DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC INSPECTOR NOTES. 5-17-99 2:15 pm Transformer oil according to C. Kovari. Found new leak, started cleaning and found historical contamination around transformer #3. Test shows 173ppm PCB. 6-6-01 Foley and Rodriguez inspected substation. Wet stain on bluestone noted as new oil from a leak from top of transformer that occurred last week according to station operator Machi. Historical contamination was seen around entire transformer. Bluestone to be removed. (KMF 6/13/01) 3/8/04: Bluestone and soil removal completed by Con Edison - post-excavation samples indicate no elevated concentrations of contamination. Close out. (JHO) ~~~~~~~~~~~~~~~~~~~~~~~~ CON ED E2MIS 124720: At Jamaica S/S found approx. 1/2 pt transaformer oil leaked from Transformer #3 onto bluestone. No sewers or waterways affected. Absorbant pads placed on affected area. Cleanup pending test results. 5-17-99 19:50 Cleanup was completed on May 11,1999. Field forces removed /recovered liquid /soilds, excavated contaminated soil and bluestone, and placed oil absorbant pads. The samples taken from the 27 KV bus cans came back with a PCB count of <1ppm. The soil results from the same area indicated a PCB count of 176ppm; from the main body <3ppm; from the radiator bank soil <1ppm. 05-JAN-2000 18:30 ELECTRONIC DOCUMENTATION OF BLUESTONE SAMPLES TAKEN FROM THE SIX DISPOSAL DRUMS RECEIVED FROM PETER SUDOL INDICATES THE FOLLOWING COUNTS FOR PCB: DRUM # 99-170-067 (10 PPM, AS PER LSN 99-05450-001) DRUM # 99-170-068 (31 PPM, AS PER LSN 99-05450-002) DRUM # 99-170-070 (3 PPM, AS PER LSN 99-05450-003) DRUM # 99-170-071 (3 PPM, AS PER LSN 99-05450-004) DRUM # 99-170-072 (2 PPM, AS PER LSN 99-05450-005) DRUM # 99-170-073 (4PPM, AS PER LSN 99-05450-005) 6/18/01 Lab Sequence Number: 01-06225-001 SAMPLE POINT #1 PCB 30 PPM Lab Sequence Number: 01-06225-002 SAMPLE POINT #2 PCB 4 PPM Lab Sequence Number: 01-06225-003 SAMPLE POINT #3 PCB 715 PPM Lab Sequence Number: 01-06225-005 SAMPLE POINT #5 PCB <1 PPM Lab Sequence Number: 01-06225-006 SAMPLE POINT #6 PCB <1 PPM Lab Sequence Number: 01-06225-007 SAMPLE POINT #7 PCB <1 PPM Lab Sequence Number: 01-06225-008 SAMPLE POINT #8 PCB <1 PPM Lab Sequence Number: 01-06225-009 SAMPLE POINT #9 PCB <1 PPM Lab Sequence Number: 01-06225-010 SAMPLE POINT #10 PCB <1 PPM 6/2/03 As per maxmio # 0000105753 TRANS #3 A,B,AND C PHASES - LEAKS BY VENTS AND RADIATORS has been completed the incident may be closed."

Site Description:	Location: The 0.114 acre (4950 square feet) site is located at 87-83 139th Street in Jamaica, Queens County, NY, in an urban area. Site Features: The Site currently consists of a vacant 2-story steel frame construction building, with a small alley located adjacent to the northern side of the building. Current Zoning and Land Use: The site is currently zoned as C2-4 (commercial) and is located adjacent to a commercial facility to the north, and a residential property to the south. Past Use of the Site: This site was utilized by Duraspec Electroplating from 1998 to 2015. Duraspec Electroplating performed chromium, nickel, cadmium, copper, gold, nickel, silver, and zinc electroplating. The facility had a wastewater treatment area in the eastern portion of the building. In July 2000 a fire in a neighboring building caused damage to some electroplating process tanks and containers of virgin chemicals stored in the alley. A second fire occurred inside the facility in August 2000 which resulted in significant damage to its plating tanks and wastewater treatment

FORMER DURASPEC ELECTROPLATING (Continued) **S121933854**

units. A significant amount of plating solutions and untreated wastewater were released to the floor. The property was purchased by Hastings Capital, LLC in January 2016. Facility decommissioning and closure is being completed by the new owner under an approved RCRA Closure Plan. EPA ID no. NYD012379798 is associated with the site. Site Geology and Hydrogeology: Groundwater this site is approximately 40 ft below grade.

Env Problem: Nature and Extent of Contamination: Shallow soil samples and groundwater samples have been collected at the site and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and PCBs. Contaminants of concern identified in soil include metals. Soil As a result of contamination found in the soil borings collected in January 2017, a total of 1,357 tons of soil were excavated and removed. Excavation endpoint samples identified cadmium at a maximum concentration of 420 parts per million (ppm), chromium at a maximum concentration of 610 ppm, silver at 47 ppm, mercury at 0.3 ppm, and cyanide 110 ppm. Groundwater Petroleum VOCs ethylbenzene and xylene were detected in one of the 2 on-site monitoring wells at concentrations of 38 parts per billion (ppb) and 8 ppb, respectively. Other petroleum VOCs were also found at concentrations nominally above their respective groundwater standards. The VOCs are likely attributable to a spill on an adjacent gas station. No VOCs or dissolved metals were detected at concentrations exceeding the groundwater standards. Soil Vapor no soil vapor samples have been collected. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental or human health significant threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Updated By: MJKOMORO
Site Description: Location: The 107-35 Merrick Boulevard site is located in a generally residential and commercial area in the Jamaica section of Queens, New York. The site is bordered by Merrick Boulevard to the west, an auto repair shop to the north, a mixed-use building to the south, and residential homes to the east. The site is approximately .488 acres (21,282 square-feet) in area. Site Features: The property is improved with a single one-story, 3,800 square-foot, slab on grade commercial building. A large portion of the site consists of either an asphalt or gravel parking lot. Site access is restricted through the presence of a steel panel fence along Merrick Boulevard. Current Zoning and Land Use: The site is currently zoned for residential and commercial use and sits within an R4-1 zoning district with a C2-4 commercial overlay. The site is currently vacant. Past Use of the Site: The on-site building was constructed in 1973 and was used most recently as a diesel bus repair facility. Other past uses include a knitting mill, gasoline service station, and home heating oil delivery operation. These past uses are considered to be of environmental concern. A Phase 1 Environmental Site Assessment dated April 17, 2014 and the Draft Remedial Investigation Report dated June 2018 have been completed for this property. Site Geology and Hydrogeology: The site is underlain by asphalt pavement and supporting rocky fill to a depth of approximately six inches. Below the rocky fill is brown fine-grained sand grading into reddish-brown, stratified to medium to coarse grained sands with sub-rounded quartz pebbles and sub-angular rock fragments. These sands are likely native glacial outwash deposits and continue to a depth of 20 feet below ground surface (bgs). Depth to bedrock is approximately 450 feet. Depth to groundwater is approximately 14 to 14.5 feet bgs. Groundwater flows from north to south across the site based on well data.
Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based on investigations performed to date, the primary contaminants of concern are elevated tetrachloroethene(PCE) and trichloroethene(TCE). Soil Vapor - concentrations of PCE in soil

107-35 MERRICK BLVD-OER (Continued) **S122449255**

	vapor range from 1,080 g/m3 to 552,000 g/m3 along with a maximum concentration of TCE detected on site of 2,250 g/m3 in the five on-site soil vapor probe locations sampled. Soil - no VOCs, SVOCs, metals, PCBs, or pesticides were detected above6NYCRR Part 375-5 Commercial Soil Cleanup Objectives (SCOs). Four SVOCs, Benzo(a)anthracene (UUSCO 1ppm, max. 1.1ppm), Benzo(b)fluoranthene (UUSCO 1ppm, max. 1.5ppm), Chrysene (UUSCO 1ppm, max. 1.3ppm), and Indeno(1,2,3-c,d)pyrene (UUSCO .5ppm, max. .85ppm), exceeded their Unrestricted Use SCOs. Other Unrestricted Use SCO exceedances include copper (UUSCO 50ppm, max. 181ppm), lead (UUSCO 27ppm, max. 125ppm), mercury (UUSCO .18ppm, max. .24ppm), and zinc (UUSCO 109ppm, max. 233ppm). Groundwater - concentrations for PCE slightly exceeded New York State Groundwater Quality Standards with a maximum concentration of 6.3 ug/l (NYSGWS max. 5 ug/l). Additionally, sodium and manganese were detected above their respective standards in all seven well samples. Further site investigation is needed to determine the extent and possible source of site-related contamination.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

UTM Y (Meters):	4505779.5
Elevation:	38 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940539 JAMAICA, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

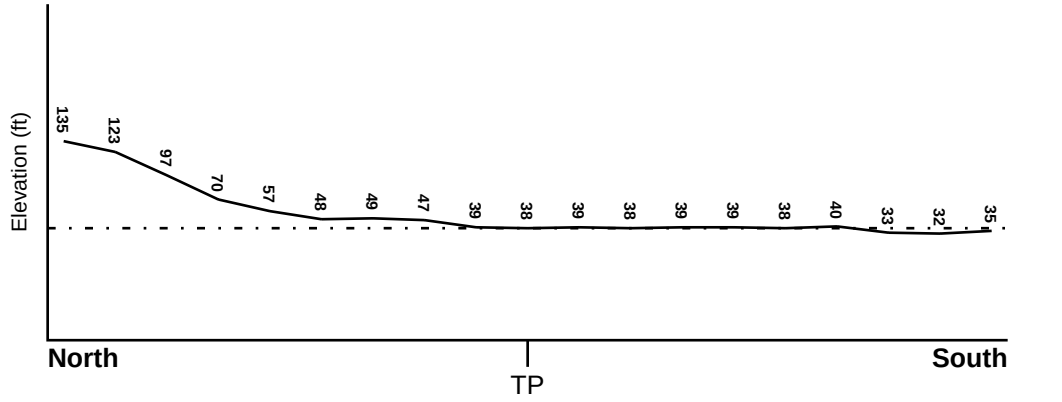
TOPOGRAPHIC INFORMATION

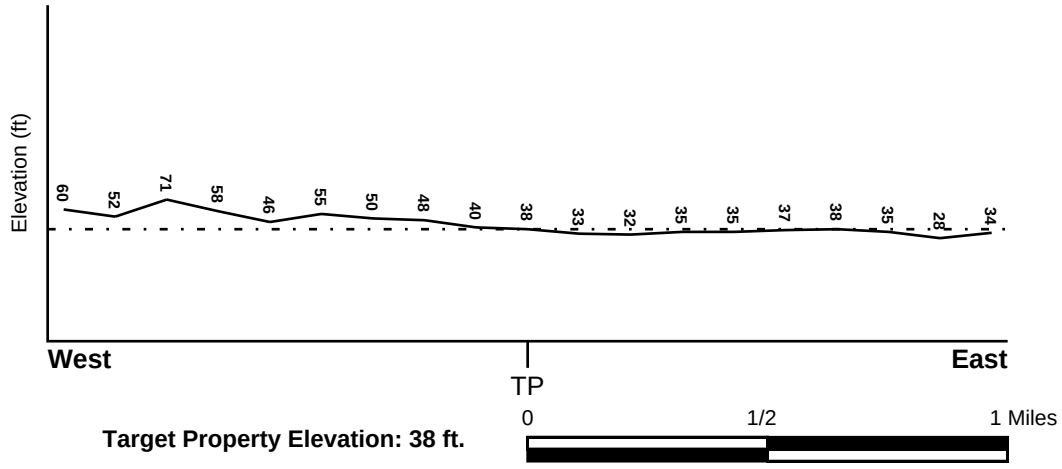
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





0 1/2 1 Miles

Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970059B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
3604970229F	FEMA FIRM Flood data
3604970067B	FEMA Q3 Flood data
3604970237F	FEMA FIRM Flood data
3604970241F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
JAMAICA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic

Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

95-04 149TH STREET, QUEENS, NY 11435
95-04 149TH STREET
JAMAICA, NY 11435

TARGET PROPERTY COORDINATES

Latitude (North):	40.698633 - 40° 41' 55.08''
Longitude (West):	73.804112 - 73° 48' 14.80''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	601036.5
UTM Y (Meters):	4505779.5
Elevation:	38 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940539 JAMAICA, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

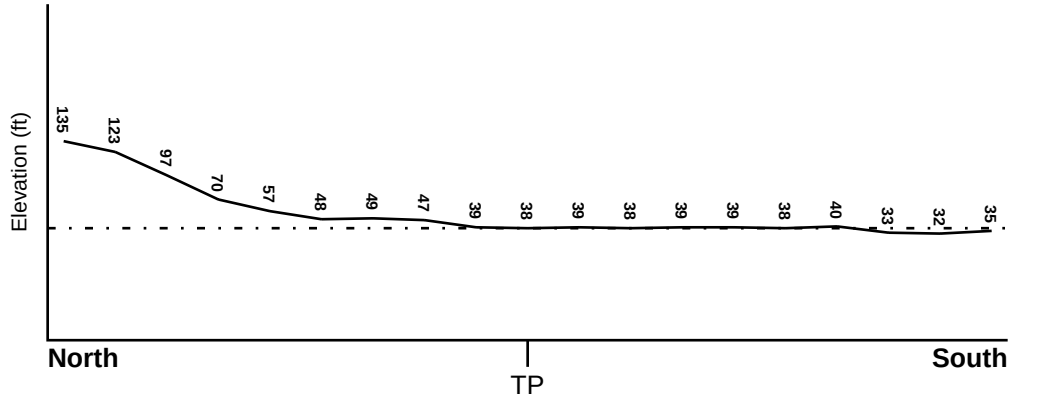
TOPOGRAPHIC INFORMATION

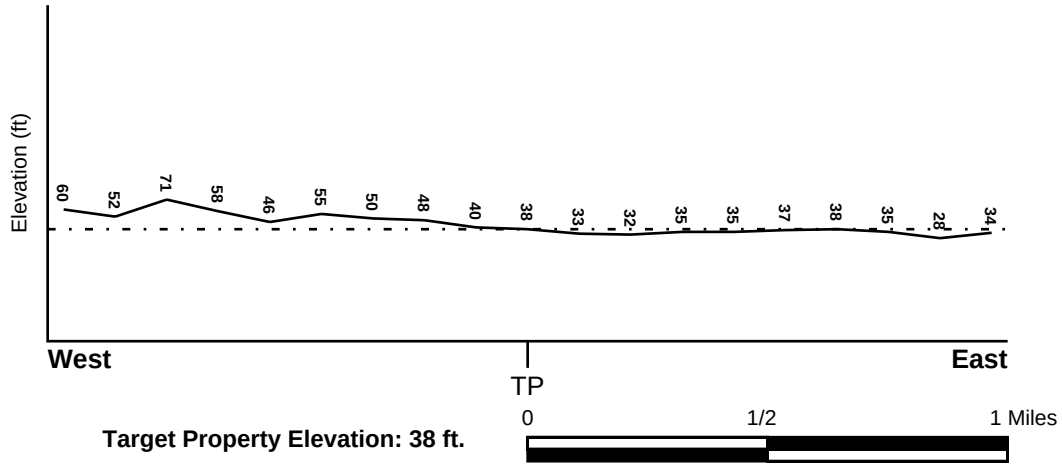
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





0 1/2 1 Miles

Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970059B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
3604970229F	FEMA FIRM Flood data
3604970067B	FEMA Q3 Flood data

3604970241F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
JAMAICA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Appendix C:

Additional Reviewed Records

Appendix C: Proposed (E) Designations

A. INTRODUCTION

Under the proposed zoning, (E) designations are proposed to avoid impacts on projected or potential development sites with respect to hazardous materials, air quality (heating systems and industrial sources), and noise. A description of the requirements of those (E) designations follows. A list of the sites, blocks and lots affected by the (E) designations is presented in Tables C-1 through C-9. The descriptions and requirements of the proposed (E) designations are presented below.

B. HAZARDOUS MATERIALS

There are two mechanisms that are applied to avoid the potential impacts to sites with respect to hazardous materials. For privately owned sites it is an (E) designation that is mapped as part of the zoning. For City-owned sites it is a Memorandum of Understanding. Both approaches are described below.

(E) DESIGNATION SITES (PRIVATELY OWNED SITES)

As described in Chapter 11, "Hazardous Materials," a number of projected and potential development sites in the study area have the potential to be impacted by hazardous materials. In order to avoid impacts from hazardous materials, an (E) designation would be placed on these sites as part of the proposed zoning. The sites with the need for hazardous materials (E) designations are presented in Tables C-1 and C-2.

By placing (E) designations on sites where there is a known or suspect environmental concern, the potential for an adverse impact to human health and the environment resulting from the proposed action is eliminated. The (E) designation provides the mechanism for identifying and remediating environmental conditions with respect to hazardous materials. The New York City Department of Environmental Protection (DEP) would provide the regulatory oversight of the environmental investigation during this process. Building permits are not issued by the Department of Buildings without prior DEP approval of the investigation and/or remediation pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements).

The (E) designation requires that the fee owner of the site conduct, as necessary, a Phase 1 Environmental Site Assessment, a site sampling and testing protocol and remediation, as necessary, to the satisfaction of the NYCDEP. The (E) designation also includes a mandatory construction-related health and safety plan that must be approved by NYCDEP. Under the (E) designation, the following tasks are undertaken:

Task 1 – The applicant submits to the NYCDEP Bureau of Environmental Planning and Assessment (BEPA), for review and approval, a Phase 1A of the site along with a soil and

groundwater testing protocol including a description of methods and a site map with all sampling locations clearly and precisely represented.

If site sampling is necessary, no sampling should begin until written approval of a protocol is received from DEP. The number and location of sample sites should be selected to adequately characterize the site, the specific source of suspected contamination (i.e., petroleum based contamination and non-petroleum based contamination) and the remainder of the site's condition. The characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of sampling data. Guidelines and criteria for selecting sampling locations and collecting samples are provided by DEP upon request.

Task 2 – A written report with findings and a summary of the data must be submitted to DEP after completion of the testing phase and laboratory analysis for review and approval. After receiving such results, a determination is made by DEP if the results indicate that remediation is necessary.

If DEP determines that no remediation is necessary, written notice shall be given by DEP.

If remediation is indicated from the test results, a proposed remediation plan must be submitted to DEP for review and approval. The applicant must complete such remediation as determined necessary by DEP. The applicant should then provide proper documentation that the work has been satisfactorily completed.

A DEP-approved construction-related health and safety plan would be implemented during evacuation and construction and activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil and/or groundwater. This Plan would be submitted to NYCDEP for review and approval prior to implementation.

CITY-OWNED SITES

In addition to the sites receiving (E) designations, there are several City owned properties that have been identified as having the potential for hazardous materials contamination. Because these sites are under City ownership, they are not subject to the regulations governing (E) designations. The agencies that own and control these sites have entered into Memoranda of Understanding or other agreements with DEP to ensure that any testing and remediation activities, as deemed necessary by DEP in accordance with DEP requirements, are performed prior to and/or during development of or a change in use on these sites. (See Table C-3, "City Owned Projected and Potential Development Sites with Hazardous Materials.")

C. AIR QUALITY

HEATING SYSTEM EMISSIONS

Under the proposed actions, for each of the 43 development sites that failed the HVAC screening analysis, a refined analysis was performed utilizing the ISC3 dispersion model (see Chapter 18,"Air Quality"). The results indicated that 30 of the 42 sites that failed the screening analysis also failed the refined analysis, for No. 2 oil. If minimum distances are increased from the most conservative distance (building line to building line) no significant adverse impacts are predicted at 21 of these 30 development sites. All of the sites analyzed with the ISC3 model would pass the analysis if natural gas is utilized as the fuel type.

To preclude the potential for significant adverse air quality impacts on other projected and potential developments from the HVAC emissions, an (E) designation would be incorporated into the propose rezoning for each of the affected sites. The (E) designations for these sites with respect to HVAC systems is presented in Tables C-4 and C-5.

INDUSTRIAL SOURCES

As discussed in Chapter 18, "Air Quality" analyses were undertaken to identify manufacturing and industrial uses within 400 feet of the projected and potential development sites. In order to avoid impacts on these sites due to local industrial source emissions an (E) designation for air quality could be incorporated into the rezoning proposal on these affected sites. The (E) designations for those sites affected by industrial sources is presented in Tables C-6 and C-7.

As currently proposed, the (E) designations would require that new residential and/or commercial development, enlargement, or change of use would meet specified conditions designed to preclude adverse air quality effects. Specifically, fee owners of properties on which the (E) designations would be mapped would need to demonstrate to NYCDEP that any new development, enlargement, or change of use has inoperable windows and does not include air intakes, unless such intakes incorporate alternative design features and/or technologies recognized as effective under industry standards. New York law requires operable windows in habitable portions of residential buildings and residential development, enlargement, or change of use on the referenced property is therefore restricted under current conditions.

These conditions would apply only if the emissions and/or contaminants identified in the air quality analyses were to continue to be present at the time that the fee owner of the property subject to the (E) designation seeks to satisfy the (E) requirements. If the fee owner could demonstrate to NYCDEP that the emissions, contaminants, or exposure pathways no longer existed or have been reduced below impact levels, the conditions would not apply.

Chapter 18, "Air Quality," has been updated since the Draft Environmental Impact Statement (DEIS) to reflect changes to the Reasonable Worst-Case Development Scenario. Between the DEIS and the FEIS, further analyses of industrial sources were undertaken in coordination with NYCDEP. The further analyses have resulted in the elimination of (E) designations from many projected and potential development sites. Specifically, the further analyses consisted of the following:

- Analyses from the DEIS were refined to reflect the NYSDEC policy at sites where there were predicted exceedances of a SGC or AGC for a criteria pollutant, but where the NAAQS were met for the same pollutant.
- NYCDEP conducted site inspections at certain concrete batching plants that provided more accurate information for determining concentrations of particulate matter at development sites.
- NYCDEP conducted site inspections of a metal plating facility and a facility with process ovens, and the analyses from the DEIS were revised to reflect existing operations that are in compliance with all applicable legal requirements.
- Sensitivity analyses were conducted incorporating additional control technologies or increased stack heights at certain facilities.

As a result of the above refinements and site inspections, (E) designations were eliminated from many projected and potential development sites, and one (E) designation was limited to specific

lot lines for potential development site 384. Because the City cannot currently require the measures analyzed under the sensitivity analyses, (E) designations could not be eliminated as a result. Finally, since the DEIS, the City was unable to identify any design features or technologies that developments could incorporate to reduce or eliminate the impacts that would be avoided by the (E) designation. This, however, would not preclude future developments from incorporating such design features or technologies that become recognized as effective by industry standards.

D. NOISE

As described in Chapter 19, "Noise," a number of projected and potential development sites require noise attenuation in order to avoid impacts from ambient noise. In order to avoid these impacts, an (E) designation would be mapped on these sites as part of the proposed zoning. Three factors were considered in the analysis of noise attenuation: 1) whether a development site would require attenuation of 30 dBA or greater; 2) whether the site is currently in a zoning district that does not allow residential uses (e.g., an M or C8 zone); and 3) whether the site is currently in a zoning district that would allow residential in the No-Action (e.g., R6). If a site met the first two criteria, it was determined to need an (E) designation. If the site fell under the last criteria, and it could be developed with a residential use in the No-Action, it would not receive an (E) designation.

There are three levels of required noise attenuation depending upon the ambient noise levels, one is 30 dBA, 35 dBA, and 40 dBA. The text for the (E) designation for sites requiring 30 dBA is as follows:

> **"In order to ensure an acceptable interior noise environment, future residential/commercial uses must provide a closed window condition with a minimum of 30 dBA window/wall attenuation on all façades in order to maintain an interior noise level of 45 dBA. In order to maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning sleeves or HUD approved fans."**

The projected and potential development sites where the 30 dBA level of noise attenuation would be required are presented in Table C-8 (projected sites) and C-9 (potential sites).

For sites requiring 35 dBA noise attenuation, the following (E) designation noise text would apply:

> **"In order to ensure an acceptable interior noise environment, future residential/commercial uses must provide a closed window condition with a minimum of 35 dBA window/wall attenuation on all façades in order to maintain an interior noise level of 45 dBA. In order to maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, central air conditioning."**

For facades requiring 40 dBA noise attenuation, the following (E) designation noise text would apply:

> **"In order to ensure an acceptable interior noise environment, future residential/commercial uses must provide a closed window condition with a minimum of 40 dBA window/wall attenuation in order to maintain an interior**

noise level of 45 dBA. To achieve 40 dBA of building attenuation, special design features that go beyond the normal double-glazed windows are necessary and may include using specially designed windows (i.e., windows with small sizes, windows with air gaps, windows with thicker glazing, etc.), and additional building attenuation. In order to maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, central air conditioning."

With the attenuation measures specified above, the proposed rezoning would not result in any significant adverse noise impacts, and would meet CEQR guidelines.

Between the DEIS and the FEIS additional monitoring was undertaken at 25 additional locations in the study area for the purposes of gathering supplemental noise data relative to determining ambient noise conditions and project impacts for the FEIS. This involved supplemental noise monitoring around locations where measured $L_{10(1)}$ values reported in the DEIS indicated that 40 dBA of attenuation would be necessary to satisfy CEQR interior noise requirements. The purpose of these additional measurements and subsequent analyses performed for the FEIS was to identify which development sites and/or facades of those sites would require 40 dB of attenuation and which development sites and/or facades of those sites would require less attenuation. As a result of these efforts, certain sites along higher-level noise corridors in the project area were confirmed to require 40 dB of attenuation (e.g., Jamaica Avenue, Van Wyck Expressway). However, at other locations or facades of buildings, based on the supplemental noise monitoring, it was determined that less than 40 dB of attenuation (i.e., 35 dB of attenuation) would be adequate to satisfy CEQR requirements. Appendix C of this FEIS Appendix C, "Proposed (E) Designations" has been modified to reflect this additional noise monitoring work.

The (E) designations for these sites affected by ambient noise are presented in Tables C-8 and C-9.

(E) Designations for Projected Development Sites (Air Quality, HVAC Restrictions)

Site #	Block	Lot	Restriction
41	9681	47 and 49	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
45	9681	56	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
50	9681	62	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
51	9681	64	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
52	9681	71	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
53	9681	73	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
56	9681	85	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
57	9681	87 and 90	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
58	9681	91, 93, and 94	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
79	9694	44, 47, and 49	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 70 feet from the lot line facing Hillside Avenue when firing No. 2 oil, or at least 20 feet from the same lot line when firing natural gas, to avoid any potential significant air quality impacts.
88	9697	52	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 60 feet from the lot line facing Hillside Avenue when firing No. 2 oil, or at least 10 feet from the same lot line when firing natural gas, to avoid any potential significant air quality impacts.
127	9760	82	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 161st Street, to avoid any potential significant air quality impacts.
128	9761	14	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 20 feet from the lot line facing Jamaica Avenue when firing No. 2 oil, to avoid any potential significant air quality impacts.
131	9761	80	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Jamaica Avenue, to avoid any potential significant air quality impacts.
133	9761	95	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems exclusively, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 162nd Street, to avoid any potential significant air quality impacts.

Table C-4 (cont'd)
(E) Designations for Projected Development Sites (Air Quality, HVAC Restrictions)

Site #	Block	Lot	Restriction
154	9763	47	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
155	9763	51	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 153rd Street when firing No. 2 oil, to avoid any potential significant air quality impacts.
202	9816	49	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
217	9834	1, 3, 5, 6, 8, and 10	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
228	9835	33	Any new residential and/or commercial development must utilize natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 20 feet from the lot line facing Hillside Avenue, to avoid any potential significant air quality impacts.
230	9837	1	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
231	9837	10	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
250	9913	25, 35, and 41	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
252	9914	40	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
271	9950	64	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Dalny Road, to avoid any potential significant air quality impacts.
272	9950	70	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 20 feet from the lot line facing Avon Road, to avoid any potential significant air quality impacts.
299	9998	22, 25, 42, 43, and 47	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
302	9999	1, 9, 10, 11, 13, 15	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
302	10000	1	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
381	10058	1, 21	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 30 feet from the lot line facing 105th Avenue when firing No. 2 oil, to avoid any potential significant air quality impacts.
403	10101	7	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 20 feet from the lot line facing 160th Street, to avoid any potential significant air quality impacts.

Table C-4 (cont'd)

(E) Designations for Projected Development Sites (Air Quality, HVAC Restrictions)

Site #	Block	Lot	Restriction
404	10101	9	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Archer Avenue and at least 10 feet from the lot line facing 160th Street, to avoid any potential significant air quality impacts.
405	10101	15	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 70 feet from the lot line facing Archer Avenue when firing No. 2 oil, or at least 20 feet from the same lot line when firing natural gas, to avoid any potential significant air quality impacts.
470	10155	1	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 40 feet from the lot line facing Archer Avenue when firing No. 2 oil, or at least 10 feet from the same lot line when firing natural gas, to avoid any potential significant air quality impacts.
471	10155	1, 8, 9, 10, 11, 12, 16, and 210	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.

Table C-5
(E) Designations for Potential Development Sites (Air Quality, HVAC Restrictions)

Site #	Block	Lot	Restriction
38	9681	41	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
39	9681	43	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
42	9681	50	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
43	9681	52	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
44	9681	54	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
46	9681	58	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
47	9681	59	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
48	9681	60	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
49	9681	61	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
54	9681	83	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
55	9681	84	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
84	9697	41	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 150th Street and at least 10 feet from the lot line facing Hillside Avenue to avoid any potential significant air quality impacts.
85	9697	43 and 45	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, ensure that the heating, ventilating and air conditioning stack(s) is located at least 40 feet from the lot line facing 150th Street and at least 20 feet from the lot line facing Hillside Avenue when firing No. 2 oil, or at least 10 ft from each of the above mentioned lot lines when firing natural gas, to avoid any potential significant air quality impacts.
87	9697	50	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 30 feet from the lot line facing Hillside Avenue when firing No. 2 oil, or at least 10 feet from the same lot line when firing natural gas, to avoid any potential significant air quality impacts.
147	9763	1	Any new residential and/or commercial development must utilize natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Hillside Avenue, to avoid any potential significant air quality impacts.
149	9763	23, 25, and 26	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
150	9763	36	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
151	9763	42	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.

Table C-5 (cont'd)

(E) Designations for Potential Development Sites (Air Quality, HVAC Restrictions)

Site #	Block	Lot	Restriction
152	9763	44	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
153	9763	45	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
156	9763	55	Any new residential and/or commercial development must utilize natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 153rd Street, to avoid any potential significant air quality impacts.
163	9765	37, 39, and 41	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 60 feet from the lot line facing Hillside Avenue when firing No. 2 oil, or at least 20 feet from the same lot line when firing natural gas, to avoid any potential significant air quality impacts.
199	9814	34	Any new residential and/or commercial development must utilize natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 164th Street, to avoid any potential significant air quality impacts.
201	9816	39 and 41	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
218	9834	16	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
219	9834	20	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
220	9834	26	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
221	9834	28	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
222	9834	33	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
223	9835	23	Any new residential and/or commercial development must utilize natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Hillside Avenue, to avoid any potential significant air quality impacts.
224	9835	26	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Hillside Avenue to avoid any potential significant air quality impacts.
225	9835	28	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Hillside Avenue to avoid any potential significant air quality impacts.
226	9835	30	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Hillside Avenue to avoid any potential significant air quality impacts.

Table C-5 (cont'd)
(E) Designations for Potential Development Sites (Air Quality, HVAC Restrictions)

Site #	Block	Lot	Restriction
227	9835	32	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Hillside Avenue to avoid any potential significant air quality impacts.
229	9835	50	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 20 feet from the lot line facing Wexford Terrace to avoid any potential significant air quality impacts.
251	9914	35	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
253	9915	31	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
254	9915	33	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
266	9937	56	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
267	9937	60	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
268	9944	18	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 30 feet from the lot line facing Avon Street when firing No. 2 oil, to avoid any potential significant air quality impacts.
269	9950	6	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Dalny Road and at least 10 feet from the lot line facing Hillside Avenue, to avoid any potential significant air quality impacts.
270	9950	55	Any new residential and/or commercial development must use natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Avon Street, to avoid any potential significant air quality impacts.
278	9982	12, 13, and 17	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
279	9982	27	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
280	9984	11	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
281	9984	17	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
282	9986	3	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
283	9986	20	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
284	9986	61	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
294	9995	1, 7, 14, and 18	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
295	9995	10 and 12	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.

Table C-5 (cont'd)

(E) Designations for Potential Development Sites (Air Quality, HVAC Restrictions)

Site #	Block	Lot	Restriction
296	9996	16	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
297	9997	97 and 104	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
301	9998	95, 101, 109, 110, 119, 124, and 127	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
347	10030	6	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
348	10030	12	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
349	10030	15	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
350	10030	17 and 22	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
351	10030	25 and 28	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
352	10031	2	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
353	10031	7	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
354	10031	10 and 12	Any new residential and/or commercial development must use natural gas as the type of fuel for HVAC systems.
355	10031	17	Any new residential and/or commercial development must use natural gas as the fuel type for HVAC systems.
382	10059	1	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
383	10059	4	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
384	10059	5 and 6	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
385	10059	11, 12, 15, 23, 24, and 25	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
386	10059	16	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 20 feet from the lot line facing Sutphin Boulevard and at least 20 feet from the lot line facing 105th Avenue when firing No. 2 oil, or at least 10 ft from each of the same lot lines when firing natural gas, to avoid any potential significant air quality impacts.
387	10059	26	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
388	10059	27	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
389	10059	28	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
390	10059	30	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
391	10059	31, 32, 131, and 132	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
392	10060	2	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.

Site #	Block	Lot	Restriction
393	10060	6	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
394	10060	16	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 30 feet from the lot line facing Sutphin Boulevard and at least 40 feet from the lot line facing South Road when firing No. 2 oil, or at least 10 ft from each of the same lot lines when firing natural gas, to avoid any potential significant air quality impacts.
395	10060	25 and 28	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
396	10060	30	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
465	10151	21, 23, and 24	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
466	10151	25	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
467	10151	31 and 32	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
472	10155	24	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
474	10155	123	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems.
574	10318	12	Any new residential and/or commercial development must utilize natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Jamaica Avenue and at least 10 feet from the lot line facing 178th Place, to avoid any potential significant air quality impacts.
575	10318	13	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 178th Place when firing No. 2 oil, to avoid any potential significant air quality impacts.
576	10318	23	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing 179th Place when firing No. 2 oil, to avoid any potential significant air quality impacts.
577	10318	24	Any new residential and/or commercial development must utilize natural gas exclusively as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 10 feet from the lot line facing Jamaica Avenue and at least 10 ft from the lot line facing 179th Place, to avoid any potential significant air quality impacts.
580	10319	1, 6, 12	Any new residential and/or commercial development must use No. 2 oil or natural gas as the type of fuel for HVAC systems, and ensure that the heating, ventilating and air conditioning stack(s) is located at least 20 feet from the lot line facing179th Place, when firing No. 2 oil, to avoid any potential significant air quality impacts.

Table C-6
(E) Designations for Projected Development Sites (Air Quality, Industrial Source Restrictions)

Site #	Block	Lot	Restriction
6	9620	1	Under current conditions, nitric acid emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
7	9620	11	Under current conditions, nitric acid emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
381	10058	1, 21	Under current conditions, particulate matter emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
525	10222	13, 14, 15, 16	Under current conditions, acetaldehyde emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.

(E) Designations for Projected Development Sites (Air Quality, Industrial Source Restrictions)

Site #	Block	Lot	Restriction
526	10223	10	Under current conditions, acetaldehyde emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
529	10223	14, 16	Under current conditions, acetaldehyde emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.

Table C-7
(E) Designations for Potential Development Sites (Air Quality, Industrial Source Restrictions)

Site #	Block	Lot	Restriction
59	9685	1	Under current conditions, nitric acid emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
62	9685	52	Under current conditions, nitric acid, sodium hydroxide, and sulfuric acid emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
63	9685	59	Under current conditions, nitric acid emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
198	9813	25	Under current conditions, tetrachloroethylene emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.

Table C-7 (cont'd)
(E) Designations for Potential Development Sites (Air Quality, Industrial Source Restrictions)

Site #	Block	Lot	Restriction
384	10059	5, 6	Under current conditions, particulate matter emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes (on the east façade facing 148th Street and on the south façade facing 106th Avenue). Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
524	10221	7	Under current conditions, acetaldehyde emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
527	10223	12	Under current conditions, acetaldehyde emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.
528	10223	13	Under current conditions, acetaldehyde emissions from a nearby industrial source require that development, enlargement, or change of use on the referenced property have inoperable windows and may not include air intakes. Development, enlargement, or change of use on the referenced property is restricted under current conditions as a result of these requirements; in particular, New York law requires operable windows in habitable portions of residential buildings and residential development. The City may determine that these requirements are no longer in effect if the emission source is no longer operating, emission levels affecting the referenced property have changed, or new design approaches and/or technologies are developed in the future that are recognized as effective under industry standards.

NEW YORK CITY DEPARTMENT OF HEALTH AND MENTAL HYGIENE

For office use only
CONTROL NUMBER:

FREEDOM OF INFORMATION LAW REQUEST FORM

To: Records Access Officer
NYC Department of Health and Mental Hygiene
42-09 28th Street, 14th Floor, CN 31
Long Island City, NY 11101
Phone: (347) 396-6078/6116
Fax: (347) 396-6087
recordsaccess@health.nyc.gov

Date 11 / 8 / 2019

Dear Record Access Officer:

I, Samuel Ambrose request copies of any inspection reports and/or records located in the Bureau of Environmental, of the New York City Department of Health and Mental Hygiene.

The records pertain to:

- ☐ Lead Poisoning
- ☐ Animal bite
- ☐ Employment/Human Resources
- ☐ Contracts/RFPs
- ☐ Pest Control
- ☒ Environmental for specific property
- ☐ Early Intervention
- ☐ Food Safety
- ☐ Mental Health
- ☐ Communicable Diseases
- ☐ School Health
- ☐ Day Care
- ☐ Other: _____

Please specify/describe the records you are requesting from the above program(s):

Any information the department has regarding on-site septic systems, supply or monitoring wells, Chemical spills health violations or other environmental contamination issues associated with the following properties: 95-04 149th Street, Queens (Block 10001 Lot 1) 95-25 149th Street, Queens (Block 10002 Lot 1) 95-08 + 95-17 150th St Queens (Block 10002, Lots 13 + 10)

There is a charge of 25¢ per page or actual costs of reproduction, payable in advance.

Requester's Name: Samuel Ambrose (Please print) (Signature)

Requester's Organization: PVE LLC

Requester's Address: 108 W 39th St Suite 500 (Street) New York (City) NY (State) 10018 (Zip code)

Telephone Number: (646) 602-4999 E-mail: sambrose@PVE-LLC.com

Appendix F:

Scope and Limitations of Report

SCOPE OF SERVICES

PHASE I ENVIRONMENTAL SITE ASSESSMENT

The main objective of this Scope of Services is to identify recognized environmental conditions, specifically: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. This Scope of Services meets or exceeds Standard Practice E 1527-13 for Phase I Environmental Site Assessments.

A. REVIEW OF ENVIRONMENTAL RECORDS AND HISTORICAL SOURCES

1. Environmental Record Sources

PVE, LLC will obtain and review public records from standard sources that will help identify recognized environmental conditions relevant to the subject property:

Federal NPL Site List
Federal Delisted NPL Site List
Federal CERCLIS List
Federal CERCLIS NFRAP List
State Registered Storage Tanks Lists
Federal RCRA Generators List
Brownfields Sites
Federal RCRA TSD List
Federal ERNS List
State Lists of Hazardous Waste Sites
State Leaking Underground Storage Tank Lists
State Landfill/Solid Waste Disposal Site Lists
State VCP Sites

To the extent necessary, PVE, LLC will check one or more of the following additional records or local sources:

Local Lists of Landfill/Solid Waste Disposal Sites
Fire Department
Planning Department
Local Lists of Hazardous Waste/Contaminated Sites
Building Permit/Inspection Department
Local/Regional Pollution Control Agency
Local/Regional Water Quality Agency
Local Electric Utility Companies
Local Lists of Registered Underground Storage Tanks
Local Records of Emergency Release Reports
Local Records of Contaminated Public Wells
Department of Health/Environmental Division

2. Physical Setting Sources

PVE, LLC will review one or more of the following Physical Setting Sources:

USGS 7.5 Minute Topographic Map
USGS or State Bedrock Geology Maps
USGS or State Groundwater Maps
USGS or State Surficial Geology Maps
Soil Conservation Service Soil Maps

3. Historical Use Information

PVE, LLC will consult one or more historical sources to develop a history of previous uses or occupancies of the subject property in order to identify those uses or occupancies that are likely to have led to recognized environmental conditions:

Aerial Photographs
Property Tax Files
USGS 7.5 Minute Topographic Map
Building Department Records
Fire Insurance Maps
Recorded Land Title Maps
Local Street Directories
Zoning/Land Use Records

B. SITE RECONNAISSANCE

On a visit to the property, PVE, LLC will visually and physically observe the property and any structures (interior and exterior) to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. The site reconnaissance will include:

Periphery of the Property
Interior of Structures
Periphery of Structures
Current Uses of Property

Past Uses of Property
Past Uses of Adjoining Properties
Geologic and Topographic Conditions
Description of Structures
Potable Water Supply
Hazardous Substances
Storage Tanks
Pools of Liquid
PCB Containing Equipment
Stains or Corrosion
Pits, Ponds, Lagoons
Stressed Vegetation
Wastewater
Septic Systems
Current Uses of Adjoining Properties
Uses of Surrounding Properties
Hydrogeologic & Hydrologic Conditions
Roads
Sewage Disposal System
Petroleum Products
Odors
Drums and Containers
Means of Heating & Cooling
Drains & Sumps
Stained Soil or Pavement
Solid Waste
Dry wells, Injection wells, Floor drains

C. INTERVIEWS WITH OWNERS, OCCUPANTS, AND GOVERNMENT OFFICIALS

PVE, LLC will conduct interviews with individuals familiar with the uses and conditions on the subject property. Questions may be asked in person, by telephone, or in writing. An attempt will be made to interview one or more of the following:

User of the Phase I ESA
Owner or Key Site Manager
Current Owners or Occupants
Past Owners or Occupants

and one or more government officials:

Local Fire, Health, or Environmental Agencies

Interviewees will be asked to provide helpful documents, if available:

Site Plans, Maps, Drawings or Surveys
Environmental Site Assessment Reports
Environmental Audit Reports
Environmental Permits
Petroleum Bulk Storage Registrations
Material Safety Data Sheets
Community Right-to-Know Plan
Safety Plans
Hydrogeologic Reports
Notices or Correspondence from Agencies Regarding Environmental Violations
Hazardous Waste Generator Notices or Reports
Geotechnical Studies

D. REPORTPREPARATION

PVE, LLC will prepare a written evaluation of the subject property summarizing results of the Records Review, Site Reconnaissance, and Interviews. The following will be included in the report:

Site and Vicinity Characteristics
Description of Structures and Other Improvements
Current Uses of the Property
Past Uses of the Property
Current & Past Uses of Adjoining Properties (to the extent identified)
Site Location Map
Site Features Map
Summary of Environmental Records
Review Physical Setting
Historical Use
Hazardous Substances Stored, Handled or Disposed
Petroleum Products Stored, Handled or Disposed
Indications of Solid Waste Disposal
Findings and Conclusions
List of Information Sources

Note: No attempt will be made to verify the presence of asbestos, radon, lead-based paint, lead in drinking water, or wetlands. PVE, LLC can provide additional services relating to those matters if requested.

Scope and Limitations of Report

Scope:

The specific components of this investigation are as follows:

Records Review:

Federal and State records were reviewed and compiled into report format by an independent subcontractor to PVE, LLC. The following are some of the reasonably ascertainable standard environmental record sources consulted:

- $ U.S. Environmental Protection Agency (USEPA) Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list;
- $ USEPA CERCLIS No Further Remedial Action Planned list;
- $ USEPA National Priority List (NPL) and Delisted NPL sites;
- $ Resource Conservation and Recovery Act (RCRA) list of hazardous waste generators, both small quantity and large quantity (SQG and LQG) and RCRA Treatment, Storage, and Disposal (TSD) facilities list;
- $ USEPA Emergency Response and Notification System (ERNS) list;
- $ Petroleum Bulk Storage Inventory list (PBS);
- $ Leaking Storage Tank list and/or Spills List;
- $ Solid Waste Facility Register (SWF);
- $ Brownfields and/or Voluntary Cleanup Program sites;
- $ Practically reviewable local records.

Environmental Setting:

Compiled through review of the following physical setting sources:

- $ United States Geological Survey (USGS) 7.5 Minute Topographic Maps
- $ Surficial and/or Bedrock Geology maps

History

The history of the site and of the surrounding area was developed based on consultation with any or all of the following reasonably ascertainable standard historical sources: aerial photographs, site maps, topographic maps, property tax files and interviews with owners, operators and local officials.

Limitations and Exceptions of Assessment

This report is intended for the sole use of the Client listed on the cover page to this Report and Section 1.5, and must be used in its entirety. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users, and any use or re-use of

this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

This written analysis is an assessment of the property completely described in Section 2.0 and depicted in Appendix A, and is not valid for any other property or location. It is a representation of the property analyzed as of the dates of the record reviews and site inspection. This report does not apply to any activities or events resulting in contamination after the date of site inspection or historic research.

Observations were made as indicated within the report. Where access to portions of the site or to structures on the site was unavailable or limited, PVE, LLC renders no opinion as to the presence of regulated or hazardous material or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure.

This Environmental report was performed in accordance with ASTM E 1527-13 **Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process**. The findings and conclusions contained herein must not be considered scientific certainties, but probabilities based on professional judgment concerning the significance of the limited data gathered during the course of this study. The following potential site conditions are outside the scope of this report and were not the subject of analysis during this investigation: asbestos-containing materials, radon, lead-based paint, lead in drinking water, and wetlands.

Conclusions and findings of this report are based in part on certain information provided by federal, state, and local officials and other parties referenced herein, and on information contained in the files of governmental agencies available at the time of this report. Reasonable attempts were made to interview users and property owners. No attempt was made to independently verify the accuracy or completeness of any information reviewed or received. The information provided on present and past property ownership does not constitute a title search.

As stated in 1527-13, no environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property and that performance of Practice 1527-13 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, recognizing reasonable limits of time and cost.

Also, as per 1527-13, the level of inquiry is variable: Not every property warrants the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment is guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Radix 95-25 149th St. LLC (the Client) to conduct a Phase II Environmental Site Assessment (ESA) of 95-25 149th Street and 95-08 and 95-12 150th Street in Queens, New York (the Site). The approximately 50,797 square-foot Site is shown on Figure 1. The Site is identified as Block 10002, Lots 1, 10, and 13. The Site layout and lot boundaries are shown on Figure 2.

The objectives of the investigation were to assess the Recognized Environmental Conditions (RECs) and other subsurface environmental concerns identified in a November 2019 Phase I ESA by Partridge Venture Engineering, PC (PVE), and to perform a preliminary characterization of subsurface conditions at the Site to evaluate environmental concerns related to existing occupancy and the potential future use as a mixed commercial/residential development.

The initial Phase II ESA field activities were completed between August 20 and 28, 2020. The scope consisted of a geophysical investigation, followed by the advancement of 18 borings (with continuous soil core collection and field screening), eight of which were retrofitted as temporary groundwater monitoring wells, and installation of eight soil vapor probes, with the collection and laboratory analysis of 24 soil, eight groundwater, and eight soil vapor samples from the approximate locations shown on Figure 2. Based on chlorinated volatile organic compounds (CVOCs) being detected in soil and soil vapor, supplemental soil vapor and indoor air sampling was conducted on October 23 and 26, 2020. The sampling included the collection of two soil vapor samples from temporary sub-slab points, seven indoor air samples, and one ambient (exterior courtyard) air sample. This report describes the methods and results of the investigation. Photographs of the field activities are provided in Appendix A.

2.0 SITE DESCRIPTION

The Site is generally flat with local topography sloping gently downward to the east-southeast. The three parcels on the Site total approximately 50,797 square feet and contain 11 one to two-story structures, some of which are interconnected and share heating systems. The majority of the Site buildings consisted of former industrial/warehouse buildings that were vacant and used periodically for professional films and television sets. A small portion of the warehouse buildings were being used by the current property owner, Mr. Jeffrey Grossman, for office space, storage of construction materials, and warehousing. Several partial basements and crawl spaces were located throughout the buildings on the Site. According to the previous Phase I ESA and historical Sanborn maps, tetrachloroethylene (PCE) was formerly utilized for metal plating and finishing operations at 95-08 150th Street (Lot 10). One 7,500-gallon No. 4 fuel oil aboveground storage tank (AST) was observed within a vault in the basement of 95-25 149th Street (Lot 1), located on the southern portion of the Site.

The Site is located in an industrial/commercial-zoned area of Jamaica, Queens, New York. The surrounding land use consists of predominantly commercial and/or industrial buildings on all four sides with some residential apartments, including the following:

- North – commercial/industrial buildings, warehouses, and residential apartment buildings along 95th Avenue;
- South – industrial/ commercial buildings and residential properties along 97th Avenue;
- East – Mohan's Precast USA, Inc., Taste of Heaven Ministries, and industrial buildings and warehouses; and
- West – industrial/ commercial buildings along 149th Street.

3.0 PREVIOUS REPORTS

Phase I Environmental Site Assessment, 95-04 & 95-25 149th Street, 95-08 & 95-12 150th Street, Queens County, New York, Partridge Venture Engineering, PC, November 25, 2019.

The Phase I ESA identified environmental concerns for the Site related to historic industrial use dating back to the late 1800's, including tanneries, machine shops, metal plating, painting, tarring, battery servicing, and a cap and fuse factory. PCE was used for metal plating and finishing operations at 95-08 150th Street (Lot 10), located on the northeastern portion of the Site. Off-site concerns were identified related to a nearby auto scrap/junkyard, dry cleaner, auto repair and painting shops, and other industrial and commercial facilities. The on-site and off-site environmental concerns have the potential to affect soil, groundwater, and soil vapor quality at the Site.

The Site is also listed in the Department of City Planning (E) designation database for hazardous materials (E-175) as a result of the Downtown Jamaica Redevelopment Plan. The New York City Mayor's Office of Environmental Remediation (OER) is the City agency responsible for ensuring compliance with (E) designation requirements.

4.0 PHYSICAL SETTING

Surface topography at the Site is generally level with a gentle slope towards the south-southeast. Based on reports compiled by the U.S. Geological Survey (Jamaica Quadrangle), the Site is approximately 38 feet above mean sea level. Groundwater was encountered at approximately 16 and 19 feet below ground surface (bgs) across the Site during this investigation. Groundwater is expected to flow beneath the Site to the southeast direction towards Jamaica Bay, located approximately 4 miles south-southeast of the Site. Based on long-term industrial use of the Site and surrounding neighborhood a subsurface investigation was designed to assess soil, groundwater, and soil vapor conditions at the Site. As AKRF's initial testing revealed the presence of CVOCs in soil and soil vapor at the Site, additional soil vapor and indoor air testing was conducted to evaluate the potential for soil vapor intrusion.

5.0 FIELD ACTIVITIES

The following activities were conducted as part of the Phase II Site Assessment:

1. A geophysical survey to identify the presence of any USTs across the accessible portions of the Site;
2. Advancement of 10 soil borings across the Site and collection of up to two soil samples from each for laboratory analysis to evaluate subsurface soil quality;
3. Installation of five temporary groundwater monitoring wells and collection of one groundwater sample from each for laboratory analysis to evaluate groundwater quality;
4. Installation of seven temporary soil vapor points with collection of one soil vapor sample from each for chemical analysis; and
5. Collection of seven indoor air samples from the interior of buildings and one ambient (outdoor) air sample.

The sample locations are shown on Figure 2. All locations were patched in-kind with the surface at the completion of the field activities.

5.1 Geophysical Survey and Utility Mark-Outs

On August 20, 2020, a geophysical survey was conducted by Enviroprobe Service, Inc. of Mount Laurel, New Jersey to provide clearance of subsurface utilities for the proposed drilling locations, to search in areas with suspected USTs and to locate potentially buried structures. The geophysical survey included both radio detection and ground penetrating radar. The geophysical survey did not identify any anomalies consistent with a potential UST at the Site. Anomalies consistent with underground utilities were also identified throughout the Site and were marked appropriately. A copy of the geophysical investigation report is included as Appendix B.

In addition to the geophysical survey, Coastal Environmental Solutions, Inc. (Coastal) of Medford, New York, the drilling contractor, notified Dig Safely New York at least three days prior to the start of drilling.

5.2 Soil Sampling

Between August 25 and 28, 2020, a total of 10 soil borings (denoted as SB-09 through SB-18) were advanced across the Site by Coastal using Geoprobe® direct push probe (DPP) technologies. A core drill or concrete bit was used when necessary to core through the building concrete slab to gain access to the subsurface. Soil boring locations were selected to obtain representative samples across the Site and to determine whether the environmental concerns identified in the November 2019 Phase I ESA affected subsurface conditions beneath the Site.

Seven of the soil borings were advanced using a track-mounted DPP, and three borings (SB-15 through SB-17) were advanced using a remote-access DPP. Groundwater was encountered between 11 and 19 feet bgs across the Site. Bedrock was not encountered. All borings were advanced to a minimum of 3 feet below the water table to evaluate the soil/water interface for contamination.

Soil cores were obtained from the track-mounted DPP using a 5-foot long, 2-inch diameter, stainless steel dual tube sampler fitted with an internal acetate liner. A 3-foot long liner was utilized with the remote-access DPP. Each core was split lengthwise, field-screened for organic vapors using a photoionization detector (PID) calibrated with isobutylene gas prior to use in accordance with the manufacturer's specifications, and logged using the modified Burmister Classification System, noting any evidence of contamination (e.g., staining, sheens, or odors). Subsurface materials consisted of a thin layer of historic fill material followed by sand, with varying amounts of gravel and silt. No soil boring locations exhibited elevated PID readings during field screening activities. Soil boring logs are provided in Appendix C.

A total of 12 samples were collected for chemical analysis. The number of samples taken in each boring was determined by the potential presence of contamination and environmental concerns identified in PVE's Phase I ESA. A shallow sample (collected from a 2-foot interval in the top 5 feet of soil) was taken from each of the 10 soil borings. A second deeper sample (collected from the 2-foot interval directly above the water table at the groundwater interface) was collected from SB-10 and SB-18.

Samples were placed in laboratory-supplied containers within a chilled cooler, in accordance with United States Environmental Protection Agency (EPA) protocols, and transported via courier with appropriate chain-of-custody (COC) documentation to Eurofins TestAmerica Laboratories (TestAmerica) of Edison, New Jersey, a New York State Department of Health (NYSDOH)-certified laboratory. Samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds-base neutral fraction (SVOCs-BN) by EPA Method 8270, polychlorinated biphenyls (PCBs) by EPA Method 8082, and the Target Analyte List (TAL) of metals by EPA Method 6000/7000 series. Sample locations are shown on Figure 2.

5.3 Groundwater Sampling

Well Installation

Five temporary groundwater monitoring wells (TW-09, TW-10, TW-13, TW-16, and TW-18) were installed within SB-09, SB-10, SB13, SB-16, and SB-18, respectively, for the collection of groundwater samples for laboratory analysis. The wells were installed by extending these borings approximately 5 feet below the observed water table. Each groundwater monitoring well was constructed of 1-inch, threaded, flush-joint polyvinyl chloride (PVC) well materials. Based on the observed groundwater table, 10 feet of 20-slot well screen were installed to straddle the water table at each location. The annular space around each monitoring well was backfilled with clean silica sand to grade. Temporary well construction logs provided in Appendix C.

Sample Collection

Prior to collecting the groundwater samples, the depth to groundwater and the total well depth were then measured in each well using an oil-water interface probe attached to a measuring tape accurate to 0.01 feet. The wells were then developed via surging and pumping until at least three well volumes were evacuated and the purge water was relatively clear. The purged water was periodically monitored for turbidity and water quality indicators (i.e., pH, temperature, dissolved oxygen, oxidation-reduction potential, and specific conductivity).

After well development, all groundwater monitoring wells were sampled using low flow methodology. No separate phase product was detected on the groundwater surface at any of the temporary well locations. The depth to groundwater in each of the temporary wells was approximately 16 to 19 feet bgs. Purging of the wells continued until the turbidity of the water decreased and groundwater quality parameters stabilized.

Groundwater samples were placed in laboratory-supplied containers within a chilled cooler, in accordance with EPA protocols, and transported via courier with appropriate COC documentation to TestAmerica. The samples were analyzed for VOCs and SVOCs-BNs by EPA Methods 8260 and 8270, respectively. Groundwater sampling logs are provided in Appendix C.

5.4 Soil Vapor Sampling

Between August 26 and 27, 2020, five temporary soil vapor points (SV-09, SV-10, SV-13, SV-16, and SV-18) were installed at the approximate locations shown on Figure 2, to collect soil vapor samples for laboratory analysis. All soil vapor points were installed between 4 and 5 feet bgs with the exception of SV-16, which was installed approximately 1 to 2 feet beneath the basement slab of the northwestern building on Lot 1.

The soil vapor points were installed using a DPP to advance a 2-inch diameter hollow probe rod fitted with an expendable 6-inch long stainless steel screened implant. Dedicated Teflon®-lined polyethylene tubing with threaded fittings was connected from the implant to above grade. The probe rod was then removed, and the void space was backfilled with clean silica sand to approximately 6 inches bgs. Hydrated bentonite was used to fill the remaining void to the surface.

Prior to sample collection, each sampling probe implant was purged of at least three sampler volumes using a Gillian® GilAir Plus low-flow sampling pump set at a flow rate of approximately 0.2 liters/minute. During purging, an inverted bucket was placed over each sampling point, and helium gas was introduced through a small hole in the bucket to saturate the atmosphere around the sample port. Purged vapors were collected in a Tedlar® bag and field-screened for organic vapors using a PID. The purged air was also monitored using a portable helium detector to check for short-circuiting of ambient air into the vapor sampling point. All soil vapor points were found

to pass the required seal integrity tests. PID readings were recorded at each soil vapor sampling location and ranged from 4.5 to 22 ppm.

After purging, the tubing at each soil vapor point was connected to a laboratory-supplied, batch-certified clean 6-liter SUMMA® canister equipped with a flow regulator set to collect a sample over approximately 2 hours. The flow rate did not exceed 0.2 liters per minute during sampling collection. Immediately after opening the flow control valve, the initial canister vacuum (in inches of mercury) was noted. When the canisters reached the approximate minimum vacuum necessary for laboratory analyses (between 4 and 8 inches of mercury), the flow controller valve was closed, the final vacuum noted, and the canister placed in a shipping carton for delivery to the laboratory for analysis of VOCs via EPA Method TO-15. Each canister was labeled to identify the sample ID, date, time, and vacuum readings. The identification numbers for both the canister and flow controller were noted on the chain-of-custody documentation, and the samples were transported by courier directly to TestAmerica.

Methodologies used for soil vapor assessment were consistent with relevant portions of NYSDOH *Final Guidance on Soil Vapor Intrusion*, October 2006 and ASTM E 2600-08 *Standard Practice for Assessment of Vapor Intrusion into Structures on Property Involved in Real Estate Transactions.* Soil vapor sampling logs are included in Appendix C.

5.5 Pre-Sampling Inspection and Chemical Inventory

On October 22, 2020, AKRF completed a pre-sampling inspection of the Site to confirm building conditions, airflow patterns, chemical storage and other known factors that may affect indoor air quality. During the inspection, AKRF personnel also inspected the floors for cracks, penetrations, or other preferential pathways for vapor intrusion, such as floor drains and sumps. A photoionization detector (PID) capable of detecting VOCs in the parts per billion (ppb) range was used to field-screen the proposed indoor air sample locations and the surrounding areas during the pre-sampling inspection for potential interferences with the materials stored within the building.

Small containers of chemicals and cleaning products were observed at various location throughout the Site, and PID readings up to approximately 800 ppb were noted within 95-08 150th Street (Lot 10). The highest detections were observed near the floor drain and chemical storage closet in the attached garage but elevated detections were also noted within the first floor office of 95-08 150th Street. No elevated PID readings were detected in the vicinity of the other indoor air sampling locations or other areas of the building during the inspection.

During the inspection, AKRF completed a pre-sampling questionnaire based on an interview with Mr. Grossman, who answered pertinent questions about the building's age, construction characteristics, heating and ventilation systems, and factors that may potentially influence indoor air quality. AKRF completed an inventory of cleaning chemicals and other products stored in the vicinity of the sample locations. The copy of the questionnaire is provided as Appendix D.

5.6 Indoor and Ambient Air Sampling

On October 23, 2020, seven indoor air samples and one ambient (outdoor) air sample were collected in accordance with applicable procedures in the NYSDOH *Final Guidance on Soil Vapor Intrusion*, October 2006. The samples were collected in batch-certified clean 6-liter Summa® canisters over approximately an 8-hour period from the first floor or basement of the Site, as shown on Figure 2 and summarized in Table I below. The indoor and outdoor air samples were collected from the breathing zone approximately 4 to 5 feet above grade. After opening each canister, the initial vacuum reading (in inches of mercury) was noted. At the conclusion of the sampling period, the final vacuum reading was noted and the canister was closed. The canisters were delivered under chain-of-custody control by courier to Alpha Analytical Laboratories

(Alpha) in Mansfield, Massachusetts to be analyzed for VOCs using EPA Method TO-15. Copies of the indoor and ambient air sampling logs are included in Appendix C.

Table I
Summary of Indoor Air Quality Sample Locations

Sample ID	Location
IA-09	Southwestern Building (first floor)
IA-10	Southeastern Building (basement)
IA-13	Western Building (first floor)
IA-16	Northern Building (first floor)
IA-18	Northeastern Building (first floor)
IA-19	Western Building (first floor)
IA-20	Eastern Building (first floor)
AA	Exterior Courtyard (at grade)

5.7 Supplemental Soil Vapor Sampling

Two additional temporary sub-slab vapor points (SV-19 and SV-20) were installed at the Site at the approximate locations shown on Figure 2, to collect soil vapor samples for laboratory analysis. The sub-slab vapor points were installed through approximately 2-inch diameter holes in the slabs, made using a hammer drill. The points were installed to approximately 6 inches below the bottom of the slab, placing an approximately 3-inch polyethylene implant with connected tubing into the boring, backfilling the area around the screen with sand, and sealing the remaining void around the tubing with hydrated bentonite. The vapor point locations are shown on Figure 2.

Prior to sample collection, each sampling probe implant was purged of at least three sample volumes using a Gillian® GilAir Plus low-flow sampling pump set at a flow rate of approximately 0.2 liters/minute. During purging, an inverted bucket was placed over each sampling point, and helium gas was introduced through a small hole in the bucket to saturate the atmosphere around the sample port. Purged vapors were collected in a Tedlar® bag and field-screened for organic vapors using a PID. The purged air was also monitored using a portable helium detector to check for short-circuiting of ambient air into the vapor sampling point. All soil vapor points were found to pass the required seal integrity tests. PID readings were recorded at each soil vapor sampling location and ranged from 2.1 to 4.8 ppm.

After purging, the tubing at each soil vapor point was connected to a laboratory-supplied, batch-certified clean 6-liter SUMMA® canister equipped with a flow regulator set to collect a sample over approximately 2 hours. The flow rate did not exceed 0.2 liters per minute during sampling collection. Immediately after opening the flow control valve, the initial canister vacuum (in inches of mercury) was noted. When the canisters reached the approximate minimum vacuum necessary for laboratory analyses (approximately 4.5 inches of mercury), the flow controller valve was closed, the final vacuum noted, and the canister placed in a shipping carton for delivery to the laboratory for analysis of VOCs via EPA Method TO-15. Each canister was labeled to identify the sample ID, date, time, and vacuum readings. The identification numbers for both the canister and flow controller were noted on the chain-of-custody documentation, and the samples were transported by courier directly to Alpha.

Methodologies used for soil vapor assessment were consistent with relevant portions of NYSDOH *Final Guidance on Soil Vapor Intrusion,* October 2006 and ASTM E 2600-08 *Standard Practice for Assessment of Vapor Intrusion into Structures on Property Involved in Real Estate Transactions.* Soil vapor sampling logs are included in Appendix C.

5.8 Quality Assurance/Quality Control (QA/QC) Sampling

QA/QC procedures were used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures were used (1) to document that samples are representative of actual conditions at the Site and (2) to identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses were used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process.

QA/QC samples for the initial testing program were analyzed at TestAmerica. QA/QC sampling consisted of the following:

- Two aqueous trip blanks were included with the sample shipments on the first and final day of sampling and submitted for VOC analysis for QA/QC purposes.

QA/QC samples for the indoor air sampling event were analyzed at Alpha Analytical Laboratories. QA/QC sampling consisted of the following:

- One ambient (exterior courtyard) sample was included with the indoor air samples and submitted for VOC analysis for QA/QC purposes.

6.0 FINDINGS

6.1 Geophysical Survey

The geophysical survey did not identify any anomalies consistent with a potential UST at the Site. Anomalies consistent with underground utilities were also identified throughout the Site and were marked appropriately. The Geophysical Investigation Report is included as Appendix B.

6.2 Soil Analytical Results

Analytical results for 12 soil samples were compared to NYSDEC 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Commercial Use Soil Cleanup Objectives (CUSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs). Exceedances of the SCOs are presented below and laboratory results are summarized in Tables 1 through 4. The complete laboratory analytical data packages are included as Appendix E. Soil concentrations above UUSCOs and CUSCOs are shown on Figure 3.

VOCs

The VOC tetrachloroethylene (PCE), a contaminant of concern, was detected at in soil sample SB-18_3-5_20200827 at a concentration of 14 milligrams per kilogram (mg/kg), exceeding its UUSCO and PGWSCO of 1.3 mg/kg. The NYSDEC CUSCO for PCE is 150 mg/kg. PCE was also detected in seven additional soil samples ranging from an estimated concentration of 0.00022 mg/kg in soil sample SB-10_1-3_20200827 to 0.12 mg/kg in soil sample SB-07_6-8_20200827, below the UUSCO for PCE. Trichloroethylene (TCE), a breakdown product of PCE, was detected in soil samples SB-14_2-4_20200828, SB-17_0-2_20200826, and SB-18_3-5_20200827 at concentrations between 0.00018 mg/kg to 0.43 mg/kg, which were below the UUSCO for TCE of 0.47 mg/kg. Additional VOCs were detected in one or more of the soil samples below their respective UUSCOs.

Soil boring SB-18, the sampling location with the highest PCE and TCE results, was located on the northeastern portion of the Site at 95-08 150th Street (Lot 10), where historic Sanborn maps indicated that this area was utilized for metal plating and associated PCE usage. Soil analytical results for VOCs are presented in Table 1. VOCs detected above NYSDEC UUSCOs are shown on Figure 3.

SVOCs

Fourteen SVOCs [2-nitroanaline, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i) perylene, benzo(k)fluoranthene, bis(2-chloroisopropyl)ether, carbazole, chrysene, dibenzo(a,h)anthracene, flouranthene, indeno(1,2,3-c,d)pyrene, phenanthrene, and pyrene] were detected in one or more samples at concentrations well below their respective UUSCOs. The SVOCs detections were generally polycyclic aromatic hydrocarbons (PAHs), which are a class of compounds found in some petroleum products, coal ash, and in other combustion products commonly found in urban fill. Soil analytical results for SVOCs are presented in Table 2.

Metals

Four metals [copper (maximum 1,200 mg/kg), lead (maximum 392), mercury (maximum 2.5 mg/kg), and zinc (maximum 121 mg/kg)] were detected at concentrations exceeding one or more of their applicable SCOs in at least one soil sample, as presented below. Additional concentrations of metals were detected in at least one sample at concentrations below their applicable SCOs.

Table II
Metals in Soil Above UUSCOs

Boring ID Depth (feet bgs) Units = mg/kg	UUSCO	CUSCO	SB-10 (17-19)	SB-11 (3-5)	SB-13 (0-2)	SB-14 (2-4)	SB-17 (0-2)	SB-18 (3-5)
Copper	50	270	**51.2**	NE	NE	**1,200**	**76.4**	**133**
Lead	63	1,000	NE	NE	NE	**297**	**287**	**392**
Mercury	0.18	2.8	**1.7**	**2.5**	**0.38**	**0.2**	**0.73**	**0.64**
Zinc	109	10,000	NE	NE	NE	NE	**121**	NE

Based on the Site history, the detections for copper and mercury may be attributable to the Site's long-term industrial use, as the layer of historic fill observed at the Site was only a few feet thick and some of the detections were from samples collected below the fill layer. Analytical results for metals are summarized in Table 3. Metals detected above the NYSDEC UUSCOs and CUSCOs are shown on Figure 3.

PCBs

PCBs were not detected above the laboratory reporting limits in any of soil samples. Soil analytical results for PCBs are presented in Table 4.

6.3 Groundwater Analytical Results

Analytical results from the five groundwater samples were compared to the Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs) in the NYSDEC Division of Water Technical Operational and Guidance Series (TOGS) Memo 1.1.1. These guidance values were developed to protect human health assuming groundwater is used as the source of drinking water, a scenario which does not currently occur at the Site (and would not be expected in the future).

VOCs

No VOCs were detected above the AWQSGV in any of the groundwater samples. PCE was detected in all of the groundwater samples between 1.3 micro grams per liter (µg/L) and 4.6 µg/L, below the AWQSGV for PCE of 5 µg/L. Five other VOCs (acetone, chloroform, chloromethane, cis-1,2-dichloroethylene, and TCE) were also detected in at least one sample at concentrations below their respective AWQSGVs. It should be noted that acetone detection is often associated with laboratory contamination and may not be attributable to Site conditions. Analytical results for VOCs are presented in Table 5.

SVOCs

SVOCs were detected above the laboratory detection limits. Groundwater analytical results for SVOCs are presented in Table 6.

A complete laboratory analytical report for the groundwater samples is included in Appendix E.

6.4 Soil Vapor Analytical Results

The soil vapor sampling results identified up to 42 VOCs detected in one or more of the seven soil vapor samples [including PCE, TCE, 1,1,1-trichloroethane (1,1,1-TCA), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 2-hexanone, 4-ethyltoluene, acetone, benzene, bromodichloromethane, butane, carbon disulfide, carbon tetrachloride, chlorodifluoromethane, chloroform, chloromethane, cis-1,2-dichloroethylene, cyclohexane, cymene, dichlorodifluoromethane, ethylbenzene, isopropanol, isopropylbenzene, m,p-xylenes, methyl ethyl ketone (MEK), methyl isobutyl ketone, methyl methacrylate, methylene chloride, n-butylbenzene, n-heptane, n-hexane, n-propylbenzene, o-xylene, styrene, tert-butyl alcohol, tetrahydrofuran, toluene, and trichlorofluoromethane. Soil vapor detections for PCE and TCE are shown on Figure 4. A summary data table summarizing all of the results for the chemical analyses performed on soil vapor is included as Table 7. A complete laboratory analytical report for the soil vapor samples is included in Appendix E.

Concentrations of VOCs detected in the soil vapor samples were compared to the NYSDOH 2006 Guidance for Evaluating Soil Vapor Intrusion matrix values for CVOCs. These values provide are a conservative means of comparison utilized to aid in the determination for the need for soil vapor mitigation. The Matrix Values provide recommended responses based on a comparison of the concentration of the compound in both the soil vapor and the indoor air. Based on detected concentrations in sub-slab vapors and/or indoor air, the NYSDOH range of recommended responses are (1) no further action, (2) take reasonable and practical actions to identify sources and reduce exposures, (3) monitor, (4) mitigate, and (5) monitor/mitigate. A summary of the soil vapor results for CVOCs with a comparison to the soil gas matrix values (irrespective of the corresponding indoor air concentration) specifying mitigation is provided below.

Table III
CVOC Detections in Soil Vapor

Sample ID	Matrix Value	SV-09	SV-10	SV-13	SV-16	SV-18	SV-19	SV-20
Location		Exterior Paved Area	Exterior Paved Courtyard	Ground Floor	Basement	Exterior Paved Area	Ground Floor	Ground Floor
Units	µg/m³	µg/m³	µg/m³	µg/m³	µg/m³	µg/m³	µg/m³	µg/m³
1,1,1-Trichloroethane	1,000	ND	1.1	ND	2.0	3.7	ND	ND
Cis-1,2-Dichloroethylene	60	2.5	ND	ND	ND	ND	ND	ND
Tetrachloroethene (PCE)	1,000	**1,500**	**2,100**	**2,200**	**1,200**	**14,000**	**4,200**	**54,300**
Trichloroethene (TCE)	60	49	24	33	55	**270**	**113**	**507**

Notes:
Matrix level is the NYSDOH soil vapor value that specified mitigation (regardless of indoor air concentration)
Bold = Concentration exceeds the NYSDOH Matrix value for mitigation
µg/m³ = micrograms per cubic meter
ND = Analyzed for but not detected

The levels of PCE detected in soil vapor sample location SV-18 and SV-20 indicate a potential source of solvent contamination within the northeastern portion of the Site near 95-08 150th Street (Lot 10) and 95-12 150th Street (Lot 13). PCE was also detected above the NYSDEC UUSCOs in soil sample SB-18 obtained from 3-5 feet bgs adjacent to soil vapor point SV-18. TCE was also detected above its NYSDOH matrix value in soil vapor samples SV-18, SV-19 and SV-20. Based

upon the widespread detections of PCE, and to a lesser extent TCE, in soil vapor at the Site, other on-site and/or off-site sources may be present.

6.5 Indoor and Ambient Air Analytical Results

The indoor air sampling conducted within the buildings occupying the Site identified levels of PCE in the indoor air between 3.94 and 123 µg/m^3 in each of the indoor air samples. PCE was also detected in the ambient air sample collected from the exterior courtyard at a concentration of 6.2 µg/m^3. The highest detection of PCE (123 µg/m^3) was reported in sample SV-18, collected in the garage area of 95-08 150th Street (Lot 10). The NYSDOH indoor air guidance value (AGV) for PCE is 30 µg/m^3. TCE was also detected in the indoor air but at levels below its AGV of 2 µg/m^3. Methylene chloride, a common laboratory contaminant, was also detected in samples IA-18 and IA-20 at concentrations of 80.9 and 129 µg/m^3, respectively, which were above its AGV of 30 µg/m^3. A summary of the indoor air detections for CVOCs with a comparison to the NYSDOH AGVs is provided below. Indoor and ambient air detections for PCE and TCE are shown on Figure 4. A summary of the results for the complete list of VOC analyses performed on indoor air and ambient samples is included in Table 8. A complete laboratory analytical report for the indoor and ambient air samples is included in Appendix E.

Table IV
CVOC Detections for Indoor and Ambient Air

Sample ID	NYSDOH AGV	AA	IA-09	IA-10	IA-13	IA-16	IA-18	IA-19	IA-20
	Location	Exterior Courtyard	1st Floor	1st Floor	1st Floor	Basement	1st Floor	1st Floor	1st Floor

Notes:
AGV is the NYSDOH Indoor Air Guidance Value
Bold = Concentration exceeds the NYSDOH AGV
µg/m^3 = micrograms per cubic meter
ND = Analyzed for but not detected

7.0 CONCLUSIONS

Between August 20 and October 27, 2020, AKRF, Inc. (AKRF) conducted a Phase II (Subsurface) Environmental Site Assessment (ESA) at 95-25 149th Street and 95-08 & 95-12 150th Street in Queens, New York. The approximately 50,797 square-foot Site, as shown on Figures 1 and 2, is also identified as Block 10002, Lots 1, 10, and 13.

The Site is generally flat with local topography sloping gently downward to the east-southeast. The three parcels that comprise the Site contains 11 one- to two-story interconnected structures. The majority of the Site buildings at the Site consisted of former industrial/warehouse buildings that were vacant and used periodically for professional films and television sets. The building at 95-08 150th Street (Lot 10) contained an office area and a garage utilized by a contractor. The building at 95-12 150th Street (Lot 13) contained two large refrigeration units and was reportedly last utilized to store fish/seafood. A small portion of the eastern warehouse buildings were being used by Mr. Grossman for office space, storage of construction materials, and warehousing. Several partial basements and crawl spaces were located throughout the buildings on the eastern portion of the Site. According to the previous Phase I ESA and historical Sanborn maps, tetrachloroethylene (PCE) was formerly utilized for metal plating and finishing operations at 95-08 150th Street (Lot 10), located on the northeastern portion of the Site. One 7,500-gallon No. 4 fuel oil aboveground storage tank (AST) was observed within a vault in the basement of 95-25 149th Street (Lot 1).

The objectives of the investigation were to assess the Recognized Environmental Conditions (RECs) and other subsurface environmental concerns identified in a November 2019 Phase I ESA by Partridge Venture Engineering, PC (PVE), and to perform a preliminary characterization of subsurface conditions at the Site to evaluate environmental concerns related to existing occupancy and the potential future use as a mixed commercial/residential development. Additionally, a supplemental study was conducted at the Site to evaluate the potential for soil vapor intrusion. The scope of the investigation consisted of a geophysical investigation followed by the advancement of 10 soil borings with the collection of 12 soil samples; five of which were retrofitted as temporary groundwater monitoring wells; the installation of seven soil vapor points with the collection of a soil vapor sample from each, and collection of seven indoor air samples for VOCs within buildings occupying the Site. The sample locations are shown on Figure 2.

Soil samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds-base neutral fraction (SVOCs-BNs), polychlorinated biphenyls (PCBs,) and metals. Groundwater samples were analyzed for VOCs and SVOCs-BNs. Soil vapor, indoor and ambient air samples were analyzed for VOCs.

Based on the findings of this investigation, AKRF concludes the following:

- The Site surface is covered by industrial buildings and paved parking areas. The surface is underlain by a thin layer of fill material consisting of sand and silt with traces of brick, gravel, and wood extending from grade to approximately 3 feet below ground surface (bgs). Soil observed beneath the fill primarily consisted of sand with traces of silt and gravel to the terminus of the borings, which ranged from 16 to 25 feet bgs. Bedrock was not encountered during the investigation.
- The presumed groundwater flow direction is southeast based on topography, United State Geological Survey (USGS) maps of the water table, and work conducted by AKRF at two nearby NYSDEC Brownfield Cleanup Programs sites located approximately 1,000 to 1,500 feet northwest of the Site along 95th Avenue.
- The chlorinated solvent tetrachloroethylene (PCE), a contaminant of concern based on its prior use in the metal plating and finishing process at 95-08 150th Street (Lot 10), was detected in soil sample SB-

18_3-5_20200827 at a concentration of 14 milligrams per kilogram (mg/kg), above its Unrestricted Use Soil Cleanup Objective (UUSCO) of 1.3 mg/kg, but below its Commercial Use Soil Cleanup Objective (CUSCO) of 150 mg/kg.

- PCE was detected in all seven soil vapor samples at concentrations between 1,200 micrograms per cubic meter (µg/m^3), with the highest concentrations being 14,000 µg/m^3 and 54,300 µg/m^3 in samples SV-18 and SV-20, respectively. Trichloroethene (TCE), a breakdown product of PCE, was detected between 113 and 270 µg/m^3 in samples SV-18, SV-19 and SV-20. Additional chlorinated-VOCs and petroleum-related VOCs were also detected at generally lower levels in soil vapor samples across the Site.

  PCE was detected in all seven indoor air samples between 3.94 and 123 µg/m^3. PCE was also detected in the ambient air sample collected from the exterior courtyard at 6.2 µg/m^3. The highest detection of PCE was reported in sample SV-18, located in the garage area of 95-08 150th Street (Lot 10), at a concentration of 123 µg/m^3, which exceeded the NYSDOH indoor air guidance value (AGV) of 30 µg/m^3. TCE was not detected in any of the indoor air samples exceeding its AGV of 2 µg/m^3.

  A comparison of the co-located soil vapor and indoor air sample results to the values in the NYSDOH Soil Vapor/Indoor Air Matrix B indicate that mitigation is required for PCE at all locations. A comparison of the co-located soil vapor and indoor air sample results to the values in the NYSDOH Soil Vapor/Indoor Air Matrix A indicate that mitigation is required for TCE at sampling locations SV-16/IA-16, SV-18/IA-18, and SV-20/IA-20.

- The metals copper, lead, mercury, and zinc were detected at concentrations above UUSCOs in at least one soil sample. As the fill layer at the Site was only 1 to 3 feet thick, and metals, particularly mercury, were reported in soil beneath the fill layer, some of the detections may be attributable the Site's long-term industrial usage.

- SVOCs were detected in soil at levels beneath their applicable UUSCOs. The reported compounds are similar to compounds commonly found in historic fill materials commonly found in the New York metropolitan area.

- No PCBs were detected in the soil samples.

- No VOCs or SVOCs were detected in the groundwater samples above the applicable NYSDEC standards. PCE was detected in all five groundwater samples between 1.3 micro grams per liter (µg/L) and 4.6 µg/L, below its respective Class GA Ambient Water Quality Standards and Guidance Value (AWQSGV) of 5 µg/L.

In summary, PCE was detected in soil boring SB-18 (at 3 to 5-ft. bgs) and in soil vapor and indoor samples SV-18 and IA-18 collected at 95-08 150th Street (Lot 10), above applicable standards/guidance. PCE was also detected in the five groundwater samples just below the NYSDEC AWQSGV, and in all remaining soil vapor and indoor air samples. Based on these findings and the Phase I ESA REC of former metal plating and finishing business that utilized PCE at this location, a potential source of PCE contamination is likely present at the Site, particularly in the vicinity of soil boring SB-18 and soil vapor samples SV-18 and SV-20. Based upon the widespread detections of PCE in soil vapor at the Site, other on-site and/or off-site sources may be present. Historic fill and detections for SVOCs and metals in soil typically associated with historic fill were present throughout the site. Other chlorinated-VOCs and petroleum-related VOCs were also detected at generally lower levels in soil vapor samples across the Site.

8.0 RECOMMENDATIONS

AKRF understands that the Client intends to acquire an interest in the Site and to redevelop the Site for mixed-use commercial/residential purposes including affordable housing. Further, AKRF understands that during the entitlement process associated with the redevelopment, Client intends to continue the current commercial use. As such, given the above findings, AKRF recommends the following:

- The Client may wish to consider entering the Site into the NYSDEC Brownfield Cleanup Program (BCP) with the Client qualifying as a Volunteer. If the Site is eligible for the BCP, qualified remediation costs and a portion of the redevelopment costs could be eligible for New York State tax credits afforded under the BCP.
- Additional investigation will be required pursuant to the BCP to delineate the impacts to all media (groundwater, soil and soil vapor). In the meantime, mitigation of potential vapor intrusion at the Site for continued and future tenant occupancy is recommended.
- The 7,500-gallon No. 4 fuel oil aboveground storage tank (AST) located within a vault in the basement of 95-25 149th Street (Lot 1), and any additional tanks that can be identified either during site investigation activities or redevelopment, should be removed in accordance with applicable requirements.
- AKRF understands that the redevelopment of the Site will require the demolition of the existing structures. Soil and fill materials excavated as part of Site redevelopment should be properly handled and managed in accordance with applicable regulations, including (if applicable) hazardous waste disposal regulations. Transportation of material leaving the Site for disposal must be in accordance with federal, state, and local regulatory requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc. Waste characterization sampling should be conducted prior to redevelopment in accordance with intended disposal facility requirements for all soil/fill to be removed during redevelopment. Transportation of material leaving the Site for disposal must be in accordance with federal, state and local regulatory requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- If dewatering is required during the future Site redevelopment, it should be conducted in accordance with a New York City Department of Environmental Protection and/or the NYSDEC discharge permit.

9.0 LIMITATIONS

The findings set forth in this report are strictly limited in scope and time to the date of the evaluation. The findings and recommendations presented are based solely on the services and any limitations described in this report.

This report contains conclusions that are based on the analysis of data collected at the time and locations noted through intrusive or non-intrusive sampling. However, further investigation might reveal additional data or variations of the current data, which may differ from our understanding of the conditions presented in this report and require the recommendations to be or modified.

Chemical analyses were performed for specific parameters, as summarized in the text, tables, and appendices. It should be noted that additional chemical constituents not searched for may be present as well. Due to the nature of the investigation and the limited data generated, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. In particular, the presence of biological hazards, radioactive materials, lead-based paint and asbestos-containing materials was not investigated, unless specified in the report.

Interpretations of the data, including comparison to regulatory standards, guidelines or background or typical values, are not opinions that these comparisons are legally applicable, relevant, or appropriate. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage and disposal of known or potentially contaminated materials is subject to a multitude of laws, which are not fully described in this report.

The analytical data, conclusions, and/or recommendations provided in this report should not be construed in any way as a classification of waste that may be generated during future disturbance of the Site. Waste(s) generated at the Site, including excess fill, may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined before excavation, as the data provided in this report is most likely insufficient for waste classification purposes.

This report may be based partially on data collected, conducted, and provided to AKRF by others. No warranty is expressed or implied by usage of such data. Data may have been based upon available previous reports, historical records, documentation from government agencies, personal interviews, and geological mapping. This report is subject, at a minimum, to the limitations of the previous reports, documents, etc. Unless noted otherwise, AKRF has assumed that the information in these previous reports, documents, etc. is accurate, despite limited or often no corroboratory evidence.

This report is intended for the use solely by Radix 95-25 149th St. LLC and Empire Management. Reliance by third parties on the information and opinions contained herein is strictly prohibited and requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.

10.0 SOIL DISPOSAL ISSUES

In addition to the discussions in the Results, Conclusions, Recommendations, and Limitations Sections herein, the issue of appropriate management of off-site disposal of soil warrants careful consideration. Unless determined otherwise by an environmental professional and/or an appropriate regulatory agency, any material being removed from the Site should be assumed to be a regulated waste, and disposal or other off-site use must be in accordance with:

- Requirements of the specific receiving facility;
- Requirements of any agencies overseeing the cleanup/excavation; and
- Federal and state requirements (typically in both the state where the soil is generated and where disposal will occur).

For hazardous wastes and petroleum-contaminated soil (and other "clearly contaminated" materials), the requirements are usually fairly well defined. It is in the situation where contamination is not readily apparent (e.g., so called "fill" or "historic/urban fill," "construction and demolition debris," or material that previously may have been identified as "clean") that presents the greatest potential for problems and cost overruns. Even on sites where no contamination requiring remediation is identified, it is common that most, if not all, of the excavated material is considered "contaminated" or is otherwise regulated for purposes of waste disposal or off-site use. Concentrations of the various contaminants in Site soil can be highly variable, and upon further testing, the material could contain higher contaminant concentrations than were found in this investigation. Thus, portions of this material could be classified as hazardous waste.

It is important to identify the intended receiving facility (or facilities) in advance of removing excavated materials from the site. Agency approval is sometimes required prior to disposal or other off-site uses, and the facility will usually require additional testing prior to (and sometimes at the time of) accepting material. Material must conform to a lengthy list of requirements based on both chemical composition and numerous other parameters (such as size, percentage of liquids, and presence of odors) for acceptance. Assuming (or allowing a contractor to assume) that all, or even most, of the soil from a site can be disposed of at minimal cost may result in unanticipated and expensive change orders.

For these reasons, we recommend seeking that professional advice prior to preparing bid documents and contracts incorporating soil disposal.

DEFINITIONS

D : Indicates an identified compound in an analysis that has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analyses.

J : The concentration given is an estimated value.

ND : The standard is a non-detectable concentration by the approved analytical method.

NR : Not reported.

NS : No standard.

T : Indicates that a quality control parameter has exceeded laboratory limits.

U : The analyte was not detected at the indicated concentration.

mg/kg : milligrams per kilogram

µg/L : micrograms per Liter

µg/m^3 : micrograms per cubic meter of air

STANDARDS

Part 375 Soil Cleanup Objectives : Soil Cleanup Objectives listed in New York State Department of Environmental Conservation (NYSDEC) "Part 375" Regulations [6 New York Codes, Rules and Regulations (NYCRR) Part 375].

Exceedances of Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) are highlighted in bold font.
Exceedances of Part 375 Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) are highlighted in gray shading.
Exceedances of Part 375 Commercial Soil Cleanup Objectives (CSCOs) are highlighted with an underline.

NYSDEC Class GA AWQSGVs : New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs).

Exceedances of NYSDEC Class GA AWQSGVs are highlighted in bold font.

NYSDOH Soil Vapor Intrusion Air Guidance Value : New York State Department of Health (NYSDOH) Air Guideline Values (AGVs) presented in the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 (“NYSDOH Vapor Intrusion Guidance Document”), updated September 2013 for change of AGV for PCE, August 2015 for TCE, and May 2017 for NYSDOH Matrices A, B, and C for PCE, TCE, c1,2-DCE, 1,1-DCE, carbon tetrachloride, 1,1,1-TCA, methylene chloride, and vinyl chloride. The matrix values listed are the sub-slab soil vapor concentration where mitigation is recommended regardless of the indoor air concentration.

Exceedances of NYSDOH Matrix Values are highlighted in bold font.
Exceedances of NYSDOH AGVs are highlighted in gray shading.

1.0 INTRODUCTION

Enviroprobe Service, Inc. (Enviroprobe) is an environmental investigation services firm which provides monitoring well installation (HSA), Geoprobe (DPT) drilling services and Environmental & Engineering Geophysics (EEG) services to the environmental consulting and engineering community.

Enviroprobe conducted a subsurface geophysical investigation at the subject property within client-specified areas of concern. Due to conditions and objectives, the investigation utilized a GSSI UtilityScan cart-mounted ground penetrating radar (GPR) unit with a 350 MHz antenna, a Fisher TW-6 metallic locator, a Radiodetection multi-frequency transmitter, and a Radiodetection receiver.

Ground penetrating radar (commonly called GPR) is a geophysical method that has been developed over the past thirty years for shallow, high-resolution, subsurface investigations of the earth. GPR uses high frequency pulsed electromagnetic waves (generally 10 MHz to 2,000 MHz) to acquire subsurface information. An EM wave is propagated downward into the ground by a transmitting antenna. Where abrupt changes in electrical properties occur in the subsurface, a portion of the energy is reflected back to the surface. This reflected wave is detected by a receiver antenna and transmitted to a control unit for real time processing and display. The penetration depth of the GPR unit varies from several inches to tens of feet according to site-specific conditions. The penetration depth decreases with increased soil conductivity. The penetration depth is the greatest in ice, dry sands, and fine gravels. Clayey, highly saline or saturated soils, areas covered by concrete, foundry slag, or other highly conductive materials greatly reduce GPR penetration. GPR is a method that is commonly used for environmental, engineering, archaeological, and other shallow investigations.

The Fisher TW-6 metallic locator is designed to find pipes, cables and other metallic objects such as underground storage tanks (USTs). The TW-6 transmitter generates an electromagnetic field that induces electrical currents in the subsurface. These currents produce a secondary electromagnetic field that is measured by the TW-6 receiver. One surveyor can carry both the transmitter and receiver together to search for underground metallic objects, although the TW-6 response can also be affected by the electrical properties of non-metallic materials in the subsurface.

The Radiodetection (RD) transmitter and receiver are commonly used for pipe and cable locating. The multi-frequency transmitter can be directly connected, clamped, or used to induce a signal in a target line while the multi-frequency receiver is used to measure the signal from energized lines.

2.0 SCOPE OF WORK

On August 20, 2020, a geophysical technician from Enviroprobe Service Inc. was mobilized to the subject property to perform a geophysical investigation. The purpose of

the investigation was to detect possible USTs, designate underground conduits/utilities, and clear proposed boring locations inside and outside of active warehouses. The ground surface of the survey area consisted of concrete and asphalt surfaces.

3.0 SURVEY RESULTS

The utility survey was conducted using a cart-mounted GPR unit and a RD unit. The RD unit was used to trace common utilities from sources in and around the survey area. The RD receiver was also used in the passive mode to search for live underground electrical power cables and other utilities emitting 60Hz electromagnetic signals. When possible, the location of utilities was confirmed with the GPR. The GPR survey was also performed in a grid pattern in at least two orthogonal directions to search for evident and non-evident underground utilities. Linear anomalies consistent with underground utilities were designated on site with spray paint using the following colors: blue – water, red – electric, green – sanitary sewer, and pink – unknown utilities.

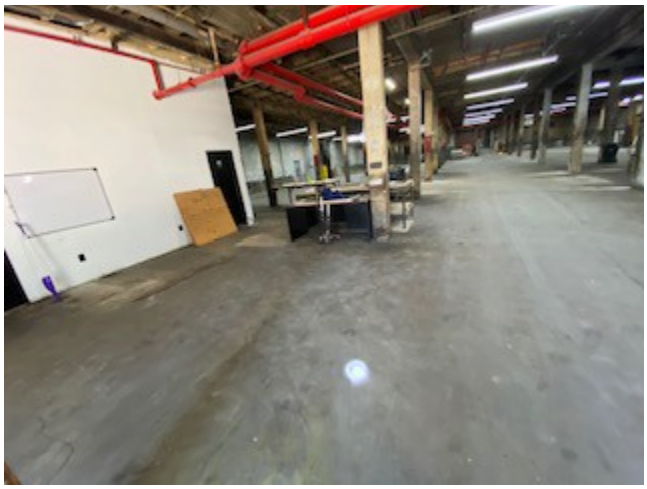

Figure 17: Proposed boring location.

Figure 18: Proposed boring location.

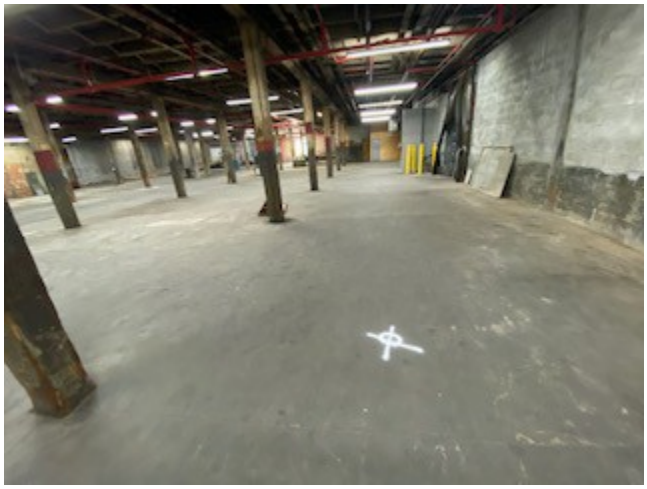

Figure 19: Proposed boring location.

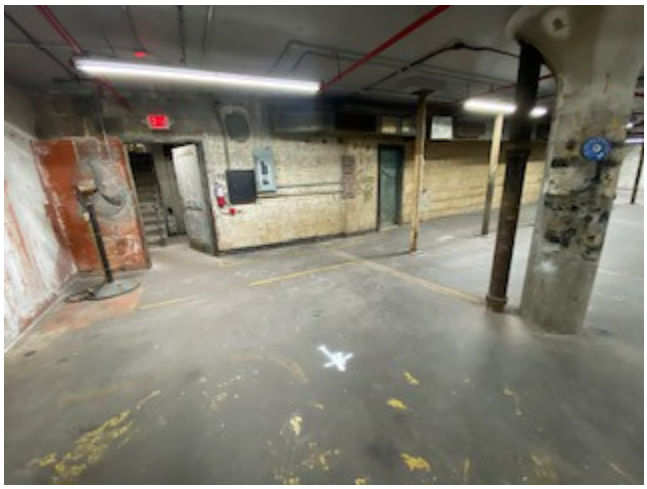

Figure 20: Proposed boring location.

Figure 21: Proposed boring location.

The GPR and TW-6 were used in a grid pattern over all client specified areas of the site. Based on the results of the GPR and TW-6 surveys, no metallic anomalies were detected on site. One area of former excavation was detected in the warehouse area housing a music supply facility.

Client-selected proposed boring locations were investigated with the GPR, TW-6, and RD receiver. When possible, an area of approximately 10 ft by 10 ft surrounding each location was scanned. In some cases, obstructions prevented an investigation of the entire 10 ft by 10 ft area.

4.0 LIMITATIONS

Due to surface conditions and subsurface content, the GPR penetration depth was estimated as about 3 feet in the majority of the survey area.

Due to the dielectric properties of the subsurface, plastic polymer and fiberglass utilities may not have been detected.

The underground utility survey was conducted in compliance with the industry standard of care guidelines found in ASCE 38-02 (Level B).

5.0 WARRANTIES

The field observations and measurements reported herein are considered sufficient in detail and scope for this project. Enviroprobe Service, Inc. warrants that the findings and conclusions contained herein have been promulgated in accordance with generally accepted environmental engineering methods. There is a possibility that conditions may

exist which could not be identified within the scope of this project and were not apparent during the site activities performed for this project.

Enviroprobe represents that the services were performed in a manner consistent with that level of care and skill ordinarily exercised by environmental consultants under similar circumstances. No other representations to Client, express or implied, and no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

Enviroprobe Service, Inc. believes that the information provided in this report is reliable. However, Enviroprobe cannot warrant or guarantee that the information provided by others is complete or accurate. No other warranties or guarantees are implied or expressed.

GPR data is subject to signal anomalies and operator interpretation. The GPR data is intended to provide the locations of areas of concern requiring additional investigation or the approximate location of underground structures and utilities. Great care must be utilized when excavating and/or drilling around underground structures and utilities since GPR data can only be used for estimation purposes and GPR data is subject to misinterpretation. Enviroprobe can not guarantee that utilities, post-tension cables, and/or rebar will not be incurred during drilling, cutting, coring, or excavating activities.

This report was prepared pursuant to the contract Enviroprobe has with the Client. That contractual relationship included an exchange of information about the property that was unique and between Enviroprobe and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between Enviroprobe and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to Enviroprobe.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to Enviroprobe contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

20									

Notes: Groundwater Depth Indicator

Groundwater measured at 18 feet below grade in TW-09 on 08/28/2020.

Groundwater monitoring well installed to 22 feet below grade.

Notes: Soil sample analyzed for VOCs, SVOCs, PCBs, TAL Metals, and Mercury.

Groundwater was encountered at approximately 18 feet below ground surface at SB-09.

End of soil boring at 20 feet below grade.

PID = photoionization detector **NAPL = non-aqueous phase liquid** **ppm = parts per million** **ND = not detected**

Soil classifications and descriptions presented are based on the Modified Burmister Classification System. Descriptions were developed for environmental purposes only.

Notes: Groundwater Depth Indicator

Groundwater measured at 11 feet below grade in TW-16 on 08/28/2020

.Groundwater monitoring well installed to 15 feet below grade.

Notes: Soil sample analyzed for VOCs, SVOCs, PCBs, TAL Metals, and Mercury.

Groundwater was encountered at approximately 11 feet below ground surface at SB-16.

End of soil boring at 15 feet below grade.

PID = photoionization detector **NAPL = non-aqueous phase liquid** **ppm = parts per million** **ND = not detected**

Soil classifications and descriptions presented are based on the Modified Burmister Classification System. Descriptions were developed for environmental purposes only.

SOIL BORING LOG

149th & 150th Streets, Queens, New York

AKRF Project Number: 200278

ND = non-detect ppm = parts per million L/min = Liters per minute

Soil vapor sample collected in a 6-L SUMMA® canister using a 2-hour flow controller.

Soil Vapor Sample Log

AKRF Project No:	200278	**Point Installed By:**	Coastal Environmental Solutions, Inc.
Project Location:	149th & 150th Streets	**Installation Method:**	DPP
Client:	Empire	**Sampled By:**	J. Sulich
Date:	8/28/2020	**Weather:**	75°F, Partly Cloudy

Sample Setup

Vapor Point Depth:	60	Inches	**Total Time of Purge:**	10 Minutes	
Purging Pump:	Gilair Plus (or equal)		**Purge Volume:**	2L	
Pump Flow Rate*:	0.2	L/min	**Purged Vapor PID:**	7.0	ppm
			Helium Concentration:	0	%

Sample Identification

Soil Vapor Point ID:	SV-18	**SUMMA® Canister ID:**	5099
Flow Controller ID:	2668	**Soil Vapor Sample ID:**	SV-18_20200828

Sample Collection

Time		Vacuum (in/Hg)	Background PID	Notes
Time Started:	11:35	-26.0	ND	
Time Halfway:	12:35	-16.0	ND	
Time Stopped:	13:25	-5.0	ND	

Notes:	65°F, Cloudy
	ND = non-detect ppm = parts per million L/min = Liters per minute
	Soil vapor sample collected in a 6-L SUMMA® canister using a 2-hour flow controller.

Soil Vapor Sample Log

AKRF Project No:	200/278200350	**Point Installed By:**	Coastal Environmental Solutions, Inc.
Project Location:	149th & 150th Streets	**Installation Method:**	Hammer Drill
Client:	Radix	**Sampled By:**	J. Sulich
Date:	10/26/2020	**Weather:**	65°F, Cloudy

Sample Setup

Vapor Point Depth:	8	Inches	**Total Time of Purge:**	10 Minutes	
Purging Pump:	Gilair Plus (or equal)		**Purge Volume:**	2L	
Pump Flow Rate*:	0.2	L/min	**Purged Vapor PID:**	2.1	ppm
			Helium Concentration:	0	%

Sample Identification

Soil Vapor Point ID:	SV-19	**SUMMA® Canister ID:**	2703
Flow Controller ID:	0979	**Soil Vapor Sample ID:**	SV-19_20201026

Sample Collection

Time		Vacuum (in/Hg)	Background PID	Notes
Time Started:	8:06	-30.06	ND	
Time Halfway:	9:09	-17.42	ND	
Time Stopped:	10:14	-4.51	ND	

Notes:

*Purge flow rate not to exceed 0.2 L/min.

ND = non-detect ppm = parts per million L/min = Liters per minute

Soil vapor sample collected in a 6-L SUMMA® canister using a 2-hour flow controller.

APPENDIX D

PRE-SAMPLING QUESTIONNAIRE

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name JOHN SULICH Date/Time Prepared 10/22/20 10:00

Preparer's Affiliation AKRF Phone No. 203 517 7433

Purpose of Investigation PRE IAQ SURVEY

1. OCCUPANT:

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: (Y) / N

Last Name: GROSSMAN First Name: JEFF

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
Industrial	Church	Other: WAREHOUSE / GC

If the property is residential, type? (Circle appropriate response) NA

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) GENERAL CONTRACTOR

Does it include residences (i.e., multi-use)? Y (N) If yes, how many? NA

Other characteristics:

Number of floors 2 Building age N 20 YEARS

Is the building insulated? Y (N) How air tight? Tight / Average / (Not Tight)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

STAIRWAYS

Airflow near source

CRACKS IN SLAB

Outdoor air infiltration

OPEN DOORS, HOLES IN WALLS,

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	(concrete)	stone	brick
b. Basement type:	(full)	crawlspace	(slab)	other ONLY NW CORNER
c. Basement floor:	(concrete)	dirt	stone	other _____
d. Basement floor:	(uncovered)	covered	covered with _____	
e. Concrete floor:	(unsealed)	sealed	sealed with _____	
f. Foundation walls:	(poured)	(block)	stone	other _____
g. Foundation walls:	(unsealed)	sealed	sealed with _____	
h. The basement is:	wet	damp	(dry)	moldy
i. The basement is:	(finished)	unfinished	partially finished	
j. Sump present?	(Y) / N BY SOUTH WALL			
k. Water in sump?	Y (N) not applicable			

Basement/Lowest level depth below grade: NIO (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

CRACKS IN SLAB

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	(Hot water baseboard)	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

(Natural Gas)	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: NATURAL GAS

Boiler/furnace located in:	(Basement)	Outdoors	Main Floor	Other _____
Air conditioning:	Central Air	(Window units)	(Open Windows)	None

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

7. OCCUPANCY

Is basement/lowest level occupied? (Full-time) Occasionally Seldom Almost Never

ONLY NE CORNER TENANT

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	NA
1st Floor	~~GENERAL~~ OFFICE
2nd Floor	NA
3rd Floor	NA
4th Floor	NA

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? (Y) N

b. Does the garage have a separate heating unit? Y / (N) NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) N / NA
Please specify TRUCK / FORKLIFT

d. Has the building ever had a fire? (Y) N When? SOUTH ANNEX

e. Is a kerosene or unvented gas space heater present? Y / (N) Where? _____

f. Is there a workshop or hobby/craft area? (Y) N Where & Type? NW, SOUTH

g. Is there smoking in the building? Y / (N) How frequently? _____

h. Have cleaning products been used recently? (Y) N When & Type? HOUSEHOLD CLEANERS NIGHTLY

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? (Y) N Where & When? GARAGE 9/25 1YR

k. Is there new carpet, drapes or other textiles? Y (N) Where & When? _____

l. Have air fresheners been used recently? Y (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / ~~N~~ If yes, where vented? _____

n. Is there a bathroom exhaust fan? (Y) N If yes, where vented? ROOF

o. Is there a clothes dryer? Y (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y (N) When & Type? _____

Are there odors in the building? SOME (Y) N
If yes, please describe: EXHAUST, PAINT IN GARAGE

Do any of the building occupants use solvents at work? Y (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) (No)
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y (N) Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

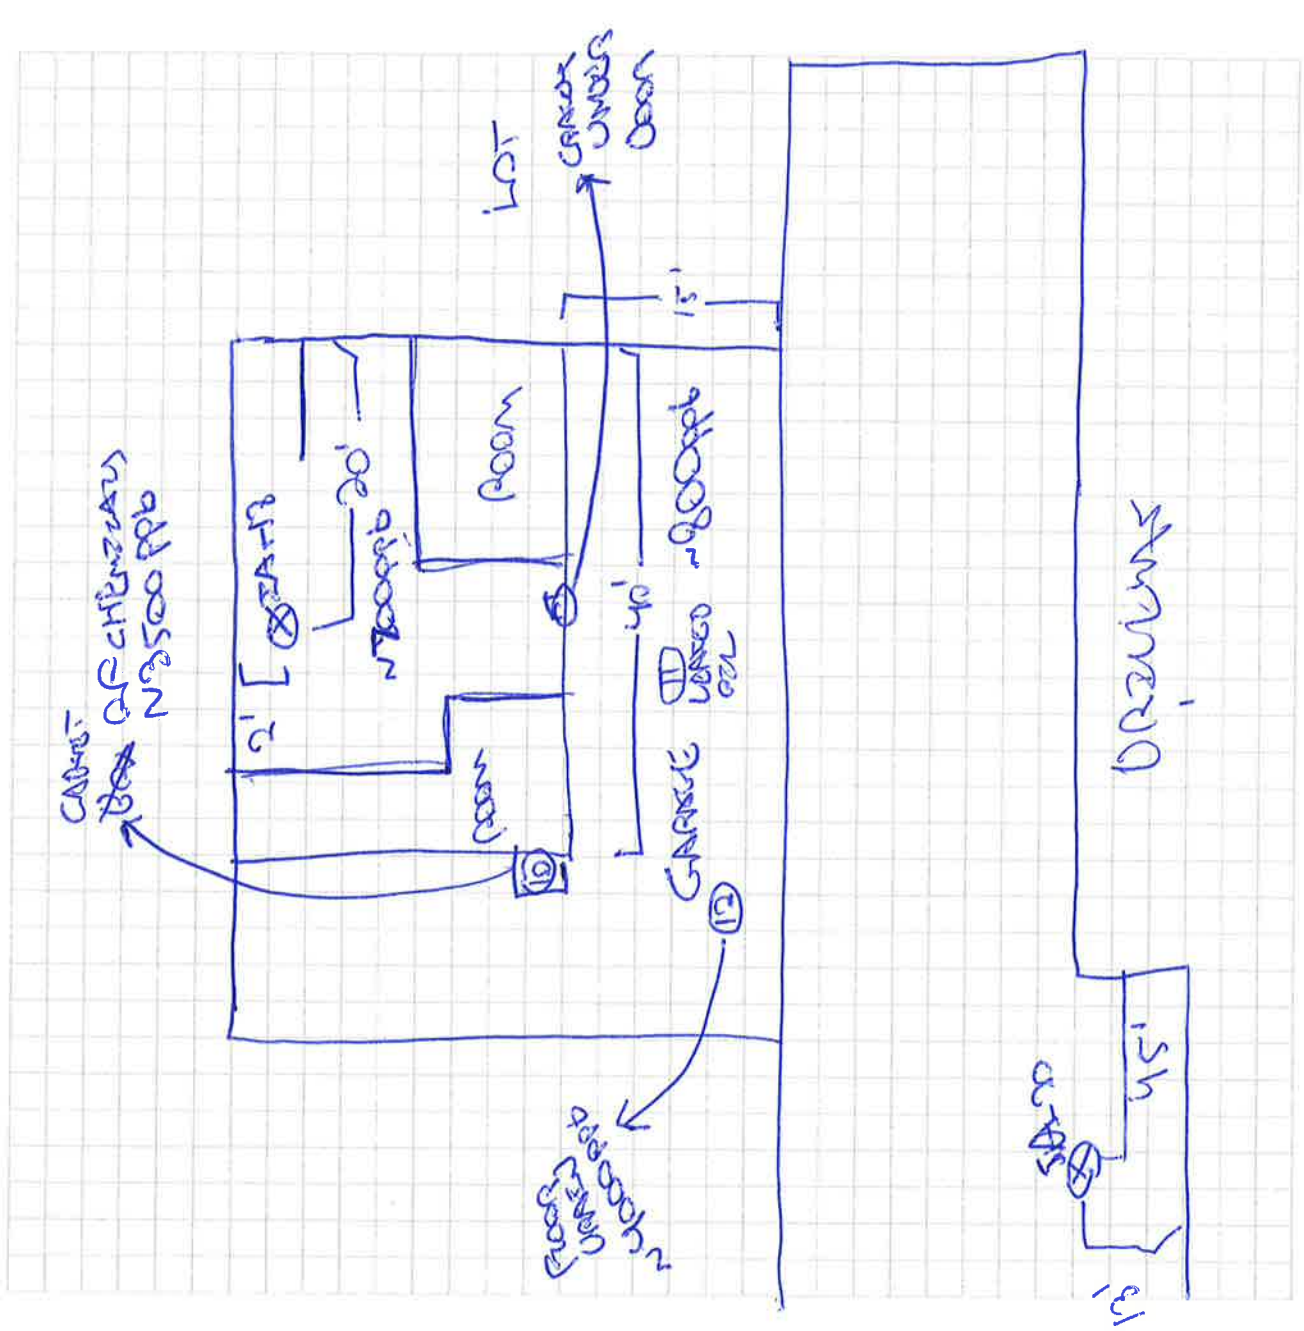
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

12. OUTDOOR PLOT EAST SIDE OF EAST LOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

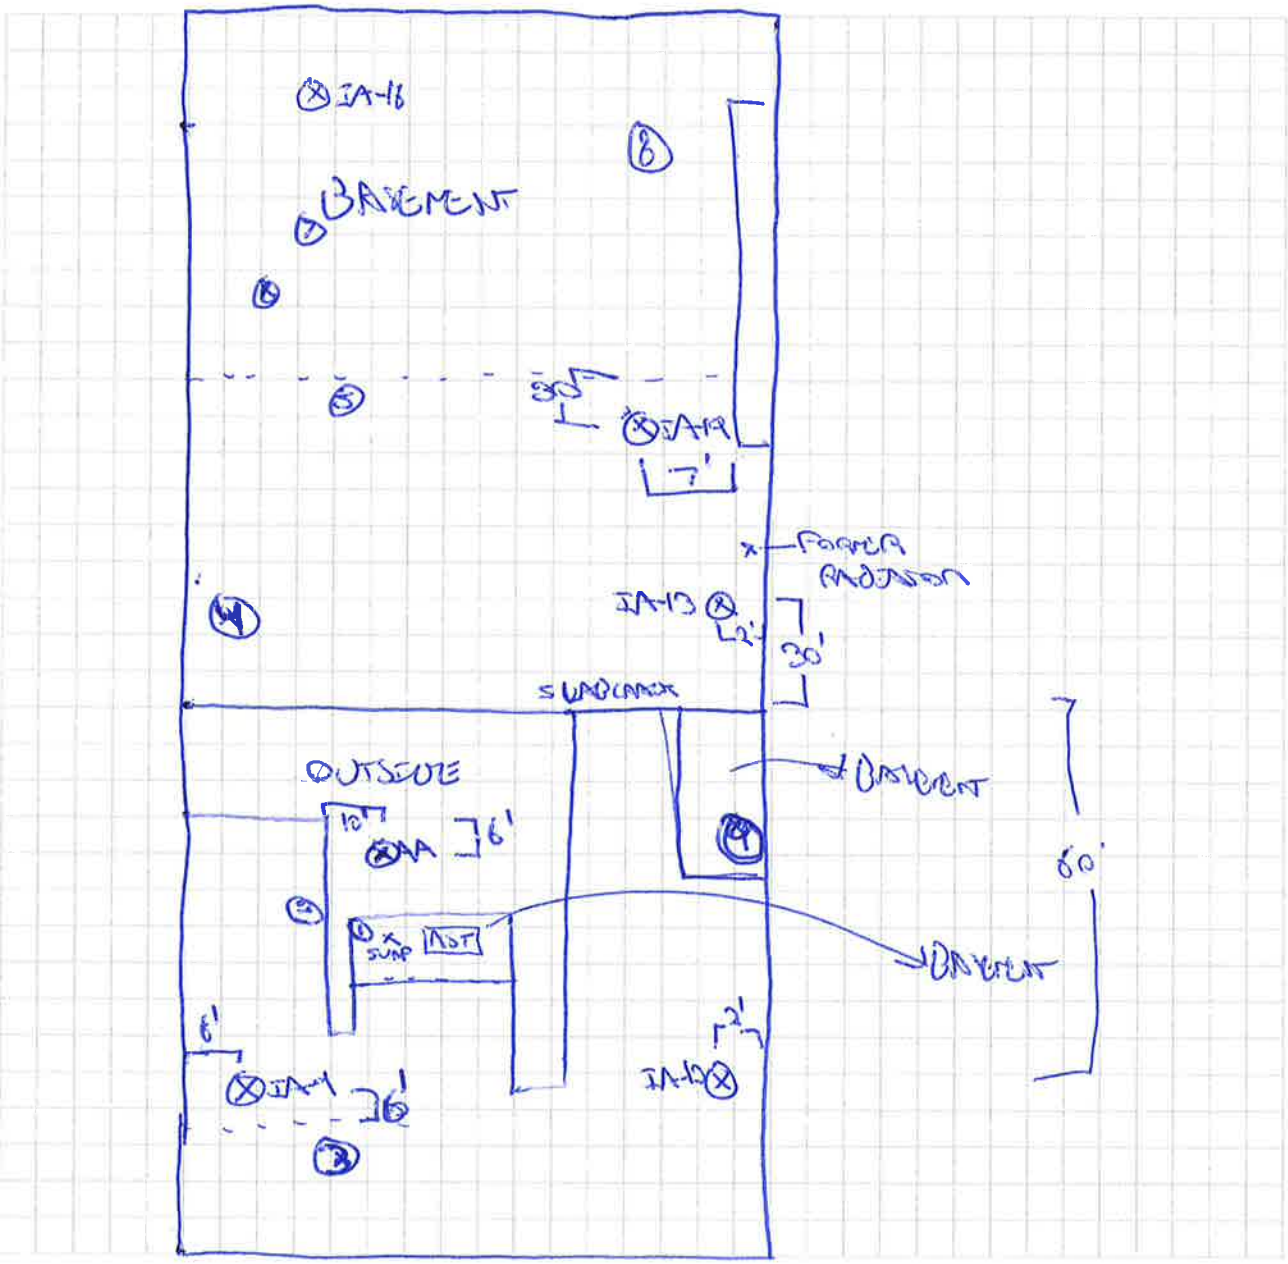


LOT
GRASS
CONC
DOOR
15'
DOOR
DOOR
DOOR

12. OUTDOOR PLOT WEST HALF OF LOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: _____

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N
①	JOINT COMPOUND(TU)	3.3L	U	VOLCONFLIT/MG/L	NO	Y
				CONTAINS, LATEX, ETC		
	SPRAY ENAMEL	1702	U	CONTAINS ACETONE, XYLENE	NO	Y
	CAN ENAMEL	3302	U	ENAMEL, CONT. PETROLEUM	NO	Y
	METAMATIC-OIL	1102	U	SDS ONLINE	NO	Y
②	3X CANS OF PAINT		U		NO	Y
	SEE PIC					
③	ROUNDUP + ONES		U		NO	Y
	SEE PIC					
④	GRAUT (SEALER)		U		NO	Y
⑤	ENAMEL/SEALANTS OTHERS		U		NO	Y
~~①, ②~~ ⑥ ⑦	CLEANERS		U		NO	Y
⑧	ENAMEL		U		NO	Y
⑨	SEALANTS		U		NO	Y
	SEE DISPOSE					

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: _____

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
①	CABINET OF CHEMICALS	~30x	U	VARIOUS SOLVENTS, ETC	3500ppb	Y
②	OIL LEAK	N/A	U	LEAKY ROOF OIL	~2000ppb	Y

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

APPENDIX E

LABORATORY ANALYTICAL REPORTS

ANALYTICAL REPORT

Job Number: 460-216817-1

Job Description: Empire 149th & 150th Streets, Queens

For:
AKRF Inc
34 South Broadway
Suite 314
White Plains, NY 10601

Attention: Stephen Grens

Approved for release.
Allison L Bennett
Project Manager I
9/4/2020 9:13 AM

Designee for
Melissa Haas, Senior Project Manager
777 New Durham Road, Edison, NJ, 08817
(203)308-0880
Melissa.Haas@Eurofinset.com
09/04/2020

The test results in this report meet all NELAP requirements unless specified within the case narrative. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Edison Project Manager.

TestAmerica Edison Certifications and Approvals: Connecticut: CTDOH #PH-0200, New Jersey: NJDEP (NELAP) #12028, New York: NYDOH (NELAP) #11452, NYDOH (ELAP) #11452, Pennsylvania: PADEP (NELAP) 68-00522 and Rhode Island: RIDOH LAO00132

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Job Number: 460-216817-1

Job Description: Empire 149th & 150th Streets, Queens

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Approved for release.

CASE NARRATIVE

Client: AKRF Inc

Project: Empire 149th & 150th Streets, Queens

Report Number: 460-216817-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 8/25/2020 6:00 PM, 8/26/2020 6:00 PM, 8/27/2020 6:20 PM and 8/28/2020 3:30 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 3.4º C, 3.6º C, 3.7º C, 3.8º C, 3.9º C and 3.9º C.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The collection date for the following samples was not recorded on the COC: SB-16_1-3_20200826 (460-216927-2) and SB-17_0-2_20200826 (460-216927-3). The date of 08/26/2020 was used per the sample IDs. The sample type and matrix were also not recorded for these samples.

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The sample collection date, sample type, and samlpe matrix were only recorded for the first sample on the COC.

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The project name/site name/PO number/# of containers were not listed on the COC. Samples were logged in under the Empire project and the client was notified.

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The client requested that the sample ID of the following sample be revised from TW-01 to TW-04. TW-04_20200827 (460-217143-1) A revised COC was provided.

The client requested that all soil and water samples are reported in the same SDG on 8/31/2020.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples SB-04_2-4_20200825 (460-216817-1), SB-15_0-2_20200826 (460-216927-1), SB-10_1-3_20200827 (460-217009-1), SB-12_0-2_20200828 (460-217095-1), SB-02_0-2_20200825 (460-216817-2), SB-16_1-3_20200826 (460-216927-2), SB-10_17-19_20200827 (460-217009-2), SB-13_1-3_20200828 (460-217095-2), SB-01_1-3_20200825 (460-216817-3), SB-17_0-2_20200826 (460-216927-3), SB-18_3-5_20200827 (460-217009-3), SB-14_2-4_20200828 (460-217095-3), SB-09_1-3_20200825 (460-216817-4), SB-18_16-18_20200827 (460-217009-4), SB-11_3-5_20200828 (460-217095-4), SB-03_0-2_20200825 (460-216817-5), SB-05_1-3_20200827 (460-217009-5), SB-08_2-4_20200825 (460-216817-6), SB-07_0-2_20200827 (460-217009-6), SB-07_6-8_20200827 (460-217009-7), SB-07_15-17_20200827 (460-217009-8), SB-06_3-5_20200827 (460-217009-9), SB-06_6-8_20200827 (460-217009-10) and SB-06_17-19_20200827 (460-217009-11) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260C. The samples were prepared on 08/26/2020, 08/27/2020, 08/28/2020 and 08/29/2020 and analyzed on 08/28/2020, 08/29/2020, 08/30/2020, 08/31/2020 and 09/01/2020.

1,2,3-Trichlorobenzene was detected in method blank MB 460-721040/9 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) associated with batch 460-720508 recovered above the upper control limit for

1,1,2-Trichloro-1,2,2-trifluoroethane. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

The laboratory control sample (LCS) for analytical batch 460-720508 recovered outside control limits for the following analyte: Methylcyclohexane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 460-721040 recovered above the upper control limit for 1,1,2-Trichloro-1,2,2-trifluoroethane and Dichlorodifluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-720741 was outside the method criteria for the following analytes: Bromomethane (biased high) and Bromoform (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 460-720741 recovered outside control limits for the following analyte: Bromomethane. This analyte was biased high in the LCS/LCSD and was not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 460-720646 recovered above the upper control limit for Chloromethane, Vinyl chloride, Chloroethane and Isopropylbenzene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The laboratory control sample duplicate (LCSD) for analytical batch 460-720646 recovered outside control limits for the following analyte: Chloroethane. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-721508 was outside the method criteria for the following analytes: 1,1-Dichloroethene and Dichlorodifluoromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-720746 was outside the method criteria for the following analytes: 1,1,2-Trichloro-1,2,2-trifluoroethane (biased high) and Methyl acetate (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Refer to the QC report for details.

The following sample was diluted to bring the concentration of target analytes within the calibration range: SB-18_3-5_20200827 (460-217009-3). Elevated reporting limits (RLs) are provided.

No difficulties were encountered during the volatiles analysis.

All quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples TW-04_20200827 (460-217143-1), TW-01_20200828 (460-217163-1), TW-18_20200828 (460-217163-2), TW-16_20200828 (460-217163-3), TW-13_20200828 (460-217163-4), TB_20200828 (460-217095-5), TW-07_20200828 (460-217163-5), TW-10_20200828 (460-217163-6), TB_20200825 (460-216817-7) and TW-09_20200828 (460-217163-7) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 08/28/2020, 08/30/2020 and 09/02/2020.

The continuing calibration verification (CCV) analyzed in batch 460-720644 was outside the method criteria for the following analytes: Dichlorodifluoromethane (bias high), Carbon tetrachloride, Bromoform and Methyl acetate (bias low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-721282 was outside the method criteria for Methyl tert-butyl ether. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Internal standard (ISTD) response of 1,4-Dioxane-d8 for the following samples was outside acceptance criteria: TW-01_20200828 (460-217163-1), (LCSD 460-721508/4) and (MB 460-721508/8). This ISTD does not correspond to any of the requested target compounds; therefore, the data have been reported.

Several analytes failed the recovery criteria high for the MS of sample 460-217152-18 in batch 460-721282.

4-Methyl-2-pentanone (MIBK) failed the recovery criteria high for the MSD of sample 460-217152-18 in batch 460-721282.

Refer to the QC report for details.

No other difficulties were encountered during the volatiles analysis.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples SB-04_2-4_20200825 (460-216817-1), SB-15_0-2_20200826 (460-216927-1), SB-10_1-3_20200827 (460-217009-1), SB-12_0-2_20200828 (460-217095-1), SB-02_0-2_20200825 (460-216817-2), SB-16_1-3_20200826 (460-216927-2), SB-10_17-19_20200827 (460-217009-2), SB-13_1-3_20200828 (460-217095-2), SB-01_1-3_20200825 (460-216817-3), SB-17_0-2_20200826 (460-216927-3), SB-18_3-5_20200827 (460-217009-3), SB-14_2-4_20200828 (460-217095-3), SB-09_1-3_20200825 (460-216817-4), SB-18_16-18_20200827 (460-217009-4), SB-11_3-5_20200828 (460-217095-4), SB-03_0-2_20200825 (460-216817-5), SB-05_1-3_20200827 (460-217009-5), SB-08_2-4_20200825 (460-216817-6), SB-07_0-2_20200827 (460-217009-6), SB-07_6-8_20200827 (460-217009-7), SB-07_15-17_20200827 (460-217009-8), SB-06_3-5_20200827 (460-217009-9), SB-06_6-8_20200827 (460-217009-10) and SB-06_17-19_20200827 (460-217009-11) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 08/27/2020, 08/28/2020 and 08/31/2020 and analyzed on 08/27/2020, 08/28/2020, 08/29/2020 and 09/01/2020.

The continuing calibration verification (CCV) analyzed in batch 460-720113 was outside the method criteria for the following analyte(s): 2-Nitroaniline and Hexachlorocyclopentadiene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The laboratory control sample (LCS) for preparation batch 460-719969 and analytical batch 460-720113 recovered outside control limits for the following analytes: Indeno[1,2,3-cd]pyrene, Benzo[a]pyrene and Dibenz(a,h)anthracene. The data have been reported.

Several analytes failed the recovery criteria low for the MS/MSD of sample 460-216232-6 in batch 460-720113. Several analytes failed the recovery criteria high. Several analytes exceeded the RPD limit.

Several analytes failed the recovery criteria low for the MS/MSD of sample 460-216576-1 in batch 460-720409. 3,3'-Dichlorobenzidine, 4-Nitroaniline and Hexachloroethane exceeded the RPD limit.

Several analytes failed the recovery criteria low for the MS/MSD of sample SB-10_1-3_20200827MS/MSD (460-217009-1) in batch 460-720401.

Refer to the QC report for details.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples TW-04_20200827 (460-217143-1), TW-01_20200828 (460-217163-1), TW-18_20200828 (460-217163-2), TW-16_20200828 (460-217163-3), TW-13_20200828 (460-217163-4), TW-07_20200828 (460-217163-5), TW-10_20200828 (460-217163-6) and TW-09_20200828 (460-217163-7) were analyzed for semivolatile organic compounds (GC/MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 08/30/2020 and 09/01/2020 and analyzed on 08/31/2020 and 09/01/2020.

The continuing calibration verification (CCV) analyzed in batch 460-720701 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol (Surr) and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-721182 was outside the method criteria for the following analyte(s): 2,4-Dinitrotoluene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Refer to the QC report for details.

No other difficulties were encountered during the semivolatiles analysis.

All quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS

Samples SB-04_2-4_20200825 (460-216817-1), SB-15_0-2_20200826 (460-216927-1), SB-10_1-3_20200827 (460-217009-1), SB-12_0-2_20200828 (460-217095-1), SB-02_0-2_20200825 (460-216817-2), SB-16_1-3_20200826 (460-216927-2), SB-10_17-19_20200827 (460-217009-2), SB-13_1-3_20200828 (460-217095-2), SB-01_1-3_20200825 (460-216817-3),

SB-17_0-2_20200826 (460-216927-3), SB-18_3-5_20200827 (460-217009-3), SB-14_2-4_20200828 (460-217095-3), SB-09_1-3_20200825 (460-216817-4), SB-18_16-18_20200827 (460-217009-4), SB-11_3-5_20200828 (460-217095-4), SB-03_0-2_20200825 (460-216817-5), SB-05_1-3_20200827 (460-217009-5), SB-08_2-4_20200825 (460-216817-6), SB-07_0-2_20200827 (460-217009-6), SB-07_6-8_20200827 (460-217009-7), SB-07_15-17_20200827 (460-217009-8), SB-06_3-5_20200827 (460-217009-9), SB-06_6-8_20200827 (460-217009-10) and SB-06_17-19_20200827 (460-217009-11) were analyzed for polychlorinated biphenyls in accordance with EPA SW-846 Method 8082A. The samples were prepared on 08/27/2020, 08/28/2020 and 08/31/2020 and analyzed on 08/28/2020, 08/29/2020 and 09/01/2020.

Surrogate Decachlorobiphenyl and Tetrachloro-m-xylene recovery for the following sample was outside the upper control limit: SB-10_17-19_20200827 (460-217009-2). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

The Decachlorobiphenyl and Tetrachloro-m-xylene surrogate recovery for the following samples was outside acceptance limits (high biased) on the primary column due to matrix interference: SB-05_1-3_20200827 (460-217009-5). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

Aroclor 1016 failed the recovery criteria high for the MS/MSD of sample 460-216908-1 in batch 460-719895.

Aroclor 1016 failed the recovery criteria high for the MS/MSD of sample 460-216985-1 in batch 460-720514.

Refer to the QC report for details.

No other difficulties were encountered during the PCBs analysis.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP/MS)

Samples SB-04_2-4_20200825 (460-216817-1), SB-15_0-2_20200826 (460-216927-1), SB-10_1-3_20200827 (460-217009-1), SB-12_0-2_20200828 (460-217095-1), SB-02_0-2_20200825 (460-216817-2), SB-16_1-3_20200826 (460-216927-2), SB-10_17-19_20200827 (460-217009-2), SB-13_1-3_20200828 (460-217095-2), SB-01_1-3_20200825 (460-216817-3), SB-17_0-2_20200826 (460-216927-3), SB-18_3-5_20200827 (460-217009-3), SB-14_2-4_20200828 (460-217095-3), SB-09_1-3_20200825 (460-216817-4), SB-18_16-18_20200827 (460-217009-4), SB-11_3-5_20200828 (460-217095-4), SB-03_0-2_20200825 (460-216817-5), SB-05_1-3_20200827 (460-217009-5), SB-08_2-4_20200825 (460-216817-6), SB-07_0-2_20200827 (460-217009-6), SB-07_6-8_20200827 (460-217009-7), SB-07_15-17_20200827 (460-217009-8), SB-06_3-5_20200827 (460-217009-9), SB-06_6-8_20200827 (460-217009-10) and SB-06_17-19_20200827 (460-217009-11) were analyzed for Total Metals (ICP/MS) in accordance with EPA SW-846 Method 6020B. The samples were prepared on 08/27/2020, 08/28/2020 and 08/29/2020 and analyzed on 08/27/2020, 08/28/2020 and 08/30/2020.

Antimony and Calcium failed the recovery criteria low for the MS of sample 460-216699-15 in batch 460-720330. Aluminum and Iron failed the recovery criteria high.

Antimony, Barium and Lead failed the recovery criteria low for the MS of sample 460-216793-2 in batch 460-720093. Aluminum and Iron failed the recovery criteria high.

Antimony, Calcium and Iron failed the recovery criteria low for the MS of sample SB-10_1-3_20200827MS (460-217009-1) in batch 460-720650. Several analytes failed the recovery criteria high.

Several analytes failed the recovery criteria low for the MS of sample 460-217089-1 in batch 460-720689. Calcium and Vanadium failed the recovery criteria high.

Several analytes failed the recovery criteria low for the MS of sample SB-13_1-3_20200828MS (460-217095-2) in batch 460-720650. Several analytes failed the recovery criteria high.

Beryllium, Calcium and Selenium exceeded the RPD limit for the duplicate of sample 460-216699-15.

Several analytes exceeded the RPD limit for the duplicate of sample SB-10_1-3_20200827DU (460-217009-1).

Calcium, Iron, Sodium and Zinc exceeded the RPD limit for the duplicate of sample SB-13_1-3_20200828DU (460-217095-2).

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Refer to the QC report for details.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples SB-04_2-4_20200825 (460-216817-1), SB-15_0-2_20200826 (460-216927-1), SB-10_1-3_20200827 (460-217009-1), SB-12_0-2_20200828 (460-217095-1), SB-02_0-2_20200825 (460-216817-2), SB-16_1-3_20200826 (460-216927-2), SB-10_17-19_20200827 (460-217009-2), SB-13_1-3_20200828 (460-217095-2), SB-01_1-3_20200825 (460-216817-3), SB-17_0-2_20200826 (460-216927-3), SB-18_3-5_20200827 (460-217009-3), SB-14_2-4_20200828 (460-217095-3), SB-09_1-3_20200825 (460-216817-4), SB-18_16-18_20200827 (460-217009-4), SB-11_3-5_20200828 (460-217095-4), SB-03_0-2_20200825 (460-216817-5), SB-05_1-3_20200827 (460-217009-5), SB-08_2-4_20200825 (460-216817-6), SB-07_0-2_20200827 (460-217009-6), SB-07_6-8_20200827 (460-217009-7), SB-07_15-17_20200827 (460-217009-8), SB-06_3-5_20200827 (460-217009-9), SB-06_6-8_20200827 (460-217009-10) and SB-06_17-19_20200827 (460-217009-11) were analyzed for total mercury in accordance with EPA SW-846 Method 7471B. The samples were prepared and analyzed on 08/27/2020, 08/28/2020 and 09/02/2020.

Samples SB-10_17-19_20200827 (460-217009-2)[5X] and SB-11_3-5_20200828 (460-217009-4)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the Hg analysis.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS/PERCENT MOISTURE

Surrogate Legend

DCA = 1,2-Dichloroethane-d4 (Surr)

BFB = 4-Bromofluorobenzene

Surrogate Summary

Client: AKRF Inc
Job ID: 460-216817-1
Project/Site: Empire 149th & 150th Streets, Queens

DBFM = Dibromofluoromethane (Surr)
TOL = Toluene-d8 (Surr)

Method: 8270D - Semivolatile Organic Compounds (GC/MS)

Matrix: Solid
Prep Type: Total/NA

		Percent Surrogate Recovery (Acceptance Limits)

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
A	The tentatively identified compound is a suspected aldol-condensation product.
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
U	Indicates the analyte was analyzed for but not detected.
X	Surrogate recovery exceeds control limits

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F3	Duplicate RPD exceeds the control limit
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
W	PS: Post-digestion spike was outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: AKRF Inc
Job ID: 460-216817-1
Project/Site: Empire 149th & 150th Streets, Queens

Laboratory: Eurofins TestAmerica, Edison

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	11452	04-01-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids
