## 1.0 INTRODUCTION

FH 2BRO Builder Corp. (Applicant) entered into a Brownfield Cleanup Agreement (BCA) with the New York Department of Environmental Conservation (NYSDEC) on April 21, 2021, to investigate and, if warranted, remediate the property located at 29-05 38<sup>th</sup> Avenue in Long Island City, Queens, New York (Site). The property encompasses 0.243 acre, and its legal description is Block 371, Lot 38 on the New York City Tax map. The Applicant is a Volunteer in the New York State Brownfield Cleanup Program (BCP). Based on the environmental data provided in the BCP application, the entirety of the Site has been approved for entry into the BCP. The location of the Site and nature of the surrounding area are shown on **Figures 1 and 2**, respectively.

The only remaining structures at the Site are two residential buildings located in the western portion of the Site; these structures will be vacated and demolished prior to the start of any investigative activities. Two other structures at the Site, a 1.5-story warehouse and a 1-story former gasoline station, were demolished in early 2021. The current layout of the Site is shown on **Figure 3**.

Athenica Environmental Engineering PLLC (Athenica) has prepared this Remedial Investigation Work Plan (RIWP) to further assess the nature and extent of impacted media (soil, groundwater, and soil vapor) across the Site. The objectives of the Remedial Investigation (RI) include:

- Delineate the lateral and vertical extent of impacted soils throughout the Site, particularly at locations associated with the reported carpet cleaning operations,
- Assess the lateral and vertical extent of impacted groundwater throughout the Site, particularly at locations associated with the reported carpet cleaning operations, and
- Assess soil vapor quality across the Site.

Athenica will implement this RIWP on behalf of the Applicant in general accordance with the NYSDEC DER Technical Guidance for Site Investigation and Remediation (DER-10) guidelines.

# REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

## 1.1 Surrounding Use and Site History

The Site is located within a primarily mixed-use industrial/warehouse, commercial, and residential area of Queens, New York. **Figure 1** shows the location of the Site. The 0.243-acre Site is bounded by a vacant lot that formerly had been an industrial building to the north, 30<sup>th</sup> Street to the east, 38<sup>th</sup> Avenue to the south, and Old Ridge Road to the west. (**Figure 2**). The adjacent property to the north, located at 37-24 and 37-28 30<sup>th</sup> Street, was historically used as commercial dry cleaning and laundry facilities, and has been investigated and is being remediated under the BCP (Site Number C241214).

Review of a March 2000 Phase I Environmental Site Assessment (ESA) by Middleton Environmental, Inc. (Middleton), revealed that the Site had historically been developed with four buildings. From east to west, these buildings included a 1-story commercial building, 1.5-story warehouse, 1-story residential building, and a 2-story residential building. Historic Sanborn maps identify the easternmost commercial building as an automotive service facility and gasoline station from 1947 until at least 1950. The 1.5-story warehouse is identified as a carpet cleaning facility from 1936 until 2006. The 1-story and 2-story residential buildings at the western portion of the Site were constructed circa 1898 and 1936, respectively, and have maintained their residential use since their construction. The 1.5-story warehouse and a 1-story former gasoline station were demolished in early 2021. The current Site layout is shown on **Figure 3**.

## 1.2 Contemplated Use of Site

Upon completion of the investigation and remediation activities, the Applicant plans to redevelop the Site. The planned development will consist of demolition of the two remaining structures and construction of a new 7-story mixed-use (commercial and residential) building, with a full basement. The new development will also have an affordable housing component. The basement will house utility, laundry, and storage spaces, as well as a ventilated parking garage. The proposed use of the Site is consistent with the existing zone of the Site and surrounding area.

## 1.3 Summary of Previous Reports and Investigation

There were two previous investigations at the Site, and reports of these investigations are listed below and are included in **Appendix A**.

- March 2020, Phase I Environmental Site Assessment Report prepared by Middleton, and
- July 2020, Remedial Investigation Report prepared by Athenica.

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

### 1.3.1 March 2020 Middleton Phase I

A Phase I ESA was completed for the Site in March 2020 by Middleton. The scope of the Phase I ESA included a site visit, historical research, and a review of regulatory database records.

The Recognized Environmental Conditions (RECs) that were identified by Middleton were related to the past use of the Site by a carpet cleaning facility and by an auto repair facility/gasoline filling station, and the potential presence of underground gasoline storage tanks.

### 1.3.2 July 2020 Athenica Remedial Investigation Report

Athenica conducted a Remedial Investigation (RI) of the Site in response to the RECs identified by the prior Phase I ESA and to satisfy the requirements for investigation and remediation of properties subject to oversight by the New York City Office of Environmental Remediation (OER). The following scope of work was completed to characterize subsurface conditions at the Site:

- Implemented a Ground-Penetrating Radar (GPR) survey;
- Advanced 7 soil borings to a depth of 15 feet below ground surface (bgs) and collected 15 soil samples for chemical analysis of Target Compound List (TCL) volatile organic compounds (VOCs), TCL semi volatile organic compounds (SVOCs), TCL pesticides, TCL polychlorinated biphenyls (PCBs), and Target Analyte List (TAL) metals to evaluate soil quality;
- Installed 4 temporary groundwater monitoring wells and collected 5 groundwater samples for chemical analysis of TCL VOCs, TCL SVOCs, TCL pesticides, TCL PCBs, and TAL metals (total and dissolved) to evaluate groundwater quality;
- Analyzed 1 of the soil samples and 1 of the groundwater sample for Per-and Polyfluoroalkyl Substances (PFAS), and 1,4-dioxane;
- Installed 6 temporary soil vapor probes and collected 6 vapor samples for chemical analysis of VOCs;
- Surveyed the locations of all soil borings, temporary wells, and soil vapor probes relative to a common random datum (benchmark); and
- Measured depth to water utilizing appropriate field instrumentation and, with the surveyed information, determined the groundwater flow direction at the Site.

Soil samples collected during the RI were compared to 6NYCRR Part 375-6.8 Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential Use SCOs. Overall, the findings of the soil results were consistent with contaminants associated with historic fill, with exceedances of Restricted Residential SCOs identified only for SVOCs and metals. No VOCs,

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

pesticides, or PCBs were detected at concentrations above Unrestricted Use SCOs. PFAS and 1-4-dioxane were not detected in the soil sample collected for these analyses.

Groundwater samples collected during the RI were compared to 6NYCRR Part 703.5 Class GA Groundwater Quality Standards (GQS). The only VOCs detected at concentrations above their respective GQS were chloroform and tetrachloroethene (PCE). Minor exceedances for three SVOCs (in one sample) and metals were also identified in the groundwater samples. No PCBs or pesticides were detected in any of the groundwater samples. Concentrations of several PFAS were detected in the groundwater from monitoring well MW-4 (the only well sampled for analysis of these parameters).

Soil vapor samples collected during the RI were not compared to any evaluation criteria as there is no applicable NYSDEC or New York State Department of Health (NYSDOH) evaluation criteria. Elevated concentrations of PCE (greater than 1,000 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ )) were detected in each of the six vapor samples collected at the Site. Generally-lower concentrations of trichloroethene (TCE), a breakdown product of PCE, were also detected in the six vapor samples. Various petroleum related compounds, including benzene, toluene, ethylbenzene, and xylenes, were also detected at relatively low concentrations in the soil vapor samples.

Figures and tables summarizing the analytical results for samples collected during the July 2020 Remedial Investigation are included in **Appendix B**.

Other significant findings of the RIR were as follows:

- A geophysical anomaly within the footprint of the former warehouse building and indicative of a potential underground storage tank (UST);
- Another anomaly at the southeast corner of the Site within the area of the former gasoline station was interpreted as indicative of disturbed soils by prior excavation activities;
- Depth to groundwater at the Site ranges from 23.83 to 28.13 feet below ground surface (bgs),
- Groundwater flow beneath the Site was determined to be generally from east to west,
- Site stratigraphy, from the surface down, was determined to be historic fill (generally present), underlain by approximately 10 feet of coarse-to-fine sand with silt and clay, and approximately 10 feet of poorly graded sand and clay,
- Bedrock was not identified at any on-Site boring locations.

### 1.4 Project Organization and Responsibility

Approval of this RIWP by the NYSDEC project manager will be obtained prior to the start of any field activities. Athenica will coordinate with the NYSEC and provide at least a 10-business-day notification to NYSDEC before implementing this RIWP. The drilling subcontractor will be responsible for all drilling activities, including compliance with applicable Occupational Safety and Health Administration (OHSA) regulations, installation of soil borings, vapor implants, and groundwater monitoring wells. Athenica will be responsible for overall project management, oversight of the driller and any other subcontractor, determination of corrective measures when appropriate, perimeter air monitoring for protection of the surrounding community (CAMP), collection of samples for analysis, and completion of daily logs and appropriate field documentation.

The following are the key personnel or agencies involved with the RIWP activities at the Site:

#### NYSDEC:

Steven Walsh  
Project Manager  
NYSDEC  
Division of Environmental Remediation  
625 Broadway  
Albany, NY, 12233-7017  
(518) 402-9824

#### NYSDOH:

Sally Rushford  
NYSDOH Bureau of Environmental Exposure Investigation  
Empire State Plaza - Corning Tower Room 1739  
Albany, NY 12237  
(518) 402-5465

#### Athenica:

Spiro Dongaris, P.E., Principal  
Athenica Environmental Engineering, PLLC  
45-09 Greenpoint Avenue  
Long Island City, New York, 11104  
(718) 784-7490

Kenneth P. Wenz, PG, LEP, Senior Project Manager  
Athenica Environmental Engineering PLLC  
45-09 Greenpoint Avenue  
Long Island City, New York, 11104  
(718) 784-7490

## 2.0 PURPOSE

A RI is planned to further characterize the Site in support of planned development in accordance with the requirements of the BCP. Based on the past uses of the Site and documented characterization results from prior testing, a detailed scope of work has been developed to further investigate surface and subsurface conditions at the Site, and is presented in Section 3 of this RIWP.

Consistent with DER-10, this RIWP is developed to achieve the following overall objectives:

- Define the nature of Site contamination, including its concentration, persistence, mobility, form and other significant characteristics;
- Delineate the aerial and vertical extent of contaminants in all media at or emanating from the Site;
- Identify contaminant sources areas on the Site;
- Determine whether remedial action is required for protection of human health, or the environment based on understanding of contaminant fate and mobility; and pathway analysis; and
- Provide sufficient information to support remediation of the Site.

# REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

## 3.0 INVESTIGATION SCOPE OF WORK

The proposed scope of work for the RI is as follows, with details provided in the subsequent subsections:

- Advance 4 soil borings, B-1 thru B-4, to groundwater within the area formerly occupied by the carpet cleaning facility, screening of soil samples, and selection of 2 soil samples per boring for chemical analysis;
- Install 10 temporary monitoring well clusters in 5, 2-well clusters (wells TW-1S/D and TW-3S/D through TW-6S/D), with one well screened from 22 to 32 feet bgs and another screened from 45 to 50 feet bgs, and collection of 1 groundwater sample per well for chemical analysis;
- Install 1 temporary monitoring well (TW-2) screened from 22 to 32 feet bgs near former boring SB-3, and collection of 1 groundwater sample for chemical analysis; and
- Install 5 temporary soil vapor probes, SVP-1 thru SVP-5, to a depth of 14 feet bgs (i.e., redevelopment depth), and collection of 1 sample per probe for chemical analysis.

For protection of on-Site personnel implementing this plan, field work will follow the health and safety protocols of a Site-specific Health and Safety Plan (HASP), which is included in **Appendix D**. For the protection of the public, a Community Air Monitoring Plan (CAMP) will be implemented during field activities with the potential of generating dust (see Section 3.7), and a copy of this CAMP is included in **Appendix E**. The proposed RI sample locations are shown on **Figure 4. Table 1** provides a summary of the scope and rationale for sample collection and analysis for all media.

### 3.1 Pre-sampling Activities

Upon receipt of written notification that this RIWP has been approved by the NYSDEC, Athenica will direct the drilling subcontractor to contact the One Call Center and request that subsurface utilities in the Site vicinity be marked. Based on the estimated completion date for the One Call mark-out, the sampling work will be scheduled with the Owners and subcontractors (drilling and laboratory), and the NYSDEC will be notified of the start of the planned sampling.

### 3.2 General Requirements for Execution of Work Plan

Site work will comply with all applicable local rules and regulations with respect to noise and traffic. Site activities will commence no earlier than 7:00 a.m. and will cease for the evening no later than 5:00 p.m. on Monday through Friday of each week, unless otherwise authorized by the property owner. During working hours, the drilling subcontractor will minimize potential community impacts, including, but not limited to, noise and traffic.

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

Site work will be performed in accordance with applicable OSHA, state and industry safety standards. All on-Site personnel performing intrusive activities that have the potential to come in contact with impacted materials will have requisite 1910.120 OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) Training, as well as any other applicable training prior to intrusive activities. As described further in the site-specific Health and Safety Plan (HASP), all personnel performing field work at the Site will receive daily safety training that will include review of potentially hazardous conditions or activities and required personnel protective equipment (PPE). The manner for which representative soil and groundwater samples will be collected and analyzed are described in detail in the Quality Assurance Project Plan (QAPP) in **Appendix F**.

As required by law, the initial field task will be to request a One Call (811) subsurface utility mark-out for the Site. Athenica will mobilize to the Site with our drilling subcontractor and will identify the sample locations for all media, based on the approved RIWP, as well as the results of the subsurface utility mark-out and other access considerations (overhead utilities, vehicles, etc.).

### 3.3 Subsurface Soil Sampling

A total of 4 soil borings (B-1 through B-4, see Figure 4) will be advanced at the Site. The primary objective of the soil sampling program will be to identify and to delineate any adverse impacts attributable to historic Site operations, including carpet cleaning. These borings will be located within the footprint of the former warehouse building, where carpet cleaning had reportedly been conducted. Additionally, boring B-3 will be installed in the vicinity of the geophysical anomaly in the south-central portion of the Site (indicative of a potential UST); this boring will also serve to evaluate contamination potentially originating from the UST. Proposed boring locations are shown on Figure 4.

A direct-push rig will be utilized for advancement of all borings. For each boring, soil cores will be obtained using a macro-core sampler with a dedicated internal acetate liner, thereby avoiding the need for field decontamination of soil sampling equipment. Qualified Athenica field staff (engineer, environmental scientist, or geologist) will screen each soil sample interval for VOCs using a hand-held photoionization detector (PID), and will geologically describe the sample, including observations regarding potential contamination (odors, staining, etc.).

Each boring will be advanced to the groundwater interface (Boring Termination Depth), which was previously found at approximately 25 feet bgs. The soil borings will be sampled continuously until the Boring Termination Depth. If a potential source area is identified, based on evidence of field contamination, additional borings and/or collection of additional soil samples will be conducted to delineate the horizontal and vertical extent of the source area. If

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

warranted, sampling intervals will be extended to a depth beyond the Boring Termination Depth until no elevated PID readings are measured.

A minimum of two samples will be collected from each soil boring for laboratory analysis. Soil to be analyzed will be placed directly into laboratory-supplied containers, using dedicated disposable equipment (wooden tongue depressors, plastic scoops, etc.), and filled containers will immediately be placed into an iced cooler. Samples submitted for analysis will be properly transported under chain-of-custody (COC) procedures to an environmental laboratory approved under the NYSDOH Environmental Laboratory Approval Program (ELAP). The soil samples collected under this program will be analyzed for:

- TCL VOCs by U. S. Environmental Protection Agency (USEPA) Method 8260C;
- TCL SVOCs by USEPA Method 8270D;
- TAL Metals by USEPA Method 6010C;
- TCL Pesticides by USEPA Method 8081B; and
- TCL PCBs by USEPA Method 8082A.

In addition, 2 soil samples will be also analyzed for:

- PFAS using a modified USEPA Method 537; and
- 1,4-dioxane using a modified USEPA Method 8270 (with selective ion monitoring or SIM analysis).

If significantly elevated PID measurements are identified in a boring, additional soil sample(s) may be collected from the apparently-impacted zone, for laboratory analysis of VOCs only. If PID readings in deeper samples above groundwater indicate that no additional impacted soil is present, an additional sample may be collected from the apparently-uncontaminated zone, for vertical delineation of the VOC impacts.

All non-dedicated sampling equipment in contact with soil samples will be decontaminated between boring locations in accordance with standard industry practices using a steam cleaner or scrubbed using a solution of non-phosphate detergent (e.g., Alconox<sup>®</sup>) and potable water, followed by a clean potable water rinse. After completion of soil sampling, borings will be abandoned in accordance with NYSDEC protocols.

### **3.4 Groundwater Monitoring Well Installation, Development, and Sampling**

A total of 11 temporary wells will be installed as part of this investigation, to evaluate current groundwater conditions at the Site. The temporary wells will include 5, 2-well clusters (TW-1S/D, TW-3S/D, TW-4S/D, TW-5S/D, and TW-6S/D) and one shallow temporary well (TW-2). Each of the five well clusters will consist of two temporary wells, one screened across the water table to evaluate shallow groundwater quality and a deeper well to evaluate deeper

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

groundwater quality. An additional shallow temporary well (TW-2) will be installed in the immediate vicinity of prior soil boring SB-3, to assess whether shallow groundwater has been impacted by SVOCs previously detected in shallow soil/fill at this location. A track-mounted direct-push drilling unit will be utilized for installation of all temporary monitoring wells.

If significantly elevated PID measurements are identified during well installation, a soil sample may be collected from the apparently-impacted zone, for laboratory analysis of VOCs only. If PID readings in deeper samples above groundwater indicate that no additional impacted soil is present, an additional sample may be collected from the apparently uncontaminated zone, for vertical delineation of the VOC impacts.

The proposed monitoring well locations are presented on **Figure 4**.

### 3.4.1 Site Hydrogeologic Conditions

Based on information obtained during the 2020 site investigation by Athenica, groundwater is anticipated to be encountered at a depth between approximately 23 and 28 feet bgs, and the direction of groundwater flow is toward the west.

### 3.4.2 Monitoring Well Installation

Monitoring well cluster locations WC-1 and WC-3 through WC-6 will each comprise two wells, with one well screened across the water table, at an estimated depth of 22 to 32 feet bgs; and the other well screened at a deeper interval (approximately 45 to 50 feet bgs). Temporary well TW-2 will be a single shallow well, estimated to be screened from approximately 22 to 32 feet bgs. The screen depths for the temporary wells may be modified based on field observations of the water table elevation during well installation.

Each monitoring well will be constructed of 2-inch (inside diameter) Schedule 40 PVC screen and casing, with a 5-foot or 10-foot length of screen set to the required depth. The monitoring wells will be completed with a compression cap and at least a 3-foot stickup above ground surface.

### 3.4.3 Monitoring Well Development and Surveying

The newly installed monitoring wells will be developed no sooner than 24 hours following their installation. A submersible pump will be utilized for well development and will consist of purging a minimum of 3 casing volumes and surging the water in the well as needed to loosen and remove fine-grained sediments from the well screen. Development water will be discharged to the ground surface at least 10 feet from the well that is being developed unless groundwater conditions indicate presence of free product (see Section 3.6).

The wells will be located as shown on Figure 4, unless locations need to be revised based on access considerations or locations of subsurface utilities. After development, the wells will be allowed to equilibrate to the surrounding aquifer for a minimum of 24 hours before sampling.

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

The 11 temporary monitoring wells will be surveyed. A fixed measuring point will be established at the top of each well casing, either by making a permanent mark (using paint, marker, etc.) or cutting a small notch in the well casing. The measuring point at each temporary well will be surveyed by Athenica, relative to a common, random datum. The top-of-casing elevation values will be used in conjunction with depth to groundwater measurements to calculate the groundwater elevation within each monitoring well, and the groundwater elevations will be contoured to determine the Site-specific groundwater flow direction.

### 3.4.4 Groundwater Sample Collection

Groundwater sampling will be completed utilizing the USEPA's low-flow (minimal drawdown) procedures with dedicated or decontaminated sampling equipment. Prior to collecting the groundwater samples, the depth to groundwater and total well depth will be measured at each groundwater monitoring well using an electronic water level indicator or interface probe attached to a measuring tape accurate to 0.01 foot. Field parameters, including turbidity, pH, temperature, oxidation-reduction potential, and dissolved oxygen, will be measured during completion of the groundwater sampling event. Purge water will be discharged to the ground surface at least 10 feet from the well that is being sampled.

A representative groundwater sample will be collected from each well, using the same low-flow equipment used for purging, directly into laboratory-supplied containers. Samples to be analyzed for PFAS will be collected using the NYSDEC procedures for these compounds, as documented in the QAPP. The filled containers will be immediately placed into an iced cooler for delivery to the laboratory under COC protocols, and will be analyzed for:

- VOCs using USEPA Method 8260;
- SVOCs using USEPA Method 8270;
- PFAS using a modified USEPA Method 537 at 1 upgradient location and 1 downgradient location (2 samples in total); and
- 1,4-Dioxane using a modified USEPA Method 8270 with selective ion monitoring or SIM, at 1 upgradient location and 1 downgradient location (2 samples in total).

All non-dedicated sampling equipment will be decontaminated between wells in accordance with the procedures described in the QAPP and standard industry practices. After completion of groundwater sampling, the temporary wells will be removed and the well boreholes will be abandoned in accordance with NYSDEC protocols, to facilitate excavation for the planned redevelopment of the Site.

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

### 3.5 Soil Vapor

A total of five soil vapor probes (SVP-1 through SVP-5) will be installed to the excavation depth for the proposed redevelopment, approximately 14 feet bgs. Proposed sample locations are shown on Figure 4 (but may be altered based on field conditions). All samples will be collected in accordance with the *Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York* (NYSDOH, October 2006), as amended (NYSDOH Guidance Document).

A direct-push drilling unit will be utilized to advance a steel rod attached to a soil vapor probe to the proposed sampling depth. The soil vapor probe will consist of a prefabricated perforated vapor probe screen attached to a 3/8-inch diameter low-density polyethylene (LDPE) tubing. Once driven to the installation depth, the steel rod will be removed, leaving only the tip and tubing of the soil vapor probe. Clean glass beads or sand will be emplaced around the screen. A surface seal consisting of non-VOC containing clay or similar material will be installed within the upper six inches of the borehole, to provide a surface seal for the probe.

Prior to sampling, as per the NYSDOH Guidance Document, a tracer gas test will be conducted to verify that the soil vapor probe has been properly sealed to prevent infiltration of ambient outdoor air. The tracer gas for this program will be helium, which will be injected into an enclosure placed over the top of the soil vapor probe. A portable helium detector will be utilized to measure the level of helium within the soil vapor probe. If the tracer sample results show a helium concentration in the soil vapor probe of 10 percent or greater, the seal for the soil vapor probe will be removed and re-installed, and the leak test procedure will be repeated until the seal is verified as adequate to prevent infiltration from the ambient outdoor air. At the completion of the vapor sampling, the tracer gas test will be repeated to verify the integrity of the probe seals.

Prior to sample collection, the soil vapor probe will be purged utilizing a hand pump or equivalent device. Samples will be collected over a 2-hour period, into 6-liter Summa canisters supplied and certified as clean by the laboratory, and will be analyzed using USEPA Method TO-15. In accordance with the NYSDOH Guidance Document, the flow rate for purging and sampling will not exceed 0.2 liter per minute (L/min). A sampling log will be maintained to document sample identifications, dates and times of sample collection, sampling depths, identify of the sampler(s), sampling methods and devices, soil vapor purge volumes, total volumes of the soil vapor extracted, vacuum of the canisters before and after sample collection, and chain-of-custody protocols. One outdoor ambient air sample also will be collected concurrently with the soil vapor samples, to document ambient air quality.

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

### **3.6 Material Handling**

If grossly contaminated soil or free-phase product are identified, drill cuttings and/or purge/development fluids generated during this program will be containerized in 55-gallon U. S. Department of Transportation/United Nations (USDOT/UN) drums. Drummed material will be characterized and properly disposed. The location of the drum storage area (if needed) will be determined during a preliminary Site visit prior to the start of investigative activities.

Drill cuttings exhibiting no field evidence of gross contamination will be returned to their borehole to within 12 inches of ground surface, with soil additives (bentonite) if warranted to reduce permeability. Any suitable drilling cuttings that cannot be returned to their borehole by the end of the day will be stockpiled on plastic and will be covered by protective sheeting. Stockpiled material will be properly characterized and disposed.

As noted above, development and purge water not exhibiting characteristics of significant contamination will be discharged to the ground surface at the Site.

### **3.7 Odor and Fugitive Dust Control**

In accordance with NYSDEC and NYSDOH requirements, a CAMP will be implemented at the Site during any soil disturbance activities (i.e., drilling of soil borings and installation of monitoring wells and soil vapor probes). The objective of the CAMP will be to provide protection for the surrounding community from potential airborne contaminant releases as a result of intrusive RI activities. The CAMP will consist of two air monitoring stations (one upwind and one downwind of the area where intrusive work is occurring). Each monitoring station will be equipped with instruments to continuously measure and record levels of VOCs and particulates. In addition to the two fixed stations, VOCs will be monitoring within the work zone using a hand-held PID. A copy of the CAMP is included in **Appendix E**.

### **3.8 Site Restoration**

The drilling subcontractor will restore all areas disturbed by the RIWP activities to preexisting conditions. Restoration actions will include removal of any temporary facilities, such as decontamination areas and unused materials, and repair or replacement of all asphalt or concrete surfaces damaged during the RI, as applicable.

### **3.9 Supplemental Field Investigation**

All data generated by the RI will be evaluated to identify any data gaps or unanticipated environmental concerns warranting additional investigation. Implementation of supplemental field investigation will be discussed with the NYSDEC, to confirm media of concern, and

---

sample locations and quantities. Athenica will coordinate with the NYSDEC, at a minimum, 10 business days prior to implementing supplemental investigation activities.

---

### 4.0 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT

The overall goal of the Qualitative Human Health Exposure Assessment will be to evaluate the potential risk to people posed by exposure to Site-related contaminants. With this goal in mind, a qualitative human health risk assessment will be conducted to determine if the presence and concentrations of chemicals detected at significant concentrations in the environmental media at the Site pose potential human health concerns. The assessment will encompass both on-Site and off-Site risks, with the results of the exposure analysis used as one of the criteria to determine and assess appropriate future actions at the Site. These may include no further action, additional data collection, quantitative health risk assessment, and/or establishment of risk-based action levels.

The assessment will begin with the development of a conceptual Site model, a graphic illustration that outlines chemical source areas, possible chemical release mechanisms, environmental media that currently show or may show in the future the presence of chemicals, possible exposure pathways, possible points of exposure for human receptors, possible exposure routes, and possible human receptors. The conceptual model will be based on current Site conditions and surrounding land use as well as the planned future Site and surrounding land uses. For environmental media that may be of concern, qualitative evaluations will be made for the four components that typically comprise a health risk assessment: data evaluation; exposure assessment; toxicity assessment; and risk characterization/uncertainty analysis.

At a minimum, the exposure assessment will evaluate 5 elements associated with exposure pathways, to determine if there is currently a completed pathway for human exposure, or whether a completed pathway exist under reasonable future conditions. These elements are:

1. Description of contaminant source(s),
2. Explanation of contaminant release and transport mechanisms,
3. Identification of potential exposure point(s) to human receptors,
4. Description of the route(s) of exposure, and
5. Characterization of the receptor populations.

In the data evaluation, chemical concentrations in the various media will be compared to applicable and appropriate risk-based standards and criteria (e.g., NYSDEC Soil Cleanup Objectives, Water Quality Standards, etc.). Chemicals detected in concentrations greater than these criteria will be identified as chemicals of potential concern. In the exposure assessment, an evaluation will be made of the likelihood and magnitude of exposure to the chemicals of potential concern in environmental media of concern. This will involve outlining possible exposure routes and plausible exposure times, frequencies, and durations. In the toxicity assessment, the toxicity of the chemicals of concern will be outlined. This will include

## REMEDIAL INVESTIGATION WORK PLAN

July 2021 (Revised September 2021)

---

identifying known or suspected carcinogens and/or the target organ/system of concern for non-carcinogenic effects. In the risk characterization, information from the three components will be integrated, to estimate the likelihood and magnitude of possible health risks.

Fact sheets documenting the goals and progress of the project will be prepared at key milestones of the project and distributed to those on the project mailing list. The distribution list is included in the Citizens Participation Plan (CPP) which is provided in **Appendix G**.

### 5.0 QUALITY ASSURANCE/QUALITY CONTROL

Quality control (QC) samples serve as checks on both the sampling and measurements systems and assist in determining the overall data quality with regard to representation, accuracy, and precision. Field duplicates and matrix spike samples are analyzed to assess the quality of the data resulting from the field sampling. Field duplicate samples are individual portions of the same field sample. These samples can be used to estimate the overall precision of the data collection activity. Sampling error can be estimated by the comparison of field sample result and duplicated sample result. During RI sampling, one field duplicate sample will be collected for each 20 samples collected per media. Matrix spikes and matrix spike duplicates are used to evaluate analytical accuracy and precision, respectively. Matrix spikes/matrix spike duplicates (MS/MSDs) will be analyzed by the laboratory at a frequency of one per preparation batch per media. The frequency of QC sampling is detailed in the Quality Assurance Project Plan (QAPP), which is included as **Appendix F**.

#### 5.1 Laboratory and Data Preparation

All samples collected during the BCP Site RI will be analyzed using USEPA-approved analytical methods. The subcontracted laboratory will be certified under the NYSDOH ELAP. Laboratory data will be provided with Analytical Services Protocol (ASP) Category B deliverables and a third-party Data Usability Summary Report (DUSR) will be prepared.

All sample data generated for the RI will be logged in a database and organized to facilitate data review and evaluation and will be submitted to NYSDEC in the appropriate Electronic Data Deliverable (EDD) format. The NYSDEC has implemented an Environmental Information Management System (EIMS). The EIMS uses the database software application EQUSTM from EarthSoft® Inc. Complete data packages will be submitted with supporting tables, which highlight such data as sample location coordinates and proper electronic data deliverable groupings.

The electronic dataset will include the data flags provided in accordance with USEPA Laboratory Data Validation Functional Guidelines for Evaluating Organic Analysis and Inorganic Analyses, as well as additional comments of the data review for ASP/CLP analyses. The data flags include such items as: 1) concentration below required detection limit, 2) estimated concentration due to poor recovery below required detection limit, 3) estimated concentration due to poor spike recovery, and 4) concentration of chemical also found in laboratory blank.

## REMEDIAL INVESTIGATION WORK PLAN

29-05 38<sup>th</sup> Avenue

Long Island City, New York 11101

July 2021 (Revised September 2021)

---

### 5.2 Data Evaluation

The purpose of the data evaluation is to determine the extent of any identified soil, groundwater, and soil vapor impacts associated with historic usage of the Site, and to assure that data obtained during the implementation of the RI are adequate in quantity and quality, and applicable to project objectives. To make this determination, the data will be reviewed for the quality of data coverage, and completeness, with respect to meeting project objectives.

The data package will be sent to a qualified, independent, data validation specialist for evaluation of the accuracy and precision of the analytical results. A DUSR will be prepared to describe the compliance of the analyses with the analytical method protocols detailed in the NYSDEC ASP. The DUSR will provide a determination of whether the data meets the project-specific criteria for data quality and data use. The validation effort will be completed in accordance with NYSDEC Division of Environmental Remediation DUSR guidelines.

### 6.0 REPORTING

The results, along with supporting documentation, will be provided to the NYSDEC in a Remedial Investigation Report (RIR). Preparation of the report will entail a summary of fieldwork performed to date; data collected, and will include appropriate summary data tables, soil boring and well construction logs, analytical results, photos, and maps. If no additional characterization is required, as anticipated, the RI report will include a Qualitative Human Health Risk Assessment as described in this work plan. If additional investigation is required, the Qualitative Human Health Risk Assessment will be completed following the receipt of validated results for the additional characterization sampling.

The RIR will contain a description of the source of any contamination identified, as well as characterization of the geologic and hydrogeologic conditions at the Site, and assessment of soil, soil vapor, and groundwater quality.

To facilitate interpretation of data generated during the investigation activities, the data will be tabulated in data summary tables. Figures showing sampling locations with the corresponding analytical results (i.e., spider diagrams) will be prepared to enhance the overall understanding of Site conditions regarding the magnitude and location of contamination.

Based on the findings and results of the RIR, the need for remediation will be evaluated. If warranted, a draft Remedial Action Work Plan (RAWP) will be prepared and will include identification and preliminary screening of potential remedial alternatives for the Site. Remediation alternatives passing the preliminary screening will undergo a detailed evaluation and assessment, and a recommended remedial action will be proposed. The RAWP will be submitted to the NYSDEC under separate cover from the RI Report, for review, comment, and/or approval.

### 7.0 PROJECT SCHEDULE

It is estimated that the soil sampling, temporary well installation, and soil vapor sampling portions of the scope of work presented in this RIWP can be completed within one week, with the well surveying and groundwater sampling tasks completed during the second week. The laboratory results (with the ASP Category B data packages) will be provided with a 2-week turnaround time, and the data validation and DUSR preparation are expected to be completed within four weeks after receipt of the data. Based on these timeframes, it is expected that project activities will be completed within 18 weeks after RIWP approval by the NYSDEC. As a result, the following project schedule has been developed:

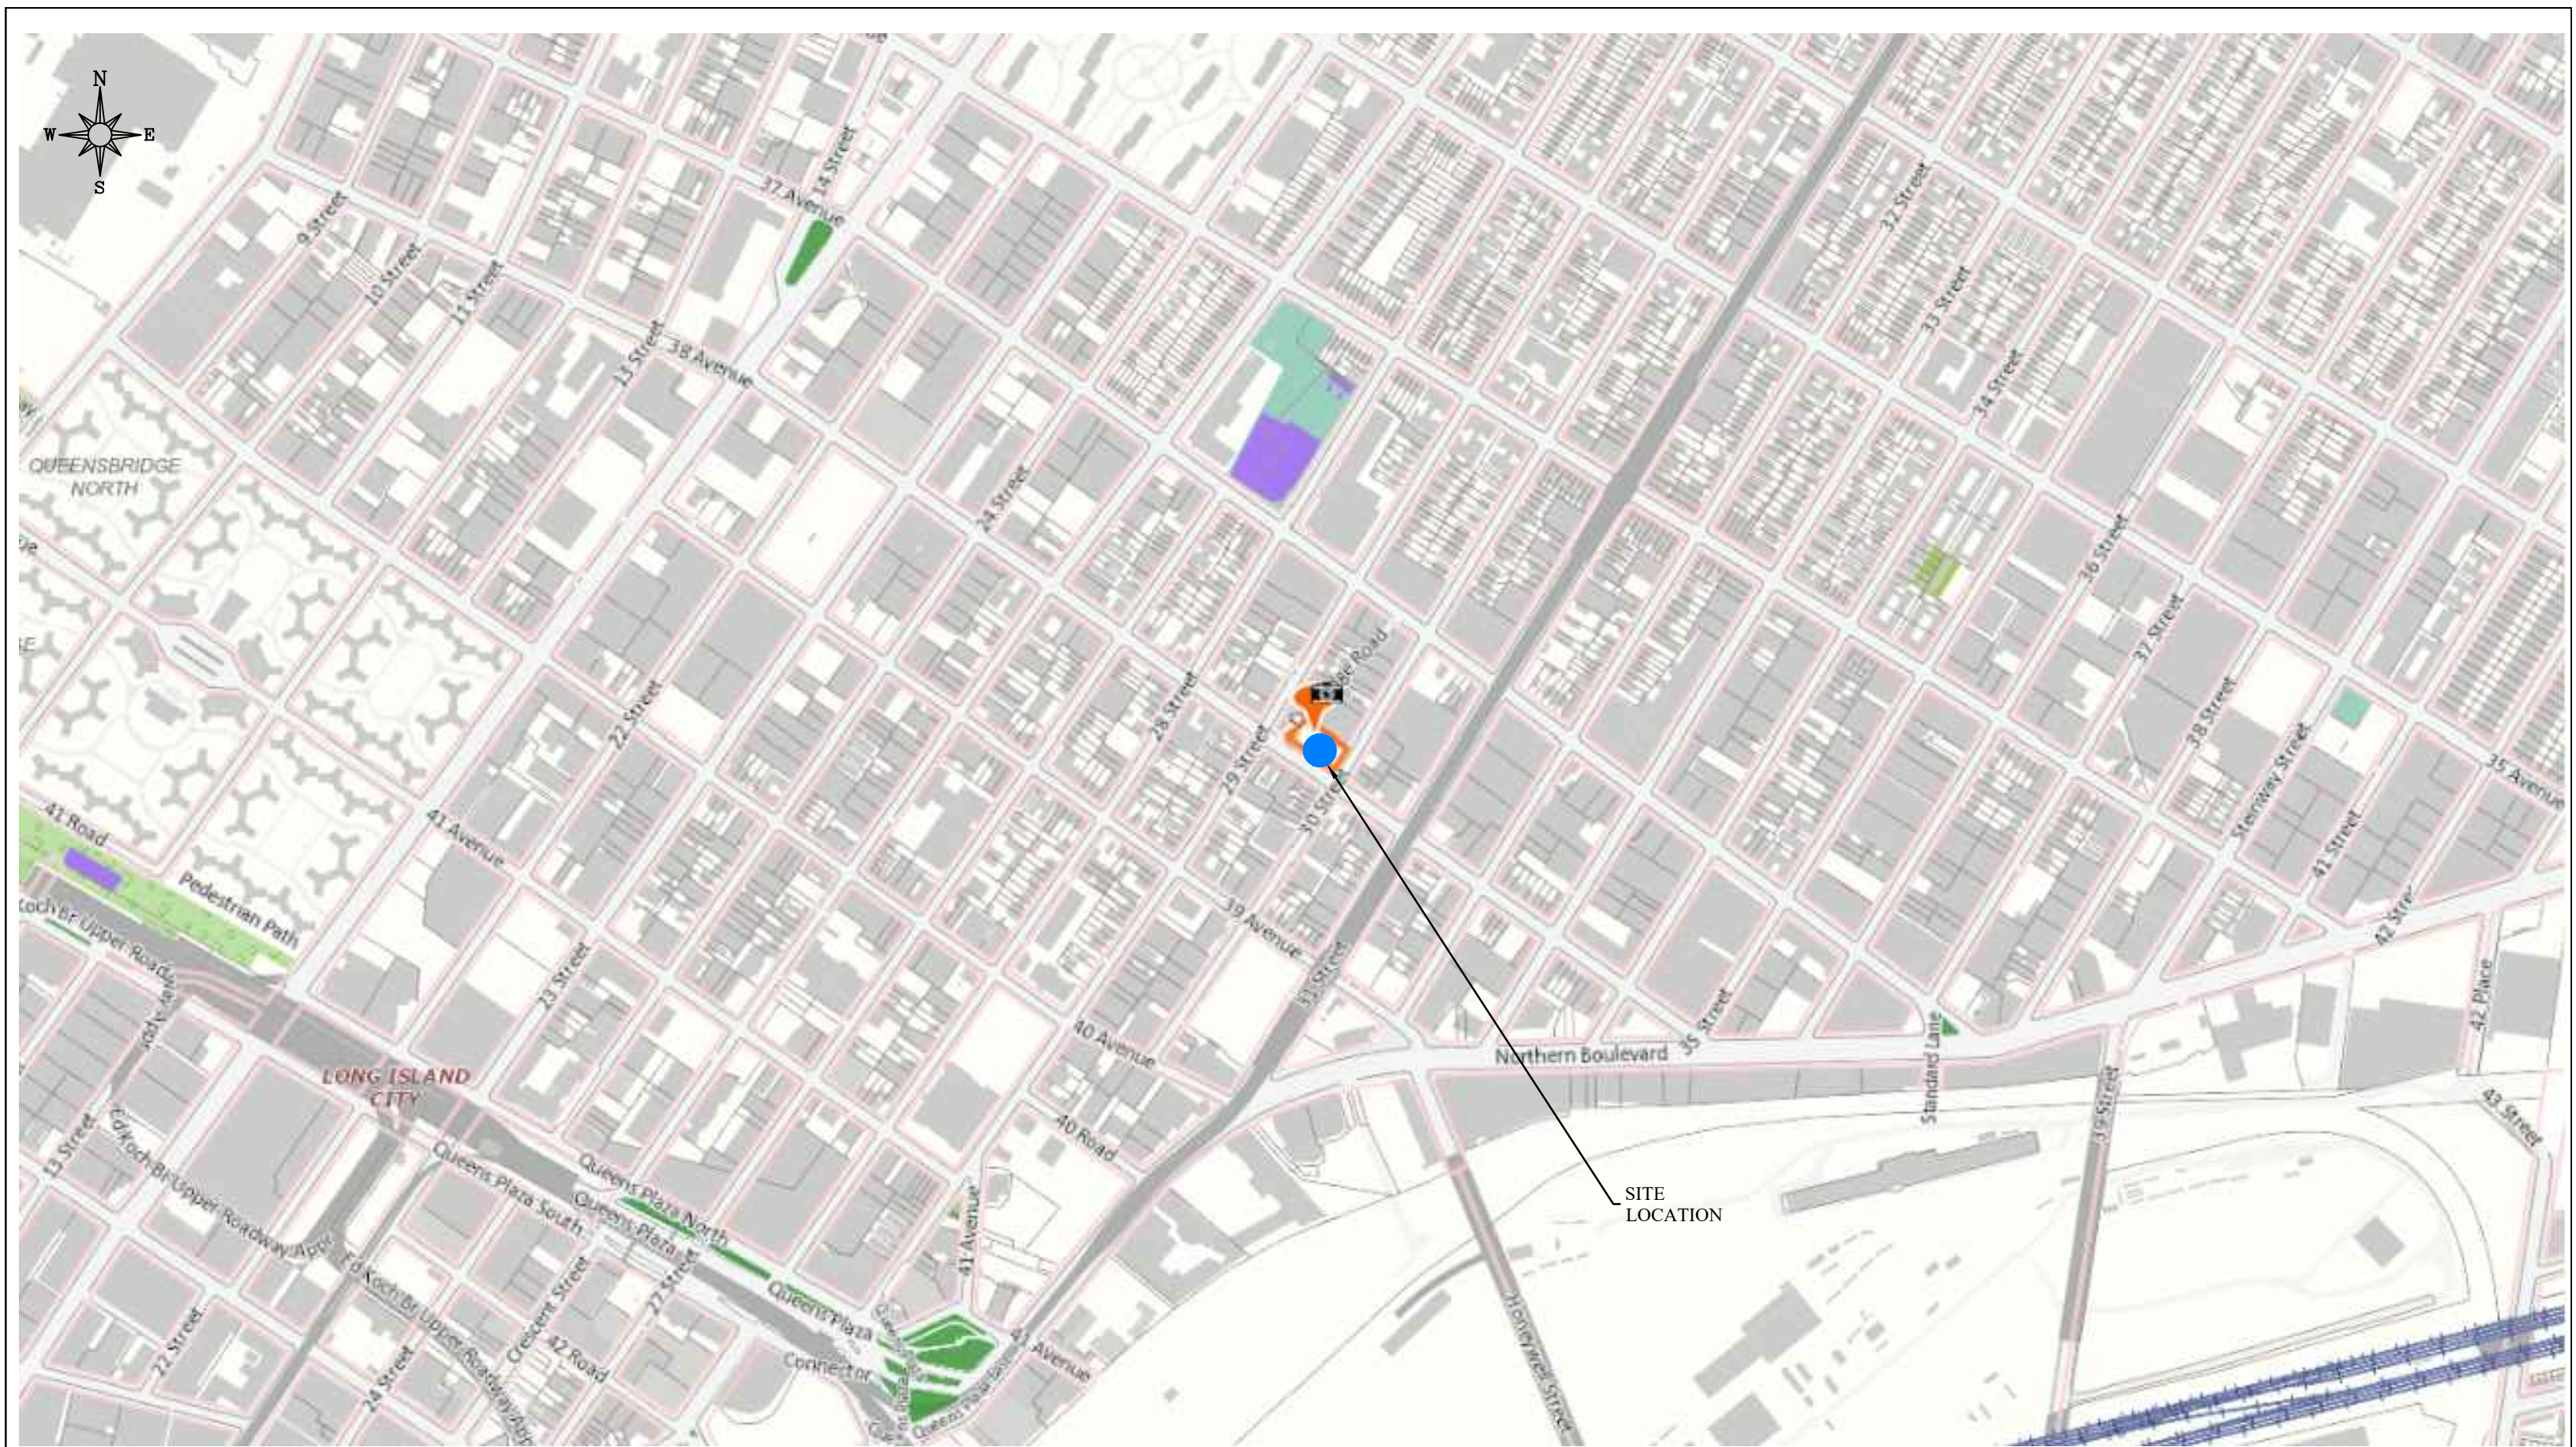

<b>Task</b>	<b>Estimated Duration (business days)</b>	<b>Total Duration (business days)</b>
RIWP approval by NYSDEC	0	0
Pre-sampling activities*	10	10
Soil, groundwater and soil vapor sampling	10	20
Laboratory analysis	20	50
Data validation and DUSR	20	70
Data review and reporting	10**	80

\* Includes scheduling with Owner and subcontractors, 10-day notification to NYSDEC, and completion of utility mark-out through One Call Center.

\*\* Portions of this task will be conducted concurrently with samples analysis and the data validation tasks – duration shown represents time for completion of the report after receipt of the DUSR.

## **TABLE**

**Table 1**  
Proposed Sampling Rationale  
29-05 38th Avenue  
Long Island City, New York

Proposed Testing Location	Sample Medium	Number of Samples	Sample Depth	Location	Laboratory Analysis	Purpose
Borings B-1 through B-4	Soil	2 per boring	To be determined based on field measurements	Portion of Site formerly occupied by carpet cleaning firm	VOCs, SVOCs, Pesticides, PCBs, Metals	Identify and delineate PCE-impacted soils at potential source area(s) and characterize soils
To be determined	Soil	2	To be field-determined	To be field-determined	PFAS and 1,4 Dioxane	Characterize PFAS and 1,4 Dioxane concentrations in soil
Well Cluster WC-1	Groundwater	1 per well	23-25' bgs, and 45-50' bgs	Portion of Site formerly occupied by gasoline station	VOCs, SVOCs	Identify petroleum-related contamination at source area and establish solvent-related groundwater contamination at upgradient portion of Site
Well Clusters WC-3 and WC-4	Groundwater	1 per well	23-25' bgs, and 45-50' bgs	Portion of Site formerly occupied by Carpet Cleaning firm	VOCs, SVOCs	Delineate PCE-impacted groundwater at potential source area
Well Clusters WC-5 and WC-6	Groundwater	1 per well	23-25' bgs, and 45-50' bgs	Downgradient portion of Site	VOCs, SVOCs	Delineate PCE-impacted groundwater across the Site
TW-2	Groundwater	1	22-32' bgs	Vicinity of former soil boring SB-3	VOC, SVOCs	Identify SVOCs impacts to groundwater and delineate PCE-impacted groundwater at potential source area
To be determined	Groundwater	2	23-25' bgs	To be determined (1 upgradient well and 1 downgradient well)	PFAS and 1,4 Dioxane	Characterize PFAS and 1,4 Dioxane concentrations in groundwater
SVP-1	Soil Vapor	1 per probe	14' bgs (development depth)	Portion of Site formerly occupied by gasoline station	VOCs	Complete characterization of vapor contamination at Site
SVP-2, SVP-3	Soil Vapor	1 per probe	14' bgs (development depth)	Portion of Site formerly occupied by Carpet Cleaning firm	VOCs	Complete characterization of vapor contamination at Site
SVP-4, SVP-5	Soil Vapor	1 per probe	14' bgs (development depth)	Downgradient portion of Site	VOCs	Complete characterization of vapor contamination at Site

29-05 38th Avenue in Long Island City, New York 11101

MEI Project #: 20-0186

In accordance with our agreement, Middleton Environmental Incorporated (MEI), has performed a Phase I Environmental Assessment of the above referenced property in accordance with ASTM E 1527-13 Scope of Work. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for choosing MEI as your consultant for this project. If you have any questions, or if we can be of additional service, please contact us at (631) 321 4300.

Respectfully submitted,

## 1.0 EXECUTIVE SUMMARY

At the request of Preferred Bank, Middleton Environmental Incorporated (MEI) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 29-05 38th Avenue in Long Island City, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify **Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs)** in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13. This assessment has identified no evidence of CRECs or HRECs in connection with the Subject Property. However, this assessment has identified RECs regarding the possible presence of underground gasoline storage tanks and the former usage by a former gasoline station and automobile repair facility and carpet cleaning company was identified pertaining to the Subject Property.

The Subject Property consists of an irregularly-shaped parcel totaling approximately 0.24 acre in size. The Subject Property is improved with a total of three subject buildings: a 1½ story warehouse primarily constructed on-grade, with a front partial basement area; a 2-story dwelling with a basement and a 1-story dwelling with a basement. Each building was constructed between 1898 and 1936. Additional site improvements are limited to two, non-contiguous, asphalt-paved parking areas at the eastern and western portions of the Property, respectively, and concrete-paved public sidewalks at the 38th Avenue and 30<sup>th</sup> Street frontages.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. MEI's Findings and Opinions and Recommendations for further action or investigation (if any), are presented in Section 10.0.

<b>ASSESSMENT SUMMARY TABLE</b>			
<b>Assessment Component</b>	<b>Section(s)</b>	<b>Recommended Actions</b>	<b>Estimated Cost</b>
Historical Review	5.3, 5.4 & 5.5	Phase II Environmental Site Assessment	\$ 9,000 - \$ 13,000
Current Occupants / Operations	3.3	No Further Action	
Hazardous Substances / Petroleum Products	7.2	Phase II Environmental Site Assessment	
Drains, Sumps & Storm Water Drywells	7.2	No Further Action	
Storage Tanks	7.2	Phase II Environmental Site Assessment	
PCBs	7.2	No Further Action	
Regulatory Agency / Database Review	5.1	No Further Action	
Asbestos Containing Materials	9.1	No Further Action	
Lead Based Paint	9.2	No Further Action	
Lead in Drinking Water	9.3	No Further Action	
Radon	9.4	No Further Action	
Mold	9.5	No Further Action	
Wetlands	9.6	No Further Action	

## **2.0 INTRODUCTION**

### **2.1 Purpose**

MEI has performed a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 29-05 38th Avenue in Long Island City, New York (Subject Property). The purpose of this Phase I Environmental Site Assessment (Phase I ESA) is to investigate and identify Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs) associated with the Subject Property and/or surrounding property. Recognized Environmental Conditions, as defined in the ASTM Standard Practice E 1527-13, including the following:

*The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.*

For the purpose of this Phase I ESA, *recognized environmental conditions (REC's)*, may also include the presence or likely presence of other conditions as noted in the Scope of Services.

### **2.2 Scope of Services**

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review. The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, radon, mold, and wetlands.

## 2.3 Assumptions and Limitations

There is a possibility that even with the proper application of these methodologies there may exist on the Subject Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. The information and conclusions contained in this report are based upon work undertaken by trained professional in accordance with generally accepted engineering and scientific practices current at the time the work was performed. MEI believes that the information obtained from the record review and the interviews concerning the Subject Property is reliable. However, MEI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all-inclusive or comprehensive results, but rather to provide the User with information relating to the Subject Property. Due to the nature of this investigation and data available, MEI cannot warrant against undiscovered environmental liabilities. Should any additional information become available which differs significantly from our understanding of conditions or findings represented in this report, we request that this information be supplied to MEI so that MEI may reassess the conclusions provided in this report (if necessary).

The findings, opinions and conclusions of this report contain the limitations inherent in these methodologies that are referred to in ASTM E 1527-13. Specific limitations and exceptions to this ESA are set forth below:

Historical and environmental information pertaining to the Subject Property has been included in this report to the extent that such information is "reasonably ascertainable" as defined in the above-referenced standard practice and in accordance with the project specific timeframes.

MEI reviewed an environmental database search report. MEI's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, MEI's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the Subject Property.

With respect to conditions outside the scope of the ASTM Standard, MEI's observations are limited to physical observations and a review of published data. Unless otherwise stated, no sampling for Asbestos Containing Materials, Lead Based Paint, Drinking Water, Radon, Mold, or Wetlands was conducted.

## **2.4 Special Terms and Conditions**

This Phase I Environmental Site Assessment (“the report”) has been prepared to assist Preferred Bank in its underwriting of a proposed mortgage loan or financing on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. MEI’s liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to MEI’s limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and MEI’s contract and report extends Preferred Bank only, in accordance with MEI Terms and Condition and the MEI Scope of Work.

## **2.5 Data Gaps**

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

## **2.6 Deviations**

No deviations from the recommended scope of ASTM Standard E 1527-13 were performed as part of this Phase I ESA with the exception of any additional services noted in Section 2.2 Scope of Services.

## **2.7 User Reliance**

This Phase I Environmental Site Assessment Report is for the benefit of Preferred Bank and this report may not be relied upon by any other person or entity without the written consent of MEI.

Only if written agreement has been executed granting the right to utilize this report, no third party which obtains all or portion of this report shall have any rights of recourse or recovery under any course of action against MEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with MEI's Standard Phase I Environmental Site Assessment Contract and this report is for the benefit of Preferred Bank and its successors and assigns. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of MEI.

## **3.0 SITE DESCRIPTION**

### **3.1 Ownership and Location**

According to the Automated City Register Information System (ACRIS) operated by the New York City Department of Finance, the Subject Property is identified as Block 371, Lot 38, and the Property is currently owned by Pemas, LLC.

The Property is located in a built-up, urban, mixed-use residential/commercial/industrial area within the borough of Queens, within the postal code of Long Island City, Queens County, and within the City and State of New York. MEI did not identify any prior owners or occupants of potential environmental concern in the property records obtained from the NYC Department of Finance.

### **3.2 Improvements**

The Subject Property consists of an irregularly-shaped parcel totaling approximately 0.24 acre in size. The Subject Property is improved with a total of three subject buildings: a 1½ story warehouse primarily constructed on-grade, with a small, front partial basement area; a 2-story dwelling with a basement; and a 1-story dwelling with a basement, each of which were constructed between 1898 and 1936. Additional site improvements are limited to two, non-contiguous, asphalt-paved parking areas at the eastern and western portions of the Property, respectively, and concrete-paved public sidewalks at the 38th Avenue and 30<sup>th</sup> Street frontages.

### **3.3 Current Use of the Subject Property**

The Subject Property is improved with two dwellings, and a 1½ story warehouse primarily constructed on-grade, with a small, front partial basement area. The warehouse is currently occupied by Green Now, a biofuel generator rental company. The 1-story dwelling basement contains residential and mechanical areas. The commercial building basement contains mechanical areas. The commercial building first floor is utilized for warehouse/storage, parking, and office purposes. The commercial building partial second floor/mezzanine contains office areas.

### 3.4 Services, Utilities and Roadways

Street Address(es): 29-05 – 29-17 38<sup>th</sup> Avenue / 37-51 Old Ridge Road / 37-44 30<sup>th</sup> Street

City and State: Postal zone of Long Island City, within the Borough of Queens, and within the City and State of New York

County: Queens County

Owner: Pemas, LLC

Property Size: 0.24 acre

Access Roadway to site: 38th Avenue, adjacent to the southwest of the Property

Site Use: Warehouse/office, dwellings, and parking

Occupants: Green Now and residential tenants

Electricity Provider: Consolidated Edison of New York (ConEd)

Natural Gas Provider: National Grid

Fuel Oil Provider: Not applicable

Potable Water: Municipal Water Supply System

Sewer Services: Municipal Sewer System

Heating System: Central, natural gas-fired low-pressure boilers (dwellings); and natural gas-/electric-fired split system HVAC units and natural gas-fired, ceiling-mounted unit heaters (commercial building)

### 3.5 Adjoining Property Usage

The current usage of the adjoining properties is residential and commercial/industrial in nature. The Subject Property borders are as follows:

North - The Subject Property is bordered to the north by an unlabeled 2-story commercial building and a development site.

South - The Subject Property is bordered to the south by 38th Avenue, beyond which are multi-story residential buildings, a 1-story restaurant, and an auto repair facility.

East - The Subject Property is bordered to the east by 30<sup>th</sup> Street, beyond which is a 2-story commercial office/retail building.

West - The Subject Property is bordered to the west by Old Bridge Road, beyond which is an unlabeled 1½-story warehouse.

## **4.0 USER PROVIDED INFORMATION**

### **4.1 Environmental Pre-Survey Questionnaire**

Pursuant to ASTM E 1527-13, MEI requested the following site information from the User of this report and from the site contact. The following section summarizes information provided Preferred Bank with regard to this Phase I Environmental Site Assessment.

<b>ITEM</b>	<b>PROVIDED BY USER</b>	<b>NOT PROVIDED BY USER</b>	<b>DISCUSSED BELOW</b>	<b>DOES NOT APPLY</b>
<b>4.1 Environmental Pre-survey Questionnaire</b>		X		
<b>4.2 Title Records</b>		X		
<b>4.3 Environmental Liens or Activity and Use Limitation</b>		X		
<b>4.4 Specialized Knowledge</b>		X		
<b>4.5 Commonly Known or Reasonably Ascertainable Information</b>		X		
<b>4.6 Valuation Reduction for Environmental Issues</b>		X		
<b>4.7 Identification of Key Site Manager</b>	X			
<b>4.8 Reason for Performing Phase 1 ESA</b>	X			
<b>4.9 Prior Environmental Reports</b>		X		

### **4.2 Title Records**

Title record information associated with the Subject Property has not been provided to MEI by Preferred Bank. Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

### **4.3 Environmental Liens or Activity and Use Limitation**

The property owner/user/key site personnel did not report any Environmental Liens or Activity/Use Limitations on the site. An environmental lien search was not included in the scope of work of this assessment and therefore was not performed. However, if the findings of a lien search performed by any other party does reveal the presence of an environmental related lien on the subject property, this information should be forwarded to MEI for review, and any significant findings will be added to this assessment as an addendum to this report.

#### **4.4 Specialized Knowledge**

Preferred Bank provided no specialized knowledge that is material to Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs). MEI was not provided with or made aware of previous environmental assessments or other documentation that is material to RECs, CRECs or HRECs in connection with the Subject Property, except as presented in Section 4.3 of this report.

#### **4.5 Commonly Known or Reasonably Ascertainable Information**

Preferred Bank has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

#### **4.6 Valuation Reduction for Environmental Issues**

Preferred Bank has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

#### **4.7 Identification of Key Site Manager**

Preferred Bank did not provide contact information for the Subject Property owner, manager, and/or occupant. The Contact person for site access was Mr. George Abdoulos, owner of the Property, of Pemas, LLC.

#### **4.8 Reason for Performing Phase I ESA Report**

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-13) in connection with the Subject Property. This ESA was also performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E-1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

#### **4.9 Prior Environmental Reports**

Although requested, no previous environmental reports were provided to MEI for review.

## 5.0 RECORDS REVIEW

### 5.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappable section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Subject Property. Pertinent regulatory files / records associated with the Subject Property and/or any adjoining site will be requested for review in the event the listing is associated with a facility at which a suspected or confirmed release has occurred that has not yet been closed to the satisfaction of the regulatory agency and/or if the facility represents a REC in connection with the Subject Property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Subject Property, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Subject Property from the listed facilities (see appendix 12.5 for Environmental Database Report).

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

<b>SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS</b>			
<b>Regulatory Database</b>	<b>Approximate Minimum Search Distance</b>	<b>Subject Property Listed</b>	<b>Off-site Listing Within Search Distance</b>
Federal NPL Sites	1.0 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
Federal SEMS Sites (formerly CERCLIS Sites)	0.5 mile	No	0
Federal SEMS Archive Sites (formerly CERCLIS NFRAP)	0.5 mile	No	0
Federal RCRA CORRACTS Sites	1.0 mile	No	1
Federal RCRA Generators Sites	Property & Adjoining	No	1
Federal RCRA Non-CORRACTS TSD Sites	0.5 mile	No	0
Federal Engineering / Institutional Control Sites	0.5 mile	No	0
Federal ERNS Sites	Subject Property	No	NA
State and Tribal equivalent NPL Sites	1.0 mile	No	16
State and Tribal equivalent CERCLIS Sites	0.5 mile	No	0
State and Tribal Leaking Storage Tank Sites	0.5 mile	No	51
State and Tribal Spills Sites	Subject Property	No	NA
State and Tribal Landfill or Solid Waste Disposal Sites	0.5 mile	No	1
State and Tribal Registered Storage Tank Sites	Property & Adjoining	No	0
State and Tribal Engineering / Institutional Control Sites	0.5 mile	No	2 / 4
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	4
State and Tribal Brownfield Sites	0.5 mile	No	13

- **Federal National Priority List (NPL) Sites**

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. The Subject Property is not listed as a Federal NPL site. No NPL sites were identified within one mile of the Property.

- **Federal Delisted National Priority List (NPL) Sites**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. The Subject Property is not listed as a Federal Delisted NPL site. No Federal Delisted NPL sites were identified within one mile of the Property.

- **Federal SEMS Sites (formerly CERCLIS Sites)**

The SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the SEMS List and the sites which are in the screening and assessment phase for possible inclusion on the SEMS. The Property is not identified as a Federal SEMS facility. No SEMS sites are located within a half-mile of the Subject Property.

- **Federal SEMS-ARCHIVE List**

The SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the SEMS List. The Property is not identified as a SEMS-ARCHIVE facility. No SEMS ARCHIVE sites are located within a half-mile of the Subject Property.

- **Federal RCRA CORRACTS Sites**

RCRA Corrective Action Tracking System (CORRACTS) is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies Transportation, Storage or Disposal (TSD), facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The Subject Property was not identified on the RCRA CORRACTS site list. However, one RCRA CORRACTS site is located within one mile of the Subject Property. This site is located 0.67 mile to the west-northwest, and cross-gradient relative to the Property. Therefore, based on its distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with this RCRA CORRACTS site would represent an environmental concern to the Subject Property.

- **Federal RCRA Hazardous Waste Generators Sites**

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). A RCRA-LQG is a facility that generates over 1,000 kilograms (Kg) of hazardous waste. A RCRA-SQG is a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month while a RCRA-CESQG generates less than 100 Kg of hazardous waste per month. The Subject Property is not listed as Resource Conservation and Recovery Act (RCRA) Generator site. However, one adjoining RCRA SQG site was identified. This site is known as Enterprise Cleaners, and is located at 37-26 30<sup>th</sup> Street, adjacent to the northeast of, and up-gradient relative to, the Property. This site is also listed on the NY DRYCLEANERS, NY MANIFEST, and RI MANIFEST databases. This facility formerly consisted of a commercial dry cleaning plant, and numerous violations and enforcement actions were identified for this facility on the RCRA SQG database. Of note, this facility appeared to no longer be in operation during MEI's site inspection.

- **Federal RCRA non-CORRACTS TSD Sites**

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) sites are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD site. No Federal RCRA non-CORRACTS TSD sites are located within a half-mile radius of the Subject Property.

- **Federal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property is not listed as a Federal Engineering Controls or Institutional Control site. No Federal Engineering Controls / Institutional Control sites are located within a half-mile of the Subject Property.

- **Federal Emergency Response Notification System (ERNS) Sites**

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a Federal ERNS site.

- **State and Tribal Equivalent NPL Sites**

State and Tribal equivalent NPL databases were searched for sites located within a mile of the Subject Property. The Subject Property is not listed as a State and Tribal Equivalent NPL site. However, 16 State and Tribal equivalent NPL sites are located within one mile of the Subject Property. These sites are each located in excess of 0.30 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 16 State and Tribal Equivalent NPL sites would represent an environmental concern to the Subject Property.

- **State and Tribal equivalent CERCLIS Sites**

State and Tribal equivalent CERCLIS databases were searched for sites located within a half mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent CERCLIS Site. No State and Tribal equivalent CERCLIS sites are located within a half-mile radius of the Subject Property.

- **State and Tribal Leaking Storage Tank Sites**

Leaking Storage Tank sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property is not listed as a State and Tribal Leaking Storage Tank site. However, 51 sites located within a half-mile of the Subject Property were identified as State and Tribal Leaking Storage Tank sites. Each of the Leaking Storage Tank sites are located in excess of 0.05 mile of the Subject Property, and are located either cross- or down-gradient relative to the Property, or have been Closed by the NYSDEC, or both. Therefore, based on their distance, gradient, and/or regulatory status, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 51 Leaking Storage Tank sites would represent an environmental concern to the Subject Property.

- **State and Tribal Spills Sites**

A review of the State and Tribal Spills database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a State and Tribal Spills site.

- **State and Tribal Landfill Sites and Solid Waste Disposal Sites**

The State and Tribal Landfill and Solid Waste Disposal site database identifies active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property is not listed as a State and Tribal Landfill and Solid Waste Disposal site. However, one State and Tribal Landfill and Solid Waste Disposal site is located within a half-mile of the Subject Property. This site is located 0.34 mile to the northwest, and cross-gradient relative to the Property. Therefore, based on its distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with this State and Tribal Landfill and Solid Waste Disposal site would represent an environmental concern to the Subject Property.

- **State and Tribal Registered Storage Tank Sites**

The Property and adjoining properties are not listed on the AST or UST registration databases.

- **State and Tribal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property was not listed as a State Engineering Controls or Institutional Control site. However, two State Engineering Controls sites and four Institutional Control sites are located within a half-mile of the Subject Property. These sites are each located in excess of 0.14 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these State Engineering Controls / Institutional Control sites would represent an environmental concern to the Subject Property.

- **State and Tribal Voluntary Cleanup Sites**

The Subject Property is not listed as a State and Tribal Voluntary Cleanup site. However, four State and Tribal Voluntary Cleanup site is located within a half-mile of the Subject Property. These sites are each located in excess of 0.30 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these four State and Tribal Voluntary Cleanup sites would represent an environmental concern to the Subject Property.

- **State and Tribal Brownfield Sites**

The Subject Property is not listed as a State and Tribal Brownfield site. However, 13 State and Tribal Brownfield sites are located within a half-mile of the Subject Property. These sites are each located in excess of 0.10 mile of, and either cross- or down-gradient relative to, the Property. Therefore, based on their distance and gradient, as well as the built-up and developed nature of the surrounding area, it is considered unlikely that conditions associated with these 13 State and Tribal Brownfield sites would represent an environmental concern to the Subject Property.

## 5.2 Sanborn Fire Insurance Maps

Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of available fire insurance maps are presented in Appendix 12.6.

FIRE INSURANCE MAP SUMMARY		
Year	Issues Noted	Observations
1898	No	Subject Property: Two small dwellings and undeveloped land are depicted on-site (with the rear dwelling appearing to be the rear dwelling identified on-site during MEI's site inspection).
		Surrounding Area: Dwellings, undeveloped land, and a 1½-story commercial building are depicted on the surrounding properties.
1915	No	Subject Property: Two small dwellings and undeveloped land are depicted on-site (with the rear dwelling appearing to be the rear dwelling identified on-site during MEI's site inspection).
		Surrounding Area: Dwellings, multi-story residential buildings, undeveloped land, and a 1½-story commercial building are depicted on the surrounding properties.
1936	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Kashan Carpet Cleaning" with a gasoline UST at the building frontage; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively), with two gasoline USTs depicted at the eastern parking area (assumed to be the development depicted on-site during MEI's site inspection).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, and commercial/industrial properties, including a dry cleaning plant to the south, beyond 38 <sup>th</sup> Avenue at 29-10 – 29-14 38 <sup>th</sup> Avenue.
1947 – 1950	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively), with the eastern parking area labeled "Filling Station" (assumed to be the development depicted on-site during MEI's site inspection). Of note, no USTs are depicted on-site.
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, and commercial/industrial properties, including a dry cleaning plant to the south, beyond 38 <sup>th</sup> Avenue at 29-10 – 29-14 38 <sup>th</sup> Avenue.
1970 - 1980	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including a gasoline station to the east, beyond 30 <sup>th</sup> Street, at 30-01 – 30-05 38 <sup>th</sup> Avenue.
1986	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including an auto repair facility to the east, beyond 30 <sup>th</sup> Street, at 30-01 – 30-05 38 <sup>th</sup> Avenue.
1988 - 2006	Yes	Subject Property: The following development is depicted on-site: a 1-story commercial building, labeled "Carpet Cleaning"; two small dwellings, and two non-contiguous parking areas (at the eastern and western frontages, respectively).
		Surrounding Area: The surrounding area is densely developed with a combination of dwellings, multi-story residential buildings, automotive facilities, and commercial/industrial properties, including a plastics manufacturing facility to the north at 37-28 30 <sup>th</sup> Street.

The 1936 Sanborn map reviewed depicts three gasoline USTs on-site, including a one gasoline UST at the commercial building frontage, and two gasoline USTs depicted at the eastern parking area. In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950. Moreover, the Sanborn maps depict over 75 years of historical industrial and automotive usage on the adjacent properties. The historical presence of gasoline USTs and a gasoline station on-site, as well as the historical industrial and automotive usage of the adjacent properties, the subsequent potential for sub-surface contamination at the Property, is considered to be an REC.

### 5.3 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by researching available historical aerial photographs from [www.historicaerials.com](http://www.historicaerials.com) and other available resources. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table:

AERIAL PHOTOGRAPH SUMMARY		
Year	Issues Noted	Observations
1954 - 2015	No	<b>Subject Property: A commercial building, two small dwellings, and two non-contiguous parking areas appear to be depicted on-site.</b>
		<b>Surrounding Area: The surrounding area is densely developed, and the adjoining properties appear to be developed with dwellings, multi-story residential buildings, and commercial/industrial facilities.</b>

## 5.4 City Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by MEI and EDR. Historical street directories were reviewed and are summarized in the following table.

<b>CITY DIRECTORY SUMMARY</b>		
<b>Year</b>	<b>Issues Noted</b>	<b>Occupants</b>
1934	Yes	Carpet Cleaning firms
1939	Yes	Carpet Cleaning firms
1945	Yes	Carpet Cleaning firms
1962	Yes	Carpet Cleaning firms
1967	No	Carpet Cleaning firms and individual tenants/owners
1970	Yes	Carpet Cleaning firms
1976	Yes	Carpet Cleaning firms
1983	Yes	Carpet Cleaning firms and individual tenants/owners
1991	No	Individual tenants/owners
2000	Yes	Individual tenants/owners and an auto repair facility
2005	Yes	Daytona Auto Body
2010	Yes	Millennium Auto Care, Daytona Auto Repair, a taxi company
2014	Yes	Daytona Auto Repair, Millennium Auto Care, Greenow Productions

The historical usage of the Property as an auto repair facility and by a carpet cleaning company is considered to be an REC.

## 5.5 Vapor Encroachment Conditions

All readily ascertainable information including all applicable Federal, State, Tribal and local database information, historical usage information, soil and groundwater sources and information from the site reconnaissance were reviewed in order to determine if there is a possibility of a Vapor Encroachment Condition regarding the Subject Property. Based upon the results of the site reconnaissance and review of readily ascertainable information, the Vapor Encroachment Condition survey is described below:

POTENTIAL AREA OF CONCERN	RESULT
Does the Subject Property have a current or past contamination concern?	None identified
Does the Subject Property have a suspected contamination concern?	See below
Does an adjacent property have a current or past contamination concern?	None identified
Does a nearby property have a have a current or past contamination concern which may impact the Subject Property?	None identified
Does a regional groundwater contamination concern exist beneath the Subject Property?	None identified
Does there exist the possibility for vapor intrusion on the Subject Property?	See below

The historical presence of gasoline USTs, a gasoline service station, and an auto repair facility on-site, as well as the historical presence of adjoining industrial and automotive facilities and a carpet cleaning company is considered to be an REC and a Phase II ESA is recommended in order to determine if any contamination from past improper chemical disposal or past tank leakage has impacted the subsurface (or could caused a vapor intrusion concern).

## 5.6 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the New York City Department of Buildings, the New York City Department of Finance, and the New York City Fire Department. Information was reviewed in order to determine the possibility of documented adverse environmental conditions, violations or complaints associated with the Subject Property.

### New York City Building Department (NYC DOB) and New York City Department of Finance

MEI reviewed information listed in the online NYC Building Information System (BIS) provided by the New York City Building Department's website, as well as information from the New York City Department of Finance website, the Automated City Register Information System (ACRIS)(<http://a836-acris.nyc.gov/CP>). Specific information provided by these websites includes lot sizes and dimensions, building zoning, and usage. These websites also include information pertaining to interior renovations, building improvements, and approximate date of construction. Various permits/actions for the Property were identified on the NYC DOB website only, dated 1923 through the present, including New Building Applications dated 1923 and 1926; a 2003 permit for auto sales; a 1993 permit for auto repair; and the following historical Certificates of Occupancy (COs): 1927 for a dwelling; 1945 for a carpet cleaner; and 1989 for a dwelling and an auto sales facility; and 1994 for a dwelling, an auto repair facility, and parking. No additional data of historical or environmental concern was identified on the NYC DOB or New York City Department of Finance websites.

### New York City Fire Department (FDNY)

Records from the New York City Fire Department (FDNY) are available by written request and fee only, and results are typically not provided to the user for approximately 30 days (or greater) from the date of receipt of the request by the FDNY, and therefore would not be considered to be "reasonably ascertainable", as defined by ASTM. As such, other sources were reviewed for information regarding current and historic petroleum storage tanks at the Property. These records include state regulatory agency databases, Sanborn Fire Insurance maps, building department records, and historical city directories, which are addressed within the respective sections of this report.

## **6.0 PHYSICAL SETTING**

### **6.1 Topography**

The Subject Property and vicinity characteristics listed below were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the Subject Property. The Subject Property is located at an elevation of approximately 38 feet above mean sea level (msl). The Property has been graded, and is relatively flat. The surrounding area slopes gently downward to the southwest.

### **6.2 Geology and Soils**

No bedrock outcroppings were observed at the Subject Property. Near-surface geology in heavily developed areas such as the Subject Property and vicinity is considered "urban land" and is characterized by a non-homogeneous distribution of soil and fill types. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

### **6.3 Hydrogeology and Hydrology**

No natural surface water bodies were identified on or adjacent to the Subject Property. Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow in the vicinity of the Subject Property is expected to flow to the west, towards the East River. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three (3) groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

## **7.0 SUBJECT PROPERTY RECONNAISSANCE**

The Subject Property reconnaissance was conducted by Mr. Jeremy Mushlin, EP, senior project manager, on February 21, 2020. Mr. Mushlin was accompanied by Mr. George Abdoulos, owner of the Property, of Pemas, LLC.

### **7.1 Methodology and Limited Conditions**

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. MEI accessed all Property exteriors, as well as the commercial building interior (with the exception of the rear, attached one-car garage area), and the 1-story dwelling basement only.

MEI was not provided access to either of the dwellings, with the exception of the 1-story dwelling basement only, or the rear, attached one-car garage area, as the Property owner does not have keys to these areas, and tenants were not available to provide access during MEI's site inspection. Therefore, MEI was unable to make a determination of environmental conditions within these areas.

### **7.2 Physical Observations**

- **Underground Storage Tanks**

No petroleum underground storage tanks (USTs), or evidence thereof, were identified. The building is heated via a combination of central, natural gas-fired, low-pressure boilers (dwellings); and natural gas-/electric-fired split system HVAC units and natural gas-fired, ceiling-mounted unit heaters (commercial building). A review of the 1936 Sanborn map depicts the presence of three gasoline USTs on-site (one gasoline UST at the commercial building frontage and two gasoline USTs at the eastern parking area). In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950. The historical presence of gasoline USTs and a gasoline station on-site, and the subsequent potential for sub-surface contamination, is considered to be an REC.

- **Aboveground Storage Tanks**

No petroleum aboveground storage tanks (ASTs) were observed. However, three cut steel pipes were observed at the walls within in the commercial building partial basement. It is possible that these cut pipes represent former fuel lines associated with a former heating oil AST (or ASTs) that were historically removed from the basement. However, given the assumed aboveground location of these ASTs, as well as that no ASTs, or additional evidence thereof, were observed on-site, these cut lines are not considered to represent an issue of concern.

- **Hazardous Substances and Petroleum Products**

Five 55-gallon drums of 15W-40 motor oil were observed within the commercial building first floor warehouse area. According to Property ownership, the motor oil is utilized for lubrication of the tenant's generator equipment. The drums were stored neatly, and no evidence of leaks or issues of concern were noted. MEI did not observe any additional hazardous substances or petroleum products at the Subject Property.

- **Non-Hazardous Substances and Non-Petroleum Products**

MEI did not observe any non-hazardous substances or petroleum products at the Subject Property.

- **Unidentified Substances Containers**

MEI did not observe any unidentified substance containers at the Subject Property.

- **Drains or Storm Water Drywells**

MEI did not observe any storm water drywells. No stained storm drains were observed.

- **Polychlorinated Biphenyls (PCB's)**

No potential PCB-containing equipment was observed.

- **Stains or Corrosion**

MEI did not observe any evidence of staining or corrosion at the Subject Property.

- **Odors**

MEI did not observe any strong, pungent, or noxious odors at the Subject Property.

- **Pools of Liquid**

MEI did not observe any pools of liquid at the Subject Property.

- **Stressed Vegetation**

MEI did not observe any stressed vegetation at the Subject Property.

- **Stained Soil or Pavement**

MEI did not observe any stained soil at the Subject Property. Pavement displayed normal minor staining due to regular usage, which is not considered to be an issue of concern.

- **Wells**

MEI did not observe any irrigation wells or groundwater monitoring wells at the Subject Property.

- **Sumps, Pits, Ponds, or Lagoons**

MEI did not observe any sumps, pits, ponds, or lagoons in accessible areas of the Subject Property.

- **Waste Water**

MEI did not observe any improper disposal of waste water into drains, ditches, or streams at the Subject Property.

- **Solid Wastes Disposal**

Solid waste generated by the residential and commercial tenants is picked up for disposal by the New York City Department of Sanitation and a private commercial waste hauler, respectively. No improper solid waste storage or disposal was identified.

## **8.0 INTERVIEWS**

### **8.1 Interview with Property Owner and/or Property Manager**

MEI interviewed Mr. George Abdoulos, owner of the Property, of Pemas, LLC. Ms. Abdoulos did not indicate the presence of any environmental liens, and was unaware of any contamination concerns regarding the Subject Property.

## **9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13**

### **9.1 Asbestos Containing Material (ACM)**

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable ACM are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the building would have been thoroughly surveyed and sampled. MEI did not observe any ACM on the heating system in accessible areas of the building. MEI did not observe any spray-on fire proofing in accessible areas of the building. MEI did not observe any ACM pipe-wrap in accessible areas of the building.

### **9.2 Lead Based Paint (LBP)**

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm<sup>2</sup>) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

MEI observed that the painted surfaces inside the accessible, occupied areas of the Property were in fair condition, and free from obvious chipping, flaking or peeling.

### **9.3 Lead in Drinking Water**

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, the USEPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing such as lead solder, brass, bronze, and other lead containing alloys. The USEPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L). MEI did not observe any brass or lead fixtures at the Subject Property.

## 9.4 Radon

Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into building through cracks and openings in the foundation. The USEPA has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in New York State. The U.S. Environmental Protection Agency's Map of Radon Zones identified the Subject Property as a radon zone Level 3. Level 3 signifies that the average predicted radon level indoors is less than 2 pico-Curies per liter and this is the lowest level in the state. This level compares favorably with the EPA action level of 4.0 pico-Curies per liter as the guideline (it should be noted that current radon information and EPA Action Levels are designated for residential spaces only and commercial and industrial facilities are not subject to EPA's Action Level of 4 pico-Curies per liter as the guideline and definitive information concerning radon gas in an individual building can only be obtained through long term testing).

## 9.5 Mold

Molds are a class of fungi, and have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

As part of this assessment, MEI performed a limited visual inspection for the conspicuous presence of mold. MEI observed the accessible interior areas of the Subject Property structure(s), including interior walls and ceilings of the accessible apartment units, the corridors of the building and the basement of the building for the presence of conspicuous mold or observed water intrusion or accumulation. This evaluation did not include a review of pipe chases or areas behind enclosed walls and ceilings. MEI did not observe conspicuous visual or olfactory indications of the presence of mold, nor did MEI observe obvious indications of significant water damage inside the accessible areas of the Subject Property.

## 9.6 Wetlands

MEI reviewed available information regarding wetlands on the Subject Property, including National Wetlands Inventory online GIS mapping. MEI additionally made general site observations for readily observable potential wetland characteristics. MEI did not observe surface water bodies or any evidence of potential wetlands on or adjacent to the Subject Property.

## **10.0 FINDINGS, OPINIONS AND RECOMMENDATIONS**

MEI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. This assessment has identified no evidence of CRECs or HRECs in connection with the Subject Property. RECs regarding the possible presence of underground gasoline storage tanks and the former usage by a former gasoline station and automobile repair facility and carpet cleaning company was identified pertaining to the Subject Property.

The site reconnaissance, interviews and review of records have found the presence or possible presence of hazardous substances or petroleum related products in, on, or at the Subject Property due to any release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

The 1936 Sanborn map reviewed depicts three gasoline USTs on-site, including a one gasoline UST at the commercial building frontage, and two gasoline USTs depicted at the eastern parking area. In addition, a gasoline station is depicted at the eastern parking area on-site on Sanborn maps dated 1947-1950 and the commercial building in the middle of the Subject Property was utilized by a carpet cleaning company. The historical presence of gasoline USTs and a gasoline station on-site, as well as the historical industrial usage of the Subject Property by a carpet cleaning company is considered to be an REC. MEI recommends that a Phase II Environmental Site Assessment be conducted on the Subject Property in order to determine if any contamination from past tank leakage and improper chemical disposal has impacted the subsurface.

There were no conditions outside of ASTM E 1527-13 were identified in connection with the Subject Property.

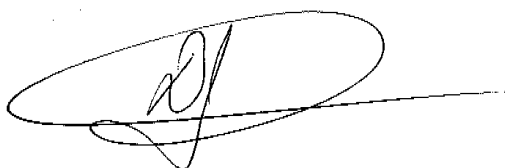

## **11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS**

This Phase I Environmental Site Assessment (ESA) Report documents the research methodology used by qualified environmental professionals of MEI to identify recognized environmental conditions using the scope and limitations of ASTM Standard E 1527-13.

## Financials

### 1. Mortgage Summary

Mortgage data is aggregated from public and governmental sources like deeds of trusts and assignments. Our team has researched over 900,000 properties with more being added daily.

**Active debt**

**Previous debt**

No active mortgages for this property.

**Upgrade your subscription** to unlock the property's mortgage balance, maturity date, interest rate and much more.

### 2. Income and Expenses

Owners of income-producing properties that have an actual assessed value of more than \$40,000 are required to file annual Real Property Income and Expense (RPIE) statements with the Department of Finance(DOF). The DOF uses the information from these statements, or data from comparables, to estimate the market value of a property for tax purposes.

### 1. Tax Bill

Property tax bill for 7/1/2019 to 6/30/2020	<b>\$43,996</b>
Estimated property tax bill for 7/1/2020 to 6/30/2021	<b>\$45,760</b>

The tax bill is calculated based on the transitional assessed value of the property. If no changes are made to the way NYC computes property taxes, we estimate that the current assessed value will increase by approximately 20% per year until it reaches the maximum assessed value of **\$444,600**.

## 2. Key Values in Calculating the Bill

Tax class	4
Market value	\$988,000
Assessed value	\$444,600
Transitional assessed value	\$417,540
Exemption value	\$0
Tax abatements	\$0

## 3. Assessment Reductions & Open Petitions

New York City's Tax Commission is responsible for reviewing and determining the annual applications for corrections of assessments. Owners and other parties with legal interest can claim that they are incorrectly assessed or improperly denied an exemption from real property tax. There are four types of assessment claims subject to review and corrective action: excessive assessment, misclassification, unequal assessment and unlawful assessment. More information can be found on New York City [Tax Commission](#) website.

### Open Petitions

If relief from tax commission is not obtained, the owner or other party with legal interest can file a petition with the New York State Supreme Court to keep the appeal open for further review. The information shown here represents only open petitions. The ones that are invalid or abandoned are closed.

Petition year	Petition Index	Petitioner	Attorney
2018	801445	Pemas LLC	Samantha J Golkin, Esq

## 4. Property Tax Calculation

### Market Value

The first step is for the City Assessor to determine the *market value* of the property. While the term *market value* would seemingly refer to how much the property would sell for on the open market, in reality the *market value* established by the City Assessor is almost always substantially lower.

For this property the City Assessor has assigned this market value:

	2019/2020	2020/2021
Land market value	\$318,000	\$318,000
Building market value	+ \$670,000	+ \$705,000
<b>Market value</b>	<b>= \$988,000</b>	<b>= \$1,023,000</b>

### Assessed Value

Next, the market value is used to compute the assessed value, which is a percentage of the market value. The exact percentage is determined by the tax class of the property. Tax class 1 is assessed at 6% of the market value, and tax classes 2,3 and 4 are assessed at 45%.

	2019/2020	2020/2021
Market value	\$988,000	\$1,023,000
Assessment ratio	x 45%	x 45%
<b>Maximum assessed value</b>	<b>= \$444,600</b>	<b>= \$460,350</b>

### Transitional Value

To protect property owners from sudden large increases in property tax, the state limits how quickly the city can increase the assessed value. Typically these limits are applied when the City Assessor makes a big increase to the market value. Without the limits the assessed value would increase by a similar percentage. Instead, the change to the assessed value is phased in over a number of years.

	2019/2020	2020/2021
<b>Transitional value</b>	<b>\$417,540</b>	<b>\$434,280</b>
Transitional exemption value	- \$0	- \$0
<b>Transitional net assessed value</b>	<b>= \$417,540</b>	<b>= \$434,280</b>

### Taxable Value

The *taxable value*, for 2019/2020, is the smaller of the city's *maximum assessed value* and the *transitional net assessed value*.

Taxable value	=	\$417,540
---------------	---	-----------

### Property Tax

Current tax is calculated by multiplying the taxable value (the assessed value minus any exemptions) by the [tax rate](#).

The city also grants some properties incentives called tax abatements, which are subtracted directly from the current tax. This results in the property tax, the amount the current owner pays.

Tax description	Billable value 19/20	Tax rate 19/20	Tax bill 19/20
Current tax	\$417,540	x 10.5370%	= \$43,996
Total abatements			- \$0
<b>Property tax</b>			<b>= \$43,996</b>

Tax description	Billable value 20/21	Tax rate 20/21	Tax bill 20/21
Current tax	\$434,280	x 10.5370%	= \$45,760
Total abatements			- \$0
<b>Property tax</b>			<b>= \$45,760</b>

For more information, you can view this property's assessment, tax bill, and account statements by clicking [here](#) and entering the Borough, Block, & Lot.

## 5. Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and nonprofit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the [J-51 Program](#), [421a Program](#) and the [Cooperative and Condominium program](#).

We believe that no exemptions or abatements currently apply to this property.

## 6. Tentative Values

Every year in January, the NYC Department of Finance Commissioner publishes the tentative property assessment roll for the current fiscal year. All properties are valued by law according to their condition on the taxable status date of January 5th. Owners who believe that the Department of Finance has used incorrect information to determine their market value may file [forms](#) providing corrections. After Finance verifies the complaints, the agency will make any corrections before the final assessment roll is published on May 25. The final roll will also include changes, based on the decisions made by the New York City Tax Commission, an independent City agency, as well as new information Finance gathers about abatements, exemptions and other adjustments. In June, Finance will use the final roll and new tax rates adopted by the City Council to generate property tax bills for the fiscal year beginning July 1st.

### Tentative Transitional Values

Tentative transitional land	<b>\$143,100</b>
Tentative transitional total	<b>\$434,280</b>
Tentative exempt total	<b>\$0</b>

### Tentative Actual Values

Tentative actual land	<b>\$143,100</b>
Tentative actual total	<b>\$460,350</b>
Tentative actual exempt total	<b>\$0</b>

## 7. Assessment History

Year	Building class	Market value	Assessed value	Taxable	Tax rate%	Base tax	Property tax
2019/20	G1	\$988,000	\$444,600	\$417,540	10.537%	\$43,996	\$43,996

2006/07	G9	\$349,000	\$157,050	\$143,730	10.997%	\$15,806	\$15,806
2005/06	G9	\$339,000	\$152,550	\$138,060	11.306%	\$15,609	\$15,609

## Development

### 1. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

The maximum usable floor area is calculated by multiplying the size of the lot by the larger of the residential or commercial FAR.

Area of lot in square feet		<b>10,600</b>
FAR	x	<b>3</b>
Maximum usable floor area of building	=	<b>31,800</b>

#### Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Maximum usable floor area		<b>31,800</b>
Usable floor area	-	<b>7,950</b>
Unused buildable square feet ("air rights")	=	<b>23,850</b>

Opportunity by parcel		Very little opportunity	
<span style="background-color: #8B4513; border: 1px solid black; display: inline-block; width: 15px; height: 10px;"></span> Above 250,000 sqft	<span style="background-color: #FFD700; border: 1px solid black; display: inline-block; width: 15px; height: 10px;"></span> 30,000 - 60,000 sqft	<span style="background-color: #FFD700; border: 1px solid black; display: inline-block; width: 15px; height: 10px;"></span> 10,000 - 30,000 sqft	<span style="background-color: #FFD700; border: 1px solid black; display: inline-block; width: 15px; height: 10px;"></span> Below 10,000 sqft
<span style="background-color: #FF8C00; border: 1px solid black; display: inline-block; width: 15px; height: 10px;"></span> 100,000 - 250,000 sqft			
<span style="background-color: #FFA500; border: 1px solid black; display: inline-block; width: 15px; height: 10px;"></span> 60,000 - 100,000 sqft			

Residential FAR	<b>3</b>
Commercial FAR	<b>2</b>
Facility FAR	<b>3</b>
FAR as built	<b>0.75</b> <span style="background-color: #008000; color: white; padding: 2px;">i</span>

### 2. Zoning

New York City is divided into three basic zoning districts: residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

R Residential district	Rezoning project area (Prop)
C Commercial district	Rezoning project area (Curr)
M Manufacturing district	Rezoning project area (Rece)
	Rezoning project area (Earli)

This map was created from the NYC Department of City Planning's online zoning map files. It includes updates found in those files through 2/8/2017.

**Zoning Designation**

Manufacturing **M1-2/R6A**  
 Special districts **LIC**

**Parcel Vicinity**

Frontage(s) **Old Ridge Rd (narrow)**  
**30 St (narrow)**  
 Nearest wide street **38 Av**  
 Distance to wide street **24.8 ft**

**Rezoning Projects**

Since	Project	Status
2014	Western Queens Transportation	Active
2008	Dutch Kills	Adopted

For more information about zoning district regulations, click [here](#).

**Manufacturing**

**M1-2/R6A**

M1 districts range from the Garment District in Manhattan and Port Morris in the Bronx with multistory lofts, to parts of Red Hook or College Point with one- or two-story warehouses characterized by loading bays. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M1-1, M1-2 and M1-3 districts are subject to parking requirements based on the type of use and size of an establishment. [More info](#)

R6A is a contextual district where the Quality Housing bulk regulations are mandatory. These regulations produce high lot coverage, six- or seven-story apartment buildings set at or near the street line. Designed to be compatible with older buildings found in medium-density neighborhoods, R6A districts are mapped in the Bronx, Brooklyn and Queens. Parts of Kingsbridge in the Bronx and Williamsburg in Brooklyn are typical R6A areas. [More info](#)

**Special District**

**LIC**

The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Paired districts combine a manufacturing and a residential district, as in the Special Mixed Use District, and are mapped in the Queens Plaza, Hunters Point and Dutch Kills Subdistricts. [More info](#)

**Map Disclaimer:** Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution. All zoning descriptions have been taken from the [NYC Planning](#) official source.

### 3. Planimetric Map

This planimetric map shows features such as retaining walls, sidewalks, medians, curbs, and roadbeds that have been digitized from aerial photography. These features must be taken into consideration when determining how a new building, or extensions to an existing building, are situated within the lot. They can also affect the maximum height that can be built.

- Sidewalk
- Curb
- Pavement edge
- Roadbed
- Median
- Retaining wall
- Plaza
- Swimming pool
- Building footprint
- Garage
- Sky bridge
- Under construction
- Piers/seawall
- Boardwalk
- Recreational area
- Park/greenstreets
- Transport structure

BIN	Type	Status	Roof height	Ground elevation
4439055	Building	Constructed	25 ft	44 ft
4439056	Building	Constructed	17 ft	44 ft
4441783	Building	Constructed	27 ft	41 ft
4448253	Garage	Constructed	11 ft	40 ft

## Permits

### 1. Permits

Pre filing date	Job type	Initial cost	Job status	Work type	Link to job
05/18/1993	Alteration type 1		Signed-off		<a href="#">↗</a>
03/11/1993	Alteration type 1	\$500	Signed-off		<a href="#">↗</a>

No work to be done, application filed fo R change in use from carpet clening plant to auto repairs

### 2. Boiler Permits

Issue date	<b>12/29/2006</b>	Boiler model	///
Expiration date	<b>7/26/2010</b>	Link to permit	<b>PB041906</b> <a href="#">↗</a>
Request type	<b>Certificate to operate</b>		
Status	<b>Expired</b>		

## Violations

### 1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

We do not have any record of violations in our database. Status can be verified [here](#).

## 2. 311 Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
4/18/2015	NYPD	Noise - commercial	Loud music/party	The Police Department responded to the complaint but officers were unable to gain entry into the premises.	4/18/2015

Complaint status can be verified [here](#).

## 3. DOB Complaints

Date entered	Complaint	Complaint category	Disposition	Inspection
7/21/2010	4451896	Curb cut/driveway/carport - illegal	ECB violation served	9/22/2010
5/25/2006	4265883	Curb cut/driveway/carport - illegal	No violation warranted for complaint at time of inspection	7/5/2006

Complaint status can be verified [here](#).

## 4. ECB Violations

There are eleven city agencies that administer the City's quality-of-life laws and issue Notices of Violation (NOVs) for alleged violations. The ECB is a separate and independent agency that hears challenges to those NOVs. The agencies that issue the most violations for real estate are:

- Department of Buildings (DOB)
- Department of Environmental Protection (DEP)
- Fire Department (FDNY)
- Landmarks Preservation Commission (LPC)
- Department of Sanitation (DSNY)

Violation ID	Issue date	Type	Severity	Status	Link to violation
34864458L	9/22/2010	Construction		Active	<a href="#">↗</a>
Occupancy contrary to that allowed by the c/o or bldg dept records. Coq 32953 does not indicate open accessory parking for 2 commercial trucks. Coq 400364556 indicates open accessory parking 5 spaces. Lno 700					
34864457J	9/22/2010	Unknown		Resolve	<a href="#">↗</a>
Work w/o a permit. Work noted: at front/along 38th ave, curb cut in place as follows: 1) approx 20' curb cut and parking pad evident w/2 - commercial trucks parked corner of 38th ave and 30th st. 2) approx 38'					
34016579X	12/28/1988	Construction	Non-hazardous	Resolve	<a href="#">↗</a>
Occupancy contrary to that allowed by bldg. Dept. Records from: street to: used car lot. Remedy: discontinue illegal use.					

Please note: the NYC Department of Buildings is the only authoritative source for information on ECB violations. Verify the status of the violation on [DOB website](#).

PropertyShark obtains its records from ECB and updates them weekly.

## Neighborhood

### 1. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found [here](#).

\* Building class: All Parking Garages (G1)

- |                            |  |
|----------------------------|--|

### 7. Traffic Map

Estimated average daily traffic volume on a route segment at a particular count location.

### 8. Demographics By Zip Code

Demographic data shown in this section was gathered from the 2014 American Community Survey and refers to zip code **11101**.

**Population Demographics**

Total population	<b>30,043</b>
Female population	<b>49.1%</b>
Male population	<b>50.9%</b>
Median age	<b>34.1</b>
Male median age	<b>34.1</b>
Female median age	<b>34.1</b>

**Education**

No highschool	<b>6.1%</b>
Some highschool or college	<b>42.5%</b>
Bachelors degree	<b>17.6%</b>

**Other**

Citizens	<b>82.1%</b>
Citizens born in US	<b>61.6%</b>
English speakers	<b>90.0%</b>

**Journey to Work**

Work in a metropolitan area	<b>99.8%</b>
Work in a micropolitan area	<b>0.2%</b>
Work at home	<b>3.4%</b>
Go to work by car	<b>12.5%</b>
Go to work after 10 am	<b>15.2%</b>

**Economic/Employment**

Average household income	<b>\$103,022</b>
White collar	<b>89.2%</b>
Blue collar	<b>10.8%</b>

**Housing**

Family households	<b>51.4%</b>
Households with kids	<b>23.5%</b>
Housing units	<b>16,814</b>
Occupied housing units	<b>13,169</b>
Owner occupied units	<b>16.9%</b>
Average number of people per household	<b>2.24</b>
Median year structure built	<b>1948</b>
Houses with mortgages	<b>69.3%</b>

**Wealth**

Median value for units with a mortgage	<b>\$945,800</b>
Median value for units without a mortgage	<b>\$859,600</b>
Median gross rent	<b>\$1,608</b>
Median housing costs per month	<b>\$1,762</b>
Population in poverty	<b>18.7%</b>

## Risk

### 1. Toxic Sites

Get a Phase I environmental report Site Assessment or a Home Environmental Database Report for this property directly from [Toxics Targeting](#).

This screening map, provided to PropertyShark by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

Call [800-2-TOXICS](#) (800-286-9427 NYS only) or [607-273-3391](#) for more info.

**Toxic Sites on the Property**

Selected NYC environmental quality review 'E' designation	<b>1</b>
Petroleum bulk storage	<b>1</b>
Total toxic sites on the property	<b>2</b>

**Toxic Sites near the Property**

Hazardous waste violation	<b>1</b>
Selected NYC environmental quality review 'E' designation	<b>1</b>
Haz waste generator or transporter	<b>1</b>
Brownfield site	<b>1</b>
Total neighboring toxic sites	<b>4</b>

**Leaking Tanks and Spills:**

- MTBE Spill
- ★ Tank Failure
- ★ Tank Test Failure
- ★ Spill greater than 25 gal/lbs
- ▼ Gasoline Spill
- ★ Spill

**Superfund, Brownfields and Solid Waste:**

- + US Superfund Priority Site
- + NY Superfund Site
- + US Superfund /CERCLIS Site
- Brownfield Site
- + Hazardous Substance Study
- ⊗ Solid Waste Facility

**Other Toxic Sites:**

- ⊗ NY Superfund Qualifying Site
- ◇ Major Oil Storage Facility
- Haz Waste Corrective Action
- ⊕ Has Waste Treatment/Storage/Disposal
- ✕ Toxic Release Inventory Site
- ⊕ Legal Civil /Admin Docket
- ⊕ Hazardous Waste Violation
- △ Air Discharge Facility
- ★ Historic Utility Site
- ▽ Wastewater Discharge Site
- △ Chemical Bulk Storage
- ◇ Petroleum Bulk Storage
- ⊗ Haz Waste Generator or Transporter
- E Selected NYC Environmental Quality Review 'E' Designation

**Map Disclaimer:** Mapped locations are approximate; sites are identified based on current and/or historic information. Regulatory status of sites may have changed. Site symbols can refer to large properties, additional toxic sites are not mapped. Contamination problems can impact properties far from toxic sources. Sites include known and potential hazards.

## 2. FEMA Flood Zones

Use this map to determine if the property is in a flood zone.

- Moderate to low risk areas
- X
- 0.2% PCT
- High risk areas
- A
- AE
- High risk-coastal areas
- VE
- Floodway
- COBRA \*\*
- \*\* Coastal barrier resources system area

Link to the map for this property at [FEMA's Map Service Center](#) (may not be available in all locations).

**FEMA Flood Zoning**

FEMA flood zone(s)	<b>X</b>
Coastal barrier resources system area (COBRA)	<b>Out</b>
Floodway	<b>Out</b>
FEMA special flood hazard area	<b>Out</b>
Map panel ID	<b>3604970093F</b>
Map quaderant ID	<b>40073-G8</b>

**Distance to...**

Nearest distance to coastline (miles)	<b>0.806</b>
Compass direction to coastline	<b>144</b>
Nearest distance to 100 year flood zone area (ft)	<b>11</b>
Angle100	<b>306</b>

## 3. Hurricane Evacuation Zones

This map shows hurricane evacuation zones. In the case of coastal storms, the City may order the evacuation of neighborhoods in danger of flooding, the most critical being Zone 1.

- Hurricane evacuation zones**
- Zone 1
  - Zone 2
  - Zone 3
  - Zone 4
  - Zone 5
  - Zone 6

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

## EXECUTIVE SUMMARY

NY RGA LF..... Recovered Government Archive Solid Waste Facilities List

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 8 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 6 RCRA-VSQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/11/2019 has revealed that there are 16 NY SHWS sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/11/2019 has revealed that there are 51 NY LTANKS sites within approximately 0.5 miles of the target property.

### State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 32 NY UST sites within approximately 0.25 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 51 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 79 NY MANIFEST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### RI MANIFEST: Hazardous waste manifest information

A review of the RI MANIFEST list, as provided by EDR, and dated 12/31/2018 has revealed that there is 1 RI MANIFEST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>ENTERPRISE CLEANERS</b> EPA Id: NYR000020362 Manifest Document Number: 003785321FLE	<b>37-26 30TH ST</b>	<b>ENE 0 - 1/8 (0.015 mi.)</b>	<b>A4</b>	<b>14</b>

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

UNIVERSAL AUTO REPAI	31-05 38TH AVE	SE 0 - 1/8 (0.079 mi.)	E93	148

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Tank Info:

Tank Number: 001  
Tank Id: 179091  
Material Code: 0022  
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

A01 - Tank Internal Protection - Epoxy Liner  
K01 - Spill Prevention - Catch Basin  
I01 - Overfill - Float Vent Valve  
C00 - Pipe Location - No Piping  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
L00 - Piping Leak Detection - None  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: Not reported  
Capacity Gallons: 100  
Tightness Test Method: -  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: 06/10/2009  
Register: True

FINDS:

Registry ID: 110004473597

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND F & N was hired to conduct a phase 1 & phase 2 on a vacant lot. Part of this lot had been used as a gas station in the past. Several tanks were identified. During excavations to install footings for a new building, a waste oil tank was found and the top was damaged. During the heavy rains on 7/22/2003, water displaced the waste oil in the tank and the oil poured out into the trench area. F&N is going back to pump out the remaining oil and to Guzzel out the contaminated soil in the trench. F&N put in a proposal to the

Hazardous Waste Summary:

. Waste code: F001  
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006  
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007  
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F008  
. Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

. Waste code: F009  
. Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Tank Info:

Tank Number: 001  
Tank Id: 61623  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)  
C03 - Pipe Location - Aboveground/Underground Combination  
J02 - Dispenser - Suction Dispenser  
E00 - Piping Secondary Containment - None  
I02 - Overfill - High Level Alarm  
I04 - Overfill - Product Level Gauge (A/G)  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
L00 - Piping Leak Detection - None  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F01 - Pipe External Protection - Painted/Asphalt Coating  
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring  
K00 - Spill Prevention - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 01/15/1994  
Capacity Gallons: 10000

Tank Info:

Tank Number: 001  
Tank Id: 35137  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
H00 - Tank Leak Detection - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
I04 - Overfill - Product Level Gauge (A/G)  
G00 - Tank Secondary Containment - None  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: Not reported  
Capacity Gallons: 2000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: 05/22/2008  
Register: True

DEC Region: 2  
 DER Facility ID: 173083  
 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 8/18/2004 Sangesland spoke to Manny Caruana, Building Supervisor at See Factor Industry Inc. to discuss the specifics of what the DEC needs to close out this spill 9/13/2004 Sangesland spoke again with Manny Caruana and asked him to send in the soil borings he has along with the tank closure documents. 9/15/2004 Mr. Caruana hand delivered a package of documents to the DEC office. Included was a summary letter outlining the testing and closure of the tank. After the tank failed the tank test in 1998, it was not retested, however Mr. Caruana says he inspected the interior of the tank and said it was still secure. He states that the initial test was faulty because of a dry leak on the vent line. In 2000 the tank was abandoned by USA tanks and an abandonment certification was forwarded to the NYC Fire Dept. The building now operates on natural gas. In Feb 2000 several soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. Three of these borings were approx. 10 ft from the abandoned tank and went down to 20 ft depth. There was no evidence of any soil contamination. Based on this information, the DEC believes that there was no actual petroleum spill at this site and this case has been closed out effective 9/15/2004. "

Record Added Date:  
Record Updated Date:  
Update By:  
Site Description:

03/07/2018  
09/26/2018  
JHOCONNE

Location: The site is located in an urban area at 37-11 30th Street and 30-14 37th Avenue in the Long Island City neighborhood of Queens, New York, and is identified on the Queens Borough Tax Map as Block 372, Lot 21 and part of Lot 8. The 26,978-square-foot (0.61 acres) site is situated on the northwest corner of the block bound by 37th Avenue to the north, 31st Street to the east, 38th Avenue to the south, and 30th Street to the west. The elevated N and Q subway tracks run north-south above 31st Street, which are about 100 feet east of the proposed BCP property. Site Features: The 26,978-square-foot (0.61 acres) site is developed with a two-story residential building in Lot 21 (30-14 37th Avenue) and a one-story and partial three-story warehouse building with multiple partial cellar levels and a stockyard/ storage area in the northern portion of Lot 8 (37-11 30th Street). The warehouse building on Lot 8 is vacant and was most recently occupied by a lighting, audio, and production rental and warehousing company. Lot 21 is vacant and was most recently used as a single-family residence. During the 2014 Limited Subsurface Investigation, one 550-gallon abandoned heating oil UST was encountered in the sidewalk along 30th Street, adjacent and to the west of the proposed BCP site. Historical Sanborn fire insurance maps suggest that another UST is present in Lot 8 within the proposed BCP site. In addition, a 5,000-gallon AST and 2,000-gallon UST were encountered in the east-central portion of Lot 8, adjoining the proposed BCP site to the east. These tanks within Lot 8 and adjoining the proposed BCP site were reportedly closed in place on July 7, 2000. An abandoned former water supply well is located near the northeast corner of the proposed BCP property in the stockyard/ storage area of Lot 8. Current Zoning and Land Use: According to the New York City Planning Commission Zoning Map 9a, the site is located within the Long Island City Special Mixed Use Paired District (M1-2/R6A). This paired district promotes development and expansion of the longstanding mix of residential, commercial, industrial, and cultural use throughout the area. M1 districts typically include retail and light industrial uses such as woodworking shops, repair shops, and wholesale service and storage facilities, and R6A districts promote residential development. Zoning is consistent with the proposed mixed-use development. The surrounding area is primarily commercial and industrial, but also includes residential buildings, public facilities, day care centers, and schools. As a result of the CEQR process, the Block 372, Lot 21 was assigned an E-Designation (E-218) on October 7, 2008 by the NYCDP as part of the Dutch Kills Rezoning (CEQR No. 08DCP021Q). The E-Designation requires coordination with the NYC OER to obtain a NTP or a NNO prior to obtaining building permits. The E-Designation addresses environmental requirements for Hazmat and noise (window wall attenuation and alternative means of ventilation) during development. Past Use of the Site: The site was an undeveloped vacant lot until at least 1915. The existing warehouse building at Lot 8 was constructed around 1920 and historically operated as a plastics manufacturer (The Marblette Corp. Mfg. of Plastic Materials) from at least 1930 to about 1980. Following 1980, the site operated as a warehouse for audio and lighting equipment. Lot 21 was developed with a two-story residential dwelling as early as 1898. From the 1930s through the 1980s, Marblette Corp. manufactured plastics, which

37-11 30TH STREET (Continued)

S121933807

primarily included production of synthetic resins. During this time period, plastic was typically made using a mixture of synthetic chemicals, solvents, and petroleum products. The confirmed presence of PCE in soil vapor at concentrations as high as 12,000 µg/m<sup>3</sup> indicate that accidental releases of solvents during the proposed BCP site's industrial past have impacted subsurface conditions. Although not previously analyzed, groundwater may be impacted with Perfluoralkyl Substances (PFAS) as a result of plastics manufacturing operations on site. In addition, mercury and lead in soil at concentrations that exceed the Part 375 Commercial Use SCOs indicate that soil quality was impacted during the 50 years of historical manufacturing. In addition, an abandoned water supply well was observed in the northwest portion of the site during the June/July 2014 Limited Subsurface Investigation by Merritt Environmental Consulting Corp. (Merritt). The water supply well was reportedly abandoned prior to 1980 when the site transitioned use from plastics manufacturing to warehousing. The water supply well may have drawn contaminants from adjoining industrial uses to the proposed BCP site. Site Geology and Hydrogeology: Based on findings from the June 2014 Limited Subsurface Investigation by Merritt, the site is underlain by fill material predominantly consisting of sand with varying amounts concrete, brick, and debris. The fill was limited to the upper five feet in each of the six borings advanced at the property. Native deposits that predominantly consisted of fine- to coarse-grained sand with varying amounts silt and silty clay were observed below the fill. Bedrock was not encountered during the June 2014 Limited Subsurface Investigation; however, competent bedrock was encountered at depths ranging from about 40 to 50 feet bgs during a 2017 geotechnical investigation performed by Langan in the vicinity of the site. Groundwater was observed at a depth of about 27 feet below grade surface (bgs) across the site footprint during the June 2014 Limited Subsurface Investigation. The inferred regional groundwater flow direction for the area surrounding the site is to the west-northwest towards the East River.

Env Problem:

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem:

People are not expected to come into contact with site-related soil or groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the onsite building is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Sampling identified impacts in indoor air quality of the vacant on-site building and the potential exists for the inhalation of site contaminants due to soil vapor intrusion if the building is re-occupied. Additional investigation is needed to evaluate whether actions are needed to address soil vapor intrusion in off-site structures.

 Spiller Name: DOROTHY CAVALCONTE  
 Spiller Company: Not reported  
 Spiller Address: 37-27 28TH ST  
 Spiller Company: 001  
 Contact Name: DOROTHY CAVALCONTE  
 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was VOUGHT/TIPPLE 2/27/2002-VOUGHT-Cleanup and sampling performed by Milro (516)379-1500. 12/05/2001- Milro performed 3 borings along line to delineate spill. 12/27/2001-12/28/2001 Milro removes approximately 5 cubic yards of impacted soil. Disposal manifests were provided to the NYSDEC. 12/28/2002-site visit by Vought confirms that no more impacted soil remains in basement. Excavation was backfilled, restored with a concrete slab and epoxied. Groundwater was no impacted and spill closed 2/27/2002 by Vought."

Remarks: "defective oil lines caused spill of up to 275 gallons (approx 100-200 gallons) spilled under neith the house - there is no way for the to get to the spill - they did run a new oil line"

 Town: New York City  
 Record Added Date: 10/26/2016  
 Record Updated Date: 09/25/2019  
 Update By: RKCORCOR  
 Site Description:

The area of concern subject to this work is considered off-site from BCP site C241182 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C241182 for further information regarding the status of the site in the Brownfield Cleanup program. Location- The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY, 11101 (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features- Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully covered the tax lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site is currently vacant. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953); welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection.

31/32 LIC LLC - OFF-SITE (Continued)

S121933768

Env Problem:	Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C241182, the primary contaminants of concern are expected to be trichloroethene (TCE) which was found in the BCP site soil vapor. The BCP site soils also contained semi-volatile organic compounds (SVOCs) and metals, such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, indenp(1,2,3-CD)pyrene, dibenz[a,h]anthracene, lead, copper, chromium, and zinc. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available. Significant Threat: It is not yet known whether there is a significant off-site environmental threat due to contamination at the BCP site. This section will be updated as data become available.
Health Problem:	People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion at off-site structures.

Location - The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features - Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully cover the lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site is currently vacant. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953); welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - The property is underlain by glacial and alluvial deposits with Harrison Gneiss underlying. Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection.

Env Problem:

Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, and metals during the remedial investigation. Soil vapor, subsurface vapor, indoor and outdoor air were also analyzed for VOCs during the remedial investigation. Based on

31/32 LIC LLC (Continued)

S118457875

the investigations performed to date the primary contaminants of concern are trichloroethene (TCE) in soil vapor and SVOCs and various metals consistent with historic fill identified in the top 5 feet of soil. Soil Lead, copper, chromium, and zinc were identified in the top 3-5 feet of soil across the site at levels above unrestricted and restricted residential SCOs. It was also found that metals exceed residential SCOs at 18 20 feet below ground surface (bgs). SVOCs benzo(a)anthracene, benzo(b)flouranthene, benzo(a)pyrene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene, were also identified in the northwestern and southeastern areas of the site above restricted residential SCOs. The highest level of SVOCs was in the northwestern area of the site with benzo(a)anthracene at 6.9 parts per million (ppm). The pesticide 4,4 -DDD was detected above unrestricted SCOs between 0-2 feet in the northern portion of the site, detections ranged between 0.0042 and 0.013 ppm. No VOCs or PCBs were detected above unrestricted SCOs during the investigation. No off-site sampling was conducted as part of this investigation.

Groundwater The dissolved metals magnesium, sodium, and nickel, were found in groundwater across the site above groundwater standards. In the western portion of the site, chloroform was found between 19 24 parts per billion (ppb), exceeding groundwater standards. No PCBs, pesticides, or SVOCs were detected above NYSDEC TOGS class GA standards in any of the monitoring wells sampled. No off-site samples were collected as part of this investigation. Soil Vapor, Sub-slab Vapor, and Indoor Air TCE soil vapor levels were identified at high concentrations across the site. The highest concentrations are noted in the western-most portion of the site at 12,500 micrograms per cubic meter (ug/m3) and gradually decline to the eastern portion of the site. An occupied 6-story residential building is located to the north. Soil vapor samples collected along the northern-most boundary of the site range from 924-945 ug/m3. TCE was detected in indoor and outdoor air samples at 0.86 ug/m3 and 1.07 ug/m3, respectively. The indoor air sample was collected from a cellar on-site due to the building being demolished prior to investigation activities. No off-site samples were collected as part of this investigation.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with a building slab. People may contact site-related contaminants if they dig below the surface. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. There is no on-site building, therefore inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a current concern. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Further evaluation is needed to determine whether soil vapor intrusion is a concern for off-site structures.

Tank Info:

Tank Number: 005  
Tank Id: 219766  
Material Code: 0022  
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

C01 - Pipe Location - Aboveground  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F01 - Pipe External Protection - Painted/Asphalt Coating  
K00 - Spill Prevention - None  
E00 - Piping Secondary Containment - None  
I00 - Overfill - None  
J00 - Dispenser - None  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
L00 - Piping Leak Detection - None  
G00 - Tank Secondary Containment - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron

Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 01/01/1954  
Capacity Gallons: 275  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported

 DEC Memo: "6-13-16 - Obligado - Desk Duty - I spoke with Steve Giannotis of Project Builders Construction Corp. They are doing excavation for development. So far they have found 4 to 5 tanks as part of this project. This is the only tank which had oil in it and apparent contamination around the tank. The oil type is unknown. ABC tank is en route to pump out the tank. Soil is going to Bayshore Soil. It is in OER but not a Brownfield project. Project Builders Construction corp is the general contractor. Athenica Environmental is the environmental company overseeing the environmental issues. So far they have found 4 to 5 tanks. This is the only tank which had oil in it and apparent contamination around the tank. The site will be redeveloped into a 7 story apartment building. 31st Street Property LLC 28-10 38th Avenue Queens NY 11101 Bessie Giannopoulos bessie212@mac.com sgiannotis@pbconstructioncorp.com This site is in the OER program. the document repository. CSL sent 6/13/2016: Rashad Received email from Ezgi: Hope you had a nice weekend. I heard you were assigned to Spill 1602528. We will keep you posted once we have the waste characterization data collected, regarding where the soil will be disposed of at. And then submit a closure letter with all the endpoint data and soil disposal manifests, etc. I am not sure if Steve, the contractor who called in the spill, mentioned but the Site is also enrolled in the Voluntary Cleanup Program through OER. Review of RIR is as follows: Site is (or was) two 2-story warehouses with interconnected basements, one building is used as a Marshall Arts Center and the other one is currently vacant. The proposed future use of the Site will consist of a 6-story mixed commercial and residential building with a full cellar. Construction of the cellar will require minor excavation of the existing basement floor to approximately 4 feet to allow for additional footings to be installed. Depth of groundwater ranges from 11-11.4 feet below ground surface, groundwater flow is generally from north east to south west. Former uses of property include pressing finishing , a dry cleaner, machinery and assembling , and others. Soil boring results are as follows: SB-1 0-2ft: tetrachloroethylene-29ppb SB-1 9-11ft: tetrachloroethylene-73ppb SB-2 0-2ft: Tetrachloroethylene-25ppb, trichloroethylene-2.9ppb, naphthalene 44.4ppb SB-2 9-11ft: Tetrachloroethylene-210ppb, trichloroethylene-5.5ppb SB-4 0-2ft: tetrachloroethylene-44ppb SB-4 6-8ft: tetrachloroethylene-13ppb SB-5 0-2ft: Benzo(a)anthracene-9110ppb, benzo(a)pyrene-6640ppb, benzo(b)fluoranthene-5340ppb, benzo(k)fluoranthene-6260ppb, chrysene-8460ppb, dobenzo(a,h)anthracene-2000ppb SB-5 8-10ft: Tetrachloroethylene-43ppb, trichloroethylene-36ppb MW-1: Tetrachloroethylene-15ppb, Trichloroethylene-0.37ppb MW-2: Tetrachloroethylene-33ppb, Trichloroethylene-1.3ppb Soil Vapor sample SS-1: tetrachloroethylene-2500ug/m3, trichloroethylene-28ug/m3, toluene-16ug/m3, xylene-10ug/m3. SS-2: Trichloroethylene-1.1ug/m3, toluene-16ug/m3, xylene-11ug/m3, tetrachloroethylene-20ug/m3 SS-3: Toluene-11ug/m3, tetrachloroethylene-24ug/m3, xylene-10ug/m3, benzene-2.6ppb SS-4: xyelene-14ug/m3, Carbon Disulfide-81ug/m3, Carbon Tetrachloride-17ug/m3 Review of RAWP is as follows: Site will be excavated to approximately 4 feetbgs, removal of USTs, collection of 5 end point samples, implementation of storm-water pollution prevention measures, installation of vapor barrier beneath buildings new slab, construction and maintenance of an engineered composite cover consisting of a 5 concrete building slab, installation and operation of a an active SSDS. 6/14/2016: Rashad Received message from Steve saying a minor spill occurred on sidewalk during tank removal activities, he wanted to know whether this constitutes as an additional spill. I emailed Steve: Thank you for your message yesterday. You can include that minor spill that occurred on the sidewalk to the already existing spill. Thanks. I also emailed Ezgi back to thank her for following up with me. Reports and CSL have been uploaded to D2. Received email from Shaminder: We issued NTP and approved RAWP in June 2015. Construction started in December 2015 and a spill is reported yesterday for this Site. The proposed future use of the Site will consist of a 7-story mixed commercial and residential use building with a full cellar. The cellar will be utilized for storage, mechanical rooms and parking. Description of Selected Remedy 1.Establishment of Track 4 Site-Specific Soil Cleanup Objectives (SCOs). 2.Excavation and removal of soils. Portions of the Site will be excavated to approximately 4 feet bgs to allow for the

OER - JOB SITE (Continued)

S118705522

construction of additional buildings footings. Approximately 325 cubic yards of soil will be excavated and removed from the Site. 3. Removal of underground storage tanks and closure of petroleum spills (if evidence of a spill/leak is encountered during Site excavation) in compliance with applicable local, State and Federal laws and regulations. 4. Collection and analysis of five end-point samples to determine the performance of the remedy with respect to attainment of Track 4 Site-Specific SCOs. 5. Installation of a vapor barrier system consisting of Preprufe 300R, manufactured by W.R. Grace & Co beneath the building's new slab as well as beneath the new footings. 6. Construction and maintenance of an engineered composite cover consisting of a 5 concrete building slab to prevent human exposure to residual soil/fill remaining under the Site. 7. An active sub-slab depressurization system will be installed beneath the building basement slab in two separate sections. One portion of the SSDS will consist of a loop system beneath the areas of the basement not being utilized as a parking garage. The second portion will consist of two straight pipes along running parallel to the southern and eastern boundaries of the Site. 8. Submission of an approved Site Management Plan (SMP) in the RAR. 9. The property will continue to be registered with an E-Designation by the NYC Buildings Department. 7/7/2016: Rashad Received voice mail from Steve stating that he is encountering difficulty removing tank, he also sent email yesterday: I left you a voicemail regarding our spill at 38-11 31st Street in Long Island City, spill #1602528. We are having difficulty removing the tank since it is located in between our support of excavation whalers & rakers. We are trying to convince ABC Tanks to cut and remove in place along with having our demo contractor work simultaneously with them hand digging around the tank. I am anticipating this process to take another week and then we can have Athenica take some end point samples. The results of the samples should take a week. I believe our date to close out the spill with DEC is July 13th. Is there any way we can have an extension to close this spill out? Please call me on my cell to discuss if you should have any questions at 347-680-6879. Called Steve back and let him know that an extension is not an issue and that he should proceed safely. Replied to his email: I apologize for missing your call, I was out of the office for a few days. An extension will not be an issue, please proceed safely and provide me with an update when one is available. Thank you. 7/19/2016: Rashad Email Steve asking for update on site work. 7/20/2016: Rashad Steve emailed: Sorry I did not get back to you yesterday. We are scheduled to remove the soil that has been disturbed by the oil in the tank tomorrow. That should be all of the soil. Athenica will as always be overseeing the removals. We will from there start to close out the paperwork end of the spill. Please do not hesitate to contact me at 347-680-6879 if you should have any questions 11/3/2016: Rashad Emailed Steve seeking update. Steve responded: We are still missing manifests and receipts from the drum disposal. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 02/21/17 - Lakhani DEC Lakhani sent the following email to OER PM Alysha Alfieri: I hope you re doing well. I am the new project manager for the above spill, as Rashad Omar is no longer with the DEC. I am emailing to obtain an update on the progress at the site. I understand that there is an active SSD system to be installed at the site. Have you received commentary from NYCDOH regarding this SSDS? Has the SSDS already been installed? Furthermore, has a Remedial

Action Report been compiled for the site? Rashad s last email with Steve Gainnotis of Project Builders Construction Crop. revealed that soil removal, supervised by Athenica, was scheduled to take place on July 21, 2016. I would appreciate it if you could provide with any other information regarding the site. I look forward to working with you! DEC Lakhani sent the following email to Steve: I hope this email finds you in good health. I am the new project manager for the above spill, as Rashad Omar is no longer with the DEC. I understand you last communicated with Rashad in July 2016 about soil and tank removal at the above spill. Has this work been completed? Could you please send me any more information regarding the site as I would like to be up to date on all remediation activities? If you have any questions, please contact me at (718) 482-4038. 02/24/17 - Lakhani Sent the following email to Athenica Ezgi: I hope this email finds you in good health. I am the new project manager for the above spill, as Rashad Omar is no longer with the DEC. I understand you last communicated with Rashad in June 2016 about soil removal and endpoint sampling at the above spill. Has this work been completed? Could you please send me any more information regarding the site as I would like to be up to date on all remediation activities? If you have any questions, please contact me at (718) 482-4038. Ezgi is no longer employed at Athenica Environmental Services. The new director of HAZMAT Services at Athenica is Paul Lindell (plindell@athenica.com). Above email was forwarded to him. 02/27/17 - Lakhani Athenica Paul responded and informed that remediation was conducted and they are currently waiting to receive some disposal documentation so that they can submit the closure request. Paul is hopeful that he will receive it soon. Responded asking for update regarding the active SSDS. Included a reminder for an SMP as part of the RAR. Paul responded informing that the SSDS has not yet been completed, as the structure is in the early stages of construction (still moving soil, laying footings). The OER Project Manager is Alysha Alfieri. Her e-mail is aalfieri@dep.nyc.gov and her phone number is (212) 676-0459. 04/06/17 - Lakhani Sent email to Paul asking for update regarding site and whether they have had their SSDS design commented on by NYCDOH. DEC Lakhani sent the following email to NYSDOH Nathan Walz asking for his review of the proposed SSDS: I hope all is well. I wanted to run the above site past you with the hopes that your commentary could provide me with the proper guidance to close the spill. The site is located at 38-11 31st Street in Long Island City. The site is 9,100 square feet bounded by a 1-story commercial warehouse, a 2-story residential building, two 2-story residential buildings and one 5-story residential buildings. It contains two 2-story warehouses with interconnected basements which is already 6 to 10 feet below street level. The depth to groundwater ranges from 11 to 11.4 feet bgs. The proposed future use of the site will consist of 7-story mixed used building with a full cellar. The building will contain commercial/retail space and residential apartments. The cellar will be utilized for storage, mechanical rooms and parking. The first floor will be used for wholesale retail and a residential lobby. Construction of the cellar will require minor excavation of the existing basement floor to allow for additional footings to be installed. Six (6) soil borings were installed from which thirteen (13) soil samples were collected and analyzed. Soil sampling showed that there were no VOCs above standards. Two (2) groundwater monitoring wells were installed and two (2) groundwater samples were collected. The only VOC detected above limits in the groundwater

OER - JOB SITE (Continued)

S118705522

samples was PCE with a maximum concentration of 33 ug/L in both samples. Four (4) sub-slab vapor probes the site perimeter were installed and four (4) samples were collected to be analyzed. Chlorinated compounds were detected in all vapor samples with maximum concentrations of 17 ug/m3 for methylene chloride, 3,700 ug/m3 for PCE, 28 ug/m3 for TCE, along with a few BTEX. These concentrations call for mitigation according to the DOB matrix. From these results, Athenica Environmental, the consultant, determined that an active SSDS along with a vapor barrier would be sufficient to prevent vapor intrusion into the building. I have attached the RAWP to this email for you to review. I would appreciate any commentary you can provide regarding the SSDS. 04/07/17 - Lakhani NYSDOH Nathan Walz replied to inform that an active SSDS is indeed necessary due to the highly elevated PCE concentrations. Soil vapor results are as follows: TCE 28 ug/m3(SS1), PCE 2500 ug/m3(SS1), m/p-xylene 10 ug/m3(SS1), methylene chloride 34 ug/m3(SS1), TCE 1.1 ug/m3(SS2), PCE 20 ug/m3(SS2), m/p-xylene 11 ug/m3(SS2), TCE 9.5 ug/m3(SS4), PCE 3700 ug/m3(SS4), m/p-xylene 14 ug/m3(SS4). The 1936 Sanborn Map shows the site as developed with one 2-story commercial structure at 38-11 31st St, noted for Press Finishing and two 2-story dwellings were also listed on a 1939 City Directory as Cosmopolitan Cleaners and Dryers Inc., however this use is not identified in any Sanborn Maps. The 1950 Sanborn Map shows no changes but designated the site commercial structure as Machinery and Assembling. This property is listed on city directories from 1945 to 1970 as Metropolitan Welding Supply Company and Metroweld Distributors. The 1979 Sanborn Map designated the commercial structure designated for manufacturing. The site has remained unchanged to present. From 2005 to 2008 38-11 31st St is listed on city directories as Van Gogh Painting Corp and as All State Banners. This property was listed as R Wholesale Corp in 2013. 38-27 31st St was listed on city directories as occupied by private residents between 1934 and 1970 and 38-19 31st St for private residents between 1934 and 1976. Paul responded informing that the site is still in the early stages of construction as they encountered numerous delays, so they are still far away from completing the RAR. They have had some vapor barrier installed and the PE has been inspecting it per the RAWP. Regarding the SSDS design, they typically work with OER and their PE to come to a final design for an SSDS. Paul informed that he did speak with Ms. Dawn Hettrick of the NYSDOH - Bureau of Environmental Exposure Investigation. 04/10/17 - Lakhani OER Chawla emailed informing that an SSDS has been installed beneath the building basement slab in two (2) separate sections. One portion of the SSDS will consist of a loop system beneath the areas of the basement not being utilized as a parking garage. The second consists of two (2) straight pipes along running parallel to the southern and eastern boundaries of the site. They are in the process of installing vapor barrier. Once construction is completed, pressure testing will be conducted. A VBS inspection was performed by Athenica and AMC Engineering(the PE). During the inspection, four (4) SSDS sampling port locations were determined by the PE. All sub-grade portions of the active SSDS piping are complete; however, the entire system will not be completed for some time. Approx. only 30% of the VBS has been installed to date. 10/24/17 - Lakhani OER Alysha emailed to provide an update for the site. The basement elevation that was constructed is approx. 10' below street level, which is give or take the same elevation of the previous slab. Localized excavations were proposed for additional footings and the SSDS trenches; however, those

OER - JOB SITE (Continued)

S118705522

excavations were enlarged in many locations during tank removals. The SSDS piping is completed beneath the slab, however the riser pipes and fans have not been installed yet. Pressure testing has not been performed yet. 11/30/17 - Lakhani According to the 11/07/17 Monthly Status Report, regular construction activities and installation of vapor barrier and concrete slab near the cellar entrance ramp in Grid B will continue. Construction of SSDS riser roof will continue. Sub-slab pressure testing will be conducted once SSDS fan is installed (02/2017). 04/02/18 - Lakhani As per the 01/24/18 Daily Report, construction is on-going at the site. The vapor barrier is to be installed and inspected over the gravel section (all other vapor barrier sections previously inspected and approved by PE). Continue regular construction activities and installation of vapor barrier and concrete slab near the cellar entrance ramp in Grid B is planned to be completed by May 2018. In that time the construction of SSDS riser to the roof will be continued and the sub-slab pressure testing will be conducted once the SSDS fan is installed. 04/25/18 - Lakhani As per the 02/26/18 Monthly Status Report, construction is on-going at the site. Gravel was leveled in the vicinity to the cellar entrance ramp. The vapor barrier is to be installed and inspected over the gravel section (all other vapor barrier section were previously inspected and approved by a PE). Planned activities for the next three (3) months from 02/26/18 include installation of the vapor barrier and concrete slab near the cellar entrance ramp and continued construction of the SSDS riser to the roof. SSDS pressure testing will be conducted once the SSDS fan is installed. 04/27/18 - Lakhani OER Alysha Alfieri spoke with the consultant for the project and she was informed that there has been no change to site since February. The pressure testing for the SSDS has not been done yet. There is still a portion of the slab that requires the installation of the vapor barrier and subsequently poured. The risers have also not been extended above the roof, nor have the fans been installed. 02/04/19 - Lakhani DEC Lakhani spoke to Athenica who informed that the two loops of the SSDS have been installed. The system will be pressure tested in the coming week. Athenica project manager is: Adib Rahman ARahman@athenica.com 718-784-7490 07/24/19 - Lakhani Athenica pressure tested the SSDS and submitted the data. DEC Lakhani forwarded it to NYSDOH for review. 07/25/19 - Lakhani NYSDOH Nathan Walz reviewed the RAR and the SSDS commissioning and pressure differential test results. There are no comments as the system meets standards. Spill is closed. DEC Requires: 1) Pressure testing required to close spill"

Remarks: "found tank during excavation/loss of product to soil"

Tank Info:

Tank Number: 001  
Tank Id: 14959  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F00 - Pipe External Protection - None  
A01 - Tank Internal Protection - Epoxy Liner  
G03 - Tank Secondary Containment - Vault (w/o access)  
H00 - Tank Leak Detection - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
C01 - Pipe Location - Aboveground  
J02 - Dispenser - Suction Dispenser  
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 12/01/1957  
Capacity Gallons: 4000  
Tightness Test Method: NN  
Date Test: Not reported

**FINDS:**

Registry ID: 110059760833

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
Tank Id: 5552  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
K00 - Spill Prevention - None  
E00 - Piping Secondary Containment - None  
G03 - Tank Secondary Containment - Vault (w/o access)  
H00 - Tank Leak Detection - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
I04 - Overfill - Product Level Gauge (A/G)  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 02/06/1986  
Capacity Gallons: 4000

DEC Memo: "12/28/11- Zhune visited the site. RR Plumbing Sevice Corp. was going to replace the sewer line at this site. While digging they noiced oil smell. They stopped digging with the machine and started doing hand digging when they found soil contamination coming from a leaking return line. The line was shut down. AB Environmental is going to do the clean up. Violeta Leano 718-784-3530 -- Owner tleano@yahoo.com 02/24/12- On 02/15/12 AB Environmental emailed the report dated 02/9/12. The soil contaminated in the impacted area was removed. The excavation was completed as best that could be accomplished with out compromising the foundation. One endpoint sample was collected at the bottom of the excavation(7feet). The endpoint sample analytical result indicated that all detected constituents are within acceptable limit. Spill Closed. Report eDocs. "

Remarks: "Found line broken. Been leaking for years"

**FINDS:**

Registry ID: 110057070342

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Updated By: GWBURKE

Site Description: The site is a vacant lot that extends from 31st Street to 32nd Street and is located between 37th Avenue and 38th Avenue near Sunnyside Yards in the western portion of Queens (Long Island City). The property is in a predominantly Commercial Use and Industrial/Manufacturing area with some Mixed Residential & Commercial use. Site Features: The site is fenced (wooden construction), somewhat flat and vacant with no structures. The surface is a mixture of soil, construction debris and concrete rubble. Historical Use(s): As of 1898, the subject property contained a two-story bottling and laboratory facility occupied by Hiscox & Company Patent Medicines. By 1915, the building was occupied by Mercury Motor Works and two two-story dwellings were constructed in the western portion. By 1936, the main building expanded, occupying more of the property and was occupied by Renner-Maras Inc. Ornamental Iron Works. In addition, one of the dwellings was identified as an office. By 1947, the building was identified as a loft and electro-plating facility. By 1970, the western building was built-out to the property and was identified as Bliss Display Corp, a manufacturer. The eastern portion was used for painting and the southern was used for woodworking. By 1995, the property was occupied by one manufacturer. By 1996, a small portion was used for parking. The property remained substantially unchanged through 2006. Site Geology and Hydrogeology: The topography of the site is generally level and is approximately 36 feet above mean sea level. The site is located approximately 0.87 miles northeast of Dutch Kills and 1.1 miles east of the East River. There is no groundwater data but according to the USGS, the depth to groundwater is expected between 21 and 30 feet bgs in the vicinity of the site. Groundwater was not

encountered to the maximum depth of exploration of 27 feet bgs. The groundwater gradient is expected to slope generally to the southwest towards Dutch Kills. The major aquifer systems beneath the subject property are the Upper Glacial and Lloyd aquifers. The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 50 feet below ground surface where the Raritan confining unit is encountered. Bedrock beneath the subject property is located approximately 200 feet below ground surface. The lithology generally consisted of up to five feet of fill material underlain by a silt or clay lens extending to a maximum observed depth of seven feet followed by fine-grained poorly graded sand to the terminal depth of investigation at 23 feet bgs. The historic fill encountered was evidenced by brick and concrete, which predominantly was embedded in a silty sand matrix.

Env Problem: Work at this site was performed through New York City Office of Environmental Remediation.

Contact Name: MARK GELBAND  
DEC Memo: "6/27/2016: Rashad 37-21 32 Street has an alternate address of 37-13 - 37-23 32 Street and 37-12 - 37-18 33 Street. No additional spills or PBS registrations found for this site. Called Mark, this site is an OER site and they found contamination during RIR field work. Shaminder contacted us this morning with regards to this site: I am reviewing an RIR which indicated VOCs in soils at 20 feet depths. Groundwater was not sampled due to refusal at 27 feet depths. Soil/fill samples results were compared to New York State Department of Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples collected during the RI showed that no PCBs were detected in any of the soil samples. VOCs including 1,2,4-Trimethylbenzene (42,000 ug/kg), 1,3,5-Trimethylbenzene (13,000 ug/kg), Ethyl Benzene (3,800 ug/kg), n-Propylbenzene (6,700 ug/kg) and total Xylenes (19,000 ug/kg) were detected above Unrestricted Use SCO in one deep soil sample SB-9 (21-23 ). The email had two documents attached. First document has site maps with soil concentrations as well as soil vapor results. Soil vapor results are as follows: SV-1: Tetrachloroethene-150ug/m3, SV-2: tetrachloroethene-230ug/m3, SV-3: Tetrachloroethene-170ug/m3, SV-4 Tetrachloroethene-160ug/m3, trichloroethene-400ug/m3, SV-5: tetrachloroethene-260ug/m3, trichloroethene-170ug/m3, SV-6 tetrachloroethene-220ug/m3, trichloroethene-200ug/m3, SV-7 tetrachloroethene-96ug/m3, trichloroethene-420ug/m3. Soil analyticals found contamination at SB-9 21-23 feet: 1,2,4 Trimethylbenzene-42,000ppb, 1,3,5 Trimethylbenzene-13,000ppb, Ethyl Benzene-3,800ppb, n-propylbenzene-6,700ppb, and total xylene-19,000ppb. 7/7/2016: Rashad Sent contaminated soil letter to NYCOER for site, it has been uploaded to D2 and mailed to owner. 9/6/2016: Rashad Received call from Paul Stewart of Advanced Cleanup Technologies. He said that he is working with OER on site and that the RAWP is in the final stages

**MOTOR AND IRON WORKS (Continued)**

**S118705940**

of approval. Received email from Shaminder: Above spill was recently called in during Site investigations. Since then, RIR and RAWP have been prepared. A copy of RAWP is attached for your review. Development includes excavations of full footprint of property to more than 22 feet deep for cellar and sub-cellar (to be used as parking garage) and a seven story residential building. Remedy includes: 1. Excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. 2. Performance of a remedial action for the petroleum spill #16-03003 under New York State Department of Environmental Conservation (NYSDEC) Spill program. 3. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. End point samples for spill closure will be performed per DER-10 requirements. 4. Construction of an engineered composite cover 5. Installation of a vapor barrier system 6. Installation of a passive sub-slab depressurization system (SSDS) 7. parking garage with high volume air exchange in conformance with NYC Building Code. Attached to email was RIR and summary. It has been uploaded to D2. Review of RAWP is as follows: Site is in VCP. The proposed future use of site will be a seven story mixed use building with retail stores on first floor, and residential apartments on the upper six floors. The cellar will be built to a max depth of 10 feet bgs, the subcellar will be built to a depth of 20 feet bgs. The majority of the property will be excavated to a depth of 22 ftbgs. Elevator pits will be excavated to depth of 26 ft bgs, the excavation is not expected to reach the groundwater table. The sub-cellar will contain 45 parking spots. The cellar will contain 25 parking spots. Groundwater was not encountered, refusal was reached at 27 ft bgs. The proposed remedial action will consist of: community air monitoring, excavation and removal of soil for the majority of the site to a depth of 22 feet below grade except for two recessed area to the northwest and northeast, which will be excavated to 2 feet bgs. A small portion will be excavated to 27 ft bgs. Removal of all USTs that are encountered during soil removal actions and registrations of all found tanks. Performance of remedial actions for the open spill case on property which include installation and monitoring of off site groundwater wells as required and approved by NYSDEC, and may include the removal of LNAPL present beneath the site, treatment of groundwater plume via injections of biorem and chem ox if required by NYSDEC, excavation and removal of petroleum impacted soil, where feasible to 2 feet below groundwater and the implementation of a groundwater monitoring program. A separate RAWP Addendum may be required by NYSDEC. Construction of an engineered composite cover of a min of 6 inch thick reinforced concrete building slab. Installation of a vapor barrier system consisting of vapor barrier beneath the building slab and outside of sub-grade foundation sidewalls. Vapor barrier will be 20 mill in thickness. Installation of passive SSDS. Property is also E-designated. 9/7/2016: Rashad Spoke to DEC Vought and sent report review letter approving RAWP to NYCOER pending proposed monitoring well locations. 10/5/2016: Rashad Shaminder submitted addendum to myself and John Durnin, John is DEC project manager for hazardous waste remediation project on this site. Sent email to John seeking if I should administratively close this spill and refer it to his hazardous waste project. 10/6/2016: Rashad Review of the addendum is as follows; they are proposing installation of two down gradient groundwater monitoring wells along the western boundary of the site. Also five additional soil vapor samples have been proposed along the northern and southern boundaries of the site.

**MOTOR AND IRON WORKS (Continued)**

**S118705940**

Discussions with John continue on possible case transfer (Remediation ID number 241191). 10/13/2016: Rashad On 10/12 DEC Durnin sent comments to Shaminder for the RAWP Addendum which include: Revised RAWP Addendum (see figure below) Site investigation decisions for this P site are based on the entire property being excavated to the depth of at least 22 feet. The north corner of the site along 32nd Street (recessed area) and the east corner of the site along 33rd Street (recessed area) both are only going to be excavated to a depth of 2 feet. Should the developer not implement this excavation plan, the soil investigation would require additional sampling from 2 feet to 22 feet across to entire property. Soil Vapor According to the June 22, 2016 draft RIR (page 20), nine soil vapor samples (SV-1 through SV-9) were collected but only 7 are documented (SV-1 to SV-7). This should be corrected in the final RIR. Relocate proposed SV-11 away from the former basement area to ensure the soil vapor sample (6 -7 probe depth) is representative of the soil conditions without any influence of the former basement. Add soil vapor sample points SV-13 and SV-14 at each end of the site near 32nd Street and 33rd Street to evaluate the potential for off-site migration. Soil There is only one soil sample, SB-9 (21 -23 ) below the two foot depth. All the other soil samples are from the 0 to 2 depth. The off-site soil borings for MW-1 and MW-2 must be logged continuously and screened with a PID. Any visual evidence of contamination or elevated PID readings will require soil sample collection and laboratory analysis for VOCs, SVOCs and Metals. Groundwater Based on groundwater data from other OER Brownfield Sites in the area, the groundwater flow direction is most likely in the westerly direction and approximately 20 feet deep. Indicate the diameter of the proposed wells and the type of well drilling rig to be used. Since refusal was encountered at 27 feet during a previous attempt, a larger drill rig is needed to install the four proposed monitoring wells. Provide well construction details for all new wells. MW-1 and MW-2 must be greater than 20 feet apart to be representative of a broader area of groundwater, to not influence one another and to enhance the verification of the groundwater flow direction. MW-2 needs to be far enough along 32nd Street to reasonably be downgradient of the site. MW-3 should be located near SB-9 where elevated levels of Trimethylbenzenes, Ethyl Benzene, n-Propylbenzene and total Xylenes were encountered in the soil at 21 to 23 feet. MW-4 will show if there is off-site groundwater impacting the site (assuming a westerly groundwater flow). As per DEC Vought, no further comments are needed for petroleum remediation as DEC Durnin has taken the lead and addressed the Departments comments/concerns. 10/31/2016: Rashad On 10/28 DEC Durnin asked for update to revised addendum. Alysha from OER sent revised addendum report. It has been uploaded to D2. 11/9/2016: Rashad John Durnin sent email: There has been a question raised regarding the revision of the RAWP Addendum for 37-21 32nd Street, Spill #16-03003. The consultant, Advanced Cleanup Technologies, Inc. (ACT) prepared the revised addendum to the Remedial Action Work Plan (RAWP) and RAWPs required a P.E. to do the work. However, the work I ve been reviewing and commented on involves investigative work necessary to evaluate if this project (NYSDEC P Site) will be in the NYCOER BF program or the NYSDEC BF program, typically investigative work not requiring a P.E. Is it possible that this is actually an addendum to an existing RIWP prepared by ACT in early 2016? Alysha replied: The addendum is for the existing RIWP and will be also included as an appendix in the Stipulation List.

1/5/2017: Rashad Emailed DEC Durnin about possible case transfer due to my resignation at DEC, received no response. 1/6/2017: Rashad After meeting with RSE Austin spill will be assigned to DEC Durnin. There is a DEC approved RI Work Plan addendum for additional wells and SVI sampling. Waiting for this to be done. DEC sent a sidewalk opening permit request letter on February 23, 2017. (3/31/2017) The additional well samples and SVI sampling were completed in May 2017. Site remediation/construction began in January 2018. Daily reports are available on the NYCOER EPIC website (16TMP0372M). Once the site remediation is completed, DEC will evaluate the open spill and determine if it can be closed. The DEC Project Manager, John Durnin, will retire in April 2018. The new Project Manager will be Kyle Forster. (3/29/2018), "

FINDS:

Registry ID: 110004561634

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110004344148

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 4/29/2002 - Sangesland spoke to property owner (Mr. Ron Levy). Mr. Levy did not feel comfortable with ProTest and requested information on how to close out this spill. Isolate and retest just the tank and just the piping. Once the spill is closed out, owner will abandon the tank and switch to gas. 6/10/2002 Man hole on top of tank was left open. Gasket was replaced and the tank passed the retest. 7/3/2002 Mr. Levy called. He will send a copy of the tank test which shows that the tank passed the second test. He also said that he will be pulling the tank out and wanted to know the proper procedures. Sangesland provided Mr. Levy with a contact at PBS. 6/16/05 Heitzman: See PBS 2-607788. Tank was removed July 2002. Closed."

Tank Info:

Tank Number: 001  
Tank Id: 34357  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
L00 - Piping Leak Detection - None  
E00 - Piping Secondary Containment - None  
K00 - Spill Prevention - None  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F01 - Pipe External Protection - Painted/Asphalt Coating  
I04 - Overfill - Product Level Gauge (A/G)  
C01 - Pipe Location - Aboveground  
G02 - Tank Secondary Containment - Vault (w/access)  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 05/04/1957  
Capacity Gallons: 10000  
Tightness Test Method: -  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

Historical Generators:

Date form received by agency: 2012-09-28 00:00:00.0  
Site name: NYC DEPT OF EDUCATION - I S 204Q  
Classification: Small Quantity Generator

Hazardous Waste Summary:

. Waste code: B004  
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007  
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Facility Has Received Notices of Violations:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**SHWS:**

Name: BRIDGE CLEANERS  
Address: 39-26 30TH STREET  
City,State,Zip: LONG ISLAND CITY, NY 11101  
Program: HW  
Site Code: 440982  
Classification: Significant threat to the public health or environment - action required.  
Region: 2  
Acres: 0.17299999999999999  
HW Code: 241127  
Record Add: 10/15/2010  
Record Upd: 02/14/2019  
Updated By: MJKOMORO

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to

9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the

subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Control Code: 15  
Control Type: ENG  
Date Record Added: 09/17/2018  
Date Rec Updated: 09/17/2018  
Updated By: RECURLEY  
Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported

MAP FINDINGS

**FRESH CLEANERS & LAUNDRY INC (Continued)**

1001125032

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Code: 440982  
Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported  
Env Problem: NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011,

and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

MAP FINDINGS

**FRESH CLEANERS & LAUNDRY INC (Continued)**

1001125032

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. Not reported

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016

resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Description:

LOCATION: This is an off-site investigation of the area downgradient of the Bridge Cleaners site, Site Number C241127, which located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. CURRENT ZONING: This section of Long Island City is zoned Special Purpose

Env Problem:

District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings. Recent construction in the area includes a self-storage facility and hotels. HISTORICAL USES: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, and distribution points for a variety of products. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL, which is about 20 feet below land surface in the vicinity of the site. Soils in the area are expected to be primarily sand and silty sand. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2.

NATURE AND EXTENT OF CONTAMINATION: In October 2010, a property location in this block was identified as a potential site (P-site) due to soil vapor and groundwater results collected by an adjacent property owner. After unsuccessfully attempting to obtain access for a more thorough investigation, NYSDEC conducted a limited offsite investigation in February 2012. Groundwater and soil samples were taken. Based on this investigation, the Bridge Cleaners Site (C241127) was determined to be causing a significant threat to public health and the environment. The site entered the NYS Brownfield Cleanup Program and remained in the Program until December 2016. Groundwater: Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of tetrachloroethylene (PCE) and trichloroethylene (TCE) upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. The groundwater standard for both PCE and TCE is 5 ppb. Soil: One of 14 soil samples, at a side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Scope of Off-Site Investigation 2016: This 2016 Remedial Investigation will define the nature and extent of contamination emanating from the Bridge Cleaners Site in groundwater, soil vapor and any other parts of the environment that may be affected. Shallow and deep groundwater wells will be installed upgradient and downgradient of the Bridge Cleaners site (C241127). After well installation, two sets of samples will be collected. Based on the initial sampling, groundwater samples will be collected for Compound Specific Isotope Analysis (CSIA). This analysis will be used to determine whether the source of the Tetrachloroethene (PCE) and Trichloroethene (TCE) groundwater contamination is exclusively from the Bridge Cleaners site or from other sources in the immediate area. Eleven soil vapor samples will also be collected initially. After the results are obtained, the Department may request access from owners of eight structures along 29th Street for sub-slab and indoor air sampling. OU2 Off-Site Investigation Results Soil: Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 389 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. PCE and TCE were not observed in the 4 deep wells installed. Soil Vapor: Eleven soil vapor points were

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building, and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil

samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade, and below the water table at 25.5 feet. In the first quarter of 2014, after entering the Brownfield Program, additional groundwater, soil and soil vapor samples were obtained from within the building. Five groundwater samples ranged from 165 to 340 ppb for PCE, and TCE concentrations from 2-7 ppb. Soil samples obtained from the same 5 locations did not exceed unrestricted soil cleanup objectives. Sub-slab soil vapor, however, ranged from approximately 20,000 ug/m3 to 668,000 ug/m3 below the slab (PCE) and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Based on the soil vapor results, there is a need to mitigate the building. In Nov 2014, a new consultant was hired by the BCP applicant. Soil in the NW corner of the building was found at 1.8-9.6 ppm (exceeding the protection of groundwater SCOs) for PCE (1.3ppm). An IRM design has been developed to address the source area.

Health Problem:

People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
Tank Id: 9907  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
A00 - Tank Internal Protection - None  
I04 - Overfill - Product Level Gauge (A/G)  
B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
D02 - Pipe Type - Galvanized Steel  
F00 - Pipe External Protection - None  
G00 - Tank Secondary Containment - None  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 09/01/1930  
Capacity Gallons: 5000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported

Hazardous Waste Summary:

. Waste code: B004  
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007  
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

. Waste code: D001  
. Waste name: IGNITABLE WASTE

. Waste code: D002  
. Waste name: CORROSIVE WASTE

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

On 9/2 - Bob C - spoke with Al Cardino, who said to call the school custodian (Tom Logan) at 718-937-8214, who would have the records and could fax them. Called Tom on 9/7 & left message. 11/15/2005: Lead transfered to Joe White as part of the Spill Initiaative Project. 12/08/2005: Mr. James Merlo contacted Joe White and is checking to see if a new tank test has been performed on this tank. He will provide documentation so spill can be closed. 1/5/2006: Tha associated PBS# 2-478741 indicates that the tanks 001 and 002 have ben closed in place as of 6/1/2001. The remaining tank 003 is an above ground tank that does not require a tank test. Given that the spill was a tank failure and the underground tanks are no longer in service I am closing out this spill ----- joe white "

 Control Type: ENG  
 Date Record Added: 05/10/2017  
 Date Rec Updated: 05/02/2019  
 Updated By: RECURLEY

Site Description: Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: There is a 2-story building on-site. The first floor is primarily storage and the second floor is used as office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is currently occupied by a wireless communications distributor. Future use is anticipated to be a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 492945

Site Description: Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: There is a 2-story building on-site. The first floor is primarily storage and the second floor is used as office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is currently occupied by a wireless communications distributor. Future use is anticipated to be a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the

south-southeast.  
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan.  
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 492945

Site Description: Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: There is a 2-story building on-site. The first floor is primarily storage and the second floor is used as office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is currently occupied by a wireless communications distributor. Future use is anticipated to be a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Update By: MJKOMORO  
Site Description:

Location: This is an off-site investigation of the area downgradient of the Former Union Wire Site, Site Number C241163, which located at the corner of 30th Street and 40th Ave, in Long Island City, an urban area. Site Features: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. Current Zoning and Land Use: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including several three-story apt buildings along 29th Street. The downgradient block also contains a limited number of residential buildings, parking, self-storage, hotel and auto repair businesses. Past Use of the Site: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, warehouse operations, and churches occupied the site. Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by intermixed layers of sand and silty-sand. A clay layer was encountered in one location at approximately 32-38 feet. Bedrock was not encountered although reference material indicates bedrock is glacial and alluvial deposits from the Cenozoic age. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast.

Env Problem:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminant is TCE. The off-site investigation focused on groundwater and soil vapor. Soil: Based on soil analysis from nearby off-site wells, off-site soil contamination was not expected. Groundwater: On-site, TCE was identified in groundwater with a maximum concentration of 280 ppb (parts per billion). Perchloroethylene (PCE), a chemical commonly used at drycleaners, is present in groundwater (up to 730 ppb) but is believed to be from an adjacent off-site source. Off-site wells sampled at the downgradient edge of the site indicate low concentrations of TCE (11 ppb in MW6, 3.1 ppb in MW7) and PCE (99 ppb in MW6, 64 ppb in MW7) migrating off-site. In addition, a well, located immediately adjacent to the site and side-gradient, and installed by the Department for an investigation, also contained PCE at 369 ppb and TCE at 272 ppb. Soil Vapor: Eleven soil vapor points were installed as part of the adjacent site's off-site investigation. The highest soil vapor (4400 ug/m<sup>3</sup> TCE) was located across 40th Avenue from the site, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the level decreased to 1300 ug/m<sup>3</sup> TCE. Sub

Health Problem:

Slab and Indoor Air: Four buildings were sampled for sub-slab and indoor air. One of them was classified as mitigate due to both PCE and TCE in the sub-slab and indoor air. A second structure was classified mitigate or monitor only based on PCE, not TCE. People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater off-site is not used for drinking or other purposes and the area is served by a public water supply that obtains its water from a different source that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling, as part of the off-site investigation at the adjacent Bridge Cleaners site (C241127), indicated soil vapor intrusion is a concern at several off-site structures and actions have been recommended.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 01  
Tank Id: 62198  
Material Code: 0022  
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

H00 - Tank Leak Detection - None  
I00 - Overfill - None  
K01 - Spill Prevention - Catch Basin  
A01 - Tank Internal Protection - Epoxy Liner  
E00 - Piping Secondary Containment - None  
C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
L00 - Piping Leak Detection - None  
D00 - Pipe Type - No Piping  
G04 - Tank Secondary Containment - Double-Walled (Underground)

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 09/01/1998  
Capacity Gallons: 500  
Tightness Test Method: -  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.  
 HAZARDOUS WASTE BIENNIAL REPORTER

Tank Info:

Tank Number: 001  
Tank Id: 64494  
Material Code: 0022  
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
E00 - Piping Secondary Containment - None  
G06 - Tank Secondary Containment - Remote Impounding Area  
I04 - Overfill - Product Level Gauge (A/G)  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
G10 - Tank Secondary Containment - Impervious Underlayment  
K00 - Spill Prevention - None  
D00 - Pipe Type - No Piping  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
L00 - Piping Leak Detection - None  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 02/01/1998  
Capacity Gallons: 275  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

Hazardous Waste Summary:

. Waste code: D001  
. Waste name: IGNITABLE WASTE

. Waste code: D035  
. Waste name: METHYL ETHYL KETONE

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005  
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110019781244

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act. FIS (New York - Facility Information System) is New York's Department

of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AIR MINOR

Registry ID: 110004494226

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 127449  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 02/28/05: Transferred from Rommel to Tibbe. Site being investigated by NYCT. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 12/15/05: Transferred back to Tibbe from Bureau B. 08-30-06: NYCT attempted to perform a subsurface investigation but continually encountered refusal. A new subway tunnel, ventilation bulding and utilities were constructed in the area of the former tanks and associated contamination. It would appear that the contamination was removed during construction becuase of the large excavation that was required to construct these facilities, but NYCT has no reports or mainfests to indicate how much was removed. Further investigation does not appear to be possible due to the ubdground structures and utilities. "

DER Facility ID: 405653  
DEC Memo: "10/12/2011 - Sangesland reviewed a Request for Closure submittal from Riteway Tank dated Oct 12, 2011. Problem was a Tank Test Failure that was traced to a hole in the sidewalk fill line. The sidewalk was opened and 58 drums of contaminated soil was removed. The line was replaced and 4 end point samples were taken. Clean fill was put back and the sidewalk was repoured. Based on the end point lab results, this spill case has been closed out. Lab results, manifests, photos etc are all in eDocs attachments."

Remarks: "tank test failure. retest pending, believed to be line failure"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
 Tank Id: 66582  
 Material Code: 0022  
 Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

C01 - Pipe Location - Aboveground  
 J00 - Dispenser - None  
 F00 - Pipe External Protection - None  
 A00 - Tank Internal Protection - None  
 B01 - Tank External Protection - Painted/Asphalt Coating  
 I01 - Overfill - Float Vent Valve  
 K00 - Spill Prevention - None  
 E00 - Piping Secondary Containment - None  
 H00 - Tank Leak Detection - None  
 D00 - Pipe Type - No Piping  
 L00 - Piping Leak Detection - None  
 G00 - Tank Secondary Containment - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
 Tank Status: In Service  
 Pipe Model: Not reported  
 Install Date: 06/24/2002  
 Capacity Gallons: 258  
 Tightness Test Method: NN  
 Date Test: Not reported  
 Next Test Date: Not reported  
 Date Tank Closed: Not reported  
 Register: True  
 Modified By: DMMOLOUG

**FINDS:**

Registry ID: 110001601829

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: 001  
Tank Id: 248976

Equipment Records:

A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
K00 - Spill Prevention - None  
C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
E00 - Piping Secondary Containment - None  
G06 - Tank Secondary Containment - Remote Impounding Area  
D00 - Pipe Type - No Piping  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
J04 - Dispenser - On Site Heating System (Suction)  
L00 - Piping Leak Detection - None  
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron

Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 02/01/1998  
Capacity Gallons: 275  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
Tank Id: 22235  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
E02 - Piping Secondary Containment - Vault (with Access)  
F00 - Pipe External Protection - None  
G03 - Tank Secondary Containment - Vault (w/o access)  
H00 - Tank Leak Detection - None  
K01 - Spill Prevention - Catch Basin  
L09 - Piping Leak Detection - Exempt Suction Piping  
I04 - Overfill - Product Level Gauge (A/G)  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 09/01/1973  
Capacity Gallons: 15000  
Tightness Test Method: NN

Tank Info:

Tank Number: 001  
Tank Id: 22235  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
E02 - Piping Secondary Containment - Vault (with Access)  
F00 - Pipe External Protection - None  
G03 - Tank Secondary Containment - Vault (w/o access)  
H00 - Tank Leak Detection - None  
K01 - Spill Prevention - Catch Basin  
L09 - Piping Leak Detection - Exempt Suction Piping  
I04 - Overfill - Product Level Gauge (A/G)  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 09/01/1973  
Capacity Gallons: 15000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 002  
Tank Id: 56075  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
G99 - Tank Secondary Containment - Other  
F00 - Pipe External Protection - None  
C01 - Pipe Location - Aboveground  
I04 - Overfill - Product Level Gauge (A/G)  
J02 - Dispenser - Suction Dispenser  
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 01/01/1999  
Capacity Gallons: 1500  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True  
Modified By: MRBARROW

DEC Memo: "4/6/04 TTF letter sent out to Cary Wolf. 9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. BP is doing cleanup under spill #8402855. Provided copy of TTF letter dated 4/6/04. B. Beck to provide response by 10/8/04. 10/20/04 Received repair record for the premium tank line performed by Alvin Petroleum. Alvin excavated over the premium tank on 4/9/04. They found plastic in the check valve over the tank and removed the plastic and insert on valve. Disconnected suction line from tank, tested the line at 50lbs. and

 Updated By: JHOCONNE

Site Description: Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located

to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility. Historic Use: The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA) project. An extensive cleanup program was completed in 1996 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with recurring PCB contaminated sediment impacts. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem:

Nature and Extent of Contamination: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater

MAP FINDINGS

**AMTRAK SUNNYSIDE YARD (Continued)**

**S103575644**

from soils impacted by the COC's. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs ( 18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface

Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs.  
Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010.

Health Problem: Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

Contact Name: CHRIS BENSON  
DEC Memo: "3/31/15: Mahat t/c: DEC Mahat contacted Mr. Benson and asked him to send some picture and closure report as clean up is done by retained contractor. DEC is waiting for a closure report. 4/3/15: Mahat E/C: DEC Mahat received a narrative clean up report from Mr. Benson. Absorbents were applied to the effected concrete to. Affected soils were excavated to a depth of 9 , and concrete was scrubbed with a degreasing agent to remove any remaining product. The area was returned to service, 2x drums of oily solids were generated. V/R, Chris Benson Senior Environmental & Safety Analyst New York - Operations AMTRAK 39-29 Honeywell St. Long Island City, NY, 11101 Cell 917-538-2982 ATS 521-6084 Office 212-630-6084 christian.benson@amtrak.com Based on the report and the facility and initial picture. The Department does not warrant any further investigation. Spill case will be closed in DEC Spill Database. "  
Remarks: "rain caused buckets to lose fluid to soil, c/u pending by Phillip Service"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was TIPPLE 7/9/07: Reassigned to Kartik Chanda (Chanda) 9/10/07: Kartik Chanda of DEC has reviewed this spill case and sent a letter to National Railroad Passenger, 400 West 31st St., 4th Floor, NY, NY 10001, Attn: Emma Cattafi requiring that the following information be submitted to DEC for review by 10/25/07: 1. An explanation of the cause of the tank/equipment failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/17/07: Chanda received a letter from Emma Cattafi, Senior Environmental Coordinator, Amtrak with enclosed: 1. Invoices from Eadtmond describing work performed. 2. Invoices and scope of work from CHES. 3. Soil sample analysis report. 4. Tightness test results. 5. Shipping paper for soil disposal. 11/19/07: Chanda reviewed soil sample analytical results and UST tightness test results for this spill and has the following comments: 1. On May 14, 2004, the oil was found during the soil excavation phase of a project to upgrade/ retrofit an existing 20,000-gallon UST. 2. Amtrak estimated a release of approximately 10 gallon of #2 fuel oil. 3. Clean Harbors Environmental Services(CHES) excavated the contaminated soil surrounding the tank. VOCs and SVOCs were not detected in soil analytical results. Kartik Chanda discussed with Joe Sun (NYSDEC) regarding the findings of the soil analytical results and based on the information presented to the Department, DEC closed this spill, dated 11/20/07. 11/21/07: Chanda sent an NFA letter to Ms.Emma Cattafi, Senior Environmental Coordinator, AMTRAK, by regular mail. "

DEC Memo: "02/14/12- Christian Benson from Amtrack sent the following email:  
Around appx 1500hrs, 13FEB12, while replacing fuel in a portable heating unit, an Amtrak employee noticed fuel leaking from the underside of the fuel tank. The employee notified their supervisor, who instructed them to bring it to the motor pool area, away from the track area. The employee tilted the unit upwards to move product away from the hole. Upon reaching the motor pool, the employee had to tilt the unit back down, allowing product to begin leaking again. It is now estimated that only 1.2 gallons were released as employees were able to remove remaining product from the tank and place into a separate drum. The spilled material was contained with absorbent boom, pads, and sand. Clean-up was completed the morning of 14FEB12, and all wastes were placed into a drum for disposal. S-200 product will be used to further ensure full remediation of the area. Product was only released on impermeable surface, no waterways or soil was affected. Spill Closed. "  
Remarks: "Caller reporting a spill of 5 gallons of #1 fuel oil (kerosene) to concrete. Clean up is in progress."

Hazardous Waste Summary:

- . Waste code: B001
- . Waste name: PCB oil (concentrated) from transformers, capacitors, etc.
  
- . Waste code: B002
- . Waste name: Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
  
- . Waste code: B007
- . Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Violation Status: No violations found

 HW Code: 241102  
 Record Add: 12/13/2006  
 Record Upd: 05/10/2019  
 Updated By: JCGRATHW

Site Description:

Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th Street and 37th Avenue. Site Features: The site consists of four lots. Current owner owns three lots and the other lot foreclosed by NYC as tax lien property. Recently the other lot (lot 26) was bought by a different owner who demolished the single-story old building that was existed on this lot. The main current site features include a newly built eleven story building on one lot which is being developed, and other two lots will begin excavation under an IRM soon. The whole site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site s property is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility rights-of-way. The nearest residential area is located north (up gradient) of the site, on the other side of 37th Avenue. There is also a residential area approximately 500 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930 s to the late 1980 s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980 s to the mid 1990 s. It appears that site contamination resulted from poor housekeeping and spills associated with the dry-cleaning operation. Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the south-southeast.

Env Problem:

Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During the remedial investigation, PCE, TCE and cis-1,2-DCE were found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The concentration of PCE on-site significantly exceeded the Soil Cleanup Objective (SCO) for unrestricted use as well as for protection of groundwater (1.3 ppm). Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC were detected in on-site shallow groundwater at concentrations up to

**S110246984**

4,000 parts per billion (ppb), 1200 ppb, 12000 ppb, 130 ppb and 240 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. As per April and June 2012 and March 2014 groundwater data, the PCE plume in groundwater has migrated approximately 400 feet down gradient from the site (off-site) towards southeast. Soil Vapor - PCE and TCE were detected in on-site soil vapor at levels up to 2,800,000 microgram per cubic meter ( g/m3) and 130,000 g/m3 respectively and off-site at levels up to 13,000 g/m3 and 420 g/m3, respectively. Soil Vapor Intrusion (SVI) evaluation As part of SVI evaluation, vapor samples were collected from under the basement slab and basement indoor air from 5 surrounding structures. Two structures need mitigation and one structure needs monitoring or mitigation. To mitigate one of the structures located adjacent to the site an SSDS system has installed which currently in operation.

Health Problem: Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended.

Tank Info:

Tank Number: 001  
Tank Id: 48657  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

I02 - Overfill - High Level Alarm  
L09 - Piping Leak Detection - Exempt Suction Piping  
E00 - Piping Secondary Containment - None  
G03 - Tank Secondary Containment - Vault (w/o access)  
H03 - Tank Leak Detection - Vapor Well  
K00 - Spill Prevention - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F01 - Pipe External Protection - Painted/Asphalt Coating  
A00 - Tank Internal Protection - None  
C01 - Pipe Location - Aboveground  
B99 - Tank External Protection - Other  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: 08/06/1991  
Capacity Gallons: 20000

FINDS:

Registry ID: 110019778141

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110004333294

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 01  
Tank Id: 236396  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

C00 - Pipe Location - No Piping  
A00 - Tank Internal Protection - None  
J00 - Dispenser - None  
H00 - Tank Leak Detection - None  
I00 - Overfill - None  
D00 - Pipe Type - No Piping  
L00 - Piping Leak Detection - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 06/15/1935  
Capacity Gallons: 2000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: JEBROWN

Site Code: 490213

Site Description: Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies,

**U000409049**

including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to coarse sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Dt rec updated: 03/10/2017  
Updated By: JEBROWN  
Site Code: 490213  
Site Description: Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest.  
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives.  
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Updated By: JEBROWN  
Site Code: 490213  
Site Description: Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned

M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: See also Site no. V00600 Location: The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The entire site is occupied by a one story building which covers approximately 21,900 sq.ft. Historical Use: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis.

Env Problem: Nature and Extent of Contamination: Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues. Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994. Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable

levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore, inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion.

Site Code: 57131

Site Description: See also Site no. 241009 Location: The Levco Metals Finishers property is located in an urban area in New York City in an industrial/residential part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The site is undergoing development. Current Zoning and Land Use: The site is under construction. The zoning is commercial. Past Use of the Site: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. The entire site was occupied by a one story building which covered approximately 21,900 sq.ft and was demolished in 2000. The site was used as a parking lot until 2017. Site Geology and Hydrogeology: Site soils removed from the sump area were described as silty, clayey sands and clay in the upper part of the aquifer with coarser sand and gravel deposits to a till layer above the bedrock. The groundwater table is at 15 feet below grade and the bedrock is 30 feet below that. Groundwater flows to the west, and the East River lies 1.5 miles west of the site.

Env Problem: Nature and Extent of Contamination: The remediation of the site is complete. The contaminant of concern in soil and groundwater had been trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

construction. The zoning is commercial. Past Use of the Site: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. The entire site was occupied by a one story building which covered approximately 21,900 sq.ft and was demolished in 2000. The site was used as a parking lot until 2017. Site Geology and Hydrogeology: Site soils removed from the sump area were described as silty, clayey sands and clay in the upper part of the aquifer with coarser sand and gravel deposits to a till layer above the bedrock. The groundwater table is at 15 feet below grade and the bedrock is 30 feet below that. Groundwater flows to the west, and the East River lies 1.5 miles west of the site.

Env Problem: Nature and Extent of Contamination: The remediation of the site is complete. The contaminant of concern in soil and groundwater had been trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

 DEC Region: 2  
 DER Facility ID: 299586  
 DEC Memo: "11/30/2005 Sangesland spoke to rep at Island tank. She said the site was dug out and endpoints were clean. She said a closure report would be sent ASAP. 1/4/06-Hiralkumar Patel. Here is the summary of the report from Island Environmental Tank, Inc. \* According to owner, the tank has previously been used for the purpose of storing #2 heating oil and owner doesn't know when this tank was installed. \* UST was installed horizontally in the backfill material, with the top of the tank located approximately 4' below the surface. \* A 1080 gal. capacity tank was removed in the presence of Mr. Vinny Lovari of Island Tank Enviromental. After removal from cavity, tank has been cut and washed and removed oil and water mixture with vac/truck. \* No groundwater or static surface water was encountered in the tank cavity. \* Tank had pits and holes. \* Tank cavity was excavated approximately 30 cubic yard of soil in 55 gal. drums and disposed at Jamaica Recycling Inc. Jamaica, NY. \* Tank cavity was backfilled and compacted in place. \* 6 samples were taken out from cavity and tested at Severn Trent Laboratory, Edison, NJ. \* The metal tank and all metal tank system components were removed from teh owner's property and disposed of as scrap metal at John Iron & Metal Co.,Inc. 33 Arthur Kill Road, Staten Island, NY. 1/5/06-Hiralkumar Patel. No Further Action required letter has been sent to Mr. John Domenico. Case closed as per Mr. Jeff Vought. 02/03/06-Hiralkumar Patel. Send out NFA again through fax (212-689-6082) as per John's request."  
 Remarks: "tnak removal found oil on the tank. THERE IS 3 OR 4 DRUMS THAT NEEDS TO BE REMOVED. THE TANK HAS BEEN CUT UP."

**FINDS:**

Registry ID: 110012185349

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 3/11/2003 Sangesland responded to the site of an ECO/Police action at a junk yard. Site has been an active Auto Parts facility for approx 2 years. Site is an irregular T shaped lot (approx 120' x 200') Cement/asphalt appears to cover majority of the lot, unknown if this ground cover is complete and impervious to surface spills. No obvious floor drains could be seen. Unknown if rainwater, auto fluids run into the ground or directly off site. Central area of the yard appears to be the car dismantling area and contains the majority of the spilled auto fluids (oil, transmission fluid, etc.) There is no controled spill containment area (no curbing, collection tank etc). Perimeter of yard was lined primarily with automobile racks (3 cars high). Ground staining appeared weathered and less severe than in the central area. Along with automotive liquids, the yard contained a large number of engines, transmissions, various engine parts and multiple automobile batteries (several appeared damaged and overturned). DEC Requirements: 1) Surface of the yard must be cleaned down to the cement/asphalt level. An integrity inspection will be made to determine if there are any floor drains or open cracks directly to the ground below. 2) A Site Delineation will be required at the property. A series of soil borings will be taken in a grid pattern over the area of the yard and soil/water samples tested to EPA Method 8260, 8770 & heavy metals. 3) Based on the results of the Site Delineation , a Site Remediation Plan will need to be prepared which will identify the procedure to clean up the contamination identified in the delineation. 4/11/2003 - The owner of the property is believed to be Virginia 516-383-9358. She is somehow associated with Yardley Associates . A call was made to this number in an attempt to get a mailing address, but no response was recieved. Lease holder to the site is: Jussain Zulfiquar and/or Anwar Javed. 5/7/2003 Sangesland spoke with Virginia Lupoli (owner) She inherited the property from her father. Yardley Associates LLC is the corporate name for the owner. Sangesland outlined the work which will be required on this site. 1) Power wash the lot to determine the condition of the black top or cement pavement 2) Geo Probe of site to determine the subsurface condition of the site. 3) A 60 day limit will be put in the letter. 4) A list of state contractors will be forwarded with the letter Contact info: Yardley Associates LLC Attn: Virginia Lupoli P.O. Box 237 Cold Spring Harbor, NY 11724 Fax # 631-385-4477 11/4/2003 Sangesland reviewed an Environmental Site Assessment for this site prepared by Dr. Norman Munroe (917-497-0190) of Astem Labs Inc. Report states that the entire site is capped with a cement pad between 8 and 24 thick. There did not appear to be any open preferential pathways directly to the soil. The report did not outline the path for rain water runoff or recharge. Report outlines soil boring work done on the site along with some ground water sampling. Some minor soil VOC hits (BTEX) in BH-2, BH-4 and BH-9 One minor groundwater hit for Benzene & MTBE in BH-4 SVOC's for soil and water were below regulatory limits Heavy metal concentrations in soil samples exceeded regulatory limits for several metals including: lead arsenic, cadmium, chromium and copper. Based on this information, the case is closed with no further action required."

Remarks:

"DEC SPILLS GROUP CALLED TO SITE OF POLICE ACTION AT A JUNK YARD. SITE HAD SPILLS OF AUTO RELATED LIQUIDS OVER ENTIRE YARD AREA."

DEC Memo: "4/25/07 bf: sent ttf letter to: Eric Levor Queens Plaza Realty Corp. 25-12 41 Avenue Long Island City, NY 11101-3882 5/25/07 received passing tightness test results by fax from Eric Lovor. Tried calling him at number on fax:(718)392-2123. No answer. To close this spill, he needs to submit a response to ttf letter. bf 5/29/07 Called E. Levor again and there was no answer. Called Emergency Contact # from PBS facility info (718)263-2418 and left message to call me back. bf 6/4/07 Called E. Levor at (718)392-2123. The number is no longer in service. I then left a message at (718)263-2418. bf 6/5/07 Received 2 messages from Edith Levor to call back. (718)392-2123. Called her at 3:45 Pm and she said that the tank failed the test because there were two sets of vent pipes. The old vent pipe was never disconnected. She said she will call Advanced Tank after she hangs up with me and have them prepare a response to the ttf letter. bf 11/8/07 Called E. Levor. Left message that i still have not received letter from Advanced Tank and to call me back. Called Vinnie the Tank Doctor (718)727-0666. He said that there was an open line from a hot water heater and he plugged the line. No contaminated soil was found. He faxed paperwork to E. Levor. He was not in his office and requested I call him Monday. He will check to see if he still has the fax. bf 11/26/07 Received message from E. Levor. Called her back and left message on her machine. bf 1/22/10 Inspected site and issued NOV for expired registration, failure to monitor unmetered tank for leaks, and failure to contain/reomve petroleum discharge. Administrative settlement conference is scheduled for 2/17/10 at 10:30 AM. bf 2/17/10 PBS Settlement Conference held today. Attended by Edith and Eric levor. Provided 6/7/07 letter from Tank Doctor Inc. stating that 2 unused lines from top of tank were disconnected in building. Removed lines and tank retested and passed. NFA. bf "

Site Description: Location: The 11,200 square foot (0.26 acre) site is located at 3545 35th Street, Long Island City, NY in an urban area. The site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The site is occupied by a 1 to 2 story commercial dry cleaner. Current Zoning/Use(s): The site is zoned as M1-5, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The Site is an industrial building conducting dry cleaning operations

since 1975. The site is a RCRA large quantity generator (EPA ID # NYD981132459) of spent solvent, waste code F002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site (site no. 241139) generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater in the vicinity of the site was encountered at approximately 17 to 20 feet bgs and flows towards the southwest.

Env Problem: Nature and Extent of Contamination: Information is based on the results of a site characterization investigation performed at the nearby Former Luft Co. Inc. Cosmetics Manufacturer site (241139). That investigation was triggered by the discovery of elevated levels of cVOCs in the indoor air and sub-slab vapor of the school building on that site. The subsequent Supplemental Site Investigation (SSI) indicated that elevated concentrations of cVOCs (namely PCE) existed along the adjacent sidewalk on the western side of 35th Street and the south-eastern section of the school building. The addendum to the SSI ascertained that the Former Luft Cosmetics site was not a source of the contamination. Seven groundwater wells were installed upgradient and cross gradient of the school and samples taken at the groundwater interface. One well was installed adjacent to and another just downgradient of the Teitelbaum site. Groundwater Several cVOCs associated with chlorinated solvents, namely, tetra-chloroethylene (PCE) and its breakdown products tri-chloroethylene (TCE) and cis-1,2-dichloroethylene (cis-DCE), were detected at elevated levels from groundwater samples taken at the groundwater interface at locations along the adjacent sidewalk and downgradient of the Site. PCE, cis-DCE and TCE concentrations were at orders of magnitude of the TOGS SCG of 5 g/l; trans-DCE and 1,1-DCE were also detected at levels above the SCG. Concentrations of cVOCs decreased in the downgradient direction consistent with the inferred contaminant plume. The groundwater flow direction was identified as southwesterly by the Addendum to the Supplemental Site Investigation Report (ASSIR) of the nearby Former Luft Co. Inc. Cosmetics Manufacturer site. Significant Threat: Evaluation of significant threat will be made following completion of the Site Characterization. This Site has entered the Brownfield Cleanup Program (BCP). Executed Brownfield Cleanup Agreement signed on 01/09/2014. See site no. C224149 for further updates.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The 11,200 square foot (0.26 acre) site is located in an urban area in the Astoria section of the Borough of Queens. The Site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The Site is currently improved with one 100 ft by 100 ft (approximately 10,000 square feet) commercial/manufacturing building. The ground floor is currently utilized for dry cleaning operations and a portion of the building contains a second floor for office space and storage. Current Zoning and Land Use: The site is zoned M1-5 (manufacturing and light industrial) and is surrounded by industrial, commercial and residential uses. Past Use of the Site: The site has been a commercial dry cleaner operating under various names and ownership since 1952. Site Geology/Hydrogeology: The Site is generally level

Env Problem:

and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. Groundwater in the vicinity of the site was encountered at 17-20 feet bgs and flows towards the southwest.

Nature and Extent of Contamination: As part of the Remedial Investigation (RI) soil, groundwater and soil vapor were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon the results of the RI, the primary contaminants of concern for the site include tetrachloroethene (PCE) and its breakdown products. Soil - Highly elevated concentrations of CVOCs ranging from 360 to 1100 ppm of PCE were found in soils collected from the northwestern portion of the Site in proximity to an abandoned UST. The UST grave likely created a depression in the subsurface resulting in a preferential pathway for chlorinated solvent contamination to pool. Based upon data collected to date, this area is considered to be the source of chlorinated solvent contamination in groundwater and soil vapor on and off the Site. CVOC impacts in this area extend vertically from approximately 5 to 20 ft-bg and are limited to a radius of approximately 15 to 20 feet, using SB-1/SB-17 (located in the NW section) as the center point. CVOC concentrations drastically decrease in soil outside of this radius and are generally not detected above Unrestricted Use SCOs outside of a 30 foot radius. Groundwater - Groundwater results from the RI indicate that elevated concentrations of chlorinated solvents are present throughout the Site and are migrating offsite. PCE concentration was 120 ppb in the source area mentioned above and 130 ppb just down gradient and off-site sampled a year before. Chlorinated solvent contamination is consistent with current and former Site operations. Concentrations of chlorinated solvents as measured in both on-site and off-site wells have decreased during the performance of this RI [2014 2017]. Soil Vapor - The results of the RI soil vapor investigation indicate that elevated concentrations of chlorinated solvents are present in soil vapor within the Site boundaries (maximum 328,000 g/m<sup>3</sup> of PCE) and extend offsite to the west, north and south (maximum 2860 g/m<sup>3</sup> of PCE).

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Sent ttf letter to: Dominic Casamento 2403 41st LLC 14-38 31st Drive Long Island City, NY 11106 Mr. Casamento called back later in the day. He said Petroleum Tank Cleaners will be coming back on Monday to make necessary repairs. He said they told him it was a dry leak. I confirmed the above address as his mailing address. He is on vacation and will be returning Monday. bf 4/2/08 received fax from M. Salamack of PTC. Tank was emptied and lines and tank were isolated. vent line was hit by a vehicle as tank is under a driveway area. Vent line was replaced to a different area to prevent future accidents. Tank was retesed 3/10/08 and passed. Test results attached. NFA. bf"

Remarks: "DRY PORTION LEAK"

DEC Region: 2  
DER Facility ID: 149087  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 6/4/2002 - Sangesland called Dave Fazin at Crown Leak Detection (516-939-2959) to find out if repair work was ever done to this tank. If so, Crown needs to submit a letter stating that: tank was welded, past a tank test, no visible sign of leakage. 4/14/06 - L. Alden - suggested action: Re-establish contact with Crown Leak Detection or site owner. 11/16/06 - Austin - Reassigned to Ketani for followup/review - end 12/1/06 - Raphael Ketani. The original caller was David Fazin of Crown Leak Detector (516) 939-2959. The TTF was on 3/26/02 and was the result of a failed epoxy patch. The patch was supposed to be rewelded and the tank system retested. Gus Tsambas (718) 721-2688 was involved with the site. PBS case #2-607845 with a 1500 gal. tank in service with #2 oil. The owners are Algus Realty Co., 25-26 33 Street, Astoria, NY, 11103, (718) 721-2688. I made contact with Mr. Tsambas. The phone number was his home. He said he has the passing test results and he will send it to me. He said that the tank sits on the concrete floor and the patch is on the top of the tank. He said that no oil was released. 12/12/06 - Raphael Ketani. Mrs. Gallun of the Gallun Agency (718) 728-8120 called to ask what DEC needed to close the spill case. I told her we needed a new tank system test showing that the system is tight. She said she will have the super. call the oil company and arrange such a test, and send me the results. 1/4/07 - Raphael Ketani. I received the passing tank test results from Mr. Tsambos. Based upon these results and Mr. Tsambos' statement to me on 12/1/06 that no oil was released, I am closing the spill case. 1/10/07 - Raphael Ketani. I received a copy of the passing tank test results from the Gallan Agency - Insurance and Real Estate."

Remarks: "EPOXY PATCH ON TANK - WILL BE CLEANED,WELDED AND RETESTED"
