day public comment period</li> </ul>	Before NYSDEC approves RI Work Plan. If RI Work Plan is submitted with application, public comment periods will be combined and public notice will include fact sheet. Thirty-day public comment period begins/ends as per dates identified in fact sheet.
<b>After Applicant Completes Remedial Investigation:</b>	
<ul style="list-style-type: none"> <li>• Distribute fact sheet to site contact list that describes RI results</li> </ul>	Before NYSDEC approves RI Report
<b>Before NYSDEC Approves Remedial Work Plan (RWP):</b>	
<ul style="list-style-type: none"> <li>• Distribute fact sheet to site contact list about draft RWP and announcing 45-day public comment period</li> <li>• Public meeting by NYSDEC about proposed RWP (if requested by affected community or at discretion of NYSDEC project manager)</li> <li>• Conduct 45-day public comment period</li> </ul>	Before NYSDEC approves RWP. Forty-five day public comment period begins/ends as per dates identified in fact sheet. Public meeting would be held within the 45-day public comment period.
<b>Before Applicant Starts Cleanup Action:</b>	
<ul style="list-style-type: none"> <li>• Distribute fact sheet to site contact list that describes upcoming cleanup action</li> </ul>	Before the start of cleanup action.
<b>After Applicant Completes Cleanup Action:</b>	
<ul style="list-style-type: none"> <li>• Distribute fact sheet to site contact list that announces that cleanup action has been completed and that NYSDEC is reviewing the Final Engineering Report</li> <li>• Distribute fact sheet to site contact list announcing NYSDEC approval of Final Engineering Report and issuance of Certificate of Completion (COC)</li> </ul>	At the time the cleanup action has been completed. <b>Note:</b> The two fact sheets are combined when possible if there is not a delay in issuing the COC.

### **3. Major Issues of Public Concern**

This section of the CP Plan identifies major issues of public concern that relate to the site. Additional major issues of public concern may be identified during the course of the site's investigation and cleanup process.

The Site previously maintained four buildings, including (from east to west) a former service station, warehouse (demolished by March 2021), and two residential buildings, as well as two non-contiguous paved parking areas. The two residential buildings and the paved parking area between them are still present at the Site. The remainder of the Site (former service station, its associated paved parking area, and the warehouse building) was demolished by March 2021. The vacant portion of the Site is enclosed by a locked fence to prevent access by trespassers.

The Site is located in an Environmental Justice Area. Environmental justice is defined as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

Environmental justice efforts focus on improving the environment in communities, specifically minority and low-income communities, and addressing disproportionate adverse environmental impacts that may exist in those communities.

The Site is located in an area with a large South Asian population nearby. Therefore, all future fact sheets will be translated into Hindi and Bangladeshi.

For additional information, visit:

<https://popfactfinder.planning.nyc.gov/profile/2212/demographic>

### **4. Site Information**

Appendix C contains a map identifying the location of the site.

#### *Site Description*

The Site is located at 29-05 38<sup>th</sup> Avenue in the Long Island City section of Queens, NY, and is designated on the New York City tax map as QueensBlock 371, Lot 38, and encompasses an area of 10,600 square feet (0.24 acre). As noted above, the Site previously maintained four buildings, including (from east to west) a former service station (demolished by March 2021), warehouse (demolished by March 2021), and two residential buildings (existing), as well as two non-contiguous paved parking areas.

The Site is bounded by a vacant lot that formerly maintained an industrial building to the north (a former commercial laundry and dry cleaner that has been investigated and is currently undergoing remediation under the New York State Brownfield Cleanup

Program), 30<sup>th</sup> Street to the east, 38<sup>th</sup> Avenue to the south, and Old Ridge Road to the west. The area surrounding the Site maintains a mixture of industrial, commercial, and residential uses.

The redevelopment plan for the Site includes construction of a 7-story mixed-use (commercial and residential) building, with a full basement that will maintain utility, laundry, and storage spaces, as well as 24 parking spaces. The residential portion of the new building will include affordable housing units.

### *History of Site Use, Investigation, and Cleanup*

According to previous reports prepared for the Site, the four buildings at the Site were constructed between 1898 and 1936. According to the Sanborn Fire Insurance maps, the former warehouse (now-demolished) was a carpet cleaning facility from 1936 until 2006. Additionally, the former single-story building (now-demolished) was an automotive service facility and gasoline station from 1947 until at least 1950. The single-story and two-story residential buildings on the western portion of the Site were constructed circa 1898 and 1936, respectively, and have reportedly maintained residential occupancy since their construction. The Sanborn Fire Insurance maps also identify underground gasoline tanks associated with the former service station and the carpet cleaning facility (1936 only).

A New York City E-Designation for potential hazardous materials was assigned to the Site in October 2008 as part of regional rezoning; in accordance with New York City regulations, the E-Designation requires that the Site be investigated and remediated as warranted, upon redevelopment of the Site. Accordingly, a Remedial Investigation was conducted at the Site in June 2020. As documented in a Work Plan approved by the New York City Office of Environmental Remediation (NYCOER), the scope of work for the sampling program included the following:

- Geophysical survey of accessible areas of the Site, using ground-penetrating radar and magnetometer, to identify subsurface utilities or potential subsurface obstructions in areas to be sampled and evaluate for the presence of underground storage tanks.
- Advancing seven soil borings at locations across the Site, screening of soils, and selection of two horizons within each boring from which soil samples were collected for laboratory analysis.
- Installation and sampling of four temporary groundwater monitoring wells.
- Installation and sampling of six temporary soil vapor points.

The geophysical survey identified two anomalies at the Site, one within the former warehouse building that was interpreted as an existing tank, and one at the former gasoline station that was interpreted as an area where tanks had been removed. Soil samples were found to contain concentrations of three semi-volatile organic compounds (SVOCs) that exceeded New York State Restricted Residential Soil Cleanup Objectives (SCOs), which are applicable to the planned redevelopment of the Site for multi-family housing. No other parameters (i.e., volatile organic compounds (VOCs), pesticides, polychlorinated biphenyls (PCBs), and metals) were detected in soil at concentrations exceeding Restricted Residential SCOs. Groundwater samples contained two VOCs (chloroform, a common by-product of water disinfection, and tetrachloroethene (PCE), a chemical typically used in degreasing and dry-cleaning operations) and four dissolved

metals (magnesium, manganese, selenium, and sodium) at concentrations exceeding New York State Class GA Groundwater Standards. No pesticides or PCBs were detected in groundwater samples at concentrations exceeding groundwater standards. Twenty-one individual VOCs were detected in one or more of the soil vapor samples collected at the Site, including PCE (detected at concentrations ranging from 4,800 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) to 8,800  $\mu\text{g}/\text{m}^3$ , PCE breakdown products trichloroethene (detected at concentrations ranging from 120  $\mu\text{g}/\text{m}^3$  to 1,700  $\mu\text{g}/\text{m}^3$ ) and cis-1,2-dichloroethene (detected at concentrations ranging from 120  $\mu\text{g}/\text{m}^3$  to 1,700  $\mu\text{g}/\text{m}^3$ ), and petroleum-related VOCs benzene (detected at concentrations ranging from 5.0  $\mu\text{g}/\text{m}^3$  to 8.5  $\mu\text{g}/\text{m}^3$ ), toluene (detected at concentrations ranging from 26  $\mu\text{g}/\text{m}^3$  to 47  $\mu\text{g}/\text{m}^3$ ), ethylbenzene (detected at concentrations ranging from 9.2  $\mu\text{g}/\text{m}^3$  to 15.0  $\mu\text{g}/\text{m}^3$ ), and xylenes (detected at concentrations ranging from 45  $\mu\text{g}/\text{m}^3$  to 67  $\mu\text{g}/\text{m}^3$ ).

## **5. Investigation and Cleanup Process**

### *Application*

The Applicant has applied for and been accepted into New York's Brownfield Cleanup Program as a Volunteer. This means that the Applicant was not responsible for the disposal or discharge of the contaminants or whose ownership or operation of the site took place after the discharge or disposal of contaminants. The Volunteer must fully characterize the nature and extent of contamination onsite, and must conduct a "qualitative exposure assessment," a process that characterizes the actual or potential exposures of people, fish and wildlife to contaminants on the site and to contamination that has migrated from the site.

The Applicant in its Application proposes that the site will be used for restricted purposes.

To achieve this goal, the Applicant will conduct investigation activities at the site with oversight provided by NYSDEC. The Brownfield Cleanup Agreement executed by NYSDEC and the Applicant sets forth the responsibilities of each party in conducting these activities at the site.

### *Investigation*

The Applicant has completed a partial site investigation before it entered into the BCP. For the partial investigation, NYSDEC will determine if the data are useable.

The site investigation has several goals:

- 1) Define the nature and extent of contamination in soil, surface water, groundwater and any other parts of the environment that may be affected;
- 2) Identify the source(s) of the contamination;

- 3) Assess the impact of the contamination on public health and the environment;  
and
- 4) Provide information to support the development of a proposed remedy to address the contamination or the determination that cleanup is not necessary.

The Applicant submits a draft “Remedial Investigation Work Plan” to NYSDEC for review and approval. NYSDEC makes the draft plan available to the public review during a 30-day public comment period.

When the follow-up investigation is complete, the Applicant will prepare and submit a report that summarizes the results. This report also will recommend whether cleanup action is needed to address site-related contamination. The investigation report is subject to review and approval by NYSDEC.

NYSDEC will use the information in the investigation report to determine if the site poses a significant threat to public health or the environment. If the site is a “significant threat,” it must be cleaned up using a remedy selected by NYSDEC from an analysis of alternatives prepared by the Applicant and approved by NYSDEC. If the site does not pose a significant threat, the Applicant may select the remedy from the approved analysis of alternatives.

#### *Interim Remedial Measures*

An Interim Remedial Measure (IRM) is an action that can be undertaken at a site when a source of contamination or exposure pathway can be effectively addressed before the site investigation and analysis of alternatives are completed. If an IRM is likely to represent all or a significant part of the final remedy, NYSDEC will require a 30-day public comment period.

#### *Remedy Selection*

When the investigation of the site has been determined to be complete, the project likely would proceed in one of two directions:

1. The Applicant may recommend in its investigation report that no action is necessary at the site. In this case, NYSDEC would make the investigation report available for public comment for 45 days. NYSDEC then would complete its review, make any necessary revisions, and, if appropriate, approve the investigation report. NYSDEC would then issue a “Certificate of Completion” (described below) to the Applicant.

**or**

2. The Applicant may recommend in its investigation report that action needs to be

taken to address site contamination. After NYSDEC approves the investigation report, the Applicant may then develop a cleanup plan, officially called a “Remedial Work Plan”. The Remedial Work Plan describes the Applicant’s proposed remedy for addressing contamination related to the site.

When the Applicant submits a draft Remedial Work Plan for approval, NYSDEC would announce the availability of the draft plan for public review during a 45-day public comment period.

### *Cleanup Action*

NYSDEC will consider public comments, and revise the draft cleanup plan if necessary, before approving the proposed remedy. The New York State Department of Health (NYSDOH) must concur with the proposed remedy. After approval, the proposed remedy becomes the selected remedy. The selected remedy is formalized in the site Decision Document.

The Applicant may then design and perform the cleanup action to address the site contamination. NYSDEC and NYSDOH oversee the activities. When the Applicant completes cleanup activities, it will prepare a Final Engineering Report (FER) that certifies that cleanup requirements have been achieved or will be achieved within a specific time frame. NYSDEC will review the report to be certain that the cleanup is protective of public health and the environment for the intended use of the site.

### *Certificate of Completion*

When NYSDEC is satisfied that cleanup requirements have been achieved or will be achieved for the site, it will approve the final engineering report. NYSDEC then will issue a Certificate of Completion (COC) to the Applicant. The COC states that cleanup goals have been achieved, and relieves the Applicant from future liability for site-related contamination, subject to certain conditions. The Applicant would be eligible to redevelop the site after it receives a COC.

### *Site Management*

The purpose of site management is to ensure the safe reuse of the property if contamination will remain in place. Site management is the last phase of the site cleanup program. This phase begins when the COC is issued. Site management incorporates any institutional and engineering controls required to ensure that the remedy implemented for the site remains protective of public health and the environment. All significant activities are detailed in a Site Management Plan.

An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction that would prevent or restrict certain uses of the property. An institutional control may be used when the cleanup action leaves some contamination that makes the site suitable for some, but not all uses.

An *engineering control* is a physical barrier or method to manage contamination. Examples include: caps, covers, barriers, fences, and treatment of water supplies.

Site management also may include the operation and maintenance of a component of the remedy, such as a system that pumps and treats groundwater. Site management continues until NYSDEC determines that it is no longer needed.

## **Appendix A - Project Contacts and Locations of Reports and Information**

### **Project Contacts**

For information about the site's investigation and cleanup program, the public may contact any of the following project staff:

#### **New York State Department of Environmental Conservation (NYSDEC):**

Steven Walsh  
NYSDEC Project Manager  
Division of Environmental Remediation  
625 Broadway  
Albany, NY 12233  
Phone: (518) 402-9824  
Email: [steven.walsh@dec.ny.gov](mailto:steven.walsh@dec.ny.gov)

Thomas V. Panzone, MPA  
Public Participation Specialist  
Office of Communications Services  
NYSDEC - Region 2 Office  
47-40 21st Street  
Long Island City, NY 11101  
Phone: (718) 482-4953

#### **New York State Department of Health (NYSDOH):**

Sally Rushford  
NYSDOH Project Manager  
Bureau of Environmental Exposure  
Investigation

Empire State Plaza – Corning Plaza  
Room 1739  
Albany, NY 12237  
Phone: (518) 402-5465  
Email: [BEEI@health.ny.gov](mailto:BEEI@health.ny.gov)

### **Locations of Reports and Information**

The facilities identified below are being used to provide the public with convenient access to important project documents:

Queens Library at Long Island City  
37-44 21<sup>st</sup> Street  
Long Island City, NY 11101  
Phone: (718) 752-3700  
Hours: Monday, Wednesday, Friday,  
Saturday: 10 AM to 5 PM, Tuesday 1  
PM to 5 PM, Thursday Noon to 7 PM,  
Closed Sunday.

Queens Community Board 1  
45-02 Ditmars Boulevard, LL Suite 1025  
Astoria, NY 11105  
Phone: (718) 786-3335  
Hours: Call for appointment

## Appendix B - Site Contact List

<b>1. Local Officials</b>	
<b>Name and Title</b>	<b>Mailing Address</b>
The Honorable Bill de Blasio Mayor, City of New York	City Hall New York, NY 10007
Marie Torniali Chair, Queens Community Board 1	45-02 Ditmars Boulevard, LL Suite 1025 Astoria, NY 11105
Hon. Jimmy Van Bramer Deputy Leader of the City Council	47-01 Queens Boulevard, Suite 205 Sunnyside, NY 11104
Marisa Lago Commissioner, New York City Department of City Planning	120 Broadway New York, NY 10271
