Re: Willets Point Asphalt
35-32 College Point Boulevard
Flushing, New York

Dear Mr. Tockman:

On behalf of Fulton/Max International (Holdings), Inc., Roux Associates, Inc. (Roux Associates) performed a limited environmental investigation of the property identified as Willets Point Asphalt, located at 35-32 College Point Boulevard, in Flushing, New York (Site). The limited environmental investigation included the following scope of work:

1. Review of existing Phase I and Phase II environmental investigation reports for the Site;

2. Field oversight of the removal of three underground storage tanks (USTs) from the Site;

3. Collection and analysis of soil samples from the UST excavation areas; and

4. Installation of three groundwater monitoring wells and collection and analysis of groundwater samples.

The results of the scope of work and Roux Associates' findings are discussed below.

Review of Existing Environmental Reports
Roux Associates reviewed two environmental reports provided by Fulton/Max International (Holdings), Inc.; a Phase I Environmental Site Assessment (ESA) report entitled "Phase I Environmental Site Assessment" prepared by Hydro-Tech Environmental Corp., dated January 2, 2007, and a Phase II report entitled "Willets Point Asphalt Phase II Investigation" prepared by Spectra Environmental Group, Inc., dated February 2007. The Phase I ESA report identified several recognized environmental conditions (RECs), which are conditions indicating a past release, existing release, or material threat of a release of hazardous substances or petroleum products onsite. The RECs included the historical presence of gasoline-containing USTs onsite, existing oil-containing USTs at the Site, soil staining, and the use of the Site as an asphalt plant.

These RECs were further evaluated in the Phase II investigation. The Phase II investigation involved the installation of eight soil borings and three groundwater monitoring wells throughout the Site. The laboratory results of the soil and groundwater samples did not reveal significant impacts. One of eight soil samples contained concentrations of volatile organic compounds (VOCs) slightly exceeding their respective New York State Department of Environmental Conservation (NYSDEC) Recommended Soil Cleanup Objectives (RSCOs). The slightly elevated VOCs were detected in Spectra soil boring SB-7 and included ethyl benzene and xylenes. One of three groundwater samples from the monitoring wells slightly exceeds its NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs) for MTBE (methyl tertiary butyl ether) in Spectra monitoring well MW-1. Ethyl benzene, xylenes, and MTBE are common constituents of gasoline.

Removal of USTs

On August 24, 2007, Roux Associates personnel visually observed the removal of three oil-containing USTs from the Site. Two 1,000-gallon and one 10,000-gallon USTs were excavated by Tully Environmental Inc. The two 1,000-gallon USTs were integrity tested in May 2007 and the 10,000-gallon UST was tested in August 2004. All three of the UST passed the integrity tests and were considered "tight." Copies of the tank integrity tests are provided in Attachment 1. Upon their excavation on August 24, 2007, no holes, leaking product, or other tank integrity issues were observed by Roux Associates' personnel. Evidence of the historical gasoline-containing UST was not identified during Roux Associates' limited environmental investigation, nor were Site personnel aware of any existing gasoline-containing USTs onsite.

UST Excavation Soil Sampling

Roux Associates collected two soil samples from the 10,000-gallon UST excavation pit (TP-01N and TP-01S), and one soil sample from each of the 1,000-gallon UST excavation pits (TP-2 and TP-3). The four soil samples were delivered under chain-of-custody procedures to EcoTest Laboratories, Inc. (EcoTest) in North Babylon, New York. EcoTest is a New York State Department of Health (NYSDOH) certified environmental laboratory. The four soil samples were analyzed in accordance with the NYSDEC Spill Technology and Remediation Series (STARS) guidelines for VOCs using laboratory method 8021 and semivolatile organic compounds (SVOCs) using laboratory method 8270. Based on a review of the laboratory results, no VOCs or SVOCs were detected at concentrations above their respective NYSDEC RSCOs. The soil results are provided in Tables 1 and 2. Based on the laboratory data, it does not appear that the former oil-containing USTs significantly impacted the soils at the Site.

Groundwater Sampling

To evaluate groundwater quality at the Site, Roux Associates installed three temporary groundwater monitoring wells (MW-1 through MW-3). MW-1 was installed hydraulically downgradient of the 10,000-gallon UST excavation pit; MW-2 was installed on the northwest section of the Site, and MW-3 was installed on the southwest

section of the Site. The monitoring wells were constructed of 10-feet of slotted PVC screen straddling the water table (located at approximately 5-feet below land surface) and a three-foot solid PVC riser. The locations of the monitoring wells are shown in Figure 1. Monitoring wells MW-1 and MW-2 were not sampled as per NYSDEC sampling protocol because floating product (i.e., liquid phase petroleum) was observed in those monitoring wells. One groundwater sample was collected from MW-3. The groundwater sample was delivered under chain-of-custody procedures to EcoTest. The groundwater sample was analyzed for VOCs using laboratory method 8260, SVOCs using laboratory method 8270, metals (filtered and unfiltered) using laboratory method 200.7, and total petroleum hydrocarbons using laboratory method 8015. The laboratory results of the groundwater samples were compared to the NYSDEC AWQSGVs and are provided in Tables 3 through 6. A review of the laboratory data reveals that no VOCs or metals (filtered) were detected at concentrations exceeding their AWQSGVs. Several SVOCs (specifically poly aromatic hydrocarbons [PAHs]) were detected at concentrations exceeding their respective AWQSGVs. Total petroleum hydrocarbon was 1.6 milligrams per kilogram. Based on the presence of floating product in two of the three monitoring wells and elevated PAHs in the groundwater sample from MW-3, groundwater beneath the Site is impacted by product.

It should be noted that the former onsite oil-containing USTs passed recent integrity tests, were not observed by Roux Associates to have been leaking upon their removal, and soil samples collected from the UST excavations did not reveal evidence of tank leakage. The presence of product on the water table beneath the Site does not appear to be from an onsite source, but rather is likely due to an offsite spill identified in the NYSDEC files as spill number 79-00995. It should also be noted that measurable floating product has also present in an offsite recovery well associated with that spill number directly adjacent to, and hydraulically upgradient of, the east side of the Site. Based on the reports Roux Associates has reviewed, the NYSDEC spill number has not been closed.

Summary

Based on the results of the limited environmental investigation, Roux Associates has identified the following:

- A previous Phase II environmental investigation found minor soil and groundwater impacts at the Site. Elevated concentrations of VOCs (above NYSDEC standards) were detected in one of eight soil samples and in one of three groundwater samples. The elevated compounds are associated with gasoline, which is not used onsite and are likely due to an offsite source.

- Soil staining associated with the historical use of the Site as an asphalt manufacturing plant is present.

- The three former oil-containing USTs have been removed and, based on laboratory results of soil samples collected from the UST excavations, it does not appear that they significantly impacted Site soils.

- Based on the presence of floating product in two of the three onsite groundwater monitoring wells, and elevated PAHs in the groundwater sample collected from a third onsite monitoring well, groundwater beneath the Site is impacted. However, it should be noted that the former onsite oil-containing USTs passed recent integrity tests, were not observed by Roux Associates to have been leaking upon their removal, and soil samples collected from the UST excavations did not reveal evidence of tank leakage. The presence of product on the water table beneath the Site does not appear to be from an onsite source, but rather is likely due to an offsite spill identified in the NYSDEC files as spill number 79-00995. It should also be noted that measurable product was observed in an offsite recovery well associated with that spill number directly adjacent to the east side of the Site.

- The NYSDEC has not yet closed the open spill number 79-00995. Given the presence of product on the water table beneath the Site, the NYSDEC may require additional investigation and/or remediation of that spill, which according to documents reviewed by Roux Associates, is not the responsibility of the current Site owner/operator.

- The Site is in receipt of a NYSDEC Order On Consent (File Nos. R2-20070111-28 and R2-20070130-47) for a NYSDEC violation for the placement of fill (gravel) into the waterway (Flushing River) along the west side of the Site and for failing to submit timely air monitoring reports. According to Site representatives, these violations are currently being corrected, and the purchase contract stipulates that the current property owner is responsible for satisfying the terms of the Consent Order and contains an indemnity to the purchaser.

If you have any questions concerning this letter, please feel free to contact us directly at 631.232.2600.

Sincerely,

EXECUTIVE SUMMARY

At the request of YOUNGWOO & ASSOCIATES, LLC (YoungWoo), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of the real property with the street address of 35-32 College Point Boulevard in the Borough of Queens, City and State of New York (referred to herein as the Site) (Figure 1). The Site is identified in New York City tax maps as Tax Block 4963, Lot 212.

The Phase I ESA was conducted in accordance with the scope of work presented in the contract between Roux Associates and YoungWoo dated May 15, 2013 and in general accordance with the American Society of Testing and Materials' (ASTM) standard practice for Environmental Site Assessments for Commercial Real Estate (ASTM E 1527 05, 2005), and the All Appropriate Inquiry (AAI) Rule as promulgated in 40 Code of Federal Regulations (CFR) Part 312.

Roux Associates utilized a variety of information sources to perform the Phase I ESA, including radial information searches from state and federal regulatory agency databases, freedom of information law (FOIL) requests submitted to federal, state and local regulatory agencies, a review of readily available information including: historical aerial photographs, historical Sanborn fire insurance maps, historical topographic maps, City Directory search, liens, interviews with Site representatives, and observations made during a Site reconnaissance.

Based on the information gathered as a result of the Phase I ESA process, Roux Associates has identified the following recognized environmental conditions (RECs) in connection with the Site.

- Former Site Use: According to the Sanborn fire insurance maps, the Site was utilized for coal storage from sometime prior to 1886 until 1980. In addition, open/active spill numbers 8704514 and 8705123 were assigned to former business (Willets Point Asphalt) are considered open/active according to the NYSDEC.

- Offsite Sources of Groundwater Contamination: According to review of previous investigation reports, several upgradient offsite groundwater monitoring wells have been impacted and, therefore, groundwater beneath the Site may also be impacted as a result. A previous investigation documented the removal of former USTs and contaminated soil at the Site. Additional sampling warranted to further confirm or deny impacts to the Site.

Although not technically defined as RECs, the following is a list of potential environmental concerns at the Site that could potentially impact subsurface conditions at the Site:

- Information suggests that the Site is most likely underlain by historical urban fill material from an unknown origin.
- Several round lids were noted on the sidewalk, immediately east of the Site. The lids were not accessed during the Site reconnaissance because it was unclear if the structure were associated with the Site.

Although considered out of scope, the following environmental issues were reviewed in previous environmental reports and warrant attention:

- Several underground transformers were noted on the sidewalk, immediately east of the Site. The size or contents of the transformers could not be confirmed at the time of the Site reconnaissance.
- Portions of the building were lit by fluorescent lighting, which may have PCB-containing ballasts considering the age of the building (constructed sometime prior to 1980). In accordance with ASTM E1527-05, Roux Associates did not inspect the ballasts for PCB content during the Site reconnaissance.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Pending response to FOIL requests from the USEPA, the NYSDEC, the NYCDEP; the NYCDOH, the NYCOER, the FDNY and the NYCLPC. If any additional pertinent information is obtained from responses to outstanding FOIL requests, Roux Associates will prepare a letter addendum summarizing these findings.

Please note that although lack of record sources listed above is considered a data gap, it is not considered a material limitation for the completion of this Phase I ESA report.

1.0 INTRODUCTION

At the request of YOUNGWOO & ASSOCIATES, LLC (YoungWoo), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of the real property with the street address of 35-32 College Point Boulevard in the Borough of Queens, City and State of New York (referred to herein as the Site) (Figure 1). The Site is identified in New York City tax maps as Tax Block 4963, Lot 212.

The Phase I ESA was conducted in accordance with the scope of work presented in the contract between Roux Associates and YoungWoo dated May 15, 2013 and in general accordance with the American Society of Testing and Materials' (ASTM) standard practice for Environmental Site Assessments for Commercial Real Estate (ASTM E 1527-05, 2005), and the All Appropriate Inquiry (AAI) Rule as promulgated in 40 Code of Federal Regulations (CFR) Part 312.

This Phase I ESA is not intended to serve as an environmental compliance audit; rather, the purpose of this investigation is to identify "recognized environmental conditions" (RECs) at the Site. ASTM E 1527-05 defines an REC as:

> "…the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not represent a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions… or
>
> "…an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. The final decision rests with the environmental professional and will be influenced by the current impact of the historical recognized environmental condition on the property through reviewing and gathering information relating to the following at the Site:
>
> *(1) Current and past property uses and occupancies;*
>
> *(2) Current and past uses of hazardous substances and petroleum products;*
>
> *(3) Waste management and disposal activities;*

(4) Current and past corrective actions and response activities;

(5) The presence of any engineering controls;

(6) The presence of any institutional controls; and

(7) Information relating to properties adjoining or located within a quarter mile of the Site."

In order to assess the potential for RECs associated with the Site, Roux Associates utilized a variety of information sources, including radial information searches from state and federal regulatory environmental databases, Freedom of Information Law (FOIL) requests submitted to federal, state and local regulatory agencies, a review of readily available information including historical aerial photographs, historical Sanborn fire insurance maps, historical topographic maps, interviews with Site representatives, and observations made during a Site reconnaissance. The qualifications of key personnel assigned to manage and conduct the Phase I ESA are provided in Appendix A.

2.0 METHODS OF INVESTIGATION

The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

2.1 General

The activities performed in conjunction with the Phase I ESA of the Site included:

- Review of state and federal environmental regulatory agency databases provided by Environmental Data Resources, Inc. of Milford, Connecticut (EDR), indicating properties of environmental concern within specified radii from the Site (Appendix B);
- Submission of FOIL requests to federal, state, and local regulatory agencies;
- Review of historical information for the Site and surrounding area;
- Interview conducted on May 20, 2013 with Ms. Phoebe Chen (Key Site Representative); and
- Reconnaissance of the Site and surrounding area.

2.2 Review of Readily Available Information

The resources compiled and reviewed by Roux Associates to date include the following:

- EDR Radius Map with GeoCheck, dated December 17, 2012 (EDR database report) (Appendix B);
- Historical Sanborn fire insurance maps dated 1886, 1892, 1897, 1903, 1914, 1916, 1917, 1931, 1934, 1941, 1943, 1950, 1951, 1963, 1980, 1981, 1982, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, and 2006. (Appendix C);
- Historical aerial photographs dated 1924, 1946, 1954, 1966, 1975, 1984, 1994, 2006, 2009, and 2011 (Appendix D);
- United States Geological Survey (USGS) 15 Minute Topographic Maps, Harlem Quadrangle dated 1897; and 7.5 Minute Topographic Maps, Flushing Quadrangle dated 1947, 1955, 1966, 1979 (1966 revised), and 1995 (Appendix E);
- Environmental Lien Search Report (Appendix F); and
- A search of the historical City Directories conducted by EDR (Appendix G).

The agencies contacted during the records review are provided below:

Agency	Status
United States Environmental Protection Agency (USEPA)	Request for information filed with agency, response pending.
New York State Department of Environmental Conservation (NYSDEC)	Request for information filed with agency, response pending.
New York City Department of Environmental Protection (NYCDEP)	Request for information filed with agency, response pending.
New York City Department of Health (NYCDOH)	Request for information filed with agency, response pending.
New York City Office of Environmental Remediation (NYCOER)	Request for information filed with agency, response pending.
New York City Fire Department (FDNY)	Request for information filed with agency, response pending.
New York City Landmark Preservation Commission (NYCLPC)	Request for information filed with agency, response pending.
New York City Department of Buildings Building Information System (NYCDOB BIS)	Records accessed; discussed in report.
New York City Department of Finance Automated City Register Information System (NYCDOF ACRIS)	Records accessed; discussed in report.

2.3 Site and Surrounding Area Reconnaissance

Roux Associates conducted a reconnaissance of the Site and surrounding area on May 20, 2013 to identify, investigate, and assess RECs and other environmental concerns. The Site reconnaissance included a review of the following:

- Site and local topography;
- Visible drainage pathways;
- Stained soil, stained concrete/pavement;
- Stressed vegetation, excavations, mounded soil;
- Ponded liquids, drywells, floor drains, and sumps;

- Locations and types of utilities;
- Storage areas;
- Hazardous materials;
- Hazardous wastes;
- Presence of aboveground storage tanks (ASTs) and/or USTs;
- Presence of electrical transformers; and
- Current use of adjacent properties.

This Phase I ESA does not include a review of, or discussions regarding, asbestos-containing material (ACM), lead based paint (LBP), or radon surveys as they are considered "out-of-scope" under ASTM E 1527-05.

Photographs from the Site reconnaissance are included in Appendix H.

2.4 Previous Environmental Investigations

Reports regarding previous environmental investigations conducted at the Site were requested to be reviewed and be included in this Phase I ESA. The following environmental reports have been reviewed and are outlined below.

Gannet Fleming Engineers (GFE) Phase I ESA, August 2005 (reviewed as part of the G. C. Environmental Inc. (GCE) Phase II Work Plan and Health & Safety Plan, January 3, 2013 [Plan])

According to the GFE Phase I ESA, the Site was formerly utilized as an asphalt production facility since the late 1950's; and for coal storage through 1951. At the time of the GFE Phase I ESA the Site was being used as the current use (scrap metal recycling). No open spills identified; only Spill Nos. 0105316 (closed October 2, 2005) and 7900995 (closed August 3, 2099) were identified.

Hydro Tech Environmental, Corp (HTEC) 2007 (reviewed as part of the G. C. Environmental Inc. Phase II Work Plan and Health & Safety Plan, January 3, 2013)

According to the HTEC Phase I ESA, no additional spills identified as stated in the GFE Phase I. In addition, the RECs outlined in the Plan (below) were accumulated from the GFE and HTEC Phase I ESAs, so there is no way to tell which RECs came from each report.

- Federal database review did not reveal RECs.
- State database review revealed several sites and incidents which may present an environmental concern due to upgradient location in respect to the Site; no specifics given in the Plan.
- The adjacent property, 36-30 College Point Boulevard, presents a concern due to reported spill. However, through a search of the NYSDEC Spill Database, no spill is found for this address.
- Various 55 gallon drums and containers represent a *de minimis* environmental concern.
- Asbestos containing materials (ACM) and lead based paint (LBP) are suspect in the administrative building.

A stormwater management system and storm water pollution prevention plan; drum storage as per code; and additional investigation and remedial actions for the Site are recommended in the prior mentioned Phase I ESAs.

Spectra Environmental Group, Inc. Phase II Report, February 2007 (reviewed as part of the G. C. Environmental Inc. Phase II Work Plan and Health & Safety Plan, January 3, 2013)

Spectra Environmental Group, Inc. (Spectra) prepared a Phase II report for the Site in February 2007. Soil and groundwater analysis revealed:

- No volatile organic compounds (VOCs) were found in the soil. VOCs detected in groundwater above regulatory limits.
- Several semivolatile organic compounds (SVOCs) were detected in the soil above regulatory limits. No SVOCs detected above regulatory limits in groundwater.
- Several metals detected in soil above regulatory limits. Lead was the only metal detected above regulatory limits in groundwater.

The Spectra report revealed that there were unregistered USTs utilized on Site.

Roux Associates, Inc. UST Removal, 2007

In 2007, Roux Associates witnessed the removal of three USTs from the Site. No holes or other tank integrity issues were noted. Post excavation soil sampling revealed that the subsurface soil surrounding the USTs was impacted. In addition, three groundwater monitoring wells (designated MW-1, MW-2 and MW-3) were installed and sampled. No VOCs or metals were detected above regulatory standards, while several SVOCs were detected above regulatory standards. Free product was discovered in two of the three wells.

G. C. Environmental Inc. Limited Phase II Investigation, 2011 (reviewed as part of the G. C. Environmental Inc. Phase II Work Plan and Health & Safety Plan, January 3, 2013)

GCE preformed a Phase II ESA including a geophysical survey and the collection of soil samples. Although petroleum staining and elevated photo-ionization detector (PID) readings were noted, only one SVOC was noted above regulatory standards.

In July 2011, GCE excavated impacted soils where laboratory results revealed elevated SVOC detection (SB-8 / former location of 10,000 gallon and 1,000 gallon USTs). Approximately 37 cubic yards of impacted soil was excavated and disposed of at Residuals Management Services Facility in Deer Park, NY. GCE installed three monitoring wells (one on the sidewalk, immediately southeast of the Site and two across College Point Boulevard). In addition, free product was discovered in a well previously installed and located on the sidewalk immediately northeast of the Site. Based on the hydraulically upgradient location of these wells and the associated data, GCE infers that offsite sources have impacted the Site and recommend additional investigations be conducted.

G. C. Environmental Inc. Phase II Work Plan and Health & Safety Plan, January 3, 2013

GCE prepared a Phase II Work Plan and Health & Safety Plan (Plan) for the Site in response to email correspondence from the NYSDEC dated July 2012. According to the Plan several USTs and an undocumented aboveground storage tank (AST) were utilized at the Site under the previous owner, Willets Point Asphalt Corp. (WPAC). WPAC operated the Site under NYSDEC Petroleum Bulk Storage (PBS) No. 2-032182, per the following tank history:

- One 10,000 and one 1,500 gallon no. 2 fuel oil USTs, installed in 1956, removed on or about July 1988.

- One 10,000 gallon and two 1,000 no. 2 fuel oil USTs, installed in 1988, removed in 2007.
- One 550 gallon kerosene AST, unknown installation date, removal undetermined.

According to the Plan the second generation of the USTs was installed in the vicinity of the 10,000-gallon 1956 UST. NYSDEC Spill No. 8704514 was assigned for the tank test failure of the 10,000-gallon 1956 UST and a rise in product level in a nearby monitoring well. The first generation of USTS was closed/removed on or about July 1988 and the second generation of USTs was installed. During a Phase I ESA conducted in 1991, surface staining was noted near the 1,000-gallon USTs and beneath an unregistered 550-gallon kerosene AST. From October 1991 until 2000 several investigations, including soil and groundwater analysis, revealed petroleum contamination; free product in Site wells; and overflowing buckets of oil and staining. Upgradient monitoring wells were installed in February 1993 and no petroleum product was detected in the soil or groundwater samples.

According to the Plan, soil borings are proposed to be installed, in areas associated with the former 1,000 gallon generator tank, the former 10,000 gallon fuel oil UST and associated piping. Groundwater wells will be installed and samples collected in areas exhibiting impacted subsurface soils. In addition, GCE proposes a tidal survey to be conducted.

3.0 PROPERTY DESCRIPTION

Descriptions of the Site and surrounding properties are included in the following sections. The location of the Site is presented in Figure 1. The Site and Surrounding properties are presented in Figure 2.

3.1 Property Location and Description

The Site is located on the west side of College Point Boulevard, south of Northern Boulevard and immediately easts of Flushing Creek in the Borough of Queens. The Site is located in an area that is pre-dominantly non-residential (commercial and light-industrial).

The Site, occupied by Scrap King since April, 2010, is currently owned by the TDC Development & Construction, Corp. and is approximately 0.92 acres. The 2-story Site building (approximately 600 square feet) is utilized to distribute payment for scrap metal and as office space. A total of four restrooms are located in the Site building. Wall mounted electric heaters / air conditioning units are located in each office or conference room. A natural gas fired hot water heater is located in a storage closet on the first floor.

The hatch to gain roof access is not used by the current tenants and no ladder was available to gain roof access at the time of the Site reconnaissance. It was reported by Ms. Chen (Key Site Representative) that it is to the best of her knowledge that there are no structures or materials on the roof. A scale is present outside the office to weigh vehicles to determine payment for scrap metal.

A shed with aluminum walls and roof is utilized to sort scrap metal delivered to the Site. Liquid wastes or containers containing liquids are not accepted at the Site. Four hydraulic forklifts are utilized to move material during the sorting process and to unload and load vehicles. During the Site reconnaissance, it was reported that forklift maintenance is conducted by an outside contractor; no hydraulic oil was noted. Flushing Creek abuts the Site on the West side of the Site and is approximately 10 feet below land surface. A retaining wall running along the west side of the Site is one to seven jersey barriers high.

Natural gas is brought to the Site via a connection from College Pint Boulevard. According to Ms. Chen, wastewater from the Site building is directed to the municipal sewer. No tank fill or

vent lines were noted. A majority of the Site is paved, concrete or dirt; no vegetation or staining was observed during the Site reconnaissance.

3.2 Current Surrounding Property Usage

The Site is surrounded pre-dominantly by non-residential (commercial and light-industrial) development. The table below details the adjacent property usage surrounding the Site.

North	Mensch Mill & Lumber Yard Corp.; Northern Boulevard further north.
South	Advanced Auto Sport; U-Haul further south.
East	College Point Boulevard; commercial / retail properties further east, including carpet, cabinet, furniture sales, a vacant property and plumbing supply store.
West	Flushing Creek; Van Wyck Expressway across Flushing Creek.

3.3 Topographic and Hydrogeologic Setting

The grade at the Site slopes gently towards the west (Flushing Creek). The elevation of the Site is 9 feet above mean sea level, according to the EDR database report and as shown in the USGS 7.5 Minute Series Topographic Map – Flushing Quadrangle, dated 1995 (Appendix E). The general slope in the surrounding area appears to dip gently west and south towards Flushing Creek. The Site is located in a 100-year flood zone. The Site is located immediately adjacent to Flushing Creek (with regulated wetland areas along the coast).

There is a two-story office on the north side of the Site and a shed used to sort material (scrap metal) in the center of the Site. The remaining areas of the Site are covered by asphalt; therefore, the Site contains no vegetation or unimproved areas. The surrounding topography is flat and covered by multi-story buildings of commercial usage. According to the US Department of Agriculture (USDA), Soil Conservation Service, the area in which the Site is located is Urban Land. Urban land is characterized as having more than 85 percent of its surface covered by man-made improvements such as buildings and roads. According to previous investigative reports, the Site is underlain by historic fill material.

Groundwater, which is not used for drinking purposes, is located approximately 10 feet below land surface according to previous investigative reports and the EDR database report. The direction of shallow groundwater flow beneath the Site is westerly. However, groundwater flow may be influenced by subsurface structures and impediments such as building foundations, sewer lines, utility vaults, and subways.

4.0 SITE HISTORY

The historical uses of the Site are discussed below.

4.1 Historical Site and Surrounding Property Usage

The historical uses of the Site and surrounding properties were researched by examining historical Sanborn fire insurance maps dated 1886, 1892, 1897, 1903, 1914, 1916, 1917, 1931, 1934, 1941, 1943, 1950, 1951, 1963, 1980, 1981, 1982, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, and 2006 (Appendix C); historical aerial photographs dated 1924, 1946, 1954, 1966, 1975, 1984, 1994, 2006, 2009, and 2011 (Appendix D); historical USGS topographic maps, dated 1897, 1947, 1955, 1966, 1979 (1966 revised), and 1995 (Appendix E); Environmental Lien Search Report (Appendix F); and EDR city directory abstract (Appendix G); interview conducted with Ms. Phoebe Chen (Key Site Representative); and documentation from NYCDOB BIS and NYCDOF and ACRIS.

It was noted during the Site reconnaissance that the surrounding area consists of commercial properties. From review of the Sanborn fire insurance maps, Roux Associates identified the Site as being developed sometime prior to 1886. The 1886 Sanborn fire insurance map depicts the Site use as coal and wood storage until sometime prior to 1980, where it is depicted as an asphalt plant until 2006.

The 1947 topographic map indicates an elevation ranging from approximately 10 feet above mean sea level for the Site and surrounding area, consistent with current elevations.

4.2 Historical Sanborn Fire Insurance Maps

Roux Associates reviewed historical Sanborn fire insurance maps for the Site (Appendix C). The following is a summary of the Site and surrounding area from 1886 to 2006, as determined from the historical Sanborn fire insurance maps. Please note map details for the Site and immediately surrounding area were not visible for the years 1914, 1931, 1941, 1943, 1950, 1963, 1981, 1986, 1987, 1989, 1990, 1994, and 1996.

Year	Observations
1886	The Site is used for coal and wood storage and is improved with four structures, including 1, 2 and 7-story sheds and 1–story office. College Point Boulevard is named Lawrence Street. The Flushing and North R/R passed through the property immediately south of the Site and headed in a northeast direction. Residential dwellings noted south and west; ice and wagon storage to the north.
1892, 1897, 1903	No significant changes are noted for the Site or for the surrounding properties.
1916	Broadway renamed Northern Boulevard (1916).
1917	No significant changes are noted for the Site or for the surrounding properties.
1934	No significant changes are noted for the Site. Two repair shops with gasoline tanks, a power plant substation, and a lumber yard are depicted across College Point Boulevard. Property south of the Site, developed with building, erected in 1929 (currently U-Haul). In addition, the Flushing and North R/R is no longer depicted.
1951	No significant changes are noted for the Site. Changes noted for the immediate surrounding area include addition of a repair shop immediately south of the Site; the omission of the lumber yard across College Point Boulevard; and the addition of several commercial properties (truck body works, machine shop, and junk yard) are depicted southeast of the Site.
1980	The Site is depicted as an asphalt plant. (current configuration) No significant changes are noted for the Site. A 2-story office building is present in the northeast corner of the Site and a 3-story building is located in the center of the Site. Steel and gravel hoppers are located in the center and southern parts of the Site. Two asphalt tanks are located adjacent to the Site building; additional unidentifiable structures are noted in the center of the Site. Lawrence Street has been renamed College Point Boulevard. The repair shop immediately south of the Site has expanded westward.
1982, 1985, 1988, 1991, 1992, 1993, 1995, 1999, 2001, 2002, 2003, 2004, 2005 and 2006	No significant changes are noted for the Site, except for the addition of a conveyor (1985). No significant changes are noted for the immediate surrounding area.

Due to documentation of previous investigations, no RECs were identified based on the review of the Sanborn fire insurance maps for the Site.

According to G. C. Environmental Inc. and based on previous investigations, upgradient properties may have impacted the Site. According to the Sanborn fire insurance maps, several properties across College Point Boulevard utilized and may still utilize USTs and pose a Potential Recognized Environmental Condition at the Site.

4.3 Historical Aerial Photographs

Aerial photographs were obtained from EDR for the years 1924, 1946, 1954, 1966, 1975, 1984, 1994, 2006, 2009, and 2011, and are presented in Appendix D. According to the historical aerial photographs, the Site and surrounding areas appear to be developed according to the Sanborn fire insurance maps.

4.4 Historical Topographic Maps

Historical topographic maps of the Site were obtained from EDR for the years 1897, 1947, 1955, 1966, 1979 (1966 revised), and 1995, and are presented in Appendix E. These maps corroborate the reported general development of the area around the Site, as documented in the aerial photographs and Sanborn fire insurance maps.

The 1947 topographic map indicates an elevation ranging from approximately 10 feet above mean sea level for the Site and surrounding area, consistent with current elevations. There was no indication of radical elevation changes consistent with filling operations. Furthermore, these maps did not indicate any environmentally significant topographical features such as wetlands or environmentally significant Site uses such as landfills on or adjacent to the Site.

4.5 Lien Search and Activity Use Limitations

EDR performed an environmental lien search and search for recorded activity use limitations (AULs). No recorded environmental liens or AULs were found. Information revealed in this search presents the deed document, dated January 8, 2008 for the transfer of the Site from Willets Point Asphalt, Corp. to TDC Development & Construction, Corp. The deed includes the DEP Customer Registration Form for Water and Sewer Billing and the Real Property Transfer Report between the two parties. Documentation concerning this request is included in Appendix F.

In addition, the NYCDOF ACRIS reportedly lists federal liens, if any; and no federal liens were listed for the Site.

4.6 City Directory Search

A City Directory Abstract of the Site and adjoining properties was obtained from EDR and is presented in Appendix G. According the EDR report, the years 2012, 2007, 2005, 2000, 1996, 1991, 1983, 1976, 1970, 1967, 1962, 1950, 1945, 1939, 1934, and 1922 were researched.

4.6.1 City Directory Search of the Site

The Site address, or target property according to EDR, are listed for the year 2005.

No listings were recorded for the Site for the years 2012, 2007, 2000, 1996, 1991, 1983, 1976, 1970, 1967, 1962, 1950, 1945, 1939, 1934, and 1922.

According to the City Directory report, the listing for the Site or target property is recorded as corporate names, business names include: Willets Point Asphalt Corp (3532 College Point Boulevard – 2005).

According to previous environmental reports, USTs associated with this business have been closed/removed. In addition, open/active spill numbers 8704514 and 8705123 were assigned to former business (Willets Point Asphalt) and are considered open/active according to the NYSDEC.

4.6.2 City Directory Search of Adjoining Properties

Listings for adjoining properties were limited to the following street addresses: 35-01, 35-03, 35-07, 35-09, 35-11, 35-17, 35-20, 35-21, 36-01, 36-03, 36-20 College Point Boulevard.

The listings in the searched directories included commercial entries; nearby properties include New Lotte Auto Repair (35-01 College Point Boulevard – 2012, 2007); AZ Thirty Five Avenue Automobile Service (35-03 College Point Boulevard – 2012, 2007); Dan's Auto Repair (3509 College Point Boulevard – 2012, 2007); North Shore Auto Service Center (35-11 College Point Boulevard – 2007); Formula General Auto Service, Inc. (36-03 College Point Boulevard).

The property listings were identified as potentially having reason to handle hazardous substances as part of the conduct of business, with the associated potential for a release into the subsurface media of these properties.

5.0 RECORDS REVIEW

Roux Associates used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search of properties of known and suspected environmental concern within specific radii of the Site. A total of 89 environmental databases were reviewed as part of this Phase I ESA. Appendix B contains a complete copy of the environmental database and radius map report. The Site, identified as WILLETS POINT ASPAHLT PL, WILLETS POINT ASPHALT CORP, VAULT # 7378, and SCRAP KING FLUSHING INC, was recognized in the following environmental databases:

1) SPILLS / Historical SPILLS: Spill incidents are reported to the NYSDEC (SPILLS). Historical spills (Hist SPILLS) were reported to the NSYDEC utilizing its original database and are now documented with current spill incidents.

   - NYSDEC Spill No. 0105316 was assigned to **WILLETS POINT ASPAHLT PL** on August 16, 2001 for finding a 55 gallon drum with a gash in it. The spill has been declared closed by the NYSDEC on October 24, 2005.

   - NYSDEC Spill No. 0205900 was assigned to **VAULT #7378** on August 16, 2001 for approximately 4 gallons of oil found on water. The spill has been declared closed by the NYSDEC on November 7, 2002.

   - NYSDEC Spill No. 0205904 was assigned to **VAULT #7378** on September 6, 2002 for approximately 5 gallons of oil found on water. The spill has been declared closed by the NYSDEC on November 7, 2002. Spill No. 0205874 referenced.

   - NYSDEC Spill No. 0205874 was assigned to **WILLETS POINT ASPAHLT** on September 6, 2002 for approximately 50 gallons of oil found on water in a vault. The spill has been declared closed by the NYSDEC on November 7, 2002.

2) FINDS: Facility Index System/Facility Registry System (FINDS) contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: Permit Compliance System, Aerometric Information Retrieval System, Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes, Federal Underground Injection Control, Criminal Docket System used to track criminal enforcement actions for all environmental statutes), Federal Facilities Information System, State Environmental Laws and Statutes, and PCB Activity Data System.

   - The Site, identified as **WILLETS POINT ASPHALT CORP** (Registry ID: 110019071065) was identified. No additional information identified in the EDR report.

   - The Site, identified as **WILLETS POINT ASPHALT** (Registry ID: 110008088185) was identified. No additional information identified in the EDR report.

3) Resource Conservation and Recovery Act (RCRA) Non-Generator (Non-Gen): A RCRA NonGen does not presently generate hazardous waste, but generated hazardous waste at some point in the past. Activity Data System.

   - The Site, identified as **WILLETS POINT ASPHALT** (EPA ID: NYN008006850) was identified and no violations were found.

   - The Site, identified as **SCRAP KING FLUSHING INC** (EPA ID: NYR000191841) was identified. Batteries listed as waste type and no violations were found.

4) LTANKS: Leaking storage tanks (LTANKS) generate a NYSDEC spill number, which is maintained by the NYSDEC.

   - NYSDEC Spill No. 0008962 was assigned to **WILLETS POINT ASPAHLT** on November 2, 2000 for a tank overfill event. The spill has been declared closed by the NYSDEC on January 2, 2004.

   - NYSDEC Spill No. 7900995 was assigned to **WILLETS POINT ASPAHLT** on October 18, 1979 for fuel oil found seeping into Consolidated Edison (ConEd) duct work. The spill has been declared closed by the NYSDEC on August 3, 2009 (Spill remediation details outlined in GCE Phase II Work Plan and Health & Safety Plan, January 3, 2013).

   - NYSDEC Spill No. 8705123 was assigned to **WILLETS POINT ASPAHLT** on September 17, 1987 for a tank test failure. The spill is considered active/open (Spill remediation details outlined in GCE Phase II Work Plan and Health & Safety Plan, January 3, 2013).

   - NYSDEC Spill No. 8704514 was assigned to **WILLETS POINT ASPAHLT** on August 31, 1987 for a tank test failure. The spill is considered active/open (Spill remediation details outlined in GCE Phase II Work Plan and Health & Safety Plan, January 3, 2013).

Offsite properties identified in the state and federal databases within the searched radius include:

- One Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) site;

- Two listings of RCRA large quantity generators (LQGs) of hazardous waste;

- 24 facilities that currently no longer generate hazardous waste (RCRA-NonGen);

- One state hazardous waste site (SHWS);

- 34 State Solid Waste Facility/Landfill in New York (SWF/LF);

- 41 leaking storage tank incidents (LTANKS);

- 13 properties with registered Underground Storage Tanks (USTs);

- 12 properties with Historical USTs;
- Two properties with registered Major Oil Storage Facility (MOSF) USTs;
- 19 properties with registered Aboveground Storage Tanks (ASTs);
- One properties with registered Chemical Bulk Storage (CBS) AST;
- One Solid Waste Recycling Facilities (SWRCY);
- 15 NYSDEC spill sites;
- 22 properties with Manifests;
- One E-Designation site listing;
- Two Manufactured Gas Plant (MGP) sites;
- 40 US Historical Auto Stations; and
- Two US Historical Cleaners.

Offsite properties that meet the criteria presented below are discussed in this report:

- Facilities located immediately adjacent to the Site are examined due to their close proximity to the Site and the potential for surface water discharges (e.g., stormwater runoff, surface water effluent discharges) to enter the Subject Site or through the migration of groundwater.
- Facilities located topographically or hydraulically upgradient to the Site.

Properties located across Flushing Creek were not included in this report due to the large distance to the Site and the presence of Flushing Creek as a hydraulic barrier between these properties and the Site.

For the purposes of this assessment, groundwater has been assumed to flow westerly. Facilities that are located downgradient or crossgradient to the Site but not immediately adjacent to the Site are not generally discussed in this report as these sites are considered to pose a low potential environmental concern to the Site. In addition, certain facilities that may be hydraulically upgradient but involve conditions that are considered *de minimis* (i.e., small quantities of releases, contained releases, or releases that are cleaned up in such a manner that does not pose a threat to

human health or the environment) are not generally discussed in this report unless further clarification was warranted to rule out the potential for these properties to impact the Site.

5.1 USEPA Comprehensive Environmental Response, Compensation, and Liability Information System

The EDR report identified one CERCLIS site within the searched radius. The CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private persons. Sites which are either proposed to or on the NPL and sites which are in the screening and assessment for possible inclusion on the NPL are on the CERCLIS. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site and distance of more than 0.125 mile from the Site,), this CERCLIS site was not identified as an environmental concern in connection with the Site.

5.2 USEPA Large Quantity Generators of Hazardous Waste

The EDR report identified two facilities within the searched radius as a Large Quantity Generator (LQG) of hazardous waste. A LQG of hazardous waste generates more than 1,000 kilograms (2,200 pounds) of hazardous waste per month or more than one kilogram (2.2 pounds) of acutely hazardous waste per month. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, and/or nature of generated waste) the LQG properties were not identified as an environmental concern in connection with the Site.

5.3 RCRA – Non-Generators

The EDR report identified 24 facilities within the searched radius as RCRA non-generators of hazardous waste (RCRA NonGen). A RCRA NonGen does not presently generate hazardous waste, but generated hazardous waste at some point in the past. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, absence of or satisfied reported violations, and/or nature of generated waste), the RCRA NonGen facilities were not identified as an environmental concern in connection with the Site.

5.4 State Hazardous Waste Sites

The EDR report identified one state hazardous waste site (SHWS) within the searched radius. The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, and distance of more than 0.125 mile from the Site), the SHWS was not identified as an environmental concern in connection with the Site.

5.5 Solid Waste Facilities/Landfill Facilities

The EDR report identified 34 solid waste facility/landfill facilities (SWF/LF) within the searched radius. These records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, and/or inactive status), the SWF/LF facilities were not identified as an environmental concern in connection with the Site.

5.6 Leaking Storage Tanks/Historical Leaking Storage Tanks

The EDR report identified 41 properties within the searched radius as having leaking storage tanks (LTANKS). In addition, the EDR report identified 19 properties in the Historical Leaking Storage Tanks database within the searched radius. In 2002, the NYSDEC stopped entering information into this historical database and transferred all records to the Leaking Storage Tank Database; therefore, all properties included in this database are included in the current Leaking Storage Tank Database. The EDR report includes the historical database, which includes additional information to complement information provided in the current Leaking Storage Tank Database. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, and/or quantity and nature of the release), the LTANKS were not identified as an environmental concern in connection with the Site.

5.7 Registered Underground Storage Tanks / Historical Underground Storage Tanks

The database identified 13 properties within the searched radius with registered USTs under provisions of the NYSDEC Petroleum Bulk Storage (PBS) program. In addition, the EDR report identified 12 properties in the Historical Underground Storage Tanks database within the searched radius. In 2002, the NYSDEC stopped entering information into this historical UST database and transferred all records to the current Registered UST database; therefore, all properties included in the historical UST database are included in the current UST database. The EDR report includes the historical database, which contains additional information to complement information provided by the current UST database.

Based on the information contained in the database (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, quantities/nature of the UST contents, facility status and/or lack of a history of leaking tanks/spills/releases), the UST properties were not identified as an environmental concern in connection with the Site:

5.8 Registered Major Oil Storage Facility (MOSF) UST

The database identified two properties within the searched radius with registered USTs under provisions of the NYSDEC MOSF program. Based on the information contained in the database (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, quantities/nature of the UST contents, facility status and/or lack of a history of leaking tanks/spills/releases), the MOSF UST properties were not identified as an environmental concern in connection with the Site.

5.9 Registered Aboveground Storage Tank Database

The database identified 19 properties within the searched radius with registered ASTs under provisions of the NYSDEC PBS program. Based on the information contained in the database (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, quantities/nature of the UST contents, facility status and/or lack of a history of leaking tanks/spills/releases), the AST properties were not identified as an environmental concern in connection with the Site.

5.10 Chemical Bulk Storage Database for ASTs

The EDR report identified one property within the searched radius with registered chemical bulk storage (CBS) ASTs which includes facilities storing hazardous substances listed in 6 NYCRR Part 597 and registration data collected as required by 6 NYCRR Part 596, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site, quantities/nature of the UST contents, facility status and/or lack of a history of leaking tanks/spills/releases), the CBS facility was not identified as an environmental concern in connection with the Site.

5.11 Landfill / Solid Waste Disposal Sites

The EDR report identified one Landfill / Solid Waste Disposal Sites (SWRCY) site within the searched radius. The Registered Recycling Facility List is maintained by the NYSDEC. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, distance of more than 0.125 mile from the Site), the SWRCY site was not identified as an environmental concern in connection with the Site.

5.12 Spill Sites Database

The EDR report identified 15 properties within the searched radius with spill incidents that were reported to the NYSDEC (SPILLS). Based on the information contained in the database (i.e., hydraulic location with respect to the Site, distance of less than 0.125 mile from the Site, quantities/nature of the spills, and/or spill status), the following SPILLS property was identified as an environmental concern in connection with the Site:

- The property identified as **U-HAUL COMPANY OF METRO NEW YORK** was assigned NYSDEC Spill No. 9305224 on July 28, 1993 for housekeeping issues. Several drums were leaking around the waste oil tank. The spill was declared closed by the NYSDEC on October 24, 2001.

5.13 Manifest Facilities

The EDR report identified 22 properties within the searched radius with Facility and Manifest Data (MANIFEST). In addition, four properties in New Jersey were identified; however are not included in this Phase I ESA due to the nature hydraulic barrier of the Upper New York Bay. This information lists and tracks hazardous waste from the generator though transporters to a

Treatment, Storage, Disposal (TSD) facility. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site and distance of more than 0.125 mile from the Site, and/or nature of generated waste), the MANIFEST properties were not identified as an environmental concern in connection with the Site.

5.14 E-Designation Facilities

The EDR report identified one property within the searched radius as an E-designation facility. The E-Designation Environmental Review Program is administered by the NYCOER; formerly by the NYCDEP. The designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. An E-Designation is a NYC zoning map designation that indicates the presence of an environmental requirement pertaining to potential Hazardous Materials Contamination, Window/Wall Noise Attenuation, or Air Quality impacts on a particular tax lot. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site), the E-DESIGNATION property was not identified as an environmental concern in connection with the Site.

5.15 Manufactured Gas Plant Facilities

The EDR report identified two Manufactured Gas Plant (MGP) facilities within the searched radius. The MGP database includes records of coal gas plants compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludge, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site and distance of more than 0.125 mile from the Site), the MGP facilities were not identified as an environmental concern in connection with the Site.

5.16 US Historical Auto Stations

The EDR report identified 40 potential gas station/filling station/service station sites within the searched radius. EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records," or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site, distance from the Site, and/or lack of station information), the Historical Auto Station facilities were not identified as an environmental concern in connection with the Site.

5.17 US Historical Cleaners

The EDR report identified two potential dry cleaner sites were identified within the searched radius. EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records," or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Based on the information contained in the EDR report (i.e., hydraulic location with respect to the Site and/or distance from the Site), the Historical Cleaners sites were not identified as an environmental concern in connection with the Site.

5.18 Freedom of Information Law Letter Responses

FOIL letters were submitted to the USEPA, NYSDEC, NYCDEP, NYCDOH, NYCOER, FDNY, and NYCLPC. In addition, the NYCDOB BIS and NYCDOF ACRIS Internet databases were

consulted in reference to the Site. No responses have been received by the date of issuance of this Phase I ESA from the USEPA, NYSDEC, NYCDEP, NYCDOH, NYCOER, FDNY, and NYCLPC. If any additional pertinent environmental information is received from any of these agencies following the issuance of this report, Roux Associates will provide a letter addendum to this report detailing this information. Information obtained from the Internet Databases and FOIL responses is included as Appendix H.

USEPA

The USEPA responded that the request was received and contact will be made when the file review is complete. In addition, Roux Associates conducted a search of the USEPA website, regarding Superfund Site Information, the Site address was not identified.

NYSDEC

A request for records has been submitted to the NYSDEC, to which a response is pending.

In addition, Roux Associates accessed the Spills Database, Hazardous Waste Registry (HWR)/Environmental Remediation Database, Petroleum Bulk Storage (PBS) Database, and conducted a search for outstanding permits on the NYSDEC website. The spill numbers documented in the GCE Phase II Work Plan and Health & Safety Plan, January 3, 2013 were confirmed in the NYSDEC Spill Database and PBS Database. The Site is not listed in the Hazardous Waste Registry (HWR)/Environmental Remediation Database.

NYCDEP

A request for records has been submitted to the NYCDEP, to which a response is pending.

NYCDOH

A request for records has been submitted to the NYCDOH, to which a response is pending.

NYCOER

A request for records has been submitted to the NYCOER, to which a response is pending.

FDNY

A request for records has been submitted to the FDNY, to which a response is pending.

NYCLPC

A request for records has been submitted to the NYCLPC, to which a response is pending.

NYCDOB BIS and NYCDOF ACRIS

The NYCDOF ACRIS and NYCDOB BIS Internet databases were reviewed for the Site in reference to property transfers or other pertinent information regarding the Site.

Several deeds, regarding transfer of the Site property were retained through review of the NYCDOF ACRIS for the Site. The deed document dated, December 13, 1983 involves the transfer of the Site from Poanne Realty Corp. to Willets Point Contracting, Corp. The deed document dated, August 30, 1991 involves the transfer of the Site from Willets Point Contracting, Corp to Willets Point Asphalt, Corp. The deed document, dated January 8, 2008 involves the transfer of the Site from Willets Point Asphalt, Corp. to TDC Development & Construction, Corp. The deed includes the DEP Customer Registration Form for Water and Sewer Billing and the Real Property Transfer Report between the two parties.

No other property transfers and agreements referencing the Site were listed in the NYCDOF ACRIS Internet databases. In addition, the NYCDOF ACRIS reportedly lists federal liens, if any; no federal liens were listed for the Site.

No Certificates of Occupancy (C/O) were available for the Site by review of the NYCDOB BIS. The NYCDOB BIS also contained information on past actions (i.e., permits and violations) executed at the Site. Several work permits pertaining to construction renovations were noted. Several violations and complaints found regarding construction work, alterations and plumbing work. No information regarding plumbing inspections, boiler records, or elevator records were identified. There were no past actions regarding gasoline tanks or fuel oil tanks (typically labeled “GT” or “FO”, respectively).

6.0 SITE RECONNAISSANCE

The findings of the Site reconnaissance conducted on May 20, 2013 are discussed below. The Site is located on the west side of College Point Boulevard, south of Northern Boulevard and immediately easts of Flushing Creek in the Borough of Queens. The Site is located in an area that is pre-dominantly non-residential (commercial and light-industrial).

The Site, occupied by Scrap King since April, 2010, is currently owned by the TDC Development & Construction, Corp. and is approximately 0.92 acres. The 2-story Site building (approximately 600 square feet) is utilized to distribute payment for scrap metal and as office space. The Site is approximately 10 feet above mean sea level.

The hatch to gain roof access is not used by the current tenants and no ladder was available to gain roof access at the time of the Site Reconnaissance. It was reported by Ms. Chen (Key Site Representative) that it is to the best of her knowledge that there are no structures or materials on the roof.

6.1 Utilities

Natural gas service is available to the Site building from Con Edison Corporation of New York (Con Ed); gas connection noted along College Point Boulevard. Electrical service is supplied to the Site building by Con Ed. Overhead electric heating units are located throughout the building. Natural gas connection was noted along College Point Boulevard.

6.2 Hazardous Substances

Liquid wastes or containers containing liquids are not accepted at the Site. Four hydraulic forklifts are utilized to move material during the sorting process and to unload and load vehicles. During the Site reconnaissance, it was reported that forklift maintenance is conducted by an outside contractor; no hydraulic oil was noted.

6.3 Storage Tanks

No evidence of USTs or ASTs was observed during the Site reconnaissance. According to a review of the EDR report and the NYSDEC bulk storage database, historical use of tanks is confirmed in previous environmental reports.

The NYSDEC and FDNY have not yet responded to the FOIL requests.

6.4 Polychlorinated Biphenyls

Several underground transformers were noted on the sidewalk, immediately east of the Site. The size or contents of the transformers could not be confirmed at the time of the Site reconnaissance.

No other evidence of aboveground or subsurface electric utility transformers, vaults or manholes that may have PCB-containing equipment were observed. Portions of the building were lit by fluorescent lighting, which may have PCB-containing ballasts considering the age of the building. In accordance with ASTM E1527-05, Roux Associates did not inspect the ballasts for PCB content during the Site reconnaissance.

6.5 Staining and Stressed Vegetation

A majority of the Site is paved, concrete or dirt; no vegetation or staining was observed during the Site reconnaissance.

6.6 Drains and Sumps

Several round lids were noted on the sidewalk, immediately east of the Site. The lids were not accessed during the Site reconnaissance because it was unclear if the structure were associated with the Site.

No drains or sumps were noted at the Site.

6.7 Solid Waste

Solid waste generated at the Site appeared to be limited to conventional waste and is picked up by an outside contractor.

6.8 Wastewater

Based on the Site reconnaissance, and according to Ms. Chen, sanitary waste and wastewater is discharged to the municipal sewer.

6.9 Wells

Potable water in the area of the Site is provided by the municipal water distribution system and obtained from upstate reservoirs.

Two groundwater monitoring wells were noted on the sidewalk, immediately east of the Site. No wells were noted on Site.

7.0 INTERVIEWS AND USER-PROVIDED INFORMATION

Roux Associates incorporated interviews conducted with the User to complete this Phase I ESA. Information obtained from this source was detailed throughout this report in various sections, as appropriate. Pertinent findings from these sources are summarized in the following sections.

7.1 Interviews

Roux Associates contacted the following individuals regarding the Site during the completion of this Phase I ESA:

- Interview conducted on May 20, 2013 with Ms. Phoebe Chen (Key Site Representative).

Findings from the interviews were summarized in appropriate sections of this document.

7.2 User Questionnaire

Roux Associates provided a questionnaire to the Owner Representative and to the potential Site purchaser. The questionnaire was completed by Mr. Earle Tockman (Current Site Owner Representative) and was provided to Roux Associates (Appendix J). Mr. Tockman indicated the following, to the best of his knowledge:

- No environmental cleanup liens exist in connection with the Site.
- Activity and land use limitations (AULs) are in effect (tidal wetlands).
- No specialized knowledge of the potential for nearby properties to utilize chemicals or have knowledge of their business processes.
- The purchase price of the Site fairly reflects the fair market value of the Site.
- Past uses of the Site include an asphalt plant. Spills have been reported to the NYSDEC. From 1979 through 2001.
- The User has knowledge of obvious indicators that suggest the presence of contamination at the Site. Previous investigations indicated soil contamination was present at the Site and has been excavated in limited areas. In addition, laboratory results and visual inspections (free product) confirm groundwater as recent as 2011.

This information is concurrent with the findings documented in other components of this Phase I ESA.

8.0 FINDINGS AND CONCLUSIONS

Based on the information gathered as a result of the Phase I ESA process, Roux Associates has identified the following RECs in connection with the Site.

- Former Site Use: According to the Sanborn fire insurance maps, the Site was utilized for coal storage from sometime prior to 1886 until 1980. In addition, open/active spill numbers 8704514 and 8705123 were assigned to former business (Willets Point Asphalt) and are considered open/active according to the NYSDEC.

- Offsite Sources of Groundwater Contamination: According to review of previous investigation reports, several upgradient offsite groundwater monitoring wells have been impacted and, therefore, groundwater beneath the Site may also be impacted as a result. A previous investigation documented the removal of former USTs and contaminated soil at the Site. Additional sampling is warranted to further confirm or deny impacts to the Site.

Although not technically defined as RECs, the following is a list of potential environmental concerns at the Site that could potentially impact subsurface conditions at the Site:

- Information suggests that the Site is most likely underlain by historical urban fill material from an unknown origin.

- Several round lids were noted on the sidewalk, immediately east of the Site. The lids were not accessed during the Site reconnaissance because it was unclear if the structure were associated with the Site.

Although considered out of scope, the following environmental issues were reviewed in previous environmental reports and warrant attention:

- Several underground transformers were noted on the sidewalk, immediately east of the Site. The size or contents of the transformers could not be confirmed at the time of the Site reconnaissance.

- Portions of the building were lit by fluorescent lighting, which may have PCB-containing ballasts considering the age of the building (constructed sometime prior to 1980). In accordance with ASTM E1527-05, Roux Associates did not inspect the ballasts for PCB content during the Site reconnaissance.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Pending response to FOIL requests from the USEPA, the NYSDEC, the NYCDEP; the NYCDOH, the NYCOER, the FDNY and the NYCLPC. If any additional pertinent

information is obtained from responses to outstanding FOIL requests, Roux Associates will prepare a letter addendum summarizing these findings.

Please note that although lack of record sources listed above is considered a data gap, it is not considered a material limitation for the completion of this Phase I ESA report.

9.0 REPORT ASSUMPTIONS AND LIMITATIONS

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux Associates' initial investigation to identify the potential presence of RECs involving or affecting the Site in accordance with ASTM E1527-05. This Phase I ESA was conducted by Roux Associates in accordance with the regulatory requirements for conducting AAI as set forth in the USEPA AAI Rule, at 40 CFR Part 312. Specifically, the preamble to the AAI Rule states:

> "*In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-05 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule* [1]."

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter "Prospective Purchaser") defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), is that person must conduct all appropriate inquiry in conformance with the AAI Rule (or the ASTM E1527-05) prior to acquisition of the property YoungWoo has acknowledged that, under the AAI Rule, Roux Associates' performance of the Phase I ESA in accordance with ASTM E1527-05 will not alone result in YoungWoo satisfying all requirements of the AAI Rule and provide a defense to CERCLA liability.

YoungWoo has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX ASSOCIATES MAKES NO GUARANTEES OR WARRANTIES, THAT THIS PHASE I ESA, IN AND OF ITSELF, WILL IN FACT QUALIFY CLIENT FOR A DEFENSE TO CERCLA LIABILITY.**

Roux Associates has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent

[1] Federal Register: November 1, 2005 (Volume 70, Number 210) Page 66081.

environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux Associates.

The AAI Rule requires, and the conclusions and recommendations stated herein, represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

YoungWoo has agreed that Roux Associates shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux Associates has identified data gaps and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of the Phase I ESA. Implementation of the recommendations may not fully address the data gaps as the information obtained from execution of those recommendations may alter or modify the interpretation of the Site conditions and conclusions regarding the data gaps.

It should be noted that Roux Associates has not conducted any intrusive activities on the Site and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux Associates does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify significant RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

This Phase I ESA Report is not an appraisal or value judgment of the Site. YoungWoo has agreed that Roux Associates shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Site.

The Phase I ESA Report has been prepared for the exclusive use of YoungWoo for specific application to the Site covered by the Phase I ESA Report. YoungWoo has agreed that any third-party use of this Phase I ESA Report is the sole responsibility and at the sole liability of YoungWoo.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312; and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth on 40 CFR 312.

Respectfully submitted,

Joseph P. Gavin
Project Hydrogeologist

Sin Senh
Vice President /
Principal Hydrogeologist

ROUX

Professional Profile

Sin Senh
Vice President / Principal Hydrogeologist

Technical Specialties:
Specialties include ERD and ISCO technologies for chlorinated sites, evaluation of environmental discharge to water bodies, degradation studies of CVOCs, analytical and numerical groundwater and surface water flow and contaminant transport modeling for hazardous waste sites, multi-phase (petroleum free-product) finite-element modeling, dual-phase recovery well design, landfills and remedial design of pump and treat systems, GIS database management, aquifer testing, and 3-D computerized visualization.

Experience Summary:
Fourteen years of experience: Vice President, Principal, Senior, Project, and Staff Hydrogeologist with Roux Associates, Inc., Hydrogeologist with the South West Florida Water Management District.

Credentials:
M.A., Hydrogeology, Binghamton University 2005.
B.S., Geology Binghamton University 1997.
B.A., Environmental Studies, Binghamton University 1997.

Professional Affiliations:
National Ground Water Association – member
American Institute of Professional Geologists – member

Publication:
Large-Scale Enhanced Reductive Dechlorination for the Remediation of Chlorinated Volatile Organic Compounds, Kwan, W. P., Senh, S. and G. Netuschil, Proceedings of The Seventh International Conference on Remediation of Chlorinated and Recalcitrant Compounds, In Publication, 2010.

Key Projects:

- Principal-in-Charge for the largest redevelopment project in New York City (over $4.5 billion). Project includes Phase I and Phase II ESAs (investigation of soil, groundwater, and soil vapor) at over 75 properties; Construction support for excavation of one million cubic yards of soil including implementing an *in situ* waste characterization program; Environmental support for demolition, asbestos and lead abatement, site remediation using In-Situ Chemical Oxidation, and relocating of an active 9-acre 100-year old railyard; Property acquisition support throughout the project (7 city blocks); and Agency support for NYSDEC, NYCDEP, MTA (LIRR/NYCT), and ESDC. The environmental data was used as an integral component of the New York State Environmental Quality Review Act (SEQRA) final Environmental Impact Statement (EIS). The project will encompass 336,000 sq ft of office space, 6.4 million sq ft of residential space, an 18,000 seat sports and entertainment venue – the Barclays Center (future home of the Nets professional basketball team) – 247,000 sq ft of retail space, a 165,000-square-foot hotel, and over 8 acres of intricately designed publicly accessible open space.

- Principal-in-Charge of a $125MM redevelopment project in Flushing, NY. Project involves coordination the NYC OER for the E-designation program (noise and hazardous materials) and NYC Brownfield Cleanup Program; Phase II ESA; *in situ* waste characterization and excavation support for 40,000 cubic yards of soil to seek Track I (Unrestricted use) clean goals. Project will receive a Brownfield Incentive Grant once excavation is completed and will receive a NYC Green Property Certification.

- Principal Coordinator for a due diligence project for a major petroleum company for the divestiture of retail service stations throughout the Mid-Atlantic and New England regions. The project was to complete an assessment of over 1,000 retail service stations with the intent of divesting of both the property and the environmental liability. Provided strategic insights for developing and managing the overall project. Managed team that performed over 180 Phase I ESAs in accordance with ASTM E1527-05, developed the scope of work for the Phase II site characterizations within a four-month period; finishing ahead of schedule and on budget. Following the Phase I ESAs, managed team that perform the Phase II site characterizations at 60 of the retail service station sites. The scope of work for each site in general included a geophysical survey, soil borings and soil samples, and installing monitoring wells and sampling groundwater. The Phase II investigations generated a substantial volume of data including laboratory results, well location survey data, groundwater elevation measurements, and boring logs; all of which were presented in a summary report of each site.

- Project Manager for a 7.2-acre site redevelopment project in Rego Park, New York. Project involved Phase II ESAs, groundwater monitoring, and excavation support for 258,000 cubic yards of soil. Developed a unique *in situ* waste characterization plan which included the collection of over 1,000 soil samples, management and review of several thousand records of analytical data, preparation of various graphics delineating the Site by horizontal and vertical grids of hazardous and non-hazardous soil, preparation of state and federal applications, and documentation of the fate and transport of hazardous and non-hazardous soils.

- Principal-in-Charge of a redevelopment project in Secaucus, NJ where an 800,000 square foot data center will be constructed over a closed solid waste landfill. Project included health and safety oversight, air monitoring, *in situ* waste characterization of 15,000 cubic yards of soil, and excavation oversight.

- Consulting expert for a retail property owner on Long Island. The property is a NYSDEC Class 2 Inactive Hazardous Waste Disposal site where the primary contaminants are chlorinated solvents in soil and groundwater and is being evaluated by the USEPA as a NPL-listed site. Investigations revealed DNAPL-like concentrations in vadose soils with concentrations over 3.5 million ppb and up to 300,000 ppb in groundwater of PCE.

- Principal-in-Charge for the closure and abandonment of 53 Class V drywell structures at commercial warehouse facility in Syosset, New York. The drywell abandonment project was conducted in accordance with the USEPA Underground Injection Control Program as administered by Nassau County Department of Health (NCDOH). The project required coordination with the client and their developer, the NCDOH, the USEPA, the local union representatives, Nassau County Department of Public Works, and subcontractors in order to complete the job. Obtained a No Further Action from NCDOH and USEPA through work plans, memoranda and summary reports.

- Principal-in-Charge of a redevelopment project in Coney Island, NY. Project involved closure of a fuel oil spill with the NYSDEC which entailed demolition of a building in order to chase the contamination in soil and excavation of all impacted soils. The site is part of a large project (over $2 billion) associated with the redevelopment of area Coney Island area.

Sin Senh
Vice President / Principal Hydrogeologist

- Principal-in-Charge of a redevelopment site in the Bronx, NY for a private developer who plans on constructing a multi-use living center including a public school, retail, commericial, and residential. Project responsiblities include Phase I and II ESA, community air monitoring, health and safety monitoring, soil disposal, and design and installation of a sub-slab depressurization system to mitigate vapors emanaing from groundwater. The site is divided in half by an activce NYC transit subway line as it transitions from underground to aboveground.
- Principal-in-Charge for the remediation and redevelopment of a former asphalt manufacturing facility in Flushing, NY. Project included closure of multiple NYSDEC spill numbers, Phase II ESA, closure of a 10,000-gal UST, hot spot soil excavation, coordination with NYSDEC Tidal Wetlands staff when working within tidal wetland buffer zone, and re-zoning of the property for lease to a metals recycling contractor.
- Principal-in-Charge of a remediation project at a former 18-acre television manufacturing facility in Taoyuan, Taiwan. Project included coordination of a soil and groundwater investigation using Taiwanese consultants and subcontractors. Investigation included using a MIP probe to delineate a DNAPL source for a 9,000-ft dissolved PCE and TCE plume, installation of over 65 monitoring wells, design and management of two 24-hour pump tests, implementation of an Enhanced Reductive Dechlorination (ERD) pilot study using HRC/molasses injections and an In-Situ Chemical Oxidation (ISCO) pilot study using potassium permanganate, tracer studies, implementation and design of a full-scale ERD remedial system that includes over 125 injection wells and a groundwater re-circulation system, database management, and numerous report preparation including site investigation summary reports and remediation work plans.
- Consulting expert and fact witness for a $200MM-plus class action case against a Fortune-500 client for groundwater contamination at a former television manufacturing facility in Taiwan. Evaluated historic usage of carbon tetrachloide, PCE, and TCE as cleaners during a 30-yr span, impacts of former TCE stills, chemical fires, and effects of break-down products in groundwater (Deposition August 2010).
- Consulting expert for an insurance litigation claim (on behalf of defendant) where a developer who purchased the property in NYC to build a 10-story residential tower and claimed environmental damages against the defendant for its prior use of the propoerty as a gas station. Preparation of expert report for which claim settled for less than one third of original claim.
- Consulting expert for major petroleum company for 77 gas stations in NJ and PA. Evaluated life cycle costs for each gas station based on their anticipated remedies and prepared expert report illustrating environmental exposure across these sites.
- Primary modeler for the largest subsurface free-product plume in North America (Brooklyn, NY). Constructed a groundwater flow and multi-phase flow model using BIOSLURP™ to estimate total free-product volume and recovery time and a three-dimensional groundwater flow model using MODFLOW. Provided alternative remedial strategies to expedite recovery effort and improvements to maintain hydraulic containment and prevent discharge to adjacent creek. Performed two constant-rate pump tests and hydrocarbon characterization sampling to evaluate mobility of free-product plume. Modeling results were used to design and installed additional thirteen 12-inch diameter stainless steel recovery wells. Total volume recovered to date is over 10 million gallons free-product.
- Primary modeler and contaminant transport assessment at a bulk petroleum storage facility in Buffalo, New York. Project included assessment of the site's environmental discharge to the Buffalo River, soil investigations, GIS database management and computerized mapping. Constructed a MODFLOW groundwater flow model to evaluate hydraulic containment to the river and a multi-phase flow model using BIOSLURP™ to estimate total free-product volume and recovery time. Provided alternative remedial strategies to expedite recovery effort. Performed three 24-hour constant-rate pump tests and hydrocarbon characterization sampling to evaluate mobility of free-product plume.
- Primary groundwater flow and contaminant fate and transport modeler for a Phase II RI/FS at USEPA NPL Superfund site in New Jersey. Constructed a 12-layer MODFLOW model to simulate groundwater flow and MT3D transport model of three contaminant plumes (TCE, Benzene, and BCEE) resulting from former petroleum lagoon and acid washing facility. Performed evaluation of discharge from groundwater to surface water bodies (swamps, creeks, ponds, and lakes), calculation of bio-degradation rates of TCE and Benzene based on microbial studies. Participated in installation of monitoring wells and soil borings, soil sampling, conducting a 72-hour constant rate pump test and hydrogeologic interpretation of site.
- Project Manager for the Delaware City PVC Superfund Site. Project included soil/groundwater investigations at the polyvinyl chloride manufacturing facility, construction of flow model for design of additional pump and treat system, annual groundwater sampling of over 85 wells to assess the effectiveness of existing pump and treat system, and performing aquifer pump test on newly installed wells, and annual reporting to the USEPA.
- Project Manager for a former fibers manufacturing facility undergoing RCRA Corrective Action in Williamsburg, Virginia. Managed multi-person field crew who installed multiple monitoring wells, gauged and sampled groundwater, and prepared reports for VDEQ approval. Segragated site into multiple parcels for property transaction and prepared closure reports for each parcel as part of the property divestment.
- Project Manager at a former petroleum bulk storage terminal in Oceanside, NY. Responsibilities included installation of 20-plus monitoring wells, 6 pumping wells, slug tests and constant rate pump test, design and installation of a pump and treat system, and performance monitoring of the full scale system for 3 years after which was shutdown due to approval from the NYSDEC for reaching cleanup goals.

Professional Profile

Joseph P. Gavin
Project Hydrogeologist

Technical Specialties:
Phase I / Phase II Environmental Site Assessments; Petroleum Bulk Storage (PBS) compliance programs; site investigations, underground storage tank (UST) assessments, and remedial oversight at residential properties, major chain retail stations and commercial / industrial facilities.

Experience Summary:
Seven years of experience: Project Hydrogeologist with Roux Associates, Inc.; Geologist, PBS Compliance Manager, and Environmental Technician with C2G Environmental Consultants, LLC.

Credentials:
M.S. in Geology; City University of New York, Brooklyn College, Brooklyn, New York; anticipated May 2013
B.A. in Environmental Science with Geology Concentration; City University of New York, Queens College, Flushing New York, 2003
OSHA 40-hour HAZWOPER Training
OSHA 8-HOUR Refresher Training
AMTRAK Contractor Safety and Security Training

Key Projects

- PBS Compliance Audit responsible for managing and conducting a multi-million dollar PBS Compliance Audit Program, under supervision of the New York State Department of Environmental Conservation (NYSDEC), at over 400 facilities throughout New York State for Getty Petroleum Marketing, Inc. (GPMI), OK Petroleum, Prestige Petroleum, Bottini Fuels. Included all scheduling, site inspections, updates to PBS tank registrations to NYSDEC, Rockland County Department of Health (RCDOH), Westchester County Department of Health (WCDH), Nassau County Department of Health (NCDH), Suffolk County Department of Health Services (SCDHS), compliance issue tracking, and addressing regulatory and client inquiries.
- PBS Compliance Manager responsible for managing and conducting Major Oil Storage Facility (MOSF) Compliance Audits for GPMI locations in New York to acquire and/or maintain MOSF license registration.
- Provide PBS compliance training seminars and compliance issue review sessions for GPMI employees biannually.
- Managed and performed PBS Compliance Audits for over 50 non-retail properties (i.e., local municipalities, commercial and industrial properties) throughout New York.
- Performed Phase I Environmental Site Assessments and as part of due diligence in connection with property transfers for the Long Island and Hudson Valley, New York region. A majority of properties included MOSF Terminals, commercial properties, former retail gasoline stations, and office buildings.
- Field manager responsible for Phase II Site Assessment and preparation of investigation reports for soil boring installation, monitoring well installation and corresponding soil / groundwater sampling. Projects include field oversight for retail gasoline station UST replacement for multiple GPMI locations; quarterly well sampling programs.
- Staff Geologist responsible for managing field activities associated with site investigations and UST removal and closure at over 30 residential properties under the NYSDEC spills program. Responsibilities also included preparation of reports and regulatory agency / client correspondence.
- Managed performed environmental services to achieve and/or maintain SPDES permit requirements for multiple MOSF terminals in the Hudson Valley, New York area.
- Provide field oversight for Allstate Insurance Company policy holders during contractor UST removal and spill remediation projects for over 40 New York residential locations.
- Emergency spill remediation services for Central Hudson in the Hudson Valley, New York area following Hurricane Irene.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

SPECTRUM MAINTENANCE CORP	***39-08 JANET PLACE***	***S 1/8 - 1/4 (0.240 mi.)***	***AE129***	***366***

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 03/21/2013 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 01/07/2013 has revealed that there are 34 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 04/05/2013 has revealed that there are 41 LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 04/02/2013 has revealed that there are 13 UST sites within approximately 0.25 miles of the target property.

MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 MOSF UST sites within approximately 0.5 miles of the target property.

CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 CBS AST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

CON-ED FARRINGTON STREET GAS H	FARRINGTON STREET AT 32	NNE 1/4 - 1/2 (0.418 mi.)	AP177	564

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 40 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 2 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

and manhole replacement.11/15/05-Vought-Contract Payment Package (EAR)-Reviewed Draft Status Report, well monitoring, replaced adsorbent socks, coordinated site visits.11/16/05-Vought-Contract Payment Package (EAR)-Verified site data information (3/18/05).11/16/2005-Vought-Contract Payment Package (EAR)-Coordinated and scheduled site visit, well monitoring, entered info into database (10/1/05-10/31/05). DEC Drescher received copy of purchase agreement from Tockman. Meeting resulted in agreemen that:1)New owner would be required to call in spill upon discovery of soil and/or groundwater contamination.2)New onsite wells are required to be installed at former well locations.3)Tank Compliance data required including 09/25/07-Vought-Teleconference call with DEC Tibbe, DEC Austin, DEC Vought, AG Buss and OSC Hohenstein with discussion of recent site conditions and review of site history. Decision reached to review submission of tank closure data and submit maps to AG Buss and OSC Hohenstein with summary of DECs review of tank closure report.2/28/06-Vought-Meeting with EAR to dicuss further work. DEC required: 1)installation of geoprobe borings with continuous soil sampling and groundwater sampling, one probe at 1000-gallon fuel oil UST location and one downgradient towards the west 2)one round of sampling for dissolved contamination on all wells 3)quarterly groundwater sampling for one year from all wells surrounding well with free product (MW41A) 4)sensitive receptor survey (surrounding area site plan).03/13/06-Thomas - Contract Payment Package- (EAR)- preparation of paperwork, entering field data into databse, scheduling of site visits and technician , monitoring of site (11/01/05-11/30/05).03/16/06-Thomas- Contract Payment Package-(EAR,inc.)- Monitored site, dipped wells and recorded readings (12/01/05-12/31/05).04/03/06-Vought-Received call from EAR(Dany) and work will start later this week. Request to use H2M as opposed to STL due to proximity of lab, better quality data and electronic format of data and only 1% higher. Vought called DEC Karweil and left message to return call.04/28/06-Thomas- Contract Payment Package- (LI Env Assmt)- dipped wells and recorded readings(01/01/06-01/31/06).04/28/06-Thomas- Contract Payment Package-(Env Assmt)- monitored site, dipped wells and recorded readings (01/27/06-02/28/06).05/10/06-Vought-Contract Payment Package (Env Assmt)-monitored site, dipped wells and recorded readings (02/28/06-03/31/06). 08/16/06-Vought-Contract Payment Package (STL)-Soil sample analysis for samples collected from 04/01/06-04/31/06.08/16/06-Vought-Contract Payment Package (EAR)-Monitored site, dipped wells and recorded readings, performed groundwater sample collection, updated site plan and updated quarterly report (04/01/06-04/30/06).08/16/06-Contract Payment Package (EAR). Monitored site, dipped wells and recorded readings, worked on 1st Quarter Report (05/01/06-05/31/06).08/16/06-Contract Payment Package(EAR). Report preparation, data and task review, data entry, monitored site, dipped wells and recorded readings (06/01/06-06/30/06).09/27/06-Vought-Contact Payment Package-(EAR)-Reviewed site monitoring data, monitored site, replaced adsorbent socks, groundwater sampling (06/26/06-7/31/06).11/16/06-Vought-Received inquiry from EAR Dany as to whether he should continue with groundwater monitoring and Vought approved for one year as per 2/28/06 notes above ("quarterly groundwater sampling for one year from all wells surrounding well with free product (MW41A)"). Vought sent email to Dany regarding notes above and continuation of monitoring for one year for wells

WILLETS POINT ASPHALT (Continued) **1001222195**

with dissolved VOCs above TAGM and discontinuation of biweekly monitoring and going to monthly. Vought left message with requirements. Vought spoke with EAR Dany who requested to use a lab besides STL to confirm suspect findings below method detection limits. Dany also agreed to perform groundwater sampling for MNA parameters for quarterly sampling. Vought sent email to DEC Karwiel inquiring about use of another lab. Contract Payment Package (EAR)-biweekly site monitoring and correspondence with DEC (08/01/06-08/31/06). Contract Payment Package (STL)-Groundwater sample analysis(07/01/06-08/10/06). Contract Payment Package(EAR)-Reviewed lab data, bi-weekly site monitoring, data entry (08/24/06-9/30/06). 11/21/06-Vought-Spoke to DEC Rahman regarding adjacent spill #0608868 for investigation and remediation on site being performed by Spectra Environmental (John Ciampa) for site to north.11/27/06-Vought-Received message from Dany that samples were sent to STL as no response to inquiry to use of another lab was received from DEC. (Vought received no response from Karewiel). Vought called Dany and left message to return call with approval to begin monitoring for redox paramaters for MNA. No analysis by second lab needed as if analyticals are showing below method detection limits, then dissolved concentrations should not be so high as to not warrant site closure. Furthermore, confirmation will be made by further groundwater sample analyticals for MNA for one year.2/1/07-Vought-Received call from Mike Dany who received call from Dean Devoe who works for Willet Points Asphalt(917-417-1524) who was calling on behalf of Asphalt plant and is consultant for property owner. Well FN-15 had damaged manhole cover. Vought gave approval to replace cover.2/2/07-Vought-Received call fromand spoke to Devoe who works for Willets Point Asphalt and plant is looking to sell property and Devoe looking for current analyticals. Vought referred him to FOIL application on website, discussed current conditions of site and current DEC requirements and suggested that he call AG Buss for further cost recovery issues.02/28/07-Vought-Contract Payment Package (EAR)-Reviewed monitoring data, biweekly well monitoring, revised project status report, reviewed laboratory data, quarterly groundwater sampling (11/01/06-11/30/06). 02/28/07-Vought-Contract Payment Package (EAR)-Biweekly well monitoring, updating summary tables, completed project status reports (10/01/06-10/31/06).03/01/07-Vought-Contract Payment Package (STL)-Groundwater sample analysis for samples received on 12/1/06 (12/01/06-12/31/06).03/01/07-Vought-Contract Payment Package (EAR)-Writing drafts of project status reports, biweekly well monitoring, data entry (11/30/06-12/31/06).05/03/07-Vought-Contract Payment Package (EAR)-Sorting and filing site information, data entry(11/09/06-1/1/07), biweekly site monitoring, report review (1/1/07-1/31/07).05/03/07-Vought-Contract Payment Package (EAR)-Reviewed site data, bi-weekly site monitoring, installation of steel plate over manhole to prevent trip/fall (02/01/07-02/28/07).05/07/07-Vought-Contract Payment Package (STL)-Groundwater sample analysis for samples received on 3/23/07 (part 1 of 2).05/07/07-Vought-Contract Payment Package (STL)-Groundwater sample analysis for samples received on 3/23/07 (part 2 of 2).05/07/07-Vought-Contract Payment Package (EAR)-Editing project status report, preparation for groundwater sampling, well monitoring, installation of second steel plate over manhole (01/29/07-03/31/07).5/9/07-Vought-Current file review by Vought:Email from Devoe to DEC Vought and EAR Dany-4/3/07-Email requesting update

WILLETS POINT ASPHALT (Continued) **1001222195**

on round of monitoring for site and request if data will result in spill closure.Email from EAR Dany to Devoe-4/4/07. Groundwater samples were collected on 3/21/07 and 3/22/07 from all accessible site wells and EAR currently awaiting data.Email from Devoe to EAR Dany and DEC Vought-4/6/07. Request to know if data resulted in spill closure.Email from Devoe to EAR Dany and DEC Vought-4/11/07. Request to know if data resulted in spill closure.Email from Devoe to EAR Dany and DEC Vought-4/30/07. Request to know if data resulted in spill closure.Email from EAR Dany to DEC Vought-4/30/07. Email with groundwater data from STL dated 4/10/07.05/09/07-Vought-Abbreviated file review by Vought:1979:USCG traces oil back up to Willets Asphalt Plant and requires borings be installed by Willets Asphalt Plant (WAP). ConEd also reports fuel oil in electrical vaults. Installation of product recovery system in Oct 1979.1980: Diagrams with locations of oil found in three coast guard wells along College Point Blvd. Spill discovered by appearance of gasoline in ConEd electrical vaults. Chemical analysis of two samples show product is #2 fuel oil. Map showing up to 3' of free product on Metropolitan Petroleum Corp and separate plume with up to 10' of free product in front of Willets Point General Contractors. Recovery pump installed in the area around electrical vaults by NYSDOT. "We have taken 33 borings which indicate that it is two spills, one in front of Willets Point Asphalt and one on the perimeter of Metropolitan Oil Corporation". Borings show two separate plumes. Willets Point Asphalt buys fuel from Metropolitan Oil. Willets Point feels they are not responsible and files third party claims for damages. Metropolitan also feels that oil is coming from another source. Recommendation made for more borings and recovery systems. 2000-gallons of product recoveryed by system to date.1981: Recommendations by Handex to NYCDOT Sullivan regarding further action and investigation of site1982: PIN project already opened. Handex installed fuel recovery tank in pit and excavation of trenches. VEFR records of pumping out wells. Letter from DEC Sullivan to College Point requesting access. Third party clain by WAP denied and WAP notified they are responsible for spill to Flushing River.1983: Deposition taken during the State of New York vs. Willets Point Contracting Corp, Metropolitan Petroleum Corp and Pittston Petroleum Inc. Affadavit of Handex (J. Longworth). Affirmation in Support of Cross Motion, Pollution Discharge Hearing Notes, Affadavit of WAP(Joe Ferrigno), Affadavit of NYSDOT Graichen, Continued Deposition notes of Mr. Graichen. 1984: Observation Well Reports of four wells on College Point Blvd. (product thickness up to .85'). 1000-gallons of oil recovered to date at WAP and 22000 gallons of #2 were recovered at Pittston Facility. 1985: Observation Well Reports of four wells on College Point Blvd. (product thickness up to 1.61'). Affadavit of NYSDOT Graichen, Affadavit of Handex (J. Longworth). Decision of NYS Supreme Court. Motion for summary judgement against WAP denied as plume adjacent to Willets Point has not been proven ny NYSDOT to be from WAP. Reply Affirmation from Alvin Goldstein.1986: Observation Well Reports of four wells on College Point Blvd. (product thickness up to 1.59'). Letter from Appellate Court, "in our opinion, the State has forfeited its rights to oppose summary judgement based on the lack of discovery by its failure to conduct discovery in all the years of investigation...". Furthermore, status attribution that source is Pittston is based on "speculation" as per Appellate Court.1987: Observation Well Reports of four wells on College Point Blvd. (product thickness up to 1.61'). Letter from DEC Sullivan to WAP-8/24/87.Request to tightness test 1500 and 10000

WILLETS POINT ASPHALT (Continued) **1001222195**

gallon fuel oil tanks.Letter from F&N Berninger to DEC-9/1/87. 10000-gallon UST system failed pressure test. Letter from Pedneault Associates (9/4/87). "We have analyzed the two samples from Willets Point Asphalt labelled "Tank" and "Well in front of Tank" for fingerprint identification and cross match. The chromatic fingerprints show these two samples to be a match".Notes of DEC Activities (unknown author). (8/25/80-11/5/87).1988:Observation Well Reports of four wells on College Point Blvd (1/6/88-12/23/88). (product thickness up to 25"). 1989:Observation Well Reports of four wells on College Point Blvd (1/4/89-6/14/89). (product thickness up to 25"). Monitoring Reports (F&N)-7/9/89-12/26/89). Site undergoing weekly monitoring, system is drawdown pump and product only ejector with 550-gallon recovery tank. Free product in MW25 and RW during entire time.1990:Monthly Monitoring Reports (F&N) Jan 90-Dec 90. As of Dec 1990, four wells still being monitored, free product in MW25 and RW, 9443 gallons of total recovery to date. Product thickness up to .42'.1991:Monthly Monitoring Reports (F&N) Jan 90-Dec 91. As of Dec 1991, Recovery system not changed (consists of 12" recovery well with a drawdown pump and product only ejector and 550-gallon holding tank and compressor). Free product in wells MW25 and RW, 9618.50 gallons of total recovery to date. Product thickness of .29'.Phase II ESA (F&N)-10/31/91. Groundwater at 5' below grade. "Field observation and the laboratory results indicate significant amounts of hydrocarbons are present in the soil and groundwater beneath the property". Four soil borings performed and sample analysis via EPA Method show up to 9090ppm in soil and 32500ppm in groundwater. Recovery system was installed on sidewalk of College Point Ave. Report recommends delineation. Four monitoring wells total.1992:Monthly Monitoring Reports (F&N) Jan 92-Dec 92. Letter from DEC Sullivan to WAP Tully-3/31/92. Letter requesting access to install monitoring wells on WAP.Second Letter from DEC Sullivan to WAP Tully-3/31/92. Letter requesting access to install monitoring wells on WAP.Fingerprinting Results (Pedneault)-8/5/92. Shows samples collected fro, MW2 and MW41 to be fuel oil.Letter from F&N to DEC Sullivan-9/1/92. Recommendation to submit site plan and perform tightness testing after source determination.Quarterly Report (F&N) (4/1/92-6/30/92). No soil samples collected during well installation.Fourth Quarter Report (F&N) (10/1/92-12/31/92). As of Dec 1992, recovery shed still operational, a total of eighteen monitoring wells located on WAP and College Point Blvd and wells also found on U-Haul property which are being monitored by F&N. Weekly monitoring and manual bailing of wells. "The groundwater at this site is heavily influenced by tidal fluctuations in the esturarial Flushing River." "...the gradient changes directions several times from south to north". A total of 9746.75 gallons of product recovered to date. Report recommends additonal delineation, updating of recovery equipment, sampling for dissolved, tidal study. No sampling to date for dissolved hydrocarbons. Well monitoring shows: .11' FP(FN1), .35' FP(FN4), .01' FP(FN5), 1.58' FP(MW41).1993:Monthly Monitoring Reports (F&N) Jan 93-Dec 93. Signed Access Agreement from U-Haul property-2/23/93.Letter from Franklin Co to WAP-3/3/93. "The interstitial space was dry upon examination" of fuel oil tank located adjacent to front boundary fence. "The sensor was tested and found to be at fault". Sensor was replaced.Letter from F&N to DEC Sullivan-3/22/93. Three wells installed on U-Haul property. No petroleum found in soil or groundwater in these wells. Letter from F&N to DEC Sullivan-3/24/93. Three wells installed on U-Haul

WILLETS POINT ASPHALT (Continued) **1001222195**

property. No petroleum found in soil or groundwater in these wells. "The plume, that has been identified as No. 2 fuel oil, is in close proximity to a 1,000-gallon fuel oil tank that supplies generators that provide electrical power for the plant". Recovey shed in operation and VEFR visits also added.First Quarter Report (F&N)-1/1/93-3/31/93.Subsurface Investigation (F&N)-5/27/93. Recovery system shut down since early May 1993 due to failure of drawdown pump. Six additional monitoring wells were installed (three on U-Haul, two on far side of College Point Blvd and on one WAP). Samples anlyzed for total petroleum products (EPA Method 310.13). Petroleum found in one well (4952ppm FN13, Floating product in groundwater in same well). Note that FN13 adjance to 1000-gallon fuel oil UST.Second Quarter Report (F&N)(S4/1/93-6/30/93).Letter from F&N to DEC Tomasello-7/27/93. Proposal to install addition fluid ejectors, oil water separator, stripper tower, new recovery tank.Letter from F&N to WAP Farigno-8/18/93. Letter notifying WAP of installation of total fluids ejectors and trenchs for piping.Letter from WAP to DEC Tomasello-9/2/93. Letter requesting proof of insurance and Hold Harmless agreeement.Letter from DEC Tomasello to WAP Irwin-9/10/93. Access agreement sent to WAP for work referenced on 8/18/93.Signed Access Agreement-9/17/93.Status Report (F&N) (7/1/93-12/31/93). Addition of a 26" recovery well and installation of four new ejectors, addition of oil/water sepaarator, stripper tower, product tank. Total of 24 monitoring wells on and offsite. VEFR stopped in December 1993 due to operation of recovery system.1994:Monthly Monitoring Reports (F&N) Jan 94-Dec 94. Letter from Pedeneault to DEC-3/16/94. Sample from FN11 fingerprinted and shows gasoline and fuel oil.Status Report (F&N) (1/1/94-3/31/94).Letter from F&N Jacobs to DEC Tomasello-5/4/94. Letter recommending installation of 2’ diameter monitoring wells in close proximity to the wells that contain Ejectors.Analyticals for soil and groundwater (Pedneault)-5/11/94, 5/23/94. Letter from Pedneault to DEC-6/1/94. Soil samples from FN13 fingerprinted and all three samples show fuel oil.Status Report (F&N) (4/1/94-7/31/94). Includes soil and groundwater samples collected from installation of four additional wells. Soil analyticals show no TAGM 4046 Soil Cleanup Objective exceedences. "Two independent plumes of floating product exist at the site. One in the vicinity of monitoring wells MW-41 and FN-4, and the second in monitoring well FN-11.".Recovery System As-Built (F&N)-8/24/94.Grondwater Analyticals (Pedneault)-9/22/94, 9/23/94.1995:Monthly Monitoring Reports (F&N) Jan 94-Dec 94. Effluent Analyticals (Pedneault) 1/31/95-11/9/95.Letter from DEC Tang to UHaul (Dunham)-1/9/95. Order of Consent agreed to between DEC and UHaul for investigation and remediation of the site and as a result DEC requires well installation and submission of RAP and installation of spill catchment basins.Groundwater analyticals (Pedneault)-4/20/95.Status Report (F&N)-7/6/95. Total of 29 monitoring wells onsite. Weekly site monitoring and manual bailing if product present. Mounding of groundwater at WAP results in radial flow away from plant. Total recovery to date is 10,949.65 gallons. Two separate product plumes (one in UHaul and one on WAP). UHaul product was fingerprinted showing mixture of fuel oil and gasoline. Groundwater analytilcals show: 3ppb benzene(FN5), 6ppb xylene(FN5), 14ppb xylene(FN6), 20ppb xylene(FN8), 12ppb benzene(FN10), 120ppb toluene(FN10), 52ppb ethylbenzene(FN10), 475ppb xylene, 20ppb xylene(FN12), 1ppb benzene(OW1), 25ppb toluene(OW1), 11ppb ethylbenzene(OW1), 119ppb

WILLETS POINT ASPHALT (Continued) **1001222195**

xylene(OW1), 3ppb benzene(OW2), 2ppb benzene(OW3), 21ppb xylene(OW3), 7ppb xylene(OW4). Letter from F&N to DEC Tomasello-11/16/95. Proposal to use ground penetrating radar and cone penetrometer testing to determine subsurface lithology.Letter from F&N Winslow to DEC Tomasello-12/1/95. In detailed description of use of ground penetrating radar and cone penetrometer testing.1996:Monthly Monitoring Reports (F&N) Jan 96-Oct 96.Status Report (F&N)-5/9/96.Letter from F&N Ash to DEC Tomasello-7/31/96. Summary of EFR on two wells (MW41 and FN4).Status Report (F&N) First Half of 1996-8/28/96. Remediation system consists of one 26" recovery well which contains a drawdown pump and product only ejector, and a second 26" recovery well with a drawdown pump. Four wells have total fluid ejectors and a stripper tower and recovery tank are also operational. Total of 29 monitoring wells onsite. EFR performed on wells in June 1996. F&N recommeding installation of permanent vacuum enhanced fluid recovery system. Groundwater monitoring shows .23' FP(FN4) and .14' FP (MW25) with no dissolved TAGM exceedences in surrounding wells.1997:Letter from Pedneault to DEC Tomasello-1/16/97. Sample submitted for fingerprinting from wells FN4 shows "relatively fresh diesel fuel".Letter from F&N Jackson to DEC Tomasello-2/14/97. FN4 product sample does not match the free product detected in 1994 from FN13.Status Report (F&N)-3/3/97. For period covering 1996.Effluent Sample Analyticals (Pedneault)-4/22/97.Letter from F&N Dunn to DEC Tomasello-5/12/97. Letter summarizing information obtained from geophysical companies. "...F&N does not recommend the use of these techniques.." with respect to either GPR or Cone Penetrometer testing. F&N recommends Geoprobe delineation and EFR on wells.Letter from F&N Abbasi to DEC Tomasello-6/12/97. Letter summarizing F&N request to WAP for additional geoprobe delineation resulted in WAP requesting meeting with DEC.Characterization of LNAPL & Pure Reference Fuel from Willets Point Asphalt Facility (William Sawyer)-6/12/97. Samples collected from FN4, FN1, MW41 and from osite tanks. "Monitoring wells FN-1, FN-4 and MW-41 revealed a No. @ fuel oil spill unequivocally composed of biodegraded No. 2 distallate formulated prior to November of 1992". "Based on the analytical data from February of 1997, two different aged spills were identified. Both spills, however, were composed of distillate No. 2 fuel oil of nearly identical distillation pattern". "The FN-1, FN-4 and MW41 LNAPL was of nearly identical composition which best matched oil from the 1,000 gallon storage tanks ("Gas RM & Office Bdlg")."Letter from Pedneault to DEC Tomasello-7/3/97. Samples were collected from FN42 and FN43 and "submitted samples revealed trace levels of MTBE, consistent with exposure to gasoline".Status Report (F&N) (Jan 97-June 97)-12/29/97.Status Report (F&N) (Jul 97-Dec 97). Total of 22 monitoring wells onsite and remediation consists of on 12" recovery well with four fluid ejectors. Two four inch diameter wells were installed near two story office building in Aug 1997. "MW41A shows a large variation in thickness ranging from 0.10 feet on September 10 and 26, 1777 to 3.20 feet on November 30, 1997". Total product recovery to date is 11302 gallons. Groundwater monitoring data from 12/15/97 shows 2.85' FP (MW41), 1.45' FP(FN-17), .05' FP(FN1A), 2.05' FP(FN4A), .10' FP(FN13A), 132ppb benzene(FN11), 348ppb toluene(FN11), 1229ppb xylene(FN11).1999:Groundwater Analyticals (Pedneault)-1/5/98, 1/13/98.Letter from F&N Lorthior to DEC Tomasello-4/20/98. Proposed plan of action to determine responsible party including determining if 10000-gallon tank has been removed from WAP, review of city records, monitoring of wells on Pittston and UHaul site.Letter from

WILLETS POINT ASPHALT (Continued) **1001222195**

F&N Lorthior to DEC Tomasello-5/4/98. Submission of bid estimates to survey wells.Letter from F&N Lorthior to DEC Tomasello-5/21/98. F&N accepted bid proposal for well survey.Status Report (F&N) Jan 1998-June 1998.ISR-6/15/98Letter from Pedneault Associates to DEC Tomasello-8/4/98. "In summary and as can be seen upon the enclosed data reports and associated chormatograms, the subject samples labeled WELLS #FN6, FN#7 and FN#8 were shown to contain elevated levels of associated compounds, consistent with exposure to gasoline".Letter from F&N Lorthior to DEC Tomasello-9/25/98. DEC Tomasello authorized F&N to install two new ejector wells and associated 2" monitoring wells. 10000-gallon UST still remains to be tested.Letter from F&N Lorthior to DEC Tomasello-12/4/98. Free product found in recovery well in sidewalk and ejector will be moved to this well.1999:Status Report (F&N) (Jan 98-June 98)-2/26/99.Letter from F&N Blumberg to DEC Tomasello-5/7/99. F&N replaced compressor head and system put back on line and "operating effeciently". Status Report (F&N) (June 98-Dec 98)-7/2/99. Total of 24 monitoring wells onsite and remediation system consists of one 24" recovery well that containd a drawdown pump and product only ejector, holding tank and stripper tower. Four other wells also contain total fluid ejectors. "Historical investigations, such as borings, well monitoring, tank tests and file reviews have indicated that the Willets Point Asphalt Plant is the responsible party for this spill". Biweekly monitoring. Total of 11,347 gallons of product recovered from site to date. In December 1998, four wells, two 2" monitoring wells and two 4" ejector wells were installed at the site. Bulk of free product confined to area of FN4 and MW41.Letter from F&N Lorthior to DEC Tomasello-12/15/99. Proposal to install six soil borings to determine is soil adjacent to 10000-gallon heating oil tank is contaminated.2000:Status Report (F&N) (Jan 1999-June 1999)-1/18/00. Total of 24 monitoring wells onsite and remediation system consists of one 24" recovery well that containd a drawdown pump and product only ejector, holding tank and stripper tower. Six other wells also contain total fluid ejectors. Groundwater monitoring in June 199 shows: 1.40'FP (MW41A), .60'FP(FN1A), 1.40'FP(FN4A). Analysis of groundwater for dissolved hydrocarbons shows 265ppb MTBE(FN7). Recommendations made for soil boring adjacent to 10000-gallon UST and installation of multi-phase extraction system.Pedneault Analyticals for Groundwater-1/21/00.Status Report (F&N) (Jun 1999-Dec 1999)-2/4/00. Unknown if tanks at site have been tested to date.EcoTest Laboratory Analyticals-2/10/00, 7/12/00, 7/13/00, 7/19/00, 8/08/00, 8/11/00, 8/21/00, 10/16/00, 12/21/00.2001:EcoTest Analyticals-1/11/01, 2/12/01, 3/12/01, 3/19/01, 4/13/01,Hydrographs and Monitoring Results from Meeting at DEC with EAR-4/01.EcoTest Laboratory Analyticals-7/31/01, 8/31/01, 10/25/01.2002:Letter from DEC Tipple to EAR Rocchetta-12/17/02. "...please schedule the disassembly and removal of the non-operational remediation equipment...". Request to submit a proposal for tidal study to determine groundwater flow direction.2004:EcoTest Analyticals-5/21/04.2005:Project Status Report (EAR Dany) (July 2005-Dec 2005). EAR took over site management as of 5/1/00. "A pump and treat system was installed by F&N in 1997 and operated until it was decomissioned in 2002." General groundwater flow direction to the west. Oliophyllic socks installed in MW41. Biweekly visits for site monitoring and to gauge product storage tank. Only well to have free product is MW-41A (.24' for 3Q2005 and .07' FP for 4Q2005). Report recommends continuation of bi-weekly site visits. No product in MW25

WILLETS POINT ASPHALT (Continued) **1001222195**

or FN4A from 12/02-12/05.2006:Letter from EAR Dany to DEC Vought-2/16/06. Enclosed please find project status report.Analytical Report (STL)-5/8/06.Contractor Authorization Form-6/2/06.Analytical Report (STL)-8/10/06.Email to EAR Dany by Vought-11/16/06. Request to monitor wells surrounding MW41 for MNA parameters with move to monthly as opposed to biweekly monitoring.Analytical Report (STL)-12/14/06.2007:Analytical Reports (STL)-4/10/07.Email request from Dean Devoe for update on closure of spill-4/3/07.Email from EAR Dany to Devoe-4/4/07. Groundwater samples were collected on 3/21/07 and 3/22/07 and analyticals have not been received to date.Email request from Dean Devoe for update on closure of spill-4/6/07.Email request from Dean Devoe for update on closure of spill-4/11/07.Email request from Dean Devoe for update on closure of spill-4/30/07.DEC requires: 1)soil borings adjacent to 10000-gallon AST 2)tightness test records of 10000-gallon AST 3)determination of types of product stored in USTs 4)investigation of 10000-gallon UST at U-Haul 4)continued monitoring and recovery of product?05/13/07-Vought-Devoe plans on selling property however future use and buyer not yet determined. Vought dicussed issues of outstanding state costs, future development constraints (vapor barrier, SSDS), need for further investigation either by DEC, WAP or new buyer. Vought also discussed submission of tightness test results. Devoe will return call to Vought with site visit time. Vought called EAR Dany and left message to return call to DEC.08/27/07-Vought-Vought also sent email to DEC Tibbe, DEC Austin, AG Buss requesting conference call to discuss further action at the site. Vought spoke to Devoe(718 4467000 x 298) and he still has buyer and three tanks were removed from the site last week. Soil samples were collected by buyers (two 1000-gallon fuel oil tanks and one 10,000-gallon fuel oil tank were removed). Excavations were backfilled. Called AG Buss and informed him of tank removal. Vought to: 1)confirm PIN reopen by DEC Farrar 2)tightness test records of all tanks removed (two 1000-gallon and one 10000-gallon UST) 3)continued monitoring and recovery of product? 4)Conference call to determine further DEC actions or 9/10/07 meeting at DEC w/Buss 5)send most recent EAR report to Devoe. 6)Send letter to Devoe requesting submission of tank closure data, TTF data and PBS registration 7)Call Dany for most recent EAR report 8)Schedule Meeting for 9/10 for AG Buss. 9)Notify OSC Hohenstein on 9/4/07 of 9/10 meeting. 08/29/07-Vought-Received tank testing results from Devoe showing tight tank systems for two 1000-gallon fuel oil and tight tank for 10000-gallon fuel oil UST and forwarded to AG Buss. PIN reopened by DEC Farrar. Vought sent email request to EAR Dany for most recent data and copied Devoe on email. Vought called Devoe for address that letter should be sent to:Dean DevoeWillets Point Asphalt127-50 Northern Blvd.Flushing, NY 11368Fax: 718-458-5199Vought drafted letter requiring submission of endpoint samples, site plan and description of endpoint samples to AG Buss for review prior to transmission.09/13/07-Vought-Contract Payment Package(EAR). Scheduled site visit, biweekly well monitoring (04/01/07-04/30/07).09/13/07-Vought-Contract Payment Package(EAR). Biweekly well monitoring (05/01/07-05/31/07).09/25/07-Vought-Called Devoe(718-446-7000x298) and summarized conference call and deferral of decision until report submission. Vought noted that report was already received on 9/11/07 and Vought reviewed report. Soil analyticals from endpoint sample collection at four locations (two from each end of tank) show no TAGM 4046 Required Soil Cleanup Objective exceedences. Vought reviewed report and required:

WILLETS POINT ASPHALT (Continued) **1001222195**

1)submission of clear site plan with sampling locations.09/27/06-Vought-Contract Payment Package (EAR)-Bi-weekly well monitoring and reviewing work orders (06/01/07-06/30/07). 09/28/07-Vought-Contract Payment Package(EAR)-Bi-weekly well monitoring, coordinating site visit, data entry and review (06/27/07-07/31/07).10/1/07-Vought-DEC requires:1)site visit to inspect for areas of contamination and bulkhead modifications with notification to Devoe of site visit.2)review of file, spills database and PBS records for surface spills and areas of concern 3)recent monitoring results from EAR Dany-Vought called EAR and Dany no longer working at EAR. Vought spoke to Nick Bono who is current project manager and sent him email request of most recent data and cc'd Devoe.4)send letter to Willets for submission of site plan with clear sampling locations from UST removal, possible grid sampling, tanks, piping and discharge pits, historical operations, sumps as per DEC Austin after site visit, historical PBS compliance data (TT results, inventory reconciliations).5)callback for AG Buss and OSC Hohenstein with tank removal results and site plan upon completion of site visit.6)removal of remediation system and decomissioning of wells (if applicable)Review of file, spills and PBS database for surface spills and areas of concern:a)Photos of surface spills and overflowing waste oil buckets(2-25-00)b)Tank test failure of 10000-galllon #2 UST-9/1/87.c)F&N Phase II-10/31/91. Report mentions "presence of surface staining". 1000ppm on OVA in B1 2'-4'bg.d)F&N Subsurface Investigation-5-27-93. Documents soil contamination during installation of FN-13. Borings logs show from 2-5'bg soil is dark gray with "heavy petroleum odor".e)F&N Status Report 7/31/94. Petroleum odors observed in FN1A, FN4A, FN13A and MW41A from 1-10'bg. f)F&N 1994-1995 Status Report-"However, the June 1994 fingerprint identification of soil samples from FN-13A from depths of 1 to 3 feet, 3 to 5 feet, and 5 to 7 feet indicated that all three samples contained #4 fue oil".g)F&N Status Report Jan 98-June98. "The first tank, a 1,500 gallon tank containing #2 fuel oil was tested by F&N on October 31, 1987 and the second tank, a 10,000 gallon tank containing #2 fuel oil was tested on September 17, 1987. Both tanks failed the pressure test. According to records from NYSDEC, both of these tanks were closed and 3 new tanks, one 10,000 gallon and two 1,000 gallon tanks were installed. However there are no records on file at either F&N or the NYSDEC of the original tanks having been removed."No significant spills on site showing sources of soil contamination.Recent Monitoring Results from EAR Dany-Received results from EAR Brett Schaefer on 10/3/07. Well monitoring results from biweekly well monitoring show no free product on site in last four monitoring events (7/3/07, 7/24/07, 8/07/07, 8/21/07).Vought copied review results above and faxed to Devoe. Historical TTF will be reviewed, consensus will be held among legal and site visit will be scheduled.10/23/07-Vought-DEC to:1)perform site visit to inspect for areas of contamination and bulkhead modifications with notification to Devoe of site visit. 2)callback for AG Buss and OSC Hohenstein with tank removal results and site plan upon completion of site visit to determine if further investigation is warranted and to also ensure DECs requirements for WAP soil investigation are warranted, lack of overt evidence required by AG for additional cost recovery, and discuss recent monitoring results and additional costs associated with removal of remediation system and well decomissioning (if applicable).3)send letter to Willets after site visit,for submission of site plan with clear sampling locations, possible grid

WILLETS POINT ASPHALT (Continued) **1001222195**

sampling as per DEC Austin, tanks, piping and discharge pits, historical operations, sumps after historical PBS compliance data (TT results, inventory reconciliations), sampling at former locations of documented soil contamination(see notes 10/1/07 for Review of File) and Submission of Detailed Soil Descriptions of Endpoint Samples, Submission of a Surrounding Area Site Map with Former/Current Locations of all USTs, Remote Fill Ports and Dispenser Islands as per previous report.10/3/07-Vought-Called Devoe who confirmed receipt of email requesting site visit. Vought called Devoe to confirm PBS registration and Devoe confirmed submission and confirmation of receipt by DEC Lombardo.11/27/07-Vought-Called Devoe (718-446-7000x298) to arrange site visit and left message to return call with possible times of visit. Vought spoke to Devoe who requested meeting at DEC prior to site visit.11/29/07-Vought-Discussed meeting prior to site visit with DEC Austin and Austin approved of meeting prior to site visit. Vought left message for Devoe to return call to see if he was available on 12/6, 12/7 for meeting at DEC.12/5/07-Vought-After further discussion with DEC Austin a site visit was peformed. No structures remain onsite however remediation system still in place. No signs of soil contamination however subsurface structure that is possibly old scale still in place. No sign of USTs or spills and no odors from site. Vought reviewed photos from site visit with DEC Austin and teleconference will be arranged with AG Buss, OSC Hohenstein, DEC Tibbe and DEC Austin to discuss issues from 10/23/07. Vought left message with Devoe prior to and after site visit.01/14/08-Vought-Contract Payment Package (EAR)-Reviewed data, coordinated site visit, biweekly well monitoring (08/01/07-08/31/07). 01/14/08-Vought-Contract Paytment Package (EAR)-Writing text portion of 2nd Qtr 2006 to 2nd Qtr 2007 Project Status Report, data entry, biweekly well monitoring (08/27/07-09/30/07).1/14/08-Vought-Contract Payment Package (EAR)-Data entry, coordinated site visit, biweekly well monitoring (10/01/07-10/31/07). 01/16/08-Vought-Received call from Earle Tockman who is attorney for land (TDC Development and Construction-718-713-0267). Tockman called as they just purchased property. Tockman plans to use property as a parking lot. Roux Associates may be consultant. All further conversation should be with Tockman as per Tockman. 1/17/08-Vought-Began scheduling conference call with DEC Tibbe, DEC Austin, AG Buss and OSC Hohenstein. Called Buss and informed him of property sale and intened future use. Vought to include recent photos and notes in email.1/22/08-Vought-Received email and teleconference date set for 1/31/08 at 10am. Vought received email from Tockman requesting status and Vought informed him of time requirements due to numerous decisions including cost recovey, future expenses, soil contamination remaining onsite and wetlands/bulkhead violations. Vought received reply from Tockman further explaining bulkhead issues and Consent Orders issues and will defer all further questions to DEC Drescher.1/24/08-Vought-Received email from:William HolubowichRoux AssociatesPh: (631)232-2600Fax: (631)232-9898who will be assisting Tockman on all further matters. Vought sent email to Tockman and Holubowich informing them of teleconference date.1/31/08-Vought-Teleconference with DEC Austin, DEC Tibbe, DEC Vought, DEC Drescher, DEC Walker, AG Buss and OSC Hohenstein. DEC Drescher received copy of purchase agreement. Agreement reached during call that:DEC requires: 1)New onsite wells required to be installed and monitored at former onsite well locations 2)Documentation of historical USTs required to be submitted

WILLETS POINT ASPHALT (Continued) **1001222195**

including submission of site plan with clear sampling locations 3)PBS registration of tanks 4)piping and discharge pits 5)historical PBS compliance data (TTF results, inventory reconciliations), 6)sampling at former locations of documented soil contamination(see notes 10/1/07 for Review of File) 7)submission of detailed soil sescriptions of endpoint samples and boring logs 8)submission of a site map with former/current locations of all USTs, remote fill ports and dispenser islands as per previous report 9)investigation of old tank test failures 10)Estimate from EAR for system removal including shed and above grade structures 11)Email to EAR for continuation of well monitoring 12)Inquiry if FOIL requests received by new owner DEC Vought to submit CAP with Spills requirements, combined with site photos, PBS records, spills and documented soil contamination within past ten years, instructions not to disturb existing wells and associated legal violations to DEC Drescher for inclusion in Consent Order requirements.02/11/08-Vought-Spoke with EAR Nick Bono and he will prepare a estimate to remove remediation system and submit to DEC. Nick will also perform round of quarterly groundwater sampling and monthly monitoring and submit all data to DEC in one report. DEC Tibbe currently editing CAP with spills requirements, photos and documented soil contamination prior to submission to AG Buss and DEC Drescher for review.03/11/08-Vought-Received comments from DEC Tibbe and redited requirements, supporting documents and violations and also drafted CAP for review by Tibbe. 03/12/08-Vought-Reviewed proposals submitted by EAR Nick Bobo dated 3/4/08. First proposal is Removal of Above Ground Remedial Equipment. "The onsite system currently occupies an approximate 8'x40' area of sidewalk in between the north and south entrances of the former asphalt plant. The removal of the above ground equipment will include the demolition of the equipment shed, product storage tank; oil-water separator, chail link fence and surrounding bollards." Prior to removal contents of tanks and separator will be emptied by contractor. "Following the waste removal and demolition of the above ground system components, lockable manholes will be installed over RW-1 and RW-2 and the sidewalk area will be restored to match existing onsite conditions. System removal estimate at $20,056.57. Vought reviewed second proposal also submitted by EAR - Groundwater Sampling Event dated 3/4/08. "During a routine bi-weekly site visit on August 21, 2007 EAR onsite environmental technicians noted that the asphalt plant located on the west side of College Point Blvd. was shut down. The field technicians also noted that the asphalt plan twas in the process of being decomissioned during their next scheduled site visit. Nine monitoring wells within the asphalt property were found to be destroyed as a result of the equipment removal activities (FN18, FN19, FN1, FN1A, FN20, FN13, FN13A, FN4 and FN4A). Proposal for biweekply groundwater monitoring, quarterly groundwater sampling, 03/13/08-Vought-Submitted copy of CAP that includes all requirements from above 1/31/08 via requirements of: complete delineation of soil and groundwater contamination, submission of PBS registration, submission of inventory records, leak monitoring records, monthly inspection reports, submission of a workplan, investigation report and remedial action plan and requirements/violations to DEC Austin for approval and upon Austin approval Vought will: 1)schedule meeting with DEC Tibbe, DEC Urda and DEC Drescher and submit CAP 2)send email to OSC, AG asking or notifying them on estimate for system removal and will also include CAP and requirements/evidence document drafted by Vought and Tibbe 3)send approval for proposal to EAR to remove

WILLETS POINT ASPHALT (Continued) **1001222195**

shed and continue OM&M.03/14/08-Vought-Performed site visit and no activity on site, no cars and only office building onsite and no signs of activity. 05/12/08-Vought-Contract Payment Package (EAR)-Biweekly site monitoring, filing information, scheduling site visits, data entry (11/1/07-11/30/07).05/13/08-Vought-Contract Payment Package (EAR)- Biweekly site monitoring, data entry, billing review (12/01/07-12/31/07).05/14/08-Vought-Contract Payment Package (EAR)- Biweekly site monitoring, data entry, coordinated site visits (01/01/08-01/31/08).05/14/08-Vought-Contract Payment Package (EAR)-Coordinated site visit, biweekly site monitoring, drafting report, preparation of equipment removal proposal (01/03/08-02/29/08).05/14/08-Vought-Contract Payment Package (EAR) - Reviewed site activities, prepared final cost report, biweekly site monitoring (02/29/08-03/31/08).06/2/08-Vought-After further PBS review, another PBS registration was found (PBS#2-032182) in addition to known PBS#2-016098. PBS#2-032182 shows closure and removal of one 10000-gallon #2 fuel oil USTs installed in 1988, two (1000-gallon) #2 fuel oil USTs installed in 1988, one 10,000-gallon #2 fuel oil UST installed in 1956 and one 1,500-gallon #2 fuel oil UST installed in 1956. Due to discovery of above additional PBS regsistration Vought and review with DEC Krimgold, Vought amended CAP requirements to include: recovery of free product if found, complete delineation of soil and groundwater contamination at all areas of documented soil contamination and TTFs, submission of monthly cathodic protection records for new 10,000-gallon #2 fuel oil UST, submission of monthly inspection reports for 13,000 and 15,000-gall ASTs, submission of a workplan with implementation schedule, investigation report and remedial action plan. Vought submitted requirements/violations to DEC Austin who approved of edits. Vought called EAR Bono (888-327-6789x143) for status of site and left message to return call to DEC. Vought drafted and sent letter approving of EAR proposal to remove shed dated 3/4/08 and copied OSC, AG and DLE as well. Vought received call from and spoke to EAR Bono who met ConEd on site last week and ConEd indicated that since they were never informed of demolition of asphalt plant that energized transformers still onsite and as such there may be delays in removing remediation equipment as equipment cannot be removed until ConEd approves. EAR Bono will also arrange for collection of round of groundwater samples prior to system removal and will arrange for Milro to pick up drums of purge and sample water and use Test America for analysis. Bono will provide updates.06/10/08-Vought-Contract Payment Package (EAR)-Contacted ConEd to obtain info on disconnection of electrical service, checked site for ConEd meter number, checked liquid levels in onsite carbon vessels and old remediation equipment, requested electrical disconnection from ConEd and line removal, biweekly well monitoring, absorbent sock installation, drafted letter to ConEd for service removal (4/01/08-04/30/08).06/11/08-Vought-Received call from EAR Bono that he is looking to send someone to NYCDOT to obtain sidewalk permit and he requested letter from DEC waiving permit fee. Nick stated that letter was previously granted by Tibbe. Tibbe not in office and Vought requested copy of Tibbe letter from EAR Bono.06/19/08-Vought-Received call from EAR Bono and Milro scheduled to be on-site Monday 6/23/08 to vac out oil water separators. Contractor being sought to remove carbon cannisters and negotiating with DEP for connection removal.06/26/08-Vought-Received call from EAR Marrone and deconstruction of system has begun. Fence and bollards and storage tanks have been removed. Recovery wells will be

WILLETS POINT ASPHALT (Continued) **1001222195**

left in place for further monitoring. EAR still has received no response from ConEd on removing electrical service to one of the underground vaults and EAR will send staff to ConEd office today.07/01/08-Vought-Contract Payment Package (EAR)-Well monitoring, absorbent sock installation, site visit to meet Con Edison to discuss electrical service demolition, creation of "system construction/site O&M health and safety plan as required by OSHA regulations" (05/01/08-05/31/08). Inquiry sent by DEC Tibbe to DEC Karwiel and DEC Cruden to determine if this was payable and Vought awaiting response before paying package. Received email from EAr Trego that "I believe this was done as part of our internal health and safety program, and should not have been invoiced. Please send back the invoices and we will remove this time. I apologize for any confusion this may have caused." Vought sent back invoices to EAR Werner with copy of email from EAR Trego.07/08/08-Vought-Contract Payment Package (EAR)- Site monitoring and sock installation, Biweekly well monitoring, site meeting with ConEd (05/01/08-05/31/08).07/16/08-Vought-Received and reviewed Groundwater Sampling Proposal dated 7/15/08 from EAR Bono. Current biweekly monitoring plan consists of monitoring wells FN6, FN7, FN8, FN9, FN14, FN15, FN16, MW25, MW41, MW41A, MW42, RW1, RW2. As requested by DEC, quarterly groundwater sampling will also be performed. Groundwater analyticals from 11/30/06 show: 40ppb acenapthene(MW41), 140ppb phenanthrene(MW41), 8.7ppb isopropylbenzene(MW41A), 28ppb acenapthene(MW41A), 100ppb phenanthrene(MW41A). Groundwater analyticals from 3/21/07 show:32ppb acenapthene(FN16), 74ppb phenanthrene(FN16), 6.1ppb isopropylbenzene(MW25), 9.3ppb n-propylbenzene(MW25), 33ppb phenanthrene(MW25), 81ppb phenanthrene(MW41), 13ppb phenanthrene(MW41A), 8.7ppb isopropylbenzene(MW41A), 8.1ppb n-propylbenzene(MW41A). DEC sent letter approving Proposal pending inclusion of following requirements: 1)Status of MW43, FN11, FN10, MW9, MW6, FN12 and possible quarterly groundwater monitoring. Also received email from EAR Bono that system demolition was completed on 7/11/08.07/23/08-Vought-Received faxed letter dated 7/22/08 from EAR Bono that MW6, MW9, FN10, FN11 and FN12 were not included as wells are on active U-Haul property and lot is currently used to park vehicles that are not in use. "Limited property access, high volume of commercial traffic and obstructions has made routine monitoring of these wells inconsistent during historical site visits". Wells will be added to quarterly monitoring and sampling schedule and continue efforts for biweekly monitoring. Vought sent email to EAR Bono confirming receipt of 7/22/08 letter and offering assistance with respect to access if needed. 07/24/08-Vought-Received email from EAR Bono that wells on u-haul were abandoned previously after extensive monitoring under DEC Tipple. Vought stated original sampling proposal should be followed as per prior DEC approval and requested that someone confirm U-Haul wells are gone.07/25/08-Vought-Contract Payment Package (Milro)-Vacced oil contaminated water from storage tank and oil/water separator, removal of spend carbon drums, liquid disposal (06/19/08).08/28/08-Vought-Received email from EAR Bono that he is preparing a Quarterly Status Report which will be submitted to DEC in mid October.10/20/08-Vought-Contract Payment Package (EAR)-Well monitoring, sock installation and replacement, coordination of Milro to clean out separator, delivery of permit application for sidewalk restoration, pick-up of final permit for sidewalk restoration, oversight of Milro product removal onsite, began dismantling of remediation system, disposal of rememdiation

WILLETS POINT ASPHALT (Continued) **1001222195**

system debris, saw-cut and removal of concrete, concrete installation, onsite meeting with ConEd (5/28/08-6/30/08).10/20/08-Vought-Contract Payment Package (EAR)-Continued demolition and removal of concrete, set forms and reinforcement wire, well monitoring, replacement and installation of socks, pouring of new concrete, arranging for disposal of carbon drums, additional meeting with ConEd to discontinue electrical service, demolished shed and disposal of debris, demolition and removal of concrete under shed, reviewed and finalized groundwater proposal, reviewed and submitted proposal regarding adjacent U-Haul site, U-Haul site inspection (07/01/08-07/31/08).10/20/08-Vought-Contract Payment Package (Milro)-Transport and disposal of one drum of purge water (08/28/08).10/20/08-Vought-Contract Payment Package (EAR)-Biweekly well monitoring and sock installation/replacement, groundwater development and sampling, met Milro onsite to arrange disposal of purge water (08/01/08-08/31/08). Sent email to DEC Drescher on status of review and addition of CAP submitted by Vought on 6/2/08 to Consent Order.10/21/08-Vought-Contract Payment Package (Test America)- Groundwater sample analyses (08/27/08-09/17/08).10/21/08-Vought-Contract Payment Package (Test America)- Groundwater sample analyses (08/26/08-09/10/08).12/1/08-Vought-Inquired to DEC Drescher about status of consent order and was requested to ask again in one week.1/15/09-Vought-Received email analyticals from EAR Anacona and requested formal report.02/09/09-Vought-Contract Payment Package (EAR)-Coordinated site visits, well monitoring, sock installation, drafting Project Status Report, began drafting groundwater summary tables, updated tables, created maps, updated text for reports (10/01/08-10/31/08).2/11/09-Vought-Performed site visit and parking bollards installed with sign of F&T Parking on front gate. Remediation system removed. Vought forwarded pictures of parking lot to DEC Drescher. Vought emailed DEC Drecscher, DEC Walker, DEC Oliva pictures of parking lot. DEC Walker to send a warning letter to property owner and a letter to F&T Parking advising them they need a tidal wetlands permit to the extent that they intend to rent parking space or otherwise commercially use that portion of the site that is within the tidal wetland adjacent area.2/18/09-Vought-Contract Paytment Package (EAR)-Revision of analytical tables, well monitoring, reviewed draft summary report, edited-rewrote text of project status report (11/01/08-11/30/08).02/18/09-Vought-Contract Payment Package(EAR)- Reviewed comments of PSR Draft#1, revised edits to the draft PSR (11/12/08-11/25/08).02/18/09-Vought-Contract Payment Package(Test America)-Groundwater sample analysis (1/30/09).04/03/09-Vought-Spoke with DEC Walker and he confirmed that letter advising them they need a tidal wetlands permit to use the site for parking. Walker sent copies of letters to Vought including requirement to TDC Development dated 2/13/09 to contact DEC with intentions of using site as parking lot and also provided notice that a meeting is needed with the DEC to discuss scope of development. Vought also received copy of letter from Roux Associates (Sin Senh 631-232-2600. "As discussed, the F&T Parking sign will be removed from the Site".04/03/09-Vought-Contractor Payment Package (EAR)-Preparation of maps, internal EAR meeting to discuss draft Project Status Report, arranged sampling water disposal with Milro, ammended analytical tables, final review of Project Status Report, well monitoring, manhole cover replacement, well sampling,

WILLETS POINT ASPHALT (Continued) **1001222195**

coordinated site visits, replaced absorbent socks (12/01/08-12/31/08).04/03/09-Vought-Contract Payment Package (EAR)-Arranged for drum pickup, arranged groundwater sampling, biweekly well monitoring and sock replacement (08/29/08-09/30/08). 04/03/09-Vought-Contract Payment Package (EAR)-Biweekly well monitoring and sock replacement, data entry, arranged disposal of sampling water, drafted project status report. (01/01/09-01/31/09). 04/06/09-Vought-Sent email to EAR Rober Ancona to cease all work on site as New PIN Contracts out and site to be taken over by Envirotrac.05/05/09-Vought-Vought amended CAP as 13,000-gallon and 15000-gallon USTs part of 32-02 College Point Blvd and are not of same site and also amended Observations and Supporting data list and submitted to Urda. 06/02/09-Vought-File review to date by Vought:2007:Groundwater Analyticals (STL)-4/10/07.Fax from Tully Environmental (Dean Devoe) to Vought-6/19/07. Results from Dry-As-A-Bone showing "Tight system" for two 1000-gallon USTs.Letter from Action Remediation (Kevin O'Connor 516-781-3000)to NYCFD Bureau of Fire Prevention-8/15/07. "...our company has removed (1)10,000 gallon and (2)1000 gallon #2 underground storage tanks from the above referenced location".Fax from Tully Environmental (Devoe)to Vought-8/21/07. Tank test results showing tight tank (not tight system) for 10000 gallon #2 fuel oil UST. Note that "0 lines tested".Letter from Vought to WPA Devoe-8/30/07. Letter sent requiring collection of endpoint samples from UST excavation limits, submission of descriptions of endpoint samples and submission of surrounding area site plan with locations of UST. Deadline for submission is 10/15/07.Fax from Tully Environmental (Devoe) to Vought-9/11/07. Soil analytical results of borings through tanks showing no TAGM 4046 exceedences however piping runs not sampled and unsure whether tanks removed of abandoned in place. Note that now TAGM exceedences however detections of fuel oil compounds particular to fuel oil are above method detection limits indicating that a spill did occur onsite. Soil analyticals show: 23ppb 1,2,4 trimethylbenzene(TP-01N), 6.4ppb 1,3,5-trimethylbenzene(TP-01N), 6.4ppb n-butylbenzene(TP-01N), 28ppb napthalene(TP-01N), 1100ppb 1,2,4-trimethylbenzene(TP-2), 2700ppb 1,3,5-trimethybenzene(TP-2), 76ppb ethylbenzene(TP-2), 160ppb isopropylbenzene(TP-2), 930ppb xylenes(TP-2), 510ppb n-butylbenzene(TP-2), 320ppb n-propylbenzene(TP-2), 180ppb napthalene(TP-2), 420ppb sec-butylbenzene(TP-2), 7.2ppb napthalene(TP-3), 230ppb napthalene(TP-01S).Fax from Vought to Tully (Devoe)-10/3/07. Fax included pictures of gross soil contamination, and other report pages indicative of Willets Point Asphalt as potentiall RPFax from Tully (Devoe) to Vought-10/3/07. Tank test results showing tight tank (not tight system) for 10000 gallon #2 fuel oil UST and shows "lines tested" as 0. Shows 10,000-gallon UST as tight tank (but system not tested).2008:Letter from Gutman & Gutman to TDC Tockman-1/8/08. "...and that TDC Development & Construction Corp, will have no obligations or duties in respect to the subject matter and remediation work specified in the Consent Decree". (refers to Wetlands CO).Letter from DEC Walker to WPA Devoe-1/4/08. "Based on this submittal, Program hereby states tha tht work required under paragraphs 7 (Post Excavation Bathymetric Survey) and 11(Restoration) has been completed.Letter from EAR Bono to Vought-3/4/08. Proposal for remediation system demolition, sidewalk replacement.Letter from EAR Bono to Vought-3/4/08. "During a routine biweekly site visit on August 21, 2007 EAR onsite environmental technicians ntoes that the

WILLETS POINT ASPHALT (Continued) **1001222195**

asphalt plant located on the west side of College Point Blvd was shut down (Figure 1). The field technicians also noted that the asphalt plant was in the process of being decomissioned during their next scheduled site visit. Nine monitoring wells located within the asphalt plant property were found to be destroyed as a result of the equipment removal activities (i.e FN-18, FN-19, FN-1, FN-1A, FN-20, FN-13, FN-13A, FN-4 and FN-4A)." Proposal for quarterly groundwater monitoring.Letter to EAR Bono from Vought-6/2/08. DEC approves proposal to remove system and restore sidewalk.Sidewalk Permit Letter-6/12/08. Requesting permits to remove system and restore sidewalk.Letter from EAR Bono to Vought-7/15/08. Proposal for quarterly groundwater sampling and containerization of purge water.Letter from Vought to EAR Bono-7/17/08. Approval of proposal for groundwater sampling pending submission of status fo wells (MW43, FN11, FN10, MW9, MW6 and FN12).Letter from EAR Bono to DEC Vought-7/22/08. Wells MW43, FN11, FN10, MW9, MW6 and FN12 not included in quarterly groundwater sampling proposal as they are located within active U-haul property which has high traffic and many wells covered by cars. EAR will attempt to add them to quarterly groundwater sampling schedule and proceed with sampling.Analytical Report (Test America)-9/10/08. Groundwater analyticals for samples collected on 8/26 from wells MW43, MW41, RW2 and RW1. All analyticals results below TOGs 1.1.1 Groundwater Standards.Analytical Report (Test America)-8/27/08. Groundwater analyticals for samples collected on 8/27 from wells FN6, FN7, FN9, MW25, FN8, FN14, FN15 and MW41A. Groundwater analyticals show:1.9ppb benzene(MW41A), 53ppb acenapathene(MW41A), 120ppb fluoranthene(MW41A), 210ppb phenanthrene(MW41A).Analytical Report (Test America)-01/06/09. Groundwater analyticals for samples collected on 12/17 from wells MW43, MW41, MW41A, FN6, FN7, FN9, FN16, MW25, RW2, RW1, MW42, FN14, FN15, FN8. All analyticals results below TOGs 1.1.1 Groundwater Standards.Letter from DEC Walker to TDC Development-2/13/09. "The demolition of the site and preparation for use as a parking lot constitute violations of the Environmental Conservation Law..." "You are hereby instructed to contact this office within fourteen (14) days after receipt of this notification and advise us of your intentions in this matter."Letter from Roux Associates (Sin Senh 631-232-2600) to DEC Walker-2/27/09. "TDC purchased the site from Willets Point Asphalt Corp (WPA)in 2008." "In addition the demolition of the Site has also been completed by WPA." "TDC currently has no development plans for the Site..." "As discussed the F&T Parking sign will be removed from the Site."Letter from EAR Ancona to DEC Vought-4/4/09. Enclosed are two CDs with copies of hardcopy file.06/05/09-Vought-After discussion with DEC Austin, due to lack of free product in offsite wells since 12/05 and no TOGs exceedences in offsite wells since 3/07 (minor exceedences at that time), Spill 790095 and PIN 9118 will be closed and Spills 8704514 and 8705123 which had been consolidated with this spill number will be reopened as RP never reconciled these tank test failures/discharges. This spill to be closed upon well decomissioning. WPA and TDC to be notified by letter of their continuing obligations regarding these open spills. Vought called Buss and left message with update. Vought called and spoke to Envirotrac Bohlen and informed him of upcoming work. Bohlen also requested letter to U-Haul (adjacent property with onsite wells from this spill) and sidewalk permit letter.06/10/09-Vought-Emailed CWA, sidewalk permit letter, property access letter and site plan to EnviroTrac. Sent original access

WILLETS POINT ASPHALT (Continued) **1001222195**

letters to U-Haul and property owner for 36-30 College Point Blvd. Vought reopened spills 8704514 and 8705123.6/11/09-Vought-Sent out certified letter and faxed letter as well to WPA Tully and TDC Tockman requiring submission of investigation results for TTF by July 20, 2009.Vought to:1)spill closure upon abandonment of all wells2)Final ISR after all bills received.07/02/09-Vought-Received message from Americo Real Estate (Rob Furley 602-263-6555x615111) regarding well decomissioning on U-Haul property. 07/06/09-Vought-Called and spoke to Furley and he has been in contact with and has arranged site visit with EnviroTrac to determine if wells still on U-Haul that require abandonment.07/06/09-Vought-Contractor Payment Package (EAR)-Coordination and scheduling of site visits, biweekly well monitoring, sock inspection and replacement, updated tables, water table contour mapping (02/01/9-02/28/09). 07/06/09-Vought-Contract Payment Package(EAR)-Biweekly well monitoring, labratory contact, prepared file for electronic transfer, archiving data, hard document scanning, data entry (03/01/09-03/31/09).07/15/09-Vought-Reviewed response to DEC letter dated 6/1/09 from Roux Associates (William Holubowich) and received on 6/30. "Because the tank test failures and associates spill numbers occurred approximately 20 years prior to TDC's purchase of the property, TDC is not aware of the circumstances associated with the two spills or their remediation, if any." Disscussion of TDC contracting Roux Associates to witness removal of three USTs in 9/07 and the passing tanks tests for these systems, no holes or leaking product or tank integrity issues were observed. Also discusses endpoint sample passing TAGM RSCO's. Note that the tanks referred to in this report are new and are not subject of reopened 1987 spills. Roux Associates installed three monitoring wells. "MW 1 was installed hydruaulically downgradient of the 10,000-gallon UST excavation pit; MW-2 was installed on the northwest section of the site and MW3 was installed on the southwest section of the site." Groundwater at depth of 5'bg. "Monitoring wells MW-1 and MW-2 were not sampled because floating product (i.e liquid phase petroleum was observed in those monitoring wells." "It should also be noted that, based on court records reviewed by Roux Associates (State of New York vs. Willets Point Contracting Corp et al {125A.D.2d 742] the subject property was determined by the court not to be the source of the impact to groundwater associated with Spill Number 7900995."07/29/09-Vought-To send letter noting that USTs in report are not subject of 1987 TTF spills, 7900995 to be closed upon decomissioning of monitoring wells, USTs tests referred to in 2005 and 2007 may not have tested piping nor were samples collected from piping runs as per DER-10, number of endpoints collected around USTs were insufficient as per DER-10, that two subject spills relate to subsequent discharges and as such court case not relevant to these spills, the fact that product was documented as released during former tightness test, fact that endpoint sampls showed detections of VOCs particular to fuel oil indicating a release despite being below TAGM 4046 RSCOs.07/30/09-Vought-Received call from and spoke to Bill Klein (performed tightness test of 10,000-gallon UST) and piping from UST to adjacent pumproom was tested however piping that supplied #2 fuel oil to asphalt burners was never tested. Klein not sure if piping to burners as above or below grade. As per PBS registration there is "no piping" despite numerous site plans with documented piping. Vought discussed spill closure of 7900995 with AG Buss and spill can be closed despite ongoing well decomissioning. Vought

WILLETS POINT ASPHALT (Continued) **1001222195**

submitted response letter to DEC Urda for review.08/03/09-Vought-Received back edits from DEC Urda and DEC Austin and Vought editted letter and sent to Tockman and Tully. Austin approved closure of 7900995 and referall to open spills 8704514 and 8705123. This spill closed by Vought. See those spills numbers for further action.08/12/09-Vought-Contract Payment Package (EnviroTrac)- Corresponding with U-Haul for possible well decomissioning, permit procurement, permit management, review data and permit applications, permit expediting (06/01/09-06/28/09).08/12/09-Vought-Received phone message from Devoe (718-446-7000x298) requesting copy of documents referred to in DECs letter. Vought called Devoe and required him to submit FOIL request. Vought called Devoe and left message to return call and or submit FOIL request.08/27/09-Vought-Received voicemail message from Roux (Holubowich) that he was on vacation and is reviewing DECs letter dated 8/3/09 and will discuss with client and provide response to DEC.08/31/09-Vought-Received call form Lorthior who indicated that approximately .5" of product was found in MW41A as EnviroTrac currently onsite performing well abandonment. Vought discussed site with DEC Austin and impact from this well most likely from Willet Asphalt Plant as no upgradient wells show product and this well historically adjacent to UST and piping systems. Department will leave well open.09/16/09-Vought-Received message from Lorthior that to replace sidewalk flags may require a large amount of concrete and that he will be performing site visit today. Request to return call. Vought called and spoke to Lorthior and all wells except recovery wells have to be decomissioned. All u-Haul wells decommissioned and wells on College Point Blvd decomissioned as well. One section may require replacement of ten flags to restore site to NYCDOT standards. Lorthior will send in rough estimate of work performed to date with additional costs if sidewalks to be replaced to DOT standards.10/16/09-Vought-Contract Payment Package (EnviroTrac)-08/03/09-08/30/09-Figure managment, permit management, calls to U-Haul, travel to U-Haul to abandon wells.11/4/09-Vought-Contract Payment Package (EnviroTrac)-Permit procurement, correspondence with corporate U-haul, preparation for site inspection, travel to and from site, well inspection, revision of permit applications (06/29/09-08/02/09).11/4/09-Vought-Contract Payment Package (EnviroTrac)-Well abandonment of approximately twenty monitoring wells, surface restoration, sidewalk repairs, calls and travel to U-Haul, sock installation, well monitoring, project coordination. (8/31/09-9/27/09).11/4/09-Vought-Received message from EnviroTrac (Sanagorski) that "Additionally, I wanted to give you a heads up that construction was occurring at the former Willets Point Asphalt Plant. I was at the site last week to change the sock in MW-41A and saw constructions vehicles working inside the fence. One worker told me they were planning to make the property a parking lot."12/10/09-Vought-Contract Payment Package (EnviroTrac)-Gauging MW41 and sock replacement, project review and coordination. (11/1/09) Vought sent email to EnviroTrac requesting that all further sock replacement and monitoring stop as product in MW41A is responsibility of owners under old TTFs.12/23/09-Vought-Received letter from EnviroTrac (Sanagorski)-12/23/09. "...EnviroTrac is providing the NYSDEC this letter as its final action for the above referenced spill." "....it was later discovered that oil was also present in monitoring well MW-41A..." Absobent sock filled with product removed from well MW41A on 10/29/09 and on 11/23/09.2/9/10-Vought-Contract

WILLETS POINT ASPHALT (Continued) **1001222195**

Payment Package (Test America)-Groundwater sample analysis (1/30/9). Vought called and spoke to Test America (Erin Gaus 203-929-8140) and confirmed that the invoice was over a year old and had not been paid to date despite current submittal.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was " " 06/05/09-Vought-Due to lack of free product in offsite wells since 12/05 and no TOGs exceedences in offsite wells since 3/07 (minor

WILLETS POINT ASPHALT (Continued) **S100143812**

exceedences at that time), Spill 7900995 and PIN 9118 will be closed and Spills 8704514 and 8705123 which had been consolidated with this spill number will be remain open as RP never reconciled these tank test failures/discharges. WPA and TDC to be notified by letter of their continuing obligations regarding these open spills.Spill assigned to DEC Vought. Vought drafted TTF letter reopening spill #'s: 8704514, 8705123 and closing spill 7900995 with cc to Roux Associates (Sin Senh Ph:631-232-2600 Fax:631-232-9898) and submitted to DEC Urda for review. Letter addressed to: Mr. Peter Tully Willets Point Asphalt Corp. 32-02 College Point Blvd. Flushing, NY 11354 Fax:(718) 426-8737 Ph:(718)446-7000 and: Mr. Earle Tockman TDC Development & Construction Corp. 136-20 38th Avenue, 12th Floor Flushing, NY 11354 Ph:(718)713-0267 06/11/09-Vought-Called and spoke to Mr. Tockman inquiring as to fax number. Mr. Tockman asked what inquiry was regarding and Vought summarized letter and Mr. Tockman stated that Vought was "rude, unprofessional and incompetent". Vought politely explained reason for spill consolidation and fact that original TTFs were never resolved. Tockman did not provide fax but did provide email address of: Etock1@aol.com. Vought sent out certified letter to both parties, email to Tockman and fax to Tully. Vought suggested to all parties that meeting be held to discuss further action. 07/15/09-Vought-Reviewed response to DEC letter dated 6/1/09 from Roux Associates (William Holubowich) and received on 6/30. "Because the tank test failures and associated spill numbers occurred approximately 20 years prior to TDC's purchase of the property, TDC is not aware of the circumstances associated with the two spills or their remediation, if any." Disscussion of TDC contracting Roux Associates to witness removal of three USTs in 9/07 and the passing tanks tests for these systems, no holes or leaking product or tank integrity issues were observed. Also discusses endpoint sample passing TAGM RSCO's. Note that the tanks referred to in this report are new and are not subject of reopened 1987 spills. Roux Associates installed three monitoring wells. "MW 1 was installed hydruaulically downgradient of the 10,000-gallon UST excavation pit; MW-2 was installed on the northwest section of the site and MW3 was installed on the southwest section of the site." Groundwater at depth of 5'bg. "Monitoring wells MW-1 and MW-2 were not sampled because floating product (i.e liquid phase petroleum was observed in those monitoring wells." "It should also be noted that, based on court records reviewed by Roux Associates (State of New York vs. Willets Point Contracting Corp et al {125A.D.2d 742] the subject property was determined by the court not to be the source of the impact to groundwater associated with Spill Number 7900995." 07/29/09-Vought-To send letter noting that USTs in report are not subject of 1987 TTF spills, 7900995 to be closed upon decomissioning of monitoring wells, USTs tests referred to in 2005 and 2007 may not have tested piping nor were samples collected from piping runs as per DER-10, number of endpoints collected around USTs were insufficient as per DER-10, that two subject spills relate to subsequent discharges and as such court case not relevant to these spills, the fact that product was documented as released during former tightness test, fact that endpoint sampls showed detections of VOCs particular to fuel oil indicating a release despite being below TAGM 4046 RSCOs. 07/30/09-Vought-Received call from and spoke to Bill Klein (performed tightness test of 10,000-gallon UST) and piping from UST to adjacent pumproom was tested however piping that supplied #2 fuel oil to asphalt burners was never tested. Klein not sure if piping to burners

WILLETS POINT ASPHALT (Continued) **S100143812**

as above or below grade. As per PBS registration there is "no piping" despite numerous site plans with documented piping. Vought submitted response letter to DEC Urda for review. 08/03/09-Vought-Received back edits from DEC Urda and DEC Austin and Vought editted letter and sent to Tockman and Tully. Austin approved closure of 7900995 and referall to open spills 8704514 and 8705123. 08/06/09-Vought-Received confirmation of delivery certified mail receipts from Tockman and Tully representatives. 3/16/10-Vought-Received email from DEC Drescher that site is being used for storage for Mensch Mill and Lumber who is leasing site from TDC. 3/23/10-Vought-Received call from and spoke to Roux (Bill Holubowich 631-232-2600) who was inquiring as to status and also noted that "Tully would be resolving petroleum issues at the site". 5/26/10-Vought-Up to date file review by Vought: Letter from WPA (Devoe) to DEC-11/23/09. WPA performed FOIL request in response to DEC's letter dated 8/3/09. Letter includes repsonses to failures of 1987 including removal of the failed 10,000-gallon UST and installation of a UST in the same location and use of GPR inspect for the presence of other 10,000-gallon USTs onsite. GPR survey found that "there was no other 10,00-gallon tank at the site by the absence of buried metal objects (other than known tanks). No mention of sampling around failed UST. "Numerous additional investigations and a lengthy remediation process have taken place since the referenced spills took place. The data that was collected was sufficient to allow the Department to close the primary spill file 79-00995 that impacted the subject property. We believe the same data in addition to the information presented above should be sufficient to close the referenced spill." Letter also includes result of GPR survey. 5/26/10-Vought-Case referral form submitted to DEC Legal. DEC requires: 1)Recovery and monitoring of product in MW41A (see closed spill 7900995) 2)Delineation of contamination 3)Possible vapor barrier and/or SSD if property is developed 4)reinstallation of onsite monitoring wells destroyed by removal of asphalt plant (see closed spill 7900995) 5)cc Roux (Holubowich) and to DEC Drescher due to possible wetlands enforcement. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A.9/27/10 - Raphael Ketani. Dean Devoe (718) 446-7000, ext 298 of Tully Environmental called(Tully is owned by the same company that owns Willets Point Asphalt), but I could only leave him a message. I spoke to Mr. Vought in regards to the nature of this spill and the related ones, #7900995 and #8704514. He said that the open spill (#7900995) originally was a PIN case where DEC was doing the investigating and delineation. However, this case was closed and the 1987 tank test failure cases remained open. Each 1987 case was for a UST on site. However, there were 3 tanks at the site: a 10,000 gal. tank at the east edge of the site near the gate; a 1,000 gal. tank at the north edge of the site next to the hot A.C. tanks; and a 1,000 gal. tank near the southeast corner of the site next to the old electrical house. The site, itself, is a bare lot right now. Six DEC wells were destroyed as a result of the process of demolishing the asphalt plant. These were the only on site wells and were concentrated in the eastern part of the property. All of the off site wells had been abandoned as they didn't show any oil, except for MW 41-A. The 1/6/09 Test America data report for the off site wells was entirely non-detect. DEC was not allowed on site to sample the FN series wells before they were destroyed. Previously, Mr. Tockman had claimed that the contamination had been coming from off-site. However, no oil or

WILLETS POINT ASPHALT (Continued) **S100143812**

contamination had been found coming from upgradient. There had been a plume under the U-Haul site to the south, but they voluntarily cleaned it up in the nineteen eighties. Both tanks and the associated piping had leaked oil into the ground. The DEC wells need to be reinstalled and the contamination needs to be delineated. Letters were sent to Mr. Tockman of TDC and to Mr. Tully of Willets Point Asphalt in late 2009 explaining the evidence for the spills and that the tank failures hadn't been addressed. One letter requested that a report be submitted describing an investigation of the spills. A report dated 6/22/09 was submitted by ROUX Associates describing a limited investigation. The results were either below TAGM for oil or non-detect. Mr. Voughts full notes about the spill are in #7900995. The paper reports are in the PIN file draws under PIN #91118. I spoke to Mr. Devoe. He said that the property was sold in 2007 to TDC Corp., 136-20 38 Avenue, Flushing, NY. I explained to him that the DEC wanted the destroyed wells replaced, and the contamination under the site delineated. He said that contamination had been found emanating from off site. I told him that DEC had records of tank failures for the 10,000 gal. tank and the 1,000 gal. tank. I added that I was told the piping associated with the tanks was also possibly defective. So there are a number of reasons why the oil came from the site. He said that he will contact TDC and let them know that the DEC wants work to take place at the site. I asked him what the current status of the site was. He said that, as best as he can tell, the site is a parking lot.11/10/10 - Raphael Ketani. I tried to contact Mr. Devoe (718) 446-7000, ext 298, but I could only leave a message. 11/15/10 - Raphael Ketani. Mr. Devoe called me today. He said that he did pass word along to staff in TDC Corp. regarding the DEC's request. I told him that I hadn't heard anything back. I asked Mr. Devoe for the TDC contact. He said that it's Earl Tockman at (718) 713-0267/e-mailEtock1@aol.com. I tried to contact Mr. Tockman by phone, but I could only leave a message. Later, I sent Mr. Tockman an e-mail requesting that the destroyed DEC wells be replaced and that the contamination be delineated. I added that if the DEC doesn't receive documentation that this is being done by December 10, 2010, then the case will be referred to the Office of General Counsel for legal action.Mr. Tockman called me back. We had a long discussion regarding what took place previously at the site. Mr. Tockman said that he was surprised that the previous owners, Tully Construction, had not submitted the investigation report. He had been under the impression that it had been sent to the DEC. I told him that we didn't have anything in our files. He was surprised to hear this. Mr. Tockman added that there had been a trial that the DEC was aware of whereby another party was found responsible for letting contamination run under the asphalt plant. I told him that I wasn't aware of this, but, I said, this trial wasn't the issue that needed to be resolved. I added that the wells that had been destroyed during the site demolition needed to be replaced and that there needed to be a soil and groundwater investigation. Mr. Tockman said that he will talk to people at Tully Construction about this. I added that if contaminated soil is discovered, then it may need to come out, depending on the analyte concentrations. He said that TDC Corp. didn't have any plans to dig out the site and develop this site soon due to the market. I told him that the Spills Unit required that the contamination be adddressed quickly, regardless of the development plans. Mr. Tockman said that he will get back in touch with me.11/26/10 - Raphael Ketani. John Urda of Region 2 Legal sent an e-mail to Mike Bogin of

WILLETS POINT ASPHALT (Continued) **S100143812**

SPR Law stating that the DEC had requested action regarding the investigation of the site (see E-docs). However, none was taken. Therefore, legal action is pending.2/2/11 - Raphael Ketani. I received an e-mail from John Urda of DEC Region 2 Office of General Counsel, with an attachment consisting of a letter from Richard Wynn, counsel to the owners of the asphalt plant. The letter was dated 1/31/11 and addressed to Mr. Urda. In the letter, Mr. Wynn stated that the wetlands violations were not justified and that the oil spill was from offsite and that the other spills which were open were just housekeeping issues. Therefore, there was no justification for having an open spill against the site.2/9/11 - Raphael Ketani. Mr. Urda sent a letter to Mr. Wynn, counsel for WPA, explaining the State's position regarding the wetlands violations, the spill case and legal action.2/10/11 - Raphael Ketani. Mr. Urda revised the letter to Mr. Wynn and it was sent out.3/2/11 - Raphael Ketani. Today I received an e-mail from Mr. Urda which contained the February 2007 Spectra Environmental Phase II. I reviewed the report. It appears that much more exploratory and remedial work is needed at the site.3/7/11 - Raphael Ketani. Mr. Devoe sent me an e-mail which contained an aerial photograph of the site. Various proposed boring locations were indicated on the map. I asked Mr. Devoe who the tenant was who wanted to move in quickly. He said that he didn't know. I told him that the DEC would be looking for a phase II report with raw analytical data for soil and groundwater samples and with summary tables for the data. I added that staff at the Department will review the proposed plan very soon. 4/13/11-Vought-Drafted request letter for no new permit issuance and revocation of exisiting building permits to city agencies as per DEC Austin and after discussion with DEC Urda and submitted to DEC Austin for signature.4/13/11 - Raphael Ketani. Mr. Austin signed the letter and it was sent to Ira Gluckman (Queens Borough Commissioner), Gary Heath (NYC DEP), Chris D'Andrea (NYC DOH), Lance Michaels (NYC DCP) and Michael Hughes (NYS DOH).5/3/11 - Raphael Ketani. Jeff Vought of DEC Spills/Unit A told me today that GC Environmental is conducting work on the site this week and not to respond to any reports that they submit.5/31/11 - Raphael Ketani. Mr. Wynn, general counsel for Willets Point Asphalt Corp., sent the DEC an Oppositon to Motion dated 5/27/11.10/27/11 - Raphael Ketani. As part of the caseload realignment order by Randall Austin, Chief of the Spills Unit, I am transfering this case to Jeffrey Vought in the Spills Unit.11/3/11-Vought-Mediation Conference held with judge, DEC Urda and Vought, Dean Devoe, Rick Wynn and owner (Dan Scully) to discuss Permits and Spills violations. DEC will send out Consent Order including Corrective Action Plan.12/14/11-Vought-Consent Order (including CAP) signed by Willets (Scully) and DEC Urda noted Vought to call Dean Devoe to discuss submission of Investigation Work Plan as per CAP for Consent Order. Vought called Devoe and left message to arrange techincal meeting at DEC offices to discuss requirements for Investigation Work Plan. 12/15/11-Vought-Received message from Devoe that he was looking to perform a site visit on 12/19 or 12/20. 12/19/11-Vought- Called Dean Devoe (Cell:917-417-1524) and site visit scheduled for 1/9 with Devoe to discuss and negotiate Investigation Work Plan.1/13/12-Vought-Sent email to WPA Devoe with available dates for second meeting for discussion of Investigation Work Plan. Vought confirmed second meeting date of 2/2. Meeting later confirmed for 2/11.2/11/12-Vought-Visit to Tully offices on 1/9/12 and 2/11/12 to discuss acceptable Investigation Work Plan to be submitted to

WILLETS POINT ASPHALT (Continued) **S100143812**

Department. The Departments 8/3/09 letter was used a guide to address Department investigatory concerns. Vought noted to Devoe that if Willets Point Asphalt continued think that the on-site contamination was from an off-site source, then a tidal study (with 24-hour transducers) should be part of Work Plan. Discussion also included uncertainly of amount of backfill/grading after removal of the plant and its effects on pre-determination of sampling depths before investigation. Due to unknown backfill amount, soil borings in areas of historical contamination will be performed continuously to water table with collection of water sample. Piping investigations and shallow sources will have continuous sampling from 0-5'bg at a minimum. At all borings, Geoprobe 4" macrocores will be spilt into two foot segments to increase shallow soil delineation capabilities due to shallow water table. Vought noted that if refusal encountered via Geoprobe then Department would require more aggressive drilling method (eg hollow stem auger). Agreement reached on following:10000-GALLON FUEL OIL UST SYSTEM: Continuous soil samples will be collected to water table (Geoprobe macro cores will be split into two foot segments to increase delineation capabilities) at former boring locations SB-11, SB-12 along piping run and will be named SB-14 and SB-15. Another soil boring will be at oil burner location and will go to 5'bg as shallow piping and will be named SB-13 (due to field indications of contamination down to and below water table). . No sampling currently required at tank due to prior well FN19 showing levels below TOGs Standards. UST investigation results will be satisfied by FN-19, FN-16 and MW-25(which showed little dissolved contamination in 3/07). 1000-GALLON OFFICE UST SYSTEM: Former boring SB-7 will satisfy piping investigation requirements. UST investigation requirements satisfied via former boring FN-3. 1000-GALLON GENERATOR TANK: Continuous soil samples will be collected to water table (Geoprobe macro cores will be split into two foot segments to increase delineation capabilities). One soil boring will be continuous to the water table at the UST location and will be called GT-1. One boring will be performed by piping elbow and will be named GT-2 and will include collection of soil and groundwater sample due to SB5 from Roux investigation dated 5/11 shows soil contamination from 0-5'bg at piping location. Boring B-3 from 10/91 statisifes one piping sample location. One boring will be performed for soil samples from 0-5'bg at bend in piping to generator house and will be named GT-3.KEROSENE TANK: Former boring FN-5 satisfied investigation of kerosene AST. SHALLOW SOIL SAMPLES FROM 10/91(BULLET 6 of DEC 8/3/09 LETTER): Investigation of shallow soil contamination in borings in Boring B1 satisfied via SB-7 and FN-3. Shallow contamination in Boring B2. Shallow contamination in Boring B2 satisfied via boring FN-5 at adjacent kerosene UST. Vought noted contamination in Boring B4 is minimal and also satisfied as per FN-2.SOIL BORING IN MAY 1992 SHOWING FREE PRODUCT AND SHALLOW CONTAMINATION(BULLET 7 OF DEC 8/3/09 LETTER): Investigation satisfied via boring FN-19, FN-16 and MW-25. MW-25 showed no dissolved contamination as well as of 3/07 results.SOIL SAMPLES FROM 4/93 AT FN-13 SHOWING FREE PRODUCT AND SHALLOW CONTAMINATION(BULLET 8 OF DEC 8/3/09 LETTER): GT-1 shifted approximately 5' to the north for FN-13 investigatory requirements.OVERFLOWING BUCKETS OF OIL OBSERVED BY DEC STAFF ON 2/25/00: One boring will be installed from 0-5'bg by the hot elevator due to shallow soil source of buckets. Boring will be named HE. Spill by Hot Elevator as per Scully.SPECTRA 2/07 REPORT: Heavy napthalene in soil at MW-1 below water table and water level above

WILLETS POINT ASPHALT (Continued) **S100143812**

screen in currently installed well. One boring will be performed with soil and groundwater samples named OC1 as adjacent to former Overhead Conveyor.Vought also noted to Devoe that if Willets Point Asphalt continued think that the on-site contamination was from an off-site source, then a tidal study (with 24-hour transducers) should be part of Work Plan. Vought also noted that two soil samples to be collected from shallow soil borings (highest PID and deepest dry).4/23/12-Vought-Reeived attached boring location plan from WPA Devoe and if DEC approves he will forward it to current site owner to confirm accessibility and he is also developing scope of work to accompany site plan.7/17/12-Vought-Called and spoke to WPA Devoe and Vought approved boring location plan and required submission of scope of work of both shallow borings to delineate possible piping sources as well as for deeper borings to groundwater at other locations. Vought sent email with same request.7/18/12-Vought-Sent email to WPA Devoe with notes from 1/9/12 and 2/11/12 office visit by Vought and summary of resulting investigatory requirements. Vought also included some standardized language that may be used in report for sampling requirements. Vought performed historical file summary from 6/25/10 to present:Letter from DEC Urda to Richard Wynn, Esq.-1/11/11. Response to Wynns comments during pre-hearing conference on 1/10/11. Urda confirmed demolition filing and grading occurred in tidal wetlands of states jurisdiction. Letter noted that MW41 contamination is in vicinity of three spills from the two test failures in 1987 and the surface discharge near the 1000-gallon tank and shallow soil contamination around same. Letter also noted upgradient wells were clean and possible contribution of tidal influence to well MW41. Letter notes lack of response to prior DEC letters in 2007 and 2009 and submission of inadequeate endpoint sampling from tank and piping removal prior to sale. Letter included history of recent correspondence between DEC and WPA. Letter proposed penalty amount and it it was acceptable to Wynn, that a Consent Order would be sent. If not acceptable DEC will extend deadline to answer complaint until 2/1/11.Letter from Wynn to DEC Urda-1/31/11. Response to Urda's 1/11/11 letter. Wynn noted that there was no tidal wetland violation as work occured behind bulkead. Wynn noted that they do not have post excavation samples from 1987 tank removal and no "appreciable" contamination was found. Wynn maintained impacts were from off-site spill and that DER-10 not applicable as tanks passed test in 2007. Wynn noted in 1995 letter noting spill was gasoline and he never had gasoline tanks onsite. Letter notes other possible sources of contamination including spills in area and that penalties sought by DEC are not justified and they look forward to continuing discussions.Letter from DEC Urda to Wynn-2/9/11. Response to 1/31/11 letter. Letter noted that bulkead does not protect activities from state jurisdiction. Letter noted spills cannot be closed as we do not have data from 1987 tank and piping removals, sampling was inadequate including so sidewall samples or piping samples during removal in 2007. Letter notes that WPA is "now in default"and that response is due by 2/14/11.DEC requires:1)Investigation of location of former 10,000-gallon #2 fuel oil AST and associated piping2)Investigation of locations of two former 1000-gallon #2 fuel oil ASTs and associated piping3)Investigation of FN-134)Investigation of location of photos of overflowing buckets of fuel oil dated 2/25/00.5)Collection of highest PID and deepest dry sample and installation of well is contaminated soil extends to the water table.6)cc to Devoe, Urda and Wynn

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was " "06/09/09-Vought-Due to lack of free product in offsite wells since 12/05 and no TOGs exceedences in offsite wells since 3/07 (minor exceedences at that time), Spill 790095 and PIN 9118 will be closed and Spills 8704514 and 8705123 which had been consolidated with this spill number will be remain open as RP never reconciled these tank test failures/discharges. WPA and TDC to be notified by letter of their continuing obligations regarding these open spills. Spill assigned to DEC Vought.Vought drafted TTF letter regarding spill #'s: 8704514, 8705123 and closing spill 7900995 with cc to Roux Associates (Sin Senh Ph:631-232-2600 Fax:631-232-9898) and submitted to DEC Urda for review. Letter addressed to:Mr. Peter TullyWillets Point Asphalt Corp.32-02 College Point Blvd.Flushing, NY 11354Fax:(718) 426-8737Ph:(718)446-7000and:Mr. Earle TockmanTDC Development & Construction Corp.136-20 38th Avenue, 12th FloorFlushing, NY 11354Ph:(718)713-026706/11/09-Vought-Called and spoke to Mr. Tockman inquiring as to fax number. Mr. Tockman asked what inquiry was regarding and Vought summarized letter and Mr. Tockman stated that Vought was "rude, unprofessional and incompetent". Vought politely explained reason for spill consolidation and fact that original TTFs were never resolved. Tockman did not provide fax but did provide email address of: Etock1@aol.com. Vought sent out certified letter to both parties, email to Tockman and fax to Tully. Vought suggested to all parties that meeting be held to discuss further action.07/15/09-Vought-Reviewed response to DEC letter dated 6/1/09 from Roux Associates (William Holubowich) and received on 6/30. "Because the tank test failures and associates spill numbers occurred approximately 20 years prior to TDC's purchase of the property, TDC is not aware of the circumstances associated with the two spills or their remediation, if any." Disscussion of TDC contracting Roux Associates to witness removal of three USTs in 9/07 and the passing tanks tests for these systems, no holes or leaking product or tank integrity issues were observed. Also discusses endpoint sample passing TAGM RSCO's. Note that the tanks referred to in this report are new and are not subject of reopened 1987 spills. Roux Associates installed three monitoring wells. "MW 1 was installed hydraulically downgradient of the 10,000-gallon UST excavation pit; MW-2 was installed on the northwest section of the site and MW3 was installed on the southwest section of the site." Groundwater at depth of 5'bg. "Monitoring wells MW-1 and MW-2 were not sampled because floating product (i.e liquid phase petroleum was observed in those monitoring wells." "It should also be noted that, based on court records reviewed by Roux Associates (State of New York vs. Willets Point Contracting Corp et al {125A.D.2d 742] the subject property was determined by the court not to be the source of the impact to groundwater associated with Spill Number 7900995."07/29/09-Vought-To send letter noting that USTs in report are not subject of 1987 TTF spills, 7900995 to be closed upon decomissioning of monitoring wells, USTs tests referred to in 2005 and 2007 may not have tested piping nor were samples collected from piping runs as per DER-10, number of endpoints collected around USTs were insufficient as per DER-10, that two subject spills relate to subsequent discharges and as such court

WILLETS POINT ASPHALT (Continued) **S100143812**

case not relevant to these spills, the fact that product was documented as released during former tightness test, fact that endpoint sampls showed detections of VOCs particular to fuel oil indicating a release despite being below TAGM 4046 RSCOs.07/30/09-Vought-Received call from and spoke to Bill Klein (performed tightness test of 10,000-gallon UST) and piping from UST to adjacent pumproom was tested however piping that supplied #2 fuel oil to asphalt burners was never tested. Klein not sure if piping to burners as above or below grade. As per PBS registration there is "no piping" despite numerous site plans with documented piping. Vought submitted response letter to DEC Urda for review.08/03/09-Vought-Received back comments from DEC Urda and DEC Austin and Vought editted letter and sent to Tockman and Tully. Austin approved closure of 7900995 and referall to open spills 8704514 and 8705123.08/06/09-Vought-Received confirmation of delivery certified mail receipts from Tockman and Tully representatives.3/16/10-Vought-Received email from DEC Drescher that site is being used for storage for Mensch Mill and Lumber who is leasing site from TDC.3/23/10-Vought-Received call from and spoke to Roux (Bill Holubowich 631-232-2600) who was inquiring as to status and also noted that "Tully would be resolving petroleum issues at the site".5/26/10-Vought-Up to date file review by Vought:Letter from WPA (Devoe) to DEC-11/23/09. WPA performed FOIL request in response to DEC's letter dated 8/3/09. Letter includes repsonses to failures of 1987 including removal of the failed 10,000-gallon UST and installation of a UST in the same location and use of GPR inspect for the presence of other 10,000-gallon USTs onsite. GPR survey found that "there was no other 10,00-gallon tank at the site by the absence of buried metal objects (other than known tanks). No mention of sampling around failed UST. "Numerous additional investigations and a lengthy remediation process have taken place since the referenced spills took place. The data that was collected was sufficient to allow the Department to close the primary spill file 79-00995 that impacted the subject property. We believe the same data in addition to the information presented above should be sufficient to close the referenced spill." Letter also includes result of GPR survey.5/26/10-Vought-Case referral form submitted to DEC Legal.DEC requires:1)Recovery and monitoring of product in MW41A (see closed spill 7900995)2)Delineation of contamination3)Possible vapor barrier and/or SSD if property is developed4)reinstallation of onsite monitoring wells destroyed by removal of asphalt plant (see closed spill 7900995)5)cc Roux (Holubowich) and to DEC Drescher due to possible wetlands enforcement.6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A.9/27/10 - Raphael Ketani. Dean Devoe (718) 446-7000, ext 298 of Tully Environmental called(Tully is owned by the same company that owns Willets Point Asphalt), but I could only leave him a message. I spoke to Mr. Vought in regards to the nature of this spill and the related ones, #7900995 and #8704514. He said that the open spill (#7900995) originally was a PIN case where DEC was doing the investigating and delineation. However, this case was closed and the 1987 tank test failure cases were reopened. Each 1987 case was for a UST on site. However, there were 3 tanks at the site: a 10,000 gal. tank at the east edge of the site near the gate; a 1,000 gal. tank at the north edge of the site next to the hot A.C. tanks; and a 1,000 gal. tank near the southeast corner of the site next to the old electrical house. The site, itself, is a bare lot right now. Six DEC

WILLETS POINT ASPHALT (Continued) **S100143812**

wells were destroyed as a result of the process of demolishing the asphalt plant. These were the only on site wells and were concentrated in the eastern part of the property. All of the off site wells had been abandoned as they didn't show any oil, except for MW 41-A. The 1/6/09 Test America data report for the off site wells was entirely non-detect. DEC was not allowed on site to sample the FN series wells before they were destroyed. Previously, Mr. Tockman had claimed that the contamination had been coming from off-site. However, no oil or contamination had been found coming from upgradient. There had been a plume under the U-Haul site to the south, but they voluntarily cleaned it up in the nineteen eighties. Both tanks and the associated piping had leaked oil into the ground. The DEC wells need to be reinstalled and the contamination needs to be delineated. Letters were sent to Mr. Tockman of TDC and to Mr. Tully of Willets Point Asphalt in late 2009 explaining the evidence for the spills and that the tank failures hadn't been addressed. One letter requested that a report be submitted describing an investigation of the spills. A report dated 6/22/09 was submitted by ROUX Associates describing a limited investigation. The results were either below TAGM for oil or non-detect. Mr. Voughts full notes about the spill are in #7900995. The paper reports are in the PIN file draws under PIN #91118. I spoke to Mr. Devoe. He said that the property was sold in 2007 to TDC Corp., 136-20 38 Avenue, Flushing, NY. I explained to him that the DEC wanted the destroyed wells replaced, and the contamination under the site delineated. He said that contamination had been found emanating from off site. I told him that DEC had records of tank failures for the 10,000 gal. tank and the 1,000 gal. tank. I added that I was told the piping associated with the tanks was also possibly defective. So there are a number of reasons why the oil came from the site. He said that he will contact TDC and let them know that the DEC wants work to take place at the site. I asked him what the current status of the site was. He said that, as best as he can tell, the site is a parking lot.11/10/10 - Raphael Ketani. I tried to contact Mr. Devoe (718) 446-7000, ext 298, but I could only leave a message. 11/15/10 - Raphael Ketani. Mr. Devoe called me today. He said that he did pass word along to staff in TDC Corp. regarding the DEC's request. I told him that I hadn't heard anything back. I asked Mr. Devoe for the TDC contact. He said that it's Earl Tockman at (718) 713-0267/e-mailEtock1@aol.com. I tried to contact Mr. Tockman by phone, but I could only leave a message. Later, I sent Mr. Tockman an e-mail requesting that the destroyed DEC wells be replaced and that the contamination be delineated. I added that if the DEC doesn't receive documentation that this is being done by December 10, 2010, then the case will be referred to the Office of General Counsel for legal action.Mr. Tockman called me back. We had a long discussion regarding what took place previously at the site. Mr. Tockman said that he was surprised that the previous owners, Tully Construction, had not submitted the investigation report. He had been under the impression that it had been sent to the DEC. I told him that we didn't have anything in our files. He was surprised to hear this. Mr. Tockman added that there had been a trial that the DEC was aware of whereby another party was found responsible for letting contamination run under the asphalt plant. I told him that I wasn't aware of this, but, I said, this trial wasn't the issue that needed to be resolved. I added that the wells that had been destroyed during the site demolition needed to be replaced and that there needed to be a soil and groundwater

WILLETS POINT ASPHALT (Continued) **S100143812**

investigation. Mr. Tockman said that he will talk to people at Tully Construction about this. I added that if contaminated soil is discovered, then it may need to come out, depending on the analyte concentrations. He said that TDC Corp. didn't have any plans to dig out the site and develop this site soon due to the market. I told him that the Spills Unit required that the contamination be adddressed quickly, regardless of the development plans. Mr. Tockman said that he will get back in touch with me.11/26/10 - Raphael Ketani. John Urda of Region 2 Legal sent an e-mail to Mike Bogin of SPR Law stating that the DEC had requested action regarding the investigation of the site (see E-docs). However, none was taken. 2/2/11 - Raphael Ketani. I received an e-mail from John Urda of DEC Region 2 Office of General Counsel, with an attachment consisting of a letter from Richard Wynn, counsel to the owners of the asphalt plant. The letter was dated 1/31/11 and addressed to Mr. Urda. In the letter, Mr. Wynn stated that the wetlands violations were not justified and that the oil spill was from offsite and that the other spills which were open were just housekeeping issues. Therefore, there was no justification for having an open spill against the site.2/9/11 - Raphael Ketani. Mr. Urda sent a letter to Mr. Wynn, counsel for WPA, explaining the State's position regarding the wetlands violations, the spill case and legal action.2/10/11 - Raphael Ketani. Mr. Urda revised the letter to Mr. Wynn and it was sent out.3/2/11 - Raphael Ketani. Today I received an e-mail from Mr. Urda which contained the February 2007 Spectra Environmental Phase II. I reviewed the report. It appears that much more exploratory and remedial work is needed at the site.3/7/11 - Raphael Ketani. Mr. Devoe sent me an e-mail which contained an aerial photograph of the site. Various proposed boring locations were indicated on the map. I asked Mr. Devoe who the tenant was who wanted to move in quickly. He said that he didn't know. I told him that the DEC would be looking for a phase II report with raw analytical data for soil and groundwater samples and with summary tables for the data. I added that staff at the Department will review the proposed plan very soon.4/13/11-Vought-Drafted request letter for no new permit issuance and revocation of exisiting building permits to city agencies as per DEC Austin and after discussion with DEC Urda and submitted to DEC Austin for signature.4/13/11 - Raphael Ketani. Mr. Austin signed the letter and it was sent to Ira Gluckman (Queens Borough Commissioner), Gary Heath (NYC DEP), Chris D'Andrea (NYC DOH), Lance Michaels (NYC DCP) and Michael Hughes (NYS DOH).5/3/11 - Raphael Ketani. Jeff Vought of DEC Spills/Unit A told me today that GC Environmental is conducting work on the site this week and not to review any reports that they submit.5/31/11 - Raphael Ketani. Mr. Wynn, general counsel for Willets Point Asphalt Corp., sent the DEC an Oppositon to Motion dated 5/27/11.7/13/11-Vought-Reviewed additional documents received in OGC Document Request as per DEC Urda and DEC Austin. Documents included were as follows:Phase I ESA (Gannett Fleming-Ivy Olberding - Ph:516-671-8440)-September 2005. Gannett retained by Tully Environmental. Asphalt plant till present at time of Phase I.Site was originally a coal company since 1886 and produced asphalt since "the 1950's". Estimated groundwater flow to the west and at a depth of 10'bg. Lists closed spill 0105316 as recognized enviro concern (REC)at adjacent new location of Willets Point Asphalt at 35-52 College Point Blvd. (PM NOTE: This spill site owned by same RP (Willets Point Asphalt) and is for leaking 55-gallon drum which is a small source in a cross gradient location). Subject property did "not reveal any RECs" but did note three fuel oil

WILLETS POINT ASPHALT (Continued) **S100143812**

storage tanks that may need "upgrades or replacement" to comply with current regulations. Also notes tanks may require "closure assessments" and that drums should be stored in "area with spill protection". "Appropriate assessment, investigative and remedial measures should be implemented" to close DEC active spill case. Report notes presence of five monitoring wells onsite used for "monitoring and up-gradient RCRA site". (PM NOTE: These were wells installed by DEC as part of fuel oil investigation and remediation). Phase I contains EDR report and does not mention review of DEC file for Spill 7900995. Report notes that 10,000 gallon fuel oil UST was due for tightness testing on 8/1/04. Report concludes that "as-built drawings, purchase receipts and/or regulatory agency files should be reviewed to determine compliance with applicalble petroleum tank system requirements." Phase I also notes that recordkeeping will include "monthly reconciliation of fuel oil consumption by all other combustion sources (eg boilers and tank heaters) based upon delivery receipts, on-hand inventory of fuel in storage tanks and gernerator fuel consumption meter readings". Report also notes annual emmission statements will be submitted to NYSDEC including "as summary of asphalt production and fuel oil consumption" and the "monthly recorded data". Phase I ESA Report(HydroTech Yashodhara Saha Ph:718-636-0800)-1/2/07. ESA prepared for David Peng, 36-17 Bud Place, Flushing, NY. Phase I found RECs including current presence of fuel oil USTs, active USTs are not registered with NYSDEC PBS, historical and current site use as asphalt plant and asphalt staining of ground surfaces. "There is extensive asphalt staining and spills in the vicinity of the HEATEC system. The subject property has poor housekeeping conditions". With regards to the asphalt manufacturing unit, "stains, petroleum odors and spills were noted along the manufacturing unit". "The ground surface at the subject property consists of petroleum stained asphalt and concrete". Groundwater flow is "torward the west in the direction of Flushing Creek". "...the ground surface of the facility consisted of asphalt stained concrete and dirt." "The soil may be impacted during the manufacturing process". Vent pipes for 10,000 gallon UST and UST in southwestern portion of the site could not be indentified. "Mo monitoring wells were identified on the subject property". (PM NOTE: Apshalt plant was still in place suggesting that well were destroyed prior to asphalt plant removal and prior to this third party Phase I). FOIA request to DEC only yielded spill 0008962. Foil request not included in report. PM NOTE: No mention of DEC remediation system or piping on College Point Blvd or spill 7900995. Phase I recommends subsurface investigation, PBS registration of all USTs, installation of soil borings in vicinity of USTs to "determine if their presence has affected the soil quality", installation of probes in "petroleum stained areas" and collection of groundwater samples.7/15/11-Vought-Continued review of documents received in OGC Document Request.Phase I ESA Scope of Work (Gannett Fleming -Stephen Hix)-7/18/05. Gannett Fleming reviewed "Bank of America’s scope of work". Scope of work includes historical research, environmental information (FOIL), site inspection, report. Scope of Work for Phase II Services (Spectra Environmental Group Kimberly Punchar 518-782-0882)-1/26/07. Scope written for WPA Devoe. Proposal for eight soil borings to max depth of 15’bg, collection of eight groundwater samples, survey groundwater flow direction and provide report.Willets Point Asphalt Phase II Investigation (Spectra Environmental Group Ph:845-454-9440)- February 2007. Phase II due to

WILLETS POINT ASPHALT (Continued) **S100143812**

Phase I by Hydrotech and Gannett Fleming. Eight soil borings and three monitoring wells installed. One soil sample collected from each boring for analysis. Two soil borings were completed as monitoring wells. Measured groundwater flow to the west and depth to water is 4.1-5.16'bg. GPR survey also performed by Spectra to locate any unknown USTs and was only able to located a buried steel sheet. Soil analyticals show: 19000ppb napthalene(SB1 7-7.5'), 66000ppb napthalene(SB1 7-7.5'bg), 78000ppb TPH(SB1 7-7.5'bg), 10,000ppb napthalene(SB4 8-10'bg), 11,000ppm TPH(SB4 8-10'bg), 2400ppm TPH(SB5 8-10'bg), 1,100ppb napthalene(SB6 2-4'bg), 23,000ppb methylnapthalene(SB6 2-4'bg), 6,900ppm TPH(SB6 2-4'bg), 2000ppb napthalene(SB7 6-8'bg). PID readings of soils showed 94ppb SB1 2-4'bg, 150ppb SB6 2-4'bg, 71ppm SB7 6-8'bg. PM NOTE:All soil samples collected were from below water level table fluctuation zone and therefore cannot be used for onsite source characterization). Groundwater analyticals show 25ppb MTBE(MW1) and 9ppb 1,2,4-trimethylbenzene(MW2). Note that MW1 and MW3 wells have groundwater levels within the riser and not the screen and cannot be used. Report notes three DEC wells onsite and groundwater remediation system on College Point Blvd.Limited Phase II Environmental Site Assessment (GC Environmental-Gregory Collins-631-206-3700)-6/30/11. Purpose of Phase II ESA is to "determine the environmental impact of the failed tank tests performed on the former (1956) 10,000 gallon fuel oil tank." Twelve soil borings were installed on 5/19/11. Probes done using Geoprobe and borings terminated at 12'bg. Twelve soil samples collected and 9 out of 12 samples collected at 5-10' internval (PM NOTE: historical groundwater depth is 4-8'bg and therefore these samples cannot be used for onsite source characterization). Report notes groundwater flow to the west. Following shallow PID readings obtained: 89ppm(SB5 0-5'bg), 16ppm(SB7 0-5'bg). Soil was compared with industrial use standards. "Visual and olfactory contamination (petroleum odor) and elevated PID readings were detected in most of the soil borings". Petroleum stains were detected in soil borings SB-4, SB-5. SB-7, SB-9, SB-11 and SB-12." Report recommends additional investigation of upgradient locations to determine "if offsite sources have impacted the subject Property" and also recommends of benzo(a)pyrene contamination (4.7ppb) in SB8. Borings logs for B1, B2, B3, B5, B6, B7, B8, B9, B10, show "petroleum odor was detected at all depths". Boring logs for B4 show "petroleum stain" at 0-5'bg and for B11 show "petro stain at all depths". Soil analyticals show: 27,00ppb napthalene(SB5 0-5'bg), 2700ppb xylene(SB5 0-5'bg), 4600ppb n-propylbenzene(SB5 0-5'bg), 29000ppb phenanthrene (SB5 0-5'bg), 9500pb acenapthene (SB5 0-5'bg), 8200ppb 1,1,-dichloroethane (SB7 0-5'bg). Soil analyticals from 5-10' samples show Unrestricted however are not listed at this time as they cannot be used for onsite source determination. PM NOTE: Presence of fuel oil contaminants in shallow soil at levels above background indicate onsite sources of petroleum regardless of CP-51 Soil Cleanup Objectives.Letter from Triumvirate (Lauren Biggs Ph:800-966-9282)-2/14/07. Acceptance letter for oil contaminated soil "oily soil" shipped on 2/3/07. No note of source but may be investigation derived waste as one 55-gallon drum and one 30-gallon drum.8/23/11-Vought-Received and reviewed Limited Phase II Environmental Site Assessment from GC Environmental (Greg Collins Ph:631-206-3700) that was sent via email from Dean Devoe to DEC Ketani on 8/19. Vought also added to E-docs. Site history includes installation of twelve borings on 5/19/11 with recommendation of soil

WILLETS POINT ASPHALT (Continued) **S100143812**

excavation adjacent to boring SB-8. GCE arrived onsite on 7/27 and began excavation and removed 15 cubic yards of soil with excavation 13'x13'x30"deep and five endpoint samples were collected for 8270 analysis and one sample collected for disposal facility requirements. Endpoint analyticals compared to Restricted Use Soil Cleanup Objectives (NOTE: Restricted track not approved by DEC to date). SVOC exceedences of PAHs resulted in further excavation on 8/3. On 8/3, an additional 11 yards of soil was removed from the site extending excavation dimensions to 18'x18'x30"deep and collected two endpoint samples for analysis as excavation expanded only to the south and east. Review of analyticals showed endpoint samples exceeded target values on south wall and excavation was extended on 8/9 via removal of another 11 cubic yards of impacted soil and one additional endpoint samples was collected for anlaysis. Analyticals showed no target value exceedences. Disposal manifests included in report. Excavation was backfilled.9/22/11 - Raphael Ketani. The Ruling on Motion for Order Without Hearing dated 9/22/11 was received by Mr. Urda today.10/27/11 - Raphael Ketani. As part of the caseload realignment order by Randall Austin, Chief of the Spills Unit, I am transfering this case to Jeffrey Vought in the Spills Unit. 11/3/11-Vought-Mediation Conference held with judge, DEC Urda and Vought, Dean Devoe, Rick Wynn and owner (Dan Scully) to discuss Permits and Spills violations. DEC will send out Consent Order including Corrective Action Plan.12/14/11-Vought-Consent Order (including CAP) signed by Willets (Scully) and DEC Urda noted Vought to call Dean Devoe (Ph:718-446-7000x298) to discuss submission of Investigation Work Plan as per CAP for Consent Order. Vought called Devoe and left message to arrange techincal meeting at DEC offices to discuss requirements for Investigation Work Plan.12/19/11-Vought-Called Dean Devoe (Cell:917-417-1524) and site visit scheduled for 1/9 with Devoe to discuss and negotiate Investigation Work Plan.1/13/12-Vought-Sent email to WPA Devoe with available dates for second meeting for discussion of Investigation Work Plan. Vought confirmed second meeting date of 2/2. Meeting later confirmed for 2/11.2/11/12-Vought-Visit to Tully offices on 1/9/12 and 2/11/12 to discuss acceptable Investigation Work Plan to be submitted to Department. The Departments 8/3/09 letter was used a guide to address Department investigatory concerns. Vought noted to Devoe that if Willets Point Asphalt continued think that the on-site contamination was from an off-site source, then a tidal study (with 24-hour transducers) should be part of Work Plan. Discussion also included uncertainly of amount of backfill/grading after removal of the plant and its effects on pre-determination of sampling depths before investigation. Due to unknown backfill amount, soil borings in areas of historical contamination will be performed continuously to water table with collection of water sample. Piping investigations and shallow sources will have continuous sampling from 0-5'bg at a minimum. At all borings, Geoprobe 4" macrocores will be spilt into two foot segments to increase shallow soil delineation capabilities due to shallow water table. Vought noted that if refusal encountered via Geoprobe then Department would require more aggressive drilling method (eg hollow stem auger). Agreement reached on following:10000-GALLON FUEL OIL UST SYSTEM: Continuous soil samples will be collected to water table (Geoprobe macro cores will be split into two foot segments to increase delineation capabilities) at former boring locations SB-11, SB-12 along piping run and will be named SB-14 and SB-15. Another soil boring will be at oil burner

WILLETS POINT ASPHALT (Continued) **S100143812**

location and will go to 5'bg as shallow piping and will be named SB-13 (due to field indications of contamination down to and below water table). . No sampling currently required at tank due to prior well FN19 showing levels below TOGs Standards. UST investigation results will be satisfied by FN-19, FN-16 and MW-25(which showed little dissolved contamination in 3/07). 1000-GALLON OFFICE UST SYSTEM: Former boring SB-7 will satisfy piping investigation requirements. UST investigation requirements satisfied via former boring FN-3. 1000-GALLON GENERATOR TANK: Continuous soil samples will be collected to water table (Geoprobe macro cores will be split into two foot segments to increase delineation capabilities). One soil boring will be continuous to the water table at the UST location and will be called GT-1. One boring will be performed by piping elbow and will be named GT-2 and will include collection of soil and groundwater sample due to SB5 from Roux investigation dated 5/11 shows soil contamination from 0-5'bg at piping location. Boring B-3 from 10/91 statisifes one piping sample location. One boring will be performed for soil samples from 0-5'bg at bend in piping to generator house and will be named GT-3.KEROSENE TANK: Former boring FN-5 satisfied investigation of kerosene AST. SHALLOW SOIL SAMPLES FROM 10/91(BULLET 6 of DEC 8/3/09 LETTER): Investigation of shallow soil contamination in borings in Boring B1 satisfied via SB-7 and FN-3. Shallow contamination in Boring B2. Shallow contamination in Boring B2 satisfied via boring FN-5 at adjacent kerosene UST. Vought noted contamination in Boring B4 is minimal and also satisfied as per FN-2.SOIL BORING IN MAY 1992 SHOWING FREE PRODUCT AND SHALLOW CONTAMINATION(BULLET 7 OF DEC 8/3/09 LETTER): Investigation satisfied via boring FN-19, FN-16 and MW-25. MW-25 showed no dissolved contamination as well as of 3/07 results.SOIL SAMPLES FROM 4/93 AT FN-13 SHOWING FREE PRODUCT AND SHALLOW CONTAMINATION(BULLET 8 OF DEC 8/3/09 LETTER): GT-1 shifted approximately 5' to the north for FN-13 investigatory requirements.OVERFLOWING BUCKETS OF OIL OBSERVED BY DEC STAFF ON 2/25/00: One boring will be installed from 0-5'bg by the hot elevator due to shallow soil source of buckets. Boring will be named HE. Spill by Hot Elevator as per Scully.SPECTRA 2/07 REPORT: Heavy napthalene in soil at MW-1 below water table and water level above screen in currently installed well. One boring will be performed with soil and groundwater samples named OC1 as adjacent to former Overhead Conveyor.Vought also noted to Devoe that if Willets Point Asphalt continued think that the on-site contamination was from an off-site source, then a tidal study (with 24-hour transducers) should be part of Work Plan. Vought also noted that two soil samples to be collected from shallow soil borings (highest PID and deepest dry).4/23/12-Vought-Reeived attached boring location plan from WPA Devoe and if DEC approves he will forward it to current site owner to confirm accessibility and he is also developing scope of work to accompany site plan.7/17/12-Vought-Called and spoke to WPA Devoe and Vought approved boring location plan and required submission of scope of work of both shallow borings to delineate possible piping sources as well as for deeper borings to groundwater at other locations. Vought sent email with same request.7/18/12-Vought-Sent email to WPA Devoe with notes from 1/9/12 and 2/11/12 office visit by Vought and summary of resulting investigatory requirements. Vought also included some standardized language that may be used in report for sampling requirements.DEC requires:1)Investigation of location of former 10,000-gallon #2 fuel oil AST and associated piping2)Investigation of locations of two former 1000-gallon #2 fuel oil ASTs and associated

WILLETS POINT ASPHALT (Continued) **S100143812**

piping3)Investigation of FN-134)Investigation of location of photos of overflowing buckets of fuel oil dated 2/25/00.5)Collection of highest PID and deepest dry sample and installation of well is contaminated soil extends to the water table.6)cc to Devoe, Urda and Wynn

Remarks: HIGH VOLUME LEAK, TANK TEST FAILURE, WILL EXCAVATE, ISOLATE, AND RETEST.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"ORIGINALLY ASSIGNED TO GRIFFINUHaul Center # 803-8210/23/2001 Sangesland met with David Winslow of ATC Associates (212-353-8280) to discuss several U-Haul sites.Test results from this site (College Pt. Blvd) indicate several quarterly monitoring rounds where the VOC's and SVOC's are either VERY minor or Non Detect. Of 10 wells on site MTBE in 9wells are below 50 ppb, one well has MTBE between 60 and 96 ppb.10/24/2001 "No Further Action" letter sent by NYSDEC
Remarks:	SLOPPY HOUSE KEEPING AROUND US WASTE OIL TANK - SEVERAL 55 GALLONS DRUMS LEAKING ALSO AROUND WASTE OIL TANK AREA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NORTHERN BLVD MAZDA (Continued) **1000789467**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V

AUTORAMA BODYWORKS INC (Continued) **1000326733**

of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"03/31/95: CONTAMINATED SOILS WERE FOUND WHEN CLOSING UST'S.04/12/95: 4000 GAL DIESEL FAILED TIGHTNESS TESTING, WILL PUMP PRODUCT IN THE MORNING, #95-00504, #94-16972 (3/31/95).04/12/95: RETESTED THE 4000 GAL DIESEL AND IT FAILED, METHOD USED US1, # 95-00509. LiRo installed and operated an SVE system to address soil contamination. LiRo advanced soil confirmation borings in May 2003 and samples were non-detect. J. Kolleen approved shut down of the SVE system, with continued semi-annual groundwater monitoring, on 9/17/03. In semi-annual monitoring report for period July - December 2004, LiRo recommended NFA. Kolleeny rejected in letter dated 2/28/05, since groundwater contination, while relatively low, does not show a clearly decreasing trend.This site transferred from Kolleeny to A. Zhitomirsky on 4/15/05. - JK8-9-2005 reviewed a Semi-Annual Monitoring Report for the period January - June 2005, submitted in July 2005 by LiRo Engineers, Inc. The report presented groundwater monitoring data for the site, where a soil vapor extraction system formerly operated. The groundwater data indicated low levels of petroleum-related compounds remaining in two on-site wells. LiRo recommends no further action for the site and closure of the associated spill number. The Department noted that although contaminant levels in the two impacted wells (MW-8 and MW-19) are relatively low, the wells do not show a clear trend of decreasing contamination. The Department requested that the City continue semi-annual groundwater monitoring. The request for no further action will be reevaluated in light of the future results. AZ11-16-2006 Received and reviewed report dated August 31, 2006. Total VOCs range from 11 ppb to 186 ppb with all detections being chlorinated VOCs except MW-13. Product sheen has been observed in MW-10. VOC concentrations increased in six wells. Residual chlorinated VOC contamination remains in all site monitoring wells. More evidence is needed to prove that, as per consultant's statement, chlorinated VOCs are originated from an upgradient offsite source. AZ6-21-2007 Reviewed report submitted on February 13, 2007. All USTs were closed in place in either April 1995 or October 1996. Since then, NYCDOS has moved out and the facility has been redeveloped entertainment/dining in the southern and western portions of the building. The SVE system was shut down on October 1, 2003 with approval from DEC. On November 2, 2006, Roux performed semi-annual groundwater monitoring. VOC (primarily chlorinated VOCs) concentrations increased in three monitoring wells during November 2006 sampling; MW-06 (from 34 ppb to 220 ppb), MW-13 (from 24 ppb to 48 ppb) and MW-19 (from 33 ppb to 192 ppb). According to Roux, chlorinated VOCs "have been determined to be from an upgradient offsite source." Roux stated that all VOC detections have been attributed to an upgradient site except for very low-level non-chlorinated VOCs remaining in MW-13 and MW-19. An e-mail was sent to B. Morrissey:According to Roux, chlorinated VOCs "have been determined to be from an upgradient offsite source." Also, Roux stated that all VOC detections have been attributed to an

NYC DEPT OF SANITATION (Continued) **1000141003**

upgradient site except for very low-level non-chlorinated VOCs remaining in MW-13 and MW-19. Could you provide some evidence supporting these statements? AZ2-12-2008 Reviewed semi-annual report for January-September 2007 dated October 26, 2007.Of the 12 monitoring wells sampled chlorinated VOCs were detected in 8 wells. The highest total chlorinated VOC concentration was 410 ppb in MW-12 (sampled in August 2007). Contamination is confined to the east side of the site. The primary chlorinated compound detected was tetrachloroethene. The location of the source is unknown. No obvious potential sources of chlorinated VOCs were identified during the field reconnaissance conducted on June 29, 2007.I discussed this site with Vadim Brevdo. It was decided that study of possible remedial options by the consultant is necessary. Conversation with Brian Morrissey. Roux will perform a Sensitive Receptor's Survey studying impacts of chlorinated VOCs and possible remediation options at the site. AZ2-19-2008 An e-mal which was discussed and approved by V.B was sent to Roux/DDC/Greyhawk:"I have reviewed bi-annual report for the above site received on November 13, 2007. We also discussed this site over the phone on February 12, 2008. Of the twelve monitoring wells sampled chlorinated VOCs were detected in 8 wells. The highest total chlorinated VOC concentration was 410 ppb in MW-12 (sampled in August 2007). Contamination is confined to the east side of the site. The primary chlorinated compound detected was tetrachloroethene. A the DEC request, Roux performed a field reconnaissance in order to determine potential off-site sources of chlorinated VOCs No obvious potential sources of chlorinated VOCs were identified during the field reconnaissance conducted on June 29, 2007. Based on the above information, DEC requests that the City submit proposals for remediation of existing chlorinated VOCs plume." AZ1-22-2008 An e-mal was sent to Roux/DDC/Greyhawk/V. Brevdo: "I have reviewed semi-annual report for the above site covering the period from October 2007 to June 2008. Roux proposed implementation of the additional work plan to further characterize the nature and extent of the impact of CVOCs in soil and groundwater. Also, Roux proposed collection of bioremediation samples. These proposals are approved. Investigative summary report should include proposals for remediation of CVOCs." AZ10-30-09 An e-mail was sent to Roux (Brian Morrissey)/DDC (Fatemeh Ashkan)/V.B.: "I have reviewed semi-annual report for the above site covering the period from July 2007 to January 2009 and submitted in April 2009. Roux proposed implementation of the additional work plan to further characterize the nature and extent of the impact of CVOCs in soil and groundwater. Also, Roux proposed collection of Bioremediation samples. These proposals were approved in February 2008, however this investigation has not been performed. Investigative summary report should include proposals for remediation of CVOCs." AZ 10-2-09 An e-mail was sent to Fatemeh Ashkan/ V. Brevdo/ Brian Morrissey: "Roux's proposals for the above site were approved almost 2 years ago, but the investigation has not started yet. Therefore, per my supervisor's instructions, the approved investigation should start within one month. If the investigation doesn't start within one month, the case will be referred to OGC for enforcement." AZ6-15-2011 Received a site turn-over report and semi-annual report (July 2010 to April 2011) on June 13, 2011. AZ9/21/2011 Reviewed a site turn-over report and semi-annual report (July 2010 to April 2011). Soil contamination was detected in soil sample at or below gw table at RXM-05s.There is a chlorinated VOC plume. LiRo suggested semi-annual monitoring and installation of ORC

NYC DEPT OF SANITATION (Continued) **1000141003**

socks in MW-19 and RXMW-05S. I left a message for S. Frank asking to call back and discuss the site. AZ9/23/2011 I contacted S. Frank LiRo) and asked him that the LiRo's statement that chlorinated VOC contaminants are coming from an off-site source should be more substantiated. AZ9/26/2011 An email was sent to S. Frank/F. Ashkan/V. Brevdo:"Dear Steve,I have reviewed the above site turn-over report and semi-annual report dated June 9, 2011. We have discussed this site on 9/23/2011. LiRo stated that they will discontinue sampling of chlorinated VOC. This decision can not be made unilaterally by LiRo. Such actions should be approved by NYSDEC. LiRo stated that a chlorinated VOC plume is a result of the off-site contamination. This statement should be well documented. The information which has been submitted so far is inconclusive. A source of off-site chlorinated contamination should be indicated. A report containing this information should be sent to V. Brevdo and to my attention.Currently, LiRo should maintain semi-annual sampling of all wells including sampling of chlorinated VOCs." AZ9-11-2012 An email was sent to S. Frank/F. Ashkan/V. Brevdo:"Dear Steve, I have reviewed a Monitoring Report for the above site dated June 5, 2012. The report proposed a reduction of frequency of sampling and reporting from semi-annual to annual. I disagree with this proposal. Monitoring, sampling and reporting should be performed semi-annually. The report suggested a reduction of the number of monitored wells. Please compile a list of the wells which should be excluded from the sampling. Also, the report proposed to conduct an additional investigation to define the source of the Chlorinated VOC plume. This proposal is approved. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alexander ZhitomirskyEngineering Geologist 2NYSDEC Region 2Division of Environmental Remediation" AZ

DEC Memo:	3/19/03 REASSIGNED FROM K. O'DOWD TO VOUGHT.12/4/03 Reassigned from Vought to Foley.File review:Avg depth to water: 27'Note: Mobil service station located across College Point Blvd (133-01 thru 133-11 Roosevelt Ave) has several monitoring and pumping wells and a remediation system on property.Subsurface hydrocarbon assessment report (Delta, 4/17/00)Soil samples collected from 6 borings around existing tank field returned with VOCs in excess of STARS guidance in SB-1B, SB-2 and SB-5A. On 2/7/00, four monitoring wells were installed. On 3/20/00 groundwater samples were collected. No LNAPL was detected. Between one and two VOCs were detected in all wells in excess of GWQS. Specifically MTBE, ranging from 555ppb(MW-2) to 142,000ppb(MW-4) and an elevated conc of benzene(4.4ppb) was detected in MW-3. No VOCs were detected in MW-5.Additional monitoring wells (MW-6,7,8 and 9) were installed in 8/01.From most recent monitoring report(4Q2002), total BTEX levels are relatively low in all wells (ND in all on 11/14/02). MTBE at 17200ppb (MW-1, 11/14/02), 7750ppb(MW-6, 11/14/02) and ND in MW-8 and MW-5.From Amoco spreadsheet provided 11/10/03, total BTEX ranges from ND to 22.8ppb(9/8/03) and MTBE ranges from ND to 2510ppb(9/8/03).SHAR Addendum (Delta, 9/25/03) submitted. Documents installation of one inch diameter MW-10.

BP AMOCO STATION (Continued) **S108637396**

Installed to monitor gw conditions to the southwest and downgradient of site. GW at 16-31'bgs. Well was completed to 26'bgs. Soil sample at 18-20' did not show elevated levels of VOCs.3/16/04 3Q and 4Q 2003 monitoring reports received. 3Q 2003: BTEX from ND to 275ppb(MW-10). MTBE from ND to 2,510ppb(MW-6).4Q 2003: BTEX from ND to 216ppb(MW-10). MTBE from ND to 1,200ppb(MW-6).3/19/04 Received 1Q and 2Q 2003 monitoring reports.4/16/04 1Q 2004: BTEX from ND to 225ppb(MW-10). MTBE from ND to 1,200ppb(MW-6).8/6/04 2Q04 monitoring report received. BTEX from ND(MW-1,2,3,5,6,7,8,9) to 251ppb(MW-10). MTBE from ND(MW-5,8,9) to 991ppb (MW-6).4/12/05 3Q04 & 4Q04 monitoring reports received. DTW approx 16-31'bgs.3Q04- BTEX from ND(MW-1,2,3,5,6,7,8,9) to 192ppb(MW-10). MTBE from ND(MW-5,8,9) to 720ppb(MW-6)4Q04- BTEX from ND(MW-1,2,3,5,6,7,8,9) to 120ppb(MW-10). MTBE from ND(MW-5,8,9) to 313ppb(MW-6)9/16/05 1Q05- DTW 16.6-30.7'bgs. No LNAPL present. BTEX from ND(MW-1,2,3,5,6,7,8,9) to 97ppb(MW-10). MTBE from ND(MW-3,5,8,9) to 264ppb(MW-6).11/8/05: Reviewed quarterly monitoring report dated 11/1/05. Ten wells were sampled on 9/22/05. No free product. Max BTEX 72ppb(MW10) located at most downgradient well. General decreasing trend apparent.3/15/06 Reassigned from Foley to Tang. (KMF)12/13/06 Reassigned from Tang to Brevdo. (JS)12/21/06 Received Site Spill Inactivation Report, dated August 10, 2006. Reviewed. Provided verbal comments to Dave M. Taylor of Delta. Comments were addressed via replacement pages No. 16, 17, and 18. Closed the Spill and Issued NFA letter on December 21, 2006. (V. Brevdo)5/22/2007 Delta Enviornmental pulled tanks in April 2007 and now says the site is still contaminated. A new spill number was opened for the site - Spill #0702148

DEC Memo:	This site had a historical spill # 9709624. Delta Environmental submitted a "Site Spill Inactivation Report" dated Aug 10, 2006 claiming the site was clean, which was reviewed by Vadim Brevdo and closed out on 12/21/2006.In April 2007 Delta pulled the tanks at the site and now says that the site really was not clean. Delta will submit a new report soon.8/21/2007 - Feng - Received the Tank Closure Report submitted by Delta. Talked to V. Brevdo. Case re-assigned to R. Feng as per V. Brevdo. (RJF)10/10/2007 - Feng - Portfolio meeting with BP and Delta. All tanks and dispensers and piping were removed. Delta will collect 3 groundwater samples by temporary GeoProbe points to confirm the groundwater quality. 3 groundwater samples include, 1 from tank area, dispensers area and the P-6 piping area where the soil exhibit the exceedances. (RJF)10/17/2007 - Feng - Underground Storage Tank Excavation Assessment Report, July 10, 2007, by Delta. Site divestment. This report summarizes the excavation of 4 (4,000-gallon) double-walled steel gasoline USTs from a single tank cavity, associated lines and pump islands, and 2 abandoned off-site fills and associated piping. Soil samples were collected subsequent to tank excavation, soil post-excavation and over-excavation. Some

BP AMOCO STATION (Continued) **S108637396**

exceednaces of TAGM 4046 were detected. B-1, 3,350 ppb Xylenes. SB-2, 6,310 ppb Xylenes. SB-3, 2,120 ppb Xylenes. B-7, 5,910 ppb Xylenes. Delta rquested spill closure based on the information presented in the Site Spill Inactivation Report dated 8/10/2006. DEC require during 10/10/2007 meeting to have 3 groundwater samples from the former tank area, dispenser area and the piping area to confirm the groundwater quality before the spill closure. (RJF)3/20/2008 - Feng - Email to BP for status of groundwater sampling. (RJF)6/18/2008 - Feng - Portfolio meeting with BP and Delta. BP/Delta will do the 3 soil and groundwater samples as agreed in the previous meeting. No work plan will be needed. The site is potentially for development, but unclear what to build yet at this time. The site is currently vacant. (RJF)10/21/2008 - Letter from Delta, dated June 12, 2008. Requesting spill closure. endclosed with a copy of the spill closure letter for spill no. 97-09624. (RJF)12/17/2008 - Reviewed the Delineation Soil Borings - December 2008 work plan, dated 12/12/2008, submitted by Delta. Delat proposed to install 6 soil borings near the previous SB-1 area. Comments are provided to Delta. 1) submit the previous investigation report, 2) soil boring must be installed 5 feet past groundwater interface. Need revised work plan. (RJF)2/20/2009 - Reviewed Confirmatory Assessment Report, dated 1/12/2009, by Delta. On July 10 and 11, 2008, Associated Environmental, under supervison of EnviroTrac and on behalf of Atlantic Richfield, advanced three soil borings using GeoProbe. 4 soil samples were collected. SB-1 at 8-8.5 feet with high concentration of VOCs, ug/kg, 330 benzene, 710 toluene, 13,000 ethylbenzene, 94,000 xylenes, 420 MTBE, 76,000 1,2,4-Trimethylbenzene, 23,000 1,3,5-Trimethylbenzene, 230,850 total VOCs. Groundwater was encountered at 29 feet. 2 groundwater samples were collected, SB-1 and SB-3. SB-3 shows 91 ug/L MTBE. The rest are low. Delta intends to conduct additional soil borings in the area west of the former UST field on site in order to futher delineate soil impact. Work plan will be submitted. (RJF)7/13/2009 - Reviewed Delineation Assessment Report, dated May 27, 2009, by Delta. On December 17 and 23, 2008, Assciated Environmental advanced six soil borings, SB-4, SB-5, SB-6, SB-7, SB-8 and SB-9 using GeoProbe. SB-7 and SB-9 hit refusal at depths between 2.5 and 6 feet bg and no soil samples nor groundwater samples were collected from these borings. SB-5, SB-6, SB-8 were advanced 5-8 above water table. SB-4 was installed 8 feet past groundwater water. Eleven soil samples were taken. SB-4 (8-8.5'), ND. SB-4 (14-14.5'), 150J benzene, 1,380 xylene, 1,830 BTEX, 3,200 MTBE. SB-4 (20.5-21'), ND. SB-4 (34.5-35'), ND. SB-5 (8-8.5'), 3,800 MTBE. SB-5 (16-16.5'), ND. SB-6 (8-8.5'), 5,300 xylenes, 8,300 BTEX, 220J MTBE, 34,000 1,2,4-Trimethylbenzene, 3,600 1,3,5-Trimethylbenzene, 58,830 total VOCs. SB-6 (16-16.5'), ND. SB-8 (8-8.5'), ND. SB-8 (18-18.5'), ND. SB-8 (26-26.5'), ND. One groundwater was collected from SB-4, 15 ug/L MTBE. The subject site is tentatively planned for redevelopment as a new hotel facility. Delta will maintain contact with the property owner/representatives to determine if any soil excavation activities are planned as part of the redevelopment (particularly at the northwestern corner of the subject site). (RJF)7/15/2009 - Reviewed Phase II Environmental Site Assessment, dated March 16, 2009, by Advanced Cleanup Technology, Inc. 3 soil borings/monitoring wells were advanced. Soil samples were collected from SB-01 and SB-02 at 8-10 feet bg. Soil samples were collected from SB-03 at 5-7 feet and 8-10 feet bg due to a discolored layer of shallow soil. Soil analyticals show low/ND VOCs. 3 monitoring wells were installed. Groundwater flows to west. DTW

BP AMOCO STATION (Continued) **S108637396**

26.94' to 29.03' bg. 3 groundwater samples were taken. NO VOCs exceedances, except 46 ug/L MTBE in MW-02. ACT recommended excavation of impacted soil, installation of sub-slab depressurization system and coordinate the remediation with DEC and BP. (RJF)08/06/2010: This spill was temporarily (for 6 months) transferred to A. Doronova. - AD4/11/2011 - Spill transferred back to JFeng.11/14/2011 - email from Chris Meyer of Antea Group "Hello June Attached is the excavation summary and closure request for the above-referenced former BP Station property. As part of the ongoing development, the entire footprint of the former station property was excavated and the soil removed. This included the areas of previously identified soil impacts. This letter summarizes the confirmatory soil sampling that was conducted and requests that NYSDEC Number 07-02148 be granted "Closed" status. The final file was >150MB in size, so we opted to send you this electronic version, which does not include the disposal manifests. A CD is also being sent to your attention, which includes this report and all of the disposal documentation for the >6,500 tons of soil, removed from the site. Should you have any questions, please give me a call. We look forward to hearing from you on this matter. Thank you. Chris12/20/11 - Raphael Ketani. Chris Meyer of Antea Group sent me the 11/11/11 Excavation Summary Report by e-mail. He requested that the DEC close the spill case and issue an NFA letter. I reviewed the report. I noted that they had described excavating the contaminated soil in the northwest corner of the site where the 4,000 gal. tanks had been. The 8/22/11 soil end point results for GS-1 (next to SB-1) and GS-2 (next to SB-4) were almost non-detect. However, no excavation, nor end points were performed next to SB-6, which had up to 34,000 ppb of 1,2,4-trimethylbenzene and three other exceedences of individual VOC concentrations. Also, I could not find a PBS registration for the tanks. This was a violation of 6NYCRR Part 612. Lastly, I could not find the CD with the tickets and manifests. As a result of this missing information and the PBS violation, I could not close the spill case. I sent the following e-mail to Mr. Meyer:Chris:I have reviewed the closure report. The diagram did not show that soil end point samples were taken at the location of SB-6. The 2008 sample from this location had up to 34,000 ppb of 1,2,4-trimethylbenzene, plus three other exceedences that were over 1,000 ppb. Also, I could not find a PBS registration for the tanks that were removed. This is a violation of 6NYCRR Part 612. Therefore, I can not close this spill case and issue an NFA letter. Also, I could not locate the CD with the tickets and manifests. The DEC must have this information and it must be in the form of pdf files that are no larger than 50 MB.Please submit the required information as soon as possible.12/21/11 - Raphael Ketani. Mr. Meyer responded back by e-mail. He pointed out that it was stated in the Excavation Summary Report that the entire station site had been dug out to 15 feet below grade. I re-read the report and found the statement that the entire site had been dug out. Next, he wrote that the PBS registration is #2-602004. I checked this registration and did find the site with listings for the four 4,000 gal. USTs as being closed and removed on 1/1/86. It was very strange that I could not find the registration despite using 4 different addresses for the site. In my response to this e-mail, I pointed out that the DEC still needed the tickets and manifests and that this will hold up closing the spill case. I asked him to send the CD. 12/22/11 - Raphael Ketani. Mr. Meyer sent me the CD with the entire collection of manifests. The latest date was 8/11/11. These were the last pieces of documentation

BP AMOCO STATION (Continued) **S108637396**

that were required by the Department in order confirm that the remediation had taken place.As the information in the case file and the e-docs indicates that the spill has been remediated and as the threat to the public and the environment is minimal from any remaining contamination, I have closed the spill case. 1/9/12 - Raphael Ketani. Mr. Meyer sent me the owner's address. It is: John Hsu, Pane Stone Construction, 35-06 Farrington Street, Flushing, NY 11354, (718)353-2239.The SCL was sent to Mr. Onufrak, Mr. Hinshalwood and Mr. Meyer.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

GRACE ASPHALT (Continued) **1001222194**

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company: 999
Contact Name: CHRIS MONTALVO
Contact Phone: (212) 839-9803
DEC Memo: 7/27/11 - Raphael Ketani. I spoke to Chris Montalvo (212) 839-9803, the Environmental Coordinator for the NYC DOT. He said that there a number of compressors running various devices at the site. The plant has a DEC permit to run as a batch plant, but not as a continuous mix plant - it does not receive barges of sand and gravel. So the plant is operating. The subject compressor is in a shed and is used to operate the discharge chutes. The compressor usually discharges condensed water from a pipe to the ground. However, possibly due to the hot weather, it was discharging water and lube oil last saturday, 7/23/11. The compressor was shut down because of this. Some of the soil was dug up where the drainage landed. However, more needs to be dug up. I asked Mr. Montalvo to send the DEC the manifests for the removed soil as soon as he has them. He said that he will send the manifests.There is an associated spill case #1000181 for the site.

GRACE ASPHALT (Continued) **S110823404**

This case deals with most of the site and the spills that took place therein. The investigation is ongoing.9/15/11 - Raphael Ketani. I tried to contact Mr. Montalvo regarding removal of the contaminated soil, but I could only leave a message.9/28/11 - Raphael Ketani. I tried to contact Chris Montalvo (212) 839-9803, but I could only leave a message.10/7/11 - Raphael Ketani. Today I received a 10/5/11 letter report from Augustine Montalvo of the NYC DOT. The letter report concerned the cleanup of the soil that was contaminated by the compressor condensate. A disposal manifest was included with the report. I reviewed the report and found it to be acceptable. Based upon the information in the 10/5/11 letter report, I determined that the contamination from the spill had been cleaned up and so it was not a threat to the public or the environment. Therefore, I closed the spill case.

Remarks: MORE THAN 5 GALLONS OF AIR COMPRESSOR LUBE OIL TO GROUN CLEANUP PENDING

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region:	2
DER Facility ID:	130698
DEC Memo:	9/28/2005 - Cozzy - On September 1, 2005, GSC requested closure of this spill. Based on information in the file from Region 2 and a site history submitted by GSC, the following remedial activities took place at this site:5/89-Sixteen 550 gal steel USTs removed and five 4000 gal double walled fiberglass tanks installed. Approx. 390 cubic yds of contaminated soil remvoed.5/94 thru 6/94 - two 550 gal USTs which had filled with water were removed. Installation of SVE was initiated. 8/94 - two 375 pound vapor phase carbon units installed on SVE.12/94 - needed air 100 permit. Once DAR approves, the SVE will be started.2/95 - SVE was started in February 1995, with three vapor extraction points.3/96 - SVE shut down due to asymptotic recovery rates. Total of 4910 lbs of contaminants revoved with SVES.12/99 - SVES dismantled.5/2002 thru 7/2002 - HIT events on MW-5 and MW-13.12/2004 - Sensitive Receptor Survey (SRS) submitted to DEC. SRS was found acceptable in January 2005.The groundwater concentrations have shown a significant decline with all wells on the downgradient side of the property meeting standards. Spill closed.Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"This spill case was reassigned from DEC (Sigona) to Rommelon 02/10/2004.
Remarks:	PRODUCT COMING OUT OF SOIL. SEWER LINE MAY BE BROKEN.

DEC Memo:	01/05/06: This spill transferred from J.Kolleeny to S.Kraszewski. 1995 ISRP indicates little or no contamination present in area around tanks. Both tanks replaced in 1997. No other tank test failures or spills related to tank integrity. No tank closure assessment performed during excavation. Needs a tank closure report. - SK03/22/06: This spill transferred to K.Tang. - SK05/20/09: This spill transferred to J.Kann. Investigative Work Plan submitted on 5/20/09. J.Kann08/18/09: J.Kann - spoke with Jessica of GF on July 10, 2009. Investigative work plan requires 10 existing on-site wells be sampled. Revised work plan submitted July 14. Work Plan approved on August 18.11/29/10: J.Kann - Site Investigation Report submitted on 8/19/10. Based on review of this report - groundwater samples were collected from 10 wells. Two rounds of sampling were performed - May 20 and July 20, 2010. No exceedences were found in nine of the ten wells. 2nd round of sampling should minor exceedences of three SVOCs in groundwater. A qualitative exposure assessment was prepared and a compelte exposure pathway does not exist. Spill closed. NFA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"ACCORDING TO JAY SHAW OF DOS, AFTER TTF ON 1/4/99, TANK WAS EXPOSED & ISOLATED, BUT NO LEAKS OR ODORS COULD BE FOUND. TANK RETESTED ON 1/13/99, FAILED AGAIN. KOLLEENY OF DEC INSTRUCTED DOS TO PUMP OUT TANK AND EITHER CLOSE PERMANENTLY OR REPAIR, AND TO PERFORM SITE ASSESSMENT TO INVESTIGATE POSSIBLE IMPACTS TO ENVIRONMENT. ON MARCH 8, 1999, TYREE CLOSED TANK IN PLACE WITH SAND. AT DEC'S REQUEST, LIRO (MANAGER OF SITE AS VEHICLE FUELING FACILITY UNDER DDC CONSENT ORDER) PERFORMED CLOSURE ASSESSMENT. FOUND VERY MINOR SOIL CONTAM. (UNDER TAGM 4046 RSCO'S) AND ALMOST NOTHING IN GROUNDWATER (ONE WELL HAD 1 PPB BENZENE, ANOTHER HAD 2.2 PPB ACENAPHTHENE). LIRO RECOMMENDED NO FURTHER ACTION FOR AREA OF HEATING OIL TANK. KOLLEENY AGREED. (NORTHERN PART OF SITE NEAR MOTOR FUEL TANKS HAS APPROVED REMEDIAL PLAN INVOLVING APPLICATION OF OXYGEN RELEASE COMPOUND TO ADDRESS CONTAMINATED GROUNDWATER AND SATURATED SOIL CONTAMINATION IN CAPILLARY FRINGE.)
Remarks:	CALLER TESTED TANK. TANK FAILED.

QUEENS NORTH 11C DOS -DDC (Continued) **S104515223**

DER Facility ID: 270656
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"LiRo investigated this site and implemented an ORC injection program to address groundwater contamination on DOS property and in parking lot to north owned by Tully Construction. LiRo has maintained that some of the contamination there is from another source, an adjacent gas station/repair shope to the northwest; however, LiRo's water table contour maps consistently show that site to be up-gradient/cross-gradient of the DOS site and tanks.Nevertheless, in letter dated 8/19/04, Kolleeny approved LiRo's recommendation of no further action to address the contamination on the Tully property. LiRo continues to perform semi-annual monitoring of groundwater on both the DOS site and the Tully property.This spill transferred from Kolleeny to A. Zhitomirsky on 4/15/05. - JK10-24-2005 Higher levels of gw contamination persist at an adjacent property which according to JK is located cross gradient to the DOS site.AZ11-8-2005 Reviewed monitoring report dated September 30, 2005. NYSDEC criteria for VOCs were exceeded in 4 wells including sentinel wells. The highest concentration is 132 ppb. Plume is not stable. AZ7/6/2006 Reviewed Sensitive Receptor Survey issued by LiRo. The highest VOC concentration at the Tully parking lot was 132 ppb. NYCDOS lot - 23 ppb. Groundwater gradient direction is not clear. Two rounds of ORC were performed at the site. The report does not state if the tanks were removed. A basement is located within 100 feet of DOS Garage. MW-13 is located approximately 12 feet from the basement. MW-13 has shown less than 100 ppb according to the report. The report stated that groundwater is used for drinking in the region. Depth to groundwater is 8 feet. According to the map included in the report, the site is located approximately within 2 miles from public wells. DEC recommended groundwater modeling analysis by consultants to asses the possibility of public wells contamination. E-mail was sent on 7/5/2006 to Fatemah Ashkan (NYCDDC). AZ 8/7/2006 Contacted Fatemah Ashkan (DDC). The site was dicsussed. I reiterated, as per Koon Tang suggestion, DEC recommendation to perform a groundwater modeling of the site in order to study the existing dissolved groundwater plume and its possible influence on groundwater supply wells in the area. Sampling should be performed prior to the study. Another course of action could be remediation of the existing contamination. Greyhawk should submit proposals to DEC regarding the course of action. AZ8/14/2006 Conversation with Chris Proce (Roux Associates @631-232-2600). I told him that DEC is looking for groundwater modeling which would help to see if existing gw contamination affects or might affect in future existing water supply wells. AZ11/16/06 - reviewed the GW modeling result and the petition for closure. The residual GW contaminations is only at 132 TVOCs with not much BTEX left after at least 2 years of monitoring. The closet public water well is more than 2 miles away. No other sensitive receptor could be impacted by the residual contaminants. Spills closed. - KST
Remarks: FOUND PRODUCT IN GROUND WATER AROUND TANK.

DEC Memo:	4/24/2006 Sangesland spoke to Steve Grens of AKRF (cell 914-806-5650)Site is in the Brownfields Program.Two 10,000 gal USTs (installed 1917) were found with 1" to 2" holes. During tank removal, oil/water sludge poured out into the pit. This sludge is now being pumped out and disposed of. Contractor will excavate out contaminated soil and dispose with manifest. End point samples will be taken after excavation.10/26/07 - closed by martinkat, based on the following:October 30, 2007Ms. Ioana Munteanu-RamnicNew York State Department of Environmental ConservationDivision of Environmental Remediation, Region 247-40 21st StreetLong Island City, NY 11101-5407Re: Spill Closure ReportFlushing Industrial Park, Parcel 1, Flushing, New YorkBCP Site No. C241051Spill No. 0600907Dear Ms. Munteanu-Ramnic:AKRF, Inc. (AKRF) is pleased to present this report summarizing the closure of a spill reported at 40-22 College Point Boulevard in Flushing, New York (the Property). The subject Property consists of four Parcels participating in the New York State Department of Environmental Conservation's (NYSDEC) Brownfield Cleanup Program (BCP): Flushing Industrial Park (Eastern), Parcel 1 (BCP Site No. C241051); Flushing Industrial Park (Western), Parcel 2 (BCP Site No. C241078); Flushing Industrial Park (Western Waterfront), Parcel 3 (BCP Site No. C241079); and Flushing Industrial

INDUSTRIAL SITE (Continued) **S107789225**

Park (Flushing River), Parcel 4 (BCP Site No. C241080).On April 25, 2006, during removal of two 10,000-gallon fuel oil underground storage tanks (USTs), a spill was reported due to apparent petroleum like sludge noted on the water table. The tanks were located on the western portion of Flushing Industrial Park, Parcel 1. Provisions for tank removal and spill cleanup were included in the NYSDEC-approved Remedial Action Work Plan for Parcel 1. The RAWP established Site-Specific Action Levels for use in determining sufficiency of remedial actions. The remediation of Spill No. 0600907 was performed under the RAWP, and the remediation of the entirety of Parcel 1 will be documented in the forthcoming Final Engineering Report (FER). The FER includes figures, tables, laboratory analytical reports, and photographs of these events.Spill Closure SummaryOn April 19, 2006, two 10,000-gallon USTs were encountered. Following tank removal, corrosion holes up to 2 inches in diameter were noted on the sidewalls and bottoms of both USTs. A sludge-like layer with a petroleum-like odor was noted on the water table; therefore, a spill was reported to the NYSDEC Spills Hotline (Spill No. 0600907) on April 25, 2006. No light non-aqueous phase liquid (LNAPL) was measurable on the groundwater in the excavation using the oil/water interface probe. The tank excavation was kept open for several days while oil absorbent pads were used to soak up the sludge layer. Groundwater was pumped from the open excavation into the on-site water treatment system on April 21,Spill Closure Report (Spill No. 0600907) 2 Flushing Industrial Park, Parcel 1Flushing, New York24, and 27, 2006, and the sludge layer did not reappear. The soil and portions of the tank vault exhibiting petroleum-like staining and/or odors were directly loaded into trucks for disposal as non-hazardous waste. Excavation continued horizontally to a depth of several feet below the water table, and laterally until no evidence of contamination was apparent on the soil. The contaminated soil was excavated and disposed of off-site. The tanks were cleaned and recycled as scrap metal. Eight perimeter endpoint soil samples (UST-x-3 to UST-x-10) were collected on April 27 and 28, 2006, for analysis of NYSDEC Spill Technology and Remediation Series (STARS)-list volatile organic compounds (VOCs), STARS-list semivolatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs). The endpoint sample concentrations were less than the applicable SSALs. Under the BCP, post-remediation groundwater sampling is being conducted on Parcels 1, 2 and 3 to assess the performance of the remedy Property-wide.Based on the remedial activities conducted, and on the analytical results, AKRF requests that the NYSDEC grant closure with respect to Spill No. 0600907. Please contact Kate Brunner at (646) 388-9525 with any questions or concerns.Sincerely yours,AKRF, Inc.Marcus Simons Kathleen BrunnerSenior Vice President Technical Director

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"2/18/98 smart.:CONTRACTOR ADVISED OWNER TO COVER SOIL PILE. OWNER WANTED THEM TO SIGN AFFADAVIT BUTR CONTRACTOR REFUSED. OWNER SAID THAT THEY WOULD GET OTHER ESTIMATES BUT CONTRACTOR BELIEVES THAT THEY WILL GET RID OF SOIL THEMSELVES AND NOT RE-REGISTER. TIBBE MAY HAVE HANDLED INITIAL RESPONSE.4/12/04-Vought-Spill transferred from Mulqueen to Rommel as per Rommel.8/26/2004 Sangesland spoke to Christopher Seib of Whitestone Associates (908-668-7777) His firm is going to do the environmental investigation & remediation on this site. A new spill number was called in, but it was closed out and referenced back to 9712812.Ref # 0405679 - now closed3/9/2007-Ian Beilby: A tank closure report was received. A quick review was performed to determine if spill could be closed. It was not clear that any work plan had been developed and approved or that there was any department involvement during the fieldwork. The report was forwarded to Region 2 with requested reassignment.Spill previously assigned to Ian Beilby in CO.3/12/07 - Austin - Recieved closure report from Beilby. Spill reassigned to Raphael Ketani for review - below referenced PIN spill report closed - end**********NOTE THIS SITE WAS ALSO A PIN JOB - REF #9800087- MARK TIBBE**********3/12/ 07 - Raphael Ketani. I spoke to Sue of the Albany Attorney General's Office (518) 474-8105. She said that the PIN case was never referred to her office. I spoke to Mr. Tibbe of DEC Region 2, DER Unit B, regarding this PIN case. He said that the site was a 10 acre property. He said that spill #9712812 and spill #9800087 are not related to each other. Spill #9800087/PIN 00537 involved oil that was running from a fuel tank that was cut open and left to spill oil into a street storm sewer. The oil ran from the sewer, down the sewer pipe, out into Flushing Creek, and then out to open water beyond the Coast Guard's buoys. DEC started a PIN and cleaned up the spilled oil on the street, in the sewer, and the drain pipe. Then DEC billed the Coast Guard through "Open 90." According to Mr. Tibbe, the Coast Guard agreed to pay for the cleanup.The owners of the site are ABS Flushing Development, LLC, 1274 49 Street, Ste 302, Brooklyn, NY, 11219. The consulting company is Whitestone Associates, Inc., 35 Technology Drive, Warren, NJ, 07059. The contacts are Ronald F. Meloskie (908) 668-7777 (case manager) and Keith D'Ambrosio, PE.The site is located at 39-08 Janet Place, Flushing. The block and lot are 04963/0007. There is a PBS case #2-031739 under the previous owners, Flushing Promenade, LLC. Tanks #2 and #3 are listed as temporarily out of service and tanks #1, and #4 to #6 are listed as closed/removed. Tank #1 was removed 2/1/98 and the other 3 were removed 8/1/03. 3/13/07 - Raphael Ketani. I have reviewed the 1/11/07 Underground Storage Tank Closure/Remedial Investigation/Remedial Action Report and Corrective Action Workplan produced by Whitestone Associates, Inc. (Whitestone). The site has an "E" designation. From the Executive Summary:Site investigations were performed from 1990 to 1995 and found contaminated soil and groundwater. A phase I and limited phase II investigation were completed in 12/01 and 2/02, respectively, by Merritt Environmental Consultants, P.C. (MEC). The previously listed USTs were the two 550 gal. gas tanks and a 4,000 gal. diesel tank. There were abandoned drums on the property which were overpacked and removed in 1998. QR Development Corporation, a former owner, hired a contractor in 1998 to install a sump or

OR DEVELOPMENT CORP (Continued) **S103273254**

drywell. However, a UST was discovered in the northeast corner of the site. It was removed, but the contents spilled into a storm drain and entered Flushing Creek (spill case #9800087). MEC completed a subsurface investigation in 2002. VOCs, SVOCs and metals exceeded the Recommended Soil Cleanup Objective standards. Whitestone did some followup investigative work in 2002 consisting of a GPR survey for the entire site and 10 test pits for the eastern upland area. Three suspected 20,000 gal. tanks were discovered in a vault via the use of the GPR. The GPR didn't detect any anomalies in the western part of the site. UST closure and remediation activities were conducted by Whitestone from 8/04 to 5/05. These activities included the removal of 16 USTs and ASTs (however, the 1/17/07 report lists only 11 tanks and many of these don't appear in the PBS database), removal of contaminated soil from around the tank locations, removal of contaminated groundwater, soil end-point sampling, installing 10 borings with Geoprobes for groundwater sampling, and digging 9 more test pits for soil and groundwater collection. The post excavation sampling involved 24 soil samples, of which 7 had SVOC exceedences. Post excavation sample PE-5 had exceedences for xylene. So additonal soil was removed. Soil samples XE-1 to XE-3 showed that there were no exceedences. The remedial investigation resulted in finding that 7 of the 10 groundwater samples from the Geoprobes (#1 to #6 and #10) and Test Pit #5 exceeded the groundwater standards. Free product was found at sites #4 to #6 and #10. Subsequent remediation was performed by Whitestone in 2006 and included 6 additional test pits to characterize soil and groundwater in the western part of the site. Test pits #1, #2, #4, and #6 had soil exceedences. Test pits #2 to #4 had groundwater exceedences.From the body of the report:I looked at the Soil and Groundwater Sample and Proposed Monitor Well Location Plan. It shows only 10 tank locations, even though the enclosed PBS registration form shows 11 tanks. The Proposed Vapor Barrier and Cap Details plan shows the vapor barrier resting on top of a gravel subbase. It is not clear what size gravel this will be and whether it is safe for the liner. It is not clear from any of the 3 diagrams whether type 1 sub-base fill material will be used. There is a 9/24/04 letter from Brookside Environmental, Inc. stating that a total of 16 USTs and ASTs were removed (again, this is not reflected in the PBS records on file nor the PBS application in the report). The discrepancy regarding the 6 undepicted 275 gallon ASTs is that they were all in 1 story buildings that were along the north side of the property. This has been determined from a sketch that accompanies the Brookside letter. There were few test pits and borings in the vicinity of these tanks. Additional pits and borings may be necessary. The boring and test pit logs didn't reveal anything more than some concrete, construction debris and fill material. As many other nearby sites in the area along Flushing Creek have large amounts of old tires, metal, bricks, glass, plastic and other debris resting on top of the intertidal surface, it is not clear why these materials haven't been reported. The soil analyticals for each soil boring and test pit sample vary in the number of VOC and SVOC hits. Some sites have no detects at all for either VOCs and SVOCs. If there are exceedences of the TAGM RSCOs, usually they are very low. Groundwater samples from the borings and test pits typically have several VOC hits and many SVOC hits. Many groundwater samples have several VOC exceedences and several SVOC exceedences. However, all of the exceedences are usually at very low levels in the parts per billions and just over the groundwater standards. The water in

OR DEVELOPMENT CORP (Continued) **S103273254**

Flushing Creek has a history of being contaminated and may be contributing to the presence of the analytes, aside from the area being heavily industrial and commercial. So there doesn't appear to be any serious contamination issues at the sites where soil and groundwater samples have been taken.In summation, the report is INCOMPLETE and needs the following:1) a plan for additional soil borings and test pits with soil and groundwater sampling in the western part of the site 2) analysis of all samples via methods 8260 and 82702) narrative descriptions in the text regarding what will actually be built with fold out plans depicting the footprints for the apartment building, stores, and promenade for the site3) fold out elevation plans depicting the various structures and buildings to be constructed on the site WITH DEPICTION OF THE VAPOR BARRIER OR VENTING SYSTEMS 4) narrative descriptions of the the various vapor barrier or venting systems with a detailed fold out plan depicting them5) pictures showing all aspects of the site6) all 16 tanks must be registered on the DEC PBS system, or else the case can not be closedAfter reviewing the report, I talked to Maurice Winter (718) 595-4514 of the NYC DEP, Division of Environmental Planning and Assessment, 59-17 Junction Blvd., 11th Floor, Flushing, 11373. He said the site has a Hazmat "E" and Noise designation. He said he is also reviewing the project and that the site will have an apartment building with underground parking. Groundwater is about 3 to 4 feet below grade in the western part of the site. I told him that, with the exception of one sentence in the first paragraph of the Executive Summary, there is no mention of the apartment building. There is just a plan for a promenade and park. He said he thinks they have to do a lot more borings and test pits in the western part of the property. I told him that I agreed and that the report was very incomplete because of this. Mr. Winter said that he sent a letter on 3/6/07 asking for more borings.3/15/07 - Raphael Ketani. I met with Randall Austin, Chief Engineer Spill Prevention and Response Unit, Region 2, to discuss the case. I told him that there is soil and groundwater contamination, but it is not significant for such an industrial area and as per TAGM standards. I showed him the boring, well and test pit plan and explained that this was a big project. He agreed with me that the project was too big for the Spills Unit, but advised me to call the consultants.I spoke to Ronald Meloskie of Whitestone (908) 668-7777. I told him about the deficiencies of the report. I also asked him whether the owners had ever considered applying for the brownfield program. He said that his company had talked to the previous owners about the program about 5 or 6 years ago, but they weren't interested as time was a concern. I asked him about whether the current owners would be interested. Mr. Meloskie sounded very non-commital and uninterested about the program and seemed to indicate that the present owners would also not be interested. I told him where the web site was located if he wanted to get more information. 3/16/07 - Raphael Ketani. I spoke to Mr. Winter at DEP. I told him that DEC Spill Prevention finished its review and had comments. I gave him the list of 6 comments as above. I also told him that this case was too big for Spills and will probably be transfered to DER Unit B. He said he understood.3/28/07 - Raphael Ketani. A letter was sent to Mr. Meloskie with 6 items that needed to be addressed in order to complete the information that DEC requires for the site. This items included:1) additional soil borings, wells, and test pits for the western part of the site2) analysis of samples via 8260 and 82703) surveying of water table elevation at all locations

OR DEVELOPMENT CORP (Continued) **S103273254**

and construction of contaminant plumes4) descriptions of what will be constructed with fold out plans showing footprints, elevations, and detail of vapor barrier for each structure5) photos of current site conditions6) revised PBS registration for the 16 tanks6/18/07 - Raphael Ketani. Yoram Barel of LEV Group (a developer working with the owners ABS Management) (917) 514-2114 called to get clarification as regards what DEC was requesting in it's 3/28/07 letter. I explained everything in detail for clarity for Mr. Barel. He said his company is having a meeting with ABS and Whitestone tomorrow and will explain what DEC is asking for.10/24/07 - Raphael Ketani. I contacted Mr. Barel. He said that the phase II investigation plan had been submitted to the DEP and had been approved a month ago. I asked him to send me a copy of the plan. He said he will. I asked him whether any digging had taken place to remove material at the site. He said "No." 10/29/07 - Raphael Ketani. Today I received the 7/10/07 Health and Safety Plan, and the 7/20/07 Phase II Environmental Site Assessment Workplan from Whitestone Associates, and the 8/23/2007 HASP and Phase II Workplan review letter from the NYCDEP. I began my review of the Phase II Workplan today. 10/31/07 - Raphael Ketani. I finished my review of the Workplan. The deficiencies were as follows:1) a location was found where there were spent solvents, and ignitable and corrosive waste, but no mention is made of where this site is2) at least one soil boring is necessary at the former location of the solvents and other waste3) only 6 tanks are listed under PBS registration #2-031739. However, 16 tanks were removed. Also, 2 of the tanks in the PBS registration are listed as temporarily out of service, which is wrong.4) the planned borings for the western half of the site are too few in number and so are too widely spaced to characterize this part of the site - up to 165' apart between SB-6 and SB-9, with 110' being typical. Nine more borings should be proposed which would be situated between the borings that are already depicted.I wrote a DRAFT letter with these comments to Mr. Meloskie, with a "c-c" to Mr. Winter and Mr. Estesen of DEP, and submitted it to Randall Austin, Chief of the Spills Unit, for his review. He approved the letter and it was sent out today.11/13/07 - Raphael Ketani. I spoke to Mr. Meloskie (908) 668-7777 regarding the additional borings that DEC was requesting. We discussed that nine more borings are required by DEC. Mr. Meloskie stated that he will send a revised boring plan with a cover letter and will include the location of the former hazardous material site. He also stated that he is working with the present owner to put together a revised PBS application for the 16 tanks. I told him that the owner needs to sign the forms, submit a copy of the deed of ownership, and a check for the appropriate amount. He said this will be done. 11/16/2007 - Raphael Ketani. I received the revised boring plan from Mr. Meloskie of Whitestone Associates, Inc. I reviewed the revised Proposed Soil Boring Location Plan map and found it to be acceptable. I reviewed the entire revised boring plan and found the responses to be acceptable.I contacted Mr. Meloskie and told him that both parts (7/20/07 Work Plan and the revised work plan dated 11/15/07) of the proposed boring and sampling plan were acceptable and to have his company start the investigation as soon as possible. He said that the work is scheduled to start about 11/26/07. I informed Mr. Winter of DEP that the work will start next week. 12/11/07 - Raphael Ketani. I met Yoram Barel (646) 443-3717 at the office. He was here to see someone in another division. He told me that all of the borings have been done and the soil samples were sent

OR DEVELOPMENT CORP (Continued) **S103273254**

to the lab. He said that the analyticals should be received soon.1/11/08 - Raphael Ketani. Today I received the revised PBS registration form for 17 tanks of various sizes for the site. The PBS case is #2-031739. I forwarded the form to Nick Lombardo of the PBS Unit. 1/31/08 - Raphael Ketani. I checked the PBS registration. It still hasn't been updated. I contacted Mr. Meloskie (908) 668-7777 of Whitestone. He said that the report is still in draft form, but he can send the analytical tables. I told him that would be fine.I received the site plan and analytical tables. 2/6/08 - Raphael Ketani. I reviewed the soil and groundwater analytical data. The results were largely non-detect. The only exceptions were soil sample SB-5S, which had 4 hits that were on the border with the TAGM exceedences, and groundwater samples SB-5GW, SB-6GW, and SB-9GW. SB-6GW and SB-9GW had 35 ppb and 57 ppb of MTBE, respectively. SB-5GW had 5 exceedences of the TAGM groundwater standard, but only 1,3,5-trimethylbenzene at 26 ppb and ethylbenzene at 54 ppb were somewhat above the limits.3/7/08 - Raphael Ketani. Today I received the Phase II Environmental Site Assessment Report, Remediation Plan, and Site Specific Construction Health and Safety Plan for Remediation and Earthwork. All of the plans were submitted by Whitestone Associates, Inc. and dated 3/5/08. I began my review of the documents.3/10/08 - Raphael Ketani. I looked over the Health and Safety Plan. I reviewed the Phase II ESAR. For soil samples SB-6D to SB-10D and SB-11 to SB-19, the great majority of the results were non-detect. There were a small number of hits and a small number of low level exceedences for combustion product analytes. As with my 2/6/08 review of the groundwater results, there were a small number of analyte hits and a very small number of low level TAGM exceedences. 3/13/08 - Raphael Ketani. I finished my review of the Phase II ESAR, the Remediation Plan, and the Health and Safety Plan. I sent a letter to Mr. Meloskie of Whitestone (908) 668-7777 approving the Phase II ESAR and Section 4.0 of the Remediation Plan.I checked the PBS case #2-031739. It still shows tanks #1 and #2 temporarily out of service and tanks #3 to #6 closed and removed. I checked with Nick Lombardo of the PBS Unit. He said the application was returned because there was no federal tax i.d., nor a copy of the deed of ownership. He said that happened back a couple of months ago.5/5/08 - Raphael Ketani. I received an e-mail today from Mr. Meloskie. He stated that they will be starting the remediation work at 3908 Janet Place. They will start the utility mark outs today. The remediation will include installation of the product recovery trenches and excavation of the soil "hot spot." 5/8/08 - Raphael Ketani. Mr. Meloskie called me today. He said that the job has been delayed about a week. He said that they would like to fill in any excavations with broken concrete rubble from the buildings that were knocked down. I told him that as long as it is determined that the concrete is free from hazardous materials (i.e. asbestos) and is itself non-hazardous (i.e. doesn't contain heavy metals or contaminants), then using it would be alright.7/10/08 - Raphael Ketani. Mr. Meloskie (908) 668-7777 called me on 7/8/08 and I returned his call today. They had excavated the hot spot. He will send the post excavation sample report. They installed three product recovery trenches. Two have only a sheen and third had 3 feet of mixed oils product. The trench is in the vicinity of fuel tanks that were along Janet Place. He asked me to write a SPDES Equivalency Permit. He said he spoke to Steve Watts of Environmental Permits and Mr. Watts told him that this type of permit is issued when dewatering

OR DEVELOPMENT CORP (Continued) **S103273254**

is taking place for a remediation project. Mr. Watts told him that Spills should do the permit.I spoke to Randall Austin, Chief Region 2 Spills Unit, about the SPDES permit. He said that if the discharge is to a storm sewer or a water body, then a SPDES permit is necessary as a Stipulation Agreement. If the discharge is to a combined or sanitary sewer, then the DEP issues the permit. He said we also need to know the rate of discharge and how the water will be processed before discharge. 8/19/08 - Raphael Ketani. I tried to contact Mr. Melowski, but could only leave a voice mail.8/21/08 - Raphael Ketani. Mr. Melowski (908) 668-7777 called me back. He said that nothing is happening at the site right now. The SPDES permit is on hold. The draft report for the hot-spot remediation has been completed and is under review by the client.Sebastian Zacharias, Environmental Engineer from the Region 2 Water Division, came over to discuss the SPDES permit and the Remediation Plan. He said that they didn't need a SPDES permit during the remediation phase of work if the area that is disturbed to set up the system is small. He added that during construction they will need a SPDES permit. Mr. Zacharias stated, however, that they did need a SEEP - a plan for soil disturbance and dewatering system construction.I called up Mr. Melowski and told him that Mr. Zacharias said that a SEEP was needed, but not a SPDES. Mr. Melowski told me he will contact Mr. Zacharias. I asked Mr. Melowski to send Spills copies of any documents that are submitted to the Division of Water. 8/26/08 - Raphael Ketani. Imdadul Islam of the Division of Water, Region 2 sent Mr. Meloskie guidance regarding whether the developers need a SPDES permit, and also stating that the demolition of the buildings without the permit was a violation of the regulations. 9/15/08 - Raphael Ketani. I checked the PBS record (#2-031739). It shows tank #2 and #3 temporarily out of service, but all of the other tanks are listed as closed and removed.I tried to contact Mr. Meloskie (908) 668-7777 to find out if any work is taking place at the site, but could only leave a voice mail. 9/18/08 - Raphael Ketani. Today I received the "Hot Spot" Soil Remediation Status Update report dated 9/17/08 from Mr. Meloskie. The report dealt with the "hot spot" remediation and initial free product recovery.9/19/08 - Raphael Ketani. I reviewed the "Hot Spot" report. It stated that 2,300.59 tons of contaminated soil were removed from the 3 "hot spots", and 3 free product collection trenches were installed in the eastern half of the site where many fuel tanks had been present. The end-point sample results for the test pits were all below TAGM RSCO limits. I spoke to Mr. Meloskie about the oil under the eastern half of the site. I told him that back on 7/10/08 we had a conversation about the newly dug trenches and he commented that there was a 3 foot thick layer of mixed oil in one trench. I commented that there must be a lot of oil contaminated soil in the capillary fringe zone above the water table. I added that this probably requires soil treatment after the oil is recovered from the water table. He said that this is one possible way to treat the oil contamination and that Whitestone is looking at various options. Mr. Meloskie said that the trenches are 30 feet long and 5 feet into the water table. There are 6" diameter collection pipes at the ends of each trench. I sent a letter to Chiam Hoffman of ABS Flushing Development, LLC (owners), Yoram Barel of Lev Real Estate (1230 Avenue of the Americas, 7th Floor, NY, 10020), Mr. Meloskie, and Mr. Estesen of DEP, requesting a plan to address the oil contaminated soil below the site. 10/27/08 - Raphael Ketani. I tried to reach Mr. Meloskie (908) 668-7777, but could only leave a message regarding

OR DEVELOPMENT CORP (Continued) **S103273254**

progress at the site.10/28/08 - Raphael Ketani. I received the following e-mail today from Mr. Meloskie:Raphael and Terrell,Currently, Whitestone Associates is not providing remediation and consulting services on behalf of ABS Management or LEV Group for the above referenced project. LEV Group is providing the petroleum remediation as an "in-house" service not under our oversight. Any questions regarding the remediation or site development status should be directed to Yoram Barel at LEV (917-514-2114) or Alexander Ashkanazi at ABS (718)974-9783. Please also feel free to call me at 908-668-7777 and I will provide you with any information that I have.Thanks,Ron MeloskieI tried to contact Mr. Barel and Mr. Ashkanazi regarding the submission of a soil remediation plan, but could only leave messages.11/5/08 - Raphael Ketani. Mr. Barel sent me an e-mail today: This email is a response to your message from last week regarding the futureremediation work at 131-35 Roosevelt Avenue.The recovery of the free product will continue directly by the ownership andwith Whitestone Associates' cordination, free product will be pumped intodrums and will be disposed accordingly.We will notify Whitestone and the DEC of the recovery progress,Sincerely,Yoram BarelLEV Group1230 Avenue of the Americas7th FloorNew York, NY 10020Also, I received a letter dated 11/4/08 with an attached Notice of Violation and Order on Consent from Robert Elburn, Regional Water Engineer. The letter was sent to the Lev Group, LLC and stated that the violation was due to the failure to comply with the SPDES General Permit and implement a Stormwater Pollution Prevention Plan. The plan was needed because the site is directly upslope from Flushing Creek. The owners of the site had work performed not only without a SPDES permit, but also without taking precautions to prevent water and sediment runoff from entering the creek during building demolition and digging. A penalty of $5,000 was issued and they have 15 days to send a check with the signed Order.12/2/08 - Raphael Ketani. I contacted Mr. Barel (917) 514-2114. He said that he came back from the site today and there is still free product in a trench to the south. They collected some product and are waiting for more to accumulate.12/22/08 - Raphael Ketani. I spoke to Mr. Barel. He said that they are still collecting oil from the trench to the south. He said that their technique is to collect product, wait for the oil layer to build up again, and then collect some more oil. It is a slow method, but, this way, they collect almost only product and minimize their disposal costs. I asked him to send DEC the oil collection totals as he gets them. Mr. Barel said that he will. 2/11/09 - Raphael Ketani. I tried to contact Mr. Barel in order to find out what progress had been made regarding collecting the oil in the trench, but could only leave a message. 2/23/09 - Raphael Ketani. I spoke to Mr. Barel (917) 514-2114. He said that no work has been taking place as the DOB had issued a stop work order. I asked him why. He said that the rain from several weeks ago had run to the site and ponded on the western part of the property. When the DOB noticed this, they issued the stop work order. The site has no sewers and so the water can not drain. Mr. Barel stated that it would be expensive to remove all of the water and that the owners don't want to spend the money. He added that economic conditions are bad. I told him that the economic conditions are not the DEC's concern and that the remediation work must proceed. I asked him whether the water has overflowed the trenches and whether the oil is flowing onto the site. He said it was not. I told him to contact the owners and tell them that the DEC wants them to proceed with the cleanup. He said that he

OR DEVELOPMENT CORP (Continued) **S103273254**

will tell them and that he will try to get the DOB to lift its stop work order. 3/12/09 - Raphael Ketani. I spoke to Mr. Barel. He said that no work has taken place since we last talked. He said that the stop work order still stands. The owners, ABS Flushing Development, LLC, refinanced their project about a week and a half ago. However, they are making no efforts to get the stop work order lifted. I told him to press them to resolve this matter. He said that a letter from DEC would help. I asked what the address is for mail to the owners. He said that it is: ABS Flushing Development, LLC, 1531 57th Street, Brooklyn, 11219 (the previous address was ABS Flushing Development, LLC, 1274 49 Street, Ste 302, Brooklyn, NY, 11219). 4/21/09 - Raphael Ketani. I tried to contact Mr. Barel (917) 514-2114 regarding remediation progress at the site, but could only leave a message.5/29/09 - Raphael Ketani. I tried to contact Mr. Barel (917) 514-2114 regarding remediation progress at the site, but could only leave a message.6/1/09 - Raphael Ketani. I tried to contact Mr. Barel, but could only leave a message. I checked the PBS registration (#2-031739). It still shows two tanks as temporarily out of service. As there has been no contact from Mr. Barel or the owners, ABS Flushing Development, LLC, I drafted a STIP agreement and submitted it to Randall Austin, Chief of the Spills Unit for his approval.6/2/08 - Raphael Ketani. Mr. Austin discussed the case with me and suggested having the owners of the site come in for a meeting with DEC, instead of sending the STIP. We would discuss the status of the site, the presence of the oil on the water table, and the failure of the owners to register the 17 tanks.I contacted Alexander Ashkanazi, one of the owners, at (718) 974-9783. I told him that we would like a meeting with him at DEC to discuss the site. He told me that I should contact Chaim Hoffman, the owners representative, at (347) 683-6047. I spoke to Mr. Hoffman and he said that he will call me back this afternoon to arrange a meeting with DEC. In the afternoon, I received a call from Cody Jones of the LEV Group (646) 443-3701. He said that he represented the owners. I told him that I had been trying to get ahold of Mr. Barel and I asked him where he was. He said that Mr. Barel was out of the country. I asked Mr. Jones whether he had the authority to represent the owner in Mr. Barel's absence and whether he can arrange a meeting between the LEV Group and DEC. He said that he can represent the owner in any matter and that he can get the necessary people together for a meeting. I told him that DEC wanted to have a meeting here at our office regarding the lack of progress concerning collecting the oil on the water table, the status of the site, and the failure to register the 17 tanks that were on site. Mr. Jones said that the tanks were registered. I told him that they were not. He said that he will talk to his people and see when they will be available to meet with the DEC. I suggested June 18 at 10:30AM.A little while later, Mr. Jones called back and said that June 18 at 10:30AM would be fine. He said that he was FAXing over the completed PBS registration form with the formerly missing federal tax i.d. and a copy of the deed of the ownership.I received the FAX containing the PBS registration forms. The deed of ownership and the federal tax i.d. number were present. However, a registration form with the original owner's signature was missing. I left a message for Mr. Jones that he needed to send DEC the PBS registration form with the original signature.6/18/09 - Raphael Ketani. I checked the PBS registration #2-031739. All 17 tanks are listed as closed and removed.The meeting took place as scheduled to discuss the case. In attendance were Chaim Hoffman (ABS

OR DEVELOPMENT CORP (Continued) **S103273254**

Flushing Development, LLC - owner), Yoram Barel (LEV Group - developer), Christopher Seib (Whitestone Associates - consultant (908) 668-7777), Randall Austin (Chief of the DEC Regon 2 Spills Unit), John Urda (Senior Attorney Region 2), myself, and Brandon Harrell (DEC legal intern). The issues discussed were the presence of oil in the southern collection trench, the inefficiency of the oil collection method, the lack of permanent groundwater monitoring wells, the possible presence of a source of oil and presence of a plume, the Stop Work Order issued by the NYC DOB, and the groundwater contamination.In summation, the following was agreed upon: ABS will find the source of the oil, submit a plan for installing a number of permanent groundwater monitoring wells, find a better method for collecting the oil, and remove oil contaminated soil. Also, LEV Group will provide the DEC with the contact information for the NYC DOB so that we may try to get the Stop Work Order at least partially lifted.Later today, Mr. Barel sent the following information by e-mail:Department of Buildings site address 131-35 Roosevelt AvenueChief Construction Department block and lot 4963/7Queens Borough Office BIN 4864543 120-55 Queens Blvd. Stop Work Order complaints #4396737, #4383792 Kew Gardens, NY 114246/19/09 - Raphael Ketani. I found out that the NYC DEP no longer handles "E" designations for sites. They are now handled by Dan Cole (212) 341-0964 of the Mayor's Office of Remediation. I spoke to Mr. Cole and explained the situation to him. I told him that the spill case was a high priority to DEC given the presence of an oil plume, the need to find the source, and the site's proximity to Flushing Creek. Mr. Cole said that he will contact the NYC DOB and try to resolve the matter. If he can't, he added, then he will leave me voice mail instructions regarding what to do to lift the Stop Work Orders.6/23/09 - Raphael Ketani. Mr. Cole "c-c'd" me the following e-mail today and I responded back with the information that he needed, the old and new addresses, and the block and lot for each address:Commissioner Gluckman - attached, I have included a Notice To Proceed that was previously issued by DEP in 2003 for the above referenced site. Although "Notice To Proceed" isn't listed at the top of the letter, the text for the NTP is recommending the applicant may proceed with remediation/construction. I'm informing you about this site since I received a call from a NYSDEC Region II Case Manager (Raphael Ketani) for the petroleum spill assigned to the site. Apparently, the DEC is managing an oil plume that is migrating towards the Flushing Creek and would like the consultant to mobilize quickly to start excavation and removal of impacts soil/fill and has informed me that the permits are being flagged by your office as a result of the E Designation. The DEC required excavation work should be covered under the 2003 Notice To Proceed. If necessary, OER could issue a Notice Of No Objection for the specific excavation permit if required. I will coordinate with DEC and either submit a Notice Of No Objection for the soil excavation or reissue the March 2003 Notice To Proceed with the proper formatting and get back to you as soon as possible.I appreciate your time,Daniel L. Cole, P.G.Bureau Chief, E - Designation ProgramOffice of Environmental RemediationMayor's Office of Operations253 Broadway, 14th FloorNew York, NY 10007Tel. 212-341-0964Fax 212-788-2941dcole@dep.nyc.govwww.nyc.gov/oer I put the March 31, 2003 attached Notice to Proceed letter in the E-docs.06/25/09 - Raphael Ketani. Today I sent out a regular letter and a STIP package to Chaim Hoffman. Both correspondences were previously reviewed and edited by Randall Austin, Chief of the Spills

OR DEVELOPMENT CORP (Continued) **S103273254**

Unit. The letter described all of the work that ABS Flushing Development, LLC agreed to do, as per the 6/18/09 meeting. The STIP had a deadline of July 23, 2009 for being returned signed. Item #1 in the CAP for the STIP indicated that all of the agreed upon work (that was mentioned in the letter dated 6/18/09) should be submitted as an Investigation and Remediation Work Plan.6/30/09 - Raphael Ketani. Mr. Cole sent me an e-mail today stating that he will talk to the NYC DOB and hopefully resolve any issues they have so that the work at the site can resume.7/1/09 - Raphael Ketani. Mr. Cole sent Mr. Seib and I the following e-mail:>>> "Cole, Daniel" 7/1/2009 8:41 AM >>>Raphael - according to DOB, the Stop Work Order is for fence repairs, etc. Obviously this is the responsibility of the property owner and needs to be repaired/lifted before obtaining excavation permits, etc. for your work. For the soil excavation related to the spill, the best way to move forward is have a P.E. or R.A. submit a pre-filing Job Application to DOB with all necessary documentation describing the work so I can reference the Job No. when I issue the Notice of No Objection. Please make sure all required work required for your scope is included. When Whitestone gets everything together, please let me know so I can give DOB a heads-up. Don't hesitate to call if you need any additional info.7/23/09 - Raphael Ketani. The deadline for submitting the signed STIP was today. I did not receive any calls or e-mails indicating that the STIP was on the way.7/24/09 - Raphael Ketani. Mr. Barel called me and asked whether DEC had received the signed STIP. I told him that DEC hadn't. He said that he will contact the owners (though today is friday and so they are in only half a day) and get them to send the STIP in. I also sent an e-mail to Mr. Barel asking him to resolve the Stop Work orders and get the project moving again.7/30/09 - Raphael Ketani. I spoke to Mr. Barel today (917) 514-2114. I asked him why the DEC still hasn't received the STIP with the original signature of the owners. He said that he didn't know why, but he will contact the office of ABS and get them to send it. Then I asked him whether there has been any progress on getting the Stop Work Order lifted. He said that there hasn't. He added that there has been a problem getting insurance for the site, but people are working on the issue. I told him that Mr. Cole is waiting for ABS to submit a pre-filing job application to the DOB. Mr. Barel said that he knows this, but the consultant from Whitestone Associates is on vacation right now. Mr. Barel added that whent he consultant comes back, everything will be sumbitted to the DOB. Mr. Barel asked how Whitestone can submit a work plan when it is not known how many wells will be needed. I told him to talk to the consultant at Whitestone and make a plan with wording that indicates the number of wells will depend upon what additional information they obtain by performing the well installation as they go and doing well gauging and so forth. I told him to make it a general plan. I added that Whitestone will know how it should be worded. Mr. Barel told me that he will get things moving and then the conversation ended. 8/5/09 - Raphael Ketani. Today I received the STIP with the original signature. It was signed by Chaim Hoffman, who supposedly is one of the owners. However, he indicated below his name that he is the manager. 8/6/09 - Raphael Ketani. The signed STIP was sent to Lou Oliva, Regional Attorney, who will review it and forward it to Suzanne Mattei, Regional Director, for her signature.8/18/09 - Raphael Ketani. A fully signed and executed STIP was received from the Region 2 Office of General Counsel. A copy of the signed STIP was sent to Mr. Hoffman with a deadline for submission of the

OR DEVELOPMENT CORP (Continued) **S103273254**

Investigation and Remediation Work Plan of September 18, 2009. 9/24/09 - Raphael Ketani. Mr. Barel (917) 514-2114 called me today. He said that the work plan is almost ready and will go out tomorrow. He said that DEC should have it in hand sometime next week. I asked Mr. Barel whether ABS Flushing Development, LLC is ready to get to work and perform all of the activities that are in the work plan. He said that they are. Mr. Barel added that some oil was collected a month ago, and also at weekly intervals. He said that there was only a small amount of oil. He believes the pool of oil is only a very local phenomena.9/29/09 - Raphael Ketani. I received the Investigation and Remediation Work Plan dated 9/28/09 and prepared and submitted by Whitestone. I reviewed the document, and had no comments.9/30/09 - Raphael Ketani. I passed by the site from a distance (about 400 feet away). I could see what looked like a blanket of light colored material covering the site. It may have been sandy soil. All of the buildings and debris appeared to have been removed.10/2/09 - Raphael Ketani. I spoke to Christopher Seib of Whitestone Associates, Inc. (908) 668-7777. I asked him whether there were any other wells on site. He said that there was just the one upgradient well about 70 feet to the east of the southern product collection trench. I asked him why just 8 wells were planned. He said that Whitestone is willing to put in more, if necessary, once the groundwater flow direction and analyte concentrations are known. He said that it was a money issue. I told him that the plan looked fine and that DEC will send him an approval letter. I asked him whether ABS Flushing Development has resolved all of the Stop Work orders. He said that he wasn't sure, but that he will talk to Mr. Barel and find out. He said that he will let me know by e-mail what the status of the Stop Work orders is.I drafted an approval letter for Mr. Austin. He approved the letter and it was sent to Mr. Seib and to Terrell Estesen of the NYCDEP. 10/29/09 - Raphael Ketani. I tried to contact Mr. Seib (seeb) regarding progress at the site, but could only leave a voice mail. 10/30/09 - Raphael Ketani. Mr. Seib returned my call and left a message. He said that the said that he hoped to finish this phase of the project this monday, November 2. Mr. Seib contract was still being finalized with the client for the work that the DEC requires. He added that then the physical work at the site will start very soon afterwards.11/2/09 - Raphael Ketani. Mr. Cole of the Mayors Office of Remediation (212) 341-0964 left me a voice message. He stated that the Notice of No Objection letter is about to go out.11/6/09 - Raphael Ketani. I made an unannounced site visit. There was not much to see. The site was a very large, empty fenced lot (see E-docs). There were white plastic pipes sticking up in the eastern, upland area. There was a large pool of ponded water in the lower, western area. The fence was secure and there were no signs of dumping.11/20/09 - Raphael Ketani. I tried to contact Mr. Seib (908)668-7777. I could only leave a voice mail stating that the DEC would like to know if progress is being made regarding the further investigation of the oil plume and the collection of the oil.11/24/09 - Raphael Ketani. Mr. Seib left me a voice mail. He stated that the contract with the driller is still being negotiated. It is expected that the contract will be finalized next week and work will start soon after.12/22/09 - Raphael Ketani. I tried to contact Mr. Seib, but could only leave a voice mail regarding progress at the site.12/23/09 - Raphael Ketani. Mr. Seib called me. He said that the contract with the driller has been resolved. However, the Stop Work orders still stand. He said that he talked to Mr. Cole and he said

OR DEVELOPMENT CORP (Continued) **S103273254**

that the orders should be lifted in a couple of days. Mr. Seib said that he hoped to be drilling sometime next week.1/8/10 - Raphael Ketani. I spoke to Mr. Seib. He said that the issues with the NYC DOB are not resolved. The person at the DOB who is responsible for giving permission to resume work at the site has been on vacation for a couple of weeks. Mr. Seib hopes to have the matter finally resolved by this monday. He will keep me updated.2/9/10 - Raphael Ketani. I spoke to Mr. Seib (908)668-7777. He said that he is still waiting for the permits from DOB for doing the investigative work that DEC requested. I tried to contact Mr. Barel (646) 443-3717 regarding what is preventing the LEV Group from obtaining the DOB permits for doing work on the site. However, I could only leave a message.2/10/10 - Raphael Ketani. I spoke to Mr. Barel. He said that they have had the permit for a week already, but the weather isn't cooperating. He said that he hoped to start drilling in about a week or so, baring bad weather. If the conditions are good, then he will call Mr. Seib and tell him to arrange for the driller and the other contractors.3/17/10 - Raphael Ketani. I tried to contact Mr. Seib and Mr. Barel, but could only leave messages.3/18/10 - Raphael Ketani. Mr. Seib returned my call and left a voice mail. He said that the owners and developer are still having trouble with a permit for the fencing from the NYC DOB.3/19/10 - Raphael Ketani. I tried to contact Mr. Barel, again, but could only leave a voice mail.Mr. Seib called me back today and left a voice mail. He said that he talked to Mr. Barel and he was informed that the work can start. Whitestone will be ready to start the well installation work as soon a driller can be arranged. This will entail starting the work either next week or the week after. Mr. Seib will keep me informed.3/31/10 - Raphael Ketani. I spoke to Mr. Seib. He said that he talked to Mr. Barel. He said that the work will start in a week or two. He will keep me informed. I warned Mr. Seib that if Mr. Barel or the owner are stalling, then the DEC will not look favorably on this tactic. Mr. Seib said that he understood.4/26/10 - Raphael Ketani. I talked to Mr. Seib (908) 668-7777. He said that Whitestone was ready to go on the project as scheduled for the beginning of April, but he never received any word from Mr. Barel that the work could start. He has not been able to contact Mr. Barel since.I tried to contact Mr. Barel (646) 443-3717 regarding why the work didn't start as planned, but could only leave a message.4/28/10 - Raphael Ketani. As there has been no progress regarding the tasks that were described in the approved I&R Work Plan dated 9/28/09, I drafted a letter for Mr. Hoffman stating that ABS was in violation of the STIP and Sections 173 and 176 of Article 12 of the Nav Law. I also stated that they had until 5/14/10 to initiate the tasks, or they will incur penalties and fines.Mr. Austin approved the letter and it went out today. 5/7/10 - Raphael Ketani. Mr. Seib sent me a voice mail that excavation and product recovery will take place starting monday, 5/10/10.5/13/10 - Raphael Ketani. Mr. Seib called me today. He said that his contractor had been digging last teusday. They found lots of concrete in the area that had to be dug up. They also found a utility box with oil in it. This was removed. Also, oil was collected from the site. Today, nothing is happening. They will restart next week.5/24/10 - Raphael Ketani. I contacted Mr. Seib (908) 668-7777. He said that the contaminated soil excavating and the product recovery should be finishing up today. He said that they found a little contaminated soil and it will be characterized for disposal. He said that the amount of recovered oil is really small. He didn't know how much was being recovered from the trenches.

OR DEVELOPMENT CORP (Continued) **S103273254**

Mr. Seib said that once the oil is recovered, it takes a good while until anything measureable comes back. I asked him when the well array will be installed. He said that this part of the project hasn't been set up contracturally. I told him that the DEC doesn't want the well installation to be dragged out too long. I added that the DEC wants to see whether oil or contaminated groundwater is entering Flushing Creek. Mr. Seib said that he understood. With this, the conversation ended. 7/13/10 - Raphael Ketani. I tried to contact Mr. Seib of Whitestone Associates (908) 668-7777, but could only leave a message. 7/15/10 - Raphael Ketani. I spoke to Mr. Seib. He said that Whitestone has been trying to set up a contract with the LEV Group for some time in order to do the well installations and the groundwater monitoring. He said that since there is no contract, he hasn't been out there to check and see how much oil is in the collection trenches. I told him that the DEC was very concerned that the work has come to a halt and that no one is determining whether there is a plume that is affecting Flushing Creek. He said that his hands are tied. I told him that I will send him an e-mail explaining that the DEC is concerned about the lack of progress and that legal action will be taken if the work doesn't start within two weeks (by July 30). He said that he understood. 8/4/10 - Raphael Ketani. Mr. Seib (908) 668-7777 called to say that ABS Flushing Development gave Whitestone a large retainer check. So Whitestone is now scheduling all of the work that needs to take place: monitoring well installation, oil recovery, groundwater monitoring. The work will start sometime in August 2010. Mr. Seib will let me know the exact date. 9/23/10 - Raphael Ketani. I tried to contact Mr. Seib (908) 668-7777, but could only leave a message.9/24/10 - Raphael Ketani. I spoke to Mr. Seib. He said that the contaminated soil was removed. He added that the well installation will take place during the last week in September 2010. They will wait 48 hours before developing the wells. I told him to wait at least 3 to 4 weeks before sampling the wells so that the fines in the water have settled down. He said that he will. 10/18/10 - Raphael Ketani. Dustin Kapson of Whitestone sent me the following e-mail:In accordance with Whitestone's NYSDEC-approved September 28, 2009 Investigation and Remediation Workplan, eight groundwater monitor wells were installed at the above-referenced site on September 27 and 28, 2010. Development of the wells was conducted on October 8, 2010. A survey was also conducted on October 8, 2010 to establishing casing elevations and groundwater flow direction. No measurable free product was identified at any of the newly installed monitor well locations or product recovery trenches during the installation and development activities. As requested in NYSDEC's October 2, 2009 letter, sampling of the monitor wells will not commence prior to a two-week stabilization period following well development. Upon the completion of two rounds of groundwater sampling and gauging from each of the monitor wells, a report documenting Whitestone's findings (including a discussion of the free product source investigation and removal activities) will be provided to NYSDEC.11/15/10 - Raphael Ketani. I spoke to Mr. Kapson (908) 668-7777. He said that the well installation and development work took place as planned. However, ABS Management has not paid Whitestone in advance for doing the groundwater sampling. So it hasn't taken place. I spoke to Mr. Barel (646) 443-3717/ cell (917) 514-2114 of the LEV Group regarding why the work didn't start as planned. He said that he thought ABS Management was going to release the money for the well sampling shortly. I told him that the DEC was

OR DEVELOPMENT CORP (Continued) **S103273254**

concerned that the work had stalled again. He said that he will contact the owners and find out when the payments will be made. Then, he will get back to me.11/16/10 - Raphael Ketani. Mr. Barel called me back. He said that he had spoken to the owner and the problem was that Whitestone wanted to charge them a lot of money to do the rounds of groundwater sampling. So the owners are putting out bids for doing this work to other environmental companies. Mr. Barel added that they hope to have a contractor on board to do the groundwater sampling by this week or next week. I told him that I will wait for a little while and see whethr ABS has someone on board and whether they are doing the sampling. 12/3/10 - Raphael Ketani. Rachel Ataman of HydroTech (631) 462-5866 called. She said that HydroTech will be the ones doing the work at the site from this point on. She asked what the project entailed. I told her that the DEC needed to see the groundwater analytical results for the wells that were recently installed in October 2010. I added that the groundwater elevations for each well needed to be survey so that a flow map can be constructed. I also told her that if the analytical results indicate that a plume is flowing to Flushing Creek, then more wells will need to be installed. She said that she understood.Mr. Barel (646) 443-3717/ cell (917) 514-2114 called me a little while later. He said he had spoken to Ms. Ataman of HydroTech and asked whether just sampling the groundwater was alright for now. I told him that is all that the DEC is looking for at this moment in time. I added that I had told Ms. Ataman that groundwater elevation surveying also needed to take place. Also, I stated that when DEC gets the analytical data for the groundwater samples, then we can determine whether there is a plume and whether more wells are needed to delineate the plume. Mr. Barel said that he was in agreement with doing things this way. I finished the conversation by stating that a final closure report will still be needed for all of the work that has been done and the results of the investigation and remediation. He said that Whitestone will do this report as they have much more knowledge about what went on.1/14/11 - Raphael Ketani. I tried to contact Mr. Barel (646) 443-3717/ cell (917) 514-2114, but I could only leave a message. I tried to contact Ms. Ataman, but found out that she was on maternity leave. I was passed to Mark Robbins in HydroTech. He said that HydroTech did not get the environmental job and so he didn't know anything about the site.1/24/11 - Raphael Ketani. I tried to reach Mr. Barel, but I could only leave a message.Mr. Barel called me back. He said that HydroTech will be at the site tomorrow. They will sample the groundwater and do the well elevation and groundwater surveying. Mr. Barel also said that HydroTech had put together a groundwater sampling plan. I asked him to send it to me.I reviewed the groundwater sampling plan. I had no comments and e-mailed Mr. Barel that they should proceed with the sampling.2/3/11 - Raphael Ketani. Mr. Seib (908) 668-7777 called me today. He said that the first round of groundwater samples had been taken last week. The samples are presently at the lab.2/14/11 - Raphael Ketani. Paul Matli of HydroTech (631) 462-5866 sent me an e-mail with a groundwater report attached dated 2/7/11. I reviewed the report and the VOC and SVOC concentrations were low or non-detect in almost all instances, with the exception of a couple of hits of 100 ppb or above. An oil sheen was seen in three wells, but no free product. Groundwater flow was measured to be heading to the northwest.4/20/11 - Raphael Ketani. Brett Huber of AEI (732) 414-2720, ext 1405 called today. He said that he was putting together a Phase I for the bank that hired his

OR DEVELOPMENT CORP (Continued) **S103273254**

company. He asked about the remediation of the site. I told him what had taken place so far. He asked that he be kept informed if anything should be discovered. He added that he would also like to receive the soil contamination remediation report.I tried to contact Mr. Seib regarding a soil contamination remediation report, but I could only leave a voice message and send him an e-mail.5/2/11 - Raphael Ketani. Mr. Seib sent me an e-mail stating that one more round of groundwater sampling will take place. Then an environmental report will be prepared for the DEC. 6/1/11 - Raphael Ketani. Mr. Huber called to get an update. I told him that the DEC was waiting for the results of the second round of groundwater sampling and the final cleanup report.7/8/11 - Raphael Ketani. I tried to contact Mr. Seib (908) 668-7777 regarding the second round sampling results and the final cleanup report, but I could only leave a message.7/11/11 - Raphael Ketani. I tried to contact Mr. Barel (646) 443-3717/ cell (917) 514-2114 and Ms. Ataman of HydroTech (631) 462-5866 regarding performing the second round of groundwater sampling and sending the final cleanup report. However, I could only leave messages. 7/12/11 - Raphael Ketani. I tried to contact Mr. Barel (646) 443-3717/ cell (917) 514-2114 regarding performing the second round of groundwater sampling and sending the final cleanup report. However, I could only leave messages. 7/22/11 - Raphael Ketani. I tried to reach Ms. Ataman (631) 462-5866/cell (631) 457-0032 regarding when the second round of groundwater sampling will take place. However, I could only leave a message.Ms. Ataman called me back. She said that the second round of groundwater sampling will take place today. 7/25/11 - Raphael Ketani. I received a call today from Mike Taoraima of AEI. He said that he had spoken to Hydro Tech and that AEI will do the sampling.Michael Feinman of Blank Rome, LLC (law firm) called. He said that he represented U.S. Bank, the mortgagee. He wanted to know what was left to close the spill case. I gave him a synopsis of what needed to be done. This was the taking of a second round of groundwater samples, the delivering of the data, and the delivering of a remediation-closer report by Whitestone. Mr. Feinman acknowleged what I had said and the conversation ended.7/26/11 - Raphael Ketani. Mr. Barel sent me an e-mail that Hydro Tech had performed the second round of groundwater sampling last week.9/9/11 - Raphael Ketani. I spoke to Ms. Ataman (631) 462-5866/cell (631) 457-0032 regarding the groundwater sampling report. She said that Paul Matli (718) 636-0800/cell (631) 741-7165 is the case manager and that he just sent the report to the DEC.10/7/11 - Raphael Ketani. I received the second round groundwater monitoring report dated 8/15/11 (the e-mail was in the archive). The samples were taken during July 2011. I reviewed the report. Groundwater was flowing to the north-northwest during July. The elevation of the water table was a little lower than during January 2011. The results for the VOCs and the SVOCs were very low and largely below the CP-51 standards. The results for MW-4 were a little higher than those for the January 2011 sample, but they were still almost entirely below the CP-51 standards. However, the samples for the wells had very consistent results for the SVOCs which slightly exceeded the standards. These results suggest that the groundwater is passing through the historical fill in the subsurface. This is to be expected as the larger area next to and in the vicinity of Flushing Creek was filled in during the early part of the previous century and during the nineteenth century.The information in the case file and the documents in the e-docs indicate that all of the USTs and ASTs, the contaminated soil, the free product and the solid waste

OR DEVELOPMENT CORP (Continued) **S103273254**

had been removed. My previous inspections of the site revealed that the property now consists of just some concrete gravel on an empty lot without any other debris. Also, according to the groundwater reports, there is no oil on the surface of the groundwater and there are only very low concentrations of residual contamination, which is mostly below the CP-51 standards. Given the remedial actions taken by Whitestone Associates and HydroTech, on behalf of ABS Flushing Development, I have determined that the contamination from the original spill has been removed, that the site has been remediated, and that there is no off site contamination. Additionally, the construction plans for the site indicated that a vapor barrier will be installed. Considering all of the above information, I have determined that the site is not a threat to the public or the environment. Therefore, I have closed the spill case effective today. I informed Dan Cole (212) 341-0964 of the Mayor's Office of Environmental Remediation that the DEC was satisfied that the spill had been remediated and that I was closing the case today.Later, Mr. Feinman of Blank Rome, LLC (law firm) called. He asked what else the DEC needed from ABS Flushing Development. I told him that we still needed the closure report from Whitestone summarizing the remediation work that took place. Otherwise, the DEC will not issue the NFA letter that ABS Flushing Development needs. He said that the report will be sent.10/24/11 - Raphael Ketani. Mr. Feinman (212) 885-5541 called and left a message. He wanted to know whether I had received the closure report. I returned his call and left a message that the DEC had not received the closure report and so the NFA letter will not be sent out.5/4/12 - Raphael Ketani. Today I received the Remedial Investigation/Remedial Action Report dated 4/23/12 and submitted by Whitestone Associates. I reviewed the Report. The soil analytical data was almost entirely non-detect, with only two elevated hits for 2-methylnaphthalene. These were from SIS-3 and SIS-5 in the oil interceptor trench area. They possibly represented two oily pockets under the site, but they were not of concern as the entire site will be dug out. The report also contained fully signed manifests for oily water and oil. I found the report to be acceptable and sent the NFA letter.

Remarks: tanks being removed. Possible contaminated soil on site. Contractor called about registration information, mentioned he must remove soil, get procedure for removal and registration, said he wasn't hired yet. I didn't write down his name (516#)

DEC Memo:	3/28-05 - Austin - Put under Lombardo's name from Wyne for transfer to Central Office for closure reviewTransferred back down from Albany - no action by them9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end9/22/06 - Raphael Ketani. There was very little information in the file. I found the following through Property Shark:block/lot: 01831/0035notice address: B&Z Willets Point Boulevard Corp., 127-20 35 Ave., Flushing, 11368-1514billing address: B&Z Willets Point Boulevard Corp., 6737 167 Street, Fresh Meadows, 11365-3207the primary party is Elaine Gelardi, and the secondary is Jacob BengigiI will make a site visit.I found the site. The owner of the shop is Jose Imas, but he wasn't in. The manager showed me the site. The floor was intact with no cracks and made of concrete. There were no oil spills. I could not get to the south and west parts of the shop as there were car bodies placed too close to pass. However, these were empty car bodies from what I could see. Car bodies were placed on racks in the south and west areas and they looked oil free. The engines and transmissions were in shipping containers. There was some oil staining on the floors of the containers, but nothing significant. Other parts were on racks and some Speedi-Dri was being used to soak up a little oil that had dripped out. The place was crowded, but not chaotic.Based upon what I could see, I am closing the spill case administratively.
Remarks:	Junk yard has accumulating oil and other waste automotive fluids accumulating under storage racks. RP had pump in product with discharge line running out into street. Law enforcement on scene.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"4/15/04 TJDRAP prepared by Berninger reviewed and conditionally approved. Approval letter mailed.3/23/05 - Austin - Transferred from DeMeo to Tibbe - end3/23/05 - Austin - Transferred from DeMeo to Rahman, for temp. tracking purposes - end06/27/05-SR// Sent a letter.05/15/06 Sharif Rahman- I spoke with Walter Berninger @ 631-589-6521. He will provide DEC a recent status of what has been done after the 06/2004 RAP was approved.12/19/06-Rahman-The original property owner made Eighteen Auto Parts get off of this property and closed off the access.Now, Berninger Environmental is not allowed to perform any remedial work on that property.03/31/09 Spoke with Walter Berninger(BEI).He thinks the property might have been taken over by NYC, in that case NYC would take the resposibility of remediating the site.Next step: a site visit to see the current status and find out NYC contact for the site.(sr)06/29/10 performed site visit today.Eighteen Auto still runs the business at the site.The site is divided into two percels.At one portion, Eighteen Auto runs the business.Other portion of the site is locked and Eighteen has no access to that side.Eighteen needs to investigate ground water quality on their side.I explained it to shop owner Joseph. He told me that he will contact BEI to perform the test.(sr)09/13/10 Berninger Environmental,Inc has been retained by Eighteen Auto Parts to perform the ground water sampling on site.One gw sample was taken from the existing well and two other samples were taken by installing borings.Site map provided.VOCs and SVOCs were detected slightly above the TAGM limit.Considering the industrial nature of the neighborhood, no further actions are recommended by Berninger Environmental. Case closed.(sr)

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"Cross Ref with 00076069/9/05 - Raphael Ketani. This case is Best Buy Auto, but A to Z Auto shares the same location. A to Z case is closed case 0007606. Best Buy's case has an associated PBS case #2-608000 with one 250 gal. tank above ground, but in contact with the ground. Dean Devoe of Tully Environmental ((718) 446-7000, ext. 298 is the consultant on the case.9/14/05 - Raphael Ketani. I spoke to Dean Devoe of Tully Environmental today regarding a third company that is listed at the same address as A to Z Auto and Best Buy. This is Frank Santora Equipment Corp., PBS case 2-479764. The additional company was discovered as the SPDES Storm Water Pollutin Prevention Plan dated January 2002 for Best Buy has a couple of pictures showing

BEST BUY AUTO (Continued) **S104790013**

covers to USTs on site. However, there is no PBS case with USTs for Best Buy. The registration for these tanks expired in 1995 and Frank Santora never renewed the registrations. There are 4 tanks, each with a capacity of 550 gals. The owner of the property is listed as Stadium Assests Inc. ((718) 899-8100). They are located in Corona, Queens. Mr. Devou asked a colleague whether Tully had bought the property from Stadium Assests. The colleague said "Yes" and that Tully intended to use these tanks in the future. I told Mr. Devou that the registrations for the tanks would have to be renewed and that the tanks would have to be tightness tested. He said he would take care of the 2 matters. 9/30/05 - Raphael Ketani. I received a FAX from Dean Devoe of Tully Environmental containing the tank tightness testing results for the 4 small USTs on site. Each tank passed its test. Mr. Devoe told me that the tanks have been cleaned out and will be in service sometime in the future. 10/3/05 - Raphael Ketani. I called Mr. Devoe to tell him that I was going to send my review letter with comments from the Division of Water and Spills regarding our review of the January 2002 Malcolm Pirnie SPDES Storm Water Pollution Prevention Plan (SWPPP) to Dean Devoe of Tully Environmental. Mr. Devoe said that wasn't the report he wanted me to review. I told him that this was the only report in our file cabinets for Best Buy. I told him this was for a SPDES permit for an active junk yard. He said that was the previous plan to keep the junk yard operating and get a SPDES permit. I asked him what was it that he wanted me to review? He said that there was an old spill on the site and that he wanted to know what to do about it. He said the junk yard doesn't operate anymore and is now just a cleared piece of property with nothing in it. I told him I need a full phase 2 investigation plan with figures and pictures of the site, a description of the site history, a description of where and when the spill took place, a description of planned operations to dig up the pavement and remove contaminated soil, take end point samples, take a groundwater sample, and collect free product. I told him to get this plan to me very quickly as we have wasted too much time already. He apologized for the mistake and agreed to submit the new plan fast.10/5/05 - Raphael Ketani. I reviewed the FAXed Phase I and Limited Phase II Environmental Site Assessment produced by G.C. Environmental and dated May 23, 2002. I had some comments and sent Mr. Devoe a letter with those comments, which included requesting 2 more soil borings on site.10/20/05 - Raphael Ketani. I received a FAX containing the site map for the two additional borings (B-11 and B-12) and the soil characterization results. At each location, black fill was encountered from the 0' to 2' interval. I left a message for Dean Devoe of Tully Environmental that the soil needed to be removed from 0' to 5' down at each location (the 5' to 7' interval was clean sand at each location). Mr. Devoe also submitted a preliminary report for the soil and groundwater analyses for each location. These results showed no oil contamination in the soil or the water. 10/21/05 - Raphael Ketani. I received a call from Dean Devoe regarding my comments on the preliminary report that I reviewed. He said that he didn't know why the soil descriptions included the word "black". I told him that it sounds like oil contaminated soil was discovered. He said that he wasn't there all of the time in order to view the samples coming out of the borings. I told him someone needs to look again at these two 0' to 2' samples and determine whether the color is due to oil soaking. He said he would and that he will get back to me. Mr. Devoe added that they are about to dig up the soil today at

BEST BUY AUTO (Continued) **S104790013**

boring B-3. 10/27/05 - Raphael Ketani. Dean Devoe sent me a FAX containing lead soil sampling TCLP results and another FAX of 4 pictures depicting the excavation of the contaminated soil at the site. In a telephone conversation regarding the FAXed material, he mentioned that the pipe testing for the USTs went well and that soil samples had been sent off to the laboratory to characterize it so that the dug up soil can be sent off for disposal. I told him this was alright. Mr. Devoe added that the black color of the upper 2 feet of the soil is due to broken and pulverized asphalt. He said that Best Buy used to sit atop a small hill and that multiple layers of asphalt were laid down, as time went by, to maintain the road to the top. Hence, the black color. 12/19/05 - Raphael Ketani. I reviewed the tank tightness testing report, soil disposal manifests, pictures, and the 10/28 - 11/18 data package which were all submitted on 12/7/05 for the site by Dean Devoe of Tully Environmental. I did not find any information that would indicate that there were hazardous conditions or conditions threatening or damaging to the environment. Based on the information in the above report and data package, I'm closing the spill case. Mr. Devoe asked me for a "nfa" letter. So I will send one to him.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"TRANSFERRED FROM Y.KRIMGOLD.10/06/05 Site will be excavated. AZ12/12/2005 R. Austin forwarded to me e-mail from Mary Keating (<mkeating@dot.nyc.gov)which informed DEC that Tanks 4 and 5 were tightness tested and both tanks passed the test. AZ1/20/2006 In order to address existing contamination the site has to be excavated. Proposals for excavation were submitted to DEC and approved. Excavation/remediation is pending. AZ9/27/2006 I contacted Andy Leddins (Greyhawk). URS recommended excavation. Heavily contaminated soil and groundwater were encountered at the site. Today (09/27/2006) a coordination meeting between DDC, DOT and Greyhawk took place. They reviewed environmental assessment data. Greyhawk will consolidate all the data and evaluate it with respect to the proposed soils excavation and submit. Greyhawk will coordinate excavation with DOT. AZ 7-25-2007 Reviewed semi-annual report for the period of October 2006- March 2007 submitted on May 24, 2007. Wells around the diesel area were not sampled. URS completed enhanced bioremediation in 2000 (five rounds of ORC and bacteria injection). However, these injections did not enhance the microbial growth enough to expedite the biodegradation. In January 2005 URS submitted DAR proposing excavation. DEC approved the DAR on February 8, 2005. But the soil excavation was never performed. A GWET system consisting of one extraction well began operation in 1994.The system has been inactive at least since January 1, 2006. High levels of total VOC concentrations were detected in HAR-MW-01 (3,419 ppb) and HAR-MW-02 (5,742 ppb). Depth to groundwater is approximately 4-5 feet. Roux stated that soil excavation is prohibitive due to the cost. Roux proposed enhanced bioremediation program. I called Brian Morrissey and discussed proposed remediation strategy. He will contact me tomorrow with additional information.7-26-2007 Reviewed proposed Soil Boring Work Plan dated June 22, 2007. Four groundwater samples will be collected. 12 soil borings will be advanced. Roux proposed

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

installation of injection wells. Contacted Brian Morrissey (Roux). It was decided that additional borings should be advanced prior to deciding on the remedial strategy for the site. Monitoring of the site should be conducted quarterly. AZ7-27-2007 Contacted Brian Morrissey (Roux). Bioremediation can not be approved at this point since this technique was used previously and was not very successful at the site. According to Roux: "Previous injections did not enhance the microbial growth enough to expedite the biremediation." Excavation, which was previously proposed by URS and approved by DEC, could be more efficient in removing the source of the groundwater contamination. Soil boring locations should be amended: one soil boring should be moved and advanced between GP-10 and GP-11. Injection wells can not be approved at this time. Remedial strategy will be selected after additional soil investigation is completed. Wells around the diesel area should be sampled. Brian Morrissey will submit an amended soil boring location plan to DEC. AZ 7-3-2007 Email was sent to Roux/Greyhawk/DDC/V.Brevdo:"I have reviewed semi-annual report for the above site for the period of October 2006- March 2007. Also, I have reviewed proposed Soil Boring Work Plan dated June 22, 2007. In addition, we have discussed this site recently over the phone. Based on my review and our discussion, I offer the following comments:According to the report, URS completed enhanced bioremediation in 2000 (five rounds of ORC and bacteria injection). However, these injections did not enhance the microbial growth enough to expedite the biodegradation. In January 2005, URS submitted DAR proposing excavation. DEC approved the DAR on February 8, 2005. But the soil excavation was never performed due to the budgetary reasons. A GWET system consisting of one extraction well began operation in 1994.The system has been inactive at least since January 1, 2006. High levels of total VOC concentrations were detected in HAR-MW-01 (3,419 ppb) and HAR-MW-02 (5,742 ppb). Roux stated that soil excavation is prohibitive due to the costs and proposed enhanced bioremediation program.Bioremediation can not be approved at this point since this technique was used previously and was not very successful at the site. According to Roux: "Previous injections did not enhance the microbial growth enough to expedite the bioremediation." Excavation, which was previously proposed by URS and approved by DEC, could be more efficient in removing the source of the groundwater contamination.According to the Work Plan proposals, four groundwater samples will be collected. Twelve soil borings will be advanced. Roux proposed installation of injection wells. Injection wells can not be approved at this time. Monitoring of the site should be conducted quarterly. Wells around the diesel area were not sampled. These wells should be sampled. Soil sampling program is approved with changes. Soil boring locations should be amended: one soil boring should be moved and advanced between borings GP-10 and GP-11 which have high VOC concentrations in soil. Remedial strategy will be selected after additional soil investigation is completed. Roux should submit an amended soil boring locations plan to DEC." AZ12-6-2007 Left a message for B. Morrissey. AZ12-7-2007 Spoke to B. Morrissey. Diesel area in the eastern part of the site about 400' away from the areas 1 and 2 (gasoline areas - where six gasoline tanks are located). Roux advanced soil borings on September 18, 2007. Wells around the diesel area were not sampled in the 3rd quarter. One well could not be found and one well could not be accessed. Roux wiil sample the wells in the diesel area and re-install them if needed. Report with new soil and groundwater results will be coming soon

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

recommeding the remedial strategy. AZ2-7-2008 Brian Morrissey notified me over the phone that a supplemental plan proposing excavation in addition to pilot nitrate injection (anaerobic technique)Ca(NO3)2 will be submitted within a week. Review of the previously submitted plan dated December 30, 2007 should be postponed until the proposal arrive. AZ4-3-2008 An e-mail was sent to DDC/Roux/Greyhawk/V.Brevdo:"I have reviewed Remedial Design/Remedial Action Plan submitted on February 14, 2008 for the above site. Also, at Roux's request, I reviewed a different plan for the same site submitted on December 21, 2007.The plan submitted on December 21, 2007, proposed enhanced Bioremediation using nitrite injections. Also, report proposed conducting a pilot study for enhanced Bioremediation, replacing two monitoring wells and repair of monitoring well MW-09. DEC concurs with well replacement and repair. The latter plan submitted on February 14, 2008, proposed a different remedial strategy - source soil excavation and in situ Bioremediation using nitrite at the bottom of excavation pit. In the past URS completed their enhanced Bioremediation program at this site which consisted of five rounds of injections of non-native bacteria along with oxygen release compounds. However, these injections were not effective. Subsequently, URS submitted a Design Analyses Report for Excavation. The work plan was approved by NYSDEC on February 8, 2005, but the soil excavation was never performed. Roux modified URS's excavation plan and submitted their excavation plan with in situ Bioremediation. I consider the latter strategy - excavation with the follow up Bioremediation more efficient and preferable strategy for this site." AZ5-5-2008 An e-mail was sent to DDC/ROux/Greyhawk/VB: "I have discussed the above site with Ms. Fatemeh Ashkan of NYCDDC. Based on the submitted information, two remedial strategies are being considered at this time: enhanced bioremediation using nitrite injections and excavation. DEC considered that the excavation plan would be more effective strategy . However, I was informed that the NYCDDC now prefers the bioremediation approach because the redevelopment plans for the Harper Street site have been put on hold. The timing for building demolition and site redevelopment is uncertain. Also, the area of concern would be difficult to excavate due to the need for protection of an existing structure, removal of contaminated material from the saturated zone and the need for a high-rate dewatering system. In addition, the facility is very active and the area needed for excavation and stockpiling could adversely affect their operations. Based on the above. I approve the enhanced bioremediation strategy. However, the two 550 gallon tanks that were closed in-place by Fenley & Nicol could be a continuous source of contamination. These tanks should be removed in conjunction with the bioremediation, if feasible, to expedite the remediation process. If the bioremediation approach is not effective, then excavation strategy should be implemented at the site." AZ1-27-2009 An e-mail was sent to DDC/Roux/Greyhawk/VB:"I have reviewed Quarterly Monitoring Report covering the period of October 2007 through June 2008. The report stated that relatively high levels of total VOC concentrations were detected in groundwater samples (up to 10,290 ppb). Soil samples from IP-05 exhibited up to 60, 040 ppb of total VOC. DEC requested replacement of two monitoring wells in the Diesel Area. The report recommended replacement and repair of several monitoring wells, as per DEC request, and submitted a work plan for this work. Roux requested DEC's approval of the work plan. It should be noted that we stated in writing and at meetings with Roux/DDC that

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

there is no need for DEC approval for replacement of existing monitoring wells which require such replacement. Roux/Greyhawk should replace and repair all wells that require replacement/repair. Submitting work plans and approving these work plans for well replacement will delay essential investigative/remedial work at NYCDDC sites." AZ1-31-2011 Reviewed report by LiRo submitted on September 20, 2010. There are two 550 USTs which accroding to the PBS records are removed but listed as abandoned in place in past site reports. Total dissolved VOC contaminats in gw - 2766 ppb. The site exhbited heavy soil contamination (up to 539,600 ppb from 7'-9' in RXSB-04). iN 2000 enhancced bioremediation program was completed in areas A nad B. In June 2008 and March 2009 an enhaced bioremediation pilot study using calcium nitrate was performed at the site. The injections were generally ineffective in reducing the groundwater contamination at the site.2-2-2011 An e-mail was sent to LiRo/F. Ashkan/V.Brevdo: "I have reviewed turn-over status report, quarterly monitoring report and additional investigation work plan for this site dated September 2010. There are two 550 gal USTs which, according to the PBS records, are removed but listed as abandoned in place in past site reports. The PBS records must be reconciled with the actual tank status and corrected if needed. The actual status of the tanks and actions taken should be reported to DEC in the next quarterly report.The above discussed tanks, if they were closed in place, could be a continuing source of contamination. If the tanks are closed in place, they should be excavated, if feasible.LiRo proposed to advance three additional soil borings to fully delineate the extend of the contamination. This proposal is approved." AZ11-1-2011 I contacted S. Frank and discussed this site. Soil excavation plans were proposed by URS and Roux in the past and approved by DEC in 2005 and 2008. However, the excavation was never performed. LiRo will evaluate excavation plans previously submitted by URS and Roux and submit their proposals within 6 weeks (45 days). Also, LiRo will reconcile the information related to 2x550 gal tanks with the PBS records and evaluate the excavation of these tanks, if feasible. DEC requested PBS reconciliation in the email dated 2-2-2011. AZ 11-2-2011 An email was sent to S. Frank/F. Ashkan/V. Brevdo: "Dear Steve,We have discussed this site yesterday. I would like to recap our discussion. Soil excavation plans were proposed by URS and Roux in the past and approved by DEC in 2005 and 2008. However, the excavation has never been performed. In the past Roux performed calcium nitrate injection, however, no progress in remediation was achieved. The results of the recent groundwater sampling show that VOC contamination in the area immediately north/northeast of UST areas 1 and 2 continues to rise. indicating plume migration. Excavation was recommended by two previous consultants and seems to be a preferable treatment strategy for this site. However, other active remedial proposals including installation a remedial system could be considered. LiRo should evaluate excavation plans previously submitted by URS and Roux. Other alternative remedial technologies could be also considered. LiRo should submit their proposals to DEC within 45 days. Also, in email dated February 2, 2011, DEC inquired about a discrepancy related to two 550 gal USTs which, according to the PBS records, are removed, but listed in PBS records as abandoned in place in past site reports. DEC requested that the PBS records must be reconciled with the actual tank status and corrected, if needed. DEC requested that LiRo submit the actual status of the tanks and actions taken in the next

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

quarterly report. The tank information has not been received by DEC. This information should be submitted to DEC within 15 days.The above discussed tanks, if they were closed in place, could be a continuing source of contamination. If the tanks are closed in place, they should be excavated, if feasible.Sincerely,Alexander ZhitomirskyEngineering Geologist 2NYSDEC Region 2Division of Environmental Remediation" AZ11-8-2011 An email was received from S. Frank:"Dear Alex,We addressed the discrepancy for the two 550-gallon USTs in our previous quarterly report dated February 7, 2011. LiRo interviewed the NYCDOT representative for the site who confirmed that the two 550-gallon USTs were removed rather than closed in-place. That information is consistent with the PBS records and therefore, no changes to the PBS records are required. We are evaluating remedial alternatives and will submit a proposal within 45 day of your letter as requested. Thanks,Steve FrankLiRo Engineers, Inc." AZ9-10-2012 An e-mail was sent ot S. Frank/F. Ashkan/V. Brevdo:"Dear Steve, We have discussed this site today over the phone. Also, we have discussed this site on 11-2-2011. Soil excavation plans were proposed by URS and Roux in the past and approved by DEC in 2005 and 2008. However, the excavation has never been performed. In the past Roux performed calcium nitrate injection but no progress in remediation was achieved. The site has residual gross soil contamination and groundwater contamination. Monitoring well HAR-MW-01 continues a generally increasing trend observed since September 2010. Excavation was recommended by two previous consultants and seems to be a preferable treatment strategy for this site. LiRo should evaluate excavation plans previously submitted by URS and Roux and submit their remedial proposals. A shallow test pit excavation in the area of tanks numbers 005 and 006 is approved. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alexander ZhitomirskyEngineering Geologist 2NYSDEC Region 2Division of Environmental Remediation12-27-2012 A closure request was submitted for the diesel area. No VOC or SVOC concentration above AWQSGVs were reported for all monitoring wells sampled. No exceedances in petroleum related contaminants in soil were observed. LiRo proposed closure of this spill. The following e-mail was sent to S. Frank/V. Brevdo/F. Ashkan:"Dear Steve, I have reviewed a Quarterly Monitoring Report for this site dated August 23, 2012. LiRo proposed discontinuing SVOCs analysis for the monitoring program but continuing monitoring naphthalene. This proposal is approved. As it was stated in my e-mail dated September 10, 2012, LiRo should evaluate the excavation plans previously submitted by URS and Roux and submit their remedial proposals. A previously approved excavation plan (near boring location M-35) and a test pit plan should be implemented. Also, LiRo proposed closure of the Spill#9003967 (diesel area) based on no exceedances in groundwater and soil. I concur with this proposal. Spill numbers 9003967 is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation.II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval.III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

approval for inactivation.Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely.Sincerely,Alexander Zhitomirsky

DER Facility ID: 264900
DEC Memo: 10-05-05 Site is to be excavated. Plan was approvede by DEC.AZ12/14/2005 Tanks were tested on October 08, 2004. 1080 gal tank diesel tank failed. R. Austin forwarded to me e-mail from Mary Keating (<mkeating@dot.nyc.gov)which informed DEC that Tanks 4 and 5 were tightness tested and both tanks passed the test. AZ3/23/2006 Reviewed tank test failer report. AZ9/27/2006 I contacted Andy Leddins (Greyhawk). URS recommended excavation. Heavily contaminated soil and groundwater were encountered at the site. Today (09/27/2006) a coordination meeting between DDC, DOT and Greyhawk took place. They reviewed environmental assessment data. Greyhawk will consolidate all the data and evaluate it with respect to the proposed soils excavation and submit. Greyhawk will coordinate excavation with DOT. AZ12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 DEC inquired about the remedial progress at this site. Greyhawk will study tidal influence from Flushing Bay. They plan to perform a staged axcavation and gw treatment. A standpipe in Flushing Bay and a data logger in the wells will be utilized. The influence will be correlated. AZ7-25-2007 Reviewed semi-annual report for the period of October 2006- March 2007 submitted on May 24, 2007. Wells around the Diesel area were not sampled. URS completed enhanced bioremediation in 2000 (five rounds of ORC and bacteria injection). However, these

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

injections did not enhance the microbial growth enough to expedite the biodegradation. In January 2005 URS submitted DAR proposing excavation. DEC approved the DAR on February 8, 2005. But the soil excavation was never performed. A GWET system consisting of one extraction well began operation in 1994.The system has been inactive at least since January 1, 2006. High levels of total VOC concentrations were detected in HAR-MW-01 (3,419 ppb) and HAR-MW-02 (5,742 ppb). Depth to groundwater is approximately 4-5 feet. Roux stated that soil excavation is prohibitive due to the cost. Roux proposed enhanced bioremediation program. I called Brian Morrissey and discussed proposed remediation strategy. He will contact me tomorrow with additional information.7-26-2007 Reviewed proposed Soil Boring Work Plan dated June 22, 2007. Four groundwater samples will be collected. 12 soil borings will be advanced. Roux proposed installation of injection wells. Contacted Brian Morrissey (Roux). It was decided that additional borings should be advanced prior to deciding on the remedial strategy for the site. Monitoring of the site should be conducted quarterly. AZ7-27-2007 Contacted Brian Morrissey (Roux). Bioremediation can not be approved at this point since this technique was used previously and was not very successful at the site. According to Roux: "Previous injections did not enhance the microbial growth enough to expedite the biremediation." Excavation, which was previously proposed by URS and approved by DEC, could be more efficient in removing the source of the groundwater contamination. Soil boring locations should be amended: one soil boring should be moved and advanced between GP-10 and GP-11. Injection wells can not be approved at this time. Remedial strategy will be selected after additional soil investigation is completed. Brian Morrissey will submit an amended soil boring location plan to DEC. AZ 12-7-2007 Spoke to B. Morrissey. Diesel area in the eastern part of the site about 400’ away from the areas 1 and 2 (gasoline areas - where six gasoline tanks are located). Roux advanced soil borings on September 18, 2007. Wells around the diesel area were not sampled in the 3rd quarter. One well could not be found and one well could not be accessed. Roux wiil sample the wells in the diesel area and re-install them if needed. Report with new soil and groundwater results will be coming soon recommeding the remedial strategy. AZ5-5-2008 An e-mail requesting identification of the tanks associated with this spill number was sent to DDC/Roux/Greyhawk/V.B. Also, DEC requested investigation and remediation of the surrounding area. AZ1-27-2008 An e-mail was sent to B. Morrissey, V.B, Ledins, Samani and Ashkan: "A tank test failure of two 1080 gallon tanks is associated with this spill number. This spill has not been addressed, although DEC requested investigation of this spill. The tanks associated with this spill report should be identified, spill investigated and remediated if necessary." AZ2-2-2011 LiRo, in their September 2010 report, proposed an additional site investigation to investigate possible source of this spill. This investigation was approved. However, historical and analytical information related to destroyed wells MW-09, MW-10 and MW-11 should be collected. The time line of the wells installation and the occurrence of the spill should be established. Installation of additional wells in the area of the diesel tanks could be required depending on the above information. AZ6-7-2011 According to LiRo’s report dated February 2011, this spill is in regard to two diesel tanks located in the diesel area which failed a tightness test in 2004. There was no data collected from monitoring wells MW-09 through MW-11 after this spill was reported

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

because the wells were destroyed prior to the tank tightness test failure. Before the tank test failure, the last data was collected in 1998 and showed non-detect. LiRo proposed an additional investigation of this area. Two monitoring wells will be installed on the north and south side of the diesel area. This proposal was approved in February 2011. AZ11-1-2011 Contacted S. Frank of LiRo. He stated that two additional monitoring wells will be installed within next quarter. This is a separate spill area. AZ9-10-2012 The diesel tank area is monitored. It is located next to Flushing Creek. AZ

DEC Memo:	10-05-05 Site is to be excavated. Plan was approvede by DEC.AZ1/13/2005 Waiting for excavation. AZ9/27/2006 I contacted Andy Leddins (Greyhawk). URS recommended excavation. Heavily contaminated soil and groundwater were encountered at the site. Today (09/27/2006) a coordination meeting between DDC, DOT and Greyhawk took place. They reviewed environmental assessment data. Greyhawk will consolidate all the data and evaluate it with respect to the proposed soils excavation and submit. Greyhawk will coordinate excavation with DOT. AZ 7-25-2007 Reviewed semi-annual report for the period of October 2006- March 2007 submitted on May 24, 2007. Wells around the Diesel area were not sampled. URS completed enhanced bioremediation in 2000 (five rounds of ORC and bacteria injection). However, these injections did not enhance the microbial growth enough to expedite the biodegradation. In January 2005 URS submitted DAR proposing excavation. DEC approved the DAR on February 8, 2005. But the soil excavation was never performed. A GWET system consisting of one extraction well began operation in 1994.The system has been inactive at least since January 1, 2006. High levels of total VOC concentrations were detected in HAR-MW-01 (3,419 ppb) and HAR-MW-02 (5,742 ppb). Depth to groundwater is approximately 4-5 feet. Roux stated that soil excavation is prohibitive due to the cost. Roux proposed enhanced bioremediation program. I called Brian Morrissey and discussed proposed remediation strategy. He will contact me tomorrow with additional information.7-26-2007 Reviewed proposed Soil

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

Boring Work Plan dated June 22, 2007. Four groundwater samples will be collected. 12 soil borings will be advanced. Roux proposed installation of injection wells. Contacted Brian Morrissey (Roux). It was decided that additional borings should be advanced prior to deciding on the remedial strategy for the site. Monitoring of the site should be conducted quarterly. AZ7-27-2007 Contacted Brian Morrissey (Roux). Bioremediation can not be approved at this point since this technique was used previously and was not very successful at the site. According to Roux: "Previous injections did not enhance the microbial growth enough to expedite the biremediation." Excavation, which was previously proposed by URS and approved by DEC, could be more efficient in removing the source of the groundwater contamination. Soil boring locations should be amended: one soil boring should be moved and advanced between GP-10 and GP-11. Injection wells can not be approved at this time. Remedial strategy will be selected after additional soil investigation is completed. Brian Morrissey will submit an amended soil boring location plan to DEC. AZ 12-7-2007 Spoke to B. Morrissey. Diesel area in the eastern part of the site about 400' away from the areas 1 and 2 (gasoline areas - where six gasoline tanks are located). Roux advanced soil borings on September 18, 2007. Wells around the diesel area were not sampled in the 3rd quarter. One well could not be found and one well could not be accessed. Roux wiil sample the wells in the diesel area and re-install them if needed. Report with new soil and groundwater results will be coming soon recommeding the remedial strategy. AZ2-7-2008 Brian Morrissey notified me over the phone that a supplemental plan proposing excavation in addition to pilot nitrate injection (anaerobic technique)Ca(NO3)2 will be submitted within a week. Review of the previously submitted plan dated December 30, 2007 should be postponed until the proposal arrive. AZ5-5-2008 An e-mail requesting identification of the tanks associated with this spill number was sent to DDC/Roux/Greyhawk/V.B. Also, DEC requested investigation and remediation of the surrounding area. AZ1-27-2009 An e-mail was sent to DDC/Greyhawk/Roux/V.B.: "Abandoned UST which was punctured is associated with this spill number. This spill has not been addressed, although DEC requested its investigation. The tank associated with this spill report should be identified, spill investigated and remediated if necessary." AZ1-28-2011 LiRo submitted work plan proposals to address this spill in Septemebr 2010. LiRo proposed to advance two soil borings to investigate a possible source of spill #0210852. This proposal has been approved. AZ2-4-2011 DEC responded to LiRo's request and informed LiRo that the spill is in regard to an abandoned UST being punctured during drilling and subsequently plugged. AZ11-1-2011 The following information was received from LiRo (report dated July 19-2011): In January 2003, Tectonics completed a geotechnical investigation on-site. During the completion of the geotechnical boring M-35 on the northwest side of the cement shed the drillers from Aquifer Drilling and Testing indicated that a metallic object was encountered at 6 feet below ground surface, followed a three foot void and then another metallic object being encountered at 6 ft bgs. Upon retrieving the augers from M-35 the rep from Tectonics and drillers indicated that a petroleum type oil was observed on the drilling head. The boring was subsequently plugged with bentonite/cement grout. LiRo proposed to complete a limited excavation with regard to this spill. The following email was sent to S. Frank/F/Ashkan/V.Brevdo: "Dear Steve, LiRo proposed to complete a limited excavation with regard to the

HARPER STREET REPAIR SHOP DOT -DDC (Continued) **S106011068**

above spill number in the area where the reported abandoned tank was punctured from the geotechnical investigation. This work plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work.Sincerely,Alexander Zhitomirsky" AZ9-10-2012 LiRo will perform a shallow pit excavation at the location of former tanks number 005 and 006. This excavation was approved. AZ

Remarks: ABANDONED TANK WAS PUNCTURED DURING DRILLING AT ABOVE LOCATION.PUNCTURE WAS PLUGGED UP. CALLER WILL FOLLOWUP WITH CASE MANAGER FROM PREVIOUS REPORTED SPILLS AT SITE.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MULQUEEN"MMM inspected the site on 2/21/96. Gasoline spill all cleaned up but found evidence of sloppy housekeeping and PBS information was wrong. Sent them PBS package, with various other pertinent pamphlets to inform them of proper UST operation
Remarks:	DUE TO THE COLD DRIVER WAS SITTING IN HIS TRUCK AND NOT WATCHINGTHE TANK TANK WAS OVERFILLED BY ABOUT 150 GALLONSSPILL WAS CLEANED UP BY ATLAS COMPANY

DEC Memo:	10/15/12 - LizThe Macy's September 27, 2012 letter and attached to it another letter and a TTY report indicate that the fill line caused the test failure (eDocs). The fill line was replaced; no contamination found. The tank system was retested and passed the test. The spill case is closed. 11/24/2009 TTF letter sent to:Mr. Mike Guatta, Regional Director Facilities Mgt.Macy's, Inc - Engineering Dept.151 West 34th St. - 20th Flr.New York, NY 1000102/17/10. J.Krimgold spoke to Mr. Kirit Vorta (Bureau Veritas) a consultant for Macy's. He prepared a work plan to investigate the fill line under the sidewalk (cause of the test failure). The plan should be submitted to DEC next week.
Remarks:	CALLER STATES FAILED TANK TEST. CALLER STATES UNKNOWN AMOUNT OF SPILL. CALLER DOES NOT HAVE PBS NUMBER ON HAND.

DEC Memo:	7/3/07 Called Macy's (718)358-9000. Operator listed in registration records is no longer there. Emergency contact is no longer there. Site is registered to Stern's, not Macy's. New operator is Mike Higgins. Ph:(718)358-9000 ext. 4475. Left message to call me about the tank test failure and I want to set up an inspection. The registration expired 10/23/02. bf7/5/07 Recevied message from Mr. Higgins to call him back. Received message from Mark Bellamy of Crompco. ph. 1-800-646-3161.7/9/07 Called Mr. Higgins back and left message. Called Mr. Bellamy back left message. Mr. Bellamy said that his technician found a faulty manhole gasket which they believe is the cause of the failure. No product observed outside of the tank.

MACY'S (Continued) **U001838754**

Tank will be repaired and Crompco will retest tank. bf7/10/07 bf: Received call from Mike Higgins. Tank to be repaired and retested within next few weeks. Tank is only used for heat. Hot water is heated via gas. I told him the registration expired in 2002. I faxed application and ttf letter to him. Fax: (718)359-3572. Sent ttf letter to:Mike GuattaMacy's151 West 34th St., 20th Fl., EngineeringNew York, NY 10001-21018/14/07 On 8/13/07, DEC received a response to the 7/10/07 tank test failure letter. The cause of the tank failure was the manhole gasket, which was cracked. The gasket was replaced and the tank was retested and passed. Tank test results were also provided. NFA. bf

Remarks: PBS No: 2-325651FAILED DUE TO TANK TOP FIXTURE LEAK; AS OF NOW NO RELEASE; REPAIR AND RETEST RECOMMENDED;

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"2-2 TANK SIPHONS 4-550GAL TANKS TESTED AS A SYSTEM. TANK EMPTY WHEN PERFORMED.3/2/05- The spill case is transferred to I. Islam. The site is under remediation by O'Brien-Kreitzberg (OBK) and URS Corp. is the consultant to OBK. -II.4/26/05- Reviewed the quarterly monitoring report (Oct.-Dec./04). There is only one groundwater monitoring well remaining, as sampling results from all other monitoring wells were already in compliance for at least two consecutive events. Sampling results from this lone monitoring well in Nov./04 after installation of ORC socks in the well in Oct/04 exhibited no exceedances of VOCs. One more round of sampling to go prior to consideration of NFA for the site.- II.7/25/05- Reviewed the

109 PRECINCT NYPD -DDC (Continued) **S107410221**

spill closure report dated june 2/05 along with latest round of sampling results. Based on the results and in discussion with Koon, the spill closure request is approved and the spill is thus closed. - II

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"9/19/2002JIM FROM PROTEST CALLED TO SAY THE 5,000 GAL TANK - FAILED A "TANK ONLY TEST". TANK STILL WAS 1/2 FULL OF PRODUCT. BANK WAS CONTACTING THEIR OIL COMPANY TO PUMP OUT THE TANK.SANGESLAND DIRECTED PROTEST TO CONDUCT A DELINEATION OF THE SITE AND TO THEN EITHER EXCAVATE OUT THE TANK & CONTAMINATION, OR PREPARE A PLAN TO REMEDIATE THE AREA WITH THE TANK IN PLACE. 10/22/2002-VOUGHT-SPOKE WITH TOM LEDDY (PROTEST) AND TANK WAS PUMPED CLEAN. INSTRUCTED LEDDY TO SAMPLE AT LEAST 15 BELOW TANK BOTTOM FOR DELINEATION. 12/10/2002 Sangesland spoke with "Scott" at Protest. He called asking for guidance on what to do. Soil sampling was done at the site and lab analysis shows some hits. He asked if he could fax over the soil results and have DEC review it. Sangesland requested Protest to

QUEENS CO SAVINGS BANK (Continued) **S105996686**

prepare a report showing a site plan, sample locations, lab results and a comparison of results to TAGM.1/2/2003 Sangesland reviewed a report submitted by Scott Swezey at Protest (631-321-4670). Report shows lab results of 2 soil samples taken near the elbow of the subject oil storage tank. Report states that the subject 5,000 gal tank was relined in Nov 2002 and that 8 geoprobe borings were taken around the tank which came back clean (this data was not included in report).Sangesland called Mr. Swezey and asked him to resubmit a closure report which lists:* Eight geoprobe samples compared to TAGM standards.* Two samples from the elbow area compared to TAGM standards.* Either additional work with new end point samples OR Strong justification why additional contamination can not be removed from the "elbow" site (or treated in place). 1/8/2002 Sangesland reviewed a submittal from Mr. Swezey. This submittal shows the Two samples from the elbow area exceed TAGM levels for a few SVOC's. There were 8 soil samples taken from around the buried tank. Fours sides of the tank with samples taken at 12 and 22 foot depths. Results of these 8 samples indicate all samples were below TAGM limits for both VOC and SVOC's.1/27/2003 Sangesland spoke with Scott at Protest. DEC has requested a letter that either lists how the SVOC's will be treated, OR a good arguement on why these levels can not be treated and should therefore be left in place.7/8/2003 Sangesland reviewed a report from Don Carlo Environmental. The report shows results of digout & sampling from the "Elbow" area of the fuel fill/return lines. These results were within TAGM limits. Spill Closed

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"12/14/04 TJDReassigned Tipple >>> DeMeo1/9/06 - Raphael Ketani. I have no information or file on this case. The phone number in the Queens "white pages' is (718) 396-0766. I called the number and the secretary answered saying that the owner is Killian. She said he would be back on thursday.On Property Shark: owner Killian Zavala, Trading Used Auto Parts, 127-02 35 Ave., Flushing, NY, 11363 home Killian Zavala, 200 Adams St., Bedford Hills, NY, 10507-1910 president Elaine J. Gelardi, Magrut Corp., 171-04 Pidgeon Meadow Road, Flushing, NY, 11365I will send a contaminated soil letter. The PBS case is #2-605829 with 1 275 gal. waste oil tank in service.3/17/06 - Raphael Ketani. I received a call from Andrew Gershon, Assistant Attorney General in the NYS Dept. of Law regarding the site. He said he is sending out a "Notice of Violation" as they didn't fulfill their agreements for doing work and submitting documentation.3/23/06 - Raphael Ketani. I had an impromptu meeting with Killian Zavala (cell (914) 715-9006), owner of the site and business. He said that he had just found my unopened January 9, 2006 letter on his desk and wanted to talk to me about the site. He said that the environmental firm IVI did a phase II 2 to 3 years ago on his site and took soil samples. He said that he has duplicate documents of the analytical results and other documentation at home. He said he will hand deliver them to me today. I told him I will review the documents and make a site visit and determine what the next step is. However, I told him, Mr. Andrew Gershon, Esquire, of the NYS Dept. of Law is instituting action against Trading Used Auto Parts as Mr. Zavala has not cleaned up the site. I told Mr. Zavala that he should talk to Mr. Gershon. He said he will.Today I received the below e-mail from Andrew Gershon, Assistant Attorney General NYS DOL:(212) 416-8474March 4, 2004NOTICE OF VIOLATION OF INTERIM COURT ORDERCertified Mail, Return Receipt RequestedKilian ZavalaTrading Used Auto Parts Corp.127-02 35th AvenueCorona, New York 11368Re:Spitzer, et al. v. Trading Used Auto Parts Corp, Robert Tume, and George Hernandez, and Kilian Zavala, Index No. 11181/2001 (Sup.Ct, Queens County)Dear Mr. Zavala:On March 4, 2004, we sent you the attached letter demanding submission of the report on the subsurface investigation done by IVI, the consultant for defendants Trading Used Auto Parts Corp, Robert Tume, and George Hernandez, and Kilian Zavala (collectively "Trading") as required under the Interim Order in this action. More than two years have passed without submission of the report. The State is therefore issuing this Notice Of Violation for failure to submit the report, as required under Paragraphs 16-18 of the Interim Order.Under Paragraph 20 of the Interim Order:Trading shall, upon plaintiffs' service of a notice of violation of this Stipulation and Order, immediately stop (i) any further dismantling at the Facility by anyone and (ii) by Trading at any other location. Following the service of such a notice, the dismantling described in clauses (i) and (ii) above shall remain prohibited unless and until the alleged violations set forth in the notice are remedied and any attendant penalty paid or, if the notice of violation is challenged by Trading, are resolved in the Trading's favor under the procedures specified in paragraph 24 below.Trading must therefore cease dismantling activities until the required report is submitted.As to a financial penalty, Trading is liable for stipulated penalties in accordance with the following schedule for failing to submit the report in accordance with the following

TRADING USED AUTO PARTS (Continued) **S108146167**

schedule:PERIOD OF LATE SUBMITTALPENALTY PER-DAY1st day through 7th day$1008th day through 14th day$150Each day beyond the 14th day$300Trading is therefore subject to stipulated penalties of over $100,000 under the Interim Order for its failure to submit the report. However, the State will give Trading one more opportunity to avoid a financial penalty. If Trading submits the report by Friday, April 14, 2006, the State will refrain from assessing penalties. If Trading fails to submit the report by that date, or is found to be engaged in dismantling before submitting the report, the State will pursue penalties. Copies of the report should be submitted to:Rafael Ketani, P.E..Division of Environmental RemediationNew York State Department of Environmental ConservationRegion 247-40 21st StreetLong Island City, NY 11101718-482-4634(fax) 718-482-4098<rvketani@gw.dec.state.ny.us>and:Andrew J. GershonAssistant Attorney GeneralNew York State Department of LawEnvironmental Protection Bureau120 Broadway, 26th FloorNew York, NY 10271(212) 416-8474fax (212) 416-6007<Andrew.Gershon@oag.state.ny.us>Please feel free to call me with any questions at 212-416-8474. Very truly yours,ANDREW J. GERSHONAssistant Attorney Generalcc: Rafael Ketani, P.E.Later this afternoon, Mr. Zavala dropped off the phase II investigation plans and the best management plan from IVI.3/24/06 - Raphael Ketani. I reviewed the PROPOSAL Phase II Environmental Site Assessment plan revised March 11, 2002, the Phase II Environmental Site Assessment Workplan dated April 22, 2002, and the Storm Water Pollution Prevention Plan and Best Management Practices final revision March 21, 2003. The Phase II ESAW depicts only 3 borings for investigating the subsurface soils. This may not be enough for even such a small site (1/4 acre). I will have to arrange a site visit.3/27/06 - Raphael Ketani. On 3/24, I received the Phase II Environmental Site Assessment from Mr. Zavala dated November 10, 2003. I reviewed the report today and saw that the only soil analyte consistantly exceeding TAGM was benzo(a)pyrene - a maximum of 1.8 ppm. Two other SVOCs had one exceedence each. Regarding grounwater, only MW-3 had many exceedences. These were all VOCs and were all just slightly above TAGM, with the exception of MTBE. MTBE ranged from 22 ppb to 100 ppb. There were 8 borings (3 turned into wells) on the site. 3/28/06 - Raphael Ketani. I set up a site visit at 12 noon for 3/29/06 with Mr. Zavala.3/29/06 - Raphael Ketani. I received the following e-mail today from Andrew Gershon, Assistant Attorney General, NYSDOL:I have an open case, but go ahead and close it. Send me a copy of theletter. I'll then wrap up my case. Andrew J. GershonAssistant Attorney GeneralNew York State Department of LawEnvironmental Protection Bureau120 Broadway, 26th FloorNew York, NY 10271(212) 416-8474fax (212) 416-6007<Andrew.Gershon@oag.state.ny.us>>>> "Raphael Ketani" <rvketani@gw.dec.state.ny.us> 03/29/06 4:20 PM>>>CONFIDENTIALI made a site visit at 12 noon today to Trading and met Mr. Zavala. Wewent over the site together. I found them to be doing a reasonably goodjob of keeping things clean, though I had to point out a small oil spill(maybe 6 oz.)from sloppy filling of the used oil tank. Otherwise,things looked good and like they were following the Best ManagementPlan. They could be a little better organized, but I thought they werealright. I have the site investigation plan and the site assessmentreport. The report looked good as it showed only slight contamination -at or just above TAGM 4046. I'd like to close the case. Do you have anopen case against Trading? If so, would my

TRADING USED AUTO PARTS (Continued) **S108146167**

closing the spill case affectyour case? Let me know or I wont close this case.4/3/06 - Raphael Ketani. I have reviewed the Phase II Environmental Site Assessment Workplan, the Storm Water Pollution Prevention Plan and Best Management Practices, and the Phase II Environmental Site Assessment. I also made a site visit on 3/29/06. All of these were found to be acceptable to the Department. Therefore, I am closing the spill case.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"PBS 2-328138. Diesel AST4/14/06 - Called Jerry Antonacci (718) 335-6845. He said they had it cleaned up the spill. 4/28/06 - Received copy of invoice from owner indicating that Jamaica Recycling had cleaned up the oil spill from facility in June 2002, but no record of how much soil had been removed or residual conditions. Spill Closure Initiative ending. Recommend send letter requesting more information. (EGH)1/30/2009 Ted Yen called Sangesland to ask what it would take to close this site out. Sangesland asked for a summary of repair work done to the tank along with photographs of the tank/spill area and a statement that the cleanup was completed. Mr. Yen will forward a report to DEC "soon".3/2/2009 Ten Yen submitted photographs to show the suface spill was cleaned. Tank was an AST. All Cleaned - case is closed.
Remarks:	callers company went to make a delivery and noticed the spill on the ground - tank has failed

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"5/20/04 TJDInvestigative work plan submitted by Malcolm Pirnie reviewed and conditionally approved. Letter in file.6/2/04 TJDJohn from Malcolm Pirnie called this morning requesting an extension to complete the invasive investigation. An extension to June 30, 2004 has been granted. 12/2/05 - Raphael Ketani. I tried to find out who is the project manager for the site at Malcolm Pirnie. I contacted the Queens engineering office of MP ((718) 446-0116) and spoke to Don Cohen. He said that he would try to find out what happened and who may be in charge. Next, I spoke to Mr. Muhammad Latif at the site ((718) 205-0272). Mr. Latif is the site manager and told me that Baig Sedeeq sold the company some time ago. Mr. Latif told me he thought that everything was alright and that the drilling had not found any oil under the pavement. He said that he had a letter from the company's lawyer, Mr. Steven Goldenberg, that nothing further needed to be done. He added that Malcolm Pirnie told him nothing further needed to be done. I told him the spill case was still open and that our lawyer, Mr.Gershon from the NYSAG, told me that followup work needed to be done after the soil investigation. Mr. Latif sounded surprised. He said he would get me Mr. Goldenberg's phone number and FAX me his letter. The associated PBS case is #2-606187 for a 275 gal. tank for waste oil.Mr. Latif called me back. He said that Mr. Goldenberg's phone number is (917) 656-9358. I tried calling Mr. Goldenberg, but could only leave a voice mail messaage.12/6/05 - Raphael Ketani. I tried calling Mr. Goldenberg's number again, but could only leave a voice mail message.12/8/05 - Raphael Ketani. Don Cohen of the Queens Malcolm Pirnie office called me and suggested that I try and call Ken Goldstein ((914) 641-2615) of Malcolm-Pirnie upstate regarding the site. He said that Mr. Goldstein was the boss of the person who was the case manager for A&S. I tried calling Mr. Goldstein, but could only leave a message.I finally got ahold of Mr. Goldenberg and he said that he thought soil sampling was still left to be done. I told him I had no information that the site investigation had been completed. He suggested I call Malcolm Pirnie to find out what's left to be done at the site. 1/9/06 - Raphael Ketani. I called Mr. Goldstein and asked him what was happening with the site. He said that Malcolm Pirnie was not involved. I called Mr. Goldenberg and told him that Malcom Pirnie is not involved with A&S. He said "what do you mean they are not involved?" I told him that's

A & S USED AUTO PARTS & BODY WORKS INC (Continued) **S108145605**

what Mr. Goldstein told me. Mr. Goldenberg said, "they did an investigation plan and a BMP." I said "yes, I know, but they told me they haven't been involved for a year and a half." Then he said, "let me call my client and Mr. Goldstein."1/23/06 - Raphael Ketani. I called Mr. Goldenberg to find out what was happening with doing the phase 2 on the site. He said that he had made contact with his client and told them to pay Malcolm Pirnie or do whatever was necessary to continue with the investigation. He said that he was waiting for word back. Mr. Golenberg said that he would call me.2/2/06 - Raphael Ketani. I left a message for Mr. Goldenberg.2/28/06 - Raphael Ketani. I tried to contact Mr. Goldenberg, but could only leave a voice-mail. 4/5/06 - Raphael Ketani. I received an e-mail from Andrew Gershon today regarding the site. He said that he will get back to me.4/20/06 - Raphael Ketani. I sent an e-mail to Mr. Gershon requesting an update regarding the site.4/24/06 - Raphael Ketani. Mr. Gershon left me an e-mail. He said that the lawyer for A&S is looking into what his client still owes DEC. 6/13/06 - Raphael Ketani. I received the June 2006 Report of Findings on 6/8/06. I reviewed the report today. There weren't many hits for VOCs or SVOCs for soil or groundwater. Also, I didn't find any large VOC or SVOC exceedences of TAGM 4046 standards for soil or groundwater.6/15/06 - Raphael Ketani. I drafted a case closure letter and sent it to Andrew Gershon of the New York State Dept. of Law in Manhattan. He approved it and so I sent it out.Based upon the June 2006 Report of Findings and the implementation of the April 2002 Storm Water Pollution Prevention Plan and Best Management Plan, I am closing the spill case.

Remarks: unk quantity of product found on the ground at location - no infoon clean up at this time

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"2/4/04 Reassigned Tipple >>> DeMeo12/2/05 - Raphael Ketani. There is no information in the file cabinet regarding this site. G.T.R. Auto Parts is listed at the same address. The spill case for

ASOCIADO AUTO PARTS INC (Continued) **S104789995**

G.T.R. is 2-609263. It's a 250 gal. waste oil tank. Perhaps G.T.R. is the old owner. The "SPDES Storm Water Pollution Prevention Plan and Best Management Practices" dated November 2001 is in the office. Also, the "Summary Report on Subsurface Investigation Program" dated October 20, 2004 is available.I reviewed the "Summary Report". They need to remove the soil at S-2. There is contamination with MTBE above TAGM 4046 for groundwater - 17 ppb to 40 ppb. However, the entire area has groundwater contamination from decades of spillage. I will send a letter to Berninger ordering them to remove the soil at S-2 and do 4 more soil borings: the small automotive container area, the low lying area, midway between S-2 and S-4, and in the old drum area. The NYS DOL's office is involved with this site.1/6/06 - Raphael Ketani. Meeting held between Walter Berninger and Jill Haimson of Berninger Environmental and myself. They agreed to do 4 more borings and to remove soil at S-2.2/13/06 - Raphael Ketani. I received no response so far to my December 5, 2005 letter. Originally, the letter was addressed to Berninger Environmental, but Walter Berninger, President, told me to send the letter to the present owners. The current tenant is a Mr. Tumi.Through Property Shark, I found that the bills are going to Joseph Romano at 24 Noahs Path, Rocky Point, NY, 11778-9144 and the assessment is going to Myrtis Romano at a P.O. Box in Rocky Point. The deed is listed with George Romano. I will send a February 2/13 dated letter to Joseph and George with the same wording as the Dec. 5, 2005 letter.3/2/06 - Raphael Ketani. I received the following e-mail today from Walter Berninger of BEI:Associado I forwarded your letter to the current tenant and the property owner and have heard nothing.3/6/06 - Raphael Ketani. I received a call from George Romano, the owner ((516) 551-4791). He said that he had a previous agreement with the former case manager from Spills, Tim Demeo, for remediating the site. He said that Mr. Demeo just had him do several borings. I told him that B-2 had significant contamination and needed to be dug out, and that I had no idea how large a site this was and so I wanted more boring coverage. Mr. Romano said that the site is about 100' x 50'. He asked whether we could come up with a different plan. I told him that the size of the site is small and I can't get ahold of Mr. Demeo. So additional borings may not be necessary. However, I said, I still wanted the soil dug up at B-2 and I wanted to visit the site before agreeing on a solution to this spill case. He said fine and offered a site visit with him on 3/8 at 10AM. I told him I will be there.Below is listed the following e-mail exchange I had with Andrew Gershon, Assistant Attorney General, Environmental Protection Bureau, NYS DOL:Walter Berninger sent me the Summary Report on Subsurface Investigation Program dated 10/20/04. The report was addressed to Tim Demeo. In it are analytical results for VOCs and SVOCs for soil and groundwater. I was not impressed by any of the results, except the VOC results for soil for site S-2. I told George Roman that I was willing to go with just digging up site S-2 down to 4 feet where the worst contamination was found. However, if I see other sites that look really dirt, then I may tell him to dig these up also. We'll see what happens wednesday. I would discuss all of this with Tim, but he is out on leave until the end of March. Do you want a copy of the 10/20/04 report? I'll make a copy and send it via regular mail as a FAX may not come out clear.Rafiel "Andrew Gershon" <Andrew.Gershon@oag.state.ny.us> 03/06/06 1:47 PM >>>I am handling the DEC's civil lawsuit against Asociado. As of December2004, Berninger environmental had done the approved

ASOCIADO AUTO PARTS INC (Continued) **S104789995**

subsurfaceinvestigation. Asociado had not received the results or provided themto DEC because Berninger hadn't been paid. I don't know if that haschanged; Tim wasn't great at keeping me up to date. I would ask to seethe results, and you can check with Berninger if they were ever providedif the file is unclear. I have no problem with you seeking furthertesting, but would want to hear your take on the already obtainedresults before the site is closed out. If you are satisfied that thesubsurface needs no further remediation I would resolve the case. 3/8/06 - Raphael Ketani. I made a site visit today and met George Romano. The site is paved over with cement over the entire lot. The cement is free from any cracks. The waste oil tank is now sitting just inside the covered garage in the back. It sits in a large drip pan. There are 3 drums next to it that they put liquids into from the junked cars. The drums looked dry on the outside and I didn't see any wetness at their bases. Site S-2 is situated just under the south end of the suspended office trailer. While the contamination is high, the cement slab is intact with no cracks at all. If the slab were to be opened up, then cement poured to seal the slab would still leave cracks at the edges of the patch for fluids to enter the soil below. For such a small area with only 3 analytes of concern, and because I didn't believe it was worth going after this contaminated soil only to create a bigger problem by breaking the intact concrete slab which would result in having cracks along the edge of any concrete patch, I am closing the spill case. I will send an NFA letter as Mr. Romano had requested.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"07-01-05: Leak from a hose on a hydraulic bus lift. Product spilled to a concrete pit under the lift. Originally, the pit had a drain that went to the sewer, but thhe drain had been closed soon after construction to prevent a spill from going into the sewer. It was determined that 30 gallons was lost based on the capacity of the resevoir and how much product was left in the resevoir. Spill cleaned by Depot personnel.
Remarks:	engine lift caused leak and went into a pit made of concrete

HW Code: 241001
Record Add: 11/18/1999
Record Upd: 12/26/2012
Updated By: JAMORAS
Site Description: This site is located south of 31st Avenue between southern extensions of 123rd and 124th Streets adjacent to Flushing Bay. Surrounding properties are commercial and industrial. At the time, the site was mostly unpaved and vacant, with open areas which had been apparently excavated for the receipt of liquid wastes. The lagoon depth varied to a maximum of 6 feet and had approximately 15 inches of PCB contaminated oil floating on the surface. The City of New York conducted a removal action during the end of 1980, under direction of the USEPA, removing the oil, water, and sludge from within the lagoons, and a limited amount of soil from beneath the sludge at the base of the lagoons. The sludge layer was tested at the time with the highest concentration being 1 ppm PCBs. Two buildings and a parking area have been constructed over the site. Confirmatory soil samples were collected by NYSDEC in 1989. The analytical sampling data revealed that no hazardous wastes remain at the site.
Env Problem: The lagoons contained PCB contaminated oil, and oil and PCB contaminated water and sludge. A removal action was completed in 1980. Samples collected in 1989 confirmed that no hazardous wastes remain at the site. Therefore, the site is no longer a significant threat.
Health Problem: The potential for human exposures at the site is limited to direct contact with PCBs and petroleum hydrocarbons that may have remained after the lagoon was cleaned. However, due to the construction of buildings and a parking area over the former lagoon area, the current potential for exposure is minimal. Groundwater in the area is not used as a source of drinking water, therefore, exposure to contaminated groundwater is not expected.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Next Scheduled EDR Contact: 06/24/2013
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Next Scheduled EDR Contact: 06/10/2013
Data Release Frequency: Biennially

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/18/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

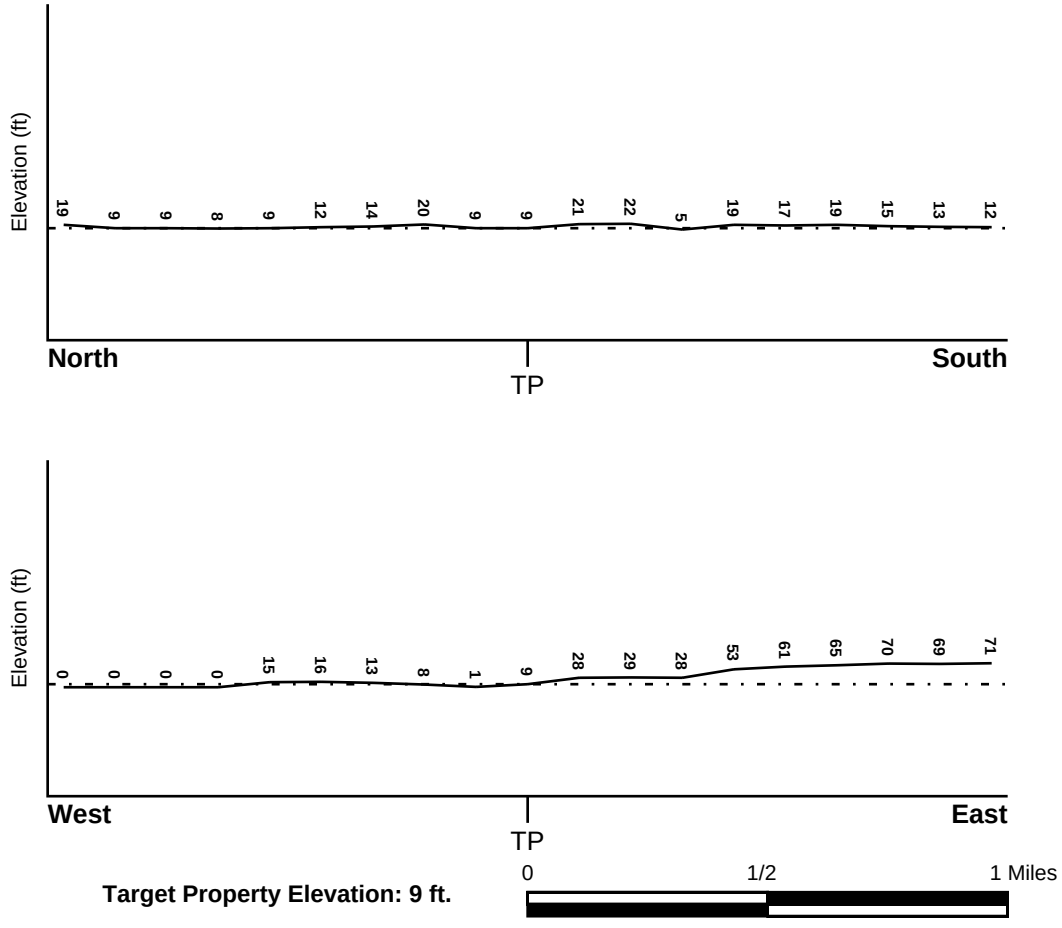
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
QUEENS, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FLUSHING	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles North
Site Name:	Park Nameplate Co. Inc.
Site EPA ID Number:	NYD001613868
Surficial Aquifer Flow Dir.:	GENERALLY NNW TOWARD THE NORTH SHORE.
Inferred Depth to Water:	15 feet.
Hydraulic Connection:	The surficial and lower aquifer are separated by a clay layer. Saltwater intrusion of the upper aquifer may be present.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT – THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY

THIS INDENTURE, made on 8th day of January 2008

BETWEEN WILLETS ASPHALT CORP with principal offices at 127-50 NOrthern Blvd. Flushing, New York 11368

party of the first part, and

TDC DEVELOPMENT & CONSTRUCTION CORP., with principal offices at 136-20 38th Avenue, Flushing, New York 11354

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the

SCHEDULE "A" ATTACHED

Being the same premises described in deed dated 8/30/91 recorded 9/24/91 in R. 3207 P. 1809 as modified by Agr. in L. 7079 P. 497

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.
AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.
The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

Willets Point Asphalt Corp

HSBC LAND TITLE AGENCY (USA) LLC

Title No. HS1354Q PERIMETER DESCRIPTION

SCHEDULE A

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough and County of Queens, City and State of New York, and bounded and described as follows:

BEGINNING at a point on the westerly side of College Point Boulevard (formerly known as Lawrence Street) (100 feet wide) as now laid out on the final topographical map of the City of New York, distant 135.13 feet southerly from the corner formed by the intersection of the westerly side of College Point Boulevard (formerly known as Lawrence Street) with the southerly side of Northern Boulevard (180 feet wide);

RUNNING THENCE south 9 degrees 13 minutes 05 seconds east along the westerly side of Lawrence Street 176.01 feet to lands now or formerly of Long Island Railroad-.Whitestone Division (abandoned) being 311.14 feet south of the corner formed by the westerly side of College Point Boulevard and the southerly side of Northern Boulevard;

THENCE along said last mentioned land the following two (2) courses and distances:
(1) south 65 degrees 43 minutes 55 seconds west a distance of 93.98 feet;
(2) south 87 degrees 45 minutes 45 seconds west a distance of 44.57 feet;

THENCE south 9 degrees 13 minutes 05 seconds east 104.87 feet to a point;

THENCE north 68 degrees 12 minutes 41 seconds west a distance of 67.30 feet to a point;

THENCE north 83 degrees 18 minutes 26 seconds west a distance of 6.92 feet to a point;

THENCE north 85 degrees 00 minutes 55 seconds west a distance of 27.49 feet to a point;

THENCE along the arc of a curve to the right having a radius of 785.216 feet for a distance of 47.11 feet;

THENCE north 2 degrees 26 minutes 08 seconds west a distance of 25.69 feet to a point on the U.S. Pierhead & Bulkhead Line established by the Secretary of War 3/06/1911;

THENCE north 86 degrees 32 minutes 45 seconds east a distance of 9.66 feet to a point on the old line of Timber Dock;

THENCE along said old line of Timber Dock the following four (4) courses and distances:

(1) north 3 degrees 30 minutes 10 seconds west a distance of 42.50 feet to a point;
(2) north 5 degrees 25 minutes 05 seconds west a distance of 73.92 feet to a point;
(3) north 6 degrees 36 minutes 25 seconds west a distance of 36.29 feet to a point;
(4) north 2 degrees 54 minutes 30 seconds west a distance of 50.01 feet to a point;

THENCE north 85 degrees 45 minutes 45 seconds east a distance of 190.83 feet to the westerly side of College Point Boulevard (formerly known as Lawrence Street)
the point or place of BEGINNING.

The policy to be issued under this report will insure the title to such buildings and FOR improvements erected on the premises which by law constitute real property.
FOR CONVEYANCING ONLY TOGETHER with all the right, title and interest of the party of the first part, of, in and to the land lying in the street in front of and adjoining said premises.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) Property receiving service is located in the Borough of **QUEENS**
Block: **4963** Lot: **249**

(2) Account Number (if applicable):
Meter Number (if available–include the letter):

(3) Street Address of Property Receiving Service:
Street **35-501 COLLEGE POINT BLVD** City **NY** State **NY** Zip **11355**

(4) Full name, mailing address, home phone and business phone numbers of owner of property receiving service: (please provide information on owner ONLY; do NOT give information on property manager or tenant):
Owner's Name Business: **TDC DEVELOPMENT & CONSTRUCTION CORP.**
or Individual:
(Last Name) (First Name) (MI)
Street **136-20 38TH AVENUE** City **FLUSHING** State **NY** Zip **11354**
Home Phone(Numbers only): Business Phone(Numbers only):

Customer Billing Information:

PLEASE NOTE:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.

B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.

C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.

(5) If you would like a duplicate copy of bills sent to another party, please check here ☐ and fill out the following information:
Name of Party to Receive Duplicate Copies of Bills:

(6) Mailing Address: Street City State Zip

(7) Relationship to Owner (check one): Managing Agent ☐ Mortgagee ☐
Tenant ☐ Other (please explain):

Owner's Approval

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Sent: Thursday, May 16, 2013 10:35 AM
To: Joseph P. Gavin
Subject: FOIAs to EPA

Good day,

EPA and a number of partners agencies are now using a shared service *FOIAonline* to receive FOIA requests electronically. This new system allows the public to search previous requests and access responsive documents that have been cleared for release. There are many new features available from this system and if you determine you need to submit a request to a participating agency, please consider creating an account to take advantage of the many features offered by FOIAonline, including modifying your request, communicating with the agency processing your request, and accessing responsive documents cleared for distribution all online, as well as presenting you a dashboard indicating the status of your requests and the ability to file an appeal online. We hope you find *FOIAonline* to be a useful tool in accessing your government and the information of interest to you. Click ***FOIAonline*** to access the site.

THE LINK TO THE FOIAonline system is <https://FOIAonline.regulations.gov>

Re: Freedom of Information Request
35-32 College Point Boulevard
Queens, NY 11354

Dear Ms. Calderon:

Pursuant to the Freedom of Information Act, 5 U.S.C. 552, Roux Associates, Inc. (Roux Associates) hereby respectfully requests copies of any and all records pertaining to the real property located at 35-32 College Point Boulevard, Queens, NY 11354 (a.k.a 35-32 Lawrence Street) (New York City Tax Block 4963, Lot 212). More specifically, I am interested in obtaining records from specific programs and records of action including the hazardous waste program, oil spill and hazardous substance release program, compliance inspections, violation issuances, and enforcement actions.

If all the requested records cannot be emailed to me, please inform me of the portions that can be emailed and advise me of the cost for reproducing the remainder of the records, which are tentatively not to exceed $25. If this request is too broad or does not adequately describe the records, please contact me so that I may clarify my request and, when appropriate, inform me of the manner in which records are filed, retrieved, or generated.

If for any reason any portion of this request is denied, please inform me of the reasons for the denial in writing within 20 days and provide the contact information of the person or body to whom an appeal should be directed.

Thank you for your prompt attention to this matter. If you have any questions, you may reach me at 631-232-2600 or at jgavin@rouxinc.com.

Sincerely,

ROUX ASSOCIATES, INC.

Waterbody: GROUNDWATER

Record Close

Date Spill Closed: 08/03/2009

"Date Spill Closed" means the date the spill case was closed by the case manager in the Department of Environmental Conservation (the Department). The spill case was closed because either; a) the records and data submitted indicate that the necessary cleanup and removal actions have been completed and no further remedial activities are necessary, or b) the case was closed for administrative reasons (e.g., multiple reports of a single spill consolidated into a single spill number). The Department however reserves the right to require additional remedial work in relation to the spill, if in the future it determines that further action is necessary.

If you have questions about this reported incident, please contact the Regional Office where the incident occurred.

Re: Freedom of Information Request
35-32 College Point Boulevard
Queens, New York 11354
Tax Block 4963 – Lot 212

Dear Mr. McIntyre:

Pursuant to the Freedom of Information Act, 5 U.S.C. 552, Roux Associates, Inc. (Roux Associates) hereby respectfully requests copies of all records pertaining to the above-captioned parcel of real property located in the Borough of Queens, City and State of New York (Property). The Property is identified in the New York City Tax maps as Tax Block 4963, Lot No. 212. More specifically, I am interested in obtaining copies of Phase I ESAs, Phase II ESAs or other such environmental reports typically handled by your Office under the E-Designation and New York City Brownfield Program.

If all the requested records cannot be emailed to me, please inform me of the portions that can be emailed and advise me of the cost for reproducing the remainder of the records, which are tentatively not to exceed $50. If this request is too broad or does not adequately describe the records, please contact me so that I may clarify my request and, when appropriate, inform me of the manner in which records are filed, retrieved, or generated.

If for any reason any portion of this request is denied, please inform me of the reasons for the denial in writing within 20 days and provide the contact information of the person or body to whom an appeal should be directed.

Thank you for your prompt attention to this matter. If you have any questions, you may reach me at 631-232-2600 or at jgavin@rouxinc.com.

Sincerely,

WITNESSETH, that the party of the first part, in consideration of

ONE HUDNRED ($100.00) and NO/100---------- dollars,

lawful money of the United States, and other valuable considerations paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Queens, City and STate of New YOrk, designated on the Tax Map of the City of New York, for the Borough of Queens, as said Tax Map was on December 12, 1955 as Section 25, Block 4963 Lot 249.

LOT #249

LOT #212

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being at Flushing, in the Borough and County of Queens, City and STate of New York, and bounded and described as follows:

BEGINNING at a point on the westerly side of Lawrence Street (100 Feet wide) as now laid out on the final topographical map of the City of New York distant 135.13 feet southerly from the corner formed by the intersection of the westerly side of Lawrence Street with the southerly side of Northern Boulevard (180 feet wide); running thence south 9 degrees 13 minutes 05 seconds east along the westerly side of Lawrence Street 175.17 feet to lands now or formerly of Long Island Railroad-Whitestone Division (abandoned); thence along said last mentioned land the following 4 courses and distances: (1) southwesterly along an arc of a circle bearing to the right having a radius of 589.57 feet a distance of 93.86 feet, said curve being subtended by a chord 93.76 feet in length and bearing south 63 degrees 56 minutes 44 seconds west; (2) north 85 degrees 44 minutes 15 seconds west 28.63 feet; (3) south 89 degrees 45 minutes 45 seconds west 22.17 feet; and (4) south 86 degrees 32 minutes 45 seconds west 67.24 feet to the old line of Timber Dock; thence along said old line of Timber Dock the following 4 courses and distances: (1) North 3 degrees 30 minutes 10 seconds west 42.50 feet; (2) north 5 degrees 25 minutes 05 seconds west 73.92 feet; (3) north 6 degrees 36 minutes 25 seconds west 36.29 feet; and (4) north 2 degrees 54 minutes 30 seconds west 50.01 feet; thence north 85 degrees 45 minutes 45 seconds east 190.83 feet to the westerly side of Lawrence Street at the point or place of BEGINNING.

TOGETHER with all the right, title and interest of the party of the first part of, in and to the land under water in Flushing Creek in front of said premises to the centre line of said Creek, and to erect, construct, build and maintain docks, wharves, bulkheads, piers and basins on the said land under the water in said Creek, in front of said premises and to charge and receive dockage and wharfage from all persons or corporations using any of the said wharves, bulkheads, piers and basins.

SUBJECT to the use of said Creek as a public highway for the purposes of navigation.

SUBJECT TO:

1. Consents by the party of the first part or any former owner of premises for the erection of any structure or structures, on, under or above any street or streets on which said premises may abut, and all covenants, agreements, easements, restrictions and/or consents of record, if any.

2.Encroachment of stoops, areas, cellar steps,trim and cornices,if any, upon any street or highway.

3. Zoning regulations and ordinances of the City,Town or Village in which the premises lie which are not violated by existing structures, including building restrictions and regulations contained in a resolution or ordinance adopted by the Board of Estimate and Apportionment of the City of New York, July 25,1916, and amendments and additions thereto now in force.

4. Any state of facts an accurate survey may show.

5. Easements, if any, over any unopened street adjoining the aforedescribed premises on and over the same for right of way, and easements, if any, on and over the premises for the maintenance of telephone, electric light and power poles, cables,wires and lines.

6. Sewer agreements, if any, of record.

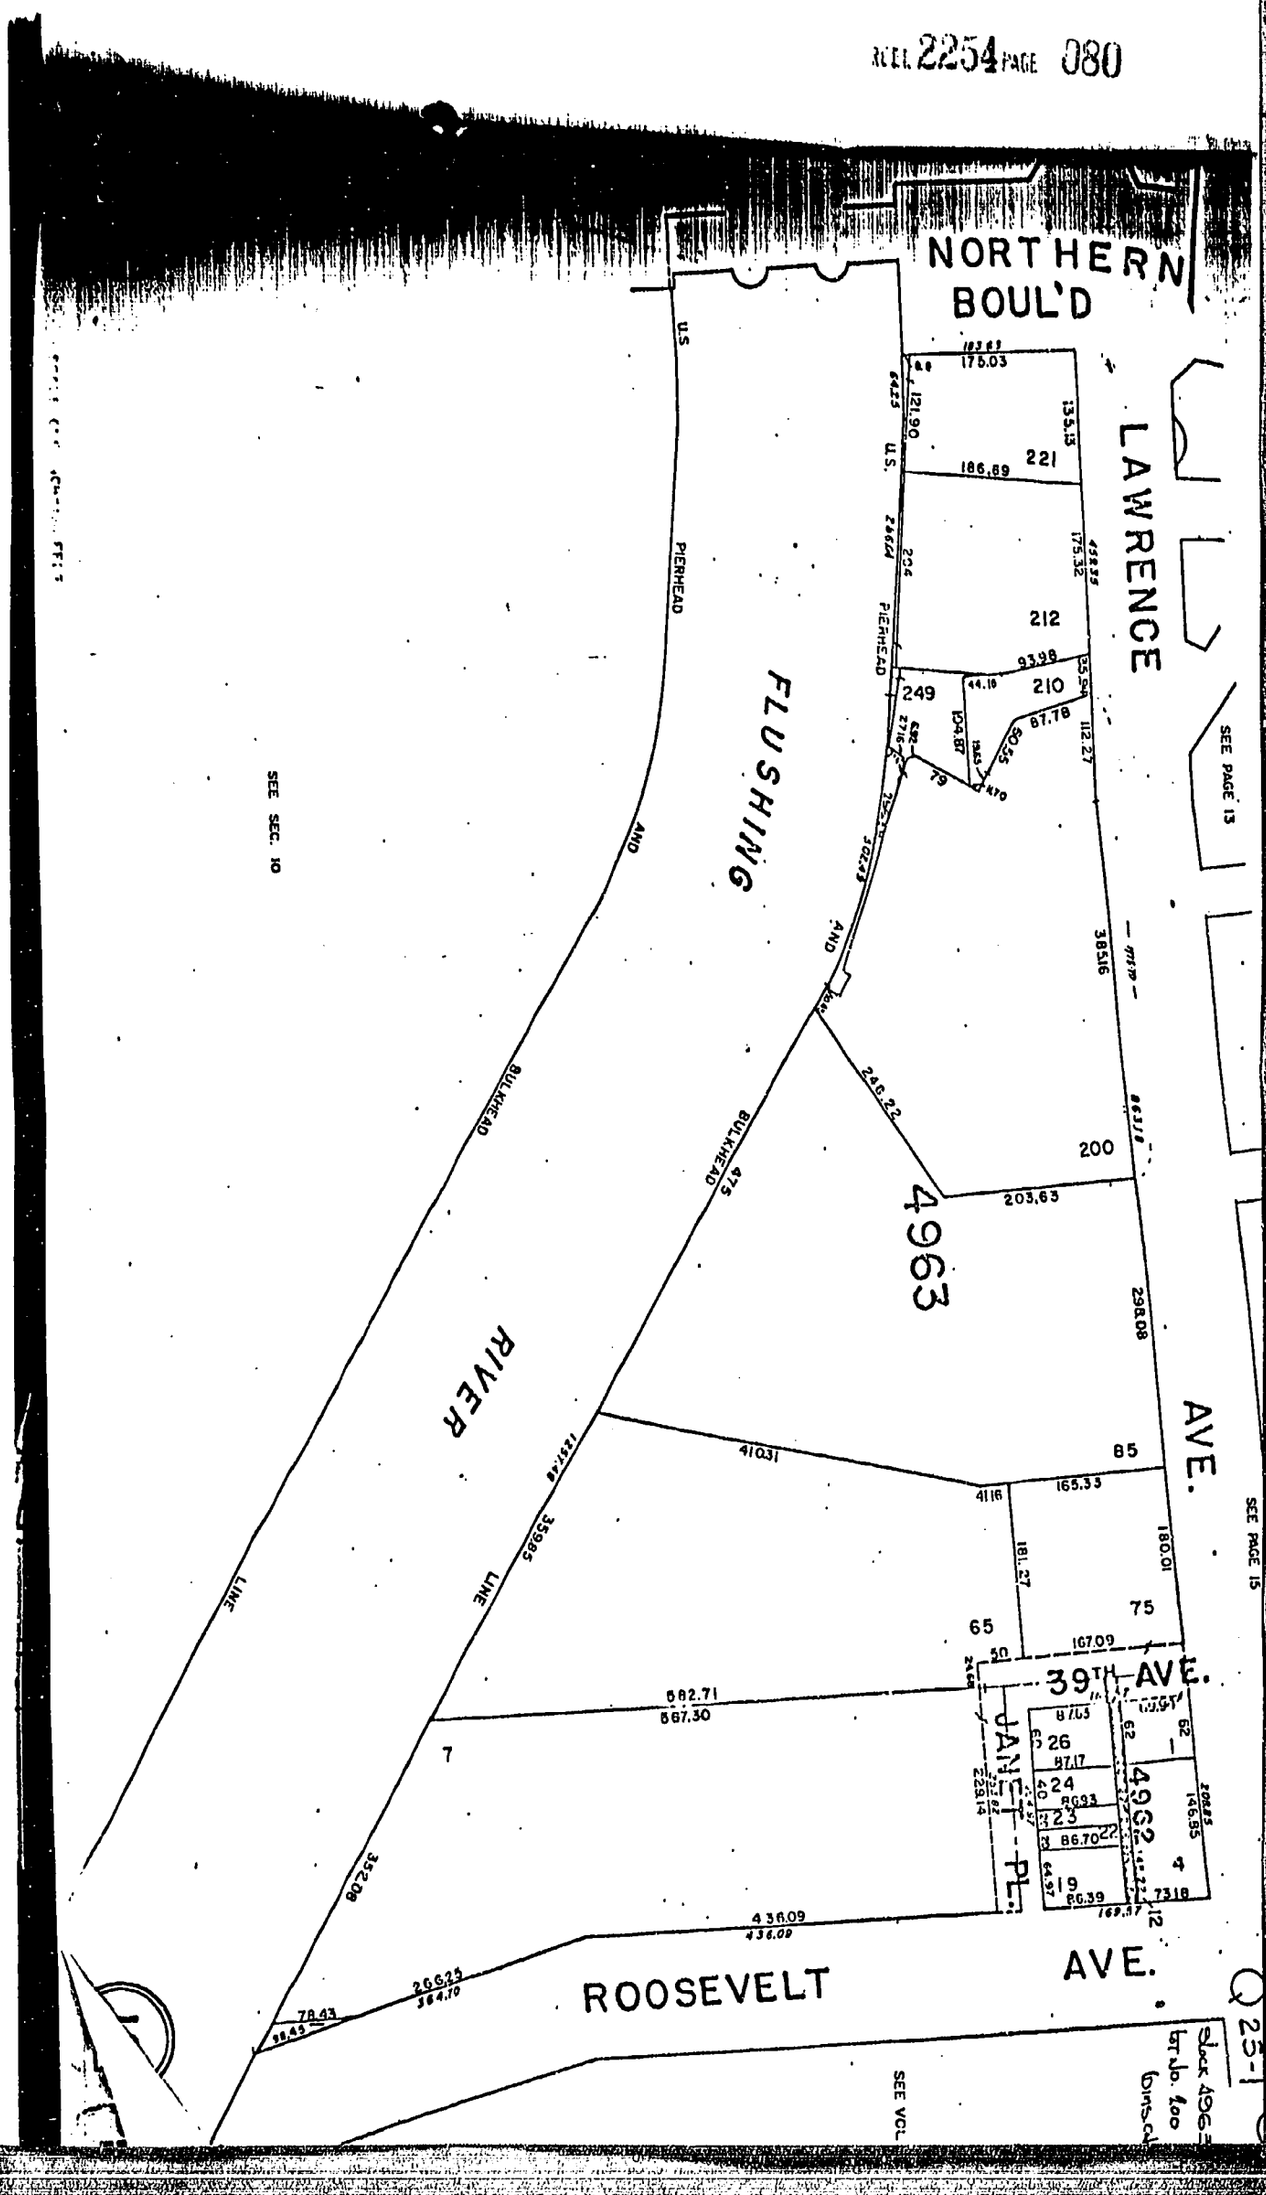
7. Statutory restrictions, if any.

The said premises are sold subject to any right, title and interest of the city of New York, or of the State of New York, or of the United States Government, to any land outshore of the original high water line, and also to any laws, ordinances,rules and regulations covering the same and adjacent areas of uplands, including the right to change bulkhead or pierhead lines without compensation.

THIS DEED IS A CORRECTION DEED intended to correct an error in the description of the deed between the parties hereto dated December 13,1983 and recorded in the office of the City REgister, Queens County on November 15th, 1985 in deed book 1964 page 340.

PREMISES also known as 35-32 College Point Blvd.,Flushing, New York

REEL 2254 PAGE 080



TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been incumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

HSBC LAND TITLE AGENCY (USA) LLC

Title No. HS1354Q PERIMETER DESCRIPTION

SCHEDULE A

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough and County of Queens, City and State of New York, and bounded and described as follows:

BEGINNING at a point on the westerly side of College Point Boulevard (formerly known as Lawrence Street) (100 feet wide) as now laid out on the final topographical map of the City of New York, distant 135.13 feet southerly from the corner formed by the intersection of the westerly side of College Point Boulevard (formerly known as Lawrence Street) with the southerly side of Northern Boulevard (180 feet wide);

RUNNING THENCE south 9 degrees 13 minutes 05 seconds east along the westerly side of Lawrence Street 176.01 feet to lands now or formerly of Long Island Railroad-.Whitestone Division (abandoned) being 311.14 feet south of the corner formed by the westerly side of College Point Boulevard and the southerly side of Northern Boulevard;

THENCE along said last mentioned land the following two (2) courses and distances:
(1) south 65 degrees 43 minutes 55 seconds west a distance of 93.98 feet;
(2) south 87 degrees 45 minutes 45 seconds west a distance of 44.57 feet;

THENCE south 9 degrees 13 minutes 05 seconds east 104.87 feet to a point;

THENCE north 68 degrees 12 minutes 41 seconds west a distance of 67.30 feet to a point;

THENCE north 83 degrees 18 minutes 26 seconds west a distance of 6.92 feet to a point;

THENCE north 85 degrees 00 minutes 55 seconds west a distance of 27.49 feet to a point;

THENCE along the arc of a curve to the right having a radius of 785.216 feet for a distance of 47.11 feet;

THENCE north 2 degrees 26 minutes 08 seconds west a distance of 25.69 feet to a point on the U.S. Pierhead & Bulkhead Line established by the Secretary of War 3/06/1911;

THENCE north 86 degrees 32 minutes 45 seconds east a distance of 9.66 feet to a point on the old line of Timber Dock;

THENCE along said old line of Timber Dock the following four (4) courses and distances:

(1) north 3 degrees 30 minutes 10 seconds west a distance of 42.50 feet to a point;
(2) north 5 degrees 25 minutes 05 seconds west a distance of 73.92 feet to a point;
(3) north 6 degrees 36 minutes 25 seconds west a distance of 36.29 feet to a point;
(4) north 2 degrees 54 minutes 30 seconds west a distance of 50.01 feet to a point;

THENCE north 85 degrees 45 minutes 45 seconds east a distance of 190.83 feet to the westerly side of College Point Boulevard (formerly known as Lawrence Street)
the point or place of BEGINNING.

The policy to be issued under this report will insure the title to such buildings and FOR improvements erected on the premises which by law constitute real property.
FOR CONVEYANCING ONLY TOGETHER with all the right, title and interest of the party of the first part, of, in and to the land lying in the street in front of and adjoining said premises.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) Property receiving service is located in the Borough of **QUEENS**
Block: **4963** Lot: **249**

(2) Account Number (if applicable):
Meter Number (if available–include the letter):

(3) Street Address of Property Receiving Service:
Street **35-501 COLLEGE POINT BLVD** City **NY** State **NY** Zip **11355**

(4) Full name, mailing address, home phone and business phone numbers of owner of property receiving service: (please provide information on owner ONLY; do NOT give information on property manager or tenant):
Owner's Name Business: **TDC DEVELOPMENT & CONSTRUCTION CORP.**
or Individual:
(Last Name) (First Name) (MI)
Street **136-20 38TH AVENUE** City **FLUSHING** State **NY** Zip **11354**
Home Phone(Numbers only): Business Phone(Numbers only):

Customer Billing Information:

PLEASE NOTE:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.

B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.

C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.

(5) If you would like a duplicate copy of bills sent to another party, please check here ☐ and fill out the following information:
Name of Party to Receive Duplicate Copies of Bills:

(6) Mailing Address: Street City State Zip

(7) Relationship to Owner (check one): Managing Agent ☐ Mortgagee ☐
Tenant ☐ Other (please explain):

Owner's Approval

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

(8) E-mail:

(9) Name of Owner: TDC Development & Construction Corp.

(10) Signature: _____

Name and Title of Person Signing for Owner, if applicable: Jenny Chiu, Pres.

Date(mm/dd/yyyy): 1 / 8 / 08

User Provided Information

G. C. ENVIRONMENTAL, INC.
CONSULTANTS CONTRACTORS

January 8, 2013

Mr. Dean Devoe
Willets Point Asphalt Corp.
127-50 Northern Boulevard
Flushing, New York 11368

Subject: Phase II Work Plan and Health & Safety Plan
35-32 College Point Boulevard
Queens, New York 11354
GCE Project No: 12-384-00

Dear Mr. Devoe:

Enclosed please find the Phase II Environmental Work Plan and Health & Safety Plan prepared by G. C. Environmental, Inc. (GCE) for the subject site.

If you have any questions concerning this project, please feel free to call me at (631) 206-3700, ext. 111.

Very truly yours,

Gregory Collins
President

APPENDICES

A. Health and Safety Plan by GCE dated January 03, 2013
B. NYSDEC Facts letter dated December 20, 2010

1.0 INTRODUCTION

This document presents the Phase II Investigation Work Plan for the Site located at 35-32 College Point Boulevard, Flushing, New York, in accordance with the New York State Department of Environmental Conservation (NYSDEC) requested scope of work as stated in the NYSDEC's email correspondence dated July 2012. The Property is located on College Point Boulevard, Flushing, Queens County, New York, approximately 700 feet to the southwest of the intersection formed by College Point Boulevard and Northern Boulevard.

The Plan has been prepared on behalf of Willets Point Asphalt Corp by G C Environmental, Inc to address possible subsurface environmental impacts resulting from previous activities in the Site.

The Plan includes the following sections:

Section 1: Introduction—including the purpose of the investigation and background information.

Section 2: Site History and Description- includes NYSDEC Facts about the Site, site location, legal description, geology and hydrogeology of the Site.

Section 3: Summary of Previous Environmental Reports- includes summary of previous environmental reports, results, recommendations etc

Section 4: Phase II Investigation Work Plan- which includes scope of work, soil and groundwater characterization, sampling protocols etc

Section 5: Quality Control- which includes sampling and laboratory protocols etc

Section 6: Site Investigation Report- which includes schedule for field work and reporting.

Section 7: Health and Safety Plan (HASP).

1.1 Purpose

In 2012, Willets Point Asphalt Corp requested GCE to perform a Phase II Environmental Site Assessment (ESA) at the Site to investigate the areas of concern (AOC) as identified in the NYSDEC's scope of work. The Phase II study will focus on 35-32 College Point Boulevard, Flushing, New York adhering to DEC's scope of work provided in email correspondence dated July 2012.

The purpose of this Phase II ESA is to investigate the AOCs as identified in NYSDEC's scope of work. This is required to determine if any onsite potential contamination exists and to ascertain, if present, if the source was derived from onsite or offsite. If evidence of a release is identified in

this investigation, supplemental investigations may be necessary to further define the ultimate magnitude, extent, and source of any releases and to evaluate appropriate response actions.

This Phase II work plan has been prepared in accordance with NYSDEC scope of work as initially described in the Departments' 8/3/09 letter.

Due to unknown backfill amounts, soil borings in areas of historical contamination, as stated in NYSDEC Facts, referred in section 2.1, will be performed continuously to the water table with the collection of water samples. Piping investigations and shallow sources will have continuous sampling from 0-5' bgs at a minimum. At all borings, Geoprobe 4" macrocores will be split into two foot segments to increase shallow soil delineation capabilities due to shallow water table.

The Phase II Work Plan includes the following:

- Install soil borings to water table at former boring locations of (previous 10,000 gallon fuel oil UST system) SB-11 and SB-12 along piping run and will be renamed as SB-14 and SB-15.

- Install soil boring at oil burner location to a depth of 5 feet bgs (shallow piping) of (previous 10,000 gallon fuel oil UST system) and will be named SB-13.

- Install one (1) soil boring to water table at the UST location (previous 1000 gallon generator tank) and will be called GT-1. One (1) soil boring will be performed by piping elbow to a depth of 5 feet bgs (shallow piping) and will be named GT-2. GT-2 location includes collection of soil and groundwater samples. One (1) soil boring will be performed at bend in piping to generator house to a depth of 5 feet bgs (shallow piping) and will be named GT-3.

- Install one (1) soil boring at a depth of 5 feet bgs (shallow surface) by the former hot elevator location. Boring will be named HE.

- Install one (1) soil boring adjacent to former overhead conveyor, will be named as OC1. OC1 location includes collection of soil and groundwater samples.

- Piping investigations and shallow sources will have continuous sampling from 0-5' bgs at a minimum.

- At all borings, Geoprobe 4" macrocores will be split into two foot segments to increase shallow soil delineation capabilities due to shallow water table.

- If refusal encountered via Geoprobe, then more aggressive drilling method (eg hollow stem auger) will be used as required.

- Screen the boring samples for stains and odors and use MultiRAE systems Photoionization Detector (PID) on any samples that appear to contain contaminants. Additionally, a head space analysis sample will be taken for each of the soil samples collected.

- Describe visual and olfactory soil characteristics and collect field headspace measurements from soils collected from soil borings.

- The deepest dry soil sample and the sample with the highest PID reading will be collected and analyzed by Volatile Organic Compounds (VOC's) and Semi Volatile Organic Compounds (SVOC's) using EPA Method 8260/8270. If no elevated PID readings are found, then the two deepest dry soil samples will be submitted for analysis.

- If contamination extends to water table, a monitoring well will be installed and groundwater samples will be collected and analyzed for Volatile Organic Compounds (VOC's) and Semi Volatile Organic Compounds (SVOC's) using EPA Method 8260/8270. Also determine the groundwater flow direction to delineate the contamination (onsite and offsite if applicable).

- Tidal Survey-Synoptic ground and surface water levels will be collected as necessary using data logging pressure transducers (or similar devices) continuously over a two day period from all applicable wells and the surface water, during a fair weather sampling event.

- Summarize the results of the Phase II investigation in a report, including results of the above scope, and providing, where appropriate, recommendations for future investigation and response actions.

2.0 SITE HISTORY AND DESCRIPTION:

2.1 NYSDEC Facts:

GCE reviewed the historical documents provided by Willets Point Asphalt Corp. Based on the GCE's review, the following were referenced in NYSDEC Department Facts (received by Willets Point Asphalt Corp dated December 20, 2010). Please refer to NYSDEC Facts attachment enclosed in Appendix B.

Willets Point Asphalt Corp. owned and operated a Petroleum Bulk Storage (PBS) facility at the site registered with the department as facility number 2-032182 (the PBS Facility). The PBS Facility included two successive sets of UST's, all storing No. 2 Fuel oil: a set of 2 UST's installed in 1956 and closed on or about July 1988, consisting of one 10,000 gallon tank and one 1,500 gallon tank and a set of three UST's installed in 1988 and removed in 2007, consisting of one 10,000 gallon tank and two 1,000 gallon tanks. The 1988 10,000 gallon UST was installed in or around the same location as the 1956 10,000 gallon UST and the two 1988 10,000 gallon UST's were installed approximately 50 feet from the new 10,000 gallon UST, one to the northwest and the other to the southwest of the tank.

On August 6, 1987, while monitoring a New York State funded gasoline spill remediation project originating at an offsite property, Department staff observed up to 8.95 feet of petroleum product in groundwater monitoring wells located immediately adjacent to the 10,000 gallon 1956

UST. The wells were in the sidewalk at the front of the site, then an asphalt plant, along College Point Boulevard.

On August 20, 1987, the State's remediation contractor collected samples from two wells along College Point Boulevard adjacent to the 10,000 gallon UST. Analysis identified both samples as No 2 fuel oil.

On August 28, 1987, the State's remediation contractor collected a product sample from the monitoring well next to the 10,000 gallon 1956 UST, and another sample of the product in the tank. Subsequent lab analysis of the samples for fingerprint identification indicated a match, with no asphaltic compounds present.

On August 31, 1987, the 10,000 gallon 1956 UST failed three hydrostatic tightness tests performed by a qualified professional technician and witnessed by the department staff. In the course of three failing tests, approximately 18 gallons of petroleum product was released from the tank. The monitoring well next to the tank was gauged before and after the tests, and showed an increase in product thickness. The technician reported the system failure and petroleum releases to the NYSDEC spills hotline, opening NYSDEC spill number 8704514.

According to department records, the 1956 USTs were simply closed on or about July 1, 1988 and replaced with the 1988 UST's.

Regular monthly monitoring of wells along College Point Boulevard, including wells directly adjacent to the 10,000 gallon 1956 UST location, revealed the continuous presence of free petroleum product thickness of up to 26 inches both before and after the tank was closed.

In addition to the two discharges associated with the 10,000 gallon 1956 UST, an October 1, 1991 Phase I ESA noted surface petroleum staining at the site, including the areas around both 1000 gallon 1988 UST's and beneath an unregistered 550 gallon AST storing kerosene, indicating three additional unreported spills at the site.

In the area around the 1000 gallon UST by the office building, approximately 50 feet northwest of the 10,000 gallon UST, analysis of subsurface samples taken on October 9, 1991 at a shallow depth of two to four feet exhibited significant petroleum contamination.

In the area around the unregistered 550 gallon kerosene tank, analysis of soil and groundwater samples taken on October 9, 1991 exhibited significant petroleum contamination. Sampling attempts on October 9, 1991, in the area of the other 1000 gallon UST, supplying an electrical generator approximately 50 feet southwest of the 10,000 gallon UST, failed due to subsurface refusal. Later attempts, confirmed the presence of heavy petroleum contamination at this location.

The October 1991, Phase II Subsurface sampling report concluded, " Field observation and lab results indicate significant amounts of hydrocarbons are present in the soil and groundwater beneath the property, the extent and origin of which remain undetermined"

In May 1992, a soil boring in the area of the 1956 and 1988 10,000 gallon UST's exhibited a petroleum odor at a shallow depth of 0.5 to 1.5 feet, indicating the continuing presence of a recent discharge in that area.

In May 1992, a soil boring in the area of the 1000 gallon office building UST exhibited a strong petroleum odor, look, feel throughout.

In May 1992, a soil boring in the area of the 550 gallon kerosene tank exhibited a strong petroleum odor, look, feel throughout and petroleum product was observed coming out of the sampling bore hole.

On August 25, 1992, the State's contractor again identified petroleum product in the well adjacent to the 10,000 gallon UST as No. 2fuel oil, again indicating a discharge from the UST.

On September 1, 1992, the states contractor recommended further subsurface investigation to confirm the source of the persistent No 2 fuel oil in the onsite monitoring wells.

In February 1993, the States' contractor installed monitoring wells up gradient to the site to determine whether an offsite source was causing or contributing to the onsite contamination nearest to the property line at the 1000 gallon UST. No petroleum product was detected in soil or groundwater samples taken from the new wells. The plume that has been identified as No 2 fuel oil is in close proximity to a 1000 gallon fuel oil tank that supplies the generators that provide electrical power for the asphalt plant. Data collection has produced results strongly implicating the 1000 gallon fuel oil tank.

In April 1993, hydrogeologists were able to sample the area directly around the 1000 gallon generator UST, where they had earlier met subsurface refusal. According to a May 27, 1993 subsurface investigation report, soil samples taken on April 28, 1993 from monitoring well FN-13 showed extensive petroleum contamination, as follows; a sample taken from a depth of 2 to 5 feet exhibited heavy petroleum odor, a sample taken from a depth of 5 to 10 feet was oil saturated and a sample taken from a depth of 10 to 15 feet was petroleum contaminated.

On May 16, 1994, samples from 4 monitoring wells adjacent to and near the 10,000 gallon UST and the 1000 gallon generator UST exhibited petroleum odors at every depth below the surface asphalt from 6 inches to 15 feet.

In June 1995, the state contractor prepared a floating product plume map showing a petroleum plume encompassing the area of the 10,000 gallon UST and the 1000 gallon generator UST. In addition sampling results detected the highest concentrations of total petroleum hydrocarbons in a separate zone around the other 1000 gallon UST near the office building.

On February 28, 1997, product samples were taken from three monitoring wells in the area of the UST's and from the contents of all the three UST's. All six samples were determined to be No. 2 fuel oil.

On April 2, 1998, the States contractor reported that monitoring data from the area wells"

indicate that groundwater flows from the center of the asphalt plant to neighboring properties" and the measurements of product thickness placed the 10,000 gallon UST in the middle of the subsurface plume of No 2 oil.

On February 25, 2000, Department staff inspected the site and observed numerous buckets of oil overflowing onto the ground and various surface stains from petroleum discharges on the ground.

Throughout this period and up to 2009 when the offsite spill remediation project was closed, the spatial and temporal distribution of soil and groundwater contamination documented pursuant to that offsite site investigation revealed onsite discharges from sources including but not limited to onsite storage tanks the extensive piping lines associated with those tanks and the documented areas of surface spills noted above. Moreover, throughout this period no free phase product was detected in upgradient wells, confirming the onsite source of the remaining contamination.

On September 5, 2007, the Departments contractor informed the department that during a site visit it observed that nine onsite State owned monitoring wells had been destroyed including the wells adjacent to the UST locations. Department staff subsequently visited the site and confirmed the destruction of wells.

2.2 Site Description

2.2.1 Location and Legal Description

The Property is located in the College Point Boulevard, Flushing, Queens County, New York, approximately 700 feet to the southwest of the intersection formed by College Point Boulevard and Northern Boulevard. The Property consists of approximately 1.2 acres and is an irregular-shaped parcel of vacant land.

The subject Property is currently vacant land with no structures onsite and is located on Block 4963 and consists of Lots 212 and 249. The Property is bounded to the north by 35-20 College Point Boulevard, to the south by 36-28 College Point Boulevard, to the east by College Point Boulevard and to the west by the Flushing River.

According to New York City Zoning maps, the subject Property is zoned as M2-1, which corresponds to a manufacturing zoning district.

2.2.2 Site Geology

According to the 1970 Bedrock Geologic Map of New York, Lower Hudson Sheet and the 1989 Surficial Geologic Map of New York, Lower Hudson Sheet prepared by the University of the State of New York, the geology in the area of the Property consists of Till (clay, silt-clay, boulder clay) usually poorly sorted diamict, deposition beneath glacier ice, relatively impermeable (loamy matrix) with variable clast content and Hartland Formation (schist's, amphibolites).

According to prior Phase I report submitted by Gannett Fleming Engineers in August 2005, the general geology of Queens County, as part of Long Island, is comprised of unconsolidated sediments deposited upon south easterly dipping consolidated bedrock. The bedrock is crystalline and of Precambrian age. The overlying sediments range from upper cretaceous to Pleistocene age.

Based on the prior Phase I report submitted by Gannett Fleming Engineers in August 2005, depth to groundwater in the vicinity of the Property is approximately 10 feet below grade.

Based on the information gathered during the soil borings during the Phase II investigation, the geology in the area of the Site to the explored depth of approximately 10 feet below grade consists of approximately 2 to 3 feet of fill, represented by dark-gray silt with asphalt stones, underlain by approximately 7 feet of yellow-brown medium to fine-coarse sand with dark clay.

According to prior Phase I report submitted by Gannett Fleming Engineers in August 2005, the general geology of Queens County, as part of Long Island, is comprised of unconsolidated sediments deposited upon south easterly dipping consolidated bedrock. The bedrock is crystalline and of Precambrian age. The overlying sediments range from Upper Cretaceous to Pleistocene age.

2.2.3 Site Hydrogeology

Based on the prior Phase I report submitted by Gannett Fleming Engineers in August 2005, depth to groundwater in the vicinity of the Property is approximately 10 feet below grade.

2.3 Sensitive Environmental Receptors

According to the Digital US Department of the Interior, Fish and Wildlife Service, National Wetlands Inventory Map for Flushing, Flushing Quadrangle, the nearest designated wetland is located approximately 0.01 miles to the northeast of the Property, which is designated as Estuarine, Subtidal, Unconsolidated Bottom water regime (E1UBL). According to the Digital New York State Department of Environmental Conservation (DEC) Freshwater Wetlands Map for Flushing, Flushing Quadrangle, the nearest designated wetland is located approximately 1.26 miles to the north of the Property.

3.0 PREVIOUS ENVIRONMENTAL REPORTS

3.1 Summary of the Phase I ESA Reports (GFE 2005 & HTEC 2007)

According to the prior Phase I Environmental Site Assessment (ESA) report submitted by Gannett Fleming Engineers (GFE) in August 2005, the Property formerly was an asphalt

production facility and was in operations since 1987 producing hot mix paving materials. Historically the subject Property has been in use as an asphalt production facility since the late 1950's. According to Historical Sanborn Fire Insurance Maps, the subject Property had been utilized as a coal storage and distribution facility through 1951. The subject Property is currently scrap metal recycling with two (2) story office building and is located on Block 4963 and consists of Lots 212 and 249. The Property is bounded to the north by 35-20 College Point Boulevard, to the south by 36-28 College Point Boulevard, to the east by College Point Boulevard and to the west by the Flushing River.

According to New York City Zoning maps, the subject Property is zoned as M2-1, which corresponds to a manufacturing zoning district.

The Phase I report for the Property prepared by Gannett Fleming Engineers in August 2005 and Phase I report submitted by Hydro Tech Environmental, Corp (HTEC) in January 2007 did not identify any open spill files associated with this site other than 0105316 (this spill case is closed as of 10/24/2005) and 7900995 (this spill case was closed as of 08/03/2009), both of which were subsequently closed. The previous Phase I reports outlined the following:

- The review of the federal databases did not identify any sites or issues that are considered a recognized environmental condition (REC) to the subject Property.

- The review of the state databases identified several sites and incidents which may present a de minimus environmental concern to the subject property due to their inferred upgradient groundwater flow path but are not considered RECs.

- The adjacent site, 36-30 College Point Boulevard, presents a concern due to the reported spill and location adjacent to the subject Property. The subject Property's reported Spill Case (#0105316) is a REC since it is currently listed as an active case by the NYSDEC (this spill case is closed as of October 26, 2005).

- The various 55-gallon drums and containers of petroleum products located outdoors within the subject property represent a de minimus environmental concern due to their potential to spill or leak onto the ground.

- Based on the age of the building, ACM's and LBP are suspected in the administrative building.

Based on the above findings, the following recommendations are made:

- A storm water management system and storm water pollution prevention plan should be developed for the subject Property.

- The various outdoor 55-gallon drums and containers of petroleum products should be consolidated into a proper code compliant drum storage area with spill protection and weather protection.

- Appropriate assessment, investigative and remedial measures should be implemented to satisfactorily obtain case closure for the NYSDEC active spill case (this spill case was closed as of October 26, 2005).

3.2 Phase II Environmental Site Assessment- SPECTRA (2007)

The Phase II report for the Property prepared by Spectra Environmental Group, Inc. (SPECTRA) in February 2007 outlined the following:

On January 31, 2007, SPECTRA directed Zebra Environmental Corp. (Zebra) to advance eight soil borings (SB-1 through SB-8) at the site using a geoprobe direct push drill rig. Soil borings were advanced to a maximum depth of fifteen (15) feet bgs or until the sol-groundwater interface was located. One soil sample was collected for laboratory analysis from the soil increment that exhibited the highest PID reading at each of the eight soil boring locations. Soil samples were analyzed for VOC's, SVOC's and Priority Pollutant Metals. Sol samples from soil borings SB-1, SB-4, SB-5, SB-6 and SB-7 were also analyzed for TPH for soil disposal purposes. In addition to the soil samples addressed above, one composite soil sample was also collected from containerized soil cuttings and was analyzed for TCLP metals, PCB's, Flashpoint, Ignitability, pH, Reactivity and TPH.

On January 31, 2007, SPECTRA directed Zebra Environmental Corp. (Zebra) to install three monitoring wells MW-1, MW-2 and MW-3. Groundwater monitoring wells were advanced to a depth of 15 feet bgs. On February 1, 2007, groundwater samples were collected from the three monitoring wells and analyzed for VOC's, SVOC's and Priority Pollutant Metals.

On February 1, 2007, a GPR survey was conducted by SPECTRA at the facility to identify and locate any unknown UST's that may be present at the site. On February 12, 2007, Willets Point Asphalt personnel conducted excavation activities in the area where the GPR survey identified an underground feature. Excavation activities revealed that the underground feature was a buried steel sheet (which was found about 2 feet bgs).

Summary of Site Soil and Groundwater Analytical Results

Soil analytical results were compared to NYSDEC cleanup levels identified in the Division of Environmental Remediation TAGM # 4046/STARS-1, Recommended Soil Cleanup Objectives. Groundwater analytical results were compared to NYSDEC Title 6 NYCRR Part 703, Water Quality Standards for surface water and groundwater.

Soil sample results indicate that none of the borings have reportable concentrations of VOC's that exceed NYSDEC TAGM # 4046 Guidance Values or Title 6 NYCRR Subpart 375-Restricted Use Soil Cleanup Objectives.

With regard to SVOC's, soil boring SB-1 had two parameters (2- Methylnaphthalene and Naphthalene) that exceed NYSDEC TAGM# 4046 Guidance Values; however, only Naphthalene exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Additionally, soil boring SB-3 had one parameter (3& 4 Methylphenol (m & p cresol) that exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives; however, this parameter did not exceed TAGM# 4046 Guidance Values.

Soil boring SB-1 results had one metal (Nickel), exceed the NYSDEC TAGM # 4046 Guidance Value and one metal (chromium) that exceeded the Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Soil Borings SB-2, SB-5, SB-6, SB-7 and SB-8 results had one metal (Zinc), exceed TAGM# 4046 Guidance Value; however, none of the concentrations exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Soil boring SB-3 results had two metals (Mercury and Zinc), exceed TAGM# 4046 Guidance Value; however, only Mercury exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Soil boring SB-4 results had one metal (chromium), exceed Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives; however, the concentration did not exceed NYSDEC TAGM # 4046 Guidance Value.

TPH, TCLP Metals, PCB's, Flashpoint, Ignitability, pH and Reactivity analysis was completed for disposal purposes only. Unidentified TPH levels in the soil samples ranged from 2, 400 ppm to 17, 000 ppm. PCB's were not detected, flashpoint was greater than 200 degrees F, Ignitability was reported as passing, pH was reported at 7.55, Reactivity was reported as less than the reporting limits and the following TCLP Metals were detected at less than the regulatory criteria for hazardous waste- Arsenic at 0.04 ppm (TCLP Regulatory Level for arsenic is 5ppm), Barium at 0.83 ppm (TCLP Regulatory Level for barium is 100 ppm) and Lead at 0.056 ppm (TCLP Regulatory Level for lead is 5 ppm)

New monitoring well groundwater sample results indicate that 2 locations (MW-1 and MW-2) have a concentration of one VOC (MTBE and 1,2,4- Trimethylbenzene, respectively) that exceeds Title 6 NYCRR Part 703- Water Quality Standards, and 2 locations (MW-2 and MW-3) have a reportable concentration of one metal (lead) that exceed Title 6 NYCRR Part 703- Water Quality Standards. SVOC's were not detected in any of the three monitoring wells.

With regard to the ASTM REC's identified in the Phase I reports prepared by GFE and HTEC;

Phase I REC's- GFE

Adjacent site located at 36-30 has an active NYSDEC Spill No. 01-05516- The NYSDEC Database indicates this spill was closed on October 24, 2005; therefore no further action is recommended with regard to this REC.

Phase I REC's- HTEC

Historical presence of gasoline UST- Excavation activities revealed that the underground feature was a buried steel plate. Since it has been confirmed that the only underground feature identified by the GPR survey is not a UST, no further action is recommended with regard to this REC.

Current presence of fuel oil UST's- According to the Willets Point Asphalt personnel, the following UST's currently exist at the site:

A 10,000 gallon UST that stores No.2 fuel oil for site process activities

A 1000 gallon UST that stores No.2 fuel oil to heat product in the AC tanks

A 1000 gallon UST that stores No. 2 fuel oil for generators.

Current UST's are not registered with the NYSDEC- No further action is recommended with regard to this REC except to continue tank tightness testing in accordance with applicable regulatory requirements.

3.3 Roux Associates- UST Removal (2007)

In August 2007, Roux Associates personnel visually observed the removal of the three UST's from the site. Upon their excavation, no holes, leaking product, or other visible tank integrity issues were observed by Roux Associates personnel. Based on the soil sampling done by Roux Associates in the UST excavation pits, it does not appear that the former oil containing UST's impacted the soils at the site. Also Roux Associates installed three groundwater monitoring wells identified as MW-1 through MW-3. The groundwater results revealed that no VOC's or metals (filtered) were detected at concentrations exceeding their standards. Several SVOC's were detected at concentrations exceeding their standards. TPH was 0.6 mg/kg. Based on the presence of floating product in two of the three monitoring wells and elevated PAH's in the groundwater sample from MW-3, groundwater beneath the site was impacted by product.

3.4 Limited Phase II Investigation- G C Environmental, Inc (2011)

On May 19, 2011, GCE performed a Phase II ESA, which consisted of the geophysical survey, advancement of twelve (12) soil borings (SB-1 through SB-12) with subsequent soil sampling, to address the supplemental soil sampling required by NYSDEC related to the 1987 spills. GCE's investigation revealed the following:

Visual and olfactory contamination (petroleum odor) and elevated PID readings were detected in most of the soil borings.

Petroleum stains were detected in soil borings SB-4, SB-5, SB-7, SB-9, SB-11 and SB-12.

Laboratory results of one (1) analyzed soil sample (SB-8, hydrologically cross/down gradient from former 10,000 gallon UST and former 1,000 gallon UST) indicated one of the B/N's namely; Benzo (a) pyrene (4.7 milligram per kilogram (mg/kg) was detected above the soil cleanup objectives of 1.1 mg/kg for this compound. The remaining VOC's and B/N's detected were below the soil cleanup objectives. It should be noted that Benzo (a) pyrene is a high molecular weight, 5-ring PAH, and an EPA Priority Pollutant and EPA-classified carcinogen.

Twelve samples were analyzed, one from each boring and eleven samples met the NYSDEC Part 375 6.8(b) Restricted Use Soil Cleanup Objectives for Industrial Zoned land use.

Recommendations

Based on the general observation that petroleum staining, odors and elevated PID readings increased with depth of the samples, GCE recommends that additional investigation of upgradient locations be conducted to determine if offsite sources have impacted the subject Property. Based on our observations, analysis of documents provided and the current data, there are no on-site sources of petroleum contamination and incidental spills from the former asphalt plant operation have since been remediated and closed as shown in the closure of NYSDEC spill numbers 0105316, 0008962 and 7900995. In addition, the sampling results taken in the former location of the removed underground storage tanks and associated piping in August 2007 indicate no contamination exceeding regulatory limits; therefore offsite sources of contamination are the most probable source of the product that continues to impact the subject Property.

GCE recommends to excavate the area and collect post excavation samples near soil boring SB-8 (hydrologically cross/down gradient from former 10,000 gallon UST and former 1,000 gallon UST) where Benzo (a) pyrene (4.7 milligram per kilogram (mg/kg)) was detected above the soil cleanup objectives of 1.1 mg/kg.

3.5 Excavation of impacted soils- G C Environmental (2011)

As per the recommendation, on July 27, 2011 GCE arrived on site at 11:00 am following the completed excavation of approximately 15 cubic yards of impacted soils by which a cavity of thirteen foot wide by thirteen foot long by 30 inches deep was created. GCE collected end point samples from this excavation for 8270 analysis, documented as end points (EP) 1 -5. A sample was collected from the center of the excavation at a depth of thirty inches (EP-5), as well as from the center of each sidewall (North/East/South/West) at a depth of twenty inches (EP 1-4). Additionally, one (1) sample was collected of the composite material from the excavation and analyzed for disposal facility requirements. In total, six (6) samples were collected and analyzed.

As per the recommendation, on August 3, 2011 GCE arrived on site at 11:00 am following the completed further excavation of approximately 11 cubic yards of impacted soils by which the existing cavity was extended by five feet on the eastern wall and five feet on the southern wall to create a cavity approximately eighteen foot wide by eighteen foot long by 30 inches deep (see Figure 2). GCE collected sidewall samples for 8270 analysis from this excavation at a depth of twenty inches on the east (EP-1) and south (EP-2) walls. Upon review of analysis it was determined that the sample from the South wall (EP-2) of the cavity exceeded target values and further excavation was recommended.

As per the recommendation, on August 9, 2011 GCE arrived on site at 3:00 pm following the backfill of the existing cavity with clean sand and completed further excavation of approximately 11 cubic yards of impacted soils, by which a new cavity of approximately eighteen foot long by six foot long by thirty inches deep had been created. GCE collected sidewall samples from the cavity for 8270 analysis, at a depth of twenty inches in the center of the south (EP-1) wall.

Upon review of analysis it was determined that the sample from the South wall (EP-1) of the cavity did not exceed target values and this portion of the recommendation is complete. This excavation was subsequently backfilled with clean sand. All contaminated soil was disposed of at the Residuals Management Services Facility in Deer Park, New York.

On September 08, 2011, GCE installed three temporary monitoring wells (MW-4, MW-5 & MW-6) and gauge existing monitoring well MW-41A for product thickness, located hydrologically upgradient of the subject Property in order to determine if the offsite sources of contamination are the most probable source that may have impacted the subject Property.

Prior to commencement of the work, GCE arranged for a public underground utility mark out to be performed at the Site. One (1) monitoring well (MW-4) was installed on the south eastern portion of the Property (west side of College Point Boulevard, on the side walk, near auto body shop), hydrologically up/ cross gradient and approximately 45 feet from the subject Property. One (1) monitoring well (MW-5) was installed on the north eastern portion of the Property (east side of College Point Boulevard, on the side walk), hydrologically upgradient and approximately 85 feet from the subject Property. One (1) monitoring well (MW-6) was installed on the south eastern portion of the Property (east side of College Point Boulevard, on the side walk), hydrologically up gradient and approximately 145 feet from the subject Property. Additionally, existing monitoring well MW-41A was gauged for free product thickness, which is located on the south eastern portion of the Property (outside the property fence, west side of College Point Boulevard) hydrologically up gradient and approximately 5 feet from the subject Property.

Groundwater Sampling

Prior to sampling, the newly installed wells were allowed to stabilize and equilibrate with the aquifer for approximately 15-20 minutes. The water sample was obtained by utilizing half (1/2)-inch diameter disposable polyethylene tubing.

All groundwater samples were logged and transferred under a chain-of-custody protocol to the Phoenix Environmental Laboratory (PEL), Manchester, Connecticut, a New York State ELAP-approved laboratory. Ground water samples collected were analyzed for the presence of VOC's using EPA Method 8260 and B/N's using EPA Method 8270. Groundwater sample MW-5 (for semivolatiles (B/Ns)) was accidentally lost by PEL during their extraction process, so MW-5 monitoring well was sampled again, logged and transferred under a chain-of-custody protocol to PEL for EPA Method 8270 analysis

Groundwater Sampling Results

The groundwater analytical results were compared to the DEC Ambient Water Quality Standards & Guidance Values (Groundwater Standards).

Monitoring well MW-4

Laboratory results of analyzed MW-4 groundwater sample indicated four (4) of the volatiles and nine (9) of the B/Ns namely; Isopropylbenzene (13 microgram per litre (ug/l)) was detected

above the Groundwater Quality Standards of 5 ug/l for this compound, N-Butylbenzene (16 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, N-Propylbenzene (15 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, Sec-butyl benzene (34 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, Acenaphthene (21 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 20 ug/l for this compound, Benz (a) anthracene (2.1 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benz (b) fluoranthene (1.9 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benzo (k) fluoranthene (0.5 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Bis (2-ethylhexyl) phthalate (53 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, Chrysene (3.9 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Indeno (1,2,3-cd) pyrene (0.38 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Naphthalene (48 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 10 ug/l for this compound and Phenanthrene (330 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 50 ug/l for this compound.

Monitoring well MW-5

Laboratory results of analyzed MW-5 groundwater sample indicated four (4) of the B/Ns namely; Benz (a) anthracene (0.1 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benz (b) fluoranthene (0.14 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Chrysene (0.008 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound and Indeno (1,2,3-cd) pyrene (0.38 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound.

Monitoring well MW-6

Laboratory results of analyzed MW-6 groundwater sample indicated five (5) of the B/Ns namely; Benz (a) anthracene (2.2 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benz (b) fluoranthene (3.3 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benzo (k) fluoranthene (0.8 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Chrysene (1.9 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound and Indeno (1,2,3-cd) pyrene (1.1 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound.

The remaining VOCs and B/Ns were either non detected or detected below their detection limit. It should be noted that Isopropylbenzene is an aromatic hydrocarbon and is a constituent of crude oil and refined fuels. It should be noted that n-butyl benzene is highly flammable, less dense and

insoluble in water, and is used to make plastics and as solvent. It should be noted that n-propylbenzene and sec-butyl benzene is highly flammable, less dense and insoluble in water, and is mildly toxic by ingestion and inhalation. Acenaphthene is a polycyclic aromatic hydrocarbon (PAH) and is a constituent of coal tar. Naphthalene is classified as a benozenoid polycyclic aromatic hydrocarbon (PAH). It should be noted that Benz (a) anthracene is a high-molecular-weight, 4-ring polycyclic aromatic hydrocarbon (PAH) and an EPA Priority Pollutant, Benz (a) anthracene is an EPA classified probable human carcinogen. It should be noted that Benzo (b) fluoranthene is a high-molecular-weight, 5-ring Polycyclic Aromatic Hydrocarbon PAH and an EPA Priority Pollutant, Benzo (b) fluoranthene is an EPA classified carcinogen for regulatory purposes. It should be noted that Benzo (k) fluoranthene is a polycyclic aromatic hydrocarbon and anticipated human carcinogen. It should be noted that Bis (2-ethylhexyl) phthalate is an organic compound and is used as a plasticizer. It should be noted that Chrysene is a polycyclic aromatic hydrocarbon, constituent of coal tar and suspected human carcinogen. It should be noted that Indeno (1, 2, 3-cd) pyrene is a high molecular weight, 5-ring PAH, and an EPA Priority Pollutant and EPA-classified carcinogen. Naphthalene is the most abundant single component of coal tar. The International Agency for Research on Cancer (IARC) classifies naphthalene as possibly carcinogenic to humans and animals. It should be noted that Phenanthrene is a poly cyclic aromatic hydrocarbon and is used in making plastics, dyes and pesticides.

Free Product

MW-41A was gauged for free product thickness, which is located on the south eastern portion of the Property (outside the property fence, west side of College Point Boulevard) hydrologically upgradient and approximately 5 feet from the subject Property. Free product thickness was measured using Solinst oil/water interface probe equipped with a fiberglass measuring tape. The depth of free product from top of the well was measured as 6.70 feet and the depth of water was measured as 7.30 feet. The difference between depth of water and depth of free product gives the free product thickness which is 0.6 feet (7.2 inches). Petroleum stains and odor were detected.

Recommendations

Since groundwater results from monitoring well MW-4 showed elevated levels of VOCs and B/Ns, monitoring wells MW-5 and MW-6 showed elevated levels of B/Ns and existing monitoring well MW-41A showing petroleum free product thickness, all the wells being hydrologically upgradient and offsite from the subject Property, suggests these offsite sources of contamination have impacted the subject Property.

Additional monitoring wells should be installed and monitored offsite from the subject Property to further study the offsite source of contamination.

Ground water survey should be completed to determine the direction of ground water flow.

4.0 PHASE II SITE INVESTIGATION WORK PLAN

Phase II Site Investigation Work Plan

A Phase II Site Investigation Work Plan is being required by the NYSDEC. The objective of the Phase II Site Investigation is to characterize the subsurface soils and groundwater at the Site. This is required to determine if onsite contamination was from an offsite source have resulted in any environmental impacts to the Site.

Due to unknown backfill amounts, soil borings in areas of historical contamination, as stated in NYSDEC Facts, referred in section 2.1, will be performed continuously to the water table with the collection of water samples. Piping investigations and shallow sources will have continuous sampling from 0-5' bgs at a minimum. At all borings, Geoprobe 4" macrocores will be split into two foot segments to increase shallow soil delineation capabilities due to shallow water table.

Based on DEC's recommendations provided in email correspondence dated July 2012, GCE included subsurface soil and groundwater investigation on subject Site, a site map depicting proposed soil boring locations and groundwater sampling locations (see Figure 2), and a summary of proposed drilling and soil/groundwater sampling activities (see Section 4.0 Phase II Investigation Work Plan).

This work plan provides a summary of history of land use, any prior environmental assessments or information, a proposed Phase II Site Investigation sampling program, sampling protocols and associated Health and Safety Plan (HASP).

The objective of the Phase II Site Investigation is to characterize the soil and groundwater quality at 35-32 College Point Boulevard (the Site). This Phase II includes: Due to unknown backfill amounts, soil borings in areas of historical contamination, as stated in NYSDEC Facts, referred in section 2.1, will be performed continuously to water table with collection of water samples. Piping investigations and shallow sources will have continuous sampling from 0-5 feet bgs at a minimum. At all borings, Geoprobe 4" macrocores will be split into two foot segments to increase shallow soil delineation capabilities due to shallow water table. Continuous soil sampling collected to water table for the 10,000 gallon fuel oil UST; soil sampling for the 1000 gallon generator tank; soil sampling by the former hot elevator location; soil sampling by overhead conveyor; and groundwater sampling. The work plan outlines the methods, procedures and protocols proposed for conducting soil and groundwater sampling at the subject Property. The general scope of work will include the collection and analysis of soil and groundwater samples at a certified laboratory in order to characterize soil and groundwater conditions at the subject Property.

The Phase II Work Plan includes the following:

10,000 Gallon Fuel Oil UST System:

- Install soil borings to water table at former boring locations SB-11 and SB-12 along piping run and will be renamed as SB-14 and SB-15.

- If contamination extends to water table, a monitoring well will be installed and groundwater samples will be collected. Also determine the

groundwater flow direction to delineate the contamination (onsite and offsite)

- Install soil boring at oil burner location to a depth of 5 feet bgs (shallow piping) and will be named SB-13.

- Screen the boring samples for stains and odors and use MultiRAE systems Photoionization Detector (PID) on any samples that appear to contain contaminants. Additionally, a head space analysis sample will be taken for each of the soil samples collected.

- The deepest dry soil sample and the sample with the highest PID reading will be collected and analyzed by EPA Method 8260/8270. If no elevated PID readings are found, then the two deepest dry soil samples will be submitted for analysis.

- If contaminated soil extends to water table, a monitoring well will be installed and groundwater samples will be collected and analyzed for EPA Method 8260/8270.

1000 Gallon Generator Tank:

- Install one (1) soil boring to water table at the UST location (previous 1000 Gallon generator Tank) and will be called GT-1. One (1) soil boring will be performed by piping elbow to a depth of 5 feet bgs (shallow piping) and will be named GT-2. GT-2 location includes collection of soil and groundwater samples. One (1) soil boring will be performed at bend in piping to generator house to a depth of 5 feet bgs (shallow piping) and will be named GT-3.

- Screen the boring samples for stains and odors and use MultiRAE systems Photoionization Detector (PID) on any samples that appear to contain contaminants. Additionally, a head space analysis sample will be taken for each of the soil samples collected.

- The deepest dry soil sample and the sample with the highest PID reading will be collected and analyzed by EPA Method 8260/8270. If no elevated PID readings are found, then the two deepest dry soil samples will be submitted for analysis.

- If contaminated soil extends to water table, a monitoring well will be installed and groundwater samples will be collected and analyzed for EPA Method 8260/8270.

Former Hot Elevator:

- Install one (1) soil boring at a depth of 5 feet bgs (shallow surface) by the hot elevator. Boring will be named HE.

- Screen the boring samples for stains and odors and use MultiRAE systems Photoionization Detector (PID) on any samples that appear to contain contaminants. Additionally, a head space analysis sample will be taken for each of the soil samples collected.

- The deepest dry soil sample and the sample with the highest PID reading will be collected and analyzed by EPA Method 8260/8270. If no elevated PID readings are found, then the two deepest dry soil samples will be submitted for analysis.

- If contaminated soil extends to water table, a monitoring well will be installed and groundwater samples will be collected and analyzed for EPA Method 8260/8270.

Overhead Convevor:

- Install one (1) soil boring adjacent to former overhead conveyor, will be named as OC1. OC1 location includes collection of soil and groundwater samples.

- Screen the boring samples for stains and odors and use MultiRAE systems Photoionization Detector (PID) on any samples that appear to contain contaminants. Additionally, a head space analysis sample will be taken for each of the soil samples collected.

- The deepest dry soil sample and the sample with the highest PID reading will be collected and analyzed by EPA Method 8260/8270. If no elevated PID readings are found, then the two deepest dry soil samples will be submitted for analysis.

- If contaminated soil extends to water table, a monitoring well will be installed and groundwater samples will be collected and analyzed for EPA Method 8260/8270.

Performance of a Tidal Survey:

- Synoptic ground and surface water levels will be collected as necessary using data logging pressure transducers (or similar devices) continuously over a two day period from all applicable wells and the surface water, duringa fair weather sampling event.

4.1 Soil and Groundwater Characterization

This section of the work plan provides detailed procedures for collecting and analyzing samples. The Phase II site investigation includes: collecting soil samples and groundwater samples in response to NYSDEC scope of work to determine if potential contamination from historic offsite/ surrounding land uses has impacted the Site.

4.1.1 Soil Sampling

Based on NYSDEC's scope of work, after all the sampling locations are identified, the soil quality will be examined using hand tools, and any soil issues identified by sight, odor or PID extending deeper than shovel depth will be examined using soil cores.

Soil borings will be installed using a Geoprobe drilling system to collect continuous soil cores from land surface to the water table. Soil samples will be collected to water table for the 10,000 gallon fuel oil UST; soil sampling for the 1000 gallon generator tank; soil sampling by the former hot elevator; soil sampling by overhead conveyor. Due to unknown backfill amounts, soil borings in areas of historical contamination will be performed continuously to water table with collection of water samples. Piping investigations and shallow sources will have continuous sampling from 0-5' bgs at a minimum. If refusal encountered via Geoprobe then more aggressive drilling method (eg hollow stem auger) would be used. Soil samples will also be collected to characterize soil for any possible contamination that may have occurred due to off-site and/or surrounding land uses, etc. The soil samples will be collected utilizing the Geoprobe sampling system ranging from zero to fifteen (0-15) feet below existing grade or to the depth of ground water to provide representation of the subsurface soil. At all borings, Geoprobe 4" macrocores will be split into two foot segments to increase shallow soil delineation capabilities due to shallow water table. A head space analysis sample will be taken for each of the soil samples collected. Screen the boring samples for stains and odors and use MultiRAE systems Photoionization Detector (PID) on any samples that appear to contain contaminants. Additionally, a head space analysis sample will be taken for each of the soil samples collected. The deepest dry soil sample and the sample with the highest PID reading will be collected and analyzed by EPA Method 8260/8270. If no elevated PID readings are found, then the two deepest dry soil samples will be submitted for analysis.

A public utility mark-out will be obtained on the subject property prior to drilling activities.

If in any case drill refusal occurs by the Geoprobe, or if mechanical boring is not possible due to the proximity to utilities, a hand auger (consisting of a three (3) inch diameter bucket, a five (5) foot long extension rod and "T" handle) will be used for shallow depths (0-5 feet).

Upon the completion of each day's sample collection, the soil samples will be transported under strict chain-of-custody to an NYSDOH-ELAP certified laboratory for the presence of Environmental Protection Agency (EPA) Test Method 8260 for Volatile Organic Compounds (VOC's) and EPA Method 8270 for Semi Volatile Organic Compounds (SVOC's) analysis. Sample collection procedure, quality assurance/quality control, and equipment decontamination procedures are further discussed in Section 5 of this work plan.

4.1.2 Groundwater Characterization

If contaminated soil extends to water table, a monitoring well will be installed and groundwater samples will be collected and analyzed for EPA Method 8260/8270.

Temporary groundwater wells will be constructed to extract groundwater samples using a Geoprobe drilling system. The wells will be constructed of with a Schedule 40, 1.0 inch diameter, 0.10- slotted PVC well screens (5 foot) set, three (3) feet into and two (2) feet above the water table. One-inch diameter solid PVC riser will be connected to the well screen and will be temporarily stubbed at grade.

The purging and sampling of the temporary monitoring wells will follow USEPA's Low Stress/Flow Groundwater Sampling Protocol (SOP# GW0001). Prior to sampling, each well will be developed to remove residual sediments and ensure good hydraulic connection with the water-bearing zone. Sampling of groundwater will be conducted after the standard groundwater parameters have stabilized.

Groundwater samples will be collected with dedicated disposable polyethylene tubing suspended in the well and connected to a low-flow peristaltic pump. Three-to-five well bore volumes will be purged from the each temporary monitoring well before the groundwater sample is collected. Each of the groundwater samples will be appropriately containerized when collected and immediately maintained in an ice-packed cooler. After each day's sampling is done, the samples will be transported under strict chain-of-custody to an NYSDOH-ELAP certified laboratory for the presence of Environmental Protection Agency (EPA) Test Method 8260 for Volatile Organic Compounds (VOC's) and EPA Method 8270 for Semi Volatile Organic Compounds (SVOC's) analysis. Please find enclosed Figure 3 for Sampling Location Map.

4.1.3 Investigation-Derived Waste

All investigation-derived waste (e.g., drill cuttings, decontamination water, etc.) will be containerized in a NYSDOT-approved 55-gallon drum temporarily staged on-site for future sampling and off-site disposal. All disposable personal protective equipment used during the site investigation will be appropriately containerized prior to off-site disposal.

5.0 QUALITY ASSURANCE/QUALITY CONTROL PROCEDURES

Appropriate Quality Assurance/Quality Control (QA/QC) Procedures were developed to ensure that suitable and verifiable data results from sampling and analysis are maintained. To achieve this objective, the quality, the quality assurance procedures detailed in this section were adopted from the NYSDEC, DER "Technical Guidance for Site Investigation and Remediation," dated May 2010 and will be followed for all sampling and laboratory analysis activities.

5.1 Quality Assurance Requirements

The person responsible for conducting the investigation and/or remediation will ensure suitable and verifiable data results from sampling and analysis. To achieve this objective, the quality assurance procedures detailed in this section will be followed for all the sampling and laboratory analysis activities. Quality Assurance/Quality Control procedures were developed to ensure that suitable and verifiable data will result from prescribed sampling and analysis programs. The procedures to be implemented during the investigation are summarized below.

5.1.1 Sampling Personnel

The activities associated with the field sampling and analysis program will be performed under supervision of a Quality Assurance Officer, in accordance with the NYSDEC, DER "Technical Guidance for Site Investigation and Remediation," May 2010. The samplers assigned will possess a minimum of two or more years experience in environmental field work.

Additionally, all samplers will have received the mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and Right-To-Know training.

5.1.2 Sampling Equipment

Individual QA/QC measures will be implemented for each of the types of equipment, field screening instruments, sample containers, etc used in the sampling program.

5.1.3 Geoprobe or Manual Sampling Equipment

Prior to arrival on the site and between sample locations, all equipment associated with the drilling system or manual sampling equipment will be decontaminated by a physical scrub with detergent (Alconox) and potable water solution and rinse with potable water.

5.1.4 Glassware

All sample glassware will be "Level A" certified-decontaminated containers supplied by a NYSDOH-Certified Commercial Laboratory. Samples analyzed VOCs will be placed in Teflon-lined containers. All samples will be preserved by cooling them to a temperature of approximately four degrees Celsius prior to transport to the laboratory.

5.1.5 Sample Documentation

The following sample identification and chain-of custody procedures will be followed to establish and maintain proper sample documentation control:

5.1.5.1 Sample Identification

A sample tag, log book and chain-of-custody forms will be used to identify samples. The following information will be recorded: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) the date the sample was secured from the source media; 5) the time the sample was secured from the source media; and 6) the person who secured the sample from the source media.

5.1.5.2 Chain-of Custody Procedures

Due to the evidential nature of samples, possession will be traceable from the time the samples are collected until they are received by the testing laboratory. A sample is considered under custody if it: is in a person's possession; it is in a person's view, after being in possession; if it is in a person's possession and they locked it up; or, it is in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples will sign, date and note the time on the Chain-of-Custody Form.

5.1.5.3 Laboratory-Custody Procedures

A designated sample custodian will accept custody of the delivered samples and verify that the information on the sample tags matches that on the Chain-of-Custody Records. Pertinent information as to delivery, pick-up, courier, etc., will be entered in the "remarks"

section. The custodian will enter the sample tag data into a bound logbook. The laboratory custodian will use the sample tag number, or assign a unique laboratory number to each sample tag, and assure that all samples will be transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian will distribute the samples to the appropriate analysts. Laboratory personnel will be responsible for the care and custody of samples, from the time they are received, until the sample is exhausted or returned to the sample custodian. All identifying data sheets and laboratory records will be retained as part of the permanent documentation. Samples received by the laboratory will be retained until after analysis and quality assurance checks are completed.

5.2 Soil Sample Collection

The soil sampling will be conducted using a Geoprobe or similar direct push sampling rig using a discrete sampling device such as a slam bar or decontaminated stainless steel auger. A new PVC liner will be installed into the sampling barrel between each sampling event. The equipment (drive point, barrel, subs and adaptors) will be decontaminated before each sample location following NYSDEC Sampling Guidelines & Protocols, 1991. The cleaning procedure will include the use of a standard laboratory grade phosphate-free detergent (Alconox) followed by a municipal-supplied potable water rinse. The retrieved samples will be placed in a laboratory supplied certified container. The samples will be stored in a cooler containing ice to maintain a temperature of 4° Celsius and delivered under strict chain-of-custody to an NYSDOH ELAP-certified Laboratory.

5.3 Groundwater Sample Collection

The groundwater sampling will be conducted using new dedicated disposable polyethylene tubing inserted into the dedicated new temporary well screen, installed via Geoprobe or similar equipment. The groundwater will be extracted through the polyethylene tubing by a low-flow peristaltic pump until 3 to 5 times the approximate volume in the polyethylene tubing and well screen have been purged. The retrieved samples will be placed in new laboratory-supplied 40 ml Teflon- lined cap glass vials for VOC's and 1 Liter brown glass containers for SVOCs. The samples will be stored in a cooler containing ice to maintain a temperature of 4° Celsius and delivered under strict chain-of-custody to an NYSDOH ELAP-certified Laboratory.

The drilling equipment used to install the temporary wells will be decontaminated before each sampling location according to NYSDEC Sampling Guidelines & Protocols, 1991. The cleaning procedure will include the use of a standard laboratory grade phosphate-free detergent (Alconox) followed by a municipal-supplied potable water rinse.

5.4 Laboratory Analysis Requirements

5.4.1 Certified and Data Acceptance

The laboratories used on this project will conform to the following specifications: For the analysis of any aqueous samples for a parameter or category of parameters for which laboratory certification exists pursuant to NYSDOH ELAP Certification, the laboratory will be certified for that specific parameter or category of parameters pursuant to NYSDOH ELAP Certification.

For the analysis of non-aqueous samples using specific analytical methods contained in the EPA Publication SW-846, "Test Methods for Evaluating Solid Waste," fourth edition, update IV, January 2008, as amended and supplemented, for a parameter or category of parameters for which certification exists pursuant to NYSDOH ELAP Certification, the laboratory will be certified for that specific parameter or category of parameters pursuant to NYSDOH ELAP Certification or, at a minimum, have obtained temporary approval to analyze regulatory samples pursuant to NYSDOH ELAP Certification.

5.4.2 Specific Requirements

Laboratories will follow all quality assurance/quality control procedures specified in the analytical methods. Sampling methods, sample preservation requirements, sample handling times, decontamination procedure for field equipment, and frequency for field blanks, field duplicates and trip blanks should conform to the appropriate analytical services protocol, unless an alternate method/procedure has been approved. Results from analysis of soils and sediments will be reported on a dry weight basis, except for those results required by the method to be otherwise reported.

6.0 SITE INVESTIGATION REPORT

Upon receipt of the laboratory analytical data, a Site Investigation report will be prepared for submission to the NYSDEC. The Site Investigation Report will include data summary tables, field notes, sample log sheets, inventory forms, chain of custody, laboratory data summary sheets, a photographic log and a sampling location map.

The results of the soil and groundwater analysis will be compared to NYSDEC CP- Soil Cleanup Guidance October 21, 2010 and NYSDEC Ambient Water Quality Standards.

The report will also include recommendations and conclusions, based on the analytical results, with an opinion on the need for any further action, if warranted. If required, a

separate Remedial Action Work Plan (RAWP) will be prepared to address environmental issues during construction and submitted for NYSDEC review.

7.0 HEALTH AND SAFETY PLAN

A site specific Health and Safety Plan has been developed and is attached to this document as Appendix A. The plan will be adhered to by all personnel involved in the Phase II investigation.

G.C. ENVIRONMENTAL, INC. APPROVALS

This Work Plan has been prepared for the following project:

35-32 College Point Boulevard
Queens, New York 11354
GCE Project No. 12-384-00

This Work Plan has been completed by the following G. C. Environmental personnel:

APPENDIX A

ASTM E 1527-05 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the **User** (entities seeking to use the ASTM E1527-05 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: 35-32 College Point Blvd., Flushing, NY

Person Interviewed/Title: Earle Tockman, General Counsel Date: 5/15/13

If known, when was the property initially developed? n/a

If different, when were the current building(s) on the property constructed? unknown

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (**Note:** If unknown, a review of title records or an environmental lien search is recommended)

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes ☑ No ☐ If you answer yes, please include an explanation in the space provided below:

Tidal Wetlands

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *User* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ☐ No ☑ If you answer yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

Yes ☑ No ☐ If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the *property*?

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:

a. Do you know the past uses of the *property*?

Yes ☑ No ☐

b. Do you know of specific chemicals that are present or once were present at the *property*?

Yes ☐ No ☑

c. Do you know of spills or other chemical releases that have taken place at the *property*?

Yes ☑ No ☐

d. Do you know of any environmental cleanups that have taken place at the *property*?

Yes ☐ No ☑

If you answered yes to any of the questions above, please include an explanation in the space provided below:

~~a.: asphalt plant. c: 1989 spill recorded by NYS DEC~~

6. The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *User* of this *ESA*, based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes ☑ No ☐ If you answer yes, please include an explanation in the space provided below:

See prior environmental reports

APPENDICES

A. Health and Safety Plan by GCE dated April 10, 2016
B. NYSDEC Corrective Action of Order on Consent dated March 18, 2016

1.0 INTRODUCTION

This document presents the Remedial Action Work Plan (RAWP) for the Site located at 35-32 College Point Boulevard, Flushing, New York, in accordance with the New York State Department of Environmental Conservation (NYSDEC) requested scope of work as stated in the NYSDEC's Corrective Action Plan of Order on Consent dated March 18, 2016. The Property is located on College Point Boulevard, Flushing, Queens County, New York, approximately 700 feet to the southwest of the intersection formed by College Point Boulevard and Northern Boulevard.

The Plan has been prepared on behalf of Willets Point Asphalt Corp (WPA) by G. C. Environmental, Inc. (GCE) to address subsurface environmental impacts resulting from previous Site activities.

The Plan includes the following sections:

Section 1: Introduction—including the purpose of the investigation and background information.

Section 2: Site History and Description- includes NYSDEC Facts about the Site, site location, legal description, geology and hydrogeology of the Site.

Section 3: Summary of Previous Environmental Reports- includes summary of previous environmental reports, recommendations, results, and recommendations achieved etc

Section 4: Remedial Action Work Plan- which includes scope of work, well installations, well survey, groundwater characterization, sampling protocols etc

Section 5: Quality Control- which includes sampling and laboratory protocols etc

Section 6: Groundwater Monitoring Report- which includes schedule for field work and reporting.

Section 7: Health and Safety Plan (HASP).

1.1 Purpose

In 2016, Willets Point Asphalt Corp. requested GCE to perform a Remedial Action Work Plan (RAWP) at the Site to investigate in conformance with NYSDEC's scope of work. The RAWP study will focus on 35-32 College Point Boulevard, Flushing, New York adhering to DEC's scope of work Corrective Action of Order on Consent, dated March 18, 2016.

This RAWP is required to ensure that any groundwater contamination does not migrate off-site. If the wells do not delineate groundwater contamination in this investigation, supplemental investigations may be necessary to further define the ultimate magnitude, extent, and source of any releases and to evaluate appropriate response actions.

This RAWP has been prepared in accordance with NYSDEC scope of work Corrective Action of Order on Consent, dated March 18, 2016.

The RAWP includes the following:

- Install a total of up to five (5) monitoring wells to investigate the potential for offsite migration of contaminants and to verify horizontal and vertical extent of contamination. Out of five wells, three (3) wells are proposed to be installed along the Flushing Creek property boundary (MW-1, MW-2 & MW-3) and two (2) wells along the Site sidewalk (MW-5 & MW-6).

- The wells will be installed by a NY-licensed well driller to a depth of approximately 10 feet below the water table. Screens will be placed across the water table to provide groundwater recharge. The wells will consist of 4" Schedule 40 PVC casing and up to fifteen (15) feet of 0.2 screen and completed with a flush-mount steel protective casing.

- The new wells will be developed to ensure adequate connection between the aquifer and surrounding soil formation. In order to determine the direction of groundwater flow, GCE will retain a NY licensed surveyor to survey the new wells for exact locations and elevations.

- Gauge free product thickness measurements (if identified) from newly installed wells MW-1, MW-2, MW-3, MW-5, MW-6 and existing well MW-41A.

- Monitoring free product recovery if separate phase product is identified in the wells. This will be done initially on a weekly basis and adjusted accordingly with Department approval and based on the presence or absence of such product.

- Any measurable product will be removed using passive means (absorbent socks) or by manual bailing.

- Monitoring if no separate phase product is identified in the wells, will be done on a quarterly basis and adjusted accordingly with Department approval and based on the presence or absence of such product.

- Summarize the results of the remedial investigation in Groundwater Monitoring Reports (Remedial Action Progress Reports), including results of the above scope, and providing, where appropriate, recommendations for future investigation (additional wells if free product is detected) and response actions.

- The remedial activity will continue until the Department approves a new remedial method or close the Spill. At such time when product is no longer measurable in the wells for a period of 12 months, a proposal for quarterly groundwater sampling will be submitted to the Department for approval. If current site owner begins site development and soil excavation, the onsite wells will be abandoned.

- The product/purged water will be stored in labeled 55-gallon drums for periodic removal and disposal by GCE.

2.0 SITE HISTORY AND DESCRIPTION:

2.1 NYSDEC Facts:

GCE reviewed the historical documents provided by Willets Point Asphalt Corp. Based on the GCE's review, the following were referenced in NYSDEC Department Facts (received by Willets Point Asphalt Corp dated December 20, 2010). Please refer to NYSDEC Facts attachment enclosed in Appendix B.

Willets Point Asphalt Corp. owned and operated a Petroleum Bulk Storage (PBS) facility at the site registered with the department as facility number 2-032182 (the PBS Facility). The PBS Facility included two successive sets of UST's, all storing No. 2 Fuel oil: a set of 2 UST's installed in 1956 and closed on or about July 1988, consisting of one 10,000 gallon tank and one 1,500 gallon tank and a set of three UST's installed in 1988 and removed in 2007, consisting of one 10,000 gallon tank and two 1,000 gallon tanks. The 1988 10,000 gallon UST was installed in or around the same location as the 1956 10,000 gallon UST and the two 1988 10,000 gallon UST's were installed approximately 50 feet from the new 10,000 gallon UST, one to the northwest and the other to the southwest of the tank.

On August 6, 1987, while monitoring a New York State funded gasoline spill remediation project originating at an off-site property, Department staff observed up to 8.95 feet of petroleum product in groundwater monitoring wells located immediately adjacent to the 10,000 gallon 1956 UST. The wells were in the sidewalk at the front of the site, then an asphalt plant, along College Point Boulevard.

On August 20, 1987, the State's remediation contractor collected samples from two wells along College Point Boulevard adjacent to the 10,000 gallon UST. Analysis identified both samples as No 2 fuel oil.

On August 28, 1987, the State's remediation contractor collected a product sample from the monitoring well next to the 10,000 gallon 1956 UST, and another sample of the product in the tank. Subsequent lab analysis of the samples for fingerprint identification indicated a match, with no asphaltic compounds present.

On August 31, 1987, the 10,000 gallon 1956 UST failed three hydrostatic tightness tests performed by a qualified professional technician and witnessed by the department staff. In the course of three failing tests, approximately 18 gallons of petroleum product was released from the tank. The monitoring well next to the tank was gauged before and after the tests, and showed an increase in product thickness. The technician reported the system failure and petroleum releases to the NYSDEC spills hotline, opening NYSDEC spill number 8704514.

According to department records, the 1956 USTs were simply closed on or about July 1, 1988

and replaced with the 1988 UST's. Regular monthly monitoring of wells along College Point Boulevard, including wells directly adjacent to the 10,000 gallon 1956 UST location, revealed the continuous presence of free petroleum product thickness of up to 26 inches both before and after the tank was closed.

In addition to the two discharges associated with the 10,000 gallon 1956 UST, an October 1, 1991 Phase I ESA noted surface petroleum staining at the site, including the areas around both 1000 gallon 1988 UST's and beneath an unregistered 550 gallon AST storing kerosene, indicating three additional unreported spills at the site.

In the area around the 1000 gallon UST by the office building, approximately 50 feet northwest of the 10,000 gallon UST, analysis of subsurface samples taken on October 9, 1991 at a shallow depth of two to four feet exhibited significant petroleum contamination.

In the area around the unregistered 550 gallon kerosene tank, analysis of soil and groundwater samples taken on October 9, 1991 exhibited significant petroleum contamination. Sampling attempts on October 9, 1991, in the area of the other 1000 gallon UST, supplying an electrical generator approximately 50 feet southwest of the 10,000 gallon UST, failed due to subsurface refusal. Later attempts, confirmed the presence of heavy petroleum contamination at this location.

The October 1991, Phase II Subsurface sampling report concluded, " Field observation and lab results indicate significant amounts of hydrocarbons are present in the soil and groundwater beneath the property, the extent and origin of which remain undetermined"

In May 1992, a soil boring in the area of the 1956 and 1988 10,000 gallon UST's exhibited a petroleum odor at a shallow depth of 0.5 to 1.5 feet, indicating the continuing presence of a recent discharge in that area.

In May 1992, a soil boring in the area of the 1000 gallon office building UST exhibited a strong petroleum odor, look, feel throughout.

In May 1992, a soil boring in the area of the 550 gallon kerosene tank exhibited a strong petroleum odor, look, feel throughout and petroleum product was observed coming out of the sampling bore hole.

On August 25, 1992, the State's contractor again identified petroleum product in the well adjacent to the 10,000 gallon UST as No. 2fuel oil, again indicating a discharge from the UST.

On September 1, 1992, the State' contractor recommended further subsurface investigation to confirm the source of the persistent No 2 fuel oil in the onsite monitoring wells.

In February 1993, the State's contractor installed monitoring wells up gradient to the site to determine whether an offsite source was causing or contributing to the onsite contamination nearest to the property line at the 1000 gallon UST. No petroleum product was detected in soil or

groundwater samples taken from the new wells. The plume that has been identified as No 2 fuel oil is in close proximity to a 1000 gallon fuel oil tank that supplies the generators that provide electrical power for the asphalt plant. Data collection has produced results strongly implicating the 1000 gallon fuel oil tank.

In April 1993, hydrogeologists were able to sample the area directly around the 1000 gallon generator UST, where they had earlier met subsurface refusal. According to a May 27, 1993 subsurface investigation report, soil samples taken on April 28, 1993 from monitoring well FN-13 showed extensive petroleum contamination, as follows; a sample taken from a depth of 2 to 5 feet exhibited heavy petroleum odor, a sample taken from a depth of 5 to 10 feet was oil saturated and a sample taken from a depth of 10 to 15 feet was petroleum contaminated.

On May 16, 1994, samples from 4 monitoring wells adjacent to and near the 10,000 gallon UST and the 1000 gallon generator UST exhibited petroleum odors at every depth below the surface asphalt from 6 inches to 15 feet.

In June 1995, the state contractor prepared a floating product plume map showing a petroleum plume encompassing the area of the 10,000 gallon UST and the 1000 gallon generator UST. In addition sampling results detected the highest concentrations of total petroleum hydrocarbons in a separate zone around the other 1000 gallon UST near the office building.

On February 28, 1997, product samples were taken from three monitoring wells in the area of the USTs and from the contents of all the three UST's. All six samples were determined to be No. 2 fuel oil.

On April 2, 1998, the State's contractor reported that monitoring data from the area wells" indicate that groundwater flows from the center of the asphalt plant to neighboring properties" and the measurements of product thickness placed the 10,000 gallon UST in the middle of the subsurface plume of No 2 oil.

On February 25, 2000, Department staff inspected the site and observed numerous buckets of oil overflowing onto the ground and various surface stains from petroleum discharges on the ground.

Throughout this period and up to 2009 when the offsite spill remediation project was closed, the spatial and temporal distribution of soil and groundwater contamination documented pursuant to that offsite site investigation revealed onsite discharges from sources including but not limited to onsite storage tanks the extensive piping lines associated with those tanks and the documented areas of surface spills noted above. Moreover, throughout this period no free phase product was detected in up-gradient wells, confirming the onsite source of the remaining contamination.

On September 5, 2007, the Departments contractor informed the Department that during a site visit it observed that nine on-site State owned monitoring wells had been destroyed including the wells adjacent to the UST locations. Department staff subsequently visited the site and confirmed the destruction of wells.

2.2 Site Description

2.2.1 Location and Legal Description

The Property is located in the College Point Boulevard, Flushing, Queens County, New York, approximately 700 feet to the southwest of the intersection formed by College Point Boulevard and Northern Boulevard. The Property consists of approximately 1.2 acres and is an irregular-shaped parcel of vacant land.

The subject Property is currently vacant land with no structures onsite and is located on Block 4963 and consists of Lots 212 and 249. The Property is bounded to the north by 35-20 College Point Boulevard, to the south by 36-28 College Point Boulevard, to the east by College Point Boulevard and to the west by the Flushing River.

According to New York City Zoning maps, the subject Property is zoned as M2-1, which corresponds to a manufacturing zoning district.

2.2.2 Site Geology

According to the 1970 Bedrock Geologic Map of New York, Lower Hudson Sheet and the 1989 Surficial Geologic Map of New York, Lower Hudson Sheet prepared by the University of the State of New York, the geology in the area of the Property consists of Till (clay, silt-clay, boulder clay) usually poorly sorted diamict, deposition beneath glacier ice, relatively impermeable (loamy matrix) with variable clast content and Hartland Formation (schist's, amphibolites).

According to prior Phase I report submitted by Gannett Fleming Engineers in August 2005, the general geology of Queens County, as part of Long Island, is comprised of unconsolidated sediments deposited upon south easterly dipping consolidated bedrock. The bedrock is crystalline and of Precambrian age. The overlying sediments range from upper cretaceous to Pleistocene age.

Based on the prior Phase I report submitted by Gannett Fleming Engineers in August 2005, depth to groundwater in the vicinity of the Property is approximately 10 feet below grade.

Based on the information gathered during the soil borings during the Phase II investigation, the geology in the area of the Site to the explored depth of approximately 10 feet below grade consists of approximately 2 to 3 feet of fill, represented by dark-gray silt with asphalt stones, underlain by approximately 7 feet of yellow-brown medium to fine-coarse sand with dark clay.

According to prior Phase I report submitted by Gannett Fleming Engineers in August 2005, the general geology of Queens County, as part of Long Island, is

comprised of unconsolidated sediments deposited upon south easterly dipping consolidated bedrock. The bedrock is crystalline and of Precambrian age. The overlying sediments range from Upper Cretaceous to Pleistocene age.

2.2.3 Site Hydrogeology

Based on the prior Phase I report submitted by Gannett Fleming Engineers in August 2005, depth to groundwater in the vicinity of the Property is approximately 10 feet below grade.

2.3 Sensitive Environmental Receptors

According to the Digital US Department of the Interior, Fish and Wildlife Service, National Wetlands Inventory Map for Flushing, Flushing Quadrangle, the nearest designated wetland is located approximately 0.01 miles to the northeast of the Property, which is designated as Estuarine, Subtidal, Unconsolidated Bottom water regime (E1UBL). According to the Digital New York State Department of Environmental Conservation (DEC) Freshwater Wetlands Map for Flushing, Flushing Quadrangle, the nearest designated wetland is located approximately 1.26 miles to the north of the Property.

3.0 PREVIOUS ENVIRONMENTAL REPORTS

This section contains a summary of several previous investigations and interim remedial actions that have been undertaken. The recommended measures have been implemented as stated.

3.1 Summary of the Phase I ESA Reports (GFE 2005 & HTEC 2007)

According to the prior Phase I Environmental Site Assessment (ESA) report submitted by Gannett Fleming Engineers (GFE) in August 2005, the Property formerly was an asphalt production facility and was in operations since 1987 producing hot mix paving materials. Historically the subject Property has been in use as an asphalt production facility since the late 1950's. According to Historical Sanborn Fire Insurance Maps, the subject Property had been utilized as a coal storage and distribution facility through 1951. The subject Property is currently scrap metal recycling with two (2) story office building and is located on Block 4963 and consists of Lots 212 and 249. The Property is bounded to the north by 35-20 College Point Boulevard, to the south by 36-28 College Point Boulevard, to the east by College Point Boulevard and to the west by the Flushing River.

According to New York City Zoning maps, the subject Property is zoned as M2-1, which corresponds to a manufacturing zoning district.

The Phase I report for the Property prepared by Gannett Fleming Engineers in August 2005 and Phase I report submitted by Hydro Tech Environmental, Corp (HTEC) in January 2007 did not identify any open spill files associated with this site other than 0105316 (this spill case was

closed as of 10/24/2005) and 7900995 (this spill case was closed as of 08/03/2009),. Closed spill 7900995 contained files on the investigation of the site and findings of on-site set forth above.

Previous Phase I reports outlined the following:

- The review of the federal databases did not identify any sites or issues that are considered a recognized environmental condition (REC) to the subject Property.

- The review of the state databases identified several sites and incidents which may present a de minimus environmental concern to the subject property due to their inferred upgradient groundwater flow path but are not considered RECs.

- The adjacent site, 36-30 College Point Boulevard, presents a concern due to the reported spill and location adjacent to the subject Property. The subject Property's reported Spill Case (#0105316) is a REC since it is currently listed as an active case by the NYSDEC (this spill case is closed as of October 26, 2005).

- The various 55-gallon drums and containers of petroleum products located outdoors within the subject property represent a de minimus environmental concern due to their potential to spill or leak onto the ground.

- Based on the age of the building, ACM's and LBP are suspected in the administrative building.

Based on the above findings, the following recommendations were made:

- A storm water management system and storm water pollution prevention plan should be developed for the subject Property.

- The various outdoor 55-gallon drums and containers of petroleum products should be consolidated into a proper code compliant drum storage area with spill protection and weather protection.

- Appropriate assessment, investigative and remedial measures should be implemented to satisfactorily obtain case closure for the NYSDEC active spill case (this spill case was closed as of October 26, 2005).

3.2 Phase II Environmental Site Assessment- SPECTRA (2007)

The Phase II report for the Property prepared by Spectra Environmental Group, Inc. (SPECTRA) in February 2007 outlined the following:

On January 31, 2007, SPECTRA directed Zebra Environmental Corp. (Zebra) to advance eight soil borings (SB-1 through SB-8) at the site using a geoprobe direct push drill rig. Soil borings were advanced to a maximum depth of fifteen (15) feet bgs or until the soil-groundwater interface was located. One soil sample was collected for laboratory analysis from the soil increment that exhibited the highest PID reading at each of the eight soil boring locations. Soil samples were analyzed for VOC's, SVOC's and Priority Pollutant Metals. Soil samples from soil borings SB-1, SB-4, SB-5, SB-6 and SB-7 were also analyzed for TPH for soil disposal purposes. In addition to the soil samples addressed above, one composite soil sample was also collected from containerized soil cuttings and was analyzed for TCLP metals, PCB's, Flashpoint, Ignitability, pH, Reactivity and TPH.

On January 31, 2007, SPECTRA directed Zebra Environmental Corp. (Zebra) to install three monitoring wells MW-1, MW-2 and MW-3. Groundwater monitoring wells were advanced to a depth of 15 feet bgs. On February 1, 2007, groundwater samples were collected from the three monitoring wells and analyzed for VOC's, SVOC's and Priority Pollutant Metals.

On February 1, 2007, a GPR survey was conducted by SPECTRA at the facility to identify and locate any unknown UST's that may be present at the site. On February 12, 2007, Willets Point Asphalt personnel conducted excavation activities in the area where the GPR survey identified an underground feature. Excavation activities revealed that the underground feature was a buried steel sheet (which was found about 2 feet bgs).

Summary of Site Soil and Groundwater Analytical Results

Soil analytical results were compared to NYSDEC cleanup levels identified in the Division of Environmental Remediation TAGM # 4046/STARS-1, Recommended Soil Cleanup Objectives. Groundwater analytical results were compared to NYSDEC Title 6 NYCRR Part 703, Water Quality Standards for surface water and groundwater.

Soil sample results indicate that none of the borings have reportable concentrations of VOC's that exceed NYSDEC TAGM # 4046 Guidance Values or Title 6 NYCRR Subpart 375-Restricted Use Soil Cleanup Objectives.

With regard to SVOC's, soil boring SB-1 had two parameters (2- Methylnaphthalene and Naphthalene) that exceed NYSDEC TAGM# 4046 Guidance Values; however, only Naphthalene exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Additionally, soil boring SB-3 had one parameter (3& 4 Methylphenol (m & p cresol) that exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives; however, this parameter did not exceed TAGM# 4046 Guidance Values.

Soil boring SB-1 results had one metal (Nickel), exceed the NYSDEC TAGM # 4046 Guidance Value and one metal (chromium) that exceeded the Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Soil Borings SB-2, SB-5, SB-6, SB-7 and SB-8 results had one metal (Zinc), exceed TAGM# 4046 Guidance Value; however, none of the concentrations exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Soil boring SB-3 results

had two metals (Mercury and Zinc), exceed TAGM# 4046 Guidance Value; however, only Mercury exceeded Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives. Soil boring SB-4 results had one metal (chromium), exceed Title 6 NYCRR Subpart 375- Restricted Use Soil Cleanup Objectives; however, the concentration did not exceed NYSDEC TAGM # 4046 Guidance Value.

TPH, TCLP Metals, PCB's, Flashpoint, Ignitability, pH and Reactivity analysis was completed for disposal purposes only. Unidentified TPH levels in the soil samples ranged from 2, 400 ppm to 17, 000 ppm. PCB's were not detected, flashpoint was greater than 200 degrees F, Ignitability was reported as passing, pH was reported at 7.55, Reactivity was reported as less than the reporting limits and the following TCLP Metals were detected at less than the regulatory criteria for hazardous waste- Arsenic at 0.04 ppm (TCLP Regulatory Level for arsenic is 5ppm), Barium at 0.83 ppm (TCLP Regulatory Level for barium is 100 ppm) and Lead at 0.056 ppm (TCLP Regulatory Level for lead is 5 ppm)

New monitoring well groundwater sample results indicated that two locations (MW-1 and MW-2) had a concentration of one VOC (MTBE and 1,2,4- Trimethylbenzene, respectively) that exceeded Title 6 NYCRR Part 703- Water Quality Standards, and two locations (MW-2 and MW-3) had a reportable concentration of one metal (lead) that exceeded Title 6 NYCRR Part 703- Water Quality Standards. SVOC's were not detected in any of the three monitoring wells.

With regard to the ASTM REC's identified in the Phase I reports prepared by GFE and HTEC;

Phase I REC's- GFE

Adjacent site located at 36-30 had an active NYSDEC Spill No. 01-05316- The NYSDEC database indicates this spill was closed on October 24, 2005; therefore no further action was s recommended with regard to this REC.

Phase I REC's- HTEC

Historical presence of gasoline UST- Excavation activities revealed that the underground feature was a buried steel plate. Since it had been confirmed that the only underground feature identified by the GPR survey is not a UST, no further action was s recommended with regard to this REC.

Current presence of fuel oil UST's- According to the Willets Point Asphalt personnel, the following UST's existed at the site:

A 10,000 gallon UST that stored No.2 fuel oil for site process activities

A 1000 gallon UST that stored No.2 fuel oil to heat product in the AC tanks

A 1000 gallon UST that stored No. 2 fuel oil for generators.

Current USTs were not registered with the NYSDEC- No further action was recommended with regard to this REC except to continue tank tightness testing in accordance with applicable regulatory requirements.

3.3 Roux Associates- UST Removal (2007)

In August 2007, Roux Associates personnel visually observed the removal of the three USTs from the site. Upon their excavation, no holes, leaking product, or other visible tank integrity issues were observed by Roux Associates personnel. Based on the soil sampling done by Roux Associates in the UST excavation pits, it did not appear that the former oil containing UST's impacted the soils at the site. Also Roux Associates installed three groundwater monitoring wells identified as MW-1 through MW-3. The groundwater results revealed that no VOC's or metals (filtered) were detected at concentrations exceeding their standards. Several SVOC's were detected at concentrations exceeding their standards. TPH was 0.6 mg/kg. Based on the presence of floating product in two of the three monitoring wells and elevated PAH's in the groundwater sample from MW-3, groundwater beneath the site was impacted by product.

3.4 Limited Phase II Investigation- G C Environmental, Inc. (2011)

On May 19, 2011, GCE performed a Phase II ESA, which consisted of the geophysical survey, advancement of twelve (12) soil borings (SB-1 through SB-12) with subsequent soil sampling, to address the supplemental soil sampling required by NYSDEC related to the 1987 spills. GCE's investigation revealed the following:

Visual and olfactory contamination (petroleum odor) and elevated PID readings were detected in most of the soil borings.

Petroleum stains were detected in soil borings SB-4, SB-5, SB-7, SB-9, SB-11 and SB-12.

Laboratory results of one (1) analyzed soil sample (SB-8, hydrologically cross/down gradient from former 10,000 gallon UST and former 1,000 gallon UST) indicated one of the B/N's namely; Benzo (a) pyrene (4.7 milligram per kilogram (mg/kg) was detected above the soil cleanup objectives of 1.1 mg/kg for this compound. The remaining VOC's and B/N's detected were below the soil cleanup objectives. It should be noted that Benzo (a) pyrene is a high molecular weight, 5-ring PAH, and an EPA Priority Pollutant and EPA-classified carcinogen. Twelve samples were analyzed, one from each boring and eleven samples met the NYSDEC Part 375 6.8(b) Restricted Use Soil Cleanup Objectives for Industrial Zoned land use.

Recommendations by GCE in 2011

Based on the general observation that petroleum staining, odors and elevated PID readings increased with depth of the samples, GCE recommended that additional investigation of up-gradient locations be conducted to determine if offsite sources had impacted the subject Property. Based on GCE'sobservations, analysis of documents provided and the current data, there were no on-site sources of petroleum contamination and incidental spills from the former asphalt plant

operation had since been remediated and closed as shown in the closure of NYSDEC spill numbers 0105316, 0008962 and 7900995. In addition, the sampling results taken in the former location of the removed underground storage tanks and associated piping in August 2007 indicated no contamination exceeding regulatory limits; therefore offsite sources of contamination were the most probable source of the product that continued to impact the subject Property.

GCE recommended to excavate the area and collect post excavation samples near soil boring SB-8 (hydrologically cross/down gradient from former 10,000 gallon UST and former 1,000 gallon UST) where Benzo (a) pyrene (4.7 milligram per kilogram (mg/kg)) was detected above the soil cleanup objectives of 1.1 mg/kg.

3.5 Excavation of impacted soils- G C Environmental (2011) /Recommendations achieved

As per the recommendation, on July 27, 2011 GCE arrived on site at 11:00 am following the completed excavation of approximately 15 cubic yards of impacted soils by which a cavity of thirteen foot wide by thirteen foot long by 30 inches deep was created. GCE collected end point samples from this excavation for 8270 analysis, documented as end points (EP) 1 -5. A sample was collected from the center of the excavation at a depth of thirty inches (EP-5), as well as from the center of each sidewall (North/East/South/West) at a depth of twenty inches (EP 1-4). Additionally, one (1) sample was collected of the composite material from the excavation and analyzed for disposal facility requirements. In total, six (6) samples were collected and analyzed.

As per the recommendation, on August 3, 2011 GCE arrived on site at 11:00 am following the completed further excavation of approximately 11 cubic yards of impacted soils by which the existing cavity was extended by five feet on the eastern wall and five feet on the southern wall to create a cavity approximately eighteen foot wide by eighteen foot long by 30 inches deep (see Figure 2). GCE collected sidewall samples for 8270 analysis from this excavation at a depth of twenty inches on the east (EP-1) and south (E-2) walls. Upon review of analysis it was determined that the sample from the South wall (EP-2) of the cavity exceeded target values and further excavation was recommended.

As per the recommendation, on August 9, 2011 GCE arrived on site at 3:00 pm following the backfill of the existing cavity with clean sand and completed further excavation of approximately 11 cubic yards of impacted soils, by which a new cavity of approximately eighteen foot long by six foot long by thirty inches deep had been created. GCE collected sidewall samples from the cavity for 8270 analysis, at a depth of twenty inches in the center of the south (EP-1) wall. Upon review of analysis it was determined that the sample from the South wall (EP-1) of the cavity did not exceed target values and this portion of the recommendation is complete. This excavation was subsequently backfilled with clean sand. All contaminated soil was disposed of at the Residuals Management Services Facility in Deer Park, New York.

On September 08, 2011, GCE installed three temporary monitoring wells (MW-4, MW-5 & MW-6) and gauge existing monitoring well MW-41A for product thickness, located

hydrologically up-gradient of the subject Property in order to determine if the offsite sources of contamination were the most probable source that may have had impacted the subject Property.

Prior to commencement of the work, GCE arranged for a public underground utility mark out to be performed at the Site. One (1) monitoring well (MW-4) was installed on the south eastern portion of the Property (west side of College Point Boulevard, on the side walk, near auto body shop), hydrologically up/ cross gradient and approximately 45 feet from the subject Property. One (1) monitoring well (MW-5) was installed on the north eastern portion of the Property (east side of College Point Boulevard, on the side walk), hydrologically up-gradient and approximately 85 feet from the subject Property. One (1) monitoring well (MW-6) was installed on the south eastern portion of the Property (east side of College Point Boulevard, on the side walk), hydrologically up gradient and approximately 145 feet from the subject Property. Additionally, existing monitoring well MW-41A was gauged for free product thickness, which was located on the south eastern portion of the Property (outside the property fence, west side of College Point Boulevard) hydrologically up gradient and approximately 5 feet from the subject Property.

Groundwater Sampling

Prior to sampling, the newly installed wells were allowed to stabilize and equilibrate with the aquifer for approximately 15-20 minutes. The water sample was obtained by utilizing half (1/2)-inch diameter disposable polyethylene tubing.

All groundwater samples were logged and transferred under a chain-of-custody protocol to the Phoenix Environmental Laboratory (PEL), Manchester, Connecticut, a New York State ELAP-approved laboratory. Ground water samples collected were analyzed for the presence of VOC's using EPA Method 8260 and B/N's using EPA Method 8270. Groundwater sample MW-5 (for semivolatiles (B/Ns)) was accidentally lost by PEL during their extraction process, so MW-5 monitoring well was sampled again, logged and transferred under a chain-of-custody protocol to PEL for EPA Method 8270 analysis.

Groundwater Sampling Results

The groundwater analytical results were compared to the DEC Ambient Water Quality Standards & Guidance Values (Groundwater Standards).

Monitoring well MW-4 (Temporary Well Point - TWP)

Laboratory results of analyzed MW-4 groundwater sample indicated four (4) of the volatiles and nine (9) of the B/Ns namely; Isopropylbenzene (13 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, N-Butylbenzene (16 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, N-Propylbenzene (15 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, Sec-butyl benzene (34 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this

compound, Acenaphthene (21 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 20 ug/l for this compound, Benz (a) anthracene (2.1 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benz (b) fluoranthene (1.9 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benzo (k) fluoranthene (0.5 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Bis (2-ethylhexyl) phthalate (53 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 5 ug/l for this compound, Chrysene (3.9 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Indeno (1,2,3-cd) pyrene (0.38 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Naphthalene (48 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 10 ug/l for this compound and Phenanthrene (330 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 50 ug/l for this compound.

Monitoring well MW-5 (TWP)

Laboratory results of analyzed MW-5 groundwater sample indicated four (4) of the B/Ns namely; Benz (a) anthracene (0.1 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benz (b) fluoranthene (0.14 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Chrysene (0.008 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound and Indeno (1,2,3-cd) pyrene (0.38 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound.

Monitoring well MW-6 (TWP)

Laboratory results of analyzed MW-6 groundwater sample indicated five (5) of the B/Ns namely; Benz (a) anthracene (2.2 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benz (b) fluoranthene (3.3 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Benzo (k) fluoranthene (0.8 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound, Chrysene (1.9 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound and Indeno (1,2,3-cd) pyrene (1.1 microgram per litre (ug/l)) was detected above the Groundwater Quality Standards of 0.002 ug/l for this compound.

The remaining VOCs and B/Ns were either non detectable or detected below their detection limit. It should be noted that Isopropylbenzene is an aromatic hydrocarbon and is a constituent of crude oil and refined fuels. It should be noted that n-butyl benzene is highly flammable, less dense and insoluble in water, and is used to make plastics and as solvent. It should be noted that n-propylbenzene and sec-butyl benzene is highly flammable, less dense and insoluble in water, and is mildly toxic by ingestion and inhalation. Acenaphthene is a polycyclic aromatic hydrocarbon (PAH) and is a constituent of coal tar. Naphthalene is classified as a benozenoid

polycyclic aromatic hydrocarbon (PAH). It should be noted that Benz (a) anthracene is a high-molecular-weight, 4-ring polycyclic aromatic hydrocarbon (PAH) and an EPA Priority Pollutant, Benz (a) anthracene is an EPA classified probable human carcinogen. It should be noted that Benzo (b) fluoranthene is a high-molecular-weight, 5-ring Polycyclic Aromatic Hydrocarbon PAH and an EPA Priority Pollutant, Benzo (b) fluoranthene is an EPA classified carcinogen for regulatory purposes. It should be noted that Benzo (k) fluoranthene is a polycyclic aromatic hydrocarbon and anticipated human carcinogen. It should be noted that Bis (2-ethylhexyl) phthalate is an organic compound and is used as a plasticizer. It should be noted that Chrysene is a polycyclic aromatic hydrocarbon, constituent of coal tar and suspected human carcinogen. It should be noted that Indeno (1, 2, 3-cd) pyrene is a high molecular weight, 5-ring PAH, and an EPA Priority Pollutant and EPA-classified carcinogen. Naphthalene is the most abundant single component of coal tar. The International Agency for Research on Cancer (IARC) classifies naphthalene as possibly carcinogenic to humans and animals. It should be noted that Phenanthrene is a poly cyclic aromatic hydrocarbon and is used in making plastics, dyes and pesticides.

Free Product

MW-41A was gauged for free product thickness, which is located on the south eastern portion of the Property (outside the property fence, west side of College Point Boulevard) approximately 5 feet from the subject Property. Free product thickness was measured using a Solinst oil/water interface probe equipped with a fiberglass measuring tape. The depth of free product from top of the well was measured as 6.70 feet and the depth of water was measured as 7.30 feet. The difference between depth of water and depth of free product gives the free product thickness which is 0.6 feet (7.2 inches). Petroleum stains and odor were detected.

4.0 REMEDIAL ACTION WORK PLAN (RAWP)

Remedial Action Work Plan

The RAWP is being required by the NYSDEC. The objective of the Remedial Action Work Plan is to characterize the subsurface groundwater at the Site..

This Work Plan provides a summary of history of land use, any prior environmental assessments or information, a proposed RAWP sampling program, sampling protocols and associated Health and Safety Plan (HASP).

The Remedial Action Work Plan includes the following:

- Install a total of up to five (5) monitoring wells to investigate the potential for offsite migration of contaminants and to verify horizontal and vertical extent of contamination. Out of five wells, three (3) wells are proposed to be installed along the Flushing Creek property boundary (MW-1, MW-2 & MW-3) and two (2) wells along the Site sidewalk (MW-5 & MW-6).

- The wells will be installed by a NY-licensed well driller to a depth of approximately 10 feet below the water table.. Screens will be placed across the water table to provide groundwater recharge. The wells will consist of 4" Schedule 40 PVC casing and up to fifteen (15) feet of 0.2 screen and completed with a flush-mount steel protective casing.

- The new wells will be developed to ensure adequate connection between the aquifer and surrounding soil formation. In order to determine the direction of groundwater flow, GCE will retain a NY licensed surveyor to survey the new wells for exact locations and elevations.

- Gauge free product thickness measurements (if identified) from newly installed wells MW-1, MW-2, MW-3, MW-5, MW-6 and existing well MW-41A.

- Monitoring free product recovery if separate phase product is identified in the wells. This will be done initially on a weekly basis and adjusted accordingly with Department approval and based on the presence or absence of such product.

- Any measurable product will be removed using passive means (absorbent socks) or by manual bailing.

- Monitoring if no separate phase product is identified in the wells, will be done on a quarterly basis and adjusted accordingly with Department approval and based on the presence or absence of such product.

- Summarize the results of the Remedial investigation in Groundwater Monitoring Reports (Remedial Action Progress Reports), including results of the above scope, and providing, where appropriate, recommendations for future investigation (additional wells if free product is detected) and response actions.

- The remedial activity will continue until the Department approves a new remedial method or closes the Spill. At such time when product is no longer measurable in the wells for a period of 12 months, a proposal for quarterly groundwater sampling will be submitted to the Department for approval. If the current site owner begins site development and soil excavation, the onsite wells will be abandoned.

- The product/purged water will be stored in labeled 55-gallon drums for periodic removal and disposal by GCE.

4.1 Groundwater Characterization

This section of the Work Plan provides detailed procedures for collecting and analyzing samples. The remedial investigation includes collection of groundwater samples in response to NYSDEC scope of work.

4.1.1 Groundwater Characterization

A public utility mark-out will be obtained on the subject property prior to drilling activities.

Permanent groundwater wells will be constructed to extract groundwater samples using a Hollow Stem Auger (HSA) drilling system. The wells will be constructed of with a Schedule 40, 4.0 inch diameter, 0.10- slotted PVC well screens (up to 15 foot screen and 5 foot riser).

The purging and sampling of the monitoring wells will follow USEPA's Low Stress/Flow Groundwater Sampling Protocol (SOP# GW0001). Prior to sampling, each well will be developed to remove residual sediments and ensure good hydraulic connection with the water-bearing zone. Sampling of groundwater will be conducted after the standard groundwater parameters have stabilized.

Groundwater samples will be collected with dedicated disposable polyethylene tubing suspended in the well and connected to a low-flow peristaltic pump. Three-to-five well bore volumes will be purged from the each permanent monitoring well before the groundwater sample is collected. Each of the groundwater samples will be appropriately containerized when collected and immediately maintained in an ice-packed cooler. After each day's sampling is done, the samples will be transported under strict chain-of-custody to an NYSDOH-ELAP certified laboratory for the presence of Environmental Protection Agency (EPA) Test Method 8260 for Volatile Organic Compounds (VOC's) and EPA Method 8270 for Semi Volatile Organic Compounds (SVOC's) analysis. Please find enclosed Figure 2 for Sampling Location Map.

4.1.2 Investigation-Derived Waste

All investigation-derived waste (e.g., drill cuttings, decontamination water, etc.) will be containerized in a NYSDOT-approved 55-gallon drum temporarily staged on-site for future sampling and off-site disposal. All disposable personal protective equipment used during the site investigation will be appropriately containerized prior to off-site disposal.

5.0 QUALITY ASSURANCE/QUALITY CONTROL PROCEDURES

Appropriate Quality Assurance/Quality Control (QA/QC) Procedures were developed to ensure that suitable and verifiable data results from sampling and analysis are maintained. To achieve this objective, the quality, the quality assurance procedures detailed in this section were adopted from the NYSDEC, DER "Technical Guidance for Site Investigation and Remediation," dated May 2010 and will be followed for all sampling and laboratory analysis activities.

5.1 Quality Assurance Requirements

The person responsible for conducting the investigation and/or remediation will ensure suitable and verifiable data results from sampling and analysis. To achieve this objective, the quality assurance procedures detailed in this section will be followed for all the sampling and laboratory analysis activities. Quality Assurance/Quality Control procedures were developed to ensure that suitable and verifiable data will result from prescribed sampling and analysis programs. The procedures to be implemented during the investigation are summarized below

5.1.1 Sampling Personnel

The activities associated with the field sampling and analysis program will be performed under supervision of a Quality Assurance Officer, in accordance with the NYSDEC, DER "Technical Guidance for Site Investigation and Remediation," May 2010. The samplers assigned will possess a minimum of two or more years' experience in environmental field work.

Additionally, all samplers will have received the mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and Right-To-Know training.

5.1.2 Sampling Equipment

Individual QA/QC measures will be implemented for each of the types of equipment, field screening instruments, sample containers, etc used in the sampling program.

5.1.3 Hollow Stem Auger or Manual Sampling Equipment

Prior to arrival on the site and between sample locations, all equipment associated with the drilling system or manual sampling equipment will be decontaminated by a physical scrub with detergent (Alconox) and potable water solution and rinse with potable water.

5.1.4 Glassware

All sample glassware will be "Level A" certified-decontaminated containers supplied by a NYSDOH-Certified Commercial Laboratory. Samples analyzed VOCs/BNs will be placed in Teflon-lined containers. All samples will be preserved by cooling them to a temperature of approximately four degrees Celsius prior to transport to the laboratory.

5.1.5 Sample Documentation

The following sample identification and chain-of custody procedures will be followed to establish and maintain proper sample documentation control:

5.1.5.1 Sample Identification

A sample tag, log book and chain-of-custody forms will be used to identify samples. The following information will be recorded: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) the date the sample was secured from the source media; 5) the time the sample was secured from the source media; and 6) the person who secured the sample from the source media.

5.1.5.2 Chain-of Custody Procedures

Due to the evidential nature of samples, possession will be traceable from the time the samples are collected until they are received by the testing laboratory. A sample is considered under custody if it: is in a person's possession; it is in a person's view, after being in possession; if it is in a person's possession and they locked it up; or, it is in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples will sign, date and note the time on the Chain-of-Custody Form.

5.1.5.3 Laboratory-Custody Procedures

A designated sample custodian will accept custody of the delivered samples and verify that the information on the sample tags matches that on the Chain-of-Custody Records. Pertinent information as to delivery, pick-up, courier, etc., will be entered in the "remarks" section. The custodian will enter the sample tag data into a bound logbook. The laboratory custodian will use the sample tag number, or assign a unique laboratory number to each sample tag, and assure that all samples will be transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian will distribute the samples to the appropriate analysts. Laboratory personnel will be responsible for the care and custody of samples, from the time they are received, until the sample is exhausted or returned to the sample custodian. All identifying data sheets and laboratory records will be retained as part of the permanent documentation. Samples received by the laboratory will be retained until after analysis and quality assurance checks are completed.

5.2 Groundwater Sample Collection

The groundwater sampling will be conducted using new dedicated disposable polyethylene tubing inserted into the dedicated new temporary well screen, installed via Geoprobe or similar equipment. The groundwater will be extracted through the polyethylene tubing by a low-flow peristaltic pump until 3 to 5 times the approximate volume in the polyethylene tubing and well screen have been purged. The retrieved samples will be placed in new laboratory-supplied 40 ml Teflon- lined cap glass vials for VOC's and 1 Liter brown glass containers for SVOCs. The samples will be stored in a cooler containing ice to maintain a temperature of 4^{o} Celsius and delivered under strict chain-of-custody to an NYSDOH ELAP-certified Laboratory.

The drilling equipment used to install the wells will be decontaminated before each sampling location according to NYSDEC Sampling Guidelines & Protocols, 1991. The cleaning procedure will include the use of a standard laboratory grade phosphate-free detergent (Alconox) followed by a municipal-supplied potable water rinse.

5.3 Laboratory Analysis Requirements

5.3.1 Certified and Data Acceptance

The laboratories used on this project will conform to the following specifications: For the analysis of any aqueous samples for a parameter or category of parameters for which laboratory certification exists pursuant to NYSDOH ELAP Certification, the laboratory will be certified for that specific parameter or category of parameters pursuant to NYSDOH ELAP Certification.

For the analysis of non-aqueous samples using specific analytical methods contained in the EPA Publication SW-846, "Test Methods for Evaluating Solid Waste," fourth edition, update IV, January 2008, as amended and supplemented, for a parameter or category of parameters for which certification exists pursuant to NYSDOH ELAP Certification, the laboratory will be certified for that specific parameter or category of parameters pursuant to NYSDOH ELAP Certification or, at a minimum, have obtained temporary approval to analyze regulatory samples pursuant to NYSDOH ELAP Certification.

5.3.2 Specific Requirements

Laboratories will follow all quality assurance/quality control procedures specified in the analytical methods. Sampling methods, sample preservation requirements, sample handling times, decontamination procedure for field equipment, and frequency for field blanks, field duplicates and trip blanks should conform to the appropriate analytical

services protocol, unless an alternate method/procedure has been approved.

6.0 GROUNDWATER MONITORING REPORT

Upon receipt of the laboratory analytical data, a Groundwater Monitoring Report will be prepared for submission to the NYSDEC. The Groundwater Monitoring Reports will include data summary tables, field notes, sample log sheets, inventory forms, chain of custody, laboratory data summary sheets, a photographic log and a sampling location map.

The results of the groundwater analysis will be compared to NYSDEC Ambient Water Quality Standards.

The report will also include recommendations and conclusions, based on the analytical results, with an opinion on the need for any further action, if warranted. If required, a separate Work Plan will be prepared to address environmental issues during property development and submitted for NYSDEC review.

7.0 IMPLEMENTATION SCHEDULE

The NYSDEC will be notified of the date of the monitoring well installation at least two weeks prior so that a site visit may be scheduled. The Groundwater Monitoring Report will be submitted to the NYSDEC within 60 days of the NYSDEC approval of the Remedial Action Work Plan.

8.0 HEALTH AND SAFETY PLAN

A site specific Health and Safety Plan has been developed and is attached to this document as Appendix A**.** The plan will be adhered to by all personnel involved in the Remedial investigation.

G.C. ENVIRONMENTAL, INC. APPROVALS
This Work Plan has been prepared for the following project:

35-32 College Point Boulevard
Queens, New York 11354

1.0 INTRODUCTION

1.1 Purpose and Policy

This Construction Health and Safety Plan (HASP) has been developed to comply with the regulations under Occupational Safety and Health Administration (OSHA) 29 CFR 1910.120(b)(4), Hazardous Waste Operations and Emergency Response. It addresses foreseeable activities associated with the site work activities to be conducted at 35-32 College Point Boulevard in Queens, New York (see Figure 1). This HASP establishes personnel protection standards and mandatory safety practices and procedures.

GCE personnel involved with inspection of site work activities which involve monitoring well installations on the Flushing Creek property boundary and in the Site sidewalk during the proposed work shall comply with the requirements of this HASP. All GCE personnel engaged in onsite activities will read this document carefully and complete the Safety Briefing Form (Attachment A), a copy of which will be provided to GCE's Project files. Personnel who have any questions or concerns regarding implementation of this plan are encouraged to request clarification from the GCE Project Manager. Field personnel must follow the designated health and safety procedures, be alert to the hazards associated with working close to vehicles and equipment, and use common sense and exercise reasonable caution at all times.

The levels of protection and procedures specified in this HASP are based on the best information available from historical data and recent evaluations of the Site. Therefore, these recommendations represent the minimum health and safety requirements to be observed by all personnel engaged in work at the site. Unforeseeable site conditions, changes in scope of work, or hazardous conditions not previously considered will warrant a reassessment of the protection levels and controls stated. Refer to below sections for requirements pertaining to field modifications and changes to the HASP.

2.0 SITE ORGANIZATION AND COORDINATION

Remedial Investigation activities will be performed by G C Environmental, Inc. All work will be performed under the direction of the Site Supervisor and support staff.

The following section describes the organizational structure for GCE during the Remedial Investigation. Key personnel and their responsibilities are listed below:

Personnel Name	Title/Responsibility	Contact Information
Mr. Gregory Collins	Site Safety and Health Officer	T: 631-206-3700 Email: gc@gcenvironmental.com
Mr. Thomas Becker	Site Supervisor	T: 631-206-3700 Email: tbecker@gcenvironmental.com
Mr. Fulya Toylular	Principal Investigator	T: 914-588-8851 Email: ftoylular@gcenvironmental.com

2.1 SITE SAFETY AND HEALTH OFFICER

The SSHO advises the Site Supervisor on safety and health issues and conducts briefings prior to initiation of site activities. The SSHO assesses the potential for worker exposures to hazardous agents, recommends appropriate hazard controls for protection of task site personnel, and will

require personnel to obtain immediate medical attention in the event of a work-related injury or illness. The SSHO ensures any necessary monitoring of potential chemical hazards is performed, reviews the effectiveness of monitoring and personal protective equipment, and recommends upgrades or downgrades in protective safety and health measures. The SSHO ensures that appropriate fall protection measures are available and that needed work permits are obtained. The SSHO notifies the Office of Radiation Protection when radiological support is required. The SSHO has stop work authority and advises emergency response personnel of an emergency. The SSHO authorizes the return to work following resolution of any safety and health hazards or other stop work issues. The SSHO ensures that this HASP is revised and approved if there are changes in site conditions or tasks. The SSHO will be available for consultation when required and will be aware of project-related work occurring on-site.

2.2 SITE SUPERVISOR

The Site Supervisor has primary responsibility for directing and managing all site investigation field activities, including coordination with any support organizations. The Site Supervisor ensures that all on-site project personnel meet the required level of training, have reviewed the HASP, and are instructed in safe work practices. The Site Supervisor also ensures that a qualified SSHO is designated, maintains a current copy of the HASP, and documents field changes to the HASP in the project logbook. In addition, the Site Supervisor and staff perform oversight of field activities, maintain awareness of site operations, and ensure that all project personnel adhere to ES&H requirements in order to prevent potential accidents from occurring.

The Site Supervisor is responsible for ensuring that the following five core functions of the Integrated Safety Management System (ISMS) are fulfilled appropriately:

- Define the work, roles and responsibilities. Allocate resources to ensure that research goals are balanced with safe work practices.

- Identify and analyze the hazards using the ESH&Q evaluation, consultation with subject matter experts, material safety data sheet information, Work Smart Standards (WSS), lessons learned by other Principal Investigators (PIs) and staff, and other resources.

- Develop and implement hazard controls tailored to the work being performed.

- Resources include contractors' staff, subject matter experts, the Hazardous Materials Inventory System, project procedures, Training Needs Assessment process, Laboratory Operating Manuals, Laboratory Stewards, and Lessons Learned and Alerts.

- Examples of actions and tools include optimization of engineering controls and procedural approaches with training, HAZCOM job-specific training, job pre-briefings, compliance-based and project-specific training, ES&H permits (e.g.,RWPs, Lockout/Tagout process), and protective equipment.

Perform work within controls to ensure the work is done safely:

- Communicate expectations to project staff.
- Ensure that the controls identified in the ESH&Q evaluation and this HASP are carried out.
- Ensure opportunity for procedure modification to respond to unanticipated situations.

- Stop work if imminent danger exists.

Provide feedback and continuous improvement:

- Solicit feedback from project staff regarding ESH&Q issues and act on that input.
- Communicate concerns to and seek help from supervisors and the ESH&Q group.
- Reallocate resources to address issues that arise.
- Ensure safety meetings and site briefings are performed.

2.3 PRINCIPAL INVESTIGATORS (PI) AND FIELD PROJECT PERSONNEL

PIs and field project personnel involved in onsite operations are responsible for understanding the intent of the principles of Integrated Safety Management and are to be knowledgeable of the processes in place to satisfy the intent of Integrated Safety Management Plan.

- Define the Scope of Work
- Understand the expectations they are to meet in their particular work assignment.
- Understand the responsibilities of the Site Supervisor and SSHO.
- Provide documentation of training to the Site Supervisor.
- Identify and Analyze the Hazard
- Notify the SSHO of any special medical conditions (i.e., allergies, diabetes, etc.).
- Actively participate in identification of hazards prior to beginning work.
- Ensure that potential work hazards have been evaluated by subject matter experts and are accounted for in all work practices.
- Develop and Implement Hazard Controls
- Seek the help of the SSHO and other subject matter experts, as appropriate, to analyze the hazards.
- Ensure that control strategies are developed and implemented, as appropriate, before work begins.
- Ensure safety measures are incorporated into activities (i.e., through HASP addendums or amendments, work aides, or standard operating procedures).
- Perform Work within Controls

- Perform only those tasks that they believe they can do safely.
- Meet the responsibilities and safely perform the tasks that are delegated to them.
- Take all reasonable precautions to prevent injury to themselves and to their fellow employees; be alert to potentially harmful situations.
- Suspend work if unexpected concerns arise and modify plans to address concerns before resuming work.
- Comply with the work plan and HASP as well as postings and rules at the project site.
- Provide Feedback and Continuous Improvement
- Keep the SSHO and Site Supervisor informed of any issues, problems, or concerns regarding all aspects of their work.
- Notify appropriate management personnel or the facility point of contact of any unsafe condition, violation, noncompliance, or an environmental threat discovered in a facility.
- Report to the SSHO any changes in site conditions that may affect safety and health.
- Immediately notify the SSHO of symptoms or signs of exposure potentially related to any chemical, physical, or biological hazards present at the site and immediately report any accidents, injuries, and/or unsafe conditions to the SSHO.
- If unsafe conditions develop, task site personnel are authorized and expected to stop work and notify the SSHO and Site Supervisor of the unsafe condition.

3.0 INTEGRATED SAFETY MANAGEMENT SYSTEM (ISMS)

The ISMS process systematically integrates safety into management and work practices at all levels so work objectives are accomplished while protecting the public, the worker, and the environment. Direct involvement of workers during the development and implementation of safety management systems is essential for success. Therefore, all personnel are expected to incorporate the following basic ISMS core functions during all work activities:

- Defining the scope of work;
- Identifying and analyzing hazards associated with the work;
- Developing and implementing hazard controls;
- Performing work activities within these controls; and
- Providing feedback on the adequacy of the controls to continue improving safety management.

4.0 TASK SPECIFIC HAZARD EVALUATION AND CONTROLS

The purpose of this task is hazard evaluation to identify and assess potential hazards that personnel might encounter and to prescribe methods of hazard control. Given the past uses at the Site (industrial), the potential environmental concerns associated with either possible fuel oil use and/or the historic land use of the surrounding area and according to the requirements of the NYSDEC, chemicals to be potentially encountered during investigation activities may be petroleum-related compounds, and typical generic contaminants in urbanized areas such as VOCs, SVOCs, and heavy metals.

A description of sampling procedures and the activities to be conducted at the Site during the required Remedial Investigation are described below.

4.1 FIELD SAMPLING AND ANALYSIS OF SOIL & GROUNDWATER

Task Description: Procedures for field sampling and analysis of surface soils, subsurface soils and groundwater are described in the Remedial Investigation Work Plan.

Samples will be handled and transported according to regulatory requirements and procedures outlined in the Site Investigation Work Plan. Samples will be preserved and stored as required by the analytical protocols (e.g., cooled, preservative added). Storage on site may occur for short periods of time in ice chests containing "blue ice" but will be quickly transferred to refrigerator storage in the fixed base laboratory at the appropriate temperatures. All storage of contaminated samples will follow procedures and relevant regulations.

Equipment Used: Equipment used during investigation activities may include Hollow Stem Auger (HAS), slam bars, shovels, etc.

Task Hazards and Controls:

Chemical and Radiological Hazards

- Soil Contact: As no specific soil or groundwater sample data is available, the risk of chemical exposure from short-term exposure to soil or other environmental media samples is minimal. However, direct contact with contaminated materials should be avoided; therefore, disposable latex or nitrile gloves and safety glasses will be worn when conducting soil and sediment sampling to prevent eye and skin contact.

Physical Hazards

- Direct contact with equipment: Precautions will be made to keep a minimum of ten feet from the maximum reach of the drilling equipment during its operation. Furthermore, all on-ground personnel will wear hard hats, leather work gloves, construction boots and safety glasses as necessary.

- Tripping/Falling: Precautions should be taken to avoid trip, slip, and fall accidents when climbing irregular or slippery surfaces. Before changing location visually survey the area for slippery surfaces and tripping hazards.

- Heat/Cold Stress: Wear clothing appropriate for environmental and weather conditions. Temperature extremes may be a hazard for consideration depending on the timing of the activity. Refer to below sections for discussion of recognition of symptoms and controls.

Biological/Vector Hazards

- Ticks/Snakes/Rodent/Pathogens: Be cautious of snakes, and vector carriers such as ticks. Check clothing and skin for ticks after walking in brush. Wash hands before eating and drinking.

Personal Protective Equipment Required to Address General Site Hazards

- Level of Protection: D
- Protective Clothing: Issued work clothes or disposable tyvek
- Head Gear: Safety glasses
- Gloves: Latex or nitrile (when conducting groundwater sampling or handling corrosive or oxidizing reagents)
- Footwear: Sturdy work shoes

5.0 OTHER HEALTH AND SAFETY PLAN ELEMENTS

5.1 REVISIONS/ MODIFICATIONS TO THE HASP

The following actions will warrant revision and approval of this plan by the appropriate health and safety disciplines:

- Change in tasks (or previously unidentified tasks) that could impact employee health and safety.
- Changes in hazards (unknown or not previously addressed) which require a significant change in, or addition to, respiratory protection (as defined in exemptions to the plan modifications), physical/barrier protection features, or other engineering controls.

5.1.1 Modifications allowed

The SSHO may upgrade PPE. These changes must be documented in the field logbook. The change and reason or evidence for the change must also be documented in the field logbook. For upgrades to include respiratory protection (including air-purifying and supplied air) for previously unidentified non-radiological issues or contaminants such as VOCs, the appropriate health and safety disciplines must be contacted. The SSHO will approve and document changes in PPE in the field logbook. Upgrades to include respiratory protection will require the SSHO to ensure workers have 40 Hour HAZWOPER Training and to assess any additional medical surveillance requirements.

5.2 MONITORING

Historical site data indicate that chemical exposure of site personnel will not be a significant concern within the scope of this project. However as only limited site information is available,

monitoring may be required for all field activities. Site monitoring requirements may change based on site conditions. All changes must be documented in the site logbook.

5.3 SITE AND SPILL CONTROL

Site access will be controlled by the developer. An exclusion zone may be required for drilling operations and other field activities if required to reduce the accidental distribution of hazardous substances from contaminated areas to clean areas. The SSHO will determine, as needed, the locations of the support zone, contamination reduction zone, and the exclusion zone. Personnel accessing the zones must meet access requirements as stated in this plan.

5.4 PERSONAL PROTECTIVE EQUIPMENT

Level D protection is normally used when the potential for personnel contamination is low, as is the case with this project. Level D protection will include work clothing or disposable tyvek overalls. Details and special requirements have been covered in the hazard control sections of the specific tasks in above sections. Unexpected new hazards will require a reassessment of the specified PPE.

5.5 TEMPERATURE EXTREMES AND SITE CHARACTERISTICS

The effect of temperature extremes on personnel is a primary hazard associated with the activities conducted at the site. Symptoms and controls related to temperature extremes are considered in detail in this section.

Field activities conducted during the summer or winter pose a hazard because of temperature extremes. Since the project site is located in a relatively open area, workers will dress appropriately for environmental conditions, wearing clothing that provides reasonable protection against winter cold and summer sun. Although extreme physical exertion will not be likely within the scope of this project, during hot weather workers are encouraged to be aware of their own symptoms of heat stress (headaches, dizziness, increased heart rate), to drink plenty of water, and to take breaks as needed. Heat stress symptoms, remedies, and monitoring are discussed in below sections. Cold exposure effects are discussed in below sections.

Workers are also encouraged to apply insect repellant and/or sunscreen as needed prior to field activities. Workers should exercise caution by visually inspecting their immediate area of activity for presence of poisonous/harmful plant, insect, and animal species as well as any hazard resulting from previous human activity.

5.5.1 Effects and Prevention of Heat Stress

If the body's physiological processes fail to maintain a normal body temperature because of excessive heat, a number of physical reactions can occur. They can range from mild symptoms such as fatigue, irritability, anxiety, and decreased concentration, dexterity, or movement, to death.

Heat-related health concerns can include the following:

Heat rash: Caused by continuous exposure to heat and humid air and aggravated by chafing clothes. Decreases ability to tolerate heat and is a nuisance.

Heat cramps: Caused by profuse perspiration combined with inadequate fluid intake and chemical replacement, particularly salts. Signs include muscle spasm and pain in the extremities and abdomen.

Heat exhaustion: Caused by increased stress on various organs to meet increased demands to cool the body. Signs include shortness of breath; increased pulse rate (120-200 beats per minute); pale, cool, moist skin; profuse sweating; dizziness; and lassitude.

Heat stroke: Is the most severe form of heat stress. Body must be cooled immediately to prevent severe injury and/or death. Signs include red, hot, dry skin; no perspiration; nausea; dizziness and confusion; strong, rapid pulse; and possibly coma. Medical help must be obtained immediately.

Medical attention must be obtained for the more serious symptoms of heat stress. One or more of the following methods are recommended to help reduce the potential for heat stress:

- Provide plenty of liquids. To replace body fluids (water and electrolytes) lost due to sweating, use a 0.1 percent saltwater solution, more heavily salted foods, or commercial mixes. The commercial mixes may be preferable for those employees on a low-sodium diet.

- Provide cooling devices to aid natural body ventilation. These devices, however, add weight, and their use should be balanced against worker efficiency.

- Wear long cotton underwear, which acts as a wick to help absorb moisture and protect the skin from direct contact with heat-absorbing protective clothing.

- Install mobile showers and/or hose-down facilities to reduce body temperature and cool protective clothing.

- In extremely hot weather, conduct non-emergency response operations in the early morning or evening.

- Ensure that adequate shelter is available to protect personnel against sun, heat, or other adverse weather conditions that decrease physical efficiency and increase the probability of accidents.

- In hot weather, rotate workers wearing protective clothing.

- Maintain good hygiene frequently changing clothing and showering daily. Clothing should be permitted to dry during rest periods. Workers who notice skin problems should immediately consult medical personnel.

5.5.2 Cold Exposure

Persons working outdoors in temperatures at or below freezing may suffer from cold exposure. During prolonged outdoor periods with inadequate clothing for protection, the effects of cold exposure may occur even at temperatures well above freezing. Cold exposure may cause severe injury due to freezing of exposed body surfaces (frostbite), or profound generalized cooling (hypothermia), possibly resulting in death. Areas of the body which have high surface area-to-volume ratios such as fingers, toes, and ears are the most susceptible to frostbite.

Local injury resulting from cold is included in the generic term frostbite. There are several degrees of damage. Frostbite of the extremities can be categorized into:

Frost nip or incident frostbite: characterized by sudden blanching or whitening of skin.

Superficial frostbite: skin has a waxy or white appearance and is firm to the touch, but tissue beneath is resilient.

Deep frostbite: tissues are cold, pale, and solid; extremely serious injury.

Systemic hypothermia, or lowering of the core body temperature, is caused by exposure to freezing or rapidly dropping temperatures. Symptoms are usually exhibited in five stages: 1) shivering and loss of coordination; 2) apathy, listlessness, sleepiness, and (sometimes) rapid cooling of the body to less than 95ºF (35ºC); 3) unconsciousness, glassy stare, slow pulse, and slow respiratory rate; 4) freezing the extremities; and 5) death.

5.6 DECONTAMINATION

Contactors and its subcontractors will maintain on-site decontamination equipment such as potable water, alconox and water reservoir tank. Groundwater sampling and drilling equipment will be decontaminated between well installation, sampling event, and prior to mobilization on or off site.

Decontamination of personnel will be conducted only in the unexpected event that contamination is detected. At a minimum, personnel who have conducted work at the site will wash their hands prior to eating or drinking. Contractors personnel will supervise, assist, and document incidents involving personnel contamination

5.7 EMERGENCY PREPAREDNESS/RESPONSE

The first worker who notices that a medical emergency or personal injury has occurred will immediately make a subjective decision as to whether the emergency is life threatening and/or otherwise serious.

Life-Threatening and/or Otherwise Serious Incident

If a life-threatening incident occurs, those persons recognizing the situation should do whatever actions in their capabilities to reduce the threat and then the SSHO will be contacted. The SSHO

will immediately notify the Emergency Medical Services (EMS) and implement emergency action procedures to have someone meet and guide EMS to the incident location.

The SSHO will be kept apprised of the situation and the location of the victim(s). As the SSHO proceeds to the accident scene, communications channels will be opened and kept on standby until the SSHO has surveyed the scene and performed a primary survey of the victim. The SSHO will provide emergency action guidance consistent with the injury and will relay the appropriate information to the site person meeting the EMS.

Depending on the nature of the injury and the location at which the injury occurred, the SSHO will determine whether the person can be moved or whether the EMS team will need to come into the work area to assist the victim. Should the victim be injured in the work zone, all appropriate life-saving methods will be exercised in that area before attempting decontamination (if required) of the victim. The extent of emergency decontamination performed will depend on the severity of the injury or illness and the nature of the contamination. If the emergency is such that emergency decontamination cannot be performed safely, the victim will be given necessary first-aid treatment and wrapped in a blanket prior to transportation by EMS.

If heat stress is a factor in a victim's injury/illness, all protective clothing will be removed from the victim immediately.

Non-Life-Threatening Incident

Should it be determined that no threat to life is present, a co-worker will assist the injured person and contact the SSHO as soon as reasonably possible. The SSHO will notify the Contractor of the incident. For all non-life threatening injuries, all medical assistance will be provided outside the work zone to reduce the spread of contamination to medical personnel or equipment.

All emergency services can be reached by dialing 911 from any facility or mobile telephone. Access to phones and/or radios will be provided to onsite personnel. The Emergency Response Coordinator (ERC) will coordinate all emergency response operations.

If an injury occurs at the site, the route to the hospital is shown in Figure 2. Emergency telephone numbers are given below.

EMERGENCY CONTACTS

Ambulance:	911
Police:	911
Fire Department:	911
Hospital:	911

G.C. Environmental, Inc, 22 Oak Street, Bay Shore, New York (631) 206-3700

Nearby Hospital: (718) 670-5000

Flushing Hospital Medical Center
4500 Parsons Boulevard
Flushing, Queens, New York 11355

A hospital route map is presented in Appendix C.

6.0 TRAINING/MEDICAL REQUIREMENTS

6.1 SITE-SPECIFIC HAZARD COMMUNICATION AND ACCESS BRIEFING

Since different training requirements may be needed based on the nature of different tasks to be performed, specific training requirements may be identified. However, generally applicable training requirements are presented here. Visitors not entering any exclusion zone or contamination reduction zone who have very limited potential for exposure to contaminants require:

1. Site-specific hazard communication and access briefing.

- All project personnel performing hands-on work that could potentially expose them to hazardous substances, safety, or health hazards will meet the following training requirements:

2. General Employee Training (GET)

- 10 hour OSHA training, or equivalent (Note: for certain types of low risk work, 8 or 24 hour training is acceptable)
- Site-specific hazard communication and access briefing

Prior to beginning work at the project site, all personnel will review this Health and Safety Plan and sign the training acknowledgment form (Appendix C). The site-specific hazard communication and access briefing is documented in the project logbook. If site conditions change or other hazards are detected, the training and access requirements will be revised accordingly.

6.2 MEDICAL SURVEILLANCE

A medical surveillance program will be conducted in accordance with the requirements of 29 CFR 1910.120 for:

- All employees who are or may be exposed to hazardous substances or health hazards at or above the established permissible exposure limits or, if there is no permissible exposure limit, above the published exposure levels for these substances, without regard to the use of respirators, for 30 days or more a year.
- All employees who wear a respirator for 30 days or more a year or as required by 29 CFR 1910.134.

- All employees who are injured, become ill, or develop signs or symptoms due to possible overexposure involving hazardous substances or health hazards from an emergency response or hazardous waste operation.
- Members of HAZMAT teams.

All contractors' employees receive periodic medical examinations. Because of the low potential for exposure to hazardous agents, it is not expected that additional medical surveillance will be required for any personnel undertaking this project. If necessary, non-contractors personnel will be required to acknowledge coverage by a medical surveillance program sufficient to satisfy the requirements of 29 CFR 1910.120 (Appendix C).

7.0 G.C. ENVIRONMENTAL, INC. APPROVALS

This HASP has been prepared for the following project:

35-32 College Point Boulevard
Flushing, New York 11354
GCE Project Number: 12-384-00

This HASP has been reviewed and approved by the following G. C. Environmental personnel:

04/14/16

Thomas Becker — Date
Site Supervisor

04/14/16

Fulya Toylular — Date
Principal Investigator

04/14/16

Gregory Collins — Date
Site Safety and Health Officer

SIGNATURE PAGE

The following signatures indicate that this Health and Safety Plan has been read and accepted by GCE personnel as well as subcontractors and their personnel.

NAME	COMPANY	SIGNATURE	DATE

Important notice to subcontractor(s):

This Health and Safety Plan has been prepared solely for the use of GCE personnel. It is supplied to you for informational purposes only and may not be relied upon for protection of your employees. The Subcontractor is responsible for providing, at its cost, all personal protective clothing and equipment required for its employees to perform their work in a safe manner and in compliance with all applicable state and federal OSHA regulations. Subcontractor is responsible for ensuring that such equipment is in good condition and is properly inspected and maintained. Subcontractor must, at a minimum, use the equipment and follow the procedures described in this HSP. Failure to do so may result in immediate termination of Subcontractor's services. This does not relieve Subcontractor of the responsibility to provide equipment and institute procedures affording a greater degree of protection than those specified in this HSP should Subcontractor determine such measures are necessary to protect the health and welfare of its employees, second-tier subcontractors or others under its control or direction.

APPENDIX A

CHEMICAL DESCRIPTIONS

CHEMICAL DESCRIPTIONS

The following general chemical descriptions are presented for chemicals that are of importance. Each chemical description includes physical and odor recognition characteristics, health effects associated with exposure, and exposure limits expressed as an eight-hour time weighted average (TWA). Provided are federal OSHA ("OSHA") permissible exposure limits (PELs; located in 29 CFR 1910.1000).

Acenaphthene is a polycyclic aromatic hydrocarbon (PAH) consisting of naphthalene with an ethylene bridge connecting positions 1 and 8. It is a colorless solid. Coal tar consists of about 0.3% of this compound.

Phenanthrene is a polycyclic aromatic hydrocarbon composed of three fused benzene rings. The name *phenanthrene* is a composite of phenyl and anthracene. In its pure form, it is found in cigarette smoke and is a known irritant, photosensitizing skin to light. Phenanthrene appears as a white powder having blue fluorescence.

Naphthalene is an organic compound with formula $C_{10}H_8$. It is the simplest polycyclic aromatic hydrocarbon, and is a white crystalline solid with a characteristic odor that is detectable at concentrations as low as 0.08 ppm by mass.

Effects with Exposure:

Eyes: Moderate irritant. Contact with liquid or vapor may cause irritation.

Skin: Practically non-toxic if absorbed following acute (single) exposure. May cause skin irritation with prolonged or repeated contact. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are exposed repeatedly.

Ingestion: The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death. Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

Inhalation: Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

Chronic Effects and Carcinogenicity: PAH compounds have the potential to cause anemia and other blood diseases, including leukemia, after repeated and prolonged exposure. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with systemic toxicity.

Medical Conditions Aggravated by Exposure: Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash). Chronic respiratory disease, liver or kidney dysfunction, or pre-existing central nervous system disorders may be aggravated by exposure.

Exposure Limits:

Components:

Naphthalene 10 ppm	Benzo pyrene 0.02 ppm
Benz (a) anthracene 0.02 ppm	Fluorene: no limits setup
Benz (b) fluoranthene 0.02 ppm	Acenaphthene: no limits setup

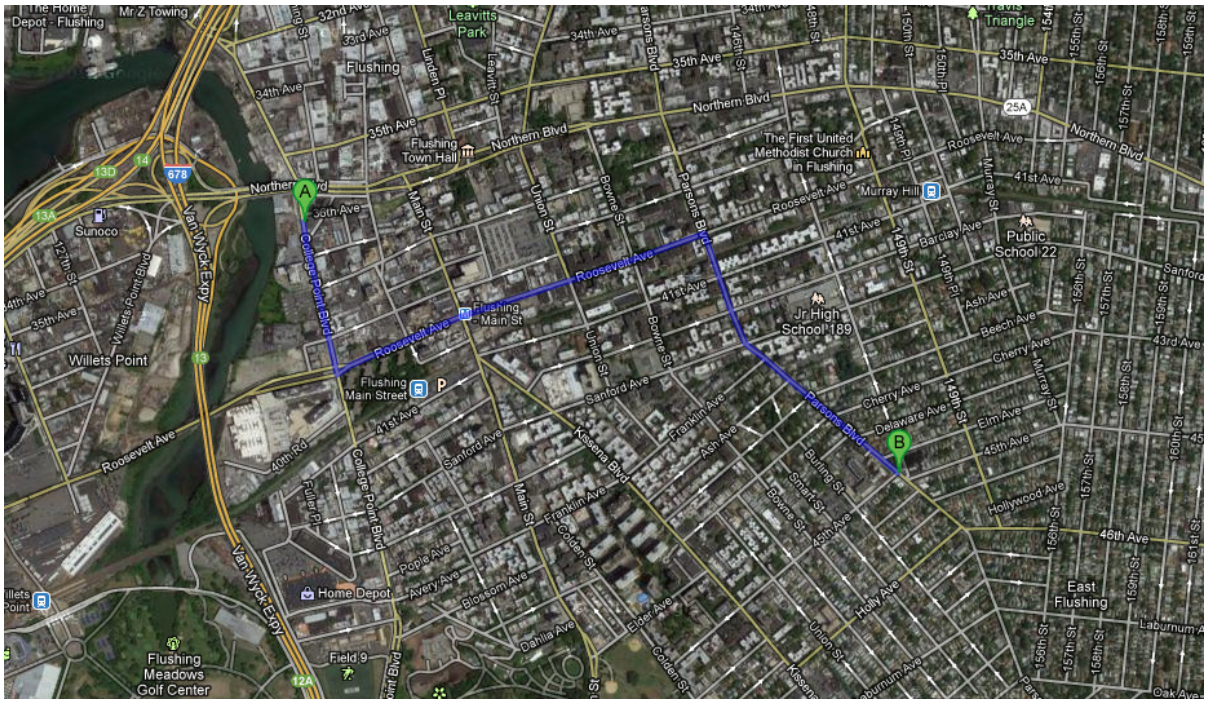
APPENDIX C

HOSPITAL ROUTE MAP

ROUTE TO HOSPITAL



Driving Directions to New York Downtown Hospital

4500 Parsons Boulevard,
Flushing, New York 11355
from 35-32 College Point Boulevard, Flushing, New York 11345:

1. Head south on College Point Blvd toward King Road (0.3mi)
2. Turn left on Roosevelt Avenue (0.7mi)
3. Turn right on Parsons Blvd (0.6 mi)
   Destination will be on the right.

APPENDIX B

STATE OF NEW YORK
DEPARTMENT OF ENVIRONMENTAL CONSERVATION
----------X
In the Matter of the Violations of Article 17 of the New York State Environmental Conservation Law, Article 12 of the New York State Navigation Law, and Titles 6 and 17 of the Official Compilation of Codes, Rules and Regulations of the State of New York,

ORDER ON CONSENT

NYSDEC File No. R2-20100628-177A

- by -

WILLETS POINT ASPHALT CORP.,

Respondent.
----------X

WHEREAS:

1. The New York State of Department of Environmental Conservation ("NYSDEC" or the "Department") has jurisdiction over the environmental laws of the State of New York pursuant to Article 3 of the New York State Environmental Conservation Law ("ECL");

2. The Department is authorized to regulate the handling and storage in bulk of petroleum, enforce the illegal discharge of petroleum, and direct the investigation, containment and remediation of petroleum spills, and the registration and maintenance of petroleum bulk storage facilities in the state, pursuant to Article 17 of the ECL, Article 12 of the New York State Navigation Law ("NL"), and Titles 6 and 17 of the Official Compilation of Codes, Rules and Regulations of the State of New York ("NYCRR");

3. Willets Point Asphalt Corp., an active domestic business corporation with offices at 127-50 Northern Boulevard, Flushing, New York, or its predecessor/affiliate Willets Point Contracting Corp. (together, the "Respondent" or "Willets Point"), owned Queens County tax block 4963, lots 212 and 249, also known as 35-32 College Point Boulevard, Flushing, New York, (the "Site") at all relevant times; and

4. Willets Point owned and operated a petroleum bulk storage ("PBS") facility at the Site registered with the Department as facility number 2-032182 (the "PBS Facility") consisting of two successive sets of underground storage tanks ("USTs"), all storing #2 fuel oil: i) a set of two USTs installed in 1956 and closed on or about July 1, 1988, consisting of one 10,000-gallon tank and one 1,500-gallon tank (the "1956 USTs"); and ii) a set of three USTs installed in 1988 and removed in 2007, consisting of one 10,000-gallon tank and two 1,000-gallon tanks (the "1988 USTs").

FACTS

5. On August 6, 1987, while monitoring a New York State-funded gasoline spill

remediation project originating at an off-Site property, Department staff observed 8.95 feet of petroleum product in groundwater wells immediately adjacent to the 10,000-gallon 1956 UST in the sidewalk at the front of the Site, then an asphalt plant, along College Point Boulevard.

6. On August 20, 1987, the Department collected samples from the two wells and identified both as #2 fuel oil. The sewer pump station and Con-Edison transformer boxes along College Point Boulevard adjacent to the 10,000-gallon UST had been impacted by the seeping oil.

7. The Department notified Willets Point of the discharge by letter of August 24, 1987.

8. On August 31, 1987, the 10,000-gallon 1956 UST failed three tightness tests, during which approximately 18 gallons of petroleum discharged from the tank, opening NYSDEC spill number 8704514.

9. On September 17, 1987, the 10,000-gallon 1956 UST failed another tightness test, opening NYSDEC spill number 8705123.

10. For administrative purposes only, the two spill numbers were consolidated with the then-ongoing spill remediation project at and around the Site, NYSDEC spill number 7900995, a separate gasoline spill with an off-Site source. At the completion of the remediation of that spill in 2009, the two on-Site spills remained open under their original numbers.

11. The Respondent failed to investigate the area surrounding the compromised tank and its piping system. Rather, the 1956 USTs were closed on or about July 1, 1988 and replaced with the 1988 USTs. The Respondent has provided no documentation to the Department evidencing proper repair, closure or removal of the 1956 USTs.

12. In addition to the two discharges associated with the 10,000-gallon 1956 UST, an October 1, 1991 site assessment noted surface petroleum staining at the Site, including the areas around both 1,000-gallon 1988 USTs and beneath an unregistered 550-gallon aboveground tank storing kerosene, indicating three additional unreported spills.

13. Soil samples taken by the Department on October 9, 1991 around the 1,000-gallon UST by the office building exhibited significant contamination at a depth of two to four feet.

14. Soil and groundwater samples taken by the Department on October 9, 1991 around the unregistered 550-gallon kerosene tank exhibited significant petroleum contamination.

15. Soil samples taken by the Department in May 1992 in the area of the 1956 and 1988 10,000-gallon USTs, and in the area of the 1,000-gallon office building UST, indicated shallow soil contamination. Also in May 1992, petroleum product was observed coming out of a soil boring hole in the area of the 550-gallon kerosene tank.

16. On August 25, 1992, the Department identified #2 fuel oil in the well adjacent to

the 10,000-gallon UST, indicating a discharge from the UST.

17. On February 25, 2000, Department staff inspected the Site and observed overflowing oil buckets and various stains from unreported petroleum discharges on the ground.

APPLICABLE LAW

18. NL § 192 provides that a person who violates any provision of, or who fails to perform any duty created by, Article 12 of the NL or any rule or regulation promulgated thereunder, shall be liable for a civil penalty of up to $25,000 per day for each violation.

19. ECL § 71-1929 provides that a person who violates the provisions of, or who fails to perform any duty imposed by, titles 1 through 11 inclusive and title 19 of Article 17 of the ECL, or the rules, regulations, orders or determinations of the commissioner promulgated thereunder, shall be liable for a civil penalty of up to $37,500 per day for each violation.

20. NL § 173 prohibits the discharge of petroleum.

21. NL § 176 and 17 NYCRR 32.5 require any person discharging petroleum to immediately undertake to contain the discharge.

22. NL § 175, 17 NYCRR 32.3 and 6 NYCRR 613.8 require any person discharging petroleum or with knowledge of a discharge to notify the Department immediately.

23. 6 NYCRR 613.9 (b) requires the owner of a permanently out-of-service UST to: (i) remove liquid and sludge from the tank and connecting lines, and dispose of any waste products removed in accordance with all applicable state and federal requirements; (ii) render the tank free of petroleum vapors; and (iii) disconnect and remove or securely cap or plug all lines, and securely fasten manways in place.

VIOLATIONS

24. By discharging petroleum at the Site, Willets Point violated NL § 173.

25. By failing to notify the Department of petroleum discharges, Willets Point violated NL § 175, 17 NYCRR 32.3, and 6 NYCRR 613.8.

26. By failing to remediate petroleum discharges, Willets Point violated NL § 176 and 17 NYCRR 32.5.

27. By failing to properly close USTs, Willets Point violated 6 NYCRR 613.9 (b).

CONSENT

28. In settlement of the respondent's civil liability for the aforesaid violations, the Respondent waives the right to a hearing herein as provided by law and consents to the issuing

and entering of this Order on Consent pursuant to the provisions of Articles 17 and 71 of the ECL and Article 12 of the NL, and agrees to be bound by the provisions, terms and conditions herein.

29. This Order on Consent is strictly for Department purposes, and is not intended for the benefit of, or use by, any third party in any third-party proceeding.

NOW, being duly advised and having considered this matter, the Commissioner of the New York State Department of Environmental Conservation hereby ORDERS that:

I. PENALTY

A. The Respondent is hereby assessed a total civil penalty in the amount of ONE HUNDRED THOUSAND DOLLARS ($100,000) for the violations stated herein. Of that amount, EIGHTY-FIVE THOUSAND DOLLARS ($85,000) shall be payable by bank check or certified check to the **Environmental Protection and Spill Compensation Fund** and shall be delivered with the Respondent's executed original of this Order to John K. Urda, Assistant Regional Attorney, NYSDEC Region 2, 47-40 21st Street, Long Island City, New York, 11101.

B. The remaining penalty amount of FIFTEEN THOUSAND DOLLARS ($15,000) shall be suspended, contingent on the Respondent's full compliance with this Order. The suspended portion of the civil penalty shall become payable immediately upon service of a notice of non-compliance on the Respondent.

C. In the event that the Respondent fails to comply with any obligation of this Order, the Respondent shall in addition be subject to penalties of up to $37,500 per day per violation pursuant to ECL § 71-1929 and penalties of up to $25,000 per day per violation pursuant to NL § 192 without prejudicing the Department from seeking further penalties.

II. CORRECTIVE ACTION PLAN

A. Within 30 days of the effective date of this Order, Willets Point shall submit for Department approval a work plan detailing the scope of work proposed to manage and prevent off-Site migration of groundwater contamination (the "Work Plan"). The Work Plan shall conform to the Scope of Work attached as Exhibit A. The Work Plan will include the installation of at least three monitoring wells adjacent to Flushing Creek, and two monitoring wells along the Site sidewalk, as depicted in the aerial photograph attached as Exhibit B. The Work Plan will include an implementation schedule for performing the work proposed and submitting a Groundwater Monitoring Report for Department approval.

B. Upon receiving Department approval of the Work Plan, Willets Point shall implement the Work Plan in accordance with the schedule set forth therein. The Groundwater Monitoring Report shall include conclusions and recommendations for well monitoring and free product recovery if separate phase product is noted in the wells, including existing well MW-41A, and shall provide for the installation of additional delineation wells if free product is detected, and if necessary to prevent off-Site product migration.

C. Within 60 days of receiving Department approval of the Groundwater Monitoring Report, Willets Point shall submit for Department approval an Operation, Monitoring and Maintenance Plan detailing the work proposed to recover free product using passive remedies and prevent off-Site migration of groundwater contamination (the "OM&M Plan"). The OM&M Plan must include an implementation schedule.

D. Upon receiving Department approval of the OM&M Plan, Willets Point shall implement the OM&M Plan in accordance with the implementation schedule set forth therein.

E. All approved submittals and deadlines shall be an enforceable part of this Order. If a submittal is disapproved, the Department shall specify any deficiencies and required modifications in writing. Within 15 days of receipt of the Department's disapproval notice, Willets Point shall submit a revised submittal which addresses the Department's comments, correcting all deficiencies identified in the disapproval notice.

F. Any modifications to this Corrective Action Plan must be approved in advance in writing by the Department. The Department may require additional investigation and/or remedial action due to environmental conditions related to the Site and/or spills which were unknown to the Department.

G. If separate free phase hydrocarbons are present in the groundwater, Willets Point shall immediately conduct gauging and recovery visits at the monitoring wells identified on Exhibit B and MW-41A.

H. All communications to the Department pursuant to this Corrective Action Plan shall be addressed to Mr. Jeffrey Vought, NYSDEC Region 2, 47-40 21st Street, Long Island City, New York, 11101; jeffrey.vought@dec.ny.gov.

I. Upon Department approval of site development plans, it shall rescind the April 13, 2011 letter attached as Exhibit C. Should Site development including excavation of impacted soil (based on staining and/or odor observations) to the water table not commence within three years of the effective date of this Order, Willets Point shall either request an extension of time or immediately submit for Department approval a Remedial Investigation Work Plan detailing the scope of work proposed to fully delineate the contamination both on and off-Site (the "RIWP"). The RIWP must include an implementation schedule for performing the investigation and submitting a Remedial Investigation Report summarizing the information gathered during the investigation (the "RIR"). Upon receiving Department approval of the RIWP, Willets Point shall complete the investigation and submit the RIR for Department approval, within the implementation schedule set forth in the RIWP. The RIR shall include conclusions and recommendations for further action to remediate the subject spills. Within 30 days of receiving Department approval of the RIR, Willets Point shall submit for Department approval a Remedial Action Plan detailing the work proposed to fully remediate the contamination caused by the spills (the "RAP"). The RAP must include an implementation schedule. Upon receiving Department approval of the RAP, Willets Point shall implement the RAP in accordance with the implementation schedule.

III. MISCELLANEOUS

A. Compliance with all terms of this Order shall satisfy the Respondent's outstanding civil liability for the violations described above. The provisions, terms and conditions of this Order shall be deemed to bind the Respondent and the Respondent's heirs, receivers, trustees in bankruptcy, successors and assigns.

B. This Order shall constitute the entire agreement of the Department and the Respondent with respect to settlement of the violations specifically referenced herein.

C. No change in this Order shall be made or become effective except as specifically set forth by written order of the Commissioner, being made either upon written application of the Respondent, or upon the Commissioner's own findings after notice and opportunity to be heard have been given to the Respondent. The Respondent shall have the burden of proving entitlement to any modification requested.

D. The Respondent shall indemnify and hold the Department, the State of New York, and their representatives and employees harmless for all claims, suits, actions, damages and costs resulting from the acts and/or omissions of the respondent, intentional, negligent, or otherwise, of every nature and description, arising out of or resulting from the compliance or attempted compliance with the provisions of this Order by the Respondent or its employees, servants, agents, successors or assigns.

E. The penalty assessed in the Order constitutes a debt owed to the State of New York. Failure to pay the assessed penalty, or any part thereof, in accordance with the schedule contained in the Order, may result in referral to the New York State Attorney General for collection of the entire amount owed (including the assessment of interest, and a charge to cover the cost of collecting the debt), or referral to the New York State Department of Taxation and Finance, which may offset any tax refund or other monies that may be owed to you by the State of New York by the penalty amount.

F. This Order shall take effect when it is signed by the Commissioner of the Department of Environmental Conservation or his designee.

DATED: Long Island City, New York
March 18, 2016

BASIL SEGGOS
Acting Commissioner, NYSDEC

By: _____
VENETIA A. LANNON
Regional Director
NYSDEC - Region 2

CONSENT BY RESPONDENT

The Respondent, WILLETS POINT ASPHALT CORP., hereby consents to the issuing and entering of this Order without further notice, waives its right to a hearing herein, and agrees to be bound by the terms, conditions and provisions contained in this Order.

WILLETS POINT ASPHALT CORP.

By [signature]: _____

Qualified in Queens County
Commission Expires April 30, 2018

EXHIBIT A

REMEDIAL SCOPE OF WORK FOR NYSDEC SPILLS 8704514 AND 8705123

The following scope of work will clarify the remedial obligations discussed by the parties, and will be the basis of the Work Plan and follow-up Groundwater Monitoring Report and Operation, Monitoring and Maintenance Plan required by the Corrective Action Plan of Order on Consent R2-20100628-177A.

Willets Point will install 4-inch diameter perimeter groundwater monitoring and recovery wells – three along the Flushing Bay property boundary and up to three in the sidewalk east of the property as shown in Exhibit B. If any existing wells in the sidewalk can be used for monitoring and recovery purposes, the same number of new wells will not be required. Willets Point representatives will monitor for the presence of floating product in the six wells. This will be done initially on a weekly basis and adjusted accordingly with Department approval and based on the presence or absence of such product. Any measureable product will be removed using passive means (absorbent socks) or by manual bailing. The product will be stored in labelled 55-gallon drums for periodic removal and disposal by Willets Point.

This remedial activity will continue until such time as product is no longer measureable in the wells for a period of 12 months or the current site owner begins site development and soil excavation at which time the onsite wells will be abandoned.

PREPARED FOR:

WILLETS POINT ASPHALT CORP.
127-50 NORTHERN BOULEVARD,
FLUSHING, NEW YORK 11368
ATTN.: MR. DEAN DEVOE

DATE ISSUED: DECEMBER 12, 2016

GCE PROJECT NUMBER: 16-109-00

G. C. Environmental, Inc. is pleased to provide this "Groundwater Monitoring Report" for the property located at 35-32 College Point Boulevard, Flushing, NY (the "Subject Site").

This document presents the Groundwater Monitoring conducted at the Site in accordance with the New York State Department of Environmental Conservation (NYSDEC) requested scope of work as stated in the NYSDEC's Corrective Action Plan of Order on Consent dated March 18, 2016 and approved Remedial Action Work Plan (RAWP) dated August 9, 2016.

Purpose

The purpose of this work is to investigate in conformance with NYSDEC's scope of work and to determine whether, through subsurface groundwater sampling, if groundwater contamination migrates off-site.

Site Description

The Property is located on College Point Boulevard, Flushing, Queens County, New York, approximately 700 feet to the southwest of the intersection formed by College Point Boulevard and Northern Boulevard. The Property consists of approximately 1.2 acres and is an irregular-shaped parcel of land.

The Subject Property is currently occupied as a contractors yard and is located on Block 4963, Lots 212 and 249. The Property is bounded to the North by 35-20 College Point Boulevard, to the South by 36-28 College Point Boulevard, to the East by College Point Boulevard and to the West by the Flushing River.

According to New York City Zoning maps, the subject Property is zoned as M2-1, which corresponds to a manufacturing zoning district. (Please, refer to Figure 1 - Site Locus Map).

Background Information

On August 9, 2016 a Remedial Action Work Plan was prepared and submitted to NYSDEC.

The approved RAWP includes the following:

- Install a total of five (5) monitoring wells to investigate the potential for offsite migration of contaminants and to verify horizontal and vertical extent of contamination. Out of five wells, three (3) wells are proposed to be installed along the Flushing Creek property boundary (MW-1, MW-2 & MW-3) and two (2) wells along the Site sidewalk (MW-5 & MW-6).

- The wells will be installed by a NY-licensed well driller to a depth of approximately 10 feet below the water table. Screens will be placed across the water table to provide groundwater recharge. The wells will consist of 4" Schedule 40 PVC casing and up to fifteen (15) feet of 0.2 screen and completed with a flush-mount steel protective casing.

- The new wells will be developed to ensure adequate connection between the aquifer and surrounding soil formation. In order to determine the direction of groundwater flow, GCE will retain a NY licensed surveyor to survey the new wells for exact locations and elevations.

- Gauge free product thickness measurements (if identified) from newly installed wells MW-1, MW-2, MW-3, MW-5, MW-6 and existing well MW-41A.

- Monitoring free product recovery if separate phase product is identified in the wells. This will be done initially on a weekly basis and adjusted accordingly with Department approval and based on the presence or absence of such product.

- Any measurable product will be removed using passive means (absorbent socks) or by manual bailing.

- Monitoring if no separate phase product is identified in the wells, will be done on a quarterly basis and adjusted accordingly with Department approval and based on the presence or absence of such product.

- Summarize the results of the remedial investigation in Groundwater Monitoring Reports (Remedial Action Progress Reports), including results of the above scope, and providing, where appropriate, recommendations for future investigation (additional wells if free product is detected) and response actions.

- The remedial activity will continue until the Department approves a new remedial method or close the Spill. At such time when product is no longer measurable in the wells for a period of 12 months, a proposal for quarterly groundwater sampling will be submitted to the Department for approval. If current site owner begins site development and soil excavation, the onsite wells will be abandoned.

- The product/purged water will be stored in labeled 55-gallon drums for periodic removal and disposal by GCE.

Work Performed

The geophysical survey (field investigations) was performed on the Subject Property. As part of the investigation, the GPR equipment (electromagnetic waves) is passed (walked) throughout the property and identified for any reflected data in its path. The reflected wave data is retrieved and interpreted by the GPR technician. Based on the results, monitoring well locations were identified.

Subsurface Investigation

On October 13 & 26, GCE initiated five (5) borings and monitoring well installation activities (MW-1, MW-2, MW-3, MW-5, MW-6) to a depth of approximately fifteen (15) feet below

ground surface (bgs) to investigate the potential for off-site migration of contaminants and to verify horizontal and vertical extent of contamination at the Subject Site.

Three (3) monitoring wells; MW-1 was installed at the Northwest of the property, MW-2 was installed at the West and MW-3 was installed at the Southwest of the property along the Flushing Creek property boundary and two (2) monitoring wells; MW-5 and MW-6 were installed at the Northeast of the property along the Site sidewalk.

Due to hitting refusal at the requested two monitoring well locations (MW-5 & MW-3), on October 26, 2016, a Geophysical Survey was performed on the property for the accessible areas of the property to identify the proper boring locations for the two monitoring well installation.

GCE installed one (1) four inch diameter monitoring well (sand packed) in groundwater in each boring locations. Screens were installed into the water table to provide groundwater recharge. The wells consisted of 4" Schedule 40 PVC casing and fifteen (15) feet of 0.2 screen and completed with a flush-mount steel protective casing. Groundwater monitoring well installations were performed mechanically by utilizing Geoprobe® 6610DT direct Push Drilling Rig and 3 inch center rod system.

(Please refer to the Figure 2 for the Property Map- Boring Location Plan.)

All soil cuttings were stored in labeled 55-gallon drums and disposed of disposed of by Action Trucking Inc. at .Veolia Environmental Services Technical Solutions, Flanders, NJ. .

(Please refer to the Appendix C for the Waste Manifest.)

Groundwater Sampling

On November 17, 2016, groundwater samples were collected from the newly installed monitoring wells and one existing well at the ground water interface. During the groundwater sampling, well development was conducted using a recycled plastic bailer. Approximately 2-3 casings of well water were purged from the monitoring wells using dedicated disposable tubing.. The ground water samples were visually classified and logged by the onsite GCE geologist for groundwater characterization purposes. Groundwater samples from the monitoring well locations were inspected and visual and olfactory signs of contamination were detected in samples MW-5, and MW-6. Approximately 8 inches of free product was observed in sample MW-41A. No indications of contamination were observed in samples from MW-1, MW-2 and MW-3.

Laboratory obtained glassware was used for the groundwater samples and consisted of the following:

- Volatile Organic Compounds (VOCs) - two (2) 40 ml vials preserved with HCL equipped with teflon lined lid per sample;

- Semi-Volatile Organic Compounds Base Neutrals (B/Ns) - one (1) 1000 ml amber glass bottle equipped with a teflon lined lid per sample;

Groundwater samples from the MWs were placed into glass containers equipped with teflon lined lids containers. The following groundwater samples were collected:

American Analytical Laboratories Sample ID	**Field Logged**	**Depth to Water, Feet below grade**	**Visual/Olfactory Contamination**
1611137-001A/B	MW-1	4.6	No
1611137-002A/B	MW-2	7.55	No
1611137-003A/B	MW-3	5.01	No
1611137-004A/B	MW-5	6.65	Yes
1611137-005A/B	MW-6	6.05	Yes
1611137-006A/B	MW-41A	7.6	Yes

The groundwater samples were analyzed for the presence of VOCs using EPA Method 8260 and SVOCs using EPA Method 8270 as described in the approved work plan. The samples were submitted under a chain-of-custody protocol to the American Analytical Laboratories, a New York State ELAP-approved laboratory.

(Please refer to Appendix B - for Boring Logs and Figure 2-Property Map).

Groundwater Sampling

All equipment utilized in sampling advancement was steam cleaned prior to initial use. All metal parts of Geoprobe sampler were cleaned using mechanical and chemical cleaning procedures, which consisted of brushing and sweeping off loose dirt followed by detergent washing and potable water rinsing. Groundwater samples were transferred into the appropriate containers using dedicated disposable latex gloves.

All samples were carefully packed and placed in a laboratory-supplied cooler with sufficient ice packs to maintain the sample temperature at 4° C at all times during shipping to the laboratory.

Chain-of-custody protocols were maintained from sample collection to delivery to the laboratory. Field information was recorded in field report and sampling log sheets. Full documentation was made as to the location and depth of all samples collected. Each sample was labeled with GCE's project number, site name and address, the sample location and depth interval, the date and time, the initials of the sampler, and the requested analysis.

Groundwater Sample Results

MW-1:

The concentrations of VOCs in sample MW-1 namely Methylene chloride (9.9 mg/l) was detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 5 mg/l for Methylene chloride. Methylene chloride is used as a lab solvent and is considered as a common lab contaminants; thus the results are qualified "B" and can be negated.. The remaining compounds (other than listed above) of VOCs and SVOCs in sample MW-1 were either not detected or detected at trace levels or below *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards*.

MW-2:

The concentrations of VOCs in sample MW-2 namely Methylene chloride (11 mg/l) was detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 5 mg/l for Methylene chloride. The remaining compounds (other than listed above) of VOCs and SVOCs in sample MW-2 were either not detected or detected at trace levels or below *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards*.

MW-3:

The concentrations of VOCs in sample MW-3 namely Methylene chloride (11 mg/l) was detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 5 mg/l for Methylene chloride. The remaining compounds (other than listed above) of VOCs and SVOCs in sample MW-3 were either not detected or detected at trace levels or below *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards*.

MW-5:

The concentrations of VOCs in sample MW-5 namely 1,2,4,5-Tetramethylbenzene (63 mg/l), Isopropylbenzene (7.5 mg/l), Methyl tert-butyl ether (44 mg/l), Methylene chloride (11 mg/l), n-Butylbenzene (8.4 mg/l), n-Propylbenzene (9.3 mg/l) and sec-Butylbenzene (11 mg/l) were detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 5 mg/l for 1,2,4,5-Tetramethylbenzene, Isopropylbenzene, Methylene chloride, n-Butylbenzene, n-Propylbenzene, sec-Butylbenzene and 10 mg/l for Methyl tert-butyl ether. The concentrations of SVOCs in sample MW-5 namely Acenaphthene (23 mg/l) and Chrysene (0.97 mg/l) were detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 20 mg/l for Acenaphthene and 0.002 mg/l for Chrysene.

The remaining compounds (other than listed above) of VOCs and SVOCs in sample MW-5 were either not detected or detected at trace levels or below *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards*.

MW-6:

The concentrations of VOCs in sample MW-6 namely 1,2,4,5-Tetramethylbenzene (190 mg/l), Isopropylbenzene (9.8 mg/l), Methylene chloride (9 mg/l), n-Butylbenzene (14 mg/l), n-Propylbenzene (9.3 mg/l) and sec-Butylbenzene (29 mg/l) were detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 5 mg/l for 1,2,4,5-Tetramethylbenzene, Isopropylbenzene, Methylene chloride, n-Butylbenzene, n-Propylbenzene, sec-Butylbenzene. The concentrations of SVOCs in sample MW-6 namely Acenaphthene (140 mg/l), Bis(2-ethylhexyl)phthalate (13 mg/l), Chrysene (5.6 mg/l), Fluorene (160 mg/l), Phenanthrene (240 mg/l) and Pyrene (56 mg/l) were detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 20 mg/l for Acenaphthene, 5 mg/l for Bis(2-ethylhexyl)phthalate, 0.002 mg/l for Chrysene, 50 mg/l for Fluorene, Phenanthrene and Pyrene.

The remaining compounds (other than listed above) of VOCs and SVOCs in sample MW-6 were either not detected or detected at trace levels or below *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards*.

MW-41A:

The concentrations of VOCs in sample MW-41A namely 1,2,4,5-Tetramethylbenzene (1,100 mg/l), Isopropylbenzene (47 mg/l), Methylene chloride (67 mg/l), n-Butylbenzene (400 mg/l), sec-Butylbenzene (410 mg/l) and tert-Butylbenzene (410 mg/l) were detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 5 mg/l for 1,2,4,5-Tetramethylbenzene, Isopropylbenzene, Methylene chloride, n-Butylbenzene, sec-Butylbenzene and tert-Butylbenzene. The concentrations of SVOCs in sample MW-41A namely Acenaphthene (4,100 mg/l), Anthracene (670 mg/l), Fluorene (5,200 mg/l), Phenanthrene (6,200 mg/l) and Pyrene (1,200 mg/l) were detected above *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards* criteria of 20 mg/l for Acenaphthene, 50 mg/l for Anthracene, Fluorene, Phenanthrene and Pyrene.
The remaining compounds (other than listed above) of VOCs and SVOCs in sample MW-41A were either not detected or detected at trace levels or below *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards*.

(Please refer to Table 1 - Summary of Detected Compounds - Groundwater and Appendix C - Laboratory Analytical Report).

Conclusion and Recommendation

On October 13 & 26, GCE installed five (5) monitoring wells (MW-1, MW-2, MW-3, MW-5, MW-6) to a depth of approximately fifteen (15) feet below ground surface (bgs) to investigate the potential for off-site migration of contaminants and to verify the horizontal and vertical extent of contamination at the Subject Site.

On November 17, 2016, six groundwater samples were collected from the newly installed monitoring wells and one existing well at the ground water interface.

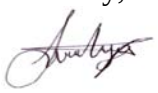
The VOCs and SVOCs compounds except Methylene chloride (a common lab contaminant) in samples MW-1, MW-2 and MW-3 were either not detected or detected at trace levels or below *New York State Department of Environmental Conservation (NYSDEC)-Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards*.

Several elevated compounds and visual/olfactory impacts were found in samples MW-5, MW-6 and free product was observed in sample MW-41A.

Due to several elevated compounds and visual/olfactory impacts were found in samples MW-5, MW-6 and MW-41A along the sidewalk, monitoring of the wells will be continuing quarterly basis as stated in the NYSDEC's Corrective Action Plan of Order on Consent dated March 18, 2016. Based in results for MW-1, MW-2, and MW-3, it appears that the site has no adverse impact on the adjacent surface water.

Feel free to contact me at (631) 206-3700, if you have any questions or concerns.

Sincerely,



Fulya Toylular
Environmental Scientist

RE: 35-32 College Point Blvd, Flushing, NY Order No.: 1611137

Dear Dean Devoe:

American Analytical Laboratories, LLC. received 6 sample(s) on 11/17/2016 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report. The results reported herein relate only to the items tested or to the samples as received by the laboratory. This report may not be reproduced, except in full, without the approval of American Analytical Laboratories, LLC and is not considered complete without a cover page and chain of custody documentation. The limits (LOQ) provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report or the data is qualified either on the sample results or in the QC section of the report. This package has been reviewed by American Analytical Laboratories' QA Department/Laboratory Director to comply with NELAC standards prior to report submittal.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer

Case Narrative

WO#: **1611137**
Date: **11/23/2016**

CLIENT: Tully Construction Co. Inc.
Project: 35-32 College Point Blvd, Flushing, NY

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846 and additional methods as detailed throughout the text of the report. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives with exceptions notated in this Narrative discussion and/or in the QC Summary Section of the lab report with appropriate qualifiers. Additional quality control information such as surrogate recovery values for organic testing is provided as part of the analytical results. Batch MS/MSD results are provided in the QC section of the lab report unless the MS/MSD summary forms indicate one of your sample identifications. MS/MSD results relate only to the parent sample that was spiked.

Volatile LCS are analyzed with preservatives - HCL/NaHSO4/Methanol depending on level of analysis (high/low) similar to sample analysis. Outliers can be attributed to the presence of chemical preservatives. 2-Chloroethyl vinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Volatile analysis of MW-41A was analyzed at a dilution due to complicated matrix.

During the 8270 extraction procedure of MW-3, the entire extract collector broke and the sample was lost. No additional volume was available to reextract. Unfortunately, no results can be provided for this sample location. When additional volume is received from the client, results will be submitted under separate cover.

SVOA analysis of MW-6 and MW-41A were analyzed at dilutions due to extract viscosity and complicated matrix. High surrogate recovery values were observed due to matrix interference with non-target hydrocarbon presence.

The following parameters (if included in this report) are not offered by NY ELAP: VOA 8260 Soil; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Diisopropyl ether, Ethanol, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Isopropyl Acetate, n-Amyl Acetate, n-Butyl Acetate, n-Propyl Acetate. VOA 8260 Liquid; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Isopropyl Acetate, n-Amyl acetate, n-Butyl Acetate, n-Propyl Acetate. Pesticides 8081 Soil; DBCP. Herbicides 8151 Soil; 3,5-Dichlorobenzoic Acid, 4-Nitrophenol, Acifluorfen, Bentazon, Chloramben, DCPA, Picloram .Lachat 10-107-6-1B Ammonia in Soil, SM 2540G Total Volatile Solids,

Definition Only

WO#: **1611137**
Date: **11/23/2016**

Definitions:

Sample Result and QC Summary Qualifiers - Level I and Level II Reports
ND - Not detected at the reporting limit/Limit of Quantitation

B - The analyte was detected in the associated method blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <5x the blank value as artifact.

E - The value is above the quantitation range

D - Analyte concentration was obtained from diluted analysis or from analysis using reduced sample volume.

J - The analyte was detected below the limit of quantitation but greater than the established Limit of Detection (LOD). There is greater uncertainty associated with these results and data should be considered as estimated.

U - The compound was analyzed for but not detected.

H - Holding time for preparation or analysis has been exceeded.

S - Spike recovery is outside accepted recovery limits.

R - RPD is outside accepted recovery range.

P - Secondary column exceeds 40% difference for GC test.

* - Calibration exceeds method requirement. Due to the large number of analytes for organic testing, the method allows 10% of analytes to have %RSD and/or %D to be >20%.

LOD - Limit of Detection; the lowest level the analyte can be determined to be statistically different from a blank.

LOQ - Limit of Quantitation; the lowest amount of analyte in a sample that can be quantitatively determined with suitable precision and accurary.
m - Analyte was manually integrated for GC/MS.
+ - Concentration exceeds regulatory level for TCLP
