VOC..... Volatile Organic Compounds

Executive Summary

Roux Environmental Engineering and Geology, D.P.C. (Roux), on behalf of 3532 CPB LLC (the Volunteer), has prepared this Remedial Investigation Report (RIR) for the property located at 35-32 College Point Boulevard in Flushing, Queens, New York (Site), as shown on **Figure 1**. The Site was investigated to prepare for remediation under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP). The Volunteer executed a Brownfield Cleanup Agreement (BCA) Index No. C241262-05-23 with NYSDEC on July 14, 2023, and the Site was assigned BCP Site number C241262.

The Site address is 35-32 College Point Boulevard, Flushing, New York, and consists of Tax Block 4963, Lot 212 and encompasses approximately 0.92 acres (40,000 square feet), as shown on **Figure 2**. The Site is zoned as M1-2/R7-1, which allows for residential use. Most of the Site is vacant, however approximately 20,000 square feet (ft) in the northeast corner is being used as a materials storage yard for the neighboring building materials supply store and a two-story building is present in the northeast corner of the Site. The Site cover primarily consists of sparsely vegetated bare soil near the waterfront and concrete or asphalt within all other areas on Site (**Figure 3**).

Analytical data generated during the Remedial Investigation (RI) was compared to the Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Use Soil Cleanup Objectives (RRSCOs), and the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) as defined in 6 NYCRR Part 375-6-8(a-b) in order to evaluate remediation Track cleanup options in consideration of the development plans.

This RIR summarizes the findings of the following reports and investigations: Limited Environmental Investigation, prepared by Roux Associates, Inc., prepared for Fulton/Max International (Holdings), Inc., dated September 6, 2007, Phase I Environmental Site Assessment (ESA), prepared by Roux Associates, Inc., prepared for Youngwoo & Associates, LLC, dated May 29, 2013, Remedial Action Work Plan (RAWP) and Health & Safety Plan (HASP), prepared by G.C. Environmental, Inc. (GCE) prepared for Willets Point Asphalt Corp. dated August 9, 2016, Groundwater Monitoring Report, prepared by GCE, prepared for Willets Point Asphalt Corp., dated December 12, 2016, Phase I ESA, prepared by Roux, prepared for 3532 CPB LLC, dated July 23, 2019, and the NYSDEC BCP Eligibility Sampling, prepared by Roux, prepared for 3532 CPB LLC, in May 2021 (Roux 2021 Investigation).

The purpose of the RI is to determine the nature and extent of contamination at the Site, fill any potential data gaps in past investigations, characterize environmental media, qualitatively assess the potential exposure of receptors to Site contaminants, and develop any other additional data necessary to support the development of a RAWP.

The RI was completed in accordance with the NYSDEC-approved Remedial Investigation Work Plan (RIWP) for the Site, dated April 24, 2024, the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation (NYSDEC, May 2010), and/or the New York State Department of Health's (NYSDOH's) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006 and the Revisions from 2017 and 2024 (NYSDOH SVI Guidance). The RI sampling locations are shown in **Figure 4**. The groundwater contour map is provided in **Figure 5**. The results of the RI for soil, groundwater and soil vapor are presented in **Figures 6, 7 and 8**.

A tidal wetland adjacent area was identified on a portion of the Site; remedial work approved under a Decision Document will be completed with a permit waiver or permit equivalence from NYSDEC Department of Environmental Remediation (DER). Fish and wildlife resources were not identified, therefore, a fish and wildlife assessment was not necessary to include in this RIR.

Significant Threat

The NYSDEC and NYSDOH have not yet determined if the Site poses a significant threat to human health and the environment.

Site Description/Physical Setting

The Site use as a building material storage area has remained consistent since 2008. A Site location map is included as **Figure** 1, a tax map is provided as **Figure 2,** and a land use map is provided as **Figure 3**.

Property Location	
Site Name:	4 Fulton Square
Property Address:	35-32 College Point Boulevard
Property Town, County, State:	Flushing, Queens, New York
Property Tax Identification:	Block 4963 and Lot 212
Property Topographic Quadrangle:	United States Geological Survey (USGS) -Queens, New York
Nearest Intersection:	36th Ave and College Point Boulevard
Area Description:	The area around the Site is predominantly commercial and industrial in the Flushing neighborhood of Queens, New York. The Site is bounded to the north by commercial/industrial properties, to the south by a vacant lot (Lot 252) also owned by 3532 CPB LLC, commercial properties including a U-Haul center and automotive repair facility, to the east by College Point Boulevard, and to the west by the Flushing River. The Site is located in a Brownfield Opportunity Area (BOA) and an EN-zone. Based upon the City Environmental Quality Review (CEQR) No.20DCP083Q for the Special Flushing Waterfront District, there is also an E designation (E-557) for noise and hazardous materials on the Site.

Property Information	
Property Acreage:	0.92 (40,000 square feet) acres
Property Shape:	Irregular
Property Use:	Most of the Site is vacant, however approximately 20,000 square ft in the northeast corner is being used as a materials storage yard for the neighboring building materials supply store.
Improvements:	There is a two-story building situated in the northeastern corner of the Site adjacent to College Point Boulevard. The Site is fenced off with chain-linked fence.

Summary of Proposed Redevelopment Plan

The redevelopment plans are in the preliminary planning stages. The anticipated redevelopment for the Site is mixed use which would include, commercial, mechanical and residential lobby space on the ground floor, residential apartments above the ground floor consisting of approximately 30 percent affordable housing, below grade parking and public open space along a shore-front public walkway.

Summary of Remedial Investigation

The field activities completed during the RI included the following:

- The advancement of 10 soil borings, collection of 20 soil samples for laboratory analysis;
- Installation of five groundwater monitoring wells, collection of five groundwater samples for laboratory analysis;
- Installation of five soil vapor monitoring points and collection of five soil vapor samples for laboratory analysis; and
- The collection of groundwater level measurements and the collection of additional land survey data for developing a groundwater elevation contour map.

The following is a summary of the geological and hydrogeological findings, the soil, groundwater, and soil vapor data generated during the RI.

Local Geology and Stratigraphy

Based on the field observations during the RI implementation, the Site is underlain by fill (consisting of sand, gravel, brick, asphalt, concrete, organics, and plastic) to depths ranging from 0 to 6 ft below land surface (bls). Obstructions were encountered at depths ranging from 0 to 5 ft bls, potentially associated with either subsurface structures, concrete or asphalt. The underlaying native material is generally comprised of sand with varying minor amounts of gravel, silt, clay, peat, and shells. Based on the Bedrock-Surface Elevation and Overburden Thickness Maps of the Five Boroughs, New York City, New York, prepared by the USGS, bedrock within the area of the Site could be as deep at 200 ft bls.

Site Hydrogeologic Setting

According to water-level data collected as part of the RI from the permanent wells on July 1, 2025, the elevation of the water table surface at the Site ranges from approximately 3 ft to 6 ft relative to the North American Vertical Datum of 1988 (NAVD 88), which equates to a groundwater depth of approximately 4.5 to 6.5 ft bls. Groundwater flow is generally to the west, towards the bulkhead and Flushing Creek (**Figure 5**).

Soil, Groundwater, and Soil Vapor Quality

- The only volatile organic compound (VOC) detected in soil at a concentration exceeding the UUSCOs and PGWSCOs was acetone, there were no exceedances of the RRSCOs. Acetone was not detected in groundwater in exceedance of the NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs), which indicates that acetone in soil is not impacting groundwater. There were eight other VOCs detected in groundwater above the AWQSGVs in two monitoring wells located in the south and central area of the Site. The analytes detected (1,2,4-trimethylbenzene, benzene, ethylbenzene, isopropylbenzene (cumene), n-butylbenzene, n-propylbenzene, sec-butylbenzene and tert-butyl methyl ether) are indicative of residual petroleum contamination from prior releases identified under the prior spill numbers but not fully addressed during prior remedial activities conducted by others.

- Semi-volatile organic compounds (SVOCs), 1,4-dioxane and polycyclic aromatic hydrocarbons (PAHs), were detected at concentrations above the UUSCOs, RRSCOs, and PGWSCOs in the fill material present across the Site. SVOCs 1,4-dioxane and naphthalene were detected in two groundwater samples at concentrations above the AWQSGVs. Although 1,4-dioxane was present in both soil and groundwater samples, it was not detected at co-located soil boring/groundwater monitoring well locations. These SVOC exceedances of AWQSGVs can be indicative of either prior petroleum releases or of historical fill.
- Metals were detected in soil at concentrations above the UUSCOs for total chromium, copper, lead, and mercury. There were two detections at one location exceeding the RRSCOs for hexavalent chromium and mercury. There were no exceedances of the PGWSCOs in soil, indicating that metals in soil are not a source of groundwater contamination at the Site. All of the metals detected in groundwater at concentrations above AWQSGVs in the filtered samples are naturally occurring.
- Polychlorinated biphenyls (PCBs), pesticides, and herbicides were not detected in soil or groundwater.
- Per- and polyfluorinated Substances (PFAS) compounds were detected above NYSDEC Guidance Values (GVs) for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS) in soil and groundwater samples. However, based on concentrations detected during the RI, the presence of PFAS at this Site is most likely due to background levels of these compounds ubiquitous to the New York City area.
- Petroleum-related and chlorinated VOCs were detected in all six soil vapor samples. The concentrations of petroleum-related and chlorinated VOCs, combined with the relatively low concentrations of these compounds in groundwater and soil, indicate there are either prior petroleum releases or historical fill impacts . Soil vapor intrusion is a concern for the Site and mitigation measures will be proposed in the RAWP.

Qualitative Human Health Exposure Assessment

The following table summarizes the exposure assessment.

Environmental Media and Exposure Route	Human Exposure Assessment
Direct contact with subsurface soils (and incidental ingestion)	• Construction and remedial contractors can come into contact with soil if they complete ground intrusive work at the Site. • During remediation, remedial workers, trespassers, passersby, and utility workers could come into contact with contaminated soil contained in dust through inhalation, incidental ingestion, and dermal contact. Implementation of the HASP, Community Air Monitoring Plan (CAMP), and dust controls during the remedial action and any future ground intrusive activities will mitigate potential exposures for future occupants of the Site and surrounding neighborhood. • Future exposure will be addressed by the proposed redevelopment that covers the entire Site (asphalt, concrete and or/two feet of clean fill) and will act as the site cover system.
Ingestion of groundwater	• Groundwater is not and will be not used for drinking water, as any future buildings proposed on the Site will be connected to the public water supply.
Direct contact with groundwater (and incidental ingestion)	• Remedial workers, trespassers, and utility workers could come into contact with contaminated groundwater through dermal contact and incidental ingestion during ground intrusive work. • Proper PPE and personal hygiene measures, as defined in the HASP, will be required to prevent dermal contact and the potential for incidental ingestion impacted groundwater during construction.

Environmental Media and Exposure Route	Human Exposure Assessment
	• Future exposure to Site groundwater will be eliminated by the presence redevelopment that covers the entire Site.
Inhalation of air (exposures related to soil vapor intrusion)	• Remedial workers, trespassers, and utility workers may be exposed to contaminated soil vapor during ground intrusive activities beneath all buildings. • Exposures to workers and passersby during the remedial action and future ground intrusive activities will be reduced or eliminated through implementation of the HASP, CAMP, and odor/vapor controls during construction. • Soil vapor intrusion is a concern for the Site and mitigation measures will be proposed in the RAWP. Future exposure and the potential for vapor intrusion into the future building will be mitigated by the installation of a vapor barrier and passive SSDS that may be activated based on the results of a post-remedial SVI investigation.

1. Introduction

Roux Environmental Engineering and Geology, D.P.C. (Roux), on behalf of 3532 CPB LLC (the Volunteer), has prepared this Remedial Investigation Report (RIR) for the property located at 35-32 College Point Boulevard in Flushing, Queens, New York (Site), as shown on **Figure 1**. The Site was investigated to prepare for remediation under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP). The Volunteer executed a Brownfield Cleanup Agreement (BCA) Index No. C241262-05-23 with NYSDEC on July 14, 2023, and the Site was assigned BCP Site number C241262.

The Site address is 35-32 College Point Boulevard, Flushing, New York, and consists of Tax Block 4963, Lot 212 and encompasses approximately 0.92 acres (40,000 square feet), as shown on **Figure 2**. The Site is zoned as M1-2/R7-1, which allows for residential use. Most of the Site is vacant, however approximately 20,000 square feet in the northeast corner is being used as a materials storage yard for the neighboring building materials supply store and is a two-story building present in the northeast corner of the Site. The Site cover primarily consists of sparsely vegetated bare soil near the waterfront and concrete or asphalt within all other areas on Site (**Figure 3**).

Analytical data generated during the Remedial Investigation (RI) was compared to the Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Use Soil Cleanup Objectives (RRSCOs), and the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) as defined in 6 NYCRR Part 375-6-8(a-b) in order to evaluate remediation Track cleanup options in consideration of the development plans.

This RIR summarizes the findings of the following reports and investigations: Limited Environmental Investigation, prepared by Roux Associates, Inc., prepared for Fulton/Max International Holdings, Inc., dated September 6, 2007, Phase I Environmental Site Assessment (ESA), prepared by Roux Associates, Inc., prepared for Youngwoo & Associates, LLC, dated May 29, 2013, Remedial Action Work Plan (RAWP) and Health & Safety Plan (HASP), prepared by G.C. Environmental, Inc. (GCE) prepared for Willets Point Asphalt Corp. dated August 9, 2016, Groundwater Monitoring Report, prepared by GCE, prepared for Willets Point Asphalt Corp., dated December 12, 2016, Phase I ESA, prepared by Roux, prepared for 3532 CPB LLC, dated July 23, 2019, and the NYSDEC BCP Eligibility Sampling, prepared by Roux, prepared for 3532 CPB LLC, in May 2021 (Roux 2021 Investigation).

The purpose of the RI is to determine the nature and extent of contamination at the Site, fill any potential data gaps in past investigations, characterize environmental media, qualitatively assess the potential exposure of receptors to Site contaminants, and develop any other additional data necessary to support the development of a RAWP.

The RI was completed in accordance with the NYSDEC-approved Remedial Investigation Work Plan (RIWP) for the Site, dated April 24, 2024, the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation (NYSDEC, May 2010), and/or the New York State Department of Health's (NYSDOH's) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006 and the Revisions from 2017 and 2024 (NYSDOH SVI Guidance). The RI sampling locations are shown in **Figure 4**. The groundwater contour map is provided in **Figure 5**. The results of the RI for soil, groundwater and soil vapor are presented in **Figures 6, 7 and 8**.

A tidal wetland adjacent area was identified on a portion of the Site; remedial work approved under a Decision Document will be completed with a permit waiver or permit equivalence from NYSDEC DER. Fish and wildlife resources were not identified, therefore, a fish and wildlife assessment was not necessary to include in this RIR.

1.1 RIR Organization

This RIR contains the following sections:

- Section 2 – Describes the Site, its history, and results of previous environmental investigations;
- Section 3 – Describes the completed RI field work activities;
- Section 4 – Summarizes the RI laboratory analytical results;
- Section 5 – Provides a Conceptual Site Model (CSM) explaining the occurrence of contaminant sources and their fate and transport at the Site in the context of the local Site stratigraphy and hydrogeology;
- Section 6 – Provides a qualitative exposure assessment that evaluates exposures to contaminated media including soil, groundwater, and soil vapor; and
- Section 7 – Provides a summary of the RI.

Tables, figures, plates, and appendices are provided, which summarize all RI investigation locations, analytical data, and results of sampling efforts as well as the proposed remedial areas.

1.2 Site Location and Description

The Site address is 35-32 College Point Boulevard in the Borough of Queens, City and State of New York (**Figure 1**). A tax map is presented as **Figure 2**.

Additional information regarding the Site is provided in the tables below:

Property Location	
Property Name:	4 Fulton Square
Property Address:	35-32 College Point Boulevard
Property Town, County, State:	Flushing, Queens, New York
Property Tax Identification:	Block 4963 and Lot 212
Property Topographic Quadrangle:	United States Geological Survey (USGS) -Queens, New York
Nearest Intersection:	36th Ave and College Point Boulevard
Area Description:	The area around the Site is predominantly commercial and industrial in the Flushing neighborhood of Queens, New York. The Site is bounded to the north by commercial/industrial properties, to the south by a vacant lot (Lot 252) also owned by 3532 CPB LLC, commercial properties including a U-Haul center and automotive repair facility, to the east by College Point Boulevard, and to the west by the Flushing River. The Site is located in a Brownfield Opportunity Area (BOA) and an EN-zone. Based upon the City Environmental Quality Review (CEQR)

Property Location	
	No.20DCP083Q for the Special Flushing Waterfront District, there is also an E designation (E-557) for noise and hazardous materials on the Site.

Property Information	
Property Acreage:	0.92 acres (40,000 square feet)
Property Shape:	Irregular
Property Use:	Most of the Site is vacant , however approximately 20,000 square ft in the northeast corner is being used as a materials storage yard for the neighboring building materials supply store.
Improvements:	There is a two-story building situated in the northeastern corner of the Site adjacent to College Point Boulevard. The Site is fenced off with chain-linked fence.

1.3 Contemplated Redevelopment Plan

The redevelopment plans are in the preliminary planning stages. The anticipated redevelopment for the Site is a residential affordable housing project which would include, commercial, mechanical and residential lobby space on the ground floor, residential apartments above the ground floor consisting of approximately 30 percent affordable housing, below grade parking and public open space along a shore-front public walkway.

1.4 Description of Surrounding Property

The area surrounding the Site is urban and developed with low to high-rise multi-family residential buildings, commercial and office buildings, and mixed use residential and commercial properties (**Figure 3**). The Site is bounded to the north by commercial/industrial properties, to the south by a vacant lot (Lot 252) also owned by 3532 CPB LLC, commercial properties including a U-Haul center and automotive repair facility, to the east by College Point Boulevard, and to the west by the Flushing River. The Site is located in a BOA and an EN-zone.

2. Background

The following sections provide pertinent background information, including the documented history of the Site, and the results of previous environmental investigation work conducted at the Site.

2.1 Historic Land Uses

Review of historical Sanborn Maps reveal historical use of the Site for coal storage predating 1886 until 1980. Following its use for coal storage, in 1980 the Site is depicted as an asphalt plant with two asphalt tanks and a two-story office located in the northeastern corner of the Site. Willets Point Contracting Corporation/Willets Point Asphalt Corporation owned and operated the Site until the Site was sold to TDC Development & Construction Corporation (TDC) in 2008. TDC leased the Site for storage for lumber, scrap metal, and building materials until 2013 when the property was sold to YWA College Point LLC. The Site was sold to 3532 CPB LLC in 2016. The use of the Site by tenants for building material storage has remained consistent since 2016.

2.2 Topography

A review of the USGS Flushing, New York 7.5-minute series topographic quadrangle map and Site-specific survey indicated that the topography of the Site and surrounding area slopes to the west, towards Flushing Creek. The Site elevation ranges from approximately 12 ft to 9 ft, referenced to North American Vertical Datum of 1988 (NAVD 88).

2.3 Wetland Areas and Surface Water Bodies

The Site is located east of Flushing Creek and lies within the 100-year flood zone. Regulated tidal wetlands and tidal wetland adjacent area (TWAA) are present on Lot 249, which is part of the property but not part of the Site. The Site also contains TWAA and will require a permit for the proposed development within the TWAA.

2.4 Local Geology and Stratigraphy

Based on the field observations during the RI implementation, the Site is underlain by fill (consisting of sand, gravel, brick, asphalt, concrete, organics, and plastic) to depths ranging from 0 to 6 ft below land surface (bls). Obstructions were encountered at depths ranging from 0 to 5 ft bls, potentially associated with either subsurface structures, concrete or asphalt. The underlaying native material is generally comprised of sand with varying minor amounts of gravel, silt, clay, peat, and shells. Based on the Bedrock-Surface Elevation and Overburden Thickness Maps of the Five Boroughs, New York City, New York, prepared by the USGS, bedrock within the area of the Site could be as deep at 200 ft bls.

2.5 Hydrogeology

Groundwater flow is generally to the west towards Flushing Creek, as shown on the groundwater contour map included as **Figure 5.**

2.6 Historical Environmental Reports

This section provides an overview of previous environmental-related activities completed at the Site, based on a review of readily available information and the following environmental investigations.

- Limited Environmental Investigation, prepared by Roux Associates, Inc., prepared for Fulton/Max International Holdings, Inc., dated September 6, 2007

- Phase I ESA, prepared by Roux Associates, Inc., prepared for Youngwoo & Associates, LLC, dated May 29, 2013
- RAWP and HASP, prepared by GCE, prepared for Willets Point Asphalt Corp. dated August 9, 2016
- Groundwater Monitoring Report, prepared by GCE, prepared for Willets Point Asphalt Corp., dated December 12, 2016
- Phase I ESA, prepared by Roux, prepared for 3532 CPB LLC, dated July 23, 2019
- NYSDEC BCP Eligibility Sampling, performed by Roux, prepared for 3532 CPB LLC, in May 2021

A summary of the findings from assessments of the Site is provided below. These reports are provided in **Appendix A**.

2.6.1 Limited Environmental Investigation, prepared by Roux, dated 2007

The Roux Limited Environmental Investigation Report provided a summary of historical reports as follows: The Phase I ESA report prepared by Hydro-Tech in 2007, identified several recognized environmental conditions (RECs), which are conditions indicating a past release, existing release, or material threat of a release of hazardous substances or petroleum products onsite. The identified RECS included historical presence of gasoline-containing underground storage tanks (USTs) onsite, existing oil-containing USTs at the Site, soil staining and the use of the Site as an asphalt plant. A Phase II investigation was conducted by Spectra Environmental Group, Inc., dated February 2007, to evaluate RECs identified in the Hydro-Tech 2007 Phase I ESA. The Phase II investigation included the installation of eight soil borings and three groundwater monitoring wells across the Site. The results of the soil and groundwater sampling did not reveal significant impacts. One of eight soil samples contained concentrations of volatile organic compounds (VOCs) slightly exceeding NYSDEC Recommended Soil Cleanup Objectives (RSCOs) for ethyl benzene and xylenes. One of three groundwater samples slightly exceeds its NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs) for methyl tertiary butyl ether (MTBE). Soil staining associated with the historical use of the Site as an asphalt plant was present.

Removal of USTs

On August 24, 2007, Roux oversaw the removal of three oil-containing USTs from the Site. Two 1,000-gallon and one 10,000-gallon USTs were excavated by Tully Environmental Inc. and all three USTs passed integrity testing and were deemed “tight”. Upon removal, no holes or leaking product was observed by Roux. Evidence of the historical gasoline-containing UST was not identified during the Roux Limited Environmental Investigation nor were Site personnel aware of any existing gasoline-containing USTs onsite.

Soil Sampling

Roux collected two soil samples from the 10,000-gallon UST excavation pit and one soil sample from each of the 1,000-gallon UST excavation pits. The four soil samples were analyzed in accordance with NYSDEC Spill Technology and Remediation Series (STARS) guidelines for VOCs using laboratory method 8021 and semivolatile organic compounds (SVOCs) laboratory method 8270. Based on lab results, no VOCs or SVOCs were detected at concentrations above the NYSDEC RSCOs.

Groundwater Sampling

Roux installed three temporary groundwater monitoring wells (MW-1 through MW-3) to evaluate groundwater quality at the Site. Well MW-1 was installed hydraulically downgradient of the 10,000-gallon UST excavation pit, MW-2 was installed on the northwest section of the Site and MW-3 was installed on the southwest section

of the Site. Monitoring wells MW-1 and MW-2 were not sampled as per NYSDEC sampling protocol due to floating product (liquid phase petroleum) observed in those monitoring wells. The groundwater sample collected at MW-3 was analyzed for VOCs (method 8260), SVOCs (method 8270), filtered and unfiltered metals (method 200.7) and total petroleum hydrocarbons (method 8015). Laboratory results were compared to NYSDEC AWQSGVs and revealed no VOCs or metals (filtered) at concentrations exceeding their AWQSGVs. Several SVOCs (specifically polycyclic aromatic hydrocarbons [PAHs]) were detected at concentrations exceeding their respective AWQSGVs.

2.6.2 Phase I Environmental Site Assessment, prepared by Roux, dated May 2013

In May 2013, Roux completed a Phase I ESA to further identify potential RECs at the Site. Based on the information gathered in the Phase I ESA process, Roux identified the following two RECs in connection with the Site: former Site use and offsite sources of groundwater contamination, additional information is provided as follows.

Former Site Use

According to the Sanborn fire insurance maps, the Site was utilized for coal storage from sometime prior to 1886 until 1980. In addition, two open/active spill numbers 8704514 and 8705123 were assigned to former businesses including Willets Point Asphalt and were considered open/active according to the NYSDEC.

Offsite Sources of Groundwater Contamination

According to review of previous investigation reports, several upgradient offsite groundwater monitoring wells have been impacted and therefore groundwater beneath the Site may also be impacted as a result. A previous investigation documented the removal of former USTs and contaminated soil at the Site. Additional sampling was suggested to further confirm or deny impacts to the Site.

The Phase I ESA also identified additional potential environmental concerns at the Site that could potentially impact subsurface conditions. These concerns include information suggesting that the Site is most likely underlain by historical fill material from an unknown origin. Other environmental issues discovered during the Phase I ESA environmental report review include several underground transformers noted on the sidewalk, immediately east of the Site, the size and contents of the transformers could not be confirmed at the time of the Site reconnaissance, and portions of the building were lit by fluorescent lighting, which may have polychlorinated biphenyls (PCBs)-containing ballasts considering the age of the building (construction prior to 1980). In accordance with ASTM E1527-05, Roux did not inspect the ballasts for PCB content during the Site reconnaissance.

2.6.3 Remedial Action Work Plan and Health & Safety Plan, G.C. Environmental, Inc. prepared for Willets Point Asphalt Corp, dated August 9, 2016

The RAWP prepared by GCE dated August 9, 2016, described limited Site investigation work that was completed along with subsequent hot spot soil removal. Hot spot excavation work was completed by Willets Point Asphalt Corp (WPA) to remove shallow petroleum impacted soils identified in the center of the Site during the Limited Phase II Investigation- GCE (2011).

Excavation of approximately 37 cubic yards of impacted soils was completed within an area 24 ft wide by 18 ft long by 30 inches deep. GCE collected confirmatory end point samples and side wall samples from this excavation. Following sampling results receipt, the excavation was backfilled with clean sand. Although a

figure of the excavation area was not provided in the RAWP, the estimated location of this excavation was based on the location of the excavation in documentation photos.

The RAWP included the following requirements:

- Install a total of up to five monitoring wells to investigate the potential for offsite migration of contaminants and to verify horizontal and vertical extent of contamination. Out of five wells, three wells are proposed to be installed along the Flushing Creek property boundary (MW-1, MW-2 & MW-3) and two wells along the Site sidewalk (MW-5 & MW-6).
- Permanent 4-inch wells will be installed to a depth of approximately 10 feet below the water table and screened across the water table.
- Gauge free product thickness measurements (if identified) from newly installed wells MW-1, MW-2, MW-3, MW-5, MW-6 and existing offsite well MW-41A.
- Monitoring free product recovery if separate phase product is identified in the wells and any measurable product will be removed using passive means (absorbent socks) or by manual bailing.
- Monitoring if no separate phase product is identified in the wells, will be done on a quarterly basis and adjusted accordingly with Department approval and based on the presence or absence of such product.
- The remedial activity will continue until such time as product is no longer measurable in the wells for a period of 12 months or the current site owner begins site development and soil excavation at which time the onsite wells will be abandoned.

2.6.4 Groundwater Monitoring Report, prepared by G.C. Environmental, Inc for Willets Point Asphalt Corp., dated December 12, 2016

Groundwater monitoring was completed by CGE in accordance with the NYSDEC requested scope of work as stated in the NYSDEC's Corrective Action Plan of Order on Consent dated March 18, 2016, and approved RAWP, dated April 15, 2016. GCE initiated five borings and monitoring wells at locations MW-1, MW-2, MW-3, MW-5 and MW-6 to a depth of approximately 15 ft bls to investigate the potential for offsite migration of contaminants and to verify horizontal and vertical extent of contamination. Groundwater samples were collected from the five newly installed monitoring wells and one existing well at the groundwater interface. Olfactory signs of contamination were detected in samples MW-5, and MW-6. Approximately 8 inches of free product was observed in the existing upgradient offsite monitoring well MW-41A. No indications of contamination were observed in samples from MW-1, MW-2 and MW-3.

Methylene chloride was detected above the NYSDEC AWQSGVs in monitoring wells, MW-1, MW-2 and MW-3. The following VOCs were detected above the AWQSGVs at locations MW-5, MW-6 or MW-41, 1,2,4,5-tetramethylbenzene, isopropylbenzene, methylene chloride, n-butylbenzene, sec-butylbenzene, tert-butylbenzene. The following SVOCs were detected above the AWQSGVs at locations MW-5, MW-6 or MW-41, acenaphthene, anthracene, bis(2-ethylhexyl)phthalate, chrysene, fluorene, phenanthrene, and pyrene.

Groundwater monitoring of the wells was recommended to continue quarterly.

2.6.5 Phase I Environmental Site Assessment 35-32 College Point Boulevard Queens, New York, Roux, 2019

In July 2019, Roux completed a Phase I ESA for 35-32 College Point Boulevard Queens, New York on behalf of 3532 CPB LLC. Based on the information gathered during the Phase I ESA process, Roux identified the following RECs specific to the Site:

- Historical Site Usage: The proposed BCP Site area was historically utilized as a coal yard, masonry yard, asphalt plant, scrap recycler, and for construction storage. Historically, impacts to the soil and groundwater were identified near USTs.
- Offsite Sources of Groundwater Contamination: According to review of previous investigation reports, several upgradient offsite groundwater monitoring wells have been impacted and therefore, groundwater beneath the Site may also be impacted as a result. Environmental uses of concern have been situated hydraulically upgradient and include multiple auto repair shops, multiple unspecified junkyards, electric substations, machine shops and parking/ storage lots.
- Presence of Closed NYSDEC Spills: Upon review of historical documents and environmental database listings, the Site and adjoining properties are associated with multiple closed LTANK and NY Spill listings. Upon review, all the NYSDEC spills have been administratively closed. As such, the presence of closed NY Spills and LTANK listings for the Site and surrounding area should be considered Historical Recognized Environmental Conditions (HRECs).
- Presence of Urban Fill Material: Based upon historical information reviewed and the proximity of the Site to Flushing Creek, it is likely the Site is underlain by historical fill material.

The Phase I ESA environmental report review includes several underground transformers noted on the sidewalk, immediately east of the Site, the size and contents of the transformers could not be confirmed at the time of the Site reconnaissance, and portions of the building were lit by fluorescent lighting, which may have PCBs-containing ballasts considering the age of the building (construction prior to 1980). In accordance with ASTM E1527-05, Roux did not inspect the ballasts for PCB content during the Site reconnaissance.

Roux has not identified any Controlled Recognized Environmental Conditions (CRECs) or significant data gaps throughout the course of this Phase I ESA.

2.6.6 NYSDEC BCP Eligibility Sampling, Roux, 2021

In May 2021, Roux completed a Limited BCP Eligibility Sampling Investigation at the Site to collect soil and groundwater samples. A total of 13 soil samples were analyzed and compared to NYSDEC Part 375 RRSCOs and PGWSCOs. A total of 5 groundwater samples were collected and compared to the NYSDEC Part 703 AWQSGVs. Soil borings were advanced to depths from 10 to 15 ft bls across the Site.

Soil Results

There were detections in 9 out of 13 borings with concentrations exceeding NYSDEC Part 375 RRSCOs or PGWSCOs. The soil boring logs identified historical fill material in the lithology across the Site to depths of at least five ft bls which represents the approximate depth of the water table interface. Soils exhibited exceedances of NYSDEC Part 375 RRSCOs and NYSDEC Part 375 PGWSCOs for VOCs, SVOCs or metals throughout the center of Lot 212. Concentrations of vinyl chloride were detected in the central area of the Site above the RRSCOs and PGWSCOs. PAHs were also detected in shallow soils in the central area of the Site at three locations: SB-8, SB-9, and SB-10 with exceedances of RRSCOs and PGWSCOs. Metals, specifically arsenic, were detected in exceedance of RRSCOs and PGWSCOs and Selenium exceeded the PGWSCOs but did not exceed the RRSCOs.

Groundwater Results

A total of five two-inch PVC temporary wells were installed to collect groundwater grab samples. Measurable free product was observed in one location, SB-6 which was located hydraulically downgradient of the offsite monitoring well MW-41A (which previously contained measurable free product). The four temporary monitoring well locations were analyzed for VOCs, SVOCs, metals and emerging contaminants (ECs), whereas groundwater at location SB-6 was not sampled due to the presence of free product. The free-product at SB-6 was analyzed and identified as No. 2 fuel oil. The presence of free-product in onsite groundwater at boring locations that were not in the vicinity of the former USTs, but rather downgradient of the offsite spill is indicative that the offsite source(s) is/are continuing to impact onsite groundwater and require remediation.

VOC exceedances of NYSDEC AWQSGVs were detected in groundwater samples from SB-5_GW, and SB-7_GW. SVOC exceedances of NYSDEC AWQSGVs were detected in groundwater samples from SB-5_GW. Metals exceedances of NYSDEC AWQSGVs were detected in all groundwater samples; however, the compounds present in both total and dissolved metals samples were limited to naturally occurring compounds such as magnesium, manganese and sodium. ECs, Perfluorooctanesulfonic acid (PFOS) or Perfluorooctanoic acid (PFOA) were also detected in groundwater samples throughout the Site, above the current guidance values. PFAS was not detected above the guidance values in soil. The source(s) of PFAS could be from offsite or associated with the former asphalt operations. The AWQSGV exceedances for VOCs, SVOCs and PFOS/PFOA are likely attributable to the comingled historical onsite and offsite contamination.

Soil Vapor Results

One soil vapor sample was collected beneath the 2-story building and one indoor air sample was collected. The 2021 sampling data was retroactively compared to the 2024 NYSDOH SVI Guidance matrices. Elevated petroleum related compounds (ethylbenzene, m,p-xylene and o-xylene) were detected in soil vapor and coupled with the indoor air concentrations the current matrices recommended mitigation to minimize current or potential exposures associated with soil vapor intrusion.

3. Remedial Investigation Field Activities

The following sections summarize the work completed by Roux and its subcontractors during the RI. The scope of work was completed in accordance with the RIWP dated April 24, 2024, and associated project plans including the HASP, Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP), and Community Air Monitoring Plan (CAMP). The Previous Environmental Investigation Reports are included in **Appendix A**. The Geophysical Survey results are included in **Appendix B**. The Soil Boring and Well Construction Logs are included in **Appendix C**. Groundwater Sampling Forms are included in **Appendix D**. Soil Vapor Sampling Forms are included in **Appendix E**. All Laboratory Analytical Data is included in **Appendix F**. The Data Usability Summary Report is included in **Appendix G**. All Daily reports and CAMP reports submitted to NYSDEC during RI implementation are included in **Appendix H**. The Green and Sustainable Remediation Environmental Footprint Analysis of the RI is included in **Appendix I.** Deviations from the RIWP, including scope modifications, are noted in Section 3.10. All work was performed in accordance with NYSDEC DER-10 and the NYSDOH SVI Guidance.

3.1 Objectives

The following areas of concern (AOCs) were identified in historic documents within the Site limits:

- Soil impacts from prior historical filling and Site operations;
- Soil and groundwater impacts from comingled petroleum spills from offsite plume and residual on Site spill impacts; and
- Soil vapor impacts related to historical onsite and offsite contamination.

Based on the existing analytical data for the Site and known data gaps, the following objectives were identified in the RIWP:

- Investigate and delineate Site soils to identify source areas, if any, in soil;
- Investigate potential impacts to groundwater; and
- Investigate potential impacts to soil vapor.

Environmental data collected during the RI was used to qualitatively assess the potential exposure of receptors to Site contaminants and develop the information necessary to support the development of the RAWP.

To accomplish the objectives stated above, the RIWP scope of work approved by the NYSDEC on April 30, 2024, included the following:

- The performance of Site reconnaissance to confirm proposed sampling locations;
- The performance of a geophysical survey to identify any underground anomalies and clear boring locations of potential subsurface obstructions;
- The advancement of 10 soil borings, analysis of 20 soil samples for laboratory analysis;
- Installation of five groundwater monitoring wells, collection of five groundwater samples from the new monitoring wells for laboratory analysis;
- Installation of five soil vapor monitoring points and collection of five soil vapor samples for laboratory analysis;

- The collection of soil, groundwater, and soil vapor data sufficient to define the nature and extent of impacted media;
- The collection of groundwater level measurements and the collection of additional land survey data as needed for developing a groundwater elevation contour map; and
- The performance of a qualitative exposure assessment to identify exposure pathways and evaluate contaminant fate and transport.

All data was produced in accordance with NYSDEC Analytical Services Protocol (ASP) Category B deliverables and was reviewed and validated by Data Validation Services, a party independent of the project team, in a Data Usability Summary Report (DUSR) before being incorporated into the RIR for the Site. All data will be submitted to NYSDEC in electronic format, in accordance with DER-10, Section 1.15.

The overall scope of each component of the RI is discussed in the following subsections. Detailed field sampling procedures were provided in the QAPP/FSP (Appendix C of the RIWP). The sampling locations are shown on **Figure 4** and additional information, including intervals sampled and sample rationale, is provided below.

3.2 Site Reconnaissance and Geophysical Survey

Roux performed a preliminary Site reconnaissance. An inspection of the existing Site conditions was conducted to determine final locations of soil borings and monitoring wells based on actual field conditions. A geophysical survey was conducted over the entire Site to identify any potential subsurface utilities, conduits, or obstructions. The geophysical survey indicated the presence of unknown subsurface utilities and anomalies, potentially indicative of additional USTs or associated mechanics remaining in place from previous closures. No subsurface utilities were encountered during the RI. The results of the GPR survey are provided in **Appendix B**.

3.3 Soil Investigation

All boreholes were pre-cleared to five ft bls using non-intrusive methods, such as hand tools and/or vacuum excavation, prior to advancement of soil borings to verify the absence of utilities and/or other subsurface features (i.e., obstructions). If a utility or other feature was observed during pre-clearance activities, the sampling location was relocated as close as possible to the original location. Three soil boring locations required minor relocation, as discussed in Section 3.9.2. Soil samples were collected by hand or by utilizing a GeoProbe® Direct-Push Drill Rig. Soil was collected continuously from land surface to the bottom of the boring. During installation of the soil borings, the lithology was recorded in accordance with the Unified Soils Classification System (USCS), and soil was inspected for evidence (visual or olfactory) of contamination, including staining and/or odors, and field screened continuously for VOCs using a photoionization detector (PID) containing a 10.6 eV lamp. Soil boring logs are provided in **Appendix C**.

To further characterize the soil conditions and to delineate known contamination at the Site, a total of 20 soil samples and one field duplicate were analyzed from the 10 soil borings advanced at the locations shown in **Figure 4** as part of the RI. At each soil boring location, soil samples were collected at 2-ft intervals and 20 soil samples were submitted to the laboratory from depths ranging from 0-2 ft to 6-8 ft bls for analysis.

The sample intervals were selected for laboratory analysis at each boring location to evaluate the potential presence of soil contamination. Soil samples were collected from a depth of 0-2 ft, 4-6 ft, or 6-8 ft bls to properly evaluate exposure pathways. Samples were collected from the 0-2 ft interval and the two-foot

interval either exhibiting the greatest evidence of impact (elevated PID detections, odors, or staining), or if none were observed then two-foot interval immediately above the water table or from the two-foot interval below the proposed maximum excavation depth(s), whichever is encountered first.

Ten soil borings were advanced to characterize soil conditions in the following locations at the Site and sampled at the depths indicated:

Sample Location ID	Sample Depth Intervals (bls)	Analyses
RX-01	0-2 ft	Target Compound List (TCL)/Part 375 VOCs, SVOCs, pesticides/herbicides, PCBs, Target Analyte List (TAL)/Part 375 metals, ECs*
	4-6 ft	
RX-02/ RXMW-02	0-2 ft	
	6-8 ft	
RX-03 RXMW-03	0-2 ft	
	4-6 ft	
RX-04	0-2 ft	
	4-6 ft	
RX-05	0-2 ft	
	4-6 ft	
RX-06 RXMW-06	0-2 ft	
	6-8 ft	
RX-07	0-2 ft	
	4-6 ft	
RX-08/ RXMW-08	0-2 ft	
	6-8 ft	
RX-09	0-2 ft	
	4-6 ft	
RX-10/ RXMW-10	0-2 ft	
	4-6 ft	

*As required by NYSDEC, soil samples were analyzed for the ECs 1,4-Dioxane and PFAS, which include the 21 compounds listed in accordance with the Sampling, Analysis, and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs guidance document (NYSDEC April 2023 PFAS Guidance).

Following sample collection, boreholes that were not converted to monitoring wells were backfilled with soil cuttings and restored with like materials to surrounding grade to the extent possible to minimize drummed waste.

3.4 Groundwater Investigation

Five permanent groundwater monitoring wells (RXMW-02, RXMW-03, RXMW-06, RXMW-08, and RXMW-10) were installed at co-located soil boring locations as indicated in the embedded table in Section 3.3. The locations of the onsite monitoring wells were chosen to provide general Site coverage to confirm

groundwater flow direction. The groundwater monitoring well locations are shown on **Figure 4**. Additional monitoring well design details were provided in the QAPP/FSP in Appendix C of the RIWP.

Following installation, the permanent monitoring wells were developed to ensure proper hydraulic connection with the aquifer and to reduce/eliminate turbidity of the groundwater.

Following well development, the monitoring wells were purged consistent with USEPA low-flow sampling requirements, and one round of groundwater samples was collected one week following well installation in accordance with the QAPP/FSP. One groundwater sample was collected from each of the newly installed monitoring wells, including a field duplicate. Field parameters (e.g., pH, dissolved oxygen, oxidation-reduction potential [ORP], etc.) were collected using a water quality meter during purging and prior to sampling. Groundwater samples were analyzed for TCL/Part 375 VOCs, TCL/Part 375 SVOCs, pesticides, herbicides, PCBs, TAL/Part 375 total and dissolved metals and ECs via USEPA Method 1633. As required by NYSDEC, groundwater samples were also analyzed for the ECs 1,4-Dioxane and PFAS, which include the 21 compounds listed in the NYSDEC April 2023 Guidance. Additional details on sampling procedure were provided in the QAPP/FSP in Appendix C of the RIWP.

3.5 Soil Vapor Investigation

Five soil vapor probes were installed and six soil vapor samples, including one duplicate, were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 4. Soil vapor sampling logs are included in **Appendix E**. Methodologies used for soil vapor assessment conform to the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006 (updated February 2024).

Soil vapor samples were collected using a two-hour regulator into lab-certified Summa Canisters. A soil vapor screen was installed approximately 2 – 4 ft bls, and Teflon-lined poly tubing was used to connect the soil vapor point to the surface at each location. The soil vapor point was surrounded with sand, and then sealed from the intervals above using a bentonite seal. Prior to sampling, the integrity of the bentonite seal was tested using helium as a tracer gas. The well point was enclosed in a container that was then flooded with helium. Following the verification of the tracer gas presence in the enclosure, the sampling chain was purged and tested for the presence of the tracer gas. Upon passing the test, the Summa canisters were then connected to the soil vapor points to begin sample collection. Most soil vapor samples were completed once the summa canister pressure reached less than or equal to -4" Hg or when the sample duration reached 2-hours. In order for the sample to have sufficient remaining pressure to be analyzed at the laboratory, no summa canister pressure was allowed to drop below -2" Hg. Samples were submitted to the laboratory for VOC TO-15 analysis using proper chain of custody methods.

3.6 Laboratory Analysis

Soil, groundwater, and soil vapor samples were collected and analyzed for the parameters listed in Sections 3.2, 3.3, and 3.4. All RI data was produced in accordance with NYSDEC ASP Category B deliverables and was reviewed and validated by Data Validation Services who prepared a DUSR before being incorporated into this RIR. All data was submitted to NYSDEC in electronic format, in accordance with DER10, Section 1.15.

3.7 Surveying Assessment

All newly installed RI monitoring wells were surveyed by a New York Licensed Surveyor to obtain horizontal and vertical coordinates and grade elevations. Measuring point elevations from newly installed monitoring wells were surveyed to enable groundwater flow contouring. Horizontal coordinates were based upon New York State Plane Coordinate System, Long Island Zone, North American Datum of 1983 (NAD 83) in US Survey Ft. Vertical elevations measured for top-of-casing (measuring point) and grade elevations were referenced to NAVD 88.

3.8 Investigation Derived Waste Disposal

All soil cuttings from borings that were not converted to monitoring wells, which were generated and observed to be free from odor and staining, were returned to the respective borehole. Soil from monitoring well locations and purged groundwater was drummed, labelled, and will be disposed of during the remedial action. One drum of non-hazardous and soil and one drum of non-hazardous groundwater were generated. Onsite drums are staged onsite awaiting proper offsite disposal. All wastes generated during the RI will be handled, transported, and disposed of in a manner consistent with Federal, State, and local laws and regulations.

3.9 Community Air Monitoring Program

Roux implemented a CAMP during the entire subsurface investigation to prevent offsite migration of VOCs and particulates and protect potential offsite receptors. CAMP was conducted from June 16, 2025, through June 20, 2025, when intrusive activities were completed. The CAMP included the use of two air monitoring stations (one upwind and one downwind), each equipped with one PID and one particulate meter. No exceedances of VOCs or particulates were observed, and there were no required actions taken to mitigate dust or VOC levels at the Site. All CAMP reports were submitted via email to NYSDEC with the daily reports during the RI implementation. Daily and CAMP reports from the RI implementation are provided in **Appendix H**.

3.10 Summary of Deviations from the RIWP

The following section discusses deviations from the RIWP.

3.10.1 Additional Samples Collected

No additional samples were collected.

3.10.2 Environmental Sampling Locations and Depths

The locations of soil borings and the monitoring wells were based on the locations proposed in the RIWP; however, a few of the final locations were adjusted based on conditions encountered during the RI field implementation and are shown on **Figure 4**. Boring locations RX-01, RX-05, and RX-07 were moved slightly due to the layers of concrete and asphalt below the surface, which caused refusals.

3.11 Green and Sustainable Remediation Initiative

Green remediation principles and techniques were implemented to the extent feasible in the implementation of the RI according to DER-31 and the revised 6 NYCRR Part 375 that was adopted on December 31, 2025. The DER-31 requires that green remediation concepts and techniques be considered during all stages of the remedial program, including investigation, with the goal of improving the sustainability of the cleanup and

summarizing the net environmental benefit of any implemented green technology. The following best management practices were implemented during the RI:

- Selected service providers, product suppliers and analytical laboratories from the local area and consolidate the service and delivery schedules;
- Minimized the need for disposable single-use items such as plastic bags;
- Reduced travel through increased teleconferencing;
- Integrated sources of onsite renewable energy to power hand-held devices, portable equipment, and stationery monitoring systems;
- Utilized technologies for collecting real-time data which are non-invasive or minimally invasive (i.e., PIDs for screening, Horiba for groundwater sampling, SUMMA cannisters for soil vapor sampling);
- Reused materials whenever possible;
- Minimized equipment idling to reduce discharges of pollutants and greenhouse gases (GHGs) to the atmosphere;
- Limited the use of generators, drilling equipment, and vehicles to reduce emissions to the atmosphere;
- Minimized investigation derived waste (IDW) generated by reusing soil/fill that does not exhibit visual, olfactory, or PID evidence of contamination to backfill boreholes after sampling;
- Requested that the environmental drillers use clean diesel equipment to reduce emissions to the atmosphere; and
- Utilized public transportation to access the site during implementation of the RI, to the extent practicable.

The Green and Sustainable Remediation (GSR) environmental footprint is included in Appendix I. The GSR environmental footprint analysis is broken down into four components: site preparation, sample point installation, laboratory analyses and Site survey, and waste disposal. A summary of the estimated results for each component is detailed in the table below.

Core Element / Metric	Site Preparation	Sample Point Installation	Laboratory Analysis and Site Survey	Waste Disposal	**Total**
Refined Materials Use on-site (Tons)	0	0.2	0	0	0.2
Unrefined materials used on-site (Tons)	0	0.263	0	0	0.263
On-site non-hazardous waste disposal of off-site (Tons)	0	0	0	0.5	0.5
Water (Used on-site) (million gallons)	0	0.000055	0	0	0.000055

Core Element / Metric	Site Preparation	Sample Point Installation	Laboratory Analysis and Site Survey	Waste Disposal	**Total**
Total energy used (on-site and off-site) (Million British Thermal Units [MMBtu])	2.3	30.7	15.1	2.7	64.7
On-site grid electricity used (MMBtu)	0	1.119	0	0	1.209
On-site Nox, Sox, and PM emissions (pounds)	0	10.1	0	0	10.1
Total NOx, SOx, and PM emissions (pounds)	1.7	24.4	115.7	3.5	145.4
Total NOx emissions (pounds)	1.5	15.8	31.8	3.0	52.1
Total SOx emissions (pounds)	0.1	8.0	72.9	0.2	81.3
Total PM emissions (pounds)	0.1	0.6	11.0	0.3	12.0
Total HAP emissions (pounds)	0.1	0.3	8.0	0.0	8.4
Total greenhouse gas emissions (Tons CO2e*)	0.2	1.5	0.9	0.2	2.9

* *Total greenhouse gas emissions (in CO2e) include consideration of CO2, CH4, and N2O (Nitrous oxide) emissions*

Based on the GSR environmental footprint analysis, the largest contribution to GHG emissions was during the Sample Point Installation component with the majority of GHG emissions resulting from transportation to and from Site. The most energy used was associated with the Sample Point Installation component, mostly due to the consumable materials and equipment use required for soil boring, groundwater monitoring well, and soil vapor point installation. Total NOx, SOx, and PM10 emissions are highest for the Laboratory Analysis and Site Survey component and are due to the high number of samples requiring off-site laboratory analysis. Water consumption was kept to a minimum and total consumption was only one 55-gallon drum of purge water produced during monitoring well development and groundwater sampling activities. Electricity usage during the RI was kept to a minimum and only required during the Sample Point Installation component.

In order to minimize the GHG, NOX, SOx, and PM10 emission, the drill rig and air compressor was shut off when not in operation to reduce the idle time. In addition, the Geoprobe™ 7822DT drill rig incorporates advanced emissions control technology, such as Diesel Particulate Filter (DPF) and qualifies as clean diesel equipment reduced emissions to the atmosphere. To reduce the amount of non-hazardous waste produced during the RI, cuttings were returned to the borehole from which they were generated whenever feasible. Additionally, real time data collected during the RI used a battery powered handheld PID for soil screening and SUMMA canisters for soil vapor sampling, which are minimally invasive. Additionally, when possible, public transportation was utilized by Roux personnel and subcontractors to get to and from Site.

4. Remedial Investigation Results

The following section provides a summary of the geological and hydrogeological findings, and the soil, groundwater and soil vapor quality data that were generated by Roux during the RI. Groundwater gauging data is included as **Table 1**. Data tables with all the analytical data generated during the RI are provided in **Tables 2** through **14**. All onsite soil, groundwater, and soil vapor analytical data are presented on **Figures 6** through **8**.

4.1 Geological and Hydrogeological Conditions

The following sections provide a description of the geological and hydrogeological findings of the Site as determined by performance of the RI. A hydrogeologic investigation was conducted in an effort to evaluate the subsurface conditions that could influence the nature and extent, possible migration, and remediation of contamination at the Site.

4.1.1 Local Geology and Stratigraphy

Based on the field observations during the RI implementation, the Site is underlain by fill (consisting of sand, gravel, brick, asphalt, concrete, organics, and plastic) to depths ranging from 0 to 6 ft bls. Obstructions were encountered at depths ranging from 0 to 5 ft bls, potentially associated with prior onsite subsurface structures and previous layers of concrete and asphalt. Fill materials overlie native sand with varying amounts of gravel, silt, clay, peat, and shells. Soil boring logs are provided in **Appendix D**. Based on the Bedrock-Surface Elevation and Overburden Thickness Maps of the Five Boroughs, New York City, New York, prepared by the USGS, bedrock within the area of the Site could be as deep at 200 ft bls.

4.1.2 Site Hydrogeologic Setting

According to water-level data collected from the permanent wells on July 1, 2025, the elevation of the water table surface at the Site ranged from 3 to 6 ft NAVD 88, which equates to a groundwater depth of 4.5 to 6.5 ft bls. Groundwater gauging data is included as **Table 1**. A groundwater flow map is provided in **Figure 5** and it shows that the flow is generally to the west, towards Flushing Creek.

4.2 Remedial Investigation Sample Results

The following sections summarize soil, groundwater, and soil vapor data that was generated by Roux during the RI. Data tables showing the sample data generated during these events are provided in **Tables 2** through **14**.

4.2.1 Soil Sampling Results

A total of 20 soil samples, one field duplicate, and one matrix spike/matrix spike duplicate (MS/MSD) soil samples were analyzed from 10 soil boring locations and submitted for laboratory analysis. Site-wide analytical soil data was compared to the following December 31, 2025 revised NYSDEC Subpart 375-6 SCOs in order to evaluate Site-wide soil quality and to determine contamination in soil, if present:

- NYSDEC UUSCOs;
- NYSDEC RRSCOs; and
- NYSDEC PGWSCOs.

Laboratory analytical data generated for soil is summarized in **Tables 2** through **7**. RI soil boring locations with soil sample exceedances of the NYSDEC Subpart 375-6 SCOs are shown on **Figure 6**.

A summary of soil quality results is provided in the below sections.

4.2.1.1 Volatile Organic Compounds in Soil

The table below summarizes the RI VOC exceedances in the soil samples:

VOC Exceedances of SCOs in Soil

Analyte	UUSCO (mg/kg)	Detections above UUSCOs	RRSCOs (mg/kg)	Detections above RRSCOs	PGWSCOs (mg/kg)	Detections above PGWSCOs	Range in Concentration Above SCOs (mg/kg)	Soil Sample with Maximum Detection
Acetone	0.03	12	100	-	0.03	12	0.031-0.13	RX-07 (0-2 ft)

- No exceedances detected

This very low VOC exceedance of UUSCOs is not indicative of any source within the Site boundary. Acetone is a common laboratory contaminant and its presence within the soil samples are most commonly attributed to sample processing.

4.2.1.2 Semivolatile Organic Compounds in Soil

The table below summarizes the RI SVOC exceedances in the soil samples:

SVOC Exceedances of SCOs in Soil

Analyte	UUSCO (mg/kg)	Detections above UUSCOs	RRSCOs (mg/kg)	Detections above RRSCOs	PGWSCOs (mg/kg)	Detections above PGWSCOs	Range in Concentration Above SCOs (mg/kg)	Soil Sample with Maximum Detection (ft bls)
1,4-Dioxane (p-dioxane)	0.1	-	13	-	0.1	1	0.24	RX-01 (4-6)
Benzo[a]anthracene	1	1	1	1	1	1	5.6	RX-03 (0-2)
Benzo[a]pyrene	1	1	1	1	22	-	6.4	RX-03 (0-2)
Benzo[b]fluoranthene	1	1	1	1	1.7	1	6.9	RX-03 (0-2)
Benzo[g,h,i]perylene	0.64	1	4.9	-	1000	-	1.8	RX-03 (0-2)
Benzo[k]fluoranthene	0.8	1	3.9	-	1.7	1	3.4	RX-03 (0-2)
Chrysene	1	1	3.9	1	1	1	6.5	RX-03 (0-2)
Dibenz[a,h]anthracene	0.33	1	0.33	1	1000	-	0.67	RX-03 (0-2)
Dibenzofuran	2.1	2	18	-	110	-	3.8-4.5	RX-09 (6-8)
Indeno [1,2,3-cd] pyrene	0.5	1	0.5	1	8.2	-	2.1	RX-03 (0-2)
Phenanthrene	1.1	6	4.9	4	1000	-	1.4-8.6	RX-09 (6-8)

-No exceedances detected

The SVOCs, exclusively PAHs, detected in soil are indicative of historic fill.

4.2.1.3 Metals in Soil

The table below summarizes the RI metals exceedances in the soil samples:

Metal Exceedances of SCOs in Soil

Analyte	UUSCO (mg/kg)	Detections above UUSCOs	RRSCOs (mg/kg)	Detections above RRSCOs	PGWSCOs (mg/kg)	Detections above PGWSCOs	Range in Concentration Above SCOs (mg/kg)	Soil Sample with Maximum Detection (ft bls)
Chromium III	30	2	180	-	-	-	32.5 – 44.7	RX-05 (0-2)
Chromium, hexavalent	1	1	1	1	19	-	4.1	RX-05 (0-2)
Chromium, total	30	2	180	-	-	-	32.4 – 48.8	RX-05 (0-2)
Copper	50	2	270	-	1720	-	51.3 – 55.4	RX-05 (0-2)
Lead	63	2	400	-	450	-	48.8 - 70.6	RX-01 (0-2)
Mercury	0.18	1	0.3	1	0.73	-	0.36	RX-05 (0-2)

-No exceedances detected/no SCO available

The metals detected in soil are indicative of historic fill.

4.2.1.4 Polychlorinated Biphenyls in Soil

There were no RI PCB exceedances in the soil samples.

4.2.1.5 Pesticides and Herbicides in Soil

There were no RI pesticide or herbicide exceedances in the soil samples.

4.2.1.6 PFAS in Soil

The table below summarizes the RI PFAS exceedances of the soil cleanup guidance in the soil samples:

PFAS Exceedances in Soil

Analyte	Unrestricted Use Soil Guidance Value (µg/kg)	Detections above Unrestricted Use Soil Guidance Values	Restricted Residential Soil Guidance Value (µg/kg)	Detections above Restricted Residential Soil Guidance Values	Protection of Groundwater Soil Guidance Value (µg/kg)	Detections above Protection of Groundwater Soil Guidance Values	Range in Concentration Above Soil Guidance Values (µg/kg)*	Soil Sample with Maximum Detection (ft bls)
Perfluorooctanesulfonic acid (PFOS)	0.88	1	44	-	1	1	1.02	RX-07 (0-2)
Perfluorooctanoic acid (PFOA)	0.66	1	33	-	0.8	-	0.72	RX-07 (0-2)

* NYSDEC has published soil guidance values (not SCOs) for two PFAS compounds: Perfluorooctanoic acid (PFOA) and Perfluorooctanesulfonic acid (PFOS). These guidance values were used to evaluate concentrations of these two compounds. The other PFAS compounds do not have SCOs or guidance values.

PFOA and PFOS were only detected in one sample during the RI. Based on concentrations detected during the RI, the presence of PFAS at this Site is most likely due to background levels of these compounds ubiquitous to the New York City area.

4.2.2 Groundwater Sampling Results

A total of five groundwater samples and one field duplicate sample were collected during the RI from five permanent groundwater monitoring wells onsite. The Site-wide analytical groundwater data was compared to NYSDEC AWQSGVs for Class GA groundwater as noted in the RIWP in order to evaluate groundwater quality and to determine the contamination in groundwater, if present. However, it should be noted that the groundwater beneath the Site is not currently used as a drinking water source and will not be used in the future because drinking groundwater in New York City is prohibited by local law.

Field parameters measured during groundwater sampling purging activities are provided on field datasheets included in **Appendix D**. The field parameter data was reviewed to evaluate any potential anomalies in general groundwater chemistry that could potentially be influencing the groundwater sampling results. No anomalies were noted and the field parameters measured during purging appear to be consistent with values expected to occur in the natural environment.

Analytes that exceeded NYSDEC PGWSCOs in Site-wide soil were compared to analyte detections in Site-wide groundwater to assess whether, and to what extent, constituents detected in soil are impacting groundwater quality. An evaluation of groundwater detections is provided in the below sections.

Laboratory analytical data generated for groundwater is summarized in **Tables 8** through **13**. Monitoring well locations with groundwater sample exceedances of AWQSGVs are shown on **Figure 7**.

A summary of groundwater quality results is provided in the below sections.

4.2.2.1 Volatile Organic Compounds in Groundwater

A summary of VOC exceedances in the groundwater samples analyzed is provided below:

VOC Exceedances of AWQSGVs in Groundwater

Analyte	AWQSGVs (µg/L)	Detections above AWQSGVs	Range in Concentration Above AWQSGVs (µg/L)	Sample with Maximum Detection
1,2,4-trimethylbenzene	5	1	8.5	RXMW-10
Benzene	1	1	1.1	RXMW-06
Ethylbenzene	5	1	20	RXMW-10
Isopropylbenzene (Cumene)	5	1	26	RXMW-10
N-Butylbenzene	5	1	6.3	RXMW-10
N-Propylbenzene	5	1	30	RXMW-10
Sec-Butylbenzene	5	1	10	RXMW-10
Tert-Butyl Methyl Ether (MTBE)	10	2	24-53	RXMW-06

These VOC exceedances of AWQSGVs did not exceed the PGWSCOs in soil. The from prior releases identified under the prior spill numbers but not fully addressed during prior remedial activities conducted by others

4.2.2.2 Semivolatile Organic Compounds in Groundwater

A summary of SVOC exceedances in the groundwater samples analyzed is provided below:

SVOC Exceedances of AWQSGVs in Groundwater

Analyte	AWQSGVs (µg/L)	Detections above AWQSGVs	Range in Concentration Above AWQSGVs (µg/L)	Sample with Maximum Detection
1,4-Dioxane (P-Dioxane)	0.35	5	0.56 - 9.4	RXMW-03
Naphthalene	10	1	51	RXMW-10

These SVOC exceedances of AWQSGVs can be indicative of either prior petroleum releases or of historical fill.

4.2.2.3 Metals in Groundwater

A summary of the metals exceedances in the groundwater samples analyzed is provided below:

Metals Exceedances of AWQSGVs in Groundwater

	Analyte	AWQSGVs (µg/L)	Detections above AWQSGVs	Range in Concentration Above AWQSGVs (µg/L)	Sample with Maximum Detection
Total	Arsenic	25	1	27	RXMW-06
	Iron	300	6	634 – 36900	RXMW-10
	Magnesium	35000	2	41900 - 188000	RXMW-03
	Manganese	300	3	336 - 468	RXMW-10
	Sodium	20000	5	37100 - 1830000	RXMW-03
Dissolved	Antimony	3	1	3.3	RXMW-06
	Magnesium	35000	3	35100 - 204000	RXMW-03
	Manganese	300	1	468	RXMW-10
	Sodium	20000	6	38100 - 221000	RXMW-3

Sample counts above include exceedances in the duplicates.

All of the metals detected above AWQSGVs during the RI are naturally occurring and not indicative of an onsite source of contamination.

4.2.2.4 Polychlorinated Biphenyls in Groundwater

PCBs were not detected in any RI groundwater samples.

4.2.2.5 Pesticides and Herbicides in Groundwater

Pesticides and herbicides were not detected in any RI groundwater samples.

4.2.2.6 PFAS in Groundwater

A summary of the exceedances of the GVs for PFOS and PFOA collected during the RI are provided in the below table:

PFAS Detections in Groundwater (in nanograms per liter [ng/L]

Analyte	Proposed GVs (ng/L)	Detections Above GVs	Detection Range (ng/L)*	Groundwater Sample with Maximum Detection
Perfluorooctanesulfonic Acid (PFOS)	2.7	5	3.49 – 60.2	RXMW-06
Perfluorooctanoic Acid (PFOA)	6.7	4	28.7 – 664	RXMW-10

Sample counts above include exceedances in the duplicates.

There is no documented use of PFAS at the Site and known historical Site use that would indicate the past use of these compounds. Therefore, the presence of PFAS is due to background levels of these compounds in New York City.

4.2.3 Soil Vapor Sampling Results

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary of analytical data for soil vapor is summarized in **Table 14**. **Figure 8** shows the location and posts the values for soil vapor samples with detected concentrations.

Five soil vapor probes were installed and six soil vapor samples, including one duplicate, were collected and analyzed for VOCs via TO-15 during this RI. Concentrations of multiple petroleum-related and chlorinated VOCs were detected in all six soil vapor samples.

Regulatory guidance on soil vapor and indoor air quality is presented in Matrices A, B, C, D, E, and F from the NYSDOH SVI Guidance. While the matrices are designed for evaluation of sub-slab and indoor samples and not for pre-development soil vapor sampling, Site soil vapor detections are compared to the applicable matrices for informational purposes as summarized below.

Matrix A

- Carbon tetrachloride was detected in two soil vapor samples at concentrations ranging from 0.25 $\mu g/m^3$ to 0.26 $\mu g/m^3$, with the maximum detection at RXSV-04.
- Trichloroethene (TCE) was detected in five soil vapor samples at concentrations ranging from 2.5 $\mu g/m^3$ to 83 $\mu g/m^3$, with the maximum detection in soil vapor sample RXSV-01.
- 1,1-dichloroethene (DCE) was detected in three soil vapor samples at concentrations ranging from 1.2 $\mu g/m^3$ to 10 $\mu g/m3$, with the maximum detection in soil vapor sample RXSV-01.
- Cis-1,2-DCE was detected in four soil vapor samples at concentrations ranging from 1.8 $\mu g/m^3$ to 170 $\mu g/m^3$, with the maximum detection in soil vapor sample RXSV-01.

Matrix B

- 1,1,1-trichloroethane (1,1,1-TCA) was detected in five soil vapor samples at concentrations ranging from 1.6 J $\mu g/m^3$ to 470 $\mu g/m^3$, with the maximum detection in soil vapor sample RXSV-01.
- Tetrachloroethene (PCE) was detected in all six soil vapor samples, including the duplicate, at concentrations ranging from 0.82 J $\mu g/m^3$ to 370 $\mu g/m^3$, with the maximum detection in soil vapor sample RXSV-01.
- Methylene chloride was detected in three soil vapor samples at concentrations ranging from 1.5 J $\mu g/m^3$ to 19 $\mu g/m^3$, with the maximum detection in soil vapor sample RXSV-01.

Matrix C

- Vinyl chloride was detected in three soil vapor samples at concentrations ranging from 8.9 *µg/m³* to 140 *µg/m³*, with the maximum detection in soil vapor sample RXSV-01.

Matrix D

- 1,2,4 trimethylbenzene was detected in all six samples, including the duplicate at concentrations ranging from 580 D *µg/m³* to 1,900 D *µg/m³*, with the maximum detection in soil vapor sample RXSV-07.
- 1,3,5 trimethylbenzene was detected in all six samples, including the duplicate, at concentrations ranging from 300 D *µg/m³* to 870 *µg/m³*, with a maximum detection in soil vapor sample RXSV-07.
- 2,2,4 trimethylpentane was detected in all six samples, including the duplicate, at concentrations ranging from 40 *µg/m³* to 48,000 D *µg/m³*, with the maximum detection in soil vapor sample RXSV-07.
- Benzene was detected in all six samples, including the duplicate, at concentrations ranging from 15 *µg/m³* to 5,000 *µg/m³*, with the maximum detection in soil vapor sample RXSV-07.
- Cyclohexane was detected in all six samples, including the duplicate, at concentrations ranging from 22 *µg/m³* to 43,000 D *µg/m³*, with the maximum detection in soil vapor sample RXSV-07.
- Ethylbenzene was detected in five samples, at concentrations ranging from 62 *µg/m³* to 230 *µg/m³*, with the maximum detection in soil vapor sample RXSV-01.
- Naphthalene was detected in five samples at concentrations ranging from 3.6 *µg/m³* to 27 *µg/m³*, with the maximum detection in soil vapor sample RXSV-01.
- O-xylene was detected in all six samples, including the duplicate, at concentrations ranging from 170 *µg/m³* to 470 *µg/m³*, with the maximum detection in soil vapor sample RXSV-01.

Matrix E

- m,p-xylene was detected in all six samples, including the duplicate, at concentrations ranging from 260 *µg/m³* to 990 *µg/m³*, with the maximum detection in soil vapor sample RXSV-07.
- N-heptane was detected in all six samples, including the duplicate, at concentrations ranging from 22 *µg/m³* to 19,000 *µg/m³*, with the maximum detection in soil vapor sample RXSV-07.
- N-hexane was detected in six samples, including the duplicate, at concentrations ranging from 13 *µg/m³* to 49,000 D *µg/m³*, with the maximum detection in soil vapor sample RXSV-07.

Matrix F

- Toluene was detected in all six samples, including the duplicate, at concentrations ranging from 120 *µg/m³* to 460 *µg/m³* with the maximum detection in soil vapor sample RXSV-07.

Based upon the elevated concentrations of soil vapor in samples site wide, there are either prior petroleum releases or historical fill impacts.

4.2.4 Data Usability Summary

Data validation was performed on all data collected during the RI to determine whether the data, as presented, meets the Site-specific criteria for data quality and data use. Data qualifiers are included on the data tables. The laboratory reported the results for data in ASP Category B deliverable packages, which are provided as **Appendix F**. An electronic data deliverable (EDD) in the required NYSDEC format was provided by the laboratory. A DUSR, in accordance with Appendix 2B of DER-10, is provided in **Appendix G**.

5. Conceptual Site Model

The following section explains the occurrence of contaminants and their fate and transport at the Site in the context of the local Site stratigraphy and hydrogeology.

Based on the soil, groundwater, and soil vapor results discussed in Section 4.2, impacts at the Site were present in all media. The spatial distribution of contaminants of potential concern in various media is shown in **Figures 6** through **8**.

As discussed in Section 4.2.1 and based on the Site-wide detections and exceedances of UUSCOs and some detections above RRSCOs, soil at the Site is impacted with VOCs (acetone only, likely a laboratory contaminants), SVOCs (1,4-dioxane and PAHs), metals, and PFAS likely due to fill material materials across the Site. The fill material present across the Site is due to the Site's history of industrial uses, with industrial, demolition, and constructions materials being deposited on Site.

As discussed in Section 4.2.2, groundwater is not significantly impacted. Some SVOCs and metal exceedances were identified in both soil and groundwater; however, the analytes detected in soil and groundwater were not the same with the exception of 1,4-dioxane which did not have a co-located soil and groundwater sample. This indicates that the 1,4-dioxane detection in groundwater is not related to soil source and the 1,4-dioxane detection in soil is not a source of contamination in groundwater. The metals detected during the RI are naturally occurring and metals in soil are not a significant source of groundwater contamination at the Site.

PFAS compounds were detected in both soil and groundwater. However, the Site history does not indicate the previous use of PFAS during site operations and based on the concentrations detected during the RI, the presence of PFAS at this site is most likely due to background levels of these compounds ubiquitous to the New York City area.

During the RI petroleum-related and chlorinated VOCs were detected in all six soil vapor samples. The concentrations of petroleum-related and chlorinated VOCs, combined with the relatively low concentrations of these compounds in groundwater and soil, indicate there are either prior petroleum releases or historical fill impacts. Soil vapor intrusion is a concern for the Site and mitigation measures will be proposed in the RAWP.

6. Qualitative Human Health Exposure Assessment

As described in Appendix 3B of DER-10, *"The overall purpose of the Qualitative Human Health Exposure Assessment (or the exposure assessment) is to evaluate and document how people might be exposed to site related contaminants, and to identify and characterize the potentially exposed population(s) now and under the reasonably anticipated future use of the site."* The following section details the Qualitative Human Health Exposure Assessment based on data collected during the RI.

6.1 Soil Exposure

As described above in Section 4.2.1, soil samples collected during the RI indicated the presence of one VOC at a low-level concentration (likely a laboratory contaminant), SVOCs (1,4-dioxane and PAHs), metals, PFOS and PFOA at concentrations above the UUSCOs or GVs. An individual could be exposed to these contaminants through direct contact with Site soil during ground intrusive work at the Site. Direct contact without the use of proper personal protective equipment (PPE) and personal hygiene measures could lead to dermal contact and incidental ingestion of these compounds. Since the Site is currently fully fenced and will be fully fenced during construction activities, and access is controlled, potential contact with Site soil is restricted to remedial and construction contract workers at the Site performing ground intrusive activities in addition to trespassers and passersby (through potential particulate matter in the air). The general public will not be exposed to direct contact with Site soil. A CAMP and dust control measures (as needed) will be implemented during intrusive activities to minimize the potential for offSite exposures from soil/dust/vapor leaving the Site.

Alternatives will be evaluated and the proposed remedy to address impacted soil and meet remedial goals will be described in the RAWP. The Track 1, Track 2, and/or Track 4 remediation will evaluate potential remedial actions to remove, treat or minimize the potential for exposure by direct contact with remaining contamination by both the public and any future construction workers performing ground intrusive activities at the Site.

6.2 Groundwater Exposure

As described above in Section 4.2.2, groundwater samples collected during the RI indicated that VOCs, SVOCs, metals and PFOS/PFOA are present at concentrations above the AWQSGVs. Exceedances for dissolved metals, however, were limited to antimony, magnesium, manganese, and sodium, which are assumed to be naturally occurring. Groundwater is not used for drinking or other potable purposes (the area is connected to the public water supply), and there is no direct contact with or ingestion of groundwater by the general public. Furthermore, no public water supply wells are located in the area surrounding the Site.

Individuals who perform groundwater sampling, or remedial activities may come into contact with contaminated groundwater. Proper PPE and personal hygiene measures will be required to prevent dermal contact and the potential for incidental ingestion of these compounds. Depth to groundwater onsite is 4.44 ft bls to 6.51 ft bls and is currently anticipated to be encountered during redevelopment.

6.3 Soil Vapor Exposure

As described above in Section 4.2.3, soil vapor samples collected during the RI indicated that Petroleum-related and chlorinated VOCs were detected in all six soil vapor samples. The concentrations of petroleum-related and chlorinated VOCs, combined with the relatively low concentrations of these compounds in

groundwater and soil, indicate it is likely there may be an onsite source of soil vapor impacts or the soil vapor contamination is coming from an offsite source. Individuals who perform ground intrusive work and passersby during the remedial action may be exposed to contaminated soil vapor. A CAMP and odor/vapor control measures (as needed) will be implemented during intrusive activities to minimize the potential for offsite exposures from vapors leaving the Site during the remedial action. Soil vapor intrusion is a concern for the Site post-remediation and mitigation measures will be proposed in the RAWP.

6.4 Exposure Assessment Summary

The following table summarizes the exposure assessment.

Environmental Media and Exposure Route	Human Exposure Assessment
Direct contact with subsurface soils (and incidental ingestion)	• Construction and remedial contractors can come into contact with soil if they complete ground intrusive work at the Site. • During remediation, remedial workers, trespassers, passersby, and utility workers could come into contact with contaminated soil contained in dust through inhalation, incidental ingestion, and dermal contact. Implementation of the HASP, CAMP, and dust controls during the remedial action and any future ground intrusive activities will mitigate potential exposures for future occupants of the Site and surrounding neighborhood. • Future exposure will be addressed by the proposed redevelopment that covers the entire Site (asphalt, concrete and or/two feet of clean fill) and will act as the site cover system.
Ingestion of groundwater	• Groundwater is not and will be not used for drinking water, as any future buildings proposed on the Site will be connected to the public water supply.
Direct contact with groundwater (and incidental ingestion)	• Remedial workers, trespassers, and utility workers could come into contact with contaminated groundwater through dermal contact and incidental ingestion during ground intrusive work. • Proper PPE and personal hygiene measures, as defined in the HASP, will be required to prevent dermal contact and the potential for incidental ingestion impacted groundwater during construction. • Future exposure to Site groundwater will be eliminated by the presence redevelopment that covers the entire Site.
Inhalation of air (exposures related to soil vapor intrusion)	• Remedial workers, trespassers, and utility workers may be exposed to contaminated soil vapor during ground intrusive activities beneath all buildings. • Exposures to workers and passersby during the remedial action and future ground intrusive activities will be reduced or eliminated through implementation of the HASP, CAMP, and odor/vapor controls during construction. • Soil vapor intrusion is a concern for the Site and mitigation measures will be proposed in the RAWP. Future exposure and the potential for vapor intrusion into the future building will be mitigated by the installation of a vapor barrier and passive SSDS that may be activated based on the results of a post-remedial SVI investigation.

7. Summary

In summary, the data generated during the RI indicate the following about Site-wide conditions:

- The only VOC detected in soil at a concentration exceeding the UUSCOs and PGWSCOs was acetone, there were no exceedances of the RRSCOs. Acetone was not detected in groundwater in exceedance of the NYSDEC AWQSGVs, which indicates that acetone in soil is not impacting groundwater. There were eight other VOCs detected in groundwater above the AWQSGVs in two monitoring wells located in the south and central area of the Site. The analytes detected (1,2,4-trimethylbenzene, benzene, ethylbenzene, isopropylbenzene (cumene), n-butylbenzene, n-propylbenzene, sec-butylbenzene and tert-butyl methyl ether) are indicative of residual petroleum contamination from prior releases identified under the prior spill numbers but not fully addressed during prior remedial activities conducted by others.
- SVOCs, 1,4-dioxane and PAHs, were detected at concentrations above the UUSCOs, RRSCOs, and PGWSCOs in the fill material present across the Site. SVOCs 1,4-dioxane and naphthalene were detected in two groundwater samples at concentrations above the AWQSGVs. Although 1,4-dioxane was present in both soil and groundwater samples, it was not detected at co-located soil boring/groundwater monitoring well locations. These SVOC exceedances of AWQSGVs can be indicative of either prior petroleum releases or of historical fill.
- Metals were detected in soil at concentrations above the UUSCOs for total chromium, copper, lead, and mercury . There were two detections at one location exceeding the RRSCOs hexavalent chromium and mercury. There were no exceedances of the PGWSCOs in soil, indicating that metals in soil are not a source of groundwater contamination at the Site. All of the metals detected in groundwater at concentrations above AWQSGVs in the filtered samples are naturally occurring.
- PCBs, pesticides, and herbicides were not detected in soil or groundwater.
- PFAS compounds were detected above NYSDEC GVs for PFOA and PFOS in soil and groundwater samples. However, based on concentrations detected during the RI, the presence of PFAS at this Site is most likely due to background levels of these compounds ubiquitous to the New York City area.
- Petroleum-related and chlorinated VOCs were detected in all six soil vapor samples. The concentrations of petroleum-related and chlorinated VOCs, combined with the relatively low concentrations of these compounds in groundwater and soil, indicate there are either prior petroleum releases or historical fill impacts. Soil vapor intrusion is a concern for the Site and mitigation measures will be proposed in the RAWP.

TABLES

1. Groundwater Gauging Data
2. Summary of VOCs in Soil Samples
3. Summary of SVOCs in Soil Samples
4. Summary of Metals in Soil Samples
5. Summary of PCBs in Soil Samples
6. Summary of Pesticides and Herbicides in Soil Samples
7. Summary of Per- and Polyfluoroalkyl Substances in Soil Samples
8. Summary of VOCs in Groundwater Samples
9. Summary of SVOCs in Groundwater Samples
10. Summary of Metals in Groundwater Samples
11. Summary of PCBs in Groundwater Samples
12. Summary of Pesticides and Herbicides in Groundwater Samples
13. Summary of Per- and Polyfluoroalkyl Substances in Groundwater
14. Summary of VOCs in Soil Vapor

Notes Utilized Throughout Tables	
Soil Tables	
J -	Estimated value
J+ -	Estimated value, high bias
J- -	Estimated value, low bias
U -	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit
UJ -	Analyte was not detected. The associated reported quantitation limit is an estimate
R -	Sample results rejected by validator
T -	Indicates that a quality control parameter has exceeded laboratory limits
ft bls -	Feet below land surface
FD -	Duplicate sample
mg/kg -	Milligrams per kilogram
µg/kg -	Micrograms per kilogram
NYSDEC -	New York State Department of Environmental Conservation
SCO -	Soil Cleanup Objectives
--	No SCO available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use SCO	
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential SCO	
Red data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater SCO	
Groundwater Tables	
J -	Estimated Value
J+ -	Estimated value, high bias
U -	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit
UJ -	Analyte was not detected. The associated reported quantitation limit is an estimate
T -	Indicates that a quality control parameter has exceeded laboratory limits
EMPC -	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample
FD -	Duplicate
NA -	Compound was not analyzed for by laboratory
µg/L -	Micrograms per liter
NYSDEC -	New York State Department of Environmental Conservation
AWQSGVs -	Ambient Water-Quality Standards and Guidance Values
--	No NYSDEC AWQSGV available
Bold data indicates that parameter was detected above the NYSDEC AWQSGVs	
Soil Vapor/Ambient Air	
J -	Estimated value
U -	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit
D -	Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte
FD -	Duplicate sample

Notes Utilized Throughout Tables
ug/m3 - Micrograms per cubic meter
Bold data indicates that parameter was detected

DISCLAIMERS

1. THIS PDF IS AN AUTOMATED OUTPUT CREATED DIRECTLY FROM DATA COLLECTED IN THE FIELD. IT IS INTENDED TO DOCUMENT MARKINGS AND COMMENTS COLLECTED BY GPRS, LLC. THE FIELD FINDINGS MAY BE CORRECTED AND/OR ADDITIONAL DELIVERABLES CREATED AFTER THE DATA IS FURTHER REVIEWED.
2. AERIAL IMAGERY IS SOMETIMES SHIFTED, OUTDATED, OR INACCURATE WHILE THE LINE AND POINT DATA REMAIN AS COLLECTED IN THE FIELD. IN THE EVENT THE AERIAL IMAGE/LOCATION NEEDS CORRECTION, ADDITIONAL CAD SERVICES CAN BE ORDERED.
3. GPRS CANNOT GUARANTEE THAT ALL UTILITIES OR OTHER SUBSURFACE FEATURES ON SITE WERE ABLE TO BE LOCATED. ALL FINDINGS ARE SUBJECT TO THE TERMS AND CONDITIONS THAT CAN BE VIEWED AT THIS LINK: https://gp-radar.com/terms-conditions
4. GPRS DOES NOT PROVIDE GEOPHYSICAL, GEOLOGICAL, LAND SURVEYING, OR ENGINEERING SERVICES. GPRS IS NOT A LICENSED LAND SURVEYOR. THIS PDF IS NOT A LAND SURVEY AND MAY NOT BE RELIED ON OR USED FOR ANY PURPOSES EXCEPT AS EXPRESSLY STATED HEREIN.
5. FOR ADDITIONAL INFORMATION REGARDING FINDINGS AND EQUIPMENT USED, SEE THE "JOB SUMMARY REPORT" AS WELL AS OTHER SUBMITTALS INCLUDED IN THE SUBMITTAL LETTER SENT VIA EMAIL FOLLOWING COMPLETION OF FIELD WORK.
6. PRIVATE UTILITY LOCATING IS NEVER A REPLACEMENT FOR ONE CALL/811 SERVICES. STATE LAW REQUIRES 811 TO BE CALLED PRIOR TO ANY AND ALL EXCAVATION ACTIVITIES.

Barometric Pressure: _____ Precipitation: _____

DUP_SV_06202025

Sampling Team: JC

Sampling Location: RXSV-04

Site Condition (i.e. any adjacent questionable facilities, vent pipes, tanks, etc. and what type of basements are present)

Prior to commencing the sampling activity, remove the brass cap from the end of the sample tubing and fit a new brass hose barb fitting onto the sample tubing.

Calibrate the Helium detection meter

Utility Clearance Completed: ✓

Sampling Depth: 2 ft feet below land surface (If ambient air sample, elevate can to approx. 3 ft - 5 ft above land surface)

Sealed with bentonite: Yes 0.5-1 ft.

Apparent Moisture Content: No

Purge Rate: 200 Must be less than 0.2 L/min (200 mL/min)

Purge Time: 1031

Helium Rate at enclosure: 2.7%

Helium Rate from sample tubing: 0 ppm Is this rate <10% of the rate at the enclosure (Yes) / No

If the Helium readings have a greater ratio than 10% the seals should be rechecked and the tracer gas should be reapplied.

Once the tracer gas screening procedures are completed and no short-circuiting is determined to be present at the location the soil vapor sample can be collected in a lab certified clean summa canister at a rate less than 0.2 L/min.

Is the Summa Canister Certified Clean and within the proper holding time ? (Yes)

RE: 35-32 College Point Blvd, Flushing, NY Site
Data Usability Summary Report (DUSR); Validation of Analytical Laboratory Data Packages
Eurofins SDG Nos. 200-78438-1, 460-328732-1, 460-328738-1, 460-328838-1, 460-328839-1, 460-328983-1, 460-329046-1, 460-329729-1, 460-329737-1, 460-329841-1, and 460-329898-1

Dear Ms. Okvist:

Review has been completed for the data packages generated by Eurofins TestAmerica that pertain to samples collected between 06/16/25 and 07/02/25 at the 35-32 College Point site. Twenty soil samples, five aqueous samples, and field duplicates of each matrix were processed for TCL and NYCRR Part 375 CP-51 volatile analytes, TCL semivolatiles, 1,4-dioxane, TCL Aroclor PCBs (PCBs), TCL pesticides, TCL herbicides, per- and polyfluoroalkyl substances (PFAS), and TAL metals. The aqueous samples were also processed for dissolved TAL metals. Five 6 L air canisters and a field duplicate were processed for volatile analytes. Trip and field blanks were also processed. The analytical methodologies are those of the USEPA SW846, USEPA method 1633A, and USEPA method TO-15.

The data packages submitted by the laboratory contain full deliverables for validation, and this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation/Sample Receipt
* Holding Times
* Surrogate, Isotopic Dilution, and Internal Standard Recoveries
* Method/Preparation/Canister/Calibration/Field/Trip Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Blind Field Duplicate Correlations
* Laboratory Control Sample (LCS)
* Instrumental Tunes
* Initial and Continuing Calibration Standards
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B Section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data packages.

In summary, results for the samples are usable either as reported or with minor qualification, with the exceptions of the following:

- Herbicide results in six soil samples are not usable due to apparent processing error
- The result for 1,1,2,2-tetrachloroethane is rejected in one soil sample due to apparent matrix effect
- Hexavalent chromium result in one field blank is not usable due to apparent processing error

Data completeness, accuracy, precision, representativeness, reproducibility, and comparability are acceptable.

Matrix spike and field duplicate accuracy and precision determinations for volatile analytes in the soil matrix show numerous outlying recoveries. These are detailed below, and should be considered by the end-user of the data when considering data of samples with similar matrix or field location.

Validation data qualifier definitions and client sample identifications are attached to this text. Also included with this report is the client EDD with recommended qualifiers/edits applied in red.

Custody Forms/Sample Receipt

Custody form data entries included numerous instances of omitted year, time, and/or dates. These were primarily from interim courier cooler transfers.

The custody forms do not include a field for the container type, and preservative entries were omitted for aqueous samples. Preservation was documented and confirmed in the laboratory raw data preparation and/or analysis logs.

Downarrows were abbreviated for some entries on the custody form for the air samples

Blind Field Duplicates

The blind field duplicate evaluations were performed on locations RX-06(0-2), RX-06(0-2)_P, RXMW-02, RXMW-02_P, and RXSV-04.

Correlations fall within validation guidelines with the exceptions of the following, the results for which have been qualified in the indicated parent samples and their field duplicates:

- PFBA in RXMW-02_P. The field duplicate reports detection at about four times the reporting limit concentrations. The parent sample reports no detection of this analyte due to the poor signal to noise ratio of the noted response. Results for this compound in that parent sample should be used with caution.
- n-Butylbenzene, 4-ethyltoluene, and 1,2,4-trimethylbenzene in RXSV-04

Volatile Analyses by EPA 8260D

The matrix spikes of RX-06(0-2) produced outlying recoveries for 33 analytes. The result for 1,1,2,2-tetrachloroethane in that parent sample is rejected and unusable due to lack of recovery, and the results for the remaining analytes with outlying recoveries have been qualified as estimated, with a low bias, in that sample.

Matrix spikes performed on RXMW-02 and show recoveries and correlations that are within validation guidelines.

Due to presence in the associated field blank at a level an order of magnitude above the reporting limit (confirmed by reanalysis), the detected results for acetone in samples collected in June are considered as including external contamination, and are qualified as estimated, with a high bias.

Due to outlying surrogate standard recoveries, the following results are qualified as indicated:

- All results as estimated, with a low bias, in RX-7(0-2) and RX-02(6-8).
- All detected results as estimated, with a high bias, in RX-07(4-6), with the exception of acetone, which is qualified as estimated.

.

The detected result for m,p-xylene in RX-7(4-6) is edited to reflect non-detection due to poor mass spectral quality.

Calibration standards show responses within validation guidelines, with the following exceptions, results of which have been qualified as estimated in the indicated associated samples:

- Vinyl chloride, bromoform, and 1,1,2,2-tetrachloroethane (21%D to 29%D) in TRIP BLANK (SDG 460-328838-1)
- Dichlorodifluoromethane (46%D) in TRIP BLANK (SDG 460-328983-1)
- Chlorodibromomethane and bromoform (25%D to 31%D) in Trip Blank (SDG 460-329841-1)

The results for chloroethane in RXMW-02 and DUP_GW_07012025 are qualified as estimated, with a high bias, due to elevated recovery (253%) in the associated LCS.

Surrogate and internal standard recoveries are compliant.

TCL Semivolatile and 1,4-Dioxane Analyses by EPA8270E- Full Scan and SIM

Matrix spikes of RX-06(0-2) and RXMW-02 show recoveries and correlations within validation guidelines, with the following exception, result for which has been qualified in the indicated parent sample:

Parent Sample	Analyte	Outlying % Recoveries
RXMW-02	3,3'-dichlorobenzidine	40,35

LCS recoveries are within validation guidelines, with the following exceptions, results of which have been qualified as estimated in the indicated associated sample:

Affected Sample	Analyte	Outlying % Recoveries
FB_SO_06162025	4-nitrophenol	90,83
	caprolactam	84,83
	1,4-dioxane	74,68

Calibration standards show responses within validation guidelines, with the following exceptions, results of which have been qualified as estimated in the indicated associated samples: benzaldehyde (47%D to 57%D) in RX-05(0-2), RX-05(4-6), RX-06(0-2), DUP_SO_06162025, RX-06(6-8), RX-10(0-2), RX-10(4-6), RX-7(0-2), RX-7(4-6), RX-02(0-2), RX-02(6-8), FB_SO_06162025,

DUP_GW_07012025, RXMW-06, RXMW-02, RXMW-08, RXMW-03, FB_GW_07012025, RXMW-10, and in all samples reported in SDGs 460-328838-1 and 460-328983-1.

Surrogate and internal standard recoveries are compliant. Blanks show no contamination affecting sample reported results.

TCL Pesticides, TCL Herbicides, and Aroclor PCB Analyses by USEPA 8081B, 8082A, and 8151A

The six samples reported in SDG 460-328983-1 show no recovery for the herbicide surrogate standard. Based on evaluation of the surrounding QC (such as acceptable matrix spike recoveries, despite failed surrogate recoveries in those spikes), the sample chromatograms, and the project-wide surrogate failures being limited to that specific preparation batch, it is likely that the surrogate was not spiked into those samples, rather than a matrix effect. They were not re-extracted. The results of herbicides in those samples are rejected and not usable. The affected samples are: RX-09(0-2), RX-09(6-8), RX-08(0-2), RX-08(6-8), RX-03(0-2), and RX-03(4-6).

The matrix spike evaluations for Aroclors 1016/1260, herbicides, and pesticides were performed on RX-06(0-2), RX-09(0-2), and RXMW-02.

The herbicide matrix spikes of RX-06(0-2) show no recovery of target analytes, but did show compliant recoveries for the surrogate standards in those spikes; the lab noted in the case narrative that the matrix spikes were not spiked with the target analyte solution. Therefore, that matrix accuracy and precision evaluation is not available.

Other recoveries and correlations within validation guidelines, with the following exception, the result for which is qualified as estimated in the indicated parent sample:

Parent Sample	Analyte	Outlying % Recoveries	Outlying %RPD
RX-09(0-2)	endrin aldehyde	69	36

The laboratory QC summary form for herbicide matrix spikes of RXMW-02 erroneously reports no recovery of the target analytes. However, the software calculation was based on an initial preparation log error in spike solution volume (200 mL instead of the actual 200 uL) that was not noted by the analyst. Actual recoveries fall within laboratory acceptance ranges.

Due to matrix interferences, numerous samples exhibited elevated herbicide surrogate standard recoveries. Because there were no herbicide detections in those samples, their reported results are unaffected.

Internal standard recoveries are within validation guidelines. Calibration standards show compliant recoveries. LCS recoveries are within laboratory acceptance ranges.

PFAS by Draft EPA Method 1633

Some of the samples exhibited matrix effects, and required processing at dilution to produce usable isotopic dilution standard (IDS) recoveries. That resulted in elevated reporting limits up to tenfold for certain analytes in the affected samples.

The following results are qualified as estimated due to outlying associated IDS recoveries; the variances are expected to be minimal:

- PFHxA, PFBS, 4:2-FTS, and HFPODA in RX-7(4-6)_P
- PFBS and HFPODA in RX-06(0-2)_P
- PFDoA and PFHpA in RXDMW-06_P

The following results for are qualified as being Estimated Maximum Possible Concentration (EMPC) due to the outlying ion ratio. Some of these were mentioned in the laboratory case narrative, others were not. Those results should have been flagged by the laboratory in the data package report forms and/or on the EDDs.

- PFDA in RX-7(0-2)_P
- PFHxS in RX-09(6-8)_P
- PFNA in RX-09(0-2)_P and RXMW-02_P
- PFOS in RXMW-10

Due to presence in the associated field blank, the results for PFHxS in RXMW-02, RXMW-03, and DUP_GW_07012025_P are considered as including external contamination, and are either edited to reflect non-detection at the reporting limit, or qualified as estimated with a high bias.

Matrix spikes of RX-6(0-2)_P and RXMW-02 show recoveries and correlations within validation guidelines.

The following analyte results are qualified as estimated with a low bias due to outlying recoveries in the associated LCSs:

Affected Samples	Analyte	Outlying % Recoveries	Outlying %RPD
FB_SO_06182025_P	PFDoS	29	70
RXMW-06_P, RXMW-08_P, RXMW-03_P and FB_GW_07012025_P	9CL-FP3ONS	62	
	5:3 FTCA	69	
FB_SO_06162026_P	PFDoS	35,46	
RX-7(4-6)_P	PFMPA	17,52	101
	3:3 FTCA	42	

The result for PFHxA in RX-7(0-2)_P is qualified as estimated due to low signal to noise ratio.

Internal standard recoveries are within validation guidelines. Calibration standard responses are compliant.

Volatile Air Analyses by USEPA Method TO-15

The detected result for t-butylbenzene in RXSV-04 is edited to reflect non-detection due to poor mass spectral quality.

Holding times were met. Internal standard recoveries are compliant. Calibration standards show responses within validation action levels.

LCS recoveries are within validation guidelines. Blanks show no contamination.

TAL Metals by EPA 6010D, 6020B, 7271A, and 7471B

Matrix spikes and/or duplicate evaluations were performed for TAL analytes on RX-06(0-2), total and dissolved fractions of RXMW-02, and the dissolved fraction of RXMW-10. They show recoveries and correlations within validation guidelines, with the following exceptions, results for which have been qualified in the indicated parent sample:

Parent Sample	Element	Outlying % Recoveries	Outlying % RPD's
RX-06 (0-2)	nickel	154,58	35
	iron		62
	copper		52
	lead		54
	manganese		41

The result for zinc in RXMW-02 is considered external contamination and edited to non-detection due to presence in the associated method blank.

The ICP serial dilution determinations were performed on TAL metals on RX-06(0-2), the total and dissolved fractions of RXMW-02, and the dissolved fraction of RXMW-10. Correlations are within validation guidelines.

The dissolved fractions of the aqueous samples were not field filtered, but were filtered at the laboratory prior to analysis.

Total and dissolved fraction concentrations correlate well, with the exception of the concentrations of calcium in RXMW-03. The results for that element are qualified as estimated in both fractions of that sample.

Total Cyanide and Hexavalent Chromium Analyses by EPA Methods 9012 and 7196

Review was conducted for method compliance, holding times, transcription, calculations, standard and blank acceptability, accuracy, and precision, etc., as applicable to each procedure.

Due to laboratory oversight, the holding time for hexavalent chromium in FB_SO_06162025 was significantly exceeded, and that result is therefore rejected and not usable.

Matrix spikes of hexavalent chromium and total cyanide on RX-06 (0-2), and of total cyanide on RX-09(0-2) show recoveries and correlation within validation guidelines, with the following exceptions, results for which have been qualified in the indicated parent sample:

Parent Sample	Element	Outlying % Recoveries
RX-06 (0-2)	hexavalent chromium-soluble and insoluble	58,46,71,72

The results for trivalent chromium are qualified as estimated with a high bias in samples in which the hexavalent chromium results have a low bias.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.
