LIST OF ACRONYMS

Acronym	Definition
1,1,1-TCA	1,1,1-trichloroethane
AOCs	Areas of Concern
ASTM	American Society for Testing and Materials
AWQSGVs	Ambient Water Quality Standards and Guidance Values
BCA	Brownfield Cleanup Agreement
BCP	Brownfield Cleanup Program
BN	Base/Neutral
bgs	Below Ground Surface
CAMP	Community Air Monitoring Plan
CSCO	Commercial Soil Cleanup Objective
CoC	Chain of Custody
COC	Contaminants of Concern
CVOC	Chlorinated Volatile Organic Compound
DER-10	Division of Environmental Remediation Technical Guide 10
DPP	Direct-push Probe
DUSR	Data Usability Summary Report
ECs	Engineering Controls
ELAP	New York State Environmental Laboratory Approval Program
ESA	Environmental Site Assessment
eV	Electron Volt
GPR	Ground Penetrating Radar
HASP	Health and Safety Plan
HAZWOPER	Hazardous Waste Operations and Emergency Response
HDPE	High-density Polyethylene
Ics	Institutional Control
IDW	Investigation Derived Waste
IRM	Interim Remedial Measure
IRMCR	IRM Completion Report
IRMWP	IRM Work Plan
MCL	Maximum Contaminant Level
MEK	Methyl Ethyl Ketone
mg/kg	Milligrams per Kilogram
MS/MSD	Matrix Spike/Matrix Spike Duplicate
NAPL	Non-Aqueous Phase Liquid
NAVD88	North American Vertical Datum of 1988
ND	Non-Detectable
NTUs	Nephelometric Turbidity Units
NYCRR	New York Codes, Rules and Regulations
NYS	New York State
NYSDEC	New York State Department of Environmental Conservation
NYSDOH	New York State Department of Health
NYSDOT	New York State Department of Transportation
ORP	Oxidation-Reduction Potential
OSHA	United States Occupational Safety and Health Administration
PAHs	Polycyclic Aromatic Hydrocarbons

Acronym	Definition
PCBs	Polychlorinated Biphenyls
PCE	Tetrachloroethylene
PFAS	Per- and Polyfluoroalkyl Substances
PFOA	Perfluorooctanoic Acid
PFOS	Perfluorooctanesulfonic Acid
PGWSCO	Protection of Groundwater Soil Cleanup Objective
PID	Photoionization detector
ppb	Parts per billion
ppm	Parts per million
ppt	Parts per trillion
PVC	Polyvinyl Chloride
QA	Quality Assurance
QAPP	Quality Assurance Project Plan
QC	Quality Control
QEP	Qualified Environmental Professional
QHHEA	Qualitative Human Health Exposure Assessment
RA	Remedial Action
RAOs	Remedial Action Objectives
RAWP	Remedial Action Work Plan
RCRA	Resource Conservation and Recovery Act
REC	Recognized Environmental Condition

RIR	Remedial Investigation Report
RIWP	Remedial Investigation Work Plan
RRGV	Restricted Residential Guidance Value
RRSCO	Restricted Residential Soil Cleanup Objective
SCOs	Soil Cleanup Objectives
SIM	Selective Ion Monitoring
SSDS	Sub-Slab Depressurization System
SVOC	Semivolatile Organic Compound
TAL	Target Analyte List
TCE	Trichloroethylene
ULURP	Uniform Land Use Review Procedure
UST	Underground Storage Tank
UUGV	Unrestricted Use Guidance Value
UUSCO	Unrestricted Use Soil Cleanup Objective
VCP	Voluntary Cleanup Program
VEC	Vapor Encroachment Condition
VOC	Volatile Organic Compound
µg/kg	Micrograms per Kilogram
µg/L	Micrograms per Liter
µg/m^3	Micrograms per Meter Cubed

CERTIFICATION

I, Stephen Malinowski, QEP, certify that I am currently a Qualified Environmental Professional (QEP), as defined in 6 NYCRR Part 375, and that this Remedial Investigation Report (RIR) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10), and that all activities were performed in full accordance with the DER-approved work plans, work plan addenda, and any DER-approved modifications.

Stephen Malinowski, QEP		DRAFT
Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

This Remedial Investigation Report (RIR) provides information for the establishment of remedial action objectives (RAOs), evaluation of remedial action (RA) alternatives, and selection of a remedy pursuant to the Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation. The Remedial Investigation (RI) described in this RIR is consistent with applicable guidance.

Site Location and Current Usage

The property is located at 95-25 149th Street in the Jamaica section of Queens, New York, also identified as Queens Borough Tax Block 10002, Lots 1, 10, and 13 on the New York City Tax Map (the "Site"). On July 7, 2021, Radix 95-25 149th St LLC (the "Applicant") entered into a Brownfield Cleanup Agreement (BCA) (Index No. C241252-06-21) for the Site with the New York State Department of Environmental Conservation (NYSDEC) as a Volunteer.

Currently, the approximately 1.17-acre Site contains 11 one- to two-story buildings. The majority of the buildings on Lot 1 (95-25 149th Street) are unoccupied and only utilized by the current Site owner for office space, storage of construction materials, and warehousing. The southern portion of Lot 1 is occasionally utilized for professional films and television sets. Lot 10 (95-08 150th Street) contains a one-story brick building and includes a garage, shop, storage, and an office utilized by a private contractor. Lot 13 (95-12 150th Street) contains a two-story building and includes a loading dock, shop, and an office utilized by a private contractor. To support the proposed redevelopment, the Site is anticipated to be rezoned from M1-4 (manufacturing). The redevelopment plans and regulatory approvals will be advanced under the Uniform Land Use Review Procedure (ULURP). The Site location and topography of the Site and surrounding area are shown on Figure 1, and the Site layout is shown on Figure 2.

Surrounding Area

The Site is abutted to the north by commercial/industrial buildings, warehouses, and residential apartment buildings along 95th Avenue; to the east by Mohan's Precast USA, Inc., Taste of Heaven Ministries, and industrial buildings and warehouses; to the south by commercial/industrial buildings and residential properties along 97th Avenue; and to the west by commercial/industrial buildings along 149th Street. The surrounding area is predominantly commercial and industrial with some residential uses.

There are no sensitive receptors (i.e., schools, daycares, or hospitals) within 600 feet of the Site. The nearest sensitive receptors include Imagine Early Learning Centers @ Jamaica Kids located at 155-10 Jamaica Avenue (approximately 1,320 feet to the northeast) and Queens High School for the Sciences located at 94-50 159th Street (approximately 1,360 feet to the northeast). There are no water bodies located on or adjacent to the Site. Willow Lake is located approximately 2 miles northwest of the Site and Jamaica Bay is located approximately 4 miles south of the Site.

Surrounding land use and sensitive receptors are shown on Figure 3.

Historical Site Uses

Available records indicated that Lot 1 was occupied by Jas. Macbeth Cap and Fuse Factory (manufacturer of patent blasting machinery) and private residences between approximately 1891 and 1901. The fuse factory included various uses such as a tarring house and coal and tinning houses. Lot 1 was later occupied by General Acoustic Company in 1911 and Dictagraph Products Corporation between approximately 1925 and 1951. Abbott Wire Products was identified on Lot 1 between 1963 and 2006. Other uses on Lot 1 included a metal plating shop and refuse burning. Lots 10 and 13 were also occupied by Jas. Macbeth Cap and Fuse Factory from 1891 through 1901, and General Acoustic Company in 1911. By 1925, Lot 10 was utilized as a battery service facility and tin shop and Lot 13 was occupied by a garage and oil burner manufacturer. In 1951, Lots 10 and 13 were occupied by a paper box manufacturer until approximately

1963 when a sink top manufacturer was identified on both lots through approximately 2006. According to the 2019 Phase I Environmental Site Assessment (ESA), the Site buildings have also been used for metal plating operations since the late 1950s. Tetrachloroethene (PCE) was reportedly used for vaporizing operations related to metals, predominantly on Lot 10.

Areas of Concern (AOCs)

The following environmental issues identified during previous assessments were considered areas of concern (AOCs) for the RI. The AOCs include:

- The Site's former industrial use, including metal plating, manufacturing, tannery, and fuse factory;
- Elevated concentrations of chlorinated solvents detected in soil vapor sampled during a 2020 Phase II Environmental Site Assessment (ESA); and
- Elevated concentrations of chlorinated solvents and metals in soil sampled during a 2020 Phase II ESA.

Summary of the Work Performed under the Remedial Investigation (RI)

The RI was performed in July 2022. A supplemental RI was performed in September 2024 to collect additional data in the southern portion of the Site. The RIs included the following scope of work:

1. The performance of two geophysical surveys across accessible portions of the Site and utility mark-outs.
2. The advancement of 15 soil borings with continuous soil sampling and laboratory analysis of 41 soil samples.
3. The collection of and laboratory analysis of one sediment sample from a floor drain on Lot 10.
4. The installation of 6 permanent groundwater monitoring wells with the collection and laboratory analysis of 6 groundwater samples.
5. The installation of 13 temporary soil vapor probes and the collection and laboratory analysis of 5 sub-slab soil vapor samples and 8 soil vapor samples.
6. The performance of 2 groundwater monitoring well elevation and location surveys of the newly installed monitoring wells.

Summary of Hydrogeological Findings

The following geologic and hydrogeologic conditions were noted during the RI:

1. Based on the August 2022 surveys of the Site by Fehringer Surveying, PC, the Site lies at an elevation of 35.52 to 38.84 feet above the North American Vertical Datum of 1988 (NAVD88), and slopes down in a generally north to northwesterly direction.
2. The stratigraphy of the Site, from the surface down, generally consisted of uncontrolled fill material comprising sand, gravel, and silt, with varying amounts of brick and concrete extending from grade to approximately 5 to 13 feet below grade. The fill layer was underlain by apparent native sand, gravel, and silt to boring termination depths (up to 30 feet below grade). Bedrock was not encountered during the RI.
3. Groundwater beneath the Site ranges from elevation 19.19 to elevation 19.50 (NAVD88), or 10.68 to 19.25 feet below grade across the Site. Based on the well elevation survey, groundwater flows in a generally southerly to southeasterly direction beneath the Site.

Summary of Environmental Findings

Soil

Forty-one soil samples and one sediment sample were collected. The soil samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260D, semi-volatile organic compounds (SVOCs) by EPA Method 8270E, pesticides by EPA Method 8081B, polychlorinated biphenyls (PCBs) by EPA Method 8082A, TAL metals by EPA Method 6000/7000 series, cyanide by EPA Method 9012, hexavalent chromium by EPA Method 7196A, 1,4-dioxane by EPA Method 8270E, and the NYSDEC list of 21 PFAS compounds by EPA Method 537 (modified) and EPA Method 1633 (samples collected in 2024). The sediment sample was analyzed for VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, TAL metals by EPA Method 6000/7000 series, 1,4-dioxane by EPA Method 8270E, and PFAS compounds by EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633. The soil and sediment sample analytical results for VOCs, SVOCs, PCBs, pesticides, and metals, were compared to the 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs), the applicable Soil Cleanup Objectives (SCOs) for the proposed future use of the Site. Concentrations of perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were compared to the guidance values for UUSCOs and RRSCOs presented in NYSDEC's April 2023 *Sampling, Analysis and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs*.

One VOC, acetone, was detected in sample RI-SB-DRAIN_1-1.5_20220727 at a concentration of 0.15 milligrams per kilogram (mg/kg), above the UUSCO of 0.05 mg/kg, but below the RRSCO of 100 mg/kg. No other VOCs were detected above UUSCOs and RRSCOs. Tetrachloroethylene (PCE) was detected in 20 samples, below the UUSCO of 1.3 mg/kg, at concentrations up to 0.046 mg/kg in samples RI-SB-05_5-7_20220726 and RI-SB-08_5-7_20220728. Seven SVOCs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene] were detected at concentrations above their respective UUSCOs in three samples. Six of the SVOCs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene] were additionally detected above the RRSCOs at concentrations up to 5.3 mg/kg. Total PCBs were not detected above laboratory reporting limits in any soil samples. One pesticide, P,P'-DDE, was detected in sample RI-SB-07_0-2_20220725 at concentrations above the UUSCO, but below the RRSCO. Seven metals (barium, cadmium, copper, lead, mercury, nickel, and zinc) were detected in 21 soil samples at concentrations ranging from 0.32 mg/kg to 1,310 mg/kg, above their respective UUSCOs. Barium, cadmium, lead, and mercury were additionally detected above RRSCOs in up to 14 samples.

Perfluorooctanoic acid (PFOA) was detected in sample RI-SB-DRAIN_1-1.5_20220727 at an estimated concentration of 1.55 parts per billion (ppb), above the NYSDEC UUSCO Guidance Value (UUGV) of 0.66 ppb but below the NYSDEC RRSCO Guidance Value (RRGV) of 33 ppb. Perfluorooctanesulfonic acid (PFOS) was detected in sample RI-SB-02_0-2_20220727 at low levels up to an estimated concentration of 0.19 ppb, below the UUGV of 0.88 ppb. 1,4-Dioxane was not detected above laboratory reporting limits in any soil samples.

Groundwater

Six groundwater samples were collected for laboratory analysis of VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, total and dissolved TAL metals by EPA Method 6000/7000 series, cyanide by EPA Method 9012, 1,4-dioxane by EPA Method 8270E Selective Ion Monitoring (SIM), and the NYSDEC list of 21 PFAS by Modified EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633. Groundwater sample analytical results for VOCs, SVOCs, PCBs, pesticides, and total/dissolved metals were conservatively compared to the NYSDEC (Ambient Water Quality Standards and Guidance Values) AWQSGVs for Class GA groundwater. PFAS concentrations were compared to the guidance values presented in NYSDEC's April 2023 *Sampling, Analysis and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs*.

VOCs were not detected in the groundwater samples at concentrations above their respective AWQSGVs. One SVOC, 1,4-dioxane, was detected in sample RI-MW-01_20220817 at a concentration of 0.36 micrograms per liter (µg/L), above the AWQSGV of 0.35 µg/L. Up to three metals (iron, manganese, and/or sodium) were detected above their respective AWQSGVs in each of the six unfiltered groundwater samples, and sodium was detected above the AWQSGVs in each of the six filtered groundwater samples. PCBs and pesticides were not detected above laboratory reporting limits in any of the six groundwater samples.

PFOA was detected above the NYSDEC guidance value of 6.7 parts per trillion (ppt) in each of the six groundwater samples (plus the blind duplicates) at concentrations up to 46.1 ppt. PFOS was detected above the NYSDEC guidance value of 2.7 ppt in each of the six groundwater samples (plus the blind duplicates) at concentrations up to 33.7 ppt.

Soil Vapor and Indoor Air

Five sub-slab soil vapor samples and eight soil vapor samples were collected from temporary soil vapor points located across the Site. Although there are currently no regulatory or published guidance values for VOCs in soil vapor, soil vapor data was used to assess the potential for exposure to receptors and to help define the nature and extent of contamination at the Site.

The soil vapor samples were analyzed for VOCs by EPA Method TO-15. Forty-four of the 73 VOCs analyzed for were detected in the soil vapor samples. Solvent-related VOCs [including 1,1,1-trichloroethane (1,1,1-TCA), carbon tetrachloride, chlorodifluoromethane, chloromethane, dichlorodifluoromethane, methylene chloride, PCE, and trichloroethylene (TCE)] were detected in the soil vapor samples at individual concentrations up to 530 micrograms per cubic meter (µg/m^3) from a diluted analysis (PCE in sample RI-SV-03_20220728). Other VOCs, including compounds typically associated with petroleum [such as 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3-butadiene, 1,3-dichlorobenzene, 2,2,4-trimethylpentane, 2-hexanone, 4-ethyltoluene, benzene, butane, cyclohexane, cymene, ethylbenzene, isopropanol, isopropylbenzene, methyl ethyl ketone (MEK), m,p-xylenes, n-butylbenzene, n-heptane, n-hexane, n-propylbenzene, o-xylene, and toluene] were detected in the soil vapor samples at individual concentrations up to 330 µg/m^3 (total xylenes in sample RI-SV-10_20240920).

PCE was detected in all thirteen soil vapor samples at concentrations ranging an estimated 0.29 µg/m^3 in sample RI-SV-10_20240920 to 530 µg/m^3 from a diluted analysis in sample RI-SV-03_20220728. TCE, a breakdown product of PCE, was detected in eight of the thirteen soil vapor samples at concentrations ranging from 0.26 µg/m^3 in sample RI-SV-02_20220728 to 50 µg/m^3 from a diluted analysis in sample RI-SV-01_20220728.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

This Remedial Investigation (RI) Report (RIR) summarizes the remedial investigation work performed between July and August 2022, and September and October 2024 for the 95-25 149th Street project site (the "Site"). The goal of the RI was to further define and characterize the nature and extent of Site contamination and to assist with determining the appropriate remedial action. The RI was conducted in general accordance with AKRF's April 2022 New York State Department of Environmental Conservation (NYSDEC)-approved Remedial Investigation Work Plan (RIWP), which included a Health and Safety Plan (HASP) and a Quality Assurance Project Plan (QAPP), and AKRF's NYSDEC-approved Supplemental RI (SRI) Work Plan (SRIWP) dated June 2024. Deviations from the RIWP or SRIWP are described throughout the document, specifically in Section 4.7.10, although none of the deviations materially affected achieving the objectives of the RI.

1.1 Site Location and Current Usage

The property is an approximately 1.17-acre parcel located at 95-25 149th Street in the Jamaica section of Queens, New York, also identified as Queens Borough Tax Block 10002, Lots 1, 10, and 13 on the New York City Tax Map (Site). On July 7, 2021, Radix 95-25 149th St LLC (the "Applicant") entered into a Brownfield Cleanup Agreement (BCA) (Index No. C241252-06-21) for the Site with the NYSDEC as a Volunteer.

Currently, the Site contains 11 one- to two-story buildings. The majority of the buildings on Lot 1 (95-25 149th Street) are unoccupied and only utilized by the current Site owner for office space, storage of construction materials, and warehousing. The southern portion of Lot 1 is occasionally utilized for professional films and television sets. Lot 10 (95-08 150th Street) contains a one-story brick building and includes a garage, shop, storage, and an office utilized by a private contractor. Lot 13 (95-12 150th Street) contains a two-story building and includes a loading dock, shop, and an office utilized by a private contractor. A sub-slab depressurization system (SSDS) was installed at the Site as an Interim Remedial Measure (IRM) and is currently in operation.

To support the proposed redevelopment, the Site is anticipated to be rezoned from M1-4 (manufacturing). The redevelopment plans and regulatory approvals will be advanced under the Uniform Land Use Review Procedure (ULURP). The Site location and topography of the Site and surrounding area are shown on Figure 1, and the Site layout is shown on Figure 2.

1.2 Description of Surrounding Property

The Site is abutted to the north by commercial/industrial buildings, warehouses, and residential apartment buildings along 95th Avenue; to the east by Mohan's Precast USA, Inc., Taste of Heaven Ministries, and industrial buildings and warehouses; to the south by commercial/industrial buildings and residential properties along 97th Avenue; and to the west by commercial/industrial buildings along 149th Street. The surrounding area is predominantly commercial and industrial with some residential uses.

There are no sensitive receptors (i.e., schools, daycares, or hospitals) within 600 feet of the Site. The nearest sensitive receptors include Imagine Early Learning Centers @ Jamaica Kids located at 155-10 Jamaica Avenue (approximately 1,320 feet to the northeast) and Queens High School for the Sciences located at 94-50 159th Street (approximately 1,360 feet to the northeast). There are no water bodies located on or adjacent to the Site. Willow Lake is located approximately 2 miles northwest of the Site and Jamaica Bay is located approximately 4 miles south of the Site.

Surrounding land use and sensitive receptors are shown on Figure 3.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Available records indicated that Lot 1 was occupied by Jas. Macbeth Cap and Fuse Factory (manufacturer of patent blasting machinery) and private residences between approximately 1891 and 1901. The fuse factory included various uses such as a tarring house, and coal and tinning houses. Lot 1 was later occupied by General Acoustic Company in 1911 and Dictagraph Products Corporation between approximately 1925 and 1951. Abbott Wire Products was identified on Lot 1 between 1963 and 2006. Other uses on Lot 1 included a metal plating shop and refuse burning. Lots 10 and 13 were also occupied by Jas. Macbeth Cap and Fuse Factory from 1891 through 1901, and General Acoustic Company in 1911. By 1925, Lot 10 was utilized as a battery service facility and tin shop and Lot 13 was occupied by a garage and oil burner manufacturer. In 1951, Lots 10 and 13 were occupied by a paper box manufacturer until approximately 1963 when a sink top manufacturer was identified on both lots through approximately 2006. According to the 2019 Phase I ESA, the Site buildings have also been used for metal plating operations since the late 1950s. Tetrachloroethene (PCE) was reportedly used for vaporizing operations related to metals manufacturing, predominantly on Lot 10.

Known Site owners for former Lot 1 have included: Jas. Macbeth Cap & Fuse Factory from 1891 to 1901; General Acoustic Co. in 1911; Dictagraph Products Corporation from 1925 to 1962; Abbott Wire Products, Inc. from 1963 to 2006; and Radix 95-25 149th Steet LLC (Applicant) from July 2021 to present day. Known Site owners for former Lots 10 and 13 have included: JAS Macbeth Cap & Fuse Factory from 1897 to 1901; General Acoustic Co. in 1911; and Radix 95-25 149th Steet LLC (Applicant) from July 2021 to present day.

2.2 Proposed Redevelopment Plan

Although the redevelopment plans are still being conceived, the proposed project currently includes demolition of the existing structures (including asbestos and hazardous building materials abatement as applicable), and construction of two 8-story, mixed-use buildings with a site-wide cellar level. It is anticipated that the post-remediation use will include commercial, industrial, and both market-rate and affordable residential.

It is anticipated that the structures in the southern portion of Lot 1 will be demolished to construct a temporary parking lot prior to Site redevelopment.

2.3 Previous Environmental Reports

Phase I Environmental Site Assessment, 95-04 & 95-25 149th Street, 95-08 & 95-12 150th Street, Queens, Queens County, New York, Partridge Venture Engineering, P.C. & Lawrence ENV, LLC, November 2019

Partridge Venture Engineering P.C. (PVE) doing business as Lawrence ENV, LLC (LENV) prepared a Phase I Environmental Site Assessment (ESA) in November 2019. The Phase I ESA was conducted in conformance with the scope and limitations of American Society for Testing & Materials (ASTM) Practice E1527-13 and included a visual inspection of the Site and a review of regulatory database records and historical records. It should be noted that this Phase I ESA was prepared for a larger property, which included the Site. The assessment identified the following Recognized Environmental Conditions (RECs) in connection with the Site:

- All three tax lots within the Site contain an E-Designation for hazardous materials.
- Historically, the Site was utilized for industrial purposes since approximately 1897, including metal plating, finishing and manufacturing, machine shops, tanneries, painting rooms, a tarring

house, a cap and fuse factory, and battery service. The Site's historical uses and anticipated waste generated constituted a REC.

- Nearby current and historic off-site uses with the potential to affect soil vapor beneath the Site included, a vehicle dismantling facility, a dry cleaner, auto repair shops, gasoline stations, garages with fuel oil tanks, an air conditioning manufacturer, a wire products manufacturer, and an auto painting and spraying facility. The regulatory database also identified five nearby sites in the Voluntary Cleanup Program (VCP).

Phase II Environmental Site Assessment, Abbott 149th and 150th Street Site, 95-25 149th St. and 95-08 & 95-12 150th St., Queens, New York, AKRF, November 2020

AKRF was retained by the Applicant to conduct a Phase II ESA between August and October 2020. The scope of work was based on the findings of the November 2019 Phase I ESA prepared by PVE. The Phase II ESA included a geophysical survey; the advancement of 10 soil borings across the Site and collection of up to two soil samples from each boring; installation of five temporary groundwater monitoring wells and collection of five groundwater samples; installation of seven temporary soil vapor points with collection of seven soil vapor samples; and collection of seven indoor air samples from the interior of buildings and one ambient (outdoor) air sample.

Twelve soil samples were collected from the Site for laboratory analysis. A shallow sample (collected from a 2-foot interval within the upper 5 feet below grade) was taken from each of the 10 soil borings. A second deeper sample (from the 2-foot interval directly above the water table at the groundwater interface) was collected from borings SB-10 and SB-18. Soil samples were analyzed for VOCs by EPA Method 8260, semivolatile organic compounds-base neutral fraction (SVOCs-BN) by EPA Method 8270, polychlorinated biphenyls (PCBs) by EPA Method 8082, and the Target Analyte List (TAL) of metals by EPA Method 6000/7000 series. Five 1-inch diameter temporary groundwater monitoring wells were installed within five borings across the Site. The groundwater samples were analyzed for VOCs and SVOCs-BNs by EPA Methods 8260 and 8270, respectively.

Between August 26 and 27, 2020, five temporary soil vapor points (SV-09, SV-10, SV-13, SV-16, and SV-18) were installed to enable the collection of soil vapor samples for laboratory analysis. All soil vapor points were installed between 4 and 5 feet below grade with the exception of SV-16, which was installed approximately 1 to 2 feet beneath the basement slab of the northwestern building on Lot 1. Due to elevated levels of chlorinated volatile organic compounds (CVOCs) detected in the soil sample from SB-18 as well as several of the soil vapor samples, supplemental soil vapor and indoor air sampling was conducted on October 23 and 26, 2020. The supplemental sampling included the collection of two additional sub-slab soil vapor samples, seven indoor air samples, and one ambient (exterior courtyard) air sample. The soil vapor, indoor, and ambient air samples were analyzed for VOCs by EPA Method TO-15.

Soil Quality Conditions

A layer of uncontrolled fill material (comprising sand, gravel, and silt, with varying amounts of brick) was encountered in the upper 5 feet below grade, underlain by sand and silt with fine gravel, down to the maximum boring terminus of 25 feet below grade. Bedrock was not encountered during the investigation. No petroleum-like odors, staining, or elevated photoionization detector (PID) readings were detected.

In the Phase II ESA, AKRF compared the soil sample analytical results to the NYSDEC 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Commercial Soil Cleanup Objectives (CSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs). However, based on the proposed end-use of the Site, the soil

samples are compared to the UUSCOs and Restricted Residential Soil Cleanup Objectives (RRSCOs) in this RIWP. Soil laboratory analytical results are summarized below:

- PCE was detected in sample SB-18_3-5_20200827 at a concentration of 14 milligrams per kilogram (mg/kg), above the UUSCO of 1.3 mg/kg, but below the RRSCO of 19 mg/kg. No other VOCs were detected above the UUSCOs and/or RRSCOs. PCE was detected in six other soil samples at concentrations below the UUSCOs.
- SVOCs were detected at low levels up to 1.3 mg/kg, below the UUSCOs and RRSCOs.
- PCBs were not detected at concentrations above the laboratory reporting limits.
- Copper, lead, mercury, and zinc were detected at concentration above their respective UUSCOs. Copper was detected in one sample (SB-14_2-4_20200828) at a concentration of 1,200 mg/kg, above the UUSCO of 50 mg/kg and the RRSCO of 270 mg/kg. Mercury was detected in samples SB-10_17-19_20200827 and SB-11_3-5_20200828 at concentrations of 1.7 mg/kg and 2.5 mg/kg, respectively, above the UUSCO of 0.18 mg/kg and the RRSCO of 0.81 mg/kg. No other metals were detected at concentrations above the RRSCOs.

Groundwater Quality Conditions

Groundwater was encountered between approximately 16 and 20 feet below grade. No visual or olfactory evidence of contamination was detected in the purge water from any monitoring well. Groundwater samples were compared to the NYSDEC 6 NYCRR Part 703.5 Class GA Groundwater Quality Standards and Guidance Values (AWQSGVs).

- No VOCs were detected at concentrations above the AWQSGVs. PCE was detected in all five samples at concentrations ranging from 1.3 to 4.6 micrograms per liter (µg/L), below the AWQSGV of 5 µg/L.
- SVOCs were not detected above laboratory reporting limits in any of the groundwater samples.

The low level detections of PCE indicate may be by the subject VOCs and that further investigation is necessary to delineate the impacts to groundwater.

Soil Vapor Quality Conditions

Petroleum-related VOCs, including 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, 2-butanone, 2-hexanone, 4-ethyltoluene, benzene, butane, cyclohexane, ethylbenzene, isopropylbenzene, m,p-xylenes, methyl ethyl ketone (MEK), n-butylbenzene, n-heptane, n-hexane, n-propylbenzene, o-xylene, and toluene, were detected at concentrations up to 1,600 micrograms per cubic meter (µg/m^3).

Chlorinated solvent-related VOCs, including PCE, trichloroethylene (TCE), 1,1,1-trichloroethane (1,1,1-TCA), carbon disulfide, carbon tetrachloride, chlorodifluoromethane, chloromethane, cis-1,2-dichloroethylene, methylene chloride, and trichlorofluoromethane, were detected at concentrations up to 54,300 µg/m^3.

A comparison of the co-located soil vapor and indoor air sample results to the values in the New York State Department of Health (NYSDOH) Soil Vapor/Indoor Air Matrix B indicates that mitigation is required for PCE at all locations. A comparison of the co-located soil vapor and indoor air sample results to the values in the NYSDOH Soil Vapor/Indoor Air Matrix A indicates that mitigation is required for TCE at sampling locations SV-18/IA-18, SV-19/IA-19, and SV-20/IA-20.

Interim Remedial Measure Completion Report, Jamaica Works, 95-25 149th Street, Queens, New York, AKRF, November 2022; Revised July 2023

AKRF prepared an Interim Remedial Measure Completion Report (IRMCR) following completion of the NYSDEC-approved IRM Work Plan (IRMWP). The IRM was conducted to address the potential for soil vapor intrusion into the on-site structures until a Site-wide remedy can be developed and implemented pursuant to a NYSDEC-approved Remedial Action Work Plan (RAWP). Activities completed under the IRM including, sub-slab communication testing, design and installation of six individual SSDSs, and collection of confirmatory indoor air samples.

Following installation of the SSDS and confirmatory startup, six indoor air samples (IRM-IA-01 through IRM-IA-06) were collected across the Site. The samples were analyzed for VOCs by EPA Method TO-15. Chlorinated VOCs (including PCE, TCE, 1,1,2-trichlorotrifluoroethane, acetone, carbon disulfide, carbon tetrachloride, chlorodifluoromethane, chloroform, chloromethane, dichlorodifluoromethane, methylene chloride, and trichlorofluoromethane) were detected at individual concentrations up to 20 µg/m^3 (acetone in sample IRM-IA-05_20220104).

PCE was detected in five of the six samples at concentrations ranging from 0.22 µg/m^3 to 0.85 µg/m^3, all below the AGV of 30 µg/m^3, and significantly below the Phase II (pre-remedial) indoor air PCE concentration detection range of 3.94 to 123 µg/m^3. Methylene chloride was detected at concentrations ranging from 0.65 to 1.9 µg/m^3, all below the AGV of 60 µg/m^3, and significantly below the Phase II indoor air methylene chloride detection concentration range of 16.2 to 129 µg/m^3.

TCE was detected in one sample (IRM-IA-01_20220104) at a concentration of 2.9 µg/m^3, slightly above the AGV of 2 µg/m^3. The sample was collected on the first floor in the northern portion of the building with a partial basement on Lot 1. A source of the TCE was not identified; however, an additional indoor and ambient air sample was collected during the heating season in February 2023 within the location of IRM-IA-01_20220104. TCE was non-detect above laboratory reporting limits in the additional air samples. PCE was detected in the indoor and ambient air samples at concentrations of 1.1 µg/m^3 and 0.78 µg/m^3, respectively. The chlorinated solvents carbon tetrachloride and methylene chloride were detected at concentrations ranging from 0.31 µg/m^3 to 0.76 µg/m^3. The IRMCR was revised to include the February 2023 indoor air data and resubmitted to NYSDEC for approval in July 2023.

Previous environmental reports are included in Appendix A.

2.4 Areas of Concern (AOCs)

The following environmental issues, discussed in Section 2.3, were considered areas of concern (AOCs) for the RI:

- The Site's former industrial use, including metal plating, manufacturing, tannery, and fuse factory;
- Elevated concentrations of chlorinated solvents detected in soil vapor sampled during the 2020 Phase II ESA; and
- Elevated concentrations of chlorinated solvents and metals in soil sampled during the 2020 Phase II ESA.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

Contact information for the parties responsible for the work described in this RIR are included in Table A:

Table A
Project Organization

Company	Individual Name	Title	Contact Number(s)
NYSDEC	Richard Mustico	Project Manager	(518) 402-9647
NYSDOH	Julia Kenney	Project Manager	(518) 402-7873
AKRF, Inc.	Stephen Malinowski, QEP	Project Director	(631) 574-3724
	Rebecca Kinal, P.E.	Remedial Engineer	(914) 922-2362
	Adrianna Bosco	Project Manager	(646) 388-9576
	Mackenzie Miller	Field Team Leader/Site Safety Officer	(631) 357-9404
Radix 95-25 149th St LLC, 95-08 150th St LLC, and 95-12 150th St 11435 LLC (The Applicant)	Eric Deutsch	Applicant's Representative	(917) 597-9811

3.2 Health and Safety

All work described in this report was performed in full compliance with applicable laws and regulations, including Site and Occupational Safety and Health Administration (OSHA) worker safety requirements and Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements. The RI described in this RIR was also performed in general accordance with the Site-specific HASP dated January 2022.

4.0 REMEDIAL INVESTIGATION (RI) ACTIVITIES

The RI was conducted between July 25 through 28, 2022, August 17, 2022, and September 19 through October 7, 2024, and included the following scope of work:

1. The performance of two geophysical surveys across accessible portions of the Site and utility mark-outs.
2. The advancement of 15 soil borings with continuous soil sampling and laboratory analysis of 41 soil samples.
3. The collection of and laboratory analysis of one sediment sample from a floor drain on Lot 10.
4. The installation of 6 permanent groundwater monitoring wells with the collection and laboratory analysis of 6 groundwater samples.
5. The installation of 13 temporary soil vapor probes and the collection and laboratory analysis of 5 sub-slab soil vapor samples and 8 soil vapor samples.
6. The performance of 2 groundwater monitoring well elevation and location surveys of the newly installed monitoring wells.

The locations of the soil borings, groundwater monitoring wells, and temporary soil vapor point locations are shown on Figure 2.

4.1 Geophysical Survey

Geophysical surveys were conducted across accessible portions of the Site to investigate the presence of potential underground storage tanks (USTs) and subsurface utilities, and to clear the proposed sampling locations, by Enviroprobe Service, Inc. of Mount Laurel, New Jersey and by Radar Dynamics of Fair Lawn, New Jersey. The geophysical surveys included ground penetrating radar (GPR) and radiodetection methods.

The geophysical surveys did not identify any anomalies consistent with potential USTs at the Site. Anomalies consistent with underground utilities were identified throughout the Site and were marked appropriately.

The Geophysical Investigation Reports are included as Appendix B.

4.2 Soil Boring Advancement

Between July 25 and 28, 2022, 10 soil borings (RI-SB-01 and RI-SB-03 through RI-SB-11), and between September 19 and 25, 2024, four soil borings (RI-SB-12 through RI-SB-15) were advanced by Eastern Environmental Solutions, Inc. (Eastern) of Manorville, New York throughout the Site using a Geoprobe® direct-push probe (DPP) drill rig, under the oversight of AKRF. Soil boring locations RI-SB-02 and RI-SB-14 were advanced using a hand auger due to access limitations. Additionally, a sediment sample (RI-SB-DRAIN) was collected from a floor drain on Lot 10 using a hand auger.

The soil boring locations are shown on Figure 2. Borings that were converted into permanent monitoring wells (RI-SB-01, RI-SB-03, RI-SB-04, RI-SB-05, RI-SB-13, and RI-SB-15) were advanced to 15 to 30 feet below ground surface (bgs). Borings RI-SB-06, RI-SB-07, RI-SB-08, RI-SB-10, and RI-SB-11 were advanced to the target depth of 15 feet bgs. Borings RI-SB-02, RI-SB-09, RI-SB-12, and RI-SB-14 were advanced to between 2 and 9 feet bgs due to equipment refusal. Sample location RI-SB-DRAIN was collected from the bottom of the drain at approximately 1-foot bgs.

Continuous soil samples were collected to the bottom of the boring terminus, which ranged from 2 to 30 feet bgs. The soil boring locations that were converted into groundwater monitoring wells were surveyed by Fehringer Surveying, P.C. and Control Point Associates, Inc., both New York State-licensed surveyors. The remaining soil boring locations were measured against Site boundaries and fixed landmarks upon their completion. Lithological cross-sections are provided on Figures 4 and 5. Soil boring logs are provided in Appendix C.

4.3 Groundwater Monitoring Well Installation

Four 2-inch-diameter permanent groundwater monitoring wells (RI-MW-01, RI-MW-03, RI-MW-06, and RI-MW-07) were installed by Eastern using a Geoprobe® drill rig under the oversight of AKRF. Due to Site access limitations (limited overhead clearance and rig mobility restrictions), two 1-inch-diameter permanent groundwater monitoring wells (RI-MW-04 and RI-MW-05) were installed by Eastern using a remote -access Geoprobe ® drill rig. The groundwater well locations are shown on Figure 2. All groundwater monitoring wells were constructed with 15 feet of 0.020-inch slotted polyvinyl chloride (PVC) well screen installed approximately 5 to 10 feet into the observed water table. Monitoring well RI-MW-05 was constructed with 10 feet of 0.020-inch slotted PVC well screen installed approximately 7 feet below the water table. A No. 02 morie sand pack was installed around the well screens, followed by two feet of hydrated bentonite. Sand was backfilled to one foot below surface grade with non-shrinking cement grout installed above to surface grade. Each of the wells were finished with a locking j-plug, locking flush-mounted protective well cover, and concrete pad.

Due to Site access limitations in the proposed location of RI-SB/MW-02, the boring was relocated approximately 25 feet south and was attempted to be installed using a hand auger. Due to shallow refusal and access limitations, RI-MW-02 could not be installed during this investigation.

Groundwater well construction details and sampling location rationale are summarized in Table B.

Table B
Groundwater Monitoring Well Construction Details and Rationale

Monitoring Well ID	On-Site Well Location	Screened Intervals (feet below grade)	Rationale for Sampling Location
RI-MW-01	Western	10 to 25	To assess groundwater quality on the western portion of the Site; and determine Site-specific groundwater flow direction and elevation.
RI-MW-03	Northeastern	10 to 25	To assess groundwater quality on the northeastern portion of the Site and determine Site-specific groundwater flow direction and elevation.
RI-MW-04	Northwestern	3 to 18	To assess groundwater quality on the northwestern portion of the Site and determine Site-specific groundwater flow direction and elevation.
RI-MW-05	Northeastern	12 to 22	To assess groundwater quality on the northeastern portion of the Site and determine Site-specific groundwater flow direction and elevation.
RI-MW-06	Central	15 to 30	To assess groundwater quality on the central portion of the Site and determine Site-specific groundwater flow direction and elevation

Monitoring Well ID	On-Site Well Location	Screened Intervals (feet below grade)	Rationale for Sampling Location
RI-MW-07	Southern	15 to 30	To assess groundwater quality on the southern portion of the Site and determine Site-specific groundwater flow direction and elevation

The groundwater monitoring well locations are shown on Figure 2. Groundwater monitoring well construction logs are provided in Appendix C. Groundwater sample analytical results are discussed in Section 5.3.

4.4 Groundwater Monitoring Well Development

Following installation, each well was developed via pumping and surging with a Peristaltic or Monsoon pump affixed with dedicated high-density polyethylene (HDPE) tubing to remove any accumulated fines and establish a hydraulic connection with the surrounding aquifer. Development water was monitored with a Horiba U-52 or YSI ProDSS water quality meter during development. The goal of well development was to reduce turbidity within the well until less than 50 nephelometric turbidity units (NTUs) were recorded for three successive readings, and until water quality indicators [pH, temperature, oxidation reduction potential (ORP), dissolved oxygen, and specific conductivity] stabilized to within 10% for three successive readings. Monitoring wells RI-MW-01 and RI-MW-03 through RI-MW-07 were developed until at least three well volumes were purged, groundwater was visibly clear, and/or water quality indicators stabilized. All purged groundwater was containerized in New York State Department of Transportation (NYSDOT)-approved 55-gallon drums for off-site disposal. Investigation-derived waste (IDW) is discussed in Section 4.7.9.

Groundwater monitoring well development logs are provided in Appendix D.

4.5 Groundwater Monitoring Well Elevation and Location Survey

Groundwater monitoring wells were surveyed by Fehringer Surveying, P.C., and Control Point Associates, Inc., both New York State-licensed surveyors. Elevation measurements were taken at the access cover and on the north side of the top of the PVC casing at each of the groundwater monitoring wells; location measurements were taken at the access cover. Horizontal and vertical datum were tied to the North American Vertical Datum of 1988 (NAVD88). The groundwater elevation ranged from 19.19 to 19.50 feet NAVD. Based on the surveyed elevations, groundwater flows in a generally southerly to southeasterly direction across the Site.

The locations of the groundwater monitoring wells are shown on Figure 2. A groundwater elevation contour map is included as Figure 6, and groundwater elevation data is presented in Table 1. The groundwater monitoring well elevation survey for the Site is provided as Appendix E, and groundwater sampling logs are provided as Appendix F.

4.6 Temporary Soil Vapor Point Installation

Thirteen temporary soil vapor points (RI-SV-01 through RI-SV-13) were installed at the locations shown on Figure 2. Five sub-slab soil vapor points (RI-SV-01 and RI-SV-03 through RI-SV-06) were installed approximately 6 to 9 inches below the existing concrete foundation slab. The remaining eight vapor points (RI-SV-02 and RI-SV-07 through RI-SV-13) were installed at depths ranging from 4 to 15 feet bgs below asphalt and/or concrete paved areas. Soil vapor points RI-SV-02 and RI-SV-07 were installed at 4 and 6 feet bgs, respectively, due to access restrictions and equipment refusal.

At each soil vapor point, a 6-inch stainless steel screen implant connected to Teflon™-lined polyethylene tubing was installed by hand or through the drilling rods and threaded into the drive point. The sample tubing was extended from the bottom end of the screen to above grade. The rods were then removed, and the borings were backfilled with clean silica sand above the screen. Hydrated bentonite was used to fill the remaining void around the sampling tubing to the ground surface on all soil vapor points.

The soil vapor sampling logs, provided as Appendix G, include vapor point construction details.

4.7 Sample Collection and Chemical Analysis

Soil, groundwater, and soil vapor were sampled and evaluated in this RIR. The sampling performed, as presented below, provides a basis for the evaluation of subsurface Site conditions and potential remedial actions with respect to the media sampled.

4.7.1 Soil Sampling

Soil cores from soil borings RI-SB-01, RI-SB-03 through RI-SB-13, and RI-SB-15 were collected in decontaminated 3- or 5-foot-long, 2-inch-diameter, stainless steel macrocore piston rod samplers fitted with dedicated, internal acetate liners. Soil cores from borings RI-SB-02, RI-SB-14, and the Lot 10 floor drain (RI-SB-DRAIN) were collected via a decontaminated stainless-steel hand auger and laid out on polyethylene sheeting in sequential order. All sampling equipment was either dedicated or decontaminated between sampling locations.

Soil cores were field-screened using a PID equipped with an 11.7 electron volt (eV) lamp and logged using the modified Burmister soil classification system. The PID was calibrated at the beginning of each field day with isobutylene gas in accordance with the manufacturer's specifications. At each boring location, AKRF field personnel recorded and documented subsurface conditions. No field evidence of contamination, including elevated PID readings above background conditions, petroleum- or solvent-like odors, and/or dark staining, were encountered in the remaining borings. Evidence of free phase product [non-aqueous phase liquid (NAPL)] was not identified during the RI.

During the RI, 41 soil samples and one sediment sample were submitted for laboratory analysis. Up to three soil samples were collected from each soil boring location. At each boring location, one soil sample was collected from the upper 2 feet beneath the concrete slab or existing pavement, a second sample was collected from bottom two feet of the observed fill layer (if encountered), and a third was collected from the 2-foot interval at the bottom of the boring. Only two samples were collected from soil boring RI-SB-12, as the bottom two feet of the observed fill layer was encountered at the bottom of the soil boring.

All soil and sediment samples were submitted to Eurofins Environment Testing Northeast, LLC (Eurofins) of Edison, New Jersey and Burlington, Vermont, both NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratories, in accordance with EPA chain of custody (CoC) protocols. Soil samples collected were analyzed for VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, TAL metals by EPA Method 6000/7000 series, cyanide by EPA Method 9012, hexavalent chromium by EPA Method 7196A, 1,4-dioxane by EPA Method 8270E, and the NYSDEC list of 21 per- and polyfluoroalkyl substances (PFAS) by EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633. Sediment sample RI-SB-DRAIN was analyzed for VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, TAL metals by EPA Method 6000/7000 series, 1,4-dioxane by EPA Method 8270E, and the NYSDEC list of 21 per- and

polyfluoroalkyl substances (PFAS) by EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633.

Soil sampling locations, depths, and rationales are summarized in Table C.

Table C
Soil Boring Details and Sampling Rationale

Soil Boring	On-Site Location	Sample Depth Intervals (feet below grade)	Rationale
RI-SB-01	Western	0 to 2, 7 to 9, 13 to 15	To assess soil quality in the western portion of the Site
RI-SB-02	Southern	0 to 2, 2 to 4	To assess soil quality in the southern portion of the Site and downgradient of the in-service 7,500-gallon AST
RI-SB-03	Northeastern	0 to 2, 5 to 7, 13 to 15	To assess soil quality in the northeastern portion of the Site near suspect source area
RI-SB-04	Northwestern	0 to 2, 4 to 6, 13 to 15	To assess soil quality in the northwestern portion of the Site
RI-SB-05	Northeastern	0 to 2, 5 to 7, 13 to 15	To assess soil quality in the northeastern portion of the Site
RI-SB-06	Northeastern	0 to 2, 4 to 6, 13 to 15	To assess soil quality in the northeastern portion of the Site
RI-SB-07	Northwestern	0 to 2, 6 to 8, 13 to 15	To assess soil quality in the northwestern portion of the Site
RI-SB-08	Central	0 to 2, 5 to 7, 13 to 15	To assess soil quality in the central portion of the Site
RI-SB-09	Southern	0 to 2, 3 to 5, 7 to 9	To assess soil quality in the southern portion of the Site
RI-SB-10	Northern	0 to 2, 5 to 7, 13 to 15	To assess soil quality in the northern portion of the Site
RI-SB-11	Northeastern	0 to 2, 5 to 7, 13 to 15	To assess soil quality in the northeastern portion of the Site
Lot 10 Floor Drain	Northern	1 to 1.5	To assess sediment quality in the floor drain near the suspect source area
RI-SB-12	Central	0 to 2, 7 to 9	To assess soil quality in the central portion of the Site
RI-SB-13	Central	0 to 2, 11 to 13, 13 to 15	To assess soil quality in the central portion of the Site
RI-SB-14	Southern	0 to 2	To assess soil quality in the southern portion of the Site and downgradient of the in-service 7,500-gallon AST
RI-SB-15	Southern	0 to 2, 10 to 12, 13 to 15	To assess soil quality in the southern portion of the Site

4.7.2 Soil Quality Assurance/Quality Control (QA/QC) Sampling

For QA/QC purposes, three matrix spike/matrix spike duplicate (MS/MSD) samples, three blind duplicate samples, three aqueous field blanks, and three aqueous trip blanks were submitted for laboratory analysis, as discussed in Section 4.7.7.

Soil and sediment samples slated for laboratory analysis were placed in laboratory-supplied containers in accordance with EPA protocols. The soil and sediment samples were analyzed by Eurofins. Third-party data validation was performed by L.A.B. Validation Corp., of East Northport, New York, and Data Usability Summary Reports (DUSRs) were prepared.

DUSRs are further discussed in Section 4.7.7, and soil analytical data is discussed in Section 5.2. The soil boring locations are shown on Figure 2. Soil boring logs are provided in Appendix C.

4.7.3 Groundwater Sampling

Groundwater samples were collected from the six monitoring wells in accordance with EPA low flow sampling methodology, the NYSDEC guidance for *Sampling, Analysis, And Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs,* dated April 2023, and the Site-specific QAPP (included as Appendix A of the RIWP). Groundwater samples were collected using dedicated and decontaminated sampling equipment. The groundwater samples were collected a minimum of one week after well development.

Prior to collecting the groundwater samples, the depth to groundwater and the total well depth were measured at each of the groundwater monitoring wells using an oil/water interface probe attached to a measuring tape accurate to 0.01 foot. Free phase product was not detected in the groundwater monitoring wells during installation, purging, or sampling. Purging of the wells continued with a submersible pump affixed with dedicated high-density polyethylene (HDPE) tubing until at least three well volumes were removed, groundwater was visibly clear, and/or water quality indicators stabilized. All purge water from the groundwater monitoring wells was containerized in labeled, NYSDOT-approved 55-gallon drums for off-site disposal at a permitted facility. Disposal of IDW is further discussed in Section 4.7.9.

The groundwater samples were submitted to Eurofins for analysis of VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, total and dissolved TAL metals by EPA Method 6000/7000 series, cyanide by EPA Method 9012, 1,4-dioxane by EPA Method 8270E Selective Ion Monitoring (SIM), and the NYSDEC list of 21 PFAS by Modified EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633.

4.7.4 Groundwater Quality Assurance/Quality Control (QA/QC) Sampling

For QA/QC purposes, two MS/MSD samples, two blind duplicate samples, two aqueous field blanks, two equipment blanks, and two aqueous trip blanks were collected and submitted with the groundwater samples. The MS/MSD, field blank, and blind duplicate samples were submitted for the same laboratory analyses as the accompanying groundwater samples; the equipment blank sample was submitted for laboratory analysis of PFAS by Modified EPA Method 537.1/ Standard EPA Method 1633 only; and the trip blank was submitted for laboratory analysis of VOCs by EPA Method 8260 only.

Sample containers were labeled, placed in ice-filled coolers, and shipped to the laboratory via courier with CoC documentation. The laboratory samples were analyzed by Eurofins with Category B deliverables. Third-party data validation was performed by L.A.B. Validation Corp and DUSRs were prepared.

DUSRs are further discussed in Section 4.7.7, and groundwater analytical data is discussed in Section 5.3. Groundwater sampling logs are provided in Appendix F.

4.7.5 Soil Vapor Sampling

Five sub-slab soil vapor samples (RI-SV-01 and RI-SV-03 through RI-SV-06) and eight soil vapor samples (RI-SV-02 and RI-SV-07 through RI-SV-13) were collected from the temporary soil vapor points shown on Figure 2. Prior to collection, each temporary soil vapor sampling point was purged of approximately three sample volumes using a low-flow air pump at a flow rate of approximately 0.2 liter per minute. During purging, a shroud was placed over each sampling point and helium gas was introduced to saturate the atmosphere around the sample port. Purged vapors were collected in a Tedlar® bag and field-screened for organic vapors using an 11.7 eV PID. The purged air was also monitored using a portable helium detector to check for short-circuiting of ambient air into the vapor sampling point. It should be noted that soil vapor samples collected from depths shallower than 5 feet may be prone to negative bias due to the infiltration of outdoor (ambient) air, although, all soil vapor points passed the seal integrity tests with helium detections of non-detect. As instructed by NYSDEC, the SSDS was in operation at the time of the sampling.

After purging, probes RI-SV-01 through RI-SV-13 were connected via Teflon™-lined polyethylene tubing to a laboratory-supplied batch-certified 6-Liter SUMMA® canister equipped with a flow regulator set to collect a sample over a two-hour sampling period. Immediately after opening the flow control valve, the initial SUMMA® canister vacuum (inches of mercury) was noted. After approximately two hours, the flow controller valve was closed, the final vacuum noted, and the canister placed in a shipping carton for delivery to the laboratory. Soil vapor sample RI-SV-10 was stopped early for proper laboratory analysis due to low canister vacuum noted after approximately one hour.

Soil vapor sampling locations, depths, and rationales are summarized in Table D.

Table D
Soil Vapor Sample Details

Soil Vapor Point ID	Temporary Soil Vapor Point Location	Sampling Depth (below existing slab-on-grade)	Purged Vapor PID Reading (ppm)	Rationale For Sampling Location
RI-SV-01	Western	9 inches	1.0	To determine concentrations of VOCs on the western portion of the Site, evaluate the potential for off-site exposure to west, and determine if there is a vapor intrusion concern.
RI-SV-02	Southern	4 feet	1.2	To determine concentrations of VOCs on the southern portion of the Site and if there is a vapor intrusion concern.
RI-SV-03	Northeastern	6 inches	2.1	To determine concentrations of VOCs on the northeastern portion of the Site, and if there is a vapor intrusion concern.
RI-SV-04	Northeastern	6 inches	1.9	To determine concentrations of VOCs on the northeastern portion of the Site and determine if there is a vapor intrusion concern.
RI-SV-05	Northwestern	6 inches	0.9	To determine concentrations of VOCs on the southern portion of the Site, evaluate the potential for off-site exposure to the west, and determine if there is a vapor intrusion concern.
RI-SV-06	Southern	9 inches	0.8	To determine concentrations of VOCs on the southern portion of the Site, evaluate the potential for off-site exposure to the southeast, and determine if there is a vapor intrusion concern.
RI-SV-07	Southern	6 feet	1.2	To determine off-site conditions and support the QHHEA.
RI-SV-08	Southwestern	15 feet	1.6	To determine off-site conditions and support the QHHEA.
RI-SV-09	Northeastern	15 feet	2.0	To determine off-site conditions and support the QHHEA.
RI-SV-10	Southwestern	5 feet	1.2	To determine off-site conditions and support the QHHEA.
RI-SV-11	Southern	5 feet	0.8	To determine off-site conditions and support the QHHEA.
RI-SV-12	Southeastern	5 feet	0.7	To determine concentrations of VOCs on the southeastern portion of the Site, evaluate the potential for off-site exposure to the southeast, and determine if there is a vapor intrusion concern.
RI-SV-13	Southern	5 feet	ND	To determine concentrations of VOCs on the southern portion of the Site, evaluate the potential for off-site exposure to the southeast, and determine if there is a vapor intrusion concern.

Notes:
ppm – parts per million
ND – not detected

Methodologies used for soil vapor assessment conform to the *New York State Department of Health Final Guidance on Soil Vapor Intrusion,* October 2006; updated February 2024. The vapor samples were analyzed for VOCs by EPA Method TO-15 by Eurofins with Category B deliverables. Sample containers were shipped to the laboratory via courier with appropriate CoC documentation. Third-party data validation was performed by L.A.B. Validation Corp and DUSRs were prepared.

DUSRs are further discussed in Section 4.7.7, and soil vapor analytical data is discussed in Section 5.4. Soil vapor sample locations are shown on Figure 2. Soil vapor sampling logs are included as Appendix G.

4.7.6 Chemical Analysis

Chemical analytical work has been performed under a QA program, which is summarized in Table E.

Table E
QA Program

Factor	Description
Quality Assurance Officer	The chemical analytical QA/QC was directed by Stephen Malinowski of AKRF.
Third Party Data Validator	The third-party data validation was performed by Lori Beyer of L.A.B. Validation Corp.
Chemical Analytical Laboratory	The chemical analytical laboratories used in the RI were Eurofins of Edison, New Jersey and Burlington, Vermont.
Chemical Analytical Methods	Soil analytical methods: • VOCs by EPA Method 8260D • SVOCs by EPA Method 8270E • PCBs by EPA Method 8082A • Pesticides by EPA Method 8081B • TAL Metals by EPA Method 6000/7000 series • Cyanide by EPA Method 9012 • Hexavalent chromium by EPA Method 7196A • 1,4-Dioxane by EPA Method 8270E • 21 compound PFAS list by Modified EPA Method 537/Standard list of 40 by EPA Method 1633 Groundwater analytical methods: • VOCs by EPA Method 8260D • SVOCs by EPA Method 8270E • PCBs by EPA Method 8082A • Pesticides by EPA Method 8081B • TAL Metals (total and dissolved) by EPA Method 6000/7000 series • Cyanide By EPA Method 9012 • 1,4-Dioxane by EPA Method 8270E SIM • 21 compound PFAS list by Modified EPA Method 537/Standard list of 40 by EPA Method 1633 Soil vapor analytical method: • VOCs by EPA Method TO-15

4.7.7 Quality Assurance/Quality Control (QA/QC) Sampling

In accordance with DER-10 requirements, QA/QC procedures were used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analyses for this investigation. Field QA/QC procedures were used (1) to document that samples are representative of actual conditions at the Site and (2) to identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses were used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix or by laboratory techniques that may have introduced systematic or random errors to the analytical process.

QA/QC samples were analyzed at Eurofins. The third-party data validation was performed by L.A.B. Validation Corp. and reported in DUSRs for soil, groundwater, and vapor. Laboratory analytical data sets and DUSRs are provided in Appendix H. QA/QC sampling consisted of the following:

Soil QA/QC Samples

- Three MS/MSD samples: RI-SB-09_0-2_20220726, RI-SB-06_13-15_20220727, and RI-SB-12_7-9_20240920
- Three blind duplicate samples: RI-SB-X_13-15_20220726 (collected from RI-SB-04_13-15_20220726), RI-SB-X_4-6_20220727 (collected from RI-SB-06_4-6_20220727), and RI-SB-X_0-2_20240920 (collected from RI-SB-14_0-2_20240920)
- Three trip blank samples: TB_20220726, TB_20220728, and RI-TB-S_20240919
- Three field blank samples: FB_20220726, FB_20220727, and RI-FB-S_20240919

Groundwater QA/QC Samples

- Two MS/MSD samples: RI-MW-01_20220817 and RI-MW-07_20241007
- Two blind duplicate samples: RI-MW-X_20220817 (collected from RI-MW-03_20220817) and RI-MW-X_20241007 (collected from RI-MW-06_20241007)
- Two field blank samples: RI-FB-GW-01_20220817 and RI-FB-GW_20241007
- Two equipment blank samples: RI-EB-GW-01_20220817 and RI-EB-GW_20241007
- Two trip blank samples: RI-TB-GW-01_20220817 and RI-TB-GW_20241007

QA/QC samples were submitted with the soil and groundwater samples. The field blank, blind duplicate, and MS/MSD samples were analyzed for the same analyte list as the accompanying soil and groundwater samples. The equipment blank samples were submitted for laboratory analysis of PFAS by Modified EPA Method 537.1/Standard EPA Method 1633 only. The trip blank samples were submitted for laboratory analysis of VOCs only.

Data Validation

The DUSRs concluded that the overall assessment of the data generated was of acceptable quality. The soil, groundwater, and soil vapor DUSRs identified additional qualifiers for specific compounds, as explained in Appendix H. The data was determined to be acceptable for use with the additional data qualifiers. The qualifiers have been added to the soil, groundwater, and soil vapor data summary tables provided as Tables 2 through 15, and are summarized below:

- J: The concentration given is an estimated value.
- K: Reported concentration value is proportional to dilution factor and may be exaggerated.
- L: Sample result is estimated and biased low.
- R: DUSR indicates the reported result is unusable. (Note: the analyte may or may not be present.)
- U: The analyte was not detected at the indicated concentration.
- D: Indicates an identified compound in an analysis that has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analyses.

4.7.8 Results of Chemical Analyses

Laboratory data for soil, groundwater, and soil vapor/indoor air samples are summarized in Tables 2 through 7, Tables 8 through 14, and Table 15, respectively. Soil sample concentrations above UUSCOs and RRSCOs, and PFAS concentrations above NYSDEC guidance values are shown on Figure 7. Groundwater sample concentrations above AWQSGVs and PFAS concentrations above NYSDEC guidance values are shown on Figure 8. Soil vapor analytical results are shown on Figure 9. Laboratory data deliverables are provided in digital form in Appendix H.

4.7.9 Management of Investigation-Derived Waste (IDW)

Handling of IDW and backfilling of boreholes was conducted in accordance with Section 3.3(e) of DER-10. IDW that did not exhibit evidence of contamination (e.g., staining, elevated PID readings, oily sheens, odors, etc.) was used to backfill the corresponding borehole that generated them to within 24 inches of the surface. All development and purge water from the investigation was containerized in NYSDOT-approved 55-gallon drums.

The drums were sealed at the end of each workday and labeled with the date, the well or boring number, the type of waste (i.e., drill cuttings, decontamination fluids, development water, or purge water) and the name of an AKRF point-of-contact. All drums were labeled "pending analysis" until laboratory data became available. All boreholes were restored at the surface with concrete after being backfilled. Two drums containing development and purge water (approximately 100 gallons) and one drum of drill cuttings were disposed of off-site at GFL Environmental, Inc. in Quebec, Canada by Eastern on August 26, 2022, in accordance with applicable regulations. One drum containing development and purge groundwater (approximately 55 gallons) was disposed of off-site at Dale Transfer Corp. in West Babylon, New York by AARCO Environmental Services. The fully executed IDW disposal manifests are included as Appendix I.

4.7.10 Deviations from the Remedial Investigation Work Plan (RIWP) and Supplemental RI Work Plan (SRIWP)

The following components of the RI deviated from the RIWP and SRIWP:

- Due to access limitations and the presence of suspect friable asbestos overhead in the proposed location of RI-SB/MW/SV-02, the boring was relocated approximately 25 feet south. The boring location was advanced using a hand auger due to the structural integrity of the interior floorboard. Shallow refusal was encountered at 4 feet bgs and no groundwater was encountered in RI-SB-02. Therefore, RI-MW-02 was not installed

as part of this RI and only two soil samples were taken at this location (0 to 2 feet bgs and 2-4 feet bgs). If required, a supplemental RI may be conducted following demolition of the southern Site building and receipt of the development plans to fill in any data gaps. Soil vapor point RI-SV-02 was installed at approximately 4 feet bgs, as opposed to a sub-slab point.

- Due to concerns related to the structural integrity of the floor and the presence of a crawl space located beneath proposed soil vapor points RI-SV-10 and RI-SV-11, the sampling points were relocated immediately outside of the building footprint, approximately 15 feet west. This revised sample locations were approved by NYSDEC and NYSDOH in an e-mail dated September 18, 2024.
- Soil boring RI-SB-14 was advanced using a hand auger due to a low ceiling clearance height causing access limitations. Shallow refusal was encountered at 2 feet bgs.
- Due to shallow equipment refusal, borings RI-SB-09 and RI-SB-12 were advanced to 9 feet bgs and the proposed target depth of 15 feet was not reached.
- Due to shallow equipment refusal at the RI-SV-07 location, the soil vapor point was installed at 6 feet bgs and the target installation depth of 15 feet bgs was not reached.

None of the deviations referenced above materially affected achieving the objectives of the RI; however, if required a supplemental RI may be conducted following demolition of the southern Site building.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

5.1.1 Stratigraphy

The stratigraphy of the Site, from the surface down, generally consisted of a layer of uncontrolled fill material comprising sand, gravel, and silt, with varying amounts of brick and concrete extending from grade to approximately 5 to 13 feet bgs. The uncontrolled fill was underlain by apparent native sand, gravel, and silt to boring termination depths (up to 30 feet bgs). Bedrock was not encountered during the RI.

5.1.2 Hydrogeology

Based on Site-specific well point measurements, groundwater beneath the Site ranges from elevation 19.19 to elevation 19.50 (NAVD88), or approximately 10.68 to 19.25 feet below grade surface across the Site. Groundwater flows beneath the Site in a generally southerly to southeasterly direction.

5.2 Soil Chemistry

A total of 41 soil samples were collected for laboratory analysis from soil borings RI-SB-01 through RI-SB-15. One sediment sample was collected from the floor drain on Lot 10 (RI-SB-DRAIN). The soil samples were analyzed for VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, TAL metals by EPA Method 6000/7000 series, cyanide by EPA Method 9012, hexavalent chromium by EPA Method 7196A, 1,4-dioxane by EPA Method 8270E, and the NYSDEC list of 21 PFAS compounds by EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633. The sediment sample was analyzed for VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, TAL metals by EPA Method 6000/7000 series, 1,4-dioxane by EPA Method 8270E, and PFAS compounds by EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633. The soil and sediment sample analytical results for VOCs, SVOCs, PCBs, pesticides, and metals, were compared to the 6 NYCRR Part 375 UUSCOs and RRSCOs. Concentrations of perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were compared to the guidance values for UUSCOs and RRSCOs presented in NYSDEC's April 2023 *Sampling, Analysis and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs*.

Soil sample analytical results are presented in Tables 2 through 7. Soil sample concentrations above UUSCOs, RRSCOs, and guidance values are shown on Figure 7. Soil laboratory analytical data reports are included in Appendix H.

5.2.1 Volatile Organic Compounds (VOCs) in Soil

One VOC, acetone, was detected in sample RI-SB-DRAIN_1-1.5_20220727 at a concentration of 0.15 mg/kg, above the UUSCO of 0.05 mg/kg, but below the RRSCO of 100 mg/kg. No other VOCs were detected above UUSCOs and RRSCOs. Tetrachloroethylene (PCE) was detected in 20 samples, below the UUSCO of 1.3 mg/kg, at concentrations up to 0.046 mg/kg (samples RI-SB-05_5-7_20220726 and RI-SB-08_5-7_20220728).

Methylene chloride was detected in two field blanks (FB_20220727 and RI-SB-S_20240919) and one trip blank (RI-TB-S_20240919) at estimated concentrations between 0.36 µg/L and 0.43 µg/L. Methylene chloride is a common laboratory contaminant, and the detection in the field and trip blanks is likely due to laboratory contamination and not an on-site source. Table F summarizes VOC exceedances above UUSCOs in soil samples.

Table F
VOC Concentrations in Soil Samples Above UUSCOs

Analyte	Soil Sample Identification	UUSCO (mg/kg)	RRSCO (mg/kg)	Concentration (mg/kg)
Acetone	RI-SB-DRAIN_1-1.5_20220727	0.05	100	0.15

Notes:
mg/kg: milligrams per kilogram
All concentrations shown exceed the UUSCOs.
Sample detections that exceed the RRSCOs are designated with †.

Soil analytical results for VOCs are presented in Table 2.

5.2.2 Semi-volatile Organic Compounds (SVOCs) in Soil

SVOCs were detected at low levels, with the highest concentrations detected in shallow samples collected from the upper 2 feet below grade.

Seven SVOCs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene] were detected at concentrations above their respective UUSCOs in three samples. Six of the SVOCs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene] were additionally detected above the RRSCOs.

Table G summarizes SVOC exceedances above UUSCOs and RRSCOs in soil samples.

Table G
SVOC Concentrations in Soil Samples Above UUSCOs or UUSCOs/RRSCOs

Analyte	Sample Identification	UUSCO (mg/kg)	RRSCO (mg/kg)	Concentration (mg/kg)
Benzo(a)Anthracene	RI-SB-09_0-2_20220726	1	1	**1.6**
	RI-SB-X_0-2_20240920			**4.5**
Benzo(a)Pyrene	RI-SB-09_0-2_20220726	1	1	**1.5 JL**
	RI-SB-X_0-2_20240920			**4.7**
Benzo(b)Fluoranthene	RI-SB-02_0-2_20220727	1	1	**1.1**
	RI-SB-09_0-2_20220726			**1.9 JL**
	RI-SB-X_0-2_20240920			**5.3**
Benzo(k)Fluoranthene	RI-SB-X_0-2_20240920	0.8	3.9	2
Chrysene	RI-SB-09_0-2_20220726	1	3.9	1.7
	RI-SB-X_0-2_20240920			**4.5**
Dibenz(a,h)Anthracene	RI-SB-X_0-2_20240920	0.33	0.33	**0.64 J**
Indeno(1,2,3-c,d)Pyrene	RI-SB-02_0-2_20220727	0.5	0.5	**0.52**
	RI-SB-09_0-2_20220726			**1.1 JL**
	RI-SB-X_0-2_20240920			**3**

Notes:
J: The concentration given is an estimated value.
L: Sample result is estimated and biased low.
mg/kg: milligrams per kilogram
All concentrations shown exceed the UUSCOs.
Sample detections that exceed the RRSCO are shown in **bold**.

Soil analytical results for SVOCs are presented in Table 3.

5.2.3 Target Analyte List (TAL) Metals in Soil

Seven metals (barium, cadmium, copper, lead, mercury, nickel, and zinc) were detected in up to 21 soil samples across the Site at concentrations ranging from an estimated concentration of 0.32 mg/kg to 1,310 mg/kg, above their respective UUSCOs. Barium, cadmium, lead, and mercury were detected in up to 14 samples at concentrations above the RRSCOs.

Table H summarizes metals exceedances above UUSCOs and RRSCOs in soil samples.

Table H
TAL Metals Concentrations in Soil Samples Above UUSCOs or UUSCOs/RRSCOs

Analyte	Sample Identification	UUSCO (mg/kg)	RRSCO (mg/kg)	Concentration (mg/kg)
Barium	RI-SB-DRAIN_1-1.5_20220727	350	400	**436**
Cadmium	RI-SB-03_0-2_20220725	2.5	4.3	**4.9**
	RI-SB-DRAIN_1-1.5_20220727			**5.9**

	RI-SB-X_0-2_20240920			254

Notes:
J: The concentration given is an estimated value.
mg/kg: milligrams per kilogram
All concentrations shown exceed the UUSCOs.
Sample detections that exceed the RRSCO are shown in **bold**.

Soil analytical results for TAL metals are presented in Table 4.

5.2.4 Polychlorinated Biphenyls (PCBs) in Soil

Total PCBs were not detected above laboratory reporting limits in any soil samples.

Soil analytical results for PCBs are presented in Table 5.

5.2.5 Pesticides in Soil

One pesticide, P,P'-DDE, was detected in sample RI-SB-07_0-2_20220725 at a concentration of 0.0092 mg/kg, above the UUSCO of 0.0033 mg/kg, but below the RRSCO of 8.9 mg/kg. Cis-Chlordane and 4,4'-DDT were detected in sample RI-SB-12_0-2_20240920 at an estimated concentration of 0.0036 mg/kg and 0.094 mg/kg, respectively, below the UUSCOs and RRSCOs. No other pesticides were detected above UUSCOs and RRSCOs.

Table G summarizes pesticide exceedances above UUSCOs in soil samples.

Table I
Pesticide Concentrations in Soil Samples Above UUSCOs

Analyte	Sample Identification	UUSCO (mg/kg)	RRSCO (mg/kg)	Concentration (mg/kg)
P,P'-DDE	RI-SB-07_0-2_20220725	0.0033	8.9	0.0092

Notes:
mg/kg: milligrams per kilogram
All concentrations shown exceed the UUSCOs.
Sample detections that exceed the RRSCOs are shown in **bold**.

Soil analytical results for pesticides are presented in Table 6.

5.2.6 Per- and Polyfluoroalkyl Substances (PFAS) and 1,4-Dioxane in Soil

PFOA was detected in sample RI-SB-DRAIN_1-1.5_20220727 at an estimated concentration of 1.55 ppb, above the NYSDEC UUSCO Guidance Value (UUGV) of 0.66 ppb, but below the NYSDEC RRSCO Guidance Value (RRGV) of 33 ppb. PFOS was detected at low levels up to an estimated concentration of 0.19 ppb, below the UUGV of 0.88 ppb. 1,4-Dioxane was not detected above laboratory reporting limits in any soil samples.

Table J summarizes PFAS exceedances above UUGVs in soil samples.

Table J
PFAS Concentrations in Soil Samples Above UUGVs

Analyte	Sample Identification	UUGV (ppb)	RRGV (ppb)	Concentration (ppb)
PFOA	RI-SB-DRAIN_1-1.5_20220727	0.66	33	1.55 J

Notes:
ppb: parts per billion
All concentrations shown exceed the UUSCOs.
Sample detections that exceed the RRGV are shown in **bold**.

Soil analytical results for 1,4-dioxane are presented in Table 3. Soil analytical results for PFAS are presented in Table 7.

5.3 Groundwater Chemistry

Six groundwater samples were collected for laboratory analysis from groundwater monitoring wells RI-MW-01 and RI-MW-03 through RI-MW-07. Groundwater samples were analyzed for VOCs by EPA Method 8260D, SVOCs by EPA Method 8270E, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, total and dissolved TAL metals by EPA Method 6000/7000 series, cyanide by EPA Method 9012, 1,4-dioxane by EPA Method 8270E Selective Ion Monitoring (SIM), and the NYSDEC list of 21 PFAS by Modified EPA Method 537 (modified)/Standard list of 40 by EPA Method 1633. Groundwater sample analytical results for VOCs, SVOCs, PCBs, pesticides, and total/dissolved metals were conservatively compared to the NYSDEC Class GA AWQSGVs. PFAS concentrations were compared to the guidance values presented in the April 2023 *NYSDEC Sampling, Analysis and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs*. These standards are drinking water standards, although groundwater in this portion of Queens is not used as a source of potable water.

Groundwater sample analytical results are presented in Tables 8 through 14. Groundwater sample concentrations above the AWQSGVs or NYSDEC screening levels are shown on Figure 8. Groundwater laboratory analytical data reports are included in Appendix H.

5.3.1 Volatile Organic Compounds (VOCs) in Groundwater

No VOCs were detected in the groundwater samples at concentrations above their respective AWQSGVs. Three VOCs (chloroform, PCE, and/or TCE) were detected in each of the six samples (plus the two blind duplicates) below AWQSGVs at concentrations ranging from 0.32 µg/L to 2 µg/L.

Methylene chloride was detected in one field blank (RI-FB-GW-01_20220817) at an estimated concentration of 0.73 µg/L. Methylene chloride is a common laboratory contaminant, and the detection in the field blank is likely due to laboratory contamination and not an on-site source.

Groundwater analytical results for VOCs are presented in Table 8.

5.3.2 Semi-volatile Organic Compounds (SVOCs) in Groundwater

1,4-Dioxane was detected in groundwater sample RI-MW-01_20220817 at a concentration of 0.36 µg/L, above the AWQSGV of 0.35 µg/L. 1,4-Dioxane was also detected in sample RI-MW-07_20241007 at a concentration of 0.25 µg/L, below the AWQSGV. No other SVOCs were detected above laboratory reporting limits in any of the groundwater samples.

Groundwater analytical results for SVOCs are presented in Table 9.

5.3.3 Metals in Groundwater

Total (Unfiltered) Metals

Up to three metals (iron, manganese, and/or sodium) were detected above their respective AWQSGVs in each of the six unfiltered groundwater samples (plus the two blind duplicates). Of the 23 metals analyzed for, 16 metals were detected at low levels below the AWQSGVs in the groundwater samples.

Table K summarizes total (unfiltered) metals exceedances above AWQSGVs in groundwater samples.

Table K
Total (Unfiltered) Metals Concentrations in Groundwater Samples Above AWQSGVs

Analyte	Sample Identification	AWQSGV (µg/L)	Concentration (µg/L)
Iron	RI-MW-03_20220817	300	1,140
	RI-MW-04_20220817		664
	RI-MW-05_20220817		1,040
	RI-MW-06_20241007		1,310
	RI-MW-07_20241007		1,160
	RI-MW-X_20220817		1,280
	RI-MW-X_20241007		1,220
Manganese	RI-MW-03_20220817	300	381
	RI-MW-06_20241007		323
	RI-MW-X_20220817		399
Sodium	RI-MW-01_20220817	20,000	123,000

	RI-MW-03_20220817		210,000
	RI-MW-04_20220817		146,000
	RI-MW-05_20220817		95,000
	RI-MW-06_20241007		156,000
	RI-MW-07_20241007		141,000
	RI-MW-X_20220817		211,000
	RI-MW-X_20241007		150,000
Notes: µg/L: micrograms per liter			

Groundwater analytical results for total (unfiltered) metals are presented in Table 10.

Dissolved (Filtered) Metals

Sodium was detected above the AWQSGVs in each of the six filtered groundwater samples (plus the two blind duplicates). Barium, calcium, copper, magnesium, manganese, mercury, nickel, potassium, selenium, and zinc were detected in the groundwater samples at low levels below the AWQSGVs.

Table L summarizes dissolved (filtered) metal exceedances above AWQSGVs in groundwater samples.

Table L
Dissolved (Filtered) Metals Concentrations in Groundwater Samples Above AWQSGVs

Analyte	Sample Identification	AWQSGV (µg/L)	Concentration (µg/L)
Sodium	RI-MW-01_20220817	20,000	130,000
	RI-MW-03_20220817		229,000
	RI-MW-04_20220817		157,000
	RI-MW-05_20220817		98,900
	RI-MW-X_20220817		228,000
	RI-MW-06_20241007		149,000
	RI-MW-07_20241007		143,000
	RI-MW-X_20241007		147,000
Notes: µg/L: micrograms per liter			

Groundwater analytical results for dissolved (filtered) metals are presented in Table 11.

5.3.4 Polychlorinated Biphenyls (PCBs) in Groundwater

Total PCBs were not detected above laboratory reporting limits in any of the groundwater samples.

Groundwater analytical results for PCBs are presented in Table 12.

5.3.5 Pesticides in Groundwater

Pesticides were not detected above laboratory reporting limits in any of the groundwater samples.

Groundwater analytical results for PCBs are presented in Table 13.

5.3.6 Per- and Polyfluoroalkyl Substances (PFAS) and 1,4-Dioxane in Groundwater

PFOA was detected above the NYSDEC guidance value of 6.7 parts per trillion (ppt) in each of the six groundwater samples (plus the blind duplicates) at concentrations up to 46.1 ppt. PFOS was also detected above the NYSDEC guidance value of 2.7 ppt in each of the six groundwater samples (plus the blind duplicates) at concentrations up to 33.7 ppt.

Table M summarizes the PFOA and PFOS exceedances above the NYSDEC screening levels in groundwater samples.

Table M
PFOA and PFOS Concentrations in Groundwater Samples Above the NYSDEC Screening Level

Analyte	Sample	NYSDEC Guidance Value (ppt)	Concentration (ppt)
PFOA	RI-MW-01_20201222	6.7	30.4
	RI-MW-03_20201222		31.3
	RI-MW-04_20201222		46.1
	RI-MW-05_20201222		25.2
	RI-MW-06_20241007		35.9
	RI-MW-07_20241007		37.3
	RI-MW-0X_20201222		30
	RI-MW-X_20241007		38.1

	RI-MW-0X_20201222		33.2
	RI-MW-X_20241007		22.8
Notes: ppt: parts per trillion			

Groundwater analytical results for PFAS compounds are presented in Table 14. Groundwater analytical results for 1,4-dioxane are presented in Table 9.

5.4 Soil Vapor Chemistry

5.4.1 Soil Vapor Analytical Results

Five sub-slab soil vapor samples (RI-SV-01 and RI-SV-03 through RI-SV-06) and eight soil vapor samples (RI-SV-02 and RI-SV-07 through RI-SV-13) were collected from the temporary soil vapor points shown on Figure 2. Although there are currently no regulatory or published guidance values for VOCs in soil vapor, soil vapor data was used to assess the potential for exposure to receptors and to help define the nature and extent of contamination at the Site.

The soil vapor samples were analyzed for VOCs by EPA Method TO-15. Forty-four of the 73 VOCs analyzed for were detected in the soil vapor samples. Solvent-related VOCs

[including 1,1,1-trichloroethane (1,1,1-TCA), carbon tetrachloride, chlorodifluoromethane, chloromethane, dichlorodifluoromethane, methylene chloride, PCE, and TCE] were detected in the soil vapor samples at individual concentrations up to 530 µg/m^3 from a diluted analysis (PCE in sample RI-SV-03_20220728).

Other VOCs, including compounds typically associated with petroleum [such as 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3-butadiene, 1,3-dichlorobenzene, 2,2,4-trimethylpentane, 2-hexanone, 4-ethyltoluene, benzene, butane, cyclohexane, cymene, ethylbenzene, isopropanol, isopropylbenzene, methyl ethyl ketone (MEK), m,p-xylenes, n-butylbenzene, n-heptane, n-hexane, n-propylbenzene, o-xylene, and toluene] were detected in the soil vapor samples at individual concentrations up to330 µg/m^3 (total xylenes) in sample RI-SV-10_20240920).

PCE was detected in all thirteen soil vapor samples at concentrations ranging from an estimated 0.29 µg/m^3 in sample RI-SV-10_20240920 to 530 µg/m^3 from a diluted analysis in sample RI-SV-03_20220728. TCE, a breakdown product of PCE, was detected in eight of the thirteen soil vapor samples at concentrations ranging from 0.26 µg/m^3 in sample RI-SV-02_20220728 to 50 µg/m^3 from a diluted analysis in sample RI-SV-01_20220728.

6.0 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT (QHHEA)

The objective of the QHHEA is to identify potential receptors and pathways for human exposure to the contaminants of concern (COC) that are present at, or migrating from, the Site. The identification of exposure pathways describes the route that the COC takes to travel from the source to the receptor. An identified pathway indicates that the potential for exposure exists; it does not imply that exposures actually occur.

The RI, as described in this RIR, is sufficient to complete a QHHEA. The QHHEA was performed to determine whether the Site poses an existing or future health hazard to the Site's exposed or potentially exposed population. The sampling data from the RI was evaluated to determine whether there is any health risk by characterizing the exposure setting, identifying exposure pathways, and evaluating contaminant fate and transport. This QHHEA was prepared in accordance with Appendix 3B and Section 3.3 (c) 4 of the NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation.

6.1 Contaminants of Concern (COCs) in Respective Media

Based on the results of previous subsurface investigations and this RI, the COCs include the following:

Soil

- The VOC acetone was detected at concentrations above the UUSCO, but below the RRSCO.
- The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene were detected at concentrations above the UUSCOs and RRSCOs.
- The metals barium, cadmium, lead, and mercury were detected above the UUSCOs and RRSCOs. The metals copper, nickel, and zinc were detected above the UUSCOs, but below the RRSCOs.
- The pesticides P,P'-DDE was detected above the UUSCO, but below the RRSCO.
- PFOA was detected at concentrations above the UUGV, but below the RRGV.

Groundwater

- The metals iron (total), manganese (total), and sodium (total and dissolved) were detected at concentrations above the AWQSGVs.
- PFOA and PFOS were detected at concentrations above the NYSDEC guidance values.

Soil Vapor

- Petroleum- and chlorinated solvent-related VOCs were detected in soil vapor.

6.2 Conceptual Model of Site Contamination

Based on an evaluation of the data and information in this RI, the Site is contaminated with: SVOCs, metals, pesticides, and PFOA in soil/fill; metals, PFOA, and PFOS in groundwater; and solvent- and petroleum-related VOCs in soil vapor.

The elevated concentrations of SVOCs, metals, pesticides, and PFOA in soil/fill are likely related to the presence of contaminated soil/fill material within the soil. The PFOA, and PFOS in groundwater are likely the result of regional groundwater conditions. The elevated concentrations of metals in groundwater may be related to regional conditions and/or sediment entrained in the groundwater samples. Solvent-related and petroleum-related VOCs were detected at varying

concentrations in the soil vapor samples collected from the Site. The detections may be related to the Site's historical manufacturing/industrial uses, as PCE and TCE were found in the soil at concentrations below their UUSCOs.

The elevated metal detections in the sediment sample collected from Lot 10 may be related to historic Site uses. Lot 10 was historically used as a cap and fuse factory in the late 1800s, and a battery service facility in 1925. In 1951, Lot 10 was occupied by a paper box manufacturer until approximately 1963 when a sink top manufacturer was identified through approximately 2006. The sediment sample was collected to investigate a potential source area, as PCE was reportedly used for vaporizing operations related to metals, predominantly on Lot 10.

6.3 Potential Routes of Exposure

The five elements of an exposure pathway are:

1. The source of contamination;
2. The environmental media and transport mechanisms;
3. The point of exposure;
4. The route of exposure; and
5. The receptor population.

These elements of an exposure pathway may be based on past, present, or future events. An exposure pathway is considered complete when all five elements of an exposure pathway are documented. A potential exposure pathway exists when any one or more of the five elements comprising an exposure pathway cannot be documented. An exposure pathway may be eliminated from further evaluation when any one of the five elements comprising an exposure pathway has not existed in the past, does not exist in the present, and will never exist in the future.

6.4 Exposure Route

An exposure route is the mechanism by which a receptor comes into contact with a chemical. Three potential primary routes exist by which chemicals can enter the body:

- Ingestion of water, fill, and/or soil;
- Dermal contact with water, fill, soil, and/or building materials; and
- Inhalation of vapors and/or particulates.

6.5 Potential Receptors

The Site is currently occupied by the Site owner on Lot 1 and utilized for office space, storage of construction materials, warehousing, and parking; a private contractor on Lot 10 and utilized for garage space, workshop space, storage, and parking; and a private contractor uses Lot 13 for office space and storage. The area immediately surrounding the Site is predominantly industrial, commercial, and residential in nature. The anticipated future use of the Site will include commercial, residential, and both market-rate and affordable residential units.

On-site Receptors: Current on-site receptors include the Site owner and on-site tenants.

During redevelopment of the Site, the on-site potential sensitive receptors will include construction workers and inspectors. Once the Site is redeveloped, the on-site potential sensitive receptors will include residents, employees, community members, and vendors.

Off-site Receptors: Potential off-site receptors within a 0.25-mile radius of the Site include adult and child residents, commercial and construction workers, pedestrians, trespassers, and cyclists, based on the following:

1. Commercial Businesses – existing and future
2. Residential Buildings – existing and future
3. Building Construction/Renovation – existing and future
4. Pedestrians, Cyclists – existing and future
5. Day Care Facilities – existing and future
6. Schools – existing and future

6.6 Potential for Off-Site Vapor Intrusion

Based on the RI soil vapor concentrations, it is not anticipated that the chlorinated VOC contamination is migrating off-site.

6.7 Existence of Human Health Exposure Pathways

This evaluation consists of the following components: contaminant source; contaminant release and transport mechanism; point of exposure; route of exposure; and receptor population.

The Site is currently capped with a concrete building slab and asphalt-paved parking lot, which were noted to be in good to fair condition with minor surficial cracking. Any potential for inhalation of contaminants via soil vapor intrusion is addressed by the on-site SSDS. Additionally, groundwater is not used for drinking or other potable purposes in this part of Queens, and the Site is served by a public water supply that is not affected by Site contamination.

Once redevelopment activities begin, there will be a potential exposure pathway from contaminated surface soil and fill to construction workers, as these workers could potentially ingest, inhale, or have dermal contact with any exposed contaminated soil and fill; however, this will be mitigated with proper implementation of a Community Air Monitoring Plan (CAMP) that will prevent migration of particulates and VOCs, and a HASP that will dictate safe practices including the wearing of personal protective equipment.

6.8 Overall Human Health Exposure Assessment

The entirety of the Site is capped with a concrete building slab and asphalt-paved parking lot, which were noted to be in good to fair condition with minor surficial cracking. Any potential for inhalation of contaminants via soil vapor intrusion is addressed by the on-site SSDS. Once redevelopment activities begin, there will be a potential exposure pathway from contaminated surface soil/fill to construction workers, as these workers could potentially ingest, inhale, or have dermal contact with any exposed contaminated fill or soil; however, this will be mitigated with proper implementation of a CAMP that will prevent migration of particulates and VOCs, and a HASP that will dictate safe practices including the wearing of personal protective equipment.

Based on the results of the QHHEA, a NYSDEC-approved Remedial Action Work Plan (RAWP), which includes a HASP to protect on-site workers, should be implemented during remedial action and construction of the proposed Site buildings to ensure that the potential exposure pathways identified do not become complete. The HASP will include a CAMP compliant with Appendices 1A and 1B of DER-10. The RAWP should address the contaminated soil/fill at the Site and the installation/implementation of certain engineering and/or institutional controls (ECs and/or ICs, respectively).

7.0 CONCLUSIONS

This RIR summarizes the investigation work performed between July and August 2022, and September and October 2024. The goal of the RI was to further define and characterize the nature and extent of Site contamination and to assist with determining the appropriate remedial action. The RI was conducted in general accordance with AKRF's April 2022 RIWP, which included a HASP and a QAPP, and AKRF's June 2024 Supplemental Remedial Investigation (SRI) Work Plan (SRIWP).

Based on the RI results, the nature and extent of contaminated soil, groundwater, and vapor present at the Site has been defined. The COCs at the Site include: VOCs, SVOCs, metals, pesticides, and PFOA in soil/fill above the UUSCOs and/or RRSCOs; metals, PFOA, and PFOS in groundwater above the AWQSGVs or NYSDEC screening levels; and chlorinated solvent- and petroleum-related VOCs in soil vapor.

This RI documented a layer of contaminated uncontrolled fill Site-wide from surface grade down to approximately 5 to 13 feet bgs. The fill/soil contained elevated concentrations of VOCs, SVOCs, metals, pesticides, and PFAS. VOCs and pesticides were detected above UUSCOs, but below RRSCOs. SVOC concentrations above UUSCOs and RRSCOs were detected in shallow soil at the Site. Detected concentrations of SVOCs in soil are likely related to the presence of contaminated soil/fill material. Total metals were detected primarily in shallow samples throughout the Site, but were detected in deeper samples as well. The highest total concentrations of metals were detected in the shallow soil sample collected from the drain on Lot 10. PFAS was detected across the Site at variable concentrations down to approximately 8 feet bgs.

Total iron and manganese were detected above the AWQSGV in the groundwater samples, but were not detected at elevated concentrations in the dissolved sample. Because iron and manganese were also detected in soil samples collected throughout the Site, these detections are likely the result of sediment entrained in the samples. Sodium was detected in both the total and dissolved samples; the elevated concentrations are most likely related to regional groundwater conditions as opposed to an on-site release, because sodium is a common constituent in native soil in the region. PFOS and PFOA were detected in groundwater above the NYSDEC guidance values in the groundwater samples. The presences of PFAS in groundwater is likely the result of regional groundwater conditions.

Petroleum and chlorinated-solvent related VOCs were detected at elevated concentrations in all soil vapor samples collected. The elevated concentrations of chlorinated solvents in soil vapor are believed to be related to the Site's historical manufacturing usage. The RI data suggests that contamination is not migrating off-site to sensitive receptors. Adjacent and commercial uses are located surrounding the Site; however, the entire Site is bounded by 149th Street, 95th Avenue, 150th Street, and 97th Avenue, which act as buffers to buildings located across those streets.

Notes
Jamaica Works - Remedial Investigation
95-25 149th Street, Queens, NY

DEFINITIONS

D	:	Indicates an identified compound in an analysis that has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analyses.
J	:	The concentration given is an estimated value.
K	:	Reported concentration value is proportional to dilution factor and may be exaggeratec
L	:	Sample result is estimated and biased low.
ND	:	The standard is a non-detectable concentration by the approved analytical method.
NR	:	Not reported.
NS	:	No standard.
R	:	Indicates the reported result is unusable. (note: the analyte may or may not be present.)
U	:	The analyte was not detected at the indicated concentration.
UJ	:	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise
mg/kg	:	milligrams per kilogram
ppb	:	parts per billion
µg/L	:	micrograms per liter
ng/L	:	nanograms per liter
µg/m^3	:	micrograms per cubic meter of air

STANDARDS

Part 375 Soil Cleanup Objectives	:	Soil Cleanup Objectives listed in New York State Department of Environmental Conservation (NYSDEC) "Part 375" Regulations [6 New York Codes, Rules and Regulations (NYCRR) Part 375].

Note: Endosulfans ABS represents the detected sum of Endosulfan I, Endosulfan II, and Endosulfan Sulfate.

Exceedances of Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) are highlighted in bold font.
Exceedances of Part 375 Restricted Residential Soil Cleanup Objectives (RRSCOs) are highlighted in gray shading.

NYSDEC Part 375 PFAS Guidance Values	:	New York State Department of Environmental Conservation (NYSDEC) Sampling, Analysis and Assessment Of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs Issued April 2023.

Exceedances of NYSDEC PFAS Unrestricted Use Guidance Values (UUGVs) are highlighted in bold font.
Exceedances of NYSDEC PFAS Restricted Residential Guidance Values (RRGVs) are highlighted in gray shading.

NYSDEC Class GA AWQSGVs	:	New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs).

Exceedances of NYSDEC Class GA AWQSGVs are highlighted in bold font.

Partridge Venture Engineering, PC doing business as PVE Engineering ("PVE") & Lawrence ENV, LLC (LENV) is submitting this report for work performed at the above-referenced site. This report has been prepared in conformance with the scope and limitations ASTM Standard E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* If you have any questions or comments, please contact one of the individuals listed below. We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR § 312. We have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 Introduction

1.1 Objectives of Report

This Environmental Site Assessment (ESA) is intended to identify *recognized environmental conditions* (RECs) with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and petroleum products on the subject property (defined in Section 3.0). The term *recognized environmental conditions* (REC) is defined in accordance with **ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process** as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Consideration is given to potential impacts to soil, groundwater, vapor, and other media.

1.2 Scope and Limitations of Report

Visual inspection of the subject property, a review of regulatory records and documents, and a review of historical records and documents are performed in accordance with ASTM E1527-13 and the appended Scope and Limitations (Appendix F) with the exception of any special terms and conditions in section 1.4. Note that, as stated in Practice 1527-13, no environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property and that performance of Practice 1527-13 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, recognizing reasonable limits of time and cost. PVE/LENV makes no representation of the condition of areas that could not be visually inspected.

1.3 Significant Assumptions

PVE & LENV assumes that all database records, historical information, interviews conducted, and information obtained from others regarding the subject property are from reliable sources. No attempt was made to independently verify the reliability of said sources, as it is not required to verify the information provided according to Section 7.5.2.1 of ASTM E1527-13. Where access to portions of the site or to structures on the site was unavailable or limited, PVE & LENV renders no opinion as to the presence of regulated or hazardous materials or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure. Conclusions and recommendations are based on information obtained from said sources and a visual inspection of the subject property on the date listed herein. References and sources used for the preparation of this report are documented in this report.

1.4 Special Terms and Conditions

An environmental liens and activity and use limitations (AULs) search was not included with the scope of this report, as per the direction of the user. In order to satisfy the ASTM E 1527-13 requirements for a Phase I ESA, a search for environmental liens and AULs must be appended.

1.5 User Reliance

The user is the party seeking to use Practice E1527 to complete this environmental site assessment of the subject property. The user has specific obligations for completing a successful application of Practice E1527 outlined in Section 6 of E1527. Completion of the user questionnaire (attached in Appendix G) helps satisfy these obligations.

In addition to the user, additional parties may rely on the contents of this environmental site assessment as listed below.

User:	Empire Management 347 Fifth Avenue, New York, New York 10016.
Authorized to rely on this report:	Empire Management

The scope of this Phase I ESA may not meet the needs of other users. Any reliance on the contents of this report by any third party is the sole responsibility of that party.

1.6 Definitions

Below are some important definitions (as defined in E1527-13) that are not otherwise defined in this report:

Fill dirt: Dirt, soil, sand, or other earth, that is obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of a real property. It does not include material that is used in limited quantities for normal landscaping activities.

Material threat: A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Migrate/Migration: For the purposes of a Phase I ESA, "migrate" and "migration" refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface. Note that vapor migration in the subsurface is described in Guide E2600; however, for the purposes of a Phase I ESA, there is no requirement to apply the Guide E2600 standard to achieve compliance with all appropriate inquiries.

2.0 Site Description

2.1 Subject Property Location

Street Address:	95-04 149th Street
Municipality:	Queens
County:	Queens County
State:	New York
Block/Lot:	Block 10001 Lot 1
Lot Size:	62,682 sq. ft.
Building Size:	53,666 sq. ft. (One-story industrial structure)

Street Address:	95-25 149th Street
Municipality:	Queens
County:	Queens County
State:	New York
Block/Lot:	Block 10002 Lot 1
Lot Size:	40,077 sq. ft.
Building Size:	41,600 sq. ft. (Eight (8) industrial structures)

Street Address:	95-08 150th Street
Municipality:	Queens
County:	Queens County
State:	New York
Block/Lot:	Block 10002 Lot 10
Lot Size:	3,920 sq. ft.
Building Size:	2,400 sq. ft. (One-story industrial structure)

Street Address:	95-12 150th Street
Municipality:	Queens
County:	Queens County
State:	New York
Block/Lot:	Block 10002 Lot 13
Lot Size:	6,800 sq. ft.
Building Size:	8,700 sq. ft. (Two-story industrial structure)

See Appendix A for site maps. The parcel outline was obtained from the New York City Department of Finance Digital Tax Map (http://gis.nyc.gov/taxmap/).

2.2 General Site Features, Characteristics, and Current Operations

Site Features:	The subject property consists of four (4) lots (Block 10001 Lot 1 & Block 10002 Lots 1, 10, & 13) containing eleven (11) industrial structures.

Current Use:	Industrial.
Topography:	Subject property is generally flat; local topography gently slopes downward to the east-southeast.
Potable Water Supply:	Municipal Supplied.
Sewage Disposal System:	Municipal Supplied.
Means of heating/cooling:	Natural Gas, Electric Heaters, #4 Fuel Oil

2.3 Current Uses of Adjoining Properties

Adjoining properties are any real property or properties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them. Adjoining parcels were obtained from the New York City Department of Finance Digital Tax Map (http://gis.nyc.gov/taxmap/).

Below is a table describing the current uses of adjoining properties.

Direction from Subject Property	Address	Owner(s)	Occupant(s)/Use	Impact to Subject Property
West-southwest	95-41 148th Street	Bush, Joseph	One and Two-Family Buildings	Not Anticipated
West-southwest	95-39 148th Street	Mohammed Abdul Hannon	One and Two-Family Buildings	Not Anticipated
West-southwest	95-37 148th Street	Howard, William H	One and Two-Family Buildings	Not Anticipated
West-southwest	95-35 148th Street	Akter, Laboni	One and Two-Family Buildings	Not Anticipated
West-southwest	95-33 148th Street	Sepulveda, Martha	One and Two-Family Buildings	Not Anticipated
West-southwest	95-21 148th Street	Duran, Stanley A	One and Two-Family Buildings	Not Anticipated
West-southwest	95-29 148th Street	Shirley, Donie H	One and Two-Family Buildings	Not Anticipated
West-southwest	95-27 148th Street	Steven Bell	One and Two-Family Buildings	Not Anticipated
West-southwest	95-25 148th Street	Celestine Mayers	One and Two-Family Buildings	Not Anticipated
West	95-26 148th Street	Islam, Mohammed S	One and Two-Family Buildings	Not Anticipated
West	95-24 148th	Williams, Elton	One and Two-Family	Not Anticipated

Direction from Subject Property	Address	Owner(s)	Occupant(s)/Use	Impact to Subject Property
	Street	C	Buildings	
West	95-22 148th Street	Sutphin Avenue Development LLC	One and Two-Family Buildings	Not Anticipated
West	95-18 148th Street	Dev, Alok	One and Two-Family Buildings	Not Anticipated
West	95-11 148th Street	Polsinelli Management Corp.	Unknown	Not Anticipated
West	147-44 95th Avenue	Begum, Mossammat S	One and Two-Family Buildings	Not Anticipated
Northwest	94-01 Sutphin Boulevard	Merkel Properties LLC	Vacant Land	Not Anticipated
North	147-16 94th Avenue	Merkel Properties LLC	Parking Facilities	Not Anticipated
North	148-07 95th Avenue	TDM Realty Partners LLC	One and Two-Family Buildings	Not Anticipated
North	148-11 95th Avenue	TDM Realty Partners LLC	Unknown	Not Anticipated
North	148-13 95th Avenue	TDM Realty Partners LLC	Vacant Land	Not Anticipated
North	95th Avenue	TDM Realty Partners LLC	Unknown	Not Anticipated
North	149-01 95th Avenue	TDM Realty Partners LLC	Industrial and Manufacturing	Not Anticipated
East-northeast	95-02 150th Street	Mastronardi, Gerardo	Unknown	Not Anticipated
East	95-09 150th Street	Beaver Road Management LLC	Industrial and Manufacturing	Not Anticipated
East	Beaver Road	Beaver Road Management LLC	Vacant Land	Not Anticipated
East	150-04 Beaver Road	179-28 110th Ave LLV	Vacant Land	Not Anticipated
East	95-20 150th Street	Amba Management Corp	Industrial and Manufacturing	Not Anticipated
East	95-24 150th Street	Metro Atlantic Management LLC	Unknown	Not Anticipated
East	95-28 150th Street	Clyde Mohan	Industrial and Manufacturing	Not Anticipated

Direction from Subject Property	Address	Owner(s)	Occupant(s)/Use	Impact to Subject Property
East	95-30 150th Street	Clinton Graham	Mixed Use: Residential & Commercial	Not Anticipated
East	95-32 150th Street	Carr, John	Mixed Use: Residential & Commercial	Not Anticipated
East	95-34 150th Street	Graham Clinton	Mixed Use: Residential & Commercial	Not Anticipated
East-southeast	95-36 150th Street	Clinton Graham	Mixed Use: Residential & Commercial	Not Anticipated
East-southeast	95-38 150th Street	Clinton Graham	Mixed Use: Residential & Commercial	Not Anticipated
East-southeast	95-40 150th Street	Carr, Janie	Mixed Use: Residential & Commercial	Not Anticipated
Southeast	97-02 150th Street	Abbott Industries INC	Industrial and Manufacturing	Not Anticipated
South	149-06 97th Avenue	G. Mastronardi & Sons Construction Corp	Vacant Land	Not Anticipated
South	149-04 97th Avenue	G. Mastronardi & Sons Construction Corp	Vacant Land	Not Anticipated
South	149-02 97th Avenue	John Diaz	Multi-Family Walk-Up Buildings	Not Anticipated
South	148-24 97th Avenue	Graham Clinton	Multi-Family Walk-Up Buildings	Not Anticipated
South	148-16 97th Avenue	Mastronardi Masons Mater	Vacant Land	Not Anticipated

South	97-01 148th Street	Mora, Gregorio	One and Two-Family Buildings	Not Anticipated

3.0 Database Search

A review of state and federal documents and databases was performed to identify recorded hazardous waste or regulated substance activities on or near the subject property. Information from state and federal databases was compiled by Environmental Data Resources (EDR), an independent subcontractor to PVE & LENV. The information presented below is a summary of this report. A complete listing of the sources searched and a complete copy of the database report are provided in Appendix B. The search distances as assigned in ASTM E1527-13 were used at a minimum for each of the following environmental record sources. Additional reviewed records are provided in Appendix C.

Not all sites identified in the database records can be accurately located due to incomplete or conflicting information supplied to the regulatory agencies. Asterisked (*) sites are indicative of sites listed as un-mappable ("orphan") in the EDR database report. Based on location information provided, the asterisked sites may be located within the appropriate search radius and are included in this Phase I ESA report. Information about these sites can be reviewed in the EDR Radius Map Report in Appendix B.

3.1 Federal and State Hazardous Waste Sites

Federal National Priority List

National Priority Listing (NPL) sites are those listed with the USEPA as hazardous waste disposal sites, also known as Superfund sites. Proposed and delisted NPL site lists are also maintained by the USEPA. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 1.0 mile*:	*Impact to Subject Property*	*Rationale*
NPL	No	0 / 0*	None	Not Present
Proposed NPL	No	0 / 0*	None	Not Present
DELISTED NPL	No	0 / 0*	None	Not Present

Federal SEMS

The SEMS (Superfund Enterprise Management System) list details proposed and existing federal Superfund sites pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The USEPA also maintains a SEMS-ARCHIVE list, which tracks sites that have no further interest under the Federal Superfund Program based on available information. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
SEMS	No	0 / 0*	None	Not Present
SEMS-ARCHIVE	No	0 / 0*	None	Not Present

State-Equivalent NPL & SEMS

Inactive State Hazardous Waste Disposal Sites are designated by NYSDEC and are state-equivalent SEMS sites. NYSDEC also maintains an inventory of delisted SHWS. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 1.0 mile*:	*Impact to Subject Property*	*Rationale*
NY SHWS	No	5 / 1*	Not Anticipated	See Below
NY DEL SHWS	No	0 / 0*	None	Not Present

SHWS:

- K – Jamaica Gas and Light MGP, located on Beaver Road & 158th Street, 779 feet northeast (topographically up-gradient) of the subject property. Coal tar and semi-volatile organic compounds (SVOCs) were detected in soil at concentrations exceeding CP-51 standards. Metals were detected in groundwater at concentrations exceeding groundwater quality standards (GQS).

- K – Jamaica Holder Station, located at 158th Street & Liberty Avenue, 1,190 feet east-northeast (topographically down-gradient) of the subject property. One (1) polycyclic aromatic hydrocarbon (PAH) was detected at a concentration exceeding GQS.

- 148-28 Hillside Avenue, located 2,711 feet north-northwest (topographically up-gradient) of the subject property. No additional information was provided.

- Former Duraspec Electroplating, located at 87-83 139th Street, 3,192 feet northwest (topographically up-gradient) of the subject property. Metals in soil and petroleum compounds in groundwater have been detected in concentrations exceeding applicable standards.

- 107-35 Merrick Blvd-OER, located 4,254 feet east (topographically down-gradient) of the subject property. SVOCs and metals have been detected in soil at concentrations exceeding soil cleanup objectives (SCOs). Chlorinated solvents were detected in groundwater and soil vapor samples at concentrations exceeding applicable standards.

- *Cedar Manor A08, located at 158th Street approximately 780 feet northeast (topographically up-gradient) of the subject property. Mercury was identified in soil at concentrations exceeding industrial SCOs and in groundwater exceeding GQS. No additional information was provided.

Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE/LENV does not consider these listings to represent RECs.

Hazardous Substance Waste Disposal Sites

The Hazardous Substance Waste Disposal Sites (HSWDS) Inventory is maintained by New York State. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
NY HSWDS	No	0 / 0*	None	Not Present

3.2 Hazardous Waste Treatment, Storage, or Disposal

RCRA Treatment, Storage, and Disposal Facilities

The database of RCRA facilities for treatment, storage, or disposal of hazardous materials (RCRA TSD) is maintained by the USEPA. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
RCRA-TSDF	No	0 / 0*	None	Not Present

RCRA Corrective Action Sites

The USEPA maintains a database of sites within the RCRA Corrective Action program, which are facilities permitted by the USEPA for treatment, storage, or disposal of hazardous waste which have conducted or are currently conducting a corrective action as regulated under the Resource Conservation and Recovery Act. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 1.0 mile*:	*Impact to Subject Property*	*Rationale*
CORRACTS	No	0 / 0*	None	Not Present

3.3 Hazardous Waste Generation

The USEPA maintains a database of facilities that generate hazardous waste. Large Quantity Generators (LQG) generate over 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month. Small Quantity Generators (SQG) generate between 100 kg and 1,000 kg of hazardous waste per month. Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste or less than 1 kg of acutely hazardous waste per month. Non-generators are sites that do not presently generate hazardous waste. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*
RCRA-LQG	No	0 / 0*	None	Not Present
RCRA-SQG	No	0 / 0*	None	Not Present
RCRA-VSQG	Yes	0 / 0*	Not Anticipated	See Below
RCRA NonGen/NLR	Yes	3 / 0*	Not Anticipated	See Below

RCRA VSQG:

- Abbot Industries Inc., located at 95-25 149th Street, the subject property. The listing is related to the disposal of halogenated solvents, and the facility received a written, informal violation in 1991. No additional information was provided.

Due to the presence of a violation, PVE/LENV considers this listing to represent a REC.

RCRA Non-generator:

- Con Edison Service Box: 21085, located in front of 95-10 150th Street, the subject property. No violations were identified in association with this listing.

- Con Edison, located at 95-08, the subject property. No violations were identified in association with this listing.

- Con Edison Service Box: 11198, located in front of 95-34 150th Street, an eastern adjoining property. No violations were identified in association with this listing.

- Con Edison, located at 95-34 150th street, an eastern adjoining property. No violations were identified in association with this listing.

- Con Edison, located in front of 95-24 150th Street, an eastern adjoining property. No violations were identified in association with this listing.

Based on the nature of these listings and lack of violations, PVE/LENV does not consider these listings to represent RECs.

3.4 State Landfill and/or Solid Waste Disposal Sites

NYSDEC maintains a database of solid waste disposal facilities (SWF) and landfills (LF). Further information can be reviewed in Appendix B.

EDR Database Acronym:	Subject Property:	Properties within 0.5 mile:	*Impact to Subject Property*	*Rationale*
NY SWF/LF	No	12 / 0*	Potentially	See Below

- Tic Tac Auto Inc, located at 150-08 Beaver Road, 134 feet east (topographically cross-gradient) of the subject property, is identified as an inactive vehicle dismantling facility.

- Easy Does It Auto Salvage Inc., located at 150-08 Beaver Road, 134 feet east (topographically cross-gradient) of the subject property, is identified as an inactive vehicle dismantling facility.

Based on the proximity of these listings in relation to the subject property, PVE/LENV considers these listings to represent RECs.

- Liberty Auto Parts Inc., located at 97-09 150th Street, 183 feet southeast (topographically down-gradient) of the subject property, is identified as an inactive vehicle dismantling facility.

- New York City Auto Salvage Inc., located at 148-36 Liberty Avenue, 342 feet south-southeast (topographically down-gradient) of the subject property, is listed as an active vehicle dismantling facility.

- J & J Auto Wreckers, Inc., located at 150-35 Liberty Avenue 410 feet east (topographically down-gradient of the subject property, is listed as an active vehicle dismantling facility.

- A1 Auto Parts Inc., located at 97-15 Sutphin Boulevard, 457 feet southwest (topographically up-gradient) of the subject property, is listed as an inactive vehicle dismantling facility.

- H. Coles Construction & Service, located at 95-34 157th Street, 517 feet northeast (topographically down-gradient) of the subject property, is listed as an inactive transfer station.

- City Mason Division of S.R.M., located at 105th Avenue & 150th Street, 535 feet south-southeast (topographically down-gradient) of the subject property, is listed as an inactive construction and demolition processor.

- A & J Scrap Metal Processing, located at 95-49 Tuckerton Street, 584 feet east-northeast (topographically down-gradient) of the subject property, is listed as an active vehicle dismantling facility.

- A 2000 Auto Parts 7 Auto GLS Inc., located at 155-17 Liberty Avenue, 702 feet east (topographically down-gradient) of the subject property, is listed as an inactive vehicle dismantling facility.

- Do-Rite Salvage Corp., located at 155-19 Liberty Avenue, 707 feet east (topographically down-gradient) of the subject property, is listed as an inactive vehicle dismantling facility.

- Republic Caring Co. Inc., located at 106-21 156th Street, 1,477 feet southeast (topographically down-gradient) of the subject property, is listed as an inactive transfer station.

Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE/LENV does not consider these listings to represent RECs.

3.5 State Registered Storage Tanks

NYSDEC maintains a database of petroleum bulk storage (PBS) facilities with regulated storage tanks. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*
UST	Yes	1 / 0*	Not Anticipated	See Below
AST	Yes	1 / 0*	Not Anticipated	See Below

UST Site:

- PBS #2-249955, Abbott Industries Inc., located at 95-04 149th Street, the subject property. The following tank is associated with the property: one (1) 10,000-gallon #2 fuel oil tank, installed at an unreported date and closed in-place on August 11, 2014.

Based on this listing being associated with an LTANK listing described in Section 3.6 below, PVE/LENV considers this listing to represent a REC.

- PBS #2-620099, CC Precision Welding Corp., located at 150-09 Beaver Road, an eastern adjoining property. The following tanks are associated with the property: four (4) 550-gallon gasoline tanks, installed at an unreported date and closed and removed on June 4, 2005.

AST Site:

- PBS #2-249963, Abbott Industries Inc., located at 95-25 149th Street, the subject property. The following tank is associated with the property: one (1), in-service, 7,500-gallon #6 fuel oil tank, installed on January 1, 1965.

- PBS #2-249971, Abbott Industries Inc., located at 97-02 150th Street, a southern adjoining property. The following tank is associated with the property: one (1) 2,000-gallon #2 fuel oil tank, installed at an unreported date and closed/removed on July 20, 2007.

Fuel storage tanks operated in accordance with applicable rules and regulations, would not represent a REC, however, unreported releases can occur and would adversely impact the

subject property. Based on the information provided, PVE/LENV does not consider these listings to represent RECs.

Chemical Bulk Storage Database

NYSDEC maintains a database of facilities store regulated hazardous substances tanks (CBS), including aboveground tanks with capacities of 185 gallons or greater (CBS AST), and/or in underground tanks of any size (CBS UST). Only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
NY CBS	No	4 / 0*	Not Anticipated	See Below
NY CBS AST	No	1 / 0*	Not Anticipated	See Below
NY CBS UST	No	0 / 0*	None	Not Present

NY CBS:

- CBS #2-000185, Atlas Transit Mix, located at 95-11 147th Place, 234 feet east (topographically up-gradient) of the subject property. No additional information was provided.

- CBS #2-000453, MEC-TEC Automotive, Inc., located at 148-20 Liberty Avenue, 397 feet south (topographically down-gradient) of the subject property. The facility is inactive. Tank Information withheld (not releasable under Freedom of Information Law) in accordance with Public Officers Law Sections 86.5, 87.2(f), 89.5(a)(1)(1-a).

- CBS #2-000435, J & J Auto Wreckers, Inc., located at 150-35 Liberty Avenue, 410 feet east (topographically down-gradient) of the subject property. The following tank is associated with the property: one (1) 275-gallon tank of unknown contents, installed on February 14, 2001, and removed on March 7, 2010.

- CBS #2-000057, Honeywell Farms, located at 155-25 Styler Road, 857 feet southeast (topographically down-gradient) of the subject property. The following tank is associated with the property: one (1) 3,000-gallon tank of unknown contents, installed on August 1, 1978, and removed on November 25, 2003.

NY CBS AST:

- CBS #2-000185, Atlas Transit Mix, located at 95-11 147th Place, 234 feet east (topographically up-gradient) of the subject property. The following tank is associated with the property: one (1), in-service, 300-gallon, sodium hydroxide tank installed in June of 1987.

- CBS #2-000057, Honeywell Farms, located at 155-25 Styler Road, 857 feet southeast (topographically down-gradient) of the subject property. The following tank is associated with the property: one (1), in-service, 3,000-gallon sodium hydroxide tank, installed in August of 1978.

Storage tanks operated in accordance with applicable rules and regulations, would not represent a REC, however, unreported releases can occur and would adversely impact the subject property. Based on the information obtained in the database, PVE does not consider these listings to represent RECs.

3.6 Petroleum and Hazardous Material Releases

Emergency Response Notification System

The USEPA Emergency Response Notification System (ERNS) stores information reported to the USEPA on sudden and/or accidental releases of hazardous substances to the environment. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Impact to Subject Property*	*Rationale*
ERNS	No	None	Not Present

Petroleum Spills

NYSDEC maintains a database of petroleum spills reported to the department. Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*
SPILLS - Open File	No	0 / 0*	None	Not Present
SPILLS - Closed File	No	7 / 0*	Not Anticipated	See Below

- NYSDEC Spill #0603449, located at the intersection of 95th Avenue and 149th Street, 32 feet north (topographically down-gradient) of the subject property, occurred on June 28, 2006, when five (5) five-gallon metal drums of unknown contents were abandoned at the intersection. The drums were not located by the NYSDEC. The file was closed on August 28, 2006.

- NYSDEC Spill #9814213, located at the intersection of 95th Avenue and 148th Street, 35 feet northwest (topographically up-gradient) of the subject property, occurred on February 25, 1999 when two (2) 55-gallon drums of waste oil were found abandoned. The file was closed on July 7, 2003.

- NYSDEC Spill #9914434, located at the intersection of 95th Avenue and 148th Street, 35 feet northwest (topographically up-gradient) of the subject property, occurred on March 22, 2000 when two (2) 55-gallon drums of unknown material were found abandoned. The file was closed on February 14, 2003.

- NYSDEC Spill #9914065, located at the intersection of 95th Avenue and 148th Street, 35 feet northwest (topographically up-gradient) of the subject property, occurred on March 13, 2000 when two (2) 55-gallon drums of unknown material were found abandoned. The file was closed on March 16, 2000.

- NYSDEC Spill #1507075, located at the intersection of 97th Avenue and 148th Street, 71 feet southwest (topographically down-gradient) of the subject property, occurred on October 5, 2015, when six (6) 5-gallon buckets of unknown petroleum products were abandoned. Two of the buckets spilled into the street. According to the report, no soil or sewers were impacted. The material was contained in a 35-gallon overpack, and the file was closed on October 16, 2015.

- NYSDEC Spill #1502854, located at 148-01 95th Avenue, a northern adjoining property, occurred on June 15, 2015, when three (3) 5-gallon containers of petroleum were abandoned. The file was closed on June 19, 2015.

- NYSDEC Spill #1213219, located at 148-12 97th Avenue, a southern adjoining property, occurred on December 10, 2012, when 0.25 gallons of #2 fuel oil was released due to equipment failure. The file was closed on May 10, 2013.

Based on the files being closed to the satisfaction of the NYSDEC, PVE/LENV does not consider these listings to represent RECs.

A FOIL request was submitted to NYSDEC. If further information is received at a later date and modifies the conclusions of this report, PVE/LENV will notify the user of the report.

SPILLS 90: SPILLS 90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded

after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*
SPILLS 90	No	1 / 0*	Not Anticipated	See Below

- NYSDEC Spill #1213219, located at 148-12 97th Avenue, a southern adjoining property, occurred on December 10, 2012, when 0.25 gallons of #2 fuel oil was released due to equipment failure. The file was closed on May 10, 2013.

Based on the quantity of the release, down-gradient nature of this listing in relation to the subject property, and the file being closed to the satisfaction of the NYSDEC, PVE/LENV does not consider this listing to represent a REC.

A FOIL request was submitted to NYSDEC. If further information is received at a later date and modifies the conclusions of this report, PVE/LENV will notify the user of the report.

State Leaking Storage Tank List

NYSDEC maintains a database of leaking registered storage tank incident reports (LTANKS). Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment. Due to the high frequency of LUSTs in the applicable search radius, only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. All LUSTs files, both closed and open, within the search radius were reviewed.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
LTANKS - Open File	No	1 / 0*	Not Anticipated	See Below
LTANKS - Closed File	Yes	42 / 0*	Potentially	See Below

- NYSDEC Spill #8804089, located at 95-04 149th Street, the subject property, was reported on August 9, 1988, when a 10,000 gallon #4 fuel oil tank failed a tank tightness test. No records of remediation were observed. The file was closed on September 30, 1992. A FOIL request was submitted to NYSDEC. If further information is received at a later date and modifies the conclusions of this report, PVE/LENV will notify the user of the report.

Based on the lack of retesting and/or remediation described in this listing or readily attainable documentation, PVE/LENV considers this listing to represent a REC.

PVE/LENV personnel have reviewed the remaining 42 LTANKS listings. Based on the distance and/or down-gradient nature of these listings in relation to the subject property and the files being closed to the satisfaction of the NYSDEC, PVE/LENV does not consider these listings to represent RECs.
.

3.7 Brownfield Sites

A Brownfield is any real property where redevelopment or reuse may be complicated by the presence or potential presence of hazardous waste, petroleum, pollutants, or contaminants. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
BROWNFIELDS	No	5 / 0*	Not Anticipated	See Below

- BCP #C241184, located at 147-20 94th Avenue, 361 feet northwest (topographically up-gradient) of the subject property. Prior to remediation, the contaminants of concern were metals, SVOCs, and volatile organic compounds (VOCs). Remediation at the site is complete and does not require engineering controls or a site management plan (SMP).

- BCP #C241206, located at 147-25 94th Avenue, 378 feet northwest (topographically up-gradient) of the subject property. SVOCs and metals were detected in concentrations exceeding SCOs. Chlorinated solvents were detected in soil vapor at concentrations exceeding applicable guidelines. Data collected does not indicate any off-site impacts.

- BCP #C241064, located at Beaver Road & 159th Street, 779 feet northeast (topographically up-gradient) of the subject property. No additional information was provided.

- BCP #241062, located at 158th Street & Liberty Avenue, 1,190 feet east-northeast (topographically down-gradient) of the subject property. One (1) SVOC was detected in groundwater at concentrations exceeding GQS. A site characterization report was approved by the NYSDEC in January of 2013 and required no further action at the site.

- BCP #C241093, located at 89-14 Parsons Boulevard, 2,198 feet north-northeast (topographically up-gradient) of the subject property. The application for the Brownfield was denied on November 16, 2006.

Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE/LENV does not consider these listings to represent RECs.

3.8 State Voluntary Cleanup Program Sites

The VCP was established to address the environmental, legal, and financial barriers that hinder redevelopment and reuse of contaminated sites, and to enhance private sector cleanup of Brownfield sites by enabling parties to remediate using private rather than public funds.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
NY VCP	No	14 / 1*	Not Anticipated	See Below

- 147-16 97th Avenue, located 335 feet west-southwest (topographically up-gradient) of the subject property. A remedial investigation identified SVOCs and metals soils, metals in groundwater, and chlorinated solvents in soil vapor at concentrations exceeding applicable standards. A remedial action work plan (RAWP) has been drafted.

- 148-39 94th Avenue, located 339 feet north (topographically up-gradient) of the subject property. A remedial investigation identified one (1) VOC, one (1) polychlorinated biphenyl (PCB), metals, and pesticides at concentrations exceeding SCOs. Metals in groundwater were detected at concentrations exceeding GQS, and chlorinated solvents were detected in soil vapor at concentrations exceeding the monitoring/mitigation level ranges established by the NYSDOH. ARAWP has been drafted.

- 97-11 Sutphin Boulevard, located 475 feet southwest (topographically up-gradient) of the subject property. A remedial investigation identified one (1) VOC in soil at concentrations exceeding soil cleanup objectives. SVOCs and metals were detected in groundwater at concentrations exceeding GQS. An RAWP has been drafted and accepted by the NYC Office of Environmental Remediation (OER).

- 93-43 Sutphin Boulevard, located 572 feet northwest (topographically up-gradient) of the subject property. A remedial investigation identified SVOCs and metals at concentrations exceeding SCOs. One (1) VOC, one (1) SVOC, and several metals were detected at concentrations exceeding GQS. An RAWP has been drafted and accepted by the NYCOER.

- 97-18 Sutphin Boulevard, located 586 feet southwest (topographically up-gradient) of the subject property. A remedial investigation identified several SVOCs and metals at concentrations exceeding SCOs. Chlorinated solvents and petroleum-related compounds were detected in soil vapor. An RAWP has been drafted and accepted by the NYCOER.

Based on the proximity and up-gradient nature of these listings in relation to the subject property, PVE/LENV considers these listings to represent RECs.

- 145-07 95th Boulevard, located 693 feet west (topographically up-gradient) of the subject property. A remedial investigation identified SVOCs, VOCs, metals, pesticides, and one (1) PCB at concentrations exceeding SCOs. VOCs and metals were detected at concentrations exceeding GQS, and chlorinated solvents were detected in soil vapor at concentrations exceeding the monitoring/mitigation level ranges established by the NYSDOH. Remedial action is complete, and a Notice of Completion has been issued by the NYCOER.

- 148-12 Archer Avenue, located 698 feet north (topographically up-gradient) of the subject property. A remedial investigation identified one (1) VOC and several metals at concentrations exceeding SCOs. A RAWP has been drafted and accepted by the NYCOER.

- Jamaica Gas & Light, located at Beaver Road and 158th Street, 779 feet northeast (topographically up-gradient) of the subject property. No additional information was provided.

- 147-22 Archer Avenue, located 800 feet north-northwest of the subject property. No additional information was provided.

- 144-02 94th Avenue, located 1,000 feet west (topographically up-gradient) of the subject property. A remedial investigation identified metals in groundwater at concentrations exceeding GQS. A RAWP has been drafted and accepted by the NYCOER.

- 90-11 160th Street & 90-14 161st Street, located 2,174 feet northeast (topographically up-gradient) of the subject property. A remedial investigation identified SVOCs in soil at concentrations exceeding SCOs. Remedial action is complete, and a Notice of Completion has been issued by the NYCOER.

- 144-15 Liberty Avenue, located 2,346 feet southwest (topographically up-gradient) of the subject property. A remedial investigation identified several VOCs and metals in soil at concentrations exceeding SCOs. VOCs, SVOCs, and metals were detected in groundwater at concentrations exceeding GQS. Remedial action at the site is complete.

- 144-01 Liberty Avenue, located 2,381 feet southwest (topographically up-gradient) of the subject property. No additional information was provided.

- 143-18 Liberty Avenue, located 2,564 feet southwest (topographically up-gradient) of the subject property. A remedial investigation identified SVOCs, metals, pesticides, and one (1) PCB in soil at concentrations exceeding SCOs. SVOCs and metals were detected in groundwater at concentrations exceeding GQS. Remedial action at the site is complete.

- *Cedar Manor A08, located at 158th Street approximately 780 feet northeast (topographically up-gradient) of the subject property. Mercury was identified in soil at concentrations exceeding industrial SCOs and in groundwater exceeding GQS. No additional information was provided.

- *Jamaica Holder Station, located at 158th Street and Liberty Avenue, approximately 1,175 feet east (topographically down-gradient) of the subject property. No additional information was provided.

Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE/LENV does not consider these listings to represent RECs.

3.9 Federal & State Engineering & Institutional Controls, & Activity & Use Limitations

Activity and use limitations are legal or physical restrictions or limitations on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants or to prevent activities that could interfere with the effectiveness of a response action protecting public health or the environment. AULs are often recorded at the land title office (commonly the County Clerk's office). AUL information is not typically contained in a chain of title report. In some cases, an AUL may not have been filed at the land title office but may be found in a separate environmental agency database.

Engineering control (EC) and institutional control (IC) listings are maintained by the USEPA and NYSDEC and are controls designed to prevent exposure to contaminants remaining on a site. Engineering and institutional controls are types of AULs. Engineering controls are physical modifications to a site. Institutional controls are legal or administrative restrictions on the use of, or access to, a site.

Readily available EC and IC listings were reviewed by EDR, but other AUL information may be applicable. If an AUL search was conducted as part of the environmental liens search, the results are indicated below. However, AULs may only exist in project documentation, which may not be readily available to the environmental professional. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Impact to Subject Property*	*Rationale*
US ENG CONTROLS	No	None	Not Present
NY ENG CONTROLS	No	None	Not Present
US INST CONTROL	No	None	Not Present
NY INST CONTROL	No	None	Not Present

3.10 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 U.S.C. §§9607(1) & 9607(r) and similar state or local laws. An environmental liens report was not acquired for this report.

	Subject Property:	*Impact to Subject Property*	*Rationale*
Environmental Liens	Not Searched	N/A	Not Searched

3.11 Other Conditions of Concern

E-Designation Site list

An (E) designation requires that the fee owner of a property conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP. Details pertaining to these sites can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.125 mile*:	*Impact to Subject Property*	*Rationale*
NY E DESIGNATION	Yes (4)	98 / 0*	Potentially	See Below

- Block 10001 Lot 1 & Block 10002 Lots 1, 10, and 13, the subject property, is listed as an E-Designation site. The property was identified with the City Environmental Quality Review (CEQR) #05DCP081Q and E-No E-175. If redevelopment is to occur on the subject property, hazardous materials testing protocol is required to be completed and reviewed by the NYCOER prior to NYC DOB issuing a building permit.

Based on the E-designation from the NYCOER, PVE considers this listing to represent a REC.

PVE/LENV personnel have reviewed the remaining 98 E-Designation sites. PVE does not consider these listings to represent RECs.

Manifests

A manifest is a document that lists and tracks hazardous waste from the generator, through transporters, to a TSD facility indicating that hazardous wastes have been properly transported in

accordance with state and federal regulations. Details pertaining to these sites can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties:*	*Impact to Subject Property*	*Rationale*
NY MANIFEST	Yes	3 / 0*	Potentially	See Below
NJ MANIFEST	Yes	1 / 0*	Potentially	See Below
MANIFEST	Yes	0 / 0*	Potentially	See Below

NY/NJ/MANIFEST:

- Abbot Industries Inc., located at 95-25 149th Street, the subject property. The listing is related to the disposal of halogenated solvents, and the facility received a written, informal violation in 1991. No additional information was provided.

Due to the presence of a violation, PVE/LENV considers this listing to represent a REC.

- Con Edison, located at 95-08 150th Street, the subject property. No violations were observed in association with this listing.

- Con Edison, located in front of 95-10 150th Street, the subject property. No violations were observed in association with this listing.

- Con Edison, located at 95-34 150th Street, an eastern adjoining property. No violations were observed in association with this listing.

- Con Edison Service Box: 11198, located in front of 95-34 150th Street, an eastern adjoining property. No violations were observed in association with this listing.

- Con Edison, located in front of 95-24 150th Street, an eastern adjoining property. No violations were observed in association with this listing.

Based on the lack of violations for the properties described in the manifests, PVE/LENV does not consider these listings to represent RECs.

Manufactured Gas Plants

Manufactured gas plants (MGPs) produced gas for fuel until the 1950s. A significant amount of waste and hazardous byproducts were typically generated and often disposed of at the plant, resulting in contamination of the site.

EDR Database Acronym:	*Subject Property*:	*Properties within 1 mile*:	*Impact to Subject Property*	*Rationale*
EDR MGP	No	1 / 0*	Not Anticipated	See Below

- Jamaica Gas and Light, located at Beaver Road & 158th Street, 925 feet northeast (topographically up-gradient) of the subject property. No additional information was provided.

Based on the distance of this listing in relation to the subject property, PVE/LENV does not consider this listing to represent a REC.

Drycleaners

EDR has searched NYSDEC's list of registered drycleaning facilities. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
DRYCLEANERS	No	1 / 0*	Potentially	See Below

- HWC Dry/C&G Cleaners, located at 95-19 Sutphin Boulevard, 444 feet west (topographically up-gradient) of the subject property.

Based on the proximity and/ up-gradient nature of this listing in relation to the subject property, PVE/LENV considers this listing to represent a REC.

Historic Service Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
EDR US Hist Auto Stat	No	4 / 0*	Not Anticipated	See Below

- 150-05 Liberty Avenue, located 204 feet southeast (topographically down-gradient) of the subject property, is identified as a gasoline service station from 1969 – 1975.

- 150-19 Liberty Avenue, located 310 feet east (topographically down-gradient) of the subject property, is identified as a transmission repair shop from 1990 – 1999.

- 150-14 Liberty Avenue, located 367 feet southeast (topographically down-gradient) of the subject property, is identified as an automotive repair shop from 1978 – 2014.

- 97-44 Sutphin Avenue, located 588 feet southwest (topographically up-gradient) of the subject property, is identified as a gasoline service station and auto repair shop from 1969 – 2014.

Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE/LENV does not consider these listings to represent RECs.

Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
EDR US Hist Cleaners	No	1 / 0*	Not Anticipated	See Below

- 95-19 Sutphin Boulevard, 444 feet west (topographically up-gradient) of the subject property, is identified as a drycleaner from 1986 – 2008.

Based on the proximity and/or up-gradient nature of this listing in relation to the subject property, PVE/LENV considers these listings to represent RECs.

Registered Recycling Facility List

NYSDEC maintains a database of recycling facilities (SWRCY). Only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
NY SWRCY	No	7 / 0*	Not Anticipated	See Below

- Jamaica Recycling Metal Heaven, located at 147-20 Liberty Avenue, 592 feet south-southwest (topographically up-gradient) of the subject property, is identified as an inactive recycling facility.

- EWG Glass Recovery and Recycling, located at 94-54 158th Street, 932 feet east-northeast of the subject property, is identified as an active recycling facility.

- TNT Recycling, T&T Recycling, Nationwide Scrap, and Nationwide Recycling Center, all located at 154-20 South Avenue, 1,192 feet southeast (topographically down-gradient) of the subject property, are identified as inactive recycling facilities.

- Babylon Paper Recycling, located 1,192 feet southeast (topographically down-gradient) of the subject property, is listed as an inactive recycling facility.

Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE/LENV does not consider these listings to represent RECs.

NY TANKS: Storage Tank Facility Listing

This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile:*	*Impact to Subject Property*	*Rationale*
TANKS	No	1 / 0*	Not Anticipated	See Below

- PBS #2-606822, LIRR – Jamaica Station, located 916 feet northwest (topographically up-gradient) of the subject property. Tank information is withheld (not releasable under the Freedom of Information Law) in accordance with the Public Officers Law Sections 86.5, 87.2(f), 89.5(a)(1)(1-a).

Based on the distance of this listing in relation to the subject property, PVE/LENV does not consider this listing to represent a REC.

4.0 Physical Setting Analysis

The physical setting of the subject property was evaluated by consulting regional maps and other sources. Following is a summary of this review.

4.1 7.5 Minute USGS Topographic Map

According to the Jamaica, New York USGS topographic map, the subject property is approximately 38 feet above mean sea level.

4.2 Regional Hydrogeology

Based on topography, groundwater is presumed to flow to the south-southeast, towards Jamaica Bay.

5.0 Site Reconnaissance

PVE/LENV personnel inspected the subject property on November 11, 2019. The site reconnaissance and interviews were conducted by Samuel Ambrose and Erik Draijer. Photographs are attached in Appendix D.

The reconnaissance included a walk-through of all accessible interior common areas of the subject property and exterior locations. Adjoining properties were visually assessed from the subject property boundary, public right-of-ways, or other vantage points, and are summarized in Section 2.3. 95-08 150th Street was not inspected due to tenant restrictions. Approximately 1,000 square feet of office space at 95-04 149th Street was not inspected due to tenant restrictions.

5.1 General Site Observations Table

Below are items visually and/or physically observed. Items marked with "†" are defined below.

Item	Observed at Site or Known to Exist		Further explanation below	Brief notes
	Yes	No		
Storage Tanks	X		X	One (1) 7,500-gallon #4 fuel oil AST and one (1) decommissioned, 10,000-gallon #4 fuel oil UST.

Liquid discharges into drainage systems, including stormwater		X		
Wells (including dry wells†)		X		
Other Conditions of Concern		X		

Definitions

Drum: A container (typically, but not necessarily, holding 55 gallons) that may be used to store hazardous substances or petroleum products.

Dry wells: Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and unintentional) and wastewater disposal (often illegal).

Hazardous substance: A substance defined as a hazardous substance pursuant to CERCLA 42 U.S.C.§9601(14), as interpreted by EPA regulations and the courts: "(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, (42 U.S.C. §6921) (but not including any waste the regulation of which under RCRA (42 U.S.C.§§6901 et seq.) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 U.S.C. §7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)."

Petroleum products: Those substances included within the meaning of the petroleum exclusion to CERCLA, 42 U.S.C. §9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 U.S.C. § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to Standard Definitions of Petroleum Statistics.)

Pits, Ponds, or Lagoons: Man-made or natural depressions in a ground surface that are likely to hold liquids or sludge containing hazardous substances or petroleum products. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

Sump: A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

Wastewater: Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as stormwater flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

5.2 Site Visit Observations

The subject property consists of four (4) lots (Block 10001 Lot 1 & Block 10002 Lots 1, 10, and 13). According to NYC DOB, the lots contain nine (9) industrial and warehouse buildings. The properties on each Block (10001 and 10002) are separated by 149th Street, running north to south. The entire structure on the west side of 149th Street (Block 10001) is operated by three (3) commercial tenants that utilize the property for warehouse storage and distribution. Each tenant space was accessible from within the structure. Tenants included Ceratile (floor tile distributor), Fine Express, Inc. (moving company), and Dale Pro Audio (audio equipment wholesaler). Two (2) sub-grade basement levels are located beneath the ground-level space where utilities are located with surrounding common space. The address associated with the building on this block is 95-04 149th Street. A parking lot is located on the southern side of the block for tenants.

Block 10002, to the east of 149th Street, contains several buildings that are interconnected, with two (2) outer buildings located to the east with separate entrances (Lots 10 and 13). The building located at 95-08 150th (Lot 10) was not accessible due to legal complications between the owner and tenant. According to Mr. Jeff Grossman, the property owner, the building is utilized for office space and construction materials storage. Several basements and sub-grade cellars were observed below the buildings on this block. Crawl spaces are constructed beneath buildings that don't have a full floor basement. The majority of the buildings on this block are vacant, former industrial buildings that are utilized for professional films and television sets, leased on weekly to monthly basis. The addresses associated with the buildings on this block are as follows: 95-08 & 95-12 150th Street, and 95-25 149th Street.

According to Mr. Grossman, these buildings have been owned by his family since 1958, operating as Abbot Industries, a metal plating, finishing and manufacturing industry. According to the owner, perchloroethylene was utilized in vaporizing operations for metals, predominately located in 95-08 150th Street.

One (1) 7,500-gallon, vaulted #4-fuel oil aboveground storage tank was observed in the basement of 95-25 149th Street on Block 10002. The tank was observed to be in good condition with no staining on the floor of the vault. The associated fill line and vent line were observed inside the tank vault and traced to the exterior of the structure exterior. According to Mr. Grossman, a 10,000-gallon fuel oil tank is located on Block 10001 and was closed in-place on August 11, 2014. No lines, fill ports, or vents were observed in association with this tank.

Approximately six (6) loading docks with lifts are located throughout the subject property. An additional eleven (11) bay doors are located throughout the subject property constructed at street

grade. Each of these doors and lifts are equipped with hydraulic equipment containing approximately 5-10 gallons of hydraulic oil. No releases were observed in the vicinity of the lifts or bay doors. One (1) hydraulic freight elevator is located in the building on Block 10001.

Several floor drains were observed throughout the property. No staining or liquid discharge was observed near the drains. The discharge locations are not known.

The adjoining properties to the west are one and two-family residential structures. To the north, the adjoining properties include a concrete manufacturer, parking facilities, residential structures, and vacant land. The eastern properties are of commercial, residential, industrial, and manufacturing uses, and the properties to the south are primarily residential. Active vehicle dismantling was observed at a southern adjoining property.

6.0 Property History

The history of the subject property and surrounding area was researched through a review of readily ascertainable standard historical sources. These sources may include current and past owners, property records, recorded land title records, property tax files, building department records, and/or zoning and land use records. This review was conducted in order to identify those uses that are likely to have led to recognized environmental conditions. Following is a summary of these findings. Specific sources are documented first, followed by a summary at the end of this section, which may include information initially described in other sections of this report.

6.1 Property Ownership

Property ownership history was researched through the New York City Department of Finance Office of the City Register. Previous owners and the approximate date of purchase are listed below. This ownership record is based on reasonably attainable information, may be incomplete, and does not constitute a title search.

95-04 149th Street (Block 10001 Lot 1)

6.2 Topographic Maps

Topographic maps were obtained from http://www.historicaerials.com. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

1889	The block the subject property is located on appears to be developed with structures; local structure density is too high to depict individual structures.
1891	See 1889 description.
1898	See 1889 description.
1900	See 1889 description.
1903	See 1889 description.
1905	See 1889 description.
1906	See 1889 description.
1908	See 1889 description.

2011	See 1980 description.
2012	See 1980 description.
2013	See 1980 description.
2015	See 1980 description.

6.4 Fire Insurance Maps

Fire Insurance maps were provided in the EDR report and are attached in Appendix B. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

1891	Subject Property: Block 10001 Lot 1 contains one (1) small dwelling on the southern portion of the lot. The western portion of the lot does not have Sanborn exposure or coverage. Block 10002 Lots 10 and 13 are vacant. Block 10002 Lot 1 contains two (2) dwellings on the northern portion of the lot and one (1) two-story dwelling in the center. The southern portion of the lot is labeled as Jas. Macbeth cap and fuse factory, and contains two (2) one-story sheds, a tarring house, and a two-story structure labeled "shipping filling" with four (4) one-story additions. The eastern border of the southern portion of the lot contains portions of two (2) additional one-story structures, which are labeled as coal and tinning houses. The two blocks are split by Schooley Place, north to south. Adjoining Properties: No environmentally pertinent properties are depicted. Nearby Properties: No environmentally pertinent properties are depicted.
1897	Subject Property: Block 10002 Lot 1 is relatively unchanged since 1891, labeled as Jas Macbeth Blasting Cap and Fuse Factory, and Manufacturer of Patent Blasting Machinery. Some structures are relabeled, now depicted as a tanning structure and machine shop. A small structure along the northwestern potion of the lot is depicted as being used for burning refuse. Block 10002 Lot 10 contains two (2) one-story structures; a drying room and a storage structure. Block 10001 is relatively unchanged from 1891. Adjoining Properties: See 1891 description. Nearby Properties: See 1891 description.
1901	Subject Property: Relatively unchanged from 1897 with the following exceptions: Four (4) additional dwellings are depicted on Block 10001 Lot 1. Additional structures are depicted on the northwest portion of Block 10002 Lot 1 but are not labeled. Adjoining Properties: See 1891 description. Nearby Properties: See 1891 description.
1911	Subject Property: Relatively unchanged from 1901 with the following exceptions: An additional two-story dwelling and a one-story store are depicted on Block 10001 Lot 1. Several additional sheds and small structures are depicted. Block 10002 is now labeled as General Acoustic Company. Structures on Block 10002 Lot 1 have been labeled as a machine shop and plating shop, assembly room, storage room, private garage. and laboratory. Block 10002 Lot 10 contains only a portion of a small, unlabeled structure. Adjoining Properties: A paint shop is located on a northeast adjoining property, and a battery room is depicted to the southeast of the subject property. Nearby Properties: See 1891 description.

1925	Subject Property: Block 10001 Lot 1 now contains a total of eight (8) two-story dwellings, a store, a storage structure, and a vacant portion near the center of the lot is labeled as Dictagraph Products Corp. Block 10002 Lots 10 and 13 contain a battery service structure, and a garage respectively. Block 10002 Lot 1 contains various industrial structures similar in size and footprint to the present-day structures. The structures are labeled as painting, assembling, shipping, office, carpenter shop, winding, and machine shop. One (1) 1 ½-story dwelling is depicted on the northern portion of the lot. Adjoining Properties: See 1911 description. Nearby Properties: An auto repair shop is located 350 feet northeast of the subject property. A structure depicted as Eleto Co's Garage is located 65 feet northeast of the subject property and contains an underground gasoline storage tank. A structure depicted 100 feet northeast of the subject property is labeled as Hyman's N.Y. and Jamaica Auto Express and contains an underground gasoline storage tank. A property 170 feet to the northeast is labeled as a garage and contains two (2) underground gasoline storage tanks. A structure 175 feet north-northeast of the subject property is labeled as N.Y. Telephone Company & Garage and contains an underground gasoline storage tank.
1942	Subject Property: The dwelling located on the northern portion of Block 10002 Lot 1 is no longer depicted. The northern portion of the lot has been redeveloped into a multi-use structure containing a paint room, machine shop, a nickel-plating room, and an area for washing metal parts. The structure on Block 10002 Lot 13 is now depicted as an oil burner manufacturer. Block 10001 Lot 1 contains a windshield wiper manufacturing structure in the northern portion of the lot. Adjoining Properties: An adjoining property to the east is labeled as a garage and contains a gasoline storage tank. An adjoining property to the east-northeast contains four (4) gasoline storage tanks. Nearby Properties: A garage is depicted 150 feet to the east of the subject property and contains a gasoline storage tank. A gasoline filling station is depicted 165 feet east-southeast of the subject property and contains four (4) gasoline storage tanks. The structure previously occupied by N.Y Telephone Company is now depicted as an auto repair shop. N.Y. Telephone Co is now located 170 feet north of the subject property and contains a private garage with several gasoline storage tanks. A filling station and auto repair shop are located 360 feet to the southeast. The properties are topographically cross-gradient. Eleto Co's Garage is now depicted as a bakery and the storage tank is not depicted. Hyman's Auto Express is now depicted as a newspaper depot and the gasoline storage tank is not depicted.
1951	Subject Property: Relatively unchanged from 1942, with the addition of a one-story building on the northwest corner of Block 10001 Lot 1. The tin shop on Block 10002 Lot 10 is now a larger one-story building depicted as a Paper Box manufacturing facility. Adjoining Properties: An eastern adjoining property is depicted as a store fixtures manufacturer. Nearby Properties: A property 80 feet to the northeast is depicted as an electric motor manufacturer. A machine shop depicted 150 feet to the east. An auto service station is depicted 210 feet to the north. The structures are topographically cross-gradient. The

	filling station located 359 feet to the southeast is no longer depicted.
1963	Subject Property: Relatively unchanged from 1951, with the exception of Dictograph Products Corp. on Block 10001 Lot 1 now operating as Abbott Wire Products, Inc. Adjoining Properties: See 1942 description. Nearby Properties: An auto repair shop is depicted 350 feet north (topographically up-gradient) of the subject property. N.Y. Telephone Company is now depicted as Falmark Fabrics and the gasoline storage tanks are not depicted. The auto service station 210 feet to the north is now depicted as an auto painting and spraying facility.
1967	Subject Property: See 1963 description. Adjoining Properties: A northeast adjoining property is depicted as a machine shop. An eastern adjoining property. Nearby Properties: A filling station is depicted 145 feet south of the subject property. The auto service station 210 feet to the north is now depicted as a wire products manufacturer. A property 175 feet northeast of the subject property is depicted as an air conditioning manufacturer.
1981	Subject Property: Block 10001 Lot 1 is now depicted as a warehouse constructed in 1975 and a parking lot in southern portion. Only one (1) dwelling is depicted on the lot, on the western-central portion. Block 10002 is relatively unchanged, with the exception of Block 10 and 13 now operating as a Sink Top Manufacturer. Adjoining Properties: The four (4) gasoline tanks on the east-northeast adjoining property are no longer depicted. Nearby Properties: The wire products manufacturer is now depicted as a warehouse. An auto repair shop is depicted 190 feet to the south.
1982	Subject Property: See 1981 description. Adjoining Properties: See 1981 description. Nearby Properties: See 1981 description.
1985	Subject Property: Relatively unchanged, with the exception of the dwelling on Block 10001 Lot 1 no longer depicted. Adjoining Properties: See 1981 description. Nearby Properties: The filling station 165 feet to the east-southeast is no longer depicted.
1986	Subject Property: See 1985 description. Adjoining Properties: See 1981 description. Nearby Properties: See 1985 description.
1987	Subject Property: See 1985 description. Adjoining Properties: See 1981 description. Nearby Properties: A property 125 feet to the east is depicted as a junkyard.
1988	Subject Property: See 1985 description. Adjoining Properties: See 1981 description.

	Nearby Properties: See 1987 description.
1990	Subject Property: See 1985 description. Adjoining Properties: See 1981 description. Nearby Properties: See 1987 description.
1991	Subject Property: See 1985 description. Adjoining Properties: See 1981 description. Nearby Properties: See 1987 description.
1992	Subject Property: See 1985 description. Adjoining Properties: An adjoining property to the east-northeast is depicted as an auto repair shop. Nearby Properties: See 1987 description.
1993	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 1987 description.
1995	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 1987 description.
1996	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 1987 description.
1999	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 1987 description.
2001	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 1987 description.
2002	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: An auto repair shop is depicted 65 feet northeast (topographically cross-gradient of subject property.
2003	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 2002 description.
2004	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 2002 description.

2005	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 2002 description.
2006	Subject Property: See 1985 description. Adjoining Properties: See 1992 description. Nearby Properties: See 2002 description.

6.5 City Directories

City directories list telephone company records of past occupants and businesses for an address by year, and is reviewed to determine if past occupants and businesses of the subject property and adjacent properties may have led to recognized environmental conditions. The city directory report is attached in Appendix B.

Subject Property

9504 149th
2005 – Bellantoni Frankie v, h Ball L S A
2000 – Frankie Bellaritoni
1991 – Fraumeni L
1983 – Fraumeni Lorraine

1950 – DICTOGRAPH PORDS INC-FCTRY

Adjoining Properties

Adjoining property addresses are based on the New York City Department of Finance Digital Tax Map (http://gis.nyc.gov/taxmap/), and are listed in Section 2.3.

No environmentally pertinent listings were observed.

6.6 Other Records and Interviews

Listed below are additional records requested and/or reviewed as part of this Phase I ESA. If information relevant to the findings and conclusions of this ESA has been received from these departments, it is summarized below and/or in other sections of this report.

Health Agency Records

An information request was sent to the NYC Department of Health and Mental Hygiene requesting any information the department has regarding on-site septic systems, supply or monitoring wells, chemical spills, health violations, or other environmental contamination issues associated with the site. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

Fire Department Records

Pursuant to ASTM Standard E1527-13 Section 8.1.5, records that are obtainable within a reasonable time frame is information that will be provided by the source within 20 calendar days of receiving a public information request. Based on the expected response time of over 20 calendar days for the Fire Department of New York (FDNY), records from this agency are not considered reasonably ascertainable and therefore files were not requested.

NYC Property

The NYC Property website, http://webapps.nyc.gov:8084/CICS/fin1/find001I, was accessed for records relating to the subject property (Appendix C). The most recent assessment a warehouse and manufacturing/industrial structures to be present on the property.

Building Department

NYC Department of Buildings (DOB) records were accessed via http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp (Appendix C). The following are the Department of Finance Building Classifications for the lots: 95-04 149th Street (Block 10001 Lot 1) is classified as E1-General Warehouse, 95-25 149th Street (Block 10002 Lot 1) is classified as F1-Factory, Heavy Manufacturing, 95-08 (Block 10002 Lot 10) & 95-12 (Block 10002 Lot 13) are classified as F4-Factory, Industrial.

Any certificates of occupancy, a list of actions, and open violations for the subject property are attached in Appendix C.

NYC Department of Finance

The NYC Department of Finance Office of City Register website, https://a836-acris.nyc.gov/DS/DocumentSearch/BBL, was searched for records relating to the subject property (Appendix C). Property ownership information received from this source is included in Section 6.1.

Interview - Regulatory Agency

FOIL requests were submitted to the NYSDEC regarding Spills on the subject property and adjoining properties.

Interview - Current Owner

Mr. Jeff Grossman was available at the time of inspection. Any pertinent information disclosed is found in Section 5.2 of this report.

Interview - Current Operator/Occupant

No interviews were conducted with current operators or occupants because none were provided by the user.

Interview - Past Owner

No interviews were conducted with past owners because none were provided by the user.

Interview - Past Operator/Occupant

No interviews were conducted with past operators or occupants because none were provided by the user.

Interview – User

The user declined to complete the User Questionnaire provided by PVE/LENV personnel.

Other Interviews

No other interviews, other than those already mentioned, were conducted.

6.7 Summary of General Property History and Use

The earliest available Sanborn Map, the 1891 Map, depicts four (4) dwellings and Jas. Macbeth Cap & Fuse Factory on the subject property. Various residential, industrial, and manufacturing facilities and configurations were observed in the maps from 1891 – 1967. The property was utilized for residential space, a cap and fuse factory, machine shops, an oil burner manufacturer,

nickel plating, painting, carpentry, and various industrial and manufacturing purposes. The 1981 Sanborn depicts the subject property as containing structures similar in size and footprint to the present-day structures. Currently, the site contains a ceramic tile distributor and storage space, an audio products wholesaler, various warehouse areas, office spaces, and commercial tenant space.

7.0 Findings and Conclusions

PVE/LENV personnel have conducted a Phase I Environmental Site Assessment in conformance with ASTM Standard E1527-13 of the property at 95-04 & 95-25 149th Street and 95-08 & 95-12 150th Street, Queens, Queens County, New York (the subject property). Any exceptions to, or deletions from, this practice are described in Section 1.4 and 7.5 of this report.

Environmental Concern	Number of Findings
Recognized Environmental Conditions (RECs)	4
Controlled Recognized Environmental Conditions (CRECs)	None
Historical Recognized Environmental Conditions (HRECs)	1
De minimis Conditions	None
Data Gap/Data Failure	5

7.1 Recognized Environmental Conditions

The definition of a *recognized environmental condition* (REC) is the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to release to the environment; (*2*) under conditions indicative of a *release* to the *environment*; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except for the following:

1. As indicated in Section 3.11 (Other Conditions of Concern), the subject property (Block 10001 Lot 1 & Block 10002 Lots 1, 10, and 13) is listed as an E-Designation site. Hazardous Materials testing protocol is required to be completed and reviewed by the NYCOER prior redevelopment at the site. Based on the nature of this listing, the E-designation represents a REC.

2. As indicated in Sections 5.2 (Site Visit Observations) and 6.4 (Sanborn Fire Insurance Maps), the subject property previously operated as Abbott Industries a metal plating, finishing and manufacturing facility. Industrial and manufacturing activities have occurred on site since at least 1897. Based on historical research, the property had machine shops, tanneries, painting rooms, nickel-plating rooms, a tarring house, cap and fuse factory, and battery servicing areas. Wastes generated at facilities such as these have the potential to contaminate soil and/or groundwater and ultimately soil vapor quality at the subject property, creating a potential vapor intrusion condition.

3. As indicated in Sections 3.5 (State Registered Storage Tanks) and 3.6 (Petroleum and Hazardous Material Releases), NYSDEC Spill #8804089 occurred on August 9, 1988 when a 10,000-gallon UST on the subject property (PBS#2-249955), failed a tank tightness test. The installation date of the tank was not available, and although the file was closed and the tank was removed, no records of remedial action were readily attainable. PVE/LENV considers this condition to represent a REC. A FOIL request was submitted to NUSDEC. If further information is received at a later date and modifies the conclusions of this report, PVE/LENV will notify the user of the report.

4. As indicated in Sections 3.11 (Other Conditions of Concern), 3.4 (State Landfill and/or Solid Waste Disposal Sites, 5.2 (Site Visit Observations), 6.3 (Aerial Photographs), and 6.4 (Sanborn Fire Insurance Maps) the subject property is located in close proximity (134 feet) to a site previously utilized as a vehicle dismantling facility and junkyard. Additional vehicle dismantling was observed at an adjoining property during the site inspection. A historical and current drycleaner is located 444 feet west (topographically up-gradient) of the subject property and has been in operation since at least 1986. Sanborn maps revealed the presence of auto repair shops, filling stations, and garages with fuel storage tanks, between 65 feet and 350 feet (topographically cross-gradient) of the subject property. An air-conditioning manufacturer (175 feet up-gradient), a wire products manufacturer (210 feet up-gradient), an auto painting and spraying facility (210 feet up-gradient), were located near the subject property as well as machine shops on adjoining properties. Wastes generated at facilities such as these have the potential to contaminate soil and/or groundwater and ultimately soil vapor quality at the subject property, creating a potential vapor intrusion condition. Additionally, as indicated in Section 3.8 (State Voluntary Cleanup Program Sites), five (5) VCP sites are located within 335 – 586 feet (topographically up-gradient) of the subject property. RAWPs have been accepted, however no documentation of remediation was identified or readily attainable. Contaminants associated with these sites have the potential to migrate and affect soil vapor at the subject property.

7.2 Controlled Recognized Environmental Conditions

The definition of a *controlled environmental condition* (CREC) is a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. Examples of controls include property use restrictions, activity and use limitations, institutional controls, and engineering controls. CRECs are a subset of RECs. This assessment has revealed no evidence of *controlled recognized environmental conditions* in connection with the property.

7.3 Historical Recognized Environmental Conditions

The definition of a *historical recognized environmental condition* (HREC) is a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the property.

7.4 De minimis Conditions

The term *recognized environmental conditions* is not intended to include *de minimis conditions*. *De minimis conditions* generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are *not* RECs or CRECs. This assessment has revealed no evidence of *de minimis conditions* in connection with the property.

7.5 Data Gaps and Data Failures

Data gaps are defined as a lack or inability to obtain information required by ASTM E-1527-13 despite good faith efforts to gather such information. A *data gap* by itself is not inherently significant and is only significant if other information raises reasonable concerns. Examples of *data gaps* are the inability to inspect portions of the subject property during the site inspection, and an inability to identify the historical use of the subject property back to 1940 but the earliest source shows the subject property to be undeveloped.

Data failures are a subset of *data gaps* and indicate a failure to achieve historical research objectives even after reviewing standard historical sources that are reasonably attainable and likely to be useful. *Data failures* can occur when the use of the property was unable to be identified at approximately five-year intervals back to the first use or 1940, whichever is earlier.

The following are data failures or data gaps encountered during this assessment:

1. Records of ownership of the subject property may be incomplete. The ownership record obtained during this assessment is based on reasonably attainable information and does not constitute a title search.

2. Data gaps in excess of five years were encountered during the review of the standard historical sources.

3. Interviews were not conducted with past owners, present operators, past operators, present occupants, or past occupants.

4. Even though the subject property or any of the adjoining properties were identified on one or more of the standard environmental record searches, a regulatory file review was

not performed because the files were not considered reasonably ascertainable (either not publically available, not obtainable within reasonable cost and time constraints [20 days], or not practically reviewable). Foil requests have been sent to the NYSDEC regarding Spill Files associated with adjoining properties.

5. 95-08 150th Street was not inspected due to tenant restrictions. Approximately 1,000 square feet of office space at 95-04 149th Street was not inspected due to tenant restrictions.

7.6 Conclusions and Opinions

REC #1 reported in Section 7.1 is located on the subject property. If redevelopment is to occur on the subject property, hazardous materials testing protocol is required to be completed and reviewed by the NYCOER. If additional information is needed regarding the requirements, PVE/LENV recommends contacting the NYCOER.

RECs #2 and #3 reported in Section 7.1 are located on the subject property. If additional information is needed pertaining to the potential for releases to impact the subject property, consideration should be given to further investigation.

REC #4 reported in Section 7.1 is not located on the subject property. If additional information is needed pertaining to the potential for releases to impact the subject property, consideration should be given to further investigation.

Based on other sources consulted during this Phase I ESA the above-referenced data gaps are not significant.

Standard Notes: As part of this Phase I ESA and in accordance with Section 7.5.2.1 of ASTM E 1527-13, PVE & LENV has made no attempt to independently verify the reliability of information provided. In addition and in accordance with Section 3.2.18 Note 3 of ASTM E 1527-13, a condition identified as a CREC does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PVE, LLC. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/12/2019 has revealed that there are 5 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 07/02/2019 has revealed that there are 12 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/12/2019 has revealed that there are 43 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 25 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are

2 NY CBS AST sites within approximately 0.25 miles of the target property.

IN ROAD — 155- 11 LIBERTY AVE — E 0 - 1/8 (0.121 mi.) — U258 — 378
Spill Number/Closed Date: 1801846 / Not Reported
Site ID: 570396
Spill Date: 2018-05-17

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there are 2 NY SPILLS 90 sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 68 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 92 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within

approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
JAMAICA GAS AND LIGH	BEAVER RD., AND 158T	NE 1/8 - 1/4 (0.175 mi.)	AC329	542

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

WELBUILT TRANSMISSIO	150-14 LIBERTY AVE	ESE 0 - 1/8 (0.070 mi.)	J146	220

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Name:	DAVID
Spiller Company:	UNKNOWN
Spiller Address:	97TH AVE @ 148TH ST
Spiller Company:	999
Contact Name:	DAVID
DEC Memo:	"10/5/2015 - Feng - Duty Desk. Talked to David of NYCDEP HAZMAT (917-682-2432). He is still onsite and waiting for his partner to come. David said there are (6) 5-gallon pails/buckets that have no lids. Inside of the buckets are black plastic bags which are filled with wasted petroleum product. (3) of the buckets, either by accident or cars, were spilled on the street along the curb. He estimated it is about 2-3 gallons, but the stain that brought by the cars extended to half of the block. He does not have enough speedyDry or absorbent to clean up by himself at this time. No sewer/drain being affected. No soil impacted. He is waiting for his partner, who is on the way and will be there in in 30 minutes, to bring a 35-gallon drum to load all of the petroleum product into one single drum. The empty buckets will be picked up by the Department of Sanitation. And the spill, according to David, will be cleaned up by Sanitation also. He already contacted Sanitation and they will be there in 1-2 hours. But by the time his partner gets to the site, they will have more speedyDry and absorbent to contain the spill. I advised him that the spill will be assigned to Ryan Piper for petroleum product pickup. spill is assigned to Ryan Piper for drum run. Emailed him the spill report. 10/15/15- DEC Piper removed 1 drum from site via box truck with IP & T. Spill closed."
Remarks:	"david 6 5 gallon buckets containing bags full of unknown petroleum products. 2 were spilled into street. David will be loading all into 35 gallon overpack."

DEC Memo:	"12/10/12 TJD T/C with Mrs. Prince - she states Petro Oil technician has responded to her residence associated with a drip from 275 basement AST. Technician applied a magnet patch on tank bottom and tank is currently not leaking. Owner had a fuel delivery over the weekend - filling tank. Petro is reportedly sending a third party contractor (Milro Associates) to residence to evaluate tank system for possible replacement. DEC advised owner to place a drip pan under tank to aid in monitoring - owner was further advised to replace tank ASAP or transfer fuel to a temporary tank to avoid the potential for a more significant discharge. 3/27/13 AFrischeisen intern TTF letter sent. 5/10/13 TJD T/C with Michael Natoli (Petro Oil - Supervisor) - he confirms history as provided by property owner on 12/10/12. Less than 1 pint of #2FO was discharged onto concrete floor and cleaned with granular absorbents. 275 AST was replaced in early January 2013. As per DEC request Petro provided a short written narrative of events associated with reported discharge - letter has been uploaded to EDOCS. No further action is required."
Remarks:	"wet at bottom, concrete, c/u pending"

Tank Info:

Tank Number:	1
Tank Id:	178843

TIC TAC AUTO INC. (Continued) **A100296369**

Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	C00 - Pipe Location - No Piping
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	275
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	cgfreedm
Last Modified:	04/14/2017

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 1998-07-16 00:00:00.0
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

FINDS:

Registry ID: 110004344326

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/10/2003 Reassigned from O'Dowd to Sun. 1/12/2004-Sun-File Review by Sun: Update Report covering May 2003 through August 2003, by EnviroTrac, October 10, 2003: Tri-annual groundwater sampling of nine (9) monitoring wells (MWs) at this site was conducted on August 20, 2003. No liquid-phase hydrocarbons (LPH) was encountered. Depth to water table ranged from 15.74 to 17.79 ft. below casing. The flow direction is toward southwest (historical). The higghest concentration of BTES is at MW-1, which has 8,600 ppb. MW-7 has the highest MTBE at 810 ppb. 1/12/2004- Joe Sun sent a letter and Stipulation Agreement, datedd 1/12/2004 to Michael Matri of Hess Corporation. The letter approves the Remedial Action Plan using a combined VES/AS system, prepared by EnviroTrac, dated February 2000. The Department set a deadline of February 2, 2004 for signing of the Stipulation Agreement by the Respondent. 10/28/05: Reviewed triannual monitoring report dated 5/5/05. SVE/AS system in use and site is almost cleaned up. 2/2/06: Reviewed the update report for August - December 2005. SVE/AS system shutdown. A sensitive receptor survey will be prepared. Max BTEX 373 ppb (MW-1), max MTBE 6.5 ppb (MW-5). 1/26/06: 1/15/06 meeting between Quantum, NYSDEC, and ET. A sensitive receptor survey will be performed and site closure considered. 4/4/06: Sensitive receptor survey received. The site is approximately 0.60 miles from a Jamaica Water Supply well. 4/28/06: Approved removal of SVE system. 7/5/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Approved removal of MW3 and MW6 from sampling. Closure will be reconsidered after another quarter of monitoring. 8/4/06: Reviewed the second triannual 2006 update report. Max BTEX 937ppb (MW8), MTBE ND in all wells. ORM socks will be installed in MW1,8. MW5 approved for removal from sampling. 11/15/06: Reviewed the triannual report dated November 8, 2006. Wells sampled on September 25, 2006. Large decrease in contaminant concentrations. Closure request denied, continue monitoring for rebounding. MW 2 and MW9 approved for removal from sampling. 1/12/07: Received Sensitive Receptor Survey and update report. Wells sampled on 12/1/06. Max BTEX 536 ppb (MW8), max MTBE 2.5 ppb (MW1). Benzene ND. Three inactive Jamaica Water Supply Wells located within 1 mile. Toxics targeting identified three wells within 0.25 mile. The site is located in a commercial district. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. NFA issued."

FINDS:

Registry ID: 110001580851

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110069703627

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004439162

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Name: JAMAICA 94TH AVENUE
Address: 147-20 94TH AVENUE
City,State,Zip: JAMAICA, NY 11435
Program: BCP
Site Code: 524733
Acres: 0.574
HW Code: C241184
SWIS: 4101
Town: New York City
Record Added Date: 03/16/2016
Record Updated Date: 12/16/2016
Update By: SMQUANDT
Site Description: Location: The site is located in an urban area of Jamaica, Queens at the southwestern intersection of 94th Avenue and 148th Street. The approximately 25,000-square foot site is bound to the north by 94th Avenue, followed by industrial uses; to the east by 148th Street,

JAMAICA 94TH AVENUE (Continued) **S118628314**

followed by a vacant lot; and to the south and west by undeveloped lots. Site Features: Currently the site is under construction for residential use as a new, 25-story residential building with a basement, a parking garage, and a residential lobby on the ground level. Current Zoning and Land Use: The site is zoned as C6-4 for commercial use. The surrounding area is largely developed with industrial uses, with some commercial and residential uses. The Long Island Railroad (LIRR) tracks are located approximately 200 feet to the north. Past Use of the Site: The site was historically developed with the following uses: residential (1901 - 1925); cabinet maker (1925); cold storage (1942 - 2006); a private garage and automotive repair with a buried gasoline storage tank (1942 - 1951); a private automotive garage (1925 - 2005); a toy warehouse (1963 - 1967); and an air conditioning manufacturer (1967 - 1996). The eastern warehouse has remained vacant since approximately 2006. Site Geology and Hydrogeology: Surface topography at the site is generally level. The site lies at an elevation of approximately 39 feet above the National Geodetic Vertical Datum (NGVD), which approximates mean sea level (msl). The surrounding area slopes down to the south, toward Jamaica Bay. Groundwater has been encountered at approximately 20 feet below grade and flows to the south. Historic fill materials (including sand, silt, gravel, coal, and brick) was observed from just below the surface to approximately five feet below grade within the soil borings, underlain by apparent native sand, silt, and gravel to approximately 35 feet below grade. Bedrock was not encountered.

Env Problem:	Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the residential soil cleanup objectives, which are sufficient for the site s residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site does not require engineering or institutional controls, an environmental easement, or a Site Management Plan.
Health Problem:	Remedial actions are complete and have eliminated potential exposures to site-related contaminants.

Town:	New York City
Record Added Date:	12/29/2017
Record Updated Date:	05/10/2019
Update By:	JCGRATHW
Site Description:	Location: The site is located in an urban area in the Jamaica neighborhood of Queens. The approximately 35,000 square-foot site is bounded to the north by LIRR tracks; to the east by a scaffolding sales and installation facility; to the south by 94th Avenue, followed by a vacant lot and an active construction site; and to the west by commercial uses. The site is located in a developed area predominantly consisting of primarily commercial and industrial, with residential uses in the greater surrounding area to the north and south. Site Features: The site includes three vacant interconnected warehouse buildings, a concrete-paved loading dock, and asphalt-paved parking areas. The buildings vary from one- to three-stories and only the westernmost building contains a basement. Current Zoning and Land Use: The site is zoned C6-4 (commercial) and is currently vacant, with the exception of equipment and materials left by the former site occupant. The surrounding area is developed primarily with commercial and industrial properties with some residential uses to the north and south. A multi-story residential building is under constriction immediately south of the site across 94th Avenue. Past Use of the Site: The site has been used for commercial and industrial purposes since the 1880s. The site was most recently used for a produce warehouse, meat storage facilities, and a refrigeration sales and service facility since the 1960s. Prior to 1967, the site was occupied by small low-rise dwellings, the Long Island Rail Road

147-25 94TH AVENUE (Continued) **S121933791**

Company, food processing company Armour & Co. Beef and Provisions, and a storage yard for the N.Y. Telephone Co. Site Geology and Hydrogeology: Surface topography at the site is generally level. Historic fill materials (including concrete, sand, silt, gravel, brick, plastic, glass, asphalt, and wood) were observed from just below surface grade to approximately 15 feet below grade underlain by silt, sand, and gravel. Groundwater was encountered at approximately 20 feet below sidewalk grade. Groundwater flows in a southwesterly direction toward Jamaica Bay, approximately 3.7 miles to the south.

Env Problem: Nature and Extent of Contamination: Based upon the subsurface investigations conducted to date, the primary contaminants of concern for the site are mostly SVOCs e.g., Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Indeno(1,2,3-cd)pyrene. Soil: Low level of Benzo(a)anthracene was detected in three soil samples where the concentrations ranged from 1.12 to 1.53 ppm. Benzo(a)pyrene also detected in three soil samples and the concentrations ranged from 1.08 to 1.47 ppm. Benzo(b)fluoranthene was detected in four soil samples and the concentrations ranged from 1.08 to 2.81 ppm. These contaminants exceeded the Unrestricted use as well as Restricted Use SCOs (to 1 ppm). Indeno(1,2,3-cd)pyrene was detected in four soil samples and the concentrations ranged from 0.512 to 1.04 ppm. This contaminant exceeded the Unrestricted use and Restricted Use SCOs (to 0.5 ppm). Contaminants of concerns were mostly present at shallow depths within 0-2 feet below grade exception to one location where detection was around 13-15 feet below grade surface. Low concentrations (1.19 to 1.70 ppm) of Chrysene also detected in three locations which exceeded Unrestricted use SCOs (to 1 ppm). Lead detected in eleven samples that ranges from 73.9 to 1960 ppm. Lead concentration exceeded the Restricted Use SCOs (400 ppm) at three locations where one location was around 13-15 feet below grade. Data does not indicate any off-site impacts in soil related to this site. Sediment: Three sediment samples collected from three storm water drywells. Two of these samples detected low concentrations of toluene (2.59 and 2.63 ppm). Toluene concentrations exceeded the UUSCOs of 0.7 ppm, however concentrations were well below the RRSCOs of 100 ppm. Sample from other drywell detected low concentrations of copper, nickel and zinc. Groundwater: No VOCs and or SVOCs were detected at concentrations that exceeded their respective AWQSs. Only three naturally occurring compound such as iron, manganese and sodium were detected in at least one groundwater sample at concentrations exceeding AWQSs. Data does not indicate any off-site impacts in groundwater related to this site. Soil vapor: Seven soil vapor samples were collected and analyzed during RI. Very low levels of several VOCs including BTEX, ethanol, heptane, and hexane etc. detected in all samples. PCE was detected in five samples at concentrations from 5.1 to 257 g/m3. Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air

147-25 94TH AVENUE (Continued) **S121933791**

quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site-related contaminants due to soil vapor intrusion for any future on-site redevelopment and occupancy. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110004316071

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"2/23/04 2125hrs found 12 oz transformer oil leaked from bushing on transformer throat to the secondary bank breakers onto concrete floor. Historical records indicate oil to be <1ppm dated 2/20/97. Equipment is not leaking at this time. Diapers, oil absorb and bolognies have been placed to contain any further leaks. Update - 2/23/04 - 2210hrs the bushing is not leaking at this time, it is sweating. Taken sample by wiping outer casing of transformer where oil spilled onto.Diapers and oil absorb placed along side main body and underneath secondary throat as a precaution 2/24/04 10:45HRS DOUBLE WASHED AREA USING OIL ABSORBENT AND SIMPLE GREEN CLENUP IS 100% COMPLETED. WILL CHECK TO SEE IF UNIT IS STILL LEAKING. JOB LEFT OPEn 2/24/04 0 HRS. OPENED EQUIPMENT AND WIPED IT DOWN, IT IS NO LONGER LEAKING. CLEANUP REPORTED ON PRIOR UPDATE. ENV. STOP TAG REMOVED. amd"
Remarks:	"12 oz dielectric fluid spilled onto concrete from transformer bushing. Con Ed 152208"

FINDS:

Registry ID: 110067680717

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"1/14/13-Vought-Received call from Ezqi Karayel (Hydrotech 718-636-0800) who is consultant for owner. DEC Zhune on vacation. Karayel also sent email to Vought inquiring if I can take off the first layer of cement without removing any of the soil - that alone will take me 2-3 weeks and will not effect anything to do with the removal of the soil . Vought asked for basic info onsite in order to make possible decision and Karayel will call back Vought once she knows history of site. There are no tanks and soil contamination was noted during Phase I and Phase II above Unrestricted with respect to benzene and xylene and lead mostly in deep soil. PID readings above 1000ppm. Site is currently a parking lot but was historically a wrecking facility and automobile repair facility. Work Plan has been sumbitted to DEC. Work plan proposes installation of additional soil borings and monitoring wells. No info on future use as site may be developed and excavated as part of residential development. No letters from DEC Zhune. The site must not be developed until a RAP is sumbmitted and approved by DEC via verbal to Karayel. Vought noted that concrete could be removed IF IT DID NOT LIMIT FUTURE INVESTIGATION and asked for a scope of work and Karayel would return call to Vought with more information. Vought received email from Karayel that I talked with Steven Mendel (the client). He said they will only remove 6-8 inches and they will photo document everything. Also they are building a hotel at the site. Vought replied that the Department has no objections to the work as described above and that development of this site prior to remediation may pose a health risk to future site occupants and employees. A Remedial Action Plan (RAP) must be approved by the Department prior to site development. 9/5/13-Vought-Called and spoke to OER Chawla and he noted that DEC Sal Ervolina approved use of clean soil bank for NYC VCP sites and this was also extended to E-designation sites as well. OER Chawla noted that he offered the use of the clean soil bank to DEC O'Connell (Jane) and DEC Cozzy for NYS VCP sites but has not heard back from

COMMERCIAL LOT (Continued) **S112807574**

them. OER Chawla noted that DEC Brezner knew of clean soil bank and agreed that Brezner need to approve use of the clean soil bank to backfill this spill Site. DEC Zhune to follow up with Brezner as Vought will be on vacation. 10/16/12-Phase I was sent dated 10/16 /12. 9/23/13-Hydrotech emailed the Phase II Report dated December 6, 2012 the investigation consisted of a GPR and the installation and sampling of eight(8) soil probes. No anomalias inidcates of USTs were identified during the GPR survey. the eight probes were installed to a total depth of 16 feet , 1 soil sample was selected from each probe. The soil analitycal result indicates, four VOCs were detected in the soil sample from SP-1 and SP-3 at concntrations exceeding the limit. These VOCs include 1,2,4 trimethylbenzene, benzene, Ethylbenzene and total Xylenes. One VOC, Benzene, was detected in the soil sample from SP-2 at a concntration exceeding the limit. six VOCs were dected in the soil sample from SP-4 at concnetrations exceeding the limit. These VOCs include 1,2,4 trimethylbenzene, 1,3,5 trimethylbenzene, benzene, Ethylbenzene, n-prpylbenzene and total Xylenes. No VOCs were deteted in sample Sp-8 at concnetrations exceeding the limit. No SVOCs were present in any of the eight samples at concetrations exceeding the limit. Lead and Selenium were detected at concntrations exceeding the limit. Based on the findings during the phase II. Hydrotech sent the Investigation Work Plan dated 12/24/12. 04/4/13-Hydro Tech emailed the Subsurface Investigation dated April 4, 2013. The investigation consisted of the installation of six (6) soil probes and four (4) monitoring wells. The analitycal results reveal the presence of petroleum compounds in saturated soil at concentrations exceeding regulatory standards in soil samples from SP-10, SP-11, SP-12, Sp-13 and SP-14. Analitycal results indicate that the impact is present in the northern, central, and south-central portion of the property and present in the western poretion of the property. VOCs including BTEX and MTBE compounds were identified in monitoring well MW-1, MW-2 and MW4. Free product was identified in monitorind well MW-3.\\ 4/15/13-Based on the findings during the subsurface investigation. Hydrotech sent the Investigation Work Plan dated 4/15/13. 7/31/13-Hydrotech sent the revised remedial work plan dated 7/31/13 9/13/13-Hydrotech sent the revised remedial work plan dated 9/13/13 8/13/14-Hydrotech sent the Remedial Investigation Final Report dated 8/13/14. The report stated that the site was developed with a 5-story building utilized as a hotel with a full cellar and sub-cellar. The sub-cellar consisted of breakfast area, mechanical rooms, laundry room, compactor room and storage. The full cellar consisted of lobby area, 7 guest rooms and the remaining floor consisted of guest rooms. The impacted soil was excavated to approximately 17 .5 feet below grade and the results of the endpoint samples indicated a maximum concentration of 0.62 mg/kg (or 620ppb) benzene in soil sample EP-4. The depth to groundwater is approximately at 15 feet bg . The entire site footprint of the site was dewatered approximately 3 feet to aid with the installation of the foundation structure. Pre-treatment and post-treatment water samples from the development excavation were collected and the results indicated non-detected VOCs or SVOCs. A vapor barrier and 6-inch slab was also installed as part of the development.AS per Hydro Tech's September 2013 RAP, a Groundwater monitoring Program will be implemented at the Site. Hydro Tech will mobilize to the Site to install Four (4) monitoring wells in the sidewalks adjacent to the site. The monitoring program will consist of monthly monitoring of the wells and a quarterly groundwater sampling of wells which do not

COMMERCIAL LOT (Continued) **S112807574**

contain free product. The groundwater samples will be analyzed for volatile compounds (VOCs) via EPA method 8260. All aspects of the monitoring program will be documented in the form of Monitoring Reports and Quarterly Status Reports (QSR),which will subsequently be submitted to the NYSDEC. The estimated duration of the monitoring program is 12 month. At he end of the 12 month, It is anticipated that a Closure Report will be submitted to the NYSDEC.
4/1/2015-Hydrotech sent the Quarterly Sampling Report dated February 2015 to April2015. The report indicated a maximum concentration of 22 ug/lt benzene in a sidewalk monitoring well MW-4. 9/1/2015-Hydrotech sent the Quarterly Sampling Report dated July 2015 to September 2015. The report indicated a maximum concentration of 84 ug/lt benzene (200ppb) in a sidewalk monitoring well MW-4. 12/1/2015-Hydrotech sent the Quarterly Sampling Report dated October 2015 to December 2015. The report indicated a maximum concentration of 200 ug/lt benzene (200ppb) in a sidewalk monitoring well MW-4 2/13/17-Zhune sent the following email to Nathan. I am sending you an email regarding the above site regarding which we had separate email correspondence and you had inquired about the future use of the site as well as asked for a site summary. I have attached above the Remedial Action Report and the last Quarterly Sampling Report as well . I have also copied the consultant, Hydro Tech Environmental, above as well. The site was developed with a 5-story building utilized as a hotel with a full cellar and sub-cellar. The sub-cellar consisted of breakfast area, mechanical rooms, laundry room, compactor room and storage. The full cellar consisted of lobby area, 7 guest rooms and the remaining floor consisted of guest rooms. The December 2012 Phase II and the February 2013 subsurface investigation reports indicated soil and groundwater impacted. VOCS were detected in soil and groundwater above the standard limits beneath the northern, central and south portion of the site. The impacted soil was excavated to approximately 17 .5 feet below grade and the results of the endpoint samples indicated a maximum concentration of 0.62 mg/kg (or 620ppb) benzene in soil sample EP-4. The depth to groundwater is approximately at 15 feet bg . The entire site footprint of the site was dewatered approximately 3 feet to aid with the installation of the foundation structure.
Pre-treatment and post-treatment water samples from the development excavation were collected and the results indicated non-detected VOCs or SVOCs. A vapor barrier and 6-inch slab was also installed as part of the development. The last Quarterly Sampling Report dated October-December 2015, however, indicated a maximum concentration of 200 ug/lt benzene (200ppb) in a sidewalk monitoring well MW-4. We were concerned that the dissolved contamination in the groundwater which is proximal to the foundation may be a future vapor concern. As always thanks for review and please do not hesitate to get back to me with any questions, 2/13/17-Nathan sent the following email Is there any current groundwater data? This data is over a year old 2/13/17-Zhune sent the following email to Erica. The Department requires quarterly groundwater sampling at the above site. When is the next sampling event scheduled ?. If you need a requirement letter please let us know.\\ 3/23/17- In response of the quarterly sampling report dated January 29, 2015 for the quarter of October 2015 to December 2015 sampling, the Departmeent sent a letter dated March 23, 2017 to Mr. Steven Mendel and a copy of the letter to Erica Johnston from Hydro Tech requiring the following: 1.Quarterly Groundwater Sampling and Submission of Reports. 3/29/16-Jeff sent the following email to Nathan. Just in case you did not remember the Tuckerton site

COMMERCIAL LOT (Continued) **S112807574**

for which I forwarded you Veronica s requirement letter via separate email, see below email string if you need a proverbial refresher. We will keep you posted once we receive groundwater results. Thanks, I remember this one. Hopefully this letter gets the ball rolling and they collect a sample and we can see if we still have an issue 9/13/17-Erica.I am reaching out to you on the status of this spill site. I remember you sent out a letter earlier in the year. Can you please advise if any action has been taken at the site since then, or resend me the letter that states what is needed to close it out? 9/19/17-Paul.- i just left you a voice message. I appreciate if you can get back to me with a response to my inquiry about the closure of the spill at this site 9/19/17-Zhune to Paul-I am sending this email to loop in NYSDOH Nathan Walz on our discussion today where you noted that the above site has already been developed with a residential building. In a letter dated March 23, 2017, in consultation with NYSDOH Nathan Walz, the Department required another round of groundwater samples to examine concentration trends in relation to possibly causing a soil vapor intrusion concern into the new building that was going to be developed. Now that the site is developed and we were not provided the required groundwater data, NYSDOH s requirements may have changed. In past cases, NYSDOH has required the collection of indoor air samples to document that soil vapor intrusion from the residual groundwater contamination is not a concern to the occupants. I am reattaching our requirement letter below so Nathan may be informed and may issue additional requirements, if needed. Please let us know the status of the occupation and current use of the building 9/19/17-Paul-A small correction : the new development is a hotel and is not meant for residential use 9/20/17-Paul-- after reviewing your message below, I recalled a similar spill site in Manhattan, where remedial development activities and use are 100% consistent with this project and that spill was closed following interior air sampling that showed no evidence of indoor air impact. I would be great if we are able to follow this model with indoor air testing as a criteria for closing the spill at the site. 9/20/17-Nathan-Have all the MWs on-site been decommissioned, even the one in the side walk (MW-4 I think it was)? If so then I am on board with collecting indoor air samples at this site to determine if vapor intrusion is occurring. I believe in this case it would not be possible to collect concurrent soil vapor samples due to the fact that GW is at approximately 15 bgs and the cellar depth is at ~ 17 bgs, correct? Please submit a brief letter stating your proposed scope of work and SOPs for sample collection. Note this sampling should be conducted in the heating season (Dec March) to better assess whether vapor intrusion is occurring. Also, I recommend collecting one outdoor ambient air sample for comparative purposes. 9/20/17-Paul to Nathan- Nathan thanks for your response. With regard to the requested letter, please advise if this has to be in the form a work plan depicting the locations of indoor air samples and sampling and analytical methods for your comments and approval. 9/20/17-Nathan to Paul-So there are no wells present that can be sampled to gain an understanding of residual contamination in GW that is coming in contact with the building foundation? It doesn t need to be a full blow work plan, I don t need background info, RIR results and RAWP details, just a scope of work that provide the following details: " Anticipated sample date (heating season); " Figure with sample locations (recommend two locations indoors Gym / offices, i.e., occupied areas in basement level and one sample outdoors); "

COMMERCIAL LOT (Continued) **S112807574**

SUMMA can size 6L; " Samples collected at breathing height; " Sample collection duration - 8 hour; " Flow rate - less than 0.2L/min; " Analytical method EPA TO-15; " Conduct product inventory and fill out NYSDOH building questionnaire (attached)w; I will give it a quick review and provide any comments or concur with the scope of work. 9/20/17-Paul to Nathan-I checked with site ownership and all monitoring wells on-Site and off-site are no longer available for sampling following construction. I will prepare the letter with the information you requested. 9/20/17-Jeff to Paul -In addition to Nathan s requirements below, we are also going to have to re-install wells on the sidewalk to delineate the plume and ensure the site is not a threat to the wider community. Please also include well installation as part of the plan to NYSDOH and NYSDEC. 10/5/17-Paul to Veronica -Would you please send me a letter to obtain a DOT permit to install the missing MW-2 in attached plan. 10/5/17-Veronica to Paul-Yes, I will send it. 10/11/17-Paul to Veronica- Veronica please advise when I should anticipate receiving the letter I requested for the DOT permit. 10/17/18-Paul to Veronica -Veronica per your request, I am sending you the location of the wells to be listed in your letter to obtain the DOT permit. I included provision to install any of the wells that client indicated could be ac: " To install a monitoring well in sidewalk along Tuckerton Street to the west of 95-65 Tuckerton Street Please send me the letter as soon as posssible as our client want to proceed with this investigation soon. 10/17/18-The monitoring installation letter was sent to Paul on 10/17/18. 11/14/17-Paul to Nathan -Per your request I am presenting below the scope of work for the indoor air sampling at above spill site: -Indoor air assessment will be performed during the first week of December 2017 consistent with the onset of the heating season. Prior to sampling, normal indoor air temperatures will be maintained for a minimum of 24 hours. -One indoor air sample will be collected from a finished guest room located in the basement of the building as shown in attached plan. Simultaneously, an outdoor air sample will also be collected at the upwind direction at Site. -Samples will be collected utilizing 6-liter Summa Canisters fitted with a 4-hour laboratory flow regulator and the sampling will occur for the duration of four (4) hours. -Ambient air samples will be collected from typical breathing zone height. -Prior to sampling, the interior conditions of the building will be documented via a visual inspection to identify potential pathways of vapors in the building. The inspection will also include a preliminary screening using a PID, a survey of product inventory and filling out NYSDOH building questionnaire. -The two air samples will be analyzed for common VOCs via EPA Method TO+15. -Analytical results will be reported along the groundwater sampling data from off-site monitoring wells. Please advise if you have any comments on tsh scope of indoor air assessment. 11/15/17-Nathan to Paul email-I reviewed the scope of work you provided below and offer the following comments: 1.As previously discussed, two indoor air sampling locations and one outdoor ambient air is recommended. The location in Hotel Room C102 looks fine, please see attached modified figure for additional location placed in the vicinity of the Lobby adjacent to the elevator. If there is going to be vapor intrusion it would most likely occur near the elevator due to the additional contact with contaminated groundwater in the pit and the pumping action of the elevator as it travels up and down. 2.Please document on the chain of custody the start and finish pressure readings on the canisters, do

COMMERCIAL LOT (Continued) **S112807574**

not allow the canister to go ambient (i.e., zero inches of Hg). 3.Please verify with the laboratory that the flow rate for the canister regulators will not exceed 0.2 L/minute. 11/15/17-Paul to Nathan Email-Thanks for your message. I will make sure the scope of indoor air sampling is performed as specified in your message below. 11/16/17-Nathan to Paul-Thank you, let me know if anything comes up when you are out in the field collecting samples. 2/13/18-Paul to Nathan email-Please find attached the most recent groundwater investigation and indoor air assessment report for above spill site. Based upon our findings, I appreciate your consideration to close the spill at this site and issue a letter of No Further Action. The report indicates, the total VOC concentrations range from 2.7 ug/l in MW-2 to 14.4 ug/l detected in MW-4. The remaining total VOC concnetrations includes 5.6 ug /l in MW-1 and 8.3 ug/l in MW-3. One individual compound benzene was detected in MW-4 at a concentration of 12 ug/l that exceeds its respective GQS of 1 ug/l. The analytical results of air samples indicates a range of organic and chlorinated hydrocarbons were detected the indoor and outdoor air samples at comparable concentrations, Specifiacally, organic compounds typical of gasoline vapors were detected at trace concntrations below 9.6 ug/m3 and include compounds such as 1,2,4-trimethylbenzene, benzene, ethylbenzene, xylenes and toluene. Chlorinated compounds detected in indoor included Trichloroethylene (0.1 ug/m3) Methylene chloride (maximum 4 ug/m3) and tetrachloroethylene (maximum 18 ug.m3)and their concentrations were below the NYSDOH guidance levels. 2/16/18-Veronica to Nathan -Did you review the report for the above address. It was emailed on 2/13/18. 1/16/18-Nathan to Paul-I have reviewed the report for the above referenced site, based on that review I offer the following comments and recommendation: 1.Based on previous correspondence I believe that one of the indoor air locations was going to be in Hotel Room C102, however, this report states it was collected from the telecom room; 2.I disagree with the second bullet of the conclusions and recommendations The Air Assessment did not reveal any soil vapor intrusion impact that would warrant the implementation of mitigation measures . The indoor air assessment identified PCE at a concentration of 18 ug/m3, while this concentration is below the Air Guideline Value of 30 ug/m3, it is above typical background concentration 90th percentile of 2.9 ug/m3; 3.When comparing the indoor air concentration of PCE to the NYSDOH SVI matrix B, a level of 18 ug/m3 in the indoor air and the lowest corresponding level in soil vapor; it is recommended that a source be identified, resampling occur or the structure be mitigated; 4.I recommend that resampling of the indoor air occur, however, this time not in the telecom room. A room that will be occupied by guests or employees should be chosen as it will be more representative location and eliminate potential interferes that could be associated with the telecom room. 2/16/18-Paul to Nathan-Nathan I wanted to emphasize that the site has a sub-basement (partially above ground) and a basement (entirely sub-grade). Initially, there was a confusion when requesting the basement plan from developer that turned out to be for the sub-basement floor (that he calls basement) showing guest rooms etc& There are no guest rooms in basement but a cafeteria, a laundry room and mechanical/utility rooms. Mechanical rooms are passively aerated via openwall vaults along Liberty Avenue to the south. IA-2 Elevator- is collected right next to the cafeteria which is surrounded by mechanical rooms in southern portion of basement facing Liberty Avenue and is wide open to central hallway in basement. The

COMMERCIAL LOT (Continued) **S112807574**

telecom room is located in the northern portion of basement (rear of the basement) near laundry room and a storage room. As for the detected PCE, it is not considered a contaminant of concern for this spill site as it was not identified previously in any sampling events in soil or groundwater. Since PCE was also detected in outside air and due to fact that soil vapor intrusion is prevented by the waterproofing vapor barrier installed beneath the building at this site, it is likely that the detection of this compound it caused by interferences from outdoor during aeration of mechanical rooms and the lack of air circulation in the rear tele-communication room. 2/21/18-Nathen to Paul-Thanks for the reply, and clarification on the actual layout of the building sub-grade construction. The concentration of PCE in outdoor air (0.4 ug/m3) was lower than the telecom room (18 ug/m3), it is not possible for PCE to become more concentrated in the indoor air. Bottom line is that PCE still showed up at a concentration six times higher than the 90% percentile background level, perhaps it was from a product that was used in the telecom room prior to the sampling? Resampling the indoor air in an area that will representative of actual usage of guests should occur this heating season to verify there are no PCE impacts to the building. 2/21/18-Paul to Nathan to Veronica email-Nathan thanks for your response. Veronica will you please issue a letter with Nathan s Statement to our client and whether you agree with our recommendations to close the spill via MNA. 2/21/18-Nathan to Andre and Veronica email- Andre / Veronica,As we have previously discussed, if the spill is closed there will be no mechanism to require follow-up with SVI/ IAQ issues. I believe it is best to conduct a resample to verify no impacts to indoor air; from a liability standpoint for the client I think they should agree. I m going to ask Paul to determine if there are any dry-cleaning operations at that basement laundry facility, whether on-site or delivery to rule out potential source 2/21/18-Nathan to Paul email -One last quick question, do you know whether there are dry-cleaning services offered by the hotel either on-site or delivery? 2/21/18-Paul to Nathan email -Nathan Per owner, hotel laundry cleaned at dry cleaners are from time to time stored in basement. 2/27/18-Natan to Andre and Veronica email - Mike Hughes and I discussed this particular situation with Chris D Andrea NYCDOH and we concluded that give the use of the area and intermittent dry-cleaning drop-off; no further action regarding SVI is necessary. Spill Closed. "

Spiller Address:	95-49 TUCKERTON STREET
Spiller Company:	999
Contact Name:	SALVEMINO
DEC Memo:	"9/3/09 - Raphael Ketani. The spill took place at A and J Scrap Metal, 95-49 Tuckerton Street in Jamaica. The spill consisted of the deliberate release of gasoline onto the ground. Stephanie Salvemini of Region 2 DSHM (cell (516) 376-4288) was on site to observe the release. She was there as part of a series of inspections by DSHM of junk yards. Ms. Salvemini told me that a forklift operator picked up a car, turned it on its side, and then punctured the tank, which allowed the gas to flow onto the ground. When she tried to speak to the workers about this, three of them surrounded her. She said that she felt threatened and left the site. I reported this to Randall Austin, Chief of the Spills Unit. He contacted Paul John, E E 4 and head of the Region 2 DSHM. He told Mr. John about what happened with Ms. Salvemini and then contacted the ECO duty desk to have an ECO go down to the site. ========== A previous spill was called in on 3/22/08 and was assigned #0713517. It consisted of the release of oil onto the ground. Sharif Rahman, the case manager, wrote that the site is covered by 7 to 12 inches of concrete. The spill was cleaned up. The drains didn't show any sign of oil. So Mr. Rahman closed this previous spill case. ========== 9/14/09 - Raphael Ketani. I made an unannounced site visit today. The office address for the site is 155-11 Liberty Avenue, but one enters the main work area through a red, very large, steel gate at 95-49 Tuckerton Street. The two properties are connected and form an L shape. I met the owner John Gatti. Mr. Gatti said that he bought the site back in March 2008. He showed me pictures of the site when it was A2000 Auto Parts. The site

JUNKYARD (Continued) **S109942840**

had pools of motor oil and looked to be very messy and disorganized. He also showed me receipts for some of the liquids that were carted away. He showed me boxes of mercury switches that he was recovering from the cars before they are crushed. He said that he sells them to a mercury recycler. Next, he showed me the main work area and the gasoline storage tank (see E-docs). The work area had many locations with Speedi Dri spread around, but I didn't see any free product. The entire site was covered in concrete. Flattened cars were piled high, but nothing appeared to be draining from them. Mr. Gatti said that he had installed an oil water separator and was recovering the oil for disposal. Batteries were piled on a pallet with thick cardboard separating and covering the layers of batteries. Nothing was draining from the batteries. Mr. Gatti commented that the storage tank was the site of the gasoline spill that Ms. Salvemini of Solid Waste had seen. He said that the spill resulted from work being done too fast. However, now he had slowed things down a little. I didn't see any free product next to the tank. There was a thin veneer of Speedi Dri next to the tank, but nothing else. The tank itself was dry on the outside. Mr. Gatti said that the way they recover the gas is to first remove the gas tank from the individual car with the gas in it. Then they bring the tank over to the storage tank and transfer the gas into the storage tank. He said that this is when they make a hole in the tank, and, sometimes, a little gas is spilled. However, he said that his crew always puts down Speedi Dri. I saw an old gas buggy nearby. Mr. Gatti said that they did use this device in the beginning, but it's broken and so they don't use it anymore. There are no plans to purchase a new one. The area in the vicinity of the gas buggy and the gas storage tank smelled moderately of gas, but I could not see any signs of product on the ground. Mr. Gotti then showed me the car crusher. He said that even after they drain the cars, there may still be a little bit of liquid left. So the car crusher drains the liquids to one corner. The liquids drain from this corner to a bucket just below. I looked in the bucket and there was only a little bit of oil floating on top of mostly water. I told Mr. Gatti to see to it that someone drains off the oil and properly disposes of the water. He said he will. Next, we went to the location where the motor oil, transmission fluid, and antifreeze are collected. This was a covered area with Speedi Dri all over the concrete floor. However, there were no signs of free product or Speed Dri that was spent. There were two collection devices with hoses that lead from funnels and to small holding tanks (see E-docs). Mr. Gatti said that the motor oil is transfered from the small holding tank to the large waste oil holding tank nearby. This tank has a PBS registration #2-610668. I didn't see any signs of spilled oil. Mr. Gatti also showed me blue plastic drums for holding the transmission fluid and the antifreeze (see E-docs). Before leaving, I took one last look at the main work area. Workers were washing and sweeping the area. There was a zipper drain just after the weigh scales and another zipper drain just inside of the entrance from Liberty Avenue. Mr. Gatti said that he added both drains after he bought the place. No fluids were leaving the site. He also showed me a small bobcat front loader with a rotating brush in front. He said that he sweeps the site daily. The only issue I had was a small pool of what looked like a mixture of oil, water, and sludge. I told Mr. Gatti to remove this collection of liquids. He said that he will do this. After this, I left. As there appeared to be no free product on the ground, and the ground was protected by concrete that was in reasonable

JUNKYARD (Continued) **S109942840**

condition, and since the gas spill had been cleaned up, and since there appeared to be no threat to the public or the environment, I am closed the spill case. "

Remarks: "car crushing operation...no containment"

DEC Memo: "4/6/18-Zhune spoke to Andrew Kelly from DEP. Andrew said on March 27-2018 he received a complaint about oil in the catch basin. He went to the site and no oil was found in the catch basin. He found a coat of oil in the entire street from Liberty Street to Tuckerton street. 4/6/18-Zhune called Sanitation Department and spoke to Andrew. He said that he will call his supervisor to go there or they will call DEP. As per Andrew DEP have to clean the spill. 4/9/18 Paul email to Steven Mandel(owner of hotel at 95-49 Tuckerton Street) I received a call from NYSDEC advising me that the DEP contacted them regarding an oil release listed for your property at Tuckerton Ave and the oil is all over liberty Ave. Can you please advise if this spill is occurred on your site. I appreciate your expedite response. 4/9/18- email from Jamie Bellamy to Steven Mandel. No but oil is always all over the street on Tuckerton its from the junk yard not us. 4/9/18-Zhune spoke to Andrew from Sanitation Department. Andrew said they served the spill. Spill was cleaned. Spill closed. "
Remarks: "caller state "junk yard row" tuckerton st is covered in a black material clean up is pending"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 1/12/2004-Vought-Spill transferred from Rommel to Vought. SPILL TRANSFERRED FROM VOUGHT TO OBLIGADO 10/11/07 - UST Closure Report received by Department. 12/18/07 - Obligado - Reviewed UST Closure Report. 5 underground storage tanks were removed and disposed of off-site. 450 tons of soil from the tank excavtion nwas disposed of off site at Clean Earth of Carteret, Inc. Manifests were attached. Endpoint samples reveal one soil result above allowable soil concentratiosn at 160 ug/kg n-butylbenzene. 3 new tanks were installed. The PBS registration has been updated. After review of site and file, determine a subsurface investigation is warranted as site is in Jamaica Public Well Supply Field and ground water impact has not investigated. I sent a letter to Palmana Realty and ccd to Steve Muller via email. 2/22/08 - Obligado - Reviwed Investigation Work Plan. Proposes 5 soil borings, collection of soil samples from high PID interval and water table, collection of ground water samples, and installation of a minimum of 3 wells if contamination is detected. Submission of a summary report within 60 days. I sent Steve Muller an emailed approval cc to RP and Joe Sun. 3/28/08 - Obligado - Phone conversation with STeve Muller. He said they found impacts and they will need to install wells. He will submit the report on time. 5/19/08 - Obligado - Reviewed Investigation Summary Letter - Max BTEX 450 ug/L. Proposes monitoring. Due to relativel low levels I approved of monitoring only at this time but may require additional investigaiton/remediation based on future smapling. 8/20/08 - Obligado - Meeting with Gasteria/ASR/DEC. Agree to 1 additiona well

BP JAMAICA (Continued) **U001833045**

installed across 146th street at corner of Liberty. Submit workplan by September 15. 10/8/08 - Obligado - review workplan. Proposes 1 additional well, soil and ground water sampling. 10/10/08 - Obligado - Sent approval letter. 4/16/09 - Obligado - Received a call from Zach Schreiber (212)718-3056, from the NYC Office of Remediation. He inquired about the spill. The site is an E designated site. I gave him provided him information about the spill . He is going to issue letter of no objection to Gaseteria to operate gas station. 9/16/09 - Obligado - Review spill closure request. According to report, 450 tons of soil removed during tank pull. The endpoint samples were below SCOs. 6 quarters of ground water sampling show only low level VOCs. Maximum Total BTEX is 134 ug/L at ASR3, and appears to be decreasing from initial high of 450 ug/L. MTBE is ND. After discussion with DEC Tibbe, this case has been closed. Sent Spill Closure Letter."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 3/23/05 - Austin - Transferred from DeMeo to Tibbe - end 05/26/05: LIRR submitted spill documentation on 03/15/02. Ruptured hydraulic line on track equipment operated by Perini Corp. Equipment was moved before leak was stopped causing a 400 foot ribbon stain on track ballast plus a small stain in the area the equipment originally leaked. Perini Corp. removed the impacted ballast from the initial spill area and the ribbon on the track. Contaminated debris was disposed of."

DER Facility ID:	327462
DEC Memo:	"3/6/07 sent ttf letter to: Anthony Scaccia City Transit Mix, Inc. 104-14 148th Street Jamaica, NY 11435 Called Crompco because I was having difficulty finding the owner or operator of the site. Spoke with mark at Crompco. Tank tester not in all week. Very little info in his file. Dry leak possibly in vent line. He was unable to give me a contact phone # at the facility. Found phone # and address through acris, google, and NYS Business. Called Mr. Scaccia (718)658-3797. He plans on having the tank retested and then, if necessary, have repairs made. I told him to retest and repair asap and he will be receiving a letter from me. He said he is working on it . PBS# 2-258725. bf 4/27/07 On 4/23/07, received letter from owner. They plan on closing the tank in place. I faxed them an application for closure and page from 613 for closure. bf 8/13/10 Vent line failed. Piping does not normally contain product. Soil borings taken on 4/11/07 parameters found as ND. NFA. bf "

FINDS:

Registry ID: 110058879922

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"7/18/18- DEC Piper received call from DLE ECO Wing and Johnston. They were executing warrant with NYPD and discovered copious amounts of waste oil and antifreeze throughout the property. Approx 10 gallons was observed spilled over sidewalk, down curb line and into a storm drain. I contacted LSM rep Norman Teitler and directed LSM to contain spill to premises and clean curb line. DEC Piper received confirmatory pictures that a speedy dry berm was placed around poeprty and curb line was cleaned. Site still need to be cleaned. "
Remarks:	"spill to paved area, may have infiltrated soil/investigation underway"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

TRIBRO AUTO SERVICE INC (Continued) **1001818256**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

SHWS:

Name:	K - JAMAICA GAS AND LIGHT MGP
Address:	BEAVER RD., & 158TH ST.
City,State,Zip:	QUEENS, NY 11451
Program:	HW
Site Code:	378997
Classification:	A
Region:	2
Acres:	0.75
HW Code:	241063
Record Add:	03/27/2007
Record Upd:	02/28/2018
Updated By:	GWCROSS

Site Description: Location: The Jamaica Gas and Light MGP site is located in an urban area. The 0.76 acre site is immediately east of the intersection of 158th St and Beaver Rd, in Jamaica, NY, Queens County. LIRR tracks lie to the north of the site, and Prospect Cemetery lies to the south of the site. Site Features: The site is a relatively flat property that is vacant,fenced in,and partially covered in pavement. Current Zoning and Land Use: The site is currently vacant land that is rented out to a waste services company that uses it to store roll-off containers and trash compactors. The site is zoned as R6, residential. The surrounding parcels are currently used for a combination of commercial, and light industrial. York College is about 0.25 miles east of the site. The South Jamaica Houses are about 1/3 miles SE of the site. Downtown Jamaica is 1/10 mile north of the site. Past Use of the Site: A review of historical documents indicated that the site operated as a MGP for at least 25 years in the late 1800s before being converted to a gas storage and distribution facility around 1900 when the two smaller gas holders and structures associated with the MGP were demolished. The remaining large gas holder and associated gas storage and distribution structures were demolished in 1938. The property was subsequently used as offices by the Brooklyn Union Gas Company until the late 1960s, and then left vacant. Site Geology and Hydrogeology: Underlying the partially paved surface is urban fill consisting of poorly graded sand and gravel with varying amounts of anthropogenic debris, ranging from 3 to 19 feet in thickness. Underlying the fill is a native unit of sand, consisting of subunits of well and poorly graded sand. Discontinuous lenses of silty sand, sandy silt, and clay are present within the sand unit Maximum boring depth was 45 feet bgs and the bottom of the well graded sand unit was not encountered. The Gardiner's clay, if present, is estimated to occur at depths ranging between 75 and 90 feet bgs. Bedrock is estimated to be at depths greater than 500 ft bgs. Groundwater was encountered at depths ranging from 13 to 27 feet bgs. Groundwater generally flows from the north/northeast to the south/southwest.

Env Problem: Nature and Extent of Contamination: Prior to Remediation- Based upon investigations conducted to date, the primary contaminants of concern include coal tar and PAHs. Soil- Impacts beneath the site consist of tar odors, staining, and tar coatings of soil grains, generally to the center and southern area of the site, ranging from 3 to 33 feet bgs. Observations of tar coating were limited to four borings and 2

K - JAMAICA GAS AND LIGHT MGP (Continued) **S109580118**

	test pits, in the vicinity of the two smaller gas holders and former purifier and meter room. Observations of tar coating are limited to above the water table. Suspected purifier waste was observed in one test pit within the footprint of the former purifier and meter room. The total PAHs criterion from CP-51 of 500 ppm was only exceeded in 3 on-site subsurface soil samples. Groundwater- NAPL was not observed in any of the wells. Groundwater beneath the site does not contain MGP-related constituents at concentrations exceeding the TOGS standards. Inorganic compounds such as metals including iron, lead, manganese, and sodium were detected exceeding the TOGS standards occur naturally in the aquifer and are not related to the historic MGP operations. Soil Vapor and Indoor Air- Soil vapor and indoor air assessments were not performed because there are no structures or occupants currently on the site.
Health Problem:	The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110069695743

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110063813048

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: D000
. Waste name: Not Defined

. Waste code: U228
. Waste name: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 1988-12-07 00:00:00.0
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110004335292

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	265006

Equipment Records:

K00 - Spill Prevention - None
L99 - Piping Leak Detection - Other
D01 - Pipe Type - Steel/Carbon Steel/Iron

ALMEIDA CONCRETE (Continued) **A100429488**

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
J05 - Dispenser - On Site Heating System (Supply/Return)
G00 - Tank Secondary Containment - None
E00 - Piping Secondary Containment - None
F00 - Pipe External Protection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: 01/01/1999
Capacity Gallons: 1000
Tightness Test Method: -

Environmental Interest/Information System
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110004568281

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. DEC Memo:	"11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 07/18/2011 - The spill was reassigned from Joe O'Connell to Linda Ross 3/12/12 - Raphael Ketani. The case was reassigned to me during February 2012. I received the February 1, 2012 Quarterly Progress Report. In the report, it is stated that there are two 20,000 gal. USTs with #2 oil under the president's parking lot. The two tanks were abandoned in

LIRR - JAMAICA STATION (Continued) **U001841404**

place during 1997 with cement slurry. Groundwater is about 23 feet bgs, except for MW-4 where it is 43 feet bgs. Groundwater flow is to the southwest. The site itself is 50 feet above sea level. A draft work plan was submitted to the DEC on 5/20/10. It was updated and resubmitted. Field work for the Supplemental Investigation is scheduled for 3/19/12. There presently are 6 wells on site: 1A, 2, 4, and 6 to 8. They were sampled on 11/15/11. The analytical results are almost entirely non-detect. The PBS registration is #2-600338. Six UST tanks are listed. Tanks #1 and #2 are the 20,000 gal. USTs in question. However, listed is a closed in place 550 gal. diesel tank, a closed and removed 1500 gal. diesel tank, and in service tanks #3 and #4 (1100 gal. and 1500 gal.) containing diesel. 3/16/12 - Raphael Ketani. A conference call took place between Gloria Russo and Al Albano (347) 494-6020 of the LIRR and myself. The site was discussed. Mr. Albano stated that the two USTs below the president's parking lot were closed and filled with concrete slurry back in the 1990s. The field work that was supposed to take place in March 2012 was postponed. A building is present on site which is having its roof refurbished and the construction crew is using the parking lot as a staging area. The roof contains asbestos. So the refurbishment work will take about 3 weeks. Then, in April 2012, the investigative work will start. I told Ms. Russo and Mr. Albano that this was fine. 4/5/12 - Raphael Ketani. Al Albano of the LIRR sent me an e-mail informing DEC that the field work will be taking place on 4/11 through 4/13. 5/1/12 - Raphael Ketani. I reviewed the May 2012 Quarterly Progress Report. A supplemental investigation took place during April 2012 in order to more fully delineate the contamination. Groundwater elevation is about 20 feet above sea level. Depth to water in the wells is generally 23 feet, with one exception of 42 feet. Groundwater flow is to the southwest. Wells MW-1A, 2, 4, 6 to 8 were sampled this quarter. The results were all non-detect. An investigation report will be submitted during June 2012. 6/12/12 - Raphael Ketani. I tried to contact Mr. Albano (347) 494-6020 regarding whether either MW-4 or MW-7 were directly downgradient of the two 20,000 gal. USTs, but I could only leave a message. 6/13/12 - Raphael Ketani. Mr. Albano sent me the following e-mail in response to my e-mail: As depicted on the map, the tank locations (shown in gray dash pattern) are estimated. As part of our recent Remedial Investigation, D&B utilized Ground Penetrating Radar to determine the exact location of the USTs. As part of the Data Summary Package, a revised map will be included that will provide the information you are looking for. That said, please keep in mind the site constraints that have impacted our ability to install wells/borings in various locations throughout the site. In the area around MW-04 and MW-07 specifically, there is a 15 high retaining wall. Above the retaining wall there is an above-ground emergency generator, a fence, uneven ground, etc. Below the retaining wall, there is a trash compactor that sits at the site 24/7. Once the Data Support Package is complete and we ve had a chance to look at the updated map and the analytical data from the recent sampling effort, we can then determine if the well locations are satisfactory and whether or not there is any real need for additional investigatory work. 8/14/12 - Raphael Ketani. I reviewed the August 1, 2012 Progress Report. Wells MW-1A, 2, 4 and 7 were sampled on 5/29/12. The results were all non-detect, except for a very small number of very low VOC and SVOC hits. I approved the report without comment. 9/10/12 - Raphael Ketani. I received the Dvirka and Bartilucci August 2012 Data Summary Report. I began my

LIRR - JAMAICA STATION (Continued) **U001841404**

review. 9/13/12 - Raphael Ketani. I finished my review of the Data Summary Report. Historically, the groundwater was as much as 25 feet lower. Starting from the early nineteen nineties to the late two thousands, the groundwater level rose 5 feet. The change in groundwater level created a very wide smear zone. However, no free NAPL was found in the wells. VOC exceedences of the Unrestricted Standards were found in the soil samples from SB-02 (20-23 feet), SB-03 (20-22.5 feet), SB-03 (25-27 feet) and SB-05 (2-5 feet). From the 4/11-13/12 data, SB-02 had naphthalene at 32 ppm (12 ppm limit) as the only exceedence. SB-03 (20-22.5) had only 13 ppm of cymene (10 ppm limit). SB-03 (25-27) had 15 ppm of cymene, 9.5 ppm 1,2,4-trimethylbenzene (3.5 ppm limit), 18 ppm naphthalene, and 0.46 ppm total xylenes (0.26 ppm limit). SB-05 had 0.33 ppm benzene (0.06 ppm limit), 1.2 ppm ethylbenzene (1 ppm limit) and 2.88 ppm total xylenes. SVOCs were either non-detect or didn't exceed their respective limits. From the 4/19/12 data, groundwater probe location GP-02 had 5 low VOC exceedences, moderate exceedences for 2 SVOCs and 2 high SVOC exceedences. Wells JMW-1A and JMW-2A, MW-4 and MW-6 to MW-8 were almost entirely non-detect for VOCs and SVOCs. The LIRR stated that they will install SB-06, SB-07 and MW-09 to MW-11 only if the information that would be gained from these locations would be critical for characterizing and remediating the spill. The additional data is not necessary for formulating recommendations regarding remediation in the Remedial Investigation Report. This is partly because these locations are only minimally downgradient from the established boring and well locations. They recommend developing the RI Report. Given that the nature and extant of the contamination has been characterized, the RI Report would include remediation alternatives. In their RI/AA (alternative analysis) report, they will compare all of the obtained data to commercial and industrial standards, rather than unrestricted standards. This is because a cleanup to CP-51 standards would not be feasible, given the use of the site and the surrounding area. After having finished my review, I determined that the LIRR hadn't fully delineated the extent of the soil and groundwater contamination. Therefore, I will request that they install 2 wells downgradient to MW-7. MW-11 can be to the west of the hut. Another well (maybe MW-13) should be of due west of MW-7. MW-9 should be a little further north of the proposed location. SB-07 should be at the MW-5+ location, but as well MW-12. MW-10 should be a little further north of the proposed location. SB-06 would not be necessary. However, the LIRR needs to put wells even further downgradient from the site. I drafted a letter for the review of Hassan Hussein, supervisor of Unit C. In the letter, I stated that we accepted the data, but further soil and groundwater contamination delineation was necessary. Therefore, wells MW-9 to MW-13 must be installed and that additional wells were needed downgradient of MW-7 and downgradient on the other side of the LIRR tracks. I stated that all results must be compared to CP-51 guidance standards as this is an oil spill. Lastly, I asked for a work plan for the additional work and that it be submitted by November 2, 2012. 9/20/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today. 9/27/12 - Raphael Ketani. The September 2012 LIRR monthly project status meeting took place today. Mr. Albano stated that installing new wells at the locations indicated in the DEC 9/20/12 letter was not possible. He added that these areas were either at a 45 degree slope, or were in tight locations right next to the tracks or electrical utilities, or were over 1,000 feet away from the site and

LIRR - JAMAICA STATION (Continued) **U001841404**

would not make sense to install. Mr. Albano asked that the DEC come over to the site to look the situation over and that, possibly, other locations can be selected. I agreed with Albano and a site visit was set for October 18. 10/18/12 - Raphael Ketani. The site visit took place as planned. In attendance were Ms. Russo and Tom Fox and Anthony Caniano from Dvirka & Bartilucci. I took 9 pictures. The President's Parking Lot is a small area, maybe 75 feet by 30 feet. The adjacent area to the west is a landscaped slope of about 45 degrees, maybe a little more. Beyond the sloped area is a filled area that is held up by a retaining wall. I saw wells 1A, 2A and 6 to 8 were in the parking lot. Next, we climbed the stairs to the track level. I saw well MW-4 next to the generator housing. Then we walked west past the storage container (hut). The area next to the tracks was flat and had enough room to put more wells. We agreed on the installation of MW-11 somewhere on the west side of the storage container and MW-9 on the east side. MW-10 will be installed on the east side of the generator room. After this, the meeting ended. 10/30/12 - Raphael Ketani. I reviewed the November 1, 2012 Progress Report. The wells were gauged on 8/28/12 and on 9/13/12. The depth to groundwater was from 22.41 to 25.21 feet bgs, with the exception of one measurement down to 46.13 feet bgs. Wells MW-1A, 2, 4, and 6 to 8 were sampled on 8/28/12. The results were all non-detect for VOCs and SVOCs. I approved the report without comment. 11/8/12 - Raphael Ketani. Today I received the Remedial Investigation letter/work plan dated November 8, 2012 from the LIRR. The plan involved installing new wells MW-9 to MW-11 along the flat area at the top of the slope which is adjacent to the northmost track line. The letter mentioned installing the wells, taking 3 soil samples from each boring, developing the wells for 2 hours and then sampling using low flow techniques. I found the letter to be acceptable, but there was no mention of the date of development, nor the date of sampling. I drafted an approval letter for the review of Mr. Hussein. In the letter, I stated that well development should not take place sooner than 48 hours after well construction in order to allow time for the grout to set. I also stated that once the wells have been developed, then they should wait one month or until the next quarterly sampling date (which ever is later) to sample the new wells. Mr. Hussein approved the letter and it was sent out today. 1/23/13 - Raphael Ketani. Mr. Albano sent me an e-mail stating that the boring/well installation work will start on February 3 and is expected to take 6 days. 1/28/13 - Raphael Ketani. Mr. Albano sent me the following e-mail: LIRR s Power Department performed their markout of our work area. Due to the fact that two electric lines run within about 3 feet of each other, right where MW-11 is proposed, we will need to strike it from the program. Moving the well from the proposed location is not possible. The electric lines run parallel with the tracks in that location. In addition, there is a chain link fence in the way. Plus there is inherent limitations with moving the rig north or south, since it is a high-rail vehicle. The other two well locations look doable. 2/5/13 - Raphael Ketani. Mr. Albano sent me an e-mail that they are having trouble with train traffic on the tracks that the high rail drilling machine needs to sit on. This limited their work to 3 hours during one day. Mr. Albano proposed doing sampling every five feet through the overburden/fill and down to total depth for each of the borings in order to save time. I proposed just drilling through the overburden and starting continuous sampling from street level to total depth. Mr. Albano agreed to my suggestion. 2/12/13 -

LIRR - JAMAICA STATION (Continued) **U001841404**

Raphael Ketani. The Fourth Quarter 2012 Progress Report dated 2/1/13 was reviewed. Wells MW-1, 2, 4 and 7 were sampled. Wells MW-6 and 8 were not available. Gauging data was presented for measuring events from 10/25/12 to 1/16/13. There was no product. MW-4 had 2 groundwater VOC hits below TOGS. MW-7 had 4 groundwater VOC hits that were from just below to just above TOGS. The results for MW-1 and MW-2 were entirely non-detect. 2/14/13 - Raphael Ketani. The February 2013 monthly progress meeting took place for the 8 LIRR sites that I monitor. Mr. Albano explained that the only progress which has been made at the Jamaica Station site is drilling through the fill material at one of the new well locations. He added that there have been serious logistical problems performing the work as the various bureaucratic offices of the LIRR have not been coordinated and so train traffic has been allowed on the tracks next to the drill site. This requires Mr. Albano to move the drilling rig off of the site, preventing continuation of the work. Also, the third rail power was not being shut off as requested. This was a dangerous situation and, again, prevented the work from progressing. Mr. Albano will bring his crew out this weekend (February 16 and 17) and try to do all of the work during these two days. 3/1/13 - Raphael Ketani. Mr. Albano (347) 494-6020 sent me an e-mail. He wrote that there had been problems getting the well drilling work done. There was a lack of coordination between the electrical group, who are responsible for turning off the electricity, and the traffic group, who are responsible for rerouting the trains. An internal meeting took place at the LIRR in order to find out what the problem is and to straighten out the matter. The drilling will tentatively resume during 3 weekends in April 2013. 4/30/13 - Raphael Ketani. I reviewed the May 1, 2013 Progress Report. The LIRR will reattempt to install the wells requested by the DEC. The work will start during July 2013. Groundwater was sampled during 2/13/13 from MW-1, MW-2, MW-4 and MW-7. All of the VOC and SVOC results were non-detect. 8/1/13 - Raphael Ketani. I reviewed the July 2013 Progress Report. The report was mostly a recounting of the past events since April 2013. The three wells that were going to be installed during April could not be done due to logistical issues within the LIRR. The well installations were rescheduled for late June and early July. However, the operations staff at the LIRR told Mr. Albano that the track which would be shut down for the drilling work was needed for the summer holiday traffic. Therefore, they told him, the work could not take place. Mr. Albano then rescheduled the work for sometime in September 2013. Wells MW-2A to 9 were gauged on 5/2/13. Wells MW-1,2,4 and 6 to 8 were gauged on 6/20/13. Wells MW-1, 2, 4 and 6 to 8 were gauged on 7/11/13. Groundwater flow was determined to be to the southwest as during previous months. Groundwater samples were collected on 5/2/13 from wells MW-1, 2, 4 and 7. The results were completely non-detect. 10/29/13 - Raphael Ketani. I reviewed the November 2013 Progress Report dated 11/1/13. The report included a retelling of past activities and agreements. The General Engineering Contract was awarded on 10/17/13. A new scope of work is needed and the process will take from 6 to 8 weeks. Therefore, the installation of the DEC requested wells will probably take place during January 2014. The Supplemental Investigation Report will be completed during February 2014. Groundwater flow is due southwest. Groundwater was sampled from wells MW-1, MW-2, MW-4 and MW-7 on 8/2/13. All of the results were non-detect. 10/31/13 - Raphael Ketani. Ms. Russo (347) 494-6034 sent me the Revised November 2013 Progress Report. The only change was that she added the water

LIRR - JAMAICA STATION (Continued) **U001841404**

level measurements at the end of the report. 1/31/14 - Raphael Ketani. I reviewed the December 2013 Progress Report dated 2/1/14. Groundwater flow continued to be to the southwest. Six wells were sampled on 11/21/13. These were MW-1, MW-2, MW-4, MW-6, MW-7 and MW-8. All of the VOC and SVOC results were completely non-detect. 4/29/14 - Raphael Ketani. I reviewed the First Quarter 2014 Progress Report dated 5/1/14. The LIRR expects to install 3 groundwater wells during September 2014. The Supplemental Investigation Report will be submitted during October 2014. The new GEC (General Environmental Contractor) contract was awarded on 10/17/13. The results for the groundwater samples from MW-1, MW-2, MW-4, MW-7 and MW-8 were all non-detect for VOCs and the SVOCs. The sample from MW-6 was almost completely non-detect for VOCs, except one very low VOC hit. However, all of the SVOC results were non-detect. 8/1/14 - Raphael Ketani. I reviewed the Second Quarter 2014 Progress Report dated 8/1/14. The report contained the following information: The LIRR was not able to install the three contingency soil borings/monitoring wells in the elevated track area to the south of the site in January 2014 due to the fact that its General Engineering Consultant (GEC) contract expired on August 31, 2013. A new GEC contract was awarded on October 17, 2013. A Notice of Award was issued to the GEC in May 2014. A Remedial Investigation Work Plan will be submitted to the NYSDEC for approval in August 2014. No drilling can be performed between May 19, 2014 and Labor Day. As such, the expected date of the installation of these monitoring wells is September 2014. Once this work is complete, and all analytical data is obtained, the Supplemental Investigation Report will be finalized and submitted to the NYSDEC. It is anticipated that this report will be completed by November 2014. Wells MW-1, 2, 4, and 6 to 8 were sampled on 6/18/14. Groundwater flow was to the southwest. All of the samples from the wells were completely non-detect for VOCs and SVOCs. 9/9/14 - Raphael Ketani. I reviewed the Additional Remedial Investigation Letter Work Plan dated 9/3/14 and submitted by the LIRR. The LIRR will install wells MW-9 to MW-11 next to the northernmost track. Soil sampling will start at the street level - as previously agreed upon. Well development will take place prior to groundwater sampling. The round of groundwater sampling which will follow the new well installations will include samples from MW-9 to MW-11. I found the work plan to be acceptable. 9/19/14 - Raphael Ketani. I receieved an email from Ms. Russo regarding the plan to install only two additional groundwater monitoring wells at the site. This email was a recap of discussions which had taken place on 9/18/14 during the September 2014 Monthly Site Status Meeting between staff from the LIRR and the DEC. Well MW-9 would not be installed this year due to the construction which needs to take place in Yard D (the 6 active rail lines). A new platform will be constructed for trains heading to Brooklyn. This will require taking 2 lines out of service and leaving 4 lines in service. Such an action will leave very limited space to store the trains. Due to the limited space , Ms. Russo could only get permission to take the northernmost line (where the wells would be installed) out of service during only two weekends, September 27 and 28 and October 4 and 5. Well MW-9 could not be installed because of the time constraint. I sent a response email approving the installation of the two wells right now and waiting on installing the third well. 11/4/14 - Raphael Ketani. I reviewed the Third Quarter 2014 Progress Report dated 11/1/14. Wells MW-10 and MW-11 were installed during September and October 2014. The installation of well

LIRR - JAMAICA STATION (Continued) **U001841404**

MW-9 is being held in abeyance pending the need for additional groundwater coverage and a request by the DEC. Well MW-10 is upgradient and sidegradient to the groundwater flow and is near the LIRR building. Well MW-11 is directly downgradient to the groundwater flow and is the most distant well to the USTs. A Supplemental Investigation Report will be submitted during January 2015. Wells MW-1, 2, 4, and 6 to 8 were sampled on 8/27/14. All of the VOC and SVOC results were non-detect. 2/3/15 - Raphael Ketani. I reviewed the Jamaica Station Fourth Quarter 2014 Report dated 2/1/15. The only items to not were that the LIRR general engineering contractor cannot access the wells until the company has completed the security clearance. This is expected to be completed during February 2015. After this, the contractor will survey the wells and the water table and sample the groundwater. The data for the February round will be submitted to the DEC in a Remediation Investigation Report during April 2015. Wells JMW-1A, 2A, 4 and 6 to 8 were last sampled on 11/20/14. All of the VOC and SVOC results for all of the samples were completely non-detect. 5/5/15 - Raphael Ketani. I reviewed the Jamaica Station First Quarter 2015 Report dated 5/1/15. Wells JMW-1A, 2A, 4, and 6 to 8 were sampled on 2/17/15. There were a small number of very low VOC hits. Otherwise, the samples were all essentially non-detect. There were some very low SVOC exceedences of the benzo series of analytes and their associated combustion products. Otherwise, the samples were mostly non-detect. Wells MW-10 and MW-11 were not sampled during the February round as the contractor needed to be screened in accordance with the new LIRR security standards. It is expected that they will be approved and groundwater sampling of the new wells will take place during May 2015 with a report to be submitted during June 2015. The boring logs for MW-10 and MW-11 indicated the presence of gravelly sand high in each boring followed by primarily brownish medium sand below. MW-10 had gray to black sand from 60 to 72 feet below grade with strong petroleum odors. The samples were moist from 41 to 46 feet bgs and wet from 47 to 82 feet bgs. MW-11 had gray to black sand from 55 to 62 feet below grade with strong petroleum odors. The samples were moist from 40 to 42 feet bgs and wet from 45 to 77 feet bgs. 8/3/15 - Raphael Ketani. I reviewed the Jamaica Station Second Quarter 2015 Report dated 8/1/15. Groundwater samples were collected from wells MW-1A, 2A, 4 and 6 to 8 on 5/12/15. All of the VOC results were either entirely non-detect or almost entirely non-detect. Most of the SVOC results consisted of the benzo series of analytes and chrysene and reflected the presence of historical fill. 8/12/15 Raphael Ketani. I reviewed the Remedial Investigation Report dated July 2015 and submitted by Dvirka and Bartilucci on behalf of the LIRR. New wells MW-10 and MW-11 were installed on 5/5/15. Groundwater elevations were measured on 6/23/15. The elevations varied from 18.97 feet at MW-6 and MW-8 at the east end of the parking lot to 18.86 feet at MW-4 in the elevated area next to the tracks. Groundwater flow was determined to be to the southwest. The depth to groundwater at Archer Avenue (on the north side of the parking lot) was about 23 feet below grade. This is about 15 to 20 feet above mean sea level. Recently, there has been a rapid rise in the water table due to the cessation of pumping of the Jamaica Water Supply District. The change in water table elevation may have created a large smear zone. NAPL was never seen in any of the wells. Soil samples taken during 2012 show that the oil contamination starts at least 12 feet below the current water table. The LIRR stated that additional investigation or remediation is not

LIRR - JAMAICA STATION (Continued) **U001841404**

warranted as: 1)The USTs under the parking lot were closed in 1997 and the contaminated soil was excavated. 2)The spill has been delineated. 3)There are a limited number of soil and groundwater samples which show contamination above the CP-51 unrestricted residential soil standards and above the TOGS 1.1.1 standards. 4)Exposure to the public and on site workers is limited by the depth of the contamination asphalt covers the site and the contamination is not migrating. The LIRR requested that the spill case be closed. However, Dvirka and Bartilucci recommended taking additional groundwater samples through 2015. Three geologic cross sections were constructed for the site. Cross section A-A runs north of the parking lot and parallels Archer Avenue. It starts at JS-03 (west) and ends at MW-6 (east). Staining, petroleum odors and elevated PID readings were found in the top 20 feet of soil at JS-03 and in the top 15 feet of soil at JMW-1A. At location SB-01/GP-01, 7 feet of the stains, odors and PID readings were found 5 feet above the old water table horizon and 3 feet of NAPL saturated soil was found just above the old water table. At JS-02, stains, odors and PID readings were found in the lower 30 feet of the soil column. Cross section B-B runs along the south end of the parking lot and through the twin 20,000 gallon UST tank vault at SB-03/JS-01. It starts at SB-05 and ends at JS-04. Staining, petroleum odors and PID readings were present in the top 5 feet of SB-05 and in a 20 foot long section in the middle of the same boring which intersects the new water table. There was also another stained section of soil 6 feet above the old water table horizon. SB-02/GP-02 had 18 feet of stained soil with odors in its top part and a 21 foot NAPL contaminated zone which was situated above the old water table horizon. SB-03 had 20 feet of stained soil with odors in the top of the boring, 10 feet of NAPL bearing soil below the stained zone and a 10 foot stained zone below the NAPL zone. The top 27 feet of JS-01 had stained soil with odors and an 8 foot zone of NAPL bearing soil below it. SB-04 had 10 feet of stained soil towards the bottom of the boring. Cross section C-C runs diagonally through the site from northeast to southwest. The cross section starts at MW-6 and ends at SB-06/MW-10. JS-02 had stained soil with odors and PID readings upgradient of the tanks. SB-02/GP-02 had 2 zones of staining and odors and 2 zones of NAPL saturation for a total of 18 feet of saturation. MW-4 had 2 feet of NAPL saturarted soil just above the old water table horizon. SB-06/MW-10, which is downgradient of the 20,000 gallon USTs, had 11 feet of stained and odor bearing soil at the level of the old water table. The boring logs for SB-01 to SB-03 were compared to the cross sections. The zones of NAPL saturation matched. SB-05 (downgradient to the vault) had stains and odors at the following intervals: 0 -5 ; 5 -10 ; 25 -30 ; and 30 -33 . SB-04 (to the east and upgradient) had odors at the 35 top 45 interval. SB-06 (downgradient to the vault and in the rail bed) had soil with light to strong odors from 55 to 77 . SB-07 (far sidegradient and in the rail bed) had soil with odors from 55 to 62 . Analytical results: Soil samples taken 4/11/12 to 4/13/12, 9/27/14 and 10/4/14: VOCs compared to CP-51 unrestricted residential soil standards: SB-01, SB-04, SB-06 almost entirely non-detect for VOCs with several very low hits SB-07 mostly non-detect with 6 very low hits in the 60 -62 sample (strong oil odors) SB-02 20 to 23 sample with 4 VOC non-detects, 7 very low hits, 3 very low to low exceedences to 32 ppm (benzene was non-detect); 32 to 34 sample with 8 very low hits and 6 non-detects SB-03 20 to 22.5 sample with 8 non-detects, 5 very low to low hits and 13 ppm of cymene; 25 to 27 sample (NAPL saturation) with

LIRR - JAMAICA STATION (Continued) **U001841404**

4 non-detects, 6 very low to low hits, 4 very low to low exceedences to 18 ppm; 53 to 55 almost entirely non-detect SB-05 2 to 5 sample (black stains and oil odors) with 5 non-detects, 6 very low to low hits, 3 very low to low exceedences to 2.88 ppm (benzene was 0.33 ppm); other 2 samples had either very low hits or non-detects SVOC results: almost entirely non-detect for all of the samples. For the historical borings, the results for the JS series were almost entirely non-detect for VOCs with some very low hits. JS-02 at 18 -20 (upgradient) had 0.91 ppm of total xylenes and 26 ppb of naphthalene. MW-7 (just downgradient) and MW-8 (far sidegradient and upgradient to the east) were almost entirely non-detect. The SVOC results had very low hits or were non-detect. The PCB results for JS-01 were entirely non-detect. Analytical results: Groundwater samples taken from JMW-1A, JMW-2A, and MW-4, 6, 7, and 8 on 5/5/15 and 5/12/15: VOC results compared to TOGS 1.1.1 standards: The results for all of the above groundwater samples were entirely non-detect or almost entirely non-detect with some very low hits. The results for the samples taken on only 5/5/15 from MW-10 and MW-11 were mostly non-detect and entirely non-detect, respectively. The SVOC results were almost entirely non-detect for all of the samples, except for some low exceedences for samples taken on 5/12/15 from JMW-1A, JMW-2A, MW-6, MW-7 and MW-8. Metals samples taken on 5/6/94 from JMW-1A to JMW-3A had exceedences for chromium, copper, lead and nickel. 8/13/15 - Raphael Ketani. Staff at the Department reviewed the data in the case file for the spill case. Based upon: 1) the non-detect to very low analytical results for the soil samples taken during 2012, and previously - thereby meeting the CP-51 unrestricted residential soil standards; 2) the non-detect to very low groundwater results from the samples taken during May 2015 - thereby meeting the TOGS 1.1.1 standards; 3) the cleaning out of the tanks and their abandoning in place and the excavation of the contaminated soil next to the tanks - thereby eliminating the source of the spill; it was determined that any residual contamination would not be a threat to the public nor the environment. Therefore, the spill case was closed effective today."

Remarks: "Pre-closure assessment identified soil and groundwater contamination. Could not find a spill in the database, so this one was opened."

DER Facility ID:	475428
DEC Memo:	"1/26/16: J.Kann - spoke with Rob Hill of Riteway. They installed a new tank in the basement of the property and soil samples were collected around the former tank as a part of the tank decommissioning. The soil had slight exceedences. I informed Rob Hill that Rashad Omar will be the project manager for the site and emailed Rob/Rashad regarding the spill. Since Rashad is the runner today, spill assigned to Rashad. 1/27/2016: Rashad 88-08 151 Avenue has another building on tax lot, 88-12 151 Avenue. No additional spills found for sites. No PBS registgration found for 88-08 151 Avenue however there is PBS registration for 88-12 151 Avenue, PBS#2-276898

RESIDENCE (Continued) **S118462560**

for a 15,000 gallon #2 fuel oil UST which is in service. As per DOB records a permit was approved on 9/14/15 to install replacement fuel storage tank and abandon existing fuel storage tank. 2/1/2016: Rashad Initial email that J. Kann sent had wrong email address for Rob Hill, I emailed Rob this morning: Can you please send over the soil results and a site plan indicating where the samples were taken for this location? 2/17/2016: Rashad Received email from Rob: These samples were taken from the below the tank bottom. In addition the tank started to fill with water when the holes were made at the tank bottom. The samples were taken from the left to right in the oil tank. Email had sample results, they were uploaded to D2. Sample 1: 1,2,4-Trimethlybenzene 4300ppb, Ethylbenzene 1500ppb, Xylene 810ppb Sample 2: Xylene 530ppb Sample 3: 1,2,4-Trimethylbenzene 3800ppb, xylene 620ppb Sample 4: Xylene 660ppb 2/18/2016: Rashad Sent email to Rob: If water is present can you please take a water sample? Also what size is the tank and what type of fuel was used in the tank? Is the tank being removed or closed in place? Rob responded: It is a #2 oil tank and the tank is a 15,000 gallon tank. I will obtain a water sample tomorrow. 3/2/2016: Rashad Received email from David Chan: Please find the sample results for the water sample at 88-08 151st Ave. Please let me know if you need anything else. Thank you in advance, Email contained analytical data from water sample. The results have been uploaded to D2. The groundwater sample showed no VOCs or SCOVs above unrestricted levels. Spill will be closed as per minor soil contamination and clean groundwater sample. "

Remarks: "unknown amount spilled"

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

NEW YORK CITY POLICE DEPARTMENT (Continued) **1004761382**

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U204
. Waste name: SELENIOUS ACID (OR) SELENIUM DIOXIDE

. Waste code: U213
. Waste name: FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)

. Waste code: U214
. Waste name: ACETIC ACID, THALLIUM(1+) SALT (OR) THALLIUM(I) ACETATE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 5494.9

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 3571.5

Waste code: D008
Waste name: LEAD
Amount (Lbs): 20250

NEW YORK CITY POLICE DEPARTMENT (Continued) **1004761382**

Waste code: D039
Waste name: TETRACHLOROETHYLENE
Amount (Lbs): 301.5

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 5494.9

NEW YORK CITY POLICE DEPARTMENT (Continued) **1004761382**

Registry ID: 110004562303

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Tank Info:

Tank Number:	001
Tank Id:	57540
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I05 - Overfill - Vent Whistle
L09 - Piping Leak Detection - Exempt Suction Piping
G03 - Tank Secondary Containment - Vault (w/o access)
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
B00 - Tank External Protection - None
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

FORENSIC INVESTIGATIONS DIVISION (Continued) **A100157729**

	I04 - Overfill - Product Level Gauge (A/G) J02 - Dispenser - Suction Dispenser C02 - Pipe Location - Underground/On-ground
Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	06/01/1996
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	NTFREEMA

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	01
Tank Id:	236806
Material Code:	2711
Common Name of Substance:	Biodiesel (Heating, On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
H05 - Tank Leak Detection - In-Tank System (ATG)
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	06/25/2003
Capacity Gallons:	5000

FINDS:

Registry ID: 110012190841

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	6051
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	1926
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs):	1386
Waste code:	D004
Waste name:	ARSENIC
Amount (Lbs):	1386
Waste code:	D005
Waste name:	BARIUM
Amount (Lbs):	1386

FINDS:

Registry ID: 110004561705

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Description:	Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SHWS:

Name:	K - JAMAICA HOLDER STATION
Address:	158TH ST. & LIBERTY AVE.
City,State,Zip:	QUEENS, NY 11451
Program:	HW
Site Code:	378996
Classification:	C
Region:	2
Acres:	3.3
HW Code:	241062
Record Add:	03/27/2007
Record Upd:	04/12/2013
Updated By:	BXANDERS
Site Description:	Location: The Jamaica Holder Station is comprised of two parcels of land near Liberty Avenue in Queens, New York, Queens County. The site is between 158th and 159th Streets. Site Features: The FDA building, parking, and the Nursing Science Building of York College CUNY are located on the site. Current Zoning/Use(s): The current land use for the parcels includes a college building and Federal Building. Past Use of the Site: The site operated as a gas distribution facility from 1944 to 1975. There was a 10.6 millon cubic foot tar-sealed, remote gas distribution holder, a boiler room, and an office. The site was operated by Brooklyn Union Gas (BUG), a predecessor company to National Grid. BUG sold the property in 1987. Geology and Hydrogeology: Site geology consists of two unconsolidated units varying in thickness across the site. These units consist of fill ranging from 2.5 feet to 11 feet below ground surface, and well-graded sand ranging from 2.5 to greater than 45 feet below ground surface. Groundwater was encountered at depths ranging from approximately 11 to 34 feet below ground surface. The flow is northeast to southwest.
Env Problem:	Prior to Remediation: Based upon investigations conducted to date, there are no contaminants of concern at the site. Soil- There were no detections of contaminants above SCOs. Groundwater - There was only one PAH constituent (benzo(a)anthracene) detected above standards, at a concentration of 0.002 ug/L. The Site Characterization Report was approved in January 2013, with No Further Action for the site.
Health Problem:	Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking water or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 11539
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 10/01/1940
Capacity Gallons: 5000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

DER Facility ID:	308230
DEC Memo:	"1/19/06 - Raphael Ketani. I spoke to Mark Randazzo of O'Brien & Gere ((732) 225-7380, ext 231; cell (781) 883-6432) today. He said they were digging at the site and came across a large tank (17'X6) that was not known to be there. The soil is contaminated with oil. I told him to take 6 soil samples on the floor of the trench (one at each end and 2 at the base of the north wall and at the base of the south wall) and one 3 feet above the floor of the trench in each wall (total 10). He said that he had dug down 15' already and asked how much he should go. I told him that he has to dig out all of the soil that exceeds TAGM 4046, or until he hits groundwater. I told him that if there is groundwater, then water samples need to be taken. I told him that if he believes the digging will endanger buildings or structures, then he has to get an engineer to look at the site. If the engineer makes a determination that it is unsafe to dig deeper, then DEC needs to receive a report stating this from the engineer. He agreed to dig deeper and take the samples. Jan 20th, 2006 Sent CSL To Howard N. Apsan CUNY 535 East 80th St New York, NY 10021 2/17/06 - Raphael Ketani. I spoke to Mr. Randazzo. He said that the digging and

YORK COLLEGE (Continued) **S107523408**

soil removal have been completed and soil samples were sent to the laboratory. He said they only went 2 feet deeper due to safety concerns, but they didn't hit water. I asked him when I should receive the final report and he said in 2 or 3 weeks. 3/21/06 - Raphael Ketani. I received the Underground Storage Tank Closure Former St. Monica's Church Property report dated March 2006 and produced by O'Brien & Gere. I reviewed the report and found the results to be non-detect, or below TAGM 4046, or just above TAGM 4046. The PBS case #2-333638 has been updated. They want an NFA letter. Based upon the report, I am closing the spill case. Also, I am writing the NFA letter. "

Remarks: "tank is being pulled, soil contamination, remediation is in progress. tank size is 3600 gallon tanki."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE Universal Construction Mr. Hemlell 718-850-6446 Cut open & clean tank. Sent letter 1/27/06 to obtain more info. Sent strong followup 2/21/06. 09/05/06 -Zielinski This spill case reassigned from CO to Region 2. 10/20/06 - Zielinski Visited the site. According to staff at the property, the tank has been decommisioned. Over the phone, spoke with Mr. Ravi Etwaru, President of America Sevashram Sangha, Inc. He confirmed that the tank had been closed in place. Mr. Etwaru faxed an affidavit by Pro-Test on two tanks closures in 2000, tanks testing results conducted in 1998, and waste oil removal and disposal. Lack of information about a cause of the failure or soil contamination. 11/06/06 - Zielinski Sent a TTF letter. 01/04/10 - LZ A TTF letter sent to American Sevashram requesting a response by February 12, 2010. 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 2/1/13 TJD T/C with Deo Ramattan (917 929 8028), a representative of Hindu Temple where reported tank test failure was reported approximately 15 years ago. Temple was previously a synagogue and was converted to gas in approximately 2000 - UST's were then abandonned. No records are available. Original TTF report by ProTest does not indicate if failure was due to wet/dry leak. Options to resolve open spill were discussed with caller including soil borings around tanks or removal of tanks and direct observation. Caller is attempting to locate historical documentation and will be obtaining price quotes to perform additional investigation as discussed. 2/12/15 TJD Spill reassigned from DeMeo to Patel 03/27/15-Hiralkumar Patel. alternate address for building 153-14: none no other spill record found. PBS #: 2-117153. as per PBS record, building 153-14 has one (1) 1,500 gal #2 oil UST, closed-in-place in Sep. 1999. as per tank testing result dated 12/17/1998 (stored on edoc), Protest tested two 2,000 gal #2 oil tanks (64 inch diameter). searched PBS database with owner's name American Sevashram, Inc. and found another PBS record (# 2-117145) for adjacent building 153-20 90th Avenue. *-* -*-*-*-*-*-*-*-*-*-* alternate address for building 153-20: 153-18 to 153-20 90th Ave no spill record found. PBS #: 2-117145. as per PBS record, building 153-20 has one (1) 3,000 gal #2 oil UST, closed-in-place in Sep. 1999. *-* -*-*-*-*-*-*-*-*-*-* as per NYC DOB record, permits were approved for both buildings (153-14 and 153-20) in Sep. 1999 for removal of existing boiler and replace it with one gas fired boiler. the tank test report from Protest states that a hole was found in vent pipe for tank #1 and big hole was found somewhere in tank #2 as can't pull vacuum in the system. based on site diagram in tank test report, tank

AMERICAN SEVASHRAM, INC. - TTF (Continued) **S103558924**

#1 was at building 153-14 and tank #2 was at building 153-20. the subject spill was reported with address 153-14 where hole was found in the vent pipe, but there is no report for tank at 153-20 where tank system failed due to hole some place in the system. America Sevashram Sangha Inc. **property owner** PH. (718) 523-7515 discussed with DEC Austin. based on available information, a site visit is needed. 04/03/15-Hiralkumar Patel. 10:30 AM:- visited site and inspected basement in both buildings 153-14 and 153-20. no signs of oil seepage or petroleum odors noted in basements. in accordance with R2 TTF closure protocol, this spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, and no information that this tank test failure will be an issue in the future."

DEC Memo:	"5/30/2012 Sangesland spoke to Donna at ABC Tank. She says ABC did the work, they will prepare a closure report and submit it as soon as the client pays. Sangesland spoke to Mark at the management company. He believes ABC did too much work and charged too much. Sangesland asked for 3 items: 1) Copy of passing tank test 2) Summary of what work was done on the tank/system to repair the leak 3) Statement that EITHER no contamination was found or Contamination was removed and clean endpoints taken . Sangesland reviewed a letter from Colonial Mgnt dated June 12, 2012. It says: As per our phone converstation please find attached the tank test report performed by ABC Tank Repair and Lining INC. back on March 12, 2012. As I (Mark Colton Colonial Mgt)stated in our discussion there was no contamination of oil into the ground. The only digging done was to the top of the tank so ABC Tank workers could access the manhole which was covered in concrete. If you need any further assistance feel free to call our office at 718-258-4288. Thank you, Mark Colton. *****Based on this note and copies of a passing tank test report Vaulted Aboveground 2500 gal tank dated 3/12/2012 by ABC Tank Christopher Quintana. This spill case is closed. 5-6-14 Dupigny - Notes from Sangesland Call Mark at Colonial Mgt. "
Remarks:	"vaulted tank - repair/retest pending"

They sent porposal to: First Reformed Church 159-29 90th Ave. Jamaica NY 11432 Attn:Imogene Williams 8/5/2009 TTF sent to: Ms. Imogene Williams First Reformed Church 159-29 90th Ave. Jamaica, NY 11432 12/24/09- Pro Test Environmental sent a letter dated November 2,2009 and result of tightness test. The letter stated the following: On February 27,2009 Pro test performed a tightness test on the above subject tank system and it failed with a dry leak. On October 9,2009, Pro test returned to excavate and isolate the tank from its associated lines. The tank only passed a test, but the vent and fill failed line test. Technicians returned on October 22nd to excavate a trench at the existing vent line and removed the old line. Pro test returned the next day to install a new vent alarm. new vent lineand new fill/stick line. Upon completion of these repairs the tank system passed a retest. There was no evidence of contamination in the excavation before it was backfilled with existing clean fill. Spill Closed "

APARTMENT BUILDING TTF (Continued) **U003389505**

back with this information. and somebody from her office will send me tank test results in email. FAX for RAcheal: (631) 462-5877. from property shark, found owner name and address as below: Michael J Savino 111-32 76 Avenue Queens NY 11375 PH. (718) 263-8707 FAX (718) 263-7816 as per Michael, property has UST. on his request, sent out copy of TTF through fax. 03/31/06-Hiralkumar Patel. Spoke at ATS and operator told me that nobody has done isolation test on site. Left message for Michael. spoke with Michael. as per him, when Advanced Tank did tank test, at that time vent pipe was broken and they haven't done any isolation test. so he thinks problem is with vent line. they have repaired this vent line and in couple of days they will do isolation test. Michael will call me with test results once he gets it. as per Michael, they only use oil when temperature goes below 15 degree, otherwise they are using gas. and they haven't noticed any loss of oil while they are running gas for last few weeks. 04/04/06-Hiralkumar Patel. Received call from Michael. as per Mike, they are measuring oil level in tank and it is steady at 25.8 cm from last 3-4 days. he will cotact someone and will do tank test and send final report. 04/17/06-Hiralkumar Patel. Received fax from Jerry Lefkowitz, Attorney representing owner, on Apr. 10. i was out for EVOC training. as per Mr. Lefkowitz, he is requesting deadline extension to May 26, 2006. Left message for Michael. Spoke with Mr. Lefkowitz and told him that he doesn't need deadline extension in written if i am getting updates on weekly basis. Spoke with Michael. as per him there is no drop in level inside the tank. told him that he can submit test results showing tank system is tight by May 25, 2006. 05/05/06-Hiralkumar Patel. Received call from Rene from Eastmond. they are doing isolation test and will call back once he gets test results. 05/10/06-Hiralkumar Patel. Received message from Mike Savino. Spoke with Mike. as per him, Eastmond found that tank is ok during isolation test. they found that fill line and vent pipe needs work. Mr. Savino is contacting other companies for work proposal. Left message for Rene. 05/11/06-Hiralkumar Patel. Left message for Rene. 05/15/06-Hiralkumar Patel. Received fax from Mr. Savino. fax contains copy of letter from Rene from Eastmond about tank only test result and estimates for further work. as per Eastmond letter, tank was passed the test but fill and vent lines needs further work. Eastmond submited proposal for fill and vent line replacement. 05/16/06-Hiralkumar Patel. Received call from Isaac. they have submitted proposal for further work, but haven't heard from owner. also he hasn't got payment for previous isolation test work. 06/05/06-Hiralkumar Patel. Left message for Isaac. Left message for Mr. Savino. 07/06/06-Hiralkumar Patel. Left message for Mr. Savino. 07/28/06-Hiralkumar Patel. spoke with operator at Mr. Savino's office. as per her, they sold this property in May 2006. Left message for Mr. Savino. New Owner: Urban American (201-553-9800). left message for Ms. Ann. received call from Mr. Savino. he will call new owner and asked to contact department. 07/31/06-Hiralkumar Patel. Mr. Savino's lawyer gave phone number for purchaser's lawyer. Peter Koffler (212) 806-5686 08/07/06-Hiralkumar Patel. left message for property manager. 08/10/06-Hiralkumar Patel. received message from Ann (201-553-9800 Ext. 48), property manager. Hydrotech is working to send required documents to the department. 09/06/06-Hiralkumar Patel. spoke with Ann Heath at Grand Review LLC. they will send documents showing work details at fill and vent lines. asked Ms. Heath to investigate along fill line as Eastmond stated that fill line need further work. Ms. Heath will submit documents within 30 days.

APARTMENT BUILDING TTF (Continued) **U003389505**

10/02/06-Hiralkumar Patel. spoke with Ann. they have hired Eastmond for soil investigation. Eastmond is waiting for permit from DOT. Ann will call back with dates when Eastmond will start working at site. 10/10/06-Hiralkumar Patel. received message from Ann (Cell: 201-726-7342). she hasn't got final schedule from Eastmond regarding soil investigation along fill line. 10/13/06-Hiralkumar Patel. received message from Ann (Ph. 201-537-5148). they got permit from DOT and she wants to discuss scope of work. left message for Ann to submit work plan as the Department never received such plan. received fax from Ms. Heath with proposed work plan. 11/02/06-Hiralkumar Patel. left message for Ms. Heath. 11/10/06-Hiralkumar Patel. left message for Ms. Heath. 11/13/06-Hiralkumar Patel. received message from Ms. Heath. she hasn't got schedule from Eastmond for required work. 11/28/06-Hiralkumar Patel. received message from Ms. Heath. Eastmond will start work tomorrow. left message for Ms. Heath to send final report at end of work. 01/05/07-Hiralkumar Patel. left message for Ms. Heath. 01/09/07-Hiralkumar Patel. received message from Ms. Heath. as per her, Rene from Eastmond has finished all work and waiting for sample analyticals from lab. once they get it, Eastmond will forward it to the Department. 02/13/07-Hiralkumar Patel. received call from Rene. they took two samples from site and found no contamination. he found leak in coupling on top of tank and no contaminated soil anywhere. asked Rene to send letter report with sample analyticals, site plan, copy of job tickets etc. 02/14/07-Hiralkumar Patel. received fax from Rene. fax doesn't include final tank test result. previously Eastmond found fill and vent line leak during isolation test. Rene mentioned in fax that they replaced coupling but no word whether other part of fill line has checked or not. left message for Rene and asked him to run tank test after such repair. 03/02/07-Hiralkumar Patel. spoke with Rene. he found leak in coupling on top of tank on fill line. no leak found anywhere else in fill line. no contamination found anywhere. asked Rene to send tank test result (after repair) and statement on site observation (about contamination). 03/13/07-Hiralkumar Patel. received statement from Rene about no contamination found along fill line and original leak was in coupling on fill line on tank. based on available documents, case closed."

Remarks: "recommend isolate"

DEC Memo:	"2/22/08 bf: Left message for David Grossman of AAG Management

RESIDENCE (Continued) **S109064141**

(212)564-7250. Sent ttf letter to: David Grossman AAG Management, Inc. 421 7th Avenue, 15th Floor New York, NY 10001 2/25/08 Received message from David Rattenberg (212)564-7250. Plan is to abandon tank. Waiting for estimates. bf 2/26/08 Called D. Rattenberg. Not in. Left message on machine. He called back. He works for D. Grossman. I faxed ttf letter to him (212)564-7512. bf 3/7/08 Received message from D. Grossman (212)564-7250. Petroleum Tank Cleaners to do work. They are starting either Tuesday or Wednesday because they need to get a sidewalk permit. bf 3/14/08 Received message and fax from Mark Salamack of Petroleum Tank Cleaners. They will be doing repair and retest work. bf 4/1/08 Spoke to D. Rattenberg. He wanted to know what is required of him to close case. I told him I need letter responding to ttf letter from PTC. He will have them send letter. bf 4/11/08 Yesterday, received message from D. Rattenberg. He wanted to know if I received paperwork for closure. I called back and left message on machine that i have not received anything as far as I know and that he can fax what he has to me. bf 4/23/08 Spoke to Vincent. Tank will be repaired soon. bf 8/27/08 On 8/21/08, received message from David Grossman. He is awaiting final report from PTC. (212)564-7250. bf 9/17/08 Received fax from Mark Salamack of PTC. Suction line failed. This line runs from the tank underground for a length of approximately 5 feet and then is aboveground inside the building. Underground pipe was exposed and no contamination or sign of leak. PID meter did not show any elevated levels of contaminats. Suction and return lines replaced. Tank passed on 3/13/08. Passing tightness test report included. NFA. bf"

Remarks: "Tank test failure... tester says it looks like an air vent leak. Will evacuate the tank and do further testing."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS #141007 NOTES: 22-JAN-2002 17:05 HOURS: WHILE ON LOCATION FOR INSPECTION FOUND APPROXIMATELY 2' X 2' NON-PCB 138 KV DIELECTRIC FLUID DRY STAIN ON SOIL AROUND FILL PORT OUTSIDE THE FENCE OF JAMAICA S.S. FOR PUMO HOUSE #2 FROM SPILL OPERATION. NO WATER INVOLVED. SPILL IS NOT CONTAINED. NO SAMPLE TAKEN. CLEANUP PENDING CREW AVAILABILITY. 6-19-02 1057hrs S. Cataro, cleanup supervisor reports that on 1/23/02 from 0800hrs-1000hrs, Passerelli used absorbant to remove any residual fluids. Removed all visible traces of oil, washed stained areas, and excavated all contaminated bluestone and soil. THe generated waste was placed in a 15gal drum. 7-18-02 1424hrs A permanent containment system was installed to prevent future leaking. 12/01/02 1700 hours As per request of the NYSDEC, subsequent to an inspection conducted 8/7/02, Clean Venture Inc contractors were secured to vactor out more bluestone from underneath the fill port for pump house #2. (5) drums of bluestone /soil were removed. The waste was analyzed and found to be nonhazardous as per LSN 02- 10689-004 to -006. Results posted below. Incident will be resubmitted for closure. It should be indicated that not all 5 drums of soil removed were of contaminated soil. The job was competitively bid to remove a 2' x 4' x 3' area of soil. The area around the fill port had been cleaned prior, and only exhibited superfiscial contamination around the edges of the piping prior to excavation. ECB COMPLETED CLEAN UP AND PLACED REMIDATED BLUESTONE IN DRUM FOR REMOVAL FROM STATION ON 17-APR-1998 @ 16:00 HRS. PCB COUNT IS <1PPM.REPORT UPDATED BY E2MIS RHEIN #52639 Based on a conversation between Christine Kovari and Jane O'Connell of NYSDEC on the morning of 8/26/98 concerning Jamaica transformer #4, Jane updated old DEC spill number 9704867 (our e2MIS incident #109597). This was a result of the detection of old stained soil by our Construction group subsequent to the removal of bluestone in the immediate area of Jamaica TR#4. This work was being undertaken as part of a moat installation project to provide secondary containment for TR#4. Construction is currently in the process of soliciting bids to do the excavation/cleanup work. Report entered by P Sudol #80493 9/27/98 at 1900 hours. 23-MAR-1999 11:45 AFTER CONFERRING WITH ENVIRONMENTAL SPECIALIST PETER SUDOL, IT WAS AGREED UPON THAT THIS REPORT SHOULD BE CLOSED AND THAT ANY ADDITIONAL INFORMATION SHOULD OBTAINED FROM E2MIS #106597."
